**Introduction** :A brief history of evolutionary computation, Elements of Genetic Algorithms, A simple genetic algorithm, Applications of genetic algorithms. Genetic Algorithms in Scientific models - Evolving computer programs, data analysis & prediction, evolving neural networks, modeling interaction between learning & evolution, modeling sexual selection, measuring evolutionary activity.

**UNIT-II**

**9**

**Theoretical Foundation of genetic algorithm** :Schemas & Two-Armed and k-armed problem, royal roads, exact mathematical models of simple genetic algorithms, Statistical- Mechanics Approaches.

**UNIT-III**

**9**

**Computer Implementation of Genetic Algorithm** : Data structures, Reproduction, crossover & mutation, mapping objective functions to fitness form, fitness scaling, coding, a multiparameter, mapped, fixed point coding, discretization and constraints.

**UNIT-IV**

**9**

**Some applications of genetic algorithms** :The risk of genetic algorithms, De Jong & function optimization, Improvement in basic techniques, current application of genetic algorithms

**UNIT-V**

**9**

**Advanced operators & techniques in genetic search** :Dominance, duplicity, & abeyance, inversion & other reordering operators, other micro operators, Niche & speciation, multi objective optimization, knowledge based techniques, genetic algorithms & parallel processors.

**Total : 45hrs**

**17250E16C - SOFTWARE METRICS**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand software quality metrics.

**OBJECTIVES:**

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

**UNIT I MEASUREMENTS THEORY**

**9**

- Measurements In Software Engineering - Scope Of Software Metrics - Measurements Theory - **Goal Based Framework** – Software Measurement Validation.

**UNIT II DATA COLLECTION AND ANALYSIS**

**9**

Empirical Investigation - Planning Experiments - **Software Metrics Data Collection** - Analysis Methods – Statistical Methods.

**UNIT III PRODUCTS METRICS**

**9**

Measurement Of Internet Product Attributes - Size And Structure - External Product Attributes - **Measurement Of Quality.**

**UNIT IV QUALITY METRICS**

**9**

Software Quality Metrics - Product Quality - Process Quality - **Metrics For Software Maintenance** - Case Studies Of Metrics Program - Motorola - **Hp And IBM.**

**UNIT V MANAGEMENT METRICS**

**9**

Quality Management Models - **Rayleigh Model - Problem Tracking Report (PTR) Model** - Reliability Growth Model - Model Evaluation - Orthogonal Classification.

**TOTAL = 45**

**17250E24A - ADVANCED DISTRIBUTED COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

This course discusses the depth concepts of distributed computing and its features.

**OBJECTIVES:**

Understanding the concepts of

- processing . distributed systems, operating system issues.
- learn about distributed transaction
- study about the distributed databases.

**UNIT-I INTRODUCTION 9**

Characterization of Distributed Systems - Examples - Resource Sharing and the Web - Challenges – System Models - Architectural and Fundamental Models - Networking and Internetworking - Types of Networks - Network Principles - Internet Protocols - Case Studies: Ethernet, WiFi.

**UNIT-II PROCESSES AND DISTRIBUTED OBJECTS 9**

Interprocess Communication - The API for the Internet Protocols - External Data Representation and Marshalling - Client-Server Communication - Group Communication - Case Study: Interprocess communication in UNIX - Distributed Objects and Remote Invocation - Communication Between Distributed Objects - Remote Procedure Call - Events and Notifications - Case Study: Java RMI.

**UNIT-III OPERATING SYSTEM ISSUES 9**

The OS Layer - Protection - Processes and Threads - Communication and Invocation – OS Architecture - Security - Overview - Cryptographic Algorithms - Digital Signatures - Cryptography Pragmatics – Case Studies Kerberos, 802.11 WiFi - Distributed File Systems - File Service Architecture - Sun Network File System - Distributed Debugging - Distributed Mutual Exclusion – Elections – Multicast Communication Related Problems.

**UNIT-IV DISTRIBUTED TRANSACTION PROCESSING 9**

Transactions - Nested Transactions - Locks - Optimistic Concurrency Control - Timestamp Ordering - Comparison - Flat and Nested Distributed Transactions - Atomic Commit Protocols - Concurrency Control in Distributed Transactions - Transaction Recovery - Overview of Replication And Distributed Multimedia Systems.

**UNIT-V DISTRIBUTED DATABASES 9**

Features of Distributed versus Centralized Databases -Principles of Distributed Databases - Levels of Distribution Transparency -Reference Architecture for Distributed Databases - **Types of Data Fragmentation - Integrity Constraints in Distributed Databases.**

**Total : 45 hrs**

**CSE/Elective -II/Semester - II**

**TEXT BOOKS :**

**17250E24B- DATA WAREHOUSING & DATA MINING**

**L T P C**  
**4 0 0 4**

**AIM:**

To serve the students with an emphasis on the design aspects of Data Mining and Data Warehousing.

**OBJECTIVES:**

- To introduce the concept of data mining with in detail coverage of basic tasks, metrics, issues, and implication. Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of data warehousing with special emphasis on architecture and design.

**UNIT-I INTRODUCTION 9**

Introduction: Fundamentals of data mining, Data Mining Functionalities, Classification of Data Mining systems, Major issues in Data Mining, Data Warehousing and Business Analysis: - **Data warehousing Components** –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – **OLAP and Multidimensional Data Analysis.**

**UNIT-II DATA MINING AND ASSOCIATION RULE MINING 9**

Data Mining: - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.

**Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods** – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint-Based Association Mining.

**UNIT-III CLASSIFICATION AND PREDICTION 9**

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – **Bayesian Classification** – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – **Lazy Learners** – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

**UNIT IV CLUSTER ANALYSIS 9**

**Cluster Analysis:** - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – **Grid-Based**

**17250E24C- ARTIFICIAL NEURAL NETWORKS**

**L T P C**  
**4 0 0 4**

**AIM:**

To give out the students with an importance on the various aspects of artificial neural networks.

**OBJECTIVES:**

- To introduce the concepts of artificial neural networks such as biological neural networks, clustering and structures
- To study the linear models for regression , classification, kernel methods and feed forward neural networks

**UNIT-I Introduction to artificial neural networks 9**  
**Biological neural networks** - Pattern analysis tasks: Classification, Regression, Clustering - Computational models of neurons - Structures of neural networks - Learning principles.

**UNIT-II Linear models for regression and classification 9**  
Polynomial curve fitting - **Bayesian curve fitting** - Linear basis function models – Bias - variance decomposition - Bayesian linear regression - Least squares for classification - Logistic regression for classification - Bayesian logistic regression for classification

**UNIT-III Feed forward neural networks 9**  
Pattern classification using perception - Multilayer feed forward neural networks (MLFFNNs) - **Pattern classification and regression using MLFFNNs** - Error back propagation learning - Fast learning methods: Conjugate gradient method – Auto associative neural networks - Bayesian neural networks.

**UNIT-IV Kernel methods for pattern analysis 9**  
Statistical learning theory - Support vector machines for pattern classification - Support vector regression for function approximation - Relevance vector machines for classification and regression - **Self-organizing maps:** Pattern clustering - Topological mapping - **Kohonen's self-organizing map.**

**UNIT-V Feedback neural networks 9**  
Pattern storage and retrieval - Hopfield model - **Boltzmann machine** - Recurrent neural networks.

**Total: 45 hrs**

***CSE/Elective -II/Semester - II***

**TEXT BOOKS:**

4. C.M.Bishop, Pattern Recognition and Machine Learning, Springer, 2006

**17250E25A- SERVICE ORIENTED ARCHITECTURE**

**AIM:**

To familiarize the students with the concepts of service oriented architectures. (SOA).

**OBJECTIVES:**

- Understand SOA, service orientation and web services
- Analyzing and designing business based on SOA principles.
- Learning the concepts of XML.

**UNIT I**

**9**

**Software Architecture** – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – **SOA programming models.**

**UNIT II**

**9**

Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – **SOAP – WSDL – JAX – WS – XML WS for .NET** – Service integration with ESB – Scenario – Business case for SOA – stakeholder objectives – benefits of SPA – Cost Savings

**UNIT III**

**9**

**SOA implementation and Governance** – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software as a service – SOA technologies – proof-of-concept – process orchestration – **SOA best practices**

**UNIT IV**

**9**

Meta data management – **XML security – XML signature – XML Encryption** – SAML – XACML – XKMS – WS-Security – Security in web service framework – advanced messaging

**UNIT V**

**9**

Transaction processing – paradigm – protocols and coordination – transaction specifications – **SOA in mobile** – research issues

**Total: 45 hrs**

**REFERENCES:**

## 17250E25B - HIGH SPEED NETWORKS

L T P C  
4 0 0 4

### AIM:

To study the various performance and analysis issues involved in high-speed data transmission.

### OBJECTIVES:

Be able to

- Describe and interpret the basics of high speed networking technologies.
- Apply the concept learnt in this course to optimize and troubleshoot high-speed network.
- Demonstrate the knowledge of network planning and optimization

### UNIT - 1 : HIGH SPEED NETWORKS

9

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - ATM Service Categories - AAL. High Speed LANs: Fast Ethernet, Gigabit Ethernet, Fiber Channel - Wireless LANs: applications, requirements - Architecture of 802.11

### UNIT - 2 : CONGESTION AND TRAFFIC MANAGEMENT

9

Queuing Analysis- Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control - Traffic Management - Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

### UNIT - 3 : TCP AND ATM CONGESTION CONTROL

9

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management - Exponential RTO backoff - KARN's Algorithm - Window management - Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Frame work, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

### UNIT - 4 : INTEGRATED AND DIFFERENTIATED SERVICES

9

Integrated Services Architecture - Approach, Components, Services- Queuing Discipline, FQ, PS, BRfq, GPS, WFQ - Random Early Detection, Differentiated Services

### UNIT - 5 : PROTOCOLS FOR QOS SUPPORT

9

RSVP - Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol

Architecture, Data Transfer Protocol, RTP.

**Total: 45 hrs**

***CSE/Elective -III/Semester - II***

**TEXT BOOK:**

1. William Stallings, "HIGH SPEED NETWORKS AND INTERNET", Pearson Education, Second Edition, 2002.

**REFERENCES:**

1. Warland & Pravin Varaiya, "HIGH PERFORMANCE COMMUNICATION NETWORKS", Jean Harcourt Asia Pvt. Ltd., II Edition, 2001.

**17250E25C- EMBEDDED SYSTEMS**

**L T P C**  
**4 0 0 4**

**AIM:**

To give sufficient background for embedded systems design.

**OBJECTIVES:**

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To explain programming concepts and embedded programming in C and C++.
- To explain real time operating systems, inter-task communication and an exemplary case of MUCOS – IRTOS.

**UNIT-I INTRODUCTION TO EMBEDDED SYSTEMS**

**9**

Definition and Classification – Overview of Processors and hardware units in an embedded system – Software embedded into the system – Exemplary Embedded Systems – Embedded Systems on a Chip (SoC) and the use of VLSI designed circuits

**UNIT-II DEVICES AND BUSES FOR DEVICES NETWORK**

**9**

**I/O Devices - Device I/O Types and Examples** – Synchronous - Iso-synchronous and Asynchronous Communications from Serial Devices - Examples of Internal Serial-Communication Devices - **UART and HDLC** - Parallel Port Devices - Sophisticated interfacing features in Devices/Ports- Timer and Counting Devices - ‘12C’, ‘USB’, ‘CAN’ and advanced I/O Serial high speed buses- ISA, PCI, PCI-X, cPCI and advanced buses.

**UNIT-III EMBEDDED PROGRAMMING**

**9**

Programming in assembly language (ALP) vs. High Level Language - C Program Elements, Macros and functions -Use of Pointers - NULL Pointers - Use of Function Calls – Multiple function calls in a Cyclic Order in the Main Function Pointers – Function Queues and Interrupt Service Routines Queues Pointers – **Concepts of EMBEDDED PROGRAMMING in C++** - Objected Oriented Programming – Embedded Programming in C++, ‘C’ Program compilers – Cross compiler – Optimization of memory codes.

**UNIT-IV REAL TIME OPERATING SYSTEMS – PART - 1**

**9**

**OS Services** – Interrupt Routines Handling, Task scheduling models - Handling of task scheduling and latency and deadlines as performance metrics - Inter Process Communication And Synchronisation – Shared data problem – Use of Semaphore(s) – Priority Inversion Problem

and Deadlock Situations – Inter Process Communications using Signals – Semaphore Flag or mutex as Resource key – Message Queues – Mailboxes – Pipes – Virtual (Logical) Sockets – RPCs.

**CSE/Elective -III/Semester - II**

**UNIT-V REAL TIME OPERATING SYSTEMS – PART - 2**

**9**

Study of RTOS, VxWorks - Basic Features - Task Management Library at the System - Library Header File - VxWorks System Functions and System Tasks - Inter Process (Task) Communication Functions - Case Study of Coding for Sending Application Layer Byte Streams on a TCP/IP Network Using RTOS Vxworks

**Total : 45hrs**

**REFERENCE:**

**17250E32A - CLOUD COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To acquire basic knowledge on cloud computing and its applications.

**OBJECTIVES:**

- Identify cloud computing models, characteristics, and technologies.
- Get knowledge about the different architectures in cloud.
- Identify the information about service management and cloud securities.

**UNIT-I**

**9**

**Overview of Computing Paradigm-** Recent trends in Computing - Evolution of cloud computing - Introduction to Cloud Computing - **Cloud Computing (NIST Model)**- Properties, Characteristics & Disadvantages - Cloud computing vs. Cluster computing vs. Grid computing - Role of Open Standards

**UNIT-II**

**9**

Cloud Computing Architecture - Cloud computing stack - **Service Models (XaaS) - Infrastructure as a Service(IaaS) - Platform as a Service(PaaS) - Software as a Service(SaaS)-** Deployment Models

**UNIT-III**

**9**

**Infrastructure as a Service(IaaS)** - Introduction to IaaS - Resource Virtualization – Examples. Platform as a Service(PaaS) - Introduction to PaaS - Cloud Platform and Management – Examples - Software as a Service(SaaS) - Introduction to SaaS

**UNIT-IV**

**9**

Service Management in Cloud Computing - **Service Level Agreements(SLAs)-** Identity & Access Management - Access Control - Trust, Reputation, Risk - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations.

**UNIT-V**

**9**

**Cloud Security** - Infrastructure Security - Network level security - Host level security - Application level security - Data security and Storage - Data privacy and security Issues,

35

Jurisdictional issues raised by Data location - Case Study on Open Source & Commercial Clouds – Eucalyptus - Microsoft Azure - Amazon EC2.

**Total:45hrs**

***CSE/Elective -IV/Semester - III***

**REFERENCE BOOKS:**

**17250E32B - INFORMATION SECURITY**

**L T P C**  
**4 0 0 4**

**AIM:**

To study the critical need for ensuring Information Security in Organizations

**OBJECTIVES**

- To understand the basics of Information Security.
- To know the legal, ethical and professional issues in Information Security.
- To become aware of various standards in this area.
- To know the technological aspects of Information Security.

**UNIT-I**

**9**

An overview of Computer Security, Access Control Matrix, Security Policies, Confidentiality Polices, Integrity policies and Hybrid Policies

**UNIT-II**

**9**

Cryptography- Key Management- Session and Interchange and generation, Cryptography Key Infrastructure, Storing and revoking Keys, Digital Signature, Cipher Techniques

**UNIT-III**

**9**

Systems: Design Principle, Representing Identity, Access Control Mechanisms, Information flow and Confinement Problems

**UNIT-IV**

**9**

Malicious logic, Vulnerability Analysis, Auditing and Intrusion Detection

**UNIT-V**

**9**

Network Security, System Security, User Security and Program Security.

**Total:45hrs**

**TEXT BOOK:**

Matt Bishop, "Computer Security arts and science" 2<sup>nd</sup> edition, Pearson Education

**CSE/Elective –IV/Semester – III**

## **17250E32C - SOFT COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand the concepts of Artificial Intelligence , ANN , Genetic Algorithms and Fuzzy systems and its applications.

**OBJECTIVES:**

- To introduce the ideas of Neural networks, fuzzy logic and use of heuristics base on human experience.
- To have a general understanding of soft computing methodologies, including artificial neural networks, fuzzy sets, fuzzy logic, fuzzy clustering techniques and genetic algorithms;
- To Design and development of certain scientific and commercial application using computational neural network models, fuzzy models, fuzzy clustering applications and genetic algorithms in specified applications.

**UNIT-I FUZZY SET THEORY**

**10**

Introduction to Neuro – Fuzzy and Soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set–Theoretic Operations – Member Function Formulation and Parameterization – Fuzzy Rules and Fuzzy Reasoning – Extension Principle and Fuzzy Relations – Fuzzy If Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

**UNIT-II OPTIMIZATION**

**8**

Derivative based Optimization – Descent Methods – The Method of Steepest Descent – Classical Newton’s Method – Step Size Determination – Derivative Free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

**UNIT-III NEURAL NETWORKS**

**10**

Supervised Learning Neural Networks – Perceptrons – Adaline – Backpropagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

#### **UNIT-IV NEURO FUZZY MODELING**

**9**

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – Learning Methods that Cross fertilize ANFIS and RBFN – Coactive Neuro Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – **Neuro Fuzzy Spectrum.**

***CSE/Elective –IV/Semester – III***

#### **UNIT-V APPLICATION OF COMPUTATIONAL INTELLIGENCE**

**8**

Printed Character Recognition – **Inverse Kinematics Problems** – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

**Total: 45 hrs**

#### **TEXTBOOK:**

1. J. S. R. Jang, C. T. Sun and E. Mizutani, "Neuro Fuzzy and Soft Computing", PHI, Pearson Education, 2004.

**17250E33A - ADVANCED DATABASE TECHNOLOGY**

**L T P C**  
**4 0 0 4**

**AIM:**

To prepare the student to understand, develop, and manage more advanced database applications.

**OBJECTIVES:**

Be able to

Know the operations of parallel and distributed databases.

Understand the structures and standards of object relational databases.

Get familiar with the concepts of XML, Mobile and Multimedia Databases.

**UNIT-I PARALLEL AND DISTRIBUTED DATABASES 9**

Database System Architectures: **Centralized and Client-Server Architectures** – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts - Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture- Case Studies.

**UNIT-II OBJECT AND OBJECT RELATIONAL DATABASES 9**

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: **ODMG Model – ODL – OQL** – Object Relational and Extended – Relational Systems : Object Relational features in SQL/Oracle – **Case Studies**.

**UNIT-III XML DATABASES 9**

**XML Databases:** XML Data Model – DTD - XML Schema - XML Querying – Web Databases – JDBC – Information Retrieval – Data Warehousing – Data Mining

**UNIT-IV MOBILE DATABASES 9**

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols- **Mobile Database Recovery Schemes**.

**UNIT-V          MULTIMEDIA DATABASES**

**9**

**Multidimensional Data Structures** – Image Databases – Text/Document Databases- Video Databases – Audio Databases – Multimedia Database Design.

**Total = 45 hrs**

***CSE/Elective -V/Semester - III***

**17250E33B - MOBILE COMMUNICATION AND COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand the mobile computing and mobile application development.

**OBJECTIVES:**

- Learning the basics of Wireless voice and data communications technologies.
- Enhancing working knowledge on various telephone and satellite networks.
- studying the working principles of wireless LAN and its standards.
- Studying various wireless operating systems.

**UNIT-I**

**9**

**Introduction :** Evolution of Mobile Computing – Important terminologies - Mobile computing functions – Mobile computing Devices – Networks: Wireline, Wireless , Adhoc - Comparison of wired and wireless mechanism - Various types of wireless communication technologies used in Mobiles, Antennas - **Architecture :** Architecture of Mobile Computing – 3- Tier Architecture – Presentation ( Tier-1), Application ( Tier -2), Data ( Tier – 3).

**UNIT-II:**

**9**

**Mobile computing through Telephony:** Evolution through telephony – Multiple Access Procedures: **FDMA, TDMA, CDMA, SDMA** – features – Satellite Communication System : Communicating through satellite – Low orbit satellite – Medium orbit satellite – Geo stationary Satellite – Satellite phones

**UNIT-III**

**9**

**Wireless LAN:** Introduction - Definition – **Applications of WLAN** – Infrared versus Radio transmission – Features of WI-FI and WI-MAX - Roaming Issues.

**UNIT-IV**

**9**

**Mobile Transport Layer:** **Traditional TCP** - Congestion control - Slow start - Fast retransmit & fast recovery - Transmission / time out freezing - Selective retransmission – Indirect TCP – Snooping TCP – Mobile TCP

## UNIT-V

9

**Wireless Application languages and operating systems** - Understanding of Wireless Application languages - XML, JAVA, J2ME, JAVA CARD - Understanding of Mobile operating system - Palm OS, Windows CE , Android

**Total :45hrs**

***CSE/Elective –V/Semester – III***

**17250E33C - GREEN COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To Understand Green Technology and to implement Green computing practices to efficiently use the computers and its resources.

**OBJECTIVES:**

- Understanding scientific and social environment.
- Minimizing energy consumption from the IT estate.
- Purchasing green energy and using green suppliers.
- Reducing the paper and other consumables used.
- Minimizing equipment disposal requirements.

**UNIT-I**

**9**

Origins, Regulations and industry initiatives- Government, Industry.

**UNIT-II**

**9**

Approaches to green computing- Product longevity, Algorithmic efficiency.

**UNIT-III**

**9**

Resource allocation, Virtualization.

**UNIT-IV**

**9**

Terminal servers, Power management, Operating system support, Power supply, Storage, Video card, Display.

**UNIT-V**

**9**

Web, Temporal and Spatial Data Mining Materials recycling, Telecommuting, Middleware support for green computing, Tools for monitoring, HPC computing, Green Mobile, embedded computing and networking, Management Frameworks Standards and metrics for computing green

**Total: 45hrs**

## **17250E34A - SOFTWARE QUALITY ASSURANCE**

**L T P C**  
**4 0 0 4**

**AIM:**

To develop the ability to analyze and estimate the quality of the software.

**OBJECTIVES:**

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

**UNIT I**

**9**

**Introduction to software quality** - challenges – objectives – quality factors – components of SQA– contract review – development and quality plans – **SQA components in project life cycle** –SQA defect removal policies – Reviews

**UNIT II**

**9**

**Basics of software testing** – test generation from requirements – finite state models – combinatorial designs - **test selection, minimization and prioritization for regression testing** – test adequacy, assessment and enhancement

**UNIT III**

**9**

**Testing strategies** – white box and black box approach – integration testing – system and acceptance testing – performance testing – regression testing - internationalization testing – adhoc testing – website testing – usability testing – **accessibility testing Test plan** – management – execution and reporting – software test automation – automated testing tools

**UNIT IV**

**9**

**Hierarchical models of software quality** – software quality metrics –function points –Software product quality – **software maintenance quality** – effect of case tools – software quality infrastructure – procedures – certifications – configuration management – documentation control.

**UNIT V**

**9**

**Project progress control** – costs – quality management standards – project process standards – management and its role in SQA – **SQA unit**

Total = 45hrs

## 17250E34B - BIO-INFORMATICS

**L T P C**  
**4 0 0 4**

### AIM:

To impart knowledge, on basic techniques of Bioinformatics.

### OBJECTIVES:

- Build a solid foundation and acquire the vocabulary you need to supervise or to communicate with others who use these tools.
- To have ability to design drugs.
- To understand Evolutionary Trees and Phylogeny.
- Learn the key methods and tools used in bioinformatics.

### UNIT I FUNDAMENTALS 7

The Central Dogma – Killer Application – Parallel Universes – Watson’s Definition – Top Down Vs Bottom Up Approach – Information Flow – Conversance – Communications.

### UNIT II DATABASE AND NETWORKS 9

Definition – Data Management – Data Life Cycle – Database Technology – Interfaces – Implementation – Networks Communication Models – Transmission Technology – Protocols – Bandwidth – Topology – Contents – Security – Ownership – Implementation.

### UNIT III SEARCH ENGINES AND DATA VISUALIZATION 10

Search Process – Technologies – Searching and Information Theory – Computational Methods – Knowledge Management – Sequence Visualizations – Structure Visualizations – User Interfaces – Animation Vs Simulation.

### UNIT IV STATISTICS– DATA MINING AND PATTERN MATCHING 11

Statistical Concepts – Micro Arrays – Imperfect Data – Basics – Quantifying – Randomness – Data Analysis – Tools Selection – Alignment – Clustering – Classification – Data Mining Methods – Technology – Infrastructure Pattern Recognition – Discovery – Machine Learning – Text Mining – Pattern Matching Fundamentals – Dot Matrix Analysis – Substitution Matrix – Dynamic Programming – Word Method – Bayesian Method – Multiple Sequence Alignment Tools.

**UNIT V      MODELING SIMULATION AND COLLABORATION**

**8**

Drug Discovery Fundamentals – Protein Structure – System Biology Tools – Collaboration and Communication – Standards – Issues – Case Study.

**Total: 45hrs**

***CSE/Elective –VI/Semester – III***

**17250E34C - WIRELESS APPLICATION PROTOCOLS**

**L T P C**  
**4 0 0 4**

**AIM:**

To introduction the advanced element in the field of wireless communication.

**OBJECTIVE:**

- Be able to discuss current and emerging technology in Wireless technology.
- Understand fundamental trends of technological evolution of Wireless technology.
- Have hands-on knowledge in developing simple and comprehensive WAP contents.
- Be able to create simple Wireless applicaitions.

**UNIT-I:**

**9**

Wireless Concepts - Technologies - An Overview of WAP - WAP Application Environment - WAP Gateways - WAP Gateway Services and Security.

**UNIT-II:**

**9**

**WAP Components** - Specification - Standard Execution Environment - Agent Characters - Main Protocols - WTP/WSP/WDP(UDPYWEMP Transportation and WTLS Protocol.

**UNIT- III:**

**9**

WAP Design and Development - The Development Tools - **WML Language** - WML Script Language.

**UNIT-IV:**

**9**

Implementing an Enterprise WAP Strategy, Wireless transmission- Spread spectrum - MAC - SDMA - FDMA - TDMA - CDMA - **Cellular Wireless Networks.**

**UNIT-V:**

**9**

Application Area of WAP: Wireless Operator's Interrelated Services -Mailbox Management - Searching the Phone Directory - **Managing Personal Information.**

**Total:45hrs**

**TEXT BOOKS :**

1. Steve Mann & Scott Sbihli, - Wireless Application Protocols - Wiley Computer Publishing -

2000

2. S.Ruseyev - WAP Technology & Applications - Easwar Press - 2003 .

### **REFERENCE BOOKS :**

1. Sandeep singhal , Jari Alwinen., -The Wireless Application Protocol: Writing Applications for the Mobile Internet - Addison Wesley Publications - 2000 .

## **RESEARCH INTEGRATED CURRICULUM**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the students; both have their justification in the common pursuit of knowledge.

Integrating research skills or Inquiry based learning becomes apparent to meet the changing needs of learners and their teachers, professional practice and society. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital.

Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability these are some of the terms that mark out the world of the twenty-first century.

Teaching and research is correlated when they are co-related suggests that one way of achieving this is to 'exploit further the link between teaching and research in the design of curricula.

Growing out of the research on Teaching- Research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions to analyze their curricula and consider ways of strengthening students understanding through research.

The Curricula can be:

**Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

**Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student’s knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

**Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

**Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B .Tech. (CSE) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
IV	Research Led Seminar	1
V	Research Methodology	3
VI	Participation in Bounded Research	2
VII	Design Project/ Socio Technical Project ( Scaffolded Research)	4

VIII	Project Work	12
------	--------------	----

➤ **Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**  
(Essay type Questions set by the concerned resource persons)

➤ **Blueprint for assessment of student's performance in Design Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

➤ **Blueprint for assessment of student's performance in Research Methodology Courses**

- Continuous Internal Assessment:** **20 Marks**
  - Research Tools( Lab) : 10 Marks
  - Tutorial : 10 Marks
- Model Paper Writing:** **40 Marks**

- Abstract : 5 Marks
- Introduction : 10 Marks
- Discussion : 10 Marks
- Review of Literature : 5 Marks
- Presentation : 10 Marks

**Semester Examination: 40 Marks**

**Total: 100 Marks**

## **B.COM PROGRAMME**

Commerce is a professional course among the various arts subjects. Commerce is instrumental in bringing about changes in all aspects of the society. It promotes growth and development. The changes in the economic policies of the country and the computer application in business offer variety of opportunities for innovative and creative people to carry out their career with new vigor and enthusiasm.

In the present scenario the market based system has gradually expanded across the world securing a strong position in the market overcoming all borders and barriers.

The rapid changes in the field of economics, information technology, politics and also in the organizational structure and the increased complexities of the business world poses series of problems to the modern commerce student. At this backdrop the new syllabus is designed for the B.Com Programme of the

### **OUTCOMES:**

- Be critical of creative scholars.

- Understanding across a broad range of business and commerce disciplines.
- Have knowledge of applications commerce concepts principles.
- Ethical, social and professional understanding.
- Effective communication.

## முதல் பருவம்

இக்கால இலக்கியம் உரைநடை சிறுகதை இலக்கிய வரலாறு

அலகு I

- 1.பாரதியார் கவிதைகள்
  - i) பாரத மாதா திருப்பள்ளி எழுச்சி
  - ii) பாரத ஜனங்களின் தற்கால நிலைமை
- 2.பாரதிதாசன்  
குடும்ப விளக்கு- ஒரு நாள் நிகழ்ச்சி முழுமையும்

அலகு II

- 1.காந்திய கவிஞர் நாமக்கல் வெ. இராமலிங்கம் பிள்ளை.
  - i)இளந்தமிழனுக்கு.
- 2.கவிமணி தேசிக விநாயகம் பிள்ளை.
  - i) இயற்கை வாழ்வு.
- 3.பட்டுக்கோட்டை கல்யாணசுந்தரம் .
  - i)சொந்தம்.
  - ii) காதோரம் நரைச்ச முடி.
- 4.கண்ணதாசன்
  - i)புதியதோர் உலகம் செய்வோம்.
  - ii) சாத்தானுக்கு விண்ணப்பம்.

அலகு III

புதுக்கவிதைகள்.

- 1.வாலி
  - i) இறைவன் மனிதனுக்கு பாடிய சுப்ரபாதம்
  - ii)புன்னகை மன்னன்
- 2.ஈரோடு தமிழன்பன்
  - i)இந்தியனாக இருப்பதற்கு பெருமைப்படு .
  - ii)இது எனது என்னுமோர்கொடுமையைத்தவிர்ப்போம்.
3. மு மேத்தா - இயல் பொருள் பயன் தர மறுத்திடில் பசிப்போம்  
வைரமுத்து - இந்தியா ஒரு விவசாய நாடு  
அமைதிப்புறா

அலகு IV

உரைநடை

ஆறு செல்வங்கள் - கி. அ.பெ .விஸ்வநாதம்

அலகு v

சிறுகதை - 1.நரசிம்மம் - முனைவர் கு.வெ.பாலசுப்பிரமணியன்.  
2.இலக்கிய வரலாறு - கவிதை, புதுக்கவிதை, சிறுகதை,  
உரைநடை

3.நல்லொழுக்கப் பாடம்

1. வாழ்க்கையும் வைராக்கியமும்
2. ஈகையும் இறைதிரு வடியும்

**DEPARTMENT OF ENGLISH**

**SYLLABUS FOR UG PART I - ENGLISH - REGULATION 2017**

Course Code	Course Title	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

**References:**

## SYLLABUS FOR UG PART II - ENGLISH - REGULATION 2017

Course code	Course Title	L	T	P	C
17111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-Aruna Gnanadason

**UNIT – II**

The Merchant of Death

-Nanda Kishore Mishra &amp; John Kennet

She Spoke for all Nature

-Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

**UNIT –IV**

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

**UNIT –V**

Oliver Twist

-Charles Dickens

**References:-**

The Art of Reading/ Experiencing Poetry.

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC13	Core-I Basic Accounting (S.S)	4	1	0	5

**AIM**

To develop conceptual understanding of the fundamentals of basic accounting system in a business.

**OBJECTIVES**

- I. To process transactions and other events through a book keeping mechanism to prepare final accounts.
- II. To impart skills in basic accounting for various kinds of business transactions.
- III. To generate basic data for business information.

**UNIT – I**

Self Study Unit: Introduction – Accounting Concepts and Conventions Book Keeping and Accounting – Accounting Cycle – Objectives and Advantages of Accounting – Journal – Books of Accounts – Format of Journal – Rules of Journalizing.

**UNIT – II**

Journalizing – Ledger – Subsidiary Books – Trail balance –Rectification of Errors.

**UNIT – III**

Bills of Exchange – Self balancing – Single Entry System.

**UNIT – IV**

Final accounts of trading and – Non Trading Concerns.

**UNIT – V**

Depreciation –Methods Fixed – Diminishing Annuity – Depreciation Fund – Provisions and Reserves- Fire Claims.

**OUTCOME**

Students are now familiarized with the basic accounting principles and practices and the ascertainment of profit and the financial statement of the business.

**REFERENCE BOOKS**

1. RL.Gupta and V.K.Gupta – Financial Accounting – Sultan Chand & Sons.
2. S.P.Jain and K.L.Narang – Principles of Accounting – Kalyan Publications.
3. Reddy and Murthy – Financial Accounting – Murgham Publications.
4. Dr.Radha – Financial Accounting – Prasana Publications

**B.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC14	Core-II Business Environment	5	0	0	4

**AIM**

To study about the different types of environments which influence a business.

**OBJECTIVES**

- I. To learn the social responsibility of a business.
- II. To study about the basic aspects of a business.
- III. To highlight the economic and other environments of a business.

**UNIT – I**

Introduction of Business Environment – Nature and Scope of Business – Characteristics of Business – Objectives of Business – Social Responsibilities of Business – Economic Environment – Social and Cultural Environment.

**UNIT – II**

Political and Legal Environment – Constitutional Environment in India – Legal Environment – Technological Environment – Socio – Cultural Environment.

**UNIT – III**

Economic Environment;- Economic Systems – Economics systems – Economic Planning – Economic Policies – Business Cycle – Control of Business – Characteristics of Inflation – Control of inflation

**UNIT – IV**

Financial Environment and Financial System – What is a Financial System – Importance and Role of Banks in the Economy – Functions of Commercial Banks.

**UNIT – V**

Environment Analysis and Managerial Development – Techniques of Environmental Analysis – SWOT Analysis – Training and Development of Professional Managers – Management by Objectives – Methods – Advantages of Management Training – Limitations of MBO

**OUTCOME**

The course helped the students to understand the different types of environments which influence a business.

**REFERENCE BOOKS**

1. Dr. S.Sankaran – Business Environment
2. Dr. C.B. Gupta – Business Environment
3. Dr. P.K.Ghosh – Business Environment
4. V.Alagappan – Business Environment
5. Dr.D.N.Dwivedi – Business Environment

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161AEC15	Allied-I Marketing (S.S)	4	0	0	4

**AIM**

To learn the role of marketing in the modern Society.

**OBJECTIVES**

- I. To understand the concept of marketing in the new millennium.
- II. To study the marketing mix by element wise.
- III. To grasp the techniques of Marketing Research.

**UNIT – I**

Self Study Unit: Introduction of Marketing – Definition – Classification of Marketing – Importance of Marketing – Evolution of Marketing Concepts – Marketing Functions – Marketing Mix.

**UNIT – II**

Market segmentation – Bases – Benefits – Product Policy- Product Planning and Development – Product Life Cycle – Product Mix.

**UNIT – III**

Pricing – Meaning of Pricing – Importance of Pricing – Objectives of pricing – Kinds of Pricing - Factory affecting Pricing Policy.

**UNIT – IV**

Sales Promotion – Meaning – Importance of Sales Promotion – Objectives; Advertising – Definition – Objectives – Functions – Importance of Advertising – Advantages and Disadvantages.

**UNIT – V**

Distribution Channel: Concept – Types of Channels, Factors affecting, choice of distribution channels – Retailers and Wholesalers – Branding and packaging.

**OUTCOME**

The course helped the students to know the principles and Practices of Marketing Mix and Marketing Research.

**REFERENCE BOOKS**

1. Rajan Nair – Marketing Management.
2. Philip Kotler – Principles of Marketing.
3. Varshaney – Marketing Management.
4. Arun Kumar – Marketing.

17161AEC16	Allied-II Business Economics	4	0	0	3

**AIM**

To study the fundamental principles of business economics.

**OBJECTIVES**

- I. To apply economic theory and exact procedure to arrive correct business decisions.
- II. To study the economic behaviour of business in theory and practice.

**UNIT – I**

Definition – Methods of Economics – Meaning of Business Economics – Objectives of Business Economics – Nature of Business Economics – Economics Laws – Micro – Macro Economics.

**UNIT – II**

Demand Analysis – Demand Curves – Elasticity of Demand – Indifference Curves.

**UNIT – III**

Production Function – Factors of Production – Laws of Return – Cost of Production – Curve - Scale of Production – Economics of Large Scale Production.

**UNIT – IV**

Cost Concepts- Different cost - Long and short run cost curves – Relationship between costs – Break even analysis.

**UNIT – V**

Market Structure – Firm – Equilibrium Firm and Industry – Optimum Firm – Pricing – Pricing Under Perfect Competition – Monopoly – Duopoly – Oligopoly.

**OUTCOME**

The student learned the basic principles of Economics which help them in making logical business decisions.

**REFERENCE BOOKS:**

1. K.P.M. Sundaram & EN. Sundaram – Business Economics.
2. S.Sankaran – Business Economics.
3. PN. Reddy& Appanaiyah - Business Economics.

- To write resume
- To construct report, agenda and minutes
- To prepare for an interview

**Outcome:**

- Develop communicative skills
- To get a job

**UNIT –I**

Degrees of comparison

**UNIT –II**

Proverb expansion

**UNIT –III**

Resume writing

**UNIT –IV**

Interview

**UNIT –V**

Corporate skills-body language-etiquette-good manners-interpersonal skills

**Lab Note-** Report writing, Resume writing, Interview from Globarena software, Writing agenda, Writing minutes

**Viva-**Mock Interview

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**SEMESTER-VI**

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC61	Core- XIII Management Accounting	5	1	0	6

**AIM**

To emphasize the importance of accounting information for managerial decision making and solving problems.

**OBJECTIVES**

- i. To gain expert knowledge of the techniques of managerial accounting.
- ii. To know the application of various financial tools for making managerial decisions.
- iii. To apply techniques of costing for business decisions.

**UNIT – I**

Definition of management accounting – Nature, scope, objectives, Functions of management accounting –Management Accounting and Financial Accounting Management Accounting and Cost Accounting – Advantages & Limitations of Management Accounting.

**UNIT – II**

Financial Statement Analysis – Comparative statement – Common size statement – Trend percentages – Ratio Analysis.

**UNIT – III**

Fund Flow Analysis and Cash Flow Analysis.

**UNIT – IV**

Marginal costing and Break – Even analysis – Budget and budgetary controls – Classification of budgets.

**UNIT – V**

Standard costing and variance analysis, Capital budgeting – Importance – Techniques of Capital budgeting.

**OUTCOME**

The course helped the students to learn the analyzes and interpretation of financial statements and applications of Marginal costing and Standard costing techniques.

## **REFERENCE BOOKS**

1. Shashi K.Gupta & R.K.Sharma – Management Accounting
2. S.N. Maheswari – Management Accounting
3. R.Ramachandran and R.Srinivasan – Management Accounting
4. Hingorani and Ramanathan – Management Accounting

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC62	Core- XIV Entrepreneurship and Small Business Management	5	0	0	4

**AIM:**

To know the role of entrepreneurs and small Businesses in the economic development of the country.

**OBJECTIVES:**

- I. To study the environment for entrepreneurship development.
- II. To identify suitable business opportunities for small businesses.
- III. To prepare project report and appraise project implementation.

**UNIT – I**

Concept of Entrepreneurship – Definitions – Types of Entrepreneurship -Functions - Characteristics - Role of Entrepreneurs in the Economic Development – Factors affecting entrepreneurial growth.

**UNIT – II**

Entrepreneurial Development Programmes – Self-Employment schemes – Objectives of EDP - Women entrepreneurs – Phases of EDP - Govt. Policies on entrepreneurial development – Small Entrepreneurs development.

**UNIT – III**

Steps Involved in Establishing a small business – generation of Project ideas – Project identification – Selection of a product - Project formulation - assessment of project feasibility study.

**UNIT – IV**

Legal formalities; Registration and licensing of small scale industrial unit Benefits –Stages of Registration – Procedures for Registration – Deregistration – Filing of Entrepreneur Memorandum– Licensing for SSI sector.

**UNIT – V**

Issues in small business marketing – small entrepreneurs in International Business – Accounting for small business – office organization for small business – sickness in small industries.

**OUTCOME:**

The course helped the students to learn the role of entrepreneurs and small businesses in the economic development of the country.

**REFERENCE BOOKS:**

1. P.Saranavel – Entrepreneurial Development.
2. Dr.C.B.Gupta – Entrepreneurship &Small Business Management.
3. Dr.S.S.Khanka – Entrepreneurship &Small Business Management.
4. Dr.Radha - Entrepreneurial Development.
5. Dr.P.T.Vijayshree - Entrepreneurship &Small Business Management

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC63	Core- XV Auditing	4	0	0	4

**AIM**

To study and report about the state of affairs of business in the Organization.

**OBJECTIVES**

- I. To trace errors and frauds in business.
- II. To analyze the available evidences of all receipts and payments.
- III. To protect the interest of stakeholder and outsiders.

**UNIT – I**

Auditing – Definition – Objectives – Types of Audit – Advantages – Qualities of a professional auditor – Investigation Vs Auditing.

**UNIT – II**

Internal Check – Objectives, Principles, Advantages – Internal Check system and Auditor – Internal Control – Internal Audit.

**UNIT – III**

Vouching – Objectives, Importance, - Vouching of Cash Transactions, Trading Transactions and Impersonal Ledger.

**UNIT – IV**

Verification and valuation of assets and Liabilities – Cash – Investments – Advances, Land and Building, Plant and Machinery , Furniture, Stock , Capital , Creditors, Bills payable.

**UNIT – V**

Company Audit – Provision in the companies Act relating to auditor’s qualifications, appointment, removal, Rights, duties and liabilities, (Civil and Criminal).

**OUTCOME**

The course helped the students to learn the principles and practices of auditing of various business organizations.

**REFERENCE BOOKS**

1. B.N . Tandon – ‘ A Practical Hand Book of Auditing
2. Dinkar Pagare – ‘Principles and Practice of Auditing’
3. R.G.Saxena – ‘Principles and Practive of Auditing’
4. Rupram Gupta – Auditing

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161DSC64A	Elective paper – II- A- Principles of Insurance (OR)	5	0	0	4
17161DSC64B	Elective paper –II-B-Co-operative law				

**Elective paper – II- A -Principles of Insurance**

**AIM**

To understand the fundamental principles of life and General insurance.

**OBJECTIVES**

- I. To learn the basic concepts of insurance.
- II. To understand the nature of policies, insurance contracts and settlement of claims.
- III. To know the role of IRDA in the promotion of Insurance services.

**UNIT – I**

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

**UNIT – II**

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance – Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

**UNIT – III**

Life Insurance – Advantages of Life Insurance – Procedure for effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

**UNIT – IV**

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor , Burglary and personal Accident Insurance.

**UNIT –V**

Reforms in Insurance Sector – Principles and Types – I.R.D.A, Privatization of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

**OUTCOME**

The students gained knowledge in insurance principles and practices on life and general insurance.

**REFERENCE BOOKS**

1. Dr.MR.Mishra – Law of Insurance – Central Law Agency Allahabad
2. Dr.M.M.Verma & R.K.Agarwal – Insurance
3. Pandy & Ratogi - Insurance

**B.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161DSC64A	Elective paper – II- A- Principles of Insurance (OR)	5	0	0	4
17161DSC64B	Elective paper –II-B-Co-operative law				

**Elective paper – II- B -Co-operative Law**

**AIM:**

To make the students gain expert knowledge in co-operative law and Practices.

**OBJECTIVES:**

- (i) To learn the important concepts in co-operative law.
- (ii) To understand all the important legal aspects of co-operative management from the incorporation stage to the winding up stage.

**Unit – I**

Registration – Change of Liability – By – Laws – Amendment of by – Laws – Power of the Registrar to direct Amendment of by – laws – Divisions – Amalgamation – Power of Registrar in Amalgamation – Conversion – Transfer of Assets and Liabilities among Registered Societies.

**Unit – II**

Qualification and Disqualification for Membership – Duties and rights of Members – Management of registered Societies – Constitution of Representative – General Body – Constitution of Board – Disqualification for Membership of a Board – Election of Office bearers of the Board – Removal of Member of the Board.

**Unit – III**

Duties and Privileges of Registered Societies, Charges of societies – Deduction from Salary etc Property and Funds of Registered societies – Investment of Funds – Disposal of Net profits.

**Unit – IV**

Execution of Decrees, Decisions, Awards and Orders – Procedure for Attachment and Sale of Immovable Properties – Appeal, Review and Revision – Offences – Penalties

**Unit – V**

Audit , Inquiry, Inspection, Surcharge and supervision – Settlement of Disputes – Mode of Service and Summons – Winding up – Powers of Liquidator – Power of Registrar under the Co-operative Societies Act 1983.

**Reference Books**

1. Tamilnadu Co-operative Societies Act, 1983.
2. Tamilnadu Co-operative Societies Rules 1988.

**-Journalism**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17111GEC	- Journalism	4	0	0	2

**Aim :**

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT- II**

News – Definition – Kinds – Elements – Sources

**UNIT- III**

Reporters

**UNIT- IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

**References:-**

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM**  
**Development of Mathematical Skills**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17112GEC	<b>Development Of Mathematical Skills</b>	4	0	0	2

**Objectives**

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**References**

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM**  
**Instrumentation**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17113GEC	<b>Instrumentation</b>	4	0	0	2

**Aim:**

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin's and Norton's theorem – Bridges :

AC bridges – Maxwell, Owen, Schering and deSauty's bridges – Wien bridges.

**UNIT – II: ELECTRONIC INSTRUMENTS – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using

rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters –

Component measuring instruments (quantitative studies)

**UNIT – III: ELECTRONIC INSTRUMENTS – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation

amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

## **Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

## **Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations –

Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

### **Books for Study**

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

### **Learning Outcomes:**

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

### **Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

**UNIT-1**

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calacyble indica, volvariella vulvae ,pleurotus sp. Agaricus bisporus

**UNIT-II**

Pure culture-preparation of media(PDA and oat meal agar media)sterilization-preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petriplates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

**UNIT-III**

Cultivation technology:infrastructure,substrates(locally available)polythene bag, vessels,inoculation hood-inoculation loop-low cost stove-sieves-cultural rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy sraw,sugarcane trash,maiza straw, banana leaves

**UNIT-IV**

Storage and nutrition: short term storage-long term storage (Scanning, pickles, papads,drying, storage ion salt solutions)-nutrition:proteins,amino acids,mineral elements,nutrition:carbohydrates-crude fiber content, vitamins

**UNIT-V**

Food preparation, types of foods prepared from mushroom-soup,cutlet,omelette,samosa,pickles,curry,research centres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

**REFERENCES:**

**FOOD AND ADULTERATION**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17114GEC	<b>FOOD AND ADULTERATION</b>	4	0	0	2

**Aim:**

To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislator aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti -caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

 Web Technology

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17120GEC</b>	Web Technology	4	0	0	2

**AIM:**

To equip the students with basic programming skill in Web Designing

**OBJECTIVE:**

- To understand the concepts and architecture of the Worldwide Web.
- □□To understand and practice mark up languages
- To learn Style Sheet and Frames

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**OUTCOMES:**

Acquire knowledge about functionalities of world wide web  
 Explore markup languages features and create interactive web pages using them  
 Learn and design Client side validation using scripting languages  
 Acquire knowledge about Open source JavaScript libraries  
 Able to design front end web page and connect to the back end databases.

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

**PRIST UNIVERSITY, THANJAVUR**  
**E-COMMERCE AND ITS APPLICATIONS**

Course Code	Course Title	L	T	P	C
17122GEC	E- Commerce and its Applications	4	0	0	2

**AIM:**

To equip the students with Pc hardware and software

**OBJECTIVES:**

- To study the architecture of microprocessors like 8085 and higher versions
- To understand the Assembly language programming
- To know the methods of connecting them to the peripheral devices.
- To learn the basic concepts and Microprocessor applications

**UNIT I**

Introduction to the Personal Computer – Safe Lab Procedures and Tool use – Computer Assembly – Step by step.

**UNIT II**

Basics of Preventive maintenance and troubleshooting – Fundamental Operating Systems – Fundamental Laptops and Portable Devices

**UNIT III**

Fundamental printers and scanners – Fundamental networks – Fundamental security

**UNIT IV**

Advanced personal computers – Advanced operating systems – Advanced Laptops and portable devices.

**UNIT V**

Advanced printers and scanners – Advanced networks – Advanced security.

**OUTCOMES:**

Understand and be able to use Assembly Language.

Understand number systems and the ASCII character set as to how they relate to developing and writing Assembly Language programs.

Understand the basic architectural structure, and the various hardware components including Input/output, Memory, and Control Systems.

Understand the purpose of each of the architecture registers..

Recognize the relationship of high-level programming language constructs to the equivalent Assembly Language instructions.

**PART -VI Life Skills and Other Skills**

**UNIT I Life Skills**

**Life Skills-** Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. -Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. - Occupational Safety , First-aid

**UNIT II Other Skills**

**Other Skills**

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

PRIST UNIVERSITY, THANJAVUR

B.COM

Course Code	Course Title	L	T	P	C
17111SEC06L	Communicative English Lab-VI	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills
- To learn to manage time and stress
- To widen creative thinking
- To enrich the skill of working in a group

**Outcome:**

- Develop communicative skills
- To be a good team worker

**UNIT –I**

Simple, Compound and Complex

**UNIT –II**

Note making

**UNIT –III**

Precise writing

**UNIT –IV**

Developing a story

**UNIT –V**

Essay writing

**Lab Note**-Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

## B.COM

### RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

#### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

#### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

#### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

#### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffold Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Com curriculum, the following Research Skill Based Courses are introduced in the B.Com curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

#### **Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
  
- **Semester Examination** : **60 Marks**  
(Essay type Questions set by the concerned resource persons)

#### **Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing:**

**40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination:**

**40 Marks**

**Total:**

**100 Marks**

**PRIST UNIVERSITY**  
**Vallam, Thanjavur.**

**DEPARTMENT OF COMPUTER APPLICATION**

**B.com - CA**  
**SYLLABUS**

**(REGULATION 2017)**

## **B.COM – CAPROGRAMME**

Computer Application is a professional course among the various arts subjects.

Computer Application is instrumental in bringing about changes in all aspects of the society. It promotes growth and development. The changes in the economic policies of the country and the computer application in business offer variety of opportunities for innovative and creative people to carry out their career with new vigor and enthusiasm.

In the present scenario the market based system has gradually expanded across the world securing a strong position in the market overcoming all borders and barriers.

The rapid changes in the field of economics, information technology, politics and also in the organizational structure and the increased complexities of the business world poses' series of problems to the modern commerce student. At this backdrop the new syllabus is designed for the B.Com-CAProgramme of the

#### OUTCOMES:

- Be critical of creative scholars.
- Understanding across a broad range of business and commerce disciplines.
- Have knowledge of applications commerce concepts principles.
- Ethical, social and professional understanding.
- Effective communication.

முதல் பருவம்

இக்கால இலக்கியம் உரைநடை சிறுகதை இலக்கிய வரலாறு

அலகு I

- 1.பாரதியார் கவிதைகள்
  - i) பாரத மாதா திருப்பள்ளி எழுச்சி
  - ii) பாரத ஜனங்களின் தற்கால நிலைமை
- 2.பாரதிதாசன்  
குடும்ப விளக்கு- ஒரு நாள் நிகழ்ச்சி முழுமையும்

அலகு II

- 1.காந்திய கவிஞர் நாமக்கல் வெ. இராமலிங்கம் பிள்ளை.
  - i)இளந்தமிழனுக்கு.
- 2.கவிமணி தேசிக விநாயகம் பிள்ளை.
  - i) இயற்கை வாழ்வு.
- 3.பட்டுக்கோட்டை கல்யாணசுந்தரம் .
  - i)சொந்தம்.
  - ii) காதோரம் நரைச்ச முடி.
- 4.கண்ணதாசன்
  - i)புதியதோர் உலகம் செய்வோம்.
  - ii) சாத்தானுக்கு விண்ணப்பம்.

அலகு III

புதுக்கவிதைகள்.

- 1.வாலி
  - i) இறைவன் மனிதனுக்கு பாடிய சுப்ரபாதம்
  - ii)புன்னகை மன்னன்
- 2.ஈரோடு தமிழன்பன்
  - i)இந்தியனாக இருப்பதற்கு பெருமைப்படு .
  - ii)இது எனது என்னுமோர்கொடுமையைத்தவிர்ப்போம்.
3. மு மேத்தா - இயல் பொருள் பயன் தர மறுத்திடில் பசிப்போம்  
வைரமுத்து - இந்தியா ஒரு விவசாய நாடு  
அமைதிப்புறா

அலகு IV

உரைநடை

ஆறு செல்வங்கள் - கி. அ.பெ .விஸ்வநாதம்

அலகு v

சிறுகதை - 1.நரசிம்மம் - முனைவர் கு.வெ.பாலசுப்பிரமணியன்.  
2.இலக்கிய வரலாறு - கவிதை, புதுக்கவிதை, சிறுகதை,  
உரைநடை

3.நல்லொழுக்கப் பாடம்

1. வாழ்க்கையும் வைராக்கியமும்
2. ஈகையும் இறைதிரு வடியும்

**DEPARTMENT OF ENGLISH**

**SYLLABUS FOR UG PART I - ENGLISH - REGULATION 2017**

Course Code	Course Title	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms  
Figures of speech

**UNIT – II**

Foreign words and phrases  
British and American Vocabulary

**UNIT – III**

Speeches of famous people:  
Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing  
Proof reading

**UNIT – V**

Comparison and contrast  
Cause and effect

**SYLLABUS FOR UG PART II - ENGLISH - REGULATION 2017**

Course code	Course Title	L	T	P	C
17111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang  
 An Eco-Feminist Vision -ArunaGnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet  
 She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson  
 Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel  
 Love poem for a wife -A.K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

COURSE CODE	COURSE TITLE	L	T	P	C
17198AEC 15	Information Technology	4	0	0	4

**AIM**

- To provide opportunity for the study of modern methods of information processing and its applications

**OBJECTIVES**

- Show an awareness of what the major computer components are and how they act as system
- appreciate that computers need instructions to operate and acquire simple programming skills

**UNIT-I:**

Information Concepts and Processing: Concepts of data, data type, information, need for information evolution of information processing.

**UNIT- 2:**

Elements of computer processing systems: Classification of computers, Hardware CPU, storage devices and media, Software systems and applications.

**UNIT-3:**

Programming languages, Machine language, assembly language, high-level language, Fourth generation language, compilers, interpreters.

**UNIT-4:**

General Concept of OOPS (Object oriented programming) Operating Systems: Concept and function of Operating system.

**UNITE-5:**

Batch processing, Multiprogramming, Real time, time sharing, distributed system.

**OUTCOME:** This course will be guided to the student business technologies around the world.

**References:**

1. "Computer Fundamentals" by P.K. Sinha

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM - CA**

COURSE CODE	COURSE TITLE	L	T	P	C
17198AEC 16	Operating System	4	0	0	4

**AIM:**

- Provide proficiency skill of operating system to the target students

**OBJECTIVES**

1. To learn the fundamentals of Operating Systems.
2. To learn the mechanisms of OS to handle processes and threads and their communication
3. To learn the mechanisms involved in memory management in contemporary OS

**UNIT- I**

Evolution of Operating Systems — Types of Operating Systems — Different views of OS — Design and implementation of Operating Systems — I/O Programming concepts — Interrupt structure and Processing.

**UNIT-II**

Memory management: Single contiguous allocation — Partitioned Allocation — Relocatable Partitioned Allocation — Paged and Demand Pages Memory Management — Segment Memory Management — Segmented and Demand Paged Memory Management — Swapping and Overlay Techniques.

**UNIT- III**

Processor management: Job Scheduling — Process Scheduling — Functions and Policies — Evaluation of Round Robin Multiprogramming performance — Process synchronization — Race condition — Synchronization Mechanism — Deadly Embrace Prevention and Detect and Recover Methods.

**UNIT- IV**

Device management: Techniques for device management — Device Characteristics — I/O Traffic controller, I/O scheduler, I/O device handler — Virtual Devices Spooling

**UNIT-V**

File management: Simple file system, General Model of a file system, Physical and Logical file system. Case studies: DOS, UNIX/LINUX Operating systems

**OUTCOMES:** Students will be able to: Analyze the structure of OS and basic architectural components involved in OS design

**Text Book:**

1. Operating systems — E. Madnick and John J. Donovan — Tata McGraw Hill
2. Operating Systems (Concepts and Design) Milan Milenkovic- McGraw

## இரண்டாம்பருவம்

(செய்யுள், பக்தி இலக்கியம், நாவல், இலக்கிய வரலாறு)

அலகு I

- 1.திருநாவுக்கரசர் - தனித்திருக்குறுந்தொகை (1-10)பத்து பாடல்கள்
- 2.சுந்தரமூர்த்தி நாயனார் - திருவெண்ணெய் நல்லூர்- (1-10)பத்து பாடல்கள்

அலகு II

- 1.மாணிக்கவாசகர் திருவாசகம் - திரு அம்மாளை- (1-10) பத்து பாடல்கள்
- 2.திருமூலர் 250, 252, 270, 272, 225, 766, 1823 , 1857, 2104, 2290 வள்ளலார் பிள்ளைச் சிறு விண்ணப்பம் 1-9

அலகு III

- நாலாயிர திவ்யப் பிரபந்தம்
- i)தொண்டரடிப்பொடியாழ்வார்- திருமாலை
  - ii)குலசேகர ஆழ்வார் - திருவேங்கடம் மலையில் பிறக்க விரும்புதல்
  - iii)திருக்குற்றாலக் குறவஞ்சி - வசந்தவல்லி பந்து பயிலுதல்

அலகு IV

புதினம் மாங்காய் பால் - முனைவர் கு .வெ .பாலசுப்பிரமணியன்

அலகு V

- 1.தமிழ் இலக்கிய வரலாறு
- i) பன்னிரு திருமுறை வரலாறு
- ii)வைணவ இலக்கியம்

iii) சிற்றிலக்கியம்

iv) புதினம்

2.நல்லொழுக்க பாடம்

i)கல்வியை அழியா செல்வம்.

ii)ஒவ்வொன்றிற்கும் ஒரு விலை உண்டு

**PRIST UNIVERSITY, THANJAVUR**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC 23	Advertising and Salesmanship	5	0	0	4

**AIM:**

To know the role of advertising and salesmanship in the marketing strategy.

**OBJECTIVES:**

- I. To understand the decision process in advertising management.
- II. To examine the role of sales person in the present marketing management.

**Unit - I**

Meaning, Objectives of promotion — Kinds of promotion, Approaches to — Promotion — Method of Promotion — Factors affecting promotional mix, Optimum promotional mix.

**Unit -II**

Advertising — Meaning, Objective, Kinds and significance — Is advertising wasteful? - Scientific advertising — Characteristics of a good advertisement copy

**Unit — III**

Media of advertising - choice of advertising media — Advertising Budget — Measuring the effectiveness of advertising

**Unit —IV**

Personal Selling — Meaning and importance, kinds of salesmanship, Sales force management, Characteristic of a successful salesperson, Selection Training and remuneration of salesman

**Unit — V**

Management of sales promotion, meaning and functions, consumer sales promotion Retail Store sales promotion, Sales promotion at salesman's level - Problems in sales promotion

**OUTCOME:**

The course helped the students to understand the importance of Advertising and Salesmanship in a highly competitive business world.

## Reference Books

1. Dawar, Rustom S. Modern - Marketing in Indian Context.
2. Marketing Management — Rajan Nair
3. Neelamegam S. - Marketing Management in Indian Economy
4. Pillai and Bagavathi — Modern Marketing
5. Chunawalla -- Advertising Theory and Practice
6. Rathor — Advertising Manageme

**SEMESTER - II**

**PRIST UNIVERSITY, THANJAVUR  
B.COM - CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC 24	Business Law	4	0	0	4

### AIM

**Developing proficiency skill of Business law**

### OBJECTIVE

1. Undertake and promote research on Business laws & attract students of the highest caliber to the Law School's programs and
2. Provide opportunities for their involvement in Business law research projects.

### Unit I

Nature and Sources of law — Law of contracts — Essentials of valid contract — Classification of contracts

### Unit —II

Offer and acceptance — consideration -- capacity to contract — Free consent Legality of object

### Unit —III

Performance of contracts — Discharge of contract — Remedies for breach of contract — Quasi contracts

### Unit —IV

Contracts of agency — Different classes 'of agents — creation of agency — Rights and duties of an agent -  
- scope of agents authority — Liability of principles to third parties — Personal liability of agent —  
Bailment and pledge.

### Unit — V

Contract of Indemnity and guarantee — Rights of Indemnity holder — Rights of surety — Nature and extent of surety's liabilities

**OUTCOME:** Students will demonstrate competent knowledge and understanding of substantive and, to the extent applicable, procedural law related to corporations

## Reference Books

1. N.D.Kapoor — Elements of commercial law.
2. MLC. Shukla — Mercantile law.
3. P.P.S. Gogna — A Text book of Business Law.
4. S.N.Maheswari— Mercantile law.

## SEMESTER - II

### PRIST UNIVERSITY, THANJAVUR B.COM - CA

COURSE CODE	COURSE TITLE	L	T	P	C
17198AEC 25	Programming in C	6	0	0	6

#### AIM

This course is aimed at advancing concepts of programming and software code organization within the framework of structural and procedural programming paradigms.

#### OBJECTIVE

- Students will be able to develop logics which will help them to create programs, applications in C
- Also by learning the basic programming constructs they can easily switch over to any other language in

#### UNIT -I

Evolution and Applications of C — Structure of a C Program — Data Types — Declarations — Operators — Expressions — Type conversions — Built-in functions. -

#### UNIT-II

Data Input and Output — Control statements: if, else-if, goto, switch, while-do, do-while, for, break & continue.

#### UNIT -III

Functions: Defining and accessing functions-passing parameters of functions- Arguments - Recursive functions — Storage classes, Arrays: Defining and processing Arrays + Multi dimensional arrays — passing arrays to functions ~ Arrays and strings — String functions — String Manipulations.

#### UNIT- IV

Pointers: Pointers Declarations — Operations on pointers — pointers to functions — Pointer and Strings — pointers and arrays — array of pointers Structures: Structures and pointers — unions.

#### UNIT-V

Data files - Opening, Closing, and processing files — Files with structures and unions — Register variables — Bit wise Operations - Macros- Preprocessing.

**TEXT BOOK:**“Programming in C” ~ E. Balagurusamy — Tata McGraw-Hill Publications

**OUTCOMES:**After the completion of this course, the students will be able to develop applications.

**Book for Reference:**

5. “Programming with C” — Byron S.Gottfried — Schaum’s outline series — Tata McGraw-Hill publications.
6. “Let us C “~ Yeswantkanetkar — BPB Publications.

**SEMESTER - II**

**PRIST UNIVERSITY, THANJAVUR  
B.COM - CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198AEC26L	Programing in C Lab	0	0	3	2

**AIM**

- Focusing on discussing how to write a program of moderate complexity by using C language.

**OBJECTIVE**

1. Ability to work with textual information, characters and strings.
2. Understanding a concept of object thinking within the framework of functional model
1. Solution of a Quadratic Equation (all cases)
2. Sum of Series (Sine, Cosine, e)
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication- use functions).
6. String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings — use function pointers).
7. Creation and processing of Sequential files for Mark listpreparation(Use Structures for Record Description)
8. Develop an Invoice application
9. Payroll preparation

**10. EB bill preparation**

**OUTCOME:** Understanding a functional hierarchical code organization. Ability to define and manage data structures based on problem subject domain.

**SEMESTER-II**

**PRIST UNIVERSITY, THANJAVUR**

**B.COM-CA**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC02A	Packages Lab-II	0	0	2	1

**MS –EXCEL**

1. Prepare the addressing methods in excel
2. Describe the type of function
3. Draw a graph by using your own data
4. Prepare an Individual Pay Bill preparation for a employee in an organization.
5. Prepare a Mark list preparation for a student.
6. Prepare a Worksheet preparation for a company.
7. Prepare a Inventory Preparation
8. Prepare a Electricity Bill Preparation

**PRIST UNIVERSITY, THANJAVUR****B.COM- CA**

17160SEC02B	SOFT SKILL – II- Self Development	0	0	3	2

**Part -II Self Development****UNIT I: Self -Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

**UNIT II: Self- Management**

Managing Time, Managing Stress, Conflict Management

## PRIST UNIVERSITY, THANJAVUR

## B.COM- CA

Course Code	Course Title	L	T	P	C
17111SEC02L	Communicative English Lab-II	0	0	2	1

**Aim:**

- To acquaint with the basic grammar and develop language skills

**Objective:**

- To understand the different tenses and use it in sentences
- To form sentences
- To know subject verb agreement
- To enrich vocabulary
- To read and comprehend the context

**UNIT-1** Tenses-Simple, Perfect

**UNIT -II** Tenses-Continuous, Perfect continuous

**UNIT -III** Forming sentences-positive, negative and questions

**UNIT -IV** Concord

**UNIT -V** Reading-benefits-purpose-techniques-types-Effective reading  
Lab Note-1. Word Mentor - Level II Words and their meaning-Root and usage-Fill in the blanks-  
Synonyms-Antonyms-Match the Words, reading activity from Globarena Software 2. Newspaper  
Article notebook

Viva-Reading activity

Exam Components-Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**Outcome:**

- Understand grammar
- Develop reading skills

## முன்றாம் பருவம்

(செய்யுள், காப்பியங்கள், நாடகம், இலக்கிய வரலாறு)

### அலகு I

சிலப்பதிகாரம்- கனாத்திறம் உரைத்த காதை  
மணிமேகலை - உலக அறவி பூக்க காதை  
சீவக சிந்தாமணி - நாட்டு வளம் 2 ,3,4,5,6,7,24, 48

### அலகு II

பெரியபுராணம் - இளையான்குடி மாற நாயனார் புராணம்  
கம்பராமாயணம் - கங்கைப்படலம்  
28,29,30,31,32,33,34,35,36,37,38,39,40,41,42,43,44,45,46,47,48,49,50,51,52,53,54,  
55,56,57,58,59,60,61,62,63,64,65,66,67,68,69,70,71,72,73,74,75,76,77

### அலகு III

சீறாபுராணம்- மானுக்குப் பிணை நின்ற படலம்  
இயேசு காவியம் - மழை பொழிவு  
நாடகம் - பாரதிதாசன் - அமைதி

### அலகு IV

தமிழ் இலக்கிய வரலாறு  
காப்பியங்கள்  
சிறு காப்பியங்கள்  
சைவ வைணவ காப்பியங்கள்

நல்லொழுக்கப்பாடம்  
i)குரலில் குற்றமும் கொற்றமும்  
ii)பாரதியாரின் சமத்துவ நோக்கு

## SEMESTER-III

### PRIST UNIVERSITY, THANJAVUR B.COM-CA

Course Code	Course Title	L	T	P	C
17111AEC31	Advanced English-III	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT –I**

The organs of speech  
Classification of speech sounds  
Vowels and Diphthongs

**UNIT –II**

Consonants  
Consonant cluster

**UNIT – III**

Syllable  
Word accent  
Intonation

**UNIT – IV**

Idiom  
Interpretation of graphics

**UNIT – V**

Slogan writing  
Writing advertisement

**References:**

English Grammar -Wren and Martin  
English Grammar and Composition -Radhakrishna Pillai  
Technical Communication -Meenakshi Sharma &Sangeetha Sharma  
A text book of Phonetics for Indian Students -T.B. Balasubramaniyan

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM-CA**

Course Code	Course Title	L	T	P	C
17111AEC32	English-III	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – 1**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

**UNIT – V**

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

**References:-**

Nine Short Stories	-SteuartH.King Blackie Books
One-Act plays of Today	-T.Prabhakar Emerald Publishers

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC33	Cost Accounting	3	1	0	5

**AIM**

To ascertain the costs of products manufactured or services rendered and exercising control over the expenditure.

**OBJECTIVES**

- I. To know the cost of each process and each element.
- II. To serve management in the execution of policies according to the situations.

**UNIT – I**

Cost accounting definitions – Functions, Importance, Advantages and Limitations – Relationship between cost and Financial Accounting – Installation of costing system – Cost Unit and Cost Centre – Elements of Cost – Cost sheet – Tender and quotation.

**UNIT – II**

Materials cost control – Material Purchases – Storage of Material – Various levels of Stock – Pricing of Materials Issues.

**UNIT – III**

Labour Cost Control – Piece and Time Rates – Incentive Plans – Labour turnover – Idle time – Overheads – Allocation – Apportionment – Re Apportionment and Absorption.

**UNIT - IV**

Process Costing (Excluding Inter Process, Equivalent Production – By product– Joint product) and – Operating Costing.

**UNIT - V**

Contract Costing – Reconciliation of Cost and Financial Accounting.

**OUTCOME:**

The students gained knowledge on cost ascertainment and cost control.

**REFERENCE BOOKS**

1. Palekhar & Pattan Shetty – Costing.
2. Jain & Narang – Cost Accounting.
3. S.P. Iyengar – Cost Accounting.
4. Ahuja & Others – Cost Accounting.

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM-CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC34	Banking Theory Law and Practice	4	0	0	4

**AIM**

To provide a comprehensive view of Banking Services to know the application of Banking Theory Law and Practice.

**OBJECTIVES**

- I. To highlight the functions and services of a modern bank.
- II. To understand the relationship between banker and customer.
- III. To learn law relating to Negotiable Instruments, Securities and Advances.

**UNIT – I**

Bank and Banking – Role and importance of Banking – Classification of Commercial Banks – Functions of commercial Banks – Investment Policy of a Commercial Bank – Functions of RBI.

**UNIT – II**

E – Banking – Forms of E- Banking Automatic Teller Machine (ATMS) – Credit Cards, Debit Cards – Types of Credit Cards – Types of Bank Accounts – Types of Deposits – Electronic Funds Transfer.

**UNIT – III**

Special Types of Bank customers – The Paying Banker – The Collecting Banker.

**UNIT – IV**

Negotiable Instruments – Characteristics – Parties to Negotiable Instruments – Endorsement – Types of Endorsement.

**UNIT – V**

Bills of exchange and Promissory notes – Cheques and Bank Drafts Crossing of Cheques.

**OUTCOME:**

The course helped the students to understand the basic important functions and principles and practices of Banking Theory Law in day to day business.

**REFERENCE BOOKS**

1. B.S.Raman - Banking, Theory, Law and Practice
2. S.M. Sundaram - Banking Theory Law and Practice
3. Varshney and Sundaram - A Text Book on Banking Theory Law Practice
4. K.P.M.Sundaram - Banking Theory Law and Practice

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM-CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198AEC 35	Programming in C++	6	0	0	6

**AIM:**

Implement several programs in languages other than the one emphasized in the core curriculum (Java/C++)

**OBJECTIVES:**

- **To understand how C++ improves C with object-oriented features.**
- **To learn how to write inline functions for efficiency and performance.**

**UNIT-I**

Object oriented programming: Software evolution - OOP Paradigm- concepts, benefits, Object oriented languages and applications.

**UNIT-II**

Introduction to the basic concepts of C++ language - Tokens, keywords, identifiers, data type, variables, manipulators- expression and control structures - functions: main function - function prototyping - call by reference function overloading - friend and inline functions.

**UNIT-III**

Classes and objects - constructors and destructors - operator overloading -type conversions.

**UNIT-IV**

Inheritance - single inheritance - multiple inheritances - hierarchical, hybrid inheritance - polymorphism - pointers - virtual functions - console I/O operations.

**UNIT-V**

Files - Classes for file stream operations - opening, closing and processing files - end of file detection - file pointers - updating a file - error handling during file operations - command line arguments - templates - exception handling.

**OUTCOMES:**

Apply C++ features to program design and implementation.

**TEXT BOOK:**

"Object oriented programming with C++". E. Balagurusamy , Tata McGraw . Hill publishing ltd., New Delhi, 1995.

**REFERENCE BOOKS:**

1. C++ The complete reference- Herbert Schilt, 3rd edition, Tata McGrawHill Pub-Ltd., 1999.

2. Let us C++-YeswantKanetkar-BPB Publications, 1999.

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM-CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198AEC 36L	Programming in C++ lab	0	0	3	2

**AIM:**

Use C++ to demonstrate practical experience in developing object-oriented solutions

**OBJECTIVES:**

- Analyse a problem description and design and build object-oriented software using good coding practices and techniques
  - design and implement programs using C++
1. Write C++ program using a class to represent a bank account with datamembers- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.
  2. Design an abstract base class "Shapes" and derive three classes "Rectangle", "Circle" and "Triangle". Develop polymorphic functions "Circumference" and "Compute-Area" to calculate the circumference and area of these objects and display it. Develop a main program to create each of these and apply these polymorphic functions.
  2. Write C++ programs for implementing inheritance.
  3. Write a C++ program to illustrate inline functions.
  4. Write a C++ program using friend operator function.
  5. Write a C++ program to illustrate virtual base class, virtual function and abstract class.
  6. Write a program which reads a text from a file and display the following information.
  7. Number of Lines
  8. Number of words.
  9. Number of characters.
  10. Strings should be left-justified and numbers should be right-justified in \_ a suitable field width.
  11. Write a C++ program to implement file concept: Create a file and store some text, display the content of the file with line numbers.
  12. File Processing: Mark sheet preparation.
  13. File Processing: Inventory preparation.

**OUTCOME:**

The course is to build students' conceptual and practical skills in building software projects in the C++ programming language to reasonably advanced level.

### SEMESTER-III

#### PRIST UNIVERSITY, THANJAVUR B.COM CA

COURSE CODE	COURSE TITLE	L	T	P	C
17198RMC37	Research methodology	3	0	0	3

#### GENERALRESEARCH METHODOLOGY

##### AIM:

To create a basic appreciation towards research process and awareness of various research publication

##### OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

##### OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

##### PREREQUISITES:

Basic computer literacy&skills for working in window-environment

#### UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

#### UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

#### UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

#### **UNIT IV: Database Survey**

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

#### **UNIT - V**

##### **Business Research**

Research in Management: An Introduction – Definition, meaning and nature – Scope and objects of Research. Types of Research -Research Design – Defining Research Problem and Formulation of Hypothesis – Experimental Designs.-Sampling and types of sampling-Research Process – Steps in the process of Research, Data Collection and Measurement: Sources of Secondary data – Methods of Primary data collection – Questionnaire construction.-Data presentation and Analysis – Data Processing – Methods of Statistical analysis and interpretation of Data .

**PRIST UNIVERSITY, THANJAVUR****B.COM-CA**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC03A	Packages Lab-III	0	0	2	1

**POWER POINT**

1. Create a slide show presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slide show presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create slide show presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. Create a slide show presentation for a shop advertisement to be open shortly
6. Create a slide show presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for a tourists places
8. Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

## PRIST UNIVERSITY, THANJAVUR

## B.COM-CA

Course Code	Course Title	L	T	P	C
17160SEC03B	SOFT SKILL - III Interpersonal Relations and Social Responsibilities	0	0	3	2

**Part -III Interpersonal Relations and Social Responsibilities****UNIT I: Interpersonal Relations**

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Interdependence, Peer Reviews.

**UNIT II: Ethics and Social Responsibilities**

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

**AIM:**To define the aim of your clinical audit project consider what it is that you hope to achieve

**OBJECTIVES:**

- The students will enable the system of internal check.
- Checking arithmetical accuracy of books of accounts, verifying posting, casting, balancing etc.

**Unit -I**

Auditing — Definition — Objectives — Types of Audit — Advantages — Qualities of a Professional auditor — Investigation Vs Auditing

**Unit - II**

Internal Check — Objectives, Principles, Advantages — Internal check system and Auditor — Internal Control — Internal Audit

**Unit — III**

Vouching — Objectives, Importance, - Vouching of Cash Transactions, Trading Transactions and Impersonal ledger.

**Unit -IV**

Verification and valuation of Assets and Liabilities — Cash – InvestmentsAdvances, Land and Building, Plant and Machinery, Furniture, Stock, Capital, Creditors, Bills Payable

**Unit — V**

Company Audit — Provision in the companies Act relating to auditor’s qualifications, appointment, removal, Rights, duties and liabilities, (Civil and Criminal)

## OUTCOMES:

This course helped the students that who to calculated financial activities

### Reference Books

1. B.N.Tandon — ‘A Practical] Hand Book of Auditing’
2. DinkarPagare — ‘Principles and Practice of Auditing’
3. R.G.Saxena — ‘Principles and Practice of Auditing’
4. Rupram Gupta — Auditing.
5. C.R.M. Depuala — The Principles of Auditing

### PRIST UNIVERSITY, THANJAVUR B.COM-CA

Course Code	Course Title	L	T	P	C
17198SEC44	Business Statistics	4	0	0	5

#### Aim:

- Provide a foundation and motivation for exposure to statistical ideas subsequent to the course.

#### Objective:

- Motivate in students an intrinsic interest in statistical thinking.
- Instill the belief that Statistics is important for scientific research.

### UNIT -I

Meaning and scope of statistics, uses of statistics in business, statistical data --primary and secondary — classification of data — frequency distribution — graphs and diagrams.

### UNIT – II

Measures of central tendency — arithmetic, geometric and harmonic mean -characteristics — measures of dispersion — range — mean deviation and standard deviation — skewness — correlation -- regression.

### UNIT -III

Time series — secular trend — index numbers — uses — cost of living index — index numbers of wholesale prices.

### UNIT -IV

Quantitative analysis in the practice of management — models and their development — matrices — addition — multiplication — transpose — inverse — introduction to linear programming — concepts of optimization — solving LPusing graphical and simplex method — transportation — assignment — (only simple problems). ,

### UNIT -V

Simulation - Queuing model (M/M/I) — replacement decisions.

**OUTCOMES:**The ability to apply fundamental concepts in exploratory data analysis. Distinguish between different types of data

**References:**

1. V.K.Srinivastave, Gv. Snenoy, S.C.Sharma, Quantitative techniques for managerial decision making.
2. N.D. Vohra Quantitative techniques in management.
3. Sharma, Operation research, theory and applications.
4. Gupta S.P. statistics methods.
5. Elhance D.N, Fundamentals of statistics

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM CA**

Course Code	Course Title	L	T	P	C
17198AEC45	Visual Basic Programming	6	0	0	6

**Aim: Students must know about the Core programming of visual basic**

**Objective:**

- The ability of the system to adjust to the changing requirement of user.
- The ability of the System to be able to withstand long period of time operation by the user

**UNIT I**

Introduction to Visual Basic — Integrated Development Environment (IDE) features — VB editor — customizing the IDE — anatomy of a formworking with form properties — setting form’s properties — introducing form events and form methods.

**UNIT II**

Variables in Visual Basic: Declaring variables — Data types — Null values, Error value — empty value — the scope of a variable — Module level variables — Constants — Creating your own constants — Scope of a constant — Converting data types — arrays — Declaring arrays — Fixed size arrays - Dynamic arrays — Preserve keywords — ReDim. Writing Code in Visual Basic - The anatomy of a procedure — Subroutine and Functions — Languageconstructs - For...Next, The While loop, Select case....End select, Exit statement, with structure.

**UNIT III**

Selecting and Using controls — Introduction to standard controls - command buttons — Text boxes — labels — option buttons — Check boxes - frame controls — List boxes - Combo boxes — Image objects — Picture boxes - Timer- Scroll Bars-File System Controls(Drive, Dirlist, File List boxes).

**UNIT IV**

Introduction to Built in ActiveX control — Tool bar —The Treeview control — The Listview control — the Imagelist control - Comman Dialog Control — status bar Control — Rich textbox control — Menu editor.

**UNIT V**

DDE properties — DDE Methods — OLE properties — Active control Creation and Usage and ActiveX DLL creation and usage — Database access — Data Control — Field control — Data grid record set using SQL to manipulate data — Open Data Base Connectivity.

**OUTCOMES:** This course will be helped the students understanding on database operations

**Text Books:**

1. Mohammed Azam Programming with Visual Basic 6.0 — Vikas Publishing House Pvt. Ltd — 2002
2. Content Development Group Visual Basic 6.0 — Tata McGraw Hill Publishing Company Limited — 2002.

**SEMESTER -IV**

**PRIST UNIVERSITY, THANJAVUR  
B.COM CA**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198AEC46L	Visual Basic Programming Lab	0	0	3	2

**Aim:**

**It gives practical knowledge to the students on visual Basic Programming**

**Objective:**

1. To know the process of visual program design and development.
  2. To understand the term event-driven programming.
  3. To acquire the concepts of objects, properties, and methods.
- 
1. Simple exercises using standard controls.
  2. Write a program to design a calendar of any year.
  3. Write a program to expand and shrinking an object — while program is running.
  4. Write a code to design and implement a scientific calculator.
  5. Write a program to create animation by using move method and timerObject.
  6. Write a program for preparing students mark list.

7. Write a program to populate the label entities using data bound control.
8. Write a program to expand and shrink Objects using timer control and move method

**OUTCOME:** Visual Basic provides a huge number of graphics tools that students can be used to solve all sorts of problems.

**SEMESTER-IV**

17160SEC04B	SOFT SKILL - IV Etiquette And Interviewing Skills	0	0	3	2

**PART -IV Etiquette and Interviewing Skills**

**UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

**UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company-Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

## SEMESTER -IV

### PRIST UNIVERSITY, THANJAVUR B.COM CA

COURSE CODE	COURSE TITLE	L	T	P	C
17111SEC04L	Communicative English Lab-IV	0	0	1	1

**Aim:**

- To develop communicative skills

**Objective:**

- To change sentences from direct to indirect and vice versa
- To comprehend a passage
- To enhance language skill
- To improve presentation skill
- To enrich vocabulary

**Outcome:**

- Understand grammar
- Develop language and presentation skills

**UNIT –I**

Direct and Indirect

**UNIT –II**

Comprehension

**UNIT –III**

Conversation

**UNIT –IV**

Descriptive Writing

**UNIT –V**

Soft skills-Importance-aspects-SWOT analysis-values-positive attitude-perception

**Lab Note-** Confusing Words, Word families, Non-English words, Presentation skills, Oral presentation, Conversation from Globarena software

**Viva-**Presenting a topic

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

Soft skills -D.Jayacandran D.J Publishers

## GLOBARENA SOFTWARE

### Objective:

- To hone LSRW skills through emerging techniques
- To comprehend meaning from text to words
- To cultivate the habit of reading
- To make the students proficient in pronunciation
- To improve the listening skill

### Outcome:

- Develop LSRW skills
- Phonetics

Listening Comprehension

Reading Comprehension

Word Mentor - Level I & II

- Words and their meaning
- Root and usage
- Fill in the blanks
- Synonyms
- Antonyms
- Match the Words

### Lab Note:

Word Mentor - Level I & II

Listening Comprehension

Reading Comprehension

Newspaper Article

### Viva:

Listening Comprehension

Reading Comprehension

### Exam Components

Theory exam	:	50
Lab note	:	10
Listening Comprehension:		20
Reading Comprehension:		20
Total:		100

### Theory exam pattern:

Section A	$10*2=20$
Section B	$2*15=30$
Total	$=50$

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
171ENVSTU	Environmental studies	1	0	0	1

**AIM:**

To help the students to acquire knowledge of pollution and environmental degradation

**OBJECTIVES: Students can help and care**

- **Social groups and individuals to acquire a set of values for environmental protection.**
- An opportunity to be actively involved at all levels in environmental decision making.

**UNIT-I**

The Multidisciplinary Nature of Environmental Studies – Definition, Scope and Importance – Need for Public awareness- natural Resources: Renewable and Non – Renewable Resources- Forest Resources – Water Resources- Mineral Resources- Food Resources – Energy Resources – Land Resources.

**UNIT – II**

Ecosystems- Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Ecological succession- Food chains, food webs and ecological pyramids – Types of ecosystem – Forest ecosystem – Greenland ecosystem – Desert ecosystem – Aquatic ecosystems.

**UNIT –III**

Biodiversity and its Conservation – Definition- Genetic, Species and ecosystem diversity – Bio geographical classification of India – Values of biodiversity – Biodiversity at global, National and local levels – India as a mega – diversity nation – Hot-spots of biodiversity- Threats to biodiversity – Endangered and endemic species of India – Conservation of biodiversity.

**UNIT-IV**

Environmental Pollution – Definition – Air Pollution – Water pollution –Soil Pollution- Marine Pollution- Noise Pollution –Thermal Pollution – Nuclear hazards –Solid waste Management –Role of an individual in prevention of pollution – Disaster management.

**UNIT-V**

Social Issues and the Environment – From Unsustainable to Sustainable development- Urban problems related to energy –Water conservation, rain water harvesting, watershed management- Environmental Ethics – Climate change greenhouse effect and global warming – Ozone depletion –Waste land reclamation –Consumerism and waste products –Environmental Legislation –Issues involved in enforcement of environmental legislation – Public awareness- Human population and the environment.

**OUTCOME:**

**This course created awareness about environment ecosystem**

**TEXT BOOK:**

‘ENVIRONMENTAL STUDIES’, K.Kumarasamy, A.Alagappa Moses, M.vasanthy.

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC51	Corporate Accounting	5	0	0	5

**AIM**

To train the student to grasp the principles and practice of corporate accounting

**OBJECTIVES**

- I. To get broad picture of inflation and human resources accounting.
- II. To gain expert knowledge in advanced corporate accounting on Banking, Insurance and Electricity services.
- III. To learn Holding companies accounting.

**UNIT – I**

Holding Companies-consolidated Balance Sheet with single subsidiary

**UNIT – II**

Accounts of Insurance Companies

**UNIT – III**

Accounts of Insurance Companies

**UNIT – IV**

Double Accounts System- Electricity-Repairs and renewals

**UNIT – V**

Principles of Government Accounting – Human Resource Accounting and Inflation Accounting.

**OUTCOME**

The course helped the students to gain expert knowledge on advanced corporate accounting.

**REFERENCE BOOKS**

1. R.L.Gupta and M. Radhaswamy – Advanced accountancy vol – II
2. S.P. Jain K.L. Narang – Advanced Accountancy Vol – II
3. T.S. Reddy and Dr. A. Murthy – Corporate Accounting Vol – II
4. S.P. Iyenger – Advanced accountancy – Vol – II

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM-CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC52	Business Economics	5	0	0	5

**AIM:** Students will learn how markets and other governance structures organize core economic activities

**OBJECTIVE:** Students will be able to

- Identify and explain economic concepts and theories related to the behavior of economic agents, markets, industry and firm structures, legal institutions, social norms, and government policies.
- Integrate theoretical knowledge with quantitative and qualitative evidence in order to explain past economic events and to formulate predictions on future ones.

### **Unit -I**

Definition — Methods of Economics — Meaning of Business Economics — Objectives of Business Economics — Nature of Business Economics — Economic Laws — Micro — Macro Economics.

### **Unit — II**

Demand Analysis — Demand Schedule — Law of Demand — Demand Curves — Elasticity of Demand — Indifference Curves.

### **Unit — III**

Production Function — Factors of Production — Laws of Return — Cost of Production — curve — Scale of Production — Isoquant curve - Economies of Large scale production.

### **Unit -IV**

Cost concepts - Different costs - Long and short run cost curves — Relationship between costs — Break even analysis

### **Unit- V**

Market Structure — Firm — Equilibrium Firm and Industry — Optimum Firm — Pricing — Pricing under Perfect competition — Monopoly — Duopoly – Oligopoly

**OUTCOME:** Students learned through this course about economics structure, police and application

### **Reference Books:**

1. K.P.M. Sundaram & N. Sundaram - Business Economics
2. S., Sankaran - Business Economics
3. P.N. Reddy & Appanaiyah – Business Economic

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM-CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC53	Financial Management	5	0	0	5

**AIM:**

Optimum funds utilization. Once the funds are procured, they should be utilized in maximum possible way at least cost.

**OBJECTIVE:**

1. To ensure regular and adequate supply of funds to the concern.
2. To ensure adequate returns to the shareholders which will depend upon the earning capacity, market price of the share, expectations of the shareholders

**Unit —I**

Introduction — Finance and related disciplines — Scope of financial management — Objectives of financial management — Financial Decisions - Organization of finance function

**Unit -II**

Cost of capital — cost of debt — cost of preference shares — cost of equity — cost of retained earnings — weighted average cost of capital.

**Unit - III**

Introduction — Capital structure — Determinants - Theories ~ Netincome approach — Net operating income approach — M.M. Approach — Traditional approach

**Unit —-IV**

Leverage — Meaning and types — Significance — Operating leverage — Financial leverage - Combined leverage

**Unit — V**

Dividend policy — Factors influencing dividend policy — Theories - Relationship with value of firms — Stock dividend — Stock splits

**OUTCOME: This course guided the students various relationship among the financial movements**

**Reference Books**

1. Kulkarni - Financial Management
2. S.N.Maheswari - Financial Management
3. R.K. Sharma - Financial Management
- 4, Prasanna Chandra - Fundamentals of Financial Management
- 5.R.Ramachandran, R.Srinivasan— Financial of Management

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM-CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC54	Software Engineering	4	0	0	4

**AIM:**To produce programmers equipped with an understanding of fundamental computational concepts underlying most programming languages

**OBJECTIVE: Students** to know about:

- Techniques for solving problems
- Basic computational concepts and elementary data structures
- The edit-compile-link-run cycle from a user point of view

### **UNIT I**

Introduction — definition-size factors- quality and productivity factors- managerial issues. Planning - software project — introduction — defining the problem - developing a strategy - planning the development process- planning an organizational structure.

### **UNIT II**

Software cost estimation — cost factors — cost estimation techniques — staffing — level estimation — estimating software maintenance costs. Software requirements definition — software requirements specification techniques — languages and processors for requirements.

### **UNIT III**

Software design — fundamental design concepts — modules and modulation criteria — design notations — design techniques — detail design considerations — real time and distributed system design — test plans — milestones walkthroughs and inspections — design guidelines .

### **UNIT -IV**

Implementation issues — structured coding techniques — coding style — standards and guidelines — documentation guidelines — data abstraction — exception handling — concurrency mechanisms

### **UNIT V**

Verification and validation techniques — quality assurance — walkthrough and inspections — static analysis — symbolic executions — unit testing and debugging — system testing — formal verification. Software maintenances — enhancing maintainability during development — managerial aspects — configuration management — source code metrics.

### **OUTCOMES:**

**The student** would understand the problem; plans; top-down design / stepwise refinement; recognition of similarities between problems leading to adaptation and reuse.

### **Text Book**

Software Engineering Concepts “— Richard fairly TMH

### **Reference Book:**

“Software Engineering”- Roger S.Pressman, 5th edition 2001.

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198DSC55_	Discipline Specific Elective - I	4	1	0	4

**Object Oriented Analysis & Design**

**AIM:**

- **This programme should promote the students in the field of designing world**

**OBJECTIVE:**

- “Complex, Multi-faced learning outcomes that require substantial time and instruction to accomplish”
- Educational objectives: derived from global objectives by breaking “them down into–

**UNIT- I**

Introduction to object-oriented Development- object-oriented themes — Modeling- The object modeling Technique- object and classes Links and Associations concepts- Generalization and Inheritance- Grouping constructs.

**UNIT- II**

Advanced object modeling- Aggregation- Abstract classes- Extension and Restriction- Multiple inheritance- Metadata - Candidate keys- Constraints. Dynamic modeling:- Events and states — Operations- Nested state diagram- Concurrency. Function modeling:- Functional models- Data flow diagram- Specifying operations- Constraints.

**UNIT- III**

OMT as software Engineering Methodology- The OMT Methodology- impact of an object oriented Approach. Analysis: - Overview of analysis — problem statement — automated teller machine example — object modeling — Dynamic modeling — functional modeling- adding operations iterating the analysis.

**UNIT- IV**

System Design- overview of system design — Breaking a system into subsystem -- identifying concurrency — allocating subsystems to processors and tasks — management of data stores- handling global resources — choosing software control implementation- handling boundary design — overview of object design — combining the three models — designing algorithms - design optimization - implementation of control.

**UNIT- V**

Implementation: Implementation using a programming language- Implementation using a database system. Programming style: object —oriented style — reusability — extensibility — Robustness - object oriented language features — survey of object — oriented languages.

**OUTCOME: This course enshrined the student cognitive skill**

**Reference Book:**

- Object Oriented Modeling and Design — James Rumbaugh, Michael Blaha, William Premerlani— PHI Twelfth Printing — 2001.
- Object Oriented Analysis and Design with Applications- Grady Booch Second Edition — Pearson
- Education Asia publications

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC05B	SOFT SKILL - V Leadership Skills and Body Language	0	0	3	2

**PART -V Leadership Skills and Body Language**

**UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

**UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks- reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

**PRIST UNIVERSITY, THANJAVUR**  
**B.COM - CA**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC61	Management Accounting	5	1	0	6

**AIM**

To emphasis the importance of accounting information for managerial decision making and solving problems.

**OBJECTIVES**

- i. To gain expert knowledge of the techniques of managerial accounting.
- ii. To know the application of various financial tools for making managerial decisions.
- iii. To apply techniques of costing for business decisions.

**Unit -I**

Definition of Management accounting — Nature, scope, objectives, Functions of management accounting — Management Accounting and Financial Accounting Management Accounting and Cost Accounting — Advantages & Limitations of Management Accounting

**Unit -II**

Financial Statement Analysis - Comparative statement — Common Size statement — Trend percentages — Ratio Analysis.

**Unit -III**

Fund Flow Analysis and Cash Flow Analysis

**Unit - IV**

Marginal costing and Break — Even analysis — Budget and budgetary controls — Classification of budgets

**Unit — V**

Standard costing and variance analysis, Capital budgeting - Importance — Techniques of capital budgeting

**OUTCOMES:**

The course helped the students to learn the analyzes and interpretation of financial statements and applications of Marginal costing and Standard costing techniques.

**Reference Books**

1. ShashiK.Gupta&R.K.Sharma - Management Accounting
2. S:N.Maheswari - Management Accounting

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17198SEC62	Income Tax Law and Practice	5	0	0	5

**AIM:**

To understand the basic elements of Income Tax theory, Law and Practice.

**OBJECTIVES:**

- I. To learn the basic concepts in Income Tax Law
- II. To identify the various sources of income.
- III. To know tax exemptions and deductions.

**Unit — I**

Basic Concepts — Definitions — Assesses — Person, income, assessment year, previous year, basis of charge: Determination of Residential Status — Incomes exempt from tax

**Unit - II**

Salary: Definition — Salary under section 17 — allowances, perquisites, profit in lieu of salary — deductions under section 16 - computation of salary income.

**Unit — III**

House property: Definition, exempted incomes from house property — Annual value — determination of annual value — Let out — Self occupied — Deductions — computation of property income.

**Unit —IV**

Profits and Gains of business or profession — definition — charging provisions — deductions — computation of business and professional income

**Unit — V**

Capital Gains: Basis of charge — Cost of acquisition, cost of improvement — exempted capital gain — computation of capital gain — Income from other sources — Chargeability — deductions — Computation of Income under other sources.

**OUTCOMES:****Reference Books**

1. Gaur and Narang - Income Tax Law and Practice
2. Jayakumar and Dr.Hariharan - Income Tax Law and Practice
3. Rajavelu — Income Tax Law & Practice
4. Bagawathi Prasad — Income Tax

COURSE CODE	COURSE TITLE	L	T	P	C
17198SEC63	Database Management Systems	4	0	0	4

**AIM****OBJECTIVES****UNIT-I:**

Concepts of DBMS, advantages, various vies of data, data independence, schema and Sub-schema, data models, database languages, database administration & Users.

**UNIT-II:**

Data dictionary, overall system architecture, E-R models, mapping constraints, Keys: Primary, Candidate, Super Key, Foreign Key.

**UNIT-III:**

Access Concepts & terms: database tables, relational database, record, fields controls & objects, queries and dynasets.

**UNIT-IV:**

Forms, reports, properties, wizards, macros, Access requirements, starting & quitting access, the access workspace & toll views.

**UNIT-V:**

Creating database & tablets with & without wizard, field name, data types and properties, adding & deleting fields in fields.

**OUTCOME:****References:**

1. Working in MS-Office — “Ron Mansfield” (TMH)
2. Complete Reference Access 2002- Virginia Anderson (TMH)
3. Database-Management System — Silberchatz, Korth

## PRIST UNIVERSITY, THANJAVUR

## B.COM – CA

COURSE CODE	COURSE TITLE	L	T	P	C
17198DSC64_	Discipline Specific Elective - II	4	0	0	4

**MULTIMEDIA**

**AIM:**This course provide to the students support of self-efficacy learning methods and strategies with visual-design tools

**OBJECTIVES: The Course will be able**

- to support and motivate the students coming from disadvantaged environments towards the achievement of their educational potential, through experiential learning;
- To back the development of a Virtual Reflective Learning approach to foster the real involvement of all the students.

**UNIT I**

Introduction to Multimedia - CDROM and the Multimedia highway — Use of Multimedia - Introduction to making Multimedia — Multimedia skills.

**UNIT II**

Multimedia hardware and software — Macintosh and windows production platforms — Connections - Memory and storage devices — Input devices — Output devices Communication devices — Basic software tools — Text editing and word processing tools — Painting and drawing tools – 3D modeling and animation tools - Making instant multimedia - Multimedia authoring tools.

**UNIT III**

Multimedia Building Blocks — Text — Fonts and Faces — Using Text in Multimedia: — Computers and Text — Font Editing and Design Tools - Hypermedia and hypertext — Sound — Multimedia System Sounds ~ MIDI Versus Digital Audio — Digital Audio - Making MIDI Audio - Audio File Formats — Images — Making Still Images — Color — Image File Formats- Animation- Principle of Animation — Making Animations That Work — Video — How Video Works — Integration Video Standards — Integrating computersand Television — Shooting and Editing — Video — Video Tips —Recording Formats — Digital Video.

**UNIT IV**

Multimedia and the Internet — The Internet and How it Works — Internetworking — Connections - Internet Services — The World Wide Web — Web Services- Web Browsers — Plug-ins and Delivery Vehicles — Designing for the World Wide Web —Working on the Web —Text for the Web — Images for the Web — Sound for the Web — Animation for the Web.

**UNIT V**

Assembling and Delivering a Project — Planning and Costing — Project Planning — Estimating — Designing and Producing — Content and Talent -- Using Content Created by others — Using Content Created for a Project — Delivering —Testing — Preparing for Delivery — Delivery — Delivering on CD — ROM — Delivering of World Wide Web.

**OUTCOME: This course encouraged the students to appear in Multimedia World**

**Reference Books:**

- Multimedia Making It Work — Fifth Edition - Tay Vaughan — Tata McGraw Hill Edition 2001
- Multimedia In Action — James E.Shuman — Vikas Publishing House Multimedia an Introduction — John Villamil — Casanova, Louis Moliva,

## PRIST UNIVERSITY, THANJAVUR

## B.COM – CA

COURSE CODE	COURSE TITLE	L	T	P	C
171__GEC65	General Elective – I	4	0	0	2

## E-COMMERCE

**AIM:**

To equip the students with Pc hardware and software

**OBJECTIVES:**

- To study the architecture of microprocessors like 8085 and higher versions
- To understand the Assembly language programming
- To know the methods of connecting them to the peripheral devices.
- To learn the basic concepts and Microprocessor applications

**UNIT -I**

Internet and Commerce: Business Operation; E-Commercepractices Vs. traditional business practices; Concepts b2b, b2c, c2c, b2g, g2h, g2c.

**UNIT -II**

Benefits of e-commerce to organization, consumers, and society, Limitation of e-commerce; Management issues relating to e- commerce.

**UNIT -III**

Operation of E-Commerce; Credit and transaction; Secure Hypertext cash, Smart Cards, Indian Payment models.

**UNIT -IV**

Secure electronic transaction (SET); Set's encryption; Process; Cyber cash, Smart Cards; Indian Payment models

**UNIT -V**

Applications of B2B Application of b2b; Key technologies for b2b; Architectural models of b2b, Characteristics of the supplier- oriented marketplace, buyer-oriented marketplace, and intermediary-oriented marketplace; Benefits of b2b on procurement reengineering; Just in time delivery in b2b, internet based EDI from traditional EDI; Integrating EC with back end information systems; Marketing issues in b2b.

## **OUTCOMES:**

- Understand and be able to use Assembly Language.
- Understand number systems and the ASCII character set as to how they relate to developing and writing Assembly Language programs.
- Understand the basic architectural structure, and the various hardware components including Input/output, Memory, and Control Systems.
- Understand the purpose of each of the architecture registers..
- Recognize the relationship of high-level programming language constructs to the equivalent Assembly Language instructions.

**Objective:**

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills
- To learn to manage time and stress
- To widen creative thinking
- To enrich the skill of working in a group

**Outcome:**

- Develop communicative skills
- To be a good team worker

**UNIT –I**

Simple, Compound and Complex

**UNIT –II**

Note making

**UNIT –III**

Precise writing

**UNIT –IV**

Developing a story

**UNIT –V**

Essay writing

**Lab Note**-Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

**Viva**-Group discussion

**Exam components**-Theory -50+MCQonline exam-20+Viva-15+Lab note-15=100

## **B.COM-CA**

### **RESEARCH INTEGRATED CURRICULUM**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

#### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

#### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

#### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

## Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffold Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Com curriculum, the following Research Skill Based Courses are introduced in the B.Com curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

### Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
  
- **Semester Examination** : **60 Marks**  
(Essay type Questions set by the concerned resource persons)

## **Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment: 20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing: 40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination: 40 Marks**

**Total: 100 Marks**

#### **OUTCOMES:**

- Be critical of creative scholars.
- To become effective global citizens.
- Understanding across a broad range of business and commerce disciplines.

- Have knowledge of applications commerce concepts principles.
- Ethical, Social and Professional Understanding.
- Effective communication.

**SEMESTER-I**

**PRIST UNIVERSITY, THANJAVUR**

**M.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
17261SEC11	Core-I Marketing Research and Consumer Behavior	6	0	4

**AIM**

To plan for Marketing Research and to predict the behaviour of a consumer at the market place.

## OBJECTIVES

- I. To ascertain Marketing Research aids and their impacts.
- II. To plan for a new product pricing, marketing policy and strategy.
- III. To identify the different types of consumers and their behaviour.

### UNIT – I

Introduction: Marketing research – An Introduction – Problem, discovery and formulation – Marketing research process- Scientific method – Research design – experimental design.

### UNIT – II

Data Collection and Data analysis: primary data – secondary data collection – Survey method and its administration – Questionnaire design- Attitude measurement and scaling techniques - observation method-Sampling concepts – Selecting a sample – processing of collected data  
Tabulation of data –Data analysis and interpretation- Presentation of Research project

### UNIT – III

Product Research – Advertising Research- Motivation Research- Sales control Research- Ethical issues in Marketing Research – Future of marketing Research.

### UNIT – IV

Consumer Behaviour: Introduction of Consumer Behaviour – Consumer Research – Family – Women Consumers – Rural Consumers – Special Area Consumers market segmentation- Consumers needs and Motivation – Consumer Personality – Consumer Perception- the process of learning Consumer Behaviour.

### UNIT – V

The nature of consumer attitudes – Models of consumer behavior – Group dynamics and consumer reference groups – Communication, Advertising and Consumer buying behavior – the family and life style marketing – Culture, Social class and consumer behavior – Consumer protection –Consumer profiling –Digital marketing

## OUTCOME

The course helped the students to understand Marketing Research and Consumer Behaviour.

## REFERENCE BOOKS

1. Marketing Research – Dr.D.D.Sharma
2. Consumer Behaviour- Dr.S.L.Gupta
3. Marketing Research and Consumer Behavior – M.S.Raju
4. Marketing Research and Consumer Behavior- Dr.DominiqueXardel
5. Consumer Behaviour – Sumitra Pal

**M.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
17261SEC12	Core-II Human Resource Management	6	0	4

## AIM

To consider the implications of diversity for the development and synthesis of specific Human Resource Policy area.

## OBJECTIVES

- I. To identify the objectives of recruiting and selecting a diverse workforce as an important organizational goal.
- II. To adopt suitable performance appraisal methods, promotion policies etc.

### UNIT – I

Meaning – Nature and scope, characteristics – Functions – Objectives of organization of Human Resource department – HRM- Revaluation and Development of HRM – Role Qualification and qualities of H.R.Manager –HRM- Human Resource Planning.

### UNIT – II

Recruitment – Sources and Techniques of Recruitment - Selection , Placement and Induction – Interviews –Training –Principal Methods- Steps - Evaluation of Training Performance.

### UNIT – III

Human Resource Development (HRD) – Management Development programmes – performance Appraisal – Counseling – Managerial Appraisal.

### UNIT – IV

Promotion – Transfer – demotion and discipline – Compensation – Career Planning – Career Development – Absenteeism – Managing change – Resistance and Approaches to Organization change.

### UNIT – V

Job Evaluation – Advantages and Problems of job evaluation - Wages and Salary Administration – Bonus – Fringe Benefits – Motivation and Motivation theories – Leadership – Morale – Communication – Job Satisfaction.

## OUTCOME

The students provided basic knowledge of human resource management and its importance in the working of Organization.

## REFERENCE BOOKS

1. K.Davies – Personnel and Human Resource Management.
2. L.M.Prasad , C.B. Memoria – Human Resource Management.
3. P.Subbarao – Essential of Human Management and Industrial relations.
4. C.S.Venkataraman and B.K.Subtava – Personnal Management and Human Resources.
5. Dr.L.M.Prasad – Human Resource Management.

**M.COM**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
17261SEC13	Core-III Services Marketing	6	0	3

### AIM

To focus the Organizations offering social services including health centers communication organizations, educational institutions

## OBJECTIVES

- I. To study the total quality management in maintaining and improving the quality of services.
- II. To know the tourism and other service marketing activities.

**UNIT – I**

Introduction – Reasons for growth in service sector – Role of services in an economy – distinction between goods and services – Classification of services – Marketing Management process for Service marketing.

**UNIT – II**

Development of service marketing mix – Components in the mix – People –Process – Physical evidence in managing demand and supply.

**UNIT – III**

Managing service quality – Dimensions and measurement of service quality – gap analysis – Total Quality Management – Guidelines for managing service competition – Globalization of services- Challenges to global service marketers – Typical international services Barriers to international marketing services.

**UNIT – IV**

Marketing of Insurance Services – Users – Benefits – Formation of marketing mix for insurance products – Tourism – Marketing mix for tourism, Hotel – Market segmentation for hotels- Marketing mix for hotels.

**UNIT – V**

Hospitals: Marketing of Health care- Types of Hospitals- Marketing mix for health care, Personal care: Marketing mix for personal care, Education marketing-Literacy – The concept-Marketing mix for adult, elementary, secondary and higher education.

**OUTCOME**

The course helped the students to identify the different types of services and their marketability.

**REFERENCE BOOKS**

1. S.M.Jha – Services Marketing
2. VasanthiVenugopal- Services Marketing
3. B.Balaji – Services Marketing Furthermore Management

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
17261SEC14	Core-IV Advanced Cost Management(S.S)	6	1	5

**AIM**

To provide information to cost management to serve as a guide for making decisions for a better future of the business.

**OBJECTIVES**

- I. To use costing data for making decisions.
- II. To learn modern cost management concepts.

**UNIT – I**

Self Study Unit: Cost concepts in decision making - Relevant cost - Differential cost – Incremental cost and opportunity cost – Objectives of a costing- System – Implementation of Costing system – Essentials of good costing system.

**UNIT – II**

Marginal costing – Distinction between Marginal Costing and Absorption Costing – Break Even Analysis- Cost – Volume – Profit analysis – Various decisions – making problems.

**UNIT – III**

Costing of Service Sector – Cost units – Transport Costing- Operating Cost of Cinema Houses – Hotel Operating Costing.

**UNIT – IV**

Standard Costing and Variance analysis.

**UNIT – V**

Budgetary Control – Flexible Budgets – Performance Budget – Zero based Budget.

**OUTCOME**

The course helped the students to gain expert knowledge in Cost Management.

**REFERENCE BOOKS**

- 1. A.Murthy & S.Gurusamy – Cost Accounting
- 2. Charles T. Horgrew and Geoge Foster- Cost Accounting a Managerial Emphasis
- 3. Asbish K.Bhattacharya –Principles and Practice of Cost Accounting.

17261SEC21	Core – V Quantitative Techniques For Decisions Making	6	1	4

**AIM**

To understand Quantitative tools and their applications in business problems.

## OBJECTIVES

- I. To make the students to learn the various techniques of statistics used in business for taking decisions
- II. To study theory of probability, testing of hypothesis and linear Programming

## UNIT – I

Meaning of Quantitative Techniques – Role of Quantitative Techniques- Advantages and limitations of quantitative Techniques correlation analysis – Simple – partial and multiple, Regression analysis – Time series..

## UNIT – II

Probability – Elements of probability – Theorems of probability – Theoretical distributions – Binomial – Poison – Normal distribution.

## UNIT – III

Definition of Hypothesis – Types of Hypothesis – Type I Error –Type II Error –t test – F test –ANOVA – Chi- Square test.

## UNIT – IV

Transportation problem –Initial Basic feasible solutions by North West Corner rule Minimization method – Maximization method – Vogel’s approximation method –Optimization test by Modi method –Assignment methods.

## UNIT – V

Linear programming – Basic Concepts and notation –Linear programming formulation – Solution through graphic methods, Simplex Method (Simple problem)

## OUTCOME

The course helped the students to understand important quantitative techniques and their applications in solving business problems.

## REFERENCE BOOKS

1. Quantitative Technique –C.R.Kothari
2. Statistical Methods-S.C.Gupta
3. Statistical Methods –S.P.Gupta

## AIM

To analyze the current trends in entrepreneurial development.

## OBJECTIVES

- I. To introduce formal tools for creativity and innovation.
- II. To deal with family business.
- III. To examine business prospects in India.

### UNIT – I

Concept of Entrepreneurship, the Entrepreneur –Definition –Functions –Characteristics of successful Entrepreneurs —Entrepreneur and Entrepreneurship –How to become an Entrepreneur –Factors affecting Entrepreneurial growth –Cultural, Social, Economic and Personality Factors.

### UNIT – II

The Human side of Enterprise –Meaning of Enterprise –Qualities of Entrepreneur –Types of Entrepreneurs –Women Entrepreneur SC/ST Entrepreneurs in India –Problems of developing Entrepreneurship in India..

### UNIT – III

Development and Training of Entrepreneurs –Phases of EDP –Special agencies and schemes for developing entrepreneurs –Role of Entrepreneurs in economic development. Need for support systems.

### UNIT – IV

Identification of business ideas –Sources of idea –Identification of prospective Entrepreneurs and their development –Motivation and entrepreneurship –Project –Project selection –Project design –Project appraisal –Market and demand analysis.

### UNIT – V

Small Scale Industries –Definitions –Classification of small industries –Signification in Indian Economy –Sickness in the small –Scale industries –Causes and remedies –Incentives and subsidies to SSI –SEZ,COU

## OUTCOME

The course helped the students to identify the current trends in Entrepreneurial Development and the innovation of new products and services through different project appraisal.

## REFERENCE BOOKS

1. C.B.Gupta,N.P.Srinivasa –Entrepreneurial Development
2. Vasant Desai –Dynamics of Entrepreneurial Development and Management.

### AIM

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

### OBJECTIVES

- I. To understand the approaches towards and consumers in good research.
- II. To identify various statistical tools used in research methodology
- III. To appreciate and compose the manuscript for publication

### UNIT – I

**INTRODUCTION:** Research – Importance and its types – research approaches – process – problem formulation – development of Hypothesis – Research design – Determining the sample design – Collecting data – Analysis of data – Identifying research problem.

### UNIT – II

**MEASUREMENT AND ITS TECHNIQUES :** Measurement in research and its problems – meaning of scaling – Tests of sound measurement – Types of scaling – Techniques of measurements – Attitude scales – Summed rating scale – Equal appearing Interview scale - Cumulative scale – Rating scale – Scale constructing Techniques – Time series analysis – Projection Techniques.

### UNIT – III

**DATA COLLECTION AND HYPOTHESIS:** Classification of data – Sources of data – Collection of primary and secondary data – Questionnaire method – Guidelines for Questionnaire design – Interview technique – Observation Techniques – Processing of Data – Editing – Coding – Tabulation – Interpretation of data – Formulation of Hypothesis – Test of Hypothesis.

### UNIT – IV

**STATISTICAL TECHNIQUES:** Statistical Techniques – Quantitative and qualitative techniques – Measures of central Tendency – Arithmetic mean , Median and Mode – Standard deviation – Karl pearson’s coefficient of correlation – Regression – Chi Square test – Conditions for applying chi-square test – ANOVA – Spearman’s Rank Correlation.

### UNIT – V

**INTERPRETATION AND REPORT WRITING :** Interpretation – Techniques of Interpretation – Significance of Report Writing – Different steps in Writing report – Layout of research report – types – oral presentation – mechanics of writing a research report – precautions for writing research reports – Role of computers in Research.

### OUTCOME

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

### REFERENCE BOOKS

1. Business Research Methods – Dr. T.N. Srivastava and Mrs. Shailaja Rego
2. Business Research methods – Alan Bryman and Emmabell
3. Research Methodology – R. Panneer Selvam
4. Research Methods Indian – Donald H. Mcburney and Theresa

COURSE CODE	COURSE TITLE	L	T	C
-------------	--------------	---	---	---

17261SEC31	Core-VIII Project Planning and Control	6	0	5
------------	--	---	---	---

**AIM**

To understand the issues relating to project management and control.

**OBJECTIVES**

- I. To know the infrastructure for projects and project financing.
- II. To conduct project appraisal.
- III. To understand the purposes of a project report.
- IV. To highlight the role of the exiting project administrative setup.

**UNIT – I**

Meaning and Definition of project – project management- an over view – The project Identification – Formulation of projects – project planning – stages of Life cycle of a project – system approach of a project.

**UNIT – II**

Pre feasibility and post conception studies – project feasibility studies and considerations – Detailed project Report as submitted to the financial Institutions.

**UNIT – III**

Project appraisal – various methods of appraising a project, Financial appraisal – Technical appraisal – socio economic appraisal – Managerial appraisal.

**UNIT – IV**

Project financing – sources and patterns of finance – public sector financing – Role of Tax planning in project.

**UNIT – V**

Project cost estimation and control – Role of the cost accountant in project management – Role and Leadership of the project managers – Structure and Team Building of project organization – Best practices.

**OUTCOME**

The course helped the students to learn the issues relating to project management and control.

**REFERENCE BOOKS**

1. Dr. P.C. K. Rao – project management and control. – Sultan Chand & Sons
2. B.M. Patel – project management – Vikas
3. Rajdeep Roy – Entrepreneurship
4. Dr.Radha – Entrepreneurial Development – Prsana Publication

--------------------	---------------------	----------	----------	----------

17261SEC32	Core – IX Advanced Corporate Accounting (S.S)	6	2	6
------------	---	---	---	---

**AIM**

To gain comprehensive understanding of all aspects relating to Advanced corporate accounting.

**OBJECTIVES**

- I. To know the importance of Human Resources accounting, inflation accounting and Government accounting in corporate businesses.
- II. To learn the holding, banking and Insurance companies accounting in new formats.
- III. To practice public utilities accounting.

**UNIT – I**

Self study unit: Human Resource Accounting – Inflation Accounting – Government Accounting.

**UNIT – II**

Holding companies accounting – consolidated Balance sheet of holding companies

**UNIT – III**

Bank Accounts (New Format) – profit and Loss account – Balance sheet as per the Guidelines of RBI – classification of advances- Provision for advances.

**UNIT – IV**

Insurance companies Accounts – New Format- Life Insurance Revenue accounts with schedules surplus and valuation balance sheet – Fire and Marine Revenue accounts with schedules.

**UNIT – V**

Double Accounts system (or) Accounts of Electricity companies and public utilities.

**OUTCOME**

The course helped the students to gain expert knowledge in Advanced Corporate Accounting.

**REFERENCE BOOKS**

1. T.S. Reddy & Dr.A. Murthy. Corporate Accounting
2. S.P. Jain& K.L. Narang – Advanced Accounting.
3. R.Ramachandran and R. Srinivasan – Corporate Accounting.
4. M.C. Shukla and T.S. Grewal – Advanced Accounts.
5. S.P.Iyengar – Advanced Accountancy Vol. – II.

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
--------------------	---------------------	----------	----------	----------

17261SEC33	Core – X Investment Management	6	2	6
------------	--------------------------------	---	---	---

**AIM**

To familiarize with the functioning of the Investment Management Systems.

**OBJECTIVES**

- I. To understand the basic principles and practice of investment management.
- II. To learn about portfolio construction and portfolio management.
- III. To know the role of SEBI in regulating securities market.

**UNIT – I**

Nature and Scope of Investment Management: Definitions of Investment- Classification of Investment- Investment and Speculation-Popularity of Investments- Alternative Investment – Investments in Gold, Real Estate, Deposits, Mutual Funds, Government Securities-Promissory Notes- shares and debentures .

**UNIT – II**

Approaches to security analysis –Fundamental analysis –Economic analysis –savings and Investment - Inflation – Technological Development, Infrastructural factors-Political stability – Analysis of Financial statements by important ratios from the Investment Point of view.

**UNIT – III**

Portfolio Construction –Objectives –Risk Return analysis –Methods of Diversification – Portfolio Revision –Techniques –problems-Approaches in portfolio construction – Traditional approach and Markowitch efficient frontier approach.

**UNIT – IV**

Portfolio Management, Meaning and Definition – Contributing factors –Principles of Portfolio Management – The role of Portfolio managers in portfolio management.

**UNIT – V**

The Securities and Exchange Board of India (SEBI) constitution - Objectives –Functions –Powers Organization and Management –Depts of SEBI –SEBI guidelines - permissible securities – Nature of clients – Issue of capital Listing and trading.

**OUTCOME**

Students are now aware of the scope of Investment Management and the role of SEBI in regulating securities market.

**REFERENCE BOOKS**

1. V.k.Bhalla – Investment Management and Portfolio Management
2. Gordon , J. Alexander , William , F.Sharpe , Seffery V.Baliley – Fundamentals of Investments
3. Prasana Chandra – Security Analysis and Portfolio Management
4. Avathani V.A – Investment and Securities Management in India
5. Gupta L.C – Return of Euquties – The Indian experience.
6. Dr.L.Natarajan – Investment Management.

17261DSC34A (or) 17261DSC34B	Elective- III- A- Indian Financial System (or) III-B- International Marketing	5	0	4
------------------------------------	---	---	---	---

### Elective – III-A Indian Financial System

#### AIM

To familiarize with the overall functioning of Indian Financial system.

#### OBJECTIVES

- I. To gain knowledge on financial and capital market
- II. To understand the importance of primary and secondary markets of shares and securities
- III. To know the functioning of various financial institutional in India

#### UNIT – I

Indian Financial System – Financial Markets participants and instruments – Money market – Commercial banks – Call money markets – Treasury Bill Market – commercial Bills market and Bill Rediscounting scheme(BRs) – Certificate of Deposits (CDs) and Commercial papers (Cps)

#### UNIT – II

New issues markets – Function and issue mechanism – New issue markets – Operations– Reforms and investor Protection

#### UNIT – III

Stock Exchange – Operations – Reforms in secondary market and investor protection – over the counter exchange of India- Depositories

#### UNIT – IV

Export Import Bank of India – Unit Trust of India – Mutual funds in India – Insurance companies – venture capital funds in India – Seed Capital

#### UNIT – V

National Housing Bank – National Bank for Agriculture and Rural development – Non – Banking companies – Factoring companies – Securitization and Assets Reconstruction companies.

