INTRODUCTION

Business writing is a type of writing that is used in a professional setting. It is a purposeful piece of writing that conveys relevant information to the reader in a clear, concise, and effective manner. It includes client proposals, reports, memos, emails, and notices.

IMPORTANCE OF BUSINESS WRITING

Learning and honing business writing skills can have a positive impact on an individual's career advancement.

Effective communication makes an organization run smoothly. Professional writing improves productivity and the ability of all functional areas to work together, particularly in an increasingly global workplace where collaboration is the norm. Understanding the importance of business writing will help you improve your skills in this very important management area.

OBJECTIVES OF PROGRAM

Effective writing is often a critical success factor when it comes to presenting business cases in the workplace. An estimated 30% of all business communication is aimed at clarifying miscommunication generated from the other 70%! This realization ~~has resulted~~ ^{has resulted} in business

INTRODUCTION

Event Management is the process of analysing, planning, marketing, producing and evaluating an event. It is a different way of promoting a product, service or idea. If an event is managed efficiently and effectively, it can be used as a very powerful promotional tool to launch or market a product or service.

IMPORTANCE OF EVENT MANAGEMENT

Effective event management can be time-saving as well as money-saving. It saves time in such a manner that event planners already have connections with hotels and venues where an event will take place. They can also choose the best location, place or chooses other venues.

OBJECTIVES OF PROGRAM

The event management process are to: Detect all changes of state that have significance for the management of a CI or IT service. Determine the appropriate control action for events, and ensure these are communicated to the appropriate functions.

INTRODUCTION

Electronic filing is the process of submitting tax returns via the internet. It's available from professional tax preparers, through guided preparation software that has been preapproved by the Internal Revenue Service (IRS) or free fillable forms on the IRS site.

IMPORTANCE OF E-FILING OF INCOME TAX

Electronic filing is required to file returns. Compared to paper filing techniques, filing it electronically saves a lot of time. E-filing allows taxpayers to digitally enter and submit their information, eliminating the need for paper forms and manual processing.

OBJECTIVES OF PROGRAM

The main objectives of the Income Tax Act are promoting price stability, full employment, economic development, reduction of BOP difficulties, controlling cyclical fluctuations and non-revenue objectives.

ACADEMIC YEAR 2023-2024

Subject Code: 21516BPT

Value added course: 1

Total: 45 hours

Course objectives:

To demonstrate the low cost media preparation and impart training of eco friendly agricultural inputs in biofertilizer production.

Course Outcomes:

- ❖ Ability to distinguish the types of biofertilizers and methods of application in farmers field
- ❖ Development of integrated management for best results using nitrogenous and phosphate biofertilizers.

Syllabus:

Unit I:

Introduction, History and concept of Bio fertilizers ,status scope and importance of Bio fertilizers, Classification of Bio fertilizers. Nitrogen fixation.

Unit II:

Structure and characteristic features of bacterial Bio fertilizers- Azospirillum, Azotobacter, Bacillus, Pseudomonas, Rhizobium and Frankia; Cynobacterial biofertilizers- Anabaena, Nostoc, Hapalosiphon and fungal biofertilizers- AM mycorrhiza and ectomycorrhiza.

Unit III:

Production technology: Strain selection, sterilization, growth and fermentation, equipment, mass production of carrier based and liquid bio fertiizers. FCO specifications and quality control of bio fertilizers.

Unit IV:

Application technology for seeds, seedlings, tubers, sets etc. Biofertilizers -Storage, shelf life, quality control and marketing. Factors influencing the efficacy of bio fertilizers.

About the University

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) is a deemed university in Vallam, India. The Institute offers undergraduate and postgraduate courses in Engineering, Science, Education, Management, Arts, and Law, as well as research programmes.

Facilities Available

The University is housed in an independent, multi-story building with state-of-art equipment, excellent Laboratories and infrastructure to help complete this course. Majority of scientists have been acting in monitoring the research program. Computer Library with internet facilities for students, Hostel facilities, Health center, Sports complex, etc...

Department of Microbiology

Microbiology course is very broad where one gets to touch and know about all the major areas of life (biological) sciences.

The Microbiology is focusing on some major areas like genetics, biochemistry, cell biology, molecular biology. So this course can provide much finer hand on: Clinical Laboratory Technology.

INTRODUCTION

Our world is surrounded by several environmental challenges that are becoming troublesome by the day. Therefore, the online course in Biofertilizer Production Technology by PRIST aim to enhance soil productivity by fixing atmospheric nitrogen, solubilizing soil phosphorus, and stimulating plant growth. Biofertilizer technology has integrated plant nutrient management for sustainable agriculture through BNF.

Importance of Biofertilizer Production Technology

Application of biofertilizers increases the plant growth, symbiotic traits (nodule number, nodule weight) and grain yield over no inoculation in different pulse crops without producing any adverse effect on the environment. And also improving the soil quality, protecting the plants from pathogens, avoiding environmental pollution, destruction of harmful substances present in the soil.

Course Content

- ◆ History and concepts of Bio fertilizers
- ◆ Structure and characteristic features of bacterial Bio fertilizers
- ◆ Production technology:
- ◆ Application technology

Objective the Program

The main aim of the unit is to promote the use of Biofertilizer technology, i.e., the addition of nutrients through the natural process of nitrogen fixation, solubilizing phosphorus, as well as the stimulation of plant growth by synthesizing growth-promoting substances.

Level of Knowledge Expected

Students studying Biofertilizer technology course gain expertise in soil ecosystem as biofertilizers play an imperative role by regenerating the soil microbial biodiversity and maintenance of soil health by mobilizing the plant.

Duration of the program

45 hrs add on Certificate course

Course Outcome

Develop analysis and synthesis skills. Obtain information, design experiments and interpret results. Students will understand the general aspects of laboratory safety, different hematology methods, sample preparation, processing, biochemical test and different different branches of Pharmacology

Eligibility criteria & Fee Structure

CERTIFICATE COURSE ON FOOD PROCESSING
ACADEMIC YEAR 2023-2024**

Syllabus

Subject Code: 22516FP

Value added course: 2

Total: 45 hours

AIM:

The aim of food processing makes food more edible, palatable and safe, and preserves it so it can be eaten beyond the harvest season. Food processing is also a tool that offers greater variety in foods and therefore increases the consumer's choice.

Course Objectives:

CO 1: To get the knowledge about the principles and methods of preservation

CO 2: To know about the freezing and thawing process.

CO3: To know about food Drying/Dehydration

CO4: To get the knowledge of Food Concentration

CO 5: To know about the Membrane Processing

Course Outcome:

CO1: Students will understand the basic concepts in food processing and will get knowledge

CO2: They will understand different freezing methods used in food processing.

CO3: They will understand the drying methods and types of dryers.

CO4: They will understand different Food Concentration methods used in food processing

CO5: They will learn different Membrane Processing.

UNIT 1 (9Hr)

Food processing and preservation principles, method of preservation: pasteurization (definition, time-temperature combination and equipments) sterilization (definition, time-temperature combination and equipments), blanching (definition, time-temperature combination and equipments, adequacy in blanching), canning (definition, time-temperature combination and equipments), packaging (Introduction, Metal Containers, Glass Containers, Rigid Plastic Containers, Retortable Pouches).

UNIT 2 (9Hr)

Food Freezing and thawing process: Introduction, freezing point and freezing rate, comparison of Freezing and thawing process; freezing methods: Air freezing, plate freezing, liquid immersion freezing and cryogenic freezing. Freezer selection. Advantages and disadvantages of freezing. Freezing curve. Freezer selection, advantages and disadvantages of freezing and changes in food during freezing storage.

UNIT 3 (9Hr)

Food Drying/Dehydration: Definition, free and bound moisture, concept of water activity, factors affecting drying, Drying curve (constant rate period and falling rate period), moisture content (wet basis and dry basis), equilibrium moisture content, Drying methods and equipments: sun/solar drying, Cabinet drying, tunnel dryer, spray dryer, freeze dryer, fluidized bed dryer, Nutritional, physico-chemical changes during drying.

UNIT 4 (9Hr)

Food Concentration: Evaporation- Definition, types of evaporator (single effect, double effect and multiple effect evaporator); Freeze concentration- General principles and applications, basic elements, ice crystal nucleation, growth and crystallization, separation techniques (filtration and wash column).

UNIT 5 (9Hr)

Membrane Processing: General principles and advantages, dead end and cross flow, Classification of membrane system: Reverse Osmosis, Nano Filtration, Ultra Filtration, Micro Filtration, Electrodialysis and Pervaporation; Membrane technology comparison chart, Membrane application in the food industries; Membrane performance, and Limitation of membrane processes.

INTRODUCTION

Our world is surrounded by several environmental challenges that are becoming troublesome by the day. Therefore, the certificate course in Food Processing by PRIST aims to teach students about these pressing issues by developing in-depth knowledge about this field mainly deals with food science and technologies that are being used to transform raw ingredients into food. Food technology consists of methods such as preservation, packaging and distribution to provide clean and nutritious food for the consumption of humans and animals.

Importance of Food processing

The Food processing offers important benefits to businesses and consumers, including a more varied food supply and foods with a longer shelf life. Critical aspects of food processing, however, take concern over dietary health, worker health, and food safety.

These programs can help individuals and companies develop a comprehensive understanding of food safety including the requirements for a food management system, how to properly manage a food facility, and how to identify and mitigate potential safety risks.

Course Content

- ✓ Fundamentals of Food Processing.
- ✓ Food Microbiology.
- ✓ Food Hygiene and Sanitation.
- ✓ Food Analysis.
- ✓ Concentrated and Dehydrated milk products.
- ✓ Bakery and Confectionary Products.
- ✓ Principles of Fruits and Vegetable Technology.
- ✓ Technology of Spices and Plantation products.

Learning Objectives

- To get the knowledge about the principles and methods of preservation
- To know about the freezing and thawing process.
- To know about food Drying/Dehydration
- To get the knowledge of Food Concentration
- To know about the Membrane Processing

Level of Knowledge Expected

A food technologist needs to be well-versed in the basic principles of food science. They must also know about culinary arts, food storage, and packaging techniques.

Duration of the program

UNIT I General aspects of laboratory safety (9Hr)

Role of Medical Laboratory technologists – ethics of laboratory practice. Laboratory safety –Common lab accidents their prevention and their first aid. Bio-Medical Waste Management - Legal Aspects and Environment Concern

UNIT II Hematology (9Hr)

Various methods of blood collection - Venipuncture and collection of blood samples, Preparation of blood films, staining of blood smears, Manual count of blood cells. Blood components separation – serum and plasma. Haematocrit, ESR, blood volume measurements. RBC, WBC & platelet counts. Functions of RBC, WBC and platelets.

UNIT III Sample preparation and processing (9Hr)

Clinical sample - collection, transport and processing, Examine and analyse of body fluids, tissues and cells. Examination of urine, pus, blood, stool and CSF. Culture media preparation.

UNIT IV Biochemistry (9Hr)

Estimation of serum urea, Creatinine, uric acid, calcium and phosphorus. Demonstration of serum electrophoresis, PCR, ELISA.

UNIT V Pharmacology (9Hr)

Different branches of Pharmacology, Routes of drug administration, Absorption, Distribution, Metabolism and excretion of drugs, Animal used in experiments, Animal handling and ethics.

Course objectives:

To study the morphology and types of Seaweeds. To understand the Seaweed cultivation methods.

To be aware of the identification of commercially important Seaweeds. To identify the nutrient value of Seaweeds.

To facilitate self-employment scope of seaweed cultivation in small scale industry.

Course Outcome

After completion of the course, students will be able to identify the marine macro algae and their global status. analyze the importance of physico-chemical parameters in seaweeds learn the culture techniques of seaweeds understand the byproducts from seaweeds discuss the central and state schemes for seaweed farming

UNIT I

Introduction – Seaweed morphology; Classification and distribution of seaweeds; life cycle of seaweeds. Identification of cultivable seaweeds – Global status – Present trend and scope in India and Tamil Nadu

UNIT II

Seaweed Farming Infrastructure – Seaweed spores collection — Site selection – Physico-chemical parameters - site preparation – Farming methods - Construction specifications for cultivable species – Raft and rack culture site selection – design and operation of the systems

UNIT III

Seaweed cultivation methods, Bamboo Raft, Monoline, Tube nets - Raft preparation and installation – mooring system - maintenance of seaweeds Raft; Seaweed Cultivation period; Farm management harvesting method and preservation of seaweeds – post harvest technology

Unit IV

Seaweed Byproducts – Phytochemicals – Agar – agarose - carrageenan – Algin – Seaweed polysaccharides – sources and use - Seaweed as food – Nori – Kombu – Wakame – Seaweed Compost – Seaweed liquid fertilizer – Agricultural biostimulants – animal fodder.

UNIT V

Role of seaweed in Blue economy - .PMSSY in seaweeds – seaweed based industries in India - CSMCRI – Subsidy for seaweed farming – seaweed cultivation as livelihood.

INTRODUCTION

Our world is surrounded by several environmental challenges that are becoming troublesome by the day. Therefore, the online course in seaweed culture by PRIST the aim of seaweed culture is to sustainably produce seaweed for various industries while enhancing marine ecosystems and supporting coastal livelihoods. It seeks to promote environmental conservation, economic development, and food security through responsible cultivation practices.

Importance of seaweed culture

Seaweed culture is vital for environmental sustainability, as it improves water quality, sequesters carbon, and protects coastlines. It also supports coastal economies by creating jobs and supplying raw materials for various industries like food, biofuels, and cosmetics.

Course Content

- ◆ Types of Seaweed
- ◆ Ecological Role of Seaweeds
- ◆ Seaweed Farming Techniques
- ◆ Seaweed Processing and Value-Added Products
- ◆ Economic and Social Aspects of Seaweed Farming

Objective the Program

- ◆ To cultivate seaweed as a renewable resource for food, biofuels, cosmetics, pharmaceuticals, and other industries, reducing reliance on wild populations and ensuring long-term availability.
- ◆ To enhance marine ecosystems by absorbing excess nutrients, improving water quality, sequestering carbon, and protecting coastlines from erosion, contributing to climate change mitigation and ecosystem health.

Level of Knowledge Expected

A foundational understanding of microbiology, food science, and fermentation processes is expected for students in the seaweed culture.

Duration of the program

45 hrs add on Certificate course

Course Outcome

The outcome of seaweed culture includes sustainable production of seaweed for diverse industries and improved marine ecosystems through enhanced water quality and carbon sequestration. It also leads to economic growth and livelihood opportunities for coastal communities.

Certificate Course in Advances in Plant Tissue Culture

ACADEMIC YEAR 2023-2024

Subject Code: 23516APTC

Value added course: 5

Total: 45 hours

Course objectives:

The student completing the course is able to classify various life forms of plants, design and execute experiments related to basic studies on ecology, physiology, biochemistry, plant interactions with microbes and insects, morphology, anatomy, reproduction, genetics, microbiology, molecular biology, recombinant DNA.

Course outcome:

Plant Tissue culture is an important tool for both basic and applied aspects of plant biotechnology as well as its commercial applications. All techniques are skill based and upon systematic learning, can equip a person to effectively utilize the techniques in various areas like basic research, environmental issues and commercial applications. It is a valuable tool for research on morphogenesis, cell signaling, physiology, and molecular biology, as well as crop improvement by biotechnology. This course offers a comprehensive hands-on training for learning the basics with an insight to laboratory practices along with exposure to "lab-to-land" transfers.

Unit I: Plant Tissue Culture(9Hr)

- ❖ Introduction. History. Scope. Advantages. Applications. Limitations.
- ❖ Guidelines for establishing academic and commercial laboratories.
- ❖ Steps involved in Plant Tissue Culture. Various nutrient medium composition.
- ❖ Plant growth regulators and their role in nutrient media. Types of organ cultures and their applications.
- ❖ Pathways of regeneration. Micrografting of commercially important plants. In vitro approaches for crop improvement. Plant cell reactors. Microtechniques

Unit II: Micropropagation(9Hr)

- ❖ Meristem culture for the production of virus free plants. Nucellus culture for clonal propagation and large scale multiplication.
- ❖ Strategies of Micropropagation. Stages of micropropagation by axillary shoot proliferation in Monocots and Dicots.

- ❖ Stages in micropropagation via direct and indirect organogenesis. Stages in micropropagation via direct and indirect somatic embryogenesis. Low cost methods for micropropagation.

Unit III: Practicals in Plant Tissue Culture (9Hr)

- ❖ Handling and Instrumentation of Plant Tissue Culture. Glassware Washing & Sterilization Techniques. Preparation of stock solutions and nutrient media.
- ❖ Surface sterilization of Explants. Monocot and Dicot Seed cultures for the establishment of organ cultures. Establishment of organ cultures for the induction of callus
- ❖ Establishment of organ cultures for the induction of multiple shoots. Sub-culturing of nucellar seedlings for clonal propagation.

Unit IV: Practicals in Plant Tissue Culture (9Hr)

- ❖ Technique of micrografting in fruit crops. Primary hardening of tissue culture plants for their acclimatization. Cytological study of calli cells and their subculturing
- ❖ Establishment of embryogenic/ non embryogenic cell suspension cultures. Embryo / Endosperm/ Ovules and other Cultures.

Unit V: Practicals in Micropropagation (9Hr)

- ❖ Demonstration of meristematic explants in different plants
- ❖ Preparation of mother plants for collection of explants
- ❖ In vitro and ex vitro rooting of microshoots.
- ❖ Primary and secondary hardening of tissue cultured plants.
- ❖ Artificial seed production from microshoots and their in vitro germination.
- ❖ Establishment of cultures for the induction of embryogenic callus.

About the University

Ponnamyah Ramajayam Institute of Science and Technology (PRIST) is a deemed university in Vallam, India. The Institute offers undergraduate and postgraduate courses in Engineering, Science, Education, Management, Arts, and Law, as well as research programmes.

Facilities Available

The University is housed in an independent, multi-storing building with state of art equipment, excellent Laboratories and infrastructure to help complete this course. Majority of scientists have been acting as monitoring the research program. Computer Library with internet facilities for students, Hostel facilities, Health centre, Sports complex, etc....

Department of Microbiology

Microbiology course is very broad where you get to touch and know about all the major areas of life (biological) sciences.

The Microbiology is focusing on some major areas like genetics, biochemistry, cell biology, molecular biology. So this course can provide much better based on Clinical Laboratory Technology.

INTRODUCTION

Our world is surrounded by several environmental challenges that are becoming troublesome by the day. Therefore, the online course in Advance in Plant Tissue Culture By PRIST aims to teach students about the techniques used to maintain or grow plant cells, tissues, or organs under sterile conditions on a nutrient culture medium of known composition. It is widely used to produce clones of a plant in a method known as micropropagation.

Importance of Plant Tissue Culture

Plant tissue culture is a technique that has been around for more than 30 years. Tissue culture is seen as an important technology for developing countries for the production of disease-free, high quality planting material and the rapid production of many uniform plants.

Course Content

- ◆ Plant Tissue Culture
- ◆ Micropropagation
- ◆ Practicals in Plant Tissue Culture
- ◆ Practicals in Plant Tissue Culture
- ◆ Practicals in Micropropagation

Objective the Program

The student completing the course is able to classify various life forms of plants, design and execute experiments related to basic studies on ecology, physiology, biochemistry, plant interactions with microbes and insects, morphology, anatomy, reproduction, genetics, microbiology, molecular biology, recombinant DNA.

Level of Knowledge Expected

Students studying Plant Tissue culture is defined as culturing plant seeds, organs, explants, tissues, cells, or protoplasts on a chemically defined synthetic nutrient media under sterile and controlled conditions of light, temperature, and humidity.

Duration of the program

45 hrs add on Certificate course

Course Outcome

Plant Tissue Culture is an important tool for both basic and applied aspects of plant tissue biology as well as its commercial applications. About the University

Pornayab Ramnayan Institute of Science and Technology (PRIST) is a The institute offers undergraduate and postgraduate courses in Engineering, Science, Education, Management, Arts, and Law, as well as research programmes.

Facilities Available

The University is housed in an independent, multi storing building with state of art equipment, excellent Laboratories and infrastructure to help complete this course. Majority of scientists have been acting as monitoring the research program. Computer Library with internet facilities for students, Hostel facilities, Health centre, Sports complex, etc..

Department of Chemistry

The Department has young as well as experienced and dynamic persons as faculty, is involved in providing quality education at Undergraduate (UG) and Postgraduate (PG) level. The staff are from various disciplines in Doctorate like Fuzzy theory, Graph theory, Topology, Stochastic Process, Number theory. Many of the staff members are encouraged to pursue their higher research works.

Bsc -Chemistry	BSc	Certificate Course on Molecular Structure Drawing Tool

VALUE ADDED COURSE

Academic year: 2023 -2024 PERIOD: 02.02.24 TO 14.03.24

Diploma Course on Molecular Structure Drawing Tool

Aim:

- To introduce students to molecular structure and biological evaluation of novel biologically active compounds.

Objectives:

- To inculcate concepts of molecular structure target identification and validation.
- To understand techniques in Phenotypic screening and target convolution.
- To increase employability of the students.
- To educate about role of molecular structure of novel biologically active compounds

Course Outcomes:

At the end of this unit, you will be able to:

- Understand the software used in chemistry
- Perform the Manipulations of Selected Objects
- Apply the chemdraw software to draw the different systems

COURSE OBJECTIVE

- The most fundamental goal in drug design is to predict whether a given molecule will bind to a target and if so how strongly.
- These methods are also used to predict the conformation of the small molecule and to model conformational changes in the target that may occur when the small molecule binds to it.

EXAMINATION

There shall be an university examination at the end of academic years.

Eligibility criteria for appearing in the in the final examination

Minimum Attendance - 80%

Minimum Internal Assessment marks - 40%

- It will be done through the whole year.
- Candidate must obtain at least 35% marks in theory

internal assessment to be eligible for the university examination.

Internal assessment (Theory) will be done as follows :

a) Mid-term and term examinations = 10 marks

b) Assignments/Projects/Class test/Clinical Presentations = 05 marks

c) Attendance = 05 marks

Total = 20 marks

Criteria for a pass in the subject

Minimum marks in theory - 45

Scheme of Examination:-

Duration of written examination - 3 hrs

Maximum marks - 100

Level of Knowledge Expected

Working knowledge with excellent technological value

Duration of the program

90 hrs add on diploma course

Course Program Outcome

- These methods are faster, and accurately provide valuable insights of experimental findings and mechanisms of action.
- In addition, appropriate implementation of these techniques could lead to a reduction in cost of drug designing and development.
- Currently in biomedicine sciences these software are exhibiting imperative role in the different phases of drug discovery.