#### OUTCOME

The Course helped the students to understand the overall functioning of Indian financial system.

#### REFERENCE BOOKS

1. P.N. Varshney & D.K. Mittal – sultan chand &sons, Indian Financial System
2. H.R. Machiraju – Indian Financial System
3. Gordon, Natrajan – Financial Market & Services
4. Dr. S. Gurusamy – Financial services & Market
5. B.Santhanan –Financial Services.

17261DSC34A (Or) 17261DSC34B	Elective – I- A Indian Financial System (Or) I – B International Marketing	5	0	4
------------------------------------	--	---	---	---

### **Elective – I- B International Marketing**

#### **AIM**

It deals With Why, When, What, Where, and How of global Marketing?

#### **OBJECTIVES**

- I. To know all data developments and policies for International marketing.
- II. To study the role of global marketing mix.
- III. To identify global marketing issues.

#### **UNIT – I**

Framework of International Marketing – Basis of International Trade – Recent Trends in world Trade – Foreign Trade and economic growth – Trends in India's foreign Trade – Institutions Infrastructure for Export promotion in India – Indian Trade policy – Export Assistance.

#### **UNIT – II**

Identifying Foreign Markets – Product planning for export – Pricing for exports market entry and overseas distribution system – distribution Logistics for exports promoting products internationally – Overseas market Research – Marketing plan for export.

#### **UNIT – III**

New Techniques in International marketing Terms of payments and export finance – Management of risks in International marketing – Global marketing of services – Multinational and their role in Internal marketing state Trading in India.

#### **UNIT – IV**

Legal Dimensions of International Marketing – Export Documents and procedure – Outward FDI flow India and Indian multinationals.

#### **UNIT – V**

Issues relating to Globalization – Major Drivers – Status and implications of Globalization - Globalization and Indian economy – Global financial Institutions and Indian economy.

#### **OUTCOME**

The course helped the students to learn the importance of International Marketing and the role of exporting assisting Institutions.

#### **REFERENCE BOOKS**

1. Dr.R.L.Varshney and B.Bhattacharya – International Marketing Management.
2. P.Subbo Rao – International Business.
3. Rathor B.S. and Rathor J.S. – Export Marketing.
4. Balagopal T.A.S. – Export Marketing.
5. Francis Cherunilam – International Trade and Export Management
6. Dr.D.C.Kappor – Export Management

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>C</b>
17211GEC	<b>Writing for the Media</b>	4	0	2

**Writing for the Media**

**Aim:**

- To equip students to enter into the realm of mass media.

**Objectives:**

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluating news.

**UNIT-III**

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

**UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>C</b>
<b>17212GEC</b>	<b>Applicable Mathematical Techniques</b>	<b>4</b>	<b>0</b>	<b>2</b>

**Applicable Mathematical Techniques**

**Objectives:**

- To understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

**Outcomes:**

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

**Unit I**

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

**Unit II**

Assignment Problems

**Unit III**

Replacement Problems

**Unit IV**

Decision Analysis

**Unit V**

Game Theory

**References**

<b>17213GEC</b>	<b>BIOMEDICAL INSTRUMENTATION</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

- To understand the concepts and application of electronic Instrumentation in the Medical field.

**Objective:**

The students will be able to

- Interpret technical aspects of medicine
- Solve Engineering Problems related to medical field
- Understand medical diagnosis and therap

**UNIT – I: BIO ELECTRIC SINGNALS AND ELECTRODES**

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

**UNIT – II: RECORDING SYSTEM AND RECORDERS**

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

**UNIT – III: MEASUREMENT AND ANALYSIS TECHNIQUES**

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

**UNIT – IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGILG SYSTEMS**

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – metical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

**UNIT – V: ADVANCED BIO MEDICAL SYSTEMS**

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

**OUTCOMES:**

- To Familiarize students with various medical equipments and their technical aspects
- To introduce students to the measurements involved in some medical equipment.
- Ability to understand diagnosis and therapy related equipments
- Understanding the problem and ability to identify the necessity of an equipment to a specific problem

**Books for Study**

1. R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)
2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

**Book for Reference**

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>C</b>
<b>17214GEC</b>	<b>GREEN CHEMISTRY</b>	<b>4</b>	<b>0</b>	<b>2</b>

**Objectives:** To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

### **Unit I - Introduction**

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution Pollution prevention.

### **Unit II - Principles**

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

### **Unit III - Bio Catalytic Reactions**

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

### **Unit IV - Green House Effect**

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

### **Unit V - Green Analytical Methods**

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

### **Outcomes:**

- To understand the environmental status and evolution.
- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.

- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

**References:**

1. Introduction to Green Chemistry – M.Rayan and M.Tinnesand
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

<b>17222GEC</b>	<b>Internet And Web Design</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**AIM**

To equip the students with basic programming skill in Web Designing

**OBJECTIVE**

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**OUTCOMES:**

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

**REFERENCE BOOK**

- 1.World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
17261SEC41	Core – XII Income Tax Law and Tax Planning	5	1	5

**AIM**

To gain knowledge of the basic principles underlying the substantive provisions of the Income Tax Law and their applications.

**OBJECTIVES**

- I. To compute Income of an Individual under various Heads of Income.
- II. To learn the provisions relating to Tax exemptions and Tax deductions.
- III. To gain knowledge on Tax Planning.

**UNIT – I**

Direct and Indirect Taxes in India –Charge of Income Tax –Computation of total income and tax Liability – Income as per Sec2 (24) –Assessment year – Previous year – Residential Status and Incidence of Tax – Basis of charge- Exemptions Income under Sec 10,11,12,13 and 13A.

**UNIT – II**

Income under the Head Salaries –Definition of the Head ‘Salaries’ – Features of salary- Receipts included under Salaries –Different forms of Salaries –Computation of Taxable salaries – Allowances – Different types- Perquisites – Different types – Valuation of perks Different types of Provident Funds –Tax Planning –Deductions under Sec 80C.

**UNIT – III**

Income under the Head House Property – charge on Annual Value –Exempted Incomes of House Property- Computation of Income from House Property – Let out House- Annual Value-Gross Annual Value- Gross Annual Value of self occupied house property- Deductions allowed – Tax Planning –Interest on Housing Loan maximum limit.

**UNIT – IV**

Incomes under the Head Profits and Gains of Business or Profession –Meaning of Business and Profession –Business Income and Professional Income- Computation of Profits and Gains of business or Professions –Admissible and Inadmissible deductions – Exemptions for Tax Planning .

**UNIT – V**

Income under Capital Gains – Capital Assets- Exempted Assets-Transfer of Assets- Short term and Long term Capital Gains- Application of Cost Inflation Index – Exempted Capital Gains- Taxable Capital Gains- Tax Planning in Capital Gaining –Income from Other Sources –Taxable Income from Other Sources- General Income and Specific Income- causal Income – Deductions – Tax Planning.

**OUTCOME**

The course helped the students to know how to compute Income of an individual under various heads and to reduce the tax burden through ideal tax planning schemes.

**REFERENCE BOOKS**

1. Income Tax Act,1961 as amended up to late.
2. Dr.Vinod K.Singhania – Students Guide to Income Tax

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
17261SEC42	Core – XIII International Business	6	0	5

**AIM**

To understand the importance of the Global Business and the functions of multinational corporations.

**OBJECTIVES**

- I. To learn latest available information and data on International Business.
- II. To explain the various methods of entry to foreign market.
- III. To study the role of multinational corporation in the Global context.

**UNIT – I**

**International Business:** An overview – Evolution of International business – Drivers of Globalization – Influences of International business – Stages of Internationalization – Differences between domestic business and International business – International business Approaches – Modes of entry – Goals of International business – Advantages of International business – Problems of International business.

**UNIT – II**

**International Business Environment:** Introduction – Social and cultural environment – Technological environment – Economic environment – Political environment – Legal environment.

**UNIT – III**

**Modes of Entering International Business:** Introduction – Modes of entry – Exporting , Licensing , Franchising , Contract manufacturing , Management contracts , turnkey projects, foreign direct investment , Joint ventures – comparison of Different modes of entry – Functional Alliances – managing conflict situations – Break – Up of – Alliances.

**UNIT – IV**

**Foreign Direct Investment:** Meaning – International Investment Theories – Factors Influencing FDI – Reasons for FDI – costs and benefits of FDI – Trends in FDI – Foreign Direct Investment in India.

**UNIT – V**

**Multinational Corporations:** Definitions and concepts – Factors that contributed for the growth of MNCs – Advantages and Disadvantages – control over MNCs – Organizational structure of MNCs – Relationship between headquarters and subsidiaries – MNCs in India – The Indianisation of Transnationals.

**OUTCOME**

The course helped the students to learn the importance of Global Business and the functioning of Multinational Corporation.

**REFERENCE BOOKS**

1. Francis Cherunilam – International Business Text and Cases
2. Dr.R.L.Varshney & Bhattacharya – International Marketing Management

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
17261SEC43	Core – XIII Co-operation in India and Abroad	6	0	5

**AIM**

To understand the basic principles of co-operation and their applications in India and Abroad.

**OBJECTIVES**

- I. To study the functioning various co-operative organization in India.
- II. To gain knowledge about co-operative movement in foreign countries.

**UNIT – I**

Meaning and Definitions of Co-operation – reformulated principles of ICA- Co-operative as a Via – Media between capitalism and Communism –Evolution of Co-operative thought –Co-operative thought of Raiffeisen, Robert Owen-Rochdale Pioneers.

**UNIT – II**

Evolution of Co-operative movement in India –Pre-independence –Post independence- Co-operation during five year plans. Co-operative Agricultural Credit –Short term credit structure –Primary Agricultural Co-operative banks- Central Co-operative Banks –State Co-operative Bank.

**UNIT – III**

Long –term credit structure –Working of Primary and State Co-operative Agricultural and Rural Development Bank –NABARD and NCDC- Non-Agricultural credit –Urban Banks – Employees credit societies –Housing Co-operatives.

**UNIT – IV**

Objects –working and problems of marketing co-operatives- Consumer Co-operatives, Industrial Co-operatives-Co-operative farming and milk-Co-operatives –State aid and Co-operative education and training –State Co-operative Union and National Co-operative Union. .

**UNIT – V**

Co-operative Movement in Foreign Countries: England, Germany, Denmark and Japan, Impact of Globalization on Co-operatives.

**OUTCOME**

The course helped the students to learn the basic principles of co-operation and their applications in India and Abroad.

**REFERENCE BOOKS**

1. B.S.Mathur –Co-operation in India
2. Hajeela –Co-operation in India and Abroad

**Elective – III- A Information Technology and Computer Applications**

**AIM:**

To develop understanding and appreciation of broad nature of application of Information Technology.

**OBJECTIVES:**

- I. To know Hardware and Software in Computer system.
- II. To study web Technology, information system including Net working.
- III. To familiarize with Accounting Packages and Computer Assisted Audit Technology

**UNIT-I**

Hardware –Types of Computers –Mainframes –Mini Computers, Micro Computers, advantages and limitations –Anatomy Computer-Functions and components of computer. Software: System Software –Application Software –Other expert specialized systems.(decision support, artificial intelligence systems etc.)

**UNIT-II**

Web Technology and Information System: Introduction –Definition of Information System – Decision –making and decision levels –Categories of Information systems –Information systems for competitive advantage –Networking –Classification of Networks- Local Area Network – Metropolitan Area Network-Wide Area Network-Network Topologies –Data Transmission Modes – internet and World Wide Web –Working of W.W.W –TCP/IP – Intranet –Extranet –OSI Models – Technological Infrastructure of Internet.

**UNIT-III**

Office Productivity Tools: Word Processing –Electronic Spreadsheets –Business Project management and Presentation tools.

**UNIT-IV**

Computer Assisted Audit Techniques (CAAT): Introduction to CAAT and usage in accounting / Audit.

**UNIT-V**

Mobile Commerce: Introduction –Factors that Drive M-Commerce –Differences between E-Commerce and M-Commerce –Growth of M-Commerce in India –Advantages of Mobile Commerce –Technology behind Mobile Commerce –Application of M-Commerce –Types of Mobile Payment – Future of Mobile Commerce

**OUTCOME:**

The course helped the students to understand the broad nature of application of Information Technology.

**REFERENCE BOOKS:**

- Dr.K.Abirami Devi Dr.M.Alagammai –E-Commerce, Margham Publications
- IT Essentials PC Hardware and Software Labs and Study Guide”, Third Edition – Patrick Regan – Cisco Press – Pearson Education (Chapters 1-9, 11-16)

**AIM:**

To learn the finance function in the international context.

**OBJECTIVES:**

- I. To understand the international monetary system
- II. To study foreign exchange management in India.
- III. To know the working capital management in a multinational context.

**UNIT-I**

The finance function in the international context – The Balance of Payments – International monetary system –Functions of financial management –Challenges of international financial management.

**UNIT-II**

The foreign exchange market structure and the participants-Types of transactions-Meaning of Currency-Dealing –Exchange rate –Forward rates- Exchange rate computation.

**UNIT-III**

Working Capital Management in a multinational Context –Short term Borrowing and Investment – Centralized Vs Decentralized cash management –Cash transactions – Equity Financing in the international markets –Accounts receivable and Inventory management.

**UNIT-IV**

Long term borrowing in international capital markets –The major market segment – International leasing –Foreign direct investments by multinationals- Capital Budgeting.

**UNIT-V**

International project appraisal – Review of NPV approach –Adjusted present value-Frame work – Project appraisal in the international context – Exchange rate risk and cost of Capital –Joint ventures.

**OUTCOME:**

The course helped the students to learn the finance function in the international context.

**REFERENCE BOOKS:**

1. Jaiswal –Doing Business on Internat E-Commerce, Galgotia Publications in New Delhi.
2. Ravilalakota & Andrew,B.Whinston,Frontiers of Electronic Commerce, Addition Wesley.
3. Dr.R.L.Varshney and Dr.S.Bhashyam- International Financial Management.
4. Alan C.Shapire –Multinational Financial Management
5. Jeff Madura – International Financial Management –Southwest Publications.

## M.COM

### RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff; course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

#### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

#### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

#### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

#### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Com curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffold Research)	4
IV	Project Work	12

#### Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination** : **60**  
**Marks**

(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student's performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
  
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

**Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing:** **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination:** **40 Marks**

**Total:** **100 Marks**

**2017 Regulation BBA**

# SEMESTER-I

## முதல் பருவம்

இக்கால இலக்கியம் உரைநடை சிறுகதை இலக்கிய வரலாறு

அலகு I

- 1.பாரதியார் கவிதைகள்
  - i) பாரத மாதா திருப்பள்ளி எழுச்சி
  - ii) பாரத ஜனங்களின் தற்கால நிலைமை
- 2.பாரதிதாசன்  
குடும்ப விளக்கு- ஒரு நாள் நிகழ்ச்சி முழுமையும்

அலகு II

- 1.காந்திய கவிஞர் நாமக்கல் வெ. இராமலிங்கம் பிள்ளை.
  - i)இளந்தமிழனுக்கு.
- 2.கவிமணி தேசிக விநாயகம் பிள்ளை.
  - i) இயற்கை வாழ்வு.
- 3.பட்டுக்கோட்டை கல்யாணசுந்தரம் .
  - i)சொந்தம்.
  - ii) காதோரம் நரைச்ச முடி.
- 4.கண்ணதாசன்
  - i)புதியதோர் உலகம் செய்வோம்.
  - ii) சாத்தானுக்கு விண்ணப்பம்.

அலகு III

புதுக்கவிதைகள்.

- 1.வாலி
  - i) இறைவன் மனிதனுக்கு பாடிய சுப்ரபாதம்
  - ii)புன்னகை மன்னன்
- 2.ஈரோடு தமிழன்பன்
  - i)இந்தியனாக இருப்பதற்கு பெருமைப்படு .
  - ii)இது எனது என்னுமோர்கொடுமையைத்தவிர்ப்போம்.
3. மு மேத்தா - இயல் பொருள் பயன் தர மறுத்திடில் பசிப்போம்  
வைரமுத்து - இந்தியா ஒரு விவசாய நாடு  
அமைதிப்புறா

அலகு IV

உரைநடை

ஆறு செல்வங்கள் - கி. அ.பெ .விஸ்வநாதம்

அலகு v

சிறுகதை - 1.நரசிம்மம் - முனைவர் கு.வெ.பாலசுப்பிரமணியன்.  
2.இலக்கிய வரலாறு - கவிதை, புதுக்கவிதை, சிறுகதை,  
உரைநடை

3.நல்லொழுக்கப் பாடம்

1. வாழ்க்கையும் வைராக்கியமும்
2. ஈகையும் இறைதிரு வடியும்

CourseCode	CourseTitle	L	T	P	C
17111AEC11	AdvancedEnglish-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proofread
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT-I**

Glossary of grammar terms  
Figures of speech

**UNIT- II**

Foreign words and phrases  
British and American

**Vocabulary UNIT- III**

Speeches of famous people:

Mahatma Gandhi- Abraham Lincoln- Swami Vivekananda- John F. Kennedy

**UNIT- IV**

Editing

Proofreading

**UNIT- V**

Comparison and contrast

Cause and effect

Coursecode	CourseTitle	L	T	P	C
17111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT-I**

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

- Aruna Gnanadasan

**UNIT-II**

The Merchant of Death

- Nanda Kishore Mishra & John Kennet

She Spoke for all Nature

- Youngworld 'The Hindu'

**UNIT-III**

Because I could not Stop for Death

- Emily

Dickinson Stopping by Woodson a Snowy Evening

- Robert

**UNIT-IV**

Enterprise

- Nissim Ezekiel

Love poem for a wife

- A. K. Ramanujam

**UNIT-V**

Oliver Twist

- Charles Dickens

CourseCode	CourseTitle	L	T	P	C
17160SEC13	PRINCIPLESOFMANAGEMENT	5	0	0	5

## PRINCIPLES OF MANAGEMENT

**AIM:** To enhance production and productivity, decrease cost of production and maximize prosperity both for employer and employees having common interests.

### COURSE OUTCOMES

1. Evaluate the global context for taking managerial actions of planning, organizing and controlling.
2. Assess global situation, including opportunities and threats that will impact management of an organization.
3. Integrate management principles into management practices.
4. Assess managerial practices and choices relative to ethical principles and standards.
5. Specify how the managerial tasks of planning, organizing, and controlling can be executed in a variety of circumstances.

**OBJECTIVE:** To familiarize the students to the basic concepts of management in order to aid in understanding how an organization functions, and in understanding the complexity and wide variety of issues managers face in today's business firms.

**PREREQUISITE:** Introduction to the management process, emphasizing planning and strategy, and organizational behavior, direction and control including leadership, motivation, team building, management information systems.

### UNIT- I

Organization - Management – Importance – concepts- Nature – functions- Role of managers- Management and administration – Evolution of management thought – Modern management approaches– MBO–Merits and Demerits.

### UNIT- II

Nature and purpose of planning – Planning process - types of plans - strategies – Types of strategies– Decision Making-Types -Process-Rational decision making process.

### UNIT- III

Nature and purpose of organizing-Organization structure–Process of organization– Departmentalization– Span of control–Delegation of authority, responsibility–Accountability – Centralization and decentralization -Selection and Recruitment.

### Skill development

### UNIT- IV

Directing–Principles–Elements– Motivation, Theories of motivation :Maslow, Herzberg, Vroom models – Communication-Hurdles to effective communication

### UNIT- V

Control–Controlling–Need for control–Control process–Control techniques.Leadership leadership theories– Styles – Managerial grid .Co-ordination –meaning–need– types.

- L.M. Prasad–Sultan Chand & Sons.
- T.M Ramasamy–Himalaya Publishing House.
- P.C. Tripathi ,P.N. Reddy–Tata McGraw– Hill Publishing House.

CourseCode	CourseTitle	L	T	P	C
17160SEC14	MANAGERIALECONOMICS	5	0	0	5

## MANAGERIAL ECONOMICS

**AIM:** Economics is inevitable to business and hence to teach basic of economics to students of Business Administration

### COURSE OUTCOMES

1. Apply the knowledge of the mechanics of supply and demand to explain working of markets
2. Describe how changes in demand and supply affect markets
3. Understand the choices made by a rational consumer
4. Explain relationships between production and costs
5. Define key characteristics and consequences of different forms of markets

### COURSE OBJECTIVES

1. To educate the students to understand the fundamentals of economics
2. To understand the application of economics in business decisions
3. To familiarize the Students with economic tools for business analysis.

**PREREQUISITE:** A minimum level knowledge to understand and applications of Economics

## SYLLABUS

**UNIT I** Introduction – Natural & Scope of Managerial Economics – Significance of Managerial Economics.

**UNIT II** Demand Analysis – Basic Concepts and Tools for Analysis of Demand – Demand forecasting.

**UNIT III** Cost Concepts and Cost Analysis – Production Function – Cost Price – Output Relations.

**UNIT IV** Price and Output Decisions under different Market Structures Perfect Competition – Monopoly – Monopolistic Competition – Oligopoly – Pricing Policy – Pricing Methods and Approaches – Product Line Pricing – Price Forecasting.

**UNIT V** National Income – definition, measurement – Factors – difficulties in measurement. GDP – NDP – Business cycle – phases – Inflation – types and control measures. Managerial Economics in the Context of Globalization.

Skill development

17160AEC15	BUSINESSCOMMUNICATION	4	0	0	4

## BUSINESSCOMMUNICATION

### COURSE OBJECTIVES

To provide an overview of Prerequisites to Business Communication. To put in use the basic mechanics of Grammar. To provide an outline to effective Organizational Communication. To underline the nuances of Business communication. To impart the correct practices of the strategies of Effective Business writing.

### COURSE OUTCOMES

- To be familiar with the complete course outline/Course Objectives/Learning Outcomes/ Evaluation Pattern & Assignments
- To participate in an online learning environment successfully by developing the implication-based understanding of Paraphrasing, deciphering instructions, interpreting guidelines, discussion boards & Referencing Styles.
- To demonstrate his/her ability to write error free while making an optimum use of correct Business Vocabulary & Grammar.
- To distinguish among various levels of organizational communication and communication barriers while developing an understanding of Communication as a process in an organization.
- To draft effective business correspondence with brevity and clarity.

**PREREQUISITE:** Prerequisites to Business Communication- Introduction to Blended Learning & Blackboard. Nuances of Academic writing will be discussed which is a prerequisite to Blended Learning.

#### UNIT-1

Introduction – Definition, Characteristics and need for communication – Importance of effectivecommunication–Process, Principlesof Communication-Barriersofcommunication.

#### UNIT-2

Means of communication – Oral and Written Communication – Flow of Communication – TypesofCommunication – Non Verbal Communication.

#### UNIT-3

Introduction to Business Correspondence – Structure Layout – Letters of Enquiries, Offers,QuotationsandTenders–Orders,itsexecution andCancellationLetters–Sales Letters.

#### UNIT-4

Bank Correspondence – Letter between banker and customer, Letter between Head office

and Branch Office, Letter between Customer and banker. Insurance Correspondence – Fire, Marine, General and Life Insurance. Export and Import Correspondence.

#### UNIT-5

Reports-Structure and Layout–Business Report Writing–Reports by Individuals, Committees, Press Reports, Market Reports – Proposal Writing. Technology – Aided Business Communication–Internet, E-Mail, Web-based Communication, IT Trends in Communication.

#### Entrepreneurship

CourseCode	CourseTitle	L	T	P	C
17160AEC16	BUSINESSMATHEMATICSANDSTATISTICS	2	2	0	4

## **BUSINESSMATHEMATICSANDSTATISTICS**

**Aim:** To learn the concepts applications and methods of mathematics and statistics useful for Business operations.

**Prerequisite:** The learner should have Elementary knowledge in mathematics and statistics.

**COURSE OBJECTIVES;** To develop the students ability to deal with numerical and quantitative issues in business . To enable the use of statistical, graphical and algebraic techniques wherever relevant. To have a proper understanding of Statistical applications in Economics and Management.

### **COURSE OUTCOMES**

- Describe and discuss the key terminology, concepts tools and techniques used in business statistical analysis
- Critically evaluate the underlying assumptions of analysis tools
- Understand and critically discuss the issues surrounding sampling and significance
- Discuss critically the uses and limitations of statistical analysis
- Solve a range of problems using the techniques covered

### **UNIT-IFUNDAMENTALSOFBUSINESSMATHEMATICS**

**Arithmetic** - Ratios and Proportions - Simple and Compound interest including application of Annuity- Set theory and simple application of Venn diagram- Mathematical reasoning – basic application

### **UNIT-IIINTRODUCTIONTOSTATISTICS**

Meaning and scope of statistics, uses of statistics in business, statistical data – primary and secondary – classification of data – frequency distribution – Diagrammatic presentation .

### **UNIT-IIIMEASURES OFCENTRAL TENDENCYANDDISPERSION**

Mean, Median, Mode, Mean Deviation - Quartiles and Quartile Deviation - Standard Deviation - Co-efficient of Variation, Coefficient of Quartile Deviation

Skill development

### **UNIT-IVCORRELATIONANDREGRESSION**

Scatter diagram - Karl Pearson's Coefficient of Correlation- Rank Correlation -

Regression lines, Regression equations, Regression coefficients **UNIT–**

## **INDEX NUMBERS & TIME SERIES ANALYSIS**

Index Numbers - Uses of Index Numbers - Methods of construction of Index Numbers - Problems

involved in construction of Index Numbers - **Time Series Analysis** – Components of Time series

– Methods of computing time series - Moving Average Method - Method of Least Squares

## **TEXT BOOKS**

- Statistical Methods – S.P. Gupta
- Fundamentals of Statistics – D.L. Elhance
- Business Mathematics and Statistics – N. G. Das and J.K. Das.

## **READINGS**

- Economics and Business Statistics – M. Sivathanupillai
- Elements of Statistics – B.N. Asthana
- Schaum's outline of Statistics – Murray R Spiegel and Larry J. Stephens

CourseCode	CourseTitle	L	T	P	C
17120SEC01AL	FUNDAMENTALS OF COMPUTERS	0	0	2	1

## Fundamentals of Computers

**Aim:** This is a basic course to practically learn the fundamentals of computer operations. It helps the learner to know the applications of computers in the field of Business.

**Prerequisite:** The learner should have elementary knowledge about computers.

### OBJECTIVES

The main objective of this course is to introduce the fundamentals of computing devices and reinforce computer vocabulary, particularly with respect to personal use of computer hardware and software, the Internet, networking and mobile computing. It focuses on such computer literacy that prepares students for life-long learning of computer concepts and skills. Students discover why computers are essential components in education, business and society in this course.

### COURSE OUTCOMES

- Converse in basic computer terminology
- Formulate opinions about the impact of computers on society
- Possess the knowledge of basic hardware peripherals
- Know and use different number systems and the basics of programming
- Solve basic computational problems with C language

### Unit I Basics of Computer and its evolution

Evolution of computer, Characteristics of computers, Various fields of application of computers, Advantages and Limitations of computer, Classification of computers **i) On the basis of technology** (Digital, Analog and Hybrid) **ii) On the basis of processing speed and storage capacity** (Micro, Mini, mainframe and Super), **iii. On the basis of Purpose** (General & Special), Different Generation of computers (I to V),

### Unit II Input and Output Devices

Keyboard, Mouse, Joystick, Digitizer, Scanner, MICR, OCR, OMR, Light Pen, Touch Screen, Bar Code Reader, Voice Input Device, Monitor and its type (VGA, SVGA and XGA), Printer and its type (Impact and Non-Impact with example), Plotter

### Unit III Computer Memory

Primary Memory (ROM and its type – PROM, EPROM, EEPROM, RAM) Secondary memory- SASD, DASD Concept, Magnetic Disks – Floppy disks, Hard disks, Magnetic Tape, Optical disks – CD ROM and its type (CD ROM, CD ROM-R, CD ROM-EO, DVD ROM) Flash Memory

### Unit IV Operating System Concept

Introduction to operating system; Function of OS, Types of operating systems, Booting Procedure, Start-

upsequence, Detailsof basicsystemconfiguration, ImportanttermslikeDirectory, File, Volume, Label, Drivename, etc.

**Unit V Concept of Data Communication and Networking:**

Networking Concepts, Types of networking (LAN, MAN & WAN), Communication Media.

Skill development

**Text Books:**

1. Leon and Leon; *Introduction to Information Technology*, Leon Tech World.
2. Microsoft Office-2000 Complete-BPB Publication.

**Reference Books:**

1. Sinha, Kr. Pradeep and Preeti Sinha; *Foundations of Computing*, BPB Publication.

## 2. Jain, V.K.; *Computers and Beginners*

CourseCode	CourseTitle	L	T	P	C
17111SEC01L	Communicative English Lab-I	0	0	1	1

### **Aim:**

- To acquaint with the basic grammar and develop language skills

### **Objective:**

- To know English grammar and all the concomitant linguistic items
- To learn about the auxiliary and the models
- To understand the types of sentences and its patterns
- To enrich vocabulary
- To familiarize with the features, process, forms and barriers of communication
- To enhance listening skill

### **Outcome:**

- Understand grammar
- Develop listening skill

### **UNIT-I**

Parts of speech

### **UNIT- II**

Kind of Sentences, Patterns of sentences

### **UNIT- III**

Auxiliaries, Modals

### **UNIT-IV**

Communication-Characteristics-Process-Forms-Barriers-Types

### **UNIT-V**

Listening-benefits-types-good listener-active and passive listening-effective listening

**Lab Note-1.** Word Mentor - Level I Words and their meaning-Root and usage-Fill in the blanks-Synonyms-Antonyms-Match the Words, Listening activity from Globarena Software 2.

Vocabulary diary

**Viva-**Listening activity

**Exam components-**Theory-50+MCQ online exam-vocabulary-20+Viva-15+Labnote-15=100

# SEMESTER II

## இரண்டாம்பருவம்

(செய்யுள், பக்தி இலக்கியம், நாவல், இலக்கிய வரலாறு)

அலகு I

1. திருநாவுக்கரசர் - தனித்திருக்குறுந்தொகை (1-10) பத்து பாடல்கள்
2. சுந்தரமூர்த்தி நாயனார் - திருவெண்ணெய் நல்லூர்- (1-10) பத்து பாடல்கள்

அலகு II

1. மாணிக்கவாசகர் திருவாசகம் - திரு அம்மாளை- (1-10) பத்து பாடல்கள்
2. திருமூலர் 250, 252, 270, 272, 225, 766, 1823, 1857, 2104, 2290 வள்ளலார் பிள்ளைச் சிறு விண்ணப்பம் 1-9

அலகு III

நாலாயிர திவ்யப் பிரபந்தம்

- i) தொண்டரடிப்பொடியாழ்வார்- திருமாலை
- ii) குலசேகர ஆழ்வார் - திருவேங்கடம் மலையில் பிறக்க விரும்புதல்
- iii) திருக்குற்றாலக் குறவஞ்சி - வசந்தவல்லி பந்து பயிலுதல்

அலகு IV

புதினம் மாங்காய் பால் - முனைவர் கு . வெ . பாலசுப்பிரமணியன்

அலகு V

1. தமிழ் இலக்கிய வரலாறு
- i) பன்னிரு திருமுறை வரலாறு
- ii) வைணவ இலக்கியம்

iii) சிற்றிலக்கியம்

iv) புதினம்

2. நல்லொழுக்க பாடம்

i) கல்வியை அழியா செல்வம்.

ii) ஒவ்வொன்றிற்கும் ஒரு விலை உண்டு

17160SEC23	FINANCIALACCOUNTING	2	3	0	5

## FINANCIAL ACCOUNTING

**AIM:** The Basic purpose of this course is to develop an insight of postulates, principles and techniques of accounting, and utilization of financial accounting information for planning, decision-making and control.

### OBJECTIVES

To familiarize students with the mechanics of preparation of financial statements, understanding corporate financial statements, their analysis and interpretation, role of IFRS in accounting discipline, and the concept of management quality analysis and wealth creation.

### COURSE OUTCOMES ·

- Understand the process of recording and classifying the business transactions and events ·
- Understand the financial statements, viz., Profit and Loss Account, Balance Sheet, and cash flow statement of a sole proprietor. ·
- Understand the role of IFRS/Ind-AS in accounting discipline. ·
- Understand and Analyse the financial statements from different the perspective of different stakeholders using ratio analysis. ·
- Understanding of financial distress or bankruptcy prediction and how to analyse management quality means the concept of beyond balance sheet.

**PreRequisite:** The Learners should have introductory knowledge about accounting.

### UNIT- I

Introduction to Financial Accounting – Definition, Meaning, Nature, Objectives and Uses of Accounting – Accounting Concepts, Principles and Conventions – Books of Accounts – Branches of Accounting – Differences between various branches of accounting

### UNIT- II

Book Keeping – Single Entry System of Book Keeping – Double Entry System of Book Keeping – Recording of Transactions – Journal – Subsidiary books – Ledger – Trail Balance.

### UNIT- III

Final Accounts – Manufacturing account – Trading account – Profit and Loss account and Balance Sheet

### Skill development

### UNIT- IV

**Depreciation Accounting:** Introduction, Meaning of Depreciation, Causes for Depreciation, Need

for Depreciation, Computation of the Amount of Depreciation, Depreciation on Addition to Fixed Assets, Methods of Depreciation, Calculation of Depreciation under various methods.

#### **UNIT-V**

Consignment- Meaning, features of consignment transaction, distinction between consignment and sale, Joint venture-

Meaning, features, difference between joint venture and partnership, joint venture and consignment.

#### **Text Book:**

- Advance accounting – S.P. Jain and K.L. Narang – Kalayani Publisher.
- Principles of Accounting – Finney H. A. Miller H E Prentice Hall
- Principles of Financial Accounting – S.N. Maheshwari

CourseCode	CourseTitle	L	T	P	C
17160SEC24	ORGANIZATIONALBEHAVIOUR	5	0	0	5

## **ORGANIZATIONAL BEHAVIOUR**

**AIM:** To provide basic knowledge on various models of organizational behavior, To expose them to the concepts of motivation and group dynamics, To help them acquire interpersonal skills.

### **OBJECTIVES**

To help the students to develop cognizance of the importance of human behaviour. To enable students to describe how people behave under different conditions and understand why people behave as they do. To provide the students to analyse specific strategic human resources demands for future action. To enable students to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results.

### **COURSE OUTCOMES**

- Demonstrate the applicability of the concept of organizational behavior to understand the behavior of people in the organization.
- Demonstrate the applicability of analyzing the complexities associated with management of individual behavior in the organization.
- Analyze the complexities associated with management of the group behavior in the organization.
- Demonstrate how the organizational behavior can integrate in understanding the motivation (why) behind behavior of people in the organization.

**Pre Requisite:** The Learner should have basic interpersonal skill and Human behaviour

**UNIT-I** Organizational Behaviour – Concept – Nature – Models – Others similar fields of study – Disciplines contributing to Organizational Behaviour – Individual Behaviour – Perception.

**UNIT - II** Personality – Definition - Determinants - Group Dynamics – Formal and Informal Groups, Group Norms, Group Cohesiveness, Group Behaviour and Group Decision-making.

**UNIT - III** Leadership – Concept – Qualities of effective Leadership – Leadership Styles - Definition of Power – Types of Power – Sources of power – Power and Politics.

**UNIT - IV** Definition of Authority – Characteristics – Types of Authority - Organizational conflict, source of conflicts – Types of conflicts – Job frustration and causes.

**UNIT - V** Motivation – Concept – Nature – significance - Theories of Motivation – Maslow's need hierarchy theory – Mc Gregor's Theory X and Theory Y – Herzberg Two Factor Theory - Stress Management – Concept - Sources - Effects of stress - Management of Stress.

Employability

CourseCode	CourseTitle	L	T	P	C
17160AEC26	MANAGEMENT INFORMATION SYSTEM	4	0	0	4

## MANAGEMENT INFORMATION SYSTEM

**AIM:** The objective of this course is to help the student acquire the basic knowledge of information system so as to enable them to make more efficient use of information for decision making.

### COURSE OBJECTIVES

To describe the role of information technology and decision support systems in business and record the current issues with those of the firm to solve business problems. To introduce the fundamental principles of computer-based information systems analysis and design and develop an understanding of the principles and techniques used. To enable students understand the various knowledge representation methods and different expert system structures as strategic weapons to counter the threats to business and make business more competitive.

### COURSE OUTCOMES

1. Relate the basic concepts and technologies used in the field of management information systems;
2. Compare the processes of developing and implementing information systems.
3. Outline the role of the ethical, social, and security issues of information systems.
4. Translate the role of information systems in organizations, the strategic management processes, with the implications for the management.
5. Apply the understanding of how various information systems like DBMS work together to accomplish the information objectives of an organization.

**Pre Requisite:** The Learner should have elementary knowledge about information systems

**UNIT-I** Management information System- An overview- concept- evolution and element of MIS- definition- characteristics and basic requirement of MIS- structure- computerized MIS- prerequisites of an effective MIS.

**UNIT-II** System analysis and design- An overview- System study- System design- development and implementation.

**UNIT-III** Computers and its effect on MIS- Limitations- MIS and DSS- MIS and information resource management- executive information artificial intelligence and expert system- MIS in Indian organizations- recent developments in information technology.

## Skilldevelopment

**UNIT-IV** Computers and communication- An overview- the information technology- concept of global village- communication channels- communication networks- local area networks- wideareanetworks-video conferencing.

**UNIT-V** Client/ server computing communication servers- digital networks- ERP systems- inter-organizationalinformationsystems-valueaddednetworks-networkingE-commerceandinternet-application ofinternet and websitemanagement.

17160SEC33	MANAGEMENTACCOUNTING	2	3	0	5

## MANAGEMENTACCOUNTING

**AIM:** To help students understand the nature and scope of management accounting. Gain knowledge in the preparation of financial statement analysis, fund flow and Cash flow analysis. Utilize the management tools and techniques to take appropriate financial decisions.

### OBJECTIVES

To help students to explain basic concepts, importance & functions of Management Accounting. To help the students to illustrate the format of Vertical Financial Statements, analysis and interpretations of Financial Statement. To enable students to calculate the various ratios and interpret it. To enable students to prepare Cash flow statements using Indirect method.

### COURSE OUTCOMES

- Students would explain the significance of basic concept, importance & functions of Management Accounting.
- Students would illustrate the Vertical format of financial statements, and also tools of financial analysis such as Trend Analysis, Comparative Analysis and Common Size Statement.
- Students would calculate the various ratios and would be able to discuss the significance and use of the various ratios.
- Students would be able to prepare cashflow statements using Indirect method.
- Students would calculate the estimated working capital requirement of the entity.

**Prerequisite:** The Learner Should have Elementary knowledge about financial accounting reports and statements.

### UNIT- I

Management accounting – Meaning, Objectives, Nature and Scope of Management accounting – Utility and limitations of management accounting.

### UNIT- II

Financial Statement Analysis – Comparative Statements – Common Size Statements Ratio Analysis – significance, Uses and limitations – Computation of various ratio – Profitability, Liquidity, Solvency and Turnover ratio.

### UNIT- III

Fundflow analysis – concept of funds – sources and uses of funds – managerial uses of fund flow analysis - construction of fundflow statement.

## MANAGEMENT ACCOUNTING

### UNIT– IV

Cash flow analysis – Distinct of Cash flow from fund flow - utility of Cash flow statement –  
Construction of Cash flow statement.

### UNIT– V

**Marginal Costing:** Meaning, Features, Advantages, Limitations, Absorption costing **Cost–Volume**  
– **Profit Analysis:** Contribution, Break even analysis, Profit Volume Ratio, Margin of safety

#### **Text Book:**

- Management Accounting – S.N. MAHESWARI, Sultan Chand & Sons.

17160AEC35	BUSINESSLAW	4	0	0	4

## BUSINESSLAW

### OBJECTIVES:

- To enlighten the students on the basic principles and legal aspects of business laws.
- To promote the understanding of various legislations relating to business.
- To make them acquire knowledge on the legal aspects in the business environment.

### COURSE OUTCOMES:

- On completion of this course, learners will be able to: appreciate the relevance of business law to individuals and businesses and the role of law in an economic, political and social context.
- Identify the fundamental legal principles behind contractual agreements.
- Examine how businesses can be held liable in tort for the actions of their employees.
- Understand the legal and fiscal structure of different forms of business organizations and their responsibilities as an employer.
- Acquire problem solving techniques and to be able to present coherent, concise legal argument.

**Pre requisite Students must have knowledge of Basic business legislations and concepts**

#### **UNIT-I**

Contract Act – Definition, Classification – Essentials of a Contract – Offer and Acceptance – Consideration – Contractual Capacity – Free Consent – Legality of Object.

#### **UNIT-II**

Performance of Contract – Modes of Discharge of Contract – Remedies for Breach of Contract.

#### **UNIT-III**

Law of Agency – Mode of creation – Agency by Ratification – Sub-Agent and Substituted Agent – Termination of Agency.

#### **Employability**

#### **UNIT-IV**

Sale of Goods Act – Definition – Conditions and Warranties – Transfer of Property – Performance of Contract of Sale – Rights of an Unpaid Seller.

#### **UNIT-V**

Partnership – Definition – Essentials – Rights, duties and Liabilities of partners – Types of partnership –

Dissolution of partnership.

CourseCode	CourseTitle	L	T	P	C
17160GEC65B	CORPORATESOCIALRESPONSIBILITY	3	0	0	3

**AIM-** develop your understanding of key concepts and frameworks of cross- sector collaboration.

## OBJECTIVES

This course aims to develop your understanding of key concepts and frameworks of crosssector collaboration. Corporate Responsibility and Accountability (CRA) examines how business manages its social, environmental and economic impact on society. The course reviews the historical evolution and development of corporate responsibility and accountability ideas and concepts including corporate social responsibility, corporate citizenship, corporate sustainability, and creating shared value, as well as why social issues are now a key part of managing the business enterprise.

## COURSE OUTCOMES

The Learning Outcomes in this course also help you to achieve some of the overall Program Learning Goals and Outcomes for all postgraduate coursework students in the Business School. Program Learning Goals are what we want you to BE or HAVE by the time you successfully complete your degree (e.g. ‘be an effective team player’). You demonstrate this by achieving specific Program Learning Outcomes - what you are able to DO by the end of your degree (e.g. ‘participate collaboratively and responsibly in teams’).

**UNIT I** Introduction to CSR: Meaning & Definition of CSR, History & evolution of CSR. Concept of Charity, Corporate philanthropy, Corporate Citizenship, CSR- an overlapping concept. Concept of sustainability & Stakeholder Management.

**UNIT II** International framework for corporate social Responsibility, Millennium Development goals, Sustainable development goals, Relationship between CSR and MDGs. United Nations (UN) Global Compact 2011.

**UNIT III** CSR-Legislation In India & the world. Section 135 of Companies Act 2013. Scope for CSR Activities under Schedule VII, Appointment of Independent Directors on the Board, and Computation of Net Profit’s Implementing Process in India.

**UNIT IV** The Drivers of CSR in India, Market based pressure and incentives civil society pressure, the regulatory environment in India Counter trends. Performance in major business and programs. Voluntarism Judicial activism.

**UNIT V** Identifying key stakeholders of CSR & their roles. Role of Public Sector in Corporate, government programs that encourage voluntary responsible action of corporations. Role of Nonprofit & Local Self Governance in implementing CSR; Contemporary issues in CSR & MDGs. Global

Compact SelfAssessment Tool, National Voluntary Guidelines by Govt. of India. Understanding roles and responsibilities of corporate foundations.

## TOURISMANDHOTELMANAGEMENT

### OBJECTIVES

National Council for Hotel Management & Catering Technology and its role as the apex formation in the country to ensure co-ordinated growth and development of hospitality education through its affiliated institutes are elaborated in its Memorandum of Association which among other things, mandates the Council to effectively discharge

### COURSE OUTCOMES

- Recognize the importance of outstanding guest service quality, server-guest relationships, and ethics
- Improve ability to exercise judgment and critically analyze problems
- Apply and improve written, oral, and non-verbal communication skills
- To provide the student with a "real life" experience in the hospitality industry.
- To provide the students with an experiential learning opportunity at various levels of responsibility

### UNIT- I

Tourism management – Meaning – Scope and Contents of Travel – Importance of travel in modern times. Travel Agency – Function of Travel Agents and Organizers of tour – Establishment of travel Agency – Role of travel agencies in the economic development.

### UNIT- II

Motivation for Travel – Accommodation, Star Hotels – Catering Establishment – Model of a catering unit. Impact of Tourism in Economic Development: India and the world – Tourism and balance of payment – Tourism and National Economy.

### UNIT- III

Tourism: macro and micro Aspects – Important Tourist places in India and Tamilnadu – Role of guide in travels and tours.

### Skill development

### UNIT- IV

Hotel Industry – Introduction and evolution – Classification of Hotels – Types of accommodation – Inter media accommodation – Grouping of accommodation . Characteristics of Hotels – Activities of Hotels – Accommodation management – Front office – House keeping – Bar and restaurant – Supporting service. Working of hotels – maintenance of equipments – maintenance of accounts.

### UNIT- V

Room occupancy rate management – Intimation of demand, Seasonal pattern of Guest occupancy – Factors affecting the determination of room's rates during season and off season - menu pricing – Hotel security. License – permission from statutory authorities – Labor department – City Corporation – Police – State excise – customs – department of Tourism. Food and beverage service - problems in prospect of Hotel Industry.

## **LEGALASPECTSOFBUSINESS**

**COURSEOBJECTIVE:** To createtheknowledgeofLegalperspectiveanditspracticesto improvise thebusiness.

**COURSEOUTCOME:** Legalinsightwillbeestablishedinthebusinesspracticesaccordingto thesituationofchangingenvironment.

**UNIT - I: The Contract Act, 1871** Nature and classification of contracts - Essential elementsof a valid contract - Offer and Acceptance - Consideration - Capacities of Parties - Provisionsrelating to free consent, void agreements - Provisions relating to performance and discharge ofcontract-Breach of contract-Meaningand remedies.

**UNIT - II: Contract Act, 1872** Contracts of Indemnity - Meaning, nature - Right of IndemnityHolder and Indemnifier- Contracts of Guarantee - Meaning, Nature and Features - Types ofGuarantee - Provisions relating to various types of Guarantee - Agency - Agent and Principal -Creation of Agency - Classification of Agents- Relationship between Principal and Agent -Rights,Duties andLiabilitiesofAgent and Principal– Termination ofAgency

**UNIT - III: Sales of Goods Act, 1930** Contract for Sale of Goods - Meaning - Essentials of aContract of Sale - Formalities of a Contract of sale - Provisions relating to conditions andWarranties - Provisions relating to performance of Contract of Sale - Rights of Unpaid - Seller –Rules as to delivery of goods - Patents Act ; Conceptual understanding of patents, copyrights,trademarksand designs

### **Employability**

**UNIT- IV:The Negotiable Instruments Act, 1881**Negotiable Instruments - Meaning,Characteristics, Types, Parties – Holder and holder in Due Course - Negotiation and Types ofEndorsements- Dishonour of NegotiableInstrument- Noting and Protest-Liability of partiesonNegotiableInstrument.

**UNIT- V: The Companies Act, 1956andTheInformationTechnologyAct, 2000**Company -Definition,Meaning,FeaturesandTypesofcompanies-Incorporationofacompany-MemorandumofAssociation,ArticlesofAssociationandProspectus-theinformationtechnology act, 2000; Digital Signature - Digital Signature Certificate- Electronic Governance - ElectronicRecords -CertifyingAuthorities-Penalty&Adjudication

## STATISTICS FOR MANAGERS

**COURSE OBJECTIVE:** This course mainly deals with the use of Statistical concepts in the resolution of managerial decision problems. As such the course will deal not only with some of the theoretical concepts in Statistics but will also be concerned with their application.

**COURSE OUTCOME:** Students will achieve statistical literacy and will be able to find ways to move beyond the-what of statistics to the how and why of statistics.

**UNIT - I Fundamental of Statistics** Statistics – Definition, Types. Types of variables–Organising data -Descriptive Statistics – measures of central tendency – measures of dispersion;Skewness & Kurtosis – Frequency distribution – Histograms – Polygons - Definition of random variable.

### UNIT - II

**Fundamentals of Probability** Basic definitions and rules for probability, conditional probability independence of events, Baye's theorem, and random variables, Probability distributions: Binomial, Poisson, Uniform and Normal distributions.

**UNIT - III Sampling Distribution and Estimation** Introduction to Sampling Distributions - Sampling Distribution of Sample Mean and Sample Proportion - Application of Central Limit Theorem - Sampling Techniques - Estimation and Confidence Intervals - Point and Confidence Interval Estimates for Population Parameters of Large-Sample and Small Samples - Determining the Sample Size.

**UNIT - IV Testing of Hypothesis** Hypothesis Testing - General Procedure for Hypothesis Testing - Errors in Hypothesis Testing – One Sample and Two Sample Tests for Means and Proportions of Large Samples (Z-Test)-

One Sample and Two Sample Tests for Means of Small Samples (T-Test), (F-test) for two sample standard deviations. ANOVA one and two way classification.

#### Skill development

**UNIT - V Non-Parametric Methods** The Chi-Square Test - Statistic - Applications of Chi-Square Tests - Test of Independence of Attributes - Goodness of Fit - Theory of Correlation and Regression: Meaning of Correlation and regression – Principles of Least squares – Simple Linear Regression–Simple correlation–Co-efficient–Rank Correlation Time Series Analysis - Variations in Time Series.

## **MANAGERIALSKILLDEVELOPMENT**

**COURSEOBJECTIVE:**ThiscoursewillfocusonoverallPersonalityDevelopmentofstudentsbyenhancingtheircommunicationskills,shapingtheirattitudesandbehavioursandultimatelypreparingthemforcorporateroles.

**COURSEOUTCOME:**Learnersareable to speak confidently and effortlessly in different contexts – informal and formal. They can be think on feet’ even in difficult circumstances. To get into the habit of express themselves in different genres of writing from creative to critical to factual writing. The student will be able to manage communication in the organization and develop interpersonal relationships.

**UNIT I:** Self introduction – News Reading – Story Telling – Etiquettes for Managers – Reviews of Articles, Movies and Books

**UNITII:**Role Play–Debate –Group Discussions–Paper Presentation–Mock Interview

**UNITIII:**Corporate Writing, Creative Writing, Report Writing, Preparing Press Notes.

**UNITIV:**Case Studies– Analyzing and presenting Cases, Poster Making, Framing Advertisements, Slogans, Captions.

**UNITV:**Use of Computer & Technology (MS Word, Powerpoint) (Using Internet as a tool for effective Management)

**Skill development**

<b>FINANCIAL MANAGEMENT</b>							

**COURSE OBJECTIVE::** Facilitate student to understand the operational nuances of a Finance Manager. Comprehend the technique of making decisions related to finance function

**COURSE OUTCOME:** Learners can recall and understand Indian financial systems. Evaluate the investments projects and companies. Prepare capital budget and appropriations. Decide upon the capital structure and working capital budgeting decisions. Take decision on higher dividend payout or lower dividend payout.

**UNIT – I: Introduction of Financial Management:** Concept of Finance, Corporate Finance, Finance Functions and other functions. Structures of the Financial System. Financial Management – Meaning, functions and Objectives of Financial Management – Financial Planning and Forecasting of short term and long term – time value of money – risk and return.

**UNIT–II: Financing Decision** Sources of funds - Relative merits and demerits, Capitalization - Under Capitalization and Over Capitalization - Capital Structure - theories of capital structure - Factors affecting capital structure - Financing decision in practice - leverage - Operating, Financial and combined leverage - Cost of capital - Costs of individual components of capital - Weighted Average cost of capital.

**UNIT–III: Investment Decision** Nature and Significance of Investment Decision - Estimation of cash flows - Capital Budgeting Process - techniques of investment appraisal: Payback period; Accounting Rate of Return - DCF Techniques - Net present value, Profitability Index and Internal Rate of Return - Investment appraisal practices in Indian companies. Employability

**UNIT – IV: Working Capital Decision** Meaning - Nature of working capital - Classification and significance of working capital - financing of Working capital - Component of working capital, Cash, Short-term marketable securities - Management of Cash and Receivables

**UNIT– V: Dividend Decision** Management of Profits - Meaning and Significance - Theories of Dividend - Determinants of dividend - Dividend Policy - Dividend policies in practice - Legal aspects of Dividends – Bonus shares – stock splits.

## HUMAN RESOURCE MANAGEMENT

**COURSE OBJECTIVE:** To provide knowledge about management issues related to staffing, training, performance, compensation, human factors consideration and compliance with human resource requirements.

**COURSE OUTCOME:** Understanding of importance of Human Resource Management  
 Understanding of concepts and practices of Human Resource Management  
 Designing strategies in Human Resource Management  
 Ability to take up activities in Human Resource Management.  
 Basic knowledge about prevailing legislations related to labour

**UNIT – I: HR Roles and Functions** Human Resource Management - Introduction and Importance - Evolution - Difference between Personnel Management and HRM – HR functions - Structure of HR Department – Role, Duties and responsibilities of HR manager - HRDS System – HR Strategies and organisational Strategies.

**UNIT - II: Human Resources planning and recruitment** Objectives - Importance - HR Process - Manpower Estimation - Job analysis - Job Description - Job Specification - Recruitment - Sources of Recruitment - Selection Process - Placement and Induction - Retention of Employees - Merit rating - promotion - transfers - job enlargement - job enrichment - job rotation.

**UNIT – III: Training and Development and performance appraisal** Training and Development - Training Process and Methodology - Need and objectives - Training procedure - Methods of Training - Evaluation of Training programmes  
 Performance Management System - Definition, Concepts and Ethics - Different methods of Performance Appraisal - Rating Errors - Competency management – Career Planning.

**UNIT – IV: Compensation Management** Concepts and Components - Compensation Plan – Reward – Motivation - job evaluation - Fringe benefits and services - Employee Welfare – retirement / Separation - Kinds of Retirement - Resignation, Discharge, Dismissal, Suspension, Retirement, Layoff, Voluntary Retirement / Separation Schemes, Golden handshake.

**UNIT – V: Industrial Relations** Factors influencing industrial relations - State Interventions and Legal Framework - Role of Trade unions - Collective Bargaining - Workers' participation in management - time management – Corporate Social Responsibility. Employability

## MARKETINGMANAGEMENT

**COURSEOBJECTIVE:** To understand fundamental concepts of Marketing in Modern Marketing Practices

**COURSEOUTCOME:** knowledge of analytical skills in solving marketing related problems, awareness of marketing management process

**UNIT I Marketing:** Meaning – Concept & its types – Functions and organisation – Marketing Planning – Core concepts of marketing (such as Need, Want, Demand, Customer Value, Exchange, Customer & Consumer, Customer Satisfaction, Customer Delight, Customer Loyalty, Marketing v/s Market, Selling versus Marketing). Concept of Marketing Myopia – Marketing Segmentation and Consumer Behaviour – Marketing Research

**UNIT II Product Characteristics – Classification – Product Differentiation – Product Hierarchy – Co-Branding – Packaging – Labeling – Warranties & Guarantees – New Product Development**

**UNIT III Understanding Pricing – Setting the Price – Types of Pricing Strategies – Initiating & Responding to the Price Changes**

**Employability**

**UNIT IV Role of Marketing Communication – Components of Promotion (Advertising, Sales Promotion, Personal Selling, Public Relations – Basic Concepts), Direct Marketing (Direct Mail, Catalogue, Tele Marketing),**

**UNIT V Importance of Marketing Channels – Functions – Channel Design – Channel Management – E-Commerce – Marketing Practices – Retailing – Types & Recent Trends – Wholesaling – Market Logistics – Managing Sales Force**

## **PRODUCTION AND OPERATIONS MANAGEMENT**

**COURSE OBJECTIVE:** To provide a broad introduction to the field of production and operations management and explain the concepts, strategies, tools and techniques for managing the transformation process that can lead to competitive advantage.

**COURSE OUTCOME:** The students would have learned about various concepts related to the production and operations management. Also understood the decision role and responsibilities of operations function vis-à-vis other functions in an organization.

### **UNIT-I: INTRODUCTION OF PRODUCTION AND OPERATIONS MANAGEMENT**

Production & Operations Management – Meaning, Scope, Functions, Relationship between POM & other functional areas of Management –

Effect of Time Element on POM. Classification of Production Systems – Intermittent, Job shop, Batch, Continuous, Flow and Mass Production Systems.

### **UNIT-II: PRODUCTION PLANNING AND CONTROL**

Production Planning & Control  
 – Preplanning – Forecasting – Scheduling – Dispatching – Routing – Expediting – Plant Location  
 – Factors Influencing Plant Location, Importance of Environmental Health & Safety factors in deciding the location of plant – Cost Factor – Plant Layout – Principles, Flow Patterns, Types of Plant Layout – Capacity Planning – Types of Capacity, Capacity Decision, Capacity Planning Strategies – Manufacturing Model, P&Q Systems, MRP-I & MRP-II.

### **UNIT-III: DESIGN OF PRODUCT, PROCESS AND WORK SYSTEMS**

Product Design – Influencing factors, Approaches, Legal, Ethical and Environmental issues. Process – Planning, Selection, Strategy, Major Decisions. Work Study – Objectives, Procedure. Method Study and Motion Study. Work Measurement and Productivity – Measuring Productivity and Methods to improve productivity.

### **UNIT-IV: SCHEDULING AND PROJECT MANAGEMENT**

Project Management – Scheduling Techniques, PERT, CPM; Scheduling - work centers – nature, importance; Priority rules and techniques, shop floor control; Flow shop scheduling – Johnson's Algorithm – Gantt charts; personnel scheduling in services.

### **UNIT-V: MATERIALS MANAGEMENT**

Materials Management, Components of Materials Management – Materials Planning, Inventory Control, Purchase Management, Stores Management. Inventory Management – Inventory Decisions, Models of Inventory – ABC Analysis, XYZ Analysis and JIT.

Employability

## **RESEARCH METHODOLOGY**

**AIM:** To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:** To understand the approaches towards and constraints in good research. To identify various statistical tools used in research methodology. To appreciate and compose the manuscript for publication.

**OUTCOME:** Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:** Research Methodology course in UG level or equivalent knowledge.

**Unit I: INTRODUCTION** Research – Importance and its types – research approaches – process – problem formulation – development of hypothesis – Research design – determining the sample design – collecting data – analysis of data – identifying research problem.

**Unit II: Measurement and its techniques** Measurement in research and its problems – meaning of scaling – tests of sound measurement – types of scaling – Techniques of measurement – Attitude scales – summated rating scale – Equal appearing Interview scale – cumulative scale – Ratings scale – Scale constructing Techniques – Time series analysis – Projection Techniques

**Unit III: DATA COLLECTION AND HYPOTHESIS** Classification of data – sources of data – collection of primary and secondary data – Questionnaire method – Guidelines for Questionnaire design – Interview technique – Observation techniques – Processing of data – Editing – Coding – Tabulation – Interpretation of data – Formulation of hypothesis – Test of hypothesis.

### **Employability**

**Unit IV: Statistical Techniques** Statistical Techniques – Quantitative and qualitative techniques – Measures of Central Tendency – Arithmetic mean, Median and Mode – Standard deviation – Karl Pearson's coefficient of correlation – Regression – Chi-square test – conditions for applying chi-square test – ANOVA – Spearman's Rank Correlation.

**Unit V : INTERPRETATION AND REPORT WRITING** Interpretation – Techniques of Interpretation – Significance of Report Writing – Different steps in writing report – layout of research report – types – oral presentation – mechanics of writing a research report – precautions for writing research reports – Role of computers in Research

<b>COURSECODE</b>	17260C031			<b>4</b>	<b>0</b>	<b>0</b>	<b>4</b>

<b>INTERNATIONAL BUSINESS ENVIRONMENT</b>
<b>COURSE OBJECTIVE:</b> To familiarize the students to the basic concepts of international business management
<b>COURSE OUTCOME:</b> Students would be familiar with global business environment, global strategic management practices and get acquainted with functional domain practices. They would be familiar with conflicts situations and ethical issues in global business.
<b>UNIT-I</b> Nature and scope of international business- Growing relevance of international business- Types, Importance of international business. Business environment- internal and external environment. Economic and political Environment- Economic roles of Government- Demographic environment- Cultural environment.
<b>UNIT-II</b> International Economic Institutions- IMF, World Bank, UNCTAD, UNIDO, GATT, WTO-organizational Structure, objectives and functions
<b>UNIT-III</b> International Trade- Theories- Adam Smith, David Ricardo, Heckscher-Ohlin, and Leontief Paradox. Government influence on trade- protectionism. Exim policy of India- Export promotion- incentives- SEZ- objectives of SEZ.- BoP vs BoT- Components of BoP. Employability
<b>UNIT IV</b> MNCs- Benefits to host country- problems of MNCs – MNCs in India. Transfer of technology- levels, channels- methods of technology transfer- International investments- Significance and types of international investments- FDI, FII- factors affecting FDI- Cross-border M&As.
<b>UNIT-V</b> Globalisation and business – Features of globalization- essential conditions for globalization- foreign market entry strategies- Pros and cons of Globalisation. Global competitiveness- determinants and its pillars- IT revolution and Business Environment
<b>TEXT/REFERENCES</b> Francis Cherunilam, "International Business Environment", Himalaya Publishing House Mumbai, 4 <sup>th</sup> Edition K. Aswathappa, "Essentials of Business Environment- Text, Cases & Exercises", Himalaya Publishing House, Mumbai, 12 <sup>th</sup> Revised Edition.

## OPERATIONS RESEARCH

**COURSE OBJECTIVE:** To learn the concepts of operations research applied in business decision making using Operations Research Models. To facilitate the student to find out optimal solution for transportation and assignment problems and to empower to equip with the skills of decision making using quantitative techniques

**COURSE OUTCOME:** To facilitate quantitative solutions in business decision making under conditions of certainty, risk and uncertainty. Develop mathematical models using various techniques for successful project implementation.

**Unit I** Scope and application of Operation Research in managerial decision-making- Decision-making environments: Decision-making under certainty, uncertainty and risks situations; Uses of Decision tree.

**Unit II** Linear programming: Mathematical formulation of LP Models for product-mix problems; graphical and simplex method of solving LP problems; sensitivity analysis; duality Transportation problem: Various method of finding Initial basic feasible solution and optimal cost- Assignment model: Algorithm and its applications

**Unit III** Game Theory: Concept of game; Two-person zero-sum game; Pure and Mixed Strategy Games; Saddle Point; Odds Method; Dominance Method and Graphical Method for solving Mixed Strategy Game  
Sequencing Problem: Johnsons Algorithm for n Jobs and Two machines, n Jobs and Three Machines, Two jobs and m Machines Problems.  
Employability

**Unit IV** Queuing Theory: Characteristics of M/M/I Queue model; Application of Poisson and Exponential distribution in estimating

Arrival Rate and Service Rate; Applications of Queue model for better service to the customers Replacement Problem: Replacement of asset that deteriorate with time, replacement of asset which fail suddenly.

**Unit V** Project Management: Rules for drawing the network diagram, Application of CPM and PERT techniques in project planning and control; Crashing and resource leveling of operations Simulation and its uses in Queuing theory & Materials Management

<b>SMALL BUSINESS AND ENTREPRENEURSHIP</b>							
<b>COURSE OBJECTIVE:</b> The objective of this course is to familiarize the students with the ground realities of starting & managing their own Entrepreneurial ventures.							
<b>COURSE OUTCOME:</b> Students will gain knowledge and skills needed to run a business. Gives required competencies to run the successful enterprise. Prepared to become an entrepreneur.							
<b>UNIT I INTRODUCTION TO ENTREPRENEURSHIP</b> Understanding the Meaning of Entrepreneur; Characteristics and Qualities of an Entrepreneur; Classification of Entrepreneurs; Factors Influencing Entrepreneurship; Entrepreneurial Environment; Entrepreneurial Growth; Problems and Challenges of Entrepreneurs; Entrepreneurial Scenario in India							
<b>UNIT II ENTREPRENEURSHIP FEASIBILITY ANALYSIS</b> Starting an Enterprise; Idea Generation; Identification of Business Opportunities; Market Entry Strategies; Marketing Feasibility; Financial Feasibilities; Political Feasibilities; Economic Feasibility; Social and Legal Feasibilities; Technical Feasibilities; Managerial Feasibility, Location and Other Utilities Feasibilities							
<b>UNIT III LAUNCHING OF SMALL BUSINESS</b> Business plan – Meaning, Scope and Need; Business plan Formats; Project report preparation and presentation; Project appraisal; Why some business plan fails? MSMEs, Financial support banks, institutions and agencies; Venture capital; Government schemes and Policies							
<b>UNIT IV DEVELOPMENT OF SMALL BUSINESS</b> Role of Government and other Agencies in Promoting Small Business - Preventing Sickness and Rehabilitation of Business Units - Incentives, Subsidies and Grants - Training for Effective Management of small Business.							
<b>UNIT V WOMEN ENTREPRENEURS</b> Women Entrepreneurs Problems & Prospects in Women Entrepreneurships, Role of Government in Promoting Women Entrepreneurs. Development of Self Help Groups, Steps taken by Government in Promoting SHGs.. Employability

## CONSUMER BEHAVIOUR

**COURSE OBJECTIVE:** The basic objective of this course is to develop an understanding about the consumer decision making process and its applications in marketing function of firms.

### COURSE OUTCOME-

Able to explain the basic concepts and models of consumer behavior. Able to analyze the effects of psychological, socio-cultural and demographic factors on the consumer decision process with their results. Able to distinguish the relationship between consumer behavior and marketing practices. Able to define the importance of consumer behavior for businesses  
Able to compare the relationship between consumer behavior and other disciplines.

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EC42		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MICROFINANCE**

Objectives: To enable the students to understand the principles, practices and application in Micro Finance

**COURSE OUTCOME.**

The participants would get a good understanding on the functioning of the various Micro finance models which are existing in India as well as abroad.

It seeks to develop an understanding about the MFIs and their changing role in developing the sector and how Micro Finance is being marketed in the economy.

**UNIT I Introduction: Evolution: Impact and Importance: Micro Financial Services: Steps Initiated in Development of Micro finance**

**UNIT II Role of Regulatory body in Micro finance: Rural Credit system: Self Help groups (SHG): What is SHG: Features of SHG: Objectivity of SHG: Role of SHG in Micro finance: Self Help group promoting institutions (SHPI): Formation of SHG: Credit Linkage**

**UNIT III Micro Finance Services: Weaker Sections: SHG-Bank Linkage: Banks and Financial Intermediaries: SHG-Thrift, credit, and Other Financial Services**

**EMPLOYABILITY**

**UNIT IV Formation and development of Micro Services. Micro Finance Institutions: Role of MFI in developing Micro Finance: Enhancing Institutional Finance**

**UNIT V Micro Finance and Rural Development: Micro Credit Institutions: Non Government Organization (NGO). Prospects of Micro Finance: RBI Role in Regulating: Bank's Role in Micro Finance: Growth of Micro Finance: Development of Micro Finance: Credit Plans: Credit Schemes: social Banking.**

**Reference Books**

4. Commercial banks in microfinance - by Malcolm Harper and Sukhwinder Singh Arora – Teri Press 2005.

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EC43		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EC44		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: STRATEGIC FINANCIAL MANAGEMENT**

**Objectives:** To equip the students with necessary strategic knowledge and skills received to evaluate discussions or capital restructuring, mergers and acquisitions.

**COURSE OUTCOME**

Learners will recognize the current market scenario and upgrade the skills and knowledge of long-term sustainability. Learners will absorb changing scenario in Banking Sector and provide guidance towards choosing banking as a career option and also study made on financial management in banking sector. Learners will realize the contemporary issues related to financial management.

**UNIT I** Sale of existing assets and making discussions on complex investment opportunities and managing risk- Financial planning- Analyzing Financial Performance- Approaches to Financial Planning- Short-term Financial Planning

**UNIT II** Strategic Alliances- Ownership Restructuring- Leveraged Buyouts- Sell Offs- Leveraged Recapitalizations- Distress Restructuring- Merges & Acquisitions- Financial Framework- Merger as a Capital Budgeting Decision- Legal and Tax Aspects- Post Merger Integration Issue,

**UNIT III** Acquisition/ Take over Codes- Techniques – Defensive Strategies- Cross Boarder Deals

**SKILL DEVELOPMENT**

**UNIT IV** Corporate Sickness- The Magnitude- Different interpretation of Sickness- Causes- Turnaround- Turnaround Types- Basic Approaches- Surgical Vs. Human – Phases in Turnaround Management-

**UNIT V** Strategy and Cost Management- Strategy Formulation and Cost System Design- Alternate Strategies- Objectives of Cost Management Systems- Broken Cost System- Causes and Remedies- Cost of Quality- Activity Based Costing principles- Target Costing.

**Reference Books**

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EC45		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MERCHANT BANKING AND FINANCIAL SERVICES**

**OBJECTIVES:** To enable student to Understand the modes of issuing securities, Acquire and financial evaluation technique of leasing and hire purchase.

**COURSE OUTCOME**

To impart knowledge regarding the components of Indian Financial System. • To provide in depth understanding of different avenues of financial system viz. capital markets, banking, insurance, mutual funds & other related services. • To enable the students to understand the role & functioning of regulatory bodies in financial sector

**UNIT I MERCHANT BANKING**

Introduction – An Over view of Indian Financial System – Merchant Banking in India – Recent Developments and Challenges ahead – Institutional Structure – Functions of Merchant Bank -Legal and Regulatory Framework– Relevant Provisions of Companies Act- SERA- SEBI guidelines- FEMA, etc.- Relation with Stock Exchanges and OTCEI.

**UNIT II ISSUE MANAGEMENT**

Role of Merchant Banker in Appraisal of Projects, Designing Capital Structure and Instruments

Issue Pricing – Book Building – Preparation of Prospectus Selection of Bankers, Advertising Consultants, etc. - Role of Registrars – Bankers to the Issue, Underwriters, and Brokers. – Offer for Sale – Green Shoe Option – E-IPO, Private Placement – Bought out Deals – Placement with FIs, MFs, FIIs, etc. Off - Shore Issues. – Issue Marketing – Advertising Strategies – NRIMarketing– Post Issue Activities.

**SKILL DEVELOPMENT**

**UNIT III OTHER FEE BASED SERVICES**

Mergers and Acquisitions – Portfolio Management Services – Credit Syndication – Credit Rating – Mutual Funds -Business Valuation.

**UNIT IV FUND BASED FINANCIAL SERVICES**

Leasing and Hire Purchasing – Basics of Leasing and Hire purchasing – Financial Evaluation.

**UNIT V OTHER FUND BASED FINANCIAL SERVICES**

Consumer Credit – Credit Cards – Real Estate Financing – Bills Discounting – factoring and Forfeiting – Venture Capital.

**TEXT BOOKS**

&  
OPERATIONS**

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260ED33		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: PROJECT MANAGEMENT**

**OBJECTIVE:**

This course focuses on project management methodology that will increase the ability of students to initiate and manage projects more efficiently and effectively. Also they will learn key project management phases through an innovative model.

**COURSE OUTCOME**

Assumes responsibility as a professional practitioner of project management, applying PM principles and practices while maintaining high standards of practice, making ethical judgments and decisions in a respectful, and sustaining professional standing through a commitment to life-long learning

**UNIT I INTRODUCTION TO PROJECT MANAGEMENT**

Project Management – Definition – Goal – Lifecycles. Project Selection Methods. Project Portfolio Process – Project Formulation. Project Manager – Roles – Responsibilities and Selection – Project Teams.

**UNIT II PLANNING AND BUDGETING**

The Planning Process – Work Break down Structure – Role of Multidisciplinary teams. Budget the Project – Methods. Cost Estimating and Improvement. Budget uncertainty and risk management.

**UNIT III SCHEDULING & RESOURCE ALLOCATION**

PERT & CPM Networks - Crashing – Project Uncertainty and Risk Management – Simulation – Gantt Charts – Expediting a project – Resource loading and leveling. Allocating scarce resources – Goldratt’s Critical Chain.

Employability

**UNIT IV CONTROL AND COMPLETION**

The Plan-Monitor-Control cycle – Data Collecting and reporting – Project Control – Designing the control system. Project Evaluation, Auditing and Termination.

**UNIT V PROJECT ORGANISATION & CONFLICT MANAGEMENT**

Project Management Information System: Computer based tools, features of PMIS, using project management software, (MS Projects). Project Evaluation, Reporting & Termination: Project reviews & reporting, closing the contract.

**SUGGESTED READINGS:**

1. Clifford Gray and Erik Larson, Project Management, Tata McGraw Hill Edition, 2005.
2. John M. Nicholas, Project Management for Business and Technology - Principles and Practice, Second Edition, Pearson Education, 2006.
3. Gido and Clements, Successful Project Management, Second Edition, Thomson Learning, 2003.
4. Harvey Maylor, Project Management, Third Edition, Pearson Education, 2006.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260ED34		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

## **SUBJECT TITLE: PLANNING & CONTROL OF OPERATIONS**

### **OBJECTIVE:**

This course is designed to acquaint the student with the methods of planning and control for Operations. It helps to identify and discuss forecasting models in the qualitative and quantitative areas.

### **COURSE OUTCOME**

Identify the elements of operations management and various transformation processes to enhance productivity and competitiveness. Analyze and evaluate various facility alternatives and their capacity decisions, develop a balanced line of production & scheduling and sequencing techniques in operation environments. Develop aggregate capacity plans and MPS in operation environments. Plan and implement suitable materials handling principles and practices in the operations. Plan and implement suitable quality control measures in Quality Circles to TQM.

### **UNIT-I**

**Planning & Control of Operations:** Need, Functions - Routing, Scheduling, shop loading and dispatch, follow up. Relations with other departments, Routing- Process layout indicating flow Chart of material from machine to machine. Dispatch in production control -documentation.

### **UNIT-II**

**Demand Forecasting:** Forecasting as a planning tool, Why do we forecast, Forecasting time horizon, Design of forecasting systems, Developing the logic of forecasting, Sources of data, Models for forecasting, Extrapolative methods using time series, Causal methods of forecasting, Accuracy of forecasts, Using the forecasting system.

### **UNIT-III**

**Aggregate Production Planning:** Planning Hierarchies in operations, Aggregate Production planning, Need for Aggregate Production planning, Alternatives for managing demand, Alternatives for managing supply, Basic strategies for aggregate production planning, Aggregate production planning methods, Master Production Scheduling.

### **UNIT-IV**

**Resources Planning:** Dependent Demand Attributes, Planning a framework - the basic building blocks: Multiple levels in products, Product Structure, The Bill of Materials, Time phasing of the requirements, Determining the Lot Size, Incorporating Lead time information, Establishing the planning premises. MRP Logic, Using the MRP system, Capacity Requirements planning, Manufacturing Resources Planning (MRP II), Enterprise Resource Planning (ERP), Resource Planning in services.

### **EMPLOYABILITY**

### **UNIT-V**

**Scheduling of Operations:** Need for Scheduling, Scheduling - Alternative terms, Loading of machines, Scheduling Context, Scheduling of Flow Shops, Scheduling of Job Shops, Input-Output Control, Operational Control Issues in Mass production systems.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260ED35			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUGGESTED READINGS:**

1. Operations Management: Theory and Practice by B Mahadevan, Pearson, 2<sup>nd</sup> Edition.
2. Operations Management by Terry Hill, Palgrave, 2<sup>nd</sup> Edition
3. The fundamentals of Production Planning and Control by Stephen Chapman, Pearson, 1<sup>st</sup> Ed.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260ED36			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: TECHNOLOGY MANAGEMENT**

**OBJECTIVE:**

This course helps to understand the dynamics of technological innovation and be familiar with how to formulate technology strategies.

**COURSE OUTCOME-** Apply Measurement And Analytical Tools To Improve Process Systems  
 Apply Measurement And Analytical Tools To Increase The Quality Of Products And/Or Services  
 Provide Leadership, Guidance, And Assistance To Coworkers When Implementing Changes  
 Understand The Financial And Legal Workings Of Organizations.

**UNIT-I**

**Introduction**

Definition, Characteristics of Technology, Role and Importance of Management of Technology - Technological Environment - Levels of Environment - Changes in the Technological Environment, Major Developments in Technological Environment.

**UNIT-II**

**Innovation Management:** Concept of Innovation; invention and creativity, Drivers and process of innovation - Classification of innovation management of innovation. Technology Evolution - Technology progression, Technology change agents, Evolutionary characteristics of technological change - Drivers of Change in Value Chain, Modes of Value Chain Configuration, Value Chain Configuration and Organizational Characteristics

**UNIT-III**

**Technological Forecasting:** Meaning of Technology forecasting, uses of Technology forecasting, Technology forecasting techniques: Exploratory and Normative: technique; Process and application of techniques like Delphi, Growth Curves, S- curve, Pearl Curve, Gompertz curve :Relevance Tree, Morphological Analysis, Mission Flow Diagram

**EMPLOYABILITY**

**UNIT-IV**

**Technology and Competition**

Competitive Consequences of Technological Change, Technological Characteristics of Competitive Domains, Dynamics of Change in Competitive Domains-

Technology Intelligence

-

Technology Strategy

**UNIT-V**

**Technology and Organizational Issues:** Technological change and Industrial Relations, Technology Assessment and Environmental Impact Analysis Integration of People and Technology, Organizational and Psychological Factors, Organizational Structure.

**SUGGESTED READINGS:**

1. Managing Technology and Innovation for Competitive Advantage, V.K.Narayanan, Pearson Education.
2. Managing Technology – The Strategic View, Lowell W. Steele, McGraw Hill.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260ED37		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: LOGISTICS MANAGEMENT**

**OBJECTIVE:**

The objective of this course is to get the exposure of logistics management and to understand the relationship between the logistics and packaging.

**COURSE OUTCOME**

learn logistics concepts and basic activities

**Know the history of Logistics.**

**Define basic logistics activities.**

**Associate logistics activities with other business activities.**

**UNIT-I: Introduction to Logistics and Competitive Strategy**

Definition and Scope of Logistics – Functions and Objectives – Customer Value Chain – Service Phases and Attributes – Value Added Logistics Services – Role of Logistics in Competitive Strategy.

**UNIT-II: Warehousing and Materials Handling**

Warehousing Functions – Types – Site Selection – Decision Model – Layout Design – Costing – Virtual Warehouse. Material Handling equipment and Systems – Role of Material Handling in Logistics. Material Storage Systems – Principles – Benefits – Methods. Automated Material Handling.

**UNIT-III: Performance Measurement and Costs**

Performance Measurement – Need, System, Levels and Dimensions. Internal and External Performance Measurement. Logistics Audit. Total Logistics Cost – Concept, Accounting Methods. Cost – Identification, Time Frame and Formatting.

**EMPLOYABILITY**

**UNIT-IV: Transportation and Packaging**

Transportation System – Evolution, Infrastructure and Networks. Freight Management – Route Planning – Containerization. Modal Characteristics, Inter-Modal Operators and Transport Economies. Packaging – Design considerations, Material and Cost. Packaging as Unitization – Consumer and Industrial Packaging.

**UNIT-V: Current Trends**

Logistics Information Systems – Need, Characteristics and Design. E-Logistics – Structure and Operation. Logistics Resource Management. Automatic Identification Technologies. Warehouse Simulation. Reverse Logistics – Scope, Design and as a Competitive Tool. Global Logistics – Operational and Strategic Issues. Strategic Logistics Planning.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260ED38			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUGGESTED READINGS:**

1. Douglas MLambert et al., Fundamentals of Logistic Management, McGraw Hill, 1997.
2. Sople Vinod V, Logistics Management – The Supply Chain Imperative, Pearson Education, Indian Reprint 2004.
3. Ronald H Ballou, Business Logistic Management, PHI, 2005.
4. Benjamin S Blanchard, Logistic Engineering and Management, Pearson Education, 2009.
5. Bloomberg David J et al., Logistics, Prentice Hall India, 2005.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260ED37			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: SUPPLY CHAIN MANAGEMENT**

**OBJECTIVE:**

The objective of this course is to get the exposure of supply chain management and to understand the relationship between the procurement and supply chain management.

**COURSE OUTCOME**

Develop a sound understanding of the important role of supply chain management in today's business environment. Become familiar with current supply chain management trends Understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations

**UNIT-I: Introduction Supply Chain –**

Fundamentals, Importance, Decision Phases, Process View. Supplier – Manufacturer – Customer Chain. Drivers of Supply Chain Performance. Structuring Supply Chain Drivers. Overview of Supply Chain Models and Modeling Systems.

**UNIT-II: Strategic Sourcing**

In-sourcing and Out-sourcing – Types of Purchasing Strategies. Supplier Evaluation, Selection and Measurement. Supplier Quality Management. Creating a world class Supply Base. World Wide Sourcing.

**UNIT-III: Supply Chain Network**

Distribution Network Design – Role, Factors Influencing, Options, Value Addition. Models for Facility Location and Capacity Location. Impact of uncertainty on Network Design. Network Design Decisions Using Decision Trees. Distribution Center Location Models. Supply Chain Network Optimization Models.

**UNIT-IV: Planning Demand, Inventory And Supply**

Overview of Demand Forecasting in the Supply Chain. Aggregate Planning in the Supply Chain. Managing Predictable Variability. Managing Supply Chain Cycle Inventory. Uncertainty in the Supply Chain Safety Inventory. Determination of Optimal Level of Product Availability. Coordination in the Supply Chain.

**SKILL DEVELOPMENT**

**UNIT-V: Current Trends**

E-Business – Framework and Role of Supply Chain in e-Business and B2B Practices. Supply Chain IT Framework. Internal Supply chain management. Fundamentals of Transaction Management. Supply Chain in IT Practice. Supplier Relationship Management. Information Systems Development. Packages in Supply Chain – eSRM, eLRM, eSCM. Supply Base Management.

**SUGGESTED READINGS:**

1. Sunil Chopra and Peter Meindi, Supply Chain Management – Strategy Planning and Operation, Pearson Education, Third Indian Reprint, 2004.
2. Monczka et al., Purchasing and Supply Chain Management, Thomson Learning, Second Edition, Second Reprint, 2002.
3. Shapiro Jeremy F, Modeling the Supply Chain, 2nd Edition, Thomson Learning, 2002.
4. Janat Shah, Supply Chain Management Text and Cases, Pearson 2009
5. R P Mohanty and S G Deshmukh, Supply Chain Management Theory and Practices, Biztantra, 2009.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260ED38			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: BUSINESS PROCESS REENGINEERING**

**OBJECTIVE:**

The objectives of this course are to acquaint the student with understanding process orientation in business management and develop skills and abilities in re-engineering and business process for optimum performance.

**COURSE OUTCOME**

Understanding various BPR methodologies and their applications. Understanding the critical success factors for implementing BPR. Appreciate various alternative techniques of BPR – TQM, Work Study, Benchmarking and their applications. Basic understanding of ISO standard 9001:2015, IACBE and their applications in education and industry. Analyze and integrate issues and challenges of applying tools/techniques of Information Technology for BPR and learn to apply them in the industry.

**UNIT-I**

**Introduction to Business Process Reengineering (BPR):** Definition of business process- History, Basics, Definition, Emergence of BPR, The need for reengineering, Benefits of BPR, Role of leader & manager, Breakthrough reengineering model, BPR guiding principles, Business process reengineering & performance improvement, Key targets of BPR.

**UNIT-II**

**BPR in Manufacturing Industry:** Introduction, Enablers of BPR in manufacturing Agile Manufacturing, Lean Manufacturing, JIT, Collaborative Manufacturing, Intelligent Manufacturing, Production Planning, Product design & development.

**UNIT-III**

**BPR & Information Technology:** Introduction, Relationship between BPR & Information Technology, Role of Information Technology in reengineering, Role of IT in BPR (with practical examples), Criticality of IT in business process, BPR tools & techniques, Enablers of process reengineering, Tools to support BPR, Future role of IT in reengineering.

**SKILL DEVELOPMENT**

**UNIT-IV**

**BPR implementation methodology:** Reasons of implementation of BPR, Necessary attributes, BPR team characteristics, BPR methodology, Different phases of BPR, BPR model, Common steps to be taken for BPR implementation, Steps of process reengineering, Organizational redesign using BPR, Impact of BPR on organizational performance, Performance measures of BPR, Business process reengineering project management,

**UNIT-V**

**Success factors and Managing barriers of BPR:** Reengineering success factors, Critical success factors of BPR, Reasons for BPR project failure & success, Reengineering drives cause many changes- Potential project implementation success, Risks associated with business process reengineering projects, Business process reengineering implementation barriers, Information Technology barriers, A framework for barrier management.

**SUGGESTED READINGS:**

1. Business Process Reengineering by Radhakrishnan, Balasubramanian, PHI, Eastern Economy Edition, 2008.
2. Business Process Reengineering by Jayaraman, Ganesh Natrajan and Rangaramanujan, TMGH.
3. Business Process Reengineering and Change Management by Dey, Biztantra

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260ED39		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MATERIALS MANAGEMENT**

**OBJECTIVE:**

To understand the working of a materials management department, Aspects of Stores management, Warehousing management and material requirement planning.

**COURSE OUTCOME**

Identifying the scope for integrating materials management function over the logistics and supply chain operations. Integrate the organization wide materials requirement to develop an overall plan (MRP). Identify, study, compare, and evaluate alternatives, select and relate with a good supplier. Apply various purchasing method and inventory controlling techniques into practice. Analyzing the materials in storage, handling, packaging, shipping distributing and standardizing.

**UNIT – I** Dynamics of material management , Level of material management,

Scope, Objective, Importance– Integrated material managements–

System approach to material managements

**UNIT–II** Warehousing management, purchasing cycle, material handling

**UNIT–**

**III** Vendor rating, contract management. Legal aspects of buying spare parts management, material requirement planning,.

**UNIT – IV** Capacity management, Forecasting, Product & Processes, Just-in-time manufacturing, TQM, Incoming, Material quality.

**Skill development**

**UNIT–V** Cost-

effectiveness & performance management, material management, Information system, stores management, material management

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260ED43		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: SERVICE OPERATIONS MANAGEMENT**

**OBJECTIVE:**

To help understand how service performance can be improved by studying service operations management

**COURSE OUTCOME**

Implement statistical methods and management techniques to monitor, control and improve service processes of an organisation. Propose solutions with which a service organisation can improve its operations and achieve sustainable competitive advantage.

**UNIT I INTRODUCTION** Services – Importance, role in economy, service sector – growth; Nature of services – Service classification, Service Package, distinctive characteristics, open-systems view; Service Strategy –

Strategic service vision, competitive environment, generic strategies, winning customers; Role of information technology; stages in service firm competitiveness; Internet strategies – Environmental strategies.

**UNIT II SERVICE DESIGN** New Service Development – Design elements – Service Blue-printing - process structure – generic approaches – Value to customer; Retail design strategies – store size – Network configuration ; Managing Service Experience – experience economy, key dimensions ; Vehicle Routing and Scheduling

**UNIT III SERVICE QUALITY** Service Quality- Dimensions, Service Quality Gap Model; Measuring Service Quality – SERVQUAL- Walk-through Audit; Quality service by design - Service Recovery - Service Guarantees; Service Encounter – triad, creating service orientation, service profit chain; Front-office Back-office Interface – service decoupling.

**SKILL DEVELOPMENT**

**UNIT IV SERVICE FACILITY** Service escapes – behaviour – environmental dimensions – framework; Facility design – nature, objectives, process analysis –

process flow diagram, process steps, simulation; Service facility layout; Service Facility Location – considerations, facility location techniques – metropolitan metric, Euclidean, centre of gravity, retail outlet location , location set covering

problem **UNIT V MANAGING CAPACITY AND DEMAND** Managing Demand – strategies; Managing capacity –

basic strategies, supply management tactics, operations planning and control; Yield management; Inventory Management in Services – Retail Discounting Model, Newsvendor Model; Managing Waiting Lines –

Queuing systems, psychology of waiting; Managing for growth – expansion strategies, franchising, globalization.

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260ED44		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: PRODUCT DESIGN**

**OBJECTIVE:**

To help understand the application of structured methods to develop a product. Student gains knowledge on how a product is designed based on the needs of a customer.

**COURSE OUTCOME**

- Use the Product Design and Development Process, as a means to manage the development of an idea from concept through to production.
- Employ research and analysis methodologies as it pertains to the product design process, meaning, and user experience.
- Apply creative process techniques in synthesizing information, problem-solving and critical thinking.

**UNIT I INTRODUCTION:** Defining Product, Types of products. Product development – characteristics, duration and cost, challenges. Development Process: Generic Process- Adapting to product types. Evaluation – decay curve – cost expenditure curve.

**UNIT II PRODUCT PLANNING:** Product Planning Process – Steps. Opportunity identification – breakdown structure- product development charter. Product Life Cycle. Technology Life Cycle - Understanding Customer Needs - Disruptive Technologies- Product Specification - Concept Generation – Activity-Steps-Techniques.

**UNIT III PRODUCT CONCEPTS** Selection – Importance, Methodology, concept Screening, Concept Scoring. Concept Testing. Product Architecture- Definition, Modularity, implication, Establishment, Delayed Differentiation, Platform Planning.

**EMPLOYABILITY**

**UNIT IV INDUSTRIAL DESIGN AND DESIGN TOOLS** Industrial Design, Design for Manufacturing- Value Engineering- Ergonomics- Prototyping- Robust Design- Design for X- failure rate curve- product use testing- Collaborative Product development- Product development economics- scoring model- financial analysis.

**UNIT V PATENTS** Defining Intellectual Property and Patents, Patent Searches and Application, Patent Ownership and Transfer, Patent Infringement, New Developments and International Patent Law.

**TEXTBOOKS**

**SUBJECT TITLE: PURCHASING AND PROCUREMENT MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge on purchase function of the organization, material planning, source selection and negotiation techniques.

**COURSE OUTCOME**

Understand the basic concepts of Purchasing & Supplier Relationship Management. To understand the purchasing integration for competitive advantage Learn the basics of strategic sourcing & it's the issues, challenges & strategies in developing a World Class Supply Base: Supplier Evaluation and Development Understand basics of strategic sourcing process & its application

**UNIT I** The role of Purchase in business, Objectives, Relationship of purchasing department with Other Departments, Profit Centre Concept, Partnership Sourcing, Network Sourcing, Benchmarking, Buying Decision Models, Purchasing Market Research, Role of Information Technology in Purchasing and the Portfolio of Purchasing Skills.

**UNIT II** Materials Planning, Materials Codification: Evolution of Codes, Classification, Methodology, Advantages. Standardization: Definition, Specification, Advantages, Techniques. Value Analysis: Concept, Organization for Value Analysis, Application, Techniques, Steps for Value Analysis.

**UNIT III** Supply Sources: Importance of Source Selection, Vendor Development & Maintenance, Vendor Rating, Competitive Bidding, Selecting the Source. Pricing Principles: Economic Consideration in Determining the Right Price, Price Analysis, Discounts. Cost Analysis: Elements of Affecting Costs, Sources of Cost Data, Direct & Indirect Costs, Target Costing.

**Employability**

**UNIT IV** Purchasing capital equipment – contract buying, retail buying, engineering and construction contracting, state and institutional purchasing, international buying, negotiations. Purchasing Environment: Changes in Environmental Conditions, Strategic Purchasing Management.

**UNIT V** Negotiation: Objectives, Process, Techniques, Price Negotiation Contract Management. Import Substitution Public Buying Traffic: Transportation Cost, Shipping Terms, Modes of Transportation, Loss and Damage of Freight, Demurrage, Transportation Strategy and Cost reduction.

**SUGGESTED READINGS:**

1. Dobler & Burt : Purchasing & Supply Management
2. P. Gopala Krishan: Purchasing & Materials Management
3. L.N. Aggarwal & Parag Diwan: Management & Production Systems
4. N.G. Nair: Production & Operations Management

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EE34		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MATERIAL MANAGEMENT**

**OBJECTIVE:**

The aims of the course are to make the students familiar, understand and realize the importance of effective materials management to an organization's survival and profitability. Also, they learn about the major activities of materials management and linkages between one another.

**COURSE OUTCOME**

Identifying the scope for integrating materials management function over the logistics and supply chain operations. Integrate the organization wide materials requirement to develop an overall plan (MRP). Identify, study, compare, and evaluate alternatives, select and relate with a good supplier. Apply various purchasing method and inventory controlling techniques into practice. Analyzing the materials in storage, handling, packaging, shipping distributing and standardizing.

**UNIT I: Material management: objectives, evolution, strategies, functions of material management, organization structures in material management, role of material management techniques in improved material productivity.**

**UNIT II: Material planning:**

objectives, material requirement planning, manufacturing resource planning, JIT production planning, strategic material planning, material control: acceptance, sampling, inspection, make or buy decisions, economic analysis, breakeven analysis, breakeven point theory, whether to add or drop a product line, product explosion.

**UNIT III: Purchasing:** importance of good purchasing system, organization of purchasing functions, purchase policy and procedures, responsibility and limitations, purchasing decisions, purchasing role in new product development, role of purchasing in cost reduction, negotiations and purchase, purchasing research: identification of right sources of supply, vendor rating, standardization, vendor certification plans, vendor and supply reliability, developing new sources of supply.

**EMPLOYABILITY**

**UNIT IV: Cost reduction:** cost control / cost reduction, price analysis, material cost reduction techniques, variety reduction, cost reduction and value improvement, techniques of cost control, standard costing, cost effectiveness, cost analysis for material management, material flow cost control.

**UNIT V: Inventory Management:** Stages; Selective Control; Demand Forecasting; Lead time; Safety Stock; Fixed Quantity Reorder System; Fixed Period Reorder System; Inventory Valuation. Warehousing and Transportation: Warehouse Location; Transportation; Receiving, Issuing and Store Keeping.

**SUGGESTED READINGS:**

1. Materials Management, Gopal Krishna & Sudarsan, TMH
2. Materials Management- Procedures, Texts & Cases, A. K. Dutta, Pearson
3. Handbook of Materials Management – Gopal Krishnan – PHI
4. Inventory Control and Management – Waters – Wiley
5. Procurement Principles & Mgt. – Bailey/Farmer/Crocker/Jessop – Pearson

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EE35		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: INVENTORY MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge on corporate business communication channel, hierarchy and their report writing methodologies.

**COURSE OUTCOME**

comprehend the dynamics of inventory management's principles, concepts, and techniques as they relate to the entire supply chain (customer demand, distribution, and product transformation processes), 2. understand the methods used by organizations to obtain the right quantities of stock or inventory, 3. familiarize themselves with inventory management practices.

**Unit I Inventory – Inventory Management - Inventory Control - Importance & Scope of Inventory Control - Types of Inventory - Costs Associated with Inventory – Organizational set up for inventory management.**

**Unit II Selective Inventory Control - Economic Order Quantity - Safety Stocks - Inventory Management Systems - Forecasting Techniques - Material Requirement Planning and execution – Ratio Analysis on Inventory - Profit Margin.**

**Unit III Manufacturing Planning (MRP-II) - Just in Time (JIT) - Work in Process Inventories - Make or Buy Decisions: Concept of outsourcing, Factors influencing Make Or Buy Decisions - Trends in Make Or Buy Decisions in context of core competency.**

**EMPLOYABILITY**

**Unit IV Purpose of Inventory - Goods – Types of Goods - Finished Goods Inventories - General Management of Inventory – Stocks – Types of Stocks – Tracking the Paper Life.**

**Unit V Spare Parts Inventories - Use of Computers in Inventory Management - Evaluation of Performance of Materials Function - Criteria and methodology of evaluation.**

**SUGGESTED READINGS:**

1. Inventory Management: By Bose & D Chandra, 1st edition.
2. Sridhara Bhat, Inventory Management, 2nd edition.
3. Zipkin, Foundations of Inventory Management, McGraw Hill 1st edition.
4. Seetharama L Narasimhan, Dennis W McLeavy, Peter J Billington, Production Planning and Inventory Control, Prentice Hall of India
5. J.R. Tony Arnold, Stephen N Chapman, Introduction to materials management, Prentice Hall of India 3rd edition.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EE36		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: SUPPLY CHAIN MANAGEMENT**

**OBJECTIVE:**

At the end of the subject, the students will be able to analyze an existing supply chain of a company, apply various supply chain management concepts, and improve the supply chain. And design an efficient supply chain in alignment with the strategic goals of the company.

**COURSE OUTCOME**

- Develop a sound understanding of the important role of supply chain management in today's business environment
- Become familiar with current supply chain management trends. Understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations
- Learn to use and apply computer-based supply chain optimization tools including the use of selected state of the art supply chain software suites currently used in business

**UNIT I** The concept of Supply Chain Management - The Supply Chain Revolution - Extended organization - Integrative Management – Responsiveness – Financial Sophistication – Globalization-Digital Business Transformation.

**UNIT II** Building Blocks of a Supply Chain Network – Performance Measures – Decisions in the Supply Chain World – Models for Supply Chain Decision-making – Economic Order Quantity Model – Reorder Point Model.

**UNIT III** Supply Chain Process - Supply Chain Planning – Supply Chain Facilities Layout – Capacity Planning – Inventory Optimization – Dynamic Routing and Scheduling.

**UNIT IV** E-procurement – E-Logistics – Internet Auctions – E-Markets - E-commerce advantages and disadvantages for SCM – EDI – Exchanges, hubs and marketplaces – ERP.

**UNIT V** Evolution of world class supply chains - Global Supply Chain Integration - Supply Chain Security - International Sourcing.

**Employability**

**SUGGESTED READINGS:**

1. Supply Chain Logistics Management - Bowersox, Closs & Cooper – McGraw-Hill, 2nd Indian ed.
2. World Class Supply Management - Burt, Dobbler, Starling, TMGH, 7th ed.
3. Designing and Managing the supply chain - David Simchi, Levi & Philip Kaminski, McGraw-Hill Companies Inc., 2000.
4. Y. Narahari and S. Biswas. Supply Chain Management: Models and Decision Making.
5. Ram Ganeshan and Terry P. Harrison. An Introduction to Supply Chain Management.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		17260EE37		3	0	0	3

**SUBJECT TITLE: LOGISTICS MANAGEMENT**

**OBJECTIVE:**

The course outlines the historical background of Logistics Management. It is intended to prepare students to acquire knowledge and skills that lead them to fill management and analysis positions that will enable them to focus on the processes and systems of Logistics Management.

**COURSE OUTCOME**

learn logistics trends

- Know the third, fourth and fifth party logistics.
- Explain the reverse logistics concept.
- Know the relationship between logistics and supply chain.
- Know the global logistic concept.

UNIT I Logistics – Objectives, Components, Significance - The Logistical Value Proposition - The Work Of Logistics - Logistical Operating Arrangements - Supply Chain Synchronization – Logistic fields - The Quality Imperative - Procurement – Manufacturing – Logistics Outsourcing – Logistics Automation.

UNIT II Inventory Functionality and Definitions - Inventory Carrying Cost - Planning Inventory - Managing Uncertainty - Inventory Management Policies - Inventory Management Practices.

UNIT III Strategic Warehousing - Warehousing Operations - Warehousing Ownership Arrangements - Warehouse Decisions.

**EMPLOYABILITY**

UNIT IV Transport Functionality, Principles and Participants - Transportation Service - Transportation Economic and Pricing - Transport Administration – Documentation.

UNIT V Packaging Perspectives - Packaging For Materials Handling Efficiency – Principles of Material Handling System - Materials Handling Equipments – Safety Issues.

**SUGGESTED READINGS:**

1. Harrison, A. and R van Hoek (2005). Logistics Management and Strategy (2nd Edition) Prentice Hall.
2. Muller, M. (2003), Essentials of inventory management, American Management Association, NY 10019

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		17260EE38		3	0	0	3

**SUBJECT TITLE: CUSTOM HOUSE PRACTICE AND LEGALITIES**

**OBJECTIVE:**

This subject deals with the business transaction with the Customs and Central Excise for successfully executing an Import or Export transaction. This deals with various rules and regulations and schemes adopted by the Indian Customs as per the directions of the Ministry of Finance and provides an opportunity for the student to get a job opportunity in a CUSTOM HOUSE AGENCY.

**COURSE OUTCOME**

Explain the concepts in custom clearance in international business with respect to foreign trade CO2. Apply the current custom clearance phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects CO3. Analyse the principle of international business and strategies adopted by firms to for exporting products globally CO4. Integrate concept in custom clearance concepts with functioning of global trade

**UNIT I:** Role of Customs - Powers of Customs - Custom House Agent - Custom house agents duties - Licensing of Custom House Agents - Restrictions of Custom House Agents - Customs Power to bring a ceiling on the License - Temporary and regular license - Customs Power to Advise fees chargeable by Custom House Agent.

**UNIT II:** Import Bill Processing - Important Papers for filing Bill of Entry - Apprising - Open Inspection - Payment of Duties - Out of Charge - Clearance of goods - payment of duties - Duty exemption - Bonding of Cargo - Ex-bonding.

**UNIT III:** Export Bills - Important papers for filing Shipping Bills - Factory Stuffing - Port or CFS Stuffing - Supervision by Customs - Sealing and print out - Custom officer overtime - Importance of Shipping Bill - Comparison of Shipping Bill with Mate's Receipt and Bills of Lading.

**EMPLOYABILITY**

**UNIT IV:** Duties and Obligations - Liabilities of Custom house agents - Custom house agent and Information Technology - ICE GATE and On line filing of Bills - Records to be maintained by Custom House Agents .

**UNIT V:** Custom House Licensing - Certification and Qualifications to become a Custom House Agent - Rule 8 -G Card - Identity to enter Custom Houses - Power of Customs to cancel the License of a CHA - Drawbacks and Duties - Support of CHA to Importers and Exporters.

**SUGGESTED READINGS:**

1. Hand Book of Procedure of Exim Policy 1997-2002.

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EE39		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: EXPORT TRADE AND DOCUMENTATION**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge on Export trade, types of trades, formalities for trade, legalities of export trade and the documentation process of it.

**COURSE OUTCOME**

Explain the concepts in trade documentation in international business with respect to foreign trade Apply the current business phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects Analyse the principle of international business and strategies adopted by firms to expand globally Integrate concept in international business concepts with functioning of global trade

**Unit I** Exporting Preliminary Consideration -Generation of Foreign enquiries, obtaining local quotation & offering to overseas buyers scrutinizing export order, opening L/C by buyers- Export Controls and Licenses –Patent, Trade Mark, Copy Right Registrations – Confidentiality and NDA.

**Unit II** Export Sales – Selling and Purchasing- Consignment- Leases – Marine and Air Causality Insurances - Export Finance - Forex - Major currencies, Exchange rates, relations & impact- Export costing and pricing & Incoterms – Export License – Import License.

**Unit III** Export Packaging- Preparation of fresh shipment documentation – Methods of Transportation – Country of Origin Marking- Inspection of Export consignment - Export by Post, Road, Air & Sea- Claiming for Export benefits and Duty drawbacks.

**Employability**

**Unit IV** Shipment & Shipping documents - Complicated problems in shipments & negotiation of shipping documentations - Corporate marketing strategies - 100% EOU & Free trade zone - Deemed Export – Isolated Sales Transactions.

**Unit V** Acts for export/import- Commencement- Customs Formalities- Export Documentation - Export of Services - Export of Excisable Goods - Import Documentation - Clearance - 100% export oriented units - customs house agents - import of different products - import/export incentives- import licenses etc.

**SUGGESTED READINGS:**

1. Export and Import Procedures and Documentations – Thomas E Johnson and Donna LBade–4th Edition.
2. Export Import Procedures- Documentation and Logistics, Publisher: New Age International, Shri C Rama Gopal, Chartered Accountant.
3. Export Import Management, Justin Paul & Rajiv Aserkar.
4. Export Management, PK Khurana

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>

**SUBJECT TITLE: QUALITY MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge and importance of quality concept, quality culture, quality control and organizations for quality. It also incorporates the managerial reasoning and analyzing in order to derive an appropriate course of action by focusing quality in products and services.

**COURSE OUTCOME**

To realize the importance of significance of quality Manage quality improvement teams Identify requirements of quality improvement programs

**UNIT I** Quality - Concepts, Role of Quality in Changing Business Conditions, Contributions of Deming, Juran, Philip Crosby, Kaizen and Continuous Improvement, Tradeoff between Quality Costs and Schedules, Quality Costs and its Analysis, Life Cycle Costs, Quality Problems and Causes.

**UNIT II** Pareto Analysis, Ishikawa Cause and Effect Diagnosis. Quality Control - Control of Quality, quality control techniques, Statistical Process Control, Control Charts, Acceptance Sampling.

**UNIT III** Strategic Quality Management, Quality Management in Marketing, Quality Management in Designing, Quality Management in Manufacturing, Quality Management in Suppliers, Quality Management System.

**EMPLOYABILITY**

**UNIT IV** Total Quality Management -

Concepts, Organization for Quality, Developing a Quality Culture. Quality Certification - Quality Assurance, ISO 9000 Series Concepts and Procedure - Six Sigma, Certification Requirements - Standards for Quality.

**UNIT V** Introduction to Benchmarking - Quality Function Deployment - Quality Circle - Quality Awards.

**SUGGESTED READINGS:**

1. Juran, J.M. & Gryna, P.M. Quality Planning & Analysis
2. James Evans and William M Lidsay, The Management and Control of Quality, Thomson Learning, 5<sup>th</sup> edition, 2002.
3. Narayana V and NSSreenivasan, Quality Management - Concepts and Tasks, New Age International, 1996.
4. Shailendra Nigam, Total Quality Management, Excel Books, New Delhi.
5. Feigenbaum. A. V. "Total Quality Management, McGraw-Hill, 1991

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EE43		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: AIR CARGO LOGISTICS MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge of air freight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales.

**COURSE OUTCOME**

Understand concept of freight forwarding and air cargo. 2. Understand the process involved in air cargo management. 3. Quote the rates for transfer to air cargo from origin to the destination.

**Unit I** Introduction to Airline Industry - History - Regulatory Bodies - Navigation systems – Air Transport System– Management –Operations – Civil Aviation - Safety and Security -Aircraft operator’s security program–ICAO security manual- Training and awareness–Rescue and firefighting-Industry regulations- Future of the Industry.

**Unit II** Introduction to Air Cargo: Aviation and airline terminology - IATA areas - Country – Currency–Airlines-Aircraft layout-different types of aircraft-aircraft manufacturers-ULD - International Air Routes-Airports-codes–Consortium–Hub&Spoke – Process Flow.

**Unit III** Standardization in Logistics - Air freight Exports and Imports - Sales & Marketing, Environment, Marketing Research, Strategies and Planning, Audits, Segmentation, SWOT, Marketing Management Control, Consignee controlled cargo – Sales leads – Routing Instructions - Customer service, Future trends..

**Unit IV** Advices – Booking - SLI – Labeling – Volume/ Weight Ratio – Shipment Planning - TACT – Air Cargo Rates and Charges - Cargo operations- Cargo Operations process- Customs clearance.

**Unit V** Air Freight Forwarding: Air freight Exports and Imports - Special Cargoes - Consolidation - Documentation - Air Way Bill (AWB) – Communication – Handling COD shipments – POD – Conditions of contract - Dangerous (DGR) or Hazardous goods.

**EMPLOYABILITY**

**SUGGESTED READINGS:**

1. Air transport logistics by Simon Taylor (Hampton)
2. Air cargo distributions: a management analysis of its economic and marketing benefits/[by] Paul Jackson and William Brackenridge (Gower Press)
3. Air freight: operations, marketing and economics/ (by) Peter S. Smith (Faber)
4. 4th Party Cyber Logistics for Air Cargo by Sung Chi-Chu (Boston: Kluwer Academic Publishers)
5. Accelerated Logistics by Mark Wang (Santa Monica CA)

**SUBJECT TITLE: SHIPPING AND OCEAN FREIGHT LOGISTICS MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge of ocean freight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales.

**COURSE OUTCOME**

Analyse issues in International sourcing and trade and take a strategic view of the global business environment impacting International supply chains Apply analytical techniques to arrive at cost effective solutions to meet SC requirements of efficiency and responsiveness. Decide optimal financing options for International trade Manage International Logistics & Supply chain partners and service providers Deploy knowledge of regional and international trading blocs in solving problems of International logistics

Unit I Shipping industry and business - description of a ship. Uses of a ship or a floating vessel. Classification of ship (route point) (cargo carried) - superstructure - tonnages & cubics - drafts & loadlines - flag registration - Different types of cargo. (packaging, utility or value). Trimming - Cleansing - Unitized cargo.

Unit II Stevedoring, Lighterage Services and Security - Port trusts - operational unit - services - Seaports - Vessel Operations - pilotage - Stevedoring - Dock Labour Boards - charges - Automated Container Handling - security at ports and harbors. Role of security agencies - lighterage services.

Unit III Shipping Lines - Hub & Spoke - Process flow - Advices - Booking - Containerization - Containers - Container numbering - Process flow - Shipping Sales - Leads - Quotations - Customer Service.

**EMPLOYABILITY**

Unit IV Operations - Volume / Weight calculations - Shipment Planning basics - Preparing & loading containers - Types of container services - FCL - Consolidation - LCL - Advanced Scientific shipment planning - Container de-stuffing.

Unit V Documentation - Bill of Lading basics - MBL - HBL - CY - CFS - Advanced learning in Bills of Lading - Sea Way bill - Combined transport - MTO - Multimodal Transport Document (MTD) - Invoicing - Release of cargo - Cross Trade & Documentation - Conditions of Contract - Managing Key Accounts - Trade Lane Development - Consortium.

**SUBJECT TITLE: INTERNATIONAL MARKETING**

**Objectives:** To understand the principles & concepts in Marketing, to provide the knowledge of marketing management in the international perspective to develop marketing strategies for the dynamic international markets.

**COURSE OUTCOME**

- Demonstrate interactive communications skills
- Demonstrate use of information technology
- Obtain an understanding of the globalization context for business
- Apply critical thinking skills to complex business problems
- Be able to use analytic skills in addressing business problems

**Unit 1:** International Marketing: Scope and Significance of International Marketing, the strategic importance of international marketing, Differences between international and domestic marketing. Need for international trade, trends in foreign trade. International market environment - Business Customs in International Market.

**Unit 2:** Canalising and targeting international market opportunities: regional market Characteristics, Marketing in transitional economies and third world countries, international market segmentation and targeting. International Market Entry Strategies: Indirect Exporting, Domestic Purchasing, Direct Exporting, Foreign Manufacturing Strategies Without Direct Investment, Foreign Manufacturing Strategies With Direct Investment. Entry Strategies of Indian Firms.

**Unit 3:** International product management: International product positioning, Product saturation Levels in global Market, International product lifecycle, Geographic Expansion Strategic Alternatives. New products in International Marketing, Product and culture, brands in International Market.

**Unit 4:** International Marketing Channels: channels Distribution Structures, Distribution Patterns, Factors effecting Choice of Channels, the Challenges in Managing An international Distribution Strategy Selecting Foreign Country Market intermediaries. The management of physical distribution of goods.

**Unit 5:** Pricing and Promotion for international Markets: Environmental influences on Pricing Decisions, Grey Market goods, Transfer pricing, Global Pricing Policy Alternatives. Global Advertising and branding, selecting an advertising agency. Personal selling, Sales Promotion, Public Relations and Publicity, Sponsorship Promotion. Export Policy Decisions of a firm, EXIM policy of India. Export costing and pricing, Export procedures and export documentation. Export assistance and incentives in India.

**SUBJECT TITLE: INTERNATIONAL HUMAN RESOURCE MANAGEMENT**

**Objectives:** To provide insight from International Human Resource Management (IHRM) to give an overview and the practical implications of operating across national borders in the pursuit of core strategic competences, the management of global organizational values and culture, and the competition for talent

**COURSE OUTCOME**

Human Resource Management (HRM) is to give students the knowledge, understanding and key skills that are required by today's HR professionals and to enable students to effectively contribute to dynamic organisations.

**Unit-1: Introduction and Overview-Global Market Context-**

Key Perspective in Global Workforce Management-  
 Cultural Foundations of International Human Resource Management- Understanding culture-  
 Major models of National Culture- final Caveat on Culture and Global Workforce Management-  
 Changes and challenges in the Global Labor Market- Globalization- Technological Advancement-  
 change in labour force Demographics and Migration- Emerging on the contingent workforce- Offshore  
 sourcing- global workforce Management challenges.

**Unit-2: The key role on International HRM in Successful MNC Strategy- Knowledge Transfer-  
 Global Leadership training and Development- Strategic Control Needs- Competitive strategy of  
 Multinational corporations- Structuring for Optimal global Performances-**

Linking Human Resource management practices to Competitive Strategy and Organization Structure-  
 Paradigm Shift of international Human Resource Management form contingency model to  
 Process Development.

**Unit-3: Global Human Resource Planning From strategy to Decision about work Demand and  
 labour supply External Environment Scanning- Job Design for Meeting global Strategy work demand  
 HR planning for the Long term- Global Staffing: General Actors Affecting Global Staffing- Global Recruitment  
 of Human Resources- Global selection of Human Resources.**

**SKILL DEVELOPMENT**

**Unit-4: Global workforce Training and Development :** Strategic role of Training and Development in  
 the global Market Place- Fundamental concepts and principles for Guiding global Training and Development-  
 Training imperative for the global workforce- Managing International Assignments- Expatriate Preparation,  
 Foreign Assignment and Repatriation- International Assignments considerations for Special Expatriates-  
 New and Flexible International Assignments.

**Unit-5: Global workforce performance Management: Performing Management Process-**  
 Important consideration for Global Performance Management- Planning and Implementing Global  
 Performance Appraisal- Compensation for a Global workforce-  
 Managing Compensation on a global Scale: Fundamental Practices-  
 Key compensation for Expatriates, HCNs and TNCs Global Employee Relations- current ER issues- Influence  
 of MNCs and Union on Global ER.

Objective: The course provides the analytical framework for understanding the logistic models and supply chain techniques in an international perspective.

**COURSE OUTCOME**

Analyse issues in International sourcing and trade and take a strategic view of the global business environment impacting International supply chains. Apply analytical techniques to arrive at cost effective solutions to meet SC requirements of efficiency and responsiveness. Decide optimal financing options for International trade Manage International Logistics & Supply chain partners and service providers Deploy knowledge of regional and international trading blocs in solving problems of International logistics

**UNIT I Logistics Management: Concepts – Importance – Elements of the logistic System – Marketing and logistic mix – Logistics and marketing interface – Value-chain and production efficiency.**

**UNIT II Shipping Industry: Types of ships – Shipping systems: linear, Tramp, conference, chartering, Baltic freight exchange – Shipping intermediaries: agent, forwarder, brokers and others – containerization – types of containers – ICDs – CFS – CONCOR.**

**UNIT III Air Transport: Air transport – Air freight – IATA – Cargo handling – Designing the International Information system – system modules – Distribution and Transportation.**

**SKILL DEVELOPMENT**

**UNIT IV Supply chain: Definition – scope and importance of supply chain – supply chain drivers and metrics - efficient and responsive supply chain - Designing supply chain network: Distribution network – Factor influencing distribution - Transportation decision in supply chain management**

**UNIT V Forecasting and planning in supply chain management – Pricing in supply chain management - Role of IT in supply chain management - co-ordination in supply chain management.**

**Text Books**

1. Chopra and Meindl “Supply chain management: Strategy, planning and operations”

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260EF39			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: INTERNATIONAL TRADE PROCEDURES AND DOCUMENTATION**

**Objectives:** It gives an understanding on the India's trade Position in the World and the Various trade procedures involved in an international business. It gives an insight to the various documents required for trading.

**COURSE OUTCOME**

Explain the concepts in trade documentation in international business with respect to foreign trade Apply the current business phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects Analyse the principle of international business and strategies adopted by firms to expand globally Integrate concept in international business concepts with functioning of global trade

**UNIT I International Trade: Need and importance of International Trade – Recent Trends in World Trade – Leading players – India's Foreign Trade – Commodity composition and Destination – India's position in World merchandise trade and services – India's Foreign Trade Policy.**

**UNIT II Export Procedure: Starting an export firm – Selection of an export product – Market selection – Buyer selection – Registration procedure with Sales Tax, Central Excise and various Boards and councils – Exim code number – Elements of export contract – Incoterms – Terms of payment and Letter of Credit.**

**UNIT III Export Documentation: Types of documents – Transport, Negotiation and Insured documents.**

**Skill development**

**UNIT IV Export Finance: Sources of Finance - Role of commercial bank, EXIM Bank, ECGC and others – Export promotion Schemes – Insurance for Export – Types – export credit insurance – Risk Management – Types of risks – mitigation methods.**

**UNIT V Import Procedure and Documentation: Global sourcing – Types of global procurement – Tender – Negotiation – Contract and others – Customs regulations and import clearance formalities – Types of import licenses – Export Promotion Capital Goods Scheme (EPCG) license – Duty exemption scheme – Duty Entitlement Pass Book Scheme (DEPBS) – Import formalities for 100% EOUs and SEZs – Import Risk Management. .**

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260EF40			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: INTERNATIONAL STRATEGIC MANAGEMENT**

**Objectives:** The objective of the course is to familiarize the participants with the concepts, tools and techniques of international strategic management so as to enable them develop analytical and conceptual skills and the ability to look at the totality of situations.

**COURSE OUTCOME**

Understand the basic concepts and principles of strategic management analyse the internal and external environment of business • Develop and prepare organizational strategies that will be effective for the current business environment • Devise strategic approaches to managing a business successfully in a global context

**UNIT I** Concept, Characteristics and Dimensions of Strategic Management – Emergence of International Strategic Management (ISM) – Logic and process of Internationalization – Forces necessitating the adoption of ISM concept by MNC’s as well as Indian Companies – Corporate global strategy

**UNIT II** Nature, components and significance of environmental scanning – Corporate capability analysis – Diagnosing industry globalization potential – Building global market participation – Competition in global industries

**UNIT III** Core competencies – Significance of core competence concept in strategy making – Value Chain Analysis – Significance of value chain analysis in strategy making – Balanced Scorecard to link today’s action with tomorrow’s goals

**SKILL DEVELOPMENT**

**UNIT IV** Setting corporate objectives in MNC’s – External and internal forces interacting with corporate objectives – Identifying strategic alternatives – Stability strategy – Growth and diversification strategy – Merger, acquisitions and retrenchment

**UNIT V** Choice of corporate strategy: CIT, CASCADE and PORTFOLIO MODELS – Formulating generic competitive strategy – Implementing corporate strategy – Strategic control and operational control

**Text Books**

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EF39		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: GLOBAL BUSINESS ETHICS & CORPORATE GOVERNANCE**

**Objectives:** The course is to sensitize the student to issues pertaining to sustainable development and business ethics and enable development and business ethics and enable them to understand the implications of various statutory and policy guidelines concerning corporate governance for actual business decision making.

**COURSE OUTCOME**

Comprehend the relationship between ethics, morals and values in the workplace.  
Analyze and understand various ethical philosophies to explain how they contribute to current management practices. Critically apply understanding of ethics of real-world contexts and gather and analyse information by way of undertaking a research project on a topic relevant to business ethics.

**UNIT I** Business Ethics – trans-cultural Human Values in Management Education – Relevance of Values in Management – Need for values in Global Change – Indian Perspective – Values for Global managers

**UNIT II** Ethical Dilemma – Ethical decision making – Ethical Reasoning – Benefits of managing ethics in work place – Organization Ethics Development System - Organizational Culture – Ethics Tools – Code of ethics – Guidelines for developing code of ethics – Value based leadership

**UNIT III** Work ethics – work culture – Ethical theories – Ethical Values – Environmental ethics - Environmental Management - Environmental Management System - Environmental Laws - Consumer Protection

**SKILL DEVELOPMENT**

**UNIT IV** Corporate Governance – Meaning – Code of Corporate Governance – Audit Committee – Corporate Excellence – Role of Independent Directors – protection of Stakeholders – Corporate Social Responsibility – Changing Role of Corporate Boards with changing times – Corporate Governance for Market capitalism

**UNIT V** Indian Ethos in Management – Principles – Approaches – Role of Gita – Karma Yoga – Wisdom Management – Quality of Work Life – Strategies for Work Life Balance

**Text Books**

## **SUBJECT TITLE: MERGERS AND ACQUISITIONS**

**Objectives:** The course is to sensitize the students to issues pertaining to sustainable development and business ethics and enable development and business ethics and enable them to understand the implications of various statutory and policy guidelines concerning corporate governance for actual business decision making.