Eligibility criteria

Any graduate shall be eligible for the admission to the course Intake Capacity 15 Seats on first cum first basis (Additional admission to the course is prerogative of the school)

Course Structure and Duration

Course is One year duration and will be of 90 hrs imparted training programme covering theoretical and practical aspects of Drug Design.

Certification

The candidates successfully qualifying the course the course shall be awarded a certificate to that effect in the appropriate form by School of Arts and Science, Department of chemistry, PRIST University, Thanjavur, Vallam

- To educate about thin-layer column Chromatographic techniques of novel biologically active compounds.

Course Outcomes

- At the end of the course, students will be able to turn to understand methods of crystallization
- Explain the principles and techniques of column and thin-layer chromatography techniques.
- Purify the compounds by crystallization technique.
- Analyse and detect the sample thin-layer chromatography
- Separate the isomers of a compound by column chromatography technique

Unit – I Crystallization

Principle, Methods of recrystallization Melt crystallization, Suspension crystallization; solvents for recrystallization, Precipitation, Nucleation, Supersaturation, Common challenges in crystallization. Processes involved in crystallization, and applications.

About the University

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) is a deemed university in Vallam, India. The institute offers undergraduate and postgraduate courses in Engineering, Science, Education, Management, Arts, and Law, as well as research programmes.

Facilities Available

The University is housed in an independent, multi storied building with state of art equipment, excellent Laboratories and infrastructure to help complete this course. Majority of scientist have been acting as monitoring the research program. Computer Library with internet facilities for students, Hostel facilities, Health centre, Sports complex, etc.

Department of Chemistry

The Department has young as well as experienced and dynamic personalities as faculty, is involved in providing quality education at Undergraduate (UG) and Postgraduate (PG) levels. The staff are from various disciplines in Doctorate like Fuzzy theory, Graph theory, Topology, Stochastic Process, Number theory. Many of the staff members are encouraged to pursue their higher studies and research work.

EXAMINATION

There shall be an university examination at the end of academic years.

Eligibility criteria for appearing in the in the final examination

- Minimum Attendance - 80%
- Minimum Internal Assessment marks - 40%
- It will be done through the whole year.
- Candidate must obtain at least 35% marks in theory
- internal assessment to be eligible for the university examination.

Internal assessment (Theory) will be done as follows :

- a) Mid-term and term examinations = 10 marks
- b) Assignments/Projects/Class test/Clinical Presentations = 05 marks
- c) Attendance = 05 marks

Total = 20 marks

Criteria for a pass in the subject
Minimum marks in theory - 45

Scheme of Examination:-

Duration of written examination - 3 hrs
Maximum marks - 100

Level of Knowledge Expected

Working knowledge with excellent technological value

Duration of the program

90 hrs add on diploma course

Course Program Outcome

- These methods are faster, and accurately provide valuable insights of experimental findings and mechanisms of action.
- In addition, appropriate implementation of these techniques could lead to a reduction in cost of drug designing and development.
- Currently in biomedicine sciences these software are exhibiting imperative role in the different phases of drug discovery.

Eligibility criteria

Any graduate shall be eligible for the admission to the course Intake Capacity 15 Seats on first cum first basis (Additional admission to the course is prerogative of the school)

Course Structure and Duration

Course is One year duration and will be of 90 hrs imparted training programme covering theoretical and practical aspects of Drug Design.

Certification

The candidates successfully qualifying the course the course shall be awarded a certificate to that effect in the appropriate form by School of Arts and Science, Department of chemistry, PRTS University, Haujivur, Vallam.

- To increase employability of the students.
- To improve the Biochemical analyses of drug targets and their pathways.
- To educate about role of Design, synthesis, and biological evaluation of novel biologically active compounds.

Course Outcomes:

At the end of this unit, you will be able to:

- Drug target identification and validation
- Describe Process of Design, synthesis, and biological evaluation.
- Fragment-based drug discovery
- Pharmaceutical/red biotechnology
- Isolation, structural characterization, (bio)synthesis, bioengineering and pharmacological evaluation of natural products

UNIT – I

Introduction to The Drug Discovery/Development - Drug Discovery - Drug Development - Source of Drugs - Structural effects on drug action

UNIT – II

Approaches to New Drug Discovery - Drugs Derived from Natural Products - Existing Drugs as a Source for New Drug Discovery - Screening for New Drug Leads - Modern "Rational Approach" to Drug Design - Approaches to Lead Optimization

Facilities Available

Not all graphic designers hold a specialized degree, and this lack of a degree requirement may be confusing when trying to determine how to succeed without one. If you've looked into online graphic design certification programs, you might wonder which certification would advance a career in graphic design.

Fortunately, official programs like Adobe Certified Professional enable aspiring graphic designers to become certified in Illustrator and other Creative Cloud apps through hands-on training and testing. As an Adobe Certified Professional, you can demonstrate your expertise and credibility as a graphic designer.

COURSE OBJECTIVE

The purpose of machine learning is to discover patterns in your data and then make predictions based on often complex findings to answer business questions, detect and analyse trends and help solve problems

The goal of artificial intelligence (AI) and machine learning is to program computers to use example data or experience to solve a given problem..

To understand the basic theory underlying machine learning. To be able to formulate machine learning problems corresponding to different applications. To understand a range of machine learning algorithms along with their strengths and weaknesses.

ELIGIBILITY CRITERIA

2. At the end of the Course each student will give a presentation on a topic covered in the course

COURSE STRUCTURE AND DURATION

- Course is 6 month duration and will be of 45 hrs imparted training programme covering theoretical and practical aspects of Adobe photoshop.

Eligibility criteria for appearing in the in the final examination

- Minimum Attendance - 80%
Minimum Internal Assessment marks - 40%
• It will be done through the whole year. Candidate must obtain at least 35% marks in theory internal assessment to be eligible for the university examination.

Internal assessment will be done as follows:

- a) Mid-term and term examinations = 10 marks
- b) Assignments/Projects/Class test/Clinical Presentations = 05 marks

c) Attendance = 05 marks
Total = 20 marks

Criteria for a pass in the subject
Minimum marks in theory - 45

SCHEME OF EXAMINATION:-

Duration of written examination - 3 hrs
Maximum marks - 100

CERTIFICATION

The candidates successfully qualifying the course shall be awarded a certificate to that effect in the appropriate form by School of Arts and Science, Department of Computer Science, PRIST University, Thanjavur, Vallam.

COURSE OUTCOMES

- Appreciate the importance of visualization in the data analytics solution
- Apply structured thinking to unstructured problems
- Understand a very broad collection of machine learning algorithms and problems
- Learn algorithmic topics of machine learning and mathematically deep enough to introduce the required theory
- Develop an appreciation for what is involved in learning data.

COURSE OBJECTIVE

Specialization track involving Web Application Architectures. This course will give you the basic background, terminology and fundamental concepts that you need to understand in order to build modern full stack web applications. A full stack web developer is familiar with each "layer" of the software technologies involved in a web application, including data modeling and database technologies, the web server environment and middleware components, network protocols, the user interface and basic visual design and user interaction concepts.

ELIGIBILITY CRITERIA

Any graduate shall be eligible for the admission to the course Intake Capacity 15 Seats on first come first basis (Additional admission to the course is prerogative of the school)

COURSE DURATION (45 hrs)

Module #1 - Web Applications in Context

This module sets the context for what we will study in this specialization by first providing a historical perspective on computing and web applications. Next we provide an overview of how the Internet works, and then we discuss how web applications have evolved over the past few decades. After that we'll discuss some of the elements of modern software practice, including the typical tools that software engineers now use and the agile development practices they follow. The notion of software design patterns will be introduced, and the other architecture design pattern,

fundamental to modern web application design, is then presented. Will also discuss a few current topics related to web application development. Finally, we will show you how to set up the software development environment you will use throughout the remainder of the courses in this

Module #2 - Web Applications Frameworks

In this module you will learn about web application frameworks. We will start by talking about the evolution of software and programming languages, and then talk about software application frameworks. The fundamental trade-off we will consider is programmer productivity versus program efficiency. Next you will learn about web application frameworks, as well as the model-view-controller design pattern that is the backbone for many of these frameworks. We will also consider how these frameworks support the agile programming principles associated with modern software practice. This will include a discussion of distributed version control systems and you will learn how to use the popular Git system. We will also demonstrate how to use Git with a Ruby on Rails application. We will use Git to submit all of the programming applications in this specialization.

Module #3 - Managing Data

A successful web application provides information to users that is (1) useful, and also (2) easy to access and understand. This information is often collected from users, as well as from other information sources, and must be stored in a manner that allows it to be manipulated by the web application. The typical app approach is to store this data in a relational database. In this module you will

learn some basic concepts associated with managing the data in a web application, including how to specify the relationships between various data entities. We will also investigate how to hook a web application up to a back-end data store, along with good design techniques that will make it easier to use the data in your web applications by maintaining consistency throughout the entire web stack.

Module #4 - Middleware

Middleware is an abstraction layer that hides details about hardware devices and other lower-level software services from an application. Middleware services implement common low-level functions, such as communication with the operating system, application servers, database servers, etc., so that application developers do not need to concern themselves with these details, and can instead focus on the application functionality they are trying to provide. In a web application, these services generally make use of the HTTP protocol, and in a web application framework, the MVC design pattern can be thought of as being implemented over the middleware.

Module #5 - The User Interface

In our final module we will discuss the User Interface. We will touch on CSS and JavaScript, and how these are used to add style to layout and design of HTML documents. We will also learn about Ajax and how it improves user requests.

COURSE OBJECTIVE

The objective of Data visualization tools provide data visualization designers with an easier way to create visual representations of large data sets. When dealing with data sets that include hundreds of thousands or millions of data points, automating the process of creating a visualization, at least in part, makes a designer's job significantly easier..

The best data visualization tools on the market have a few things in common. First is their ease of use. The best tools also can output an array of different chart, graph, and map types. Most of the tools below can output both images and interactive graphs. There are exceptions to the variety of output criteria, though. Some data visualization tools focus on a specific type of chart or map and do it very well. Those tools also have a place among the "best" tools out there.

COURSE OBJECTIVE

The purpose of machine learning is to discover patterns in your data and then make predictions based on often complex findings to answer business questions, detect and analyse trends and help solve problems

The goal of google it support is to program computers to use example data or experience to solve a given problem.

To understand the basic theory underlying machine learning. To be able to formulate machine learning problems corresponding to different applications. To understand a range of machine learning algorithms along with their strengths and weaknesses.

ELIGIBILITY CRITERIA

Any graduate shall be eligible for the admission to the course Intake Capacity 15 Seats on first cum first basis (Additional admission to the course is prerogative of the school)

COURSE DURATION (45 Hrs)

- Computer Studies
- Typographic Design
- Generic Skills
- Graphics Principle and Method of Design Introduction to Multimedia
- Basic Information

EXAMINATION

1. Every student has to give periodic tests consisting of Programming tasks and Objective Questions
2. At the end of the Course each student will give a presentation on a topic covered in the course

COURSE STRUCTURE AND DURATION

Course is duration of 45 hrs imparted training programme covering theoretical and practical aspects of Adobe photoshop. Eligibility criteria for appearing in the in the final examination

Minimum Attendance - 80%

Minimum Internal Assessment marks - 40%

- It will be done through the whole year.
- Candidate must obtain at least 35% marks in theory internal assessment to be eligible for the university examination.

Internal assessment will be done as follows:

- a) Mid-term and term examinations = 10 marks
 - b) Assignments/Projects/Class test/Clinical Presentations = 05 marks
 - c) Attendance = 05 marks
- marks Total = 20 marks

Criteria for a pass in the subject

Minimum marks in theory - 45

SCHEME OF EXAMINATION:-

Duration of written examination - 3 hrs

Maximum marks - 100

CERTIFICATION

The candidates successfully qualifying the course the course shall be awarded a certificate to that effect in the appropriate form by School of Arts and Science, Department of Computer Science, PRIST University, Thanjavur, Vallam.

COURSE OUTCOMES

- Appreciate the importance of visualization in the data analytics solution
- Apply structured thinking to unstructured problems Understand a very broad collection of machine learning algorithms and problems
- Learn algorithmic topics of machine learning and mathematically deep enough to introduce the required theory Develop an appreciation for what is involved in learning from data.

As the world becomes increasingly reliant on technology, the attack surface of cyberspace continues to expand. Cyberthreats have grown more sophisticated, posing significant risk to individuals, organizations and governments alike. It is imperative to examine the top cyberthreats faced by enterprises today and consider what preventive measures can be taken to safeguard digital assets and privacy.

COURSE OBJECTIVE

The objective of Data visualization tools provide data visualization designers with an easier way to create visual representations of large data sets. When dealing with data sets that include hundreds of thousands or millions of data points, automating the process of creating a visualization, at least in part, makes a designer's job significantly easier..

The best data visualization tools on the market have a few things in common. First is their ease of use. The best tools also can output an array of different chart, graph, and map types. Most of the tools below can output both images and interactive graphs. There are exceptions to the variety of output criteria, though. Some data visualization tools focus on a specific type of chart or map and do it very well. Those tools also have a place among the "best" tools out there.

COURSE OBJECTIVE

Specialization track involving Web Application Architectures. This course will give you the basic background terminology and fundamental concepts that you need to understand in order to build modern full stack web applications. A full stack web developer is familiar with each "layer" of the software technologies involved in a web application, including data modeling and database technologies, the web server environment and middleware components, network protocols, the user interface and basic visual design and user interaction concepts.

ELIGIBILITY CRITERIA

Any graduate shall be eligible for the admission to the course intake Capacity 15 Seats on first cum first basis (Additional admission to the course is prerogative of the school)

COURSE DURATION (90 Hrs)

Module #1 - Web Applications in Context

This module sets the context for what we will study in this specialization by first providing a historical perspective on computing and web applications. Next we provide an overview of how the Internet works, and then we discuss how web applications have evolved over the past few decades. After that we'll discuss some of the elements of modern software practice, including the typical tools that software engineers now use and the agile development practices they follow. The notion of software design patterns will be introduced, and the n-tier architecture design pattern,

fundamental to modern web application design, is then presented. We will also discuss a few current topics related to web application development. Finally, we will show you how to set up the software development environment you will use throughout the remainder of the courses in this

Module #2 - Web Applications Frameworks

In this module you will learn about web application frameworks. We will start by talking about the evolution of software and programming languages, and then talk about software application frameworks. The fundamental trade-off we will consider is programmer productivity versus program efficiency. Next you will learn about web application frameworks, as well as the model-view-controller design pattern that is the backbone for many of these frameworks. We will also consider how these frameworks support the agile programming principles associated with modern software practice. This will include a discussion of distributed version control systems and you will learn how to use the popular Git system. We will also demonstrate how to use Git with a Ruby on Rails application. We will use Git to submit all of the programming applications in this specialization.

Module #3 - Managing Data

A successful web application provides information to users that is (1) useful, and also (2) easy to access and understand. This information is often collected from users, as well as from other information sources, and must be stored in a manner that allows it to be manipulated by the web application. The typical approach is to store this data in a relational database. In this module you will

learn some basic concepts associated with modeling the data in a web application, including how to specify the relationships between various data entities. We will also investigate how to hook a web application up to a back-end data store, along with good design techniques that will make it easier to use the data in your web applications by maintaining consistency throughout the entire web stack.

Module #4 - Middleware

Middleware is an abstraction layer that hides details about hardware devices and other lower-level software services from an application. Middleware services implement common low-level functions, such as communication with the operating system, application servers, database servers, etc., so that application developers do not need to concern themselves with these details, and can instead focus on the application functionality they are trying to provide. In a web application, these services generally make use of the HTTP protocol, and in a web application framework, the MVC design pattern can be thought of as being implemented over the middleware.

Module #5 - The User Interface

In our final module we will discuss the User Interface. We will touch on CSS and JavaScript, and how these are used to add style to layout and design of HTML documents. We will also learn about Ajax and how it improves user requests.

Course: Software Testing using Selenium
Subject Code: 22CC04

Aim:

- To learn the basics of software testing using java environment.

Course objective:

- To know the fundamental concepts of software testing
- To learn fundamental testing the application using selenium
- To study various inspect Web/HTML Elements

Module I: Java Programming for Selenium

1. Java Environment Setup

Download & Install Java (JDK) software, set Java environment variable path, and Download & Install Eclipse IDE.

2. Java Keywords and Identifiers

Java keywords are also known as reserved words. Keywords are particular words that act as a key to a code.

Identifiers in Java are symbolic names used for identification. They can be a class name, variable name, method name, package name, constant name, and more.

3. Java Program Structure

Java Program Structure, Java Syntax, Java Keywords & Literals, Java main method, Create Java Variables, Methods, conditions, loops, and IO.

4. Java Data Types

Java Data Types, Categories of Data Types in Java, Java Primitive Data Types, Java Non-primitive Data Types, and Data Type Conversion in Java.

9. Java Variables

Java Variables, What is Variable, Types of Variables in Java, Declare Variables, Assign values to Variables, and Java Variable Naming Rules.

10. Java Operators

Operators in Java, what is the operator? operator precedence, arithmetic operators, unary operators, comparison operators, and logical operators.

11. Java Control Flow

i. Decision Making/Conditional Statements

HOD

Science & Technology (PRIST)
Deemed to be University
Vallur, Thanjavur - 613 403.

- ii. Loop Statements
- iii. Branching Statements

12. String Handling in Java

Java Strings, What is String?, Declare Strings in Java, String handling in Java, String Methods, String Concatenation, and String Comparison.

13. Java Data Structures

Java Arrays

Arrays in Java, What is Array in Java, Declare Arrays, Java Array built-in methods, advantages of Java Arrays, and Drawbacks of Java Arrays.

Java ArrayList

Java ArrayList, Java Data Structures, Java Arrays vs. ArrayList, Add elements to an ArrayList, Remove Java Array List Elements, and Java ArrayList Operations.

14. Java Input and Output

Java Input and Output, Java User Input, Java Output, Java Scanner Class, Java System Class, Java File Handling, and Java Database Connectivity.

15. Java Methods

Java User-defined methods

Java User-defined Methods, What is a Method?. Advantages of methods in Java. Declare & call methods, and Static & Non-static Methods in Java.

Java built-in methods

Java Built-in Methods, Java Java Standard Library Methods, Java String Methods, Java Number Methods, Java Character Methods, and Array Methods.

16. Java Exception Handling

Exception Handling in Java, What is Exception handling, Types of exceptions in Java, Java Program Runtime Errors, and Java try-catch block.

17. Java Object-Oriented Programming

Java Object-Oriented Programming, Class, Object, Method, Java Inheritance, Polymorphism in Java, Java Abstraction, and Java Encapsulation.

Module 2: Selenium Web Driver

1. Selenium Test Environment Setup

2. Inspect Web/HTML Elements
3. Locating Elements in Selenium (Using Element Locators)
4. Performing Actions on Elements (Using Selenium WebDriver Methods)
5. Selenium Page Object Model (Creating Object Repositories)
6. Writing Selenium Test Cases
Write Selenium Test Steps
Synchronization
Inserting Verification Points
Handling Run-time Errors
Etc.

Module 3: TestNG Testing Framework for Selenium

Install TestNG plug-in for Eclipse IDE, Create Test Batches (TestNG Programs), Prioritize Test Cases, Grouping Test Cases, Executing Test Batches, Generating Test Reports etc,

Course Outcomes:

- Convert real world problems to testing the software in online.
- Perform the test cases using various inspect web and HTML elements.
- Design efficient application using selenium and generate the test report.

Course: Google IT Support
Subject Code: 22CC05

Aim:

- To learn the basics of Google IT Support.

Course objective:

- To know the fundamental concepts of Google IT Support
- To study various analytics on stream data.

Unit 1:

Technical Support Fundamentals- Offered by Google. This course is the first of a series that aims to prepare you for a role as an entry-level IT Support Specialist.

Unit 2:

The Bits and Bytes of Computer Networking- Offered by Google. This course is designed to provide a full overview of computer networking. We'll cover everything from the fundamentals.

Unit 3:

Operating Systems and You: Becoming a Power User- Offered by Google. In this course -- through a combination of video lectures, demonstrations, and hands-on practice

Unit 4:

System Administration and IT Infrastructure Services- Offered by Google. This course will transition you from working on a single computer to an entire fleet. Systems administration is the field.

Unit 5:

IT Security: Defense against the digital dark arts- Offered by Google. This course covers a wide variety of IT security concepts, tools, and best practices. It introduces threats and attacks.

Course: Introduction to Cyber Security Tools and Cyber Attacks
Subject Code: 22CC06

Aim:

- To learnt the basics of Introduction to Cyber Security Tools and Cyber Attacks.

Course objective:

- To know the fundamental concepts of Introduction to Cyber Security Tools and Cyber Attacks
- To study various analytics on stream data.

UNIT-1

- Introduction to cyber security • Cybercrime and different modes of attacks • Intrusion detection system

UNIT-2

- It assets and wireless security • Cyber security assurance framework • Desktop security and malware

UNIT-3

- E-commerce and web-application security • Social engineering • Cyber security risk management

UNIT-4

- Cyber attacks, types of attacks motivation • Asset, threat and risk management • Oraganization security & frameworks • Information security governance • Security controls • Security control design • Software development life cycle (sdlc)

UNIT-5

- Authentication and password security • Wireless security • Investigation and digital forensic • Introduction to cryptography

COURSE: Certificate course on Block Chain Technology
SUBJECT CODE: 23CC01

Aim:

To learn the basics of Block Chain technology

Objectives:

The block chain technology course allows the students to explore the driving force behind the cryptocurrency Bitcoin. Along with the Decentralization, Cryptography, Bitcoins with its alternative coins, Smart contracts and outside of currencies.

Unit -I

What is Block chain, Block chain Technology Mechanisms & Networks, Block chain Origins, Objective of Block chain, Block chain Challenges, Transactions And Blocks

Unit-II

P2P Systems, Keys As Identity, Digital Signatures, Hashing, and public key cryptosystems, private vs. public Blockchain. CAP theorem and block chain, Block chain Network, Mining Mechanism,

Unit-III

Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Block chain application, Soft & Hard Fork, Private and Public block chain.