### **COURSE OUTCOME**

Understanding of different types of mergers and acquisitions and the process involved in executing their deals. Develop an ability to understand factors influencing the valuation of a business and different methods used in Business Valuation.

Basic understanding about regulatory environment of mergers and acquisitions in India.

**Unit-I: Introduction to Mergers and Acquisitions:** Participants in Mergers and Acquisitions Common Motivations and Impact of Mergers and Acquisitions Challenges towards successful Mergers and Acquisitions. Takeover Tactics: Alternative Takeover Tactics Alternative Takeover decision Prebid and Postbid.

**Unit II: Regulatory Issues in Mergers:** Federal Security Laws Insider Trading Laws Antitrust laws State Regulations effecting Mergers and Acquisitions Regulated industries Environmental Laws Labour and Benefit Law.

**Unit III: Developing Business and Acquisition Plans:** Planning Based Approach for Mergers and Acquisitions Building Business Plan Building Mergers and Acquisitions plan The Search and Screening Process Negotiations Implementing Post Closing Evaluation .

### **EMPLOYABILITY**

**Unit IV: Integration: Mergers, Acquisitions and Business Alliances:** The Role of Integration in successful mergers and Acquisitions Integration as a process Integrating Business Alliances.

**Unit V: Shared Growth and Shared Control Strategies:** Motivations for Business Alliances Critical Success Factors for Business Alliances Strategic and Operational Plans Strategic and Operational Plans Business Alliances Deal Structuring. **Alternative Exit and Restructuring Strategies** - Motivators for Exiting Businesses Divestitures Spin offs and Split ups - **Equity Carveouts** Voluntary Liquidations.

**SUBJECTTITLE:INTERNATIONALFINANCIALMANAGEMENT**

**OBJECTIVE:**To give the students an overall view of the international financial system – instruments and markets.

**COURSE OUTCOME**

Apply appropriate formats and technologies to financial communication. Analyse, apply and evaluate information within the global financial environment of foreign exchange to solve problems and make informed decisions.

**UnitI**

International Financial Management: An overview, Importance, nature and scope, International Business Methods, Recent changes and challenges in IFM- History of Global Monetary Systems- Evolution and practices in Foreign Exchange Markets- International Financial Institutions

**UnitII**

Fundamentals of Foreign Exchange – Parity theory and conditions – Factors affecting determination of Exchange rate – Various exchange rate types.

**UnitIII**

Exposure and Risk Management - hedging – speculation – arbitrage - internal and external techniques of hedging – derivatives – meaning – significance – types.

**EMPLOYABILITY**

**UnitIV**

Regulatory Framework for International Finance - Short term financial management in a global set-up – treasury functions – International Taxation – Double Taxation Avoidance Agreement

**UnitV**

Global capital Markets: Issues, investors, intermediaries. Disintermediation, Deregulation, Securitization, Globalization. Various methods of raising resources by borrowers in International markets. Types of Bonds, Floating Rate Notes (FRNs), Deep Discount Bonds, Zero Coupon Bonds, Dual Currency Bonds, Equity related Bonds. Procedure for Bonds Issues.

**SUBJECT TITLE: SOFTWARE ENGINEERING**

**OBJECTIVE:**

This course aims to understand the software engineering and apply the knowledge of a disciplined approach to the development of software and to the management of the Software product lifecycle.

**COURSE OUTCOME**

- How to apply the software engineering lifecycle by demonstrating competence in communication, planning, analysis, design, construction, and deployment
- An ability to work in one or more significant application domains
- Work as an individual and as part of a multidisciplinary team to develop and deliver quality software

**Unit-I OVERVIEW OF SOFTWARE ENGINEERING**

Software engineering as a discipline, Software processes, Software projects, Requirements engineering processes, System models, Software prototyping, and Formal specification.

**Unit-II SOFTWARE DEVELOPMENT MODELS**

Software Life Cycle, Waterfall model, Spiral model, Incremental Development, Evolutionary Development, Re-use oriented Development.

**Unit-III SOFTWARE DESIGN**

Architectural design, Distributed Systems architecture, OO design, Real-time software design, Design with reuse, User Interface design. Software Metrics: software process and project metrics, technical metrics for software.

**EMPLOYABILITY**

**Unit-IV SOFTWARE QUALITY**

Verification and Validation, Software testing, Critical systems validation, CMM and PCMM concepts.

**Unit-V SOFTWARE MANAGEMENT**

Managing people, Software cost construction, Quality Management, Process empowerment. Legacy Systems, Software change, Software re-engineering, Configuration Management.

**SUGGESTED READINGS:**

1. Roger S. Pressman: Software Engineering – A Practitioner’s Approach – Tata McGraw Hill – 4th Edition.
2. Sommerville, Ian: Software Engineering, Addison Wesley.
3. S.A. Kelkar, Software Project Management, PHI
4. Carlo Ghezzi, Mehdi Jazayeri, Dino Mandrioli – Fundamentals of Software Engineering – PHI.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260EG34			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECTTITLE:SOFTWAREPROJECTMANAGEMENT**

**OBJECTIVE:**

This course gives an overview of software project management and the project planning. It also covers the Step Wise framework in project planning. It also imparts knowledge to the student on how to evaluate and assess the projects and to find the cost of the project using cost benefit evaluation techniques.

**COURSE OUTCOME**

Identify the different project contexts and suggest an appropriate management strategy. Practice the role of professional ethics in successful software development. Identify and describe the key phases of project management. Determine an appropriate project management approach through an evaluation of the business context and scope of the project.

**Unit I SYSTEM ANALYSIS & DESIGN**

Overview of system analysis & Design : Introduction to different methodologies & Structured system analysis – Details of SDLC approach – E.R. diagrams – DFD concepts – Data dictionary concepts. Structure charts – modular programming – I/O & file design consideration.

**Unit II SYSTEM IMPLEMENTATION**

System implementation & maintenance: Implementation Strategies – SW / HW selection & procurement – Control & security – issues of designing & implementing on-line systems – data communication requirements – selection issues

**Unit III PROJECT DEVELOPMENT & DATABASE DESIGN**

Introduction to Database technologies & CASE tools with specific packages – overview of relational model – Database creation – SQL command – Normalization – designing forms & reports – using CASE tools for system analysis & design – case studies – Cost / benefit analysis – project & resource planning – design & development testing & documentation.

**EMPLOYABILITY**

**Unit IV SOFTWARE PROJECT MANAGEMENT**

Software project management: challenges & opportunities – changing technologies & approaches – choice development of methodologies & technical platforms, project management techniques – monitoring & measurement of progress.

**Unit V SOFTWARE PROJECT MANAGEMENT**

Software project management – elements, cost estimation, manpower planning, Software & Product Metrics – Quality assurance & control – standards & documentation – testing – implementation – training – technology management – quality standards – certificate – handling multiple projects, issues of shared development.

**SUGGESTED READINGS:**

1. Software Engineering Principles and Practice by Waman S. Jawadekar Tata Mcgraw Hill Co. – Chennai.
2. Walker Royce, 'Software Project Management' - A Unified Framework, Pearson Education Asia, New Delhi 2000.
3. Software Project Management by S.A. Kelkar, PHI Learning India PVT Ltd.,
4. Software Project Management (2 volumes set) by Prof. S.N. Singh and S.L. Gupta – Global India Publications PVT Ltd., New Delhi.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EG35		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: RELATIONAL DATABASE MANAGEMENT SYSTEMS**

**OBJECTIVE:**

This course helps the students to understand the roles and technology of databases for the Internet and Worldwide Web. This also helps to understand the roles of database Administration in the enterprise and be able to perform common database administration functions.

**COURSE OUTCOME**

Understand the basic concepts and the applications of database systems. Master the basics of SQL and construct queries using SQL. Understand the relational database design principles.

**UNIT-I Introduction**

Basic concepts of Database – purpose of database - characteristics of database; roles of database manager, database administrator and database users. Database systems, concepts and architecture. Distributed databases - structure and design.

**UNIT-II Data Models**

Data models, schema and instances. E-R models – E-R diagram. Hierarchical model, relational model, object oriented model, object relational model – comparison of models.

**UNIT-III Database system and query languages**

Relational model, Languages and system, structure of relational database, modifying the database. Relational commercial language – SQL. Relational database management system ORACLE/DB2.

**UNIT-IV Relational Database design**

Normalization process – First, second, Third, Fourth normal forms. Mapping relational data to files, data dictionary storage.

**UNIT-V Database Security**

Database integrity, security, concurrency, recovery, client/server architecture.

**EMPLOYABILITY**

**SUGGESTED READINGS:**

1. Leon.A, Database Management Systems, 'BPB publications', Delhi, 1997.
2. Date.C.J., An introduction to Database Systems, 7<sup>th</sup> edition, Pearson Education Asia.
3. Naveen Prakash, Introduction to Database Management, TMH, 1993.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260EG36			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: E-BUSINESS TECHNOLOGY AND MANAGEMENT**

**OBJECTIVE:**

This course will help the student to recognize and understand ways of using digital technologies to improve intra and inter-organizational processes; and to analyze the impact that electronic commerce is having and will likely have on key sectors of the economy and assess the strategic implications this analysis holds for an organization.

**COURSE OUTCOME**

- understand the issues around defining ‘technology’, ‘innovation’ and ‘innovation management’
- recognise the diversity of types of innovation, innovators and innovation settings
- understand the nature and extent of technological change and innovation
- critically assess and explain key current issues in our understanding of innovation as a field of study.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE	17260EG37			3	0	0	3
<p><b>UNIT-I</b>  Introduction to E-Business: Overview of E-Business; Information Services; Interpersonal Communication; Shopping Services; Virtual Enterprises. E-Commerce: Origin and Need of E-Commerce; Factors affecting E-Commerce; Business dimension and technological dimension of E-Commerce; Internet as an E-Commerce enabler handling business transactions.</p> <p><b>UNIT-II</b>  E-commerce business models. **SUBJECT TITLE: DATA WAREHOUSING AND DATA MINING**

**OBJECTIVE:**

This course helps the students to understand the overall architecture of a data warehouse and Techniques and methods for data gathering and data pre-processing tools. The different data mining models and techniques will be discussed in this course. Data Mining and data warehousing applications will also be explored.

**COURSE OUTCOME**

Analyzing Dimensionality. Reduction. Feature Subset Selection. Understanding. Discretization and. Analyzing Similarity – Basics and Dissimilarity. Understanding. Association Rules. Understanding APRIORI. principal, support and.

**UNIT-I**

Data – Types of Data - Data warehousing concepts – difference between operational system and data warehouse system- Applications of data warehouse – Benefits of data warehousing systems- Metadata.

**UNIT-II**

Data warehousing methodology - Data warehousing process - Data warehouse architecture - Designing data warehouse.

**UNIT-III**

Data mining concepts – Integration of a Data Mining System with a Data Warehouse - Benefits of data mining systems- Data Mining Functionalities- Interestingness of patterns- Classification of Data Mining Systems.

**EMPLOYABILITY**

**UNIT-IV**

Data mining process - Data mining techniques – Data mining tools - Data mining applications - Issues in data mining.

**UNIT-V**

Web Data Mining- Association Rule Mining

**SUGGESTED READINGS:**

1. G.K. Gupta, Introduction to Data Mining with Case Studies, Easter Economy Edition, Prentice Hall India, 2006.
2. McLaren & McLaren: Data Warehousing and Data Mining, Tata McGraw-Hill, New Delhi, 2003.

4. Jiawei Han and Micheline Kamber, "Data Mining Concepts and Techniques", Second Edition, Elsevier, 2007.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260EG39			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: KNOWLEDGE MANAGEMENT**

**OBJECTIVE:**

The goal of the course is to prepare students to become familiar with the current theories, practices, tools and techniques in knowledge management (KM), and to assist students in pursuing a career in the information sector for profit and not for profit organizations. In addition, students will learn to determine the infrastructure requirements to manage the intellectual capital in organizations.

**COURSE OUTCOME**

Use a framework and a clear language for knowledge management concepts; • Describe how valuable individual, group and organizational knowledge is managed throughout the knowledge management cycle; • Define the different knowledge types and explain how they are addressed by knowledge management; • Describe the major roles and responsibilities in knowledge management implementations;

**Unit-I: The Knowledge Economy:** Data – Information - Knowledge, Attributes of Knowledge as an Economic Resource – Knowledge Capital Vs Physical Capital - Types of Knowledge - Scope of Knowledge Management - Building Knowledge Societies.

**Unit-**

**II: Knowledge Management and Information Technology:** Role of Information Technology in Knowledge Management Systems, Knowledge Management Tools and Knowledge Portals – Knowledge Organization & Managing Knowledge Workers

**Unit-III: The Knowledge Process:** Knowledge Management Systems Life Cycle - Stages of KM Process, Knowledge Creation & Knowledge Architecture – Knowledge Capturing Techniques – Knowledge Codification – Transferring and Sharing Knowledge.

**Unit-IV: Implementation of Knowledge Management:** Business Intelligence and Internet Platforms, KM & the Indian experience, Net Banking in India – Role of Knowledge Management in Organizational Restructuring – The Mystique of a Learning Organization - Management of Intellectual Property.

**Unit-V: Future of Knowledge Management and Industry Perspective:** Knowledge Management in Manufacturing and service industry, Challenges and Future of Knowledge Management - Measures for meeting the Challenges of KM - Business Ethics and KM.

**EMPLOYABILITY**

**SUGGESTED READINGS:**

- Mattison: Web Warehousing & Knowledge Management, Tata McGraw-Hill, 2009
- Becerra Fernandez: Knowledge Management: An Evolutionary View, PHI, 2009
- Fernando: Knowledge Management, Pearson, 2009
- B. Rathana Reddy: Knowledge Management, Himalaya, 2009
- Madan Mohan Rao, Leading with Knowledge, Tata McGraw Hill, 2011.

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EG39		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: ENTERPRISE RESOURCE PLANNING**

**OBJECTIVE:**

To understand about ERP systems, ERP software and modules, Implementation of ERP, and Emerging trends on ERP.

**OUTCOMES**

1. Make basic use of Enterprise software, and its role in integrating business functions
2. Analyze the strategic options for ERP identification and adoption.
3. Design the ERP implementation strategies.
4. Create reengineered business processes for successful ERP implementation

**UNIT-I: Introduction**

Overview of Enterprise Systems – Evolution – Risks and Benefits – Fundamental Technology – Issues to be consider in Planning Design and Implementation of Cross Functional Integrated ERP Systems.

**UNIT-II: ERP Solutions and Functional Modules**

Overview of ERP Softwares – SAP – Baan – IFS – Oracle – People Soft – Comparison of ERP software, Overview of ERP Modules – Sales and Marketing, Accounting and Finance, Materials and Production Management. Business Process Reengineering concepts.

**UNIT-III: ERP Implementation**

Planning Evaluation and selection of ERP Systems – Implementation Life Cycle – ERP Implementation, Methodology and Frame Work – Training – Data Migration. People Organization in Implementation – Consultants, Vendors and Employees.

**EMPLOYABILITY**

**UNIT-IV: Post Implementation**

Maintenance of ERP – Organizational and Industrial Impact; Success and Failure factors of and ERP Implementation. Measuring ERP Benefits – Balanced Score Card Method – ABCD Checklist.

**UNIT-V: Emerging Trends on ERP**

Extended ERP Systems – CRM, SCM, Business Analytics – Future Trends in ERP Systems – Web Enabled, Wireless Technologies.

6. K. Balasubramaniyan, S. Ushapriya & K. Hema, Enterprise Resource Planning : Emerging concepts & cases

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EG42		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: INFORMATION STORAGE AND MANAGEMENT**

**OBJECTIVE:**

This course helps to learn and understand the storage management, virtualization technologies, infrastructure and storage security.

**OUTCOMES**

- CO1: Design business continuity plan.
- CO2: Select a local replication technology to provide data backup.
- CO3: Distinguish different remote replication technologies.
- CO4: Discuss security issues and mitigate them.
- CO5: Select appropriate storage management software.

**Unit I**

Review data creation and the amount of data being created and understand the value of data to a business, challenges in data storage and data management, Solutions available for data storage, Core elements of a data center infrastructure, role of each element in supporting business activities Intelligent Storage system – Introduction to Flash Drives.

**Unit II**

Hardware and software components of the host environment, Physical and logical components of a connectivity environment, Major physical components of a disk drive and their function, logical constructs of a physical disk, access characteristics - Concept of RAID and its components - Storage Area Networks – Attached Storage: Benefits, components – NAS Protocol & Implementation – File level Virtualization – Object based and Unified Storage: Devices and components.

**Unit III**

List reasons for planned/unplanned outages and the impact of downtime, Impact of downtime. Differentiate between business continuity (BC) and disaster recovery (DR) - Backup and Recovery – Local Replication: Technologies – Backup in NAS environments – Data duplication – Remote replication.

**EMPLOYABILITY**

**Unit V**

Information security, Critical security attributes for information systems, Storage security domains, List and analyzes the common threats in each domain, Virtualization technologies – Security implementations in Storage Networking.

**Unit V**

Managing Storage infrastructure - Storage infrastructure Management Activities & Challenges – Ideal solutions for Storage Infrastructure management – Storage tiering.

**SUGGESTED READINGS:**

1. G.Somasundaram, Alok Shrivastava, "Information Storage and Management", EMCEducation Services, Wiley Publishing, Inc, Edition 2010.
2. Robert Spalding, "Storage Networks: The Complete Reference", Tata McGraw Hill, Osborne, 2003.
3. Marc Farley, "Building Storage Networks", Tata McGraw Hill, Osborne, 2001.
4. Meeta Gupta, Storage Area Network Fundamentals, Pearson Education Limited, 2002.

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EG42		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: CLOUD COMPUTING**

**COURSE OBJECTIVE:** To understand basics of cloud computing for business management

**OUTCOMES**

- Explain the core concepts of the cloud computing paradigm: how and why this paradigm shift came about, the characteristics, advantages and challenges brought about by the various models and services in cloud computing.
- Apply the fundamental concepts in datacenters to understand the tradeoffs in power, efficiency and cost.
- Identify resource management fundamentals, i.e. resource abstraction, sharing and sandboxing and outline their role in managing infrastructure in cloud computing.
- Analyze various cloud programming models and apply them to solve problems on the cloud.

**UNIT I INTRODUCTION** Introduction to Cloud Computing, Evolution - Cloud Computing, Hardware, Internet and Software, Virtualization, Web Services on Cloud, Infrastructure-as-a-Service, Platform-as-a-Service, Software-as-a-Service, Building Cloud Network.

**UNIT II IMPLEMENTATION AND CONTROL** Privacy and its relation to Cloud-based Information Systems, Security in the Cloud, Common Standards in the Cloud, End-User Access to the Cloud Computing, legal and ethical dimensions.

**UNIT III CLOUD COMPUTING FOR MANAGERS** Centralizing Email Communications – Collaborating on Schedules, To-Do Lists, Contact Lists – online Community development – online collaboration tools for projects – Cloud Computing for business.

**UNIT IV APPLICATIONS OF CLOUD SERVICES** Applications – Online Planning and Task Management – Event Management – CRM – Cloud service development tools – word processing, databases, storing and file sharing on cloud.

**UNIT V VIRTUAL OFFICE MANAGEMENT** Web-based communication tools – Web Mail Services – Web Conference Tools – Social Networks and Groupware – collaborating via blogs and Wikis; IBM, Amazon Ec2, Google Apps for Business, Salesforce.com, Ramco-On-Demand

**SKILL DEVELOPMENT**

<b>COURSECODE</b>		17260EG42		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: DECISION SUPPORT SYSTEM AND INTELLIGENT SYSTEMS**

**OBJECTIVE:** To understand the components of DSS and IS. To know the appropriate model to be used for a problem

**OUTCOMES**

- Apply techniques of IDSS (e.g. artificial neural networks, machine learning, rule-based systems, etc.) and validate IDSS techniques to solve a complex industrial problem
- Identify decision factors, models, and analysis of intelligent decision support systems (IDSS) to support a smart production system.
- Appraise the frameworks of IDSS.
- Design a knowledge-based system for a smart production system.

**UNIT I INTRODUCTION** Management Support systems, Decision making, Models, DSS Overview, Data, Model, Knowledge Management system.

**UNIT II DATA AND MODEL MANAGEMENT SYSTEMS** Data Collection, Data Warehousing, Data Mining, Data visualization, Modeling, Static and dynamic, Optimization, Heuristic, Simulation, Multidimensional modeling.

**UNIT III GSS, ENTERPRISE DSS, KMS** Group support system, Technologies, Enterprise DSS, Knowledge management methods, Technologies, Tools.

**SKILL DEVELOPMENT**

**UNIT IV KNOWLEDGE BASED DSS** Artificial Intelligence, Expert System, Knowledge Acquisition and validation, Knowledge representation, Inference techniques.

**UNIT V ADVANCED INTELLIGENT SYSTEMS** Neural Computing, Fuzzy Logic, Intelligent Agents, Implementation, Integration, Intelligent DSS.

# **HOSPITAL MANAGEMENT**

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EH33		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MANAGEMENT OF HOSPITAL SERVICES**

**OBJECTIVE:**

To enable the students gain insights into various aspects like importance, functions, policies and procedures, equipping, controlling, co-ordination, communication, staffing, reporting and documentation of both clinical and nonclinical services in a hospital.

**OUTCOMES**

**CO1:** Describe the health systems of various Countries including India

**CO2:** Discuss and learn public health care system in India

**CO3:** Develop, implement and manage various public health programs

**CO4:** Critically analyze the various components of health care delivery system in India

**Unit- I Overview:** Hospital operations management, role and decisions, Difference of hospital operations from other service and manufacturing organizations.

**Unit – II Out Patient Services:** Overview of the department, day care, accident and emergency services, physical medicine and rehabilitation, occupational therapy unit, physiotherapy department. **In Patient Services:** Ward design (general & specialized), critical care services – ICU, CCU, NICU, , medical services, surgical services – operation theater, nuclear medicine, burn unit, nursing services and administration.

**Unit – III Speciality Services:** Pediatrics, OBG & GYN, ENT, Ophthalmology, Orthopedic, Psychiatry, Anesthesia, Dental. **Super-speciality Services:** Cardiology, Thoracic Surgery, Neurology, Neurosurgery, Nephrology- Dialysis Unit, Transplantation Services

**SKILL DEVELOPMENT**

**Unit–IV**

**Hospital Acquired Infection:** Source and Control, Modern trends in Hospital Administration, Disaster Management, Information Systems, Telemedicine.

**Unit–**

**V Disaster Management Services:** Basics of disaster management and Mass casualties Component of disaster plan: pre-hospital and hospital, Disaster alertness in Hospital Disaster management planning and implementation, Severity of illness among disaster victims and risk assess - **Disaster preparedness-** Policies & procedures for general safety, fire safety procedure for evacuation, disaster plan and crisis management.

<b>COURSECODE</b>		17260EH35		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: OPERATIONS MANAGEMENT IN HEALTH CARE**

**OBJECTIVE:**

Gives understanding about various operations related to hospital administrations such as purchase procedures of healthcare equipments and materials, store maintenance, quality management and conduction of healthcare events

**OUT COMES**

- Explore the challenges and opportunities for improving healthcare operations;
- Develop an understanding of the systems of care and how they translate into operational strategies and activities;
- Understand the relationship between business strategy and operations (or the lack thereof);
- Explore methods and tools for problem solving and decision making in healthcare operations;

**Unit I HOSPITAL PURCHASE MANAGEMENT:** Objectives and Elements of Purchasing- Purchasing System- Purchase Cycle- Purchase methods and Procedures; Planning and Selection of Equipment- Purchase, Inspection and Installation; Import of Equipment

**Unit II HOSPITAL STORES MANAGEMENT:** Planning Consideration of Stores- Inspection and Verification of Materials- Storage of Materials- Codification and Standardization- Value Analysis- Inventory Control- Economic Order Quantity (EOQ), Distribution of Materials- Condemnation and Disposal; Hospital Wastes Management

**Unit III HOSPITAL MATERIALS AND MAINTENANCE MANAGEMENT:** Functions of Materials Manager- Information Systems for Materials Management; Policy and Procedures- Equipments Types and Characteristics; Records, Responsibilities- Level of Maintenance; Equipment Utilization and Operation- Equipment Repair and Maintenance- Equipment Audit

**SKILL DEVELOPMENT**

**Unit IV QUALITY ASSURANCE IN HOSPITALS:** Patient safety and satisfaction, Patient feedback system, Job Description of Quality Manager- Quality Steering Committee- Quality Council, Quality Audit; Quality Teams: Task Force, Quality Circle- ISO Certification; BSMARK, Accreditation: JCI, Quality Awards Scheme - MBNQA; NABH, Six sigma in hospitals; Obstacles to Practice Quality in Hospitals

**Unit V**

**HEALTH PROGRAM / EVENT MANAGEMENT:** Healthcare programs, campaigns and camps; Program need analysis, Planning/Preproject phase (CPM & PERT Analysis), Execution phase – Manpower and quality service delivery requirements, Post project impact analysis

**SUGGESTED READINGS:**

1. Donna Deepro, Project Management, Capstone Publishing, Oxford, 2007
2. H. Kerzner, Project Management: A System Approach to Planning, Scheduling and Controlling, Wiley Eastern publication, 2008

<b>COURSECODE</b>		17260EH36		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MARKETING MANAGEMENT OF HOSPITAL AND HEALTH CARE SERVICES**

**OBJECTIVE:**

Gives better understanding about the way to market health care services. Gives view about the market in gmix for health care services

**OUTCOMES**

Principles of Management

CO101: Students will have an idea of the overall Managerial Functions which can be applied in any organizational set up Basics of Hospital Administration

CO103: Students will have a general idea about the fundamentals of hospital administration Health Economics

CO105: Students will have the complete understanding about micro and macroeconomics Basics of Medical Sciences

CO107: Students will have a basic understanding of structure & functions of various organ system of a human body. Students will have basic knowledge on various aspects of community medicine

**Unit I APPLICATION OF MARKETING IN HEALTH CARE** Concept of Marketing-Importance of Marketing to Healthcare Organizations - Challenges in Practicing Marketing in Healthcare Industry - Marketing Intelligence, Information and Research System- Marketing Organization: Chart, Fulltime Staff and Hiring Consultants

**Unit II MARKETING MIX DECISIONS** Product (Service) Decisions- Nature and Characteristics of Services- Marketing Approaches to New Services Development- Pricing Decisions - Place Decisions- Promotion Decisions - Advertising in Healthcare Industry - Marketing Strategies - Service Portfolio Strategy - Market Expansion Strategy - Target Market Strategy- Price Quality Strategy- Competitive Positioning Strategy.

**Unit III SOCIAL MARKETING** Steps in Social Marketing- Cognitive, Action, Behavior and Value Changes, Media in social Marketing, Social media sources; Social Events and Printed sources; Online sources; Role of social marketing in healthcare

**Unit IV PUBLIC RELATIONS** Introduction to Public Relations, Classification of Public from Healthcare Marketing Perspective, Identifying the Relevant Publics- Measuring Images and Attitude of the Relevant Public- Establishing Image Goals for the Key Publics- Developing Cost Effective Public Relations Strategies- Implementing Actions and Evaluating Results; Health Service Public Relations Officer - Changing Role and Responsibilities of Health Service PRO.

**Unit V COMMUNITY OPINIONS SURVEYS AND MARKET RESEARCH** Market research- Model Questionnaire used in Healthcare Services; Public Relations Tools and Materials: Written and Audiovisual; Media: News, Events, Speeches and Telephone Information Services; Data analysis; Research report preparation and presentation; Decision making based on market research.

**SUBJECT TITLE: COMMUNITY HEALTH AND MANAGEMENT OF NATIONAL HEALTH PROGRAMMES**

**OBJECTIVE:**

After completion of community health and management of National health programs module, students will be able to recognize and identify the elements in designing the strategies for health care delivery for community.

**OUTCOMES**

- To appreciate the Educational heritage of India.
- To understand the nature of Education as a discipline and its correlation with other disciplines.
- To comprehend the basic features of Indian Constitution and its implication in Education.
- Critically examine the pivotal issues of contemporary India.
- Analyse vision, aims of education, and recommendations of various commissions after independence in shaping the present educational system of India.
- Evaluate the basic concepts/issues of Education with reference to NCF (2005) and NCFTE(2009).

**UNIT – I Concepts in Health and Disease** – Introduction of medicine, public health and community health; Definition of health: the determinants and relative concept; Agent – Host – Environmental factors in health and disease, indices used in measurement of health, levels of prevention; Epidemiology of common communicable diseases and chronic non-communicable diseases and condition.

**UNIT – II Health care delivery system in India:** Introduction, Demography and Family Planning; Maternal and child health; Urban health; Occupational health; Mental health; Community geriatrics; Essential Medicines and Counterfeit Medicines.

**UNIT – III Health Education:** Definition, approach in health education, methods, barrier to effective communication, principles of health education; International Health Regulations and International classification of diseases.

**UNIT – IV International Health agencies and organizations:** WHO, UNICEF, UNOP, World Bank, UNFPA, CARE, IHO, Notifiable diseases.

**UNIT – V National Health Programs:** Objectives, strategy, achievements, critical analysis; Cancer screening and national cancer control program, National AIDS Control program and NACO, National leprosy eradication program, Universal immunization program, National vector-borne disease control program, RNTCP, RCH, National Program for control of blindness, National Health Policies, National Population Policy, National Rural Health Mission.

**SKILL DEVELOPMENT**

<b>COURSECODE</b>		17260EH40		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MANAGEMENT OF CLINICAL AND SUPER SPECIALTY SERVICES IN HOSPITALS**

**OBJECTIVE:**

This course is aimed at developing awareness among students regarding concept of location, layout and the infrastructure and staff requirements. They would be able to enumerate general procedures and policies and procedures followed in each of these.

**OUTCOMES**

**CO1:** Describe the health systems of various Countries including India

**CO2:** Discuss and learn public health care system in India

**CO3:** Develop, implement and manage various public health programs

**CO4:** Critically analyze the various components of health care delivery system in India

**CO5:** Apply various principles of planning and management in implementing health projects and programmes.

**UNIT – I Hospital Management Of Clinical Services (Medical + Ancillary):** Detailed Management, Layout, Design of - OPD Services, Emergency Services, Clinical Laboratories, Radiological Services, Operation Theatres.

**UNIT – II Overview of Management Layout & Design of:** Radiation Therapy department, Nuclear Medicine, Labour and Delivery Suite, Physical Therapy, Pulmonary Medicine, Cath Lab.; Equipment Planning, utilization survey of super-specialty service equipment.

**UNIT – III Clinical services-3:** Operation theatre – Intensive care units – Hospital acquired infections – Sterilization – Nursing services – Ward management.

**SKILL DEVELOPMENT**

**UNIT – IV Nursing Services: Detailed Layout, Design & Management of:** General Nursing Unit including general wards and private rooms, Intensive Care Units; Decision making in nursing profession: Nurse-Patient relationship, health education to patients; Pediatric Nursing Unit, Obstetric Nursing Unit, Psychiatric Nursing Unit, Isolation Rooms, ICU/CCU, New born Nursery.

**UNIT – V Emerging areas in Hospital Services:** Alternative and Complimentary medicine, Palliative medicine, promotive Healthcare, home health care; Rehabilitation and De-addiction – Role of hospitals, duties and responsibilities of clinical and paraclinical staff.

<b>COURSECODE</b>		17260EH42		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: PATIENT CARE MANAGEMENT**

**OBJECTIVE:** To understand the processes and details related to effective patient care and to further increase the satisfaction levels of patients

**OUTCOMES**

**CO1:** Describe the health systems of various Countries including India

**CO2:** Discuss and learn public health care system in India

**CO3:** Develop, implement and manage various public health programs

**CO4:** Critically analyze the various components of health care delivery system in India

**CO5:** Apply various principles of planning and management in implementing health projects and programmes.

**Unit I Patient centric management:** Concept of patient care, Patient-centric management, Organization of hospital departments, Roles of departments/managers in enhancing care, Patient counseling & Practical examples of patient centric management in hospitals. Patient safety and patient risk management.

**Unit II Quality in patient care management:** Defining quality, Systems approach towards quality, Towards a quality framework, Key theories and concepts, Models for quality improvement & Variations in practice.

**Unit III Patient classification systems and the role of case mix:** Why do we need to classify patients, Types of patient classification systems, ICD 9 (CM, PM), Casemix classification systems, DRG, HBG, ARDRG, Casemix innovations and Patient empowering classification systems.

**Unit IV Medical ethics & auditory procedures:** Ethical principals, Civic rights, Consumer protection act, CPA, Guideline of the CPA, Patient complaints powers & procedures of the district forum, State and National commission, Role of supreme court, Patient appeals, Autopsy, Tort liability, Vicarious liability, Medical negligence, Central & state laws, Use of investigational drugs, Introduction/need & procedures for medical audit, Audit administration & Regulating committees. Confidentiality and professional secrecy, ethics of trust and ethics of rights—autonomy and informed consent, under trading of patient rights—universal accessibility—equity and social justice, human dignity.

**SKILL DEVELOPMENT**

**Unit V Patient Medical Records:** Policies & procedures for maintaining medical records. e-records, legal aspects of medical records, its safety, preservation and storage.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		17260EH39		3	0	0	3

**SUBJECT TITLE: HEALTH RELATED LAWS AND ETHICS**

**OBJECTIVE:**

To Understand Laws relating to Health services, Legal reports, License, Risk Management.

**OUTCOMES**

1. Demonstrate systematic knowledge of the substantive law relevant to a range of key areas of healthcare law;
2. Demonstrate systematic knowledge of major western traditions in bioethics and key ethical principles relevant to the provision of healthcare;
3. Demonstrate a critical understanding of how these different traditions and principles apply to current key issues in healthcare law;

**UNIT – I:**

Laws relating to Hospital formation: Promotion-Forming society-The Companies Act-Law of Partnership-A Sample Constitution for the Hospital-The Tamil Nadu Clinics Act.

**UNIT – II:**

Laws relating Purchases and funding: Law of contracts-Law of Insurance-Export Import Policy-FEMA-Exemption of Income Tax for Donations-Tax Obligations:Filing Returns and Deductions at Source.

**UNIT – III:**

Laws pertaining to Health: Central Births and Deaths Registration Act, 1969-Recent amendments – Medical Termination of Pregnancy Act, 1971 – Infant Milk Substitutes, Feeding Bottles and Infant Food Act, 1992.

**SKILL DEVELOPMENT**

**UNIT – IV:**

Laws pertaining to Hospitals: Transplantation of Human Organs Act, 1994 – Pre-natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act, 1994 – Medical Negligence – Medico Legal Case – Dying Declaration-MCI act on medical education. The Biomedical Waste (Management and Handling) Rules-Radiation Safety System.

**UNIT – V:**

Laws pertaining to Manufacture and sale of Drugs: Drugs and Cosmetics Acts, 1940 – Pharmacy Act, 1948 – Drugs and Magic Remedies (Objectionable Advertisement) Act, 1954 – Poison Act, 1919 – Legislation for Tobacco control.

**SUGGESTED READINGS:**

1. The Law of Health Care Administrations – Stuart Showalter
2. Dynamics of Industrial Relations – C.B. Memoria
3. Industrial laws – N.D. Kapoor

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EH42		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: MEDICAL TOURISM**

**OBJECTIVE:**

To understand the Significance of Medical Tourism, Role of government, Communication for medical tourists. This will enable students to learn effects of medical tourism in nation's economy, Pricing of Medical Services, Emerging trends on Medical Tourism.

**COURSE OUTCOME**

- Define the basic concepts related to medical tourism
- Have information about intermediary institutions and organizations in medical tourism
- Discuss medical tourism practices in Turkey and the World
- Explain digital transformation in the field of health

**Unit-I Introduction to Medical Tourism – History – Evolution of Medical Tourism – Scope of Medical Tourism – Importance – Medical Tourism Process.**

**Unit-II Medical Tourism Destinations – National & International Destinations – Travel Retailing and Logistics for Health Tourism.**

**Unit-III Marketing Concepts and Strategies – Hospitality and Hotel Industry linkages – Spa and Wellness Tourism.**

**EMPLOYABILITY**

**Unit-IV Medical Tourism – Ethical, Legal and Social Concerns – Medical Tourism – Issues & Challenges.**

**Unit-V Quality Standards in Medical Tourism – Medical Tourism – The Future of Health Services – International Healthcare Accreditation.**

**SUGGESTED READINGS:**

1. Milica Z., Bookman Karla R. Bookman, Medical Tourism in Developing Countries, Palgrave Macmillan 2007.
2. Raj Pruthi, Medical Tourism in India, Arise Publishers & Distributors, 2006.
3. RNCOS, Opportunities in Medical Tourism in India (2007), RNCOSE – Services Pvt. Ltd., 2006.
4. Michael D. Horowitz Jeffrey A. Rosensweig, Medical Tourism – Health Care in The Global Economy (Trends), American College of Physician Executive, 2007.

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		17260EH43		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: HOSPITAL ARCHITECTURE, PLANNING, DESIGN AND MAINTENANCE**

**OBJECTIVE:**

To understand the Significance of Medical Tourism, Role of government, Communication for medical tourists. This will enable students to learn effects of medical tourism in nation's economy, Pricing of Medical Services, Emerging trends on Medical Tourism.

**COURSE OUTCOME**

At the end of the course, the students shall have acquired knowledge of the process involved in addressing a design problem with emphasis on site planning.

**UNIT – I: Hospital as a system: Definition of hospital – classification of hospitals – changing role of hospitals – role of hospital administrator – hospital as a system – hospital & community.**

**UNIT – II: Planning: Principles of planning – regionalization - hospital planning team – planning process – size of the hospital – site selection – hospital architect – architect report – equipping a hospital – interiors & graphics – construction & commissioning – planning for preventing injuries – electrical safety**

**UNIT – III: Technical analysis: Assessment of the demand and need for hospital services – factors influencing hospital utilization – bed planning – land requirements – project cost – space requirements – hospital drawings & documents – preparing project report.**

**UNIT – IV: Hospital standards and design: Building requirement – Entrance & Ambulatory Zone – Diagnostic Zone – Intermediate Zone – Critical zone – Service Zone – Administrative zone – List of Utilities – Communication facility – Biomedical equipment Voluntary & Mandatory standards – General standards – Mechanical standards – Electrical standards – standard for centralized medical gas system – standards for biomedical waste.**

**UNIT – V: Facilities planning: Transport – Communication – Food services – Mortuary – Information system – Minor facilities – others.**

**REFERENCE BOOKS**

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	17260EJ35			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: FARM BUSINESS MANAGEMENT**

**OBJECTIVE:**

To acquaint the students with the basic principles of farm management dealing with the analysis of farm resources having alternatives within the framework of resource restrictions.

**COURSE OUTCOME**

Understand the fundamentals of management with reference to agribusiness.

Acquaint with various functional areas of agribusiness

Study the managerial functions and its applications with reference to agribusiness

Learn the concepts and process of Planning and Organizing

**UNIT I** Nature, scope, characteristics and role of farm business management; farm management decisions; farm management problems.

**UNIT II** Principles of farm management decisions – principle of variable proportion, cost principle, principle of factor substitution, law of equi-marginal returns, opportunity cost principle, etc.

**UNIT III** Tools of farm management and farm business analysis - farm planning and budgeting; Farm records and accounts, types and problems in farm records and accounts, net worth statement, farm efficiency measures.

**EMPLOYABILITY**

**UNIT IV** Management of farm resources – Land, Labour, Farm machinery, Farm building, etc.

**UNIT V** Risk and uncertainty in farming - sources of uncertainty in farming, management strategy to counteract uncertainty and decision making process in farm business management under risks and uncertainty.

**Suggested Readings**

**SUBJECT TITLE: AGRICULTURAL AND MICRO-FINANCE**

**Objective:** Objective: To familiarize students with the Agricultural Financial System, Microfinance System and tools and techniques used for better management decisions.

**COURSE OUTCOME**

Understand the fundamentals of management with reference to agribusiness.  
 Acquaint with various functional areas of agribusiness  
 Study the managerial functions and its applications with reference to agribusiness  
 Learn the concepts and process of Planning and Organizing  
 Provides knowledge about the Staffing, Directing and Control.

**UNIT-I** Need and Importance of Agriculture Finance, Essential Features of Agriculture credit system, Agricultural credit Structure in India. Non-institutional financing for Agriculture, Merits and Demerits. Management of Agri-Finance: View point of Borrower and lender. Economic feasibility Tests of Farm credit proposal (Three R's of credit & Four C's of Credit).

**UNIT-II** Methods and mechanics of Lending to Agriculture, Role and functions of NABARD for Agriculture Finance Role of Commercial Bank and Agricultural Finance, Regional Rural Banks and Rural Finance, Its viability, Problems and challenges

**UNIT-III** Multi-agency Approach to agricultural Finance, Problems of Over dues of Agricultural loans. Measures to overcome the Problem of over dues. Public Farm Financing Schemes: Financing of Bio-Gas Plant, Financing of Poultry Development, Financing of Dairy Development, Financing of Customs Services Units, Financing of Minor Irrigation Schemes

**EMPLOYABILITY**

**UNIT-**

**IV** Microfinance: Concept and Revolution, Grameen experiment. Growth and development of Micro-finance in Bangladesh, World without poverty- Views of Muhammad Yunus. Microfinance and SHGs in India and its importance for socio-economic development of poor families.

**UNIT-V** Microfinance and women empowerment. Role of NABARD in linking SHGs with Banks, Growth and Development. SGSY and SHGs. Role of MFIs (Non-Banking Financial Institutions) in expanding micro-credit facilities for the poorest of poor in the country. These MFIs include SKS microfinance, SHARE, BASIX, etc. Some case studies on microfinance and Agriculture Finance.

**SUBJECT TITLE: NEW TRENDS AND DEVELOPMENT IN AGRICULTURE**

**Objective:** To familiarize students with the Agricultural Financial System, Microfinance System and tools and techniques used for better management decisions.

**COURSE OUTCOME**

Enable students to gain knowledge on agricultural marketing, challenges and prospects for improving agricultural marketing system. Gain skills to analyze Marketing Functions, Market Information and Intelligence. Imparting knowledge of the marketing efficiency and agricultural prices. Learn the Markets and Market Structure. Provide the platform to the students of Marketing of Agricultural Inputs.

**UNIT I Agribusiness Management**

Concept of E-agribusiness, Need & importance of E-agribusiness, Different models in E-agribusiness, Microfinance with special reference to SHGs.

**UNIT II Greenhouse/Polyhouse techniques**

Basic concept of Green house / Polyhouse, Constructing Green House / Polyhouse, Different commercially important horticultural and other plants grown in Green House / Polyhouse, Importance & future scope of the technique.

**UNIT III Plant Tissue culture** Basic concept, scope & importance of plant tissue culture, Fundamental technique followed in tissue culture, Major crop plants exploited in tissue culture technique. **Biodiesel sector** Basic concept of biodiesel, Different crop plants used in biodiesel, Benefits of biodiesel in comparison to crude diesel/petrol, Manufacturing biodiesel, Algal biodiesel.

**EMPLOYABILITY**

**UNIT IV Managerial aspects in Food Processing Industry** Organization of a food processing unit: Different department involved in a food processing company and importance of coordination in those departments etc. Importance of production, marketing & distribution aspects in food processing sector. **Management of Agro Processing Industry** Factors to be considered while establishing food processing plant including government norms & requirements, Actual processing of Agri-produce into final products, Utilization of by products in agro processing industry

**UNIT V Water Management:**

Sources of water and water requirement of crops, irrigation water use efficiency. Micro-irrigation systems, economic use of water. Water conservation measures, rainwater harvesting, gully plugging, contour bunding, terracing, checking runoff water. Watershed development programmes, problems of water management, water pollution and strategies to overcome them.

பாடத்தொடர்புடைய கட்டுரை – 20 மதிப்பெண்

ஆத்திச்சூடி – 20 மதிப்பெண்

அறம் செய விரும்பு, ஆறுவது சினம், இயல்வது கரவேல், ஈவது விலக்கேல், உடையது விளம்பேல், ஊக்கமது கைவிடேல், எண் எழுத்து இகழேல், ஏற்பது இகழ்ச்சி, ஐயம் இட்டு உண், ஒப்புரவு ஒழுகு, ஒதுவது ஒழியேல், ஔவியம் பேசேல், கண்டு ஒன்று சொல்லேல், ஞயம்பட உரை, இடம்பட வீடு எடேல், இணக்கம் அறிந்து இணங்கு, தந்தை தாய்ப்பேன், நன்றி மறவேல், பருவத்தே பயிர்செய், இயல்பு அலாதன செயேல், வஞ்சகம் பேசேல், இளமையில்

கல்,அனந்தல்ஆடேல்,கடிவது மற,கீழ்மை அகற்று,குணமது  
கைவிடேல்,கெடுப்பது ஒழி, கேள்வி முயல்,சான்றோர் இனத்து  
இரு, சோம்பித்திரியேல்.

(மேற்;கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை(  
மரபு அல்லது புதுக்கவிதை) கதை,கட்டுரை,நாடகம் எழுதி வரச்  
செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

Aim:

To improve the knowledge of English

Objective:

To familiarize with the glossary terms, figures of speech

To improve vocabulary

To learn how to edit and proof read

To know the comparison and contrast and cause and effect forms

To understand the impact of the speeches of famous people

Outcome:

Develop vocabulary

Read and comprehend literature

UNIT –I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

UNIT – IV

Editing

Proof reading

## UNIT – V

Comparison and contrast

Cause and effect

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC12	English-I	4	0	0	2

### Aim:

To acquaint students with learning English through literature

### Objective:

To improve English delightfully through simple poems, essays

To throw light on fiction

To read and comprehend literature

### Outcome:

Read and comprehend literature

## UNIT –I

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-Aruna Gnanadason

## UNIT – II

The Merchant of Death

-Nanda Kishore Mishra & John

Kennet

She Spoke for all Nature

1677 -Young world 'The Hindu'

### UNIT –III

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

### UNIT –IV

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

### UNIT –V

Oliver Twist

-Charles Dickens

### References:-

Emerald Publishers

COURSE CODE	COURSE TITLE	L	T	P	C
17114AEC13	General Chemistry - I	6	1	0	5

### Aim:

To study about the theoretical and molecular models of chemical compounds.

### Objective:

To provide a broad foundation in chemistry that stresses scientific reasoning and analytical problem solving with a molecular perspective.

To expose the students to a breadth of experimental techniques using modern instrumentation.

### Outcome:

The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.

### UNIT – I

Basic concepts in organic chemistry -Electron displacement effects – Inductive, electrometric and mesmeric effects, resonance, hyperconjugation and

steric effects. Homolytic and heterolytic fission of carbon - carbon bonds. Reaction intermediates: - free radicals, carbocations, carbocations, carbones, nitrenes and arynes - their stability.

## UNIT II

Standard solution - primary and secondary standards solution, Types of titrimetric reactions - redox and precipitation titrimetric reactions. Indicators - effect of change in pH - neutralization - mixed and fluorescent indicators. Halogen family comparative study of halogens and their compounds- unique nature of fluorides and Oxides and oxyacids of halogens - preparation and properties

## UNIT III

Nomenclature of organic compounds - IUPAC naming of simple and substituted Aliphatic, aromatic and alicyclic compounds\_Alkanes : Mechanism of free radical substitution in alkanes. Petroleum-thermal and catalytic process of cracking Synthetic petrol - Fischer, Tropsch and Bergtus processes, flash point, fire point, smoke point, knocking, octane number

## UNIT IV

Liquid State: Liquid crystals classification, structures Properties and applications. Colloidal State: Size of colloidal particles-gold number- peptisation, stability of colloids, coagulation and protection. Reverse Osmosis and desalination of sea water. Electrophoresis and endosmosis.

## UNIT V

Solid state: Nature of the solid state - seven crystal systems - Bravais lattice unit cell, law of rational indices (Weiss indices), Miller indices, symmetry) elements in crystals (for cubic system)

X-Ray diffraction by crystals — derivation of Bragg's equation – Bragg method - Crystal structure of NaCl, KCl, ZnS, CsCl determination of Avogadro number

COURSE CODE	COURSE TITLE	L	T	P	C
17112AEC15A	Calculus and Fourier Series	4	0	0	4

Aim:

To equip the students with basic differentiation, integration and Fourier series.

Objectives:

This course is designed to give students, basic elementary calculus to allow them to tackle to solve Fourier series problems.

Outcomes:

By the end of this course, the student should solve the differentiation, integration and Fourier series.

Unit – I

Leibnitz theorem (Proof not needed) and its applications – curvature and radius of curvature in Cartesian only (Proof not needed) – total differential coefficient (Proof not needed) – Jacobians of two & three variables – Simple problems in all these.

Unit – II

Reduction formula (when n is a +ve integer) for (i)

$$\int_a^b e^{ax} x^n dx$$

$$\int_a^b \sin^n x dx$$

$$\int_a^b \cos^n x dx$$

$$\int_0^x e^{ax} x^n dx$$

$$\int_0^x \sin^n x dx$$

without proof  $\int_0^x \sin^n x \cos^n x dx$  and illustrations

Unit – III

Beta and Gamma functions

Unit – IV

Evaluation of double and triple integrals in simple cases – changing the order and evaluating of the double integration (Cartesian only)

Unit – V

Definition of Fourier series – Finding fourier coefficients for a given periodic function with period  $2\pi$  and with period  $2l$  – use of odd and even functions in evaluating fourier coefficients – half range sine and cosine series.

Reference:

Calculus – T.K.M. Pillai

Trigonometry & Fourier series – T.K.M. Pillai.

COURSE CODE	COURSE TITLE	L	T	P	C
17112AEC16A	Algebra and Trigonometry	4	0	0	4

Aim:

To study Algebra and Trigonometry to solve various applications in chemistry.

Objectives:

This course is designed to give students, the student should know the algebra and trigonometry.

Outcomes:

By the end of this course, the student should solve the algebra and Trigonometry concepts to solve the problems.

Unit – I

Binomial, Exponential & Logarithmic series (Formulae only) – Summation

Unit – II

Nonsingular, symmetric, skew symmetric, orthogonal, Hermitian, skew Hermitian and unitary matrices – Characteristics equation, eigen values, eigen vector – Cayley Hamilton's theorem (proof not needed) Simple application only.

Unit – III

Expansion of  $\sin n\theta$ ,  $\cos n\theta$ ,  $\tan n\theta$  (n being a positive integer) – Expansion of  $\sin^n \theta$ ,  $\cos^n \theta$ ,  $\sin^n \theta \cos^m \theta$  in a series of sines and cosines of multiples of  $\theta$  ( $\theta$  – given in radius) Expansion of  $\sin \theta$ ,  $\cos \theta$  and  $\tan \theta$  in terms of powers of  $\theta$  (only problems in all the above)

Unit – IV

Euler's formula for  $e^{i\theta}$  – definition of hyperbolic functions – formulae involving hyperbolic functions – relation between hyperbolic and circular function – expansion of  $\sinh x$ ,  $\cosh x$ ,  $\tanh x$  in power of  $x$ .

Unit – V

Expansion of inverse hyperbolic function –  $\sinh^{-1}x$ ,  $\cosh^{-1}x$  and  $\tanh^{-1}x$  -

Separation of real and imaginary parts of  $\sin(x+iy)$ ,  $\cos(x+iy)$ ,  $\tan(x+iy)$ ,  $\sinh(x+iy)$ ,  $\cosh(x+iy)$ ,  $\tanh(x+iy)$

Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
171INDCONS	Indian Constitution	1	0	0	1

Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
2. To appreciate the salient features of the Indian constitution
3. To know the fundamental rights and constitutional remedies
4. To make familiar with powers and positions of the union executive ,union parliament and the supreme court .
5. To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Learning Out comes:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

Unit I::The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies - fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles - differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court - high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India.

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

17111AEC22	English-II	4	0	0	2

Aim:

To acquaint learners with different trends of writing

Objective:

To empower students to acquire language skills through literature

To enable the students to appreciate literature

To develop the conversational skills through one act plays

Outcome:

Read and comprehend literature.

#### UNIT – I

Ecology

-A.K. Ramanujan

Gift

-Alice Walker

The First Meeting

-Sujata Bhatt

#### UNIT –II

Fueled

-Marcie Hans

Asleep

-Ernst Jandl

Buying and selling

-Khalil Gibran

#### UNIT –III

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

#### UNIT – IV

The Refugee

-K.A. Abbas

I Have a Dream

-Martin Luther king

Those People Next Door

-A.G. Gardiner

#### UNIT – V

Marriage is a private Affair  
The Fortune Teller  
Proposal

-Chinua Achebe  
-Karel Capek  
-Anton Chekov

References:-

Gathered Wisdom GowriSivaraman EmeraldPublishers

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC23	General Chemistry -II	6	1	0	5

Aim:

Develop an appreciation of chemistry and its application in daily life.

Objective:

To teach students to analyze data from experiments or from other sources.

To acquire students a readiness in becoming responsible citizens in a changing world.

Outcome:

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to explore new areas of research in both chemistry and allied fields of science and technology.

UNIT I

Alkynes: Acidity of acetylene, formation of acetylides, addition of water with HgSO<sub>4</sub> catalyst, addition of hydrogen halides and halogens, oxidation, ozonolysis and hydroboration (mechanisms).

Cycloalkanes: Preparation using Wurtz's reaction, Dieckmann's ring closure and reductions of aromatic hydrocarbons. Substitution and ring opening reactions.

Baeyer's strain theory and theory of strain in rings.

UNIT II

Quantum numbers - principal, Azimuthal, magnetic and spin quantum numbers and their significance - Pauli exclusion principle - Hund's rule - Aufbau principle, (n+1) rule, stability of half-filled and fully filled orbitals - inert pair effect.

### UNIT III

Quantum theory: Bohr's model of atoms. Bohr's theory of hydrogen and spectral lines. Limitations of Bohr model. Sommerfeld's extension. Photoelectric effect and Compton Effect. Debroglie's equation and verification (Davisson and Germer expt)

### UNIT IV

Chemical Kinetics: Rate of reactions, rate laws, rate constant, order and molecularity of reactions. Rate equations for zero, first, second and third order reactions. Derivation of rate constant for Zero, first and second order reactions. Fractional order reactions. Examples- Half-life period, Pseudo first order reactions.

### UNIT V

Polymerization: Types- free radical, cationic and anionic polymerizations with mechanisms.

Preparation of polymers - addition polymers (PE, PVC, Teflon and PS)- Condensation polymers (Nylon6.6, tereylene) - synthetic rubbers (Buna, Butyl rubber, SBR, neoprene) - natural rubber.

R.D.Madan, Advanced Inorganic Chemistry.

Puri and Sharma, Text Book of Physical Chemistry.

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC24L	Organic Analysis Lab	0	0	3	2

A study of the reactions of the following organic compounds, :  
Carbohydrate,

Amide,  
Aldehyde,  
Ketone,  
Acid,  
Phenol.

The students may be trained to perform the specific reactions like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional group present and record their observations.

Preparation (Single stage) involving  
Nitration,  
Hydrolysis  
Bromination.

Employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17112AEC25A	ODE, PDE and Laplace Transform	4	0	0	4

Aim:

To study the Ordinary Differential Equations, Partial Differential Equations and Laplace Trans for my to solve mathematical applications in chemistry.

Objectives:

This course is designed to give students the student should know the Differential

## Equations and Laplace Transform.

### Outcomes:

By the end of this course, the student should solve the ODE, PDE and LAPLACE TRANSFORM concepts to solve the problems.

### UNIT I:

Ordinary differential equations of first order but of higher degree- Equations solvable for  $x$  and  $y$  – solvable for  $dy/dx$ , Clairaut's form (simple case only)- homogeneous linear differential equation (Variable coefficients), variation of parameter.

### UNIT II:

Formation of partial differential equation by eliminating constants and by eliminating of arbitrary functions- definition of general, particular and complete solution – singular integral (Geometrical meaning not required) solution of first order equations in the standard forms  $f(p,q)=0$ ,  $f(x,p,q)=0$ ,  $f(z,p,q)=0$ ,  $f_1(x,p)=f_2(y,q)$ ,  $z=f(x,p+yq)$ .

### UNIT III:

Lagrange's method for solving  $Pp + Qq = R$  where  $p,q,r$  functions of  $X, Y, Z$ - (geometrical meaning is not needed)- (only problem in all the above- No proof needed for any formula ) Charpit's method The four standard forms.

### UNIT IV:

Laplace Transforms- Definitions-

$L(e^{at})$ ,  $L(\cos at)$ ,  $L(\sin at)$ ,  $L(t^n)$  where  $n$  is a positive integer – Basic theorem in Laplace (transform only)  $L(e^{-st} \cos bt)$ ,  $L(e^{-st} \sin bt)$ ,  $L[e^{-st} f(t)] = L[F(t)]$ ,  $L[f'(t)]$

### UNIT V:

Inverse Laplace transform related to the above standard forms- solving second order ODE with constant coefficients using Laplace transforms and simultaneous equation, variable coefficients. Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions change of interval — Half range series.

### References:

1. S. Narayanan – differential equations

3. M.L.Khanna- differential calculus

COURSE CODE	COURSE TITLE	L	T	P	C
17112AEC26A	Analytical Geometry in Vector Calculus	4	0	0	4

**Aim:**

To study analytical geometry in vector calculus for the application in Chemistry.

**Objectives:**

This course is designed to give students; the student should know and solve the analytical geometry in vector calculus.

**Outcomes:**

By the end of this course, the student should solve problems of analytical Geometry in vector calculus.

**UNIT – I**

Vector differentiation – velocity & acceleration vectors- Gradient of a vector directional derivative - Unit normal vector- tangent plane

**Unit- II**

Divergence- Curl – Solenoidal & Irrotational vector- Double operators – Properties connecting grad, div & curl of a vector.

**Unit –III**

Vector integration –Line integrals – Conservative force field – Scalar field- Scalar potential- work done by d Force- Surface integrals – Volume integrals.

**Unit –IV**

Gauss divergence theorem , Stoke's theorem (statement, application & verification only)

**Unit –V**

Equation of sphere – Tangent plane – plane section of a sphere – Finding the centre & radius of the circle of integration – sphere through the circle of integration (only problem in all above)

**பாடத்தொடர்புடையக் கட்டுரை 20 மதிப்பெண்**

வெற்றி வேற்கை 20 மதிப்பெண்

எழுத்து அறிவித்தவன் இறைவன் ஆகும், கவ்விக்கு அழகு கசடற மொழிதல், செல்வர்க்கு அழகு செழுங்கிளை தாங்குதல், மன்னவர்க்கு அழகு செங்கோல் முறைமை, வைசியர்க்கு அழகு வளர் பொருள் ஈட்டல், உழவர்க்கு அழகு உழுது ஊண் விரும்பல், மந்திரிக்கு அழகு வரும் பொருள் உரைத்தல், தந்திரிக்கு அழகு தறுகண் ஆண்மை, உண்டிக்கு அழகு விருந்தோடு உண்டல், பெண்டிர்க்கு அழகு எதிர் பேசாதிருத்தல், அறிஞர்க்கு அழகு கற்றுணர்ந்து அடங்கல், வறிஞர்க்கு அழகு வறுமையில் செம்மை, பெரியோர் எல்லாம் பெரியோரும் அல்லர். சிறியோர் எல்லாம் சிறியரும் அல்லர், அடினும் ஆவின் பால் தன் சுவை குன்றாது, சுடினும் செம்மென தன்னொளி கெடாது,

அறைக்கினும் சந்தனம் தன் மனம் மாறாது பெருமையும் சிறுமையும் தான் தர வருமே, அறிவுடை ஒருவனை அரசும் விரும்பு, யானைக்கு இல்லை தானமும், தருமமும்,பூனைக்கு இல்லை தவமும் தயையும், ஞானிக்கு இல்லை இன்பமும் துன்பமும் , அச்சமும் நாணமும் அறிவிலோருக்கு இல்லை, நாளும் கிழமையும் நலிந்தோருக்கு இல்லை, கேளும் கிளையும் கெட்டோருக்கு இல்லை,உடைமையும் வறுமையும் ஒரு வழி நில்லா,இரந்தோர்க்கு ஈவதும் உடையோர் கடனே,பழியா வருவது மொழியாது ஒழிவது, சுழியா வருபுனல் இழியாது ஒழிவது, துணையோடு அல்லது நெடுவழி போகேல்.

(மேற்;கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை( மரபு அல்லது புதுக்கவிதை) கதை,கட்டுரை,நாடகம் எழுதி வரச் செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC31	Advanced English-III	4	0	0	2

Aim:

To improve the knowledge of English

Objective:

To familiarize with the organs of speech and the description and classification of speech sounds

To understand consonant cluster, syllable, word accent and intonation.

To know how to interpret graphics

To write slogans and advertisements

Outcome:

Understand Phonetics

Develop writing skill

UNIT –I

The organs of speech, Classification of speech sounds , Vowels and Diphthongs

UNIT –II

Consonants, Consonant cluster

UNIT – III

Syllable, Word accent, Intonation

UNIT – IV

Idiom, Interpretation of graphics

UNIT – V

Slogan writing, Writing advertisement

References:

A text book of Phonetics for Indian Students -T.B. Balasubramaniyan

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC32	English-III	4	0	0	2

Aim:

To acquaint students with learning English through literature

Objective:

To sensitize students to language use through prescribed text

To develop the conversational skills through one act plays

Outcome:

Read and comprehend literature

UNIT – 1

The Doctor's World

- R.K. Narayan

The Postmaster

- Rabindranath Tagore

Princess September

- E.Somerest Maugham

UNIT – II

The Price of Flowers

-Prabhat Kumar Mukhopadhyay

The Open Window

-Saki

The Model Millionaire

-Oscar Wilde

UNIT –III

My Brother My Brother

- Norah Burke

Uneasy Home Coming

- Will F. Jenkins

Resignation

- Premchand

UNIT –IV

The Referee

-W.H. Andrews & Geoffrey Dreamer

The Case of the Stolen Diamonds

-Farrell Mitchell

## UNIT – V

The Dear Departed

-Stanley Houghton

The Princess and the Wood Cutter -Alan Alexander Milne

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC33	General Chemistry - III	5	0	0	5

Aim:

To acquaint with the knowledge of nature of metals and its characters.

Objective:

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.

The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

Outcome:

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.

### UNIT I

Alkali and alkaline earth metals:

Comparative study of alkali and alkaline metal compounds (oxides, halides, hydroxides, carbonates, sulphates). Diagonal relationship between lithium and magnesium, lithium aluminium hydride and sodium borohydride — preparation, properties and uses. Coinage metals: Comparative study of coinage metals. Zinc Group metals: Comparative study of Zinc group metals. Galvanization, existence of mercurous ion and  $Hg^{2+}$  principles of qualitative analysis -solubility product, principles of elimination of interfering radicals, common effect, reactions including spot tests in qualitative analysis.

### UNIT II

Inner transition elements:

Lanthanides—occurrence—electronic configuration — oxidation states, magnetic properties, complexation behaviour. Actinides —occurrence — electronic configuration — oxidation states, magnetic properties and complexation behavior. Lanthanide contraction. Chemistry of thorium and uranium — occurrence, extraction and uses. Mineral wealth of India —minerals found in India. Steel and

alloy steels — Heat treatment of steel.

### UNIT III

Aromatic hydrocarbons and Aromaticity:

Structure and stability of benzene ring — resonance in benzene — delocalized  $\pi$  electron cloud in benzene. Aromaticity — Huckel's Rule — examples — benzene, naphthalene, anthracene, furan, pyrrole, thiophene and ferrocene. Electrophilic substitution reactions in aromatic compounds. General mechanism of electrophilic substitution reactions — Nitration, sulphonation, halogenation, Friedel-Crafts alkylation and acylation reactions — nuclear and side chain halogenations.

### UNIT IV

Polynuclear hydrocarbons-

Naphthalene and anthracene — isolation, properties, structure and uses. Aromatic nucleophilic substitution — Benzyne mechanism and intermediate complex formation mechanism — effect of substituents on reactivity.

### UNIT V

Magnetic properties of matter- magnetic flux- magnetic permeability —magnetic susceptibility. diamagnetism, paramagnetism, ferro and anti-ferro magnetism — Curie temperature. Determination of magnetic susceptibility —Buoy's method — number of unpaired electrons. Application to structural problems  $K_3Fe(CN)_6$ ,  $K_4Fe(CN)_6$  and  $Ni(CO)_4$ .

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC34L	Physical Chemistry Lab - I	0	0	3	3

Kinetics – Acid hydrolysis of Ester – (Methyl acetate)  
 – (IN HCL & 0.5N HCL)  
 Kinetics – Acid hydrolysis of Ester – (Ethyl acetate)  
 – (IN HCL & 0.5N HCL)  
 Determination of molecular weight of substance by Rast method  
 Determination of (CST) of phenol – water system  
 Effect of impurities on CST  
 Determination of molecular weight of substances by Transition  
 Temperature method.

Employability/Entrepreneurship/Skill development.

COURSE CODE	COURSE TITLE	L	T	P	C
17113AEC35	Physics - I	5	0	0	4

Aim:

The course presents an introduction to the physics of the objects whose sizes span from atomic dimensions to macroscopic, human scale dimensions, and beyond: atoms, molecules, gases, liquids, and solids.

The aim is to show how the properties of macroscopic bodies can be derived from the knowledge that matter is made up from atoms.

Objectives:

Recognize the difference between physical and chemical properties

Distinguish between extensive and intensive properties

Outcomes:

On completion successful students will be able to demonstrate an understanding of:

1. The relationships between physics on the atomic scale and the properties of

matter.

2. The roles played by microscopic states of system, their numbers and their accessibility.

3. Techniques for finding appropriate averages to predict macroscopic behavior.

#### Unit I: Mechanics

Center of gravity of a solid hemisphere – Hollow hemisphere – Solid cone. Stability of floating bodies – Meta center – Determination of Meta centric height of a ship.

#### Unit II: Sound

Simple harmonic motion – comparison of two simple harmonic motion – A long straight line – At right angle to each other Lissa Hou's figures and their application – Acoustics of buildings reverberation – reverberation time Sabine's formula – conditions for good acoustics.

Decibel – phon – Intensity measurements by hotwire microphone method.

#### Unit III: Properties of matter

Diffusion: Fick's law – Coefficients of diffusion – experimental determination of coefficient of diffusion – application.

Osmosis: Laws of osmotic pressure Berkelley and Hartly method of determining osmotic pressure – elimination of boiling and depression of freezing point – application.

#### Unit IV

Thermal Physics: Newton's law of cooling – Verification – specific heat capacity of liquid by cooling – bomb calorimeter.

Conduction: Coefficient of thermal conductivity – good and bad conductor – Stefan's law of radiation - Solar constant – Angstrom's pyro heliometers – temperature of the sun.

#### Unit V

Optics: Electro magnetic spectrum – spectral response of human eye – UV and IR spectroscopy

Raman effect – experimental arrangement – application of Raman effect.

Fiber optic communication: Introduction – optic fiber – numerical aperture – coherent bundle – fiber optic communication system and its advantage – multimode optic sensors.

Sound , Saigal, S-Chand & co.

Properties of matter, D.S.Matur.

Heat and Thermodynamics, Brijal Subramaniam.

Optics, Brijal Subramaniam.

Static, Hydrostatics and Hydrodynamics, Nrayanamoorthy & Nagarathinam.

COURSE CODE	COURSE TITLE	L	T	P	C
17113AEC36L	Physics Lab - I	0	0	3	3

List of Experiments

Semi-conductor diode characteristics

Surface tension – Drop weight method

Meter Bridge – Determinations of resistance

Post office Box – Resistance

Non-uniform Bending – Young’s modulus

Potentiometer – Voltmeter calibration

Sonometer – Verification of laws

Spectrometer – Determinations of refractive index

Bridge Rectifier

Basic Logic Gates – Discrete components

COURSE CODE	COURSE TITLE	L	T	P	C
17114RMC37	Research Methodology	3	0	0	3

AIM:

To create a basic appreciation towards research process and awareness of various research publication

OBJECTIVES:

To understand the steps in research process and the suitable methods.

To identify various research communications and their salient features

To carry out basic literature survey using the common data-bases

To give exposure to standard laboratory precautions and best practices for experimental work

To provide orientation for basic mathematical computation useful in basic research

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

PREREQUISITES:

Basic mathematical and experimental skills and exposure to window-based computer operation system.

UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

UNIT IV: Database Survey

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

UNIT V: Laboratory Safety

General guidelines. Hygiene – Eye, foot, skin and hand protection – Safety rules Equipment protection – Respiratory protective equipment – safety equipment – Leaking

compressed gas cylinders – electrical safety. Fire – fire extinguishers.

17120SEC03A L	Packages Lab-III	0	0	2	1

### Packages Lab-III (Power Point)

Create a slide show presentation for a seminar (choose your own topics)

Enter the text in the outline view

Create Non-bulleted and bulleted text

Create a slide show presentation for a science exhibition

Create Non-bulleted and bulleted text

Apply appropriate text attributes

Create slide show presentation for an invitation

Insert an object from a bitmap file

Apply appropriate text attributes

Rotate the object to 45 degree

Apply shadow to the object

Create a slide show presentation to display percentage of marks in each semester for all students

Use bar chart (x-axis: semester; y-axis: % of marks)

Use different presentation template and different transition effect for each slide

Use different text attributes in each slide

Create a slide show presentation for a shop advertisement to be open shortly

Create a slide show presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)

Create a slide show presentation for a tourists places

Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

COURSE CODE	COURSE TITLE	L	T	P	C
17111SEC03L	Communicative English-III	0	0	2	1

**Aim:**

To acquaint with the basic grammar

**Objective:**

To familiarize with the clauses and phrases

To learn the different degrees of comparison

To change a sentence from active to passive and vice versa

To know where to use punctuations

To frame sentences

To know the features, process, forms and barriers of communication

**Outcome:**

Understand grammar

**UNIT –I**

Clauses

Phrases

மரபு அல்லது புதுக்கவிதை) கதை,கட்டுரை,நாடகம் எழுதி வரச்  
செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC41	Advanced English-IV	4	0	0	2

Aim:

To improve the knowledge of English

## Objective:

To familiarize with the objectives and types of interview  
To know the types of questions and answering techniques  
To prepare reviews and proposals  
To learn the grammatical forms  
To understand the meaning of a poem and write the content  
To write for and against a topic  
To draw a flowchart  
To write definitions

## Outcome:

Develop communicative skill  
Read and comprehend literature

## UNIT –I

### Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation  
–Presentation– Type of questions – Answering techniques.

## UNIT – II

### Flowchart

### Proposals

## UNIT – III

### Discourse markers

### Review

## UNIT IV

### Grammatical forms

### Paraphrasing

## UNIT –V

### Definition

Writing for and against a topic.

**Aim:**

To acquaint with the knowledge of nature of metals and its characters.

**Objective:**

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature. The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

**Outcome:**

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.

**UNIT I**

**TRANSITION METALS AND THEIR COMPOUNDS** - Group study of Titanium, Vanadium, Chromium, Manganese and Iron. Metallurgy and uses of V, W and Mo. Comparison of lanthanides and actinides and their position in the periodic table. Elements with atomic number 104 and 105; preparation and their position in the periodic table. Chemistry of Thorium and Uranium — occurrence, ores, extraction and uses.

**UNIT II**

**BIOLOGICALLY IMPORTANT COORDINATION COMPOUNDS** — Chlorophyll, Hemoglobin, Vitamin B 12 — their structure, application (Structure elucidation is not required). Metal carbonyls — Mono and poly nuclear carbonyls of Ni, Fe, Cr, Co and Mn — synthesis, reactions, structure and uses. Nitrosyl compounds — classification, preparation, properties and structure of nitrosyl chloride and sodium nitroprusside.

**UNIT III**

ALIPHATIC NUCLEOPHILIC SUBSTITUTIONS — mechanism of SN1, SN2, and SNii reactions, effect of solvents, leaving groups, nucleophiles and structure of substrates.

Elimination reactions — Hoffmann and Saytzeff's eliminations — cis, trans eliminations. Mechanism of E1 and E2 reactions. Relative reactivity of ethyl, vinyl, allyl and benzyl halides.

#### UNIT IV

POLYHYDRIC ALCOHOLS: Ethylene glycol, glycerol - properties including oxidation using periodic acid and LTA.

Unsaturated alcohols: Thioalcohols — preparation, properties and uses of ethyl mercaptan. Ethers- Methods of preparation of aliphatic and aromatic ethers — reactions of ethers — 1,4-dioxane — preparation and uses — Epoxides — Preparation and reactions. Thioethers — Preparation and uses.

#### UNIT V

Thermodynamics: system and surrounding — isolated, closed and open systems — homogeneous & heterogeneous systems, State of the system, intensive and extensive variables. Thermodynamic process — cyclic processes, reversible and irreversible, isothermal and adiabatic processes — state and path functions, concept of heat and work. First law of thermodynamics — statements, definition of internal energy (U), enthalpy (H), heat capacity. Relation between Cp and Cv;

COURSE CODE	COURSE TITLE	L	T	P	C
17113AEC45	Physics- II	5	0	0	5

Aim:

To develop a basic understanding of electric and magnetic fields in free space using the Integral forms of Maxwell's laws.

Objectives:

Describe the electric field and potential and related concepts, for stationary charges.

Calculate electrostatic properties of simple charge distributions using Coulomb's law, Gauss's law and electric potential.

Outcomes:

Describe the magnetic field for steady currents and moving charges.

Calculate magnetic properties of simple current distributions using Biot-Savart and Ampere's Laws.

Describe electromagnetic induction and related concepts, and make calculations using Faraday and Lenz's laws.

Describe the basic physical content of Maxwell's laws in integral form.

Unit I: Electrostatics

Coulomb's law-Gauss theorem, its application Field due to an infinite long plane,

Sphere and Cylinder- Mechanical force on the surface of a charged conductor – Electrostatics energy in The Medium – Capacitors – Principles of a capacitor – Capacity of a capacitor – Capacity of an Isolated sphere and cylinder – Energy of a charged capacitor – Sharing charges and loss of energy.

#### Unit II: Electricity

Kirchoff's law's and their applications to Wheatstone's network – condition for bridge balance – Carey Forster's bridge – Laws of electromagnetic Induction – Expression for induced EMF – Self and Mutual Induction – Self Inductance of a Solenoid – Mutual inductance of a solenoid Inductor – Coefficient of coupling – Determination of coefficient of self induction by Raleigh's method

#### Unit III: Atomic Physics

Atom models – Summerfield's and Vector atom Models – Pauli's exclusion principle – various quantum numbers and quantization of orbits.

X-rays – Continuous and Characteristic X-ray – Mosle's Law and its importance Bragg's Law – Miller indices – Determination of Crystal structure by Laue's Powder photograph method.

#### Unit IV: Nuclear Physics

Nucleus – Nuclear size – charge – Mass and spin – Liquid drop and Shell models. Nuclear Radiations and their properties, particle accelaior – Betatron and Proton Synchrotron, Particle Detectors – Cloud Chamber and Bubble Chambers. Four types of reactions – Elementary particles and their classifications

#### Unit V: Digital Electronics

Decimal – Binary – Octal and Hexa Decimal number systems and their Mutual conversions – 's and 2's complement of a Binary number and Binary arithmetic (Addition, Subraction, Multiplication and Division) – Binary subtraction by 1's and 2's complement methods – Basic logic gates – AND, OR, NOT, NOR, NAND and EXOR gates – NAND & NOR as universal building gates – Boolean algebra – Laws of Boolean algebra – De-Morgan's Theorems – Their verifications using truth tables

#### Reference:

Magnetism and Electricity – Khare and Srivastave – AtmaRam and sons – New Delhi

#### List of Experiments

Figure of merits of Galvanometer

Potentiometer – Ammeter calibration

Carey Forster Bridge

Viscosity of Liquid – Poiseulle’s flow method

Lee’s Disc – Thermal conductivity

Specific capacity of a liquid

Spectrometer – Wavelength determination using Grating

Meter Bridge verification of serial and parallel connections of resistance wires

Logic Gates – IC Version

Zener Diode characteristics

COURSE CODE	COURSE TITLE	L	T	P	C
17120SEC04A L	Packages Lab-IV	0	0	2	1

#### Package Lab -IV (MS-Access)

Create a database and a simple table

Create a database for sorting the marks scored by the student in the universality exams

Create a database for sorting the date of joining by the employee in the organization.

4. Create queries to select records that matches specific condition
5. Create relationships among the different tables
6. Create queries using built-in functions
  7. Develop forms to enter data in to the student marks database
  8. Develop forms to enter data in to the employee database

COURSE CODE	COURSE TITLE	L	T	P	C
17111SEC04L	Communicative English-IV	0	0	1	1

Aim:

To develop communicative skills

Objective:

To use gerund and make sentences

To change sentences from direct to indirect and vice versa

To understand the listening skill

To enhance reading skill

To familiarize with the singular and plural forms

To describe a picture

Outcome:

Understand grammar

Develop listening and reading skills

UNIT –I

Gerund

Infinitive

UNIT –II

Direct and Indirect

UNIT –III

Listening -types-features of a good listener-active and passive listening-effective listening

COURSE CODE	COURSE TITLE	L	T	P	C
171ENVTSTU	Environmental Studies	1	0	0	1

Aim:

To study about the awareness of environmental pollution and its issues.

Objectives:

Creating the awareness about environmental problems among people.

Imparting basic knowledge about the environment and its Ancillary problems.

Developing an attitude of concern for the environment.

Motivating public to participate in environment protection and environment improvement.

Acquiring skills to help the concerned individuals in identifying and solving environmental problems.

Striving to attain harmony with Nature.

Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;

Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;

Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;

Apply their ecological knowledge to illustrate and graph a problem and describe the realities that managers face when dealing with complex issues; and

Understand how politics and management have ecological consequences.

Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

Natural Resources and Associated Problems.

Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.

Water resources: Use and over — utilization Of surface and ground water, floods,

drought, conflicts over water, dams benefits and problems.

Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.

Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.

Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.

Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

## Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

- a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
- d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

## 4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot — spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

## Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution,

soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

### Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

### 7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

### 8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC51	Inorganic Chemistry - I	5	0	0	5

Aim:

To know about the details of co-ordination compounds and nature of metals.

Objective:

To know about ligand types and their different methods of coordination

To know about isomerism in transition metal complexes.

To know some basic Chemistry of first row transition metal ions.

Outcome:

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

The bonding models, structures, reactivities, and applications of coordination complexes, boron hydrides, metal carbonyls, and organometallics

UNIT - I

Coordination Compounds: Types of ligands. IUPAC nomenclature. Theories of coordination compounds — Werner, Sidgwick, valence bond, crystal field, molecular orbital and ligand field theories.

UNIT- II

Isomerism — stability of complexes — factors affecting the stability of complexes.

Unimolecular and bimolecular nucleophilic substitution reactions in octahedral and square planar complexes — Trans effect. Application of coordination compounds -

Detection of potassium ions, separation of copper and cadmium ions. Estimation of nickel using DMG and aluminium using oxime. Structure of EDTA and its complexes. Complexometric titrations — principles and applications.

UNIT — III

Metallic state: Packing of atoms in metal (BCP, CCP(FCC), HCP). Theories of metallic bonding — electron gas, Pauling and band theories. Structure of alloys — substitutional and interstitial solid solutions — HUME Rothery ratios. Ionic Bond, crystal structure and advanced covalent bonding: Radius ratio rules — Calculation of some limiting radius ratio values for C.N.3(planar triangle), C.N.4 (tetrahedral) & C.N.6 (octahedral).

UNIT — IV

Binary compounds — hydrides, borides, carbides and nitrides — classification, preparation, properties and uses. Organometallic compounds of alkenes and cyclopentadienes.

UNIT - V

Group Theory and its Applications: Symmetry elements — symmetry operations — mathematical group of multiplication tables, point group of simple molecules (H<sub>2</sub>, HCl, CO<sub>2</sub>, H<sub>2</sub>O, BF<sub>3</sub> and NH<sub>3</sub>).

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC52	Organic Chemistry - I	5	0	0	5

### Aim:

To know about the organic molecules and its reactivity.

### Objective:

To know about isomerism types and their different reactivity.

To detail about carbonyl compounds and its reactions.

To know some basic acids and its derivatives .

### Outcome:

Describe bonding models and appreciate how these impact on the properties of a simple molecule.

Understand the importance of stereo isomerism and carbonyl compounds on a molecule structure and reactivity.

## UNIT – I: STEREOISOMERISM - I

Stereoisomerisms — definition — optical and geometrical isomerism — classification of optical isomerism — optical activity — observed and specific rotation — conditions for optical activity in solid, liquid and gaseous phases — criteria for optical activity. Asymmetric center chirality's — achiral molecule — meaning of + and — and D and L notations — elements of symmetry — racemisation — methods of racemisation (by substitution and tautomerism) — resolution — methods of resolution (mechanical separation, seeding, biochemical and conversion to diastereoisomers) — asymmetric synthesis partial and absolute asymmetric synthesis — Walden inversion, Vant Hoff rule of superposition —m Freudenberg's rule of shift. Notations for optical isomers — Cahn — Ingold — Prelog rules — R.S.Notations for optical isomer with one asymmetric carbon — erythro and threo representations. Fischer projections, Sawhorse, Newman projections - representation of molecules with two asymmetric carbon atoms.

## UNIT- II: STEREOISOMERISM - II

Optical activity in compounds containing no asymmetric carbons -biphenyls, allenes and spiranes. Optical activity on symmetric system (lactic acid, dissymmetric system (1,2- trans cyclopropane dicarboxylic acid). Geometrical isomerism — cis, —trans, syn and anti and E — Z notations-geometrical isomerism in maleic and fumaric acids and in unsymmetrical ketoximes — methods of distinguishing geometrical isomers (dipole moment, dehydration, heat of hydrogenation, cyclisation , melting points) — methods of determining the configuration of geometrical isomers no details required).Geometrical and optical isomerism in three member rings.

## UNIT III: REACTIONS OF CARBONYL COMPOUNDS

Carbonyl polarization - reactivity of carbonyl group — acidity of  $\alpha$ -hydrogen. Mechanisms of aldol, Perkin, Knoevenagel and benzoin condensations. Mechanisms of Claisen, Reformatsky, Wittig and Cannizzaro reactions. Mechanisms of reduction (sodium borohydride,  $\text{LiAlH}_4$ , Wolff — Kishner and MPV reductions) — mechanisms of haloform reaction and Michael addition and Oppenauer oxidation. Photochemistry of carbonyl compounds — Norrish I and II Types. Problems and conversion wherever applicable.

## UNIT IV: ACIDS AND ACID DERIVATIVES

Ionization of carboxylic acids — acidity constant- comparison of acid strengths of substituted halo acids — acid strengths of substituted benzoic acids Hammett equation. Hell — Volhard — Zeliniski reaction. Dicarboxylic acids — preparation and properties of oxalic, malonic, succinic, glutaric and adipic acids, unsaturated acids and hydroxy acids. malonic acid, acetoacetic esters — characteristics of reactivities of methylene group — synthetic uses of malonic and acetoacetic esters. Tautomerism — definition — keto-enol tautomerism (identification, acid and bases catalysed interconversion mechanisms. Preparations - amido — imido and — acnitro tautomerisms). Nucleophilic acyl substitutions, acid — base hydrolysis of ester, hydrolysis of amides and trans esterification.

## UNIT V: HETEROCYCLIC COMPOUNDS

Aromatic characteristics of heterocyclic compounds. Preparation, properties and uses of furan, pyrrole, & thiophene. Synthesis and reactions of pyridine and piperidine — comparative basic characters of pyrrole, pyridine and piperidine with amines. Synthesis and reactions of Quinoline, isoquinoline and indole with reference to Skraup, Bischer Napieralski and Fischer indole synthesis. Structural elucidation of pyridine, quinoline and isoquinolines.

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC53	Physical Chemistry – I	4	1	0	4

Aim:

To know about the physical properties of molecules and its reactivity.

Objective:

To understand different properties of molecular structure.

To understand the basic features of spectroscopy.

To know some basic acids and its derivatives .

To knowledge about thermodynamics and its applications.

Outcome:

Able to recognize different regions for thermodynamics.

Able to explain the concept of thermochemistry.

Able to explain the concept and applications of surface chemistry.

**UNIT- I THERMOCHEMISTRY:**

Internal energy and enthalpy changes in chemical reactions. Relation between  $E$  and  $H$ . Relation between enthalpy of reaction at constant volume ( $q_v$ ) and at constant pressure( $q_p$ ). Thermochemical equations, laws of thermochemistry — Hess's law and its applications. Standard states — standard enthalpy of formation, enthalpy of combustion, enthalpy of neutralization, integral and differential heats of solution and dilution. Bond dissociation energy — its calculation from thermobhemical data, temperature dependence of  $H$  - Kirchoff s equation.

**UNIT - II SECOND LAW OF THERMODYNAMICS:**

Need for the law, different statements of the law- concept of entropy. Entropy as a state function —entropy as a function of P,V and T. Entropy changes in phase changes —entropy of mixing. Gibbs and Helmholtz functions. Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities- A and G as criteria for thermodynamic equilibrium and spontaneity — variation of A and G with P,V, T- Gibbs- Helmholtz equation and their applications —Maxwell's relations.

#### UNIT - III

##### APPLICATIONS OF II LAW OF THERMODYNAMICS:

Equilibrium constants and free energy change. Thermodynamic derivation of law of mass action. Equilibrium constants in terms of pressure and concentration —NH<sub>3</sub>, PC<sub>15</sub>, CaCO<sub>3</sub>. Thermodynamic interpretation of LeChatlier's principle. (concentration, temperature, pressure and addition of inert gases). Equilibrium between different phases — system of variable composition —partial molar quantities — chemical potential of component in an ideal mixture — Gibbs - Duhem equation — variation of chemical potential with T,P,S and X(mole fraction). Reaction isotherm — vant Hoff's equation — vant Hoff's isochore - Clapeyron equation and Clausius Clapeyron equation —Applications.

#### UNIT - IV

##### THIRD LAW OF THERMODYNAMICS:

Need for the law. Nernst heat theorem, third law of thermodynamics — statement and concept of residual entropy. Evaluation of absolute entropy from heat capacity data. Exception to third law.(ortho & para hydrogen, CO<sub>2</sub>,N<sub>2</sub>O and ice). Thermodynamic properties of real gases — fugacity — definition, calculation (real gases) and variation of fugacity with temperature, pressure and composition (Duhem-Margules equation).

#### UNIT - V

##### SURFACE PHENOMENA:

Adsorption and free energy reaction relation at interphase — physisorption and chemisorption — potential energy diagram- Lannord-Jones plot— Langmuir, BET isotherm — surface area determination-heats of adsorption, determination — adsorption from solutions — Gibbs adsorption isotherm. Activity and activity coefficient—definitions. experimental determination of activity and activity coefficients of non-electrolytes — activities in electrolytic solutions — determination of activity coefficient of electrolytes by freezing points.

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC54L	Inorganic Qualitative Analysis Lab	0	0	3	3

Analysis of a mixture containing two cations and two anions of which one will be an interfering ion.

Semimicro methods using the conventional scheme with hydrogen sulphide may be adopted.

Cations: Pb, Co, Cd, Fe, Al, Zn, Cu, Ni, Sr, Mg and Sb.

Anions: Sulphide, bromide, chromate, arsenate, fluoride, oxalate, chloride, carbonate and sulphate.

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC55L	Gravimetric Analysis Lab	0	0	3	3

Estimation of:

Barium as barium chromate

Nickel as nickel dimethylglyoxime complex.

Lead as lead chromate.

Calcium as calcium oxalate.

Lead as lead sulphate.

COURSE CODE	COURSE TITLE	L	T	P	C
17114DSC56A	Discipline Specific Elective: I Pharmaceutical Chemistry	5	0	0	4

Aim:

To develop pharmaceutical knowledge to the learners.

Objectives:

Imparting basic knowledge about the drugs.

Developing knowledge about pharmacy.

Learning Outcomes:

Students who graduate with a major in Pharmaceutical Chemistry will be able to:  
Understand the principles of Pharmaceutical Chemistry.

To know the knowledge about antiseptic and anaesthetics.

To have employability.

UNIT I

ALKALOIDS — general methods of extraction from a plant source, colour reaction and detection — morphine and quinine with special reference to structure relationship (SAR) and uses. Chemistry of sulphonamides — sulphapyridine phthalyl sulphathiazole — sulpha furazole and protosil — preparation and uses — vitamins — classification of vitamins — vitamin A, B 1 and B2, ascorbic acid — their synthesis, estimation and uses.

UNIT II

ENZYMES — characteristics — classification — composition and biological functions — composition of blood and blood plasma — analysis of serum proteins — functions of plasma proteins — osmotic regulation — functions of hemoglobin, transport of oxygen and maintenance of pH of blood — analysis of hemoglobin in blood — Rh factor — blood pressure — normal, high and low and to control — diagnostic test for sugar, salt and cholesterol in serum — medically important compounds of Al, P, As and Fe — their preparation and applications.

### UNIT III

SYNTHESIS OF HETEROCYCLICS - drugs derived from — pyridine derivatives — triphenyl amine and mepyramine — quinoline derivatives — chloroquine and primaquine — pyrimidines — urides and barbiturates. Antibiotics — pharmacological action — structural elucidation — synthesis and rises of chloramphenicol and penidillin.

### UNIT IV

ORGANIC DIAGNOSTIC AGENTS — x-ray contrast media (radiopaques) sodium diatrizolate,— evan's blue — indigocarmine — methylene blue — histamine — pentagastrin — xylose and sodium benzoate — clinical estimation of proteins, glucose, urea, blood, cholesterol and hemoglobin — analgesic — classification — narcotic analgesics — morphine and derivatives — totally synthetic analgesic — pethidine and methadones — antipyretic analgesics — salicylic acid derivatives, indolyl derivatives and p-aminophenol derivatives —synthetic — action and uses.

### UNIT V

ANAESTHETICS— preparation and uses of general and local gaseous anaesthetics —ether, vinyl ether, methoxy flourane, halogenated hydrocarbons like chloroform, halothane, trichloroethylene, ethyl chloride, cyclopropane, nitrous oxide. Thiopentane sodium, methohexitone and propanoid- local anahetics- cocaine and its derivatives. Antiseptic and disinfectants- phenols and related compounds, organic mercurials- dyes, cationic surface active agents, chloramine-T, chlorhexidine, diqualinium chloride. Preservatives, antioxidants, coloring, flavoring and sweetening agents, emulsifying agents-and suspending agents- ointment bases- disintegrating agents.

COURSE CODE	COURSE TITLE	L	T	P	C
17114DSC56B	Discipline Specific Elective: I Agricultural Chemistry	5	0	0	4

Aim:

To develop agricultural knowledge to the learners.

Objectives:

Imparting basic knowledge about the soil nature.

Developing knowledge about fertilizers and pesticides.

Learning Outcomes:

Students who graduate with a major in Agricultural Chemistry will be able to:

Understand the principles of Agricultural Chemistry.

To know the knowledge about nutrients and its importance.

To have employability.

UNIT-I

DEFINITION OF SOIL-SOIL composition. Soil Physical properties-soil separates and particle size distribution-soil texture and structure —Bulk density, particle density, pore space, soil air, soil temperature, soil water, soil consistence-significance of physical properties to plant growth. Soil chemical properties — soil colloids —Inorganic colloids — clay minerals — amorphous — Ion exchange reactions —organic colloids — soil organic matter-Decomposition-Humus formation —significance on soil fertility, soil reaction —Biological properties of soil —nutrient availability.

UNIT-II

FERTILIZER — definition-fertilizer recommendation based on soil testing-Nitrogenous fertilizers — Effect of Nitrogen on plant growth and development .Phosphate fertilizers — Effect of phosphorous on plant growth and development.-super phosphate & Bone meal .Potassium fertilizers — function of Potassium on plant growth. Secondary and micronutrient fertilizers — complex and mixed fertilizer- sources. Manufacture, properties and reactions in soils. Biofertilizersnitrogen fixing biofertilizer- rhizobium, azospirillum- Phosphate Mobilizing.

UNIT-III

ORGANIC MANURES —Agricultural, industrial and urban Wastes — preparation of enriched farm yard manures — Zinc enriched organics. Green manures-green leaf manure-bulky organic and concentrated organic manures -compost — enriched farm yard manures, oil cakes, bone meal, fish meal, guano poultry manures- Fertilizer use efficiency —integrated nutrient management. Preparation of slow release fertilizer-compatibility of fertilizers —fertilizers Blending- preparation of different fertilizer mixtures — fertilizer prescription for different soils and crops.

#### UNIT - IV

PEST MANAGEMENT AND CONTROL .PESTICIDES — formulations — emulsifiable concentrate, water miscible liquids, wettable powders, dusts, granules , classification of pesticides — mode of action — characteristics — uses — fate of pesticides in soil and plants — impact of pesticides on environment — safety measures in the analysis of pesticides.

Insecticides — plant products — Nicotine, pyrethrum, rotenone, petroleum oils. Inorganic pesticides — Arsenical fluorides, borates. Organic pesticides — organo chlorine compounds — D.D.T , B.H.C, methoxychlor, chloredane, endosulfon.

#### UNIT - V

FUNGICIDES-inorganic-sulphur compounds-copper compounds- Mercuric compounds-organic- dithio carbamates – dithane M.bordeaux mixture Herbicides: Inorganic herbicides- Arsenical compounds Boron compound- cyanamide- cyanides and thiocyanates, chlorates and sulphamates. Organic herbicides & Nitro – compounds- chlorinated compound – urea herbicides, Alachlor.

COURSE CODE	COURSE TITLE	L	T	P	C
17120SEC05AL	Package Lab - V	0	0	2	1

Package Lab -V ( PHOTOSHOP)

Design a Visiting card.

Design a Identity card.

Design a letter pad with LOGO.  
 Create an advertisement for News paper and Poster creation.  
 Design a calendar with pictures.  
 Design a Magazine.  
 Create a front page for a Magazine  
 Design a CD Cover.

URSE CODE	COURSE TITLE	L	T	P	C
17111SEC05L	Communicative English - V	0	0	2	1

Aim:

To develop communicative skills

Objective:

To develop vocabulary

To comprehend meaning from context

To involve in a dialogue

To note the important points from the text.

To write a letter

To understand the subject verb agreement

To teach the different genders

Outcome:

Develop communicative skills

UNIT –I

Correct the spelling mistakes

Comprehension

UNIT –II

Find the odd one out

Picture description

UNIT –III

Abbreviations

Note making

UNIT –IV

Gender

Dialogue writing

UNIT –V

Technical Communication	-Meenakshi Sharma &
Sangeetha Sharma	

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC61	Inorganic Chemistry - II	5	1	0	5

#### Aim:

To develop knowledge about inorganic metals and its characteristics.

#### Objective:

To know the differences between transition elements and main group elements.

To know about ligand types and their different methods of coordination.

To know about isomerism in transition metal complexes

#### Outcome:

Able to write electronic configuration of given atomic number.

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

#### UNIT I

**NUCLEAR CHEMISTRY:** Introduction—composition of nucleus and nuclear forces, nuclear stability — o/p ratio, mass defect, binding energy, packing fraction and magic numbers, shell and drop models. Isotopes —detection and separation. Isotopic constitution of elements and whole number rule-deviation of atomic weights from whole numbers-isobars, isotones and isomers.

#### UNIT — II

**RADIOACTIVITY:** Discovery, detection and measurements (Wilson cloud chamber). Radioactive emanations-disintegration theory — decay — group displacement law — rate of disintegration — half-life and average life — Radioactive series. Nuclear transformations — uses of projectiles, nuclear reactors.

Applications of radio isotopes — carbon dating — radioactive waste disposal - radiolysis of water and hydrated electron.

#### UNIT — III

X-RAY CRYSTALLOGRAPHY: Solid state-difference between point groups and space groups — screw axis — glide planes. Crystal symmetry elements-crystal classes-crystal systems-unit cell, Bravais lattices, Asymmetric unit space group-equivalent positions — relations between molecular symmetry and crystallographic symmetry — basic concepts. The concept of reciprocal lattice and its application. X-ray diffraction by single crystal — structure factor — systematic absences. Determination of space group — heavy atom method. Neutron diffraction — elementary treatment. Comparison of X-ray diffraction, electron diffraction — basic principles.

#### UNIT — IV

SOME SPECIAL CLASSES OF COMPOUNDS: Clathrates-examples and structures. Interstitial compounds and non-stoichiometric compounds. Silicones-composition, raw materials, manufacture, structures, properties and uses. Metal alkyls, co-ordination polymers and phosphonitrilic polymers. Silicates — classification into discrete anions, one, two and three dimensional structures with typical examples. Composition, properties and uses of beryl, asbestos, talc, mica, zeolites and ultramarines.

#### UNIT-V

FOSSIL FUELS:- Varieties of coal and petroleum- petroleum refineries in India. Gaseous fuels-natural, gobar, coal, water, semiwater and producer gases, liquefied petroleum gas (LPG). Safety matches, fire-works and explosives, paints and varnishes. Effluents and their treatment (dye, cement, tannery, distillery units).

COURSE CODE	COURSE TITLE	L	T	P	C
17114SEC62	Organic Chemistry – II	5	1	0	5

Aim: To study about the organic and bioorganic molecules and its characteristics.

Objective:

Structural theory, Lewis structures, isomers, basic resonance theory.

Atomic, molecular, and hybrid orbitals, covalent bonding, shapes of molecules.

Polarity of molecules and bonds.

Outcome:

Students will have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in Organic Chemistry.

Able to study of biomolecules and its activity.

UNIT — I

**NITROCOMPOUNDS AND AMINES** : Conversion of nitrobenzene to ortho-, para- and meta- dinitrobenzenes. TNT - aromatic nitro compounds —reduction in neutral, acidic and alkaline media. Relative basic characters of aliphatic and aromatic amines. Ring substitution in aromatic amines, diazotisation and its mechanism. Synthetic applications of diazonium salts, diazomethane and diazoacetic ester — preparation, structure and their synthetic uses. Phenylene diamines, sulphanilic acid, sulphanilamide, saccharin, chloramine-T, diamide — preparation, properties and uses of urea and thiourea.

UNIT — II

**AMINOACIDS AND PROTEINS**: Classification of aminoacids. Essential and non-essential amino acids. Preparation of L — amino acids, properties and reactions. Zwitter ions, isoelectric points, peptide synthesis. Structure determinations of polypeptides - end group analysis. Proteins-classification based on physical and chemical properties based on physiological functions. Primary and secondary structures of proteins. Helical and sheet structures (elementary treatment only) - denaturation of proteins. Nucleic acid-structures of nucleobases — adenine, guanine, thiamine, uracil and cytosine-nucleosides- nucleotides- polynucleotides - types of nucleic acids — DNA and RNA biological functions.

### UNIT—III

**CARBOHYDRATES:** Classification, constitution of glucose and fructose. Reactions of glucose and fructose - oxazone formation, mutarotation, and its mechanism, cyclic structure, pyranose and furanose forms. Determination of ring size, formulas, configuration of monosaccharide. Epimerisation, chain lengthening and chain shortening

### UNIT—IV

**MOLECULAR REARRANGEMENTS:** Classification (anionotrophics, cationotrophic) Intermolecular and intramolecular. Pinacol- Pinacolone rearrangement (Mechanism, Evidences for carbonium ion intermediate formation — Migratory aptitude) Beckmann, Benzidine, Hofmann, Curtius, Benzilic acid rearrangements (mechanisms only) Claisen Rearrangement (sigmatropic rearrangement) — Evidence for intramolecular nature and allylic carbon attachment paraclaisen rearrangement, cope and oxycope rearrangements, Fries rearrangement (Two mechanisms).

### UNIT — V

**NATURAL PRODUCTS:** Terpenes, geraniol, nerol, menthol, and  $\alpha$  - terpinol Alkaloids — general and methods of isolation and general methods of structural determination of coniine, piperine and nicotine. Vitamins — thiamine, riboflavin, pyridoxine and ascorbic acid occurrence and biological importance. Structural elucidations of pyridoxine and ascorbic acid.

COURSE CODE	COURSE TITLE	L	T	P	C
	1735				

**Aim:**

To know about the electrical properties and spectroscopy characteristics of molecules.

**Objective:**

To understand the shapes of different orbitals.

To understand different principles for filling electrons.

To understand how to draw energy diagrams.

**Outcome:**

Able to write electronic configuration of given atomic number.

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

**UNIT - I**

**ELECTRICAL CONDUCTANCE:** Electrical transport and ohm's law, conduction in metals and in electrolyte solutions. Specific conductance and equivalent conductance, measurement of equivalent conductance using Kohlrausch's bridge - variation of equivalent conductance with concentration - migration of ions - Kohlrausch's law and its applications. Arrhenius theory of electrolytic dissociation and its limitations. Weak and strong electrolyte Ostwald's dilution law, its uses and limitations. The elementary treatment of the Debye-Huckel-Onsager equation for strong electrolytes. Evidence for ionic atmosphere. The conductance at high fields (Wien effect) and high frequencies (Debye-Falkenhagen effect). Transport number and Hittorf's rule - determination by Hittorf's method and moving boundary method. Application of conductance measurements, determination of  $\alpha$  of a strong electrolyte and acids, determination of  $K_a$  of acids, determination of solubility product of a sparingly soluble salt, common ion effect and conductometric titrations.

**UNIT - II**

**ELECTROKINETIC'S PHENOMENA:** Theories of electrical double layer - electrical double layer potential — theory of multiple layers at electrode and electrolyte interface — double layer capacity — electrokinetic's phenomena (zeta potential, electro osmosis, sedimentation potential).

**UNIT- III**

**FAST REACTION TECHNIQUES:** Flow methods (continuous and stopped flow methods), relaxation methods (T and P jump methods), pulse techniques (pulse radiolysis, flash photolysis, shock tube method), molecular beam

method — lifetime method.

#### UNIT- IV

**EQUILIBRIA IN ELECTROCHEMICAL CELLS:** Electrolytic and galvanic cells, reversible and irreversible cells, conventional representation of electrochemical cells. Electromotive force of a cell and its measurements. Computation of cell, e.m.f. calculation of thermodynamic quantities of cell reactions ( $\Delta G$ ,  $\Delta H$ ,  $\Delta S$  and  $K$ ). Applications of Gibbs - Helmholtz equation. Types of reversible electrodes — gas/metal ion, metal/metal ion, metal insoluble salt/anion and redox electrodes, electrode reactions. Nernst equation — derivation of cell E.M.F. and single electrode potentials. Standard hydrogen electrode — reference electrodes — standard electrode potentials — sign conventions — electrochemical series and its significance. Concentration cell with and without transport, liquid junction potential. Application of concentration cells — valency of ions, solubility product and activity co-efficient, potentiometric titrations. Determination of pH using hydrogen, quinhydrone and glass electrode. Determination of pK<sub>a</sub> of acids by potentiometric methods. Corrosion — general theory — electrochemical theory — passivity and prevention of corrosion.

#### UNIT- V

**MOLECULAR SPECTROSCOPY:** Definition of spectrum, electromagnetic radiation, interaction of electromagnetic radiation with molecules and quantization of different forms of energies in molecules (translational, rotational, vibrational and electronic).

**MICROWAVE SPECTROSCOPY:** Theory of microwave spectroscopy — condition — molecular rotation — selection rules. Effect of isotopic substitution, calculation of moment of inertia and bond length of diatomic molecules.

COURSE CODE	COURSE TITLE	L	T	P	C
17112DSC64A	Discipline Specific Elective:II Nano Science	4	0	0	4

Aim: To study about the importance and applications of Nano science.

Objective:

To foundational knowledge of the Nanoscience and related fields.

To make the students acquire an understanding the Nanoscience and Applications.

To help them understand in broad outline of Nanoscience.

Outcome:

Learn about the background on Nanoscience

Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment

Apply their learned knowledge to develop Nanomaterial's.

UNIT I:

#### INTRODUCTION AND HISTORY

Background to nanotechnology - scientific revolutions –atomic structure-atomic size – bottom up/top down nanotechnology-chemical reactivity-Incremental nanotechnology-Evolutionary nanotechnology-Radical nanotechnology-Emergence of nanotechnology-Challenging in nanotechnology-Misnomers and misconception of Nanotechnology.

UNIT II:

#### EVOLUTION AND GROWTH OF NANOSYSTEM

Basic problems and limitations - opportunities of nano scale -evolution of band structures and Fermi surface. Nanoparticles through homogeneous and heterogeneous nucleation-Growth controlled by surface and diffusion process-Oswald ripening process - influence of reducing agents-solid state phase segregation- grain growth and sintering precipitation in solid solutionhume rothery rule.

UNIT III:

#### NANOMATERIALS AND CLASSIFICATIONS

Carbon Nanotubes (CNT) - Metals (Au, Ag, Pd, Cu) - Metal oxides (TiO<sub>2</sub>, CeO<sub>2</sub>, ZnO, MgO) - Semiconductors (Si, Ge, CdS, ZnSe). Classifications of nanomaterials-zero dimensional-onedimensional-two dimensional-three dimensional nanostructures- Quantum dots-Quantum wireQuantum well-semiconductors and ceramics.

#### UNIT IV: SPECIAL NANOMATERIALS

Carbon fullerenes-fullerene derived crystals- carbon nanotubes. Micro and Mesoporous material Ordered mesoporous materials-Random mesoporous materials-crystalline microporous materials.Core/Shell structures-Metal oxide structures-Metal polymer structures-Intercalation compounds-nanograined materials.

#### UNIT V: MATERIALS STRUCTURE AND PROPERTIES

Space lattice and unit cells, crystal system, Symmetry operation, Structures of common metallic, Semiconductor ceramic and superconductor materials, Miller Indices, Packing fractions, Formation of dangling bonds-atom like behavior of nanomaterials-physicochemical properties. Optical properties of nanomaterials-semiconductor-metal nanoparticles-Electrical and electronic properties Thermal properties-Ferro electric properties-mechanical and magnetic properties.

COURSE CODE	COURSE TITLE	L	T	P	C
17112DSC66A	Discipline Specific Elective:II Polymer Chemistry	4	0	0	4

Aim:

To develop knowledge about polymers to the learners.

Objectives:

Imparting basic knowledge about the different types of polymers.

Developing knowledge about production and advantages of polymers.

Learning Outcomes:

1739

Students who graduate with a major in Polymer Chemistry will be able to:  
Understand the principles of Polymer Chemistry.

To know the knowledge about various techniques of polymers and its importance.

To have employability.

#### UNIT — I

Basic concepts- an introduction of polymers and macromolecules. Natural and synthetic polymers. Molecular forces and chemical bonding polymers. Classification of polymers-addition and condensation polymers. General methods of preparation of polymers. Polymerisation through functional groups, multiple bonds and ring opening. Polymerisation techniques- bulk, solution, suspension and emulsion polymerization.

#### UNIT—II

Copolymerisation- homo and copolymers. Block copolymers and graft copolymers. Kinetics of free radical and cationic polymerization reactions. Mean kinetic chain length, degree of polymerization. Inhibition and retardation.

#### UNIT — III

Thermoplastic and thermosetting resins. Constituents of plastics, fillers, dyes, pigments, plasticizers, lubricants and catalysts. Acrylics, polyvinyl and cellulose derivatives of thermoplastic resins. Silicone resins, epoxy resins, phenolic resins and alkyl resins of thermosetting resins.

#### UNIT — IV

Nylon 66, terylene, viscose rayon, polyesters —definition and polymer requirement. Polymers of acrylic acid, methacrylic acid and poly acrylates.

#### UNIT — V

Polymer structure- linear, branched and cross-linked polymers- isotactic, syndiotactic and atactic. Properties- melting point, glassy state, glass transition temperature. Thermal analysis of polymers, thermal high energy radiation, oxidative and hydrolytic polymer degradation.

Course Code	Course Title	L	T	P	C
17211OEC	Open Elective -Writing for the Media	4	0	0	2

Aim:

To equip students to enter the realm of mass media.

Objectives:

To help students to understand the intricacies of mass media

To know about the barriers to mass communication

To understand the function of mass media

To learn the different kinds of news

To enhance the different kinds of writing for media

Outcome:

Understand the intricacies of mass media

#### UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

#### UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluating news.

#### UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

#### UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

#### UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

Course Code	Course Title	L	T	P	C
17212OEC	Open Elective – Applicable Mathematical Techniques	4	0	0	2

Aim:

To acquaint with the basic concept of Interpolation.

Objectives:

Understand the basic concept of Interpolation.

To enhance the knowledge about Assignment Problems, Replacement Problems,  
 Decision Analysis and Game Theory.

Outcomes:

Students using OR techniques in business tools for decision making

Students develop Assignment problem and Replacement problems

Understand the concept of decision analysis and game theory

Students gets the knowledge about interpolation

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

References

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Course Code	Course Title	L	T	P	C
17213OEC	Open elective Biomedical Instrumentation	4	0	0	2

Aim:

To understand the concepts and application of electronic Instrumentation in the Medical field.

Objective:

Interpret technical aspects of medicine

Solve Engineering Problems related to medical field

Understand medical diagnosis and therapy

Outcomes:

To familiarize students with various medical equipments and their technical aspects

To introduce students to the measurements involved in some medical equipment.

Ability to understand diagnosis and therapy related equipments

Understanding the problem and ability to identify the necessity of an equipment to a specific problem

UNIT – I: Bio Electric Signals And Electrodes

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

UNIT – II: Recording System And Recorders

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

UNIT – III: Measurement And Analysis Techniques

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

UNIT – IV: Magnetic Resonance And Ultrasonic Imaging Systems

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

## UNIT – V: Advanced Bio Medical Systems

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

### Books for Study

R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)

Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

### Book for Reference

M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
17214OEC	Open Elective-Green Chemistry	4	0	0	2

### Aim:

To reduce the soil and water pollution in environment.

### Objectives:

To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

### Outcomes:

To understand the environmental status and evolution.

- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antiobiotics.

### Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

### Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals

of Green Chemistry - The roots of innovation – Limitations.

### Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Trends.

### Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

### Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

### References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	Course Title	L	T	P	C
17215OEC	Open elective-Bio-Analytical Techniques	4	0	0	2

### Aim:

Bioanalysis is a sub-discipline of analytical chemistry covering the quantitative measurement of xenobiotics (drugs and their metabolites, and biological molecules in unnatural locations or concentrations) and biotics (macromolecules, proteins, DNA, large molecule drugs, metabolites) in biological

### Objectives

To teach students on various techniques used for the assessment of various diseases and research studies.

To teach the good laboratory practice required to execute the learned techniques.

### Outcomes

The students learn various techniques and acquire the skills to use appropriate methods.

The students acquire the good laboratory practices.

### Unit I

Separation techniques – Solvent extraction – principles and applications of soxhlet

extraction and super critical fluid extraction; Distillation – Theory of distillation, method and application of fractional and steam distillation; Techniques of sublimation and its applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hassel balch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

#### Unit II

Chromatography – Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC .

#### Unit III

Centrifugation – Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges. Radioisotopes – Radioactivity, types, law of radioactivity, decay processes, units of radioactivity; Applications of radioisotopes in biology.

#### Unit IV

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

#### Unit V

Spectroscopy – Principles and components of instruments and applications of Colorimeter, Spectrophotometer, Fluorescence spectrometry, AAS and Flame photometer. Principles and applications of Raman spectroscopy, IR spectrometry, NMR and ESR.

#### References:

Biophysical Chemistry – Nirmalendu nath

Biophysical Chemistry – Upadhyay, Upadhyay and nath.

Principles and techniques of practical Biochemistry – Keith Wilson and Walker.

Principles of Instrumental analysis – B.K.Sharma.

Instrumental analysis – Chatwall Anand

Course Code	Course Title	L	T	P	C
17220OEC	Open Elective-Internet & Web Design	4	0	0	2

Aim :

To provide the conceptual and technological developments in the field of internet and web designing with the emphasis on comprehensive knowledge of internet.

Objectives:

To understand the web designing and web development with the knowledge of internet.

To learn the overview of the design of HTML & Scripting Languages.

To learn the use of website and internet design and development.

Outcomes:

Acquire knowledge about functionalities of Internet

Acquire knowledge about functionalities of world wide web

Explore markup languages features and create interactive web pages using them

Learn and design Client side validation using scripting languages

Acquire knowledge about Open source JavaScript libraries

Able to design front end web page and connect to the back end databases.

## UNIT I

Internet, Growth of Internet, Owners of the Internet, Anatomy of Internet, ARPANET and Internet history of the World Wide Web, basic Internet Terminology, Net etiquette. Internet Applications – Commerce on the Internet, Governance on the Internet, Impact of Internet on Society – Crime on/through the Internet. Connectivity types: level one, level two and level three connectivity, Setting up a connection: hardware requirement, selection of a modem, software requirement, modem configuration, Internet accounts by ISP: Telephone line options, Protocol options, Service options, Telephone line options – Dialup connections through the telephone system, dedicated connections through the telephone system, ISDN, Protocol options – Shell, SLIP, PPP, Service options – E-mail, WWW, News Firewall

## UNIT II

Network definition, Common terminologies: LAN, WAN, Node, Host, Workstation, bandwidth, Interoperability, Network administrator, network security, Network Components: Servers, Clients, Communication Media, Types of network: Peer to Peer, Clients Server, Addressing in Internet: DNS, Domain Name and their organization, understanding the Internet Protocol Address. Network topologies: Bust, star and ring, Ethernet, FDDI, ATM and Intranet.

## UNIT III

Email Networks and Servers, Email protocols –SMTP, POP3, IMAP4, MIME6, Structure of an Email – Email Address, Email Header, Body and Attachments, Email Clients: Netscape mail Clients, Outlook Express, Web based E-mail. Email

encryption- Address Book, Signature File.

#### UNIT IV

HTML page structure, HTML Text, HTML links, HTML document tables, HTML Frames, HTML Images, multimedia - ASP, VB Script, JAVA Script, JAVA and Front Page, Flash

#### UNIT V

Overview, SGML, Web hosting, HTML. CGL, Documents Interchange Standards, Components of Web Publishing, Document management, Web Page Design Consideration and Principles, Search and Meta Search Engines, WWW, Browser, HTTP, Publishing Tools Overview of Internet Security, Firewalls, Internet Security, Management Concepts and Information Privacy and Copyright Issues, basics of asymmetric cryptograms.

Text Book

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

Course Code	Course Title	L	T	P	C
17261OEC	Open Elective-Insurance Services	4	0	0	2

Aim:

To look after the interests of people from uncertainty by providing certainty of compensation.

Objectives:

To learn the fundamental concepts and principles of insurance.

To explain the nature of different insurance policies, insurance contracts and

settlement of claims.

Outcome:

The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

UNIT – I

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

UNIT – II

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

UNIT – III

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

UNIT – IV

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

UNIT – V

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

Course Code	Course Title	L	T	P	C
17280OEC	Open Elective-Counselling Psychology	4	0	0	2

Aim:

To acquaint with counselling and its process

Objectives:

To learn the fundamental concepts of counselling.

To know the nature of different determinates.

To familiarize with the approaches of counselling

Outcome:

Learn counselling and its process

## UNIT I

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

## UNIT II

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

## UNIT III

Approaches to Counselling

Counselling Process

## UNIT IV

Psychological Testing

Diagnosis

## UNIT V

Educational Counselling

Family Counselling

COURSE CODE	COURSE TITLE	L	T	P	C
17120SEC06AL	Package Lab-VI	0	0	2	1

Drawing and painting original art in flash.

Creating simple objects using flash.

Creating a frame-by-frame animation techniques.

Develop a program for animation with motion Twenning.

Develop a program for animation with shape Twenning.

Develop a program for adding sound to your movies.

Create a simple Banner.

Create a simple animations techniques movie clip and graphic symbols.

COURSE CODE	COURSE TITLE	L	T	P	C
17111SEC06L	Communicative English Lab - VI	0	0	2	1

Aim:

To develop communicative skills

Objectives:

To extract the main ideas from a text

To understand the meaning of text

To expand an idea

To shorten a text

To develop vocabulary

To enhance writing skills

To write simple, compound and complex sentences

Outcome:

Develop communicative skills

UNIT –I

Jumbled words, Paragraph writing

UNIT –II

Prefix and suffix, Precise writing

UNIT –III

Eponyms, Summarizing

UNIT –IV

Compound words, Simple, Compound and Complex

UNIT –V

Homophones, Essay writing

**M.Sc. Graduate Attributes**

- Domain knowledge
- Investigative
- Critical thinking
- Resourceful and Responsible
- Effective Communication
- Ethical and Moral values

**M.Sc. Programme Educational Objective – PEO**

- PEO1-To demonstrate broad knowledge of descriptive Chemistry.
- PEO2-To impart the basic analytical and technical skills to work effectively in the various fields of chemistry.
- PEO3- To motivate critical thinking and analysis skills to solve complex chemical problems, e.g., analysis of data, synthetic logic, spectroscopy, structure and modeling, team-based problem solving, etc.
- PEO4-To demonstrate an ability to conduct experiments in the above sub-disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling methods.
- PEO5-To demonstrate the ability to perform accurate quantitative measurements with an understanding of the theory and use of contemporary chemical instrumentation, interpret experimental results, perform calculations on these results and draw reasonable, accurate conclusions.
- PEO6-To develop skills in quantitative modeling of static and dynamic chemical systems.
- PEO7-To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
- PEO8-To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment, and modern instrumentation.

## **M.Sc Programme Outcome –PO**

- PO1-Think critically and analyze chemical problems.
- PO2-Present scientific and technical information resulting from laboratory experimentation in both written and oral formats.
- PO3-Work effectively and safely in a laboratory environment.
- PO4-Use technologies/instrumentation to gather and analyze data.
- PO5-Work in teams as well as independently.
- PO6-Apply modern methods of analysis to chemical systems in a laboratory setting.

**SEMESTER – I**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214SEC11	Organic Chemistry – I	5	0	0	5

**Aim:**

- To acquaint students with learning Organic Chemistry.

**Objective:**

- To sensitize students to learn Important components of Organic Chemistry.

**Outcome:**

Having successfully completed this module you will be able to:

- Recognise many functional groups and their reactivity
- Set up glassware and apparatus to conduct experiments in Organic Chemistry.
- Interpret data from a range of physical techniques to characterise Organic compounds.
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis

**Unit - I****Bonding, Structure & Aromaticity**

Hybridization with reference to carbon compounds-Shapes of simple organic molecules-bond angle and bond length in organic molecules. Electronegativity of atoms and groups. Dipole moments of molecules-Applications of dipole moment to study the properties of organic molecules. Polarity of solvents. Hydrogen bonding-Inter and Intramolecular hydrogen bonding. **Electronic Effects**-Inductive, resonance and hyperconjugative effects and their influence-rules of resonance. Tautomerism. Steric effects. Aromatic character-Huckel's rule and applications-Craig's rule and applications-Consequences of aromaticity – non-alteration in bond length-Resonance energy from heat of hydrogenation, heat of combustion and Huckel's MO calculation, antiaromatic compounds.

## **Unit - II**

### **Essentials of Organic Stereochemistry**

Principles of symmetry-concept of chirality. Molecular symmetry and chirality. Newmann, Sawhorse, Fischer and Wedge representations and their interconversions. Types of molecules exhibiting optical activity. Configurational nomenclatures of acyclic and cyclic molecules: *cis-trans* and *E,Z* – and *D, L; R, S*; erythro and threo; *syn* and *anti*; *endo* and *exo*. Stereochemistry of molecules with axial chirality-atropisomerism – biphenyls-allenes, spiranes and analogues. Helicity and chirality. Topocity and prostereoisomerism- Diastereotopic ligands and faces. Resolution –methods of Resolution. Conformations six membered ring systems and their optical activity. Quantitative correlation between conformation and reactivity- Winstein-Eliel equation

## **Unit - III**

### **Reactive Intermediates Methods of Determining Reaction Mechanisms**

Carbocations, Carbanions, Carbenes and Nitrenes – Generation and stability of reactive intermediates. Correlation of reactivity with structure of reactive intermediates. Free radicals – Configurations – Identification by chemical and spectral methods – Free radical halogenation - NBS. Types of reactions: Homolytic and Heterolytic cleavages of bonds. Thermodynamic and kinetic aspects, Hammond's postulate, isotope effects. Energy profile diagrams –Intermediate versus transition state, Product analysis and its importance, Crossover experiments, Kinetic methods, Stereochemical studies, Isotopic and substituent effects

## **Unit - IV**

### **Nucleophilic Substitutions in Aliphatic and Aromatic Substrates**

SN1 and SN2 mechanisms-effect of substrate structure, leaving group, attacking nucleophile and solvent polarity-neighbouring group participation-substitution at vinylic and allylic carbons and reactivity. Ambient nucleophiles and substrates. Hydrolysis of esters-mechanisms. Selected reactions-Von-Braun, Dieckmann, Williamson. SNAr mechanism- SN1 (Aromatic) mechanism with evidences - Benzyne mechanism - Effect of substrate structure, leaving group, attacking nucleophile and solvent.

## **Unit -V**

### **Heterocycles**

Nomenclature of heterocycles having not more than two hetero atoms such as oxygen, nitrogen and sulphur. Synthesis, reactivity and applications of the following heterocycles: Pyrazoles, Oxazoles, Pyridazines, Pyrimidine and Pyrazines.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC12	Inorganic Chemistry – I	5	0	0	4

### Aim:

- To acquaint students with learning Inorganic Chemistry

### Objective:

- To learn Important Concepts of Inorganic Chemistry

### Outcome:

- Having successfully completed this module you will be able to:
- .
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis

## Unit - I

**18 electron rule - EAN rule** - theories of coordination compounds - valence bond theory - crystal field theory - splitting of d orbitals in different symmetries - crystal field stabilization energy - factors affecting the magnitude of  $10 Dq$  - evidence for crystal field stabilization - spectrochemical series - site selection in spinels - tetragonal distortion from octahedral symmetry - Jahn-Teller distortion - molecular orbital theory - octahedral complexes - tetrahedral and square planar complexes - pi bonding and molecular orbital theory - experimental evidence for pi bonding.

## **Unit - II**

**Term states of dn ions** - electronic spectra of coordination compounds - selection rules - band intensities and band widths - energy level diagrams of Orgel and Tanabe - Sugano - spectra of  $Ti^{3+}$ ,  $V^{3+}$ ,  $Ni^{2+}$ ,  $Cr^{3+}$ ,  $Co^{2+}$ ,  $Cr^{2+}$  and  $Fe^{2+}$  - calculation of  $10Dq$  and  $B$  for  $V^{3+}$  (oct) and  $Ni^{2+}$  (oct) complexes.

Magnetic properties of coordination compounds - change in magnetic properties of complexes in terms of spin orbit coupling - temperature independent paramagnetism - spin cross over phenomena.

## **Unit - III**

**Substitution reactions in square planar complexes** - the rate law for nucleophilic substitution in a square planar complex - the trans effect - theories of trans effect - mechanism of nucleophilic substitution in square planar complexes - kinetics of octahedral substitution - ligand field effects and reaction rates - mechanism of substitution in octahedral complexes - reaction rates influenced by acid and bases - racemization and isomerization - mechanisms of redox reactions - outer sphere mechanisms - excited state outer sphere electron transfer reactions - inner sphere mechanisms - mixed valent complexes.

## **Unit - IV**

**Structure of coordination compounds** with reference to the existence of various coordination numbers - complexes with coordination number two - complexes with coordination number three - complexes with coordination number four - tetrahedral and square planar complexes - complexes with coordination number five - regular trigonal bipyramidal and square pyramidal - site preference in trigonal bipyramidal complexes - site preference in square planar complexes - isomerism in five coordinate complexes - coordination number six - distortion from perfect octahedral symmetry - trigonal prism - geometrical isomerism in octahedral complexes - coordination number seven and eight.

## **Unit - V**

**Inorganic chains** - rings - cages and clusters - catenation - heterocatenation - intercalation chemistry - one dimensional conductor - isopolyanions - heteropolyanions - borazines - phosphazenes - phosphazene polymers - ring compounds of sulphur and nitrogen - homocyclic inorganic systems - cages - boron cage compounds - metal clusters - dinuclear clusters - trinuclear clusters - tetranuclear clusters - hexanuclear clusters - structural prediction of organometallic clusters.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC13	Physical Chemistry – I	5	0	0	4

### Aim:

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry .

### Objective:

- To learn the importance of Physical Chemistry.

### Outcome:

- Having successfully completed this module you will be able to:

- Determine rate constants and half-life for 0, 1st and 2nd order reactions from experimental datasets.
- Understand and apply the Boltzmann distribution and its effect on the observed spectra; integrate most functions encountered in chemical practice.
- Solve separable first-order ordinary differential equations.

## **UNIT - I**

### **Classical Mechanics**

Symmetry of space and its relation to conservation laws-Conservation theorems - conservation of linear momentum, angular momentum and energy-Equations of motion - Newtonian, Lagrangian, Hamiltonian- Definition of classical mechanics, quantum mechanics and relativistic mechanics- Assumptions of classical mechanics. Classical wave equation- Conversion of classical wave equation into Schrodinger wave equation- Failure of Classical mechanics-Black body radiation-Photoelectric effect-Heat capacity of substances-Hydrogen atom spectrum.

## **UNIT- II**

### **Mathematics for Quantum Chemistry**

Functions - definition, classification-Linearly dependent and independent functions, odd and even functions-Inner product - normalization - orthogonality - orthonormal functions-Kronecker delta - Eigen functions - need for normalization. Operators - Linear, angular momentum, energy operators-Linear and non-linear operators. Hermitian operators and their properties- Proof for Hermiticity of linear, angular, position and Hamiltonian operators-Commutator of operators-Commutation relation among angular momentum operators  $L_x, L_y, L_z$ - Vectors - vector space - Euclidean space, Hermitian space, Hilbert space.

## **UNIT - III**

### **Basic Quantum Chemistry**

Wave - particle dualism-Compton effect-Uncertainty principle and its applications-Postulates of quantum mechanics-Setting up Schrodinger wave equation and solving for particle in a 1D and 3D box, Harmonic oscillator, Rigid rotor, Hydrogen atom-Hydrogen atomic orbitals-Analytical and graphical representations-Radial probability distribution function-Orthogonality of 1s, 2s, 2p orbitals- Many electron atom – one electron orbital and one electron potential, Pauli's exclusion principle, Slater's determinant.

## **UNIT -IV**

### **Fundamentals of Statistical Thermodynamics**

Permutations and combinations-Combinatory rule – probability theorems. Microstates, macrostates-Methods of counting microstates of distinguishable and indistinguishable particles-Heat capacity of solids-Einstein and Debye models-Maxwell-Boltzmann statistics-Phase space-Thermodynamic probability-Statistical equilibrium. Derivation of

M.B. statistics-Relationship between entropy and probability-Statistical meaning of third law of thermodynamics.

## UNIT -V

### Applications of Statistical Thermodynamics

Partition functions -Translational, rotational and vibrational partition functions of diatomic molecules-Translational, rotational and vibrational partition functions of polyatomic molecules-Electronic partition function-Derivation of thermodynamic quantities E, S, A, H, G, K and Cp, Cv using partition function-Sackur-Tetrode equation- Quantum statistics. Bose Einstein statistics-Behaviour of helium at low temperature-Fermi Dirac statistics.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC14L	Organic Chemistry Lab – I	0	0	5	3

**Aims:** The organic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecturebased part of the course. The students will be introduced to key synthetic techniques and will regularly employ spectroscopic techniques to examine the outcome of experiments.

**Objectives:** To perform seven experiments that have been divided into 3 topics:

Functional group interconversions, carbon-carbon bond formation / enolate chemistry, and electrophilic aromatic substitution. To take part in spectroscopy workshops that will demonstrate further topics in spectroscopy and the use of spectroscopic techniques in the characterisation of organic compounds. To learn new synthetic techniques: distillation under reduced pressure, reactions involving continuous removal of water and preparative chromatography. To gain experience in the identification and characterisation of unknown products using  $^1\text{H}$  NMR spectroscopy,  $^{13}\text{C}$  NMR spectroscopy, IR spectroscopy and mass spectrometry. To introduce the concept of multi-step organic synthesis.

### ORGANIC CHEMISTRY LAB – I

#### Qualitative analysis of an organic mixture containing two components.

- Pilot separation
- Bulk separation
- Analysis
- Derivatization

#### Preparation of Organic compounds (Single stage)

- Glucose pentaacetate from glucose (acetylation)
- Resorcinol from resorcinol (acetylation)
- Benzophenone oxime from benzophenone (addition)
- p*-Benzoquinone from hydroquinone (oxidation)
- Phenyl-azo-2-naphthol from aniline (diazotization).

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC15L	Inorganic Chemistry Lab – I	0	0	5	3

#### Aims:

The inorganic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture-based part of the course. To equip students with the basic skills and expertise required to carry out

careful and precise procedures in the modern practical chemistry laboratory whilst providing experiments that illustrate and support the lecture course. To train students in the art of good scientific report writing and in the use of spectroscopic techniques for the structural elucidation of inorganic compounds. To encourage student to become more aware of the risks and hazards associated with careful laboratory work and to assess risks and methods for minimizing them.

### **Objectives:**

#### **Analytical Experiments:**

(1) To be familiar with the use of pipettes, burettes and analytical balances. To be able to transfer quantitatively liquids and solids.

(2) To be familiar with the techniques of gravimetric analysis, complexometric titration, colorimetry and atomic absorption spectrometry for the analysis of inorganic compounds.

(3) To learn about gases in the environment and how to analyse for concentrations of gas components via spectrophotometry and IR spectroscopy. In modern analytical chemistry instrumental methods are replacing traditional titration and gravimetric methods. Nevertheless, a good grasp of the basic techniques is essential in all forms of instrumental analysis.

Among these techniques are:

- (a) the ability to make up a standard solution
- (b) the ability to make careful measurements
- (c) an appreciation of errors and significant figures.

## **INORGANIC CHEMISTRY LAB – I**

1. Qualitative analysis: Qualitative analysis employing semi-micro methods and spot tests of mixtures of common cations and ions of the following less familiar elements. Molybdenum, tungsten, selenium, tellurium, cerium, thorium, titanium, zirconium, vanadium, uranium and lithium.

2. Colorimetry: Colorimetric estimations of copper, nickel, iron and chromium using photoelectric colorimeter.

3. Industrial analysis: (i) Analysis of two of the following alloys: brass, bronze, stainless steel, solder type metal. (ii) Analysis of any one of the following: cement, glass, ultramarine.

4. Titrimetry: Complexometric titrations involving estimations of calcium, magnesium, nickel, zinc and hardness of water.

5. Quantitative analysis: Quantitative analysis involving volumetric and gravimetric estimations of at least four mixtures of cations.

6. Preparation of inorganic complexes: About six preparations involving different techniques selected from the following.

(i) Potassium tris(oxalato)aluminate

(ii) Nickel ammonium sulphate

(iii) Tris(thiourea)copper(I) chloride

(iv) Potassium tris(oxalato)ferrate

(v) Hexamminecobalt(III) chloride

(vi) Ammonium hexachloro stannate(IV)

(vii) Tetrammine copper(II) sulphate

(viii) Cis and trans bis(glycinate) copper.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214DSC16A	Discipline Specific Elective - I Environmental Chemistry	5	0	0	4

**Aim:** To learn the important of Environmental Chemistry.

**Objective:**

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its Ancillary problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

**Outcomes:**

Students who graduate with a major in environmental science will be able to:

- Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
- Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
- Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
- Apply their ecological knowledge to illustrate and graph a problem and describe the realities that managers face when dealing with complex issues; and
- Understand how politics and management have ecological consequences.

**UNIT – I**

**Pollution**

Environmental pollution - structure of atmosphere - biogeological cycles - oxygen - nitrogen – carbon – phosphorous – sulphur - biodistribution of elements - air pollutions - reactions in atmosphere - primary pollutants - air quality standards - analysis of CO, nitrogen oxides, sulphur oxides, hydrocarbons and particulate matter - particulate pollution - control methods - vehicular pollution - green house effect and global warming - climatic changes – ozone - photochemical smog - acid rain - sampling - monitoring – control.

**UNIT – II**

**Water Pollution**

Hydrosphere: Water pollution - hydrological cycle - chemical composition - sea water composition - water quality criteria for domestic and industrial uses - BIS and WHO standards - ground water pollution - surface water pollution - lake and river water - eutrophication - marine pollution - water pollutants - biodegradability of detergents – pesticides - endosulfan and related case studies.

**UNIT – III**

**Water Treatment**

Principles of water and waste water treatment - aerobic and anaerobic treatment - industrial waste water treatment - heavy metal pollution - hard water - softening - purification of water for drinking purposes - water treatment for industrial use -

electrodialysis - reverse osmosis - other purification methods - chemical speciation of elements.

#### UNIT – IV

##### Water Analysis

Color - odor - conductivity - TDS - pH - acidity - alkalinity - chloride - residual chlorine - hardness - trace metal analysis - elemental analysis - ammonia - nitrite - nitrate - fluoride - sulphide - phosphate - phenols - surfactants - BOD - COD - DO - TOC - nondispersive IR spectroscopy - anode stripping - ICP - AES - Chromatography - ion selective electrodes - neutron activation analysis.

#### UNIT – V

##### Soil Pollution:

Soil humus - soil fertility - inorganic and organic components in soil - acid - base and ion exchange reactions in soils - micro and macro nutrients - wastes and pollutants in soil - introduction to geochemistry - solid waste management - treatment and recycling soil analysis - radioactive pollution - disposal of radioactive waste.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214DSC16B	Discipline Specific Elective - I Supramolecular Chemistry	5	0	0	4

- To focuses on non-covalent bonding interactions of molecule.

#### **Objective:**

- To explain the chemical reactions and molecular rearrangements of non-covalent bond molecules.
- To forces include hydrogen bonding ,metal coordination, van der waals forces, pi-pi interactions and electrostatic effects.

#### **Outcome:**

- Understand the reactivity of non-covalent bonding molecules.
- Develop the interaction and nature of organic solvents to others.

#### **UNIT- I**

**Definition of supramolecular chemistry:** Nature of binding interactions in supramolecular structures: ion-ion, ion-dipole, dipole-dipole, hydrogen bonding, cation- $\pi$ , anion- $\pi$ ,  $\pi$ - $\pi$ , and van der Waals interactions.

#### **UNIT -II**

**Synthesis and structure of crown ethers:** lariat ethers, podands, cryptands, spherands, calixarenes, cyclodextrins, cyclophanes, cryptophanes, carcerands and hemicarcerands.

#### **UNIT- III**

**Host-Guest interactions:** pre-organization and complimentarity, lock and key analogy. Binding of cationic, anionic, ion pair and neutral guest molecules. Crystal engineering: role of H-bonding and other weak interactions.

#### **UNIT- IV**

**Self-assembly molecules:** design, synthesis and properties of the molecules, self assembling by H-bonding, metal-ligand interactions and other weak interactions, metallomacrocycles, catenanes, rotaxanes, helicates and knots.

#### **UNIT -V**

**Molecular devices:** molecular electronic devices, molecular wires, molecular rectifiers, molecular switches, molecular logic.

Relevance of supramolecular chemistry to mimic biological systems: cyclodextrins as enzyme mimics, ion channel mimics, supramolecular catalysis.

employability/Entrepreneurship/Skill development

## SEMESTER - II

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC21	Organic Chemistry - II	4	0	0	4

### Aim:

- To acquaint students with learning Organic Chemistry

### Objective:

- To sensitize students to learn Important components of Organic Chemistry

### Outcome:

- Having successfully completed this module you will be able to:
- Gaining knowledge about Carbon –Carbon Double bonds
- About rearrangements
- Interpret data from a range of physical techniques to characterise Organic compounds.
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis.

## UNIT- I

### Addition to Carbon–Carbon Multiple Bonds

Electrophilic and nucleophilic additions, addition to conjugated systems, orientation and reactivity, addition of halogen and nitrosyl chloride to olefins, hydration of olefins and acetylenes, hydroboration, hydroxylation epoxidation, Michael addition, 1,3 dipolar addition, Diels-Alder reaction.

## UNIT- II

### Addition to Carbon–Hetero Atom Multiple Bonds

Mechanism and reactivity, Mannich, Stobbe, Darzen-Glycidic ester condensation, Benzoin condensation, Peterson olefination (Silyl Wittig reaction), Strecker synthesis, Wittig, Wittig Horner, Perkin, Thorpe, Ritter, Prins reactions.

## UNIT -III

### Elimination Reactions

E<sub>1</sub>, E<sub>2</sub>, E<sub>1</sub>CB mechanisms, Orientation of the double bond, Hofmann and Saytzeff rule, competition between elimination and substitution, dehydration and dehydrohalogenation reactions. Stereochemistry of E<sub>2</sub> eliminations in cyclohexane ring systems, mechanism of pyrolytic eliminations, Chugaev reaction and Cope elimination.

## UNIT - IV

### Molecular Rearrangements

A detailed study of the mechanism of the following rearrangements: Nucleophilic. Electrophilic and Free radical rearrangements-memory effects, Migratory aptitudes,

Pinacol-Pinacolone. Oppener-Wagner-Meerwin, Demyanov, Dienone-Phenol, Favorski, Baeyer-Villiger, Wolff, Stevens and Von-Richter (a few examples in each rearrangement are to be studied), rearrangements involving nitrenes- Hofmann, Curtius, Lossen, and Beckmann.

## UNIT –V

### Oxidation and Reduction

Study of the following oxidation reaction with mechanism: Oxidation of alcohols by  $\text{CrO}_3$  - DMSO. DMSO in combination with DCC; acetic anhydride and oxyl chloride, oxidation of aryl methane, allylic oxidation of olefins, oxidative cleavage of glycols, oxidative cleavage of double bonds by ozonolysis., NBS Oxidation.

Study of the following reduction reactions with mechanism: Reduction of carbonyl compounds by hydrides, selectivity in reduction of 4-ter-butylcyclohexanone using selenides, Clemmenson and Wolff-Kishner reductions, Birch reduction, MPV reduction.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214SEC22	Inorganic Chemistry - II	4	0	0	5

**Aim:**

- To acquaint students with learning Inorganic Chemistry

**Objective:**

- To learn Important Concepts of Inorganic Chemistry

**Outcome:**

- Having successfully completed this module you will be able to:
- .
- Present the results of a practical investigation in a concise manner.
- Recognise Nuclear chemistry and transition Elements

**UNIT- I**

**Nuclear Chemistry:**

Radioactive decay and equilibrium, Nuclear reactions; Q value, cross sections, types of reactions, Chemical effects of nuclear transformations; fission and fusion, fusion products and fission yields. Radioactive techniques; tracer technique, neutron activation analysis, counting techniques such as G.M. ionization and proportional counter.

**UNIT - II**

**Chemistry of Non-transition Elements:**

General discussion on the properties of the no transition element special features of individual elements; synthesis, properties and structure of their halides and oxides, polymorphism of carbon, phosphorus and sulphur. Synthesis, properties and structure of boranes, carbonates, borazines, silicates carbides, silicones, phosphazenes, sulphur-nitrogen compounds; peroxo compounds of boron, carbon and sulphur; oxy acids of nitrogen, phosphorous, sulphur and halogens, interhalogens pseudohalides and noble gas compounds.

**UNIT- III**

**Chemistry of Transition Elements:**

Coordination chemistry of transition metal ions; stability constants of complexes and their determination; stabilization of unusual oxidation states. Stereochemistry of coordination compounds. Ligand field theory, splitting of d-orbital in low-symmetry environments. , John – Teller effect : interpretation of electronic spectra including charge transfer spectra; spectrochemical series , nephelauxetic series Magnetism; Dia, para; ferro- and antiferromagnetism, quenching of orbital angular momentum, spin-orbit coupling,

inorganic reaction mechanisms; substitution reactions, trans effect and electron transfer reactions.

#### **UNIT - IV**

##### **Chemistry of Lanthanides and Actinides:**

Spectral and magnetic properties ; Use of lanthanide compounds as shift reagents molecules metal clusters, Spin crossover in coordinating Photo chemical reaction of chromium and ruthenium complexes. Fluxional compounds.

#### **UNIT -V**

##### **Organometallic Chemistry of Transition Elements:**

Synthesis, structure and bonding, organometallic reagents in organic synthesis and in homogeneous catalytic reaction (hydrogenation, hydroformylation, isomerisation and polymerization); pi-acid metal complexes, activation of small molecules by coordination.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214SEC23	Physical Chemistry - II	4	0	0	4

**Aim:**

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry.

**Objective:**

- To learn the importance of Physical Chemistry.

**Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of Surface Phenomenon and Spectroscopy.
- 

**UNIT - I**

**Surface Phenomena:**

Adsorption and free energy reaction at inter –phase-physorption and chemisorption-potential energy diagram-Lennard –Jones Plot-Langmuir,BET isotherm-Gibbs & Freundlich’s adsorption isotherms.

Role of surfaces in catalysis- Semiconductor catalysis-n and p type surfaces-kinetics of surface reactions involving adsorbed species-Langmuir-Hinshelwood mechanism of biomolecular reaction- Langmuir-Rideal mechanism of biomolecularr reaction- Rideal-Eley mechanism.

**UNIT- II**

**Partition Functions:**

Calculation of thermodynamic probability of a system –difference between thermodynamics and statistical probability-definition of micro and macro states – different methods of counting macro states-distinguishable and indistinguishable particles classical statistics-derivation of Maxwell-Boltzman Distribution law.

Transational ,rotational.vibrational,electronic-calculation of enthalpy internal energy,entropy and other thermodynamic functions – applications of partition functions to monoatomic and diatomic molecules.

**UNIT - III**

## **Spectroscopy:**

Microwave Spectroscopy - Theory of linear, symmetric top and asymmetric top molecules.

IR Spectroscopy - Vibrational spectra- selection rules-harmonic and unharmonic oscillator- (fundamental absorption, first and second overtones, hot bands etc)-rotation, vibration spectra of diatomic molecules-influence of rotation on the spectra of polyatomic molecules- FT- IR spectrometry.

## **UNIT- IV**

**Raman Spectroscopy:** Raman's effect – elastic and inelastic scattering- selection rules-pure rotational Raman spectra( linear, spherical top, symmetric top and asymmetric top molecules)-vibrational Raman's spectra-polarisation of lights and Raman effect-comparison of IR and Raman spectra –simple molecules-mutual exclusion principle-fermi resonance- Laser Raman's Spectroscopy (LRS).

## **UNIT-V**

**Group Theory:** Elements of group theory- properties of subgroup –classes –group multiplication table –isomorphism groups –symmetry element and symmetry operations –inter relation among symmetry operation- generations- points group of molecules-matrix representation theory –construction of character tables- reducible and irreducible representations –MOs for systems like ethylene, butadiene, monocyclic and aromatic compounds

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC24L	Organic Chemistry Lab - II	0	0	5	3

**Aims:** The organic laboratory class consists of a series of experiments designed to complete in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to key synthetic techniques and will regularly employ spectroscopic techniques to examine the outcome of experiments.

**Objectives:** To perform seven experiments that have been divided into 3 topics: Functional group interconversions, carbon-carbon bond formation / enolate chemistry, and electrophilic aromatic substitution. To take part in spectroscopy workshops that will demonstrate further topics in spectroscopy and the use of spectroscopic techniques in the characterisation of organic compounds. To learn new synthetic techniques: distillation under reduced pressure, reactions involving continuous removal of water and preparative chromatography. To gain experience in the identification and characterisation of unknown products using <sup>1</sup>H NMR spectroscopy, <sup>13</sup>C NMR spectroscopy, IR spectroscopy and mass spectrometry. To introduce the concept of multi-step organic synthesis.

## ORGANIC CHEMISTRY LAB – II

### Qualitative analysis of Organic Compounds:

#### Estimation of

- a) Phenol
- b) Aniline
- c) Ketone
- d) Glucose

### Preparation of Organic Compounds (Double stage)

- a) p-bromoacetanilide from aniline (acetylation & bromination)
- b) 1,3,5- tribromobenzene from aniline (bromination, diazotization & hydroxylation)
- c) p-nitroaniline from acetanilide (nitration & hydrolysis)
- d) p-aminobenzoic acid from para- nitrotoluene, (oxidation & reduction).

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC25L	Inorganic Chemistry Lab - II	0	0	5	3

### Aims:

The inorganic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture-based part of the course. To equip students with the basic skills and expertise required to carry out careful and precise procedures in the modern practical chemistry laboratory whilst providing experiments that illustrate and support the lecture course. To train students in the art of good scientific report writing and in the use of spectroscopic techniques for the structural elucidation of inorganic compounds. To encourage student to become more aware of the risks and hazards associated with careful laboratory work and to assess risks and methods for minimizing them.

### Objectives:

#### Analytical Experiments:

- (1) To be familiar with the use of pipettes, burettes and analytical balances. To be able to transfer quantitatively liquids and solids.
- (2) To be familiar with the techniques of gravimetric analysis, complexometric titration, colorimetry and atomic absorption spectrometry for the analysis of inorganic compounds.
- (3) To learn about gases in the environment and how to analyse for concentrations of gas components via spectrophotometry and IR spectroscopy. In modern analytical chemistry instrumental methods are replacing traditional titration and gravimetric methods. Nevertheless, a good grasp of the basic techniques is essential in all forms of instrumental analysis.

Among these techniques are:

- (a) the ability to make up a standard solution
- (b) the ability to make careful measurements
- (c) an appreciation of errors and significant figures.

#### Titrimetry and gravimetry (any two)

A mixture(s) of solution given for estimation.

Cu (V)	AND	Ni (G)
Cu (V)	AND	Zn (G)
Fe (V)	AND	Zn (G)
Zn (V)	AND	Cu (G)
Ca (V)	AND	Ba (G)

#### Preparation of the following compounds (any three)

Tetramminecopper(II) sulphate  
 Potassium trioxalatochromate  
 Potassium trioxalatoaluminate  
 Trithioureacopper(I) chloride

COURSE CODE	COURSE TITLE	L	T	P	C
17214DSC26A	Discipline Specific Elective - II Industrial Chemistry	4	0	0	4

**Aim:**

- The aim of this course is to provide a core for future studies in chemistry and aspects of Industrial Chemistry .

**Objective:**

- To learn the importance of Industrial Chemistry.

**Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of industries using Chemicals.

**Unit – I**

**Water conditioning for chemical factories** – reuse – methods of conditioning – Demineralisation – Precipitation – Desalting – Industrial and Sewage waste water treatment. Vegetable oils – Refining of edible oils – Solvent extraction – Processing of animal fat – Hydrogenation – Interesterification - Manufacture of soap and detergents . Biodegradability of surfactants – Methods.

**Unit – II**

**Pulp and paper industries** – Sulphite, Sulphate, soda, ground wood pulp for paper – Manufacture of paper – Speciality paper – Paper stock – Structural Boards. Plastics – Manufacture – Resin – Manufacturing process – Condensation polymerization – Manufacture of laminates and other derivatives – Hexamethylene tetramine plastics – Vinyl esters.

**UNIT – III**

**Basic ideas – Flow charts** – Chemical Conversion – Batch Versus Continuous processing – Design – Chemical Process control and economics – Market evaluation – Plant location – Management for productivity and Creativity – Research & Development and its role in Chemical industries.

## **Unit – IV**

**Rubber industries** – Natural rubber – Synthetic rubber – Monomer production – Synthetic rubber polymerization – Butadiene – Styrene copolymers – Butadiene acrylonitrile copolymer – Neoprene – Thiokol – Silicon Rubber – Butyl rubber – Urethane rubber – Rubber processing- chemicals – Rubber compounding – Rubber fabrication – Latex compound- reclaimed rubber- Rubber derivatives.

## **UNIT – V**

**Industrial and military explosives** – Manufacture – Pyrotechniques – Manufacture of safety matches. Colour photography – Theory – material and process – special applications of photography.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214DSC26B	Discipline Specific Elective - II Macromolecules as Engineering Materials	5	0	0	4

**Aim:**

- To study about the macromolecules as engineering materials in various fields.

**Objective:**

- To develop the concept and reactivity of macromolecules.

**Outcome:**

- Develop the knowledge of characterization and its applications of macromolecules.

**UNIT - I**

**Concepts - Small molecules to macromolecules.** Definitions and nomenclature. Classification of polymers, types of polymerizations (chain growth, step growth and living), molecular weights and distribution.

**UNIT- II**

**Study on physical methods of determining molecular weights and distribution.**

Synthesis of macromolecules – thermodynamics and kinetics of chain polymerization with reference to industrially important polymers such as polyethylene, polypropylene, polystyrene, polyvinyl chloride.

**UNIT- III**

**Thermodynamics and kinetics** of step polymerization with reference to specialty polymers such as PET, Nylon, PC, and PU. Step growth polymerizations involving crosslinking (gelation) or formation of insoluble polymer mass. Determination of polymer structure via IR and NMR spectroscopies.

**UNIT - IV**

**Characterization of polymer structure in the solid state** – Characteristics of Amorphous and semicrystalline polymers. Viscoelasticity. Glass transition temperature

and elementary theories of glass transition. Rubber elasticity and thermodynamic theory of rubber elasticity.

#### **UNIT -V**

**Applications – Engineering and specialty polymers, high performance fibres (Kevlar), Composite materials (BMC and SMC), conducting plastics. Polymers for separation science, biomedical devices, electronics and photonics.**

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214RMC27	Research Methodology	3	-	-	3

**Aim:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**Objective:**

To understand the approaches towards and constraints in good research.

To identify various statistical tools used in research methodology

To appreciate and compose the manuscript for publication

To train in basic computational and software skills for research in physical and chemical sciences.

**Outcome:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

**UNIT I:**

**Introduction to Research Methodology**

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT II:**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

### **UNIT III:**

#### **Data Analysis and Chemical Packages**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co-variance (ANCOVA) correlation and multiple regression analysis – Chemical Packages – ChemDraw – ChemSketch – ISIS draw – Origin.

### **UNIT IV:**

#### **Thesis and Paper writing**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

### **UNIT V:**

#### **Laboratory Safety**

Basic laboratory guidelines – safety equipment – Leaking compressed gas cylinders – electrical safety. Fire – fire extinguishers. Laboratory injuries and treatment. Chemical spills – Mercury and Biohazardous – clean up procedure - Accident management - Disposal of chemicals and glass wares.

### SEMESTER - III

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC31	Organic Chemistry - III	5	0	0	4

**Aim:**

- To acquaint students with learning Organic Chemistry

**Objective:**

- To sensitize students to learn Important components of Organic Chemistry

**Outcome:**

- Having successfully completed this module you will be able to:
- Gaining knowledge organic Synthesis.

**Unit I**

**Reagents in Organic Synthesis:**

Use of the following reagents in organic synthesis and functional group transformations, complex metal hydrides, Gilman's reagent, lithium dimethylcuprate, lithium diazopropylamine (LDA), 1,3-dithiane, trimethylsilyl iodide, tri-n-butyltin hydride, Woodward and Prevost hydroxylation, osmium tetroxide, DDQ, selenium dioxide, Peterson's synthesis, Wilkinson's catalyst, baker yeast.

**Unit II**

**Photochemistry:**

Cis-trans isomerism, Paterno-Buchi reaction, Norrish type I and II reactions. Photoreduction of ketones, di-pimethane rearrangement, photochemistry of arenes.

**Unit III**

**Pericyclic Reactions:**

Selection rules and stereochemistry of electrocyclic reactions, cycloaddition, and sigmatropic shifts, Sommet, Hauser, Cope and Claisen rearrangements.

**Unit IV**

### **Selective Organic Name Reactions:**

Favorski, Mannich, Stork-Enamine reactions, Sharpless asymmetric epoxidation, Ene reaction, Barton reaction, Hoffmann-Löffler-Freytag reaction, Shapiro, Chichibabin and Bayer-Villiger reactions.

### **Unit V**

#### **Spectroscopy:**

Applications of Mass, UV-VIS, IR and NMR spectroscopy for structural elucidation of organic molecules.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214SEC32	Inorganic Chemistry - III	5	0	0	4

**Aim:**

- To acquaint students with learning Inorganic Chemistry

**Objective:**

- To learn Important Concepts of Inorganic Chemistry

**Outcome:**

- Having successfully completed this module you will be able to:
- Recognise Analytical Techniques and Spectroscopy.

**UNIT – I**

**Topics in Analytical Chemistry:**

Adsorption partition, exclusion electrochromatography, solvent extraction and ion exchange methods. Application of atomic and molecular absorption and emission spectroscopy in quantitative analysis. Light scattering techniques including nephelometry. Raman Spectroscopy: Electroanalytical techniques; voltammetry, cyclic voltammetry, polarography, amperometry coulometry and conductometry. Ion-selective electrodes, anodic stripping voltammetry, TGA, DTA, DSC and online analyzer.

**UNIT –II**

**Electronic Spectroscopy:**

Electronic configuration, terms states and microstates, derivation of term symbols ( $p^2$ ,  $d^2$ ) and arranging the various terms according to their energies. Spectroscopic terms – effect of inter electronic repulsion and spin – orbit coupling – Racah parameters B and C- R-S coupling and JJ coupling. Selection rules and the breakdown of selection rules- group theoretical explanation. Ground states of free ions for  $d^n$  systems- Oh and Td

systems and the corresponding energy level diagrams- mixing of orbitals. Orgel diagram – characteristics – prediction and assignment of transitions for d<sup>n</sup> weak field cases. Tanabe-Sugano diagrams- characteristics – prediction and assignment of transition for weak field and strong field – d<sup>n</sup> systems band intensity, band widths – band shapes – factors affecting these – distortion and spin-orbit coupling calculation of B and 10q for simple octahedral complexes of Co and Ni.

### **UNIT – III**

#### **IR and Raman Spectroscopy:**

Combined uses of IR and Raman spectroscopy in the structural elucidation of simple molecules like H<sub>2</sub>O, ClF<sub>3</sub>, NO<sub>3</sub>, ClO<sub>3</sub>. Effect of co-ordination on ligand vibrations – uses of group vibrations in the structural elucidation of metal complexes of urea, thiourea, cyanide, thiocyanate nitrate, sulphate and dimethylsulphoxide. Effect of isotopic substitution on the vibrational spectra of molecules – vibrational spectra of metal carbonyls with reference to the nature of bonding, geometry and number of C-O stretching vibrations (group theoretical treatment).

### **UNIT – IV**

#### **NMR Spectroscopy:**

Chemical shifts and coupling constants (spin-spin coupling involving different nuclei <sup>1</sup>H, <sup>31</sup>P & <sup>13</sup>C) interpretation and applications to inorganic compounds. Effects of Quadrupole nuclei (<sup>1</sup>H, <sup>10</sup>B, <sup>11</sup>B) on the <sup>1</sup>H NMR spectrum. NMR paramagnetic molecules - isotopic shifts, contact and pseudocontact interactions- lanthanide shift reagents. Stereochemistry of non-rigid molecules, satellite spectra – Applications of <sup>31</sup>P, <sup>13</sup>C and <sup>1</sup>H NMR of inorganic molecules.

### **UNIT – V**

#### **EPR Spectroscopy:**

Basic principles – characteristics of 'g' – hyperfine splitting - selection rules- hyperfine splitting on various structure – bis (salicyldiamine)copper(II) – factors affecting the magnitude of the 'g' values of transition metal ions – dependence on spin – orbit coupling crystal field. Three conditions (i) spin-orbit coupling crystal field (ii) strength of the crystal field effects, (iii) very large crystal field. Ni(II) octahedral complex- Cu<sup>2+</sup> in a tetragonal – field. Zero-field splitting and signal- effecting spins mixing of saturated zero field splitting. Line widths in solid state EPR – spin – lattice – spin – spin relaxation – exchange processes. Effect of distortion – T, A<sub>g</sub>, E<sub>g</sub>. ground terms – g (parallel), g (perpendicular), g (average)  $\alpha^2\beta^2$  and G parameters from EPR and information obtained from them.

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC34L	Physical Chemistry Lab -I	0	0	5	3

**Aims:** The physical laboratory class consists of a series of experiments designed to be completed in either one or two sessions. The laboratory is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to a number of spectroscopic and analytical techniques.

**Objectives:** To perform eight experiments covering analytical chemistry, catalysis, diffraction, IR spectroscopy, kinetics and thermodynamics

1. Kinetics – Acid hydrolysis of Esters - Comparison of strengths of acids.

2. Kinetics – Acid hydrolysis of Esters – Determination of Energy of Activation ( $E_a$ )

3. Kinetics – Saponification of Ester - Determination of Energy of Activation ( $E_a$ ) by conductometry

4. Kinetics – Persulphate – Iodine Reaction - Determination of order, effect of ionic strength on rate constant

5. Distribution Law – Study of Iodine – Iodide equilibrium

6. Distribution law – Study of Association of Benzoic acid in Benzene.

7. Adsorption – Oxalic acid / Acetic acid on charcoal using Freundlich

Isotherm.

8. Conductometry –Determination of dissociation constant of weak acids

9. Acid - alkali titrations

10. Displacement titrations

11. Precipitation titrations

12. Solubility product of sparingly soluble silver salts.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214SEC35L	Physical Chemistry Lab -II	0	0	5	3

**Aims:** The physical laboratory class consists of a series of experiments designed to be completed in either one or two sessions. The laboratory is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to a number of spectroscopic and analytical techniques.

**Objectives:** To perform eight experiments covering analytical chemistry, catalysis, diffraction, IR spectroscopy, kinetics and thermodynamics

1. Determination of molecular weight of substances by cryoscopy

2. Determination of molecular weight of substances by Transition Temperature method

3. Determination of molecular weight of substances by Rast method

4. Determination of Critical Solution Temperature (CST) of phenol – water system and effect of impurity on CST

5. Study of phase diagram of two components forming simple eutectic

6. Study of phase diagram of two components forming a compound.

7. Study of phase Diagram of three components (Acetic acid, Benzene and water)

8. Potentiometric titration's –Acid alkali titration

9. Precipitation titration's

10. Redox titration's

11. Determination of dissociation constant of weak acids.

12. Determination of solubility of silver salts

13. Determination of activity and activity co-efficient of ions

employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17111OEC	Open Elective - Journalism	4	0	0	2

### Aim:

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

### Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

### Outcome:

- Become a journalist

### UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

### UNIT- II

News – Definition, Kinds, Elements, Sources

### UNIT- III

Reporters, Qualities, types

### UNIT- IV

The Editor and the Sub Editor-qualities, types, editorial department,

## UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

### References:-

Course code	Course Title	L	T	P	C
17112OEC	Open Elective: Development of Mathematics Skills	4	0	0	2

### Aim:

- To understand the concepts from the five branches of mathematics

### Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

### Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

### Unit I

Simple interest and compound interest

### Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

Course Code	Course Title	L	T	P	C
17113GEC	Open Elective- Instrumentation	4	0	0	2

**Aim:**

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**Outcomes:**

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

### **UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

### **UNIT – II: Electronic Instruments – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

### **UNIT – III: Electronic Instruments – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

### **Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

### **Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

### **Books for Study**

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

### **Books for Reference:**

A Course In Electrical And Electronic Measurements and Instrumentation – A.K. Sawhney – Dhanpat Rai and Sons – 1990.

Electronic Measurements And Instrumentation – Oliver Sage – McGraw Hill –1975.

Course Code	Course Title	L	T	P	C
17114OEC	Open Elective-Food and Adulteration	4	0	0	2

**Aim:**

- To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

**Outcomes:**

- The students will have knowledge about different processing and preservation methods and principles involved.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection.

Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	Course Title	L	T	P	C
17117OEC	Open Elective-Mushroom Technology	4	0	0	2

**Aim:**

- Mushrooms represent microbial technology that recycles agricultural residues into food and manure
- Mushroom technological interventions aims to increase productivity, quality, and income of farmers through cultivation of mushrooms.

**Objectives:**

- To strengthen the promotion of mushroom cultivation by establishing a well-equipped laboratory and offices
- To provide the Unit with appropriately trained personnel for the promotion of mushroom production in the country
- To increase the production and consumption of mushrooms.

**Outcomes:**

- Light. Mushrooms cannot extract nutrients from the sun as green plants do, so they do not need light.
- Cultivating specialty mushrooms is the most accessible way to growing edible mushrooms for profit. The two most popular specialty mushrooms grown in the United States are shiitake and oyster.

**Unit – I**

Introduction – history – scope of edible mushroom cultivation – Types of edible mushroom available in India – *Calacybeindica*, *VolvariellaVolvacea*, *Pleurotussp.*, *Agaricusbisporus*

Pure culture – preparation of media (PDA and Oatmeal agar media) sterilization – Preparation of test tube slants to store mother culture – culturing of Pleurotus mycelium on petriplates – Preparation of mother spawn in saline bottle and polypropylene bags and their multiplication.

### **Unit – III**

Cultivation Technology : Infra structure, Substrates (locally available) polythene bag, vessels, Inoculation hood – inoculation loop – low cost stove – sieves – Culture rack mushroom unit (Thatched house) – Mushroom bed preparation – Paddy straw, sugarcane trash, maize straw, banana leaves.

### **Unit – IV**

Storage and nutrition : Short term storage – Long term storage (scanning, Pickles, papads, drying, storage in salt solutions) – Nutrition : Proteins, amino acids, mineral elements. Nutrition : Carbohydrates – Crude fiber content, vitamins.

### **Unit – V**

Food preparation, Types of foods prepared from mushroom - soup, cutlet, omelette, samosa, pickles, curry. Research Centres – National level and Regional Level Cost benefit ratio – Marketing in India and abroad – Export value

### **Reference:**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120OEC	Open Elective -Web Technology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Objective:**

- To understand and practice mark up languages
- To learn Style Sheet and Frames

**Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
17122OEC	Open Elective- E-Commerce and its Application	4	0	0	2

**Aim:**

- To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

**Objectives:**

- To be aware of all aspects of communication and information exchange in Electronic Commerce, including:
  - Navigation, brokerage, advertising and catalogue exchange in pre-sales activities.
  - Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
  - Secure exchange of documents, content and value in open trading protocols.
  - Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

**Outcomes:**

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

**UNIT-I:**

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective

distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

**UNIT-II:**

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script – XML.

**UNIT- III:**

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

E-Security: Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

**UNIT-V**

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet baking-History’s lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stack trading: The high speed alternative.

**Reference Book:**

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition.

Course Code	Course Title	L	T	P	C
17161OEC	Open Elective – Indirect Taxes	4	0	0	2

**Aim:**

- To acquaint with the knowledge of indirect taxes

**Objectives:**

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

**Outcome**

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

#### **UNIT – V**

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

#### **Reference Books:**

Income Tax Law and Practice - N.Hariharan.

Business Taxation – T.S.Reddy/Hari Prasad Reddy.

### **SEMESTER – IV**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214SEC33	Physical Chemistry - III	5	1	0	5

#### **Aim:**

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry.

#### **Objective:**

- To learn the importance of Physical Chemistry.

#### **Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of Electro Chemistry.
- Learning various concepts of Quantum Chemistry.
- Learning various concepts of Thermodynamics

#### **UNIT –I**

#### **Electrochemistry:**

Electrochemical cell reactions, Nernst equation, electrode kinetics, electrical double layer, electrode /electrolyte interface, batteries-primary & secondary fuel cells, corrosion and corrosion prevention.

## **UNIT –II**

### **Non-Equilibrium Thermodynamics:**

Postulates and methodologies, linear laws, Gibbs equation, Onsagar reciprocal theory.

### **Ideal and Non-Ideal Solutions:**

Excess functions, activities, concept of hydration number, activities in electrolytic solutions, mean ionic activity coefficient, Debye-Huckel treatment of dilute electrolyte solutions.

## **UNIT –III**

### **Quantum Chemistry:**

Planck's quantum theory, wave-particle duality, uncertainty principle, operators and commutation relations, postulates of quantum mechanics, free particle, particle in a box, degeneracy harmonic oscillator, rigid rotator and the hydrogen atom. Angular momentum, including spin coupling of angular momenta including spin-orbit coupling.

## **UNIT –IV**

### **Born-Oppenheimer Approximation:**

Hydrogen molecule ion, LCAO-MO and VB treatments of the hydrogen molecule, electron density, forces, and their role in chemical binding. Hybridization and valence MOs of H<sub>2</sub>O, NH<sub>3</sub> and CH<sub>4</sub>. Huckel pi-electron theory and its applications to ethylene, butadiene and benzene, idea of self-consistent fields.

## **UNIT –V**

### **Statistical Thermodynamics:**

Thermodynamic probability, and entropy , Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics, partition function, rotational, translational, vibrational and electronic partition functions for diatomic molecules, calculations of thermodynamic functions and equilibrium constants. Theories of specific heat for solids.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
17214DSC41A	Discipline Specific Elective - III Medicinal Chemistry	5	1	0	4

**Aim:**

- The aim of this course is to provide a core for future studies and aspects of MedicinalChemistry.

**Objective:**

- To learn the importance of Medicinal Chemistry.

**Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of Drugs.
- Learning various concepts in medicinal Chemistry.

## General Introduction

Introduction to medicinal chemistry, general mechanism of drug action on lipids, carbohydrates, proteins and nucleic acids, drug metabolism and inactivation, receptor structure and sites, drug discovery development, design and delivery systems, gene therapy and drug resistance.

## UNIT - II

### Drugs

Drugs based on structure or pharmacological basis with examples, synthesis of important drugs such as  $\alpha$  - methyl dopa, chloramphenicol, griseofulvin, cephalosporins and nystatin. Molecular modeling, conformational analysis, qualitative and quantitative structure activity relationships.

## UNIT - III

### Antibiotics

Mechanism of action of lactam antibiotics and non lactam antibiotics, antiviral agents, chemistry, stereochemistry, biosynthesis and degradation of penicillins - An account of semisynthetic penicillins - acid resistant, penicillinase resistant and broad spectrum semisynthetic penicillins.

## UNIT- IV

### DNA Interactions

DNA-protein interaction and DNA-drug interaction. Introduction to rational approach to drug design, physical and chemical factors associated with biological activities, mechanism of drug action.

## UNIT V

**Enzyme Reactions:** Nomenclature and classification of enzymes, Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors. Enzyme kinetics, Michaelis-Menten and Lineweaver-Burk plots.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17214DSC41B	Discipline Specific Elective - III Green Organic Synthesis: Principles and Applications	5	0	0	4

**Aim:**

- To develop the study about green organic synthesis and its principles.

**Objective:**

- To explain the awareness about soil and water pollution in environment.

**Outcome:**

- Develop the advanced techniques to reduce chemical waste pollution.

**UNIT- I**

**Green Chemistry:** Definition, need for Green chemistry, evolution of Green Chemistry, principles of Green Chemistry.

**UNIT - II**

**Classification of organic reactions under Green chemistry principles:** a) Atom economic and non-toxic byproduct reactions: rearrangements, addition reaction, condensations, cascade strategies under catalysis, b) atom uneconomic reactions: substitutions, eliminations, Wittig reactions, degradation reactions.

### **UNIT - III**

**Green Strategies and techniques for Organic Synthesis:** use of Microwave, Sonochemistry, Ball mill technique, electrochemical reactions, photochemical reactions.

### **UNIT- IV**

**Catalysis:** Principles of various catalysis techniques in terms of Green Organic Synthesis i) Homogeneous, ii) Heterogeneous, iii) bio (enzyme) catalysis, iv) catalysis with nontoxic metals (Ca, Fe, Co, etc.), v) solid supported catalysis, vi) metal free/organocatalysis, vii) Visible light catalysis viii) phase transfer catalysis  
**Alternative/Green Solvents for Organic Synthesis** i) Water, ii) Ionic liquids, iii) Supercritical liquids (SCL), iv) Poly(ethylene glycol) (PEG), v) Fluorous biphasic Solvents.

### **UNIT- V**

**Comparison of greenness of solvents.** Understanding the role/effect of these solvents on organic reactions. Solvent Free Organic Synthesis. Reactions at Room Temperature, Applications of the Green strategies in Organic Synthesis. Comparing organic reactions under classical conditions and Green conditions.

employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17116AEC13	Fundamentals of Microbiology	6	1	0	6

### Unit – I

Introduction – definition, scope and history of microbiology, differences between the prokaryotic and eukaryotic microorganisms. Classification of micro organisms – general principles and nomenclature – Haeckel’s three kingdom concept, Whittaker’s five kingdom concept – Classification and characterization of bacteria according to Bergey’s manual of Systematic Bacteriology. Basic understanding of classification of viruses, algae, fungi and protozoa.

### Unit – II

Microscopy: Principles and application of simple, compound, bright field, dark field, phase contrast, fluorescent and Electron microscopy. Principles of staining: Nature of dyes, types of staining – simple, differential, negative and spore staining. Sterilization: Principles and methods – physical and chemical.

### Unit – III

General characteristics and nature of archaebacteria, Eubacteria, Cyanobacteria, Rickettsiae, Chlamydiae, Spirochaetes, Actinomycetes, Protozoa, Viruses including phages, Mycoplasmas, Algae and fungi.

### Unit – IV

Microbial Cell: Ultrastructure of bacteria, subcellular structures and cell envelope – slime, capsule, cell wall, pili, flagella, cell inclusions, biosynthesis of bacterial cell wall, cell membrane – Biomembrane, liposomes – membrane transport – diffusion, active and passive transport and osmoregulation

### Unit – V

Culture techniques: types of media simple, defined, enriched and transport media with specific examples for each type. Methods of maintenance and preservation of cultures

### Entrepreneurship

### Unit I

Carbohydrates: Definition, Classification and Properties; Structural Elucidation of Glucose and fructose; Biological Functions of Glucose, fructose, starch, Cellulose, Chitin and Heparin.

### Unit II

Amino acids: Structure, Classification, Properties.

Peptides: Amides and Peptides, Peptide bond, Peptide synthesis, Biologically important Peptides.

Proteins: Biological importance, Classification, properties; Structural orders; Protein stability; Separation and purification of proteins.

### Unit III

Nucleotides and Polynucleotides; Terminology –Components.DNA and RNA – Composition, Structure, their biological importance.

### Unit IV

Lipids: Biological Significance, Classification of lipids. Analysis of oils – Iodine Number, Saponification Value, Acid number, Acetyl value and Reichert-Meisel value; Qualitative Tests for Lipids.

### Unit V

Vitamins: Source, Structure of Biological Role requirement, deficiency manifestation of fat soluble (A, D, E and K) and water soluble (B complexes and C) vitamins.

171INDCON S	Indian Constitution	1	0	0	1

### Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
  2. To appreciate the salient features of the Indian constitution
  3. To know the fundamental rights and constitutional remedies
  4. To make familiar with powers and positions of the union executive, union parliament and the supreme court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

### Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

### Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

### Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

### Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court - functions and position of supreme court and high court

### Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.  
Employability

### References:

- 1) Palekar.s.a. Indian constitution government and politics, ABD publications, India
- 2) Aiyer, alladi krishnaswami, Constitution and fundamental rights 1955.
- 3) Markandan. k.c.directive Principles in the Indian constitution 1966.
- 4) Kashyap. Subash c, Our parliament ,National book trust , New Delhi 1989

### Learning Out comes:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

## SEMESTER II

Course Code	Course Title	L	T	P	C
17110AEC21	Tamil-II	4	0	0	2

### அலகு-I

திருஞாசம்பந்தர் தேவாரம் - இடரினும் தளரினும் - பதிகம்  
திருநாவுக்கரசர் தேவாரம் - அன்னம் பாலிக்கும் தில்லை - பதிகம்  
திருவாசகம் - கோயிற் திருப்பதிகம்  
திருமந்திரம் - 25, 85, 139,238,250,252,270,724,2104,2716  
திருஅருட்பா - தெய்வமணி மாலை 1,8,9

### அலகு-II

நம்மாழ்வார் - 1 பாசரம்- திருவாய்மொழி - எம்பெருமானுக்கு ஆட்படுதல் இன்பமே  
பெரியாழ்வார் - 1 பாசரம் - திருப்பல்லாண்டு - தாலப்பருவம்  
நாச்சியார் திருமொழி - 10 பாடல்கள்- ஆறாம் திருமொழி

### அலகு-III

சிற்றிலக்கியம் ,  
முக்கூடற்பள்ளு - வளமை, செழுமை  
மதுரை மீனாட்சியம்மை பிள்ளைத்தமிழ்- தாலப்பருவம்-ஐந்துபாடல்கள்

### அலகு-IV

இலக்கணம் - சொல்  
மனப்பாடப்பகுதி

### அலகு-V

இலக்கிய வரலாறு  
சைவ, வைணவ இலக்கியங்கள்  
சிற்றிலக்கியம்.பள்ளு  
பிள்ளைத்தமிழ்  
பரணி

## SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
17111AEC21	Advanced English-II	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**Outcome:**

- Develop writing skill
- Read and comprehend literature

**UNIT – I**

E-mail

Fax

Memos

**UNIT – II**

Itinerary

Checklist

**UNIT – III**

Invitation

Circular

**UNIT – IV**

Instruction

Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

**SKILDEVELOPMENT**

**References:**

Inspiring Lives

-Maruthi Publishers

English Work Book-I&II

-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
17111AEC22	English-II	4	0	0	2

**Aim:**

- To acquaint learners with different trends of writing

**Objective:**

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – I**

Ecology -A.K. Ramanujan

Gift -Alice Walker

The First Meeting -Sujata Bhatt

**UNIT –II**

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran

**UNIT –III**

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

**UNIT – IV**

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king

Those People Next Door -A.G. Gardiner

**UNIT – V**

Marriage is a private Affair -Chinua Achebe

The Fortune Teller -Karel Capek

Proposal -Anton Chekov

Gathered Wisdom

-GowriSivaraman EmeraldPublishers

Course Code	Course Title	L	T	P	C
17116AEC23	Microbial Physiology	6	1	0	6

### Unit – I

Nutrition and growth of microorganisms: Nutritional types of microorganisms, nutritional requirements. Factors influencing the growth of microorganisms temperature, pH, Osmotic pressure, moisture, radiations and different chemicals. Physiology of growth – significance of various phases of growth - Growth Measurements – batch, continuous and synchronous

### Unit – II

Bacterial enzymes – classification properties, coenzymes and cofactors isozymes

### Unit – III

Metabolism of carbohydrates: Anabolism – photosynthesis – oxygenic – anoxygenic, synthesis of carbohydrate – catabolism of glucose – Embden Mayer – Hoff – Parnas pathway – Pentose pathway, Krebs's cycle (TCA) – electron transport system and ATP production

### Unit – IV

Metabolism of protein – metabolic pathways of nitrogen utilization (urea cycle), synthesis of amino acids, peptides, proteins

### Unit – V

Anaerobic – Respiration and fermentations. Anabolic and catabolic processes of lipids - Reproductive physiology of microorganisms

## SKILLDEVELOPMENT

### Text Books:

- 1 Pelczar Jr. M.J. Chan E.C.S. and Kroig N.R.(1993). Microbiology – Mcgraw Hill Inc., New York
- 2 Stainer R.Y., Ingraham J.L. Wheelia M.L. and Painter P.R. (1986). General Microbiology, Macmillan Education Ltd, London
- 3 Murray R.K., Cranner M.D., Mayea P.A. and Rodwell V.W.(1990). Biochemistry-prentice Hall International Inc., London

### Reference:

Course Code	Course Title	L	T	P	C
17116AEC24L	Microbial Physiology Lab	0	0	3	2

1. Bacterial culture / isolation techniques, a streaking method, b.Pour plate method

2. Isolation and cultivation of fungi

3. Bacterial growth curve: cell count / viable count / absorbance (total count)

4. Carbohydrate fermentation test:

- a. Glucose
- b. Lactose,
- c. Maltose
- d. Sucrose
- e. Mannitol

5. Biochemical test for identification of Bacteria:

- a. Indole test
- b. Methyl red
- c. Voges – Proskaur test
- d. Citrate utilization
- e. TSI agar test
- f. Urease
- g. Catalase
- h. Oxidase

Pelczar, Jr. M.J.
3. Bucker, J.M. Caldwell, G.A., Zachgo, E.A. 1990. A Laboratory Course, Academic Press
4. Harold J.Benson, 1994. Microbial Applications, WM.C. Brown Publishers

Course Code	Course Title	L	T	P	C
17115AEC25	Bio Chemistry II	5	0	0	5

### **Unit I**

Organization of Life. Water – Physical Properties, Structure of Water, Weak Interactions in aqueous environment; Role of Water in life.

Bioenergetics – Laws of thermodynamics; Free energy concepts; ATP and ADP cycles; ATP as energy currency of cells.

### **Unit II**

Release of energy into cells - Major metabolic pathways – Glycolysis, TCA cycle, Glycogenolysis, Gluconeogenesis, Fatty acid oxidation, ETC and Oxidative phosphorylation.

### **Unit III**

Composition and functions of plant and bacterial cell wall. Biological membrane – Fluid mosaic model; Transport across membranes.

Phytohormones – Auxin, Gibberllin and cytokinin.

### **Unit IV**

Cell and cell organelles – Structure and functions of cell organelles – Nucleus, Mitochondria, Chloroplast - Photosynthesis, Golgi apparatus, Endoplasmic reticulum and Micro bodies.

### **Unit V**

Enzymes – Classification, Nomenclature, Mechanism of enzyme action; factors influencing enzyme action – pH and Temperature; Specific activity; MM equation and its significances.

### **SKILDEVELOPMENT**

MS-EXCEL**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC02AL	Package Lab-II	0	0	2	1

1. Prepare the addressing methods in excel
2. Describe the type of function
3. Draw a graph by using your own data
4. Prepare an Individual Pay Bill preparation for a employee in an organization.
5. Prepare a Mark list preparation for a student.
6. Prepare a Worksheet preparation for a company.
7. Prepare a Inventory Preparation
8. Prepare a Electricity Bill Preparation

**SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
17160SEC02B	SOFT SKILL II	0	0	2	1

### Part -II Self Development

#### UNIT I: Self -Assessment

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

#### UNIT II: Self- Management

Managing Time, Managing Stress, Conflict Management

#### SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
17111SEC02L	Communicative English Lab-II	0	0	2	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To learn about the auxiliary and the models
- To understand the different tenses and use it in sentences
- To know where to use and where not to use the articles
- To familiarize with the participle

**Outcome:**

- Understand grammar

**UNIT –I**

Auxiliaries

**UNIT –II**

Modals

**UNIT –III**

Tenses-Simple, Perfect

## SEMESTER – III

Course Code	Course Title	L	T	P	C
17110AEC31	Tamil-III	4	0	0	2

### அலகு-I

சிலப்பதிகாரம்-  
மணிமேகலை -  
சீவகசிந்தாமணி -

வழக்குரை காதை  
ஆதிரை பிச்சையிட்ட காதை  
நாட்டுவளம் 10 பாடல்கள்

### அலகு-II

பெரியபுராணம்-  
கம்பராமாயணம்

மெய்ப்பொருள் நாயனார் புராணம்  
-வாலி வதைப்படலம்

### அலகு-III

சீறாப்புராணம் -  
இயேசுகாவியம் -

கரம் பொருத்து படலம்  
மலைப்பொழிவு

### அலகு-IV

இலக்கணம்-  
மனப்பாடப்பகுதி

யாப்பு இலக்கணம்

### அலகு-V

இலக்கிய வரலாறு  
காப்பியங்கள்  
ஐஞ்சிறுகாப்பியங்கள்  
புராணங்கள், இதிகாசங்கள்

## SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C	Marks
17111AEC31	Advanced English-III	4	0	0	2	100

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT – I**

The organs of speech

Classification of speech sounds

Vowels and Diphthongs

**UNIT – II**

Consonants

Consonant cluster

**UNIT – III**

Syllable

Word accent

Intonation

**UNIT – IV**

Idiom

Interpretation of graphics

**UNIT – V**

Slogan writing

Writing advertisement

**SKILDEVELOPMENT**

A text book of Phonetics for Indian Students

-T.B. Balasubramaniyan

Course Code	Course Title	L	T	P	C
17111AEC32	English-III	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – I**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

**UNIT – V**

The Dear Departed	-Stanley Houghton	<b>SKILDEVELOPMENT</b>
The Princess and the Wood Cutter	-Alan Alexander Milne	

**References:-**

Nine Short Stories	-Steuart H.King	Blackie Books
One-Act plays of Today	-T.Prabhakar	Emerald Publishers

Course Code	Course Title	L	T	P	C
17116AEC33	Soil and Agriculture Microbiology	5	0	0	5

#### UNIT – I

Classification of soils. Physical and chemical characteristics and microflora of various soil types (bacteria, fungi, algae and nematodes in relevance to soil types).

#### UNIT – II

Interactions among microorganisms. Symbiosis – mutualism – commensalisms – competition – amensalism – synergism – parasitism – predation.

#### UNIT – III

Biogeochemical cycles. Carbon, nitrogen, phosphorus and sulphur.

#### UNIT – IV

Biofertilizers. Symbiotic nitrogen fixation – (*Rhizobium*, *Frankia*) – Symbiotic nutrient mobilizers – Endomycorrhizae and Ectomycorrhizae – Non symbiotic microbes – *Azotobacter* – *Azospirillum* – Cyanobacteria (*Nostoc*, *Gloeocapsa*, *Anabaena*).

#### UNIT – V

Microbial Association with higher plants – Rhizosphere – *Rhizobium* – infection – inoculation – nodule formation. Phylloplane association with animals. A brief account of the symptoms, etiology, life-cycle and management of bacterial (blight of paddy, citrus canker) and fungal (late blight of potato and red rot of sugarcane) diseases.

#### Employability

##### Text Book:

Course Code	Course Title	L	T	P	C
17116AEC34L	Soil and Agriculture Microbiology Lab	0	0	3	3

### Lab work

1. Isolation and culturing of *Rhizobium* from root nodules.
2. Isolation and culturing of *Azospirillum* from grassplant.
3. Isolation and culturing of *Azotobacter* from paddy field
4. Isolation and culturing of *Phosphobacter* from paddy field
5. Isolation and culturing of Blue Green Algae from paddy field

### Demonstrations

1. Testing nodulation ability of *Rhizobium*.
2. Seed inoculation with *Rhizobium* and testing of nodulation ability.
3. Study of the following diseases:
  - Bacterial blight of paddy;
  - Downy mildew of bajra;
  - Powdery mildew of cucurbits;
  - Head smut of sorghum;
  - Leaf rust of coffee;
  - Leaf spot of mulberry,
  - Red rot of sugar cane,
  - Root knot of mulberry

### Employability

Course Code	Course Title	L	T	P	C
17112AEC35	Biostatistics	4	0	0	4

### Unit – I

Use of statistics in biology – Measures of Central tendency – Mean, Median, Mode, Measure of dispersion Standard deviation – Standard error – Correlation Coefficient - Probability

### Unit – II

Marginal conditional distribution – continuous and discrete distribution – Regression analysis – ‘t’ test, Chi-Square test, binomial, Normal and exponential, Biostat program.

### Unit – III

Null hypothesis, level of significance, test of significance for mean / different

### Unit – IV

Curve fitting – least square method – finite differences – difference operators – Newton’s forward and backward formula, Basics of the application of SPSS 7.5 window software package

### Unit – V

MS Excel for computing data – Newton Raphson method, false position method – Solution of simultaneous algebraic equation.

### SKILDEVELOPMENT

#### Reference:

1. Introduction to numerical methods 1990 S. Shasta
2. Computer Oriented numerical methods 1971 V. Rajaraman
3. Introduction to Biostatistics by Sokal and Rohit 1973 Toppan Co. Japan

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17112AEC36L	Biostatistics Lab	0	0	3	3

1. Mean and Standard deviation using biological samples
2. Chi – Square test, Student ‘t’ test and Correlation coefficient
3. Regression Coefficient and regression lines

Employability

Course Code	Course Title	L	T	P	C
17116RMC37	Research Methodology	3	0	0	3

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

**OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

**PREREQUISITES:**

Basic computer literacy & skills for working in window-environment

**UNIT I: Introduction to Research Methodology**

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

**UNIT II: Research Methods**

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT III: Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

**UNIT IV: Database Survey**

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

**UNIT V:**

**Basic Principles of Laboratory Safety and Waste management**

Introduction - Access to Laboratory and Emergency Exits - Personal Protective Clothing and Equipment - Good Working Practices-Maintenance of Laboratory Equipment - Working with Hazardous Substances - Storage of Chemicals - Working with Flammable Solvents - Gas Cylinders-Fire Precautions - Emergency Procedures - First Aid - Accident Follow-Up - Safety Manual - Safety Training - Management of Laboratory Safety and Responsibilities - Waste Management.

**SKILDEVELOPMENT**

## Skill Based Elective-III

### POWER POINT

Course Code	Course Title	L	T	P	C
17120SEC03AL	Package Lab-III	0	0	2	1

1. Create a slide show presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slide show presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create slide show presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. *Create a slide show presentation for a shop advertisement to be open shortly*
6. Create a slide show presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for a tourists places
8. Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

### SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
17160SEC03B	SOFT SKILL III	0	0	2	1

### Part -III Interpersonal Relations and Social Responsibilities

#### UNIT I: Interpersonal Relations

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

#### UNIT II: Ethics and Social Responsibilities

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

#### SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
17111SEC03L	Communicative English Lab-III	0	0	2	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To familiarize with the clauses and phrases
- To learn the different degrees of comparison
- To change a sentence from active to passive and vice versa
- To know where to use punctuations
- To frame sentences
- To know the features, process, forms and barriers of communication

**Outcome:**

- Understand grammar

**UNIT –I**

Clauses

Phrases

**UNIT –II**

Degrees of comparison

**UNIT –III**

Active and Passive

**UNIT –IV**

Communication

Characteristics -Process -Forms - Barriers

**UNIT –V**

Punctuation

Forming sentences

## SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
17111AEC41	Advanced English-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT –I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

**UNIT – II**

Flowchart

Proposals

**UNIT – III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT –V**

Definition Writing for and against a topic.

Course Code	Course Title	L	T	P	C
17116AEC43	Virology	6	0	0	6

### UNIT – I

Introduction – Definition, History of virology. General properties of Viruses classification of Viruses – cultivation of Viruses – Structure and replications Viruses.

### UNIT - II

Virus: Assay, purification and characterization of Viruses, Separation and characterization of viral components and quantification of Viruses.

### UNIT – III

Bacterial Viruses – structure of bacteriophage, The Lytic life cycle (T-Even coliphages) – Lysogenic life cycle (*Escherchia coli*, Phage Lambda) noninteractive lysogeny (*Escheirchia coli*).

### UNIT – IV

Plant Viruses, common plant viral diseases: TMV, Bunchy top of banana, satellite virus, Viroid – Double stranded DNA virus – Assay methods.

### UNIT – V

Animal viruses: Morphology, pathogenesis and laboratory diagnosis of Prions, Animal viruses Rinder pest, Blue tongue, Raniket dion, Foot and Mouth Disease. Human Viruses – Herpes, HIV, Hepatitis Viruses. Viral Vaccines. Prevention and treatment of viral diseases. Antiviral agents.

Course Code	Course Title	L	T	P	C
17116AEC44L	Soil Microbiology and Virology Lab	0	0	3	3

### Lab work

1. Isolation and enumeration of soil microorganisms (fungi, bacteria and actinomycetes).
2. Isolation and staining of vesicular arbuscular mycorrhizae from roots of higher plants.
3. Isolation and testing of antagonistic microorganisms from soil
4. Isolation of microorganisms from Rhizosphere and Rhizoplane
5. Determination of soil pH
6. Estimation of soil chlorides.
7. Estimation of soil calcium.
8. Estimation of magnesium
9. Estimation total phosphorus.
10. Isolation & characterization of bacteriophage from natural resources.

### Demonstrations

1. Isolation of microorganisms from Phyllosphere.
2. Study of the following viral diseases: Tobacco mosaic; Cucumber Mosaic Virus.
3. Demonstrations of some plant, animal & human viruses (photographs, diagram etc.).

Course Code	Course Title	L	T	P	C
17116AEC45	Bioinformatics	6	0	0	6

### Unit – I

Introduction to Bioinformatics – Scope and application – Characteristics of Hardware and Software – Types of computer – Sending and receiving e-mails – Internet searching biological articles in internet

### Unit – II

Computer application in biology – Information theory and biology – Analysis tools for databases – BLAST, FASTA and DNA database – NCBI, DDBJ and EMBL.

### Unit – III

Protein structure determination by X- ray diffraction methods – Sequence alignment – Global alignment using Needleman – Wunsch algorithm and Local alignment using Smith – Waterman algorithm

### Unit – IV

Application to DNA and protein sequence – Biochips, Biosensors.

### Unit – V

Use of databases in biology: Sequence databases, structure databases. Sequence analysis – Protein and nucleic acids, Structure comparisons, molecular modeling, genome projects

### SKILDEVELOPMENT

## PART -IV Etiquette And Interviewing Skills

### **UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

### **UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

### **SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111SCE04L	Communicative English Lab-IV	0	0	1	1

**Aim:**

- To develop communicative skills

**Objective:**

- To use gerund and make sentences
- To change sentences from direct to indirect and vice versa
- To understand the listening skill
- To enhance reading skill
- To familiarize with the singular and plural forms
- To describe a picture

**Outcome:**

- Understand grammar
- Develop listening and reading skills

**UNIT –I**

Gerund

Infinitive

**UNIT –II**

Direct and Indirect

**UNIT –III**

Listening -types-features of a good listener-active and passive listening-effective listening

**UNIT –IV**

Reading-purpose-technique-types-reading rates-reading & interpretation

**UNIT –V**

Singular and Plural

Letter writing

## ENVIRONMENTAL STUDIES

(for under graduate students)

Course Code	Course Title	L	T	P	C
171ENVTSTU	Environmental Studies	1	0	0	1

### Objectives:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

### 1. Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

### 2. Natural Resources and Associated Problems.

- a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
- b) Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
- c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
- e) Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification, Role of an individuals in conservation of natural resources.

### 3. Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

- a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
- d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

#### **4. Biodiversity and its conservation**

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot — spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

#### **5. Environmental Pollution**

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

#### **6. Social Issues and the Environment**

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global wanTling, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

#### **7. Environmental Protection**

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

#### **8. Field Work**

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

#### Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
4. Apply their ecological knowledge to illustrate and graph a problem and
5. describe the realities that managers face when dealing with complex issues; and
6. Understand how politics and management have ecological consequences.

## SEMESTER V

Course Code	Course Title	L	T	P	C
17116AEC51	Food and Dairy Microbiology	5	0	0	5

### UNIT – I

Introduction: Importance of food and dairy Microbiology – Types of microorganisms in food – Source of contamination (primary sources) – Factors influencing microbial growth in foods (extrinsic and intrinsic).

### UNIT – II

Food fermentations: Cheese, bread, wine, fermented vegetables – methods and organisms used. Food and enzymes from microorganisms – single cell protein, production of enzymes.

### UNIT – III

Contamination, spoilage and preservation of different kinds of foods, cereals and cereal products – sugar and sugar products – vegetable and fruits – meat and meat products – fish and other sea foods – eggs and poultry – dairy and fermentative products (ice cream/milk/bread/wine).

### UNIT – IV

Food Poisoning: food borne infections (a) Bacterial: *Staphylococcal*, *Brucella*, *Bacillus*, *Clostridium*, *Escherichia*, *Salmonella* (b) Fungal: Mycotoxins including aflatoxins, (c) Viral: Hepatitis, (d) Protozoa – Amoebiasis.

### UNIT – V

Food preservation: Principles of food preservation – methods of preservation. a. Physical (irradiation, drying, heat processing, chilling and freezing, high pressure and modification of atmosphere) b. Chemical (Sodium benzoate Class I & II). Food Sanitation: Good manufacturing practices – Hazard analysis, Critical control points, Personnel hygiene.

### SKILDEVELOPMENT

#### Text Book

1. Adams, M.R. and Moss, M.O.1995. Food Microbiology, The Royal Society of Chemistry, Cambridge.
2. Frazier, W.C. and Westhoff, D.C.1988. Food Microbiology, TATA McGraw Hill Publishing company ltd., New Delhi.
3. Jay, J.M.1987. Modern Food Microbiology. CBS Publishers and distributors, New Delhi.
4. Atlas, R.M. 1989. Microbiology, A Fundamentals and Applications, Macmillan Publishing company.

1. Banwart, G.J.1989. Basic Food Microbiology, Chapman & Hall New York.
2. Board, R.C.1983. A Modern Introduction to Food Microbiology, Blackwell Scientific Publications, Oxford.
3. Robinson, R.K.1990. Dairy Microbiology, Elsevier Applied Science, London.
4. Hobbs, B.C. and Roberts, D.1993. Food Poisiong and Food Hygiene, Edward Arnold (A division of Hodder and Stoughton), London.

Course Code	Course Title	L	T	P	C
17116AEC52	Molecular Biology	5	0	0	5

### UNIT – I

Nucleic acids: Structure of DNA and RNA, Types and forms – DNA, t-RNA, r-RNA, m-RNA – Definition and functions.

### UNIT – II

Vectors – plasmids, phages and cosmids, Ti-plasmid, pBR322, pSC101, pUC. Structure and assay methods.

### UNIT – III

Enzymes – Nucleases, ligases, polymerases, DNA modifying enzymes, Topoisomerases – their uses and applications.

### UNIT – IV

Gene and its manipulation techniques – Definition of a gene, structure, cloning techniques, genomic library, C-DNA, expression systems. Gene rearrangement by RNA and DNA splicing.

### UNIT – V

Nucleic acid and protein hybridization technique – Southern, Northern and Western methods of hybridization. DNA amplification techniques – PCR. DNA fingerprinting and its applications.

Employability/Entrepreneurship/Skill development

7. Gardner EJ, Simmons MJ, Snustad DP, 1991. Principles of Genetics. John Wiley & Sons.
8. Singer M, Berg P.1991. Genes and Genomes. University Science Books.

Course Code	Course Title	L	T	P	C
17116AEC53	Environmental Microbiology	4	1	0	3

### UNIT – I

Concepts of microbial ecology: Relationship between microorganism and different environments land, water and air. Microorganism inhabiting extreme environments. Microbiology of air – organisms in air, distribution and sources. Droplet nuclei, aerosol, assessment of air quality, solid – liquid – impingement methods. Brief account of air borne transmission of harmful microbes.

### UNIT – II

Types of aquatic ecosystems: fresh water – ponds, lakes, streams. Marine habitats – estuaries, mangroves, deepsea, hydrothermal vents, saltt pans, coral reefs. Zonations – upwelling – eutrophication – food chain. Potability of water – microbial assessment of water quality – water purification – brief account of water borne diseases.

### UNIT – III

Types of wastes – characterization of solid and liquid wastes. Solid waste treatment – saccharification – gasification – composting, Utilization of solid wastes – food (SCP, mushroom, yeast); fuel (ethanol, methane, hydrogen); fertilizers (composting).

### UNIT – IV

Liquid waste treatment. Treatment methods – primary –secondary (anaerobic – methanogenesis; aerobic- trickling activated sludge – oxidation pond – tertiary treatment. Utilization of liquid wastes – food (SCP, Yeast) – fuel (methane), fertilizers (Cyanobacteria).

### UNIT – V

Biodeterioration: Deterioration of paper, leather, wood, textiles, metal corrosion, mode of deterioration, organisms involved its disadvantages and mode of prevention.

Employability/Entrepreneurship/Skill development

### Text Book:

Course Code	Course Title	L	T	P	C
17116AEC54L	Food and Dairy Microbiology and Molecular Biology Lab	0	0	3	3

### Lab work

1. Assessment of milk quality by methylene blue reduction test
2. Wet mount preparation of fungal organism from spoiled bread, tomato, grapes, potato.
3. Observation of food samples to study *Leuconostoc sp.*, *Lactobacillus sp.*, *Streptococcus lacti* and *Saccharomyces*
4. Preparation of yoghurt
5. Determination of thermal death time (TDT) and thermal death point (TIP) of microorganisms from spoiled foods
6. Direct microscopic examination of milk by standard plate count (SPC) method
7. Isolation of plasmid DNA from bacteria by Spectrophotometric assay.
8. Isolation of chromosomal DNA from bacteria by Spectrophotometric assay.
9. Development of competent cells in *E. coli*.
10. Isolation of antibiotic resistant auxotrophic mutants.
11. Protoplast and Spheroplast isolation

### EMPLOYABILITY

#### Demonstration

1. Fermenting ability of yeast
2. Antibiotic resistance – plasmid mediated – chromosomal mediated – Gel Electrophoretic methods.
3. Principles and applications of agarose gel electrophoresis and plasmid separation in agarose gel.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17116AEC55L	Environmental Microbiology Lab	0	0	3	3

### **Lab work**

1. Isolation and identification of air-borne bio-particles using Open plate method
2. Effects of high salt concentration on microbial growth
3. Microbial flora of polluted water – Microbial flora of sewage
4. Bacterial examination of drinking water by membrane filter technique and MPN

Employability/Entrepreneurship/Skill development

### Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
17116DSC56A	Immunotechnology	5	0	0	4

#### UNIT – I

Introduction: Terminologies – History of Immunology – immunity – types of immunity – innate and acquired. Immunohematology, Blood groups, Blood transfusion – Rh – incompatibilities

#### UNIT – II

Immune systems: Anatomy of lympho- reticular system – Primary lymphoid organ. Secondary lymphoid tissue – cells of the immune system – detailed aspects of T and B cells – receptors – activation and function.

#### UNIT – III

Antigens: Types, properties, haptanes – adjuvants – vaccines – types –toxoids antitoxins, Immunoglobulins – structure types and properties. Theories of antibody production. complement

#### UNIT – IV

Antigen – antibody reactions – in vitro methods; Agglutination – Precipitation, Complement fixation, Immunofluorescence, ELISA, RIA, in vivo methods; Skin tests – immune complex tissue demonstrations.

#### UNIT – V

Hypersensitivity reactions – antibody mediated, Type I anaphylaxis, Type II – Antibody dependent cell cytotoxicity, Type III – immune complex reactions – respective diseases and immunologic methods of diagnosis – cell mediated immune responses – Lymphokines, Cytokines. Type IV – Hypersensitivity reactions, MHC and transplantation.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17116DSC56B	Bioinoculants	5	0	0	4

#### UNIT – I

General account of the microbes used as a biofertilizers for crop plants and their advantages. Symbiotic N<sub>2</sub> fixers: Rhizobium- Isolation, characterization, identification, classification, inoculum, production and field application. Frankia- Isolation, characterization- actinorrhizal nodules-non-leguminous crop symbiosis.

#### UNIT – II

Non-symbiotic N<sub>2</sub> fixers- Azospirillum- Free living- Azotobacter- free isolation, characterization, mass inoculum production and field application.

#### UNIT – III

Symbiotic N<sub>2</sub> fixers- Cyanobacteria, Azolla- Isolation, characterization, mass multiplication- role in rice cultivation- Crop response- field application- immobilization.

#### UNIT – IV

Phosphate solubilizers- phosphate solubilizing microbes- Isolation, characterization, mass inoculum production, field application- Phosphate solubilization mechanism.

#### UNIT – V

Mycorrhizal bioinoculants- classification- importance of mycorrhizal Ectomycorrhizae- Endomycorrhizae- Ectendo mycorrhizae- Taxonomy of mycorrhizae- Isolation of VA mycorrhizae- quantification and assessment of VAM in roots- Mass inoculum production VAM- field applications of Ectomycorrhizae and VAM.

### **PART -V Leadership Skills and Body Language**

#### **UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

#### **UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

#### **SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111SEC05L	Communicative English Lab-V	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To develop vocabulary
- To comprehend meaning from context
- To involve in a dialogue
- To note the important points from the text.
- To write a letter
- To understand the subject verb agreement
- To teach the different genders

**Outcome:**

- Develop communicative skills

**UNIT –I**

Correct the spelling mistakes

Comprehension

**UNIT –II**

Find the odd one out

## SEMESTER VI

Course Code	Course Title	L	T	P	C
17116AEC61	Industrial Microbiology	4	0	0	5

### UNIT – I

Historical development of Industrial Microbiology, Industrially important microorganisms, Major classes of products and processes. Improvement microbial stains improvement.

### UNIT – II

Design of a fermenter, types of fermenters and basic functions. Fermentation media formulation strategies, economical means of providing energy, carbon, nitrogen, vitamin and mineral sources, role of buffers, precursors, inhibitors, inducers and antifoams, types of fermentation.

### UNIT – III

The recovery and purification of fermentations products (intracellular and extracellular), cell disruption, precipitation, filtration, centrifugation, solvent recovery, chromatography, ultrafiltration, drying, Cell immobilizations and its applications.

### UNIT – IV

Microbial products of pharmaceutical value – raw materials, organism and Industrial processes involved in the production of Pencillin, Vitamin B12 and rabies vaccine.

### UNIT – V

Microbial products of Industrial value – Raw materials, organism and Industrial processes involved in the production of ethanol, vinegar, amylase, protease, glutamic acid. Recycling and safe disposal of Industrial wastes through microbes.

Employability/Entrepreneurship/Skill development

### Text Book

Course Code	Course Title	L	T	P	C
17116SEC62	Clinical Microbiology	4	0	0	4

### UNIT – I

Normal microbial flora of the human body, Host-microbe interactions – virulence factors of microbes. Invasiveness and pathogenicity. Non- specific resistance factors.

### UNIT – II

Diagnostic Microbiology – collection and transport of specimen for Microbiological examination – General methods for isolation and identification of bacteria. Typing of bacterial isolates. Sero-diagnosis.

### UNIT – III

Clinical symptoms. Epidemiology, pathogenesis, laboratory diagnosis, prevention and treatment of the following bacterial infections (a) Streptococcal infections, (b) Staphylococcal infections, (c) Meningitis, (d) Tuberculosis, (e) Leprosy, (f) Gastrointestinal disorders – typhoid, cholera, bacillary dysentery, (g) Sexually transmitted diseases – syphilis, gonorrhoea. (h) Anaerobic wound infection – tetanus, gas gangrene.

### UNIT – IV

Clinical symptoms. Epidemiology, pathogenesis, laboratory diagnosis, prevention and treatment of the following viral infections (a) Respiratory infections, common cold, influenza, measles, mumps and rubella. (b) neurological infection – encephalitis (Dengue, Japanese encephalitis), Rabies (c) Liver diseases : Hepatitis A,B,C,D & E (d) Immunodeficiency diseases, AIDS, CMV (Cytomegaloviruses) Herpes simplex viruses.

### UNIT – V

Clinical symptoms. Epidemiology, pathogenesis, laboratory, prevention and treatment of the following fungal and protozoan infections (a) Fungal – superficial, subcutaneous and systemic mycoses, (b) Protozoan: Amoebiasis, Malaria, Leishmaniasis, (c) Helminths – Filariasis, Ascariasis, Zoonotic diseases, Hospital acquired infections.

Employability/Entrepreneurship/Skill development

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17116AEC63L	Industrial Microbiology Lab	5	0	0	3

### **Lab work**

1. Whole cell immobilization – alginate –Cyanobacteria
2. Estimation of citric acid - *Aspergillus*
3. Estimation of ethanol - Fruit juice
4. Spawn production - Mushroom
5. Mushroom cultivation
6. Starch hydrolysis

Employability/Entrepreneurship/Skill development

### **Demonstration**

1. Preparation of fermented food –cheese

Course Code	Course Title	L	T	P	C
17116SEC64L	Clinical Microbiology Lab	0	0	3	3

### Lab work

1. Examination of parasitic ova and cysts from faecal samples.
2. Identification of pathogenic organism with a smear, culture and biochemical test
3. *Staphylococcus sp.*, *E. coli*, *Klebsiella sp.*, and *Salmonella typhi*

### Demonstration

1. LP Mount - *Trichophyton sp.* *Microsporum sp*

### Spotters:

2. Slides of pathogenic bacteria, fungi and parasites:
3. Electron micrographs of viruses – Pox viruses, Herpes simplex virus, HIV, HBV,
  - *Staphylococci*
  - *Streptococci*
  - *Mycobacterium leprae*
  - *Trypanema pallidum*
  - *Leptospira sp.*
  - *Bacillus subtilis*
  - *Klebsiella sp.*
  - *E.coil.*
  - *Clostridium tetani.*
  - Permanent mounts of dermatophytes
  - *Candida sp.*
  - *Cryptococcus sp.*
  - *Maduromycetes.*

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17116DSC65A	Microbial Genetics	4	0	0	4

### UNIT – I

History – experiments of Hershey Chase and Griffith, DNA as the genetic material – discovery of DNA structure – RNA as a genetic material – Genetic code.

### UNIT – II

Organization and functioning of genetic material – Bacterial and viral. Details of E.coli chromosome. Brief account of plasmid – structure – types. Replication of DNA – rolling circle model – theta. Model. Replication of RNA – reverse transcriptase.

### UNIT – III

Concept of gene – Lac operon, tryptophan operon, attenuation control – promoters – repressors – gene expression and regulation.

### UNIT – IV

Gene transfer mechanisms – conjugation – Transformation – transduction.

### UNIT – V

Mutagenesis – mutation – mutants – phenotypic mutants – genotypic mutants – IS elements – transposons – repair mechanism, Carcinogenicity testing.  
Employability/Entrepreneurship/Skill development

### Text Book

5. Singer M, Berg. P. 1991. Genes and Genomes. University Science Books.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17116DSC65B	Bioethics	4	0	0	4

### **UNIT – I**

General Ethical concerns: the use of nature, Different views of nature, Dynamic nature, interfering with nature, integrity of species; Reducing genetic diversity; Biological warfare; public perception of science.

### **UNIT – II**

Medical ethics; History and culture: The Hippocratic tradition: a profession, Philanthropy, Do no harm, adoption to the oath by western medicine. Competing ethical.

Traditions; Retaining the Hippocratic oath.

### **UNIT – III**

Status of Human embryo: Human Embryonic development; Ethics through embryo development: Fertilization, the fetus and feeling pain; Scientific Research on Human Embryos: Experimental goals of Human Embryo Research, Human Development; How much Embryo experimentation in ethical?

### **UNIT – IV**

Animal Rights: Making new strains of animal: Ethical limits of animal use: Religious views of animal status; Philosophical views of animal status; regulations.

### **UNIT –V**

Human Gene therapy: Ethics of somatic cells gene therapy: Efficiency of treatment; safety of transferred genes; protecting human life; Affect on family life; Economic factors; when we should use Gene therapy?

Employability/Entrepreneurship/Skill development

## Free Elective – Journalism

Course Code	Course Title	L	T	P	C
17111GEC	UG Free Elective - Journalism	4	0	0	2

### Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

### Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

### Outcome:

- Become a journalist

### UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

### UNIT- II

News – Definition – Kinds – Elements – Sources

### UNIT- III

Reporters

### UNIT- IV

The Editor and the Sub Editor

### UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

### SKILDEVELOPMENT

#### References:-

## Free Elective – DEVELOPMENT OF MATHEMATICAL SKILLS

Course code	Course Title	L	T	P	C
17112GEC	Free Elective : Development Of Mathematical Skills	4	0	0	2

### Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

#### Unit I

Simple interest and compound interest

#### Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

#### Unit III

Set theory – Series

#### Unit IV

Matrices – Determinants

#### Unit V

Assignment problems

### SKILDEVELOPMENT

### References

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

### Learning outcomes

By the end of this course, you should be able to

- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

## Free Elective - Instrumentation

Course Code	Course Title	L	T	P	C
17113GEC	Free Elective Instrumentation	4	0	0	2

### Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

### Objectives:

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

### UNIT – I: Introduction

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin's and Norton's theorem – Bridges : AC bridges – Maxwell, Owen, Schering and deSauty's bridges – Wien bridges.

### UNIT – II: ELECTRONIC INSTRUMENTS – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

### UNIT – III: ELECTRONIC INSTRUMENTS – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

### Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

### Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

### SKILDEVELOPMENT

**Books for Study**

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

**Learning Outcomes:**

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

**Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

### Free Elective - Food and Adulteration

Course Code	Course Title	L	T	P	C
17114GEC	Free Elective Food and Adulteration	4	0	0	2

**Aim:** To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.  
High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

Introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti -caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection.  
Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

**SKILDEVELOPMENT**

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

### Free Elective - Web Technology

Course Code	Course Title	L	T	P	C
17120GEC	Free Elective Web Technology	4	0	0	2

#### AIM

To equip the students with basic programming skill in Web Designing

#### OBJECTIVE

- To understand and practice mark up languages
- To learn Style Sheet and Frames

#### UNIT I

Introduction to HTML – Head and body sections – Hyper text and Link in HTML documents.

#### UNIT II

Designing the body section—Managing images in HTML

#### UNIT III

Ordered and unordered lists – Table handling.

#### UNIT IV

DHTML and Style Sheet – Frames.

#### UNIT V

A web page design project – Forms.

#### SKILDEVELOPMENT

#### REFERENCE BOOK

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

### Free Elective – E-COMMERCE AND ITS APPLICATIONS

Course Code	Course Title	L	T	P	C
17122GEC	Free Elective E- Commerce and its Applications	4	0	0	2

**AIM:**

To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

**OBJECTIVES:**

To be aware of all aspects of communication and information exchange in Electronic Commerce, including:

- Navigation, brokerage, advertising, and catalogue exchange in pre-sales activities.
- Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

**UNIT-I:**

**History of E-commerce and Indian Business Context:** Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO- Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal

**Business Models for E-Commerce:** E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

**UNIT-II:**

**Enabling Technologies of the World Wide Web:** Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script - XML

**UNIT- III:**

**E-Marketing:** Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

**E-Security:** Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

**UNIT-V**

**E-payment Systems:** E-Banking at ICICI bank-Main concerns in internet baking-History’s lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-

Designing E-payment system-digital signature-online financial service in India-online stock trading: The high speed alternative.

**SKILDEVELOPMENT**

**REFERENCE BOOK:**

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition

## Free Elective - Indirect Taxes

Course Code	Course Title	L	T	P	C	Marks
17161GEC	Free Elective – Indirect Taxes	4	0	0	2	100

### **OBJECTIVIES:**

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

### **UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

### **UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

### **UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

### **UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax-exempted services from tax - Value of taxable services-Different services on which tax is payable.

### **UNIT – V**

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

### **SKILDEVELOPMENT**

#### Learning Outcome

Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

### **Reference Books:**

1. **Income Tax Law and Practice - N.Hariharan.**
2. **Business Taxation – T.S.Reddy/Hari Prasad Reddy.**

**SKILL BASED ELECTIVE- VI  
FLASH**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC06AL	Package Lab-VI	0	0	2	1

1. Drawing and painting original art in flash.
2. Creating simple objects using flash.
3. Creating a frame-by-frame animation techniques.
4. Develop a program for animation with motion Tweening.
5. Develop a program for animation with shape Tweening.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animations techniques movie clip and graphic symbols.

**SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
17160SEC06B	SOFT SKILL VI	0	0	2	1

### PART -VI Life Skills and Other Skills

#### **UNIT I Life Skills**

**Life Skills** - Knows how to use technology to communicate safely and effectively. -  
 Knows how to access community resources in case of emergency. -Knows how to obtain copies  
 of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. -  
 Occupational Safety , First-aid

#### **UNIT II Other Skills**

**Other Skills**  
 Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes  
 Taking, Self learning, Complex problem solving and creativity.

#### **SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111SEC06L	Communicative English Lab - VI	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To extract the main ideas from a text
- To understand the meaning of text
- To expand an idea
- To shorten a text
- To develop vocabulary
- To enhance writing skills
- To write simple, compound and complex sentences

**Outcome:**

- Develop communicative skills

**UNIT –I**

Jumbled words

Paragraph writing

**UNIT –II**

Prefix and suffix

Precise writing

**UNIT –III**

Eponyms

Summarizing

**UNIT –IV**

Compound words

Simple, Compound and Complex

**UNIT –V**

Homophones

Essay writing

**SKILDEVELOPMENT**

17216SEC11	Prokaryotic Microbiology	5	0	0	4

### Unit – I

Microbial classification and diversity of microorganisms – classification based on cellularity, cell and kingdom concepts – Whittaker’s classification – major group of prokaryotic microorganisms – their characteristics – microbial diversity of viruses, bacterial and cyanobacteria.

### Unit – II

Viruses: Introduction – Classification of viruses – cultivation of viruses, purification and assay, various methods of viral assays. Basic structure of viruses – symmetry – biochemical composition of viruses – Bacteriophages – Ultra structure of T<sub>4</sub> phage – multiplication of bacteriophages – viruses of fungi and algae, slow viruses, viroids, satellite viruses.

### Unit – III

Plant viruses: Classification of plant viruses. Tobacco Mosaic Virus – Ultra structure of TMV, Multiplication of TMV. Viruses of various plant hosts / crops and diseases - Plant viruses as gene vectors.

### Unit – IV

Bacteriology: Introduction – Diversity of bacterial flora – distribution – morphology of typical bacterial cell – Chemical composition of bacterial cell wall, Reproduction and genetic recombination, Transformation, Conjugation, Transduction, Bacterial growth rate, Bacterial culture methods and culture media for various bacteria. Isolation and enumeration of bacterial cultures, Identification – Gram staining technique, Bacterial diseases of Man.

### Unit – V

General characteristics of other Bacteria – Mycobacteria, Myxobacteria, Rickettsia and Chlamydiae and Cyanobacteria – Classification of cyanobacteria – significance of Cyanobacteria in biofertilizers – *Archaeobacteria*, *Actinomycetes*, *Streptomyces*, *Actinoplanes*, *Maduramycetes* and their general characters

### Text books:

1. Text book of Microbiology (2005) by R.C. Dubey, S.Chand & Co., Publishers, New Delhi
2. Fundamental of Microbiology (2005) By Purohit, Agrobios Publishers, Meerut

### Reference

1. Microbiology (1993) Jr. M.J. Peczar, E.C.S. Chan and N.R. Kreig, Mc Graw Hill Inc., NewYork

Course Code	Course Title	L	T	P	C
17216SEC12	Eukaryotic Microbiology	5	0	0	4

### Unit – I

Differentiation of Eukaryotes and Prokaryotes – Salient features of Eukaryotes – Major groups of Eukaryotes – Algae, Fungi, Protozoa and lichens – Classification of Algae, Fungi and Protozoans. Significance of various Algae and fungi in Agricultural Microbiology - Significance of various fungi, algae in environmental biology – biodegradation of Xenobiotics, heavy metals and pesticides, Eukaryotic microbes in Bio pesticides.

### Unit – II

Algae: Phycology – Introduction – Distribution of Algae, General features of algae Classification and general characters of prochlorophyta, Rhodophyta, Phaeophyta: Significance of Algae in production.

### Unit – III

Biology of Lichens – fungal components and algal component: general characteristics of lichens, physiology of lichens, classification of lichens, Reproduction of lichens, Economic uses of lichens. Single cell protein (SCP) – Spirulina and significance: BGA and significance in agriculture.

### Unit – IV

Mycology – Introduction – General characters of Fungi – Structure of fungi – Fungal cell, multiplication of fungi – Fungal diseases of Plants, Animals and Human - Beneficial fungi, VAM – fungi in soil fertility. Predaceous fungi and nematophagous fungi – Fungi in food spoilage and food infections.

### Unit – V

Protozoans – Classification of Protozoa – General Characters of protozoa – general structure and life cycle of Amoeboid form – Nutrition and Reproduction in protozoans – Protozoan diseases of Animals and Man  
Employability/Entrepreneurship/Skill development

### Text book:

1. Text book of Microbiology (2005) by R.C. Dubey, S.Chand & Co., Publishers, New Delhi
2. Fundamental of Microbiology (2005) By Purohit, Agrobios Publishers, Meerut

### Reference

1. Microbiology (1993) Jr. M.J. Peczar, E.C.S. Chan and N.R. Kreig, Mc Graw Hill Inc., New York

Course Code	Course Title	L	T	P	C
17216SEC13	Microbial Physiology	5	0	0	4

### Unit – I

Cell structure and function: Biosynthesis of peptidoglycan – Outer membrane, teichoic acid Exopolysaccharides; Cytoplasmic membrane – Pilli, fimbriae, S-layer, Transport mechanisms – active, passive, facilitated diffusions – uni, sym, antiports. Electron carriers – artificial electron donors, inhibitors, uncouplers – energy bond – phosphorylation.

### Unit – II

Microbial growth: Phases of growth curve – measurement of growth – calculations of growth rate – generation time – synchronous growth – induction of synchronous growth, synchrony index – factors affecting growth – pH, temperature, substrate and osmotic condition. Survival at extreme environments – starvation – adaptive mechanisms in thermophilic, alkalophilic, osmophilic and psychrophilic- Bioluminescence – mechanism – advantages.

### Unit – III

Microbial pigments and carbon assimilation: Autotrophs – Cyanobacteria – photosynthetic bacteria and green algae – heterotrophs – bacteria, fungi, myxotrophs. Brief account of photosynthetic and accessory pigments – chlorophyll – fluorescences, phosphorescences – bacteriochlorophyll – rhodopsin – carotenoids – phycobiliproteins: Carbohydrates – anabolism – autotrophy – oxygenic – anoxygenic photosynthesis – autotrophic generation of ATP; fixation of CO<sub>2</sub> – Calvin cycle – C<sub>3</sub> – C<sub>4</sub> pathways. Chemolithotrophy – sulphur – iron – hydrogen – nitrogen oxidations – Brief account of methanotrophs in relation to CO<sub>2</sub> fixation.

### Unit – IV

Microbial respiration and fermentative pathway: Respiratory metabolism – Embden Mayer Hoff pathway – Enter Doudroff pathway – glyoxalate pathway – Krebs cycle – Oxidative and substrate level phosphorylation – reverse TCA cycles – Gluconeogenesis – Pasteur Effect – Fermentation of carbohydrates – homo and heterolactic fermentations. Cell division – endospore – structure – properties – germination.

### Unit – V

Spore structure – Function: Cell division – endospore – structure – properties – germination – Microbial development, sporulation and morphogenesis. Hyphae vs yeast forms and their significance. Multicellular organization of selected microbes – Dormancy.

Employability/Entrepreneurship/Skill development

### Text Books:

1. Microbial physiology and metabolism (1995) D.R. Caldwell, Wm. C.Brown, Publishers. USA
2. Microbial Physiology (1988). A.G. Moat and J.W. Foaster, John Wiley & Sons, New York.

Course Code	Course Title	L	T	P	C
17216SEC14L	Fundamentals of Microbiology Lab	0	0	5	4

Principles and methods and sterilization – (Wet, dry and cold sterilization)

Direct microscopic observations of bacterial shape – cocci, rods, chains, fungal spores, mycelium, yeast budding.

Preparation of Media: Nutrient broth, Nutrient agar, plates, slants, soft agar. Pure culture technique: Streak plate, spread plate and pour plate methods

Measurement of size of microbes – micrometry method. Motility determination – Hanging drop method.

Isolation and purification of cyanobacteria, actinomycetes, fungi and protozoans.

Staining methods: Simple, Negatives, acid fast, Gram staining, Capsule Metachromatic granular staining, Lactophenol cotton blue staining – Fungal slide preparation.

Measurement of growth – Direct haemocytometer count, viable count – growth curve,

Determination of growth rate and generation time.

Effect of pH, temperature and osmotic pressure on growth of bacteria.

Biochemical test: carbohydrate fermentation – acid – gas production: IMViC test; - Hydrolysis of starch: cellulose, gelatin, casein, catalase test, oxidase, urease test, nitrate reduction – triple sugar iron test, ONPG test, amino acid decarboxylase

Blood grouping

Widal test

Total count of RBC

Total count of WBC

Differential count of WBC

Erythrocyte Sedimentation Rate

Preparation of Buffer; pH measurement (Tris, phosphate, acetate buffer)

Employability/Entrepreneurship/Skill development

3. David R. Brooke. Bergey's Manual of Systematic Bacteriology (Vol.I) Eastern Halz, Springer Publication
4. James T. Stanley, Marving, P. Bryant, Bergey's Manual of Systematic Bacteriology (Vol.II), Nibert pfeming Springer Publishers

### Discipline Specific Elective-I

Course Code	Course Title	L	T	P	C
17216DSC15A	Immunotechnology	5	0	0	4

#### Unit – I

Introduction: History of immunology – types of immunity – Innate and Acquired – Passive and Active - Humoral and cell Mediated Immunity. Lymphoid organs – autoimmunity, physiology of immune response — Immunohaematology

#### Unit - II

Antigens and Antibodies: Antigens – structure and properties – types – ISO and allo – haptons; adjuvants – antigen specificity, vaccines and toxoids. Immunoglobulins – structure - heterogeneity – types and subtypes – properties (physico – chemical and biological); theories of antibody production - Complement – structure – components - properties and functions of complement components; complement pathways and biological consequences of complement activation

#### Unit - III

Major Histocompatibility complex: Structure and function of MHC and the HLA system. Gene regulation and Ir – genes. HLA tissue and transplantation – tissue typing methods for organ and tissue transplantation in humans; Graft versus host reaction and rejection. Autoimmunity –diseases-mechanism and disease with their diagnosis

#### Unit - IV

Tumor Immunology: tumour antigens – immune response to tumors immunodiagnosis of tumors – detection of tumor markers alphafoetal proteins, carcinoembryonic antigen etc. Immunotherapy of malignancy, Hypersensitivity – monoclonal antibody – production and their applications

#### Unit - V

Immunological techniques and their principles: In vitro of immunological methods – agglutination, precipitation, complement fixation, Immunofluorescence, ELISA, Radio Immuno Assays. Immunodiffusion, Immunoelectrophoresis, isoelectric focusing – cytotoxicity assay – labeled – antibody technique in light and Electron Microscopy and Immunohistochemistry. Techniques of Immunization – use of adjuvants – separation of lymphocytes – and preparation of Rosette forming cells - In vivo methods – skin tests and immune complex tissue demonstrations - Applications of these methods in diagnosis of microbial diseases.  
Employability/Entrepreneurship/Skill development

#### Text Book:

1. Essentials of Clinical Immunology (1986) H.Chapel and Halbey, ELBS
2. Essentials Immunology (1994) M.Rolt Blackwell Scientific Publication, Oxford

#### Reference:

3. Fundamental Immunology (1998) Paul II Edition, Raver Press NY.

Course Code	Course Title	L	T	P	C
17216DSC15B	Bioremediation and Waste Management	5	0	0	4

### UNIT – I

Wastes– Classification and Quantification – Solid Waste Management and Disposal: Sources and Generation of Solid Waste – characterization, composition and classification. Hazardous Waste Management: Cyanides, Dioxins, Detergents, Plastics, Nylon and Paper. Waste Minimization approaches – Monitoring and Management strategies. Radioactive Waste: Sources, half life of radioactive elements, modes of decay. Effects on Plants, Animal and Man. Low and High-level Radioactive Waste Management – Waste Minimization and Treatment, Radiation standards.

### UNIT - II

Recycling of Wastes – Types – sources – composition of waste – recycling of waste for Industrial, Agricultural and Domestic Purposes; Recycling of Metals, Reuse, recovery and reduction of paper and plastics; Recycling in Food Manufacturing, Beverages, Apparel, Leather, Paper, Pulp, Chemical and other industries; Fly Ash utilization. Waste Disposal Methods – composting, incineration, pyrolysis, medical waste disposal strategies.

### UNIT – III

Microbial Activity in Soil and Ground Water, Lithosphere as Microbial habitat, Microorganisms in rock and minerals, Mineral soil and Organic soil. Physiological groups of prokaryotes, Geomicrobial transformations – Biodegradation of carbonates – Biomobilization of silicon, phosphate, nitrogen. Geomicrobiology of fossil fuel, methane, peat, coal and petroleum.

### UNIT – IV

Principles of Bioremediation – Rapid growth and Metabolism- Genetic plasticity – Metabolic pathways for the degradation of xenobiotics, hydrocarbons – Microbial site characterization – Biodegradation potential – Bioprocess design, optimization – Microbial removal rates – inherent problems associated with biotreatment studies. Microbiological methodologies – Standard biotreatability protocols – Quantification of biodegradation; Biocleaning -Chernobyl radioactive contaminated area - Phytoremediation.

### UNIT – V

Aerobic Bioremediation: Bioremediation of Surface Soils: Fate and transport of contaminants in the Vadose zone – Biodegradation in soil ecosystems – Types of soil treatment systems – Bioreactors. Subsurface Aerobic Bioremediation: in situ Bioremediation – in situ Bioventing – in situ treatments of Harbour Sediments and Lagoons. Bioremediation in fresh water and marine systems: Bench and Pilot Scale studies – in situ Bioreactor treatment of sediments – in situ treatment in marine ecosystem. Anoxic/Anaerobic Bioremediation: Anoxic/Anaerobic Processes –Fermentation, Degradation of xenobiotics – Anoxic/Anaerobic bioremediation of hydrocarbons, Phenols, Chlorophenolic compounds, Polycyclic Aromatic Hydrocarbons (PAH), Heterocyclic Compounds, Cyanide, dyes,

Employability/Entrepreneurship/Skill development

17216RLC16	Research Led Seminar	0	0	0	1

## SEMESTER II

Course Code	Course Title	L	T	P	C
17216SEC21	Industrial Microbiology	5	0	0	4

### Unit I

Historical development of industrial microbiology: major classes of products and processes and micro organisms used in industrial processes. Design of a fermenter, types of fermenters and its basic functions

### Unit – II

Industrially important microbes and their development: Screening methods for industrial microbes – detection and assay of fermentation products – classification of fermentation types – genetic control of fermentation – strain selection and improvement – Mutation and recombinant DNA techniques for strain development

### Unit – III

Fermenter – types and function: Fermenters – Basic functions, design and components – asepsis and containment requirements – body construction and temperature control – aeration and agitation systems – sterilization of fermenter, air supply, and medium; aseptic inoculation methods – sampling methods, valve systems – a brief idea on monitoring and control devices and types of fermenters

Continuous culture: System, productivity, product formation. Aeration and agitation, power requirement oxygen transfer kinetics, concepts of Newtonian and Non – Newtonian fluids, plastic fluids apparent viscosity, foam and antifoam. Scale-up, instrumentation control, physical and chemical environment sensors, downstream process

### Unit – IV

Large scale fermentation: Fermentation in batch culture: Microbial growth kinetics, measurement of growth (cell number, direct and indirect methods) growth and nutrient, growth and product formation, heat evolution, effect of environment (temperature, pH, high nutrient concentration) media formulation. Sterilization, kinetics of thermal death of micro-organisms, batch and continuous sterilization for fermentation.

### Unit –V

Microbial Products: raw materials, organism and industrial process involved in the production of Penicillin, Streptomycin, Ethanol, Acetic acid (Vinegar), Vitamin B<sub>12</sub> Riboflavin,  $\alpha$ - Lysine, Amylase, Protease, Pectinase, Citric acid, Rabies vaccine  
Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216SEC22	Environmental and Agricultural Microbiology	5	0	0	4

### Unit – I

Biogeochemical cycles and Air microbiology: Role of microbes in biogeochemical cycles – carbon, nitrogen, phosphorus, sulphur - Soil microbes and fertility of soil - Air microbiology: a brief account

### Unit – II

Aquatic microbiology and bioremediation: Microbes in marine and freshwater environment – eutrophication – quality testing of water – water borne pathogens – Biodegradation and bioaccumulation – bioremediation concepts, microbial and phytoremediation – composting strategy for bioremediation – waste water treatment and methods. Pollution indicators – BOD and COD determination

### Unit – III

Soil microbiology: Microbial association – beneficial – nitrogen fixing organism – symbiosis, asymbiosis, associate symbiosis – bacteria actinomycetes, cyanobacteria – mycorrhizae – ecto and endo mycorrhizae – phosphate solubilizers application of biofertilizers in agriculture

### Unit – IV

Plant disease and its control: Plant pathogens – bacterial – viral – Fungal pathogens – Morphological, physiological changes with reference to disease establishment in plants and plant protection – phenolics – phytoalexins and related compounds – Bioinsecticides – viral, bacterial and fungal – a brief note

### Unit – V

Nitrogen fixation and role of Ti plasmids in biotechnology: Biology of nitrogen fixation – nitrogen fixation genes and their regulation in *Klebsiella* – *Rhizobium* – *Azospirillum* & *Azotobacter* – Agrobacterium and plant tumour – Ti plasmids Ri plasmids – Genetic regulation of tumorigenicity in plants. Brief account of Ti, Ri plasmids in Biotechnology.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216SEC23	Clinical Microbiology	5	0	0	4

### Unit – I

Normal microbial flora of human – Host – parasite interaction: The Process of infection. Infective syndromes and diagnostic procedure - Strategy of antimicrobial therapy – Epidemiology and control of community infections

### Unit – II

Description of the pathogen, pathogenesis, clinical features, laboratory diagnosis and epidemiology of the following diseases

#### A. Bacteria

##### Disease

- a) Pneumonia
- b) Whooping –cough
- c) Meningitis
- d) Diphtheria
- e) Pulmonary Tuberculosis
- f) Leprosy
- g) Typhoid
- h) Cholera

##### Pathogen

- Streptococcus pneumoniae*  
*Brodotella pertussis*  
*Haemophilium influenzae*  
*Corynebacterium diphtheriae*  
*Mycobacterium tuberculosis*  
*Mycobacterium leprae*  
*Salmonella typhi*  
*Vibrio cholerae*

### Unit – III

Description of the pathogen, pathogenesis, clinical features, laboratory diagnosis and epidemiology of the following diseases

##### Disease

- i) Tetanus
- j) Syphilis
- k) Gonorrhoea
- l) Dental carries
- m) Dysentery
- n) Bacterial food poisoning
- o) Gastroenteritis
- p) Zoonotic disease and their control

##### Pathogen

- Clostridium tetani*  
*Treponema pallidum*  
*Neisseria gonorrhoeae*  
*Streptococcus mutans*  
*Shigella dysenteriae*  
*Clostridium botulinum*  
*Escherichia coli*

### Unit – IV

#### B. Virus

Small pox, Influenza, Measles, Poliomyelitis, Common cold(Rhino virus), Hepatitis, Encephalitis, Rabies, AIDS

### Unit – V

#### C. Mycoplasma

Respiratory and Urinogenetal infections

#### D. Pathogenic Fungi

Superficial, Subcutaneous and systemic mycoses

#### E. Protozoa:

Amoebiasis – *Entamoeba histolytica*  
Malaria – *Plasmodium vivax*, *P.malariae*

#### F. Helminthes

Liverfluke – *Fasciola hepatica*  
Filariosis – *Wucherichia bancrofti*

### **G. Hospital acquired infections:**

Hospital infections Principles of control – Committee – functions;

Hospital waste disposal – Ethical committee – functions

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216SEC24L	Industrial, Clinical and Agricultural Microbiology Lab	0	0	5	4

Citric acid fermentations by *Aspergillus niger* and quantification  
 Alcoholic fermentation of fruit juice by yeast (*Saccharomyces cerevisiae*).  
 Surface and solid state culture of *Beauveria bassiana* and testing mycopesticidal activity  
 Ethanol production by sung brewer's yeast  
 Production of citric acid  
 Immobilization techniques using any microbe
 

- alginate beads
- polyurethane foam

 Hydrolysis of starch  
 Testing sensitivity of bacteria to antibiotics  
 Assessing minimum inhibitory concentration of antibiotics  
 Isolation and identification of certain pathogenic microbes from wound, pus, faeces, sputum, urine  
 Hemoglobin content of blood  
 Serum analysis: sugar, cholesterol, serum glutamate oxaloacetate transminase (SGOT), serum glutamic pyruvic transminase(SGPT)  
 Urine analysis: Albumin, bile, sugars  
 Preparation of histopathological specimens  
 Isolation and enumeration of soil microorganisms (fungi, bacteria and actinomycetes)

Isolation and staining of vesicular arbuscular mycorrhizae from plant.

Isolation and culturing of Rhizobium from root nodules of higher plant

Isolation and testing of antagonistic microorganisms from soil (Pythium vs Trichoderma)

Isolation of microorganisms from Rhizosphere and Rhizoplane

Testing nodulation ability of Rhizobium

Seed inoculation with Rhizobium and Testing of nodulation ability

Study of the following disease  
 : Tobacco mosaic; Bacterial blight of paddy; Downy mildew of bar; Powdery mildew of cucurbits; Head smut of sorghum; Leaf rust of coffee; Leaf spot of mulberry, Red rot of sugar cane, Root knot of mulberry

Isolation and identification of air-borne bio-particles using Andersen sampler

Effects of high salt concentration on microbial growth

Oligodynamic action of heavy metals on bacteria

Microbial flora of polluted water/soil – Microbial flora of sewage

Determination of BOD of polluted/pond water.  
Determination of COD of polluted/pond water.

Microbial degradation of cellulose (cotton) by *Chaetomium globosum*/any microbe

Bacterial examination of drinking water by membrane filter technique and MPN  
Spawn production and mushroom cultivation

Visit to commercial production units – ethanol, acetic acid, vaccine and Spirulina  
Visit to CFTRI/DFRL/FOOD INDUSTRIES and report should be written in the practical record

Employability/Entrepreneurship/Skill development

## Discipline Specific Elective-II

Course Code	Course Title	L	T	P	C
17216DSC25A	Food and Dairy Microbiology	4	0	0	4

### Unit – I

Introduction to Food and Dairy Microbiology – Importance of Studying Food and Dairy Microbiology – Primary Sources of micro – organisms in foods. Factors influencing microbial growth in foods extrinsic and intrinsic. Bacterial pathogens such as Brucella, Bacillus, Clostridium, Escherichia, Listeria, Salmonella, Shigella, Staphylococcus, Vibrio, Yersinia; nematodes: Protozoa, algae, fungi, viruses.

### Unit – II

Spoilage of Food: Vegetables, meat, fish, fruits, poultry, prawn and sea food, cereals and egg. Beneficial activities – fermentations – Beer, Vinegar, therapeutic and nutritional value of fermented foods. Microbes as sources of food (Spirulina, Saccharomyces cerevisia, Pleurotes, Rhizopus sp).

### Unit – III

Dairy Products: Microflora of milk and milk products, sources of contamination, methods of minimizing contamination, milk-borne infection and intoxication – preservation of milk. Microbiology of fermented milk – starter lactic cultures, butter milk, cream, yoghurt, kafir, koumiss, acidophilus milk and cheese.

### Unit – IV

Food in relation to Diseases: Food borne and water borne infections, sources, symptoms, and prevention – Bacterial toxins and infections: Staphylococcus, Bacillus, Clostridium, Escherichia, Salmonella – Fungal toxins and infections: Mycotoxins, Aflotoxins, Mycoses, Aspergilloses, Viral infections – Hepatitis; Protozoan infections – Amoebiasis – methods of detection and detoxification

### Unit – V

Food preservation methods and control measures: Physical – irradiation, drying, heat processing, chilling and freezing – Chemical preservatives – Food Sanitation in food manufacture, sanitation of food in retail market and trade, food control agencies and their regulations, quality control, personal hygiene.  
Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216DSC25B	Bioreactor	4	0	0	4

### UNIT-I

Bioreactor / Fermenter – types & operation of Bioreactors, physico-chemical standards used in bioreactors, limitations of bioreactors, stages of fermentation processes, Media design for fermentation processes, Solid substrate fermentation, Fermentors - Air-lift, stirred tank, tower, fluidized bed, packed bed, pulsed, photo bioreactors.

### UNIT-II

Principles of Microbial growth – introduction, the ways of growing microorganisms, ways to increase yield of microbes, Batch and Fed-batch bioreactors, Continuous bioreactors, Immobilized cells. Bioreactor operation, Sterilization, Aeration, valves and steam traps, seals, stirrer glands Sensors.

### UNIT-III

Industrial production of Ethyl alcohol, Acetic Acid (Vinegar), Citric acid, lactic acid,  $\alpha$ -amylase, protease penicillin, tetracycline and vitamin B12, with reference to easily available raw materials, Production of herbal drugs.

### UNIT-IV

Downstream processing – extraction, separation, precipitation, filtration, centrifugation, cell disruptions, liquid-liquid extraction, chromatography, recovery & purification, process and quality control.

### UNIT-V

Nature of enzymes, application of enzymes, limitations of microbial cells used as catalysts in fermentation, aerobic and anaerobic fermentation, multi-enzyme reactors.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216RMC26	Research Methodology	3	0	0	3

### Unit I –Research

Selection of problem-stages in the execution of research: choosing a topic to publication- preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal ; standard of research journals – Impact factor.

### Unit II: Statistical method

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

### Unit III

Coparision of means, chisquard test, student test (ANOVA ‘’portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

### UNIT IV:

Chromatography – priniciple, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, Isoelectric focusing, plused field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

### UNIT V:

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

Employability/Entrepreneurship/Skill development

### SEMESTER III

Course Code	Course Title	L	T	P	C
17216SEC31	Microbial Genetics	5	0	0	4

**Unit I – Nucleic acid as genetic material.** Nucleic acids as genetic information carriers: experimental evidence – concept of gene – allele, cistron, replicon – origin of mutation – mutagens – physical and chemical agents. Induced mutation types – mechanisms of mutation induction – suppression of mutations – Intergenic and intragenic suppression. Frame shift mutations – reversion – fine structure mapping – r11 mutants of T4 – fluctuation test.

#### Unit II – Transformation

Transformation – natural or artificial competence – transformation in *Bacillus*, *E. coli*, *Haemophilus* and *Streptococcus* – mechanism of recombination – genetic mapping.

#### Unit III – Conjugation

Bacterial conjugation – F plasmid – structure and functions. Origin of Conjugation – Hfr and F' strains. Interrupted and uninterrupted mating – time map and recombination map. Conjugation in *E. coli*, *Pseudomonas*, *Streptomyces*, Plasmids, F-factors description and their uses in genetic analysis. Colicins and col factors.

#### Unit IV – Transduction

Transduction – generalized and specialized transduction – P1 phage – mechanism of gene transfer through lambda and P1 phages. HFT and LFT lysate. Cotransduction – transduction mapping.

#### Unit V – Gene regulation

Regulation of bacterial gene expression – Operon model – lac, ara, trp and his operons, operon concept, catabolite repression, instability of bacterial RNA, positive and negative regulation, inducers and corepressors. Negative regulation – *E. coli* lac operon; positive regulation – *E. coli* ara operon; regulation by attenuation – lac and trp operons; antitermination – N protein and nut sites in I. Induction and repression mechanism in operons.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216SEC32	Molecular Biology and Microbial Biotechnology	5	0	0	4

## MOLECULAR BIOLOGY:

### Unit I:

Nucleic acids – Types- DNA,RNA- structures, functions. Vectors – plasmids(Ti plasmids,pBR322,pSC101,pUC), cosmids, bacteriophages- Structures and functions. DNA replication- process,enzymology and inhibitors of replication. Enzymes-DNA polymerases,RNAses,Ligases,Taq polymerases,Topoisomerases-uses and applications. DNA damage-Types (deamination,oxidative damage, alkylation, pyrimidine dimmers. Repair mechanisms.

### Unit II:

Gene-definition, concepts,structure and functions. Cloning techniques,Genomic library. Gene transfer mechanisms-transformation, transduction and conjugation- general process and principles. DNA fingerprinting, Gene expression and Regulation methods. Operon concepts , Lac and trp operons.

## MICROBIAL BIOTECHNOLOGY:

### Unit III:

Biotechnology-Definitions, Concepts and Scope, History and achievements. Screening for products from microorganisms – Inoculum development – Long term preservation of microbes. Biological approaches in microbial production of useful aminoacids, organic acids, antibiotics, vitamins, steroids and sterols.

### Unit IV:

Strain improvement – Applications of mutation, Recombination and DNA Technology. Recombinant DNA Technology – Principles and applications, enzymology of process. Restriction enzymes – Types, recognition sites and specificity. Gene libraries and cDNA cloning. Principles and techniques of Nucleic acid hybridization, protein sequencing and blotting techniques, PCR, DNA fingerprinting. Patent laws and legal protection in Biotechnology.