Benefits and limitations of block chain.

Unit-IV

Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.

Unit-V

Decentralization Decentralization using block chain, Methods of decentralization, Routes to decentralization, Decentralized organizations.

Course outcomes:

At the end of the course the student will be able to:

1. Understand the types, benefits and limitation of block chain.
2. Explore the block chain decentralization and cryptography concepts.
3. Enumerate the Bitcoin features and its alternative options.
4. Describe and deploy the smart contracts
5. Summarize the block chain features outside of currencies

Course: Diploma course on R / WEKA TOOL
Subject Code: 22DIP01

Aim:

- To learn the basics of data analysis in R / Weka Tool.

Objectives:

- To know the fundamental concepts of data handling and analytics
- To learn fundamental data analysis using in R
- To study various analytics on stream data.

MODULE -1

History and overview of R ,Install and configuration of R programming environment ,Basic language elements and data structures ,R+ Knitr+ Markdown+ GitHub ,Data input/output

MODULE -2

Data storage formats , Sub-setting objects , Vectorization, Control structures

MODULE -3

Functions ,Scoping Rules ,Loop functions ,Graphics and visualization ,Grammar of data manipulation (dplyr and related tools),Debugging/profiling , Statistical simulation

MODULE -4

Installation, Launching Explorer, Loading Data, File Formats

MODULE -5

Pre-processing the Data, Classifiers, Clustering, Association, Feature Selection

Course Outcomes:

- Convert real world problems to hypothesis and perform statistical analysis.
- Perform data analysis using in R.
- Design efficient modeling of huge data and work in big data platforms.

Course: Diploma course on AI and ML using pytorch
Subject Code: 23DIP01

Aim:

To learnt the basics of AI and ML using pytorch

Objectives:

Mastering PyTorch: Gain comprehensive knowledge and hands-on experience with PyTorch.

Neural Network Proficiency: Become proficient in designing and implementing various types of neural networks.

Practical AI Solutions: Develop practical AI solutions that can be deployed in real-world environments.

Unit-1

Introduction to Artificial Intelligence (AI) and Machine Learning (ML) - Understanding the concepts of AI and ML- Differences between AI and ML - Importance and applications of AI and ML in various fields - Overview of the Pytorch framework.

Unit-2

Fundamentals of Pytorch - Introduction to Pytorch and its features - Installation and setup of Pytorch - Basics of tensors and operations in Pytorch - Working with variables and gradients in Pytorch - Data loading and preprocessing using Pytorch.

Unit -3

Supervised Learning with Pytorch - Overview of supervised learning algorithms - Linear regression using Pytorch - Logistic regression using Pytorch - Support Vector Machines (SVM) using Pytorch - Implementing neural networks for classification and regression tasks

Unit-4

Unsupervised Learning with Pytorch - Overview of unsupervised learning algorithms - K-means clustering using Pytorch - Hierarchical clustering using Pytorch - Principal Component Analysis (PCA) using Pytorch - Autoencoders and dimensionality reduction techniques

Unit-5

Deep Learning with Pytorch - Introduction to deep learning and neural networks - Building and training deep neural networks using Pytorch - Convolutional Neural Networks (CNN) using Pytorch - Recurrent Neural Networks (RNN) using Pytorch - Transfer learning and fine-tuning with Pytorch

Circular

PRIST/A&S/PH/23-24/3

Date: 10.07.2023

This is to inform all physics students that the value added courses classes for academic year 2023-24 odd semester will be commenced from 17.07.2023. Hence requesting all registered students to attend the classes without fail.

1. Diploma course on crystal growth analysis
2. Certificate course on industry linked optical fiber technology
3. Certificate course on installation and maintenance of digital circuits
4. Certificate course on regulated power supply
5. Certificate course on cosmology and structure formation

About PRIST

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST), a Deemed University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 30 years in promoting quality education and research for our Indian community, since its inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

About School of Arts and Science

School of Arts and Sciences consists of Tamil, English, Mathematics, Physics, Chemistry, Biochemistry, Biotechnology, and Microbiology departments. It offers B. Sc., M.Sc. M.Phil. and Ph.D. programmes in all disciplines. It comprises of well qualified and research oriented faculty members whose are experts in the frontier areas in Sciences. Faculty members have received research projects from various funding agencies such as DST, CSIR, DRDO, and ICMR.

About Physics Department

The Physics Department offers credit based undergraduate programme, Bachelor of Science (B.Sc.) in Physics, postgraduate programme, Master of Science (M.Sc.) in Physics and Ph.D. programmes. The Department also offers credit based core and elective courses in basic Physics to undergraduate first year engineering (B.Tech)

List of topics covered in the programme

Unit I - Thermodynamics of Crystal Growth

Saturation and super saturation – solubility curve – expression for super saturation–solubility diagram

–nucleation – Theories of nucleation – Gibbs Thomson equation for vapour –Modified Thomson's equation for melt – Gibbs Thomson equation for solution – Kinetic of crystal growth– Single and rough faces – Models of surface roughness - KSU theory and BCF theory.

Unit II - Growth from solutions

Low temperature solution growth: Slow cooling process – solvent evaporation process –Temperature difference process – Use of electrolytic process high temperature solution growth: Solvent & methods – slow cooling methods – temperature difference methods – high pressure method – solvent evaporation method – electrolytic process - liquid phase epitaxial.

Unit III - Growth from melt

Bridgeman and related techniques – crystal pulling – convection in melts – modeling and simulation of bulk crystal growth considering melt growth – Czochralski technique – zone melting technique – skull melting process – Verneuil process-Heat exchange method.

Unit IV - Other Crystal Growth Techniques

Physical vapour deposition–chemical vapour deposition – chemical vapour transport –definition – fundamentals – choice of transport reactions – specifications – Transported materials and agents- STP, LTVP,OTP-Hydrothermal growth: Design aspect of autoclave-electro crystallization-Gel method: principle-types of gels-structure of gels-growth in gels-experimental procedure-biological crystallization.

Unit V - Analysis and Characterization of Crystals

Optical transmission studies (UV) Micro hardness studies-Structural analysis-XRD-Fourier Transform-IR-Spectral analysis-Scanning Electron Microscopy (SEM)-different etching techniques.

CRYSTAL GROWTH ANALYSIS

Course Objectives:

This course is designed to provide a detailed study on Ceramic materials and their applications in devices. The prerequisite for this would be to do a first course on concepts of materials science.

Course Outcomes:

At the end of this course, students will have a thorough knowledge of functional ceramic materials. Know the methods of synthesis of functional ceramics. Acquire knowledge of how to choose ceramic materials for specific applications.

Unit I - Thermodynamics of Crystal Growth

Saturation and super saturation – solubility curve – expression for super saturation–solubility diagram –nucleation – Theories of nucleation – Gibbs Thomson equation for vapour –Modified Thomson's equation for melt – Gibbs Thomson equation for solution – Kinetic of crystal growth– Single and rough faces – Models of surface roughness - KSU theory and BCF theory.

List of topics covered in the programme

Unit 1- Introduction

Need for optical communication, salient features of optical fibers, ray theory of light guidance, numerical aperture, modes of a fiber, single and multimode fibers, step-index and graded-index fibers.

Transmission characteristics of optical fibers, attenuation, pulse broadening mechanism, intermodal dispersion, bit rate - length product, material dispersion.

Unit 2- Basic Optical Communications Concepts

P2P System, Transmitter, Light Source, LED, Laser Diode, Detector, PIN diode, Avalanche PhotoDiode, Optical Amplifiers, EDFA, PDFA, Regeneration, ADM, OADM, Digital Cross Connect, RPR Ring.

Unit 3- Optical Fiber

Core, Cladding, Primary Buffer, Types of Fibers, Silica Core Silica Cladding, Silica Core, Plastic Cladding (PCS), Plastic Core Plastic Cladding (POF), fiber fabrication techniques.

Unit 4- Cable Splicing

COURSE OBJECTIVES:

1. To realize the significance of optical fiber communications.
2. To understand the construction and characteristics of optical fiber cable.
3. To develop the knowledge of optical signal sources and power launching.
4. To identify and understand the operation of various optical detectors.
5. To under the design of optical systems and WDM.

Unit 1- Introduction

Need for optical communication, salient features of optical fibers, ray theory of light guidance, numerical aperture, modes of a fiber, single and multimode fibers, step-index and graded-index fibers.

Transmission characteristics of optical fibers, attenuation, pulse broadening mechanism, intermodal dispersion, bit rate - length product, material dispersion.

Unit 2- Basic Optical Communications Concepts

P2P System, Transmitter, Light Source, LED, Laser Diode, Detector, PIN diode, Avalanche Photo Diode, Optical Amplifiers, EDFA, PDFA, Regeneration, ADM, OADM, Digital Cross Connect, RPR Ring.

Unit 3- Optical Fiber

Core, Cladding, Primary Buffer, Types of Fibers, Silica Core Silica Cladding, Silica Core, Plastic Cladding (PCS), Plastic Core Plastic Cladding (POF), fiber fabrication techniques.

Unit 4- Cable Splicing

Fusion Splicing, Mechanical Splicing, Single Fiber Fusion Splicing, Mass Fusion Splicing, Stages

4. Fiber Optic Communications – Joseph C. Palais, 4th Edition, Pearson Education, 2004.

COURSE OUTCOMES:

At the end of the course the student will be able to:

1. Understand and analyze the constructional parameters of optical fibers.
2. Be able to design the optical system.
3. Estimate the losses due to attenuation, absorption, scattering and bending.
4. Compare various optical detectors and choose suitable one for different applications.

About PRIST

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST), a Deemed University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 30 years in promoting quality education and research for our Indian community, since its inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

About School of Arts and Science

School of Arts and Sciences consists of Tamil, English, Mathematics, Physics, Chemistry, Biochemistry, Biotechnology, and Microbiology departments. It offers B. Sc., M.Sc. M.Phil. and Ph.D. programmes in all disciplines. It comprises of well qualified and research oriented faculty members whose are experts in the frontier areas in Sciences. Faculty members have received research projects from various funding agencies such as DST, CSIR, DRDO, and ICMR.

About Physics Department

The Physics Department offers credit based undergraduate programme, Bachelor of Science (B.Sc.) in Physics, postgraduate programme, Master of Science (M.Sc.) in Physics and Ph.D. programmes. The Department also offers credit based core and elective courses in basic Physics to undergraduate first year engineering (B.Tech) students.

Unit 2

Combinational Logic: Combinational Circuits: Analysis Procedure, Design procedure, Binary adder, subtractor, Decimal adder, Binary multiplier, Magnitude comparator, Multiplexers, Demultiplexers, Decoders, Encoders.

Unit 3

Sequential Logic and Its Applications: Storage elements: latches & flip Flops, Characteristic Equations of Flip Flops, Flip Flop Conversion, Shift Registers, Ripple Counters, Synchronous Counters, Other Counters: Johnson & Ring Counter.

Unit 4

Synchronous & Asynchronous Sequential Circuits: Analysis of clocked sequential circuits with state machine designing, State reduction and assignments, Design procedure. Analysis procedure of Asynchronous sequential circuits, circuit with latches, Design procedure, Reduction of state and flow table, Race-free state assignment, Hazards.

Unit 5

Memory & Programmable Logic Devices: Digital Logic Families: DTL, DCTL, TTL, ECL & CMOS etc., Fan Out, Fan in, Noise Margin; RAM, ROM, PLA, PAL; Circuits of Logic Families, Interfacing of Digital Logic Families, Circuit implementation using ROM, PLA and PAL; CPLD and FPGA.

Course Objectives

This course is a graduate-level introduction to astrophysical cosmology, with emphasis on the “standard” big bang theory of the universe and, in the latter part of the course, its extension to a more detailed theory (the inflation + cold dark matter + cosmological constant model) that is presently the leading scenario for explaining the origin of structure in the universe.

About PRIST

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST), a Deemed University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 30 years in promoting quality education and research for our Indian community, since its inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

About School of Arts and Science

School of Arts and Sciences consists of Tamil, English, Mathematics, Physics, Chemistry, Biochemistry, Biotechnology, and Microbiology departments. It offers B. Sc., M.Sc. M.Phil. and Ph.D. programmes in all disciplines. It comprises of well qualified and research oriented faculty members whose are experts in the frontier areas in Sciences. Faculty members have received research projects from various funding agencies such as DST, CSIR, DRDO, and ICMR.

About Physics Department

The Physics Department offers credit based undergraduate programme, Bachelor of Science (B.Sc.) in Physics, postgraduate programme, Master of Science (M.Sc.) in Physics and Ph.D. programmes. The Department also offers credit based core and elective courses in basic Physics to undergraduate first year engineering (B.Tech) students.

List of topics covered in the programme

Unit 1

Block diagram of microcontroller : CPU, input device, output device, memory and buses, common features of Microcontrollers : On-chip Oscillator, program and data memory, I/O Ports, Watchdog-timer reset, SFRs, Timers, Counters, Interrupts, ADC, PWM,

Unit 2

Blocks of Microcontroller 8051: ALU, PC, DPTR, PSW, Internal RAM, Internal ROM, Latch, SFRs, General purpose registers, Timer/Counter, Interrupt, Ports, Functions of each pin of 8051 Clock circuit, reset Circuit , phase and state in machine cycle of 8051, Memory organization of 8051: Program and Data memory Map, External Memory Addressing and Decoding Logic of 8051.

Unit 3

Addressing Modes : Immediate, Register, Direct, Indirect, Indexed, Relative and bit addressing, Instruction set :Data Transfer, Arithmetic, Logical, Branching, and Machine Control, Looping , Counting, sorting and Indexing. Data manipulation, Masking , Stack operation, Conditional programming,

Unit 4

Switch: Pushbutton, DIP, Thumbwheel, Tilt, Relay, LED, 7 segment LED, LCD, ADC0804, Temperature sensor LM35, DAC0808, ADC0804, Damper Control, Hoper Control, DC Motor, Stepper motor, Serial communication using MAX 232, Hyperterminal

Unit 5

Application of microcontroller in various field - Using LM35, ADCC0804, Microcontroller, 7 segment LED - Using Analog Multiplexer 4051, ADC0804, Microcontroller, 7 segment LED, MAX232 - Using GSM Modem, Microcontroller, Relay, Switches - Using Photo interrupter, Microcontroller, 7 Segment LED - Using Pushbutton switches, Microcontroller, Relay, NVRAM.

Syllabus

Course Objectives:

The main objectives of this course are to:

1. To make student to know the significance of microcontroller
2. To convey details about several tools about microcontroller
3. To acquire hands-on training on the maintenance of microcontroller
4. To transfer knowledge on the possibility of Employability and Entrepreneurship avenues in the field of microcontroller

Unit 1

Block diagram of microcontroller : CPU, input device, output device, memory and buses, common features of Microcontrollers : On-chip Oscillator, program and data memory, I/O Ports, Watchdog-timer reset, SFRs, Timers, Counters, Interrupts, ADC, PWM, microprocessor and microcontroller, Hierarchy of microcontrollers, architectures of microcontroller Harvard, Von Neumann RISC and CISC, Applications: House hold, Communication, Office equipment and industrial automation

Unit 2

Blocks of Microcontroller 8051: ALU, PC, DPTR, PSW, Internal RAM, Internal ROM, Latch, SFRs, General purpose registers, Timer/Counter, Interrupt, Ports, Functions of each pin of 8051 Clock circuit, reset Circuit, phase and state in machine cycle of 8051, Memory organization of 8051: Program and Data memory Map, External Memory Addressing and Decoding Logic of 8051, Stack, Stack Pointer and Stack operation, Timers/Counters logic diagram and its operation in various modes, I/O Ports structure: Port 0, Port 1, Port2, Port 3., Serial Communication in various modes, Interrupt structure, vector address, priority and operation

Unit 3

Addressing Modes : Immediate, Register, Direct, Indirect, Indexed, Relative and bit addressing, Instruction set :Data Transfer, Arithmetic, Logical, Branching, and Machine Control, Looping, Counting, sorting and Indexing, Data manipulation, Masking, Stack operation, Conditional programming, Configuration and programming of Timer/Counter using SFRs: TMOD, TCON,

Course Outcomes

- i. At the end of the course, trainees/students will be able to:
 - I Identify features of various microcontroller
- ii. Select appropriate microcontroller for different application
- iii. Interface microcontroller with hardware for given application
- iv. Write and execute assembly language programs(software) for given application
- v. Develop small microcontroller based applications.

About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

About the Department

The School of Agriculture under Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) was established at Vallam, Thanjavur in the year 2016.

The agriculture is intended to impart high quality education so as to produce not just agricultural graduates but agro technocrats with practical and conceptual skills. With precise and deliberate course modules, which provides education, research and training along with first hand field experiences, the students would sure be transformed as skilled human resources.

The Department has young as well as experienced and dynamic personalities as faculty, is involved in providing quality education at Undergraduate (UG) levels. The staffs are from various disciplines in Doctorate like Plant Pathology, Microbiology, Soil science, Plant Genetics and Veterinary. The staffs are from various disciplines in masters like Agricultural Entomology, Agronomy, Agricultural Extension, Horticulture and Economics. Many of the staff members are encouraged to pursue their higher studies and research works.

About the Course

Introduction and Overview

- Vegetable occupy an important place in our daily life particularly for vegetarians. Vegetables are the only source to increase not only the nutritive values of foods but also its palatability. For a balanced diet, an adult should have an intake of 85 g of fruits and 300 g of vegetables per day as per the dietary recommendation of nutrition specialists. But the present level of production of vegetables in our country can permit a per capita consumption of only 120 g of vegetables per day.
- However, people in India especially in the rural areas seldom eat vegetables due to the following reasons. Considering the above facts, we should plan to produce our own vegetable requirements in our backyards using the available fresh water as well as the kitchen and bathroom wastewater. This will not only facilitate prevention of stagnation unused water which will be hazardous to our health through environmental pollution, but can be useful for successful production of our own requirement of vegetables. Cultivation in a small area facilitates the methods of controlling pests and diseases through the removal of affected parts and non-use of chemicals. This is a safe practice, which does not cause toxic residues of pesticides in the vegetables produced

What Kitchen garden?

- Kitchen garden is the growing of fruits and vegetables at the backyard of house by using kitchen waste water.
- Otherwise called as Home garden or Nutrition garden or Kitchen gardening or Vegetable gardening

Benefits of Kitchen-garden

Supply fresh fruits and vegetables high in nutritive value.

Supply fruits and vegetables free from toxic chemicals.

Help to save expenditure on purchase of vegetables.

- Vegetables harvested from home garden taste better than those purchased from market.
- Effective utilization of kitchen waste water and kitchen waste materials. Exercise to the body and mind.

Learning outcomes of the course unit

- Gardeners fed their families first and then sell, barter or give away surplus garden foods. In certain contexts, however, income generation may become the primary objective of the home garden. In any case, it is counterproductive to impose the nutrition objective to the exclusion of the income generation objective, since in most contexts they are linked and compatible.
- The potential economic benefits of home gardening include the following
- Gardening gives dual benefits of food and income generation
- Garden provide fodder for household animals and supplies for other household needs (hand-crafts, fuel wood, furniture, baskets, etc.)

About the Course

Introduction and Overview

Landscaping is the process of modifying the visible features of an area to enhance its aesthetic appeal, functionality, and overall value.

As you dive into the world of landscaping, there are a few key aspects to consider that will make your outdoor area truly shine. First of all, it's important to think about the design of your landscape.

What is post-harvest technology?

Post-harvest technology is the application of scientific and engineering principles to the handling, storage, packaging, distribution, and sale of agricultural produce after it has been harvested.

Post-harvest technology is used to improve the quality and extend the shelf life of food. It also helps to reduce wastage and improve food safety.

In agriculture, postharvest handling is the stage of crop production immediately following harvest, including cooling, cleaning, sorting and packing. The instant a crop is removed from the ground, or separated from its parent plant, it begins to deteriorate.

Postharvest treatment largely determines final quality, whether a crop is sold for fresh consumption, or used as an ingredient in a processed food product.

Learning outcomes of the course unit

- Assessing postharvest losses and quality problems for crops
- Accessing online resources on postharvest information and extension
- Identifying small-scale postharvest technologies and potential solutions which are most appropriate for local target groups

About the Course

Introduction and Overview

- Agritourism is a business model that is growing in popularity as Indiana farmers recognize a need to diversify their operations and supplement their farm incomes.
- In addition, there is a growing public desire to engage in rural experiences and outdoor recreational activities.
- By combining agriculture and tourism, agritourism offers rural experiences to urban residents and economic diversification to farmers. Planning for agritourism requires a forward-thinking, locally-driven process.

guide for agritourism providers, community leaders, extension agents, and rural economic development and tourism professionals.

What is agritourism?

- Agritourism, sometimes called rural tourism, is a subset of the leisure and hospitality industry that combines elements of tourism and agriculture. Although farm tourism is one of the most well-known types of agritourism, there is a wide array of businesses that fall under this category.
- In essence, any agricultural operation that provides tours or allows guests to visit or stay overnight on the property can be considered an agritourism business. Examples include:
 - Vineyards and wine tours
 - Family farms and hobby farms
 - Farm-to-table culinary experiences
 - Guest ranches or dude ranches
 - Barn weddings
 - Horseback rides and pony rides
 - Petting zoos
 - Corn mazes
 - Horse-drawn carriage and sleigh rides
 - Guided hunting trips on private land

Benefits of starting an agritourism business

- Many people who own an agricultural operation — such as a farm, ranch, or vineyard already have much of the necessary infrastructure to start an agritourism business, including land, attractions, and

- Because this infrastructure often comes with a large overhead expense, the additional revenue generated by an agritourism venture can be a significant financial advantage when managed successfully.

Learn what it takes to manage a successful venture

- Developed by experts with significant experience in the tourism industry, this program provides the in-depth knowledge you need to successfully plan and manage an agritourism operation. Learn to adapt or expand existing infrastructure to create enjoyable, memorable experiences for visitors.
- Also gain insights in building a comprehensive business plan that includes elements like launching a website, promoting the business, booking guest reservations, organizing activities, managing finances, and complying with local laws and regulations.
- Offered in an online format, the program allows you to complete coursework on a flexible schedule, from the comfort of your own home.

Learning outcomes of the course unit

- To obtain and diversify knowledge from tourism, rural tourism and their specific form agri-tourism.

Course contents

Unit I: Agritourism - as part of rural development and tourism. Definition and forms. Strengths and weaknesses.

Unit II: Business projects - their content and development. Economic and environmental aspects of agritourism.

Unit III: Characteristics of quality and their grant.

Unit IV: Field exercises in agro-tourism farms and facilities.

HEAD

Unit V: Excursion on the international exhibition focusing on tourism, rural tourism and agri-tourism.

About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

About the Department

The School of Agriculture under Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) was established at Vallam, Thanjavur in the year 2016.

The staffs are from various disciplines in masters like Agricultural Entomology, Agronomy, Agricultural Extension, Horticulture and Economics. Many of the staff members are encouraged to pursue their higher studies and research works.

About the Course

Introduction and Overview

- A system of "resource-saving agricultural crop production that aims to achieve acceptable profits, high and sustained production levels while concurrently conserving the environment

What is Conservation Agriculture?

Conservation Agriculture (CA) is a farming system that can prevent losses of arable land while regenerating degraded lands. It promotes maintenance of a permanent soil cover, minimum soil disturbance, and diversification of plant species. It enhances biodiversity and natural biological processes above and below the ground surface, which contribute to increased water and nutrient use efficiency and to improved and sustained crop production.

Objectives of Conservation Agriculture

- Conservation agriculture aims to improve crop yields while protecting the environment and soil
- Conservation tillage minimizes soil loss by leaving at least 30% of crop residue on the surface.

Eligibility: Any graduates / ongoing degree students shall be eligible for the admission to the course.

Duration of the Program: 45 hrs. Value added Certificate Course.

About the Course

Introduction and Overview

Hi-tech nursery is a place where plants are raised from seeds/other vegetative methods for production of new plants under protected and controlled conditions.

What is Hi – tech nursery?

Hi Tech Nursery is a combination of poly green house and agrinet house. Vegetative reproduction is used in such nurseries to ensure genetic similarities with the source.

Objectives of Hi - tech nursery

- To produce quality seedlings in a protected environment for growers, which can lead to higher crop productivity.

ABOUT THE UNIVERSITY

PRIET University, PonnaiyahRamajayam Institutions, made a foray into the Academic Domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Polytechnic college are added feathers to the PRIET crown. Today, PRIET commands a massive student base, spread across a whole array of campuses such as Paduberry, Trichy, Kumbakonam, Chennai and Madurai. The Academic research extends right form school education upto the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, education , Pharmacy, Management, Technology etc.

ABOUT FACULTY OF MATHEMATICS

High quality teaching across a broad range of disciplines Promoting world class research in mathematics. Dedicate the communication expansion and integration of knowledge through excellence and to make the institution campus as a centre of academic excellence in mathematics.

		Syllabus Version		2022-23	

The main objectives of this course are to:

1. Understand the operations and functions of R Programming
2. Perform statistical analysis using built-in functions
3. Learn and write customized program for mathematical and statistical problems

On the successful completion of the course, student will be able to:

Expected Course Outcomes

1	Understand the basics Maths Skill	K2
2	Apply the logical skills for performing statistical analysis	K4
3	Use appropriate plots, charts and diagrams for all kinds of data	K3
4	Perform parametric methods	K3
5	Write and execute the coding theory	K6

Unit:1	Numbers and Basic operations, Fractions and Decimal Numbers, Percentage, Profit and Loss, Simple and Compound Interest, Ratio and Proportion	K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 - Create
Unit:2	Time and Distance, Time and Work, Speed, Average,	
Unit:3	Laws of Exponents, Menstruation.	
Unit:4	Progression, Series, Problems of Mathematical Signs, Finding Position, Analogy, Odd one out	
Unit:5	Coding and Decoding, Family Relations, Direction Problems, Time and Angles, Time in a clock and it's Reflection's, Date and Calendar

Course Objectives

- The main objectives of this course are to:
1. Understand the operations and functions of Statistics
 2. Perform statistical analysis using computer language
 3. Learn and write customized program for mathematical and statistical problems

Expected Course Outcomes

On the successful completion of the course, student will be able to:					
1	To bridge the skill gaps and make students industry ready.				K2
2	To provide an opportunity to students to develop inter-disciplinary skills				K4
3	To impart the Knowledge to the students with MATLAB software. [This enhances programming knowledge in Research and Development].				K3
4	To provide a working introduction to the Matlab technical computing environment. [Themes of data analysis, visualization, and programming].				K3
5	Break a complex task up into smaller, simpler tasks				K6
K1 - Remember; K2 - Understand; K3 - Apply; K4 - Analyze; K5 - Evaluate; K6 -- Create					
Unit:1	Basics of Matlab and MATLAB Compiler :The Matlab user interface ,Working with Matlab data types ,Creating matrices and arrays				
Unit:2	Operators and control statements ,Using scripts and functions ,Data import and export ,Using the graphical features				
Unit:3	Programming with simple examples: Operators and control statements				
Unit:4	Discussion of Toolboxes with Applications , Signal Processing, Image Acquisition Toolbox , Image Processing , Neural Network , Fuzzy Logic Toolbox				
Unit:5	Simulink and Hardware Interfacing (Using Kits: Lego, Raspberry Pi, Mind storms etc)

Course Objectives

The main objectives of this course are to:

1. In physics, Lie groups appear as symmetry groups of physical systems, and their Lie algebras (tangent vectors near the identity) may be thought of as infinitesimal symmetry motions.
2. Lie algebras and their representations are used extensively in physics, notably in quantum mechanics and particle physics.

Expected Course Outcomes

On the successful completion of the course, student will be able to:

1	Understand the basics of R Language	K2
2	Apply the logical skills for performing statistical analysis	K4
3	Use appropriate plots, charts and diagrams for all kinds of data	K3

DIPLAMA IN ORGANIC FARMING -17515OF

Aim:

To acquaint students with philosophy, objectives and principles of organic agriculture.

Course objective:

- To impart knowledge and proficiency in Organic production practices, Certification process and Marketing of organically raised agriculture products.
- To promote self-employment and income generation

Course Outcome:

- Understand the concept and the importance of organic farming
- Distinguish the different streams of Agriculture.
- Maintain and preserve existing ecosystems and promote the maintenance of the balance of the recommended farming system.
- Have relevant knowledge of agricultural technology for the fertilization of the land mobilization and composting.
- Have relevant knowledge of agricultural technology for composting methods in organic farming.
- Know legislation rules on livestock in OF.

Unit: I- Introduction: Farming, organic farming, concept and development of organic farming. Principles of organic farming & Need for organic farming, Agencies and institutions related to organic agriculture.

Unit: II-Organic farming systems, Soil tillage, Choice of Varieties, crop notation multiple and cropping systems, intercropping in relation to maintained of soil productivity by Propagation-seed, planting materials.

Unit:III- Plant protection- cultural, Plant protection - mechanical . Plant protection- botanical pesticides I, Plant protection- botanical pesticides II, Plant protection- botanical pesticides III. Plant protection- biopesticide. Plant protection- biocontrol agents, Plant protection- biocontrol agents.

Unit:IV-Organic crop production methods- rice, coconut, cashew, vegetables. Livestock component in organic farming, Livestock Management in organic farming.

Unit:V- Farm economy: Basic concept of economics- Demand, supply, Economic Viability of a farm. Basic production principles, reducing expenses, ways to increase returns.

ABOUT THE UNIVERSITY

PRIST University, Ponnaiyah Ramajayam Institutions, made a foray into the Academic Domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Polytechnic College are added feathers to the PRIST crown. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Pudukottai, Trichy, Kumbakonam, Chennai and Madurai. The Academic research extends right from school education up to the level of the Ph.D. Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, education, Pharmacy, Management and Technology etc.

FACILITIES AVAILABLE

The University is housed in an independent, multi storey building with state of art equipment, excellent Laboratories and infrastructure to help complete this course. Majority of the research have been going on monitoring the research program. Computer Library with internet facilities for students, Hostel facilities, Health centre, Sports complex, etc...

DEPARTMENT OF BIOCHEMISTRY

Life science course is very broad where one get to touch and know about all the major areas of life (biological) sciences.

The Biochemistry is focusing on some major areas like genetics, biochemistry, cell biology, molecular biology. So this course can provide much firmer lead on fermented production.

ABOUT FACULTY OF BIOCHEMISTRY

The department of Life Science was established in the year 2006, with Biototechnology, Biochemistry and Microbiology. Department focuses on research and education different courses like M.Phil, M.Sc, M.Tech, M.A, M.Ed and Ph.D programs offered. In this department there are 10 faculty members (Professor, Associate and Assistant Professor) and they having Post-Doctoral Research experience from Israel, Malaysia, China, Korea and South Africa. The areas of research of the department Molecular diagnostics, Stem Biotechnology, Metabolic Engineering, Biochemistry, Biotechnology, Agro medical technologies. The department has published quality research paper in leading scientific publishers such as Thovier, Springer, RSC, etc.

COURSE OBJECTIVE

This course is planned to give adequate knowledge on Organic Farming to train the students for self-employment.

COURSE DURATION (90 Hrs.)

COURSE CONTENT (Module 1)

- Organic farming
- Organic agriculture

COURSE CONTENT (Module 2)

- Organic farming system
- Choice of varieties

COURSE CONTENT (Module 2)

- Plant production
- Biological agents

COURSE CONTENT (Module 4)

- Organic crop production methods

Management in organic farming

COURSE CONTENT (Module 5)

- Farm economy
- Economic Viability of a farm

EXAMINATION

They shall be an annual university examination at the end of academic years.

Eligibility criteria for appearing in the in the final examination

- Minimum Attendance - 80%
- Minimum Internal Assessment marks - 40%
- It will be done through the whole year.
- Candidate must obtain at least 35% marks in theory and practical separately in internal
- Assessment to be eligible for the annual university examination.
- Internal assessment (Theory) will be done as follows:
- a) Mid-term and term examinations = 10 marks
- b) Assignments, Projects/Case - test/Clinical Presentations = 05 marks
- c) Attendance = 05 marks
- Total = 20 marks

Criteria for a pass in the subject

- Minimum marks in theory - 40
- Scheme of Examination:-
- Duration of written examination - 1 hr.
- Examination marks - 100

Course Program Objective

Students enrolled for the diploma course in Organic Farming product will following the objectives. Students will demonstrate knowledge of scientific principles related to agriculture.

- Understand what it takes to start and successfully operate a farm or educational project
- Use information from the course and other sources to make farm management decisions
- The ability to speak clearly about farm management, agriculture, food systems, small business management and your farm goals

Eligibility criteria

Any graduate shall be eligible for the examination in the course Intake Capacity 15 Seats on first come first basis (Additional admissions in the course is prerogative of the school)

Course Structure and Duration

Course is 12 month duration and will be of 30 hrs imparted training programme covering theoretical and practical aspects of fermentation technology.

Certification

The candidates successfully completing the course the course shall be awarded a certificate in that effect by the appropriate form by School of Arts and Science, Department of Biochemistry, PRIST University, Thanjavur, Vallam.

Value added course- (23-24) Certificate course on Techniques in Biochemistry 22515TB (45 Hours)-Syllabus

AIM- Developing analytical skills: Students should develop analytical, technical, and critical thinking skills.

COURSE OBJECTIVES

- Understanding biochemical processes: Students should gain a solid foundation in biochemical processes.
- Developing analytical skills: Students should develop analytical, technical, and critical thinking skills.
- Becoming scientifically literate: Students should become scientifically literate so they can contribute to the field after graduation.
- Learning about biological phenomena: Students should learn about the chemistry of biological phenomena in living organisms.

Unit:1

Basic Instruments and techniques: Working principles, basic operation and application of Microtome, weighing balance, PH meter, autoclave, Oven, laminar air flow, Water Baths, CO₂ Incubators, Shaking Incubators, Hot Air Ovens, Bio-Safety Hoods, Fume Hoods, Pipettes and MiliQ water system. Principle of asepsis and sterilization technique.

Unit:2

Microscopy and its modifications – Working principles, basic operation and application of Light, phase contrast and interference, Fluorescence, Confocal, Electron (TEM and SEM)

Centrifugation: Working principles, basic operation and application of micro-centrifuge, ultracentrifuge and density gradient centrifugation, applications (isolation of cell components), determination of molecular weight by sedimentation velocity and sedimentation equilibrium methods

Unit:3

Electrophoretic and PCR techniques: Working principles, basic operation and application of agarose, polyacrylamide and SDS-polyacrylamide gel electrophoresis, capillary electrophoresis, 2-D electrophoresis, pulsed field gel electrophoresis. Working principles, basic operation and application of Gradient PCR, RT-PCR and Gel Documentation system.

Unit:4

Chromatography techniques: Working principles, basic operation and application of TLC, gel permeation, ion exchange and affinity chromatography, HPLC. Spectroscopy technique: Working principles, basic operation and application of UV visible spectroscopy, fluorescence, NMR, ESR, plasma emission spectroscopy, Atomic Absorption Spectroscopy, GC-MS, LC-MS, FTIR and X-ray crystallography

Unit:5

Calibration, Validation, and certification of instruments like PCR's, Ovens, Incubators, Volumetric Dispensers, Spectrophotometers, and Electronic Balances etc. using International Standards.

Documentation for Instrumentation systems and procurement procedures, design of typical laboratory, safety measurement and IPR's.

Certificate course on Vermicompost -- 19115VC (45 Hours)-Syllabu

Course Description: This course covers the principles and practices of vermicomposting, a sustainable method of organic waste management using earthworms.

Course Objectives:

- Understand the basics of vermicomposting and its importance in waste management
- Learn how to design and operate a vermicomposting system
- Understand the role of earthworms in vermicomposting
- Analyze the nutritional and economic benefits of vermicompost
- Develop skills to troubleshoot common issues in vermicomposting

Module 1: Introduction to Vermicomposting

- Definition and history of vermicomposting
- Principles of vermicomposting
- Benefits of vermicomposting

Module 2: Earthworm Biology and Ecology

- Earthworm anatomy and physiology
- Earthworm species used in vermicomposting
- Earthworm behavior and ecology

Module 3: Vermicomposting Systems Design

- Types of vermicomposting systems (e.g., bins, beds, piles)
- Materials and construction considerations
- Scaling up vermicomposting systems

Module 4: Feedstock Management

- Types of organic waste suitable for vermicomposting
- Feedstock preparation and mixing

- Carbon-to-nitrogen ratio management

Module 5: Operating a Vermicomposting System

- Moisture management
- Temperature management
- pH management
- Aeration and ventilation

About the University
 Ponnalysh Ramajayam Institute of Science and Technology (PRIST) is a deemed university in Vellore, India. The institute offers undergraduate and postgraduate courses in Engineering, Science, Education, Management, Arts, and Law, as well as research programmes.

Facilities Available
 The University is housed in an independent, well-stone building with state-of-the-art equipment, excellent laboratories and infrastructure to help complete this course. Majority of research have been set up in monitoring the research program. Computer Library with internet facilities for students. Hostel facilities, Health centre, Sports complex, etc.

Department of Biochemistry
 Soil science course is very broad where one get to know and know about all the major areas of Soil (biological) sciences.
 The Biochemistry is focusing on some major areas like genetics, biochemistry, cell biology, molecular biology. So this course can provide much deeper hand on Biochemistry production.

**CERTIFICATE COURSE
 VERICOMPOST
 2023-2024**

COURSE OBJECTIVE
 - To inculcate concepts of vermicomposting.
 - To understand techniques in Vermicomposting.
 - To increase employability of the students.
 - To improve the soil quality by promoting the soil fertility.

To educate about role of Earthworms
 To learn the importance of Earthworms and help to maintain a good soil structure.
 To educate about Recycling of wastes through vermicomposting.

COURSE CONTENT (Module 1)
 Classification earthworm
 Anatomy of earthworm

COURSE CONTENT (Module 2)
 Types of Vermicomposting
 Biological properties

COURSE CONTENT (Module 3)
 Raw materials for composting
 Efficiency of vermicomposting

COURSE CONTENT (Module 4)
 Advantage of vermicomposting
 Application of vermicomposting

COURSE CONTENT (Module 5)
 Small Scale or Indoor vermicomposting
 Applications of vermicomposting

EXAMINATION
 There shall be an university examination at the end of academic years.

Eligibility criteria for appearing in the in the final examination
 Minimum Attendance - 80%
 Minimum Internal Assessment marks - 40%
 * It will be done through the whole year.
 * Candidate must obtain at least 75% marks in theory

Internal assessment to be eligible for the university examination.

Internal assessment (Theory) will be done as follows:
 a) Mid-term and term examinations = 20 marks
 b) Assignments/Projects/Class test/Clinical Presentations = 05 marks
 c) Attendance = 05 marks

Total = 20 marks

Criteria for a pass in the subject
 Minimum marks in theory - 45

Scheme of Examination:-
 Duration of written examination - 3 hrs
 Maximum marks - 100

Level of Knowledge Expected
 Working knowledge with moderate technological value

Duration of the program
 45 hrs add on certificate course

Course Program Outcome

- Understanding the role of waste farming in Modern Farming
- Understanding the potential of vermicompost as an alternative to chemical fertilizers
- Role of vermiculture in assessing the health of soil and humans
- Estimate importance of vermiculture
- Role of Vermiculture in protecting the environment and managing the waste

Eligibility criteria
 Any graduate shall be eligible for the admission to the course (Total Capacity 15 Seats on first come first basis (Additional admission to the course is prerogative of the school)

Course Structure and Duration
 Course is 6 month duration and will be of 45 hrs imparted training programme covering theoretical and practical aspects of vermicompost.

Certification
 The candidates successfully qualifying the course the course shall be awarded a certificate in that effect in the appropriate form by School of Arts and Science, Department of Biochemistry, PRIST University, Thanjavur, Vellore.

It is informed that employability/ entrepreneurship/ skill development training will be started on 12.06.2023 – 14.08.2023 for the academic year 2023-2024. The detailed schedule will be given by the departments.

Heads of the departments are requested to inform their students about the skill development training and motivate them to participate the training classes.

HOD'S are also requested to nominate one faculty member to co-ordinate the training class.

ABOUT THE INSTITUTION

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST), a Deemed University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 25 years promoting quality education and research for our Indian community, since its inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

ABOUT THE DEPARTMENT

The Department of Electrical and Electronics of PRIST DEEMED UNIVERSITY was established in 2008. Since then its excellence in each and every aspect has played an important role in the institute. The department received university status under section 3 of UGC Act 1956.

The EEE Department is dedicated to delivering competent electrical engineers to the arena of the real world. They are outfitted with core technical knowledge as well as professional skills necessary to face the challenges of the future. The committed faculty and staff are fully geared up towards this end.

The department has spacious laboratories such as Machines lab, Electric Circuits Lab, Measurement and Instrumentation Lab, Control System Lab, Power Electronics Lab and Power systems Simulation Lab. All the laboratories are fully equipped with latest, modern and sophisticated equipments.

The Department has young as well as experienced and dynamic personalities as faculty, is involved in providing quality education at both Undergraduate (UG) and Postgraduate (PG) levels. The staffs are from various disciplines in masters like Power electronics and drives, Power system, advanced communication system. Many of the staff members are encouraged to pursue their higher studies and research works.

WINDING OF INDUCTION MOTOR

LEARNING OBJECTIVE

An Induction motor or Asynchronous motor is an AC electric motor in which the electric current in the rotor that produces torque is obtained by electromagnetic induction from the magnetic field of the stator winding. An induction motor therefore needs no electrical connections to the rotor. An induction motor's rotor can be either wound type or squirrel-cage type.

Three-phase squirrel-cage induction motors are widely used as industrial drives because they are self-starting, reliable, and economical. Single-phase induction motors are used extensively for smaller loads, such as garbage disposals and stationary power tools. Although traditionally used for constant-speed service, single- and three-phase induction motors are increasingly being installed in variable-speed applications using variable-frequency drives (VFD). VFD offers energy savings opportunities for induction motors in applications like fans, pumps, and compressors that have a variable load.

Outcome:

- Apply the knowledge of basic principles and construction of AC machines for various industrial and house hold applications.
- Analyze the characteristics and performance of AC machines for a suitable application.
- Evaluate the performance of any AC machine for different loading conditions.
- Develop the equivalent circuit and phasor diagrams of any AC machine.

SYLLABUS

UNIT I:

3-Phase INDUCTION MOTORS: Polyphase induction motors-construction details of cage and wound rotor machines-production of a rotating magnetic field - principle of operation - rotor emf and rotor frequency - rotor reactance, rotor current and pf at standstill and during operation. Rotor power input, rotor copper loss and mechanical power developed and their inter relation-torque equation-deduction from torque equation - expressions for maximum torque and starting torque - torque slip characteristic - double cage and deep bar rotors - equivalent circuit - phasor diagram - crawling and cogging

UNIT II:

CIRCLE DIAGRAM & SPEED CONTROL METHODS OF INDUCTION MOTORS: Circle diagram no load and blocked rotor tests-predetermination of performance-methods of starting and starting current and torque calculations. Speed control-change of frequency; change of poles and methods of consequent poles; cascade connection. Injection of an emf into rotor circuit (qualitative treatment only)-induction generator-principle of operation.

UNIT III:

CONSTRUCTION AND PRINCIPLE OF OPERATION OF ALTERNATORS: Constructional Features of round rotor and salient pole machines, Armature windings, Integral slot and fractional slot windings; Distributed and concentrated windings, pitch and winding factors E.M.F Equation. Synchronous Generator Characteristics, Harmonics in generated E.M.F., suppression of harmonics, armature reaction, leakage reactance, synchrono.

UNIT IV:

SYNCHRONOUS MOTORS: Theory of operation, phasor diagram, Variation of current and power factor with excitation, synchronous condenser, Mathematical analysis for power developed.

UNIT V:

SINGLE PHASE MOTORS: Single phase induction motor, Constructional features-Double revolving field theory - Elementary idea of cross-field theory, splitphase motors, shaded pole motor. SPECIAL MOTORS: Principle & performance of A.C. Series motor, Universal motor. Principle of permanent magnet machines, stepper motors.

ABOUT THE INSTITUTION:

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST), a Deemed University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 25 years in promoting quality education and research for our Indian community, since its Inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

About the Department:

The department of Electrical and Electronics of PRIST DEEMED UNIVERSITY was established in 2008. Since then its excellence in each and every aspects has played an important role in the institute.

The EEE Department is dedicated to delivering competent electrical engineers to the arena of the real world. They are outfitted with core technical knowledge as well as professional skills necessary to face the challenges of the future. The committed faculty and staff are fully geared up towards this end.