### Unit V:

Biotransformation – Strategies and techniques involved in the process. Immobilization methods – advantages,immobilization production of Mabs. Insulin, somatotropin, IFNs, Vaccines by cloning. Microalgal biotechnology – Dunaliella , Biotechnological potentials of microalgae as food,feed ,fuel and pharmaceuticals. Valuable compounds of microalgae. Production technology of microbial biofertilizers- Azolla, Rhizobium, Azotobacter, Azospirillum and Phosphobacter.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216SEC33	Biostatistics and Bioinformatics	5	0	0	4

### Unit I – Definitions

Scope of Biostatistics, probability analysis – variables in Biology, collection, classification and tabulation of data – Graphical and diagrammatical representation – scale diagrams – Histograms – frequency polygon – frequency curves. Measures of central tendency – arithmetic Mean, Median and Mode – calculation of mean, median, mode in series of individual observations, discrete series, continuous open – end classes. Measure of dispersion – Standard Deviation and Standard curves, Measures of central tendency on Variance.

### Unit II – Correlation and regression

Simple correlation – Correlation coefficient – Regression simple linear regression. Basic ideas of significance test – Hypothesis testing level of significance – Test based on student ‘t’ ‘chi’ square and goodness of fit. ‘F’ test – ANOVA.

### Unit III – Databases

Biological resource databases – Examples and application – Sequence Analysis – protein and nucleic acid.

### Unit IV – Genomics and proteomics

Sequencing genomes – sequence assembly – genome on the web – annotating and analyzing genome sequences. Proteomics pathway databases.

### Unit V – Sequence analysis

Pair wise sequence comparison, protein data bank, SWISS-PROT, Genbank – sequence queries against biological databases – BLAST and FASTA – multifunctional tools for sequence analysis, multiple sequence alignments, phylogenetic alignment – profiles and motifs.

Employability/Entrepreneurship/Skill development

17216SEC34L	Microbial Biotechnology Lab	4	0	5	4

### **MICROBIAL GENETICS**

1. Isolation of plasmid DNA from bacteria by Spectrophotometric assay.
2. Isolation of chromosomal DNA from bacteria by Spectrophotometric assay.
3. Development of competent cells in *E. coli*.
4. Transformation in *E. coli*.
5. Isolation of antibiotic resistant auxotrophic mutants.

### **MOLECULAR BIOLOGY**

1. Restriction digestion of DNA.
2. Separation of proteins using Column chromatographic techniques (Ion exchange, Gel filtration).
3. Protoplast and Spheroplast isolation.
4. Scoring of mutants using Column chromatographic techniques (ion exchange, gel filtration).

### **MICROBIAL BIOTECHNOLOGY**

1. Assay of commercially important compounds – certain vitamins and plant hormones.
2. Immobilization techniques – alginate beads.
3. Estimation of citric acid and ethanol.

### **DEMONSTRATION**

1. Antibiotic resistance – plasmid mediated – chromosomal mediated – Gel Electrophoretic methods.
2. Clonal selection method.
3. Induced Mutagenesis.

Principles and applications of agarose gel electrophoresis and plasmid separation in agarose gel.

Employability/Entrepreneurship/Skill development

### Discipline Specific Elective III

Course Code	Course Title	L	T	P	C
17216DSC35A	Pharmaceutical Microbiology	0	0	0	3

#### Unit – 1 Antibiotics and synthetic antimicrobial agents

Antibiotics and synthetic antimicrobial agents, Antifungal antibiotics, antitumor substances. Peptide antibiotics, Chloramphenicol, Sulphonamides and Quinolone antimicrobial agents. Chemical disinfectants, antiseptics and preservatives.

#### Unit – 2 Mechanism of action of antibiotics

Mechanism of action of antibiotics (inhibitors of cell wall synthesis, nucleic acid and protein synthesis). Molecular principles of drug targeting. Drug delivery system in gene therapy. Bacterial resistance to antibiotics. Mode of action of non – antibiotic antimicrobial agents. Penetrating defenses – How the antimicrobial agents reach the targets (cellular permeability barrier, cellular transport system and drug diffusion).

#### Unit – 3 Microbial production and Spoilage of pharmaceutical Products

Microbial contamination and spoilage of pharmaceutical products (sterile injectibles, non injectibles, ophthalmic preparations and implants) and their sterilization. Manufacturing procedures and in process control of pharmaceuticals. Other pharmaceuticals produced by microbial fermentations (streptokinase, streptodornase). New vaccine technology, DNA vaccines, synthetic peptide vaccines, multivalent subunit vaccines. Vaccine clinical trials.

#### Unit – 4 Regulatory practices, biosensors and applications in Pharmaceuticals

Financing R&D capital and market outlook. IP, BP, USP. Government regulatory practices and policies, FDA perspective. Reimbursement of drugs and biologicals, legislative perspective. Rational drug design. Immobilization procedures for pharmaceutical applications (liposomes). Macromolecular, cellular and synthetic drug carriers. Biosensors in pharmaceuticals. Application of microbial enzymes in pharmaceuticals.

#### Unit – 5: Quality Assurance and Validation

Good Manufacturing Practices (GMP) and Good Laboratory Practices (GLP) in pharmaceutical industry. Regulatory aspects of quality control. Quality assurance and quality management in pharmaceuticals ISO, WHO and US certification. Safety in microbiology laboratory.

Employability/Entrepreneurship/Skill development

#### BOOKS/REFERENCE

11. Ihhpunjani. CBS Publishers & Distributors, New Delhi.

Course Code	Course Title	L	T	P	C
17216DSC35B	Genetics and Genetic Engineering	0	0	0	3

### UNIT – I

Overview of genetics: Relation between genes and traits; Mendelian genetics – Three postulates – Dihybrid cross – Test cross – Punnett square – Trihybrid cross – Pedigree analysis – Linkage – Complete and incomplete linkage – Crossing over – Four strand crossing over – Recombination frequencies – gene mapping in eukaryotes.

Sex determination – sex chromosomes – Klinefelter and Turner's syndrome – sex differentiation in humans – Dosage compensation – Barr bodies – sex linked epigenetic inheritance – Gene mutations.

Eugenics – Gene interactions – pleiotropism.

### UNIT – II

Population Genetics – gene frequency – gene pool – Hardy Weinberg equilibrium – Allele frequencies – Factors influencing – Human cytogenetics.

Evolutionary genetics – Origin of species – Genetic drift – polymorphism – Natural selection – Genetic code – genetic death – Genetic homeostasis.

### UNIT – III

Genetic engineering – overview – Analyzing DNA sequences – Maxam and Gilbert method, chain – terminator method and semi-automated method; southern and northern blotting – methods, merits and limitations; polymerase chain reactions – basic principles, types, special features and applications; cutting and joining DNA molecules – nomenclature, target sites and applications; site-directed mutagenesis – cassette mutagenesis, primer extension and PCR-based mutagenesis.

### UNIT – IV

Gene cloning – general strategies – cloning vehicles – plasmids, bacteriophages, cosmids, phasmids and YAC; shuttle and broad host range vectors; recombinant DNA and methods for introducing rDNA into host cells; screening; Expression of Cloned DNA; Cloning in E-coli, bacillus subtilis and saccharomyces cerevisiae – merits and limitations; Gene transfer into plants through Ti plasmids; Transferring genes into animal cells – eggs and embryos.

### UNIT – V

Transgenic plants – Insect and herbicide resistant plants; Transfer of Nif genes; Transgenic animals – Animal bioreactors, molecular farming and breeding strategies; Genetic engineering in the production of Insulin, somatostatin, vaccines and antibodies; Gene therapy – types, methods and prevention of diseases; Manipulation of reproduction in animals.

Employability/Entrepreneurship/Skill development

## General Elective

Course Code	Course Title	L	T	P	C
17211GEC	WRITING FOR THE MEDIA	3	0	0	3

### Aim:

- To equip students to enter into the realm of mass media.

### Objectives:

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

### Outcome:

- Understand the intricacies of mass media

### UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

### UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news- Scoop- Filters- Human interest stories- Recognizing and evaluating news.

### UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters- Features.

### UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

### UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical Employability/Entrepreneurship/Skill development

### References-

Journalism	-Susan
Professional Journalism	-John Hogenberg
News Writing and Reporting	-M.James Neal (Surjeet Publication)
Professional Journalism	-M.V Komath
The Journalist's Handbook	-M.V Komath
Mass Communication & Journalism	-D.S Mehta,

## General Elective

Course Code	Course Title	L	T	P	C
17212GEC	Applicable Mathematics Techniques	3	0	0	3

### Aim:

- To acquaint with the basic concept of Interpolation.

### Objectives:

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

### Outcomes:

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

### UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

### UNIT II

Assignment Problems

### UNIT III

Replacement Problems

### UNIT IV

Decision Analysis

### UNIT V

Game Theory

Skill development

### References

1. Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman
2. Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

## General Elective

Course Code	Course Title	L	T	P	C
17213GEC	Biomedical Instrumentation	3	0	0	3

### Aim:

- To understand the concepts and application of electronic Instrumentation in the Medical field.

### UNIT – I: BIO ELECTRIC SIGNALS AND ELECTRODES

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

### UNIT – II: RECORDING SYSTEM AND RECORDERS

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

### UNIT – III: MEASUREMENT AND ANALYSIS TECHNIQUES

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

### UNIT – IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

### UNIT – V: ADVANCED BIO MEDICAL SYSTEMS

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

Employability/Entrepreneurship/Skill development

### Books for Study

- R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)
- Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

### Book for Reference

- M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

## General Elective

Course Code	Course Title	L	T	P	C
17214GEC	GREEN CHEMISTRY	3	0	0	3

**Objectives:** To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

### Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollutionPollution prevention.

### Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

### Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentationAntibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

### Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

### Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

Employability/Entrepreneurship/Skill development

### References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnesand
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

## General Elective

Course Code	Course Title	L	T	P	C
17222GEC	Internet and Web Design	3	0	0	3

### Aim

To equip the students with basic programming skill in Web Designing

### Objective

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

### UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A web page design project – Forms.

- Employability/Entrepreneurship/Skill development

### Reference Book

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

## General Elective

Course Code	Course Title	L	T	P	C
17261GEC	Insurance Services	3	0	0	3

### Aim:

- To look after the interests of people from uncertainty by providing certainty of compensation.

### Objectives:

- To learn the fundamental concepts and principles of insurance.
- To explain the nature of different insurance policies, insurance contracts and settlement of claims.

### Out Come:

- The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

### UNIT – I

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

### UNIT – II

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

### UNIT – III

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

### UNIT – IV

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

### UNIT – V

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

Employability/Entrepreneurship/Skill development

### Reference Books:

1. Dr.MR.Mishra – Law of Insurance – Central Law Agency Allahabad
2. Dr.M.M.Verma & R.K.Agarwal – Insurance
3. Pandey & Ratogi – Insurance
4. M.N.Mishra & S.Chand - Principles and Practice of Insurance

## General Elective

Course Code	Course Title	L	T	P	C
17280GEC	Counselling Psychology	3	0	0	3

### Aim:

- To acquaint with counselling and its process

### Objectives:

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

### Out Come:

- Learn counselling and its process

### UNIT I

Definition of Counselling  
Counselling as a Solution to Human Problems  
Counselling-Expectations & Goals

### UNIT II

Personality Determinates, Intellectual Determinates, Emotional Determinates  
Social Determinates

### UNIT III

Approaches to Counselling  
Counselling Process

### UNIT IV

Psychological Testing  
Diagnosis

### UNIT V

Educational Counselling  
Family Counselling  
Employability/Entrepreneurship/Skill development

### References Book:

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc. Microbiology curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffolding Research)	4
IV	Project Work	12

**Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**  
(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student's performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

**Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing:** **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination:** **40 Marks**

**Total:** **100 Marks**

\*\*\*\*\*

**PRIST**  
DEEMED TO BE

## M Phil- SYLLABUS

(For the candidates admitted from the academic year 2020-2021 onwards)

### PAPER – I RESEARCH METHODOLOGY

(Common for all Subjects except Languages)

Course Code	Course Title	L	T	P	C
203_ _ _11	Research Methodology	2	2	0	2

#### Unit – I:

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

#### Unit – II:

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

#### Unit – III:

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

#### **Unit – IV:**

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Main (E-mail) – Intranet and Extranet.

#### **Unit – V:**

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

Employability/Entrepreneurship/Skill development

## PAPER II - ADVANCED MICROBIOLOGY

Course Code	Course Title	L	T	P	C
203MBC12	Advanced Microbiology	2	2	0	2

### Course Outcome

CO1: To learn about microbial taxonomy and molecular characterization of microbes

CO2: To Learn about applications of microbes in research aspects

CO3: To Gain the knowledge about biotechnological engineering concept in research

CO4: To Learn immune system and its mechanism

CO5: To gain knowledge about nanotechnology and synthesis of nano-particles from microbes.

### Unit I:

Prokaryotic and eukaryotic microbial diversity – bacteria, cyanobacteria, microalgae, microfungi, Habitats, nutrition, ultrastructure and mode of reproduction. Isolation, cultivation and preservation of microorganisms. Classification - Haeckel's three kingdom concept. Whittaker's five kingdom concept. Three domine concept of Carl Woese. Classification of bacteria according to Bergey's manual of determinative bacteriology. Criteria for classification and identification of microorganisms – morphological, physiological & biochemical. Numerical taxonomy. Phage typing. Nomenclature – bacteriological code. Introduction - DNA finger printing – RFLP, Plasmid profiles, G+C content. Importance of 16S rRNA in taxonomy & phylogeny.

### Unit II:

Basic concepts in medium design – design procedure growth limiting nutrient in designed medium – cell growth and product formation – immobilization and cell culture – cell immobilization – enzyme immobilization. Microbes involved in biodegradation of organic wastes and xenobiotic compounds – heavy metals, pesticides, insecticides. Bioinsecticides – BT toxin. Microbial leaching – Extraction of metals from ores. Biofuels, Microbial hydrogen production. biodegradation of oils and petroleum products.

### Unit III:

Diagnostic Immunology- methods for immunoglobulin determination – Quantative and qualitative antigen and antibody reactions. Agglutination – precipitation Immunoflourescence, Immunoblotting, Immunometric methods, Immunology of transplantation and malignancies. Enzyme immunoassays, flow cytometry- Assessment of human allergic diseases-Molecular methods- HLA typing- Immunohaematology- transfusion and compatibility testing, Transfusion reactions. Chemiluminescent detection of proteins.

#### **Unit IV:**

Introduction to molecular biology – DNA and RNA – composition and structure. DNA replication, Recombination and repair – Transcription and Translation, Regulation of gene expression. PCR based finger printing – RT PCR, 16S rDNA amplification, cloning, transformation, DNA sequencing. RAPD, STRR & LTRR, Blotting and hybridization. DNA Microarrays/Chips. Genome sequence comparison, alignment and data base searching. GenBank – NCBI, EMBL & DDBJ – retrieving sequences. Tools used for phylogenetic analysis – Ribosomal Database Project, FASTA, BLAST, Phylip. RNA structure prediction, Restriction enzyme patterns. Designing primers & probes. DNA barcoding. Submission of rDNA sequences – Bankit & Sequin guidelines.

#### **Unit V:**

History of nanobiotechnology; Terminologies of nanobiotechnology; Nanoparticles; Nanotubes; Nanowires; Silver nanoparticles. Protein functions at the cellular level. biosensors; drug delivery, and tissue engineering. Microbial growth response to inorganic nanoparticles; Nanoparticle internalization and cytotoxicity; Nano curcumin(Polymeric nanoparticle-encapsulated curcumin) – a novel strategy for human cancer;Therapeutic application of gold nanoparticles.

Employability/Entrepreneurship/Skill development

### PAPER III - MICROBIAL BIOTECHNOLOGY

Course Code	Course Title	L	T	P	C
203MBC13A	Microbial Biotechnology	2	2	0	2

#### Course Outcomes

CO1: To gain Knowledge about isolation, purification and preservation of microorganisms.

CO2: To learn about the molecular tools of genetic engineering

CO3: To Know about the production of value added products

CO4: To gain the knowledge about industrial production from microbes.

CO5: To learn the methods of biofertilizer and biofuels production

#### Unit I:

Historical development of microbial technology. Products obtained from microorganism through recombinant techniques. Introduction to genetic engineering. Molecular tools of genetic engineering- vectors-Methods of gene transfer. Gene cloning strategies. Basic techniques in genetic engineering.

#### Unit II:

Biotechnology & Bioprocess Engineering, steps in bioprocess development, Microbial culture, Screening and selection for fermentation processes; Preservation and improvement of industrially important microorganisms, Strain development. Fermentation Material and Energy balance, Microbial growth kinetics: Microbial growth cycle, measurement of growth, Batch culture, continuous culture, fed-batch culture, applications and examples. . Bioinstrumentation and computer control of fermentation processes. Bioreactors - Solid State fermentation - Submerged fermentation. Downstream processing of industrial products

#### Unit III:

Bacteriology and starter rotations, improving starter cultures for food fermentation by genetic manipulation, recombination technology. Genetic improvement of lactic starters to enhance their technological functions for industrial applications e.g. acid, flavour, EPS, probiotic functions, Metabolic engineering of lactic acid bacteria, Production of recombinant dairy / food enzymes / proteins e.g. Chymosin, lactoferrin, lysozyme, lipases, proteases, etc. Single Cell Protein

#### **Unit IV:**

Microbial products of pharmaceutical value – raw materials, organism and Industrial processes involved in the Microbial production of antibiotics - Penicillin, Cephalosporins, Aminoglycosides, Tetracycline and aromatic antibiotics, Enzymes , Vitamins - B12, Riboflavin, aminoacids and Recombinant vaccines.

#### **Unit V:**

Soil microbes and fertility of soil. Role of microbes in biogeochemical cycles Microbial association – beneficial – nitrogen fixing organism – symbiosis, asymbiosis, associate symbiosis – bacteria actinomycetes, cyanobacteria – mycorrhizae –phosphate solubilizers. Nitrogen fixation and role of Ti plasmids in biotechnology: Biology of nitrogen fixation – nitrogen fixation genes and their regulation in *Klebsiella* – *Rhizobium* – *Azospirillum* & *Azotobacter* – *Agrobacterium* and plant tumour – Ti plasmids Ri plasmids – Genetic regulation of tumorigenicity in plants. Production of Biofertilizer

Employability/Entrepreneurship/Skill development

### PAPER III - BIOPROCESS AND ENZYME ENGINEERING

Course Code	Course Title	L	T	P	C
203MBC13B	Bioprocess and Enzyme Engineering	2	2	0	2

#### Course Outcome

CO 1- To understand different fundamentals concepts and specialized knowledge of different applied microbiology area

CO 2 - To apply the knowledge gained in developing industrial enzyme products.

CO 3- To become an entrepreneur through this industrial based learning strategies

CO 4 -To start an independent research and can contribute in solving new problems faced in current science

#### Unit-I

Bioprocesses- batch, fed-batch and continuous cultivation, sterile operations, design of experiment for bioprocess optimization, industrial synthetic biology, high throughput bioprocess design, bioseparation and downstream processing- membrane separation techniques, chromatographic separation techniques, water purification etc., interactions and integration of microorganisms, bioreactor and downstream processing, experimental basis and methods for biosystems analysis, modelling of bioreactors, dynamic behaviour of bioprocesses, analysis, modelling and simulation of biological networks.

#### Unit-II

Development of reactors and processes for stabilization of organic and industrial wastes, miniaturisation of bioreaction systems, miniplant technology for integration of biosynthesis and downstream processing, technical and economic assessment of bioproduction processes, application of bioinformatics for development of bioprocesses, biocatalysis for the sustainable synthesis of chemicals and pharmaceuticals from renewable resources, rational engineering of biological systems for sustainable bioprocessing, small mimics, microfluidics and mathematical models for process understanding, scale-translation.

#### Unit-III

Strain improvement – Applications of mutation, Recombination and DNA Technology.– Principles and applications, enzymology of process. Industrial enzymes production - Proteases, amylases, lipases, cellulases, pectinases, glucose isomerase, L-Asparaginase.

#### Unit - IV

Kinetics of enzyme reactions, biochemical characterization of enzymes, graphical analysis of kinetic data, pH and temperature dependence, development of recombinant clones for overproduction of enzymes and metabolites, development of expression systems in bacteria and yeasts, bioenergetics and biological molecular machines, protein conformation study and structure-function relationship using biophysical methods, protein engineering by combinatorial methods.

#### Unit-V

Enzyme engineering and design: substitution, insertion, hybrid proteins, genes for novel enzymes Aequorin and Enviropig, directed evolution and site directed mutagenesis approaches to improve industrial enzymes, engineering more stable enzymes, analysis and design of microbial and enzyme reactors for production of industrially important products such as biofuels, industrial enzymes, biopolymers, etc., development of bio-sensors for detection of various analytes, development of cell culture techniques for cultivation of plant and animal cells in specialized reactors for production of therapeutic compounds.

## PAPER IV - RESEARCH AND PUBLICATION ETHICS

Course Code	Course Title	L	T	P	C
CPE_RPE	Research and publication ethics				2

### THEORY

#### Unit I: PHILOSOPHY AND ETHICS ( 3 hours)

1. Introduction to philosophy, definition, nature and scope, concept, braches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

#### Unit II: SCIENTIFIC CONDUCT ( 5 hours )

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

#### Unit III : PUBLICATION ETHICS ( 7 hours )

1. Publication ethics: definition, introduction and importance.
2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

### PRACTICE

#### Unit IV: OPEN ACCESS PUBLISHING ( 4 hours.)

1. Open access publications and initiatives.
2. SHERPA/RoMEO online resourse to check publisher copyright & self-archiving policies.
3. Software tool to ideitify predatory publications developed by SPPU.

4. Journal finder / journal suggestion tools viz, JANE, Elsevier Journal Folder, Springer Journal Suggester, etc.

## **UNIT V : PUBLICATION MISCONDUCT ( 4 hours)**

### **A. Group Discussions ( 2 hours )**

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest.
3. Complaints and appeals: examples and fraud from India and abroad.

### **B. Software tools ( 2 hours )**

Use of plagiarism software like Turnitin, Urkund and other open source software tools.

## **UNIT VI: DATABASES AND RESEARCH METRICS (7 hours )**

### **A. Databases ( 4 hours )**

1. Indexing databases.
2. Citation database: Web of Science, Scopus etc.

### **B. Research Metrics ( 3 hours )**

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score.
2. Metrics: h-index, g index, i10 index, altmetrics.

Discipline Specific Electives

Semester	Discipline Specific Elective Courses
V	a) 17111DSC55A-Single Author Study-Tagore b) 17111DSC55B-Single Author Study-Oliver Goldsmith
VI	a) 17111DSC64A-Study of a genre-Poetry b) 17111DSC64B-Study of a genre-Novel

Open Electives

Semester	Open Elective Courses
V	a) 17112GEC-Development of Mathematical Skills b) 17113GEC-Instrumentation c) 17114GEC-Food and Adulteration d) 17117GEC-Mushroom Technology e) 17120GEC-Web Technology f) 17122GEC-E-Commerce and its application g) 17161GEC-Indirect Taxes

Skill based Electives

Semester	Skill based Elective Courses
I	a) 17120SEC01AL-Package Lab – I b) 17160SEC01B-Soft skill – I
II	a) 17120SEC02AL-Package Lab – II b) 17160SEC02B-Soft skill – II
III	a) 17120SEC03AL-Package Lab –III b) 17160SEC03B-Soft skill – III
IV	a) 17120SEC04AL-Package Lab –IV b) 17160SEC04B-Soft skill – IV
V	a) 17120SEC05AL-Package Lab –V b) 17160SEC05B-Soft skill - V
VI	a) 17120SEC06AL-Package Lab –VI b) 17160SEC06B-Soft skill – VI

Course Code	Course Title	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Comparison and contrast

Cause and effect

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

English Work Book-I&II

-Jewelcy Jawahar

**EMPLOYABILITY**

Course code	Course Title	L	T	P	C
17111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

**References:-**

The Art of Reading/ Experiencing Poetry. -S.Murugesan and Dr.K.Chellappan  
Emerald Publishers

**EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
17111AEC13	Literature in 1400-1600 Period	4	0	0	4

**Aim:**

- To acquaint the students with a sweep from the beginning to the summit stage of English Literature

**Objective:**

- To study the early English poetry fathered by Chaucer, followed by the early Elizabethan poets and the beginning of English prose and drama

**Outcome:**

- Understand British Literature from 1400-1600 period
- Recognise, interpret and explain the connections between their own experiences and the world using the texts

**UNIT I**

The Prologue to Canterbury Tales-The Prioress, The Wife of Bath, The Parson-Chaucer

**UNIT II**

Epithalamion -Spenser

**UNIT III**

Prothalamion -Spenser

**UNIT IV**

Essays - Of Friendship, Of Studies -Bacon

**UNIT V**

Spanish Tragedy -Thomas Kyd

**EMPLOYABILITY/ SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111AEC14	Literature in Elizabethan Period	4	0	0	4

**Aim:**

- To acquaint the students with the different forms of literature during Elizabethan period

**Objective:**

- To let the students study the different sonnet forms, ‘humor’ comedy, Shakespearean tragedy and early prose literature during Elizabethan period
- To learn to appreciate the different forms of literature during Elizabethan period

**Outcome:**

- Understand British Literature in Elizabethan period
- Recognise, interpret and explain the connections between their own experiences and the world using the texts

**UNIT I**

Astrophel & Stella -Sidney

**UNIT II**

Sonnets -Shakespeare

**UNIT III**

Unfortunate Traveller -Thomas Nashe

**UNIT IV**

Alchemist -Ben Jonson

**UNIT V**

Othello -Shakespeare

**EMPLOYABILITY/ SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111AEC15	Social History of England-I	5	0	0	4

**Aim:**

- To acquaint the students with a total picture of the English society for a better understanding

**Objective:**

- To know the socio-economic aspects from fourteenth century to eighteenth century

**Outcome:**

- Ethical, social and professional understanding

**UNIT I**

The age of Chaucer-Political history, London, Feudalism and the manor, Black Death, Peasants' Revolt, John Wycliffe, Literature

**UNIT II**

The fifteenth century- Political history, War of Roses, Landlords and tenants, London, Manor houses, Nunneries, Education, William Caxton, Literature

**UNIT III**

Renaissance

Reformation

**UNIT IV**

Shakespeare's England-Political history, Social life, Education

**UNIT V**

Puritan England- Political history, Colonial expansion, Social life, Religion, Literature

**References:-**

English Social History -G.M Trevelyan The English Language Book Society & Longmans

The Social History of England -Xavier

A Social History of England -A.N Johri

A Social History of England -Dr. Raman

**EMPLOYABILITY/ SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111AEC16	History of English Literature-I	5	0	0	4

**Aim:**

- To acquaint the students with the literary background for a better understanding

**Objective:**

- To know the literary background from fourteenth century to seventeenth century
- To understand the biographies of different writers

**Outcome:**

- Understand the literary background of the English society
- Ethical, social and professional understanding

**UNIT I**

The age of Chaucer

Fifteenth century literature

**UNIT II**

The age of Shakespeare-I

**UNIT III**

The age of Shakespeare-II

**UNIT IV**

The Caroline age

The age of Milton

**UNIT V**

The age of Dryden

**EMPLOYABILITY**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC01A	Skill Based Elective -I Packages Lab-I	0	0	2	1

## **MS-WORD**

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. picture insertion and alignment
  - a. prepare a greeting card
  - b. prepare a handout
7. Create a mark sheet using tables. And find out the total marks.
8. Prepare a business letter for more than one company using mail merge

## **EMPLOYABLITY**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>

## SEMESTER – II

Course Code	Course Title	L	T	P	C
17211AEC21	Women's Writings in English	5	0	0	4

### Aim:

- To keep abreast with feminine writings championing the cause of women.

### Objective:

- To know the current social trend in favour of the rights of women
- To understand both old and modern literature dealing with the male chauvinism in all its ramifications.
- To learn the perspectives of women writers

### Outcome:

- Learn the perspectives of women writers

### UNIT – I

Lady Lazarus - Sylvia Plath  
The Queen's Rival - Sarojini Naidu  
She - Lakshmi Kannan

### UNIT – II

The Tree of Life - Toru Dutt  
An Introduction - Kamala Das  
Success is counted Sweetest - Emily Dickinson

### UNIT – III

Goblin Market - Rossetti  
A Child Asleep - Elizabeth Browning.

### UNIT – IV

Clear Light of Day - Anita Desai  
Nectar in a Sieve - Kamala Markandaya

### UNIT – V

The God of Small Things - Arundhati Roy  
Ladies Coupe - Anitha Nair

## EMPLOYABILITY

Course Code	Course Title	L	T	P	C
17211AEC22	Post Colonial Literature	6	0	0	4

**Aim:**

- To let the students observe how the backlash of colonialism is brought to bear upon literary works.

**Objective:**

- To know the background and features of the post colonialism
- To understand how the deleterious impact of colonialism and imperialism has been delineated in literature

**Outcome:**

- Understand the background and features of the post colonialism
- Learn the impact of colonialism

**UNIT – I**

Post Colonialism-origin, growth and its features

**UNIT – II**

Midnight's Children -Salman Rushdie

The Wretched of the Earth -Frantz Fanon

**UNIT – III**

The Vendor of Sweets -R.K Narayan

Things Fall Apart -Chinua Achebe

**UNIT – IV**

Ice-Candy Man -Bapsi Sidhwa

The Shadow Lines -Amitav Ghosh

**UNIT – V**

The English Patient -Michael Ondaatje

Heat and Dust -Ruth Jabwala

**EMPLOYABILITY/ SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17211AEC23	Comparative Literature & World Classics in Translation	6	0	0	4

**Aim:**

- b. To familiarize students with the comparative literature and world classics in translation

**Objective:**

- c. To widen the perspective of students in the larger context of world literature
- d. To learn different schools of thought
- e. To demonstrate the relationship between language and culture
- f. To facilitate a comparative study of literary texts based on themes, myths, archetypes and history

**Outcome:**

- g. Understand comparative literature and world classics in translation

**UNIT – I**

Comparative Literature –definition and scope

French and American Schools of thought

Influence and Reception study

**UNIT – II**

Genre Study

Thematology

Periodisation

**UNIT – III**

Translation

Literature and society

Literature and Psychology

**UNIT – IV**

Agamemnon -Aeschylus

The Wild Duck -Ibsen

**UNIT – V**

Crime and Punishment -Dostoevsky

Book of Job -Bible

**References:**

Introduction to the study of Comparative Literature-TEESI

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17211DSC24A	Discipline Specific Elective– II A Canadian Literature	5	0	0	4

**Aim:**

- To acquaint the students with the Canadian literature

**Objective:**

- To let the students know how an indomitable urge for seeking separate identity find expression in the different genres of literature.
- To trace the origin and growth of Canadian literature
- To enable learners to understand Canadian literature, their landscape, tradition, milieu, spirit, socio-cultural ethos, national identity etc.

**Outcome:**

- Learn the origin and growth of Canadian literature
- Understand Canadian literature, their landscape, tradition, milieu, spirit, socio-cultural ethos, national identity etc.

**UNIT – I**

Origin and growth of Canadian Literature - Poetry, Prose and Drama

**UNIT – II**

The Canadian Authors Meet -F.R.Scott

Journey to the Interior -Margaret Atwood.

The Lonely Land -A.J Smith

**UNIT – III**

The Loons -Margaret Lawrence.

Lamp at Noon -Sinclair Ross

**UNIT – IV**

The Sin Eater -Margaret Atwood.

The Old Woman -Joyce Marshall

**UNIT – V**

Surfacing Margaret Atwood.

Ecstasy of Rita Joe -George Ryga

**EMPLOYABILITY/ SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17211DSC24B	Discipline Specific Elective II –B Diaspora Literature	5	0	0	4

**Aim:**

- To acquaint the students with the diaspora literature

**Objective:**

- To trace the origin and growth of diaspora literature
- To offer a broad view of the literary corpus produced by the writers from the diasporic locations.
- To explore the issues specific to the phenomenon of migration that figure in the representation of diasporic experience.

**Outcome:**

- Learn the origin and growth of diaspora literature
- Explore the issues specific to the phenomenon of migration that figure in the representation of diasporic experience.

**UNIT – I**

History of Diaspora Literature, Theories

**UNIT – II**

A House of Mr. Biswas -V.S Naipaul

The Bankster -Ravi Subramaniam

**UNIT – III**

Jasmine -Bharathi Mukerjee

The Mango Coloured Fish -Kaveri Nambesan

**UNIT – IV**

The Tree Man -Patrick White

The White Tiger -Aravind Adiga

**UNIT – V**

Shame -Salman Rushdie

Can Love Happen Twice -Ravinder Singh

**EMPLOYABILITY/ SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
172ENGRM25	Research Methodology	3	0	0	3

**Aim:**

- To create a training in research process to carry out independent literary research work

**Objectives:**

- To develop suitable methods of data collection and interpretation
- To use literary resource base for evaluation and support literary hypothesis and validation
- To carry out basic literature survey using the common data-bases

**Outcome:**

9. Ability to develop research hypothesis and carry out independent literature survey corresponding to the specific publication type and assess basic literary research tools.

**Prerequisites:**

4. Research methodology at UG level

**UNIT I**

Research – Definition, Objectives, Elements of Literary research, Ethics & Misconduct in research, Plagiarism

**UNIT II**

Planning the thesis-selecting a topic, reviewing the literature, designing the study, the chapter outline

Writing the thesis- the general format, the page and chapter format

Mechanics of writing-Spelling, Punctuation, Italics, Names, Numbers, Titles, Capitalisation, paragraphs, quotation, work cited, bibliography

Revising the thesis-editing, evaluating, proof reading

**UNIT III**

Data collection-Primary data- works of the author/s, autobiography, Interviews, articles in newspapers, magazine, letters, data collected through surveys, tools for questionnaire, interviews. Secondary data-Articles in journals, books, critical books on the author, magazines, e-articles, websites.

**UNIT IV**

Rhetoric and its devices, jargon, terminology, slang, colloquialism, formal writing, vague, concrete words, denotation, connotation, verbosity, precision, sentence structure

Through the Looking Glass -Lewis Carroll

To Kill a Mocking Bird -Harper Lee

**EMPLOYABILITY/ SKILL DEVELOPMENT**

## SEMESTER – IV

Course Code	Course Title	L	T	P	C
17211SEC41	Translation	5	1	0	5

### Aim:

- To initiate the students into the mechanics of translations

### Objective:

- To let the students know the origin and development of translation.
- To promote translation
- To understand the theories of translation
- To encounter the problems in translation.
- To develop their translation skill

### Outcome:

- Develop the translation skill

### UNIT – I

History of translation

### UNIT – I

Theories of translation

Theory of meaning

### UNIT – III

Literary Translation

Non-Literary Translation

### UNIT – IV

Translatability

Difficulties in Translation

### UNIT – V

Modern Translation

Cultural translation

### References-

Towards Translation

Translation

Translation

Techniques of Translation

-Dr. R Shanthi

-Sreedevi K.Nair

-Dr.Raman

-Dr.A.Nihamathullah

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17211SEC42	English Language Teaching	4	1	1	5

**Aim:**

- To let the students have a good stead for the career of English teacher

**Objective:**

- To analyse language theories
- To learn different approaches and methods
- To explore the audio-visual techniques
- To orient in the practical application of ELT
- To understand the principles of foreign language teaching

**Outcome:**

- Enhance students to have a good stead for the career of English teacher

**UNIT- I**

The place of mother tongue in teaching English

English as a second language

**UNIT-II**

Principles of foreign language teaching

Theories of Language Learning

**UNIT-III**

Approaches

Methods

**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**  
**DEGREE: B.Sc., MATHEMATICS - SYLLABUS**

திரிபுரம் பல்கலைக்கழகம் - வணிக, தஞ்சாவூர்

பல. குறியீடு : தமிழ் முதல் பருவம்

முதலாம் ஆண்டு

இக்கலை இலக்கியம் - செவ்வாய், சிறுகதை , நட.கம், இலக்கிய வரலாறு

பிழை : 1. செவ்வாய்

தூய்மையான கவாமிதன் - ஆதார புலனம் - சிதம்பர ரகசியம் - 40 அட்டிகள்

இராமலிங்க அட்டிகள் - சிந்தனாநிபா - அருணை விண்ணப்பம் - 40 அட்டிகள்

கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மானையும் - 52 அட்டிகள்

பாரதியார் - புதுமைப்பிணை - 40 அட்டிகள்

பாரதிதாசன் - பாரதிதாசன் கவிதைகள் , தமிழ் இனிமை , தமிழ் அணவு

பிழை : 2. செவ்வாய்

நாமச்சல் கவிதை - தமிழ் தேன் - தமிழ் வளர்ச்சி சபகம் செவ்வாய் , 40 அட்டிகள்

ந.சி.சுப்பிரமணியன் - வழிநடாணை - கவிதை கருடன் , 42 அட்டிகள்

சுரதா - தேவாரை, கவிதை , 22 அட்டிகள்

கண்ணதாசன் - இலக்கியம் , ஒரு பாணியின் கதை , 54 அட்டிகள்

அழகன் ரகுமணி - சொந்த சிறுகதைகள் , குடும்பவிய சிந்தனம் சிறுகதைகள், 80 அட்டிகள்

பிழை : 3. சிறுகதை

க.சுப்பிரமணியன் - வெள்ளி புகழ் பாடி

பிழை : 4. நட.கம்

கு. வெ. பாண்டிமணியன் , கௌரவ புத்தகம் (அரைநடை நட.கம்)

பிழை : 5. இலக்கிய வரலாறு

சிறுகதை , புதினம், நட.கம் அரைநடை , கவிதை , புத்தகக்கவிதை

Course Code	Course Title	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT –I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

**References:**

- Sudhir Kumar Sharma Galaxy Publishers

English Work Book-I&II

-Jewelcy Jawahar

Course Code		L	T	P	C
17111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

## Core I - BASIC MATHEMATICS - I

Course code	Course Title	L	T	P	C
17112AEC13	Core -I Basic Mathematics -I (Differential Calculus and Vector Differentiation)	4	1	0	4

### Objectives:

This course is designed to give students a secure base in elementary calculus to allow them to tackle the mathematics needed in other sciences. Students wishing to do more mathematics will be given a good foundation from which they can proceed to other courses.

### UNIT I:

Successive differentiation — Leibnitz theorem with proof — Problems, partial derivative of a function.

### UNIT II:

Maxima & Minima for functions of two variables — Lagrange multiplier method.

### UNIT III:

Curvature (Cartesian, Polar and Pedal form) — evolutes.

### UNIT IV:

Asymptotes — envelopes

### UNIT V:

Differentiation of vectors — gradient — divergence and curl vectors.

### Reference

1. Differential calculus — T.K.M. Pillai
2. Vector calculus — T.K.M. Pillai.

### Learning outcomes

By the end of this course, you should:

- ✓ be able to manipulate, and solve problems using, successive differentiation & vector operators;
- ✓ be able to calculate Maxima & Minima for functions of two variables and Lagrange multiplier method
- ✓ be able to solve curvature, evolutes, asymptotes and envelopes in simple cases
- ✓ be able to calculate gradient, divergence and curl vectors in  $R^3$

**Core II- BASIC MATHEMATICS -II**  
**TRIGONOMETRY, ANALYTICAL GEOMETRY (3D) AND INTEGRAL**  
**CALCULUS**

Course code	Course Title	L	T	P	C
17112AEC14	Core - II Basic Mathematics -II ( Trigonometry, Analytical Geometry 3 D and Calculus)	4	0	0	4

**Objectives:**

This course is designed here to get sufficient ideas about integral calculus, trigonometry and analytical geometry to tackle the mathematics needed in other sciences.

**UNIT I:**

Expansions of  $\cos n\theta$ ,  $\sin n\theta$ ,  $\cos^n\theta$ ,  $\sin^n\theta$  (for positive integral values of n) — series for  $\cos\theta$ ,  $\sin\theta$ ,  $\tan\theta$ .

**UNIT II:**

Hyperbolic functions — Principal and general values of logarithms of complex numbers. Separation of real and imaginary parts — factorization.

**UNIT III:**

Summation of trigonometric series — method of difference - sum of series of n angles in A.P, C+ is form, Gregory's series.

**UNIT IV:**

Analytical Geometry (3-D)  
Spheres (Simple Properties only) general second degree equations to cone cylinder.

**UNIT V:**

Integral calculus.  
Evaluation of double and Triple integral — Beta and gamma integrals.

**References**

1. **Trigonometry** — T.K.M. Pillai
2. **Analytical Geometry (3D) And Integral Calculus** — T.K.M. Pillai

**Learning outcomes**

By the end of this course, you should:

- ✓ be able to manipulate the expansions of basic trigonometric functions
- ✓ be able to calculate summation of trigonometric series and Gregory's series
- ✓ understand the concept of analytical geometry and be able to use properties of spheres, cone and cylinder in real cases.
- ✓ be able to manipulate, and solve problems using, integral calculus

## Allied- I- Paper -I PROGRAMMING IN C

Course code	Course Title	L	T	P	C
17120AEC15	Allied- I- Paper -I Programming In C	6	0	0	6

### Objectives:

- To learn the concept of programming
- To understand input and output functions
- To study about Structures
- To learn Pointers in C Language

### UNIT I

Evolution and Applications of C — Structure of a C Program — Data Types — Declarations — Operators — Expressions — Type conversions — Built-in functions.

### UNIT II

Data Input and Output — Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE-DO, DO-WHILE, FOR, BREAK and CONTINUE.

### UNIT III

#### Functions:

Defining and accessing functions-passing parameters of functions -Arguments - Recursive functions — Storage classes.

#### Arrays:

Defining and processing Arrays — Multi dimensional arrays — passing arrays to functions — Arrays and strings String functions — String Manipulations.

### UNIT IV

#### Pointers

Pointers Declarations — Operations on pointers — pointers to functions — Pointer and Strings — pointers and arrays — array of pointers - Structures and pointers — unions.

### UNIT V

Data files — Opening, Closing, and processing files — Files with structures and unions Register variables — Bit wise Operations - Macros- Pre-processing

### Reference:

“Programming in C” — E. Balagurusamy — Tata McGrawHill Publications

### Reference:

1. “ Programming with C” — ByronS.Gottfried — Schauni’s outline series — Tata McGrawHill publications.
2. “Let us C “— Yeswant kanetkar — BPB Publications.

### Learning Outcomes:

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications

## Allied- I Practical -I PROGRAMMING IN C LAB

Course code	Course Title	L	T	P	C
17120AEC16L	Allied -I -Paper -I Programming in C Lab	0	0	3	2

### Objectives

Programming in C Lab provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Quadratic Equation, Sum of Series (Sine, Cosine,  $e^x$ ), Fibonacci Numbers using recursive functions, Sorting of given names in a lphabtical order, Matrix Operations (Addition, Subtraction, Multiplication — use functions) would be taught.

Students are able to the C program

1. Write a C program to find the roots of Quadratic Equation (all cases).
2. Write a C program to find the Sum of Series (Sine, Cosine,  $e^x$ )
3. Write a C program to reads an integer N and determine whether N is prime or not.
4. Write a C program to Finding factorials, generating Fibnoacci Numbers using recursive functions.
5. Write a C program to find the numbers in Ascending and Descending order (use it to find largest and smallest numbers).
6. Write a C program to find the sum of natural numbers using WHILE statement,
7. Write a C program for Sorting of given names in a lphabtical order.
8. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication — use functions).
9. Write a C program for String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings — use function pointers).

### Learning Outcomes:

At the end of the course, the student should be able to:

- Students learned program techniques
- Understand the concept of various functions and pointers
- A knowledge of writing C program
- Design/development of solutions

## Package Lab -1

### MS-WORD

Course Code	Course Title	L	T	P	C
17120SEC01AL	Packages Lab-I	0	0	2	1

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. picture insertion and alignment
  - a. prepare a greeting card
  - b. prepare a handout
7. Create a mark sheet using tables. And find out the total marks.
8. Prepare a business letter for more than one company using mail merge

Course Code	Course Title	L	T	P	C
17160SEC01B	SOFT SKILL I	0	0	2	1

## Part- I Effective Communication

### UNIT I Effective communication I

**Oral Communication:** Listening skills -Speaking skills (what to say and how to say it) – Gender neutral Language-Conflict, criticism, anger- Telephone skills.

### UNIT II Effective communication II

**Written Communication:** Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos.

**Nonverbal Communication:** Behavior, Body language and Attitude.

Course Code	Course Title	L	T	P	C
17111SEC01L	Communicative English-I	0	0	1	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To know English grammar and all the concomitant linguistic items
- To be aware of basic concepts related to the study of communication
- To understand the types of sentences and its patterns

**Outcome:**

- Understand grammar

**UNIT –I**

Noun

Pronoun

Adjective

**UNIT – II**

Verb

Adverb

**UNIT –III**

Conjunction

Preposition

Interjection

**UNIT – IV**

Kinds of Sentences

**UNIT –V**

Patterns of sentences

**References:-**

-Wren and Martin

## INDIAN CONSTITUTION

Course Code	Course Title	L	T	P	C
171INDCONS	Indian Constitution	1	0	0	1

### Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
2. To appreciate the salient features of the Indian constitution
3. To know the fundamental rights and constitutional remedies
4. To make familiar with powers and positions of the union executive, union parliament and the supreme court

To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

### Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism- democracy and republic.

### Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

### Unit III: Directive principles of state policy

Socialistic principles- Gandhi an principles- liberal and general principles -differences between fundamental rights and directive principles

### Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court -functions and position of supreme court and high court

### Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

### References:

- 1) Palekar.s.a. Indian constitution government and politics, ABD publications, India
- 2) Aiyer, alladi krishnaswami, Constitution and fundamental rights 1955.
- 3) Markandan. k.c.directive Principles in the Indian constitution 1966.
- 4) Kashyap. Subash c, Our parliament ,National book trust , New Delhi 1989

**Learning Out comes:**

1. democratic values and citizenship training are gained
2. awareness on fundamental rights are established
3. the function of union government and state government are learnt
4. the power and functions of the judiciary are learnt thoroughly
5. appreciation of democratic parliamentary rule is learnt

## SEMESTER – II

மேல். இயற்கைப் பக்கவாக்கியம்- வல்லம், தஞ்சை

பா. குடியாறு : தமிழ் இலக்கியப் பகுதி

முதலாம் பகுதி

கேள்வி , பத்தி இலக்கியம், சிற்பிலக்கியம் , இலக்கிய வரலாறு

பகுதி : 1 . கேள்வி :

1. சிற்பிலக்கியத்தின் தோற்றம் - வரலாறு பற்றியும்
2. சிற்பிலக்கியத்தின் தோற்றம் - தமிழ் சிற்பிலக்கியம்
3. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்
4. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்

பகுதி : 2 . கேள்வி :

5. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்
6. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்
7. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்
8. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்

பகுதி : 3 . கேள்வி :

9. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்
10. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்
11. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்
12. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்

பகுதி : 4 . கேள்வி :

13. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம்

பகுதி : 5 . இலக்கிய வரலாறு

14. சிற்பிலக்கியத்தின் தோற்றம் - சிற்பிலக்கியத்தின் தோற்றம் , ( பத்தி - சிற்பிலக்கியத்தின் தோற்றம் )

Course Code	Course Title	L	T	P	C
17111AEC21	Advanced English-II	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**Outcome:**

- Develop writing skill
- Read and comprehend literature

**UNIT – I**

E-mail

Fax

Memos

**UNIT – II**

Itinerary

Checklist

**UNIT – III**

Invitation

Circular

**UNIT – IV**

Instruction

Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

English Work Book-I&II

-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
17111AEC22	English-II	4	0	0	2

**Aim:**

- To acquaint learners with different trends of writing

**Objective:**

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – I**

Ecology -A.K. Ramanujan

Gift -Alice Walker

The First Meeting -Sujata Bhatt

**UNIT –II**

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran

**UNIT –III**

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

**UNIT – IV**

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king

Those People Next Door -A.G. Gardiner

**UNIT – V**

Marriage is a private Affair -Chinua Achebe

The Fortune Teller -Karel Capek

Proposal -Anton Chekov

Course code	Course Title	L	T	P	C
17112AEC23	Core III Basic Mathematics -III <b>Differential Equations</b>	4	1	0	4

### Objectives:

This course provides an introduction to a variety of techniques that are used throughout applied mathematics. It discusses how to translate physical problems into mathematics and covers such topics as differential equations, Laplace transformation and Fourier series. It illustrates how these are used when solving problems.

#### UNIT I:

Ordinary differential equations — Second order differential equation with constant coefficients —  $x \sin x$ ,  $x \cos x$ ,  $x^2 \sin x$ ,  $x^2 \cos x$  types only, variable coefficients.

#### UNIT II:

Variations of parameter — total differential equations. Exact differential equation  
 $M dx + N dy$

#### UNIT III:

Partial differential equations. Formation of equation — General, particular and complete integrals of PDE — Lagrange's method for solving  $P_p + Q_q = R$  the four standard forms.

#### UNIT IV:

Laplace Transforms: Laplace transform and its application for solving ordinary differential equations — convolution theorem for Laplace transform — problems.

#### UNIT V:

Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions change of interval — Half range series.

#### Reference

Calculus — Vol — III — T.K.M.Pillai.

#### Learning outcomes

By the end of this course, you should:

- ✓ understand the theory of, and be able to solve (in simple cases), ordinary differential equations and partial differential equations, and standard types of linear equations;
- ✓ understand the theory of Fourier and Laplace transforms and apply it to the solution of ordinary and partial differential equations

**Core IV - BASIC MATHEMATICS -IV**  
**VECTOR INTEGRATION & CLASSICAL ALGEBRA**

Course code	Course Title	L	T	P	C
17112AEC24	Core -IV Basic Mathematics IV (Vector integration and Classical Algebra)	4	0	0	4

**Objectives:**

This course is designed to divulge sufficient ideas about vector calculus and theory of equations to tackle the mathematics needed in other areas. Fundamental theorems such as Green's Theorem, Stokes' Theorem and Gauss's Divergence Theorem will be studied in this course. It provides the foundation for many of the course available in applied mathematics later in the PG programme.

**UNIT I:**

**Vector Calculus:**

Integrations of vectors — Gauss divergence theorem, simple illustrative problems.

**UNIT II:**

Stoke's Theorem — Green's Theorem — Simple illustrative problems

**UNIT III:**

**Algebra:**

Theory of equations — relation between root and coefficients — symmetric functions of the roots in terms of the coefficients — irrational roots — transformation of equation.

**UNIT IV:**

Reciprocal equations — Descarte's rule of sign — Horner's method of finding +ve root.

**UNIT V:**

Summation related to Binomial, Exponential and Logarithmic series — Summation of recurrence series.

**Reference:**

- (i) Vector Algebra and Analysis — T.K.M.Pillai
- (ii) Vector Analysis — T.V Lakshmi Narashima
- (iii) Algebra — T.K.M.Pillai
- (iv) Algebra — Suriyanarayanan
- (v) Algebra — V.Seetha raman

**Learning outcomes**

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Green's Theorem, Stokes' Theorem and Gauss's Divergence Theorem
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

## Allied - I Paper —11 WEB PROGRAMMING

Course code	Course Title	L	T	P	C
17120AEC25	Allied -I-Paper-II Fundamentals of computing	6	0	0	6

### Objectives

- give you a general understanding of how a computer works
- introduce you to assembly-level programming
- prepare you for future courses. .

### UNIT I

Introduction to Computer — Classification of Digital Computer system — Computer Architecture — Memory Units — Auxiliary Storage Devices — Input and Output devices.

### UNIT II

Introduction to Computer Software - Operating System — Programming Languages — General Software features and trends.

### UNIT III

Database System: Introduction — Data processing — Introduction to Data Base Management System - Data base design.

### UNIT IV

Internet -Introduction - hardware and software requirement web browser-email concepts- chatting — Intranet — WWW concepts.

### UNIT V

Multimedia tools — Virtual Reality — F-Commerce — Data warehousing — Data mining — Geographical Information System — Computer in Business, industry, home, education and training.

### Reference

1. Fundamentals of information technology — Alexis leon, Mathews leon, BPB Publications,
2. The compact guide to micro-soft office professional Ron Mansfield, BPB publications

### Learning outcomes

By the end of this course, you should be able to:

- describe the fetch-execute cycle of a computer
- understand the different types of information which may be stored within a computer memory
- write a simple assembly language program

## Allied- I Practical—II WEB DESIGNING LAB

Course code	Course Title	L	T	P	C
17120AEC26L	Allied-I Practical-II Web Designing Lab	0	0	3	2

### Objectives

1. To create a fully functional website with mvc architecture
2. To develop an online book store
3. To provide an understanding of the language translation peculiarities by designing a complete translator for a mini language
1. Create a Web page for ABC INFOTECH LTD., with necessary images and marquee.
2. Create Web pages which displays the menu card of a hotel. The first page should contain the list of items available. After selection of one item, the corresponding details should be displayed on the next page.
3. Create a Web page which displays the balance sheets for the given list of companies (same as above problem).
4. Create a Web page for XYZ INFOTECH LTD., to display the company profile employee details balance sheet, receive resume, customer service using links.
5. Using frames create web pages *for* a travel agency
6. Create a Web page using forms for our college students admission process. (Use list box, push button, radio button, command button, rich text box, text box, etc where ever applicable)
7. Create a Web page which receives suggestions from customers for a software development & consultancy agency using necessary.

### Learning outcomes

By the end of this course, you should be able to:

- Will create a fully functional website(online book store) using mvc architecture
- Will create a complete translator for a mini language
- Understand the basic terminology used in computer programming
- Use different data types in a computer program.
- Design programs involving decision structures, loops and functions.

## Package Lab -11

### MS –EXCEL

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC02AL	Packages Lab-II	0	0	2	1

1. Prepare the addressing methods in excel
2. Describe the type of function
3. Draw a graph by using your own data
4. Prepare an Individual Pay Bill preparation for a employee in an organization.
5. Prepare a Mark list preparation for a student.
6. Prepare a Worksheet preparation for a company.
7. Prepare a Inventory Preparation
8. Prepare a Electricity Bill Preparation

Course Code	Course Title	L	T	P	C
17160SEC02B	SOFT SKILL II	0	0	2	1

## Part -II Self Development

### UNIT I: Self -Assessment

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

### UNIT II: Self- Management

Managing Time, Managing Stress, Conflict Management

Course Code	Course Title	L	T	P	C
17111SEC02L	Communicative English-II	0	0	2	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To learn about the auxiliary and the models
- To understand the different tenses and use it in sentences
- To know where to use and where not to use the articles
- To familiarize with the participle

**Outcome:**

- Understand grammar

**UNIT –I**

Auxiliaries

**UNIT –II**

Modals

**UNIT –III**

Tenses-Simple, Perfect

**UNIT –IV**

Tenses-Continuous, Perfect continuous

**UNIT –V**

Articles

Participle

## SEMESTER – III

மேலும் தகவல்கள் பக்கங்கள் கீழ்க்கண்ட - வலை, தகவல்கள்

பாட குறியிடல் :

தமிழ் மூன்றாம் பருவம்

இரண்டாம் ஆண்டு

செய்தல், அறிவுரைகள் இலக்கிய வரலாறு

செய்தல்

அககு : 1

1. சிவப்பதிகாரம் - மனவழிப் படுத்தி காணல்
2. மணிமொகவை - ஆதினா செவ்வியல் காணல்
3. சிவச சிந்தாமணி - மொகவை இலக்கியம்

அககு :2

4. பெரியபுராணம் - இலக்கிய குறியிடல் நவகார புராணம்
5. சம்பவமொகவை - கைமொகவை குறியிடல் பருவம்

அககு :3

6. சீராமபுராணம் - நடு அககுதரம் பருவம் - 24 கவிகள்
7. தேவமொகவை - காமல் ஆட்சி பருவம் - முதல் 5 பாடல்கள்

அககு :4

8. நனவெளிபா - கவியர காணல் (20 - 51)

அககு . 5 : இலக்கிய வரலாறு

9. அறிவுரைகள் , தந்திர அறிவுரைகள் , புராணங்கள் , இதிகாசங்கள்

Course Code	Course Title	L	T	P	C	Marks
17111AEC31	Advanced English-III	4	0	0	2	100

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT – I**

The organs of speech  
 Classification of speech sounds  
 Vowels and Diphthongs

**UNIT – II**

Consonants  
 Consonant cluster

**UNIT – III**

Syllable  
 Word accent  
 Intonation

**UNIT – IV**

Idiom  
 Interpretation of graphics

**UNIT – V**

Slogan writing  
 Writing advertisement

A text book of Phonetics for Indian Students	-T.B. Balasubramaniyan

Course Code	Course Title	L	T	P	C
17111AEC32	English-III	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – I**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

**UNIT – V**

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

**References:-**

Nine Short Stories	-Steuart H.King Blackie Books

## Core V - NUMBER THEORY

Course code	Course Title	L	T	P	C
17112AEC33	Core – V Number Theory	5	0	0	5

### Objectives:

The objective is for the students to obtain a foundational knowledge of elements of Number Theory through step-by-step proofs of classical theorems, as well as to sharpen their skills through problem-solving.

### UNIT 1:

**THE FUNDAMENTAL THEOREM OF ARITHMETIC:-** Introduction - Divisibility — Greatest Common divisor — Prime numbers — The fundamental theorem of arithmetic — The series of reciprocals of the primes — The Euclidean algorithm — The greatest Common divisor of more than two numbers.

### UNIT 2:

**ARITHMETICAL FUNCTIONS AND DIRICHLET MULTIPLICATION:-** The motions function  $\mu(n)$  — The Euler totient function — A relation connecting  $\phi$  and  $\mu$  - A product formula for  $\mu(n)$  — The Dirichlet product of arithmetical functions — Dirichlet inverses and the Mobius inversion formula — the Mangoldt function  $\Lambda(n)$  — Multiplicative functions — Multiplicative function and Dirichlet multiplication.

### UNIT 3:

**AVERAGES OF ARITHMETICAL FUNCTIONS:-** The big oh notation Asymptotic equality of functions — Euler’s summation formula — some elementary asymptotic formulas- the average order of  $d(n)$  — the average order of the divisor fraction  $\partial\alpha(n)$  - the average order of  $\phi(n)$ .

### UNIT 4:

**SOME ELEMENTARY THEOREMS ON THE DISTRIBUTION OF PRIME NUMBERS:-** Chebyshev’s function  $\psi(x)$  and  $\theta(x)$  - Relations connection  $\theta(x)$  and  $\pi(x)$  - some equivalent forms of the prime number theorem — Inequalities of  $\pi(n)$  and  $P_n$  — Shapiro’s Tauberian theorem — Application of Shapiro’s theorem — An asymptotic formula for the partial sums  $\sum_{p_n \leq (1/p)}$  - the partial sums of the mobius function.

### UNIT 5:

**CONGRUENCES:-** Definition and basic properties of congruence’s — Residue classes complete residue systems — Linear congruence’s — Reduced revised systems — Ruler Fernet’s Theorem — Polynomial congruence’s module Lagranges theorem — Applications of Lagrange’s Theorem — Chinese Remainder theorem.

### Reference:

Introduction to Analytic Number Theory by Tom. M.Apostal

**For Unit 1 - Chapter 1**

**For Unit 1 - Chapter 2**

**For Unit 1 - Chapter 3**

**For Unit 1 - Chapter 4 Section 4,1 to 4.9 only**

**For Unit 1 - Chapter 5**

**General Reference:**

1. Number theory : George E.Andrews
2. Introduction to theory of Number : G.H.I-lardy and E.M.Wright.
3. Basic Number Theory : S.B.Malilk.
4. Elements of Number Theory : S.Kumaravelu and Susheela Kumaravelu.

**Learning Outcomes:**

On satisfying the requirements of this course, students will have the knowledge and skills to:

- ✓ Solve problems in elementary number theory
- ✓ Apply elementary number theory to cryptography
- ✓ Develop a deeper conceptual understanding of the theoretical basis of number theory and cryptography
- ✓ Define and interpret the concepts of divisibility, congruence, greatest common divisor, prime, and prime-factorization,

## Core VI - NUMERICAL ANALYSIS

Course code	Course Title	L	T	P	C
17112AEC34	Core – VI Numerical Analysis	4	0	0	4

### Objectives:

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems, Numerical differentiation and integration interpolation with equql & unequal intervals are concentrated.

**UNIT 1:** Solutions of Algebraic and transcendental equation iterative method, Bisection method, Aitken's process Method of False Position, Newton-Raphson methods.

**UNIT 2:** Finite differences-Forward differences backward differences Central differences symbolic relations. Newton's formula for interpolation.

Interpolation with unevenly spaced points

Lagrange's interpolation formula-divided differences and their properties-Newton's General interpolation formula.

**UNIT 3:** Numerical differentiation and integration

Numerical differentiation — integration — Trapezoidal rule and Simpson's rule.

**UNIT 4:** Solution of Linear systems

Gaussian Elimination method — Iterative methods Jacobi and Gauss seidal Methods.

**UNIT 5:** Numerical solution of Ordinary — Differential Equations. Solution by Taylor's series — Picard's method of successive approximations —Euler method Modifies Euler's method — Runge Kutta methods — Predictor Corrector nethods — Adams method and Mines method.

### Text Book

Numerical Methods in Science and Engineering by M.K.Venkatraman

### Reference:

Introductory methods of Numerical Analysis By  
S.S. Sastry- Prentice Hall of India Pvt. Ltd.

Chapters:2. 2.1 to 2.5

3. 3.1,3.3,3.6,3.9, 3.9.1,3.10,3.10.1

4. 4.2, 4.4, 4.4.1, 4.4.2

5. 5,4

6. 6.1 to 6.5 and 6.6.1 and 6.6.2

**Learning Outcomes:**

- Solving problems in algebraic and transcended equations
- Understand about finite differences
- Students develop and analyze numerical techniques
- Applying Various numerical methods to solve the ordinary differential equations
- Students gets the Research inquiry and analytical thinking abilities

## ALLIED II- PAPER 1- MATHEMATICAL STATISTICS I

Course code	Course Title	L	T	P	C
17118AEC35	Allied –II –Paper –I –Mathematical Statistics I	3	0	0	3

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course random variables, discrete distributions, continuous distributions, chi-square distribution and sampling distributions Tchebychev's inequality and weak law of large numbers — Simple form of central limit theorem for i.i.d random variables. Construction and uses of fixed and chain based index numbers — Simple and Weighted index numbers would be taught.

### UNIT I:

Statistical data — Primary and Secondary data. Formation of frequency distribution various measures of Central tendency and their merits and demerits various measures of dispersion and their merits and demerits Concept of Skewness and Kurtosis.

### UNIT II:

Axiomatic Probability and classical, probability addition, multiplication and Baye's theorems, Simple problems.

### UNIT III:

Concept of random variable—discrete and continuous distribution function, probability mass function, probability density function — their properties — mathematical expectation — moment generating function — Simple problems.

### UNIT IV:

Tchebychev's inequality and weak law of large numbers — Simple form of central limit theorem for i.i.d random variables.

### UNIT V:

Index numbers and their definition—Construction and uses of fixed and chain based index numbers — Simple and Weighted index numbers.

### Reference:

1. Fundamentals of Applied Statistics — S.C.Gupta and V.K.Kapoor. Sultan Chand & Sons.
2. Fundamentals of Mathematical Statistics — S.C.Gupta and V.K.Kapoor, Sultan Chand & Sons.

### Learning outcomes

By the end of this course, you should:

- Students gets the methodology for the planning and execution for any scientific enquiry
- Students learning statistical techniques and statistical data
- Understand the concept of random variables
- Understand the concept of central limit theorem for i.i.d random variables.
- A knowledge of constructions and uses of fixed and chain based index numbers

## ALLIED II— PAPER II- MATHEMATICAL STATISTICS II

Course code	Course Title	L	T	P	C
17118AEC36	Allied –II – Paper Mathematical Statistics II	3	0	0	3

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Karl Pearson's Correlation coefficient and its properties Linear Regression and its properties, Test of significance would be taught.

### UNIT I:

Correlation — Rank Correlation, Karl Pearson's Correlation coefficient and its properties Linear Regression and its properties — Concept of multiple and partial correlation for three variables only.

### UNIT II:

Point estimation, Properties of point estimate Neyman 's Factorization theorem(Statement only) methods of moments and maximum likelihood estimation — Properties of these estimators based on these two methods.

### UNIT III:

Interval estimation —Test of Hypothesis—Null and alternative hypothesis(Concept only) One tail and two tail tests, tests of significance based on normal and t distribution for mean, simple correlation and properties.

### UNIT IV:

Test of significance based on chi square and F distributions for variance, test for goodness of fit and independence of attributes Analysis of variance — One way and two — way classifications with simple problems.

### UNIT V:

Design and Experiments.

### Reference:

1. Fundamentals of Mathematical Statistics — S.C.Gupta and V.K.Kapoor, Sultan Chand.
2. Fundamentals of Applied statistics - S.C. Gupta and V.K. Kapoor, Sultan Chand & Sons.

### Learning outcomes

By the end of this course, you should:

- Students learning statistical techniques and statistical data
- Understood the concept of correlation and regression
- A knowledge of test of significance based on parametric and non – parametric test
- Students gets the methodology for the planning and execution for any scientific enquiry

## RESEARCH METHODOLOGY

Course code	Course Title	L	T	P	C
17112RMC37	Research Methodology	3	0	0	3

### UNIT I

Research – Definition, Objectives, Motivation and purpose – types of research – Pure and applied, survey, case study experimental, exploratory – Concept of Research Design –Criteria of Good Research, Problems Encountered by Researchers in India. General guidelines for Good housekeeping & Lab-safety- Hygiene (Eye, foot, skin and hand protection) – Safety rules - Equipment protection – Respiratory protective equipment – safety equipment – Leaking, compressed gas cylinders – electrical safety. Fire – extinguishers.

### UNIT II

Research Problem: Definition & need of research problem, Types & selection of proper research question and suitable research design with Examples, Literature types- compendia and tables of information, Reviews, General treatises, Monographs.

### UNIT III

Methods of data collection – Primary and secondary data – observation – interview – Questionnaire – Tools for questionnaire; surveying & literature survey, spreadsheets, Technical writing, Construction of tools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, Practical Exercises.

### UNIT IV

Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis – descriptive statistics – elements of processing through computer- packages for analysis (Excel).

### UNIT V

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Technical Presentation

## Package Lab -111

### POWER POINT

Course Code	Course Title	L	T	P	C
17120SEC03AL	Packages Lab-III	0	0	2	1

1. Create a slide show presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slide show presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create slide show presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. Create a slide show presentation for a shop advertisement to be open shortly
6. Create a slide show presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for a tourists places
8. Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

Course Code	Course Title	L	T	P	C
17160SEC03B	SOFT SKILL III	0	0	2	1

### Part -III Interpersonal Relations and Social Responsibilities

#### UNIT I: Interpersonal Relations

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

#### UNIT II: Ethics and Social Responsibilities

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

Course Code	Course Title	L	T	P	C
17111SEC03L	Communicative English-III	0	0	2	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To familiarize with the clauses and phrases
- To learn the different degrees of comparison
- To change a sentence from active to passive and vice versa
- To know where to use punctuations
- To frame sentences
- To know the features, process, forms and barriers of communication

**Outcome:**

- Understand grammar

**UNIT –I**

Clauses

Phrases

**UNIT –II**

Degrees of comparison

**UNIT –III**

Active and Passive

**UNIT –IV**

Communication

Characteristics -Process -Forms - Barriers

**UNIT –V**

Punctuation

Forming sentences

## SEMESTER – IV

தமிழ் இலக்கியப் பண்டைக்காலம் காலம், நடுத்தரம்

பா. குறியாடு : தமிழ்.

நான்காம் பகுதி இரண்டாம் பிழை

செய்தல் , சங்க இலக்கியம் , சிறு இலக்கியம் , பெரியோர் , இலக்கிய காலம்

பகுதி . 1 : பண்டைய இலக்கியம் - நடுத்தரம்;

1. செய்தல் - பெரியோர் கற்று - பா. க் கண் . 11
2. குறியாடு - நான்காம் கற்று - பா. க் கண் . 64
3. பண்டை - நான்காம் கற்று - பா. க் கண் . 142
4. பண்டை - நடுத்தரம் கற்று - பா. க் கண் . 29
5. பகுதி - நான்காம் கற்று - பா. க் கண் . 70

பண்டைய இலக்கியம் குறியாடுகளை

1. குறியாடு - பெரியோர் கற்று - பா. க் கண் . 1
2. பண்டை - பெரியோர் கற்று - பா. க் கண் . 157
3. பகுதி - நான்காம் கற்று - பா. க் கண் . 181
4. செய்தல் - நான்காம் கற்று - பா. க் கண் . 290
5. பண்டை - நான்காம் கற்று - பா. க் கண் . 347

பண்டைய இலக்கியம் நடுத்தரம்

1. பகுதி - நான்காம் பகுதி - பகுதி இரண்டு பா. க் கண்
2. செய்தல் - பெரியோர் கற்று - பகுதி இரண்டு பா. க் கண்
3. குறியாடு - நான்காம் பகுதி - பகுதி இரண்டு பா. க் கண்
4. பண்டை - பெரியோர் கற்று - பகுதி இரண்டு பா. க் கண்
5. பண்டை - நான்காம் பகுதி - பகுதி இரண்டு பா. க் கண்

பகுதி . 2 : சிறுபொருள்

1. பண்டை - பா. க் கண் . 2
2. குறியாடு - பா. க் கண் . 37

Course Code	Course Title	L	T	P	C
17111AEC41	Advanced English-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT – I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation –

Presentation– Type of questions – Answering techniques.

**UNIT – II**

Flowchart

Proposals

**UNIT – III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT –V**

Definition

Writing for and against a topic.

## Core –VII SEQUENCE AND SERIES

Course code	Course Title	L	T	P	C
17112AEC43	Core – VII SEQUENCE AND SERIES	4	0	0	4

### UNIT 1:

Sequence, Limits, Convergence-Cauchy's general principle of convergence-Cauchy's first theorem on Limits-Bounded sequences-Monotonic sequence always tends to a limit, finite or infinite-Limit superior and limit inferior.

### UNIT 2:

Infinite series-Definition of convergence, Divergence and Oscillation-Necessary condition for convergence-Convergence of  $\sum 1/n^p$  and Geometric series. Comparison test,  $D^1$  Alembert's ratio test and Raabe's test –Simple problems.

### UNIT 3:

Cauchy's condensation test, Cauchy's root test and their simple problems Alternative series with simple problems.

### UNIT 4:

General summation of series including successive difference and recurring series.

### UNIT 5:

Inequalities-Geometric and Arithmetic means Weistrass inequalities- Cauchy's inequality.

### TEXT BOOK:

Alebra Volume I &II T.K.M.Pillai (Relavant problems only)

- Unit I : Chapter 2 (4.7)
- Unit II : Chapter 2 (8-14,16,18,19)
- Unit III : Chapter 2 (15,17,21-24)
- Unit IV : Chapter 5
- Unit V : Chapter 4 (second volume)

### General Reference

Sequence and series: Arumugam and Isaac

## Core VIII- OPERATIONS RESEARCH

Course code	Course Title	L	T	P	C
17112SEC44	Core –VIII Operations Research	4	0	0	4

### Objectives:

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

### UNIT 1:

Introduction to operations Research — Elementary treatment of linear programming simplex Method  $<, =, >, =$  constraints.

### UNIT 2:

Application to Transportation problem - Transportation Algorithm - Degeneracy in Transportation problem, unbalanced transportation problem, Assignment problem - The assignment algorithm - unbalanced assignment problem.

### UNIT 3:

PERT and CPM network — critical and sub critical jobs — Determining the critical path. Network calculation PERT networks probability aspect of PERT — PERT time — PERT cost (omitting Crashing)

### UNIT 4:

Sequencing problem: Processing of  $n$  jobs through 2 machines - processing  $n$  jobs through 3 machines - processing 2 jobs through  $m$  machine  
Games Theory: Characteristics of games — Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving  $2 \times 2$  games.

### UNIT 5:

Inventory Theory--Variables in an Inventory problem Techniques of Inventory Control with known demand.

1. Purchasing model with no shortage. 2.. Purchasing model with shortages.

3. Manufacturing model with no shortages, 4. Manufacturing model with shortage.

5. Technique of Inventory Control with uncertain demand. 6. Buffer stock of safety stock model

[In all the units Application of the concept only. No book work]

### Reference :

1. Operations Research by Kantiswarup, P.K. Gupta and Manmohan.
2. Resource Management Techniques (Operations Research) V.Sundaresan, K.S. Ganapathy Subramanian, K. Ganesan.
3. Operations Research Methods and Applications, P.Mariappan

### Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path

- Understand the concept of sequencing problems and game theory
- Students gets the knowledge about inventory theory

## Core IX- ASTRONOMY

Course code	Course Title	L	T	P	C
17112SEC45	Core – IX Astronomy	4	0	0	4

### Objectives

Knowledge and understanding about celestial objects. Apply scientific reasoning to future astronomical discoveries to understand their validity as well as to everyday situations..Discuss the astronomical refraction zones of Earth, phases of Moon, seasonal Variations, Kepler’s law of motion, anomalies, eclipses.

#### UNIT-I:

Relevant properties of a sphere & relevant formulae for spherical trigonometry (all without proof) —Celestial sphere —Diurnal motion

#### UNIT-II:

Earth- Dip of the horizon-Twilight- Astronomical refraction- Tangent& Cosines Formula- Properties & simple problems applying them

#### UNIT-III:

Keplar’s laws of planetary motion (statement only) —Newton’s deductions from them — Three anomalies of the Earth and relation between them .

#### UNIT-IV:

Time: Equation of time – Seasons - Years and calendar – Conversion of time — Geocentric parallax - Heliocentric parallax- Aberration of light —simple problems in the above

#### UNIT-V:

Moon(except Moon’s liberations )-Motions of planet(assume that orbits are circular- Eclipses

### Reference

(1) S. Kumaravelu and Prof. Susheela Kumaravelu, Astronomy, SKV Publications,2004

UNIT-I — Chapter1&2

UNIT-II — Chapter 3 Section 1,2,5,6 & Chapter 4

UNIT-III — Chapter 6

UNIT-IV — Chapter 7, Chapter 8 Section 190 - 193 & Chapter 9

UNIT—V—Chapter 12,13 & 14

### Reference(s)

[1] J V.Thiruvengkatacharya, A Text Book of Astronomy, S. Chand and Co., Pvt Ltd., 1972

### Learning outcomes

By the end of this course, you should:

- **Understand about celestial objects**
- Knowledge about Eclipses
- Different zones of Earth
- Astronomical refraction
- Different phases of Moon

## ALLIED II - PAPER III - MATHEMATICAL STATISTICS - III

Course code	Course Title	L	T	P	C
17118AEC4 6	Allied –II – Paper –III – Mathematical Statistics III	3	1	0	3

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course various discrete and continuous distributions, and sampling distributions would be taught.

### UNIT I:

Bivariate distribution - discrete and continuous, marginal and conditional distribution  
Statistical independence, Conditional expectation.

### UNIT II:

Binomial, Poisson, Negative binomial, geometric distribution — Constants, moment  
generating function, Cumulant generating function.

### UNIT III:

Normal distribution — Constants, mgf Binomial, Poisson and Chi — square distribution  
tending to normal — Statement of Central limit theorem. Statement of Uniqueness  
theorem and Continuity theorem.

### UNIT IV:

Continuous distribution — rectangular, exponential, beta, gamma distributions.

### UNIT V:

Sampling distributions — F, T and Chi — Square distributions — Relations blw F and  
T distributions, Relation b/w F and Chi — Square distributions.

### Reference

Fundamentals of Mathematical Statistics. S.C.Gupta and V. K.Kapoor, Sultan Chand.

### Learning outcomes

By the end of this course, you should:

- learned statistical techniques and statistical data
- Understood the concept of various distributions
- A knowledge of test of significance based on parametric and non – parametric test
- Design/development of solutions
- Understood the concept of sampling theory

## ALLIED -II PRACTICAL MATHEMATICAL STATISTICS

Course code	Course Title	L	T	P	C
17118AEC47L	Allied –II – Practical – Mathematical Statistics	0	0	2	2

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course random variables, discrete distributions, continuous distributions, chi-square distribution and sampling distributions would be taught.

### List of Practical's

1. Measures of Central tendencies and measures of dispersion.
2. Moments, Skewness and Kurtosis.
3. Fitting of binomial distribution.
4. Fitting of Poisson distribution.
5. Fitting of Normal distribution.
6. Correlation.
7. Regression.
8. Goodness of fit.
9. Attributes, Contingency table.
10. Large sample tests.
11. t — tests.
12. Variance tests.
13. ANOVA.
14. Design of Experiments.

### Learning outcomes

By the end of this course, you should:

- Students learned statistical techniques and statistical data
- Understand the concept of various distributions
- A knowledge of test of significance based on parametric and non – parametric test
- Design/development of solutions

## Package Lab -IV

### MS-ACCESS

Course Code	Course Title	L	T	P	C
17120SEC04AL	Packages Lab-IV	0	0	2	1

1. Create a database and a simple table
2. Create a database for sorting the marks scored by the student in the universality exams
3. Create a database for sorting the date of joining by the employee in the organization.
4. Create queries to select records that matches specific condition
5. Create relationships among the different tables
6. Create queries using built-in functions
7. Develop forms to enter data in to the student marks database
8. Develop forms to enter data in to the employee database

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC04B	SOFT SKILL IV	0	0	2	1

## **PART -IV Etiquette and Interviewing Skills**

### **UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

### **UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioural interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

Course Code	Course Title	L	T	P	C
17111SCE04L	Communicative English-IV	0	0	1	1

**Aim:**

- To develop communicative skills

**Objective:**

- To use gerund and make sentences
- To change sentences from direct to indirect and vice versa
- To understand the listening skill
- To enhance reading skill
- To familiarize with the singular and plural forms
- To describe a picture

**Outcome:**

- Understand grammar
- Develop listening and reading skills

**UNIT –I**

Gerund  
Infinitive

**UNIT –II**

Direct and Indirect

**UNIT –III**

Listening -types-features of a good listener-active and passive listening-effective listening

**UNIT –IV**

Reading-purpose-technique-types-reading rates-reading & interpretation

**UNIT –V**

Singular and Plural  
Letter writing

## GLOBARENA SOFTWARE

### Objective:

- To hone LSRW skills through emerging techniques
- To comprehend meaning from text to words
- To cultivate the habit of reading
- To make the students proficient in pronunciation
- To improve the listening skill

### Outcome:

- Develop LSRW skills

Phonetics

Listening Comprehension

Reading Comprehension

Word Mentor - Level I & II

- Words and their meaning
- Root and usage
- Fill in the blanks
- Synonyms
- Antonyms
- Match the Words

### Lab Note:

Word Mentor - Level I & II

Listening Comprehension

Reading Comprehension

Newspaper Article

### Viva:

Listening Comprehension

Reading Comprehension

### Exam Components

Theory exam	: 50
Lab note	: 10
Listening Comprehension	: 20
Reading Comprehension	: 20
Total	:100

### Theory exam pattern:

Section A	10*2=20
Section B	2*15=30
Total	=50

## **ENVIRONMENTAL STUDIES**

**(for under graduate students)**

<b>Course code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>171ENVTSTU</b>	Environmental Studies	1	0	0	1

### **Objectives:**

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

### **2. Nature of Environmental Studies**

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

### **3. Natural Resources and Associated Problems.**

- a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
- b) Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
- c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
- e) Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

Role of an individuals in conservation of natural resources.

### **4. Ecosystems**

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

- a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
- d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

#### **4. Biodiversity and its conservation**

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot — spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

#### **5. Environmental Pollution**

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

#### **6. Social Issues and the Environment**

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global wanTling, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

#### **7. Environmental Protection**

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

#### **8. Field Work**

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

**Learning Outcomes:**

Students who graduate with a major in environmental science will be able to:

1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
4. Apply their ecological knowledge to illustrate and graph a problem and
5. describe the realities that managers face when dealing with complex issues; and
6. Understand how politics and management have ecological consequences.

**SEMESTER-V**  
**Core X. MODERN ALGEBRA**

Course code	Course Title	L	T	P	C
17112AEC51	Core-X- Modern Algebra	6	0	0	6

**Objectives:**

Algebraic structures like Groups, Rings, and Vector spaces are studied. The existence of subgroups of given order and the number of such subgroups are studied. The properties of Euclidean rings are discussed. Vector spaces and its properties which will be useful in the study of Field Theory are exposed. Finally, Lattices and their types and finite Boolean algebras are introduced.

**UNIT 1:**

Permutation Groups - Sub Groups — Cosets and Lagrange's theorem

**UNIT 2:**

Normal subgroups - Quotient groups. -Homeomorphisms –Isomorphism

**UNIT 3:**

**RING THEORY:**

Definition and Examples of Rings — Some special Classes of Rings — Homomorphisms - Ideals and Quotient Rings — More ideals and Quotient Rings — Euclidean Rings.

**UNIT 4:**

**VECTOR SPACE:**

Elementary Basic concepts — Linear independence and Bases and spaces - Inner product spaces

**UNIT 5:**

**VECTOR SPACE:**

Rank and Nullity-Matrix of a linear transformation

**INNER PRODUCT SPACES:**

Introduction-Definitions and examples-Orthogonality-Orthogonal Complement

**Text Books:**

“TOPIC IN ALGEBRA” by Arumugam . S and Isaac. A.T (Second edition)

**For UNIT 1** - .Chapter 3: Section 3.4 to 3.8

**For UNIT 2** - Chapter 3: Section 3.9 to 3.11

**For UNIT 3** - Chapter 4: Section 4.1 to 4.14

**For UNIT 4** - Chapter 5: Section 5.0 to 5.6

**For UNIT 5** - Chapter 5: Section 5.7 to 5.8 , Chapter 6 section 6.0 to 6.3

**General References**

1. Modern Algebra : A.R.Vasistha
2. Modern Algebra : Dr. S. Arumugam.

**Learning outcomes**

By the end of this course, you should:

- Knowledge and understand about Algebraic structures like Groups, Rings, Vector spaces
- Understood about Morphisms
- Skillness in Linear dep. , in- dep. and bases problems

## Core XI - REAL ANALYSIS

Course code	Course Title	L	T	P	C
17112AEC52	Core –XI- Real Analysis	6	0	0	5

### Objectives:

This paper is intended to cover all elementary topics in Real analysis such as sequence of real numbers, series of real numbers, continuous functions, connectedness, completeness and compactness. This paper is essential for studying Riemann integrals, fundamental theorem of calculus and improper integrals. This enhances the mathematical maturity of the students.

### UNIT 1:

**BASIC TOPOLOGY:-** Finite, countable and uncountable sets — Metric spaces — Compact spaces — Perfect sets — Connected sets.

### UNIT 2:

**NUMERICAL SEQUENCES AND SERIES:-** Convergent sequences - Subsequence's — Cauchy Sequences — Upper and Lower limits — some special sequences — Series — Series of Nonnegative Terms — The Number E — The Root and Ratio Tests — Power series — Summation by parts - Absolute convergence — Addition and Multiplication of series.

### UNIT 3:

**CONTINUITY:-** Limits of functions — continuous functions — Continuity and compactness — Continuity and connectedness— Discontinuity — Monotonic functions — Infinite limits and limits at infinity.

### UNIT 4:

**DIFFERENTIATION:-** The derivative of a Real function — Mean value theorems — The continuity of Derivatives — L'Hospital's Rule — Derivatives of Higher order — Taylor's theorem.

### UNIT 5:

**THE RIEMANN- INTEGRALS:-** Definition and Existence of the Integral — Properties of the Integral — Integration and Differentiation.

### Reference:

Principles of Mathematical Analysis by Walter Rudin, MC Graw Hill.

**For UNIT 1** - Chapter-2

**For UNIT 2** - Chapter-3 (section 3.1 to 3.50)

**For UNIT 3** - Chapter-4

**For UNIT 4** - Chapter-5

**For UNIT 5** - Chapter-6

### General References:

1. Real Analysis : Bartle and Schuhest.

2. Real Analysis : Albert smith E.H.

### Learning outcomes

By the end of this course, you should

- Knowledge about Connectedness, completeness and compactness
- Understanding the Riemann integrals, fundamental theorem of calculus
- Analyses the problem and finding the solution

## Core XII - STATICS

Course code	Course Title	L	T	P	C
17112SEC53	Core – XII – Statics	4	1	0	5

### Course Objectives:

Develop an understanding of the principles of statics, and the ability to analyze problems in a systematic and logical manner, including the ability to draw free-body diagrams.

#### UNIT-I

Forces and equilibrium –Forces-Resultant of two forces-Three forces related to a triangle –Equilibrium of a particle under three or more forces.

#### UNIT-II

Forces on a rigid body –Moment –Equivalent systems of forces-Parallel forces varignon's theorem –Forces along a triangle-Couples –Equilibrium of a rigid body under three coplanar forces –Reduction of coplanar forces into a force and a couple.

#### UNIT –III

Friction –Laws of friction-Coefficient of friction, angle and cone of Friction-Limiting equilibrium of a particle on a rough inclined plane, Tilting of a body Simple problems.

#### UNIT-IV

Virtual work-principle of virtual work-applied to a body or a system of bodies in equilibrium-Equation of virtual work-Simple problems.

#### UNIT-V

String –Equilibrium of string under gravity –common catenary-suspension bridge.

#### Reference:

(1)P.DURAI PANDIAN, Mechanics(vector treatment),S.chand &co.june 1997

UNIT-I chapter 2& chap 3 section 3.1

UNIT-II chapter 4 sec 4.1,4.3 to 4.9 & chap 5 sec 5.1

UNIT –III chap 2 sec 2.1,chap 3 sec 3.2,chap 5 sec 5.2

UNIT-IV chapter 8 ,UNIT-V chapter 9

#### Reference:

(1) M.K.Venkataraman, Statics, Agasthir publication ,2002

(2)A.V.Dharmapadham, Statics, S.Viswanathan publishers Pvt Ltd.,1979

(3)S.L.Lony ,Elements of Statics and Dynamics, part-1,A.I.T.Publishers,1991

#### Course Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. An ability to construct free-body diagrams and to calculate the reactions necessary to ensure static equilibrium.
2. An understanding of the analysis of couples and friction.

## Core-XIII- PROGRAMMING in C++

Course code	Course Title	L	T	P	C
17112SEC54	Core-XIII- Programming in C++	4	0	0	4

### Objectives

- Utilize Object Oriented techniques to design C++ programs.
- Use the standard C++ library.
- Exploit advanced C++ techniques

**UNIT 1:** Principles of OOP — Software evolution — OOP paradigm — basic Concepts of OOP's — Object oriented languages — applications of OOP. (Chapter 1)

**UNIT 2:** Introduction of C++ - tokens, keywords, identifiers, variables, operators, manipulators, expression and control structures in C++ - main function in function prototyping — call by reference — return by reference — function overloading and virtual functions ( Chapter 2,3 &4)

**UNIT 3:** Classes and objects - Constructors and destructors — operator overloading and type conversions, (Chapter 5, 6 &7)

**UNIT 4:** Inheritance — single inheritance — multilevel inheritance — multiple inheritances — hybrid inheritance. (Chapter 8)

**UNIT 5:** Pointer — virtual functions and polymorphism — managing console I/O operations (Chapter 9 & 10)

### Reference

Object oriented programming with C++ by E. Balagurusamy, 2e, Tarn. McGraw Hill publishing Co. Ltd., New Delhi.

### Reference

1. C++ The Complete Reference by Herbeit Schildt.
2. OOP's with C++ from the foundation by N.R. Parsa, Dream Tech Press India Pvt. Ltd., New Delhi.

### Learning Outcomes:

At the end of the course, the students should be able to:

- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to reuse the code with extensible Class types, User-defined operators and function Overloading
- Understand functions and parameter passing.
- Understand object-oriented design and programming
- Understand dynamic memory allocation and pointers

### Elective 1- FUZZY ANALYSIS

Course code	Course Title	L	T	P	C
17112DSC55 A	Elective Paper – I Fuzzy Analysis	5	0	0	4

#### Objectives

Humans have a remarkable capability to reason and make decisions in an environment of uncertainty, imprecision, incompleteness of information, and partiality of knowledge, truth and class membership. The principal objective of **fuzzy logic** is formalization/mechanization of this capability.

#### UNIT I:

Fuzzy sets-basic types-basic concepts-  $\alpha$  cuts-additional properties of  $\alpha$  cuts-extension principle for fuzzy sets,

#### UNIT II:

Operation on fuzzy sets-types of operations- fuzzy complements-t-norms- fuzzy unions-combinations of operations.

#### UNIT III:

Fuzzy arithmetic-fuzzy numbers-arithmetic operations on intervals arithmetic operations on fuzzy numbers.

#### UNIT IV:

Fuzzy relations-binary fuzzy relation-fuzzy equivalence relation-fuzzy compatibility relation-fuzzy operation relations-fuzzy morphism.

#### UNIT V:

Fuzzy relation equation-general discussion-problem partitioning-solution method-fuzzy relation equations based on sup-i compositions-fuzzy relation equations based on  $w_i$  compositions.

#### Reference

FUZZY SETS AND FUZZY LOGIC J.KLIR AND BOYUAN.PNI,NEWDELHI,2004.

#### Learning outcomes

By the end of this course, you should,

- Be able to get the knowledge and understand Classical Sets vs Fuzzy Sets (FS) – Types of FS – Operations on FS
- Be able to get the knowledge and understand Zadeh's Extension Principle
- Be able to get the knowledge and understand Fuzzy Relations – Fuzzy Relational Equations – Possibility Theory :
- Be able to get the knowledge and understand Fuzzy Measures. Fuzzy relation equations based on sup-i compositions-fuzzy relation equations based on  $w_i$  compositions.

## ELECTIVE - I - FORMAL LANGUAGES AND AUTOMATA THEORY

Course code	Course Title	L	T	P	C
17112DSE55B	Elective Paper-I-Formal Languages and Automata Theory	5	0	0	4

### Objectives

1. The course aims to develop an appreciation of the theoretical foundations of computer science through study of mathematical and abstract models of computers and the theory of formal languages.
  2. Theory of formal languages and use of various abstract machines as ‘recognizers’ and parsing will be studied for identifying the synthetic characteristics of programming languages.
  3. To understand the fundamental models of computation that underlies modern computer hardware, software, and programming languages.
  4. Explain computational thinking
- Learn the foundations of automata theory, computability theory.
5. Discuss the applications of theory to other areas of computer science such as algorithms, programming languages, compilers, natural language translation, operating systems, and software verification.

**UNIT I :** The Theory of Automata — definition of an Automaton — Description of a finite Automaton — Transition system — properties of transition function — Acceptability of a string by a finite Automaton — Non deterministic finite state machine — the equivalence of DFA and N DFA — Mealy and Moore models — minimization of finite Automata.

**UNIT II:** Formal language — basic definition and examples — Chomsky classification of languages — language and their relation — recursive and recursively enumerable sets — operations on languages — languages and Automata.

**UNIT III:** Regular sets and regular grammars — regular expressions — finite Automaton and regular expressions — Pumping lemma for regular sets — application of pumping lemma.

**UNIT IV:** Context — free languages — context — free languages and derivation Trees — Ambiguity in context — free grammars — Simplification of context — free grammars — normal forms for context — free grammars.

**UNIT V :** Push Down Automata — basic definitions — Acceptance by PDA — Push Down Automata and context — free languages — parsing and Push down Automata.

### Reference

K.L.P. Mishra and N. Chandrasekaran, “**Theory of Computer Science**”, ( Automata, languages and computation ) — Prentice Hall of India private 2: limited — New Delhi, 3.

UNIT I : CHAPTER 2: ( 2.1 to 2.9)

UNIT II : CHAPTER 3: (section 3.1 to 3.6)

UNIT III : CHAPTER 4 : ( section 4.1 to 4.4)

UNIT IV : CHAPTER 5: ( section 5.1 to 3.4)

UNIT V : CHAPTER 6 : ( section 6.1 to 6.4)

## Learning outcomes

By the end of this course you should be able ,

- Design deterministic and non-deterministic machines.
- Design the pushdown automata.
- Comprehend the hierarchy of problems arising in the computer sciences.
- The Student will get an idea for designing Compiler Design.
- The students will get knowledge about regular expressions and computability theory
- Acquire a fundamental understanding of the core concepts in automata theory and formal languages.
- An ability to design grammars and automata (recognizers) for different language classes.
- An ability to identify formal language classes and prove language membership properties.
- An ability to prove and disprove theorems establishing key properties of formal languages and automata.

## Package Lab -V

### PHOTOSHOP

Course Code	Course Title	L	T	P	C	Marks

## PART -V Leadership Skills and Body Language

### **UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

### **UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

Course Code	Course Title	L	T	P	C
17111SEC05L	Communicative English-V	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To develop vocabulary
- To comprehend meaning from context
- To involve in a dialogue
- To note the important points from the text.
- To write a letter
- To understand the subject verb agreement
- To teach the different genders

**Outcome:**

- Develop communicative skills

**UNIT –I**

Correct the spelling mistakes  
Comprehension

**UNIT –II**

Find the odd one out  
Picture description

**UNIT –III**

Abbreviations  
Note making

**UNIT –IV**

Gender  
Dialogue writing

**UNIT –V**

Acronyms  
Concord

# LOBARENA SOFTWARE

## Objective:

To boost the confidence level of the learners in communicating English in the day to day activities

To enhance the vocabulary

To present an idea

To familiarize the technical teaching tools that support language learning

## Outcome:

Develop communicative skill

## Vocabulary

- Anagrams
- Word traps
- Beastly words
- Stinging words
- Confusing words
- Guess the word
- Cross words
- Word families
- Picture talk

## Lab Note:

Vocabulary exercises

## Viva:

Picture Talk

Vocabulary exercises

## Exam Components

Theory exam	: 50
Lab note	: 10
Picture description	: 20
Vocabulary	:20
Total	:100

## Theory exam pattern:

Section A	10*2=20
Section B	2*15=30
Total	=50

## SEMESTER –VI

### Core XIV - COMPLEX ANALYSIS

Course code	Course Title	L	T	P	C
17112AEC61	Core – XIV-Complex Analysis	5	0	0	5

#### Objectives:

This paper is an introduction to the theory of analytic functions of one complex variable. Properties of analytic functions, results on linear transformations, problems on complex integration are discussed. Calculus of residues are also studied.

#### UNIT — I: Analytic Functions:

Functions of complex variables-Limits theorems on limits-continuous functions functions-Differentiability-C.R. Equations-Analytic Functions Harmonic functions (section 2. 1 to 2.8)

#### UNIT — 2: Bilinear Transformations:

Elementary transformations-Bilinear Transformations-cross ratio-fixed points of bilinear transformations-Some special bilinear transformations. (Section 3. 1 to 3.5)

#### UNIT —3: Complex Integration:

Definite Integral-Cauchy's Theorem-Cauchy's integral formula-Higher derivations (Section 6.1 to 6.4)

#### UNIT — 4: Series Expansions:

Taylor's series-Laurent series-Zeros of analytic functions-Singularities (Section 7.1 to 7.4)

#### UNIT— 5: Calculus of residues:

Residues- Cauchy's Residue theorem — Evaluation of definite integrals (Section 8. 1 to 8.3)

#### Reference:

1. Complex Analysis by T.K. Manikavasakam Pillai & Others Ananda Book Depot. Madras.
2. Functions of Complex Variable by E.G. Philips.
3. Complex Variable by Dr. P.P. Gupta Kedar Nath Ram Nath Meerut — Delhi.
4. Functions of Complex Variable by J.N. Sharma Krishna Prakashan Mandir Meerut.

#### Learning outcomes

By the end of this course you should be able

- Represent complex numbers algebraically and geometrically,
- Define and analyze limits and continuity for complex functions as well as consequences of continuity,
- Apply the concept and consequences of analyticity and the Cauchy-Riemann equations and of results on harmonic and entire functions including the fundamental theorem of algebra,
- Analyze sequences and series of analytic functions and types of convergence,
- Evaluate complex contour integrals directly and by the fundamental theorem, apply the Cauchy integral theorem in its various versions, and the Cauchy integral formula, and
- Represent functions as Taylor, power and Laurent series, classify singularities and poles, find residues and evaluate complex integrals using the residue theorem.

## Core XV - DYNAMICS

Course code	Course Title	L	T	P	C
17112SEC62	Core –XV Dynamics	4	0	0	4

### Course Objectives:

Develop an understanding of the principles of dynamics, and the ability to analyze problems in a systematic and logical manner. Ability to analyze the dynamics of particles, systems of particles and rigid bodies.

#### UNIT-I:

Kinematics velocity-Relative velocity-Acceleration –coplanar motion components of velocity & acceleration-Newton's laws of motion.

#### UNIT-II:

Simple harmonic motion-Simple pendulum-Load suspended by an elastic string-projectile-Maximum height reached, range, time of flight-projectile.

#### UNIT-III:

Impulsive force-conversion of linear momentum-impact of a sphere & a plane-Direct & oblique impact of two smooth sphere –kinetic energy and impulsive.

#### UNIT-IV:

Central orbit –central force-Differential EQUATION TO A CENTRAL ORBIT IN polar & pedal coordinates-Given the central orbit, to find the law of force-Kepler's laws of planetary motion's.

#### UNIT-V:

Motion of a rigid body-Moment of inertia of simple bodies-Theorem of parallel & perpendicular axes-motion in two dimension-motion of a rigid body about a fixed axis.

### TEXT BOOKS:

1. P.DURAI PANDIAN, VECTOR TREATMENT AS IN MECHANICS,

Unit-I-Chapter 1 & cha 2 sec 2.1, 2.1.1

Unit-II-Cha 12 sec 12.1 to 12.3 & cha 13

Unit-III-Cha 14

Unit –IV-cha 16

Unit-V-Cha 4 sec 4.2 cha 17 & cha 18

### General References:

Dynamics – Dr. K.Viswanath Naik and Dr. M.S. Kasi.

### Course Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

A knowledge of internal forces and moments in members.

1. An ability to calculate centroids and moments of inertia.
2. A knowledge of kinematic and kinetic analyses and energy and momentum methods for particles and systems of particles.
3. A knowledge of kinematic and kinetic analyses and energy and momentum methods for rigid bodies.

## Core XVI – DISCRETE MATHEMATICS

Course code	Course Title	L	T	P	C
17112AEC63	Core-XVI Discrete Mathematics	4	0	0	4

### Objectives:

Discrete Mathematics is a bridge connecting various branches of Computer Science and Mathematics. In Discrete Mathematics, we essentially study various finite (discrete) structures of Mathematics which are essential to develop the various concepts of computer science.

### UNIT 1 :

#### RELATIONS:

Cartesian Product of Two sets – Relations – Representation of Relation-Operations  
Relations-Equivalence Relation

#### FUNCTIONS:

Function and Operators- One-to-One , Onto Functions-Special Types of Functions-  
Invertible Functions- Compositions of Functions

### UNIT 2:

#### LOGIC:

Introduction-TF –Statements-Connectives-Atomic and Compound Statements-Well  
Formed (Statements) Formulae-Truth Table of a Formula- Tautology-Tautological  
Implications and Equivalence of Formulae

### UNIT 3:

#### LATTICES AND BOOLEAN ALGEBRA

Lattices – Some Properties of Lattices – New Lattices – Modular and Distributive  
Lattices- Boolean Algebra

### UNIT 4:

#### RECURRENCE RELATIONS AND GENERATING FUNCTIONS:

Recurrence an introduction – Polynomials and their Evaluations- Recurrence Relations-  
Solution of Finite Order Homogeneous (liner) Relations-Solution of Non- homogeneous  
Relations-Generating Functions-Some Common Recurrence Relations-Primitive  
Recursive Functions- Recursive and Partial Recursive Functions

### UNIT 5:

#### AUTOMATA, LANUAGES AND COMPUTATIONS:

Introduction-Finite Automata- Definition of Finite Automaton –Representation of Finite  
Automaton-Acceptability of a string by a Finite Automaton-Languages accepted by a  
Finite Automaton-Non-deterministic Finite Automata- Acceptability of a String by Non-  
Deterministic Finite Automata –Equivalence of FA and NFA

**Text Books: Dr.M.K. Venkataraman and N. Sridharan.N.Chandrasekaran**

**For UNIT 1 - .Chapter 2: Section 2.1 to 2.21& Chapter 3 Section 3.1 to 3.13**

**For UNIT 2 - Chapter 9: Section 9.1 to 9.30**

**For UNIT 3** - Chapter 10: Section 10.1 to 10.34

**For UNIT 4** - Chapter 5: Section 5.1 to 5.33

**For UNIT 5** - Chapter 12: Section 12.1 to 12.18

### **Learning outcomes**

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of Relations and functions
2. A knowledge of logical reasoning is used in mathematics to prove theorems, in computer science to verify the correctness of programs and to prove theorems in physical science to draw the conclusions.
3. An ability to find the solutions of Recurrence relations.
4. A knowledge of to study on ordering relations.

## Core Practical —Programming in C++

Course code	Course Title	L	T	P	C
17120SEC64L	Core Practical - Programming in C++	0	0	3	2

### Objectives

Programming in C ++ Lab provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Quadratic Equation, Sum of Series (Sine, Cosine,  $e^x$ ), Fibnoacci Numbers using recursive functions, Sorting of given names in alphabtical order, Matrix Operations (Addition, Subtraction, Multiplication — use functions) would be taught.

1. Bank Transaction

2. Shapes Using Polymorphism

3. a) Single Inheritance

b) Multilevel Inheritance

4. Inline Function

5, Friend Function

6. a) Virtual Base Class

b) Virtual Abstract Function

7. String Handling

8. Display File With Lines

9. Mark list Preparation

10. Inventory Preparation

### Learning outcomes

By the end of this course, you should be able

- Students learned program techniques
- Understand the concept of various functions
- A knowledge of writing C++ program
- Design/development of solutions

## Elective II - GRAPH THEORY

Course code	Course Title	L	T	P	C
17112DSC65 A	Elective Paper –II Graph Theory	5	0	0	4

### Objectives:

Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory such as Trees, Directed graphs, Connectivity, Euler tours, Hamilton cycles, Matchings, Colourings, Planar graphs

**UNIT 1:** Definitions of graph — finite and infinite graphs — incidence and degree isolated and pendent vertices — isomorphism — sub graphs — walks, paths and circuits — Connected and disconnected graphs — components — Euler graphs — Operations on graphs — more on Euler graphs — Hamiltonian paths and circuits.

**UNIT 2:** Trees — Properties of trees — pendent vertices in a tree — distances and centers in a tree — Rooted and binary trees — Spanning trees — fundamental Circuits — Finding all spanning trees of a graph — Spanning trees in a weighted graph.

**UNIT 3:** Cut-sets — Properties of cut-set- All cut-sets in a graph — Fundamental circuits and cut-sets — connectivity and reparability.

**UNIT 4:** Planar graphs — Kuratowski's two graphs — Representation of a planar graph — Detection of planarity — Geometrical dual — Combinational dual.

**UNIT 5:** Matrix representation of graphs — Incidence Matrix — circuit matrix Fundamental circuit and matrix and rank of the circuit matrix — cut-set matrix — Adjacency matrix. Chromatic number — Chromatic partitioning — Chromatic polynomial. Treatment and content as in "Graph Theory with applications to engineering and computer science" by Narsing Deo, Prentice Hall of India, New Delhi.

### References:

1. Invitation to graph Theory' by Dr.S. Arumugam and Dr. S. Ramachandran.
2. 'Graph Theory' — F. E-Harary, Narosa Publishing House, New Delhi — Madras - Bombay.
3. Graph Theory — S.A. Choudum, Macmillan India Limited —New Delhi — Madras.

### Learning outcomes

By the end of this course, you should be able

- Knowledge in Graph Theory
- Understanding the properties of Graph Theory
- Understanding the concept of Kuratowski's graph
- Understanding Matrix representation of graphs

## Elective II - MATHEMATICAL MODELLING

Course code	Course Title	L	T	P	C
17112DSC65B	Elective Paper –II Mathematical Modelling	5	0	0	4

### Objectives:

Mathematical modelling can be used for a number of different reasons. How well any particular objective is achieved depends on both the state of knowledge about a system and how well the modelling is done.

1. Developing scientific understanding - through quantitative expression of current knowledge of a system.
2. Test the effect of changes in a system;
3. Aid decision making, including (i) tactical decisions by managers; (ii) strategic decisions by planners.

### UNIT-I

Mathematical modeling through ordinary differential equations of first order: linear growth and decay models-nonlinear growth and decay models compartment models-dynamics problems-geometrical problems.

### UNIT-II

Mathematical modeling through systems of ordinary differential equations of first order: population dynamics-epidemics-compartment models-economics-medicine. arms race, battles and international trade-dynamics.

### UNIT-III

Mathematical modeling through ordinary differential equations of second order: planetary motions-circular motion and motion of satellites- Mathematical modeling through linear differential equations of second order-miscellaneous mathematical models.

### UNIT-IV

Mathematical modeling through difference equations: simple models-basic theory of linear difference equations with constant coefficients-economics and finance population dynamics and genetics-probability theory.

### UNIT-V

Mathematical modeling through Graphs: solutions that can be modeled through graphs-mathematical modeling in terms of directed graphs, signed graphs, weighted graphs and unoriented graphs.

### Reference:

MATHEMATICAL MODELLING, J.N.KAPUR ,WILEYEASTERN LIMITED, NEWDELHI,1988.

### Learning Outcomes:

Having successfully completed this module, you will be able to demonstrate knowledge and understanding of:

- 1) The concept of mathematical modelling.
- 2) The mathematical descriptions of some real systems.
- 3) Correct methodology when developing mathematical models.
- 4) Skill in applications
- 5) Designing and developing the solutions

---

## Free Elective – DEVELOPMENT OF MATHEMATICAL SKILLS

Course code	Course Title	L	T	P	C
17112GEC	Free Elective : Development Of Mathematical Skills	4	0	0	2

### Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

### Unit I

Simple interest and compound interest

### Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

### Unit III

Set theory – Series

### Unit IV

Matrices – Determinants

### Unit V

Assignment problems

### References

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

### Learning outcomes

By the end of this course, you should be able to

- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

## Free Elective - Web Technology

Course Code	Course Title	L	T	P	C
17120GEC	Free Elective Web Technology	4	0	0	2

### AIM

To equip the students with basic programming skill in Web Designing

### OBJECTIVE

- To understand and practice mark up languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to HTML – Head and body sections – Hyper text and Link in HTML documents.

### UNIT II

Designing the body section—Managing images in HTML

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A web page design project – Forms.

### OUTCOMES:

- Explore mark-up languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

### REFERENCE BOOK

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

### Free Elective – E-COMMERCE AND ITS APPLICATIONS

Course Code	Course Title	L	T	P	C
17122GEC	Free Elective E- Commerce and its Applications	4	0	0	2

#### AIM:

To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

#### OBJECTIVES:

To be aware of all aspects of communication and information exchange in Electronic Commerce, including:

- Navigation, brokerage, advertising, and catalogue exchange in pre-sales activities.
- Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

#### UNIT-I:

**History of E-commerce and Indian Business Context:** Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal

**Business Models for E-Commerce:** E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

#### UNIT-II:

**Enabling Technologies of the World Wide Web:** Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script - XML

#### UNIT- III:

**E-Marketing:** Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

**E-Security:** Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

**UNIT-V**

**E-payment Systems:** E-Banking at ICICI bank-Main concerns in internet banking-History's lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stock trading: The high speed alternative.

**OUTCOMES:**

Upon Completion of the course, the students should be able to:

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

**REFERENCE BOOK:**

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition

## Free Elective - Indirect Taxes

Course Code	Course Title	L	T	P	C	Marks
17161GEC	Free Elective – Indirect Taxes	4	0	0	2	100

### **OBJECTIVES:**

To make the students to gain expert knowledge in indirect taxes.

- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

### **UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

### **UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

### **UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

### **UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax-exempted services from tax - Value of taxable services-Different services on which tax is payable.

### **UNIT – V**

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

### **Learning Outcome**

Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

### **Reference Books:**

1. Income Tax Law and Practice - N.Hariharan.
2. Business Taxation – T.S.Reddy/Hari Prasad Reddy.

## Free Elective – Journalism

Course Code	Course Title	L	T	P	C
17111GEC	UG Free Elective - Journalism	4	0	0	2

### Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

### Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

### Outcome:

- Become a journalist

### UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

### UNIT- II

News – Definition – Kinds – Elements – Sources

### UNIT- III

Reporters

### UNIT- IV

The Editor and the Sub Editor

### UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

### References:-

- Journalism -Susan  
Professional Journalism - John Hogenberg  
News Writing and Reporting - M.James Neal (Surjeet Publication)

Mass Communication & Journalism - D.S Mehta

## Package Lab -V I

### FLASH

Course Code	Course Title	L	T	P	C
17120SEC06AL	Packages Lab-VI	0	0	2	1

1. Drawing and painting original art in flash.
2. Creating simple objects using flash.
3. Creating a frame-by-frame animation techniques.
4. Develop a program for animation with motion Twinning.
5. Develop a program for animation with shape Twinning.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animations techniques movie clip and graphic symbols.

Course Code	Course Title	L	T	P	C
17160SEC06B	SOFT SKILL VI	0	0	2	1

## PART -VI Life Skills and Other Skills

### UNIT I Life Skills

**Life Skills** - Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. -Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. - Occupational Safety , First-aid

### UNIT II Other Skills

#### Other Skills

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

Course Code	Course Title	L	T	P	C
17111SEC06L	Communicative English Lab - VI	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To extract the main ideas from a text
- To understand the meaning of text
- To expand an idea
- To shorten a text
- To develop vocabulary
- To enhance writing skills
- To write simple, compound and complex sentences

**Outcome:**

- Develop communicative skills

**UNIT –I**

Jumbled words

Paragraph writing

**UNIT –II**

Prefix and suffix

Precise writing

**UNIT –III**

Eponyms

Summarizing

**UNIT –IV**

Compound words

Simple, Compound and Complex

**UNIT –V**

Homophones

Essay writing

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the **B.Sc/B.A/B.Com/BBA/BCA ( \_\_\_\_\_ )** curriculum, the following Research Skill Based Courses are introduced in the **B.Sc/B.A /B.Com/BBA/BCA ( \_\_\_\_\_ )** curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

#### Blueprint for assessment of student’s performance in Research Led Seminar Course

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**  
(Essay type Questions set by the concerned resource persons)

#### Blueprint for assessment of student’s performance in Research Methodology Courses

- Continuous Internal Assessment:** **20 Marks**
  - Research Tools( Lab) : 10 Marks
  - Tutorial: 10 Marks
- Model Paper Writing:** **40 Marks**
  - Abstract: 5 Marks
  - Introduction: 10 Marks
  - Discussion: 10 Marks
  - Review of Literature: 5 Marks
  - Presentation: 10 Marks
- Semester Examination:** **40 Marks**
- Total:** **100 Marks**

### DISCIPLINE SPECIFIC ELECTIVE COURSES

Semester	Elective No.	Course Code	Course Title
I	I	17212DSC15A ( OR ) 17212DSC15B	a) Classical Dynamics ( OR ) b) Fluid Dynamics
II	II	17212DSC25A ( OR ) 17212DSC25B	a) Mathematical Probability ( OR ) b) Mathematical Modelling
III	III	17212DSC34A ( OR ) 17212DSC34B	a) Cryptography ( OR ) b) Algebraic Coding Theory

IV	IV	17212DSC44A ( OR) 17212DSC44B	a) Combinatorial Mathematics ( OR) b) Design And Analysis of Algorithm
----	----	-------------------------------------	--

### GENERAL ELECTIVES COURSE

Semester	GENERAL ELECTIVE COURSES
III	a. 17211GEC - Writing For The Media b. 17213GEC – Bio medical instrumentation c. 17214GEC –Green Chemistry d. 17215 GEC – Bio analytical Techniques e. 17220GEC - Internet and Web Design f. 17261GEC - Insurance Services g. 17280GEC - Counselling and Psychology

### Credit Distribution

Sem	AEC	SEC	DSC	GEC	Research	Total
I	12	4	4	-	1	21
II	9	3	4	-	5	21
III	10	5	4	2	2	23
IV	10	5	4	-	6	25
Total	41	17	16	2	14	90

**SEMESTER – I**  
**Core I: ALGEBRA**

Course Code	Course Title	L	T	P	C
17212AEC11	Core –I - Algebra	6	0	0	4

**Objectives:**

1. Group Theory is the fundamental building blocks for the Abstract Algebra.
2. To study the algebraic aspects of Real and Complex numbers.
3. Module is a third algebraic Model - Applicable to geometry and physics.

**UNIT I:**

**Group theory:** Sylow's theorem — direct products — finite abelian groups.

**UNIT II:**

**Ring theory:** Polynomial rings — polynomials over the rational field polynomial ring over commutative rings — modules.

**UNIT III:**

**Field:** Extension fields — roots of polynomials — more about roots

**UNIT IV:**

**Field:** the elements of Galois theory — Finite fields

**UNIT V:**

**Linear transformations** — the algebra of linear transformations, Hermitian, Unitary and normal transformations.

**Reference**

1. Topics in Algebra — I.N. Herstein

**Learning Outcomes:**

1. Understand the concept of Group Theory, Ring Theory.
  2. A knowledge of Linear Transformations.
  3. An understanding of the analysis of Fields.
  4. Research inquiry and analytical thinking abilities
-

## Core II : REAL ANALYSIS

Course Code	Course Title	L	T	P	C
17212AEC12	Core –II Real Analysis	7	0	0	4

### Objectives:

1. To introduce the notion of Riemann – Stieltjes integral.
2. To study the infinite series and infinite sequences of functions.
3. To study the multivariate differential calculus.

### UNIT I:

Riemann — Stieltjes — integral

### UNIT II:

Infinite series and infinite products

### UNIT III:

Sequences of functions

### UNIT IV:

Multivariable Differential Calculus

### UNIT V:

Implicit functions and Extremum problems

### Reference:

Mathematical Analysis Tom. M.Apostol. 2<sup>nd</sup> Edition Narosa Publishing House— 1985

Unit I Chapter— 7(7.1—7.25)

Unit II Chapter — 8(8.1 — 8.18)

Unit III Chapter — 9(9.1 — 9.6, 9.8-9.13)

Unit IV Chapter— 12(12.1—12.5, 12.7— 12.14)

Unit V Chapter— 13(13.1 — 13.6)

### Learning Outcomes:

Students will be able to

1. Know the notion of the Riemann-Stieltjes integral, prove elementary properties of the Riemann integral and the Fundamental Theorem of Calculus.
  2. Describe the Infinite series and Infinite Products, Sequences of Functions.
  3. An understanding of Multivariable Differential Calculus and Implicit Functions and Extremum problem.
-

### Core III- ORDINARY DIFFERENTIAL EQUATIONS

Course Code	Course Title	L	T	P	C
17212AEC13	Core-III Ordinary Differential Equations	6	0	0	4

#### Objectives:

1. Teaching the theory and applications to students preparing for advanced training in applied sciences and social sciences.
2. Presenting in easy and lucid language the results of oscillations, boundary value problems (BVP) and elements of control theory.
3. Justifying the inclusion of qualitative theory to students who that it is out of place.
4. Emphasising the importance of the study of Boundary problems, both in Mathematics and applied sciences.
5. Studying about the stability of stationary solutions.

#### UNIT I:

Systems of linear differential equations — Chapter 4

#### UNIT II:

Existence and uniqueness of solutions Chapter 5

#### UNIT III:

Boundary value problems — Chapter — 7

#### UNIT IV:

Oscillations of second order equations — Chapter 8

#### UNIT V:

Stability of linear and nonlinear system — Chapter 9

#### Reference

Ordinary Differential Equations and Stability Theory — S.G.GEO. V.Raghavendra, V.Lakshmikanthan

#### Learning Outcomes :

Upon completing this course students should be able to:

1. Solve first order equations, systems of periodic coefficients and use these methods to solve applied problems.
2. A knowledge of Sturm-Liouville Problem.
3. Understanding about the stability of stationary solutions.

## Core IV - PROGRAMMING IN C++

Course Code	Course Title	L	T	P	C
17212SEC14	Core –IV C++ Programming	6	0	0	4

### Objectives

- Utilise Object Oriented techniques to design C++ programs.
- Use the standard C++ library.
- Exploit advanced C++ techniques

### UNIT 1:

Beginning with C++ - what is C++ - applications — simple program — structure of C program — creating the source file — compiling and linking — tokens, expressions and control structures — user defined data types — derived data types — declarations of variables — reference — variables

### UNIT II:

Operations in C++ - Manipulators — types cast operator — expressions and implicit conversions — operator over loading — operator precedence — control structures — Functions in C — the main function — functions prototyping, call by reference — return by reference — function overloading

### UNIT III:

Class and object — introduction — C structures revisited — C++ program with class — arrays with in class — static member function — arrays of objects — returning objects — returning objects — constant member functions — pointers to members.

### UNIT IV:

Constructors and destructors — introduction — constructors — parameterized constructors — multiple constructors in a class — copy constructor — dynamic constructor — two dimensional Arrays — destructors — operators over loading and type conversions — defining operator loading — manipulation strings using operations — type conversions.

### UNIT V:

Inheritance: extending classes — introduction — defining derived classes — single in heritance — multiple inheritance — virtual base classes — abstract classes — nesting classes.

### Reference:

Object Oriented Programming with C++ - E.Balagurusamy.

### Learning Outcomes:

At the end of the course, the student should be able to:

- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to reuse the code with extensible Class types, User-defined operators and function Overloading
- Understand functions and parameter passing.
- Understand object-oriented design and programming
- Understand dynamic memory allocation and pointers

## Elective - CLASSICAL DYNAMICS

Course Code	Course Title	L	T	P	C
17212DSC15 A	Elective- Classical Dynamics	5	0	0	4

### Objectives.

1. Classical mechanics afford the student an opportunity to master many of mathematics techniques.
2. It is certainly true that classical mechanics today is far from being a closed subject.
3. Alternative means exist in the curriculum for acquiring the mathematics needed in other branches.

### UNIT I:

Introductory Concepts—Chapter 1(1.1 — 1.5)

### UNIT II:

Lagrange's equations — Chapter 2

### UNIT III:

Special applications of Lagrange's equations — Chapter 3

### UNIT IV:

Hamilton equations — Chapter 4

### UNIT V:

Hamilton Jacobi theory — Chapter 5

### Reference

CLASSICAL DYNAMICS — Donald T.Greenwood, PHI, India.

### Learning Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of mechanical systems , virtual work Energy and Momentum.
  2. Understanding the concept and Applications Lagrange's Equation.
  3. A knowledge of Hamilton's Principal function.
-

## ELECTIVE - FLUID DYNAMICS

Course Code	Course Title	L	T	P	C
17212DSC15B	Elective- Fluid Dynamics	5	0	0	4

### Objectives:

1. To introduce the behavior of fluid in motion.
2. To study the application of complex analysis in the analysis of flow of fluids.

### UNIT I

Real fluids and ideal fluids — velocity of a fluid at a point — streamlines and path lines: steady and unsteady flows — the velocity potential — The velocity vector — local and particle rates of change — the Equations of continuity — Worked examples — Accelerations of a fluid — Pressure at a point in a fluid at rest — Pressure at a point in moving fluids — Conditions at a Boundary to two inviscid immiscible fluids — Euler's equations of motions — Bernoulli's equation — worked examples.

### UNIT II

Some flows involving axial symmetry — some special two — Dimensional flow — impulsive Motion. Some three — dimensional flows: Introductions — sources, sinks and doublets — images in a rigid infinite plane — Axis-symmetric flows: Stokes stream functions.

### UNIT III

Some two — Dimensional Flows: meaning of a two — Dimensional flow — Use of cylindrical polar coordinates — The stream function — The complex potential for two Dimensional, irrotational, incompressible flow — complex velocity potentials for standard two — dimensional flows — some worked examples — The Milne — Thomson circle theorem and applications — The theorem of Blasius.