The department has spacious laboratories such as Machines lab, Electric Circuits Lab, Measurement and Instrumentation Lab, Control System Lab, Power Electronics Lab and Power systems Simulation Lab. All the laboratories are fully equipped with latest, modern and sophisticated equipments. The Department has young as well as experienced and dynamic personalities as faculty, is involved in providing quality education at both Undergraduate (UG) and Postgraduate (PG) levels. The staffs are from various disciplines in masters like Power electronics and drives, Power system, advanced communication system. Many of the staff members are encouraged to pursue their higher studies and research works.

POWER CONVERTER AND DESIGNS

COURSE OBJECTIVE

- Grid-connected PV systems: Power converters are used to connect energy storage systems to the power grid
- Motor control: Power converters are used to control the speed, torque, and current of a motor
- Renewable energy conversion: Power converters are used to convert renewable energy
- Energy storage management: Power converters are used to manage energy storage
- Transportation: Power converters are used in transportation systems
- Wave energy conversion: Power converters are used to convert wave energy

SYLLABUS

UNIT - I

SINGLE PHASE & THREE PHASE CONVERTERS 9 Principle of phase-controlled converter operation – Single phase full converter and semi converter (RL, RLE load), single phase dual converter, Three phase operation full converter and semi-converter (RL, RLE load); Reactive power ; Power factor improvement techniques ; PWM rectifiers.

UNIT - II

DC-DC CONVERTERS 9 Limitations of linear power supplies; switched mode power conversion; Non-isolated DC-DC converters - operation and analysis of Buck, Boost, Buck-Boost, Cuk & SEPIC under continuous and discontinuous operation, Isolated converters- basic operation of Flyback, Forward and Push-pull topologies.

UNIT - III

DESIGN OF POWER CONVERTER COMPONENTS 9 Introduction to magnetic materials – hard and soft magnetic materials-types of cores, copper windings, Design of transformer; Inductor design equations; Inductor design for buck/ boost/ fly-back converter; Selection of output filter capacitors; Selection of ratings for devices; Input filter design.

UNIT – IV

RESONANT DC-DC CONVERTERS 9 Switching loss, hard switching, and basic principles of soft switching, Classification of resonant converters – Load resonant converters, Series and parallel; Resonant switch converters; Operation and analysis of ZVS, ZCS converters, comparison of ZCS/ZVS, ZVT/ZCT PWM converters.

UNIT – V

AC-AC CONVERTERS 9 Principle of on-off and phase angle control, Single phase ac voltage controller – Analysis with R & RL load, Three phase ac voltage controller, Principle of operation of cyclo converter – Single phase and three phase cyclo converters, Single phase matrix converters and three phase matrix converters.

COURSE OUTCOME

CO1 Ability to understand and analyse the operation, characteristics of controlled rectifiers.

CO2 Ability to apply switching techniques and basic topologies of DC-DC switching regulators.

CO3 Ability to introduce the design of power converter components and to design the converters.

CO4 Ability to provide in-depth knowledge about resonant converters.

CO5 Ability to comprehend the concepts of AC-AC power converters and their applications

- Locate faults:** Determine the location of the fault
- Identify faults:** Determine the type, shape, and size of the fault
- Isolate faults:** Quickly isolate faults to minimize disruptions
- Protect people and equipment:** Select appropriate protection gear to ensure safety
- Maintain power quality:** Maintain power quality and reliability

SYLLABUS

Module 1

Introduction to Electricity Electric Charge, Voltage, Electric Current, Ohm's Law, Electric Potential, Cell, Serial and Parallel Circuit, their effect on Voltage and Current Transformer, Use and Operation

Module 2.

Electronic and Electrical Components Active and Passive Components, Resistors, Capacitors and Inductors, their identification, types and application Semiconducting Devices: Diodes, its type, characteristics and applications, Transistors, Integrated Circuits, Study of a transistor, use of a tr 555 timer, IC741, characteristics of 741, Digital ICs, ICs for logic gates, Truth table verification of logic gates, Connectors, Fuse, types, Use of Fuses and its rating, Relays and Switches, Panel Components, Digital electronics – gates and its application, multiplexers, de-multiplexers, counter

Module 3.

Soldering/ De-soldering Techniques Soldering Iron, Soldering wire, Soldering Flux, Soldering method, Zero defect soldering, Desoldering pump, Temperature controlled soldering station, Hands-on-practices of Soldering

Module 4.

Tools and equipment use for Repairing and maintenance of Electrical Equipment Screw Driver Set, Tweezers, Different Types of Tweezers, Nose Pliers, Wire Cutter, Hot air gun, Liquid solder pest,

It is informed that employability/ entrepreneurship/ skill development training will be started on 22.01.2024 – 25.03.2024 for the academic year 2023-2024. The detailed schedule will be given by the departments.

Heads of the departments are requested to inform their students about the skill development training and motivate them to participate the training classes.

HOD'S are also requested to nominate one faculty member to co-ordinate the training class.

ABOUT THE INSTITUTION:

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST), a Deemed University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 25 years in promoting quality education and research for our Indian community, since its Inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

About the Department:

The department of Electrical and Electronics of PRIST DEEMED UNIVERSITY was established in 2008. Since then its excellence in each and every aspects has played an important role in the institute.

The EEE Department is dedicated to delivering competent electrical engineers to the arena of the real world. They are outfitted with core technical knowledge as well as professional skills necessary to face the challenges of the future. The committed faculty and staff are fully geared up towards this end.

The department has spacious laboratories such as Machines lab, Electric Circuits Lab, Measurement and Instrumentation Lab, Control System Lab, Power Electronics Lab and Power systems Simulation Lab. All the laboratories are fully equipped with latest, modern and sophisticated equipments. The Department has young as well as experienced and dynamic personalities as faculty, is involved in providing quality education at both Undergraduate (UG) and Postgraduate (PG) levels. The staffs are from various disciplines in masters like Power electronics and drives, Power system, advanced communication system. Many of the staff members are encouraged to pursue their higher studies and research works.

COURSE OBJECTIVE

- Design and implement digital systems:** Students learn how to design and implement digital systems on FPGAs
- Understand design methodologies:** Students learn advanced design methodologies and practical design approaches
- Learn optimization techniques:** Students learn optimization techniques for streaming applications, FIFO and memory architectures, and finite state machines
- Understand FPGA architecture:** Students learn about FPGA architecture, interconnect, and technologies
- Learn how to use HDL:** Students learn how to use HDL to model digital circuits and design systems
- Learn how to use CAD tools:** Students learn how to use CAD tools for design, coding, simulation, and synthesis
- Understand programmable logic devices:** Students learn about programmable logic devices and FPGAs
- Understand timing analysis:** Students learn about timing analysis and how to fit designs within resource, power, and timing constraints

SYLLABUS

UNIT I: Verilog HDL Coding Style: Lexical Conventions - Ports and Modules – Operators - Gate Level Modeling - System Tasks & Compiler Directives - Test Bench - Data Flow Modeling - Behavioral level Modeling -Tasks & Functions.

UNIT II: Overview of FPGA Architectures and Technologies: FPGA Architectural options, coarse vs fine grained, vendor specific issues (emphasis on Xilinx FPGA), Antifuse, SRAM and EPROM based FPGAs, FPGA logic cells, interconnection network and I/O Pad.

UNIT III : Verilog Modelling of Combinational and Sequential Circuits: Behavioral, Data Flow and Structural Realization – Adders – Multipliers- Comparators - Flip Flops - Realization of Shift Register - Realization of a Counter-

Synchronous and Asynchronous FIFO – Single port and Dual port RAM – Pseudo Random LFSR – Cyclic Redundancy Check.

UNIT IV Synchronous Sequential Circuit: State diagram-state table –state assignment-choice of flipflops – Timing diagram –One hot encoding Mealy and Moore state machines – Design of serial adder using Mealy and Moore state machines - State minimization – Sequence detection- Design examples: Sequence detector, Serial adder, Vending machine using One Hot Controller.

UNIT V System Design Examples using Xilinx FPGAs – Traffic light Controller, Real Time Clock - Interfacing using FPGA: VGA, Keyboard, LCD, Embedded Processor Hardware Desig

Course Outcomes

Understand advanced topics in digital logic design

- Understand proven design methodologies based on standard EDA tools
- Understand the differences and similarities in hardware and software design • Understand modern specification methods (HDL)
- Design combinational devices with a full set of EDAtools (skills)
- Understand modeling and verification with hardware description languages
- Understand synthesis with HDLs
- Understand programmable logic devices and FPGAs

ABOUT THE INSTITUTION

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST), a Deemed University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 25 years in promoting quality education and research for our Indian community, since its Inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

ABOUT THE DEPARTMENT

The department of Electronics and Communication Engineering came into existence in 2008 with an objective to impart quality education to meet today's competitive environment.

Department has well experienced and dedicated faculty with strong commitment to provide a vibrant learning environment to the students in order to help them excel. To keep pace with the current technological trends, the department has a well designed, constantly reviewed syllabus to incorporate all advancements in existing and emerging technologies which gives the students a holistic and pragmatic view of the present scenario of industry.

The Department runs an undergraduate course in B. Tech - Electronics and Communication Engineering and postgraduate programme like M. Tech in Communication Systems. Department also offers part time programmes in B. Tech - Electronics and Communication Engineering and M. Tech - Communication Systems.

The Department has state-of-the-art laboratories, such as VLSI lab, Digital Image Processing Lab, Circuit Simulation Lab, Communication Lab, and higher end software like MATLAB, PSPICE, Xilinx, IAR, L-Sim & N-Sim

ABOUT THE COURSE

Introduction to Microcontroller

- A microcontroller is a compact integrated circuit designed to govern a specific operation in an embedded system. A typical microcontroller includes a processor, memory and input/output (I/O) peripherals on a single chip.

- Sometimes referred to as an embedded controller or microcontroller unit (MCU), microcontrollers are found in vehicles, robots, office machines, medical devices, mobile radio transceivers, vending machines and home appliances, among other devices. They are essentially simple miniature personal computers (PCs) designed to control small features of a larger component, without a complex front-end operating system (OS).

- A microcontroller is embedded inside of a system to control a singular function in a device. It does this by interpreting data it receives from its I/O peripherals using its central processor. The temporary information that the microcontroller receives is stored in its data memory, where the processor accesses it and uses instructions stored in its program memory to decipher and apply the incoming data. It then uses its I/O peripherals to communicate and enact the appropriate action.

COURSE OBJECTIVE

- To introduce students with the architecture and operation of typical microprocessors and microcontrollers.
- To familiarize the students with the programming and interfacing of microprocessors and microcontrollers.
- To provide strong foundation for designing real world applications using microprocessors and microcontrollers.
- To understand the basic concepts of Embedded Systems and working of a general purpose 8-bit microprocessor operations.
- Analyze how to access Microcontroller ports

Syllabus

Module – 1

The 8051 Instruction Set

- Program Status Word
- Addressing Modes
- Arithmetic Instructions
- Logical Instructions
- Data Transfers
- External RAM
- Lookup Tables

Module – 2

Common Features Description Vectors and assignment

- 8051 Architecture Block Diagram
- Special Function Registers
- Oscillator and Clock Circuit
- CPU Timing
- Port Structures and Operation

Module – 3

Serial Interface

- Baud Rates
- Baud Rate Selection Table for UART
- Internal Baud Rate Generator (BRG)
- Using Timer 1 to Generate Baud Rates
- Using Timer 2 to Generate Baud Rates
- More About Mode 0

Module – 4

Framing Error Detection

- Automatic Address Recognition
- Multiprocessor Communications
- Broadcast Address
- Reset Addresses

Module – 5

UART Registers & Interrupts

- SCON Register
- T2CON Register
- PCON Register
- BDRCON Register
- How Interrupts Are Handled
- External Interrupts
- Response Time

COURSE OUTCOME

- At the end of the course the student will be able to:
- Be familiar with the composition, design, and implementation
- Be familiar with reading and understanding processor and component datasheets
- Be familiar with working on a team to create and apply microcontroller
- Be familiar with the basics of interfacing hardware and software
- Be exposed to history of embedded interfaces

ABOUT THE COURSE

Introduction to R Programming

R is an integrated suite of software facilities for data manipulation, calculation and graphical display. Among other things it has

- an effective data handling and storage facility.
- a suite of operators for calculations on arrays, in particular matrices,
- a large, coherent, integrated collection of intermediate tools for data analysis,
- graphical facilities for data analysis and display either directly at the computer or on hardcopy,
- a well-developed, simple and effective programming language (called 'S') which includes conditionals, loops, user defined recursive functions and input and output facilities.

The term "environment" is intended to characterize it as a fully planned and coherent system, rather than an incremental accretion of very specific and inflexible tools, as is frequently the case with other data analysis software. R is very much a vehicle for newly developing methods of interactive data analysis. It has developed rapidly, and has been extended by a large collection of packages. However, most programs written in R are essentially ephemeral, written for a single piece of data analysis.

COURSE OBJECTIVE

- Understand the different data types in R
- Understand the different data structures in R
- Understand how to create and manipulate dates in R

R programming Syllabus

Module - 1

Introduction and preliminaries, organize scientific and technical data

- The R environment
- R and the window system
- R commands, case sensitivity, etc
- Executing commands from or diverting output to a file
- Data permanency and removing objects

Module - 2

Simple manipulations; numbers and vectors PID algorithms

- Vectors and assignment
- Vector arithmetic
- Generating regular sequences
- Logical vectors
- Character vectors
- Index vectors; selecting and modifying subsets of a data set

Module - 3

Arrays and matrices intrinsic attributes: mode and length

- Array indexing, Subsections of an array
- The array() function
- Generalized transpose of an array
- Matrix facilities
- Forming partitioned matrices, cbind() and rbind()
- The concatenation function, c(), with arrays
- Frequency tables from factors

Module - 4

Lists and data frames

- Constructing and modifying lists
- Data frames
- The read.table() function
- The scan() function
- Accessing builtin datasets
- Editing data

Module - 5

Grouping, loops and conditional execution

- Grouped expressions
- Named arguments and defaults
- Assignments within functions
- Analysis of variance and model comparison
- Generalized linear models
- The glm() function
- Some non-standard models

COURSE OUTCOME

At the end of the course the student will be able to:

1. Do statistical analysis and data visualization
2. Analyze the results of experiments
3. Crunch the data gathered in pre-clinical trials

COURSE OBJECTIVES

Real time / embedded systems are designed to provide a timely response to real world events. Events occurring in the real world can have deadlines before which the real time / embedded system must respond and the RTOS scheduling policy must ensure these deadlines are met.

1. Students have knowledge about the basic functions, structure, concepts and applications of embedded systems.
2. Develop familiarity with 8051 Microcontrollers and their applications in an embedded environment.
3. To learn the method of designing and program an Embedded Systems for real time applications.

4. To understand operating system concepts, types and choosing RTOS.

5. Students have knowledge about the development of embedded software using RTOS and implement small programs to solve well defined problems on an embedded platform.

6. Develop familiarity with tools used to develop in an embedded environment.

Network Design Overview

Computers and information networks are critical to the success of businesses, both large and small. They connect people, support applications and services, and provide access to the resources that keep the businesses running. To meet the daily requirements of businesses, networks themselves are becoming quite complex.

COURSE CONTENT –NETWORK DESIGN METHODOLOGIES

Large network design projects are normally divided into three distinct steps:

- Step 1. Identify the network requirements.
- Step 2. Characterize the existing network.
- Step 3. Design the network topology and solutions.

Building a Good Network

Good networks do not happen by accident. They are the result of hard work by network designers and technicians, who identify network requirements and select the best solution to meet the needs of a business.

The steps required to design a good network are as follows:

- Step 1. Verify the business goals and technical requirements.
- Step 2. Determine the features and functions required to meet the needs of the business.
- Step 3. Perform a network-readiness assessment.

Science and Technology (PRIST)

Deemed to be University,

Step 5. Create a project plan.

Network Requirements

Most businesses actually have only a few requirements for their network:

- The network should stay up all the time, even in the event of failed links, equipment failure, and overloaded conditions.
- The network should reliably deliver applications and provide reasonable response times from any host to any host.
- The network should be secure. It should protect the data that is transmitted over it and data stored on the devices that connect to it.
- The network should be easy to modify to adapt to network growth and general business changes.
- Because failures occasionally occur, troubleshooting should be easy. Finding and fixing a problem should not be too time-consuming.

Fundamental Design Goals

When examined carefully, these requirements translate into four fundamental network design goals:

- **Scalability:** Scalable network designs can grow to include new user groups and remote sites and can support new applications without impacting the level of service delivered to existing users.
- **Availability:** A network designed for availability is one that delivers consistent, reliable performance, 24 hours a day, 7 days a week. In addition, the failure of a single link or piece of equipment should not significantly impact network performance.
- **Security:** Security is a feature that must be designed into the network, not added on after the network is complete. Planning the location of security devices, filters, and firewall features is critical to safeguarding network resources.
- **Manageability:** No matter how good the initial network design is, the available network staff must be able to manage and support the network. A network that is too complex or difficult to maintain cannot function effectively and efficiently.

Introduction to LabVIEW

LabVIEW is a graphical programming environment software that is optimized for engineers and scientists. Developed by National Instruments, this software uses a visual approach to programming and is a great program for beginner programmers. You can create visual charts like data flow charts and connect hardware created by NI and other vendors. The programming environment software is available for Apple Mac, Linux, and Microsoft Windows PC 32-bit and 64-bit operating systems. MATLAB is another programming environment that is similar to LabVIEW. MATLAB is geared toward numbers whereas LabVIEW focuses on visualizations. While MATLAB computes and processes data, LabVIEW gathers and tests information. Simulink is another alternative app that is created by MathWorks, the same developers of MATLAB. The Simulink user experience is more comparable to LabVIEW since diagrams are used in both applications.

LabVIEW

COURSE OBJECTIVE

1. Use LabVIEW to create data acquisition, analysis and display operations
2. Create user interfaces with charts, graph and buttons
3. Use the programming structures and data types that exist in LabVIEW
4. Use various editing and debugging techniques

Lab View Syllabus

Module - 1

Lab View over MATLAB

- Organize scientific and technical data
- Populate the data into flow charts
- Illustrative charts
- Control instruments and virtual instruments
- Hardware integration

Module - 2

Algorithms and languages used

- PID algorithms
- Add-on algorithms
- Graphical programming language called G
- Custom user interfaces
- Connector and Icon Pane

Module - 3

Navigating Labview

- Menus and tools
- Creating and using labview projects
- Labview front panel and block diagram
- Searching for controls, vis, and functions

Module - 4

Troubleshooting and Debugging

- Build a simple labview application Web Development
- Various debugging and error-checking techniques in labview
- Problems with block diagram organization
- Problems with data passing within a block diagram

Familiarizing Labview

- Using loops
- Creating and Leveraging Structures
- Modularity (Subvis)
- Acquiring measurements with hardware
- Basic concept of file I/O
- To access and modify file resources
- Using sequential and state machine programming

COURSE OUTCOME

At the end of the course, students will be able to

- > Explore the LabVIEW environment
- > Do interactive analysis, dataflow programming
- > Develop data acquisition, instrument control, data-logging
- > Create applications using the state machine design pattern
- > Acquire, analyze, process, visualize, and store real-world data

Eligibility: ECE & III YEAR B.Sc Physics students are eligible to attend the course.

Software Used: LABVIEW

About the institution

Ponnaiyah Ramajayam Institute Of Science And Technology(Prist),A Deemed University(U/S 3 Of The Ugc Act 1956), Is One Of the Renowned Units Of Ponnaiyah ramajayam institutions, Which Are Serving For More Than 25 Years In Promoting Quality Education And Research For our Indian community, Since Its Inception. The Institution Is Now Brimming with Many social responsibilities, Particularly in Promoting Quality Education through Research.

About the department

The Department Of Electronics And Communication Engineering Came Into Existence In 2008 With an Objective to Impart Quality Education to Meet Today's Competitive Environment.

Department Has well experienced And Dedicated Faculty with strong Commitment To Provide A Vibrant Learning Environment To The Students In Order To Help Them Excel.

To Keep Pace With The Current Technological Trends, The Department Has A Well Designed, Constantly Reviewed Syllabus To Incorporate All Advancements In Existing And Emerging Technologies Which Gives The Students A Holistic And Pragmatic View Of The Present Scenario Of Industry.

The Department has The State-Of-The-Art Laboratories, Such as Vlsi Lab, Digital image Processing Lab, Circuit Simulation Lab, Communication Lab, And higher End Software Like Matlab, Pspice,, Xilinx, Iar,L-Sim & N-Sim .

The Department Runs An Undergraduate Course In B. Tech - Electronics And Communication Engineering And Three Postgraduate Programmes Like M. Tech In Communication Systems, Applied Electronics And Embedded Systems.

The Department Currently Has 25 Research Scholars Working In The Areas Of Microelectronics & Vlsi, Digital Image Processing, Microwave Engineering, Wireless Communication, Analog Signal Processing And Digital signal Processing.

Course objectives

Raspberry Pi Zero W is a new product from the Raspberry Pi Zero family. In early 2017, the Raspberry Pi community announced a new board with a wireless extension. It offers wireless functionality and now anyone can develop their own project without cables or other components. Comparing the new board with Raspberry Pi 3 Model B, we can easily see that it is much smaller, with many possibilities for the Internet of Things. However, what is a Raspberry Pi Zero W, and why do you need it? Let's go through the rest of the family and introduce the new board. In this chapter, we will cover the following

topics: An overview of the Raspberry Pi family An introduction to the new Raspberry Pi Zero W Distributions Distributors Common issues

Specific course information

Description of course content

This course introduces the students to the use of embedded electronic systems for practical application development. Students learn to develop and embed their own Linux-based operating system in a very low-cost embedded system like the Raspberry Pi during the course. The course is organized as laboratory assignments introduced by theory lessons. The laboratory assignments are designed to emphasize application development and integration skills and the presentation of results in an oral and written manner.

List of topics to be covered

1. Introduction to Raspberry Pi: Architecture and hardware resources
2. Raspberry Pi Linux Application development
Raspberry Pi Operating System installation
Linux essential use tutorial
(Optional) Install and configure Ubuntu Virtual Machine
Connecting sensors and actuators to Raspberry Pi
C application development for Raspberry Pi
3. Generation of custom embedded Linux systems
Embedded Linux System Fundamentals
Embedded Linux System generation tools: Buildroot
4. Embedded Linux Application development
Environment configuration for remote connection, development, deployment, testing, and debug
5. IoT Application development using Raspberry Pi and Embedded Linux
IoT fundamentals: Protocols and use cases
Raspberry Pi for IoT applications

Specific goals for the course

Specific outcomes of instruction

- Know the basic hardware features of an electronic system embedded as RaspBerry IP based on a System On Chip.
- Identify the functionality of each of the digital and analog interfaces included in the RaspBerry-PI.
- Install a Linux operating system and software applications in RaspBerry Pi.
- Learn about the elements of a distribution of Linux for an embedded system.
- Configure and build a distribution of the Linux operating system using the Buildroot for the RaspBerry-IP platform.
- Connect a basic electronic circuit to one of the RaspBerry-IP digital interfaces.
- Develop a basic software application using RaspBerry IP interfaces.
- Document the development of an application with RaspBerry-PI and present it in public.
- Present and defend in public proposed techniques to solve problems.
- Write technical papers presenting the steps followed and the conclusions obtained in the implementation of an application.

Requirements

- A computer + a RaspBerry Pi 4 (also works with RaspBerry 2 and 3)
- A list of hardware components (provided in a free preview lecture at the beginning). You can still start the course without those components.
- NO external monitor or keyboard required.
- NO programming, Unix, or hardware experience required.
- A will to learn and to progress with the RaspBerry Pi

Eligibility

- B.Tech students- Electronics and communication engineering
- M.Tech students -Communication System

ENGINEERING

ABOUT THE INSTITUTION

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 25 years in promoting quality education and research for our Indian community, since its Inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

ABOUT THE DEPARTMENT

The department of Mechanical Engineering came in to existence in 2008 with an objective to impart quality education to meet today's competitive environment.

Department has well experienced and dedicated faculty with strong commitment to provide a vibrant learning environment to the students in order to help them excel.

To keep pace with the current technological trends, the department has a well designed, constantly reviewed syllabus to incorporate all advancements in existing and emerging technologies which gives the students a holistic and pragmatic view of the present scenario of industry.

INFORMATION BROUCHER VALUE-ADDED COURSE - AUTOMATION IN AGRICULTURE

COURSE HIGHLIGHTS

- This course highlights the key uses of AI and ML techniques in farming and highlights the undeniably rising trend in the implementation of these techniques.
- This also highlights the use of machinery and equipment in agricultural operations to improve their diagnosis, decision-making or performing, reducing the drudgery of agricultural work and/or improving the timeliness, and potentially the precision, of agricultural operations.
- Automation technology helps in collecting information about conditions like weather, moisture, temperature and fertility of soil, Crop online monitoring enables detection of weed, level of water, pest detection, animal intrusion in to the field, crop growth, and agriculture.

COURSE OBJECTIVES

- To give the student the basic knowledge of about the field of production automation.
- To enable student to appreciate optimization of manufacturing systems Automation is a dynamic technology that represents a continuous evolutionary process in production.
- The main goal of automation is to improve efficiency, accuracy, and speed in business processes, ultimately leading to increased productivity and reduced costs.

PRE-REQUISITES

Understand and design basic mechanical concepts and reverse engineering.

ELIGIBILITY

B.Tech – Mechanical students shall be eligible for the admission to the course.

AUTOMATION IN AGRICULTURE

OBJECTIVES

1. To know the operation of various electronic circuits and its applications.
2. To get adequate knowledge about various sensors and robots used in agricultural processes
3. To learn automation techniques in agricultural system

UNIT I INTRODUCTION

9

Fundamental of electronics Passive devices -semiconductor devices - transistors - diode circuits - amplifier circuits. Integrated circuits and operational amplifier - logic gates - flip flop - counters digital to analog - analog to digital converters- microprocessor.

UNIT II PRECISION FARMING

9

Precision farming -Ground based sensors, Remote sensing, GPS, GIS and mapping software, Yield mapping systems, Crop production modelling.

UNIT III ROBOTICS IN AGRICULTURE

9

Fundamental of Robotics - types – application. Agricultural robots - types- function - application. Future trends in automation in agriculture

UNIT IV AUTOMATION USING IoT

9

Use of different sensors - Temperature and humidity sensor - Soil Moisture Sensor - Water Level Depth Detector, Raspberry Pi Arduino UNO

UNIT V AUTOMATION OF AGRICULTURE OPERATION

9

Automation of agricultural operations using IoT based systems - Smart Irrigation System- Automation in Greenhouse – Drones. Case Study- Automation of greenhouse/farm operations.

TOTAL HOURS: 45

COURSE OUTCOMES

1. Exemplify the working operations of electronic devices and processors
2. Interpret the necessity of sensor requirements for precision farming practices
3. Understand the basics of robotics and their applications in agriculture
4. Apply the IOT concepts in cropping practices
5. Interpolate the concept of automation in governing the agricultural systems

INFORMATION BROUCHER VALUE-ADDED COURSE- PIPING TECHNOLOGY

COURSE HIGHLIGHTS

- Piping system designers that may decide to use expansion joints
- Expansion joint designers that use the information provided by piping system designers.
- To determine the best design to meet the requirements.
- Designers that use modern software systems to evaluate different options
- Engineers / Managers: field, maintenance, process, operations, construction, surveyors

About the Program

The objective of this course is to provide the candidates the Detail knowledge and skills in Piping Design discipline to facilitate faster learning curves while on the job.

This course will cover the fundamental principles and concepts used in Process Plant Layout and Piping Design Engineering. Upon completion of this course, students will have a clear understanding of the design and principles used in Piping Design System for Oil & Gas Energy Sector.

Learning-Based Outcomes

Get hands-on experience in applying design tools & techniques to real engineering problems and understand Design, Engineering, Construction, O & M, etc. Thus, become a Technology Driven Engineering Professional.

- 1 Be eligible for Design & Development Engineering domain & excel your career in the respective areas.
- 2 Explore + Analyse + Solve Engineering Problem using state-of-art Softwares & Tools.
- 3 Fill the void of thousands of untapped High-Paying Jobs in your core-domain with a great salary.
- 4 Helping in Ideation & Concept building to formulate ideas into reality.
- 5 Distinguish your professional profile from peer during interviews and stand out of the box.
- 6 Understand What & How aspect of Design Engineering
- 7 Perform the exercise by accessing our labs & simulation software.
- 8 Improve your Curriculum Vitae and your social job profile with Professional Projects & assignments.
- 9 Support your Start-up or your professional career with expert mentor guidance & support.
- 10 Develop the zeal of learning to embrace the knowledge into service & entrepreneurship domain.

PIPING TECHNOLOGY

OBJECTIVE:

This class covers the following topics: piping design, the effects on overall configuration on preliminary piping design, initial layout, the total system, introduction to pipe stress analysis, detailed piping design, and how all of this influences pipe support and pipe hanger design.

Syllabus

Part 1: Introduction - Overview of Piping

1. This section serves as an introductory overview of piping system design.
 - a. Effects of operating conditions, including flow rate, design pressure and temperature on piping design
 - b. Impact of internal and external forces on the design.
 - c. Influences that the different modes of failure and the applicable codes have on the entire system.
 - d. Piping layout, an overview of the general support classifications.

Part 2: Preliminary Piping Design - Piping System Components

1. Concepts used in developing an initial piping layout.
2. Design principles including fluid properties, flow rate, and physical laws which influence the complete piping system layout.
3. Understand the effect of different piping system components, such as tanks, vessels, valves, and pumps, on the overall configuration.

Part 3: Preliminary Piping Design - The Total System

1. The total piping system.
2. The different types of equipment and components that define various types of piping systems.
3. Differences between series piping, parallel piping and branch piping as well as their specialized applications.
4. The piping system conditions such as static and dynamic head loss
5. Influences on the selection and distribution of piping components throughout the entire system.

Part 4: Basic Concepts of Stress Analysis - Flexibility Analysis

1. Historical perspective of how earlier analysis techniques were developed in the absence of today's computer technology.
2. Review how earlier techniques have evolved ultimately leading to today's finite element practices.
3. The basic concepts of stress analysis will be covered, including failure theories, stress intensification factors and the overall purpose of stress analysis.

Part 5: Basic Concepts of Stress Analysis - Design Bases

1. A review of the different phases of project evolution.
2. The design bases which form the foundation of all our analyses, including physical attributes,

**INFORMATION BROUCHER VALUE-ADDED
COURSE - GEOMETRIC DIMENSIONING AND
TOLERANCE**

COURSE HIGHLIGHTS

- This course highlights the purpose of GD&T is to describe the engineering intent of parts and assemblies. GD&T can more accurately define the dimensional requirements for a part, allowing over 50% more tolerance zone than coordinate (or linear) dimensioning in some cases.
- GD&T is the system that allows developers and inspectors to optimize functionality without increasing cost. The most important benefit of GD&T is that the system describes the design intent rather than the resulting geometry itself. Like a vector or formula, it is not the actual object but a representation of it.

COURSE OBJECTIVES

- Visualize the different ways 3D parts are projected on 2D drawings and how to the different ways the full geometry of the part or assembly is presented.
- Determine how key information is organized in notes, symbols and title blocks.
- The GD&T Training Course provides a comprehensive introduction into how to apply, read and understand technical drawings employing Geometric Dimensioning & Tolerance. The main objective of training is to show users how the system can help them perform their jobs.

GEOMETRIC DIMENSIONING AND TOLERANCING

OBJECTIVES

To apply the concepts of GD&T for design, manufacturing and inspection.

UNIT - I INTRODUCTION

9

Geometric product definition principles; verification of position with open setup; geometric characteristic symbols Geometric Dimensioning and Tolerancing: an explanation of tolerance zone conversion; surfaces, features, features of size, datum features, datum features of size, and datum's; tolerances; components common to geometrically dimensioned & toleranced drawing; fits & allowances, advantages of GD&T.

UNIT - II MMC, LMC & RFS

9

Maximum Material Condition (meaning & use); Least Material Condition (meaning & use); Regardless of Feature Size How to read a Feature Control Frame.

UNIT - III SIZE CONTROL FORM

9

The Taylors principle; Gauging size limits. Rules, concepts, Characteristics, and Untoleranced Dimensions: individual or related Datum's, Material Conditions; untoleranced dimensions.

UNIT - IV DATUMS

9

Datum features; oddly configured & curved surfaces as datum features; equalizing datum's; datum feature symbols; flexible parts; direct vs indirect tolerancing. MMC and its ramifications. Relations between individual features. Virtual Condition and Resultant condition Boundaries: Virtual condition (MMC concept & a functional boundary). Effect of LMC; wall thickness calculation.

UNIT - V LOGICAL APPROACH

9

A Logical Approach to part Tolerancing Dimensioning and Tolerancing Schemes Steps for the Development of a Dimensional Inspection Plan Paper Gauging and Functional Gauging.

TOTAL HOURS: 45

COURSE OUTCOMES

1. Contrast between conventional and GD&T tolerance zones
2. Explain MMC, LMC and RFS concepts
3. Explain Taylor's principle of gauging
4. Assess the significance of selection of datum & datum features
5. Explain the use of paper and functional gauging

QUALITY ASSURANCE , SIX SIGMA AND LEAN MANUFACTURING

OBJECTIVES:

- To impart knowledge to enable the students to design and implement Statistical Process Control in any industry

UNIT I QUALITY FUNDAMENTALS

9

Importance of quality- evolution of quality- definitions of quality- dimensions of quality- quality control- quality assurance- areas of quality- quality planning- quality objectives and policies- quality costs- economics of quality- quality loss function- quality Vs productivity- Quality Vs reliability.

UNIT II SIX SIGMA METHODOLOGY- TOOLS & TECHNIQUES

9

Cost of Quality – Conformance and Non-Conformance cost – 7 Basic Quality Control Tools – Seven Management tools – FMEA

Need for Six Sigma – Six Sigma Team – DMAIC Methodology: Define, Measure, Analyse, Improve and Control – Lean Six Sigma

UNIT III EVOLUTION & OVERVIEW OF LEAN MANUFACTURING

9

Evolution of Mass production – Traditional vs. Mass production – Evolution of Toyota (Lean) Production System – Business Dynamics of Lean production – Principles of Lean production: Value, Value stream, Flow, Pull, Perfection.

UNIT IV LEAN MANUFACTURING – TOOLS & TECHNIQUES

9

Ms: Muda, Mura, Muri – 7 Wastes in Manufacturing – Lean Tools to eliminate Muda – 5S – Standardised work – TPM – SMED – Jidoka – Poka Yoke – JIT – Heijunka – Kanban – One piece production.

UNIT V VALUE STREAM MAPPING

9

Need for Value Stream mapping – Steps involved in Value stream mapping – Choose value stream – PQ and PR analysis – Current State map – Lean Metrics – Future State Map – Kaizen plans – Lean implementation – Cultural change – Lean in the Supply chain.

TOTAL: 45 PERIODS

OUTCOMES:

- Control the quality of processes using control charts for variables in manufacturing industries.
- The students should apply the various tools, techniques and methodology of lean manufacturing.
- six sigma concepts to the potential quality gaps in manufacturing / production industries.
- Able to learn concept of tool and technique.

- Flux Core Arc Welding • 3G and 4G D1.1 Structural Weld Test, SMAW and FCAW 1"

COURSE OVERVIEW

This program is designed to develop the skills necessary for performing work in the field of welding and fabrication. Instruction will begin with a strong emphasis on safety and will address the many precautions that need to be taken to insure the safe operations of welding and fabrication equipment, as well as general industrial safety.

The tools, applied math, layout, print reading, and measuring are explained as well as hands on fabrication. Processes covered are sawing, shearing, and punching of structural steel. Next, instruction will be provided in SMAW (Shielded Metal Arc Welding), GMAW (Gas Metal Arc Welding), FCAW (Flux Cored Arc Welding), GTAW (Gas Tungsten Arc Welding) and thermal cutting techniques.

Eligible students may elect to test under AWS QC 10 certification guidelines in the 3G and 4G positions pertaining to the AWS D1.1 Structural Code. Also covered will be Oxy Acetylene Cutting and Welding, Plasma Arc Cutting and Carbon Arc Cutting.

This training serves as a progressive introduction to the technical skills and practices to prepare students for employment as flame cutters, structural welders, tack welders, welder assemblers, welder helpers, arc cutters and production line welders.

COURSE OUTCOMES

- ✓ The student will obtain entry level skills and understanding of virtually all the welding and cutting processes used in production and repair today. The student will have the theory, fundamentals of operation, equipment used and techniques recommended for all of the welding, cutting and fabrication processes that are commercially used.

PRE-REQUISITES

Understand and design basic mechanical concepts and reverse engineering.

ELIGIBILITY

B.Tech – Mechanical students shall be eligible for the admission to the course.

COURSE DURATION: 45 Hours

TIMING: 10.00 am - 4.00 pm

DATE: 09.12.2023 to 10.02.2024.

MARINE CONSTRUCTION AND WELDING

Objectives:

- Understand about different types of welding processes and equipments.
- Know about the special welding process.
- Study about metallurgy of welding.
- Acquire broader ideas about weldability of ferrous and non ferrous metals.
- Understand about welding economy and applications.

UNIT I METAL JOINING PROCESSES

Classification plastic welding, fusion welding, solid phase welding and sub classification. Study of power sources, electrodes, welding symbols - processes and applications: SMAW, GTAW, GMAW, electro gas welding and Electro Slag, resistance welding. Gas welding, oxy acetylene cutting, brazing and soldering.

UNIT II CASTING PROCESSES

Sand casting, pattern and core making, moulding process - sand properties, Gate cutting and allowances-melting furnaces – pit furnace and electric furnaces. Special casting processes – shell, investment, die casting – pressure and gravity types – squeeze casting - defects in casting

UNIT III FINISHING PROCESSES

Surface finishing processes: grinding processes, various types of grinders, work holding devices, grinding wheels and specification, selection of grinding wheels for specific applications – selection of cutting speed and work speed. Fine Finishing Process: Lapping, honing, and super finishing process, ship hull finishing.

UNIT IV METAL FORMING PROCESSES

Hot and cold working processes – rolling, forging, drawing and extrusion processes, bending, hot spinning, shearing, tube and wire drawing, cold forming, shot peening. Sheet metal working

UNIT V MACHINING PROCESSES

Drilling - classification, specification, cutters speed feed and description of parts parts-boring machines- classification, principle, parts- specification. Milling - classification, principle, parts- specification-operations. Shaper and Planer- Principle -parts -operations - CNC Machines

TOTAL : 45 PERIODS

OUTCOMES:

The students will be able

- To know the different welding process and select the appropriate process for different applications
- To have the knowledge of different casting process and select the appropriate process for different applications.

- To select the Grinding Wheel and process based on the surface finish required.
- To have the depth understanding of various hot working and cold working process.
- To select the appropriate machines or machines tools for different requirements .

DIGITAL MARKETING

Nowadays, everyone is connected to the internet through their mobile phones and laptop devices. Understanding why digital marketing is essential for businesses aiming to succeed online through modern marketing and for individuals looking to make a career in digital marketing. Digital marketing, or online marketing, strategically promotes brands, products, or services using various digital channels and technologies. With the rise of the internet and mobile devices, businesses now have huge opportunities to reach a global audience.

Whether through innovative search engine marketing (SEM) strategies or advanced digital marketing software, companies can connect with potential customers like never before. Utilizing search engine optimization (SEO), content marketing, social media advertising, and email marketing allows businesses to effectively reach and engage their target audience, driving growth and achieving marketing objectives.

What is **DIGITAL MARKETING**

Digital marketing is the use of online platforms & digital technologies to promote brands, products, or services.

Types of Digital Marketing

Digital marketing encompasses a wide range of strategies and techniques aimed at promoting products or services through digital channels. Here are the key types of digital marketing:

1. Search Engine Optimization (SEO)

SEO involves optimizing a website to improve its visibility in search engine results pages (SERPs). The goal is to attract organic traffic by using relevant keywords, improving site structure, and earning backlinks. Effective SEO can enhance online visibility and drive long-term traffic.

2. Content Marketing

Content marketing focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, articles, videos, infographics, and eBooks. The objective is to provide useful information that encourages customer loyalty and drives conversions.

3. Social Media Marketing

Social media marketing involves using platforms like Facebook, Instagram, Twitter, LinkedIn, and TikTok to promote products and engage with customers. This type of marketing can include organic content, paid advertising, and influencer partnerships to reach a broader audience and build brand awareness.

Search Engine Optimization (SEO)

SEO, or Search Engine Optimization, is the process of optimizing your website and content to rank higher on search engine results pages (SERPs). It involves keyword research, on-page optimization, and building high-quality backlinks. For example, Moz, a leading SEO software company, uses SEO services to improve their visibility for high-volume keywords like "SEO tools" and "search engine optimization strategies."

Content Marketing

Content marketing focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, videos, infographics, and eBooks. HubSpot, a prominent digital marketing agency, utilizes a robust content marketing strategy by offering free resources such as blogs, eBooks, and webinars to drive traffic and generate leads for their marketing automation software.

Social Media Marketing

Social media marketing involves using platforms like Facebook, Instagram, Twitter, and LinkedIn to promote products, engage with customers, and build brand awareness. For example, Nike effectively uses social media advertising on Instagram and Twitter to showcase their products, engage with followers, and drive online sales, often targeting their audience with visually compelling ads.

DATA SCIENCE

COURSE OUTCOMES:

- To understand the techniques and processes of data science
- To apply descriptive data analytics
- To visualize data for various applications
- To understand inferential data analytics
- To analysis and build predictive models from data

UNIT I INTRODUCTION TO DATA SCIENCE

Need for data science – benefits and uses – facets of data – data science process – setting the research goal – retrieving data – cleansing, integrating, and transforming data – exploratory data analysis – build the models – presenting and building applications.

UNIT II DESCRIPTIVE ANALYTICS

Frequency distributions – Outliers – interpreting distributions – graphs – averages – describing variability – interquartile range – variability for qualitative and ranked data – Normal distributions – z scores – correlation – scatter plots – regression – regression line .

UNIT III INFERENCE STATISTICS

Populations – samples – random sampling – Sampling distribution- standard error of the mean - Hypothesis testing – z-test – z-test procedure – decision rule – calculations – decisions – interpretations

UNIT IV ANALYSIS OF VARIANCE

t-test for one sample – sampling distribution of t – t-test procedure – t-test for two independent samples – p-value – statistical significance – t-test for two related samples, F-test – ANOVA – Two- factor experiments – three f-tests – two-factor ANOVA – Introduction to chi-square tests.

UNIT V PREDICTIVE ANALYTICS

Linear least squares – implementation – goodness of fit – testing a linear model – weighted resampling, Regression using StatsModels – multiple regression – nonlinear relationships – logistic regression .

DATA SCIENCE

In a world of data space where organizations deal with petabytes and exabytes of data, the era

of Big Data emerged, and the essence of its storage also grew. It was a great

challenge and concern for industries for the storage of data until 2010. Now when frameworks like Hadoop and others solved the problem of storage, the focus shifted to the processing of data. Data Science plays a big role here. All those fancy Sci-fi movies you love to watch around can be turned into reality by Data Science. Nowadays its growth has been increased in multiple ways and thus one should be ready for our future by learning what it is and how can we add value to it.

Data science is not a one-step process such that you will get to learn it in a short time and call ourselves a Data Scientist. It's passes from many stages and every element is important. One should always follow the proper steps to reach the ladder. Every step has its value and it counts in your model. Buckle up in your seats and get ready to learn about those steps.

1. Problem Statement:

No work start without motivation, Data science is no exception though. It's really important to declare or formulate your problem statement very clearly and precisely. Your whole model and it's working depend on your statement. Many scientist considers this as the main and much important step of Data Science. So make sure what's your problem statement and how well can it add value to business or any other organization.

2. Data Collection:

After defining the problem statement, the next obvious step is to go in search of data that you might require for your model. You must do good research, find all that you need. Data can be in any form i.e unstructured or structured. It might be in various forms like videos, spreadsheets, coded forms, etc. You must collect all these kinds of sources.

3. Data Cleaning:

As you have formulated your motive and also you did collect your data, the next step to do is cleaning. Yes, it is! Data cleaning is the most favorite thing for data scientists to do. Data cleaning is all about the removal of missing, redundant, unnecessary and duplicate data from your collection. There are various tools to do so with the help of programming in either R or Python. It's totally on you to choose one of them. Various scientist have their opinion on which to choose. When it comes to the statistical part, R is preferred over Python, as it has the privilege of more than 12,000 packages. While python is used as it is fast, easily accessible and we can perform the same things as we can in R with the help of various packages.