### UNIT IV

The use of conformal transformation and Hydrodynamical Aspects — stress components in real fluids — relations between Cartesian components of stress — Translational motion of fluid element — The rate of strains Quadratic and principal stresses — Some further properties of the rate of strains quadratic — stress Analysis in fluid motion — Relations between stress and rate of strain — The coefficient of viscous fluids

### UNIT V

Some solvable problems in viscous flow — steady viscous flow in tubes of uniform cross section — Diffusion of vorticity — Energy. Dissipation due to viscosity — steady flow past a fixed sphere — Dimensional Analysis; Reynolds Number — Prandtl's Boundary layer.

**Reference:**

Fluids dynamics by F. Chorlton (CBS Publisher & Distributors, Delhi- 110032) 1985.

- Unit I : Chapter 2.Sec 2.1 to 2.9 and Chapter 3.Sec 3.1 to 3.6  
Unit II : Chapter 3.Sec 3.9 to 3.11 and Chapter 4.Sec 4.1,4.2, 4.3, 4.5  
Unit III : Chapter 5.Sec 5.1 to 5.9 except 5.7  
Unit IV : Chapter 5.Sec 5.10 and Chapter 8:Sec 8.1 to 8.9  
Unit V : Chapter 8.Sec 8.10 to 8.16

**General References**

Fluids Dynams shanty swarup, Krishna prakasan mandir Meerut 1984.

**Learning Outcomes:**

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of behaviour of fluid in motion.
  2. A knowledge of Two Dimensional and conformal mapping.
  3. A knowledge of solving problems in viscous flow-steady viscous flow
-

## SEMESTER – II

### Core V COMPLEX ANALYSIS

Course Code	Course Title	L	T	P	C
17212AEC21	Core – V Complex Analysis	5	1	0	4

#### Objectives:

1. To introduce the students to the fascinating world of complex analysis which is different from analysis of real variable.
2. To introduce the concepts of harmonic functions , elliptic functions and periodic functions.

#### UNIT I:

Harmonic functions — power series expansions partial fraction and factorization — entire functions.

#### UNIT II:

The Riemann zeta function — normal families.

#### UNIT III:

The Riemann mapping theorem — conformal mapping of polygons — Chapter 6(6.1, 6.2)

#### UNIT IV:

A closer look at harmonic functions — the Dirichlet's problem Harmonic measures — Chapter 6 sec 3.4 and 5(5.1 only)

#### UNIT V:

Simple periodic functions — double periodic functions — the weierstrass theory Chapter 7 sec 1,2,3(3.1. 3.2, 3.3)

#### Reference

Complex Analysis L.V. Ahlfors 3<sup>rd</sup> edition McGraw Hill

#### Learning Outcomes:

On completion of this unit successful students will be able to:

1. Understand the significance of harmonic functions, Riemann zeta function.  
A knowledge of periodic functions, the weierstrass
  2. Research inquiry and analytical thinking abilities
  3. Abilities in conformal mapping
-

## Core VI MEASURE THEORY AND INTEGRATION

Course Code	Course Title	L	T	P	C
17212AEC22	Core VI- Measure Theory and Integration	5	0	0	3

### Objectives:

To gain understanding of the abstract measure theory and definition and main properties of the integral. To construct Lebesgue's measure on the real line and measurability in product space. To explain the basic advanced directions of the theory.

### UNIT I

Measure on Real line — Lebesgue outer measure — Measurable sets — Regularity — Measurable function — Borel and Lebesgue measurability.

### UNIT II

Integration of non-negative functions — The General integral — Integration of series — Riemann and Lebesgue integrals.

### UNIT III

Abstract Measure spaces — Measures and outer measures — Completion of a measure — Measure spaces — Integration with respect to a measure.

### UNIT IV

Convergence in Measure — Almost uniform convergence — Signed Measures and Hahn Decomposition — The Jordan Decomposition.

### UNIT V

Measurability in a Product space — The product Measure and Fubini's Theorem.

### Reference:

[I] G.De Barra, Measure Theory and Integration, New age international (p) Limited.

UNIT — I : Chapter II: Sections 2.1 to 2.5

UNIT—II : Chapter III: Sections 3.1 to 3.4

UNIT — III : Chapter V: Sections 5.1 to 5.6

UNIT— IV : Chapter VII: Sections 7.1 to 7.2, Chapter VIII: Sections 8.1 and 8.2

UNIT —VI : Chapter X: Sections 10.1 to 10.2

### Reference(s)

1. Measure and Integration. Second Edition by M.E.Munroe Addison — Wesley publishing company, 1971.

4. Inder, K.Rana, An Introduction to Measure and Integration, Narosa Publishing House, New Delhi, 1997.

### Learning Outcomes:

To introduce the concepts of *measure* and *integral with respect to a measure*,

To show their basic properties,

---

To provide a basis for further studies in Analysis, Probability, and Dynamical Systems.

Knowledge in measure spaces

---

## Core VII -MATHEMATICAL METHODS

Course Code	Course Title	L	T	P	C
17212SEC23	Core VII- Mathematical Methods	6	0	0	3

### Objectives:

To introduce the concept of Calculus of variations, Fourier Transforms, Hankel Transform, Linear Integral Equations, Method of successive approximations.

### UNIT I

Calculus of variations — Maxima and Minima — the simplest case — Natural boundary and transition conditions variational notation — more general case — constraints and Lagrange's multipliers — variable end points — Sturm - Liouville problems.

### UNIT II

Fourier transform — Fourier sine and cosine transform — Properties Convolution — Solving integral equations — Finite Fourier transform — Finite Fourier sine and cosine transforms — Fourier integral theorem Parseval's identity.

### UNIT III

Hankel Transform: Definition - Inverse formula — Some important results for Bessel function — Linearity property — Hankel Transform of the derivatives of the function — Hankel Transform of differential operators — Parsavaj's Theorem.

### UNIT IV

Linear Integral Equations — Definition, Regularity conditions — special kind of kernels — eigen values and eigen functions — convolution integral — the inner and scalar product of two functions — Notation — reduction to a system of Algebraic equations — examples — Fredholm alternative — examples — an approximate method.

### UNIT V

Method of successive approximations: Iterative scheme — examples — Volterra Integral equation examples — some results about the resolvent kernel. Classical Fredholm Theory: the method of solution of Fredholm — Fredholm's first theorem — second theorem — third theorem.

### References

UNIT — I : Chapter 2:Sections 2.1 to 2.9 of [2]

UNIT — II : Chapter 7 of [3]

UNIT — III : Chapter 9 of [3]

UNIT— IV : Chapter 1 and 2 of [1]

UNIT—V : Chapter 3 and4 of [1]

**Learning Outcomes:**

On completion of this unit successful students will be able to:

1. Understand the significance of Calculus of Variations, Fourier Transforms and Hankel Transforms.
  2. A knowledge of linear integral equations and Method of successive approximations.
  3. Skillness in transformation form one function into another function
  4. Applications
-

## CORE VIII- DIFFERENTIAL GEOMETRY

Course Code	Course Title	L	T	P	C
17212AEC24	Core VIII- Differential Geometry	5	0	0	3

### Objectives:

To provide an introduction to the differential geometry of curves and surfaces in space, both in its local and global aspects, with special emphasis on a geometric point of view, as a basis for further study or for applications (especially in physics, chemistry, civil and electrical engineering, graphics).

### UNIT I

**SPACE CURVES:** Definition of a space curve — Arc length — tangent — normal and binomial — curvature and torsion — contact between curves and surfaces tangent surface — involutes and evolutes — Intrinsic equations — Fundamental Existence Theorem for space curves — Helics.

### UNIT II

**INTRINSIC PROPERTIES OF A SURFACE:** Definition of a surface — curves on a surface — Surface of revolution — Helicoids — Metric — Direction coefficients — families of curves — isometric correspondence — intrinsic properties.

### UNIT III

**GEODESICS:** Geodesics — Canonical. geodesic equations — Normal property of geodesics — Existence Theorems — Geodesic parallels — Geodesics curvature — Gauss-Bonnet Theorem — Gaussian curvature — surface of constant curvature.

### UNIT IV

**NON INTRINSIC PROPERTIES OF A SURFACE:** The second fundamental form — Principle curvature — Lines of curvature — Developable — Developable associated with space curves and with curves on surface — Minimal surfaces — Rules surfaces.

### UNIT V

**DIFFERENTIAL GEOMETRY OF SURFACES:** Compact surfaces whose points are umblics — Hilbert's lemma — Compact surface of constant curvature — Complete surface and their characterization — Hilbert's Theorem — Conjugate points on geodesics.

4. J.A. Thrope Elementary topics in Differential Geometry, Under — graduate Texts in Mathematics, Springer — Verlag 1979.

### Learning Outcomes:

Upon completion of the programme, student will be able:

1. To explain and apply the concepts and techniques of differential geometry of curves and surfaces.
  2. To analyze and solve problems (using concepts and techniques from differential geometry).
  3. A complete discussion of surfaces.
  4. Research inquiry and analytical thinking abilities.
- 
-

## ELECTIVE - MATHEMATICAL PROBABILITY

Course Code	Course Title	L	T	P	C
17212DSC25A	Elective -Mathematical Probability	5	0	0	3

### Objectives:

The goal of the subject is to extend and master students' knowledge of probability and statistical and to provide theoretical background for studying and applying advanced statistical methods. Students are introduced to probability theory and mathematical statistics. They learn to understand important distributions, present statistical data, and fundamental statistical concepts. Emphasis is placed on evaluation the processes encountered in the real reality and on formulation of problems that are investigated by sampling.

### UNIT I

Measure theory — Classes of sets. Singular distributions Probability measures and their distribution functions.

### UNIT II

Random Variables — Expectation — Independence — General Definitions — Properties of mathematical expectation — Independence.

### UNIT III

Convergence concept — Various modes of convergence — Almost sure convergence — Borel — Cantelli lemma — Vague convergence — continuation — Uniform integrability — convergence of moments.

### UNIT IV

Law of large numbers and random series — simple limits theorem's — weak law of large numbers — convergence of series — strong law of large numbers.

### UNIT V

Characteristic function — General properties — convolutions — Uniqueness and inversion — convergence theorems.

### Reference

A course in Probability Theory — Second Edition — by Kai Lai Chung, Academic Press, New York

Unit I	:	Chapter 2
Unit II	:	Chapter 3
Unit III	:	Chapter 4
Unit IV	:	Chapter 5 (Sec.5.1 to 5.4 Only)
Unit V	:	Chapter 6 (Sec.6.1 to 6.3 Only)

### GENERAL REFERENCE

Modern Probability theory — BR.Bhat, Willy Eastern Limited 0989).

### Learning Outcomes:

Knowledge and understanding understand the place of probability theory knowledge in cognitive process, describe the basic probability theory and mathematical statistics concepts; Special abilities and skills.

1. Calculate the probabilities of events with an appropriate choice of the method of calculation;
2. Be familiar with the types of random variables, be able write them, calculate their numerical characteristics;

3. Evaluate numerical characteristics of the sample and interpret the meanings of the parameters of population.
  4. Formulate and test hypotheses, draw the appropriate conclusions.
  5. Understand impotent distribution
-

## ELECTIVE MATHEMATICAL MODELLING

Course Code	Course Title	L	T	P	C
17212DSC25B	Elective Mathematical Modelling	5	0	0	3

### Objectives:

Mathematical modelling can be used for a number of different reasons. How well any particular objective is achieved depends on both the state of knowledge about a system and how well the modelling is done.

1. Developing scientific understanding - through quantitative expression of current knowledge of a system.
2. Test the effect of changes in a system;
3. Aid decision making, including (i) tactical decisions by managers; (ii) strategic decisions by planners.

### UNIT I

Microbial population models, single-species, non — age — structured population models.

### UNIT II

Age — structured population models.

### UNIT III

Epidemic models.

### UNIT IV

Models in genetics.

### UNIT V

Mathematical models in Pharmacokinetics.

### Reference:

Mathematical models in Biology and Medicine By J.N.Kapur, Affiliated East — West Press Pvt. Ltd., New Delhi

- Unit I : Chapter 2,3  
Unit II : Chapter 4  
Unit III : Chapter 8  
Unit IV : Chapter 9  
Unit V : Chapter 10

### General References

1. Mathematical Modelling J N Kapur Wiley Eastern Ltd New Delhi.
2. Theory of Ordinary Differential Equations with Equations with applications in biology and Engineering Ahmad & Mohana Rao Affiliated East — West Pvt Ltd New Delhi, (1999).

### Learning Outcomes:

Having successfully completed this module, you will be able to demonstrate knowledge and understanding of:

- 1) The concept of mathematical modelling.
- 2) The mathematical descriptions of some real systems.
- 3) Correct methodology when developing mathematical models.
- 4) Skill in applications
- 5) Designing and developing the solutions.

**RESEARCH METHODOLOGY**

Course Code	Course Title	L	T	P	C
17212RMC26	Research Methodology	3	0	0	3

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis

**OUTCOME:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

**UNIT I: Introduction to Research Methodology**

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT II: Database and Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

**UNIT III: Data Analysis :**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co -variance (ANCOVA) correlation and multiple regression.

**UNIT IV: Thesis and Paper writing:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

**UNIT V: Application of MATLAB:**

Numerical Integration - Numerical integration, ordinary differential equations, partial differential equations, boundary value problems

FourierAnalysis - Fourier transforms, convolution.

**SEMESTER – III**  
**CORE IX- TOPOLOGY**

Course Code	Course Title	L	T	P	C
17212AEC31	Core IX- Topology	6	0	0	5

**Objectives:**

- 1) The subject of topology is of interest in its our right and it also serves to lay the foundations for future study in analysis, in Geometry and in Algebraic Topology.
- 2) To develop the students' abilities through hard thinking.
- 3) To train the students to develop analytical thinking.

**UNIT I**

**TOPOLOGICAL SPACES:** Topological spaces' — Basis for a topology- The order topology — The product topology on  $X \times Y$  — The subspace topology — Closed sets and limit points.

**UNIT II**

**CONTINUOUS FUNCTIONS:** Continuous functions — the product topology — The metric topology.

**UNIT III**

**CONNECTEDNESS:** Connected spaces — connected subspaces of the Real line — Components and local connectedness.

**UNIT IV**

**COMPACTNESS:** Compact spaces — compact subspaces of the Real line — Limit Point Compactness — Local Compactness.

**UNIT V:**

**COUNTABILITY AND SEPERATION AXIOMS:** The Countability Axioms — The separation Axioms — Normal spaces — The Urysohn Lemma — The Urysohn metrization Theorem — The Tietz extension theorem.'

**Reference:**

James R.Munkres, Topology(2<sup>nd</sup> Edition) Pearson Education Pvt. Ltd., New Delhi — 2002 (Third Indian Reprint)

UNIT — I Chapter 2: Sections 12 to 17

UNIT — II Chapter 2: Sections 1 8to 2l(Ornit Section 22)

UNIT — III Chapter 3: Sections 23 to 25

UNIT — IV Chapter 3: Sections 26 to 29

UNIT — V Chapter 4: Sections 30 to 35.

**Reference(s)**

New York, 1970

5. S. Willard, *General Topology*, Addison — Wesley, Mass., 1970.

**Learning Outcomes:**

Upon successful completion of this course, the student will be able to: (Knowledge based)  
distinguish among open and closed sets on different topological spaces;

- 1) know the two fundamental topologies: discrete and indiscrete topologies.
  - 2) Identify precisely when a collection of subsets of a given set equipped with a topology forms a topological space;
  - 3) Understand when two topological spaces are homeomorphic;
  - 4) Identify the concepts of distance between two sets; connectedness, denseness, compactness and separation axioms.
-

## CORE- X- STOCHASTIC PROCESSES

---

Course Code	Course Title	L	T	P	C
17212SEC32	Core X – Stochastic Process	6	1	0	5

### Objectives

The objective of this course is to provide the fundamentals and advanced concepts of random process to support graduate coursework and research in engineering. The required mathematical foundations will be studied at fairly rigorous level and the applications of the probability theory and random processes to engineering problems will be emphasized. The simulation techniques will also be studied and MATLAB will be used as a software tool for bridging the probability theory and engineering applications.

### UNIT I

Elements of Stochastic Processes — Two simple examples of Stochastic processes — Classification of general Stochastic processes — Defining a Stochastic Processes — Markov chains — Definitions — Examples of Markov Chain — Transition probability matrices of a Markov chain — classification of states of a Markov chain — Recurrence — more on Recurrence.

### UNIT II

The basic limit theorem of Markov chains and applications — Discrete renewal equation — proof of theorem — Absorption probabilities — criteria for recurrence — Random walk.

### UNIT III

Classical Examples of continuous time Markov chains — General pure birth processes and Poisson processes — more about Poisson processes — A counter model — birth and death processes — Differential equations of birth and death processes — Examples of birth and death processes.

### UNIT IV

Renewal processes — Definition of Renewal process and related concepts — Some examples of Renewal Processes — More on some special Renewal processes — Renewal equations and elementary Renewal theorem — The Renewal Theorem — Applications of Renewal theorem.

### UNIT V

Martingales — Preliminary definitions and examples — Super martingales and Sub martingales — The optional sampling theorem.

### Reference

A First course in Stochastic Processes — second Edition by Samuel Karlin and M. Taylor, Academic Press New York.

Unit I : Chapter1(1.2,1.3,1.4Only) , Chapter 2 (2.1 to 2.5 and 2.7 Only)

Unit II : Chapter 3 (3.1 to 3.4 and 3.7 Only)

Unit III : Chapter 4 (4.1 to 4.6 Only)

Unit IV : Chapter 5 (5.1 to 5.6)

Unit V : Chapter6(6.1,6.2,6.3 Only)

### General references

1. “Stochastic Processes” S.K Srinivasan and K.M. Mehata, Tata Mcgraw — Hill Publishing Company Ltd., New Delhi.

2. “Stochastic Processes” JMedhi, Second Edition Wiley Eastern Ltd., New Del/it

**Learning Outcomes**

1. On successful completion of the course, students should be able to:
2. Explain fundamentals of probability theory, random variables and random processes.
3. Understand the mathematical concepts related to probability theory and random processes
4. Understand the characterization of random processes and their properties.
5. Formulate and solve the engineering problems involving random processes.
6. Analyze the given probabilistic model of the problem.
7. Make precise statements about random processes.
8. Use computational techniques to generate simulation results.

## Core XI-ADVANCED NUMERICAL ANALYSIS

Subject Code	Title of the paper	L	T	P	C
17212AEC33	Core XI-Advanced Numerical Analysis	6	1	0	5

### Objectives:

- 1) Derive appropriate numerical methods to solve algebraic and transcendental equations.
- 2) Develop appropriate numerical methods to solve a differential equation.
- 3) Derive appropriate numerical methods to evaluate a derivative at a value.
- 4) Derive appropriate numerical methods to solve a linear system of equations.
- 5) Derive appropriate numerical methods to calculate a definite integral.

### Unit – I

Transcendental polynomials equation: Introduction, Methods based on first and second degree equation: secant method - Newton Raphson method - Muller method - Chebyshev method - Rate of convergence. Polynomials Equations: Birge-Vieta method - Bairstow method - Graeffe's root squaring method.

### Unit – II

System of linear algebraic equation and Eigen values problems: Jacobi iteration method, Gauss-Seidal iteration method successive over relaxation method. Eigen values and vectors.

### Unit – III

Interpolation and approximation – Hermite Interpolation – Bivariate interpolation – Lagrange bivariate interpolation- Newton's bivariate Interpolation for equispaced points – approximations – Gram-Schmidt orthogonalizing process – Chebyshev polynomials.

### Unit – IV

Numerical Integration: Methods based on interpolation-Newton-Cotes methods-trapezoidal rule-Simpson's rule-Methods based on undetermined coefficients-Gauss-Legendre integration methods-Labotto integration method-Radau Integration Method and Gauss-Chebystew Integration methods.

### Unit – V

Ordinary Differential Equations: Numerical methods – Euler method – Backward Euler method – Mid point method – Taylor series method – Runge Kutta methods – Implicit Runge – Kutta method.

### TEXT BOOK:

Numerical methods for scientific and Engineering Computation by M.K.Jain, S.R.K.Iyengar, R.K. Jain III – Edition.

- Unit: I – Chapter-2 Sec 2.3, 2.4, 2.5, 2.8  
Unit: II – Chapter-3 Sec 3.4, 3.5, 3.6  
Unit: III – Chapter-4 Sec 4.5, 4.7, 4.8  
Unit: IV – Chapter-5 Sec 5.6, 5.7, 5.8  
Unit: V – Chapter-6 Sec 6.2, 6.3, 6.4.

### Learning Outcomes

Students will be able to

- 1) Solve an algebraic or transcendental equation using an appropriate numerical method.

- 2) Solve a differential equation using an appropriate numerical method.
- 3) Evaluate a derivative at a value using an appropriate numerical method.
- 4) Solve a linear system of equations using an appropriate numerical method.
- 5) Calculate a definite integral using an appropriate numerical method.
- 6) Skill in finding the roots of the given equation

## Elective : CRYPTOGRAPHY

Course Code	Course Title	L	T	P	C
17212DSC34A	Elective- Cryptography	5	0	0	4

**Objectives:**

- 1) Understand the basic concept of Cryptography and Network Security their mathematical models.
- 2) Understand mathematical foundation required for various cryptographic Algorithms.

**UNIT I:**

Simple cryptosystem — enciphering matrices.

**UNIT II:**

Idea of public key cryptography — RSA — discrete log.

**UNIT III:**

Knap sack pseudo primes — Rho method

**UNIT IV:**

Fermat factorization and factor bases — continued fraction method.

**UNIT V:**

Basic facts — elliptic curve cryptosystems — elliptic curve factorization.

**Reference:**

A course in Number Theory and Cryptography — N.Koblitz, Springer — verlog, New York 1987.

**Learning Outcomes**

- 1) Analyze key agreement algorithms to identify their weaknesses.
  - 2) Describe the ethical issues related to the misuse of computer security.
  - 3) Develop code to implement a cryptographic algorithm or write an analysis report on any existing security product.
-

## ELECTIVE : ALGEBRAIC CODING THEORY

Course Code	Course Title	L	T	P	C
17212DSC34B	Elective- Algebraic Coding Theory	5	0	0	4

### Objective:

- To equip students with the basic understanding of the fundamental concept of Coding Theory as they are used in communications.
- To enhance knowledge of codes. Error, Tree Codes, cyclic codes.
- To guide the student through the implications and consequences of fundamental theories and laws of coding theory with reference to the application in modern communication and computer systems

### UNIT I

The communication channel. The coding problem. Types of codes. Block codes. Error — detecting and Error — Correcting codes. Linear codes. The hamming metric. Description of linear block codes by matrices. Dual codes. Standard Array. Syndrome. Step — by — step decoding modular representation.

### UNIT II:

Error — Correction capabilities of linear codes. Bounds on minimum Distance for block codes. Plotkin bound. Hamming sphere packing bound. Varshamov — Gilbert — Sacks bound. Bounds for Burst — Error detecting and correcting codes. Important linear block codes. Hamming codes. Golay codes. Perfect codes. Quasi — perfect codes. Reed — Muller codes. Codes derived from Hadamard matrices. Product codes. Concatenated codes.

### UNIT III:

Tree codes. Convolutional codes. Description of linear tree and convolutional codes by matrices. Standard Array. Bounds on minimum distance for convolutional codes. V. G. S bound. Bounds for Burst — error detecting and correcting convolutional codes. The Lee metric, packing bound for Hamming code w.r.t. Lee metric. The Algebra of polynomial residue classes. Galois fields. Multiplicative group of a Galois field. Cyclic codes. Cyclic codes as ideals.

### UNIT IV:

Matrix description of cyclic codes. Hamming and Golay codes as cyclic codes. Error detection with cyclic codes. Error — connection procedure for short — ended cyclic codes. Pseudo cyclic codes. Code symmetry. Invariance of codes under transitive group of permutations. Bose — Chaudhary — Hocquenghem (BCH) codes. Reed — Soloman (RS) codes.

### UNIT V:

Majority — Logic decodable codes. Majority — Logic Decoding. Singleton bound. The Griesmer bound, Maximum — distance separable (MDS) codes. Generator and Parity — check matrices of MDS codes. Weight distribution of MDS code. Necessary and sufficient conditions for a linear code to be an MDS code. MDS codes from RS codes. Abramson codes. Closed — loop burst — error correcting codes ( fire codes). Error locating codes.

### References

5. F.J. Macwilliams and N.J.A. Sloane, Theory of Error Correcting Codes" North — Roland

Publishing Company, 1977.

**Learning Outcomes**

Upon completion of this course, students should be able to:

Define channel capacities and properties using Shannon's Theorems.

Construct efficient codes for data on imperfect communication channels.

Generalize the discrete concepts to continuous signals on continuous channels.

## GENERAL ELECTIVE

Course Code	Course Title	L	T	P	C
17212GEC35C	Internet and Web Design	4	0	0	2

### AIM

To equip the students with basic programming skill in Web Designing

### OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

### UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A web page design project – Forms.

### OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

### REFERENCE BOOK

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001

## SEMESTER – IV

### Core XII: FUNCTIONAL ANALYSIS

Course Code	Course Title	L	T	P	C
17212AEC41	Core XII-Functional Analysis	5	1	0	5

#### Objectives:

- 1) To study about Converges, Hilbert spaces and Bessels's inequality.
- 2) To study about Spectral Theory.
- 3) To study about convergences in  $L(X,Y)$  – Uniform boundedness and The Gelfand Neumark theorem and Banach Algebra.

#### UNIT I

Algebraic Systems: Groups — Rings — The structure of rings — Linear spaces - The dimension of a linear space — Linear transformations — Algebras — Banach Spaces : The definition and some examples — Continuous linear transformations — The Hahn — Banach theorem — The natural imbedding of  $N$  in  $N^{**}$  - The open mapping theorem — The conjugate of a operator.

#### UNIT II

Hilbert Spaces: The definition and some simple properties — Orthogonal complements — Orthonormal sets — The conjugate space  $H^*$  - The adjoint of an operator — Self-adjoint operators — Normal and unitary operators — Projections.

#### UNIT III

Finite-Dimensional Spectral Theory: Matrices — Determinants and the spectrum of an operator — The spectral theorem — A survey of the situation.

#### UNIT IV

General Preliminaries on Banach Algebras: The definition and some examples — Regular and singular elements — Topological divisors of zero — The spectrum — The formula for the spectral radius — The radical and semi- simplicity.

#### UNIT V

The Structure of Commutative Banach Algebras: The Gelfand mapping — Applications of the formula  $r(x) = \lim \|x^n\|^{1/n}$  - Involutions in Banach Algebras — The Gelfand-Neumark theorem.

#### Reference:

Introduction to Topology and Modern Analysis, G.F.Simmons, McGraw-Hill International Ed. 1963.

UNIT-I	:	Chapters 8 and 9
UNIT-II	:	Chapter 10
UNIT-III	:	Chapter II
UNIT-IV	:	Chapter 12
UNIT-V	:	Chapter 13

#### Reference(s)

1. Walter Rudin, Functional Analysis, TMH Edition, 1974.
2. B.V.Limaye, Functional Analysis, Wiley Eastern Limited, Print, 1985.
3. K.Yosida, Functional Analysis, Springer-Verlag, 1974.
4. Laurent Schwartz, Functional Analysis, Courant Institute of mathematical Sciences, New York University, 1964.

### **Learning Outcomes**

Upon successful completion of this course, the student will be able to: (Knowledge based)  
distinguish among open and closed sets on different topological spaces;

- 1) know the two fundamental topologies: discrete and indiscrete topologies.
  - 2) Identify precisely when a collection of subsets of a given set equipped with a topology forms a topological space;
  - 3) Understand when two topological spaces are homeomorphic;
  - 4) Identify the concepts of distance between two sets; connectedness, denseness, compactness and separation axioms.
  - 5) Research inquiry and analytical thinking abilities
-

## Core XIII VISUAL PROGRAMMING

Course Code	Course Title	L	T	P	C
17212SEC42	Core XIII – Visual Programming	6	1	0	5

### Objectives

Learn to design and develop Windows-based business applications using Visual Basic.NET programs that meet commercial programming standards.

- To learn the basic principles of visual programming
- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

### UNIT I

Introduction to Visual Basic — Integrated Development Environment (IDE) features — VB Editor — Customizing the IDE — Anatomy of a form — Working with form properties — setting form's properties — Introducing form events and form methods.

### UNIT II

Variables in Visual Basic: Declaring variables — Data types — Null value. Error value — Empty value - The scope of a variable Module level variables — Constants — Creating your own constants — Scope of a constant — Converting data types — Arrays — Declaring arrays — Fixed size arrays — Dynamic arrays — Preserve Keyword - ReDim — Writing code in Visual Basic — The anatomy of a procedure — Subroutine and functions — Language constructs — For .... Next, The While loop, Select case - End select, Exit statement. With structure.

### UNIT III

Selecting and Using controls — Introduction to standard controls -- Command buttons - Text boxes — labels — Option buttons — Check boxes — Frame controls — List boxes — Combo boxes — Image objects — Picture boxes — Timer — Scroll bars - File system Controls ( Drive, DirList, File List boxes)

### UNIT IV

Introduction to Built — in ActiveX Control — Tool bar — The Tree view control — The List view control — The Image list control — Common Dialog Control — Status bar control Rich textbox control — Menu editor.

### UNIT V

DDE Properties — DDE Methods — OLE properties — Active Control Creation and Usage and ActiveX DLL creation and usage - Database access — Data Control — field control — Data grid record set using SQL to manipulate data — Open Data Base Connectivity.

### Reference:

1. Mohammed Azam, Programming with Visual Basic 6.0 — Vikas Publishing House Pvt, Ltd — 2002
2. Content Development Group, Visual Basic 6.0 — Tata McGraw Hill Publishing Company Limited — 2002.

### Learning Outcomes

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic's Integrated Development Environment (IDE).
- Implement syntax rules in Visual Basic programs.

- Write Windows applications using forms, controls, and events
  - Write and apply decision structures for determining different operations.
  - Write and apply loop structures to perform repetitive tasks.
  - Students are able to design a IDE enabled software solution to representative problems.
  - Students can use DDE data I/O components to read and write raster and vector data files.
  - Students can use OLE map components to develop a custom Windows Forms based application with a map and legend.
-

## CORE XIV- NUMBER THEORY

Subject Code	Title of the paper	L	T	P	C
17212AEC43	Core XIV -NUMBER THEORY	6	0	0	5

### Objectives:

The objective is for the students to obtain a foundational knowledge of elements of Number Theory through step-by-step proofs of classical theorems, as well as to sharpen their skills through problem-solving.

#### Unit I :

Fundamentals of Congruence's : Basic properties of Congruence's – Residue-Riffling. Solving Congruence's: Linear Congruence's-the theorems of Fermat and Wilson Revisited-the Chinese remainder Theorem-polynomial congruence's.

#### Unit II :

Arithmetic functions: Combinatorial study of  $\varphi\varphi(n)$  – Formulae for  $d(n)$  and  $\sigma(n)\sigma(n)$ . Multiplicative arithmetic functions. The Mobius inversion formula. Primitive roots: properties of reduced systems-primitive roots modulo P.

#### Unit III :

Quadratic Residues: Euler's Criterion-the Legendre symbol-the quadratic Reciprocity law-Applications of the Quadratic reciprocity law, Distribution of quadratic residues: Consecutive residues and non residues-consecutive triples and Quadratic residues.

#### Unit IV:

Sum of squares: Sums of two squares-Sums of four squares. Elementary partition theory; Introduction-graphical representation-Euler's partition theorem-searching for partition identities.

#### Unit V :

Partition generating functions: Infinite products as generating functions-Identities between infinite series and products-partition identities: History and introduction-Euler's pentagonal number theorem-The Roger's Ramanujan identities-Series and Product identities. TEXT BOOK: Scope and treatment as in "Number Theory" by George E. Andrews, Hindustan Publishing Corporation (India) Delhi-110 007 (1989).

Unit I : Chapters IV and V

Unit II : Chapters VI and VII

Unit III : Chapters IX and X

Unit IV : Chapters XI and XII

Unit V : Chapters XIII and XIV

### Learning Outcomes:

On satisfying the requirements of this course, students will have the knowledge and skills to:

1. Solve problems in elementary number theory
2. Apply elementary number theory to cryptography
3. Develop a deeper conceptual understanding of the theoretical basis of number theory and cryptography
4. Research inquiry and analytical thinking abilities

## ELECTIVE - COMBINATORIAL. MATHEMATICS

Course Code	Course Title	L	T	P	C
17212DSC44A	Elective –Combinatorial Mathematics	5	0	0	4

### Objectives:

The main objective is to learn how rigorous mathematical tools can be made for the purpose of doing mathematics with help of computers.

### UNIT I

Basic combinational numbers.

### UNIT II

Generating functions and Recurrence relations symmetric functions.

### UNIT III

Multinomials — Inclusion and exclusion principles — permutations with forbidden positions.

### UNIT IV

Necklace problem and Burnsidés' Lemma — Cycle Index of a permutations group.

### UNIT V

Polya's theorems and their immediate applications — Binary operations on permutations groups.

### Reference

Combinatorics theory and applications by V. Krishnamurthy.

- Unit I : Chapter I (Pages 1 — 15)
- Unit II : Chapter I (Pages 26— 61)
- Unit III : Chapter I (Pages 66 — 98)
- Unit IV : Chapter 11 (Pages 99— 121)
- Unit V : Chapter II (Pages 122 — 159)

### General Reference

Introductory Combinatorics — Kenneth P.Bogart — Pitman Publishing mc, MashJield, Mass achusetts.

### Learning Outcomes

Upon successful completion of Math 315 - Combinatorics, a student will be able to:

- Apply diverse counting strategies to solve varied problems involving strings, combinations, distributions, and partitions,
- Write and analyse combinatorial, algebraic, inductive, and formal proofs of combinatorial identities,
- Recognize properties of graphs such as distinctive circuits or trees.

- will become familiar with fundamental combinatorial structures that naturally appear in various other fields of mathematics and computer science.
  - They will learn how to use these structures to represent mathematical and applied questions, and they will become comfortable with the combinatorial tools commonly used to analyze such structures.
  -
-

## ELECTIVE - DESIGN AND ANALYSIS OF ALGORITHMS

Course Code	Course Title	L	T	P	C
17212DSC44B	Elective- Design And Analysis of algorithms	5	0	0	4

### Objectives:

1. Analyse the asymptotic performance of algorithms.
2. Write rigorous correctness proofs for algorithms.
3. Demonstrate a familiarity with major algorithms and data structures.
4. Apply important algorithmic design paradigms and methods of analysis.
5. Synthesise efficient algorithms in common engineering design situations.

### UNIT I INTRODUCTION

What is an algorithm? — Algorithm specification — Performance analysis — Randomised algorithms.

### UNIT II ELEMENTARY DATA STRUCTURES

Stacks and Queues — Trees — Dictionaries — Priority Queues — Graph representations.

### UNIT III DESIGN OF ALGORITHM METHODS

Divided — And — Conquer — General method — Binary search — finding the maximum and minimum in a set of items — Merge sort — Quick sort.

### UNIT IV DESIGN OF ALGORITHM METHODS CONTINUATION

The Greedy method — The general method — Tree vertex Splitting Problem — Tree traversal and search techniques — Techniques for Binary trees — Techniques for Graphs — Breadth first search and depth first search traversal — Connected components and spanning trees — Backtracking — General method — the 8 — Queens Problem — Branch and Bound method — Travelling sales person algorithm.

### UNIT V ALGEBRAIC PROBLEMS

Algebraic problems — The general method — Evaluation and Interpolation — The Fast Fourier transform — Modular arithmetic — Even faster evaluation and interpolation.

### Reference

1. Eills Horowitz,. Sartaj Shani and Sanguthevar Rajasekaran — Fundamentals of Computer Algorithm — Galgotia Publications Pvt Ltd 2000.
  - Unit I Chapter 1 (sections; 1.1,1.2,1.3.1 to 1.3.4, 1.4.1 to 1.4.3)
  - Unit II Chapter 2 (section ; 2.1 to 2.4,2.6)
  - Unit III Chapter 3 (sections 3.1 to 3.5)
  - Unit IV Chapter 4 (sections 4.1, 4.3) Chapter 6 (sections 6.1 to 6.3)  
Chapter 7 (sections 7.1, 7.2) Chapter 8 (sections 8.1, 8.3)
  - Unit V Chapter 9 (sections 9.1 to 9.5)

### References

2. Goodman, S. E and Hedetniemi, S.T Introduction to the design and analysis of algorithms (McGraw Hill international Edition 1987).

### Learning Outcomes

Students who complete the course will have demonstrated the ability to do the following:

- 1) Argue the correctness of algorithms using inductive proofs and invariants.
- 2) Analyze worst-case running times of algorithms using asymptotic analysis.
- 3) Describe the greedy paradigm and explain when an algorithmic design situation calls for it. Recite algorithms that employ this paradigm. Synthesize greedy algorithms and analyze them. Compare between different data structures. Pick an appropriate data structure for a design situation

## Free Elective -Writing for the Media

Course Code	Course Title	L	T	P	C
17211GEC35A	PG Free Elective -Writing for the Media	4	0	0	2

**Aim:**

- To equip students to enter into the realm of mass media.

**Objectives:**

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop-Filters- Human interest stories- Recognizing and evaluating news.

**UNIT-III**

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

**UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

**References-**

## FREE ELECTIVE – APPLICABLE MATHEMATICAL TECHNIQUES

Course Code	Course Title	L	T	P	C
17212GEC35 B	Free Elective – <b>Applicable Mathematical Techniques</b>	4	0	0	2

### Objectives:

- 1) Understand the basic concept of Interpolation.
- 2) To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

#### Unit I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

#### Unit II

Assignment Problems

#### Unit III

Replacement Problems

#### Unit IV

Decision Analysis

#### Unit V

Game Theory

### References

1. For unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman
2. For units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

### Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

Course Code	Course Title	L	T	P	C
17222GEC35C	General Elective -Internet And Web Design	4	0	0	2

### AIM

To equip the students with basic programming skill in Web Designing

### OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

### UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A web page design project – Forms.

### OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

### REFERENCE BOOK

- 2.Principles of web design – Joel Sklar – Vikas publishing house 2001.

## Free-Elective-Insurance Services

Course Code	Course Title	L	T	P	C
17261GEC35D	Free-Elective-Insurance Services	4	0	0	2

Aim:

To look after the interests of people from uncertainty by providing certainty of compensation.

Objectives:

To learn the fundamental concepts and principles of insurance.

To explain the nature of different insurance policies, insurance contracts and settlement of claims.

Unit – I

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

Unit – II

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

Unit – III

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

Unit – IV

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

Unit – V

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

Out Come:

The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA.

Reference Books:

1. Dr.MR.Mishra – Law of Insurance – Central Law Agency Allahabad
2. Dr.M.M.Verma & R.K.Agarwal – Insurance
3. Pandy & Ratogi – Insurance
4. M.N.Mishra & S.Chand - Principles and Practice of Insurance

## Free Elective –Counselling and Psychology

Course Code	Course Title	L	T	P	C
17280GEC35E	PG Free Elective - Counselling and Psychology	4	0	0	2

### Aim:

- To acquaint with counselling and its process

### Objectives:

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

### Out Come:

- Learn counselling and its process

### UNIT I

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

### UNIT II

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

### UNIT III

Approaches to Counselling

Counselling Process

### UNIT IV

Psychological Testing

Diagnosis

### UNIT V

Educational Counselling

Family Counselling

### References Book:

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the **M.Sc/M.A/M.Com/MBA/ ( \_\_\_\_\_ )** curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffolded Research)	4
IV	Project Work	12

**Blueprint for assessment of student’s performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**

- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
- Seminar Review Presentation : 10 Marks
- Literature Survey : 10 Marks

- **Semester Examination** : **60 Marks**

(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student’s performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**

- Review I : 10 Marks
- Review II : 10 Marks
- Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

**Blueprint for assessment of student's performance in Research Methodology Courses**  
**Continuous Internal Assessment: 20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing: 40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination: 40 Marks**  
**Total: 100 Marks**

SEMESTER - II					
173MAC31	Project Work				02

## M Phil- SYLLABUS

(For the candidates admitted from the academic year 2016-2017 onwards)

### PAPER – I Research Methodology

(Common for all Subjects except Languages)

#### **Unit – I:**

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

#### **Unit – II:**

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

#### **Unit – III:**

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

#### **Unit – IV:**

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide

Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Main (E-mail) – Intranet and Extranet.

### **Unit – V:**

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

### **References:**

- Thesis and Assignment writing by Janarthan Anderson and others – Wiley – Eastern Ltd, 1970. Part I Sections 1,2,3,4. Part II Sections 5,6,9,10.
- Research Methodology by C.R. Kothari, Chapter 1,2,3.
- Microsoft Office 2003 – Edward C. Willet. First Edition 2004, Wiley Publications, USA , (Chapters 2,3,4,5,6,12,14,15,26,28,29)

#### **Course Outcomes**

Understand the limitations of particular research methods. Develop skills in qualitative and quantitative data analysis and presentation. Develop advanced critical thinking skills.

**Department of Mathematics**  
**M.Phil Mathematics**  
**Paper – II**  
**173MAC12-ALGEBRA AND ANALYSIS**

**Course Outcomes:**

1. To empower scholars with knowledge of pure mathematics.
2. To introduce the algebraic structure through modules.
3. To acquaint with advance concepts in algebra
4. To understand Borel measures.
5. To enhance problem solving skills in algebra.
6. To understand the techniques in algebra.

**Unit-I: Modules**

Modules homomorphism and exact sequence–Projective and injective–  
Modules homomorphism and duality. (Chapter 4.1, 4.3, 4.4, Text Book-1)

**Unit-II: Commutative Rings and Modules**

Chain conditions – Prime and primary ideals – Primary decomposition –  
Noetherian Rings and modules (Chapter 8.1, 8.2, 8.3, 8.4, Text Book – 1)

**Unit III: Positive Borel Measures**

Vector spaces – Topological preliminaries – Urysohn’s Lemma–The Riesz  
representation theorem. (Chapter 2, Text Book -2, Sections 2.1-2.14).

**Unit-IV: Problems in Algebra**

Groups, subgroups, normal subgroups, quotient groups, homomorphisms,  
cyclic groups, permutation groups, Cayley’s theorem, class equations, Sylow  
theorems. Rings, ideals, prime and maximal ideals, quotient rings, Field  
extensions, Galois theory. Algebra of matrices, rank and determinant of  
matrices, linear equations. Eigenvalues and eigenvectors, Cayley-Hamilton  
theorem. Matrix representation of linear transformations. Change of basis,  
canonical forms, diagonal forms, triangular forms, Jordan forms

**Unit V: Banach Algebras**

Banach algebras – Spectrum of an element in Banach algebra – Spectral  
radius formula – Quotient algebras–applications.  
(Chapter 18, Text Book-2)

**Books for Study:**

1. Algebra by Thomas W Hungerford, Springer Verlag Indian reprint

2. Real and Complex Analysis by Walter Rudin, Tata McGraw Hill (II Edn) 1996.

**Reference Books:**

Abstract Algebra by David.S.Dummit and Richard.M.Foote, 3<sup>rd</sup> Edition, Wiley Student Edition

Linear Algebra by Stephen H. Freidberg, Arnold J. Insel, Lawrence E.Spence, Fourth Edition, Pearson

**Paper –III**  
**M.Phil Mathematics**

**173MAC13-ADVANCED NUMERICAL ANALYSIS**

Course Outcomes

1. Basic Knowledge of numerical methods
2. Approximation methods.
3. Linear and nonlinear approximation
4. Understanding polynomial equations
5. Techniques in numerical analysis
6. Initial and boundary value problems.

**Unit-I:** Transcendental and Polynomial Equations -Iteration method based on second degree equation – Rate of convergence –iterative methods – Methods for finding complex roots – iterative methods:-Birge-Vieta method, Bairtow’s method, Gracffe’s root squaring method.

**Unit-II:**System of Algebraic Linear Equations-Direct methods – Gauss Jotdan Elimination Method – Triangularization-method – Cholesky method – Partition method. Error Analysis – iteration methods : Jacobi iteration method – Gauss - seidal iteration method – SOR-method, Jacobi’s method for symmetric matrices – power method – Inverse-power method.

**Unit-III:** Interpolation and Approximation-Hermite interpolation – Piecewise and spline interpolation –Approximation– Least square Approximation.

**Unit-IV:** Differentiation And Integration-Numerical differentiation – Numerical Integration – Methods based on interpolation.

**Unit-V:** Ordinary Differential Equations-Multi – step method – predictor – Corrector method – Boundary value-problem – initial value methods – shooting method – Finite Difference method.

**Text Book**

M.K. Jain, S.R.K. Iyengar and R.K. Jain, Numerical Methods for scientific and Engineering Computation, III Edn, Wiley Eastern Ltd., 1993.

Unit I - Chapter 2 – 2.4 to 2.8

Unit II - Chapter 3 – 3.2 to 3.5

Unit III - Chapter 4 – 4.4 – 4.6, 4.8 to 4.9

Unit IV - Chapter 2 – 2.4 to 2.8

Unit V - Chapter 6 – 6.4, 6.5, 6.8, 6.9, 6.10

**References:**

1. Kendall E. Atkinson, An introduction to Numerical Analysis, II Edn., John Wiley & Sons, 1988.

2. M.K. Jain, Numerical Solution of Differential Equations, II Edn., New Age International Pvt. Ltd., 1983.
3. Samuel. D. Conte, Carl, De boor, Elementary Numerical Analysis, Mc Graw-Hill International Edn., 1983.

## **RESEARCH AND PUBLICATION ETHICS**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
CPE_RPE	<b>Research and publication ethics</b>				2

### **THEORY**

#### **Unit I: PHILOSOPHY AND ETHICS ( 3 hours)**

1. Introduction to philosophy, definition, nature and scope, concept, branches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

#### **Unit II: SCIENTIFIC CONDUCT ( 5 hours )**

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

#### **Unit III : PUBLICATION ETHICS ( 7 hours )**

1. Publication ethics: definition, introduction and importance.
2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

## **PRACTICE**

### **Unit IV: OPEN ACCESS PUBLISHING ( 4 hours.)**

1. Open access publications and initiatives.
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies.
3. Software tool to identify predatory publications developed by SPPU.
4. Journal finder / journal suggestion tools viz, JANE, Elsevier Journal Folder, Springer Journal Suggester, etc.

### **UNIT V : PUBLICATION MISCONDUCT ( 4 hours)**

#### **A. Group Discussions ( 2 hours )**

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest.
3. Complaints and appeals: examples and fraud from India and abroad.

#### **B. Software tools ( 2 hours )**

Use of plagiarism software like Turnitin, Urkund and other open source software tools.

### **UNIT VI: DATABASES AND RESEARCH METRICS (7 hours )**

#### **A. Databases ( 4 hours )**

1. Indexing databases.
2. Citation database: Web of Science, Scopus etc.

#### **B. Research Metrics ( 3 hours )**

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score.  
Metrics: h-index, g index, i10 index, altmetrics.

[PRIST]

Institution Demmed To Be University

U/S 3 of UGC act 1956

Vallam, Thanjavur – 613403

---

Department : COMPUTER SCIENCE

Programme : B.Sc (Computer Science)

---

## Graduate Attributes :

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

## PROGRAMME OBJECTIVES:

- To study about I/O management, storage management
- To know the methods of connecting them to the peripheral devices.
- To learn Software design and Implementation
- To learn the basic principles of database and database design
- To understand computational development of graphics with mathematics

## **PROGRAMME OUTCOMES (O<sub>1</sub>):**

1. Understand dynamic memory allocation and pointers.
2. Trace the flow of information from one node to another node in the network.
3. Understand the format and use of objects.
4. Able to Measure the product and process performance using various metrics
5. Design Secure applications.
6. Apply the various optimization techniques.

## **Courses (C<sub>i</sub>):**

- **Core -I** Programming in C with C++
- **Core -II** Internet and Java Programming
- **Core -III** Visual Programming
- **Core –IV** Active Server Programming
- **Core –V** E-Business Technology
- **Core –VI** Operating System
- **Core –VII** Microprocessor and its Applications
- **Core –VIII** .NET Programming
- **Core –IX** Relational Data Base Management System

இக்கால இலக்கியம் - செய்யுள், சிறுகதை, நாடகம், இலக்கிய வரலாறு

**அலகு : 1.செய்யுள்**

1. தாயுமானவ சுவாமிகள் - ஆதார புலனம் - சிதம்பர ரகசியம் - 40 அடிகள்
2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள் ,தமிழ் இனிமை , தமிழ் உணவு

**அலகு : 2. செய்யுள்:**

6. நாமக்கல் கவிஞர் - தமிழ் தேன் - தமிழ் வளர்க்க சபதம் செய்வோம் , 40 அடிகள்
7. ந.பிச்சமூர்த்தி - வழித்துணை - கவிதை கருடன் , 42 அடிகள்
- 8.சுரதா - தேன்மழை, கலப்பை , 22 அடிகள்
9. கண்ணதாசன் - இலக்கியம் , ஒரு பாணையின் கதை , 54 அடிகள்
10. அப்துல் ரகுமான் - சொந்த சிறகுகள், குப்பையை கிளறும் சிறகுகள், 80 அடிகள்

**அலகு : 3. சிறுகதை :**

11. சு.சமுத்திரம் - வேரில் பழுத்த பலா

**அலகு : 4. நாடகம் :**

12. கு. வெ. பாலசுப்பிரமணியன் , கௌதம புத்தர் (உரைநடை நாடகம்)

**அலகு : 5. இலக்கிய வரலாறு**

13. சிறுகதை , புதினம், நாடகம் உரைநடை , கவிதை , புதுக்கவிதை

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**UNIT –I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

**Employability**

**Course Outcome:**

- Develop vocabulary
- Read and comprehend literature

**References:**

Course Code	Course Title	L	T	P	C
17111AEC12	English-I	4	0	0	2

### AIM:

- To acquaint students with learning English through literature

### OBJECTIVE:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

### UNIT –I

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

### UNIT – II

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

### UNIT –III

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

### UNIT –IV

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

### UNIT –V

Oliver Twist -Charles Dickens

### COURSE OUTCOME:

- To develop an understanding of the English Literature along with language skills.
- They get acquainted with the different forms of poetry, prose, fiction and drama.
- The courses offered enable the students to get exposed to advanced level of grammatical patterns and usages in English.

The Art of Reading/ Experiencing Poetry. -S.Murugesan and Dr.K.Chellappan  
Emerald Publishers

Course Code	Course Title	L	T	P	C
17120SEC13	Programming in C with C++	5	1	0	6

## AIM

To equip the students with fundamental programming principles and concepts of object oriented design.

## OBJECTIVES:

The students should be made to:

- Be exposed to the syntax of C.
- Be familiar with programming in C.
- Learn to use arrays, strings, functions, pointers, structures and unions in C.
- To learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc
- To understand and apply the principles hiding, localization and modularity in software
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes

## UNIT -I

Introduction - Basic Structure of C Programs - Character set -C Tokens - Constants - Variables-Data Types - Declaration and Assigning Values to Variables - Defining Symbolic Constants - Operators - Expressions - Type conversions - Built-in functions.

## UNIT -II

Managing Input and Output Operators - Decision Making and Branching - Decision Making and Looping – Arrays and its Types.

## UNIT –III

Functions: The Form of C Functions-Return Values and Their Types -Calling a Function- Category of Functions- Nesting of Functions-Recursion- Structures and Unions-Pointers.

## UNIT-IV

Basic concepts of OOPs- Benefits and Application of OOPs- Inline functions- Function overloading – Friend and Virtual Functions -Constructors and Destructors - Operator overloading.

## UNIT-V

Inheritance and its Types- Files - Classes for file stream operations - Opening, Closing and processing files - End of file Detection - File Pointers - Updating a file - Error handling

### **COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications
- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Understand functions and parameter passing.
- Be able to do numeric (algebraic) and string-based computation.
- Understand object-oriented design and programming

### **REFERENCE BOOKS:**

1. "Programming in C" – E. Balagurusamy – Tata McGraw-Hill Publications
2. "Programming with C" – Byron S.Gottfried – Schaum's outline series – Tata McGraw-Hill publications.
3. "Object oriented programming with C++". E. Balagurusamy, Tata McGraw Hill Publishing ltd., New Delhi, 1995.
4. "C++ The complete reference"- Herbert Schilt, 3rd edition, Tata McGraw Hill Pub-Ltd., 1999

Course Code	Course Title	L	T	P	C
17120SEC13L	Programming in C with C++ Lab	0	0	3	2

1. Solution of a Quadratic Equation (all cases).
2. Sum of Series (Sine, Cosine,  $e^x$ )
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a c program for Matrix Operations (Addition, Subtraction, Multiplication- use functions).
6. Write C++ program using a class to represent a bank account with data members- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.
7. Write C++ programs for implementing inheritance.
8. Write a C++ program using friend function.
9. Write a C++ program which reads a text from a file and the display the following information (Number of Lines, Number of words, and Number of characters).
10. File Processing: Mark sheet preparation.

### Course Outcomes:

- Describe OOPs concepts.
- Use functions and pointers in your C++ program.
- Understand tokens, expressions, and control structures.
- Explain arrays and strings and create programs using them.
- Describe and use constructors and destructors.
- Understand and employ file management.

Course code	Course Title	L	T	P	C
17112AEC15B	Classical Algebra	5	0	0	4

## OBJECTIVES

To learn about the expansion of a Binomial Theorem for a rational index using vandermonde's theorem. Further we aim at learning problems to be solved using the different types in Binomial series .Understanding the relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods And Reciprocal equations-Descartes' rule of signs-simple problems.

### UNIT-I

Binomial, exponential and logarithmic series (formulae only)- Summations.

### UNIT-II

Non singular, symmetric, skew symmetric orthogonal, Hermition, skew Hermition and unitary matrices-characteristic equation, Eigen values, Eigen vector-Cayley Hamilton's theorem(proof not needed)-simple applications.

### UNIT-III

Relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods.

### UNIT-IV

Transformation of equations-diminishing, increasing and multiplying the roots by a constant-forming equation with the given roots.

### UNIT-V

Reciprocal equations-Descartes' rule of signs-simple problems.

### Course Course Outcomes:

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Cayley Hamilton Theorem, and finding the Eigen values & Eigen vectors
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

### REFERENCE BOOKS:

Algebra-T.K.M.Pillai, Vol1&2.

Course code	Course Title	L	T	P	C
17112AEC16B	Numerical And Statistical Methods	4	0	0	4

## OBJECTIVES:

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems ,Numerical differentiation and integration interpolation with equql & unequal intervals are concentrated. Correlation coefficient and its properties Linear Regression and its properties, Test of significance would also be taught.

### UNIT-I

Algebraic and transcendental equations-the iteration method –the Newton Raphson method-False Position method-the bisection method

### UNIT-II

Interpolation-Finite difference –Newton’s formulae for interpolation-Lagrange’s formulae for interpolation-Gaussian elimination method –Gauss-Seidal method.

### UNIT-III

Numerical different ion and integration-**Maximum and minimum values of a tabulated functions**-Trapezoidal rule-Simpson’s rule –Numerical solution of ordinary differential equations-Euler’s method –Runge Kutta methods-Predictor corrector method-Boundary value problems.

### UNIT-IV

Correlation –different types of correlation –Karl Pearson’s spearman’s correlation-Regression-Regression coefficients-Regression equations-Properties of correlation and regression coefficients.

### UNIT-V

Test of hypothesis-null and alternative hypothesis-tests of significance based on normal and distribution for mean, simple correlation and proportion Chi square test-independents of attributes and goodness of fit-applications.

### Course outcomes:

By the end of this course, you should:

- be able to calculate the solution of algebraic and transcendental equations, Solutions of simultaneous equations,
- be able to calculate the area of the given curve
- Understood the concept of correlation and regression
- A knowledge of test of significance based on parametric and non – parametric test

**REFERENCE BOOKS:**

1. Introductory methods of numerical analysis S.S.Sastry, PHI
2. Fundamentals of mathematical statistics-S.C.Gupta & V.K.Kapoor.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC01AL	Packages lab –I	0	0	2	1

### **MS-Word**

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. Picture Insertion and Alignment
  - a. Prepare a Greeting Card
  - b. Prepare a Handout
7. Create a Mark sheet using tables and find out the total marks.
8. Prepare a Business letter for more than one company using Mail Merge

### **Course Outcome:**

- Specific and measurable statements that define the knowledge, skills, and attitudes learners will demonstrate by the completion of a course.
- Learning Outcomes are written with a verb phrase and declare a demonstrable action within a given time frame, such as by the end of the course.

Course Code	Course Title	L	T	P	C
17111SEC01L	Communicative English Lab-I	0	0	1	1

**AIM:**

- To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To know English grammar and all the concomitant linguistic items
- To learn about the auxiliary and the models
- To understand the types of sentences and its patterns
- To enrich vocabulary
- To know the features, process, forms and barriers of communication
- To enhance listening skill

**UNIT –I**

Parts of speech

**UNIT – II**

Kinds of Sentences, Patterns of sentences

**UNIT – III**

Auxiliaries, Modals

**UNIT –IV**

Communication-Characteristics-Process-Forms-Barriers-Types

**UNIT-V**

Listening-benefits-types-good listener-active and passive listening-Tips for effective listening

**Lab Note-1.** Word Mentor - Level I Words and their meaning-Root and usage-Fill in the blanks-Synonyms-Antonyms-Match the Words, Listening activity from Globarena Software 2. Vocabulary diary

**Viva-**Listening activity

**Exam components-**Theory-50+MCQ online exam-vocabulary-20+Viva-15+Lab note-15=100

**OUTCOME:**

- Understand grammar
- Develop listening skill

**REFERENCES:-**

English Grammar -Wren and Martin  
 English Grammar and Composition -Radhakrishna Pillai  
 Technical Communication -Meenakshi Sharma & Sangeetha Sharma  
 Essentials of Business Communication -Rajendra Pal &J.S Korlahalli Sultan Chand & Sons

Course Code	Course Title	L	T	P	C
171INDCONS	Indian Constitution	1	0	0	1

### OBJECTIVES:

- To make the students understand about the Democratic Rule and Parliamentary administration.
- To appreciate the salient features of the Indian Constitution.
- To know the fundamental Rights and Constitutional Remedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

### UNIT I:

#### The Making of Indian Constitution

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

### UNIT II:

#### Fundamental Rights and Fundamental Duties of the Citizens

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

### UNIT III:

#### Directive Principles of State Policy

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

### UNIT IV:

#### The Union Executive, Union parliament and Supreme Court

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister RajyaSabha- LokSabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

### UNIT V:

#### State Council – Election System and Parliamentary Democracy in India

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

**COURSE OUTCOMES:**

- Democratic values and citizenship Training are gained.
- Awareness on Fundamental Rights are established.
- The functions of union Government and State Governments are learnt.
- The power and functions of the Judiciary learnt thoroughly.
- Appreciation of Democratic parliamentary Rule is learnt.

**REFERENCE BOOKS:**

1. Palekar S.A. Indian Constitution Government and polities, ABD Publications, India.
2. Aiyer Alladi, Krishnaswami, Constitution and fundamental rights 1955.
3. Markandan K.C. Directive Principles in the Indian Constitution 1966.
4. Kashyap Subash C Our Parliament, National Book, Trust New Delhi 1989.

செய்யுள் , பக்தி இலக்கியம், சிற்றிலக்கியம் , இலக்கிய வரலாறு

**அலகு : 1. செய்யுள்:**

1. திருஞானசம்பந்தர் தேவாரம் - கோளறு பதிகம்
2. திருநாவுக்கரசர் தேவாரம் - தனிக் குறுந்தொகை
3. சுந்தரர் தேவாரம் - திருநொடித் தான் மலை
4. மாணிக்கவாசகர் - திருவாசகம் - தருப்பொன் ஊசல்

**அலகு : 2 . செய்யுள்:**

5. குலசேகராழ்வார் - பெருமாள் திருமொழி
6. நம்மாழ்வார் திருவாய் மொழி - இரண்டாம் பத்து - உலகிற்கு உபதேசம்
7. ஆண்டாள் - நாச்சியார் திருமொழி - திருமணக்கனவை உரைத்தல்
8. திருமங்கை ஆழ்வார் - சிறிய திருமடல்

**அலகு : 3 . செய்யுள்:**

9. திருமூலர் - மூன்றாம் திருமுறை
10. குமரகுருபரர் - மானாட்சியம்மைப் பிள்ளை - தமிழ் வருகைப் பருவம்
11. திரிகூடராசப்பக்கவிராயர் - குற்றாலக்குறவஞ்சி - குறத்தி நாட்டு வளங் கூறுதல்
12. வீரமாமுனிவர் - திருக்காவலூர்க் கலம்பகம்

**அலகு : 4 . புதினம்**

13. கு.வெ. பாலசுப்ரமணியன் - காளவாய்

**அலகு : 5 . இலக்கிய வரலாறு**

14. சைவ வைணவ இலக்கியங்கள் , சிற்றிலக்கியங்கள் , ( பள்ளு - பிள்ளைத்தமிழ் , - பரணி)

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC21	Advanced English-II	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**Outcome:**

- Develop writing skill
- Read and comprehend literature

**UNIT –I**

E-mail, Fax, Memos

**UNIT – II**

Itinerary, Checklist

**UNIT – III**

Invitation, Circular

**UNIT – IV**

Instruction, Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

**Course Outcome:**

- Outline significant curriculum and assessment theories, models and research in the higher-education sector.
- Critically analyse disparate sources of information about WWII.
- Evaluate concepts of race, culture, identity and diversity with regards to indigenous education.

**References:**

-----------------	-----------------------------------

Course Code	Course Title	L	T	P	C
17120SEC23	Internet and Java Programming	5	1	0	6

### AIM

To equip the students with basic programming skill in Java

### OBJECTIVE

- To understand the core principles of the Java Language
- To study about Graphics programming using java Language
- To learn visual tools to produce well designed, effective applications and applets.

### UNIT-I

Introduction to the Internet - Internet Technologies - Internet Browsers

### UNIT-II

Decision making and looping statements -Classes, Objects and Methods

### UNIT-III

Arrays, strings and vectors- Interfaces: Multiple Inheritance – Packages: Putting classes together - Multithreaded Programming

### UNIT-IV

Managing Errors and Exceptions - Applet programming- Graphics programming

### UNIT-V

Managing Input/Output files in Java

### COURSE OUTCOMES:

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

### REFERENCE BOOKS:

1. “World Wide Web Design with HTML”, C.Xavier, Tata McGraw-Hill Publishing Company Limited for Unit-1.
2. “Programming with Java”, E.Balagurusamy, Tata McGraw-Hill Publishing Company Limited for Unit-2, 3, 4, 5.

Course Code	Course Title	L	T	P	C
17120SEC24L	Internet and Java Programming Lab	0	0	3	2

1. Simple programming using for, while, do-while, ternary and switch.
2. String handling using string and string buffer.
3. Inheritance.
4. Polymorphism
5. Interfaces and Packages
6. Data files(creation, processing)
7. Vector manipulation
8. Simple programs using Applets
9. Exercises using predefined and user defined exceptions
10. Graphics programs for drawing lines, rectangle, oval, string using Applets.

**COURSE OUTCOME:**

- Identify, analyze, develop, implement, verify and document the requirements for a computing environment.
- Contribute to the diagnostics, troubleshooting, documenting and monitoring of technical problems using appropriate methodologies and tools.

Course code	Course Title	L	T	P	C
17112AEC25B	Discrete Mathematics	5	0	0	4

### OBJECTIVES:

Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental thm of homomorphism are concentrated. Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory 20 such as Trees, Directed graphs, Connectivity, Euler tours are also concentrated

### UNIT I

Groups- Types – Propertices Of Groups- Semi Groups-Monoids – Problem In Groups- Cyclic Groups And Subgroups

### UNIT-II

cosets & lagrange’s thm-Normal groups and quotient groups- Different types of morphisms of groups fundamental thm of homomorphism.

### UNIT III

Graph theory - Basic concepts- Finite and infinite graph – Incidence and degree ideas on vertices- Isomorphism-sub graphs – Walks – Paths and circuits

### UNIT IV

Connected Graphs And Disconnected Graphs And Components - Euler Graphs – Hamiltonian Path And Circuits

### UNIT V

Trees-properties of trees -pendent vertices – Distance and centers in a tree rooted and binary trees.

## **REFERENCE BOOKS**

- 1. Algebra - Arumugan Issac**
- 2. Graph theory – Narasingh deo**

## **COURSE OUTCOMES**

By the end of this course, you should be able

- Understood the concept of Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental theorem of homomorphism
- Knowledge in Graph Theory
- Understood the properties of Graph Theory
- Understood the concept of Euler theorem and its applications

Course Code	Course Title	L	T	P	C
17112AEC26B	Operations Research	4	0	0	4

### OBJECTIVES:

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

### UNIT — I

Basic of operations research (OR) characteristics of OR - Necessity of OR in industry, OR and decision making - role of computers in OR Linear Programming: Formulations and graphical solution of (2 variable) canonical and standard forms of linear programming problem.

### UNIT — II

Algebraic Solution: Simplex methods — Charnes method of penalty - Two phase simplex method.

### UNIT — III

Transportation Model: Definition — Formulation and solution of transportation models the row — Minima, column minima, Matrix minima and Vogel's approximation method. Assignment Model: Definition of assignment model— comparison with transportation model - Formulation and solution of assignment model

### UNIT — IV

Sequencing problem: Processing of n jobs through 2 machines - processing n jobs through 3 machines - processing 2 jobs through m machine  
Games Theory: Characteristics of games — Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving 2 x 2 games.

### UNIT — V

PERT computation — Resource scheduling.

### REFERENCES BOOK

1. Hamdy A. Taha: Operation Research - An Introduction 5<sup>th</sup> Edition, PHI, New Delhi 1996
2. Ackoff, R Land Sasieni, M.N: Fundamental of Operation research, John Wiley and sons, New york 1968.

### COURSE OUTCOMES

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory
- Students gets the knowledge about inventory theory

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC02AL	Packages lab –II	0	0	2	1

### **MS –EXCEL**

1. Prepare the addressing methods in excel
2. Prepare an Excel Document using different type of Functions.
3. Draw a Graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark List for the Students.
6. Prepare a Worksheet for a Company.
7. Prepare an Inventory Report for a Shop.
8. Prepare an Electricity Bill for the Domestic Customers.

#### **COURSE OUTCOME:**

- use a range of lookup and reference functions.
- customise the formatting of charts in Excel.
- create and use labels and names in a workbook.
- protect data in worksheets and workbooks.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC02B	<b>Self Development</b>	0	0	3	2

**UNIT I: Self -Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

**UNIT II: Self- Management**

**Managing Time, Managing Stress, Conflict Management**

**COURSE OUTCOME:**

- Specific and measurable statements that define the knowledge, skills, and attitudes learners will demonstrate by the completion of a course.
- Learning outcomes are written with a verb phrase and declare a demonstrable action within a given time frame, such as by the end of the course.

Course Code	Course Title	L	T	P	C

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT –I**

The organs of speech, Classification of speech sounds , Vowels and Diphthongs

**UNIT –II**

Consonants, Consonant cluster

**UNIT – III**

Syllable, Word accent, Intonation

**UNIT – IV**

Idiom, Interpretation of graphics

**UNIT – V**

Slogan writing, Writing advertisement

**COURSE OUTCOME:**

- Outline significant curriculum and assessment theories, models and research in the higher-education sector.
- Critically analyse disparate sources of information about WWII.
- Evaluate concepts of race, culture, identity and diversity with regards to indigenous education.

**AIM:**

- To acquaint students with learning English through literature

**OBJECTIVE:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**OUTCOME:**

- Read and comprehend literature

**UNIT – 1**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

**UNIT – V**

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

**COURSE OUTCOME:**

- Action verb.
- Subject content.
- Level of achievement.
- Condition of performance (if applicable)

**REFERENCES:-**

Nine Short Stories	-Steuart H.King Blackie Books
One-Act plays of Today	-T.Prabhakar Emerald Publishers

Course Code	Course Title	L	T	P	C
17120SEC33	Visual Programming	5	0	0	6

**AIM:**

To equip the students with principles of various visual programming environment

**OBJECTIVE:**

- To learn the basic principles of visual programming
- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

**UNIT I**

Visual Basic – Integrated Development Environment (IDE) features – VB editor – customizing the IDE – anatomy of a form working with form properties – setting form’s properties – introducing form events and form methods.

**UNIT II**

Variables in Visual Basic : Declaring variables – Data types – Null values, Error value – empty value – the scope of a variable – Module level variable – Constants – Creating your own constants – Scope of a constant – Converting data types – arrays – Declaring arrays – Fixed size arrays – Dynamic arrays – Preserve keywords – ReDim. Writing code in Visual Basic – The anatomy of a procedure – Subroutine and Functions – Language constructs – For...Next, The While loop, Select case...End select, Exit statement, with structure.

**UNIT III**

Selecting and Using controls – Introduction to standard controls: command buttons – Text boxes – labels – frames – option buttons – Check boxes – Scroll Bars – Timer – working with Common Dialog Control.

**UNIT IV**

The Image list control – the List view control – slider control – status bar control – Tool bar control – The Tree view control – Menu editor. –File System Controls (Drive, Dirlist, File List boxes).

## **UNIT V**

OLE properties – OLE automation – building COM/OLE DLL servers – Data control – design time(for access – style databases) –programming with the data control– Database access – set using SQL –transaction control – testing the control – Open Database Connectivity.

### **COURSE OUTCOMES:**

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic's Integrated Development Environment (IDE).
- Implement syntax rules in Visual Basic programs.
- Write Windows applications using forms, controls, and events
- Write and apply decision structures for determining different operations.
- Write and apply loop structures to perform repetitive tasks.

### **REFERENCE BOOKS:**

1. Mohammed Azam, Programming with Visual Basic 6.0 – Vikas Publishing House Pvt Ltd – 2002(unit-I, unit-II)
2. Content Development Group, Visual Basic 6.0 – Tata McGraw Hill Publishing Company Limited – 2002(unit-III, unit-IV, unit-V)

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC34L	Visual Programming Lab	0	0	3	2

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to expand and shrinking an object – while program is running.
4. Write a code to design and implement a scientific calculator.
5. Write a program to create animation by using move method and timer Object.
6. Write a program for preparing students mark list. [Skill development]
7. Write a program to populate the label entities using data bound control.
8. Write a program to expand and shrink Objects using timer control and move method

**COURSE OUTCOME:**

- Identify, analyze, develop, implement, verify and document the requirements for a computing environment.
- Contribute to the diagnostics, troubleshooting, documenting and monitoring of technical problems using appropriate methodologies and tools.

Course Code	Course Title	L	T	P	C
17113AEC35A	Applied physics –I	4	0	0	6

### AIM

To provide students with a broad and balanced foundation of physics knowledge and Practical Skill.

### OBJECTIVES:

- To develop in students through an education in Physics a range of transferable skills of Value in physics and other areas.
- To instill in students a sense of enthusiasm for physics, and appreciation of its applications in different contexts.
- To provide students with a knowledge and skills base for further studies in physics or multi-disciplinary areas involving physics.

### UNIT – I: ELECTROSTATICS

Gauss theorem and its application – Intensity at a point due to uniformly charged cylinders – Electrostatic potential – Equipotential surface – Capacitor – Principle of a capacitor – Spherical and cylindrical capacitors – Capacitors in series and in parallel – Energy of a charged capacitor – Energy loss due to sharing of charges.

### UNIT – II: MAGNETOSTATICS

Magnetic field – Intensity of magnetization – Permeability – Susceptibility – Relation between them – Potential due to dipole – Relation between potential and intensity – Properties of dia, para, fero magnetic materials – Hysteresis – B.H curve.

### UNIT – III: CURRENT ELECTRICITY

Ohm's law – Kirchoff's law – Application to Wheatstone's Bridge – Carey Foster Bridge – Potentiometer – Measurement of current and resistance – Calibration of low and high range voltmeter – Fleming's left and right hand rule – Theory of moving coil galvanometer – Ballistic galvanometers.

## **UNIT – IV: ELECTROMAGNETIC INDUCTION**

Laws of Electromagnetic induction – Relation between induced emf and mutual inductance – Eddy current – Determination of self inductance – Anderson method – Co-efficient of mutual induction – Co-efficient of coupling – Transformer theory.

## **UNIT – V: ALTERNATING CURRENT**

A.C Circuit with single components – Double components – Measurement of current and voltages – Power in A.C Circuits – Wattless current – Series and parallel resonance circuits – Q factor – Oscillatory discharge of a condenser.

### **COURSE OUTCOMES:**

Cognitive abilities and skills relating to solution of problems in Physics and Physics Related Disciplines

Practical skills relating to the conduct of laboratory and industrial work in General skills relating to non-subject specific competencies, communication, ICT knowledge, interpersonal, organization skills and ethical standards.

### **REFERENCE BOOK:**

- 1) Electricity and Magnetism – Brijlal and Subramaniam.
- 2) Electricity and Magnetism – Narayanamoorthi and Nagarathnam.
- 3) Electricity and Magnetism – D.L. Seghal and Chopra.

Course Code	Course Title	L	T	P	C
17113AEC36AL	Applied physics Lab-I	0	0	3	2

1. Semiconductor diode Characteristics
2. Zener diode characteristics
3. Transistor characteristics –CE Configuration
4. IC Regulated power supply
5. Post office Box-Resistance
6. Figure of merit of galvanometer.
7. Potentiometer- Ammeter Calibration
8. Potentiometer- Voltmeter Calibration
9. Zener Regulated Power supply.
10. Carey foster bridge

**COURSE OUTCOME:**

- Students will demonstrate an understanding of core knowledge in physics, including the major premises of classical mechanics, E&M and Modern Physics.
- Students will demonstrate written and oral communication skills in communicating physics-related

Course Code	Course Title	L	T	P	C
17120RMC37	Research Methodology	3	0	0	3

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication.

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-based
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

**PREREQUISITIES:**

Basic computer skill for working in window environment & conceptual knowledge on basic matrices.

**UNIT-I Introduction to Research Methodology**

Meaning of research – Objectives of research – Type of research – Significance of research – Research approaches.

**UNIT-II Research Methods**

Research methods versus Methodology – Research and scientific method – criteria of good research – Problems encountered by researchers in India.

**UNIT-III Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Review – General treatises – Monographs.

**UNIT-IV Database Survey**

Database search – NIST –MSDS –PubMed – Scopus – Science citation index – Information about a specific search.

**UNIT-V Introduction to MATLAB:**

What is MATLAB? Matrix and its application in different areas: MATLAB approach to environmental modeling; Arithmetic Matrix – Operators; Arithmetic Array – Operators and its applications in MATLAB; Expressions, Opening M-Files; Structure of MATLAB Programming; Programming; Concatenation of strings; Vectorization ; Basic Graphics.

**COURSE OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.

**REFERENCES BOOK:**

1. C.R. Kothari, Research Methodology, New Age International publishers. New Delhi,2004.
2. R.A Day and A.L. Underwood, Quantitative analysis, Prentice Hall, 1999.
3. R. Gopalan, Thesis writing, Vijay Nicole Imprints Private Ltd., 2005.

5. Introduction to MATLAB for Engineers by William J. Palm III.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC03AL	Packages lab – III	0	0	2	1

### **POWER POINT**

1. Create a slide show presentation for a Seminar (choose your own topics)
  - a. Enter the Text in the Outline View
  - b. Create Non-Bulleted and Bulleted Text
2. Create a slide show presentation for a Science Exhibition
  - a. Create Non-Bulleted and Bulleted text
  - b. Apply appropriate Text Attributes
3. Create slide show presentation for an Invitation
  - a. Insert an Object from a Bitmap File
  - b. Apply appropriate Text Attributes
  - c. Rotate the Object to 45 degree
  - d. Apply Shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all Students
  - a. Use Bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different Presentation Template and different Transition Effect for each slide
  - c. Use different Text Attributes in each slide
5. Create a slide show presentation for a Shop Advertisement to be open shortly
6. Create a slide show presentation to display Percentage of Sales in each quarter for the any Vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for Tourists Places
8. Create a slide for Calendar using appropriate Text attributes and insert an object from a Bitmap file

COURSE OUTCOME:

- Identify the basic features and functions of PowerPoint.
- Develop a PowerPoint presentation. Perform advanced text editing operations.
- Add graphical elements to your presentation.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC03B	<b>Interpersonal Relations and Social Responsibilities</b>	0	0	3	2

### **UNIT I: Interpersonal Relations**

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

### **UNIT II: Ethics and Social Responsibilities**

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

#### **COURSE OUTCOME:**

- Analyse their own interpersonal communication style.
- Gain confidence in handling conflict, criticism and other challenging situations.
- Deal with different behaviour ranging from aggressive to submissive.
- Learn to manage change through effective interpersonal communication.

Course Code	Course Title	L	T	P	C
17111SEC03L	Communicative English Lab-III	0	0	2	1

**AIM:**

To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To change a sentence from active to passive and vice versa
- To make sentences
- To write a letter
- To improve vocabulary
- To enhance speaking skills
- To enrich writing skills

**UNIT –I**

Active and Passive

**UNIT –II**

Developing the hints

**UNIT –III**

Letter writing

**UNIT –IV**

Speaking-benefits-features of a good speaker-Tip for improving speech-types

**UNIT –V**

Writing-benefits-types-tips for improving writing

**Lab Note-1.** Anagrams, Word Traps, Stinging Words, letter writing from Globarena Software, Self-introduction, 2. Picture writing note book

**Viva-**Self introduction, Picture talk

**Exam components-**Theory -50+MCQ online exam -20+Viva-15+Lab note-10=100

**COURSE OUTCOME:**

- Understand grammar
- Develop speaking and writing skills

**REFERENCES:-**

English Grammar -Wren and Martin  
 English Grammar and Composition -Radhakrishna Pillai  
 Technical Communication -Meenakshi Sharma & Sangeetha Sharma

செய்யுள் , சங்க இலக்கியம், அற இலக்கியம் , செம்மொழி , இலக்கிய வரலாறு

**அலகு . 1 : பண்டைய இலக்கியம் - நற்றிணை;**

1. நெய்தல் - தோழி கூற்று - பாடல் எண் . 11
2. குறிஞ்சி - தலைவி கூற்று - பாடல் எண். 64
3. முல்லை - தலைவன் கூற்று - பாடல் எண்.142
4. பாலை - நற்றாய் கூற்று - பாடல் எண். 29
5. மருதம் - தலைவி கூற்று - பாடல் எண். 70

**பண்டைய இலக்கியம் குறுந்தொகை**

1. குறிஞ்சி - தோழி கூற்று - பாடல் எண்.1
2. முல்லை - செவிலித்தாய் கூற்று - பாடல் எண்.167
3. மருதம் - தலைவி கூற்று - பாடல் எண். 181
4. நெய்தல் - தலைவி கூற்று - பாடல் எண் . 290
5. பாலை - தலைவன் கூற்று - பாடல் எண் . 347

**பண்டைய இலக்கியம் ஐங்குறுநூறு**

1. மருதம் - கள்வன் பத்து - முதல் இரண்டு பாடல்கள்
2. நெய்தல் - தோழிக்குரைத்த பத்து - முதல் இரண்டு பாடல்கள்
3. குறிஞ்சி - குன்றக் குறவன் பத்து - முதல் இரண்டு பாடல்கள்

## அலகு . 2 : கலிந்தொகை

- 1 . பாலை - பாடல் எண். 2
2. குறிஞ்சி - பாடல் எண். 37

## அகநானூறு

- 1 . பாலை - பாடல் எண். 5
2. மருதம் - பாடல் எண். 6

## புறநானூறு

பாடல் எண் : 6 ,121, 41, 153 ,172 191, 223, 246, 284, 358.

## பதிற்றுப்பத்து

இரண்டாம் பத்து பாடல் எண். 4 (நிலம் நீர் வளி விசம்பு)

## அலகு.3;

- 1 . பட்டினப்பாலை - முதல் 105 வரிகள்
2. திருக்குறள் - 1.மருந்து 2.ஊக்கமுடைமை 3.உழவு

## அலகு . 4 : செம்மொழி வரனறு ;

(மொழி - விளக்கம் , மொழிக்குடும்பங்கள் , உலகச் செம்மொழிகள், இந்தியச் செம்மொழிகள் , செம்மொழித் தகுதிகள் , வரையறைகள், வாழும் தமிழ் செம்மொழி, தொன்மை , தமிழின் சிறப்புகள், தமிழ் செம்மொழி நூல்கள்)

## அலகு . 5 : இலக்கிய வரலாறு

சங்க இலக்கியங்கள் , பதினெண்கீழ்க்கணக்கு நூல்கள்.

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC41	Advanced English-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT –I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

**UNIT – II**

Flowchart

Proposals

**UNIT – III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT –V**

Definition

Writing for and against a topic.

**COURSE OUTCOME:**

- Develop your pronunciation skills, learn more and practice the different features of pronunciation and the sounds of English.
- To learn vocabulary that is likely to come in handy in your everyday language use.

**References:**

English Grammar	-Wren and Martin
English Grammar and Composition	-Radhakrishna Pillai
Essentials of Business Communication	-Rajendra Pal &J.S Korlahalli Sultan Chand & Sons

English Work Book-I&II	-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
17111AEC42	English-IV	4	0	0	2

**AIM:**

To acquaint students with learning English through literature

**OBJECTIVE:**

- To introduce learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

**UNIT –I**

How to be a Doctor -Stephen Leacock  
 My Visions for India -A.P.J. Abdul Kalam  
 Woman, not the weaker sex -M.K. Gandhi

**UNIT –II**

My Last Duchess -Robert Browning  
 The Toys -Coventry Patmore  
 I, too -Langston Hughes

**UNIT –III**

The Best Investment I ever made-A.J.Cronin  
 The Verger -W.S Maugham  
 A Willing Slave -R.K.Narayan

**UNIT –IV**

Macbeth  
 As You Like It

**UNIT –V**

Henry IV  
 Tempest

**COURSE OUTCOME:**

Read and comprehend literature

English for Enrichment -Devaraj Emerald Publishers  
 Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Course Code	Course Title	L	T	P	C
17120SEC43	Active Server Programming	5	1	0	6

### AIM

To equip the student to learn the Active Server Page

### OBJECTIVE:

- To study about scripting languages concepts
- To understand scripting languages components
- To learn ADO cursors

### UNIT I

Introduction to ASP-Active sever pages model-ASP file-The process of serving an active server page-Using scripting languages-Setting the primary scripting languages-Including other files-Understanding objects

### UNIT II

Understanding components-Working with users-Working with HTML forms-retrieving form data-using text boxes and text areas

### UNIT III

HTML & Graphics: HTML 4.0 Tag Reference, Global Attributes, Event Handlers, Document Structure Tags, Formatting Tags, List Tags, Hyperlinks, Image & Image map, Table Tags, Form Tags, Frame Tags, Executable Content Tags. Image Maps, Advanced Graphics, Tables, Frames, Forms & Style Sheets.

### UNIT IV

About the connection object – executing a SQL statement with the connection object-Understanding session and connection pooling – working with record sets-retrieving a record set-record set cursor and locking types-Understanding ADO cursors-paging through a record set

### UNIT V

Working with the command object-creating stored procedures-executing stored procedures with the connection object –executing stored procedures with the command object – retrieving parameter information

### COURSE OUTCOMES

- Explain concepts of Active Server Pages.
- Apply methods and properties of various objects and components of ASP
- Develop Dynamic real life website using the concept of ADO and ASP.

### REFERENCE BOOK:

1. Practical ASP-Ivan bayross, BPB Publications, 2000
2. Special Edition using Active Server Pages – Scot Johnson, Prentice Hall of India Private Limited 2001

Course Code	Course Title	L	T	P	C
17120SEC44L	Active Server Programming Lab	0	0	3	4

1. Create an ASP file to display the message “Have a good Week end” if it a Saturday other wise “Have a nice day”
2. Write an ASP program to get the rollno and display the corresponding name & mark details
3. Create a login form to expire if the user does not type the password within 100 seconds.
4. Create an advertisement for a book shop using Ad Rotator component.
5. Create a course registration form with name, address and list of available course. Reply with the corresponding course fees on selection of a single course or a collection of courses.
6. Write an ASP program to manipulate cookies with the information between HTTP sessions such as
  - a. Last date visited
  - b. Last Time visited
  - c. Number of visits
7. Write an ASP program using Request Object to give the exact list of headers sent by the browser to the Web server.
8. Create an Active Server Page to display the records one by one from a student database. The student database should contain roll no, name, marks & total.

#### COURSE OUTCOME:

- Identify, analyze, develop, implement, verify and document the requirements for a computing environment.
- Contribute to the diagnostics, troubleshooting, documenting and monitoring of technical problems using appropriate methodologies and tools.

Course Code	Course Title	L	T	P	C
17113AEC45A	Applied physics –II	6	0	0	6

**AIM:**

To prepare the student for the study of physics by introducing general concepts and methods this will be applied throughout the course.

**OBJECTIVES:**

- To introduce and develop the fundamental techniques of experiment in physics.
- Introduce the student to the basic concepts in electricity and magnetism.
- To expose the students to experiments in Light, Modern Physics, AC circuits, and Devices.
- To introduce the student to elementary alternating current circuits

**UNIT – I: SEMI CONDUCTOR PHYSICS**

Theory of Energy bands in crystals – Distinction between conductors, insulators and semiconductors – Hall effect in semi conductors – Zener diode – Tunnel diode – Backward diode – Breakdown voltage – Avalanche Breakdown.

**UNIT – II: TRANSISTORS**

NPN and PNP transistors – Characteristics of CE and CB configurations – H-Parameters – Transistor as an amplifier and oscillator – FET – N-Channel and P-Channel – FET Characteristics – FET amplifier.

**UNIT – III: LASER AND MASERS**

Basic concepts of stimulated emission – Principles of Laser – Population inversion and Meta stable state – Ammonia maser – Ruby laser and He-Ne laser production – Applications of laser and maser.

#### **UNIT – IV: OPTO ELECTRONIC DEVICES**

LED – LED Voltage and current – Advantages of LED – Applications of LED's – Photo diode – Photo diode operation – characteristics of photo diode – Photo transistor – Seven segment display.

#### **UNIT – V: OPERATIONAL AMPLIFIER**

The basic operational amplifier – Inverting and Non inverting operational amplifiers – CMRR – Basic uses of operational amplifier as Integrator, Differentiator, Adder, Subtractor – D/C Binary weighted method – R-2R method.

#### **Course Outcomes:**

The Applied Physics program will produce intellectually engaged graduates accomplished in application of fundamental physics principles, and prepared for direct entry into the workplace or continuing professional development. Demonstrate a working knowledge of the basic concepts and theories of physics.

#### **REFERENCE BOOK:**

1. Principles of Electronics – V.K. Metha, S. chand and Co.,
2. Electronic Devices and Circuits – Millman and Halkias.
3. The Fundamentals of solid state physics – Theraja.

Course Code	Course Title	L	T	P	C
17113AEC46AL	Applied physics Lab –II	0	0	3	2

- 1) FET-Characteristics
- 2) Logic Gates-Universality of NOR Gate.
- 3) LCR — Series Resonance Circuit.
- 4) LCR parallel – resonance circuit.
- 5) OP AMP-Addition,Subtraction.
- 6) Verification basic logic gates.
- 7) Verification of Demorgon’s theorem..
- 8) Half adder and Half subtractor.
- 9) Logic Gates-Universality of NAND Gate.
- 10) OP AMP Differentiator ,Intergrator.

#### COURSE OUTCOME:

Students will demonstrate an understanding of core knowledge in physics, including the major premises of classical mechanics, E&M and Modern Physics. Students will demonstrate written and oral communication skills in communicating physics-related

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC04AL	Packages lab - IV	0	0	2	1

### **MS-ACCESS**

1. Create a Database with a simple Table
2. Create a Database for Students Mark List using Queries.
3. Create a Database for the employees in an organization and sort by their date of joining.
4. Create Queries to Select Records that matches specific condition.
5. Create Relationships among the different Tables.
6. Create Queries using Built-in Functions.
7. Develop Forms to enter data in to the Student Marks Database
8. Develop Forms to enter data in to the Electricity bill Database

#### **COURSE OUTCOME:**

Outcomes are measurable statements that articulate at the beginning what students should know, be able to do, or value as a result of taking a course or completing a program (also called Backwards Course Design).

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC04B	<b>Etiquette And Interviewing Skills</b>	0	0	3	2

**UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

**UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

**COURSE OUTCOME:**

- Understand the various ways of gathering information by asking people questions.
- Understand how to decide between the different types of interview. Develop the skills needed for approaching different types of interviews.

Course Code	Course Title	L	T	P	C
17111SEC04L	Communicative English Lab -IV	0	0	1	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To change sentences from direct to indirect and vice versa
- To comprehend a passage
- To enhance language skill
- To develop presentation skill
- To enrich vocabulary

**UNIT –I**

Direct and Indirect

**UNIT –II**

Comprehension

**UNIT –III**

Conversation

**UNIT –IV**

Descriptive Writing

**UNIT –V**

Soft skills-Importance-aspects-SWOT analysis-values-positive attitude-perception

**Lab Note-** Confusing Words, Word families, Non-English words, Presentation skills, Oral presentation, Conversation from Globarena software

**Viva-**Presenting a topic

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**COURSE OUTCOME:**

- Understand grammar
- Develop language and presentation skills

**REFERENCES:-**

English Grammar	-Wren and Martin
English Grammar and Composition	-Radhakrishna Pillai
Technical Communication	-Meenakshi Sharma & Sangeetha Sharma
Essentials of Business Communication	-Rajendra Pal & J.S Korlahalli Sultan Chand & Sons
Soft skills	-D.Jayacandran D.J Publishers

Course Code	Course Title	L	T	P	C
171ENVTSTU	Environmental Studies	1	0	0	1

**AIM:**

To create the awareness about environmental problems among the students.

**OBJECTIVE:**

- It deals with the study of flow of energy and materials in the environment
- It deals with the study of natural and its function

**UNIT-I**

**The Multidisciplinary Nature of Environmental Studies** – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources** - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

**UNIT-II**

**Ecosystems** - Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

**UNIT-III**

**Biodiversity and its Conservation** – Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

**UNIT-IV**

**Environmental Pollution** – Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

**UNIT-V**

**Social Issues and the Environment** - From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues

involved in enforcement of environmental legislation - Public awareness - **Human Population and the Environment.**

COURSE OUTCOME:

- Develop critical-thinking skills, analyze real-world problems, and understand the power of narrative to create sustainable solutions for local and global communities.

**REFERENCE BOOK:**

1. "ENVIRONMENTAL STUDIES", K.Kumarasamy, A.Alagappa Moses, M.Vasanthy.

Course Code	Course Title	L	T	P	C
17120SEC51	Computer Networks and Security	4	1	0	5

**AIM:**

To equip the students with Computer Networks and its security.

**OBJECTIVES:**

- To learn basic network concepts.
- To understand various switching techniques and protocols.
- To study about wireless technology and network security.

**UNIT-I**

Introduction-Components-Topologies-Categories of Network-OSI model-TCP/IP suite - Addressing.

**UNIT-II**

Trasmission media-Connecting Devices-Error detection and correction-Flow and Error Control- piggy backing- IEEE standard.

**UNIT-III**

Public Key Cryptography 1. Need and Principles of Public Key Cryptosystems 2. RSA Algorithm 3. Key Distribution and Management 4. Diffie-Hellman Key Exchange 5. Digital Signatures.

**UNIT-IV**

Wireless WAN: Cellular telephony- Generations- Satellite-GSM-GPRS-Internet-WWW-HTTP

**UNIT-V**

Attacks-Web security consideration-SNMP-Secure Socket Layer- Principles of public key cryptography- Digital signature-Key management-Intruders and viruses-Firewall.

**COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Identify the components required to build different types of networks.
- Identify solution for each functionality at each layer.
- Trace the flow of data from one node to another node.

**REFERENCE BOOK:**

- 1."Data Communications and Networking "Behrouz A Forouzan, TATA McGraw-Hill
- 2." Network Security Essentials" William Stallings, Pearson Education
3. "Data and Computer Communications", William Stallings, Pearson Education

Course Code	Course Title	L	T	P	C
17120SEC52	Operating System	4	1	0	5

**AIM:**

To equip the students with operating system and their components

**OBJECTIVES:**

- To learn the fundamental functionality of Operating system
- To understand the memory management, process management
- To study about I/O management, storage management

**UNIT I**

Evolution of Operating System – Types of Operating System – Different views of Operating System – Design and Implementation of Operating System – I/O Programming concepts – Interrupts Structure & Processing.

**UNIT II**

Memory Management : Single Contiguous Allocation – Partitioned Allocation – Relocatable Partitioned Allocation – Paged and Demand – Paged Memory Management – Segmented Memory Management – Segmented and Demand – Paged memory Management – Swapping and overlay techniques.

**UNIT III**

Process Scheduling: Basic Concepts-Scheduling Criteria-Scheduling Algorithms (FCFS, SJF & Round Robin only) - Algorithm Evaluation. Synchronization: Back ground-The Critical Section Problem-Peterson’s Solution Synchronization Hardware-Mutex Locks-Semaphores-The Dining Philosopher’s Problem.

**UNIT IV**

Device Management : Techniques for Device Management – Device Characteristics – I/O Traffic Controller, I/O Scheduler, I/O Device Handler – Virtual Devices – Spooling.

**UNIT V**

File management: Simple file system, General Model of a file system, Physical and Logical file system.

**COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Design various Scheduling algorithms.
- Apply the principles of concurrency.
- Design deadlock, prevention and avoidance algorithms.
- Compare and contrast various memory management schemes.
- Design and Implement a prototype file systems.

**REFERENCE BOOK:**

1. Operating Systems by Stuart E. Madnick and John J. Donovan – Tata McGraw Hill Publishing Company Ltd.
- 2.. Operating Systems (Concepts and Design) Milan Milenkovic – McGraw Hill International Edition

Course Code	Course Title	L	T	P	C
17120SEC53	Microprocessor and its Applications	4	1	0	5

### AIM

To equip the students with the architecture and instruction sets of different Microprocessors and to design systems using microprocessors.

### OBJECTIVE

- To study the architecture of microprocessors like 8085 and higher versions
- To understand the Assembly language programming
- To know the methods of connecting them to the peripheral devices.
- To learn the basic concepts and Microprocessor applications

### UNIT I

Evolution of microprocessors – single chip microcomputers – memory buses -memory address capacity – Intel 8085 – instruction cycle – timing diagram.

### UNIT II

Instruction set of Intel 8085 – instruction and data formats – addressing modes – status flags – Intel 8085 instruction – programming of microprocessors – assembler – stacks and subroutines – macros and microprogramming.

### UNIT III

Study of Architecture and programming of ICs: 8255 PPI, 8259PIC, 8251USART, 8279 Keyboard display controller and 8254 Timer/Counter – Interfacing with 8085 -A/D and D/A converter interfacing.

### UNIT IV

Peripheral devices and interfacing – address space partitioning – memory and I/O interfacing – data transfer schemes – interrupts of Intel 8085 – interfacing devices and I/O devices – I/O ports – programmable peripheral interface.

### UNIT V

Microprocessor applications - delay subroutines – interfacing of 7 segment LED displays – frequency measurement – temperature measurement and control – water level indicator- microprocessor based traffic control.

### COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Design and implement programs on 8086 microprocessor.
- Design I/O circuits.
- Design Memory Interfacing circuits.
- Design and implement 8051 microcontroller based systems

### REFERENCE BOOK:

1. Fundamental of microprocessor and microcomputers – Badri ram – Fifth revised and enlarged edition – Dhanpat rai publications – 2001.
2. Microprocessor architecture, programming and application with 8085 – Ramesh S. Goankar.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC54L	Microprocessor Lab	0	0	3	2

The following programming exercises using 8085 instruction set,

1. 8-bit addition & subtraction
2. 8-bit multiplication & division
3. Multi byte addition
4. Multi byte subtraction
5. Sum of series & data transfer
6. Maximum & minimum values
7. Application of assembly language using 8057 instruction set to develop various programs
8. Application of data movement instruction to develop relevant program

**COURSE OUTCOME:**

- The basic concepts of microprocessor and to develop in students the assembly language programming skills and real time applications of Microprocessor as well as microcontroller.

Course Code	Course Title	L	T	P	C
17120SEC55L	Operating System Lab	0	0	3	2

1. Write a menu driven shell program for the following :
  - a. List of files.
  - b. Processes of users.
  - c. Today's Date
  - d. Users of system.
  - e. Quit of Unix
  
2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.
  
3. Write a shell program which accepts the name of a file from the standard input and perform the following
  - a. Accept five names in a file.
  - a. Sorts the names in existing file.
  - b. Lists unsorted and sorted file.
  - c. Quit
  
4. Write a menu driven shell program to copy, edit, rename and delete a file.
  
5. Write a menu driven shell program to perform the following task
  - a. Write a sentence in file.
  - b. Search for a given word or pattern in an existing file.
  - c. Quit.
  
6. Write a shell program to prepare electricity bill for domestic consumers.
  - For first 100 units – Rs. 0.75 / Unit
  - For next 100 units – Rs. 1.50 / Unit
  - Above 200 units – Rs. 3.00 / Unit
  - Prepare the bill for the following format.
  
7. Program for simulation of grep UNIX commands
8. Write a Shell program to find the factorial of a number

**COURSE OUTCOME:**

- Know basic components of an operating system. Comprehend how an operating system virtualises cpu and memory.
- Discuss various scheduling and swapping policies.
- Learn basic concurrent programming in c and assembly code.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120DSC56A	Cloud Computing	5	0	0	4

**AIM:**

To provide a strong foundation in Developing Cloud Services.

**OBJECTIVES:**

- To understand the concept of Cloud Computing.
- To get an idea about Sharing Files.

**UNIT I**

Understanding Cloud Computing: An introduction to Cloud Computing – Computing in the Cloud – Developing Cloud Services.

**UNIT II**

Cloud Computing for the Family – Cloud Computing for the Community – Cloud Computing for the Corporation

**UNIT III**

Collaborating on Calendars, Schedules and Task Management – On Event Management – On Contact Management – On Project Management – On Word Processing – On Spreadsheets – On Databases – On Presentations

**UNIT IV**

Storing and Sharing Files and other online content – Sharing Digital Photographs – Controlling it all with Web-Based Desktops

**UNIT V**

Collaborating via Web-Based Communication Tools – Collaborating via Social Networks and Groupware – Collaborating Via Blogs and Wikis

**COURSE OUTCOMES:**

- Compare the strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Apply suitable virtualization concept.
- Choose the appropriate cloud player , Programming Models and approach.
- Address the core issues of cloud computing such as security, privacy and interoperability
- Design Cloud Services and Set a private cloud

**REFERENCE BOOK:**

1. Michael Miller, Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online, Pearson, 2009.
2. Haley Beard, Cloud Computing Best Practices for Managing and Measuring Processes for On-demand Computing, Applications and Data Centers in the Cloud with SLAs, Emereo Pty Limited, July 2008.

Course Code	Course Title	L	T	P	C
17120DSC56B	Software Engineering	5	0	0	4

**AIM:**

To introduce the methodologies involved in the development and maintenance of Software (i.e) over its entire life cycle.

**OBJECTIVES:**

To be aware of

- Different Life Cycle models.
- Requirements dictation process.
- Verification Validation techniques.
- Project planning and Management.

**UNIT I**

Introduction - definitions - size factors - quality and productivity factors - managerial issues. Planning a software project - introduction - defining the problem - developing a solution strategy - planning the development process - planning an organizational structure - other planning activities.

**UNIT II**

Software cost estimation - cost factors - cost estimation techniques staffing level estimation - estimating software maintenance costs. Software requirements definition - software requirement specification - formal specification techniques - languages and processors for requirements.

**UNIT III**

Software Requirement Analysis and Specification System and software requirements-Types of software requirements-Functional and non-functional requirements-Domain requirements-User requirements Elicitation and analysis of requirements -Overview of techniques -Viewpoints Interviewing Scenarios Use-cases Process modeling with physical and logical DFDs- Requirement validation -Requirement specification -Software requirement Specification (SRS) Structure and contents SRS format Feasibility

## **UNIT IV**

Implementations issues - structured coding techniques - coding style - standards and guidelines - documentation guidelines -data abstraction - exception handling - concurrency mechanisms.

## **UNIT V**

Verification and validation techniques - quality assurance - walkthrough and inspections - static analysis - symbolic execution - UNIT testing and debugging - system testing - formal verification. Software maintenance - enhancing maintainability during development - managerial aspects - configuration management - source code metrics - other maintenance tools and techniques.

## **COURSE OUTCOMES:**

- Get an insight into the processes of software development
- Able to understand the problem domain for developing SRS and various models of software engineering
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

## **REFERENCE BOOK:**

1. Software Engineering Concepts - Richard Fairley TMH
2. Roger S.pressman, "Software engineering", 5th edition, 2001, MGH publishers.
3. Marlim L.Shoeman, "Software Ezngineering", 1983,MGH Publishers.

Course Code	Course Title	L	T	P	C
17120SEC05AL	Packages Lab –V	0	0	2	1

## PHOTOSHOP

1. Design a Visiting card with Background Image.
2. Design an Identity card with Photo.
3. Design a Letter pad with LOGO.
4. Create an Advertisement in a News paper for a Shop.
5. Design a Calendar with Pictures.
6. Design a Magazine using different type of Tools.
7. Create a Photoshop image using Lasso Tool.
8. Design a CD Cover.

### COURSE OUTCOME:

- The statements that help the learners to understand the reason for pursuing the course and helps him to identify what he will be able to do at the end of the course.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC05B	<b>Leadership Skills and Body Language</b>	0	0	3	2

**UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

**UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

COURSE OUTCOME:

- Improve bottom-line financial performance.
- Attract and retain talent.
- Drive strategy execution.
- Increase success in navigating change.

Course Code	Course Title	L	T	P	C
17111SEC05L	Communicative English Lab-V	0	0	2	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To understand the degrees of comparison
- To build up a thought
- To write resume
- To construct report, agenda and minutes
- To prepare for an interview

**UNIT –I**

Degrees of comparison

**UNIT –II**

Proverb expansion

**UNIT –III**

Resume writing

**UNIT –IV**

Interview

**UNIT –V**

Corporate skills-body language-etiquette-good manners-interpersonal skills

**Lab Note-** Report writing, Resume writing, Interview from Globarena software, Writing agenda, Writing minutes

**Viva-Mock Interview**

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**COURSE OUTCOME:**

- Develop communicative skills
- To get a job

Course Code	Course Title	L	T	P	C
17120SEC61	.NET Programming	4	1	0	5

## AIM

To cover the fundamental concepts of the .NET framework.

## OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

## UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

## UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

## UNIT III

Interfacing with the End user-Asp.NET Applications.

## UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

## UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

## COURSE OUTCOMES:

- **Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET**
- **Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.**
- **Utilize the .NET environment to create Web Service-based applications and components.**

## REFERENCE BOOKS:

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.
4. Visual Basic.Net Black Book- Steven Holzner.

Course Code	Course Title	L	T	P	C
17120SEC62	Relational Data Base Management System	4	1	0	5

### AIM

To equip the students with principles and concepts of database design

### OBJECTIVE

- To learn the basic principles of database and database design
- To learn the basics of RDBMS
- To learn the concepts of database manipulation SQL

### UNIT I

An Overview of Database Management-Introduction -Definition of Database system - Data Independence - Relational Systems - Database System Architecture - Three Levels of the Architecture - Distributed Processing.

### UNIT II

An Introduction to Relational Databases- Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to SQL - Embedded SQL - Domains , Relations , Relvars

### UNIT III

Database design and ER Model:overview, ER-Model, Constraints, ER-Diagrams, ERD Issues, weak entity sets, Codd's rules, Relational Schemas, Introduction to UML Relational database model: Logical view of data, keys, integrity rules. Relational Database design: features of good relational database design, atomic domain and Normalization (1NF, 2NF, 3NF, BCNF).

### UNIT IV

Database Design - Functional Dependencies - Introduction - Basic Definitions - Normalization - First , Second ,Third Normal Forms - BOYCE / CODD Normal Form.

### UNIT V

Transaction Management - Recovery - Introduction - Transactions - Transaction Recovery - System Recovery - Media Recovery - Concurrency -Three Concurrency Problem - Locking - Deadlock - Serializability .

### COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Design Databases for applications.
- Use the Relational model, ER diagrams.
- Apply concurrency control and recovery mechanisms for practical problems.
- Design the Query Processor and Transaction Processor.
- Apply security concepts to databases.

### REFERENCE BOOK:

" An Introduction to Database Systems - C.J.DATE Addison - Wesley Publications - 7th Edition 2000

Course Code	Course Title	L	T	P	C
17120SEC63L	.NET Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:  
 (i). Insertion (ii) Updating (iii) Deletion (iv) Selection  
 Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

#### **COURSE OUTCOMES:**

- **Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET**
- **Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.**
- **Utilize the .NET environment to create Web Service-based applications and components.**

Course Code	Course Title	L	T	P	C
17120SEC64L	Oracle Lab	0	0	3	2

1. Write SQL queries to create the following tables and insert rows in it. Employee (eno, ename, deptno, salary, designation)  
Dept (deptno, deptname, location)  
Student (rollno, name, course, paper1, paper2, paper3)
2. Write SQL queries to create primary key and foreign key constraints in the above given tables and perform all types of simple retrieval.
3. Write SQL queries to perform all types of advance retrieval using (i) nested sub queries (ii) set operators.
4. Write SQL queries to perform all types of joins.
5. Write SQL queries to illustrate all built-in functions.
6. Write SQL queries to create views and index/indices for the tables Employee, Dept and Student.
7. Write a database trigger to prevent transactions during weekend. Create PL/SQL procedures and store them in a package and execute them in the command prompt.
8. Write a PL/SQL program that prints mark sheet of students in a University using cursor.
9. Class Table: Class\_Id varchar2(20) primarykey Schedule\_Id varchar2(20) Class\_Building varchar2(25) Class\_Room varchar2(25) Course\_Id varchar2(5) Department\_Id varchar2(20) foreign key Dept\_info(Department\_id) Instructor\_Id varchar2(20) Instructor(Instructor\_id) Semester varchar2(6) School\_Year date
10. Student Grade Information Table: Student\_Id varchar2(20) Class\_Id varchar2(20) Grade varchar2(2) Check Grade in ('A','A+','A-','B','B+','B-', 'C','C+','C-', 'D','D+','D-', 'F','F+','F-') Date\_Grade\_Assigned date

### COURSE OUTCOMES:

- Specific and measurable statements that define the knowledge, skills, and attitudes learners will demonstrate by the completion of a course.
- Learning outcomes are written with a verb phrase and declare a demonstrable action within a given time

frame, such as by the end of the course.

Course Code	Course Title	L	T	P	C
17120DSC65A	Data Mining	5	0	0	4

**AIM:**

To emphasis on the design aspects of Data mining and Data Warehousing.

**OBJECTIVE**

- To understand briefly some of the data mining Techniques.
- Discuss a number of more efficient algorithms.
- To know accuracy of classification methods and how accuracy may be improved.

**UNIT-I**

Introduction: What is Data Mining- Why Data Mining now-The Data Mining Process-Data Mining Application-Data Mining Techniques-The Future of Data Mining-Guidelines for Successful Data Mining-Data Mining Software-Software Evaluation and Selection.

**UNIT-II**

Association Rules Mining: Introduction-Basics-The Task and a Naïve Algorithm - The Apriori Algorithm- Improving the Efficiency of the Apriori Algorithm- Apriori-Tid -Direct Hashing and Pruning (DHP)-Dynamic Itemset Counting (DIC)-Mining Frequent Pattern without Candidate Generation (FP-Growth)-Performance Evaluation of Algorithms- Software for Association Rule Mining

**UNIT-III**

Classification: Introduction-Decision Tree-Building a Decision Tree-The Tree Induction Algorithm-Split Algorithm Based on Information Theory-Split Algorithm based on the Gini Index-Over fitting and Pruning-Decision Tree Rules-Naïve Bayes Method-Estimating Predictive Accuracy of Classification Methods-Improving Accuracy of Classification Methods.

## **UNIT-IV**

Cluster Analysis: What is Cluster Analysis-Desired Features of Cluster Analysis-Types of Data-Computing Distance-Types of Cluster Analysis Methods-Partitional Methods-Hierarchical Methods-Density-Based Methods-Dealing with Large Databases-Quality and Validity of Cluster Analysis Methods-Cluster Analysis Software.

## **UNIT-V**

Web Data Mining: Introduction-Web Terminology and Characteristics-Locality and Hierarchy in the Web-Web Content Mining-Web Usage Mining-Web Structure Mining-Web Mining Software.

### **COURSE OUTCOMES:**

- Understanding of data mining software available on the market.
- Acquiring Knowledge about various algorithms.
- Acquiring Knowledge about cluster analysis techniques.

### **REFERENCE BOOKS:**

1. "Introduction to Data Mining with Case Studies", G.K.Gupta, Easter Economy Edition.

Course Code	Course Title	L	T	P	C
17120DSC65B	Artificial Intelligence and Expert Systems	4	0	0	4

**AIM:**

To Acquire Knowledge on various AI Techniques and Expert Systems.

**OBJECTIVE:**

- To learn AI Basic Concepts
- To understand Expert Systems Architectural-Components
- To study Expert System development process

**UNIT I**

The AI definition - AI Techniques- Problems, Problem Space and search- Defining the problem as a state space search- Problem Characteristics- Heuristic Search Techniques- Generate and Test- hill Climbing- Best First Search- Problem reduction - Constraint Satisfaction-means -ends analysis.

**UNIT II**

Game Playing- Min-Max Procedure- Adding Alpha-Beta Cutoffs- Additional Refinements- Searching AND/OR Graphs - Using Predicate Logic- Representing Simple Facts and Logic- Representing instance and IS a relationships- Computable functions and predicates- Use of the predicate calculus in AI Resolution- natural deduction.

**UNIT III**

Planning: Planning problem – Partial order planning – Planning and acting in non-deterministic domains – Learning: Learning decision trees – Knowledge in learning – Neural networks – Reinforcement learning – Passive and active.

**UNIT IV**

Expert Systems- Architectural-Components- Explanation facilities- Knowledge acquisition.

**UNIT V**

Expert System development process- Non-formal representation of knowledge- Semantic networks- Frames- Scripts- Expert System Tools.

**COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalize a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.

**REFERENCE BOOK**

1. For Units I, II, III: Elaine Rich and Kevin Kaight, “**Artificial Intelligence**”, Tata McGraw Hill, 2<sup>nd</sup> Edition, 1991.
  2. For Units IV, V: David W. Rolston, “**Principles of Artificial Intelligence and Expert Systems Development**”, McGraw Hill.
- Nills J.Nilsson “**Artificial Intelligence** “, Narosa Publicshing House, 1990.

Free Elective

COURSE CODE	COURSE TITLE	L	T	P	C
17111GEC	Journalism	4	0	0	2

**Aim :**

- To acquaint with the basic knowledge of journalism so that it may enthrust the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT- II**

News – Definition – Kinds – Elements – Sources

**UNIT- III**

Reporters

**UNIT- IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

**COURSE OUTCOME:**

- Learning goals and objectives generally describe what an instructor, program, or institution aims to do, whereas, a learning outcome describes in observable and measurable terms what a student is able to do as a result of completing a learning experience

**References:-**

Journalism -Susan

Professional Journalism - John Hogenberg

News Writing and Reporting - M.James Neal (Surjeet Publication)

COURSE CODE	COURSE TITLE	L	T	P	C
17112GEC	Development Of Mathematical Skills	4	0	0	2

### Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

### Unit I

Simple interest and compound interest

### Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

### Unit III

Set theory – Series

### Unit IV

Matrices – Determinants

### Unit V

Assignment problems

#### COURSE OUTCOME:

- Move from concrete ideas of numbers to number sense.
- Sees relationships between numbers and looks for patterns in relationship.
- Understand and applies concept related to variables, expressions, equations, identities, etc.
- Use arithmetic and algebra to solve real life problems and pose meaningful problems.

### References

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Course Code	COURSE TITLE	L	T	P	C
17113GEC	Instrumentation	4	0	0	2

**Aim:**

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

**UNIT – II: ELECTRONIC INSTRUMENTS – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

**UNIT – III: ELECTRONIC INSTRUMENTS – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

## **Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

## **Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

### **Books for Study**

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

### **COURSE Outcomes:**

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

### **Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

Course Code	COURSE TITLE	L	T	P	C
17114GEC	Food and Adulteration	4	0	0	2

**Aim:** To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

**COURSE OUTCOME:**

- Adulterants are the substance or poor quality products added to food items for economic and technical benefits.
- Addition of these adulterants reduces the value of nutrients in food and also contaminates

the food, which is not fit for consumption.

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	COURSE TITLE	L	T	P	C
17117GEC	Mushroom Technology	4	0	0	2

#### UNIT-1

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calocybe indica, volvariella volvacea ,pleurotus sp. Agaricus bisporus

#### UNIT-II

Pure culture-preparation of media(PDA and oat meal agar media)sterilization-preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petriplates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

#### UNIT-III

Cultivation technology:infrastructure,substrates(locally available)polythene bag,vessels,inoculation hood-inoculation loop-low cost stove-sieves-culture rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy straw,sugarcane trash,maiza straw,banana leaves

#### UNIT-IV

Storage and nutrition:short term storage-long term storage (Scanning,pickles, papads,drying,storage ion salt solutions)-nutrition:proteins,aminoacids,mineral elements,nutrition:carbohydrates-crude fiber content,vitamins

#### UNIT-V

Food preparation, types of foods prepared from mushroom-soup,cutlet,omelette,samosa,pickles,curry,research centres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

#### COURSE OUTCOME:

- To make the learners self reliant to identify several kind of mushrooms.
- To provide detailed hands on training on mushroom cultivation, packaging and marketing.
- To develop a business plan on mushroom cultivation.

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161GEC	Indirect Taxes	4	0	0	2

**AIM:**

To make the students to gain expert knowledge in indirect taxes.

**OBJECTIVES:**

- (i) To have practical knowledge on excise duties and customs duties.
- (ii) To learn the fundamentals of service tax, sales tax and VATS.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

**UNIT – V**

Value Added Tax (VAT) Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

**COURSE OUTCOME**

Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstances.

**REFERENCE BOOKS:**

1. Income Tax Law and Practice - N.Hariharan.
2. Business Taxation – T.S.Reddy/Hari Prasad Reddy.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC06AL	Packages Lab -VI	0	0	2	1

### **FLASH**

1. Drawing and painting original art by using simple objects in flash.
2. Develop a Flash Document by applying different type of Styles in Text with Animations.
3. Create a frame-by-frame animation technique.
4. Develop a program for animation with motion Tweening.
5. Develop a program for animation with shape Tweening.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animation by using Movie Clip and Graphic Symbols.

#### **COURSE OUTCOME:**

- Understand what Flash is and what you can do with it.
- Create and Manage content.
- Manage Website Content.
- Create and Edit Symbols.
- Use the Timeline.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC06B	<b>Life Skills and Other Skills</b>	0	0	3	2

**UNIT I            Life Skills**

**Life Skills** - Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. -Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. - Occupational Safety , First-aid

**UNIT II            Other Skills**

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

COURSE OUTCOME:

- Gain Self Competency and Confidence.
- Practice Emotional Competency. Gain Intellectual Competency. Gain an edge through Professional Competency.

Course Code	Course Title	L	T	P	C
17111SEC06L	Communicative English Lab -VI	2	0	0	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills
- To learn to manage time and stress
- To widen creative thinking
- To enrich the skill of working in a group

**UNIT –I**

Simple, Compound and Complex

**UNIT –II**

Note making

**UNIT –III**

Precise writing

**UNIT –IV**

Developing a story

**UNIT –V**

Essay writing

**Lab Note**-Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

**Viva**-Group discussion

**Exam components**-Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**OUTCOME:**

- Develop communicative skills
- To be a good team worker

**REFERENCES:-**

English Grammar

-Wren and Martin

English Grammar and Composition

-Radhakrishna Pillai

Technical Communication

-Meenakshi Sharma & Sangeetha Sharma

Essentials of Business Communication

-Rajendra Pal &J.S Korlahalli Sultan Chand & Sons

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120PRW67	Project Work	0	0	0	4

Each student will develop and implement individually developed application software based on any of the latest technologies.

**COURSE OUTCOME:**

- An ability to apply knowledge of computing and mathematics appropriate to the discipline.
- An ability to identify, formulate, and develop solutions to computational challenges.
- An ability to design, implement, and evaluate a computational system to meet desired needs within realistic constraints.

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Sc.,(CS) curriculum, the following Research Skill Based Courses are introduced in the B.Sc.,(CS) curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
IV	Project Work	4

**Blueprint for assessment of student's performance in Research Led Seminar Course**

**● Internal Assessment: 40 Marks**

- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
- Seminar Review Presentation : 10 Marks
- Literature Survey : 10 Marks

**Semester Examination : 60 Marks**

(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment: 20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing: 40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination: 40 Marks**

**Total: 100 Marks**

Vallam, Thanjavur – 613403

Department

:

COMPUTER SCIENCE

Programme

:

BCA

### GRADUATE ATTRIBUTES :

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

### PROGRAMME OBJECTIVES:

- Be exposed to the syntax of C.
- Be Familiar with the Basics of C Programming Language.
- To study about Graphics programming using java Language
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes
- To learn the basic principles of database and database design
- To understand computational development of graphics with mathematics

**PROGRAMME OUTCOMES (O<sub>1</sub>):**

- Able to understand and design the solution to a problem using object-oriented programming concepts
- Trace the flow of information from one node to another node in the network
- Design Databases for applications.
- Able to Measure the product and process performance using various metrics
- Gain the knowledge of different media streams in multimedia transmission
- Apply the various optimization techniques.

**COURSES (C<sub>1</sub>):**

- Core -I Programming in C with C++
- Core -II Data Structure and Algorithms
- Core -III Internet and Java Programming
- Core –IV Visual Programming
- Core –V Relational Database Management Systems
- Core –VI .NET Programming
- Core –VII Designing and supporting Computer Networks
- Core –VIII Advanced Web Technology
- Core –IX Operating System

இக்கால இலக்கியம் - செய்யுள், சிறுகதை , நாடகம், இலக்கிய வரலாறு

**அலகு : 1.செய்யுள்**

1. தாயுமானவ சுவாமிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள்
2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள் ,தமிழ் இனிமை , தமிழ் உணவு

**அலகு : 2. செய்யுள்:**

6. நாமக்கல் கவிஞர் - தமிழ் தேன் - தமிழ் வளர்க்க சபதம் செய்வோம் , 40 அடிகள்
7. ந.பிச்சமூர்த்தி - வழித்துணை - கவிதை கருடன் , 42 அடிகள்
8. சுரதா - தேன்மழை, கலப்பை , 22 அடிகள்
9. கண்ணதாசன் - இலக்கியம் , ஒரு பாணையின் கதை , 54 அடிகள்
10. அப்துல் ரகுமான் - சொந்த சிறகுகள், குப்பையை கிளறும் சிறகுகள், 80 அடிகள்

அலகு : 3. சிறுகதை :

11. சு.சமுத்திரம் - வேரில் பழுத்த பலா

**அலகு : 4. நாடகம் :**

12. கு. வெ. பாலசுப்பிரமணியன் , கௌதம புத்தர் (உரைநடை நாடகம்)

**அலகு : 5. இலக்கிய வரலாறு**

13. சிறுகதை , புதினம், நாடகம் உரைநடை , கவிதை , புதுக்கவிதை

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

**COURSE OUTCOME:**

- **To develop an understanding of the English Literature along with language skills.**
- **They get acquainted with the different forms of poetry, prose, fiction and drama.**
- **The courses offered enable the students to get exposed to advanced level of grammatical patterns and usages in English.**

**References:**

English Grammar	-Wren and Martin

Essentials of Business Communication	-Rajendra Pal &J.S Korlahalli Sultan Chand & Sons
English for writers and translators	-Robin Macpherson
Technical Communication	-Meenakshi Sharma & Sangeetha Sharma
The World's Great Speeches	- Sudhir Kumar Sharma Galaxy Publishers
English Work Book-I&II	-Jewel Jewawahar

Course Code	Course Title	L	T	P	C
17111AEC12	English-I	4	0	0	2

**AIM:**

To acquaint students with learning English through literature

**OBJECTIVE:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**OUTCOME:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang  
An Eco-Feminist Vision -Aruna Gnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet  
She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson  
Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel  
Love poem for a wife -A.K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

**Course Outcome:**

- Develop vocabulary
- Read and comprehend literature

**REFERENCES:-**

The Art of Reading/ Experiencing Poetry. -S.Murugesan and Dr.K.Chellappan

Course Code	Course Title	L	T	P	C
17122SEC13	Programming in C with C++	5	1	0	6

**AIM**

To equip the students with fundamental programming principles and concepts of object oriented design.

**OBJECTIVES:**

The students should be made to:

- Be exposed to the syntax of C.
- Be familiar with programming in C.
- Learn to use arrays, strings, functions, pointers, structures and unions in C.
- To learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc
- To understand and apply the principles hiding, localization and modularity in software
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes

**UNIT -I**

Introduction - Basic Structure of C Programs - Character set -C Tokens - Constants - Variables-Data Types - Declaration and Assigning Values to Variables - Defining Symbolic Constants - Operators - Expressions - Type conversions - Built-in functions.

**UNIT -II**

Managing Input and Output Operators - Decision Making and Branching - Decision Making and Looping – Arrays and its Types.

**UNIT –III**

Functions: The Form of C Functions-Return Values and Their Types -Calling a Function- Category of Functions- Nesting of Functions-Recursion- Structures and Unions-Pointers.

**UNIT-IV**

Basic concepts of OOPs- Benefits and Application of OOPs- Inline functions- Function overloading – Friend and Virtual Functions -Constructors and Destructors - Operator overloading.

**UNIT-V**

Inheritance and its Types- Files - Classes for file stream operations - Opening, Closing and processing files - End of file Detection - File Pointers - Updating a file - Error handling during file operations - Command Line Arguments - Templates - Exception Handling.

**OUTCOMES:**

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications
- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Understand functions and parameter passing.
- Be able to do numeric (algebraic) and string-based computation.
- Understand object-oriented design and programming

**REFERENCE BOOKS:**

1. “Programming in C” – E. Balagurusamy – Tata McGraw-Hill Publications
2. “Programming with C” – Byron S.Gottfried – Schaum’s outline series – Tata McGraw-Hill publications.
  
3. "Object oriented programming with C++". E. Balagurusamy, Tata McGraw Hill Publishing Ltd., New Delhi, 1995.
4. “C++ The complete reference”- Herbert Schilt, 3rd edition, Tata McGraw Hill Pub-Ltd., 1999

Course Code	Course Title	L	T	P	C
17122SEC14L	Programming in C with C++ Lab	0	0	3	2

1. Solution of a Quadratic Equation (all cases).
2. Sum of Series (Sine, Cosine,  $e^x$ )
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a c program for Matrix Operations (Addition, Subtraction, Multiplication- use functions).
6. Write C++ program using a class to represent a bank account with data members- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.
7. Write C++ programs for implementing inheritance.
8. Write a C++ program using friend function.
9. Write a C++ program which reads a text from a file and the display the following information (Number of Lines, Number of words, and Number of characters).
10. File Processing: Mark sheet preparation.

#### Course Outcomes:

- Describe OOPs concepts.
- Use functions and pointers in your C++ program.
- Understand tokens, expressions, and control structures.
- Explain arrays and strings and create programs using them.
- Describe and use constructors and destructors.
- Understand and employ file management.

Course code	Course Title	L	T	P	C
17112AEC15B	Classical Algebra	5	0	0	4

**OBJECTIVES:**

To learn about the expansion of a Binomial Theorem for a rational index using vandermonde's theorem. Further we aim at learning problems to be solved using the different types in Binomial series .Understanding the relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods And Reciprocal equations-Descartes' rule of signs-simple problems.

**UNIT-I**

Binomial, exponential and logarithmic series (formulae only)-Summations.

**UNIT-II**

Non singular, symmetric, skew symmetric orthogonal, Hermition, skew Hermition and unitary matrices-characteristic equation, Eigen values, Eigen vector-Cayley Hamilton's theorem(proof not needed)-simple applications.

**UNIT-III**

Relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods.

**UNIT-IV**

Transformation of equations-diminishing, increasing and multiplying the roots by a constant-forming equation with the given roots.

**UNIT-V**

Reciprocal equations-Descartes' rule of signs-simple problems.

## **COURSE OUTCOMES**

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Cayley Hamilton Theorem, and finding the Eigen values & Eigen vectors
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

## **REFERENCE BOOKS:**

Algebra-T.K.M.Pillai, Vol1&2.

Course code	Course Title	L	T	P	C
17112AEC16B	Numerical And Statistical Methods	4	0	0	4

**OBJECTIVES:**

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems, Numerical differentiation and integration interpolation with equal & unequal intervals are concentrated. Correlation coefficient and its properties Linear Regression and its properties, Test of significance would also be taught.

**UNIT-I**

Algebraic and transcendental equations-the iteration method –the Newton Raphson method-False Position method-the bisection method

**UNIT-II**

Interpolation-Finite difference –Newton’s formulae for interpolation-Lagrange’s formulae for interpolation-Gaussian elimination method –Gauss-Seidal method.

**UNIT-III**

Numerical different ion and integration-Maximum and minimum values of a tabulated functions-Trapezoidal rule-Simpson’s rule –Numerical solution of ordinary differential equations-Euler’s method –Runge Kutta methods-Predictor corrector method-Boundary value problems.

**UNIT-IV**

Correlation –different types of correlation –Karl Pearson’s spearman’s correlation-Regression-Regression coefficients-Regression equations-Properties of correlation and regression coefficients.

**UNIT-V**

Test of hypothesis-null and alternative hypothesis-tests of significance based on normal and distribution for mean, simple correlation and proportion Chi square test-independents of attributes and goodness of fit-applications.

**COURSE outcomes**

By the end of this course, you should be able to calculate the solution of algebraic and transcendental equations.

- solutions of simultaneous equations, be able to calculate the area of the given curve
- Understood the concept of correlation and regression
- A knowledge of test of significance based on parametric and non – parametric test

**REFERENCE BOOKS:**

1. Introductory methods of numerical analysis S.S.Sastry, PHI
2. Fundamentals of mathematical statistics-S>C>Gupta & V.K.Kapoor.

**Skill Based Elective -I**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC01AL	Packages Lab -I	0	0	2	1

**MS-WORD**

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. Picture Insertion and Alignment
  - a. Prepare a Greeting Card
  - b. Prepare a Handout
7. Create a Mark sheet using tables and find out the total marks.
8. Prepare a Business letter for more than one company using Mail Merge

**Course Outcome:**

- Specific and measurable statements that define the knowledge, skills, and attitudes learners will demonstrate by the completion of a course.
- Learning Outcomes are written with a verb phrase and declare a demonstrable action within a given time frame, such as by the end of the course.

Course Code	Course Title	L	T	P	C
17111SEC01L	Communicative English Lab-I	0	0	1	1

**AIM:**

- To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To know English grammar and all the concomitant linguistic items
- To learn about the auxiliary and the models
- To understand the types of sentences and its patterns
- To enrich vocabulary
- To know the features, process, forms and barriers of communication
- To enhance listening skill

**OUTCOME:**

- Understand grammar
- Develop listening skill

**UNIT –I**

Parts of speech

**UNIT – II**

Kinds of Sentences, Patterns of sentences

**UNIT – III**

Auxiliaries, Modals

**UNIT –IV**

Communication-Characteristics-Process-Forms-Barriers-Types

**UNIT-V**

Listening-benefits-types-good listener-active and passive listening-Tips for effective listening

**Lab Note-1.** Word Mentor - Level I Words and their meaning-Root and usage-Fill in the blanks-Synonyms-Antonyms-Match the Words, Listening activity from Globarena Software 2. Vocabulary diary

**Viva-**Listening activity

**Exam components-**Theory-50+MCQ online exam-vocabulary-20+Viva-15+Lab note-15=100

**OUTCOME:**

- Understand grammar
- Develop listening skill

**REFERENCES:-**

 English Grammar and Composition -Radhakrishna Pillai  
 Technical Communication -Meenakshi Sharma & Sangeetha Sharma  
 Essentials of Business Communication -Rajendra Pal &J.S Korlahalli Sultan Chand & Sons

Course Code	Course Title	L	T	P	C
171INDCONS	Indian Constitution	1	0	0	1

**OBJECTIVES:**

- To make the students understand about the Democratic Rule and Parliamentary Administration.
- To appreciate the salient features of the Indian Constitution.
- To know the fundamental Rights and Constitutional Remedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

**UNIT I: THE MAKING OF INDIAN CONSTITUTION**

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

**UNIT II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS**

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

**UNIT III: DIRECTIVE PRINCIPLES OF STATE POLICY**

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

**UNIT IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT**

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

**UNIT V: STATE COUNCIL – ELECTION SYSTEM AND PARLIAMENTARY**

**DEMOCRACY IN INDIA**

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

**COURSE OUTCOMES**

1. Democratic values and citizenship Training are gained.
2. Awareness on Fundamental Rights are established.
3. The functions of union Government and State Governments are learnt.
4. The power and functions of the Judiciary learnt thoroughly.
5. Appreciation of Democratic parliamentary Rule is learnt.

**REFERENCE BOOKS:**

1. Palekar S.A. Indian Constitution Government and politics, ABD Publications, India.
2. Aiyer Alladi, Krishnaswami, Constitution and fundamental rights 1955.
3. Markandan K.C. Directive Principles in the Indian Constitution 1966.
4. Kashyap Subash C Our Parliament, National Book, Trust New Delhi 1989.

செய்யுள் , பக்தி இலக்கியம், சிற்றிலக்கியம் , இலக்கிய வரலாறு

**அலகு : 1. செய்யுள்:**

1. திருஞானசம்பந்தர் தேவாரம் - கோளறு பதிகம்
2. திருநாவுக்கரசர் தேவாரம் - தனிக் குறுந்தொகை
3. சுந்தரர் தேவாரம் - திருநொடித் தான் மலை
4. மாணிக்கவாசகர் - திருவாசகம் - தருப்பொன் ஊசல்

**அலகு : 2. செய்யுள்:**

5. குலசேகராழ்வார் - பெருமாள் திருமொழி
6. நம்மாழ்வார் திருவாய் மொழி - இரண்டாம் பத்து - உலகிற்கு உபதேசம்
7. ஆண்டாள் - நாச்சியார் திருமொழி - திருமணக்கனவை உரைத்தல்
8. திருமங்கை ஆழ்வார் - சிறிய திருமடல்

**அலகு : 3. செய்யுள்:**

9. திருமூலர் - மூன்றாம் திருமுறை
10. குமரகுருபரர் - மானாட்சியம்மைப் பிள்ளை - தமிழ் வருகைப் பருவம்
11. திரிகூடராசப்பக்கவிராயர் - குற்றாலக்குறவஞ்சி - குறத்தி நாட்டு வளங் கூறுதல்
12. வீரமாமுனிவர் - திருக்காவலூர்க் கலம்பகம்

**அலகு : 4. புதினம்**

13. கு.வெ. பாலசுப்ரமணியன் - காளவாய்

**அலகு : 5. இலக்கிய வரலாறு**

14. சைவ வைணவ இலக்கியங்கள் , சிற்றிலக்கியங்கள் , ( பள்ளு - பிள்ளைத்தமிழ் , - பரணி)

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC21	Advanced English-II	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**Outcome:**

- Develop writing skill
- Read and comprehend literature

**UNIT – I**

E-mail, Fax, Memos

**UNIT – II**

Itinerary, Checklist

**UNIT – III**

Invitation, Circular

**UNIT – IV**

Instruction, Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

**Course Outcome:**

- Outline significant curriculum and assessment theories, models and research in the higher-education sector.
- Critically analyse disparate sources of information about WWII.
- Evaluate concepts of race, culture, identity and diversity with regards to indigenous education.

**References:**

English Grammar	-Wren and Martin

Course Code	Course Title	L	T	P	C
17111AEC22	English-II	4	0	0	2

**AIM:**

To acquaint learners with different trends of writing

**OBJECTIVE:**

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

**OUTCOME:**

- Read and comprehend literature

**UNIT – I**

Ecology -A.K. Ramanujan

Gift -Alice Walker

The First Meeting -Sujata Bhatt

**UNIT –II**

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran

**UNIT –III**

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

**UNIT – IV**

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king

Those People Next Door -A.G. Gardiner

**UNIT – V**

Marriage is a private Affair -Chinua Achebe

The Fortune Teller -Karel Capek

Proposal -Anton Chekov

**COURSE OUTCOME:**

- Read and comprehend literature

**REFERENCES:-**

Gathered Wisdom

-GowriSivaraman EmeraldPublishers

Course Code	Course Title	L	T	P	C
17122SEC23	Data Structure and Algorithms	6	0	0	6

**AIM**

To equip the students with principles data structure concepts and algorithms.

**OBJECTIVES:**

The Student Should Be Made To:

- Be Familiar with the Basics of C Programming Language.
- Be Exposed To The Concepts Of Adts
- Learn Linear Data Structures – List, Stack, And Queue.
- Be Exposed To Sorting, Searching, Hashing Algorithms

**UNIT –I**

Arrays and sequential Representations - Ordered Lists - stacks and Queues- Evaluation of expressions - Multiple stacks and queues - Singly Linked lists - linked stacks and queues - polynomial addition - doubly linked lists and dynamic storage management - strings.

**UNIT-II**

Trees - binary tree representations - Tree traversal - Threaded binary trees - binary tree representation of trees - set representations -decision trees - games trees and counting binary trees -graphs and representations traversals, connected components and spanning trees shortest paths and transitive closure - activity networks - topological sort and critical paths.

**UNIT-III**

Algorithms - conventions - Writing structured programs - Analyzing algorithms - sorting heap sort - binary search - finding the maximum and minimum – merge sort – quick sort - selection sort

#### UNIT-IV

Greedy method: The general method - optimal storage on tapes knapsack problem - job sequencing with deadlines - optimal merge patterns - minimum spanning trees-single source shortest paths.

#### UNIT-V

Backtracking : The general method - the 8 queens problem - sum of subsets - graph coloring - Hamiltonian cycles - knapsack problem. BRANCH AND BOUND: The general method - 0/1 knapsack problem - Traveling salesperson - Efficiency considerations.

#### COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Use the control structures of C appropriately for problems.
- Apply the different linear data structures to problem solutions.
- Critically analyze the various algorithms.

#### REFERENCE BOOKS:

1. Fundamental of Data Structure - Ellis Horowitz and Sartaj Sahni.  
Chapters 2,3,4,5 only (Excluding 2.3,3.2,4.5,4.6,4.7,4.10,4.12,6.5)
2. Fundamental of computer algorithms - Ellis Horowitz and sartaj Sahni  
Galgotia Publications.
3. Data Structures - LIPSCHUTA, Tata MaGrawHill, Schaum's Outline series.

Course Code	Course Title	L	T	P	C
17122SEC24L	Data Structure and Algorithms Lab	0	0	3	2

## 1. SORTING:

- a. Bubble sort
- b. Heap sort
- c. Insertion Sort

## 2. SEARCHING:

- a. Linear search
- b. Binary search

3. Operations on Stack
4. Operations on Queue
5. Operations on single Linked list
6. Operations on doubly linked list
7. Binary Tree Traversal

## COURSE OUTCOME:

- Ability to analyze algorithms and algorithm correctness.
- Ability to summarize searching and sorting techniques
- Ability to describe stack, queue and linked list operation.
- Ability to have knowledge of tree and graphs concepts.

Course code	Course Title	L	T	P	C
17112AEC25B	Discrete Mathematics	5	0	0	4

**OBJECTIVES:**

Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental them of homomorphism are concentrated. Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory 20 such as Trees, Directed graphs, Connectivity, Euler tours are also concentrated

**UNIT I**

Groups- Types – Propertices Of Groups- Semi Groups-Monoids – Problem In Groups- Cyclic Groups And Subgroups

**UNIT-II**

cosets & lagrange's thm-Normal groups and quotient groups- Different types of morphisms of groups fundamental thm of homomorphism.

**UNIT III**

Graph theory - Basic concepts- Finite and infinite graph – Incidence and degree ideas on vertices- Isomorphism-sub graphs – Walks – Paths and circuits

**UNIT IV**

Connected Graphs And Disconnected Graphs And Components - Euler Graphs – Hamiltonian Path And Circuits

**UNIT V**

Trees-properties of trees -pendent vertices – Distance and centers in a tree rooted and binary trees.

**COURSE outcomes**

By the end of this course, you should be able

- Understood the concept of Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental theorem of homomorphism
- Knowledge in Graph Theory
- Understood the properties of Graph Theory
- Understood the concept of Euler theorem and its applications

**REFERENCE BOOKS:**

1. Algebra - Arumugan Issac
2. Graph theory – Narasingh deo

Course Code	Course Title	L	T	P	C
17112AEC26B	Operations Research	4	0	0	4

**OBJECTIVES:**

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

**UNIT — I**

Basic of operations research (OR) characteristics of OR - Necessity of OR in industry, OR and decision making - role of computers in OR Linear Programming: Formulations and graphical solution of (2 variable) canonical and standard forms of linear programming problem.

**UNIT — II**

Algebraic Solution: Simplex methods — Charnes method of penalty - Two phase simplex method.

**UNIT — III**

Transportation Model: Definition — Formulation and solution of transportation models the row — Minima, column minima, Matrix minima and Vogel's approximation method. Assignment Model: Definition of assignment model— comparison with transportation model - Formulation and solution of assignment model

**UNIT — IV**

Sequencing problem: Processing of n jobs through 2 machines - processing n jobs through 3 machines - processing 2 jobs through m machine Games Theory: Characteristics of games — Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving 2 x 2 games

**.UNIT — V**

**PERT computation — Resource scheduling.**

**COURSE outcomes**

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory
- Students gets the knowledge about inventory theory

**REFERENCE BOOKS:**

1. Hamdy A. Taha: Operation Research - An Introduction 5<sup>th</sup> Edition, PHI, New Delhi 1996
2. Ackoff, R Land Sasieni, M.N: Fundamental of Operation research, John Wiley and sons, New york 1968.

**MS –EXCEL**

1. Prepare the addressing methods in excel
2. Prepare an Excel Document using different type of Functions.
3. Draw a Graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark List for the Students.
6. Prepare a Worksheet for a Company.
7. Prepare an Inventory Report for a Shop.
8. Prepare an Electricity Bill for the Domestic Customers

**COURSE OUTCOME:**

- use a range of lookup and reference functions.
- customise the formatting of charts in Excel.
- create and use labels and names in a workbook.
- protect data in worksheets and workbooks.

Course Code	Course Title	L	T	P	C
17160SEC02B	<b>Self Development</b>	0	0	3	2

**UNIT I: Self -Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

**UNIT II: Self- Management**

Managing Time, Managing Stress, Conflict Management

**COURSE OUTCOME:**

- Specific and measurable statements that define the knowledge, skills, and attitudes learners will demonstrate by the completion of a course.
- Learning outcomes are written with a verb phrase and declare a demonstrable action within a given time frame, such as by the end of the course.

Course Code	Course Title	L	T	P	C

**செய்யுள் , காப்பியங்கள் இலக்கிய வரலாறு**

**செய்யுள்**

**அலகு : 1**

1. சிலப்பதிகாரம் - மனையறம் படுத்த காதை
2. மணிமேகலை - ஆதிரை பிச்சையிட்ட காதை
3. சீவக சிந்தாமணி - விமலையார் இலம்பகம்

**அலகு :2**

4. பெரியபுராணம் - இளையான் குடிமாற நாயனார் புராணம்
5. கம்பராமாயணம் - கைகேயி சூழ்வினைப் படலம்

**அலகு :3**

6. சீறாப்புராணம் - நபி அவதாரப் படலம் - 24 வரிகள்
7. தேம்பாவணி - வாமன் ஆட்சி படலம் - முதல் 5 பாடல்கள்

**அலகு :4**

8. நளவெண்பா - சுயம்வர காண்டம் (20 - 51)

**அலகு . 5 : இலக்கிய வரலாறு**

9. காப்பியங்கள் , ஐஞ்சிறு காப்பியங்கள் , புராணங்கள் , இதிகாசங்கள்

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC31	Advanced English-III	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT –I**

The organs of speech, Classification of speech sounds , Vowels and Diphthongs

**UNIT –II**

Consonants, Consonant cluster

**UNIT – III**

Syllable, Word accent, Intonation

**UNIT – IV**

Idiom, Interpretation of graphics

**UNIT – V**

Slogan writing, Writing advertisement

**COURSE OUTCOME:**

- Outline significant curriculum and assessment theories, models and research in the higher-education sector.
- Critically analyse disparate sources of information about WWII.
- Evaluate concepts of race, culture, identity and diversity with regards to indigenous education.

17111AEC32	English-III	4	0	0	2

**AIM:**

To acquaint students with learning English through literature

**OBJECTIVE:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**OUTCOME:**

- Read and comprehend literature

**UNIT – 1**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

**UNIT – V**

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

**COURSE OUTCOME:**

- Action verb.
- Subject content.
- Level of achievement.
- Condition of performance (if applicable)

**REFERENCES:-**

Nine Short Stories

-Steuart H.King Blackie Books

One-Act plays of Today

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC33	Internet and Java Programming	4	1	0	6

**AIM**

To equip the students with basic programming skill in Java

**OBJECTIVE**

- To understand the core principles of the Java Language
- To study about Graphics programming using java Language
- To learn visual tools to produce well designed, effective applications and applets.

**UNIT-I**

Introduction to the Internet - Internet Technologies - Internet Browsers

**UNIT-II**

Decision making and looping statements -Classes, Objects and Methods

**UNIT-III**

Arrays, strings and vectors- Interfaces: Multiple Inheritance – Packages: Putting classes together  
- Multithreaded Programming

**UNIT-IV**

Managing Errors and Exceptions - Applet programming- Graphics programming

**UNIT-V**

Managing Input/Output files in Java

**COURSE OUTCOMES:**

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

**REFERENCE BOOKS:**

1. “World Wide Web Design with HTML”, C.Xavier, Tata McGraw-Hill Publishing Company Limited for Unit-1.
2. “Programming with Java”, E.Balagurusamy, Tata McGraw-Hill Publishing Company Limited for Unit-2, 3, 4, 5.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC34L	Internet and Java Programming Lab	0	0	3	2

1. Simple programming using for, while, do-while, ternary and switch.
2. String handling using string and string buffer.
3. Inheritance.
4. Polymorphism
5. Interfaces and Packages
6. Data files(creation, processing)
7. Vector manipulation
8. Simple programs using Applets
9. Exercises using predefined and user defined exceptions
10. Graphics programs for drawing lines, rectangle, oval, string using Applets

**COURSE OUTCOME:**

- Identify, analyze, develop, implement, verify and document the requirements for a computing environment.
- Contribute to the diagnostics, troubleshooting, documenting and monitoring of technical problems using appropriate methodologies and tools.

Course Code	Course Title	L	T	P	C
17161SEC35	Financial Accounting	4	0	0	4

**AIM:**

To train the students to record all business events as per standard principles and established conventions.

**OBJECTIVES:**

- To ascertain whether the business operations have been profitable or not
- To assess the financial position of the business.
- To generate information.

**UNIT – I**

Meaning of Accounting- Meaning & objects of Book Keeping – Advantages of Accounting – Concepts and conventions – Principles of double entry – Kinds of accounts – Journal and ledger accounts.

**UNIT – II**

Subsidiary books – Advantages Subsidiary books - Purchases Book, Sales Book, Purchases returns Book, Sales returns Book, - Cash Book.

**UNIT – III**

Trial balance – Preparation - Rectification of errors –Bank Reconciliation Statement.

**UNIT – IV**

Final Accounts – Trading Accounts - Profit and Loss Accounts - Balance Sheet.

**UNIT – V**

Bills of Exchange – Single Entry System – Simple Problems.

**COURSE OUTCOMES:**

Students are now familiarizes with the accounting principles and practices and the ascertainment of the profitability and the financial position of the business.

**REFERENCE BOOKS:**

1. R.L.Gupta – Financial Accounting
2. S.P.Jain and K.L.Narang – Principles of Accounting
3. Readdy and Murthy – Financial Accounting
4. Dr.Radha - Financial Accounting

Course Code	Course Title	L	T	P	C
17113AEC36C	Electricity and Electronics	3	0	0	4

**AIM:**

To introduce the scientific principles relevant to electric circuits, and electronic devices.

**OBJECTIVES:**

Solve simple problems in basic electrical circuit theory. Analyse and predict the behaviour of simple logic circuits and electronic devices. To prepare the student for the study of physics by introducing general concepts and methods which will be applied throughout the course.

**UNIT – I: CIRCUIT ELEMENTS:**

Resistance in series and parallel – Capacitor in series and parallel – Conversion of galvanometer into voltmeter – Conversion of galvanometer into ammeter – Multimeter – CRO, AFO (Qualitative study only).

**UNIT – II: ELECTRICITY:**

Ohm's law – Kirchof's law – Wheatstone bridge – condition for bridge balance – Meter bridge – Specific resistance – Temperature co-efficient of resistance – Potentiometer – Measurement of current – voltage and resistance.

**UNIT – III: SEMICONDUCTORS:**

Conductors, Insulators, Semiconductors, P-type, N-type – semiconductors – PN-Junction diode – Zener diode – Static characteristics – Voltage regulation – Rectifiers: – Half wave rectifiers – Bridge Rectifiers – Calculation of ripple factor and efficiency.

**UNIT – IV: BREAK DOWN DEVICES:**

FET – Design of FET – FET characteristics – working of FET – SCR – Design – Characteristics – Triac – design and characteristics – Diac – design and characteristics.

**UNIT – V: OPTO ELECTRONIC DEVICES:**

LED – voltage and current – Advantages and applications of LED – LCD – Photo diode – its operation and application – Phototransistor – LED as Seven segment display.

**COURSE OUTCOMES:**

To develop and employ circuit models for elementary electronic components, e.g., resistors, sources, inductors, capacitors, diodes and transistors;

Become adept at using various methods of circuit analysis, including simplified methods such as series-parallel reductions, voltage and current dividers, and the node method;

**REFERENCE BOOKS:**

- 1) Electricity and Magnetism by Brijlal and Subramaniam.
- 2) Principles of electronics by V.K. Metha.

Course Code	Course Title	L	T	P	C
17122RMC37	Research Methodology	3	0	0	3

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication.

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-based
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

**OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.

**PREREQUISITES:**

Basic computer skill for working in window environment & conceptual knowledge on basic matrices.

**UNIT-I Introduction to Research Methodology**

Meaning of research – Objectives of research – Type of research – Significance of research – Research approaches.

**UNIT-II Research Methods**

Research methods versus Methodology – Research and scientific method – criteria of good research – Problems encountered by researchers in India.

**UNIT-III Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Review – General treatises – Monographs.

#### **UNIT-IV Database Survey**

Database search – NIST –MSDS –PubMed – Scopus – Science citation index – Information about a specific search.

#### **UNIT-V Introduction to MATLAB:**

What is MATLAB? Matrix and its application in different areas: MATLAB approach to environmental modeling; Arithmetic Matrix – Operators; Arithmetic Array – Operators and its applications in MATLAB; Expressions, Opening M-Files; Structure of MATLAB Programing; Programing; Concatenation of strings; Vectorization ; Basic Graphics.

#### **COURSE OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.

#### **REFERENCE BOOKS:**

1. C.R. Kothari, Research Methodology, New Age International publishers. New Delhi,2004.
2. R.A Day and A.L. Underwood, Quantitative analysis, Prentice Hall, 1999.
3. R. Gopalan, Thesis writing, Vijay Nicole Imprints Private Ltd., 2005.
4. A Guide to MATLAB: For Beginners and experienced Users by Brian R. Hunt (Editor), Ronald L. Lipsman, J. Rosenberg
5. Introduction to MATLAB for Engineers by William J. Palm III.

17122SEC03AL	Packages Lab –III	0	0	2	1

#### POWER POINT

1. Create a slide show presentation for a Seminar (choose your own topics)
  - a. Enter the Text in the Outline View
  - b. Create Non-Bulleted and Bulleted Text
2. Create a slide show presentation for a Science Exhibition
  - a. Create Non-Bulleted and Bulleted text
  - b. Apply appropriate Text Attributes
3. Create slide show presentation for an Invitation
  - a. Insert an Object from a Bitmap File
  - b. Apply appropriate Text Attributes
  - c. Rotate the Object to 45 degree
  - d. Apply Shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all Students
  - a. Use Bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different Presentation Template and different Transition Effect for each slide
  - c. Use different Text Attributes in each slide
5. Create a slide show presentation for a Shop Advertisement to be open shortly
6. Create a slide show presentation to display Percentage of Sales in each quarter for the any Vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for Tourists Places
8. Create a slide for Calendar using appropriate Text attributes and insert an object from a Bitmap file

COURSE OUTCOME:

- Identify the basic features and functions of PowerPoint.
- Develop a PowerPoint presentation. Perform advanced text editing operations.
- Add graphical elements to your presentation.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC03B	<b>Interpersonal Relations and Social Responsibilities</b>	0	0	3	2

### **UNIT I: Interpersonal Relations**

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

### **UNIT II: Ethics and Social Responsibilities**

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

#### **COURSE OUTCOME:**

- Analyse their own interpersonal communication style.
- Gain confidence in handling conflict, criticism and other challenging situations.
- Deal with different behaviour ranging from aggressive to submissive.
- Learn to manage change through effective interpersonal communication.

Course Code	Course Title	L	T	P	C
17111SEC03L	Communicative English Lab-III	0	0	2	1

**AIM:**

To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To change a sentence from active to passive and vice versa
- To make sentences
- To write a letter
- To improve vocabulary
- To enhance speaking skills
- To enrich writing skills

**OUTCOME:**

- Understand grammar
- Develop speaking and writing skills

**UNIT –I**

Active and Passive

**UNIT –II**

Developing the hints

**UNIT –III**

Letter writing

**UNIT –IV**

Speaking-benefits-features of a good speaker-Tip for improving speech-types

**UNIT –V**

Writing-benefits-types-tips for improving writing

**Lab Note-1.** Anagrams, Word Traps, Stinging Words, letter writing from Globarena Software, Self-introduction, 2. Picture writing note book

**Viva-**Self introduction, Picture talk

**Exam components-**Theory -50+MCQ online exam -20+Viva-15+Lab note-10=100

**COURSE OUTCOME:**

- Understand grammar
- Develop speaking and writing skills

**REFERENCES:-**

செய்யுள் , சங்க இலக்கியம், அற இலக்கியம் , செம்மொழி , இலக்கிய வரலாறு

**அலகு . 1 : பண்டைய இலக்கியம் - நற்றிணை;**

1. நெய்தல் - தோழி கூற்று - பாடல் எண் . 11
2. குறிஞ்சி - தலைவி கூற்று - பாடல் எண். 64
3. முல்லை - தலைவன் கூற்று - பாடல் எண்.142
4. பாலை - நற்றாய் கூற்று - பாடல் எண். 29
5. மருதம் - தலைவி கூற்று - பாடல் எண். 70

**பண்டைய இலக்கியம் குறுந்தொகை**

1. குறிஞ்சி - தோழி கூற்று - பாடல் எண்.1
2. முல்லை - செவிலித்தாய் கூற்று - பாடல் எண்.167
3. மருதம் - தலைவி கூற்று - பாடல் எண். 181
4. நெய்தல் - தலைவி கூற்று - பாடல் எண் . 290
5. பாலை - தலைவன் கூற்று - பாடல் எண் . 347

**பண்டைய இலக்கியம் ஐங்குறுநூறு**

1. மருதம் - கள்வன் பத்து - முதல் இரண்டு பாடல்கள்
2. நெய்தல் - தோழிக்குரைத்த பத்து - முதல் இரண்டு பாடல்கள்
3. குறிஞ்சி - குன்றக் குறவன் பத்து - முதல் இரண்டு பாடல்கள்

## அலகு . 2 : கலிந்தொகை

- 1 . பாலை - பாடல் எண். 2
2. குறிஞ்சி - பாடல் எண். 37

### அகநானூறு

- 1 . பாலை - பாடல் எண். 5
2. மருதம் - பாடல் எண். 6

### புறநானூறு

பாடல் எண் : 6 ,121, 41, 153 ,172 191, 223, 246, 284, 358.

### பதிற்றுப்பத்து

இரண்டாம் பத்து பாடல் எண். 4 (நிலம் நீர் வளி விசம்பு)

## அலகு.3;

- 1 . பட்டினப்பாலை - முதல் 105 வரிகள்
2. திருக்குறள் - 1.மருந்து 2.ஊக்கமுடைமை 3.உழவு

## அலகு . 4 : செம்மொழி வரனறு ;

(மொழி - விளக்கம் , மொழிக்குடும்பங்கள், உலகச் செம்மொழிகள், இந்தியச் செம்மொழிகள் , செம்மொழித் தகுதிகள் , வரையறைகள், வாழும் தமிழ் செம்மொழி, தொன்மை , தமிழின் சிறப்புகள், தமிழ் செம்மொழி நூல்கள்)

## அலகு . 5 : இலக்கிய வரலாறு

சங்க இலக்கியங்கள் , பதினெண்கீழ்க்கணக்கு நூல்கள்.

COURSE CODE	COURSE TITLE	L	T	P	C
17111AEC41	Advanced English-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT –I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation –Presentation–  
Type of questions – Answering techniques.

**UNIT – II**

Flowchart

Proposals

**UNIT – III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT –V**

Definition

Writing for and against a topic.

**COURSE OUTCOME:**

- Develop your pronunciation skills, learn more and practice the different features of pronunciation and the sounds of English.
- To learn vocabulary that is likely to come in handy in your everyday language use.

**References:**

Course Code	Course Title	L	T	P	C
17111AEC42	English-IV	4	0	0	2

**AIM:**

To acquaint students with learning English through literature

**OBJECTIVE:**

- To introduce learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

**OUTCOME:**

- Read and comprehend literature

**UNIT –I**

How to be a Doctor -Stephen Leacock  
 My Visions for India -A.P.J. Abdul Kalam  
 Woman, not the weaker sex -M.K. Gandhi

**UNIT –II**

My Last Duchess -Robert Browning  
 The Toys -Coventry Patmore  
 I, too -Langston Hughes

**UNIT –III**

The Best Investment I ever made-A.J.Cronin  
 The Verger -W.S Maugham  
 A Willing Slave -R.K.Narayan

**UNIT –IV**

Macbeth  
 As You Like It

**UNIT –V**

Henry IV  
 Tempest

**COURSE OUTCOME:**

Read and comprehend literature

**REFERENCE BOOKS:-**

English for Enrichment

-.Devaraj Emerald Publishers

Selected Scenes from Shakespeare Book I &II

-Emerald Publishers

Course Code	Course Title	L	T	P	C
17122SEC43	Visual Programming	6	0	0	6

**AIM:**

To equip the students with principles of various visual programming environment

**OBJECTIVE:**

- To learn the basic principles of visual programming
- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

**UNIT I**

Visual Basic – Integrated Development Environment (IDE) features – VB editor – customizing the IDE – anatomy of a form working with form properties – setting form’s properties – introducing form events and form methods.

**UNIT II**

Variables in Visual Basic : Declaring variables – Data types – Null values, Error value – empty value – the scope of a variable – Module level variable – Constants – Creating your own constants – Scope of a constant – Converting data types – arrays – Declaring arrays – Fixed size arrays – Dynamic arrays – Preserve keywords – ReDim. Writing code in Visual Basic – The anatomy of a procedure – Subroutine and Functions – Language constructs – For...Next, The While loop, Select case...End select, Exit statement, with structure.

**UNIT III**

Menus – Keyboard accelerators – rich edit control – toolbars – status bars – reusable frame window base class – separating document from its view – reading and writing SDI and MDI documents – splitter window and multiple views – creating DLLs – dialog based applications.

**UNIT IV**

The Image list control – the List view control – slider control – status bar control – Tool bar control – The Tree view control – Menu editor. –File System Controls (Drive, Dirlist, File List boxes).

## **UNIT V**

OLE properties – OLE automation – building COM/OLE DLL servers – Data control – design time(for access – style databases) –programming with the data control– Database access – set using SQL –transaction control – testing the control – Open Database Connectivity.

### **COURSE OUTCOMES:**

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic's Integrated Development Environment (IDE).
- Implement syntax rules in Visual Basic programs.
- Write Windows applications using forms, controls, and events
- Write and apply decision structures for determining different operations.
- Write and apply loop structures to perform repetitive tasks.

### **REFERENCE BOOKS:**

1. Mohammed Azam, Programming with Visual Basic 6.0 – Vikas Publishing House Pvt Ltd – 2002(unit-I, unit-II)
2. Content Development Group, Visual Basic 6.0 – Tata McGraw Hill Publishing Company Limited – 2002(unit-III, unit-IV, unit-V)

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC44L	Visual Programming Lab	0	0	3	4

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to expand and shrinking an object – while program is running.
4. Write a code to design and implement a scientific calculator.
5. Write a program to create animation by using move method and timer Object.
6. Write a program for preparing students mark list.
7. Create a simple database in MS Access Database /Oracle and a simple database application in VB that shows database connectivity through DAO and ADO.
8. Write a simple program that displays an appropriate message when the illegal operation is performed using error handling technique in VB.

**COURSE OUTCOME:**

- Identify, analyze, develop, implement, verify and document the requirements for a computing environment.
- Contribute to the diagnostics, troubleshooting, documenting and monitoring of technical problems using appropriate methodologies and tools.

Course Code	Course Title	L	T	P	C
17113AEC45C	Allied Physics-II	5	1	0	6

### **Digital Electronics**

**AIM:**

To understand various digital system and their applications

**OBJECTIVES:**

To learn about the design principles of different digital electronic circuits.

To study the application digital electronics circuits

**UNIT – I: NUMBER SYSTEMS AND CODES:**

Decimal, Binary, Octal, and Hexa decimal systems – Conversion from one to another – Binary addition – Binary subtraction – Binary multiplication – Binary division – Complements, Codes: BCD, Gray, Alpha numeric.

**UNIT – II: BOOLEAN ALGEBRA:**

Basic logic gates – Universal gates – Fundamental concepts of Boolean algebra – De Morgan’s theorem: Simplification of expressions – Karnaugh map.

**UNIT – III: LOGIC DESIGN:**

Half adder – Half subtractor – Multiplexers – Demultiplexer, Flip-flops: R-S flip flop, J-K flip flop, D-flip flop, T-flip flop.

**UNIT – IV: MEMORY ELEMENTS:**

RAM – types – ROM: ROM, PROM, EPROM, EEPROM – Magnetic tape – Magnetic disc – Bubble memory.

**UNIT – V: REGISTERS AND COUNTERS:**

Registers: Shift register – Left shift register – Right shift register – Counters: Ripple counter – Mode N counter – up counter – down counter.

## **COURSE OUTCOMES**

Express positive integers in different number systems (binary, octal, decimal hexadecimal)

Codify data elements or information (signal values) by binary variables (signals) using standard codes for positive integers (binary, BCD, Gray) and characters (ASCII code)

Codify signed integers (positive and negative) using the two's-complement system

Perform basic arithmetic operations (addition, subtraction, multiplication) of signed integers by means of the 2's complement system

List a set of simulation tools for digital electronics

## **REFERENCE BOOKS:**

- 1) Digital Principles and Applications by Malvino and Leach

Course Code	Course Title	L	T	P	C
17113AEC46CL	Allied Physics Lab -I	0	0	3	2

- 1) FET-Characteristics
- 2) Logic Gates-Universality of NOR Gate.
- 3) LCR — Series Resonance Circuit.
- 4) LCR parallel – resonance circuit.
- 5) OP AMP-Addition,Subtraction.
- 6) Verification basic logic gates.
- 7) Verification of Demorgon’s theorem..
- 8) Half adder and Half subtractor.
- 9) Logic Gates-Universality of NAND Gate.
- 10) OP AMP Differentiator ,Intergrator.

**COURSE OUTCOME:**

Students will demonstrate an understanding of core knowledge in physics, including the major premises of classical mechanics, E&M and Modern Physics. Students will demonstrate written and oral communication skills in communicating physics-related

### Skill Based Elective-IV

Course Code	Course Title	L	T	P	C
17122SEC04AL	Packages Lab-IV	0	0	2	1

### MS-ACCESS

1. Create a Database with a simple Table
2. Create a Database for Students Mark List using Queries.
3. Create a Database for the employees in an organization and sort by their date of joining.
4. Create Queries to Select Records that matches specific condition.
5. Create Relationships among the different Tables.
6. Create Queries using Built-in Functions.
7. Develop Forms to enter data in to the Student Marks Database
8. Develop Forms to enter data in to the Electricity bill Database

#### COURSE OUTCOME:

Outcomes are measurable statements that articulate at the beginning what students should know, be able to do, or value as a result of taking a course or completing a program (also called Backwards Course Design).

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC04B	<b>Etiquette And Interviewing Skills</b>	0	0	3	2

## **UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

## **UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company-Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

### **COURSE OUTCOME:**

- Understand the various ways of gathering information by asking people questions.
- Understand how to decide between the different types of interview. Develop the skills needed for approaching different types of interviews.

Course Code	Course Title	L	T	P	C
17111SEC04L	Communicative English Lab-IV	0	0	1	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To change sentences from direct to indirect and vice versa
- To comprehend a passage
- To enhance language skill
- To develop presentation skill
- To enrich vocabulary

**OUTCOME:**

- Understand grammar
- Develop language and presentation skills

**UNIT –I**

Direct and Indirect

**UNIT –II**

Comprehension

**UNIT –III**

Conversation

**UNIT –IV**

Descriptive Writing

**UNIT –V**

Soft skills-Importance-aspects-SWOT analysis-values-positive attitude-perception

**Lab Note-** Confusing Words, Word families, Non-English words, Presentation skills, Oral presentation, Conversation from Globarena software

**Viva-**Presenting a topic

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**COURSE OUTCOME:**

- Understand grammar
- Develop language and presentation skills

**REFERENCES:-**

English Grammar	-Wren and Martin
English Grammar and Composition	-Radhakrishna Pillai
Technical Communication	-Meenakshi Sharma & Sangeetha Sharma
Essentials of Business Communication	-Rajendra Pal & J.S Korlahalli Sultan Chand & Sons
Soft skills	-D.Jayacandran D.J Publishers

Course Code	Course Title	L	T	P	C
171ENVSTU	Environmental Studies	1	0	0	1

#### UNIT-I

**The Multidisciplinary Nature of Environmental Studies** – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources** - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

#### UNIT-II

**Ecosystems** - Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

#### UNIT-III

**Biodiversity and its Conservation** – Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

#### UNIT-IV

**Environmental Pollution** – Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

#### UNIT-V

**Social Issues and the Environment** - From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - Human Population and the Environment.

#### COURSE OUTCOME:

- Develop critical-thinking skills, analyze real-world problems, and understand the power of narrative to create sustainable solutions for local and global communities.

**REFERENCE BOOK:**

1. "ENVIRONMENTAL STUDIES", K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

Course Code	Course Title	L	T	P	C
17122SEC51	Relational Database Management Systems	5	1	0	5

## AIM

To equip the students with principles and concepts of database design

## OBJECTIVES:

- To learn the basic principles of database and database design
- To learn the basics of RDBMS
- To learn the concepts of database manipulation SQL

### UNIT- I

An Overview of Database Management-Introduction -Definition of Database system - Data Independence - Relational Systems - Database System Architecture - Three Levels of the Architecture - Distributed Processing.

### UNIT -II

An Introduction to Relational Databases- Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to SQL - Embedded SQL - Domains , Relations , Relvars.

### UNIT III

Database design and ER Model:overview, ER-Model, Constraints, ER-Diagrams, ERD Issues, weak entity sets, Codd's rules, Relational Schemas, Introduction to UML Relational database model: Logical view of data, keys, integrity rules. Relational Database design: features of good relational database design, atomic domain and Normalization (1NF, 2NF, 3NF, BCNF).

### UNIT -IV

**Database Design - Functional Dependencies** - Introduction - Basic Definitions - Normalization - First , Second ,Third Normal Forms - BOYCE / CODD Normal Form

### UNIT- V

Transaction Management - Recovery - Introduction - Transactions - Transaction Recovery - System Recovery - Media Recovery - Concurrency -Three Concurrency Problem - Locking - Deadlock - Serializability .

**COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Design Databases for applications.
- Use the Relational model, ER diagrams.
- Design the Query Processor and Transaction Processor.

**REFERENCE BOOKS:**

“An Introduction to Database Systems”. C.J.DATE. Addison - Wesley Publications - 7th Edition 2000.

Course Code	Course Title	L	T	P	C
17122SEC52	.NET Programming	4	1	0	5

## AIM

To cover the fundamental concepts of the .NET framework.

## OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

## UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

## UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

## UNIT III

nterfacing with the End user-Asp.NET Applications.

## UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

## UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

## COURSE OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

## REFERENCE BOOKS:

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.
4. Visual Basic.Net Black Book- Steven Holzner.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC53	Designing and supporting Computer Networks	4	0	0	5

**AIM:**

To equip the students with Computer Networks

**OBJECTIVE:**

- To learn the Network concepts
- To understand the Network Switching Concepts
- To study about Network Security.

**UNIT I**

The Internet and its uses – OSI model – ISP Troubleshooting – Planning a Network Upgrade

**UNIT II**

Planning the Addressing Structure – IP Addressing in the LAN – NAT and PAT – Configuring Network Devices: Initial ISR Configuration – Configuring an ISR with SDM

**UNIT III**

Virtual Network management and planning – VPNs for small businesses – Secure remote access in VPNs – IPSec VPNs – Integrating data centers with Intranets – Implementing and supporting Extranets

**UNIT IV**

ISP Services: Protocols that support ISP Services – DNS – Services and Protocols – ISP Responsibility: ISP security considerations – Security tools

**UNIT V**

Monitoring and Managing the ISP – Backups and Disaster Recovery – Troubleshooting: Troubleshooting Methodologies and Tools

**COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Identify the components required to build different types of networks
- Choose the required functionality at each layer for given application
- Identify solution for each functionality at each layer
- Trace the flow of information from one node to another node in the network

**REFERENCE BOOKS:**

“Working at a Small-to-Medium Business or ISP CCNA Discovery Learning Guide” – Allan Reid  
and Jim Lorenz – CISCO Press – Pearson Education

Course Code	Course Title	L	T	P	C
17122SEC54L	Oracle Lab	0	0	3	2

- Write SQL queries to create the following tables and insert rows in it.  
Employee (eno, ename, deptno, salary, designation)  
Dept (deptno, deptname, location)  
Student (rollno, name, course, paper1, paper2, paper3)
- Write SQL queries to create primary key and foreign key constraints in the above given tables and perform all types of **simple retrieval**.
- Write SQL queries to perform all types of **advance retrieval** using (i) nested subqueries (ii) set operators.
- Write SQL queries to perform all types of **joins**.
- Write SQL queries to illustrate all **built-in** functions.
- Write SQL queries to create **views** and **index/indices** for the tables Employee, Dept and Student.
- Class Table: Class\_Id varchar2(20) primarykey Schedule\_Id varchar2(20) Class\_Building varchar2(25) Class\_Room varchar2(25) Course\_Id varchar2(5) Department\_Id varchar2(20) foreign key Dept\_info(Department\_id) Instructor\_Id varchar2(20) Instructor(Instructor\_id) Semester varchar2(6) School\_Year date
- Student Grade Information Table: Student\_Id varchar2(20) Class\_Id varchar2(20) Grade varchar2(2) Check Grade in ('A','A+','A-','B','B+','B-', 'C','C+','C-', 'D','D+','D-', 'F','F+','F-') Date\_Grade\_Assigned date

#### COURSE OUTCOME:

- Enhance the knowledge and understanding of Database analysis and design.
- Enhance the knowledge of the processes of Database Development and Administration using SQL and PL/SQL.
- Enhance Programming and Software Engineering skills and techniques using SQL and PL/SQL.

Course Code	Course Title	L	T	P	C
17122SEC55L	.NET Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:  
 (i). Insertion (ii) Updating (iii) Deletion (iv) Selection  
 Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

### **COURSE OUTCOMES:**

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

### Discipline Specific Elective-I

Course Code	Course Title	L	T	P	C
17122DSC56A	Computer Organization and Architecture	5	0	0	4

#### AIM:

To equip the students with the Computer Organization and Architecture.

#### OBJECTIVES:

- To Make Students Understand The Basic Structure And Operation Of Digital Computer.
- To Familiarize The Students With Arithmetic And Logic Unit And Implementation Of Fixed Point And Floating-Point Arithmetic Operations.
- To Expose The Students With Different Ways Of Communicating With I/O Devices And Standard I/O Interfaces.

#### UNIT I

Digital logic circuits: Digital computers- Logic gates – Boolean algebra - Map simplification - Combinational circuits - Flip-flops - Sequential circuits.

#### UNIT II

Digital components: Integrated circuits – Decoders - Multiplexers - Registers - Shift Registers - Binary Counters - Memory unit.

#### UNIT III

Overview Of Register Transfer And Microoperations - Register Transfer Language, Register transfer. -Bus and Memory transfer - Arithmetic Micro-operations. - Logic Micro-operations - Shift Micro-operations, Arithmetic Logic Shift Unit

#### UNIT IV

Central processing unit: General Register organization – Stack organization – Instruction formats – Addressing modes – Data transfer and manipulation – Program control – Reduced instruction set computers.

#### UNIT V

Memory Organization: Memory hierarchy – Main memory – Auxiliary memory – Associative Memory – Cache Memory – Virtual Memory – Memory Management and Hardware.

**COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Design arithmetic and logic unit.
- Design and analyse pipelined control units
- Evaluate performance of memory systems.

**REFERENCE BOOKS:**

1. Computer System Architecture - Morris Mano.M PHI, Third Edition - 1999
2. Digital Computer Fundamentals – Thomas C. Bartee- Sixth Edition - TataMcGrawHill.
3. Digital Design – Mano – Second Edition

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122DSC56B	Data Mining	5	0	0	4

## **OBJECTIVE**

- To understand briefly some of the data mining Techniques.
- Discuss a number of more efficient algorithms.
- To know accuracy of classification methods and how accuracy may be improved.

## **UNIT-I**

Introduction: What is Data Mining- Why Data Mining now-The Data Mining Process-Data Mining Application-Data Mining Techniques-The Future of Data Mining-Guidelines for Successful Data Mining-Data Mining Software-Software Evaluation and Selection.

## **UNIT-II**

Association Rules Mining: Introduction-Basics-The Task and a Naïve Algorithm - The Apriori Algorithm- Improving the Efficiency of the Apriori Algorithm- Apriori-Tid -Direct Hashing and Pruning (DHP)-Dynamic Itemset Counting (DIC)-Mining Frequent Pattern without Candidate Generation (FP-Growth)-Performance Evaluation of Algorithms- Software for Association Rule Mining

## **UNIT-III**

Classification: Introduction-Decision Tree-Building a Decision Tree-The Tree Induction Algorithm-Split Algorithm Based on Information Theory-Split Algorithm based on the Gini Index-Over fitting and Pruning-Decision Tree Rules-Naïve Bayes Method-Estimating Predictive Accuracy of Classification Methods-Improving Accuracy of Classification Methods.

## **UNIT-IV**

Cluster Analysis: What is Cluster Analysis-Desired Features of Cluster Analysis-Types of Data-Computing Distance-Types of Cluster Analysis Methods-Partitional Methods-Hierarchical Methods-Density-Based Methods-Dealing with Large Databases-Quality and Validity of Cluster Analysis Methods-Cluster Analysis Software.

## **UNIT-V**

Web Data Mining: Introduction-Web Terminology and Characteristics-Locality and Hierarchy in the Web-Web Content Mining-Web Usage Mining-Web Structure Mining-Web Mining Software.

### **COURSE OUTCOMES:**

- Understanding of data mining software available on the market.
- Acquiring Knowledge about various algorithms.
- Acquiring Knowledge about cluster analysis techniques.

### **REFERENCE BOOKS:**

1. “Introduction to Data Mining with Case Studies”, G.K.Gupta, Easter Economy Edition.

### Skill Based Elective-V

Course Code	Course Title	L	T	P	C
17122SEC05AL	Packages lab-V	0	0	2	1

### PHOTOSHOP

1. Design a Visiting card with Background Image.
2. Design an Identity card with Photo.
3. Design a Letter pad with LOGO.
4. Create an Advertisement in a News paper for a Shop.
5. Design a Calendar with Pictures.
6. Design a Magazine using different type of Tools.
7. Create a Photoshop image using Lasso Tool.
8. Design a CD Cover.

#### COURSE OUTCOME:

- The statements that help the learners to understand the reason for pursuing the course and helps him to identify what he will be able to do at the end of the course.

Course Code	Course Title	L	T	P	C
17160SEC05B	<b>Leadership Skills and Body Language</b>	0	0	2	1

### **UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

### **UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

#### **COURSE OUTCOME:**

- Improve bottom-line financial performance.
- Attract and retain talent.
- Drive strategy execution.
- Increase success in navigating change.

Course Code	Course Title	L	T	P	C
17111SEC05L	Communicative English Lab-V	0	0	2	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To understand the degrees of comparison
- To build up a thought
- To write resume
- To construct report, agenda and minutes
- To prepare for an interview

**OUTCOME:**

- Develop communicative skills
- To get a job

**UNIT –I**

Degrees of comparison

**UNIT –II**

Proverb expansion

**UNIT –III**

Resume writing

**UNIT –IV**

Interview

**UNIT –V**

Corporate skills-body language-etiquette-good manners-interpersonal skills

**Lab Note-** Report writing, Resume writing, Interview from Globarena software, Writing agenda, Writing minutes

**Viva-Mock Interview**

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**COURSE OUTCOME:**

- Develop communicative skills
- To get a job

**REFERENCES:-**

English Grammar -Wren and Martin  
 English Grammar and Composition -Radhakrishna Pillai  
 Technical Communication -Meenakshi Sharma & Sangeetha Sharma  
 Essentials of Business Communication-Rajendra Pal &J.S Korlahalli Sultan Chand & Sons  
 Soft skills -D.Jayacandran D.J Publishers

## SEMESTER – VI

Course Code	Course Title	L	T	P	C
17122SEC61	Advanced Web Technology	4	1	0	5

### AIM:

To equip the students with basic programming skill in Web Designing

### OBJECTIVES:

- To understand and practice mark up languages
- To understand and practice embedded dynamic scripting on client side Internet Programming
- To understand and practice web development techniques on client-side

### UNIT-I

Introduction to HTML – Head and body sections – Designing the body section. Ordered and unordered lists – Table handling.

### UNIT-II

DHTML and Style Sheet – Frames-Forms.

### UNIT-III

VBScript –VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Data type Conversion Features – Putting it all together with VBScript – using the Script Debugger.

## **UNIT-IV**

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. JavaScript and Html Documents: The JavaScript Execution Environment.

## **UNIT-V**

Introduction to PHP: Origins and Uses of PHP – Overview of PHP – General syntactic characteristics – Primitives, Operation and Expressions – Output – Control Statements – Arrays – Functions – Pattern Matching – Form Handling – Files – Cookies – Session Tracking.

### **COURSE OUTCOMES:**

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Acquire knowledge about PHP.

### **REFERENCE BOOKS:**

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.  
For UNIT I & II.
2. “Using Active Server Page”. - Scot Johnson-For UNIT III.
3. “Programming the World Wide Web” - Robert W.Sebesta , Third edition.  
For UNIT IV, V.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC62	Operating System	4	1	0	5

**AIM:**

To equip the students with operating system and their components

**OBJECTIVES:**

The student should be made to:

- Study the basic concepts and functions of operating systems.
- Understand the structure and functions of OS.
- Learn about Processes, Threads and Scheduling algorithms.
- Understand the principles of concurrency and Deadlocks.
- Learn various memory management schemes.
- Study I/O management and File systems.

**UNIT- I**

Evolution of Operating Systems – Types of Operating Systems – Different views of OS – Design and implementation of Operating Systems – I/O Programming concepts – Interrupt structure and Processing.

**UNIT-II**

Memory management: Single contiguous allocation – Partitioned Allocation – Relocatable Partitioned Allocation – Paged and Demand Pages Memory Management – Segment Memory Management – Segmented and Demand Paged Memory Management – Swapping and Overlay Techniques.

**UNIT III**

Process Scheduling: Basic Concepts-Scheduling Criteria-Scheduling Algorithms (FCFS, SJF & Round Robin only) - Algorithm Evaluation. Synchronization: Back ground-The Critical Section Problem-Peterson’s SolutionSynchronization Hardware-Mutex Locks-Semaphores-The DiningPhilosopher’s Problem.

## **UNIT- IV**

Device management: Techniques for device management – Device Characteristics – I/O Traffic controller, I/O scheduler, I/O device handler – Virtual Devices – Spooling

## **UNIT-V**

File management: Simple file system, General Model of a file system, Physical and Logical file system.

Case studies: DOS, UNIX/LINUX Operating systems

### **COURSE OUTCOMES:**

At the end of the course, the student should be able to:

- Design various Scheduling algorithms.
- Apply the principles of concurrency.
- Design deadlock, prevention and avoidance algorithms.
- Compare and contrast various memory management schemes.
- Design and Implement a prototype file systems.
- Perform administrative tasks on Linux Servers.

### **REFERENCE BOOKS:**

1. Operating systems – E. Madnick and John J. Donovan – Tata McGraw Hill
2. Operating Systems (Concepts and Design) Milan Milenkovic – McGraw Hill International Edition

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC63L	Advanced Web Technology Lab	0	0	3	2

1. Create a small paragraph about 10 lines. Try to use different font, title, head tags, Size and colors.
2. Create a table with rows & columns and split them using row span & cols pan.
3. Create a web page in the format of front page of a newspaper using text link
4. Write a program for addition using VBScript.
5. Develop a picture gallery having at least 3 pages. Each of them is having several pictures.
6. Create a java script for automatic type conversion.
7. Develop a Java Script program that handles event using button and check box.
8. Develop a program using java script for events handling text area and text field.
9. Create an XML document that contains 10 users information. Write a Java Program, which takes User Id as input and returns the user details by taking the user information from XML document using DOM parser or SAX parser
10. Write an HTML page including any required JavaScript that takes a number from text field in the range of 0 to 999 and shows it in words. It should not accept four and above digits, alphabets and special characters

**COURSE OUTCOME:**

- Analyze a web page and identify its elements and attributes.
- Create web pages using XHTML and Cascading Style Sheets.
- Build dynamic web pages using JavaScript (Client side programming).
- Create XML documents and Schemas.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC64L	Operating System Lab	0	0	3	2

1. Write a menu driven shell program for the following:
  - a. List of files.
  - b. Processes of users.
  - c. Today's Date
  - d. Users of system.
  - e. Quit of Unix
  
2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.
  
3. Write a shell program which accepts the name of a file from the standard input and perform the following
  - a. Accept five names in a file.
  - b. Sorts the names in existing file.
  - c. Lists unsorted and sorted file.
  - d. Quit

1. Program for simulation of grep UNIX commands
2. Write a Shell program to find the factorial of a number

4. Write a shell program to prepare electricity bill for domestic consumers.

For first 100 units – Rs. 0.75 / Unit

For next 100 units – Rs. 1.50 / Unit

Above 200 units – Rs. 3.00 / Unit

Prepare the bill for the following format.

5. Write a shell program to display the result PASS or FAIL using the information given below student name, student register number, mark1, mark2, mark3, mark4 the minimum pass for each subject is 50.

6. Merge the contents of the file file1, file2 and store in another file.

COURSE OUTCOME:

- Know basic components of an operating system. Comprehend how an operating system virtualises cpu and memory.
- Discuss various scheduling and swapping policies.
- Learn basic concurrent programming in c and assembly code.

## Discipline specific Elective-II

Course Code	Course Title	L	T	P	C
17122DSC65A	Software Engineering	5	0	0	4

### AIM:

To equip the students with the processes of software development skills

### OBJECTIVE

- To learn about the principles and methods of software engineering
- To understand the concepts of Software cost estimation
- To learn Software design and Implementation
- To study about development of software products from an industry perspective

### UNIT I

Introduction – definition-size factors- quality and productivity factors-managerial issues.Planning - software project – introduction – defining the problem - developing a strategy - planning the development process-planning an organizational structure.

### UNIT II

Software cost estimation – cost factors – cost estimation techniques – staffing – level estimation – estimating software maintenance costs. Software requirements definition – software requirements specification techniques – languages and processors for requirements.

### UNIT III

Software design – fundamental design concepts – modules and modulation criteria – design notations – design techniques – detail design considerations – real time and distributed system design – test plans – milestones walkthroughs and inspections – design guidelines.

### UNIT IV

Implementation issues – structured coding techniques – coding style – standards and guidelines – documentation guidelines – data abstraction – exception handling – concurrency mechanisms.

### UNIT V

Verification and validation techniques – quality assurance – walkthrough and inspections – static analysis – symbolic executions – unit testing and debugging – system testing – formal verification. Software maintenances – enhancing maintainability during development – managerial aspects – configuration management – source code metrics.

### COURSE OUTCOMES:

- Get an insight into the processes of software development
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

### REFERENCE BOOKS:

“Software Engineering Concepts “– Richard fairly TMH  
“Software Engineering”- Roger S.Pressman, 5th edition 2001.

Course Code	Course Title	L	T	P	C
17122DSC65B	Object oriented analysis and design	5	0	0	4

**AIM:**

To equip the students with object oriented analysis and design

**OBJECTIVES:**

The student should be made to:

- Learn the basics of object oriented analysis and design skills.
- Learn the UML design diagrams.
- Learn to map design to code.
- Be exposed to the various testing techniques.

**UNIT- I**

Introduction to object-oriented Development- object-oriented themes – Modeling- The object modeling Technique- object and classes Links and Associations concepts- Generalization and Inheritance- Grouping constructs.

**UNIT- II**

Advanced object modeling- Aggregation- Abstract classes- Extension and Restriction- Multiple inheritance- Metadata – Candidate keys- Constraints. Dynamic modeling:- Events and states – Operations- Nested state diagram- Concurrency. Function modeling:- Functional models- Data flow diagram- Specifying operations- Constraints.

### UNIT- III

Dynamic Diagrams — UML interaction diagrams — System sequence diagram — Collaboration diagram — When to use Communication Diagrams — State machine diagram and Modelling –When to use State Diagrams — Activity diagram — When to use activity diagrams Implementation Diagrams — UML package diagram — When to use package diagrams — Component and Deployment Diagrams — When to use Component and Deployment diagrams

### UNIT- IV

System Design- overview of system design – Breaking a system into subsystem – identifying concurrency – allocating subsystems to processors and tasks – management of data stores- handling global resources – choosing software control implementation- handling boundary design – overview of object design – combining the three models – designing algorithms - design optimization - implementation of control.

### UNIT- V

**Implementation:** Implementation using a programming language- Implementation using a database system. **Programming style:** object – oriented style – reusability – extensibility – Robustness - object oriented language features – survey of object – oriented languages.

### COURSE OUTCOMES:

At the end of the course, the student should be able to:

- Design and implement projects using OO concepts.
- Use the UML analysis and design diagrams.
- Apply appropriate design patterns.
- Create code from design.
- Compare and contrast various testing techniques.

### REFERENCE BOOKS:

1. Object Oriented Modeling and Design – James Rumbaugh, Michael Blaha, William Premerlani – PHI Twelfth Printing – 2001.
2. Object Oriented Analysis and Design with Applications- Grady Booch Second Edition – Pearson Education Asia publications.

## FREE ELECTIVE

COURSE CODE	COURSE TITLE	L	T	P	C
17111GEC	Journalism	4	0	0	2

### Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

### Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

### Outcome:

- Become a journalist

### UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

### UNIT- II

News – Definition – Kinds – Elements – Sources

### UNIT- III

Reporters

### UNIT- IV

The Editor and the Sub Editor

### UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

### COURSE OUTCOME:

- Learning goals and objectives generally describe what an instructor, program, or institution aims to do, whereas, a learning outcome describes in observable and measurable terms what a student is able to do as a result of completing a learning experience

### References:-

Journalism -Susan

Professional Journalism - John Hogenberg

News Writing and Reporting - M.James Neal (Surjeet Publication)

Professional Journalism -M.V Komath

The Journalist's Handbook -M.V Komath

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17112GEC	<b>Development Of Mathematical Skills</b>	4	0	0	2

### **Objectives**

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

### **Unit I**

Simple interest and compound interest

### **Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

### **Unit III**

Set theory – Series

### **Unit IV**

Matrices – Determinants

### **Unit V**

Assignment problems

### **COURSE OUTCOME:**

- Move from concrete ideas of numbers to number sense.
- Sees relationships between numbers and looks for patterns in relationship.
- Understand and applies concept related to variables, expressions, equations, identities, etc.
- Use arithmetic and algebra to solve real life problems and pose meaningful problems.

### **References**

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

<b>Course Code</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17113GEC</b>	<b>Instrumentation</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges :

AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

**UNIT – II: ELECTRONIC INSTRUMENTS – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

**UNIT – III: ELECTRONIC INSTRUMENTS – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation

amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

#### **Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

#### **Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

#### **Books for Study**

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

#### **COURSE Outcomes:**

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

#### **Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – DhanpatRai and Sons – 1990.

2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

Course Code	COURSE TITLE	L	T	P	C
17114GEC	Food and Adulteration	4	0	0	2

**Aim:** To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

**COURSE OUTCOME:**

- Adulterants are the substance or poor quality products added to food items for economic and technical benefits.
- Addition of these adulterants reduces the value of nutrients in food and also contaminates the food, which is not fit for consumption.

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	COURSE TITLE	L	T	P	C
17117GEC	Mushroom Technology	4	0	0	2

#### UNIT-1

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calocybe indica, volvariella volvacea ,pleurotus sp. Agaricus bisporus

#### UNIT-II

Pure culture-preparation of media(PDA and oat meal agar media)sterilization-preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petriplates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

#### UNIT-III

Cultivation technology:infrastructure,substrates(locally available)polythene bag,vessels,inoculation hood-inoculation loop-low cost stove-sieves-culture rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy straw,sugarcane trash,maiza straw,banana leaves

#### UNIT-IV

Storage and nutrition:short term storage-long term storage (Scanning,pickles, papads,drying,storage ion salt solutions)-nutrition:proteins,aminoacids,mineral elements,nutrition:carbohydrates-crude fiber content,vitamins

#### UNIT-V

Food preparation, types of foods prepared from mushroom-soup,cutlet,omelette,samosa,pickles,curry,research centres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

#### COURSE OUTCOME:

- To make the learners self reliant to identify several kind of mushrooms.
- To provide detailed hands on training on mushroom cultivation, packaging and marketing.

To develop a business plan on mushroom cultivation

#### REFERENCES:

1.Marimuthu et al.,(1991) oyster mushrooms,Dept of plant pathology,

TNAU,coimbatore

4.Shu-Ting chang,Philip G.Miles,Chang,S.T(2004) Mushrooms: cultivation,nutritional value,medicinal effect and environmental impact,2 nd ,CRC press.

5.Swaminathan M.(1990) food nutrition,bappco.The banglore printing and publishing co Ltd.,Banglore.

COURSE CODE	COURSE TITLE	L	T	P	C
17161GEC	Indirect Taxes	4	0	0	2

**AIM:**

To make the students to gain expert knowledge in indirect taxes.

**OBJECTIVES:**

- (i) To have practical knowledge on excise duties and customs duties.
- (ii) To learn the fundamentals of service tax, sales tax and VATS.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

**UNIT – V**

Value Added Tax (VAT) Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

**COURSE OUTCOME:**

Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstances.

**REFERENCE BOOKS:**

1. Income Tax Law and Practice - N.Hariharan.
2. Business Taxation – T.S.Reddy/Hari Prasad Reddy.

### Skill Based Elective –VI

Course Code	Course Title	L	T	P	C
17122SEC06AL	Packages Lab –VI	0	0	2	1

### FLASH

1. Drawing and painting original art by using simple objects in flash.
2. Develop a Flash Document by applying different type of Styles in Text with Animations.
3. Create a frame-by-frame animation technique.
4. Develop a program for animation with motion Tweening.
5. Develop a program for animation with shape Tweening.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animation by using Movie Clip and Graphic Symbols.

#### COURSE OUTCOME:

- Understand what Flash is and what you can do with it.
- Create and Manage content.
- Manage Website Content.
- Create and Edit Symbols.
- Use the Timeline.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17160SEC06B	<b>Life Skills and Other Skills</b>	0	0	2	1

**UNIT I                      Life Skills**

**Life Skills** - Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. -Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. - Occupational Safety , First-aid

**UNIT II                      Other Skills**

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

**COURSE OUTCOME:**

- Gain Self Competency and Confidence.
- Practice Emotional Competency. Gain Intellectual Competency. Gain an edge through Professional Competency.

Course Code	Course Title	L	T	P	C
17111SEC06L	Communicative English Lab-VI	0	0	2	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills
- To learn to manage time and stress
- To widen creative thinking
- To enrich the skill of working in a group

**OUTCOME:**

- Develop communicative skills
- To be a good team worker

**UNIT –I**

Simple, Compound and Complex

**UNIT –II**

Note making

**UNIT –III**

Precise writing

**UNIT –IV**

Developing a story

**UNIT –V**

Essay writing

**Lab Note**-Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

**Viva**-Group discussion

**Exam components**-Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**OUTCOME:**

- Develop communicative skills
- To be a good team worker

**REFERENCES:-**

English Grammar

-Wren and Martin

English Grammar and Composition

-Radhakrishna Pillai

Technical Communication

-Meenakshi Sharma & Sangeetha Sharma

Essentials of Business Communication

-Rajendra Pal & J.S Korlahalli Sultan Chand & Sons

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122PRW67	Project Work	0	0	0	4

Each student will develop and implement individually developed application software based on any of the latest technologies.

COURSE OUTCOME:

- An ability to apply knowledge of computing and mathematics appropriate to the discipline.
- An ability to identify, formulate, and develop solutions to computational challenges.
- An ability to design, implement, and evaluate a computational system to meet desired needs within realistic constraints.

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.C.A., curriculum, the following Research Skill Based Courses are introduced in the B.C.A., curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
IV	Project Work	4

## Blueprint for assessment of student's performance in Research Led Seminar Course

●	<b>Internal Assessment:</b>	<b>40 Marks</b>
●	Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks	
●	Seminar Review Presentation : 10 Marks	
●	Literature Survey : 10 Marks	
●	<b>Semester Examination :</b>	<b>60</b>
	<b>Marks</b>	

(Essay type Questions set by the concerned resource persons)

## Blueprint for assessment of student's performance in Research Methodology Courses

	<b>Continuous Internal Assessment:</b>	<b>20 Marks</b>
●	Research Tools( Lab) :	10 Marks
●	Tutorial:	10 Marks
	<b>Model Paper Writing:</b>	<b>40 Marks</b>
●	Abstract:	5 Marks
●	Introduction:	10 Marks
●	Discussion:	10 Marks
●	Review of Literature:	5 Marks
●	Presentation:	10 Marks
	<b>Semester Examination:</b>	<b>40 Marks</b>
	<b>Total:</b>	<b>100 Marks</b>

---

## SCHOOL OF ARTS AND SCIENCE

### DEPARTMENT OF COMPUTER SCIENCE

#### M.Sc., COMPUTER SCIENCE- REGULATION 2017

#### COURSE STRUCTURE

##### Semester I

Course Code	Course Title	L	T	P	C
17220SEC11	J2EE Programming	6	0	0	4
17220SEC12	RDBMS	6	0	0	4
17220SEC13	WAP & XML	6	0	0	4
17212SEC14	Discrete Mathematics	6	0	0	4
17220SEC15L	J2EE programming Lab	0	0	3	2
17220SEC16L	RDBMS Lab	0	0	3	2
17220RLC17	Research Led Seminar	-	-	-	1
	<b>Total</b>	<b>24</b>	<b>0</b>	<b>6</b>	<b>21</b>

##### Semester II

Course Code	Course Title	L	T	P	C
17220SEC21	Python Programming	5	0	0	4
17220SEC22	Cryptography & Network Security	5	0	0	4
17220SEC23	Software Engineering	5	0	0	3
17220SEC24L	Python Programming Lab	0	0	3	2
17220SEC25L	Core Practical IV : UNIX Lab	0	0	3	2
17220DSC26_	Discipline Specific Elective – I	5	0	0	4
17220RMC27	Research Methodology	4	0	0	3
17220BRC28	Participation in Bounded Research	-	-	-	2
	<b>Total</b>	<b>24</b>	<b>0</b>	<b>6</b>	<b>24</b>

### Semester III

Course Code	Course Title	L	T	P	C
17220SEC31	Data Mining and Warehousing	4	0	0	5
17220SEC32	Open Source programming	4	0	0	5
17220SEC33	.Net Programming	4	0	0	4
17220SEC34L	.Net Programming Lab	0	0	3	2
17220SEC35L	Open Source programming Lab	0	0	3	2
17220DSC36_	Discipline Specific Elective – II	5	0	0	4
17220SRC37	Societal project (Mini Project)	0	0	0	4

Course Code	Course Title	L	T	P	C
17222SEC31	Core XI:J2EE Programming	4	0	0	4

### AIM:

To enable the students to develop standalone programming and Internet based application

### OBJECTIVES:

- To learn java programming concepts under Client Sever environment
- To develop Database Application in Java .
- To learn java programming concepts like reflection, native code interface, threads etc
- To develop network programs in java.
- To understand concepts needed for distributed and multi-tier applications.
- To understand issues in enterprise application development.

### UNIT I

Fundamentals of OOPS-Overview of java language-Data type-Variables and arrays-Class Fundamentals-declaring objects-constructor-overloading methods-inner classes-method overriding.

### UNIT II

Applet class-Applet architecture-Html applet tag-Passing parameters in applet-AWT classes-Window fundamentals-AWT controls- Handling events by extending AWT components.

### **UNIT III**

Java Database Connectivity: JDBC/ODBC Bridge-The connectivity model being used-The java.sql Package-The JDBC Exception Classes- JDBC working with user interface-Database connectivity- Data manipulation-Data Navigation-Data Storage.

### **UNIT IV**

RMI: What is Distributed Object System? -Distributed object Technologies-RMI for distributed computing-RMI Architecture- RMI Registry service-Creating RMI Applications-Steps involved in running the RMI Applications-Removing objects from a Registry.

### **UNIT V**

Java and XML: Generating an XML Document- Java Servlets– Java Server Pages

#### **COURSE OUTCOME:**

- Create Web Applications using Java Servlet.
- Manage Web Session using Servlet and JSP.
- Use JavaBeans in JSP.
- Develop Custom Tags in JSP.
- Handle Errors and Exceptions in Web Applications.
- Use NetBeans IDE for creating J2EE Applications.

#### **REFERENCES:**

1. “JAVA2 COMPLETE REFERENCE” Fourth Edition, 2001, Herbert Schildt.  
(For UNIT- I & II: Chapters 2, 3, 6, 7, 8, 19, 21, 22)
2. WEB ENABLED COMMERCIAL APPLICATION DEVELOPMENT USING....JAVA 2.0-  
IVAN BAYROSS. (For UNIT III& IV: Chapters 11, 13).
3. THE COMPLETE REFERENCE J2EE - KEOGH  
(For UNIT – V: Chapters 9, 10, 11)

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SEC12	Core II : RDBMS	6	0	0	4

**AIM :**

To provide an in-depth knowledge of Relational database system using Oracle.

**OBJECTIVES:**

- To understand about SQL Queries.
- To learn about Oracle Web Application.
- To impart knowledge in transaction processing, concurrency control techniques and recovery Procedures.

**UNIT-I**

Introduction- File systems versus Database systems – Data Models – DBMS Architecture – Data Independence –Introduction Relational Model and E-R model.

**UNIT-II**

Introduction to SQL – Basic structure and Basic operations of SQL – Set operations - Aggregate functions – Nested queries – Join expressions and views–Functions and procedure – Triggers

**UNIT-III**

Relational query languages - Relational algebra – Tuple relational calculus – Domain relational calculus – Relational database design - Functional dependency – Normalization – 1NF,2NF,3NF and BCNF

**UNIT-IV**

Transaction management - Transaction Processing –Properties of Transactions - Serializability – concurrency control lock based protocols – Deadlock handling Time Stamp based protocol - Validation Techniques - Recovery system - Log Based Recovery.

## **Unit-V**

Data base System Architecture – Centralized client-server Architecture- Server system Architecture – Parallel Data bases – Distributed data bases – Distributed Data storage – Distributed transaction – commit protocol – Concurrency control in Distributed Database.

### **COURSE OUTCOMES:**

- Understand the basic concepts of the database and data models.
- Design a database using ER diagrams and map ER into Relations and normalize the relations.
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.

Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

### **REFERENCES:**

1. Abraham Silberschatz, Henry F.Korth and S.Sundarshan “Database System Concepts”, Fifth Edition, McGraw Hill, 2010.
2. C.J. Date, “An Introduction to Database Systems”, Eight Edition, Pearson Education Delhi, 2003.

Course Code	Course Title	L	T	P	C
17220SEC13	Core III : WAP & XML	6	0	0	4

**AIM :** To provide an in-depth knowledge of WAP &XML

**OBJECTIVES:**

- To make the students to understand of the various applications of XML in the areas of information representation
- To understand the concept of Presentation Oriented Publishing
- To know about Message Oriented Computing and Application Configuration.
- To have a knowledge on Web Services Protocols.

**UNIT-I**

Overview of wap: wap&wireless world- wap application architecture – wap internal Structure – Wap versus web-setting up wap: available software products –wap resources –the development tool kit

**UNIT-II**

Wap gateways: definition –functionality of a wap gateways the web model versus wap model – positioning of a wap gateway in the network-selecting a wap gateway Basic WML: extensible mark-up language- WML structure -a basic WML card-text formatting-navigation –advance display features

**UNIT-III**

Interacting with the user: making a selection-events-variable-input parameter passing- WML script-need for WML script-lexical structures-variable & literal-operators-automatic Data type conversion-control constructs-functions using the standard libraries-pragmas-dealing with errors.

**Unit-IV**

Xml-introduction to Xml-an eagle’s eye-view of xml-xml definition –life of an xml document-related technologies-an introduction to xml application-xml application-xml for xml- first xml document structuring data: xmlizing the data-the advantages of the xml format-preparing style sheet for document display.

## **Unit-V**

Attributes, empty tags and xsl: attribute versus element- empty tags- xsl- well formed Xml Document- foreign language and non – roman text- non roman scripts, character set, fonts and glyphs- legacy character set –Unicode character set- procedure to write xml in Unicode.

### **COURSE OUTCOME:**

- To learn the basics of creating XML documents, transforming XML documents, and validating XML documents.
- More specifically, you will learn the basics and history of XML and how to write your own XML documents.

### **TEXT BOOK:**

Unit-1, 2,3: Professional WAP with XML, WML scripts – Charles Arehat.

Unit-4, 5: XML TM BIBLE – Elliotte vusty Harold

Course Code	Course Title	L	T	P	C
17212SEC14	Core IV: Discrete Mathematics	6	0	0	4

**AIM:**

To provide in-depth knowledge of Mathematical logics, Boolean Algebra.

**OBJECTIVES:**

- To understand the concept of Set Theory and Functions.
- To solve the Recurrence Relations using Generating functions.

**UNIT I**

Sets, Relations & Functions : Property of binary relations, Equivalence, Compatibility, Partial ordering relations, Hasse diagram, Functions, Inverse function, Compositions of functions, Recursive functions.

**UNIT II**

Mathematical logic : Logic operators, Truth tables, Theory of inference and deduction, Mathematical Calculus, Predicate Calculus, Predicates and Qualifiers.

**UNIT III**

Groups & Subgroups : Group axioms, Permutation groups, Cosets, Normal subgroups, Semi groups, Free semi groups, Monoids, Sequential Machines, Error Correcting Codes, Modular arithmetic Grammars.

**UNIT IV**

Lattices & Boolean Algebra: Axiomatic definition of Boolean algebra as algebra as algebraic structures with two operations, Basic results truth values and truth tables, The algebra of propositional functions, Boolean algebra of truth tables.

## **UNIT V**

Combinatorics & Recurrence Relations : Disjunctive and sequential counting, Combinations and permutations, Enumeration without repetition, Recurrence Relation, Fibonacci relation, Solving recurrence relation by Substitution, Solving non recurrence relation by conversion to linear recurrence relation.

### **COURSE OUTCOME:**

- explain the fundamentals of counting.
- Explains permutation notion.
- Calculates the number of subsets of a given size via binomial coefficient.
- Finds number of subsets.

### **REFERENCES:**

1. Trembly J.P & Manohar. P. “Discrete Mathematical Structures with Applications to Computer Science”.
2. Kolman, Busy & Rose “ Discrete Mathematical Structures “PHI
3. K.D Joshi “ Foundations of Discrete Mathematics” , Wiley Eastern Limited.
1. Seymour Lipschutz & March Lipson Tata Mc Graw Hill.
2. C.L.Liu “ Elements of Discrete Mathematics “ Tata Mc Graw Hill.

Course Code	Course Title	L	T	P	C
17220SECL15	Core Practical I: : J2EE programming Lab	0	0	3	2

1. Load an image on to applet. As the user selects portions of this image, rectangular regions corresponding to the selection should be highlighted by enveloping them in rectangles (use mouse events). Also the user can change the colors of selected regions.

2. Create an application, which consists of a dialog box that could be used to obtain an user name and a password to connect to some on line service. The dialog box consists of two fields user name, password and two buttons of Ok & Cancel for accepting user input.

3. Write a java program, which will make balls of various colors to move within the frame windows.

4. Write a JSP Program to manipulate the following information:

- a. Last Date Visited
- b. Last Time Visited
- c. Number of Visited

4. Create Mark List Program using JDBC with UI Concept.

5. Create a SERVLET Program with JDBC.

6. Create a JSP Program to display a message.

7. Create a conversation using RMI concept.

#### COURSE OUTCOME:

- Develop error-free, well-documented Java programs; develop and test Java network, search engine, and web framework programs.
- Learn how to write, test, and debug advanced-level Object-Oriented programs using Java.

Course Code	Course Title	L	T	P	C
17220SECL16	Core Practical II: RDBMS Lab	0	0	3	2

1. Creating, Updating and Inserting into databases and simple queries.

2. Uses of Select statement – for queries using

(i) AND,OR,NOT Operations, WHERE clause

(ii) UNION, INTERSECTION , MINUS

(iii) Sorting and Grouping

3. Nested queries using SQL

(i) Sub queries

(ii) Join

4. Built-in functions of SQL

5. Creation of simple forms

6. Use of indexes, creating views and querying in views

7. Cursors, triggers and stored procedures and functions

8. Case Studies

i.Student Evaluation systems

ii.Pay-roll system

iii. Income tax calculation

iv.Seat reservation problems

v.Mark sheet preparation

#### COURSE OUTCOME:

- Students get practical knowledge on designing and creating relational database systems.
- Understand various advanced queries execution such as relational constraints, joins, set operations, aggregate functions, trigger, views and embedded SQL.

Course Code	Course Title	L	T	P	C
17220SEC21	Core V : Python Programming	5	0	0	4

## AIM

To enable the student to be familiar with Python Programming.

## OBJECTIVES:

On successful completion of the course the student should have understood the concepts in Python and its application.

### Unit - I

Core Python: Introduction-features-Comparative study-Comments-Operators-Variables and Assignments-Numbers-String-List and Tuple-Dictionary-Statements and Iterative statements-list comprehensive-Errors and Exception-functions-Classes-Modules-Useful function. Basics: Syntax and Statements-Variable Assignments-Identifier-Style-Memory Management-Application Example. Objects: Introduction-Standard Type- Built-in-type-Internal type-Standard type operator and Built-in functions-Categorizing standard type-Unsupported type.

### Unit – II

Numbers: Introduction- Integer-Floating Point-Complex numbers-Operators-Built-in-functions-Other numeric type-Sequence-Strings-Strings and Operator-String only operator-Built-in-Functions-Built-in-Methods-String Features-Unicode-Related Modules.

### Unit – III

List-Operators-Built-in-Functions-Built-in-Methods-Features of List-Tuple: Introduction-Operators and Built-in-Functions-Features-Related Modules-Mapping type: Dictionaries-Operators-Built-in and Factory Functions-Built-in- Methods. Set type: Introduction-Operators-Built-in Function-Built-in Methods-Related Modules-Conditional and looping statement.

## **Unit – IV**

File: Objects- Built in Functions-Methods-Attributes-Standard files-Command line Argument-File System-File Execution-Persistent Storage Modules-Related Module. Class: Introduction-Class and Instance- Method calls. Exception and Tools: Why use it?-Exception roles-Short story-Try/finally statement.

## **Unit – V**

Regular Expression: Introduction-Special Symbols and characters-Regexes and Python-Examples of Regexes. Network Programming: Architecture-Socket. Internet Client Programming- Transferring files-Email.GUI Programming: Introduction-Tkinter and Python.DB Programming: Introduction-Python DB-API-Non-Relational DB. Web Services: Introduction-Microblogging with Twitter.

### **COURSE OUTCOME:**

- Programming in Python.
- Implementing data types, statement, operators and strings.
- Implementing OOPs concept in Python.
- Creating GUI applications using Python.
- Connecting with databases.

### **REFERENCES:**

1. Chun, J Wesley, Core Python Programming, 2nd Edition, Pearson, 2007 Reprint 2010.
2. Wesley J Chun Core python Application Programming,3rd Edition,
3. Lutz, Mark, Learning Python, 5th Edition, O Rielly

Course Code	Course Title	L	T	P	C
17220SEC22	Core VII: Cryptography & Network Security	5	0	0	4

**AIM:**

To introduce about Internet Security in terms of measures to deter, prevent, detect, and correct security violations that involve the transmission of information

**OBJECTIVES:**

- To know the methods of conventional encryption.
- To understand the concepts of public key encryption and number theory
- To understand authentication and Hash function.
- To know the network security tools and system level security used.

**UNIT I**

CLASSICAL ENCRYPTION TECHNIQUES: Symmetric Cipher Model-substitution techniques-transposition technique-Rotor machine-Steganography.BLOCK CIPHERS AND THE DATA ENCRYPTION STANDARD: Simplified DES-Block cipher principles-The data encryption standard-the strength of DES-Differential and linear cryptanalysis-Block cipher design principles-Block cipher modes of operation.

**UNIT II**

**PUBLIC KEY CRYPTOGRAPHY AND RSA:** Principles of public key cryptosystem-The RSA algorithm.**KEY MANAGEMENT OTHER PUBLIC KEY CRYPTOSYSTEMS:** key management-Diffie-Hellman Key Exchange-Elliptic curve Arithmetic-Elliptic curve cryptography.

**UNIT III**

HASH ALGORITHM :MD5 Message Digest Algorithm-Secure Hash Algorithm-RIPEMD-160-HMAC.DIGITAL SIGNATURE AND AUTHENTICATION PROTOCOLS: Digital Signatures-Authentication Protocols-Digital Signature Standard.

**UNIT IV**

AUTHENTICATION APPLICATION : Kerberos-X.509 Authentication Service-Recommended Reading and Websites.ELECTRONIC MAIL SECURITY: Pretty Good Privacy-S/MIME IP Security : IP Security Overview-IP security Architecture-Authentication Header-Encapsulating Security Payload- Combining Security Associations -Key Management.WEB SECURITY : Web security considerations – Secure Socket Layer and Transport Layer Security – Secure Electronic Transactions.

## UNIT V

**INTRUDERS : Intruders – Intrusion detection – Password management. MALICIOUS SOFTWARES : Viruses and Related Threats – Virus countermeasures. FIREWALLS: Firewalls Design Principles-Trusted Systems.**

### **OUTCOMES:**

**Upon Completion of the course, the students should be able to:**

- Compare various Cryptographic Techniques
- Design Secure applications
- Inject secure coding in the developed applications

### **REFERENCES:**

1. “Cryptography and Network Security “ – William Stallings – 3<sup>rd</sup> Edition Pearson Education 2003.
2. “Network Security essentials Applications and Standards”, William Stalings , Pearson Education 2007.

Course Code	Course Title	L	T	P	C
17220SEC23	Core VIII: Software Engineering	5	0	0	3

**AIM:**

To introduce the methodologies involved in the development and maintenance of Software (i.e) over its entire life cycle.

**OBJECTIVES:**

- To be aware of Softwares
- Different Life Cycle models.
- Requirements dictation process.
- Verification Validation techniques.
- Project planning and Management.

**UNIT I**

Introduction - definitions - size factors - quality and productivity factors - managerial issues. Planning a software project - introduction - defining the problem - developing a solution strategy - planning the development process - planning an organizational structure - other planning activities.

**UNIT II**

Software cost estimation - cost factors - cost estimation techniques staffing level estimation - estimating soft- ware maintenance costs. Software requirements definition - software requirement specification - formal specification techniques - languages and processors for requirements.

**UNIT III**

Software design - fundamental design concepts - modules and modularization criteria - design notations - design techniques - detailed design considerations - real time and Distributed system design - test plans - milestones, walkthrough and inspections - design guidelines.

**UNIT IV**

Implementations issues - structured coding techniques - coding style - standards and guidelines - documentation guidelines -data abstraction - exception handling - concurrency mechanisms.

**UNIT V**

Verification and validation techniques - quality assurance - walkthrough and inspections - static analysis - symbolic execution - UNIT testing and debugging - system testing - formal verification. Software maintenance - enhancing maintainability during development - managerial aspects - configuration management - source code metrics - other maintenance tools and techniques.

## **OUTCOMES:**

- Get an insight into the processes of software development
- Able to understand the problem domain for developing SRS and various models of software engineering
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

## **REFERENCES:**

1. Software Engineering Concepts - Richard Fairley TMH
2. Roger S.pressman, "Software engineering", 5th edition, 2001, MGH publishers.
3. Marlim L.Shoeman, "Software Ezngineering", 1983,MGH Publishers.

Course Code	Course Title	L	T	P	C
17220SECL24	Core Practical III: Python Programming Lab	0	0	3	2

1. Find the square root of a number (Newton's method)
2. Exponentiation (power of a number)
3. Find the maximum of a list of numbers
4. Linear search and Binary search
5. Selection sort, Insertion sort
6. Merge sort
7. First n prime numbers
8. Multiply matrices
9. Programs that take command line arguments (word count)
10. Find the most frequent words in a text read from a file

#### COURSE OUTCOME:

- The course is designed to provide Basic knowledge of Python.
- Python programming is intended for software engineers, system analysts, program managers and user support personnel who wish to learn the Python programming language.
- Learning Outcomes: Problem solving and programming capability.

Course Code	Course Title	L	T	P	C
17220SECL25	Core Practical IV : UNIX Lab	0	0	3	2

1. Write a menu driven shell program for the following :
  - a. List of files.
  - b. Processes of users.
  - c. Today's Date
  - d. Users of system.
  - e. Quit of Unix
  
2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.
  
3. Write a shell program which accepts the name of a file from the standard input and perform the following
  - a. Accept five names in a file.
  - a. Sorts the names in existing file.
  - b. Lists unsorted and sorted file.
  - c. Quit
  
4. Write a menu driven shell program to copy, edit, rename and delete a file.
  
5. Write a menu driven shell program to perform the following task
  - a. Write a sentence in file.
  - b. Search for a given word or pattern in an existing file.
  - c. Quit.
  
6. Write a shell program to prepare electricity bill for domestic consumers.
 

For first 100 units – Rs. 0.75 / Unit  
 For next 100 units – Rs. 1.50 / Unit  
 Above 200 units – Rs. 3.00 / Unit

Prepare the bill for the following format.
  
7. Write a shell program to display the result PASS or FAIL using the information given below student name ,student reg.no., mark1,mark2,mark3,mark4 the minimum pass for each subject is 50.
  
8. Merge the contents of the file file1,file2 and store in another file.

## COURSE OUTCOME

- Use Linux commands to manage files and file systems.
- Create and execute BASH scripts. Explain the structure of the Linux operating system.

Course Code	Course Title	L	T	P	C
17220DSC26A	Artificial Intelligence and Expert Systems	4	0	0	4

**Aim:**

To Acquire Knowledge on various AI Techniques and Expert Systems.

**Objective:**

- To learn AI Basic Concepts
- To understand Expert Systems Architectural-Components
- To study Expert System development process
- 

**UNIT I**

The AI definition - AI Techniques- Problems, Problem Space and search- Defining the problem as a state space search- Problem Characteristics- Heuristic Search Techniques- Generate and Test-hill Climbing- Best First Search- Problem reduction - Constraint Satisfaction- means -ends analysis.

**UNIT II**

Game Playing- Min-Max Procedure- Adding Alpha-Beta Cutoffs- Additional Refinements- Searching AND/OR Graphs - Using Predicate Logic- Representing Simple Facts and Logic- Representing instance and IS a relationships- Computable functions and predicates- Use of the predicate calculus in AI Resolution- natural deduction.

**UNIT III**

Representing knowledge using rules- Procedural versus declarative knowledge- Logic Programming- Forward versus Backward Reasoning- Resolving within AND/OR Graphs matching- control knowledge-Symbolic Reasoning under uncertainty- Non-monotonic reasoning- Implementation issues- - Fuzzy Logic.

**UNIT IV**

Expert Systems- Architectural-Components- Explanation facilities- Knowledge acquisition.

## UNIT V

Expert System development process- Non-formal representation of knowledge- Semantic networks- Frames- Scripts- Expert System Tools.

### OUTCOMES:

At the end of the course, the student should be able to:

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalize a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.
- 

### REFERENCE BOOK:

1. For Units I, II, III: Elaine Rich and Kevin Kaight, “**Artificial Intelligence**”, Tata McGraw Hill, 2<sup>nd</sup> Edition, 1991.
2. For Units IV, V: David W. Rolston, “**Principles of Artificial Intelligence and Expert Systems Development**”, McGraw Hill.

Course Code	Course Title	L	T	P	C
17220DSC26B	<b>Core XII:</b> Distributed Operating System	4	0	0	4

**Aim:** To Acquire Knowledge on Distributed Operating System

**Objectives:**

- This Subject provides students with an in-depth knowledge about the operating system.
- The former treats the standard principles of single processor system, including processes, synchronization, I/O, deadlocks, Memory Management, File Management systems, security.
- This subject covers distributed operating system in detail, including communication process, file system and memory management synchronization but this time in the context of distributed systems.

**UNIT-I:**

Introduction to distributed system-what is a distributed system-goals-h/w concepts- s/w concepts – design issues. Communication in distributed systems: layered protocols –asynchronous transfer mode network.

**UNIT-II:**

The client/server model-remote procedure call- group communication. Synchronization in distributed systems: clock synchronous-mutual exclusion-election algorithm-atomic transaction-deadlock in distributed system.

**UNIT-III:**

Process & processors in distributed system: Threads system-models-processor allocation-scheduling in distributed system-fault tolerance-real time distributed system.File system: distributed file system design-distributed file system implementation-trends in distributed file system.

**UNIT-IV:**

Distributed shared memory: Introduction to distributed shared memory- consistency models-page based distributed shared memory-shared variable distributed shared memory-object based distributed shared memory-comparison.

**UNIT-V:**

Naming facility in distributed operating system-security in distributed operating system.

**Case studies:** Amoeba-V-system-Mach-Chorus-DCE-comparison.

**COURSE OUTCOME:**

At the end of the course, students are expected to be proficient in details of operating systems and be sensitive to implementation and performance tuning of operating systems in preparation to entering the industry or in pursuit of graduate studies. 2419

**REFERENCE BOOK:**

**“Distributed Operating System”** – Andrew S.Tanenbaum.

**“Distributed Operating Systems”** – Pradeep K.Sinha.

Course Code	Course Title	L	T	P	C
17220DSC26C	Computer Architecture and Parallel Processing	4	0	0	4

**Aim:**

To understand the basic structure of a digital computer and to study the operations of internal components.

**Objective:**

- To impart the knowledge in the field of digital electronics.
- To impart knowledge about the various components of a computer and its internals.
- To design and realize the functionality of the computer hardware with basic gates and other components using combinational and sequential logic.
- To understand the importance of the hardware-software inter face.

**Unit I:**

**Introduction to Parallel Processing:** Evolution of computer system-Parallelism in Uni processor System- Parallel Computer Structure-architectural classifications schemes-Parallel processing Application.

**Unit II:**

**Memory and Input / Output Subsystems:** Hierarchical Memory Structure-Virtual Memory System- Memory Allocation and Management- Cache Memories and Management- Input / Output Subsystems.

**Unit III:**

**Principles of Pipelining and Vector Processing:** An Overlapped Parallelism- Instruction and Arithmetic Pipelines-Principles of Designing Pipelined Processors-Vector Processing Requirement-Vector Super Computer-Scientific Attached Processors- Recent Vector Processors.

**Unit IV:**

**Multiprocessor Architecture and Programming:** Functional Structures-Interconnection Networks-Parallel Memory Organization-Multiprocessor Operating Systems.

**Unit V:**

**Multiprocessing Control and Algorithms:** Inter process communication mechanism-System Deadlock and Protection-Multiprocessor Scheduling Strategies-Parallel Algorithm Multiprocessor.

## **OUTCOMES:**

**After completing this course, the student will be able to:**

- Design digital circuits by simplifying the Boolean functions
- Understand the organization and working principle of computer hardware components mapping between virtual and physical memory
- Acquire knowledge about multiprocessor organization and parallel processing
- Trace the execution sequence of an instruction through the processor

## **TEXTBOOK:**

**COMPUTER ARCHITECTURE AND PARALLEL PROCESSING**

-Kai Hwang and Faye' A. Briggs

Course Code	Course Title	L	T	P	C
17222CRM	Research Methodology	3	0	0	3

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis.

**OUTCOME:**

Ability to develop research questions and the various research strategies and compile research results in terms of journal manual scripts.

**PREREQUISITIES:**

Research methodology course in UG level or equivalent knowledge.

**UNIT-I Introduction to research methodology**

Objectives of research – type of research – Significance of research. Research methodology – Research and scientific method – Criteria of good research – Problems encountered by research in India.

**UNIT-II Data base and Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patens – Secondary sources – Listing of titles – Abstracts –Chemical Abstract Service – Reviews – Monographs – Literature search.

**UNIT-III Data Analysis:**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors –normal distribution curve – Statistical treatment of finite samples – T test and F test (ANOVA) co – Variance (ANCOVA) correlation and multiple regression.

#### **UNIT-IV Thesis and paper writing:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – Reference and Appendices.

#### **UNIT-V Application on MATLAB:**

Numerical Integration – Numerical integration, ordinary differential equations, partial differential equations, and boundary value problems - Fourier analysis – Fourier transforms, convolution.

#### **COURSE OUTCOME:**

- Demonstrate the ability to choose methods appropriate to research aims and objectives.
- Understand the limitations of particular research methods.
- Develop skills in qualitative and quantitative data analysis and presentation.
- Develop advanced critical thinking skills.

#### **References:**

5. Introduction to MATLAB for Engineers by William J. Palm III.

Course Code	Course Title	L	T	P	C
17220SEC31	Core XI: Data Mining and Warehousing	4	0	0	5

**AIM:**

To emphasis on the design aspects of Data mining and Warehousing.

**OBJECTIVES:**

- To introduce the concept of Data Mining with in detail coverage of basic tasks metrics issues and implication .Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of Data Warehousing with special emphasis on architecture and design.

**UNIT I**

Introduction: Data mining-data mining functionalities-classification-Task Primitives-Data processing: data cleaning-data integration and transformation-data reduction-data discretization and concepts.

**UNIT II**

Data mining concepts: Efficient and scalable mining methods-various kinds of association rules- from association mining to correlation analysis-constraint based association mining.

**UNIT III**

Classification and prediction: classification by decision tree-Bayesian classification- classification by back propagation-prediction. Cluster analysis: types of data in Cluster analysis-partitioning methods –hierarchical methods.

**UNIT IV**

Data ware house: What is data warehousing-Multidimensional data model-data ware house architecture-Data ware house implementation-From data ware housing to data mining.

**UNIT V**

Multidimensional analysis: spatial data mining-Multimedia data mining-Text mining-Mining and world wide web-Data mining applications

## **OUTCOMES:**

**After completing this course, the student will be able to:**

- Apply data mining techniques and methods to large data sets.
- Use data mining tools
- Compare and contrast the various classifiers.

## **REFERENCES:**

1. "Data Mining concept & Techniques", Jiawei Han & Micheline Kamber, Morgan Kaufmann Publications, 2000.
2. "Data Warehouse Project Management", Sid Adman & Larissa T. Moss, Addison Wesley Longman, 2000.

Course Code	Course Title	L	T	P	C
17220SEC32	Core X: Open Source programming	4	0	0	4

**AIM:**

To improve the Programming Knowledge of VBScript, JavaScript, Perl & PHP.

**OBJECTIVES:**

- To have the knowledge of VBScript, JavaScript.
- To explore the use of Perl & PHP.

**UNIT I:**

VBScript –VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Data type Conversion Features – Putting it all together with VBScript – using the Script Debugger.

**UNIT II:**

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. JavaScript and Html Documents: The JavaScript Execution Environment –The Document Object Model – Element Access in JavaScript – Events and Event Handling – Handling Events from Body Elements, Button Elements, Text Box and Password Elements – The DOM 2 Event Model – The navigator Object.

**UNIT III:**

The Basics of Perl: Origins and Uses of Perl – Scalars and their Operations – Assignment Statements and Simple Input and Output – Control Statements – Fundamentals of Arrays – Hashes – References – Functions – Pattern Matching – File Input and Output. Using Perl for CGI Programming: The Common Gateway Interface – CGI Linkage – Query String Format – The CGI.pm Module – Cookies.

**UNIT IV:**

Introduction to PHP: Origins and Uses of PHP – Overview of PHP – General syntactic characteristics – Primitives, Operation and Expressions – Output – Control Statements – Arrays – Functions – Pattern Matching – Form Handling – Files – Cookies – Session Tracking.

**UNIT V:**

Database Access through the Web: Relational Databases – An Introduction to the Structured Query Language – Architecture for Database Access – The MySQL Database System – Database Access with Perl and MySQL – Database Access with PHP and MySQL – Database Access with JDBC and MySQL .

**OUTCOMES:**

- Understand process of executing a PHP-based script on a webserver.
- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops.
- Understand the paradigm for dealing with form-based data, both from the syntax of HTML forms, and how they are accessed inside a PHP-based script.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SEC33	Core IX: .Net Programming	4	0	0	4

## **AIM**

To cover the fundamental concepts of the .NET framework.

## **OBJECTIVES**

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

## **UNIT I**

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

## **UNIT II**

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

## **UNIT III**

Interfacing with the End user-Asp.NET Applications.

## **UNIT IV**

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

## **UNIT V**

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

## **OUTCOMES:**

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

**REFERENCES:**

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.
4. Visual Basic.Net Black Book- Steven Holzner.

Course Code	Course Title	L	T	P	C
17220SECL34	Core Practical V: .Net Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:
  - (i). Insertion (ii) Updating (iii) Deletion (iv) Selection

Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

#### **COURSE OUTCOMES:**

- **Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET**
- **Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.**
- **Utilize the .NET environment to create Web Service-based applications and components.**

Course Code	Course Title	L	T	P	C
17220SECL35	Core Practical VI: Open Source programming Lab	0	0	3	2

1. Prepare a web page in ASP which displays course submission form using objects.
2. Write a program for addition using VBScript.
3. Write a program for finding maximum number using JavaScript.
4. Develop a web page which display window shrinking using JavaScript
5. Write a program in JavaScript a)OnMouse move b)OnMouse out.
6. Write a Perl script using array find element in list.
7. Write a Perl script for simple manipulation.
8. Develop a PHP program and check message passing mechanism between pages.
9. Develop a PHP program to display student information using MYSQL table.
10. Develop a college application form using MYSQL table.

**COURSE OUTCOME:**

- Identify, analyze, develop, implement, verify and document the requirements for a computing environment.
- Contribute to the diagnostics, troubleshooting, documenting and monitoring of technical problems using appropriate methodologies and tools.

Course Code	Course Title	L	T	P	C
17220DSC36A	<b>Core</b> MULTIMEDIA AND IT'S APPLICATIONS	5	0	0	4

**AIM:**

To enable the students to learn the multimedia Systems and its applications.

**OBJECTIVES:**

- To making multimedia presentation.
- To learn the Multimedia animation.
- To study about multimedia and Internet concepts

**UNIT-I:**

Introduction – Definition- Multimedia Hardware- Multimedia Software- MULTIMEDIA networking- Multimedia Applications- Multimedia Environments- Multimedia Computer Components- Multimedia Standards- Multimedia PC.

**UNIT-II:**

Multimedia Information Systems: Limitations in workstation operating systems. Middleware System Services Architecture: Goals of Multimedia System Services- Multimedia System Services Architecture Text: Elements of Text- Using Text in Multimedia Applications- Graphics: Element of Graphics- Images and Color- Graphics file and Application Formats- Obtaining Images for Multimedia use- Using Graphics on Multimedia Applications.

**UNIT-III:**

Digital Audio Representation and Processing: Uses of Audio in Computer Applications- Digital Representations of sound- Transmission of Digital Sound- Digital Audio Signal Processing, Video Technology: Raster Scanning Principles- Sensors for TV Cameras- Color fundamentals- Color Video- Digital Video and Image Compression: Evaluating Compression System- Video Compression Techniques- JPEG Image Compression Standard- MPEG motion Video Compression Standard.

**UNIT-IV:**

Multimedia Communications Systems: Applications Network Services- Network Protocols. Multimedia Conferencing: Teleconferencing systems- Requirements for Multimedia Communications- Multimedia Conferencing Architectures.

## **UNIT-V:**

Multimedia and Internet: Internet- Client/Server Technology- Communications protocol- Internet Addressing- Internet Functions- HTML and Web Authoring. Multimedia development Team: Team Approach- Assembling multimedia Production Team- Multimedia Development Process: Multimedia Project- Structured Multimedia development- casting multimedia project.

### **OUTCOMES:**

- Enhance the perspective of modern computer system with modeling, analysis and interpretation of 2D and 3D visual information.
- Able to understand different realizations of multimedia tools
- Able to develop interactive animations using multimedia tools
- Gain the knowledge of different media streams in multimedia transmission

3. **For Unit V:** David Hillman, “Multimedia Technology and Applications”, Galgotia Publications Pvt. Ltd., year 1998.
4. Fred T. Hofstetter, “Multimedia Literacy”, McGraw Hill, 1995.

Course Code	Course Title	L	T	P	C
17220DSC36B	Compiler Design	5	0	0	4

**AIM :**

To understand the design and implementation of a simple compiler.

**OBJECTIVES:**

- To understand the functions and design of the various phases of a compiler
- To learn the overview of the design lexical analyzer and parser
- To learn the use of compiler construction tools.

**UNIT I**

Introduction to Compilers – Compilers and Translators- Assembly Language – Macros – Structure of a Compiler – Compiler writing tools - Bootstrapping. Lexical Analysis : The role of Lexical Analyzer - Regular expression – Finite Automata - Implementation of lexical analyzer – Context Free Grammars- Derivation and Parse trees.

**UNIT II**

Parsers – Shift reduce parsing – Operator precedence parsing - Top-down parsing – Predictive parsers – Simple precedence parsers – LR parsers – Constructing SLR parsing tables – Constructing Canonical LR parsing tables – Constructing LALR parsing tables – Using ambiguous grammars.

**UNIT III**

Syntax directed translation schemes – Implementation of syntax directed translation schemes - Intermediate code - Postfix notation - Parse trees and Syntax trees - Three address codes, Quadruples and Triples - Translation of assignment statements - Boolean expressions - Postfix translation.

## **UNIT IV**

Symbol tables: The contents of a symbol table - Data structures for symbol tables Representing scope information - Implementation of simple stack allocation scheme- Implementation of block structured languages - Storage allocation in FORTRAN - Storage allocation in block structured languages. Errors - Lexical phase errors - syntactic phase errors - semantic errors.

## **UNIT V**

Code optimization : Principle sources of optimization – Loop optimization – Machine dependent optimization - DAG representation of basic blocks .Code Generation: Problems in code generation - A simple code generator – Register allocation and assignment - Code generation from DAGS – Peephole optimization.

## **OUTCOMES:**

At the end of the course, the student should be able to:

- Design and implement a prototype compiler.
- Apply the various optimization techniques.
- Use the different compiler construction tools

## **REFERENCES:**

1. Principles of Compiler Design – Alfred V.Aho , Jeffrey D. Ullman
2. Compiler Construction William A. Barrett, Rodney M.Bates
3. Compiler Construction for Digital computer- DAVID GRIES.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220DSC36B	Wireless communication Network.	5	0	0	4

## **AIM**

To promote the international exchange of information related to Wireless Communication systems.

## **OBJECTIVES:**

- To understand the concepts of Transmission fundamentals.
- To study the functions of TCP/IP suite.
- To describe communication protocols , data transmission modes and satellite communication.

## **UNIT I**

Introduction – Transmission fundamentals.

## **UNIT II**

Communication Networks – Protocols and TCP/IP suite.

## **UNIT III**

Wireless communication Technology – Antennas and propagation – signal encoding technique – spread spectrum – coding & Error control.

## **UNIT IV**

Wireless networking: satellite communication – cellular wireless networks – cordless systems and wireless local loop – mobile IP and wireless Access protocol.

## **UNIT V**

Wireless LANs: Wireless LAN Technology – WiFi and IEEE802.11 –wireless LAN standard – Bluetooth and IEEE 802.15.

**OUTCOMES:**

Upon Completion of the course, the students should be able to:

- Understand the concepts of Transmission fundamentals.
- Study the functions of TCP/IP suite.
- Describe communication protocols , data transmission modes and satellite communication

**REFERENCES:**

1. William Stallings “wireless communication & Networks”, Second Edition.
2. Blake “wireless communication Technology”
3. Kaveh pahlavan,Prashant Krishnamurthy “Principles of Wireless network”.

Course Code	Course Title	L	T	P	C
17220SEC41	Core XVI :Software Testing	4	0	0	5

**AIM:**

To introduce the methodologies involved in the development and maintenance of Software

**OBJECTIVES**

To be aware of

- Different Life Cycle models software development
- Various Testing methods in software development process

**UNIT I**

Principles of testing – Software Development lifecycle models.

**UNIT II**

Testing: White box testing – Black box testing – Integration testing – System acceptance.

**UNIT III**

Performance – Regression – Internationalization – Adhoc.

**UNIT IV**

Test planning – Test management – Test process – Test reporting.

**UNIT V**

Test Metrics and Measurements.

**OUTCOMES:**

- Test the software by applying testing techniques to deliver a product free from bugs
- Evaluate the web applications using bug tracking tools.
- Investigate the scenario and the able to select the proper testing technique
- Explore the test automation concepts and tools
- Deliver quality product to the clients by way of applying standards such as TQM, Six Sigma
- Evaluate the estimation of cost, schedule based on standard metrics

**REFERENCES:**

1. “Software Testing principles and practices “ by srinivasan Desikan gopalswamy Ramesh.
- 2.” Effective methods for software testing” by William E.perry, Third Edition.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220PRW42	Project work	0	0	0	15

Each student will develop and implement individually developed application software based on any of the latest technologies.

**COURSE OUTCOME:**

- An ability to apply knowledge of computing and mathematics appropriate to the discipline.
- An ability to identify, formulate, and develop solutions to computational challenges.
- An ability to design, implement, and evaluate a computational system to meet desired needs within realistic constraints.

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline. All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc.,(CS) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
II	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffolded Research)	4
IV	Project Work	12

### **Blueprint for assessment of student's performance in Research Led Seminar Course**

●	<b>Internal Assessment:</b>	<b>40 Marks</b>
●	Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks	
●	Seminar Review Presentation : 10 Marks	
●	Literature Survey : 10 Marks	
●	<b>Semester Examination :</b>	<b>60 Marks</b>

(Essay type Questions set by the concerned resource persons)

### **Blueprint for assessment of student's performance in Socio Technical Project**

●	<b>Continuous Internal Assessment through Reviews:</b>	<b>40 Marks</b>
●	Review I : 10 Marks	
●	Review II : 10 Marks	
●	Review III : 20 Marks	
●	<b>Evaluation of Socio Technical Practicum Final Report:</b>	<b>40 Marks</b>
●	<b>Viva- Voce Examination:</b>	<b>20 Marks</b>
●	<b>Total:</b>	<b>100 Marks</b>

### **Blueprint for assessment of student's performance in Research Methodology Courses**

	<b>Continuous Internal Assessment:</b>	<b>20 Marks</b>
●	Research Tools( Lab) :	10 Marks
●	Tutorial:	10 Marks
	<b>Model Paper Writing:</b>	<b>40 Marks</b>
●	Abstract:	5 Marks
●	Introduction:	10 Marks
●	Discussion:	10 Marks
●	Review of Literature:	5 Marks
●	Presentation:	10 Marks
	<b>Semester Examination:</b>	<b>40 Marks</b>
	<b>Total:</b>	<b>100 Marks</b>

\*NEW COURSE STRUCTURE\*

**PONNAIYAH RAMAJAYAM INSTITUTE OF SCIENCE & TECHNOLOGY**  
**[PRIST]**

**Institution Demmed To Be University**

U/S 3 of UGC act 1956  
Vallam, Thanjavur – 613403

**COMPUTER SCIENCE**

---

Department : MCA

Programme : MCA

---

**Graduate Attributes :**

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

**Programme Objectives:**

- To understand the different methods of organizing large amounts of data.
- To introduce GUI programming using Microsoft Foundation Classes
- To learn the fundamental concept of Web Design.
- To develop network programs in java.
- Provides idea on VLAN, VTP, STP and Inter-VLAN Routing.
- To know the network security tools and system level security used
- To get an idea about Sharing Files.

**Programme Outcomes (O<sub>i</sub>):**

- Apply the different data structures for implementing solutions to practical problems
- Trace the flow of information from one node to another node in the network
- Understand the format and use of objects

- Able to Measure the product and process performance using various metrics
- Design Secure applications
- Apply the various optimization techniques

**Courses (C<sub>i</sub>):**

- **Core I:** C Programming and Data structure
- **Core II :** Data communication network
- **Core III :**Computer Architecture
- **Core IV:** Programming in VB
- **Core V :**OOPs with C++
- **Core VI :**Operating system
- **Core VII:** Web Designing
- **Core VII:** Database Management system
- **Core IX:**J2SE Programming
- **Core X :** Software Engineering
- **Core XI:** Relational Data Base Management System.
- **Core XII :** Routing and Switching in LAN
- **Core XIII :**Python Programming
- **Core XIV :**Cryptography Network security
- **Core XV :**Open Source programming
- **Core XVI :** Web Service
- **Core XVII:** Data mining and warehousing
- **Core XVIII:** Grid and Cloud Computing.
- **Core XIX:** .NET Programming
- **Core XX:** Object Oriented System Design
- **Core XXI:** Human Computer Interaction.

#### DISCIPLINE SPECIFIC ELECTIVE COURSES:

Semester	Elective	Course Code	Course Title
IV	I	17222DSC47A	Mobile Computing
		(OR)	
		17222DSC47B	Knowledge based decision support system
		(OR)	

		17222DSC47C	Compiler Design
V	II	17222DSC56A	Multimedia and Graphics
		(OR)	
		17222DSC56B	WAP and XML
		(OR)	
		17222DSC56C	Wireless communication Network

**SOFT SKILL COURSES:**

Semester	Course Code	Course Title
III	172SFSK01L	Soft Skill I
IV	172SFSK02L	Soft Skill II
V	172SFSK03L	Soft Skill III

Course Code	Course Title	L	T	P	C
17222SEC11	Core I: C Programming and Data structure	4	0	0	3

**AIM:**

To provide an in-depth knowledge of Creating C Programs and data structure

**OBJECTIVES:**

- To learn the systematic way of solving problems.
- To understand the different methods of organizing large amounts of data.
- To learn the programming concept.

**UNIT I**

Evaluation and Application of C – Structure of a C program – Data types – Declaration – Operators- Expression- Type conversion- Built-in-Function. Data input and output- Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE –DO, DO-WHILE, FOR, BREAK and CONTINUE.

**UNIT II**

Functions: Defining and accessing functions – passing parameters to functions- arguments – Recursive functions- Storage classes- Arrays: Defining and processing Arrays – Multidimensional arrays – Passing arrays to functions – Arrays and Strings – String functions- String manipulation.

**UNIT III**

Pointers- Pointer declaration- operations on pointers – pointers to functions – pointers and strings – pointers and arrays – array of pointers- structures- structures and pointers-

**UNIT IV**

List ADT: Implementation using arrays, linked list, cursorbased linked lists- Doubly-linked lists, applications of lists- Stack ADT: Concept and Applications- Queue ADT: Queue, Circular queue, Applications. Definitions – Topological sort – breadth-first traversal - shortest-path algorithms – minimum spanning tree

**UNIT V**

Tree ADT: Basics, Tree traversals, Binary Tree, expression trees, applications, binary search tree- Sorting: Insertion Sort – Shell Sort – Heap Sort – Merge Sort – Quick Sort – External Sorting- Balanced Search Trees, AVL trees, Binary Heaps, B-Tree.

### **Course Outcomes:**

- a) Understand the concept of Dynamic memory management, data types, algorithms, Big O notation.
- b) Understand basic data structures such as arrays, linked lists, stacks and queues.
- c) Describe the hash function and concepts of collision and its resolution methods
- d) Solve problem involving graphs, trees and heaps
- e) Apply Algorithm for solving problems like sorting, searching, insertion and deletion of data

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17222SEC12	<b>Core II : Data communication network</b>	5	0	0	4

### **AIM**

To promote the international exchange of information related to communication systems.

### **OBJECTIVES:**

- To understand the concepts of data communications.
- To study the functions of different layers.
- To describe communication protocols , data transmission modes, and satellite communication.

### **UNIT I**

Introduction – Basic concepts – The OSI model

### **UNIT II**

Transmission of digital data – Transmission media – Error detection and Correction

### **UNIT III**

Data link control – Data link protocols – Local area networks

### **UNIT IV**

Transport layer – TCP & UDP – Session layer issues – Presentation layer – Application layer.

### **UNIT V**

Application layer: Email – FTP – HTTP–Compression Techniques. Introduction to ISDN – Broadband ISDN Features – ATM Concept.

**Course Outcomes:**

CO1 : Explain basic concepts, OSI reference model, services and role of each layer of OSI model and TCP/IP, networks devices and transmission media, Analog and digital data transmission K1,K2

CO2 : Apply channel allocation, framing, error and flow control techniques. K3

CO3 : Describe the functions of Network Layer i.e. Logical addressing, subnetting & Routing Mechanism. K2,K3

CO4 : Explain the different Transport Layer function i.e. Port addressing, Connection Management, Error control and Flow control mechanism. K2,K3

CO5 : Explain the functions offered by session and presentation layer and their Implementation. K2,K3

CO6 : Explain the different protocols used at application layer i.e. HTTP, SNMP, SMTP, FTP, TELNET and VPN. K2D

Course Code	Course Title	L	T	P	C
17222SEC13	<b>Core III:</b> Computer Architecture	5	0	0	3

### AIM :

To discuss the basic structure of a digital computer and to study in detail the organization of the Control unit, the Arithmetic and Logical unit, the Memory unit and the I/O unit.

### OBJECTIVES :

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail the operation of the arithmetic unit including the algorithms & implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To study in detail the different types of control and the concept of pipelining.
- To study the hierarchical memory system including cache memories and virtual memory.
- To study the different ways of communicating with I/O devices and standard I/O interfaces.

### UNIT I

Digital logic circuits: Digital computers- Logic gates – Boolean algebra - Map simplification - Combinational circuits - Flip-flops - Sequential circuits.