4. Data Analysis and Exploration:

It's one of the prime things in data science to do and time to get inner Holmes out. It's about analyzing the structure of data, finding hidden patterns in them, studying behaviors, visualizing the effects of one variable over others and then concluding. We can explore the data with the help of various graphs formed with the help of libraries using any programming language. In R, GGplot is one of the most famous models while Matplotlib in Python.

5. Data Modelling:

Once you are done with your study that you have formed from data visualization, you must start building a hypothesis model such that it may yield you a good prediction in future. Here, you must choose a good algorithm that best fit to your model. There different kinds of algorithms from regression to classification, SVM(Support vector machines), Clustering, etc. Your model can be of a Machine Learning algorithm. You train your model with the train data and then test it with test data. There are various methods to do so.

6. Optimization and Deployment:

You followed each and every step and hence build a model that you feel is the best fit. But how can you decide how well your model is performing? This where optimization comes. You test your data and find how well it is performing by checking its accuracy. In short, you check the efficiency of the data model and thus try to optimize it for better accurate prediction. Deployment deals with the launch of your model and let the people outside there to benefit from that. You can also obtain feedback from organizations and people to know their need and then to work more on your model.

ETHICAL HACKING

Who is a Certified Ethical Hacker?

A Certified Ethical Hacker is a specialist typically working in a red team environment, focused on attacking computer systems and gaining access to networks, applications, databases, and other critical data on secured systems. A CEH® understands attack strategies, the use of creative attack vectors, and mimics the skills and creativity of malicious hackers. Unlike malicious hackers and actors, Certified Ethical Hackers operate with permission from the system owners and take all precautions to ensure the outcomes remain confidential. Bug bounty researchers are expert ethical hackers whose attack skills to uncover vulnerabilities in the systems.

What is CEH® v12?

The Certified Ethical Hacker has been battle-hardened over the last 20 years, creating hundreds of thousands of Certified Ethical Hackers employed by top companies, militaries, and governments worldwide. In its 12th version, the Certified Ethical Hacker provides comprehensive training, hands-on learning labs, practice cyber ranges for engagement, certification assessments, cyber competitions, and opportunities for continuous learning into one comprehensive program curated through our new learning framework: 1. Learn 2. Certify 3. Engage 4. Compete

RECONNAISSA

The CEH® v12 is a specialized and one-of-a-kind training program to teach you everything you need to know about ethical hacking with hands-on training, labs, assessment, a mock engagement (practice), and global hacking competition. Stay on top of the game with the most in-demand skills required to succeed in the field of cyber security.

COURSE OUTCOMES:

At the end of this course, the students will be able:

1. To express knowledge on basics of computer based vulnerabilities
2. To gain understanding on different foot printing, reconnaissance and scanning methods.
3. To demonstrate the enumeration and vulnerability analysis methods
4. To gain knowledge on hacking options available in Web and wireless applications.
5. To acquire knowledge on the options for network protection.

ETHICAL HACKING

UNIT I INTRODUCTION TO HACKING

Introduction to Hacking - Important Terminologies - Penetration Test - Vulnerability Assessments versus Penetration Test - Pre-Engagement - Rules of Engagement - Penetration Testing Methodologies - OSSTMM - NIST - OWASP - Categories of Penetration Test - Types of Penetration Tests - Vulnerability Assessment Summary - Reports .

UNIT II FOOT PRINTING AND RECONNAISSANCE

Scanning Networks - Enumeration - Vulnerability Analysis - System Hacking - Malware Threats - Sniffing.

UNIT-III NETWORK ATTACKS

Vulnerability Data Resources - Exploit Databases - Network Sniffing - Types of Sniffing - Promiscuous versus Non promiscuous Mode - MITM Attacks - ARP Attacks - Denial of Service Attacks - Hijacking Session with MITM Attack - SSL Strip: Stripping .

UNIT IV TYPES OF HACKERS

Black Hat Hacker - White Hat Hacker - Grey Hat Hacker - Hacking Process - Foot Printing - Scanning - Gaining Access - Maintaining Access.

UNIT V WIRELESS AND WEB HACKING

Wireless Hacking - Introducing Aircrack- Cracking the WEP - Cracking a WPA/WPA2 Wireless Network Using Aircrack-ng - Evil Twin Attack - Causing Denial of Service on the Original AP.

VIRTUAL REALITY

Virtual Reality (VR) is a technology that creates a simulated environment, allowing users to feel like they are in a different place or world. VR puts you inside a computer-generated world that feels real. It does this by using special equipment that covers your eyes and sometimes your ears called VR Headset. Virtual Reality creates a believable, interactive 3D environment that you can explore and interact with, making you feel like you are really there.

This is made possible by putting on a head-mounted display that sends a form of input tracking. The display is split between the eyes and thus creates a stereoscopic 3D effect with stereo sound to give you a graphic experience.

The technology feeds in the images of the objects taken at slightly different angles which creates an impression of depth and solidity. The LCD or OLED panels inside are refracted by lenses completely fill the field of vision with what is to be displayed and experienced. Together with the technology and the input tracking, it creates an immersive and exciting believable world that the computer generates. What we know today as VR, has been existing for decades now. Taking you back to when 360° paintings took the world by surprise, giving a virtual element, VR merely is 'The Wise Guy' of the digital world. It creates a world that neither functions according to you, nor does it respond to your actions. It gives you a first-hand experience with

even the after-effects of an event along with the ability to interact and interrelate with the world created. This technology holds vast potential insights into the workings of the Human Brain.

Types of Virtual Reality (VR)

On the basis of the most important feature of VR i.e. immersion and the types of systems and interfaces used, The VR systems can be classified into 3 types :

1. Immersive
2. Semi-immersive
3. Non - immersive

1. Immersive VR system

Immersive VR system is closest to the virtual environment. It makes us experience the highest level of immersion. This VR system is expensive than others. It provides the closest feeling of being in virtual world. Tools and gadgets used in this system are advanced and not so common to use.

2. Semi - immersive VR system

Semi - immersive VR systems also make us to experience a high level of immersion but the tools and gadgets used are not so advanced and costly. Tools and gadgets used in this system are common to us and utilize physical models.

3. Non-immersive VR system

Non-immersive VR system is the least immersive and least immersive VR system. It is not expensive to use this system. It is also known as desktop VR system because the gadgets used are limited to glasses and display monitors and it uses the least expensive components.

EMBEDDED SYSTEMS AND IOT

UNIT I 8-BIT EMBEDDED PROCESSOR

8-Bit Microcontroller – Architecture – Instruction Set and Programming – Programming Parallel Ports – Timers and Serial Port – Interrupt Handling.

UNIT II EMBEDDED C PROGRAMMING

Memory And I/O Devices Interfacing – Programming Embedded Systems in C – Need For RTOS – Multiple Tasks and Processes – Context Switching – Priority Based Scheduling Policies.

UNIT III IOT AND ARDUINO PROGRAMMING

Introduction to the Concept of IoT Devices – IoT Devices Versus Computers – IoT Configurations – Basic Components – Introduction to Arduino – Types of Arduino– Arduino Toolchain – Arduino Programming Structure –Sketches – Introduction to Arduino Shields – Integration of Sensors and Actuators with Arduino.

UNIT IV IOT COMMUNICATION AND OPEN PLATFORMS

IoT Communication Models and APIs – IoT Communication Protocols – Bluetooth – WiFi – ZigBee– GPS – GSM modules – Open Platform (like Raspberry Pi) – Architecture -Connecting to the Cloud.

UNIT V APPLICATIONS DEVELOPMENT

Complete Design of Embedded Systems – Development of IoT Applications – Home Automation –Smart Agriculture – Smart Cities – Smart Healthcare.

Course outcomes:

- Understanding of Embedded Systems Architecture
- Design and Develop Embedded Systems Applications
- Proficiency in IoT Frameworks and Protocols
- to solve practical problems using embedded systems and cloud platforms in areas like smart homes, healthcare, and industrial IoT.

EMBEDDED SYSTEMS AND IOT

It is essential to know about the embedded devices while learning the IoT or building the projects on IoT. The embedded devices are the objects that build the unique computing system. These systems may or may not connect to the Internet.

An embedded device system generally runs as a single application. However, these devices can connect through the internet connection, and able communicate through other network devices.

Internet of Things (IoT)

Embedded System Hardware

The embedded system can be of type microcontroller or type microprocessor. Both of these types contain an integrated circuit (IC).

The essential component of the embedded system is a RISC family microcontroller like Motorola 68HC11, PIC 16F84, Atmel 8051 and many more. The most important factor that differentiates these microcontrollers with the microprocessor like 8085 is their internal read and writable memory. The essential embedded device components and system architecture are specified below.

Embedded System Software

The embedded system that uses the devices for the operating system is based on the language platform, mainly where the real-time operation would be performed. Manufacturers build embedded software in electronics, e.g., cars, telephones, modems, appliances, etc. The embedded system software can be as simple as lighting controls running using an 8-bit microcontroller. It can also be complicated software for missiles, process control systems, airplanes etc.

Application of Embedded System

- Home appliances
- Transportation
- Health care
- Business sector & offices
- Defense sector
- Aerospace
- Agricultural Sector

Characteristics of an Embedded System

- **Performs specific task:** Embedded systems perform some specific function or tasks.
- **Low Cost:** The price of an embedded system is not so expensive.
- **Time Specific:** It performs the tasks within a certain time frame.
- **Low Power:** Embedded Systems don't require much power to operate.
- **High Efficiency:** The efficiency level of embedded systems is so high.
- **Minimal User interface:** These systems require less user interface and are easy to use.

- **Less Human intervention:** Embedded systems require no human intervention or very less human intervention.
- **Highly Stable:** Embedded systems do not change frequently mostly fixed maintaining stability.
- **High Reliability:** Embedded systems are reliable they perform tasks consistently well.
- **Use microprocessors or microcontrollers:** Embedded systems use microprocessors or microcontrollers to design and use limited memory.
- **Manufacturable:** The majority of embedded systems are compact and affordable to manufacture. They are based on the size and low complexity of the hardware.

Embedded System Work

Embedded systems operate from the combination of hardware and software that focuses on certain operations. An embedded system at its heart has microcontroller or microprocessor hardware on which user writes the code in form of software for control of the system. Here is how it generally works:

- **Hardware Layer:** Some of the hardware elements that are incorporated in an embedded system include the sensor, actuator, memory, current I/O interfaces as well as power supply. These components are interfaced with the micro controller or micro processor, depending up on the input signals accepted.
- **Input/Output (I/O) Interfaces:** They to give the system input in form of data from sensors or inputs made by the users and the microcontroller processes the data received. The processed data is then utilized to coordinate the output devices such as displays, motors or communication modules.
- **Firmware:** Firmware which is integrated within a system's hardware comprises of certain instructions to accomplish a task. Such software is often used for real time processing and is tuned to work in the most optimal manner on the system hardware.
- **Processing:** Depending on the given software and the input data received from the system's inputs the microcontroller calculates the appropriate output or response and manages the system's components.
- **Real-time Operation:** Some of the most common systems are real time, this implies that they have the ability to process events or inputs at given time. This real time capability makes sure that the system accomplishes its intended function within stated time demands.

NEURAL NETWORKS

Neural networks extract identifying features from data, lacking pre-programmed understanding. Network components include neurons, connections, weights, biases, propagation functions, and a learning rule. Neurons receive inputs, governed by thresholds and activation functions. Connections involve weights and biases regulating information transfer. Learning, adjusting weights and biases, occurs in three stages: input computation, output generation, and iterative refinement enhancing the network's proficiency in diverse tasks.

These include:

1. The neural network is simulated by a new environment.
2. Then the free parameters of the neural network are changed as a result of this simulation.
3. The neural network then responds in a new way to the environment because of the changes in its free parameters.

Importance of Neural Networks

The ability of neural networks to identify patterns, solve intricate puzzles, and adjust to changing surroundings is essential. Their capacity to learn from data has far-reaching effects, ranging from revolutionizing technology like natural language processing and self-driving automobiles to automating decision-making processes and increasing efficiency in numerous industries. The development of artificial intelligence is largely dependent on neural networks, which also drive innovation and influence the direction of technology.

Neural Networks work

Let's understand with an example of how a neural network works:

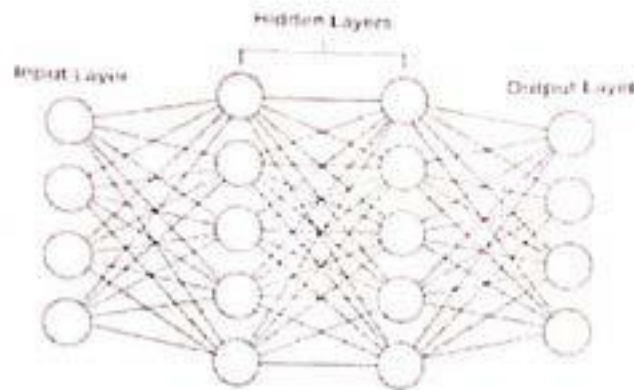

Consider a neural network for email classification. The input layer takes features like email content, sender information, and subject. These inputs, multiplied by adjusted weights, pass through hidden layers. The network, through training, learns to recognize patterns indicating whether an email is spam or not. The output layer, with a binary activation function, predicts whether the email is spam (1) or not (0). As the network iteratively refines its weights through backpropagation, it becomes adept at distinguishing between spam and legitimate emails, showcasing the practicality of neural networks in real-world applications like email filtering.

Working of a Neural Network

Neural networks are complex systems that mimic some features of the functioning of the human brain. It is composed of an input layer, one or more hidden layers, and an output layer made up of layers of artificial neurons that are coupled. The two stages of the basic process are called backpropagation and forward propagation.

Types of Neural Networks

There are *seven* types of neural networks that can be used.

- **Feedforward Networks:** A feedforward neural network is a simple artificial neural network architecture in which data moves from input to output in a single direction.
- **Multilayer Perceptron (MLP):** MLP is a type of feedforward neural network with three or more layers, including an input layer, one or more hidden layers, and an output layer.
- **Convolutional Neural Network (CNN):** A Convolutional Neural Network (CNN) is a specialized artificial neural network designed for image processing.
- **Recurrent Neural Network (RNN):** An artificial neural network type intended for sequential data processing is called a Recurrent Neural Network (RNN).
- **Long Short-Term Memory (LSTM):** LSTM is a type of RNN that is designed to overcome the vanishing gradient problem in training RNNs.

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

UNIT I INTELLIGENT AGENTS

Introduction to AI – Agents and Environments – concept of rationality – nature of environments – structure of agents. Problem solving agents – search algorithms – uninformed search strategies.

UNIT II PROBLEM SOLVING

Heuristic search strategies – heuristic functions. Local search and optimization problems – local search in continuous space – search with non-deterministic actions – search in partially observable environments – online search agents and unknown environments

UNIT III GAME PLAYING AND CSP

Game theory – optimal decisions in games – alpha-beta search – monte-carlo tree search – stochastic games – partially observable games. Constraint satisfaction problems – constraint propagation – backtracking search for CSP – local search for CSP – structure of CSP.

UNIT IV INTRODUCTION TO MACHINE LEARNING

Review of Linear Algebra for machine learning; Introduction and motivation for machine learning; Examples of machine learning applications, Hypothesis spaces, Inductive bias, Generalization, Bias variance trade-off.

UNIT V SUPERVISED LEARNING

Linear Regression Models: Least squares, single & multiple variables, Bayesian linear regression, gradient descent, Linear Classification Models: Naive Bayes, Maximum margin classifier – Support vector machine, Decision Tree, Random Forests.

COURSE OUTCOMES:

- Explain intelligent agent frameworks
- Apply problem solving techniques
- Apply game playing and CSP techniques.
- Explain the basic concepts of machine learning.
- Construct supervised learning models.

ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

Artificial intelligence (AI) is a broad category that includes machine learning (ML) as a subset. AI is the ability of computers to mimic human thought and perform tasks, while ML is a set of techniques that teach computers how to perform specific tasks.

The Artificial Intelligence tutorial provides an introduction to AI which will help you to understand the concepts behind Artificial Intelligence. In this tutorial, we have also discussed various popular topics such as History of AI, applications of AI, deep learning, machine learning, natural language processing, Reinforcement learning, Q-learning, Intelligent agents, Various search algorithms, etc.

Our AI tutorial is prepared from an elementary level so you can easily understand the complete tutorial from basic concepts to the high-level concepts.

What is Artificial Intelligence (AI)?

In today's world, technology is growing very fast, and we are getting in touch with different new technologies day by day.

some main advantages of Artificial Intelligence:

- **High Accuracy with less errors:** AI machines or systems are prone to less errors and high accuracy as it takes decisions as per pre-experience or information.
- **High-Speed:** AI systems can be of very high-speed and fast-decision making, because of that AI systems can beat a chess champion in the Chess game.
- **High reliability:** AI machines are highly reliable and can perform the same action multiple times with high accuracy.
- **Useful for risky areas:** AI machines can be helpful in situations such as defusing a bomb, exploring the ocean floor, where to employ a human can be risky.

- o **Digital Assistant:** AI can be very useful to provide digital assistant to the users such as AI technology is currently used by various E-commerce websites to show the products as per customer requirement.
- o **Useful as a public utility:** AI can be very useful for public utilities such as a self-driving car which can make our journey safer and hassle-free, facial recognition for security purpose, Natural language processing to communicate with the human in human-language, etc.

Classification of Machine Learning

Machine learning implementations are classified into four major categories, depending on the nature of the learning “signal” or “response” available to a learning system which are as follows:

1. Supervised learning:

Supervised learning is the machine learning task of learning a function that maps an input to an output based on example input-output pairs. The given data is labeled. Both *classification* and *regression* problems are supervised learning problems.

2. Unsupervised learning:

Unsupervised learning is a type of machine learning algorithm used to draw inferences from datasets consisting of input data without labeled responses. In unsupervised learning algorithms, classification or categorization is not included in the observations. Example: Consider the following data regarding patients entering a clinic. The data consists of the gender and age of the patients.

3. Reinforcement learning:

Reinforcement learning is the problem of getting an agent to act in the world so as to maximize its rewards.

A learner is not told what actions to take as in most forms of machine learning but instead must discover which actions yield the most reward by trying them.

4. Semi-supervised learning:

Where an incomplete training signal is given: a training set with some (often many) of the target outputs missing. There is a special case of this principle known as Transduction where the entire set of problem instances is known at learning time, except that part of the targets are missing. Semi-supervised learning is an approach to machine learning that combines small labeled data with a large amount of unlabeled data during training. Semi-supervised learning falls between unsupervised learning and supervised learning.

- **Neural networks**

Neural networks are a series of algorithms that are modeled after the human brain. They are used to train computers to mimic human reasoning. Deep learning is a type of neural network that has more than three layers, including the input and output layers.

- **Real-world applications**

AI and ML are used in many real-world applications, including health care, advanced robotics, and network security:

- Health care: AI and ML can be used to scan x-rays for cancerous growths, develop personalized treatment plans, and allocate hospital resources.
- Advanced robotics: AI and ML can be used to develop intelligent machines that can perform complex tasks.
- Network security: AI and ML can be used to assess network threats and improve security measures.

AI and ML connected

While AI and ML are not quite the same thing, they are closely connected. The simplest way to understand how AI and ML relate to each other is:

- AI is the broader concept of enabling a machine or system to sense, reason, act, or adapt like a human
- ML is an application of AI that allows machines to extract knowledge from data and learn from it autonomously

One helpful way to remember the difference between machine learning and artificial intelligence is to imagine them as umbrella categories. Artificial intelligence is the overarching term that covers a wide variety of specific approaches and algorithms. Machine learning sits under that umbrella, but so do other major subfields, such as deep learning, robotics, expert systems, and natural language processing.

DIGITAL MARKETING

COURSE OBJECTIVES:

- To understand the difference between Traditional Marketing and digital Marketing
- To understand and analyze the search engine functions
- To develop a deep knowledge about the Digital marketing platforms and the theoretical aspects of creating a website
- To analyze inbuilt tools for digital Marketing

UNIT I INTRODUCTION TO DIGITAL MARKETING

What is Digital Marketing- Need of Digital Marketing-Digital Marketing Platforms – Understanding digital marketing process- Difference between Traditional Marketing and digital Marketing- tools of Digital marketing - Advantage of Digital Marketing-Digital Marketing Manager Role and functions - How we use both Digital & Traditional Marketing

UNIT II WEBSITE & SEARCH ENGINE

Website –Hosting and Domain– Different platforms for website creation- Introduction to SERP- What are search engines- How search engines work- Major functions of a search engine- What are keywords -Different types of keywords- Google keyword planner tool.

UNIT III MISC TOOLS- GOOGLE WEBMASTER TOOLS

Site Map Creators- Browser-based analysis tools-Page Rank tools-pinging & indexing tools- Dead links identification tools- Open site explorer Domain information/ whois tools- Quick sprout

UNIT IV LEAD MANAGEMENT & DIGITAL MARKETING

Web to lead forms- Web to case forms- Lead generation techniques- Leads are everywhere- Social media and lead gen Inbuilt tools for Digital Marketing-Ip Tracker- CPC reduction (in case of paid ads) Group posting on Social Media platforms.

UNIT V DIGITAL MARKETING SKILL

Search Engine Optimization(SEO)- Search Engine Marketing(SEM).-Social Media Marketing/Optimization- Email Marketing. Website :Product Marketing- Content Writing.

DIGITAL MARKETING

Nowadays, everyone is connected to the internet through their mobile phones and laptop devices. Understanding why digital marketing is essential for businesses aiming to succeed online through modern marketing and for individuals looking to make a career in digital marketing. Digital marketing, or online marketing, strategically promotes brands, products, or services using various digital channels and technologies. With the rise of the internet and mobile devices, businesses now have huge opportunities to reach a global audience.

Whether through innovative search engine marketing (SEM) strategies or advanced digital marketing software, companies can connect with potential customers like never before. Utilizing search engine optimization (SEO), content marketing, social media advertising, and email marketing allows businesses to effectively reach and engage their target audience, driving growth and achieving marketing objectives.

What is **DIGITAL MARKETING**

Digital marketing is the use of online platforms & digital technologies to promote brands, products, or services.

Types of Digital Marketing

Digital marketing encompasses a wide range of strategies and techniques aimed at promoting products or services through digital channels. Here are the key types of digital marketing:

1. Search Engine Optimization (SEO)

SEO involves optimizing a website to improve its visibility in search engine results pages (SERPs). The goal is to attract organic traffic by using relevant keywords, improving site structure, and earning backlinks. Effective SEO can enhance online visibility and drive long-term traffic.

2. Content Marketing

Content marketing focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, articles, videos, infographics, and eBooks. The objective is to provide useful information that encourages customer loyalty and drives conversions.

3. Social Media Marketing

Social media marketing involves using platforms like Facebook, Instagram, Twitter, LinkedIn, and TikTok to promote products and engage with customers. This type of marketing can include organic content, paid advertising, and influencer partnerships to reach a broader audience and build brand awareness.

Search Engine Optimization (SEO)

SEO, or Search Engine Optimization, is the process of optimizing your website and content to rank higher on search engine results pages (SERPs). It involves keyword research, on-page optimization, and building high-quality backlinks. For example, Moz, a leading SEO software company, uses SEO services to improve their visibility for high-volume keywords like "SEO tools" and "search engine optimization strategies."

Content Marketing

Content marketing focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, videos, infographics, and eBooks. HubSpot, a prominent digital marketing agency, utilizes a robust content marketing strategy by offering free resources such as blogs, eBooks, and webinars to drive traffic and generate leads for their marketing automation software.

Social Media Marketing

Social media marketing involves using platforms like Facebook, Instagram, Twitter, and LinkedIn to promote products, engage with customers, and build brand awareness. For example, Nike effectively uses social media advertising on Instagram and Twitter to showcase their products, engage with followers, and drive online sales, often targeting their audience with visually compelling ads.

DATA SCIENCE

COURSE OUTCOMES:

- To understand the techniques and processes of data science
- To apply descriptive data analytics
- To visualize data for various applications
- To understand inferential data analytics
- To analysis and build predictive models from data

UNIT I INTRODUCTION TO DATA SCIENCE

Need for data science - benefits and uses - facets of data - data science process - setting the research goal - retrieving data - cleansing, integrating, and transforming data - exploratory data analysis - build the models - presenting and building applications.

UNIT II DESCRIPTIVE ANALYTICS

Frequency distributions - Outliers - interpreting distributions - graphs - averages - describing variability - Interquartile range - variability for qualitative and ranked data - Normal distributions - z scores - correlation - scatter plots - regression - regression line .

UNIT III INFERENCE STATISTICS

Populations - samples - random sampling - Sampling distribution - standard error of the mean - Hypothesis testing - z-test - z-test procedure - decision rule - calculations - decisions - interpretations

UNIT IV ANALYSIS OF VARIANCE

t-test for one sample - sampling distribution of t - t-test procedure - t-test for two independent samples - p-value - statistical significance - t-test for two related samples, F-test - ANOVA - Two-factor experiments - three F-tests - two-factor ANOVA - Introduction to chi-square tests.

UNIT V PREDICTIVE ANALYTICS

Linear least squares - implementation - goodness of fit - testing a linear model - weighted resampling, Regression using StatsModels - multiple regression - nonlinear relationships - logistic regression .

DATA SCIENCE

In a world of data space where organizations deal with petabytes and exabytes of data, the era

of Big Data emerged, and the essence of its storage also grew. It was a great

challenge and concern for industries for the storage of data until 2010. Now when frameworks like Hadoop and others solved the problem of storage, the focus shifted to the processing of data. Data Science plays a big role here. All those fancy Sci-fi movies you love to watch around can be turned into reality by Data Science.

Nowadays its growth has been increased in multiple ways and thus one should be ready for our future by learning what it is and how can we add value to it.

Data science is not a one-step process such that you will get to learn it in a short time and call ourselves a Data Scientist. It's passes from many stages and every element is important. One should always follow the proper steps to reach the ladder. Every step has its value and it counts in your model. Buckle up in your seats and get ready to learn about those steps.

1. Problem Statement:

No work start without motivation, Data science is no exception though. It's really important to declare or formulate your problem statement very clearly and precisely. Your whole model and it's working depend on your statement. Many scientist considers this as the main and much important step of Data Science. So make sure what's your problem statement and how well can it add value to business or any other organization.

2. Data Collection:

After defining the problem statement, the next obvious step is to go in search of data that you might require for your model. You must do good research, find all that you need. Data can be in any form i.e unstructured or structured. It might be in various forms like videos, spreadsheets, coded forms, etc. You must collect all these kinds of sources.

3. Data Cleaning:

As you have formulated your motive and also you did collect your data, the next step to do is cleaning. Yes, it is! Data cleaning is the most favorite thing for data scientists to do. Data cleaning is all about the removal of missing, redundant, unnecessary and duplicate data from your collection. There are various tools to do so with the help of programming in either R or Python. It's totally on you to choose one of them. Various scientist have their opinion on which to choose. When it comes to the statistical part, R is preferred over Python, as it has the privilege of more than 12,000 packages. While python is used as it is fast, easily accessible and we can perform the same things as we can in R with the help of various packages.

4. Data Analysis and Exploration:

It's one of the prime things in data science to do and time to get inner Holmes out. It's about analyzing the structure of data, finding hidden patterns in them, studying behaviors, visualizing the effects of one variable over others and then concluding. We can explore the data with the help of various graphs formed with the help of libraries using any programming language. In R, GGplot is one of the most famous models while Matplotlib in Python.

5. Data Modelling:

Once you are done with your study that you have formed from data visualization, you must start building a hypothesis model such that it may yield you a good prediction in future. Here, you must choose a good algorithm that best fit to your model. There different kinds of algorithms from regression to classification, SVM(Support vector machines), Clustering, etc. Your model can be of a Machine Learning algorithm. You train your model with the train data and then test it with test data. There are various methods to do so.

6. Optimization and Deployment:

You followed each and every step and hence build a model that you feel is the best fit. But how can you decide how well your model is performing? This where optimization comes. You test your data and find how well it is performing by checking its accuracy. In short, you check the efficiency of the data model and thus try to optimize it for better accurate prediction. Deployment deals with the launch of your model and let the people outside there to benefit from that. You can also obtain feedback from organizations and people to know their need and then to work more on your model.

SUB: ADD ON COURSE-Reg.,

It is informed that the department of computer science and engineering is planning to organized a certified course on Ethical Hacking on 03.11.23 for the academic year 2023-2024 odd semester. The detailed schedule will be given by the departments. Head of the departments are requested to inform their students about the certified course on Ethical Hacking and motivate them to attend the course. HOD's are requested to nominate one faculty member to co-ordinate the same.

Respected Sir,

Sub:- Requesting Permission for conducting Add on Course – Reg.

I wish to bring to your kind information that the department of computer science and engineering has planned to conduct the following Add On course programme for the academic year 2023-24 odd semester.

As the department is equipped with relevant lab facilities and enterprise in the same field, we are requesting the permission for the conduct of the same.

Duration: 45 Hrs.

Thanking You,

ETHICAL HACKING

Who is a Certified Ethical Hacker?

A Certified Ethical Hacker is a specialist typically working in a red team environment, focused on attacking computer systems and gaining access to networks, applications, databases, and other critical data on secured systems. A C|EH[®] understands attack strategies, the use of creative attack vectors, and mimics the skills and creativity of malicious hackers. Unlike malicious hackers and actors, Certified Ethical Hackers operate with permission from the system owners and take all precautions to ensure the outcomes remain confidential. Bug bounty researchers are expert ethical hackers whose attack skills are used to uncover vulnerabilities in the systems.

What is C|EH® v12?

The Certified Ethical Hacker has been battle-hardened over the last 20 years, creating hundreds of thousands of Certified Ethical Hackers employed by top companies, militaries, and governments worldwide. In its 12th version, the Certified Ethical Hacker provides comprehensive training, hands-on learning labs, practice cyber ranges for engagement, certification assessments, cyber competitions, and opportunities for continuous learning into one comprehensive program curated through our new learning framework: 1. Learn 2. Certify 3. Engage 4. Compete.

RECONNAISSA

The C|EH® v12 is a specialized and one-of-a-kind training program to teach you everything you need to know about ethical hacking with hands-on training, labs, assessment, a mock engagement (practice), and global hacking competition. Stay on top of the game with the most in-demand skills required to succeed in the field of cyber security.

COURSE OUTCOMES:

At the end of this course, the students will be able:

1. To express knowledge on basics of computer based vulnerabilities
2. To gain understanding on different footprinting, reconnaissance and scanning methods.
3. To demonstrate the enumeration and vulnerability analysis methods
4. To gain knowledge on hacking options available in Web and wireless applications.
5. To acquire knowledge on the options for network protection.

ETHICAL HACKING

UNIT I INTRODUCTION TO HACKING

Introduction to Hacking – Important Terminologies – Penetration Test – Vulnerability Assessments versus Penetration Test – Pre-Engagement – Rules of Engagement – Penetration Testing Methodologies – OSSTMM – NIST – OWASP – Categories of Penetration Test – Types of Penetration Tests – Vulnerability Assessment Summary – Reports .

UNIT II FOOT PRINTING AND RECONNAISSANCE

Scanning Networks – Enumeration - Vulnerability Analysis - System Hacking - Malware Threats – Sniffing.

UNIT-III NETWORK ATTACKS

Vulnerability Data Resources – Exploit Databases – Network Sniffing – Types of Sniffing - Promiscuous versus Non promiscuous Mode – MITM Attacks – ARP Attacks – Denial of Service Attacks -Hijacking Session with MITM Attack – SSL Strip: Stripping .

UNIT IV TYPES OF HACKERS

Black Hat Hacker - White Hat Hacker - Grey Hat Hacker - Hacking Process - Foot Printing – Scanning - Gaining Access - Maintaining Access.

UNIT V WIRELESS AND WEB HACKING

Wireless Hacking – Introducing Aircrack- Cracking the WEP – Cracking a WPA/WPA2 Wireless Network Using Aircrack-ng – Evil Twin Attack – Causing Denial of Service on the Original AP.

DATA STRUCTURES DESIGN

COURSE OBJECTIVES:

- To implement ADTs in Python
- To design and implement linear data structures – lists, stacks, and queues
- To implement sorting, searching and hashing algorithms
- To solve problems using tree and graph structures

LIST OF EXPERIMENTS:

1. Implement simple ADTs as Python classes
2. Implement recursive algorithms in Python
3. Implement List ADT using Python arrays
4. Linked list implementations of List
5. Implementation of Stack and Queue ADTs
6. Applications of List, Stack and Queue ADTs
7. Implementation of sorting and searching algorithms
8. Implementation of Hash tables
9. Tree representation and traversal algorithms
10. Implementation of Binary Search Trees
11. Implementation of Heaps
12. Graph representation and Traversal algorithms
13. Implementation of single source shortest path algorithm
14. Implementation of minimum spanning tree algorithms

MACHINE LEARNING LABORATORY

- To understand the data sets and apply suitable algorithms for selecting the appropriate features for analysis.
- To learn to implement supervised machine learning algorithms on standard datasets and evaluate their performance.
- To experiment the unsupervised machine learning algorithms on standard datasets and evaluate their performance.
- To build the graph based learning models for standard data sets.
- To compare the performance of different ML algorithms and select the suitable one based on the application.

LIST OF EXPERIMENTS:

1. For a given set of training data examples stored in a .CSV file, implement and demonstrate the **Candidate-Elimination algorithm** to output a description of the set of all hypotheses consistent with the training examples.
2. Write a program to demonstrate the working of the decision tree based **ID3 algorithm**. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
3. Build an Artificial Neural Network by implementing the **Backpropagation algorithm** and test the same using appropriate data sets.
4. Write a program to implement the **naïve Bayesian classifier** for a sample training data set stored as a .CSV file and compute the accuracy with a few test data sets.
5. Implement **naïve Bayesian Classifier** model to classify a set of documents and measure the accuracy, precision, and recall.
6. Write a program to construct a **Bayesian network** to diagnose CORONA infection using standard WHO Data Set.
7. Apply **EM algorithm** to cluster a set of data stored in a .CSV file. Use the same data set for clustering using the **k-Means algorithm**. Compare the results of these two algorithms.
8. Write a program to implement **k-Nearest Neighbour algorithm** to classify the iris data set. Print both correct and wrong predictions.
9. Implement the non-parametric **Locally Weighted Regression algorithm** in order to fit datapoints. Select an appropriate data set for your experiment and draw graphs.

Mobile app development using Android Studio involves a series of steps to design, build, and test Android applications. Android Studio is the official Integrated Development Environment (IDE) for Android development, providing a comprehensive set of tools for app development. Here's a guide to getting started with Android Studio for mobile app development:

1. Setting Up Android Studio

Download and Install:

- **Download:** Go to the [Android Studio website](#) and download the installer for your operating system (Windows, macOS, or Linux).
- **Install:** Follow the installation instructions. This process will include setting up the Android SDK, Android Profiler, and other necessary components.

Initial Configuration:

- **Open Android Studio:** Launch Android Studio and complete the setup wizard, which includes installing additional components and setting up the development environment.

2. Creating a New Project

Start a New Project:

- **File > New > New Project:** Choose a project template based on the type of app you want to build (e.g., Empty Activity, Basic Activity).
- **Configure Your Project:** Enter your application name, package name, save location, and minimum API level.

3. Exploring the Project Structure

Project Files and Directories:

- **app/src/main/java/:** Contains your Java/Kotlin source code files.
- **app/src/main/res/:** Contains resources like layouts, strings, and images.
- **app/src/main/AndroidManifest.xml:** Contains essential information about your app, such as permissions and activities.
- **build.gradle:** Contains build configuration and dependencies.

4. Designing the User Interface

XML Layout Files:

- **Open res/layout/activity_main.xml:** Use the Layout Editor to drag and drop UI components or write XML code to define the app's layout.
- **Design and Code Views:** Toggle between the Design and Code views to adjust your layout.

5. Writing the Code

Activity Class:

- **Open MainActivity.java or MainActivity.kt:** This is where you write the code for your app's main activity.
- **Event Handling:** Write code to handle user interactions, such as button clicks and input validation.

Connecting UI to Code:

- **Find UI Elements:** Use `findViewById` (Java) or `findViewById` with Kotlin synthetic properties to get references to your UI elements.
- **Set Up Listeners:** Attach event listeners to respond to user actions.

6. Adding Functionality

Libraries: Use Android

- **Dependencies:** Add libraries to your `build.gradle` file to integrate functionalities like networking (Retrofit), image loading (Glide), or database management (Room).

Accessing Data:

- **Local Storage:** Use SQLite or Room for local databases, or SharedPreferences for simple key-value pairs.
- **Remote Data:** Use Retrofit or Volley for network operations to fetch data from web services.

7. Testing Your App

Run on Emulator or Device:

- **Android Emulator:** Configure and start an emulator through Android Studio to test your app on a virtual device.
- **Physical Device:** Connect a physical Android device via USB and enable Developer Options and USB Debugging.

Writing Tests:

- **Unit Tests:** Write unit tests to verify the functionality of individual components.
- **UI Tests:** Use Espresso or UI Automator to test user interactions and app behavior.

8. Debugging

Logcat:

- **View Logs:** Use Logcat to view logs and debug messages from your app.
- **Breakpoints:** Set breakpoints in your code and use the debugger to step through and inspect code execution.

9. Building and Publishing

Build APKs

- **Build > Build Bundle(s) / APK(s) > Build APK(s):** Generate the APK file for distribution.
- **Sign Your APK: Generate Signed Bundle/APK:** Follow the wizard to sign your APK with a release key for distribution.

Publish to Google Play Store:

- **Create Developer Account:** Sign up for a Google Play Developer account.
- **Prepare Store Listing:** Provide app details, screenshots, and other information.
- **Upload APK:** Submit your APK for review and release.

10. Maintaining Your App

Updates:

- **Enhance Features:** Regularly update your app with new features and improvements.
- **Fix Bugs:** Address any issues reported by users or found during testing.

Analytics:

- **Integrate Analytics:** Use Google Analytics or Firebase Analytics to track user behavior and app performance.

Features and considerations in mobile app development:

1. User Interface (UI) Design

- **Responsive Design:** Adapts to various screen sizes and orientations.
- **Intuitive Navigation:** Easy-to-use navigation elements like menus, tabs, and buttons.

- **Interactive Elements:** Engaging components such as animations, transitions, and feedback (e.g., button presses).
- **Consistent Styling:** Use of consistent colors, fonts, and design patterns following platform guidelines (Material Design for Android, Human Interface Guidelines for iOS).

2. User Experience (UX)

- **Onboarding:** Introduction screens and tutorials to help users get started.
- **Accessibility:** Features like voice control, screen readers, and high-contrast modes to make the app usable for people with disabilities.
- **Performance Optimization:** Ensuring fast load times and smooth interactions.
- **Personalization:** Customizable settings and preferences to tailor the experience to individual users.

3. Functionality

- **Core Features:** Essential functionalities that the app is designed to deliver (e.g., messaging, navigation, social networking).
- **Push Notifications:** Alert users about important events or updates.
- **Offline Capability:** Allow users to access certain features or content without an active internet connection.
- **Multilingual Support:** Localization and internationalization to support multiple languages and regions.

4. Integration

- **API Integration:** Connect with third-party services and APIs (e.g., social media, payment gateways, cloud storage).
- **Social Media:** Integration with platforms like Facebook, Twitter, or Instagram for login, sharing, and engagement.
- **Maps and Geolocation:** Incorporate location-based services and map functionalities (e.g., Google Maps API, location tracking).

5. Data Management

- **Local Storage:** Use of databases (SQLite, Room) or file storage for offline data.
- **Cloud Storage:** Integration with cloud services for data synchronization and backup (e.g., Firebase, AWS).
- **Data Security:** Encryption and secure storage of sensitive information.

6. Security Features

- **Authentication:** Support for various authentication methods, including passwords, biometrics (fingerprint, facial recognition), and OAuth.
- **Authorization:** Ensuring that users have the appropriate permissions to access specific features or data.
- **Secure Communication:** Use of HTTPS and other security protocols to protect data in transit.

7. Testing and Quality Assurance

- **Automated Testing:** Unit tests, UI tests, and integration tests to ensure app stability and performance.
- **Manual Testing:** Hands-on testing to identify usability issues and bugs.
- **Performance Testing:** Assess app performance under different conditions (e.g., load testing, stress testing).

8. Deployment and Distribution

- **App Store Submission:** Process for submitting apps to Google Play Store, Apple App Store, or other app marketplaces.
- **Version Control:** Manage different versions of the app and handle updates and patches.
- **Analytics and Monitoring:** Tools for tracking app usage, user behavior, and performance metrics (e.g., Google Analytics, Firebase Analytics).

9. Monetization

- **In-App Purchases:** Offer additional features or content for a fee within the app.
- **Subscription Models:** Recurring payments for premium features or content.
- **Advertisements:** Integrate ads to generate revenue (e.g., banner ads, interstitials, rewarded ads).

10. User Feedback and Support

- **Feedback Mechanisms:** Provide ways for users to give feedback, report issues, or suggest features.
- **Customer Support:** Integration of support channels like chat, email, or FAQs.

11. Scalability and Maintenance

- **Code Architecture:** Use of scalable code architectures (e.g., MVVM, MVP) to manage growing complexity.
- **Regular Updates:** Periodic updates to add new features, fix bugs, and ensure compatibility with new OS versions.
- **Monitoring:** Continuously monitor app performance and user feedback to address issues and improve the app.

12. Compliance and Legal Considerations

- **Privacy Policies:** Clearly defined privacy policies and terms of service to inform users about data collection and usage.
- **Regulatory Compliance:** Adherence to legal requirements and guidelines, such as GDPR or CCPA.

Respected Sir,

Sub:- Requesting Permission for conducting Add on Course – Reg.

I wish to bring to your kind information that the department of AIDS has planned to conduct the following Add On course programme for the academic year 2023-24 odd semester.

As the department is equipped with relevant lab facilities and enterprise in the same field, we are requesting the permission for the conduct of the same.

Duration: 45 Hrs.

Thanking You,

Yours Truly,
HOD / AIDS

Google Cloud Platform (GCP) is a suite of cloud computing services provided by Google. It is a public cloud computing platform consisting of a variety of services like compute, storage, networking, application development, Big Data, and more, which run on the same cloud infrastructure that Google uses internally for its end-user products, such as Google Search, Photos, Gmail and YouTube, etc.

The services of GCP can be accessed by software developers, cloud administrators and IT professionals over the Internet or through a dedicated network connection.

Google Cloud Platform

Google Cloud Platform is known as one of the leading cloud providers in the IT field. The services and features can be easily accessed and used by the software developers and users with little technical knowledge. Google has been on top amongst its competitors, offering the highly scalable and most reliable platform for building, testing and deploying the applications in the real-time environment.

Apart from this, GCP was announced as the leading cloud platform in the Gartner's IaaS Magic Quadrant in 2018. Gartner is one of the leading research and advisory company. Gartner organized a campaign where Google Cloud Platform was compared with other cloud providers, and GCP was selected as one of the top three providers in the market.

Benefits of Google Cloud Platform

Some of the main benefits of Google Cloud Platform are explained below:

Best Pricing: Google enables users to get Google Cloud hosting at the cheapest rates. The hosting plans are not only cheaper than other hosting platforms but also offer better features than others. GCP provides a pay-as-you-go option to the users where users can pay separately only for the services and resources they want to use.

Work from Anywhere: Once the account is configured on GCP, it can be accessed from anywhere. That means that the user can use GCP across different devices from different places. It is possible because Google provides web-based applications that allow users to have complete access to GCP.

Private Network: Google has its own network that enables users to have more control over GCP functions. Due to this, users achieve smooth performance and increased efficiency over the network.

Scalable: Users are getting a more scalable platform over the private network. Because Google uses fiber-optic cables to extend its network range, it is likely to have more scalability. Google is always working to scale its network because there can be any amount of traffic at any time.

- **On-demand services:** Automated environment with web-based tools. Therefore, no human intervention is required to access the resources.
- **Broad network access:** The resources and the information can be accessed from anywhere.
- **Resource pooling:** On-demand availability of a shared pool of computing resources to the users.

- **Rapid elasticity:** The availability of more resources whenever required.
- **Measured service:** Easy-to-pay feature enables users to pay only for consumed services.