### UNIT II

Digital components: Integrated circuits – Decoders - Multiplexers - Registers - Shift Registers - Binary Counters - Memory UNIT.

### UNIT III

Data Representation: Data types - Complements – Fixed point representation - Floating point representation – Other binary codes – Error detection codes.

### UNIT IV

Communication methods, Buses, Bus Control, Bus Interfacing, Bus arbitration, IO and system control, IO interface circuits, Handshaking, DMA and interrupts, vectored interrupts, PCI interrupts, pipeline interrupts, IOP organization, multiprocessors, RISC and CISC processors, Superscalar and vector processor.

### UNIT V

Fixed Point Arithmetic, Addition, Subtraction, Multiplication and Division, Combinational and Sequential ALUs,

Carry look ahead adder, RobertsonAlgorithm, Booth's algorithm, non-restoring division algorithm, FloatingPoint Arithmetic, Coprocessor, Pipeline Processing, Modified booth's algorithm

**Course Outcomes:**

1. Understand the basics of instructions sets and their impact on processor design
- 2 Demonstrate an understanding of the design of the functional units of a digital computer system.
3. Evaluate cost performance and design trade-offs in designing and constructing a computer processor including memory.
- 4 Design a pipeline for consistent execution of CSE II Year I - Semester instructions with minimum hazards
- 5 Manipulate representations of numbers stored in digital computers

Course Code	Course Title	L	T	P	C
17222SEC14	Core IV: Programming in VB	5	0	0	4

### AIM:

To make the students to understand the windows programming concepts including Microsoft Foundation Classes.

### OBJECTIVES:

- To introduce the concepts of windows programming.
- To introduce GUI programming using Microsoft Foundation Classes.
- To enable the students to develop programs and simple applications using Visual Basic.

### UNIT I

Introduction to Visual Basic – IDE – Features of VB editor- Anatomy of a form – Working with form properties – Introducing form events and form methods.

### UNIT II

Variables in Visual Basic – Declaring Variables – Data types – Null values Error Value – Empty Value – Scope of a variable – Module level variables – Constants Creating our own constants – Scope of a constant – Converting data types- Arrays - Declaring arrays – PRESERVE Keyword – Redim- Writing codes in VB - Anatomy of a procedure –Subroutines and Functions – Language constructs – For.. Next, While loop Select case. End select, exit statement, with structure

### UNIT III

Selecting and using controls - Introduction to standard controls – command buttons – textbox – Labels – option buttons - check box – Frame control - List Box - Combo box – Image Object – picture box - timer – scroll bar. File system controls –drive list box-directory list box – file list box.

### UNIT IV

Working with forms and procedures: Introducing to forms and types of forms and setting form properties, Creating, adding, removing Forms in project, hide, Show Method, Load, Unload, Statement, Me Keywords, Referring to objects on a Different Forms.

## **UNIT V**

Introduction to database connecting tools (ADO, DAO, ADODC, ADODB), Creating the database file for use by Visual Basic (Using MSAccess),, Using the Data control, Setting its property, Using Data control with forms, using list boxes & combo boxes as data bound controls, updating a database file (adding, deleting records):  
PS – (Lecturers should be on Basic concepts only i.e. Definition, Diagrams and working Principles)

## **OUTCOMES:**

### **Upon completion of this course, the student will be able to:**

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic's Integrated Development Environment (IDE).
- Create one and two dimensional arrays for sorting, calculating, and displaying of data.
- Write Visual Basic programs using object-oriented programming techniques including classes, objects, methods, instance variables, composition, and inheritance, and polymorphism.
- Write Windows applications using forms, controls, and events

## **REFERENCES:**

4. Mastering Visual basic 6.0 – Evangelos petroutsos – BPB Publications

Course Code	Course Title	L	T	P	C
17212AEC15	Core V: Numerical and Statistical Methods	5	0	0	4

**AIM:**

To provide an in-depth knowledge of Numerical and Statistical Methods.

**OBJECTIVES:**

- To understand that how to find the real roots by iterative methods
- To find out the solution of simultaneous Linear equations by using Gauss Jacobis, Seidel, Jordan, elimination.

**UNIT I**

Algebraic and Transcendental equations- the iteration method - the Newton Raphson method—false position method-the bisection method.

**UNIT II**

Interpolation-finite differences-Newton's formulae for interpolation-Lagrange's formulae for interpolation—Gaussian elimination method-Gauss-Seidel method.

**UNIT III**

Numerical differentiation and integration-maximum and minimum values of a tabulated functions-Trapezoidal rule-Simpson's rule - Numerical solution of Ordinary differential equations-Euler's method -Runge Kutta methods- Predictor Corrector method-boundary value problems.

**UNIT IV**

Correlation-different types of Correlation-Karl Pearson's, Spearman's Correlation- Regression –Regression coefficients-Regression equations-properties of Correlation and Regression coefficients

**UNIT V**

Test of hypothesis- null and alternative hypothesis-tests of significance based on normal and t distribution for mean, simple correlation and proportion. Chi square test-independents of attributes and goodness of fit-applications.

**Course Outcomes:**

COURSE OUTCOMES: Upon completion of the course the students will be able

- To solve problems using numerical methods.
- To obtain the solution of system of equations using matrix theory.
- To identify real life problems into Mathematical Models.
- To apply the probability theory in the field of Computer Science Applications.

**REFERENCES:**

1. Introductory Methods of Numerical Analysis – S.S. Sastry , PHI.
2. Fundamentals of Mathematical Statistics – S.C. Gupta & V.K. Kapoor.

Course Code	Course Title	L	T	P	C
17222SEC16L	Core Practical I: C programming and Data structure Lab	0	0	3	2

1. Write a C program to find the roots of Quadratic Equation and hence determine the roots.
2. Write a C program to find the sum of series using a) Sine b) Cosine c) Exponential Series.
3. Write a program in C to read the marks of a student in a particular subject and sort them in ascending order. Also display the lowest and highest marks obtained in the subject.
4. Write a C program to perform Addition, Subtraction and Multiplication for two matrices using Functions depending on user's choice..
5. Write a C program to find a) Mean b) Standard Deviation and c) Variance for a set of n numbers.
6. Write a C program to find the a) Factorial value b) Fibonacci series using Recursion.
7. Write a C program to perform String Manipulations using Pointers.
  - a. Finding the length of the String
  - b. Joining two strings
  - c. String Comparison
  - d. Palindrome Checking
  - e. Counting the number of uppercase letter, Lowercase letter, digits, vowels, special characters, words and lines.
8. Prepare Payroll using sequential files in C. Use appropriate headings to print them in a neat format.
9. Write a C program to implement a Stack as a circular Linked list.
10. Write a C program to implement a Queue.

#### CourseOutcomes

CO 1: Understand the concept of data structures, python and apply algorithm for solving problems like Sorting, searching, insertion and deletion of data.

CO 2. Understand linear data structures for processing of ordered or unordered data.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17222SEC17L	<b>Core Practical II: Programming in VB Lab</b>	0	0	3	2

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to scroll your college name from left to right and right to left of the client area.
4. Write a code to design and implement a calculator.
5. Write a program to expand and shrinking an object while program is running.
6. Write a program to create animation by using move method and a timer object.
7. Write a program for preparing student mark list.
8. Write a program to populate the table entities using Data bound control.

Course Outcomes:

1. Students list the visual programming concepts.
2. Explain basic concepts and definitions.
3. Express constants and arithmetic operations.
4. Distinguish variable and data types.
5. Students code visual programs by using Visual Basic work environment.
6. Distinguish and compose events and methods.

Course Code	Course Title	L	T	P	C
17222SEC21	Core VI :Oops with C++	5	0	0	4

### AIM:

To present the concept of Object Oriented Programming and discuss the important elements of C++.

### OBJECTIVES:

- To understand the concepts of Object Oriented Programming.
- To write programs in simple applications using C++.

### UNIT I

Object oriented programming: Software evolution - OOP Paradigm- concepts, benefits, object oriented languages and applications.

### UNIT II

Introduction to the basic concepts of C++ language - Tokens, keywords, identifiers, data type, variables, manipulators- expression and control structures - functions: main function - function prototyping - call by reference - function overloading - friend and inline functions.

### UNIT III

Classes and objects - constructors and destructors - operator overloading - type conversions. Overloading unary operations. Overloading binary operators, data conversion, pitfalls of operators overloading and conversion keywords. Explicit and Mutable.

### UNIT IV

Concept of inheritance. Derived class and based class. Derived class constructors, member function, inheritance in the English distance class, class hierarchies, inheritance and graphics shapes, public and private inheritance, aggregation : Classes within classes, inheritance and program development.

### UNIT V

Files - Classes for file stream operations - opening, closing and processing files - end of file detection - file pointers - updating a file - error handling during file operations - command line arguments - templates - exception handling.

### OUTCOMES

- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to use proper class protection mechanism to provide security.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Able to reuse

Course Code	Course Title	L	T	P	C
17222SEC22	Core VII :Operating system	5	0	0	3

**AIM :**

To have a thorough knowledge of processes, scheduling concepts, memory management, I/O and file systems in an operating system.

**OBJECTIVES :**

- To have an overview of different types of operating systems
- To know the components of an operating system.
- To have a thorough knowledge of process management
- To have a thorough knowledge of storage management
- To know the concepts of I/O and file systems.

**UNIT I**

Operating systems objectives and functions - Operating system and user/computer interface, Operating system as a resource manager - Evaluation of operating systems - serial processing, simple batch systems, multi programmed batch systems , time sharing systems.

**UNIT II**

Process description, process control - processes and threads, Concurrency - principles of concurrency, mutual exclusion, software support, Dekker’s algorithm - mutual exclusion - hardware support, mutual messages. Deadlock avoidance. An integrated deadlock strategy.

**UNIT III**

Memory management - memory management requirements. Fixed partitioning, placement algorithm, Relocation in a paging system. Simple segmentation, Virtual memory - paging – Address translation in a paging system. Segmentation – organization, address translation in a segmentation system. Combined paging and Segmentation. Virtual memory – Operating system software – fetch policy, placement policy, and replacement policy. Page buffering resident set management.

**UNIT IV**

Linux System — Design Principles, Kernel Modules, Process Management, Scheduling, Memory Management, Input-Output Management, File System, Inter-process Communication; Mobile OS — iOS and Android — Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System.

**UNIT V**

Mass Storage system — Overview of Mass Storage Structure, Disk Structure, Disk Scheduling and Management, swap space management; File-System Interface — File concept, Access methods, Directory Structure, Directory organization, File system mounting, File Sharing and Protection; File System Implementation- File System Structure, Directory implementation, Allocation Methods, Free Space Management, Efficiency and Performance, Recovery; I/O Systems — I/O Hardware, Application I/O interface, Kernel I/O subsystem, Streams, Performance.

**OUTCOMES:**

- Able to understand the operating system components and its services
- Implement the algorithms in process management and solving the issues of IPC
- Able to demonstrate the mapping between the physical memory and virtual memory
- Able to understand file handling concepts in OS perspective
- Able to understand the operating system components and services with the recent OS

Course Code	Course Title	L	T	P	C
17222SEC23	Core VIII: Web Designing	5	0	0	4

## AIM:

To enable the students to design and develop the Web pages.

## OBJECTIVES:

- To learn the fundamental concept of Web Design.
- To understand the concept of Web Technology.

## UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers - Introduction to HTML.

## UNIT II

CSS – Formatting text – Colours and Background – Padding, Borders and Margins – Floating and positioning – Page Layout with CSS – Transition, Transforms and Animation – Javascript – Using Java Script.

### **UNIT III**

**DHTML and Style Sheet – Frames – Forms.**

### **UNIT IV**

What is XML – Well formed XML – XML Namespace?

### **UNIT V**

Sass for Responsive Web Design – Marking Content with HTML5 – Mobile-First or Desktop-First – CSS Grids, CSS Frameworks, UI Kits, and Flexbox for RWD – Designing small UIs by Large Finger -Images and Videos in Responsive Web Design – Meaningful Typography for Responsive Web Design.

### **OUTCOMES:**

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

Course Code	Course Title	L	T	P	C
17222SEC24	Core IX: Database Management system	5	0	0	4

**AIM:**

To provide a strong foundation in Database Technology and an introduction to the current trends in this field.

**OBJECTIVES:**

- To learn the fundamentals of data models and to conceptualize and depict a Database System using ER Diagram.
- To make a study of SQL and relational Database Design.
- To know the fundamental concepts of transaction processing – concurrency controls techniques and recovery procedure.

**UNIT I**

An Overview of Database Management-Introduction -Definition of Database system - Data Independence - Relational Systems - Database System Architecture - Three Levels of the Architecture - Distributed Processing.

**UNIT II**

An Introduction to Relational Databases- Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to SQL - Embedded SQL - Domains , Relations , Relvars.

**UNIT III**

Relational Algebra - Introduction - Syntax - Semantics - Examples - Additional Operators - Relational Calculus - Introduction - Tuple Calculus - Examples - Calculus Vs Algebra - Domain Calculus - SQL Specialties .

**UNIT IV**

Database Design - Functional Dependencies - Introduction - Basic Definitions - Normalization - First , Second ,Third Normal Forms - BOYCE / CODD Normal Form.

**UNIT V**

Transaction Management - Recovery - Introduction - Transactions - Transaction Recovery - System Recovery - Media Recovery - Concurrency -Three Concurrency Problem - Locking - Deadlock - Serializability .

**OUTCOMES:**

- Understand the basic concepts of the database and data models.  
design a database using ER diagrams and map ER into Relations and normalize the relations
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.
- Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

Course Code	Course Title	L	T	P	C
17212AEC25	Core X: Optimization Techniques.	4	0	0	3

**AIM:**

To have a thorough knowledge of understanding real world problems by using Optimization Techniques.

**OBJECTIVES:**

- To find out the solutions of the given variables using various Simplex methods
- To get the various strategies using two person zero sum and dominance properties.

**UNIT I**

Linear Programming: Introduction – History of OR – Meaning of OR- Principles of Modeling – Linear equation – Gaussian Elimination – Formulation of LP models – Graphical solution- Algebraic solutions – Simplex method – Feasibility – Optimality- Artificial variables – M Technique – Transportation problem- Assignment problem.

**UNIT II**

Sequencing Problem: Introduction – Problem of Sequencing – Basic terms used in Sequencing – Processing n jobs through Two Machines – Processing of n jobs through k Machines – processing of 2 jobs through k Machines  
 Game Theory : Introduction – Two persons Zero-sum Games – Some Basic Terms – The maximin-minmax principle – Games with out saddle points – Mixed Strategies – Graphic solution of 2 x n and m x 2 Games – Dominance Property.

**UNIT III**

PERT/ CPM – Introduction – Network and Basic Components – Logical Sequencing – Rules of Network Construction- Critical Path Analysis – Probability consideration of PERT, Distinction between PERT and CPM.

**UNIT-IV**

Introduction of operation research. LP Formulations, Graphical method for solving LP’s with 2 variables, Simplex method, Duality theory in linear programming and applications, Integer linear programming, dual simplex method.

**UNIT-V**

Inventory Models : Introduction to the inventory problem, Deterministic Models, The classical EOQ (Economic Order Quantity) model, Inventory models with deterministe demands(no shortage & shortage allowed), Inventory models with probabilistic demand, multiitem determinise models

**COURSE OUTCOMES (COs):**

- CO 1 Recall the theoretical foundations of various issues related to linear programming modeling to formulate real-world problems as a L P model
- CO 2 Explain the theoretical workings of the graphical, simplex and analytical methods for making effective decision on variables so as to optimize the objective function.
- CO 3 Identify appropriate optimization method to solve complex problems involved in various industries.
- CO 4 Demonstrate the optimized material distribution schedule using transportation model to minimize total distribution cost.
- CO 5 Find the appropriate algorithm for allocation of resources to optimize the process of

Course Code	Course Title	L	T	P	C
17222SEC26L	Core Practical III:OOPs with C++ Lab	0	0	3	2

1. Write C++ program using a class to represent a bank account with data members - name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show name and balance. Check the program with your own data.
2. Consider a shopping list of items for which orders are place with a dealer. The list should include the code number and price of the item. Operation such as adding an item to the list, deleting an item from the list and printing the total value of the order are to be provided for. Write a program to implement the above using a class with arrays as data members.
3. Create a "Times" class with integer data members hours, minutes and seconds. Develop two constructions, one should initialize the data to zero and the other should initialize to fixed values, A member's function should display it in hh:mm:ss format.
4. Design an abstract base class "Shapes" and derive three classes "Rectangle", "Circle" and "Triangle". Develop polymorphic functions "Circumference" and "Computer-Area" to calculate the circumference and area of these objects and display it. Develop a main program to create each of these and apply these polymorphic functions.
5. Develop a program using operator overloading
  - I.To add two complex numbers.
  - II.To find the difference between any given time and the system time
  - III.To multiply to matrices.
6. There are "n" records present in file with each record containing a 6- character item code, a 20-character item name and an integer quantity. Write a program to read these records, arrange them in the ascending order and write them in the same file overwriting the earlier records.
7. Program to demonstrate Constructor Overloading.
8. Program to check whether the given number is palindrome or not.
9. Write a C++ program to create multilevel inheritance. (Hint: Classes A1, A2, A3).
10. Write a C++ program to use pointer for both base and derived classes and call the member function. Use Virtual keyword.

## Course Outcome

- Describe OOPs concepts.
- Use functions and pointers in your C++ program.
- Understand tokens, expressions, and control structures.
- Explain arrays and strings and create programs using them.
- Describe and use constructors and destructors

Course Code	Course Title	L	T	P	C
17222SEC27L	Core Practical IV : Web Designing Lab	0	0	3	2

1. Create a small paragraph about 10 lines. Try to use Font, Title and head tags. Apply different sizes and colors using tags.
2. Write a HTML document to print your class Time Table.
3. Develop a Complete Web Page using Frames and Framesets which gives the Information about a Hospital using HTML.
4. Create a web page in the format of front page of a newspaper using text links. Align the text with colors.
5. Develop a web page for job recruitment agency in an IT industry using Forms.
6. Prepare a css for a different edition of Same Book
7. Develop a web page with Text Decoration using DHTML.
8. Develop a web page with additional table using XML.
9. Create web pages which display roll no in sorted order using XML.
10. Create a web page contains your self describing information using XML &XSL

## Course Outcomes:

- Analyze a web page and identify its elements and attributes.
- \* Create web pages using XHTML and Cascading Style Sheets.
- \* Build dynamic web pages using JavaScript (Client side programming)

Course Code	Course Title	L	T	P	C
17222SEC31	Core XI:J2EE Programming	4	0	0	4

**AIM:**

To enable the students to develop standalone programming and Internet based application

**OBJECTIVES:**

- To learn java programming concepts under Client Sever environment
- To develop Database Application in Java .
- To learn java programming concepts like reflection, native code interface, threads etc
- To develop network programs in java.
- To understand concepts needed for distributed and multi-tier applications.
- To understand issues in enterprise application development.

**UNIT I**

Fundamentals of OOPS-overview of java language-data type –variables and arrays-Class Fundamentals-declaring objects-constructor-overloading methods-inner classes-method overriding.

**UNIT II**

AWT classes-window fundamentals-AWT controls- handling events by extending AWT components Applet class-Applet architecture-html applet tag-passing parameters in applet.

**UNIT III**

Java Database Connectivity: JDBC/ODBC Bridge-The connectivity model being used-The java.sql Package-The JDBC Exception Classes. JDBC working with user interface: Data manipulation-Data Navigation-Data Storage.

**UNIT IV**

Input Output Packages – Inner Classes – Java Database Connectivity - Introduction JDBC Drivers - JDBC connectivity with MySQL/Oracle -Prepared Statement & Result Set – JDBC Stored procedures invocation - Servlets - RMI – Swing Fundamentals - Swing Classes.

**UNIT V**

Utility Packages- Introduction to collection –Hierarchy of Collection framework – Generics, Array list, LL, HashSet, TreeSet, HashMap – Comparators – Java annotations – Premain method.

## **OUTCOMES**

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

## **REFERENCES**

Course Code	Course Title	L	T	P	C
17222SEC32	Core XII: Software Engineering	4	0	0	4

**AIM:**

To introduce the methodologies involved in the development and maintenance of Software (i.e) over its entire life cycle.

**OBJECTIVES:**

- To be aware of
- Different Life Cycle models.
- Requirements dictation process.
- Verification Validation techniques.
- Project planning and Management.

**UNIT I**

Introduction - definitions - size factors - quality and productivity factors - managerial issues. Planning a software project - introduction - defining the problem - developing a solution strategy - planning the development process - planning an organizational structure - other planning activities.

**UNIT II**

Software cost estimation - cost factors - cost estimation techniques staffing level estimation - estimating soft- ware maintenance costs. Software requirements definition - software requirement specification - formal specification techniques - languages and processors for requirements.

**UNIT III**

Software design - fundamental design concepts - modules and modularization criteria - design notations - design techniques - detailed design considerations - real time and Distributed system design - test plans - milestones, walkthrough and inspections - design guidelines.

**UNIT IV**

Implementations issues - structured coding techniques - coding style - standards and guidelines - documentation guidelines -data abstraction - exception handling - concurrency mechanisms.

**UNIT V**

Verification and validation techniques - quality assurance - walkthrough and inspections - static analysis - symbolic execution - UNIT testing and debugging - system testing - formal verification. Software maintenance - enhancing maintainability during development - managerial aspects - configuration management - source code metrics - other maintenance tools and techniques.

**OUTCOMES:**

- Get an insight into the processes of software development
- Able to understand the problem domain for developing SRS and various models of software engineering
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

**REFERENCES:**

Course Code	Course Title	L	T	P	C
17222SEC33	Core XIII: Relational Data Base Management System.	4	0	0	4

**AIM :**

To provide an in-depth knowledge of Relational database system using Oracle.

**COURSE OBJECTIVES**

- To understand the fundamentals of data models and conceptualize and depict a database system using ER diagram
- To make a study of SQL and relational database design.
- To know about data storage techniques and query processing.
- To impart knowledge in transaction processing, concurrency control techniques and recovery procedures.

**UNIT-I**

Introduction- File systems versus Database systems – Data Models – DBMS Architecture – Data Independence – Introduction Relational Model and E-R model.

**UNIT-II**

Introduction to SQL - Basic structure and Basic operations of SQL – Set operations - Aggregate functions – Nested queries – Join expressions and views – Functions and procedure – Triggers

**UNIT-III**

Relational query languages - Relational algebra – Tuple relational calculus – Domain relational calculus – Relational database design - Functional dependency – Normalization – 1NF, 2NF, 3NF and BCNF

**UNIT-IV**

Query Processing and Optimization: Evaluation of Relational Algebra Expressions, Query Equivalence, Join strategies, Query Optimization Algorithms.

**UNIT-V**

Transaction management: ACID properties, serializability and concurrency control, Lock based concurrency control (2PL, Deadlocks), Time stamping methods, optimistic methods, database recovery management.

**COURSE OUTCOMES:**

- Understand the basic concepts of the database and data models.
- Design a database using ER diagrams and map ER into Relations and normalize the relations.
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.

Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

**REFERENCES:**

1. Abraham Silberschatz, Henry F.Korth and S.Sundarshan “Database System Concepts”, Sixth Edition, McGraw Hill, 2010.

Course Code	Course Title	L	T	P	C
17222SEC34	Core XIV: Routing and Switching in LAN	4	0	0	3

**AIM:**

To provide complementary perspective on the LAN routing and Switching in an Enterprise.

**OBJECTIVES:**

- Gives a systematic approach to hierarchical network that support voice, video, and data.
- Expertise the functions of basic switch.
- Provides idea on VLAN, VTP, STP and Inter-VLAN Routing.
- Teaches components of a wireless LAN and its operations.

**UNIT I**

LAN Design: Switched LAN Architecture-Matching Switches to specific LAN functions.

**UNIT II**

Basic switching concepts and configuration-Introduction to Ethernet-802.3 LANS- Forwarding frame using switches-switch management configuration.

**UNIT III**

VLAN- Introducing VLAN-VLAN Trunking- Configure VLAN and Trunks.

**UNIT IV**

VTP-VTP –Concepts-VTP Operation- configure VTP

**UNIT V**

Introduction to STP-STP convergence- Inter VLAN routing-the wireless LAN.

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Systematic approach to hierarchical network that support voice, video, and data.
- Idea on VLAN, VTP, STP and Inter-VLAN Routing.
- Components of a wireless LAN and its operations.

**REFERENCES:**

1. “LAN Switching and wireless” CCNA E xploration companion guide- wayue lewis- cisco press-pearson Education.

Course Code	Course Title	L	T	P	C
17212AEC35	Core XV: Discrete Mathematics	4	0	0	3

**AIM:**

To provide in-depth knowledge of Mathematical logics, Boolean Algebra.

**OBJECTIVES:**

- To understand the concept of Set Theory and Functions.
- To solve the Recurrence Relations using Generating functions.

**UNIT I**

Sets, Relations & Functions : Property of binary relations, Equivalence, Compatibility, Partial ordering relations, Hasse diagram, Functions, Inverse function, Compositions of functions, Recursive functions.

**UNIT II**

Mathematical logic : Logic operators, Truth tables, Theory of inference and deduction, Mathematical Calculus, Predicate Calculus, Predicates and Qualifiers.

**UNIT III**

Groups & Subgroups : Group axioms, Permutation groups, Cosets, Normal subgroups, Semi groups, Free semi groups, Monoids, Sequential Machines, Error Correcting Codes, Modular arithmetic Grammars.

**UNIT IV**

Lattices & Boolean Algebra: Axiomatic definition of Boolean algebra as algebra as algebraic structures with two operations, Basic results truth values and truth tables, The algebra of propositional functions, Boolean algebra of truth tables.

**UNIT V**

Combinatorics & Recurrence Relations : Disjunctive and sequential counting, Combinations and permutations, Enumeration without repetition, Recurrence Relation, Fibonacci relation, Solving recurrence relation by Substitution, Solving non recurrence relation by conversion to linear recurrence relation.

**Course Outcomes:**

After completion of the course students are expected to be able to:

- Analyze logical propositions via truth tables.
- Prove mathematical theorems using mathematical induction.
- Understand sets and perform operations and algebra on sets.
- Determine properties of relations, identify equivalence and partial order relations, sketch relations.
- Identify functions and determine their properties.
- Define graphs, digraphs and trees, and identify their main properties.
- Evaluate combinations and permutations on sets.

Course Code	Course Title	L	T	P	C
17222SEC36L	Core Practical V: J2EE Programming Lab	0	0	3	2

1. Develop a simple real-life application program to illustrate the use of multithreads.

2. Packages and interfaces:

Create a package called “pgmdetails” with the following details.

Pgmdetails	(character)
Broadcastday	(character)
Stationname	(character)
Directorname	(character)
Pgmtype	(character)
Broadcasttime	(character) in railway time

Create another package called “chargedetails” with the following details

if pgmtype is “commercials” – Rs 20 per min  
 if pgmtype is “drama” – Rs 100 per min  
 if pgmtype is “education” – Rs 50 per min

Inherit the necessary details from “pgmdetailes”

Using an interface “radio” calculate the amount to be paid by the programmers to the station, if they want their programs to broadcast display full information list about the given details by creating objects.

3. Create a try block that is likely to generate three types of exception and than incorporate necessary catch blocks to catch and handle them appropriately.

4. Load an image on to applet. As the user selects portions of this image, rectangular regions corresponding to the selection should be highlighted by enveloping them in rectangles (use mouse events). Also the user can change the colors of selected regions.

5. Create an application, which consists of a dialog box that could be used to obtain an user name and a password to connect to some on line service. The dialog box consists of two fields user name, password and two buttons of Ok & Cancel for accepting user input.

6. Write a program, which will open an existing file and then append text to that file.

7. Write a java program, which will make balls of various colors to move within the frame windows.

8. Create an Animating Program using Beans.

Course Outcomes:

- Create Web Applications using Java Servlet.
- Manage Web Session using Servlet and JSP.
- Use JavaBeans in JSP.

Course Code	Course Title	L	T	P	C
17222SEC37L	Core Practical VI : RDBMS Lab	0	0	3	2

1. Creating, Updating and Inserting into databases and simple queries.

2. Uses of Select statement – for queries using  
(i) AND, OR, NOT Operations, WHERE clause  
(ii) UNION, INTERSECTION, MINUS  
(iii) Sorting and Grouping

3. Nested queries using SQL  
(i) Sub queries  
(ii) Join

4. Built-in functions of SQL

5. Exception handling

6. Key Constraints-Normalization

7. Cursors, triggers and stored procedures and functions

8. connecting databases.

9. Case Studies

- Student Evaluation systems
- Pay-roll system
- Income tax calculation
- Seat reservation problems
- Mark sheet preparation

Course Outcomes:

- \* Students get practical knowledge on designing and creating relational database systems.
- \* Understand various advanced queries execution such as relational constraints, joins, set operations, aggregate functions, trigger, views and embedded SQL.

Course Code	Course Title	L	T	P	C
172SFSK01L	SOFT SKILL I – EFFECTIVE BUSINESS COMMUNICATION				1

### **UNIT I: Effective Business communication I**

**Oral Communication:** Listening skills -Speaking skills (what to speak and how to speak it) – Gender neutral Language – Conflict, criticism, anger – Telephone skills.

### **UNIT II: Effective Business communication II**

**Written Communication:** Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos.

**Nonverbal Communication:** Behavior, Body language and Attitude.

### **Course Outcomes:**

1. Students develop the awareness about the various media of communication.
2. Students become able to communicate effectively in various situations.
3. Students will learn different usage the business correspondence serve for effective communication.

Course Code	Course Title	L	T	P	C
17222SEC41	Core XVI :Python Programming	4	0	0	4

## AIM

To enable the student to be familiar with Python Programming.

## OBJECTIVES:

On successful completion of the course the student should have understood the concepts in Python and its application.

### Unit - I

Core Python: Introduction-features-Comparative study-Comments-Operators-Variables and Assignments-Numbers-String-List and Tuple-Dictionary-Statements and Iterative statements-list comprehensive-Errors and Exception-functions-Classes-Modules-Useful function. Basics: Syntax and Statements-Variable Assignments-Identifier-Style-Memory Management-Application Example. Objects: Introduction-Standard Type- Built-in-type-Internal type-Standard type operator and Built-in functions-Categorizing standard type-Unsupported type.

### Unit – II

Numbers: Introduction- Integer-Floating Point-Complex numbers-Operators-Built-in-functions-Other numeric type-Sequence-Strings-Strings and Operator-String only operator-Built-in-Functions-Built-in-Methods-String Features-Unicode-Related Modules.

### Unit – III

List-Operators-Built-in-Functions-Built-in-Methods-Features of List-Tuple: Introduction-Operators and Built-in-Functions-Features-Related Modules-Mapping type: Dictionaries-Operators-Built-in and Factory Functions-Built-in- Methods. Set type: Introduction-Operators-Built-in Function-Built-in Methods-Related Modules-Conditional and looping statement.

### Unit – IV

File: Objects- Built in Functions-Methods-Attributes-Standard files-Command line Argument-File System-File Execution-Persistent Storage Modules-Related Module. Class: Introduction-Class and Instance- Method calls. Exception and Tools: Why use it?-Exception roles-Short story-Try/finally statement.

### Unit – V

Regular Expression: Introduction-Special Symbols and characters-Regexes and Python-Examples of Regexes. Network Programming: Architecture-Socket. Internet Client Programming- Transferring files-Email.GUI Programming: Introduction-Tkinter and Python.DB Programming: Introduction-Python DB-API-Non-Relational DB. Web Services: Introduction-Microblogging with Twitter.

## Course Outcomes:

To understand why Python is a useful scripting language for developers. To learn how to use lists, tuples, and dictionaries in Python programs.

- To learn how to identify Python object types.
- To learn how to use indexing and slicing to access data in Python programs.
- To define the structure and components of a Python program.
- To learn how to write loops and decision statements in Python.
- To learn how to write functions and pass arguments in Python.

- To learn how to build and package Python modules for reusability.
- To learn how to read and write files in Python.
- To learn how to design object-oriented programs with Python classes.
- To learn how to use class inheritance in Python for reusability.
- To learn how to use exception handling in Python applications for error handling. To acquire programming skills in core Python.

**REFERENCES:**

1. Chun, J Wesley, Core Python Programming, 2nd Edition, Pearson, 2007 Reprint 2010.
2. Wesley J Chun Core python Application Programming,3rd Edition,
3. Lutz, Mark, Learning Python, 5th Edition, O Rielly

Course Code	Course Title	L	T	P	C
17222SEC42	Core XVII : Cryptography & Network security	4	0	0	4

**AIM:**

To introduce about Internet Security in terms of measures to deter, prevent, detect, and correct security violations that involve the transmission of information

**OBJECTIVES:**

- To know the methods of conventional encryption.
- To understand the concepts of public key encryption and number theory
- To understand authentication and Hash function.
- To know the network security tools and system level security used.

**UNIT I**

CLASSICAL ENCRYPTION TECHNIQUES: Symmetric Cipher Model-substitution techniques-transposition technique-Rotor machine-Steganography.BLOCK CIPHERS AND THE DATA ENCRYPTION STANDARD: Simplified DES-Block cipher principles-The data encryption standard-the strength of DES-Differential and linear cryptanalysis-Block cipher design principles-Block cipher modes of operation.

**UNIT II**

PUBLIC KEY CRYPTOGRAPHY AND RSA: Principles of public key cryptosystem-The RSA algorithm.KEY MANAGEMENT OTHER PUBLIC KEY CRYPTOSYSTEMS: key management-Diffie-Hellman Key Exchange-Elliptic curve Arithmetic-Elliptic curve cryptography.

**UNIT III**

HASH ALGORITHM :MD5 Message Digest Algorithm-Secure Hash Algorithm-RIPEMD-160-HMAC.DIGITAL SIGNATURE AND AUTHENTICATION PROTOCOLS: Digital Signatures-Authentication Protocols-Digital Signature Standard.

**UNIT IV**

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC – SHA –Digital signature and authentication protocols – DSS- Entity Authentication: Biometrics, Passwords, Challenge Response protocols- Authentication applications - Kerberos, X.509

**UNIT V**

Electronic Mail security – PGP, S/MIME – IP security – Web Security - SYSTEM SECURITY: Intruders – Malicious software – viruses – Firewalls.

## **OUTCOMES:**

**Upon Completion of the course, the students should be able to:**

- Compare various Cryptographic Techniques
- Design Secure applications
- Inject secure coding in the developed applications

## **REFERENCES:**

1. “Cryptography and Network Security “ – William Stallings – 3<sup>rd</sup> Edition Pearson Education 2003.
2. “Network Security essentials Applications and Standards”, William Stalings , Pearson Education 2007.

Course Code	Course Title	L	T	P	C
17222SEC43	Core XVIII :Open Source Programming	4	0	0	3

**AIM:**

To improve the Programming Knowledge of VBScript, JavaScript, Perl & PHP.

**OBJECTIVES:**

- To have the knowledge of VBScript, JavaScript.
- To explore the use of Perl & PHP.

**UNIT I:**

VBScript –VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Datatype Conversion Features – Putting it all together with VBScript – using the Script Debugger.

**UNIT II:**

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. JavaScript and Html Documents: The JavaScript Execution Environment – The Document Object Model – Element Access in JavaScript – Events and Event Handling – Handling Events from Body Elements, Button Elements, Text Box and Password Elements – The DOM 2 Event Model – The navigator Object.

**UNIT III:**

The Basics of Perl: Origins and Uses of Perl – Scalars and their Operations – Assignment Statements and Simple Input and Output – Control Statements – Fundamentals of Arrays – Hashes – References – Functions – Pattern Matching – File Input and Output. Using Perl for CGI Programming: The Common Gateway Interface – CGI Linkage – Query String Format – The CGI .pm Module – Cookies.

**UNIT IV:**

PHP Introduction – General Syntactic Characteristics – PHP Scripting – Commenting your code – Primitives, Operations and Expressions – PHP Variables – Operations and Expressions Control -statement – Array – Functions.

**UNIT V:**

MYSQL Introduction to MY SQL – The show Databases and Table – The USE command – Create Database and Tables – Describe Table – Select, Insert, Update, and Delete statement – Some Administrative detail – Table Joins – Loading and Dumping a Database.

**OUTCOMES:**

- Understand process of executing a PHP-based script on a webserver.
- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops.

- Understand the paradigm for dealing with form-based data, both from the syntax of HTML forms, and how they are accessed inside a PHP-based script.

**REFERENCES:**

1. UNIT I: Scot Johnson “Using Active Server Page”.
2. UNIT II, III, IV, V: Robert W.Sebesta, “Programming the World Wide Web” Third edition.
3. Internet & WWW How to program by Deital , Third edition.

Course Code	Course Title	L	T	P	C
17222SEC44	Core XIX : Web Service	4	0	0	4

**AIM:**

To have thorough knowledge about web service and web security.

**OBJECTIVES:**

- To provide an idea on Processing XML.
- To understand the concepts of SOAP, UDDI.
- To understand the concepts of Web security.

**UNIT I**

Introduction – What are web services? -Why Web Services are important?– Web services and enterprises.  
XML Fundamentals: XML: The Lingua Franca of web services- XML Documents-XML namespaces - XML Schema - Processing XML

**UNIT II**

SOAP and WSDL: The SOAP Model- SOAP- SOAP Messages - SOAP encoding – SOAP RPC- Using alternative SOAP Encodings, Document, RPC, Literal, Encoded -SOAP web services and the REST Architecture- Looking back to SOAP 1.1 - WSDL– Using SOAP and WSDL UDDI: UDDI at a glance- The UDDI Business registry- UDDI under the covers – Accessing UDDI- How UDDI is playing out.

**UNIT III**

Conversations: Overview –Web services Conversation Language – WSCL Interface components – The Bar scenario conversations – Relationship between WSCL and WSDL Workflow: Business Process Management – Workflow and Workflow management systems.

#### **UNIT- IV**

Discovering Web Services — Service discovery, role of service discovery in a SQA, service discovery mechanisms, UDDI — UDDI registries, uses of UDDI Registry, Programming with UDDI, UDDI data structures, Publishing API, Publishing, searching and deleting information in a UDDI Registry, limitations of UDDI.

#### **UNIT- V**

Web Services Interoperability — Means of ensuring Interoperability, Overview of .NET, Creating a .NET client for an Axis Web Service, creating Java client for a Web service, Challenges in Web Services Interoperability. Web Services Security — XML security frame work, Goals of Cryptography, Digital signature, Digital Certificate, XML Encryption.

#### **OUTCOMES:**

**Upon Completion of the course, the students should be able to:**

- Get an idea on Processing XML.
- Understand the concepts of SOAP, UDDI.
- Understand the concepts of Web security.

#### **REFERENCES:**

1. Developing Enterprise Web Services - An Architect's Guide – Sandeep Chatterjee, James Webber, Pearson Education– Second Indian Reprint 2005.
2. Understanding SOA with Web Services, Eric Newcomer, Greg Lomow, Pearson Education, First Indian Reprint 2005.

Course Code	Course Title	L	T	P	C
17222SEC45L	Core Practical VII: Python Programming Lab	0	0	3	2

1. Find the square root of a number (Newton's method)
2. Exponentiation (power of a number)
3. Find the maximum of a list of numbers
4. Linear search and Binary search
5. Selection sort, Insertion sort
6. Merge sort
7. First n prime numbers
8. Multiply matrices
9. Programs that take command line arguments (word count)
10. Find the most frequent words in a text read from a file

**Course Outcomes:**

- \* Student should be able to understand the basic concepts scripting and the contributions of scripting language
- \* Ability to explore python especially the object oriented concepts, and the built in objects of Python.
- \* Ability to create practical and contemporary applications such as TCP/IP network programming, Web applications, discrete event simulations

Course Code	Course Title	L	T	P	C
17222SEC46L	<b>Core Practical VIII: Open Source programming Lab</b>	0	0	3	2

- 1 . Prepare a web page in ASP which displays course submission form using objects.
- 2 . Write a program for addition using VBScript.
- 3 . Write a program for finding maximum number using JavaScript.
- 4 . Develop a web page which display window shrinking using JavaScript
- 5 . Write a program in JavaScript a)OnMouse move b)OnMouse out.
- 6 . Write a Perl script using array find element in list.
- 7 . Write a Perl script for simple manipulation.
- 8 . Develop a PHP program and check message passing mechanism between pages.
- 9 . Develop a PHP program to display student information using MYSQL table.
- 10 . Develop a college application form using MYSQL table.

#### CourseOutcomes

- a) Understand, analyze and apply the role of languages like HTML, DHTML, CSS, JavaScript and PHP.
- b) Analyze a web page and identify its elements and attributes.
- c) Create web pages using HTML, DHTML and Cascading Style Sheets.
- d) Create dynamic web pages using JavaScript, XML.

Course Code	Course Title	L	T	P	C
17222DSC47A	Discipline Specific Elective – I Mobile Computing	4	0	0	3

### UNIT-I

Mobile Computing: An Overview of Mobile Computing-Mobile Computing Architecture-Mobile Devices-Mobile System Networks-Mobility Management. Mobile Device and Systems: Mobile Phones-Digital Music Players-Hand Held Devices: operating System-Limitation of Mobile Devices

### UNIT-II

Medium Access Control-SDMA, FDMA, TDMA-Tele Communication System: GSM-Mobile Services-System Architecture-Satellite System: Application, Basics.

### UNIT-III

Wireless LAN: Infra-red Vs Radio transmission-Infra Structure and ad-hoc networks-IEEE 802.11: System Architecture, Protocol Architecture, Physical Layer-MAC Management-HIPERLAN: WATM-Bluetooth: User Scenarios, Architecture.

### UNIT-IV

Mobile IP: Goals, assumptions and requirements-Entities and terminology-IP Packet Delivery-Tunneling and Encapsulation-Reverse Tunneling-Mobile ad-hoc Networks: Overview ad-hoc routing protocols

### UNIT-V

Mobile Application Language: XML, Java, J2ME & Java Card-Mobile Operating System

#### Course Outcomes:

1. Define mobile technologies in terms of hardware, software, and communications.
2. Utilize mobile computing nomenclature to describe and analyze existng mobile computing frameworks and architectures.
3. Evaluate the effectiveness of different mobile computing frameworks.
4. Describe how mobile technology functions to enable other computing technologies.

### REFERENCE BOOKS:

1. "Mobile computing"-Raj Kamal, Oxford University published in 2007. For Unit1-1,Unit-5.

Course Code	Course Title	L	T	P	C
17222DSC47B	Discipline Specific Elective -I Knowledge based decision support system.	4	0	0	3

**AIM:**

To Explore the use of Artificial Intelligence techniques for applications development.

**OBJECTIVES:**

**To understand the various AI Techniques for application development using:**

- LISP programming
- Symbolic logic
- Matching techniques
- Knowledge Acquisition

**UNIT I**

Overview of AI – Knowledge: General Concepts – LISP and other programming languages.

**UNIT II**

Formalized symbolic logics – Dealing with inconsistencies and uncertainties – structured knowledge: Graphs, Frames & Related Structures – Object Oriented representations.

**UNIT III**

Search and control strategies – Matching Techniques.

**UNIT IV**

General concepts in knowledge Acquisition – Learning by induction.

**UNIT V**

Natural language processing – Pattern recognition – Visual image understanding – Expert system architecture.

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalise a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.
- Design and carry out an empirical evaluation of different algorithms on a problem formalisation, and state the conclusions that the evaluation supports

**REFERENCES:**

1. “Introduction to Artificial Intelligence and Expert system” by Dan w.Patterson.
2. Elaine Rich and Kevin Kaight, “Artificial Intelligence”, Tata McGraw Hill, 2<sup>nd</sup> Edition, 1991.

Course Code	Course Title	L	T	P	C
17222DSC47C	Discipline Specific Elective – I Compiler Design	4	0	0	3

**AIM :**

To understand the design and implementation of a simple compiler.

**OBJECTIVES:**

- To understand the functions and design of the various phases of a compiler
- To learn the overview of the design lexical analyzer and parser
- To learn the use of compiler construction tools.

**UNIT I**

Introduction to Compilers – Compilers and Translators- Assembly Language – Macros – Structure of a Compiler – Compiler writing tools - Bootstrapping. Lexical Analysis : The role of Lexical Analyzer - Regular expression – Finite Automata - Implementation of lexical analyzer – Context Free Grammars- Derivation and Parse trees.

**UNIT II**

Parsers – Shift reduce parsing – Operator precedence parsing - Top-down parsing – Predictive parsers – Simple precedence parsers – LR parsers – Constructing SLR parsing tables – Constructing Canonical LR parsing tables – Constructing LALR parsing tables – Using ambiguous grammars.

**UNIT III**

Syntax directed translation schemes – Implementation of syntax directed translation schemes - Intermediate code - Postfix notation - Parse trees and Syntax trees - Three address codes, Quadruples and Triples - Translation of assignment statements - Boolean expressions - Postfix translation.

**UNIT IV**

Symbol tables: The contents of a symbol table - Data structures for symbol tables Representing scope information - Implementation of simple stack allocation scheme- Implementation of block structured languages - Storage allocation in FORTRAN - Storage allocation in block structured languages. Errors - Lexical phase errors - syntactic phase errors - semantic errors.

**UNIT V**

Code optimization : Principle sources of optimization – Loop optimization – Machine dependent optimization - DAG representation of basic blocks .Code Generation: Problems in code generation - A simple code generator – Register allocation and assignment - Code generation from DAGS – Peephole optimization.

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Design and implement a prototype compiler.
- Apply the various optimization techniques.
- Use the different compiler construction tools

**REFERENCES:**

1. Principles of Compiler Design – Alfred V.Aho , Jeffrey D. Ullman
2. Compiler Construction William A. Barrett, Rodney M.Bates
3. Compiler Construction for Digital computer- DAVID GRIES.

Course Code	Course Title	L	T	P	C
17222CRM	Research Methodology	3	0	0	3

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis.

**OUTCOME:**

Ability to develop research questions and the various research strategies and compile research results in terms of journal manual scripts.

**PREREQUISITES:**

Research methodology course in UG level or equivalent knowledge.

**UNIT-I Introduction to research methodology**

Objectives of research – type of research – Significance of research. Research methodology – Research and scientific method – Criteria of good research – Problems encountered by research in India.

**UNIT-II Data base and Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

**UNIT-III Data Analysis:**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – normal distribution curve – Statistical treatment of finite samples – T test and F test (ANOVA) co – Variance (ANCOVA) correlation and multiple regression.

**UNIT-IV Thesis and paper writing:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – Reference and Appendices.

**UNIT-V Application on MATLAB:**

Numerical Integration – Numerical integration, ordinary differential equations, partial differential equations, and boundary value problems - Fourier analysis – Fourier transforms, convolution.

**Course Outcomes**

- \* Students who complete this course will be able to understand and comprehend the basics in research methodology and applying them in research/ project work.
- \* This course will help them to select an appropriate research design.
- \* With the help of this course, students will be able to take up and implement a research project/ study.
- \* The course will also enable them to collect the data, edit it properly and analyse it accordingly. Thus, it will facilitate students' prosperity in higher education.
- \* The Students will develop skills in qualitative and quantitative data analysis and presentation.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
172SFSK02L	SOFT SKILL II – ETIQUETTE AND INTERVIEWING SKILLS	0	0	0	1

### **UNIT I: Interviewing Skills**

Researching the job-Researching the company -Questions to research the company-Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction.

### **UNIT II: Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.  
Presentation skills (what to present and how to present it)

### **Course Outcomes:**

Provide participants with a thorough overview of the communication process. Offer suggestions for improving listening skills. Suggest language for communicating difficult or controversial information. Outline steps for crafting clear and courteous email messages.

Course Code	Course Title	L	T	P	C
17222SEC51	Core XX: Data mining and warehousing	4	0	0	4

**AIM:**

To emphasis on the design aspects of Data mining and Data Warehousing.

**OBJECTIVES:**

- To introduce the concept of Data Mining with in detail coverage of basic tasks metrics issues and implication .Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of Data Warehousing with special emphasis on architecture and design.

**UNIT I**

Introduction: Data mining-data mining functionalities-clasification-Task Primitives-Data processing: data cleaning-data integration and transformation-data reduction-data discretization and concepts.

**UNIT II**

Data mining concepts: Efficient and scalable mining methods-various kinds of association rules-from association mining to correlation analysis-constraint based association mining.

**UNIT III**

Classification and prediction: classification by decision tree-Bayesian classification- classification by backpropagation-prediction. Cluster analysis: types of data in Cluster analysis-partitioning methods –hierarchical methods.

**UNIT IV**

Data ware house: What is data warehousing-Multidimensional data model-data ware house architecture-Dataware house implementation-From data ware housing to data mining.

**UNIT V**

Multidimensional analysis: spatial data mining-Multimedia data mining-Text mining-Mining and world wide web-Data mining applications

**OUTCOMES:**

**After completing this course, the student will be able to:**

- Apply data mining techniques and methods to large data sets.
- Use data mining tools
- Compare and contrast the various classifiers.

**REFERENCES:**

Course Code	Course Title	L	T	P	C
17222SEC52	Core XXI: Grid and Cloud Computing.	4	0	0	4

## AIM

To understand the technology application and tool kits for grid computing and to provide a strong foundation in Developing Cloud Services.

## OBJECTIVES

- To understand the genechise of grid computing.
- To know the application of grid computing.
- To understanding the technology and tool kits to facilitated the grid computing
- To understand the concept of Cloud Computing.
- To get an idea about Sharing Files

## UNIT I

Introduction - Definition - Scope of grid computing

## UNIT II

Grid Computing Organizations and their roles – Grid Computing analog – Grid Computing road map

## UNIT III

Understanding Cloud Computing: An introduction to Cloud Computing – Computing in the Cloud – Developing Cloud Services.

## UNIT IV

Cloud Computing for the Family – Cloud Computing for the Community – Cloud Computing for the Corporation

## UNIT V

Collaborating via Web-Based Communication Tools – Collaborating via Social Networks and Groupware – Collaborating Via Blogs and Wikis

## OUTCOMES:

**At the end of the course, the student should be able to**

- Use the grid and cloud tool kits.
- Design and implement applications on the Grid.
- Compare the strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Design Cloud Services and Set a private cloud

## REFERENCES:

Course Code	Course Title	L	T	P	C
17222SEC53	Core XXII: .NET Programming	4	0	0	4

## AIM

To cover the fundamental concepts of the .NET framework.

## OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

## UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

## UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

## UNIT III

Interfacing with the End user-Asp.NET Applications.

## UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

## UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

## OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

## REFERENCES:

4. Visual Basic.Net Black Book- Steven Holzner.

Course Code	Course Title	L	T	P	C
17222SEC54	Core XXIII: Object Oriented System Design	4	0	0	3

## AIM

To understand the concepts of object oriented analysis and design.

## OBJECTIVES

- To understand the object oriented life cycle.
- To know how to identify objects, relationships, services & attributes through UML.
- To understand the use-case diagrams.
- To know the Object Oriented Design process.
- To know about software quality and usability.

## UNIT I

Introduction: an overview of object oriented system development object basics-object oriented system development life cycle.

## UNIT II

Methodology, modeling, & unified modeling language: object-oriented methodologies-UML.

## UNIT III

Object-oriented analysis: object –oriented analysis process. Identifying use case –object analysis classification identifying object relation, attribute & methods.

## UNIT IV

Object oriented designing: the object oriented designing process & design axioms- designing classes – access layer.

## UNIT V

View layer –software Quality assurance- system usability & measuring user & satisfaction.

## OUTCOMES:

- Understand the basic concepts to identify state & behavior of real world objects
- Able to learn the various object oriented methodologies and choose the appropriate one for solving the problem with the help of various case studies
- Understand the concept of analysis, design & testing to develop a document for the project
- Able to implement analysis, design & testing phases in developing a software project
- Able to understand the testing strategies and know about automated testing tools

## REFERENCES:

Course Code	Course Title	L	T	P	C
17222SEC55L	Core Practical IX: .NET Programming Lab.	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data

Manipulations:

(i). Insertion (ii) Updating (iii) Deletion (iv) Selection

Hint: Do operations using Ms-Access and SQL-Server

10. Create an application using Data grid control to access information's from table in SQL server.

### CourseOutcomes

At the end of this Lab course students will be able to:

- 1.Create user interactive web pages using ASP.Net.
- 2.Create simple data binding applications using ADO.Net connectivity.

Course Code	Course Title	L	T	P	C
17222DSC56A	Discipline Specific Elective – II Multimedia and Graphics	4	0	0	3

## AIM

To impart the fundamental concepts of Multimedia and Graphics.

## OBJECTIVES

- To study the multimedia concepts and various I/O technologies.
- To study the graphics techniques and algorithms.
- To enable the students to develop their creativity

## UNIT I

Introduction – Definition- Multimedia Hardware- Multimedia Software- MULTIMEDIA networking- Multimedia Applications- Multimedia Environments- Multimedia Computer Components- Multimedia Standards- Multimedia PC.

## UNIT II

Multimedia Software : Basic Tools : Text Editing and Word Processing Tools – OCR Software – Painting and Drawing Tools – 3-D Modeling and Animation Tools – Image-Editing Tools – Sound Editing Tools – Animation, Video, and Digital Movie Tools – Helpful Accessories. Making Instant Multimedia : Linking Multimedia Objects – Office Suites - Word Processors –Spreadsheets – Databases – Presentation Tools – Multimedia Authoring Tools – Types of Authoring Tools – Card and Page-Based Authoring tools – Icon –Based Authoring tools – Time Based Authoring tools- Object – Oriented Authoring tools – Cross platform Authoring Notes.

## UNIT III

Multimedia Building blocks : Text : The Power of Meaning – About fonts and Faces Using Text in Multimedia – Computers and Text – Font Editing and Design Tools – Hypermedia and Hypertext. Sound: The Power of Sound – Multimedia System Sounds – MIDI versus Digital Audio – Making MIDI Audio – Audio File Formats –Working with Sound on the Macintosh – Toward Professional sound – Production Tips. Images: – Making Still Images – Color – Image File formats. Computer Animation - Using Digital Video in Multimedia Applications.

## UNIT IV

Computer Graphics and output primitives: Concepts and applications, Random and Raster scan devices, Refresh Cathode ray tubes, LCD monitors, Laser, Printers, Keyboards, Mouse, Scanners, Graphics Software output primitives: Line drawing algorithm: DDA along with Bresenhan's. Circle generating algorithm, Midpoint algorithms: ellipse and other curves.

## UNIT V

Two-dimensional Transformations: Translation, scaling, rotation, reflection, shear, matrix representation of all homogeneous coordinates composite transformation. Three dimensional concepts: 3D Display methods- parallel projection, perspective projection, Depth cueing. Three dimensional object representations: Polygon Surface, Tables, Plane Equation.

**OUTCOMES:**

- Gain proficiency in 3D computer graphics API programming
- Enhance the perspective of modern computer system with modeling, analysis and interpretation of 2D and 3D visual information.
- Able to understand different realizations of multimedia tools
- Able to develop interactive animations using multimedia tools
- Gain the knowledge of different media streams in multimedia transmission

Course Code	Course Title	L	T	P	C
17222DSC56B	Discipline Specific Elective – II WAP and XML	4	0	0	3

### UNIT I

Overview of WAP : WAP and the wireless world - WAP application architecture – WAP internal structure –WAP versus the Web - WAP 1.2 – WTA and push features. Setting up WAP : Available software products –WAP resources –The development tool kits

### UNIT II

WAP gateways: Definition –Functionality of a WAP gateway- the web model versus WAP model – positioning of a WAP gateway in the network-selecting a WAP gateway Basic WML: Extensible markup language- WML structure - A basic WML card-Text formatting-Navigation –Advanced display features

### UNIT III

Interacting with the user: Making a selection-Events-Variables-input and parameter passing- WML script-need for WML script-lexical structure-variables & literals-operators-automatic data type conversion-Control constructs-functions- using the standard libraries-programs-dealing with errors.

### UNIT IV

XML-introduction to Xml-an eagle’s eye-view of XML-XML definition –life of an XML document-related technologies-An introduction to XML applications-XML applications -XML for XML- first XML Documents Structuring Data : Examining the data XMLizing the data - the advantages of the XML format-preparing style sheet for Document display.

### UNIT V

Attributes, empty tags and XSL: attributes - attribute versus elements - empty tags- XSL- well formed XML Document- foreign languages and non – roman text- non roman scripts on the Web Scripts, character set, fonts and glyphs- legacy character set –Unicode character set- procedure to write XML in Unicode.

#### Course Outcomes:

- CLO 1 Understand the basics of WAP architecture
- CLO 2 Identify the usage of WAP gate ways.
- CLO 3 Apply WML concepts to develop Web application.
- CLO 4 Develop the interactive real time applications.

#### TEXT BOOKS:

1. Charles Arehart and Others “**Professional WAP with WML, WML script, ASP,JSP XML,XSLT,WTA Push and Voice XML** “ Shroff Publishers and Distributors Pvt.Ltd.2000. . (For Unit-I ,II & III)
2. Eliotte Rusty Harlod “**XML TM BIBLE**” IDG books India(P) Ltd 2000. (forUnit-IV &V)

Course Code	Course Title	L	T	P	C
17222DSC56C	Discipline Specific Elective – II Wireless communication Network.	4	0	0	4

### AIM

To promote the international exchange of information related to Wireless Communication systems.

### OBJECTIVES:

- To understand the concepts of Transmission fundamentals.
- To study the functions of TCP/IP suite.
- To describe communication protocols , data transmission modes and satellite communication.

### UNIT I

Introduction – Transmission fundamentals.

### UNIT II

Communication Networks – Protocols and TCP/IP suite.

### UNIT III

Wireless communication Technology – Antennas and propagation – signal encoding technique – spread spectrum – coding & Error control.

### UNIT IV

Wireless networking: satellite communication – cellular wireless networks – cordless systems and wireless local loop – mobile IP and wireless Access protocol.

### UNIT V

Wireless LANs: Wireless LAN Technology – WiFi and IEEE802.11 –wireless LAN standard – Bluetooth and IEEE 802.15.

### OUTCOMES:

#### Upon Completion of the course, the students should be able to:

- Understand the concepts of Transmission fundamentals.
- Study the functions of TCP/IP suite.
- Describe communication protocols , data transmission modes and satellite communication

### REFERENCES:

1. William Stallings “wireless communication & Networks”, Second Edition.
2. Blake “wireless communication Technology”
3. Kaveh pahlavan, Prashant Krishnamurthy “Principles of Wireless network”.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
172SFSK03L	Soft Skill III - Self Development And Leadership Skills	0	0	0	1

### **UNIT I: Self-Development and Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

### **UNIT II: Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, Organizing and conducting meetings, decision making, Vision, Mission, conflict, Public Speaking.

#### **Course Outcomes:**

Students will understand the basic concepts in HRM

- Students will be aware of human resource requirement for an
- organization

Course Code	Course Title	L	T	P	C
17222SEC61	Core XXIV: Human Computer Interaction.	4	0	0	4

**AIM:**

To have a thorough knowledge about Human Computer Interaction.

**OBJECTIVES**

- To understand the concept of HCI Ergonomics and WIMP interface.
- To learn about Heuristic process and Evaluation techniques.

**UNIT I**

The interaction: Introduction - Models of interaction - Frameworks and HCI - Ergonomics - Interaction Styles - Elements of WIMP interface - Interactivity - The Context of the interaction - Paradigm: Introduction - Paradigms for interaction.

**UNIT II**

Interaction Design basics: Introduction - what is design? - User focus - Scenarios - Navigation design - Screen design and layout - Interaction and prototyping - HCI in the software process: Introduction - The software lifecycle - Usability engineering – interactive design and prototyping – Design rationale.

**UNIT III**

Design rules: Introduction - Principles to support usability - Standards – Guidelines-Golden rules and heuristics - HCI patterns - Implementation Support: Introduction -elements of windowing systems - Programming the application - Using toolkits- User interface management systems.

**UNIT IV**

Evaluation techniques: What is evaluation - Goals of evaluation - Evaluation through expert analysis - Evaluation through user participation - Choosing an evaluation method - Universal Design: Introduction - Universal design principles - Multi-modal interaction - Designing for diversity.

**UNIT V**

User Support: Instruction - Requirements of user support - Approaches to user support - Adaptive help system - Designing user support systems.

**OUTCOMES:**

**Upon completion of the course, the student should be able to:**

- Design effective dialog for HCI.
- Design effective HCI for individuals and persons with disabilities.
- Assess the importance of user feedback.
- Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Websites.

**REFERENCES:**

1. "Human-computer Interaction" - Alan Dix - Pearson Education - 2004.

Course Code	Course Title	L	T	P	C
17222PRW62	Project work	0	0	26	15

Each student will develop and implement individually developed application software based on any of the latest technologies.

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student’s knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.C.A., curriculum, the following Research Skill Based Courses are introduced in the curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
III	Research Led Seminar	1
IV	Research Methodology	3
IV	Participation in Bounded Research	2
V	Design Project/ Socio Technical Project ( Scaffolded Research)	4
IV	Project Work	12

### **Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**

(Essay type Questions set by the concerned resource persons)

### **Blueprint for assessment of student's performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

### **Blueprint for assessment of student's performance in Research Methodology Courses**

- **Continuous Internal Assessment:** **20 Marks**
  - Research Tools( Lab) : 10 Marks
  - Tutorial: 10 Marks

### **Model Paper Writing:** **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

### **Semester Examination:** **40 Marks**

**Total:** **100 Marks**

	<b>Total</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>10</b>

Course Code	Course Title	L	T	P	C
173CSC11	Research Methodology	6	0	0	4

### **Aim:**

A research aim is a broad statement indicating the general purpose of your research project. It should appear in your introduction at the end of your problem statement, before your research objectives. Research objectives are more specific than your research aim.

### **Objectives:**

- Develops Better Insight Into Topic
- Provides Systematic Structure
- Enhance The Research Quality
- Derive Better Solutions
- Aids In Decision Making
- Inculcates Logical And Systematic Thinking

### **Unit – I:**

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

### **Unit – II:**

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

### **Unit – III:**

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

### **Unit – IV:**

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Main (E-mail) – Intranet and Extranet.

### **Unit – V:**

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

**Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.**

- Microsoft Office 2003 – Edward C. Willet. First Edition 2004, Wiley Publications, USA , (Chapters 2,3,4,5,6,12,14,15,26,28,29).

Course Code	Course Title	L	T	P	C
173CSC12	WIRELESS NETWORKS AND WEB COMPUTING	6	0	0	5

**Aim:**

A wireless network connects computers without using network cables. Computers use radio communications to send data between each other. You can communicate directly with other wireless computers, or connect to an existing network through a wireless AP.

**Objectives:**

- Introduction to Wireless Local Area Network
- Advantages of WLAN
- Types of WLAN
- IEEE 802.11 standards
- Modes of wireless networks
- Introduction to 802.11 architecture

**Unit 1 :**

**Wireless Networking:**

Introduction to Wireless Networking ,History of wireless networks,-Difference between Wireless and Fixed Telephone Networks,-Development of Wireless Networks, Wireless Network Architecture,-Benefits of Wireless Networks, Wireless Networking Applications.

**Unit 2 :**

**Wireless Networks:**

Introduction, Wireless Technology-Satellite Communications: Parameters & configurations, Capacity Allocation-Cellular Wireless Networks : Principles, Evolution-Wireless LANs: Technology, IEEE 802.11 Wireless LAN Standard,-Radio based Wireless-LANs, Components, Configuration, Performance, Wi-Fi, Wimax.

**Unit 3:**

**Wireless Channel Characterization:**

Multipath propagation environment - LTI channel model - Channel correlation function - Large scale path loss-Small scale multipath fading. ]

**Unit 4:****Wireless Communication Techniques:**

Transmission techniques - Receiver Techniques - Multiple Access Technologies - Conflict free multiple access technologies - Spectral efficiencies.

**Unit 5:****Web Services**

XML, Web Services Architecture, UDDI, SOAP and its Format, WSDL, Create and Consuming XML Web Service Simple and Databases, WCF- Architecture, End Points, Types of Contracts, Web Applications and Security 08.

**Course Outcomes:**

At the end of the course, the student should be able to:

- Identify the components required to build different types of networks.
- Identify solution for each functionality at each layer.
- Trace the flow of data from one node to another node.

**References:**

1. Matthew Gast, 802.11 Wireless Networks: The Definitive Guide, Second Edition.
2. John Ross, Introduction to wireless networks.

5. Web Services & SOA Principles and Technology, Second Edition, Michael P. Papazoglou.

Course Code	Course Title	L	T	P	C
173CSC13	KNOWLEDGE DISCOVERY SYSTEM	6	0	0	5

**Aim:**

Knowledge discovery helps businesses accurately forecast future market trends and conditions. This gives them a competitive edge over their competitors, and it helps them stay relevant in an ever-changing world.

**Objectives:**

- Recognize, define, describe, and clearly state the objectives of Knowledge Discovery in Databases.
- Identify relevant data and corresponding Databases and data Warehouses from which Knowledge can be extracted.
- Specify how to access the relevant data.
- Preprocess the data (Clean, Integrate, and Transform).
- Specify proper algorithm(s) and discovery techniques.

**Unit 1 :**

Introduction-Data types, Time series-Basic concepts.

**Unit 2 :**

Knowledge discovery process-Knowledge discovery process stages-Data preprocessing for basic data types and time series.

**Unit 3 :**

KDD Tools-Background-A KDD tool: WEKA.

**Unit 4 :**

Data mining techniques-Classification-Advanced Methods for Data Analysis-Clustering-Time Series Techniques.

**Unit 5 :**

Evaluation-Objectives-Evaluation techniques.

**COURSE OUTCOME:**

- Understand the various ways of gathering information by asking people questions.
- Understand how to decide between the different types of interview. Develop the skills needed for approaching different types of interviews.

**மெட்ரிக் இலக்கியம் பன்னாட்டுக் கழகம் - வணிக, தொழில்நுட்ப**  
**பல. குடியாறு : தமிழ் முதல் பருவம்**  
**முதலாம் ஆண்டு**  
**இக்கலை இலக்கியம் - செவ்வாய், சிறுகதை , நடிகம், இலக்கிய வரலாறு**  
**அககு : 1. செவ்வாய்**  
 தாயுமானவ சுவாமிதன் - அத்தார புலனம் - சிறும்பு நகரியம் - 40 அட்டிகள்  
 இராமலிங்க அட்டிகள் - திருவாய்நம்பா - அருணை விண்ணப்பம் - 40 அட்டிகள்  
 அவிமணி தேசிக விநாயகம் நிர்ணய - மலரும் மானவயும் - 52 அட்டிகள்  
 பாரதியார் - புதுமைப்பெண் - 40 அட்டிகள்  
 பாரதிதாசன் - பாரதிதாசன் அவிதைகள் , தமிழ் இனிமை , தமிழ் அணவு  
**அககு : 2. செவ்வாய்**  
 நாமச்சல் அவிதர் - தமிழ் தேன் - தமிழ் வணிக சபதம் செவ்வாய் , 40 அட்டிகள்  
 ந.சி.சுப்பிரத்தி - வழித்தூணை - அவிதை கதன் , 42 அட்டிகள்  
 கரதா - தேன்மழை, அன்பை , 22 அட்டிகள்  
 கண்ணதாசன் - இலக்கியம் , ஒரு பாணியின் கதை , 54 அட்டிகள்  
 அப்துல் ரஹான் - சொந்த சிறுகதை , குடும்பவைய சிறுகதை , 80 அட்டிகள்  
**அககு : 3. சிறுகதை**  
 க.சுப்பிரத்திரம் - வேதில் புழந்தை பண  
**அககு : 4. நடிகம்**  
 கு. வெ. பாலசுப்பிரமணியன் , கௌதம புத்தர் (அரைநடை நடிகம்)  
**அககு : 5. இலக்கிய வரலாறு**  
 சிறுகதை , புதினம், நடிகம் அரைநடை , அவிதை , புதுக்கவிதை

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature
- 

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

<b>17111AEC12</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -ArunaGnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

## **Employability**

<b>CourseCode</b>	<b>Core Paper - I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17113AEC13</b>	<b>Properties Of Matter</b>	<b>6</b>	<b>1</b>	<b>0</b>	<b>6</b>

### **Aim:**

The course presents an introduction to the physics of the objects whose sizes span from atomic dimensions to macroscopic, human scale dimensions, and beyond: atoms, molecules, gases, liquids, and solids. The aim is to show how the properties of macroscopic bodies can be derived from the knowledge that matter is made up from atoms.

### **Objectives:**

Recognize the difference between physical and chemical properties  
Distinguish between extensive and intensive properties

### **UNIT – I Elasticity:**

Stress – Strain – Hooke's law – Relation between elastic constants – poisson's Ratio – Expression for poisson's ratio in terms of elastic constants – work done in twisting –Torsional pendulum – determination of rigidity modulus – Young's modulus – determination – uniform – non-uniform bending.

### **UNIT – II Surface Tension:**

Definition, Explanation of surface tension– Surface energy and surface tension – Pressure difference across a liquid surface – Excess of pressure inside a soap bubble – Angle of contact – Measurement of angle of contact – Experimental determination of surface tension by Jaegers method - Capillary rise method – Surface tension and vapour pressure over a liquid surface – Effect of Evaporation and condensation.

### **UNIT – III Viscosity:**

Definition – flow of liquid through a capillary tube – Stokes Law – Poiseuille's method for coefficient of viscosity – conception of poiseuille's equation-Ostwald's viscometer – viscosity of highly viscous liquids – Stokes method – variation of viscosity of a liquid with temperature – viscosity of Gases and kinetic energy.

### **UNIT – IV Diffusion – Osmosis:**

Osmosis and osmotic pressure – Laws of osmotic pressure – Experimental determination of osmotic pressure – Preffer method – Berkley method – Elevation of Boiling point and Depression of freezing point – Diffusion – Fick's law – Experimental measurement of Diffusivity – Graham's Laws of Diffusion of Gases – Effusion, Transpiration and Transfusion.

### **UNIT - V Gravitation:**

Newton's Law – Kepler's Law –Deductions of Newton's law from Kepler's Law – Law of Gravitation– Gravitational potential: Potential energy – Gravitation Potential and Field at a point due to spherical shell, solid sphere, Hollow sphere – Satellites – Stationary satellite – Escape velocity – Rocket – Jet plane.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Learning outcomes:**

On completion successful students will be able to demonstrate an understanding of:

1. The relationships between physics on the atomic scale and the properties of matter.
2. The roles played by microscopic states of system, their numbers and their accessibility.
3. Techniques for finding appropriate averages to predict macroscopic behavior.
4. How these techniques are applied to the calculation of the properties of matter.

**Reference:**

1. Properties of matter – Subramaniaiyer and Jeyaraman.
2. Elements of properties of matter – D.S. Mathur, S Chand and Co.,
3. Properties of Matter – Brijlal and Subramaniam, S. Chand and Co.,

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

<b>Course.Code</b>	<b>PROPERTIES OF MATTER LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17113AEC14L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

**List of Experiments**

1. Young's modulus – uniform bending – pin and microscope.
2. Young's modulus – non uniform bending – scale and telescope .
3. Static torsion – Rigidity modulus.
4. Torsion pendulum – Rigidity modulus.
5. Cantilever depression – scale and telescope method.
6. Surface tension – capillary rise method.
7. Viscosity – capillary flow method.
8. Newton's ring –determination of R.
9. Compound pendulum.
10. Long focus convex lens – f, R, u determination.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Allied Paper - I	L	T	P	C
17112AEC15A	Calculus and Fourier Series	4	0	0	4

**Aim and objectives:**

This paper aims at enabling the students to know various concepts and principles of differential and integral calculus.

Sound Knowledge of calculus is essential for the students of mathematics for the better perceptions of the subject and its development

**Unit – I**

Leibnitz theorem (Proof not needed) and its applications – curvature and radius of curvature in Cartesian only (Proof not needed) – total differential coefficient (Proof not needed) – Jacobians of two & three variables – Simple problems in all these.

**Unit – II**

Reduction formula (when n is a +ve integer) for (i)

i.  $\int_a^b e^{ax} x^n dx$

ii.  $\int_a^b \sin^n x dx$

iii.  $\int_a^b \cos^n x dx$

iv.  $\int_0^x e^{ax} x^n dx$

v.  $\int_0^x \sin^n x dx$

vi. without proof  $\int_0^x \sin^n x \cos^n x dx$  and illustrations

**Unit – III**

Beta and Gamma functions

**Unit – IV**

Evaluation of double and triple integrals in simple cases – changing the order and evaluating of the double integration (Cartesian only)

**Unit – V**

Definition of Fourier series – Finding Fourier coefficients for a given periodic function with period  $2\pi$  and with period  $2l$  – use of odd and even functions in evaluating Fourier coefficients – half range sine and cosine series.

**Outcomes:**

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

- Calculate definite integral values using Beta and Gamma Functions
- Develop the skill of evaluating Laplace and inverse Laplace transform to solve Linear systems under initial and boundary conditions

**Text Books**

Calculus – T.K.M. Pillai

Trigonometry & Fourier Series – T.K.M. Pillai.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Allied Paper - II	L	T	P	C
17112AEC16A	Algebra and Trigonometry	4	0	0	4

**Aim and Objectives:**

This paper emphasizes general techniques of problemsolving and explores the creation of mathematical patters. It aims at introducing a course that initiates the students into the world of Discrete Mathematics.

**Unit – I**

Binomial, Exponential & Logarithmic series (Formulae only) – Summation

**Unit – II**

Nonsingular, symmetric, skew symmetric, orthogonal, Hermitian, skew Hermitian and unitary matrices – Characteristics equation, Eigen values, Eigen vector – Cayley Hamilton's theorem (proof not needed) Simple application only.

**Unit – III**

Expansion of  $\sin n\theta$ ,  $\cos n\theta$ ,  $\tan n\theta$  and  $\sin^n \theta$ ,  $\cos^n \theta$ ,  $\sin^n \theta \cos^m \theta$  (m & n being a positive integer) – Expansion of in a series of sines and cosines of multiples of  $\theta$  ( $\theta$  – given in radius) Expansion of  $\sin \theta$ ,  $\cos \theta$  and  $\tan \theta$  in terms of powers of  $\theta$  (only problems in all the above)

**Unit – IV**

Euler's formula for  $e^{i\theta}$  – definition of hyperbolic functions – formulae involving hyperbolic functions – relation between hyperbolic and circular function – expansion of  $\sinh x$ ,  $\cosh x$ ,  $\tanh x$  in power of x.

**Unit – V**

Expansion of inverse hyperbolic function –  $\sinh^{-1} x$ ,  $\cosh^{-1} x$  and  $\tanh^{-1} x$  - Separation of real and imaginary parts of  $\sin(x+iy)$ ,  $\cos(x+iy)$ ,  $\tan(x+iy)$ ,  $\sinh(x+iy)$ ,  $\cosh(x+iy)$ ,  $\tanh(x+iy)$

**Outcomes:**

The topic like Mathematical Logic, Set Theory, Relations, Functions, Mathematical Induction, Recursive relations and Matrices.

**Text Books:**

T.K.M. Pillai, T.Natarajan, K.S. Ganapathi, **Algebra, Vol I**. S.ViswanathanPvt.Ltd., Chennai – 2004

Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Skill Based Elective	L	T	P	C
17120SEC01AL	Package Lab - I	0	0	2	1

**MS-WORD**

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. Picture Insertion and Alignment
  - a. Prepare a Greeting Card
  - b. Prepare a Handout
7. Create a Mark sheet using tables and find out the total marks.
8. Prepare a Business letter for more than one company using Mail Merge

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Skill Based Elective -I	L	T	P	C
17160SEC01B	Effective Communication	0	0	2	1

**UNIT I**

**Effective communication I**

**Oral Communication:** Listening skills -Speaking skills (what to say and how to say it) – Gender neutral Language-Conflict, criticism, anger- Telephone skills.

**UNIT II**

**Effective communication II**

**Written Communication:** Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos.

**Nonverbal Communication:** Behavior, Body language and Attitude.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

<b>Course Code</b>	<b>Communicative English-I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17111SEC01L</b>		<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To know English grammar and all the concomitant linguistic items
- To be aware of basic concepts related to the study of communication
- To understand the types of sentences and its patterns

**Outcome:**

- Understand grammar

**UNIT –I**

Noun

Pronoun

Adjective

**UNIT – II**

Verb

Adverb

**UNIT –III**

Conjunction

Preposition

Interjection

**UNIT – IV**

Kinds of Sentences

**UNIT –V**

Patterns of sentences

**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	Indian constitution	L	T	P	C
171INDCONS		1	0	0	1

**Aim and Objectives:**

1. To make the students understand about the Democratic Rule and Parliamentary Administration.
2. To appreciate the salient features of the Indian Constitution.
3. To know the fundamental Rights and Constitutional Remedies.
4. To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
5. To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

**UNIT I: THE MAKING OF INDIAN CONSTITUTION**

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

**UNIT II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS**

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

**UNIT III: DIRECTIVE PRINCIPLES OF STATE POLICY**

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

**UNIT IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT**

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

**UNIT V: STATE COUNCIL – ELECTION SYSTEM AND PARLIAMENTARY DEMOCRACY IN INDIA**

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

**Outcomes**

1. Democratic values and citizenship Training are gained.
2. Awareness on Fundamental Rights are established.
3. The functions of union Government and State Governments are learnt.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

4. The power and functions of the Judiciary learnt thoroughly.
5. Appreciation of Democratic parliamentary Rule is learnt.

Gathered Wisdom

-GowriSivaramanEmeraldPublishers

**PRIST UNIVERSITY**  
 Declared Under Section 3 of UGC Act, 1956  
 Thanjavur, Tamilnadu, India.

CourseCode	Core Paper - II	L	T	P	C
17113AEC23	Mechanics and Special Theory of Relativity	6	1	0	6

**Aim:**

To deepen understanding of Mechanics.

To prepare students for courses in quantum field theory and gauge theory

**Objectives:**

Find the unitary transformations linked to symmetry operations.

Apply time-dependent perturbation theory to variety of problems.

**Unit I :Dynamics projectile , impulse, impact**

Projectile - range of horizontal and inclined plane – Impulse – Impact – Impulsive force – Laws of impact – Impact of a smooth sphere on a smooth horizontal plane – Direct and oblique impacts – Loss in kinetic energy – Motion of two interacting bodies – reduced mass.

**Unit II: Dynamics of Rigid bodies**

Kinetic energy of rotation - Theory of compound pendulum - Equivalent simple pendulum – Reversibility of centers of oscillation and suspension - Determination of 'g' and radius of gyration of a bar pendulum-period of oscillation of a Bifilar pendulum with Parallel threads.

Center of mass - velocity and acceleration of center mass - system of variable mass-equation for a rocket – Conservation of linear and angular momentum.

**Unit III: Center of Gravity and states of equilibrium:**

Center of gravity of simple bodies – Center of gravity of solid hemisphere, hemispherical bowl, and right solid cone – stable, Unstable and neutral equilibrium of a rigid body supported about an axis.

**Unit IV: Center of Pressure:**

Center of pressure of vertical rectangular Lamina – Vertical triangular lamina – Vertical circular lamina – Atmospheric Pressure – Variation of atmospheric pressure with altitude – Hydro dynamics – stream line flow of an ideal fluid – equation of continuity of flow – Bernoulli's theorem and its applications to liquids.

**Unit V: Special theory of relativity:**

Frame of reference – Newton's relativity – Inertial frame of reference – Galilean transformations – Transformation of position , velocity and acceleration – time dilation & length contraction – Lorentz Transformations – Mass –Energy relation– variation of mass with velocity.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Learning Outcomes:**

Derive a mathematical description of quantum motion in electromagnetic fields.

Apply the relativistic wave equations to simple single-particle problems.

**Books for Study:**

1. Mechanics – Part I and II – NarayanaMoorthy
2. Mechanics – D.S. Mathur
3. Mechanics – Brij.Lal and N. Subramaniam

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Core Practical – II Mechanics Lab	L	T	P	C
17113AEC24L			0	0	3

### **List of Experiments**

1. Characteristics of junction diode.
2. Characteristics of Zener diode.
3. Potentiometer – low range voltmeter calibration.
4. Potentiometer – specific resistance.
5. Transistor characteristics – CE configuration.
6. Spectrometer -  $\mu$  of a solid prism.
7. Air wedge – thickness of a wire.
8. Specific heat capacity of liquid – Newton's law of cooling.
9. Thermal conductivity of a bad conductor- lee's disk.
10. Carey fosters bridge – specific resistance measurement.

**PRIST UNIVERSITY**  
 Declared Under Section 3 of UGC Act, 1956  
 Thanjavur, Tamilnadu, India.

Course Code	Allied Paper - III	L	T	P	C
17112AEC25A	ODE, PDE And Laplace Transform	4	0	0	4

**Aim:**

Introduce the Concepts of laplace and fourier transforms

**Objectives:**

Find the Fourier series representation of a function of one variable

Find the solution of the wave,diffusion and Laplace equations using the Fourier series.

**UNIT I:**

Ordinary differential equations of first order but of higher degree- Equations solvable for x and y – solvable for dy/dx, clairaut’s form (simple case only)- homogeneous linear differential equation(Variable coefficients), variation of parameter.

**UNIT II:**

Formation of partial differential equation by eliminating constants and by eliminating of arbitrary functions- definition of general, particular and complete solution – singular integral(Geometrical meaning not required) solution of first order equations in the slandered forms  $f(p,q)=0$ ,  $f(x,p,q)=0$ ,  $f(z,p,q)=0$   $f_1(x,p)=f_2(y,p)$   $z=(x,p+yq=f(p,q)$ .

**UNIT III:**

Lagrange’s method for solving  $P_p + Q_q = R$  where p,q,r functions of X, Y, Z- (geometrical meaning is not needed)- (only problem in all the above- No proof needed for any formula ) Cherpit’s method The four standard forms.

**UNIT IV:**

Laplace Transforms- Definitions-

$L(e^{at})$   $L(\cos at)$ ,  $L(\sin at)$ ,  $L(t^n)$  where n is a positive integer – Basic theorem in Laplace transform (Statement only)  $L(e^{-st}\cos bt)$ ,  $L(e^{-st}\sin bt)$ ,  $L[e^{-st} f(t)]-L[F(t), L[f(t)], L[f'(t)]$

**UNIT V:**

Inverse Laplace transform related to the above standard forms- solving second order ODE with constant coefficients using Laplace transforms and simultaneous equation, variable coefficients. Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions change of interval — Half range series.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Outcomes:**

Solve an initial value problem for an  $n$ th order ordinary differential equation using the Laplace transform.

Solve a Cauchy problem for the wave or diffusion equations using the Laplace,

**Text Books**

Differential Equations - S. Narayanan

Differential Calculus T.K.M Pillai & S. Narayanan

Differential Calculus - M.L. Khanna

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

<b>Course Code</b>	<b>Allied Paper - IV</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17112AEC26A</b>	<b>3D Vector Calculus</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim and Objective:**

The course is designed to lay a strong foundation of Geometry and Vector Calculus.

**UNIT – I**

Vector differentiation – velocity & acceleration vectors- Gradient of a vector directional derivative - unit normal vector- tangent plane

**Unit- II**

Divergence- Curl – Solenoidal&Irrotational vector- Double operators – Properties connecting grad, div & curl of a vector.

**Unit –III**

Vector integration –Line integrals – Conservative force field – Scalar field- Scalar potential- work done by d Force- Surface integrals – Volume integrals.

**Unit –IV**

Gauss divergence theorem ,Stoke’s theorem (statement, application & verification only)

**Unit –V**

Equation of sphere – Tangent plane – plane section of a sphere – Finding the centre& radius of the circle of integration – sphere through the circle of integration (only problem in all above)

**Outcomes:**

- Vector calculus plays an important role in differential geometry and in the
- study of partial differential equations. It is used extensively in physics and
- engineering, especially in the description of electromagnetic ends, gravitational elysian uid dynamics.

**Text Book**

Analytical Geometry (3D) & Vector calculus, T.K. Manickavasagem Pillai, , New Gamma Publishing House, 1991

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

<b>CourseCode</b>	<b>Skill Based Elective- II</b> <b>Package Lab- II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>

**MS –EXCEL**

1. Prepare the addressing methods in excel
2. Prepare an Excel Document using different type of Functions.
3. Draw a Graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark List for the Students.
6. Prepare a Worksheet for a Company.
7. Prepare an Inventory Report for a Shop.
8. Prepare an Electricity Bill for the Domestic Customers.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Skill Based Elective -II	L	T	P	C
17160SEC01B	Self Development	0	0	2	1

**UNIT I**

**Self -Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

**UNIT II**

**Self- Management**

Managing Time, Managing Stress, Conflict Management

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

<b>Course Code</b>	<b>Communicative English-II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17111SEC02L</b>		<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To learn about the auxiliary and the models
- To understand the different tenses and use it in sentences
- To know where to use and where not to use the articles
- To familiarize with the participle

**Outcome:**

- Understand grammar

**UNIT –I**

Auxiliaries

**UNIT –II**

Modals

**UNIT –III**

Tenses-Simple, Perfect

**UNIT –IV**

Tenses-Continuous, Perfect continuous

**UNIT –V**

A Practical English Grammar  
English Grammar

-A.J Thomson and A.V.Martinet  
-Wren and Martin

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	Course Title	L	T	P	C
17111AEC31	Advanced English-III	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT – I**

The organs of speech

Classification of speech sounds

Vowels and Diphthongs

**UNIT – II**

Consonants

Consonant cluster

**UNIT – III**

Syllable

Word accent

Intonation

**UNIT – IV**

Idiom

Interpretation of graphics

**UNIT – V**

Slogan writing

Writing advertisement

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – 1**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey DREAMER
The Case of the Stolen Diamonds	-Farrell Mitchell

Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	<b>Core Paper - III</b> <b>Heat and Thermodynamics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17113AEC33		<b>5</b>	<b>0</b>	<b>0</b>	<b>6</b>

**Aim:**

To develop the ideas of classical thermodynamics

To deepen the appreciation of the link between the microscopic properties of individual atoms or other particles and the macroscopic properties of many-body systems formed from them

To demonstrate the power of statistical methods in physics

**Objectives:**

Demonstrate an understanding of the first and second laws of thermodynamics, and of the concept of entropy.

Explain and derive the fundamental thermodynamic relation.

**Unit – I: Thermodynamics**

Transport Phenomenon – Viscosity- Thermal conductivity – Diffusion – Experimental confirmation of kinetic theory – Zeroth law of thermodynamics – First law of thermodynamics – Heat engines – Reversible and irreversible process – Carnot’s theorem – Second law of thermodynamics – Entropy – Change of entropy in reversible and irreversible processes.

**Unit – II: Low Temperature**

Joule – Thomson’s effect – Porus plug experiment – Liquefaction of gases – Adiabatic expansion process – adiabatic demagnetization – practical application of low temperature – Refrigerating mechanism – Electrolux refrigeration – Air conditioning machines.

**Unit – III: Radiation**

Radiation – Stefan’s law – Boltzmann law – Black body – Rayleigh radiation – Rayleigh-Jeans law – Stefan fourth power law – Pyrometry – Solar constant – Sources of solar energy .

**Unit – IV: Specific Heat**

Specific heat of solids – Dulong and Petit’s law – Einstein’s theory of specific heat – Debye’s theory – Specific heat of gases – Variations of specific heat of Diatomic gases – Quantization of various contributions to energy of a diatomic molecules.

**Unit – V: Statistical Physics:**

Quantum statistics of identical particles – M.B statistics – Ideal gas - B.E statistics – Specific heat - F.D. Statistics – Richardson equation –Comparison of M.B,B.E and F.D statistics.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Learning Outcomes:**

Use the formalism of thermodynamics, including the thermodynamic potentials and Maxwell's relations, and apply these tools to simple systems in thermal equilibrium.

Explain the basic concepts of statistical mechanics, including the derivation of the general formula for entropy in terms of the ensemble partition function.

Explain the statistical origin of the second law of thermodynamics; and

Construct a partition function for a system in thermal equilibrium and use it to obtain thermodynamic quantities of interest.

**Books for Reference:**

- 1) Heat and Thermodynamics – J.B. Rajam and C.L. Arora.
- 2) Thermodynamics and Statistical Physics – Sharma and Sarkan.
- 3) Heat and Thermodynamics – Brijlal and Subramanian.
- 4) Statistical Mechanics – Satyaprakash and C. Agarwal.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

<b>Course Code</b>	<b>Core Practical – III</b> <b>Heat and Optics Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17113AEC34L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

### List of Experiments

- 1) Sonometer – Verification of laws.
- 2) Stokes method – Viscosity of highly viscous liquid.
- 3) P.O. Box – Temperature coefficient.
- 4) Potentiometer – Calibration of high range voltmeter.
- 5) Spectrometer – i-d curve.
- 6) Joule's calorimeter – Specific heat capacity.
- 7) Study of logic gates – discrete components.
- 8) Potentiometer – Calibration of ammeter.
- 9) Spectrometer – Grating – normal incidence method.
- 10) Emissive power of a surface – Spherical calorimeter.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Allied Paper -II	L	T	P	C
17114AEC35	Inorganic, Organic and Physical Chemistry- I	4	0	0	4

**UNIT- I : Polar effect:**

Inductive effect +I and – I groups, relative strength of – foamic , acetic and propionicacids – acetic and chloroacetic acids – ammonia and methyl amine. Resonance – resonating structure of benzene, butadiene and COOH groups – conditions – applications (resonance energy and stability). Acidic & basic properties of phenol & aniline. Hyperconjugation.- consequence of hyperconjugation. Steric effects – Steric accelerated reaction and steric inhibited reaction.

**UNIT –II : Industrial chemistry**

Fuel gases – Watergas, products gas, L.P.G gas, Gobar gas and natural gas. Fertilizers – NPK and mixed fertilizers, micronutrients, and their role in plant life and biofertilizers, soap and detergents an elementary idea about preparation cleaning action of soap detergents.

**UNIT III : Aromatic compounds :**

structure, stability, resonance and aromaticity of benzene. Substitution reactions, Nitration, Halogenation and Alkylation Naphthalene Isolation, Synthesis, properties, and structural elucidation and uses .Organic compounds: Benzoin, Perkin, Cannizaro, Claisen reactions. Chemotherapy: Definition and uses of Antibiotic, Analgesic Antibacteria, Antiviral, Antidiabetic, Antihypertensive, Antiseptic and disinfectant, Antimalarial- Anaesthetics – local and general.

**UNIT –IV :Energetic:**

Review first law of thermodynamic state and path functions need for the second law Carnot cycle and thermodynamic scale of temperature spontaneous and non spontaneous process and Third law.

**UNIT – V : Chemical kinetics:**

Order of reactions and their determinations. Activation energy, effect of temperature on reaction rate. Catalysis Types, mechanism of catalytic reactions, industrial applications.

**POWER POINT**

1. Create a slide show presentation for a Seminar (choose your own topics)
  - a. Enter the Text in the Outline View
  - b. Create Non-Bulleted and Bulleted Text
2. Create a slide show presentation for a Science Exhibition
  - a. Create Non-Bulleted and Bulleted text
  - b. Apply appropriate Text Attributes
3. Create slide show presentation for an Invitation
  - a. Insert an Object from a Bitmap File
  - b. Apply appropriate Text Attributes
  - c. Rotate the Object to 45 degree
  - d. Apply Shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all Students
  - a. Use Bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different Presentation Template and different Transition Effect for each slide
  - c. Use different Text Attributes in each slide
5. Create a slide show presentation for a Shop Advertisement to be open shortly
6. Create a slide show presentation to display Percentage of Sales in each quarter for the any Vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for Tourists Places
8. Create a slide for Calendar using appropriate Text attributes and insert an object from a Bitmap file

Selected Scenes from Shakespeare Book I &II -Emerald Publishers

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Sub. Code	Core Paper - IV Optics	L	T	P	C
17113AEC43		6	1	0	6

**Aim:**

To introduce geometric optics and the use of ray diagrams using lenses and mirrors.

To understand how simple optical instruments work.

**Objectives:**

Produce ray diagrams to predict the position and size of the image produced by simple lenses. Measure the focal length of a simple convex lens by producing an image of a distant object. Calculate the focal length of a simple lens by making measurements of image and object distance and using the lens equation.

**Unit – I: Geometrical Optics**

Thick lens – Principal foci and principal points – Thick lens formulae – Power of a thick lens – Nodal points – Optical centre of a lens.

Chromatic , chromatic combination of lenses, Aberrations: Spherical aberration – Methods of reducing spherical aberration – Coma – Aplanatic surface – Astigmatism – Curvature of the field.

**Unit – II: Optical Instruments**

Kellner's eyepiece – Ramsden's eyepiece – Huygen's eyepiece. Rayleigh's criterion, Resolving power of Optical Instruments: Resolving power – Resolving power of Telescope, Microscope, Prism and Grating.

**Unit – III: Interference**

Colours of thin films – Air wedge – Newton's rings – Brewster's fringes – Michelson Interferometer and its applications – Fabryperrot Interferometer – Interference filter – Stationary waves in light – Colour photography – Holography.

**Unit – IV: Diffraction**

Fresnel's diffraction – Diffraction at a circular aperture, straight edge – Fraunhofer diffraction at a single slit – Double slit – Diffraction pattern – Transmission grating with theory – Experimental determination of wavelength – Oblique incidence.

**Unit – V: Polarization and Fibre optics**

Nicol prism – Nicol prism as an analyzer and polarizer – Huygen's explanation of double refraction in Uniaxial crystal – Elliptically and circularly polarized light – Production and detection – quarter wave plate and half wave plate – Basic ideas of optical fibre – Numerical aperture – Stepped and graded index fibres – Fibre optic communication (Block diagram only).

**Learning Outcomes:**

Generate ray diagrams to predict the position and size of images in optical systems.

Understand and use the mathematical formulae to predict the position and size of images produced by simple lenses.

Measure the focal length of lenses and mirrors using various methods.

Understand the origin of spherical aberration in lenses.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Books for study:**

- 1) Text Book of Optics – Brijlal and Subramaniam , S. Chand & Co.,
- 2) Optics by Khanna and Gulati.
- 3) Fibre Optic Communication systems – Subirkumarsarkar, S.Chand& Co.,

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Sub. Code	Core Practical– IV Basic Electronics Lab	L	T	P	C
17113AEC44L		0	0	3	3

### **List of Experiments**

- 1) CRO – Study of waveforms – Lissajous figures – determination.
- 2) Potentiometer – Temperature coefficient of resistance.
- 3) FET Characteristics.
- 4) Field along the axis of a coil – determination of magnetic moment.
- 5) Spectrometer – Grating – Minimum deviation method.
- 6) Potentiometer – EMF of a thermocouple.
- 7) Spectrometer -  $i-i'$  curve.
- 8) Koenig's method – Uniform bending – Young's modulus.
- 9) Cauchy's Constant determination.
- 10) IC Regulated power supply.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Allied Paper-II	L	T	P	C
17114AEC45	Inorganic, Organic and Physical Chemistry- II	5	0	0	5

**UNIT – I : Amino acids and proteins**

Amino acids- Classification based on structure and essential and non - essential amino acids – preparation and properties – peptides – (elementary treatment) proteins – Classification, based on physical properties and functions. Structure of proteins – primary and secondary (elementary treatment)

**UNIT – II: Coordination chemistry**

Nomenclature of mononuclear complexes – Werner Sidgwick, and Pauling's theories – Chelation and its industrial importance to EDTA. Biological role of hemoglobin and chlorophyll Metallic bond Electron gas, Pauling and band theories. Semiconductors intrinsic, n- type and p-type.

**UNIT –III: Synthetic polymers:**

Teflon, Alkyl and epoxy resins, poly esters – General treatment only. Heterocyclic compounds – Furan, Thiophene, pyrrole and pyridine – preparation and properties of pyridine and pyrrole – Quinoline and isoquinoline.

**Stereoisomerism** – lactic and tartaric acid – racemic mixture and resolution. Geometrical keto – enol tautomerism Meaning of E, Z, R, S, D, L, meso, (+), (-) in stereochemistry.

**UNIT- IV : Electrochemistry:**

Specific and equivalent conductivities – their determination – Oswald's dilution law, Kohlrausch law.  $P_H$  and Buffer: Importance of pH and buffers in living systems –  $P_H$  determination by colorimetric and electrometric methods.

**UNIT –V : Surface chemistry:**

Emulsion, gels preparation, properties and applications. Electrophoresis, Chromatography – Column, paper and thin layer chromatography.

**References:**

<b>17114AEC46L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

I - A study of the reactions of the following organic compounds:

- Carbohydrate,
- Amide,
- Aldehyde,
- Ketone,
- Acid,
- Phenol.

The students may be trained to perform the specific reactions like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional group present and record their observations.

II - Preparation (Single stage) involving

- Nitration,
- Hydrolysis
- Bromination.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Skill Based Elective	L	T	P	C
17120SEC04AL	Package Lab -IV	0	0	2	1

**MS-ACCESS**

1. Create a Database with a simple Table
2. Create a Database for Students Mark List using Queries.
3. Create a Database for the employees in an organization and sort by their date of joining.
4. Create Queries to Select Records that matches specific condition.
5. Create Relationships among the different Tables.
6. Create Queries using Built-in Functions.
7. Develop Forms to enter data in to the Student Marks Database
8. Develop Forms to enter data in to the Electricity bill Database.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Skill based Elective -IV	L	T	P	C
17160SEC04B	Etiquette and Interviewing Skills	0	0	2	1

**UNIT I**  
**Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

**UNIT II**  
**Interviewing Skills**

Researching the job-Researching the company -Questions to research the company-Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Aim:**

- To develop communicative skills

**Objective:**

- To use gerund and make sentences
- To change sentences from direct to indirect and vice versa
- To understand the listening skill
- To enhance reading skill
- To familiarize with the singular and plural forms
- To describe a picture

**Outcome:**

- Understand grammar
- Develop listening and reading skills

**UNIT –I**

Gerund

Infinitive

**UNIT –II**

Direct and Indirect

**UNIT –III**

Listening -types-features of a good listener-active and passive listening-effective listening

**UNIT –IV**

Reading-purpose-technique-types-reading rates-reading & interpretation

**UNIT –V**

Singular and Plural

Letter writing

Course Code	Environmental Studies	L	T	P	C
171ENVTSTU		1	0	0	1

**Aim:**

Provide MESM students the opportunity to formulate learning outcomes for their degree program through interaction with URI faculty and staff involved in the six different MESM advising tracks as well with URI faculty and staff working in environmental science and management.

**Objectives**

The fundamental objective of the course is to introduce new Master of Environmental Science and Management (MESM) students to the opportunities and structure of the degree program. Specifically, the course will:

**UNIT-I**

**The Multidisciplinary Nature of Environmental Studies** – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources**- Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

**UNIT-II**

**Ecosystems**- Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

**UNIT-III**

**Biodiversity and its Conservation**– Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

**UNIT-IV**

**Environmental Pollution**– Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

**UNIT-V**

**Social Issues and the Environment**- From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - **Human Population and the Environment.**

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Learning outcomes:**

Provide MESM graduate students the opportunity to identify and develop professional internships (EVS 597) through interactions with professionals representing environmental agencies, nongovernmental organizations, or private firms.

**TEXT BOOK:**

1. "ENVIRONMENTAL STUDIES", K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Core Paper - V Electricity And Magnetism	L	T	P	C
17113AEC51		6	0	0	6

**Aim:**

To develop a basic understanding of electric and magnetic fields in free space using the integral forms of Maxwell's laws.

**Objectives:**

Describe the electric field and potential, and related concepts, for stationary charges. Calculate electrostatic properties of simple charge distributions using Coulomb's law, Gauss's law and electric potential.

**Unit – I: Electrostatics**

Coulomb's law – electrical images – Electric intensity and potential due to an earthed conducting sphere, Different case, applying the principle of electrical images – Electrometers: quadrant electrometers.

**Unit – II: Magnetic Properties of Materials**

Definitions – IH and BH curves for a magnetic material, Magnetometer method, Ballistic galvanometer method – Hysteresis –coercivity –retentivity – loss of energy per cycle – Difference in the magnetic properties of iron and steel – Magnetic circuit – Magnetic circuit of an iron ring with small air gap.

**Unit – III: Chemical effects of electric current**

Faraday's law's of electrolysis – Ionic velocities and Mobilities – Calculation and experimental determination of ionic mobilities – Transport numbers.

Thermo electricity – Peltier coefficient – Thomson coefficient – Application of thermodynamics to a thermocouple and Relation between Peltier and Thomson coefficients – Thermo electric diagrams – Uses.

**Unit – IV: LCR Circuits**

Determination of Self inductance by Rayleigh method – DC circuits: Growth and decay of current in a circuit containing resistance and inductance – Growth and decay of charge in a circuit containing resistance and capacitor – Application of electromagnetic induction – Flux meter.

**Unit – V:**

AC Bridges: Owen's bridge – Anderson's bridge – Electromagnetic theory – Maxwell's equations – derivation – Propagation of energy – Poynting vector.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Learning Outcomes:**

Describe the magnetic field for steady currents and moving charges.

Calculate magnetic properties of simple current distributions using Biot-Savart and Ampere's laws.

Describe electromagnetic induction and related concepts, and make calculations using Faraday and Lenz's laws.

Describe the basic physical content of Maxwell's laws in integral form.

**Books for Reference:**

- 1) Electricity and Magnetism – Brijlal & Subramaniam.
- 2) A text book of Electricity & Magnetism – K.K. Tiwal

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	Core Paper - VI	L	T	P	C
17113AEC52	Atomic Physics	6	1	0	6

**Aim:**

This course will introduce students to the fundamentals of atomic physics and rudimentary nuclear physics. It aims to provide a coherent and concise coverage of traditional atomic and physics.

**Objectives:**

Important topics of current research interest will be also discussed, such as laser cooling and trapping which plays an important role in the realization of Bose-Einstein condensate in atomic vapors.

**Unit – I: Positive ray analysis**

Properties –  $e/m$  of positive rays: Thomson's parabola method – Aston and Bain bridges – Determination of critical potential – Franck and Hertz's experiment.

**Unit – II: Photo Electricity**

Photo electric emission – laws – Lenard's experiment – Richardson and Compton experiments – Einstein's photoelectric equation – Experimental verification of Einstein's photoelectric equation by Millikan's experiment.

**Unit – III: Vector atom model**

Various quantum numbers, L-S and j-j couplings – Pauli's exclusion principle – electronic configuration of elements and periodic classification – Magnetic dipole moment of electron due to orbital and spin motion – Bohr magneton Stern and Gerlach experiment.

**Unit – IV: Fine structure of special Lines**

Special terms and notations – Selection rules – Intensity rule and interval rule – Fine structure of sodium D lines – Alkali spectra – Fine structure in Alkali spectra.

Spectrum of Helium – Zeeman effect – Larmor's theorem – Debye's quantum mechanical explanation of the normal Zeeman effect – Anomalous Zeeman effect – (Qualitative study Only).

**Unit – V: X – Rays:**

X – Rays – Bragg's law – Bragg's, X-Ray spectrometer – Origin and analysis of continuous X – ray spectrum and characteristic X – ray spectrum – Moseley's law and its importance – Compton effect – derivation of expression for change in wavelength – its experimental verification.

**Learning Outcomes:**

Explain how light interacting with atom; the working principle of laser trapping and cooling  
Recognize the general features of atomic/nuclear spectroscopy

**Books for Reference:**

- 1) Modern Physics by R. Murugesan.
- 2) Modern Physics by J.B. Rajam

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

3) Atomic and Nuclear Physics – N. Subramaniam and Brijlal.

Course Code	Core Paper - VII	L	T	P	C
17113AEC53	Basic Electronics	5	0	0	5

**Aim:**

Electronic systems are built with components like resistance, capacitance, diodes, Transistors, etc. The intention of the course is to create awareness about the principle and

**Objectives:**

Working of the commonly used components in electronic systems. Upon completion of the Course the student is expected to be able to identify, use and check various electronic components.

**Unit – I: Semiconductors**

Introduction – Pure semiconductor – Impurity semiconductor – Fermi level in semiconductor – Hall effect – Junction diodes – PN Junction – Biased PN Junction – Volt Ampere characteristic of a PN Junction – Zener diode – Tunnel diode.

**Unit – II: Transistors**

Junction Transistor – Transistor construction – Modes of operation of a transistor –  $\alpha$  and  $\beta$  of a transistor – Relation – static characteristic in CB and CE modes – Transistor amplifier – Transistor Biasing.

**Unit – III: Special Semiconductor Devices**

Field effect transistor – FET parameters – Comparison between FET and Transistor – SCR – UJT.

**Unit – IV: Amplifiers**

Voltage and Power amplifiers: R-C coupled Transistor amplifier – Power amplifier – Class A, Class B and Class C power amplifier – Push pull amplifier – Effect of negative feedback.

**Unit – V: Oscillators**

Types of Oscillators – Concept of feedback oscillator – Hartley – Colpitts - Phase shift oscillator – Tuned collector oscillator – Wien Bridge oscillator.

**Learning Outcomes:**

Students will be able to explain basic circuit concepts and responses.

Will be able to do linear modeling of passive elements and sources.

Will be able to use analytical techniques in resistive circuits energized by direct current voltage and current sources.

**Books for Reference:**

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

- 1) Principles of Electronics – V.K. Metha
- 2) A text book of Applied Electronics – R.S. Sedha

Course Code	Core Practical – V	L	T	P	C
17113AEC54L	Digital Electronics Lab	0	0	3	3

**List of Experiments**

- 1) M and H – Absolute determination using deflection and vibration magnetometer.
- 2) Zener regulated power supply – percentage of Regulation.
- 3) Logic gates, IC- Version.
- 4) Universality of NOR gates.
- 5) Verification of Logical Expressions
- 6) Hartely oscillator – Transistor.
- 7) Universality of NAND gates.
- 8) Operational Amplifier – Adder and Subtractor.
- 9) 8-bit addition and subtraction using microprocessor 8085.
- 10) 8-bit multiplication and division using microprocessor 8085.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Discipline Specific Elective -I	L	T	P	C
17113DSC55A	Energy Physics	5	0	0	4

**Aim:**

To understand the physical background and mechanisms associated with power generation and related issues.

**Objectives:**

Understand the forms of energy, its production, transport and storage

Understand basic nuclear physics and interactions with matter

**Unit – I: Non- Renewable energy sources**

World Energy Futures – Energy Sources and their Availability – Coal – Oil – Natural gas – merits and demerits.

**Unit – II: Renewable Energy Sources**

Solar energy – nature of solar radiation – solar constant – Determination of Solar constant – Solar water heaters – Solar cooling – Solar ponds – Solar cookers – Water desalination.

**Unit – III: Other renewable energy sources**

Bio mass energy – gobar gas plants – geothermal energy – wind energy – Wind mill – Types of Wind mills – ocean thermal energy conversion (OTEC) – Energy from waves and tides.

**Unit – IV: Energy Storage**

Energy storage systems – Mechanical Energy storage – Compressed Air storage – Electrical storage – Thermal energy storage.

**Unit – V: Impacts of Non-conventional energy**

Energy consumption in domestic, Industrial- Transportation and Agricultural sectors – Energy options for the developing countries – Impacts due to non conventional energy sources – global warming. and its impacts.

**Learning Outcomes:**

Understand the conditions necessary for sustainable chain reactions in fissile material

Understand the design criteria for the control of a nuclear reactor

Understand the principles of nuclear fusion useful in power generation and stellar fusion

Understand physical ideas and issues associated with renewable forms of energy

**Books for Reference:**

- 1) Solar energy utilization – G.D. Rai.
- 2) Solar energy – S.P. Sukhatme

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Discipline Specific Elective -I	L	T	P	C
17113DSC55B	Laser Physics	5	0	0	4

**Objective:**

To introduce the physical and engineering principles of laser operation and their applications.

**UNIT- I: Fundamentals of LASER**

Spontaneous emission – Stimulated emission – Meta stable state – Population inversion – Pumping – Laser Characteristics

**UNIT II Production of LASER**

Helium – Neon Laser – Ruby Laser – CO2 Laser – Semiconductor Laser

**UNIT III Industrial Applications of LASER**

Laser cutting – Welding – Drilling – Hologram – Recording and Reconstruction of hologram.

**UNIT IV Lasers in Medicine**

Lasers in Surgery – Lasers in ophthalmology – Lasers in cancer treatment

**UNIT V Lasers in Communication**

Optic fibre communication – Total internal reflection – Block diagram of fibre optic communication system – Advantages of fibre optic communication.

**Books for study:**

1. N. Avadhanulu , An introduction to LASERS, S. Chand & Company,2001.

Books for References:

1. William T. Silfvast, Laser fundamentals, University Press, Published in South Asia by Foundation books, New Delhi, 1998.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	Core Paper - VIII	L	T	P	C
17113AEC61	Digital Electronics And Microprocessors	6	1	0	6

**Aim:**

To achieve a basic understanding of logic systems and to use this understanding in simple circuit designs.

**Objectives:**

To show familiarity with basic logic gates, Boolean algebra and binary numbers.

To understand how particular logical functions may be implemented and to design systems

To implement simple truth tables.

To understand how binary addition may be implemented using logic gates.

**Unit – I: Number systems and codes**

Decimal, Binary, Octal and Hexa decimal systems – Conversion from one to another – Binary addition, subtraction, multiplication, division, complements – Codes: BCD, Weighted, excess three, Gray code.

**Unit – II: Boolean Algebra**

Fundamental concepts of Boolean algebra – Basic gates and universal gates – De Morgan's theorem: Simplification of expressions – Karnaugh map, Sop - Pas.

**Unit – III: Logic Design**

Half adder – Full adder, Subtractors, Multiplexers, Demultiplexer, Flip-Flops: R-S Flip Flops, J-K Flip Flop, D-Flip Flop, T-Flip Flop, Master Slave – Shift Registers – Counters – BCD – Up - Down.

**Unit – IV: Memory elements**

Memory cell - RAM – types – ROM: ROM, PROM, EPROM, EEPROM – Magnetic Disk Memories – Magnetic tapes – Compact disc.

**Unit – V: Micro processor**

Organization of 8085 – working – Machine language – Assembly language – Addressing mode, Instruction set – Programming for 8 – bit addition , subtraction, Finding a Largest number in an array – Finding a smallest number in an array.

**Learning Outcomes:**

understand latches and simple memory devices.

appreciate the progression from latches to flip-flops and understand the operation of the J-K flip-flop.

be able to use and predict the behaviour of simple circuits involving J-K flip-flops.

understand excitation tables and be able to use them to design simple cyclic circuits.

**Books for Reference:**

- 1) Digital Principles and application – Albert Paul Malvino and Donald Leach.
- 2) Digital Design – M. Morris Mano.
- 3) Fundamentals of Microprocessors and Microcomputers – B.Ram.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Core Paper - IX	L	T	P	C
17113AEC62	Wave Mechanics And Nuclear Physics	6	1	0	6

**Aim:**

To explore the detailed behaviour of vibrating systems and wave motion in many different physical systems.

**Objectives:**

Demonstrate understanding of the behaviour of oscillating systems and wave motion.

**Unit – I: Duality**

Planck's hypothesis, Planck's theory and black body radiation – confirmation of quantum of energy – Compton effect and photoelectric effect – De Broglie waves – Phase and group velocities – Davisson-Germer experiment – G.P Thomson experiment.

**Unit – II:**

Postulates, Observables, Operators, wave packets – Probability density – Physical significance of the wave function – continuity equation – expectation values – Box normalisation – Schrodinger's time independent and time dependent wave equations.

**Unit – III:**

Uncertainty principle, two applications – Grating and Gamma ray experiment – step potential – square well potential – L.H.O – Tunneling effect – particle in a box.

**Unit – IV: Nucleus**

Review of basic properties of nuclei – mass, radius, binding energy, packing fractions, nuclear moments – isotopes – isobars – radioactivity – Linear accelerator - Cyclotron – Betatron – Geiger Muller counter – Cloud chamber – Photographic emulsions – Q value of nuclear reaction – discovery of neutron – Exp.- reactions.

**Unit – V:**

Liquid drop model – application to fission, fission fragments, neutrons in fission process – nuclear energy – nuclear chain reactions - thermonuclear reactor – neutron life cycle – atom bomb.

Shell model – magic numbers – spin orbit coupling – application to islands of isomerism and nuclear moments – Basic ideas of a nuclear reactor.

**Learning Outcomes:**

Use the mathematical formalism that describes them.

Recognize examples across many areas of physics.

**Books for Reference:**

- 1) Modern Physics – Brijlal and Subramanian.
- 2) Modern Physics – R. Murugasan.
- 3) Nuclear Physics – D.C. Tayal.
- 4) Introduction to Modern Physics – F.K. Richmyer.
- 5) Nuclear Physics – I. Kaplan.

<b>Course Code</b>	<b>Discipline Specific Elective -II</b> <b>Material Physics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17113DSC64A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **Aim**

The subject-specific aims of a degree in materials science are to understand the structure, Properties, processing and performance of the principal classes of materials, and to understand and exploit the relationships between these four aspects of materials.

### **Objectives:**

To understand the design, selection and processing of materials for a wide range of applications in engineering and elsewhere.

### **Unit – I: Crystallographic fundamentals**

Crystal lattice – Primitive and Unit cell – Seven classes of crystals – Bravais lattice – Miller Indices – Structure of crystals – Simple cubic, Hexagonal close packed structure, Face centered cubic structure, Body centered cubic structure – Sodium chloride structure – Zinc Blende structure – Diamond Structure.

### **Unit – II: Crystallography**

Diffraction of X-Rays by Crystals – Bragg's law in one dimension – Experimental method in X-Ray diffraction – Laue method, Rotating crystal method – Powder Photograph method – Vontae's equations.

### **Unit – III: Magnetism**

Different types of magnetic materials – Classical theory of diamagnetism (Langevin's Theory) – Langevin's theory of paramagnetism – Weiss theory of paramagnetism – Qualitative explanation of Heisenberg's interpretation of internal field and quantum theory of ferromagnetism.

### **Unit – IV: Dielectrics**

Fundamental Definitions – Dielectrics – Different types of electric polarization – Frequency and Temperature effects on polarization – Dielectric loss – Local field on internal field – ClausisMosotti Relation – Determination of Dielectric constant.

### **Unit – V : Modern materials and new materials**

Polymers – Ceramics – Super strong materials – Cermets – Electrets – Metallic glasses – Optical materials – Acoustic materials – Bio materials – Nuclear materials.

### **LearningOutcomes:**

To understand how and why the properties of materials are controlled by structure and bonding at the atomic-scale, and by features at the microstructural and macroscopic levels. To understand how and why the structure and composition of a material may be controlled by processing.

### **Books for Study:**

Material Science – M. Arumugam.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	Discipline Specific Elective -II Communication Physics	L	T	P	C
17113DSC64B		5	0	0	4

**Objective:** To promote scientific temper among students and update the basic functioning of various communication systems.

**UNIT- I : Radio transmission and reception**

Transmitter-modulation-need for modulation- types of modulation amplitude, frequency and phase modulation- modulation factor-sideband frequencies in AM wave-limitations of amplitude modulation - frequency modulation-block diagram of AM and FM Transmitter. Receiver- demodulation-AM & FM radio receivers-super heterodyne radio receiver.

**UNIT -II : Fiber Optic Communication**

Introduction –structure of optical fiber –total internal reflection in optical fiber – principal and propagation of light in optical fiber - acceptance angle - numerical aperture – types of optical fibers based on material – number of modes – refractive index profile - fiber optical communication system (block diagram) - fiber optic sensors – Temperature sensor – fiber optic endoscope.

**UNIT- III: Radar Communication**

Basic radar system -Radar range –Antenna scanning – Pulsed radar system - AScope-Plan position indicator- Tracking radar- Moving target indicator- Doppler effect-MTI Principle- CW Doppler Radar- Frequency modulator CW Radar.

**UNIT- IV: Satellite Communication**

Introduction – history of satellites – satellite communication system – satellite orbits – classification of satellites – types of satellites – basic components of satellite communication – constructional features of satellites- multiple access – communication package – antenna- power source – satellite foot points- satellite communication in India.

**UNIT- V: Mobile Communication**

GSM – mobile services- concept of cell – system architecture – radio interface – logical channels and frame hierarchy – protocols – localization and calling – Handover- facsimile (FAX) – application – VSAT (very small aperture terminals) – Modem – IPTV (internet protocol television) – Wi-Fi - 3G (Basic ideas only).

**Books for Study:**

1. Metha V.K., Principles of Electronics, S. Chand & Company Ltd., 2013
2. Anokh Singh and Chopra A.K., Principles of communication Engineering, S. Chand & Company PVT. Ltd., 2013.
3. Mani I. P., A text book of Engineering Physics, Dhanam Publications, Chennai42, 2014.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Books for Reference:**

1. PoornimaThangam I, Satellite communication, Charulatha Publications, 2012.
2. Dennis Roddy and John Coolen, Electronic Communication, PHI, 1990.
3. William C.Y. lee, Cellular telecommunication (second edition), Tata Mcgraw hill, 1991.

**PRIST UNIVERSITY**  
Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	General Elective	L	T	P	C
17111GEC	Journalism	4	0	0	2

**Aim :**

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT- II**

News – Definition, Kinds, Elements, Sources

**UNIT- III**

Reporters

**UNIT- IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

**References:-**

- Journalism -Susan  
Professional Journalism - John Hogenberg  
News Writing and Reporting - M.James Neal (Surjeet Publication)  
Professional Journalism -M.V Komath

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course code	General Elective	L	T	P	C
17112GEC	Development of Mathematics Skills	4	0	0	2

**Aim:**

- To understand the concepts from the five branches of mathematics

**Objectives**

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Outcomes**

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**References**

P.A.Navanitham, Business Mathematics & Statistics

**Thanjavur, Tamilnadu, India.**

Course Code	General Elective	L	T	P	C
17114GEC	<b>Food And Adulteration</b>	4	0	0	2

**Aim:** To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk.

Health hazards and risks.

Declared Under Section 3 of UGC Act, 1956  
Thanjavur, Tamilnadu, India.

Course Code	General Elective	L	T	P	C
17117GEC	Mushroom Technology	4	0	0	2

**UNIT-1**

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calocybe indica, volvariella volvacea, pleurotus sp. Agaricus bisporus

**UNIT-II**

Pure culture-preparation of media(PDA and oat meal agar media)sterilization-preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petriplates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

**UNIT-III**

Cultivation technology:infrastructure,substrates(locally available)polythene bag,vessels,inoculation hood-inoculation loop-low cost stove-sieves-culture rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy straw,sugarcane trash,maizastraw,banana leaves

**UNIT-IV**

Storage and nutrition:short term storage-long term storage (Scanning,pickles, papads,drying,storage ion salt solutions)-nutrition:proteins,aminoacids,mineral elements,nutrition:carbohydrates-crude fiber content,vitamins

**UNIT-V**

Food preparation, types of foods prepared from mushroom-soup,cutlet,omelette,samosa,pickles,curry,researchcentres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	General Elective	L	T	P	C
17120GEC	Web Technology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Objective:**

- To understand and practice mark up languages
- To learn Style Sheet and Frames

**Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

**Thanjavur, Tamilnadu, India.**

Course Code	Course Title	L	T	P	C
17122GEC	E-Commerce and its Application	4	0	0	2

**Aim:**

To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

**Objectives:**

To be aware of all aspects of communication and information exchange in Electronic Commerce, including:

- Navigation, brokerage, advertising, and catalogue exchange in pre-sales activities.
- Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

**UNIT-I:**

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model-Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC'S echoupa

Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

**UNIT-II:**

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script - XML

**UNIT- III:**

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

E-Security: Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

### **UNIT-V**

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet banking-History's lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stock trading: The high speed alternative.

#### **Outcomes:**

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

#### **Reference Book:**

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition

**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	General Elective	L	T	P	C
17161GEC	Indirect Taxes	4	0	0	2

**Aim:**

- To acquaint with the knowledge of indirect taxes

**Objectives:**

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

**Outcome**

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

**UNIT – V**

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

**Reference Books:**

- Income Tax Law and Practice - N.Hariharan.
- Business Taxation – T.S.Reddy/Hari Prasad Reddy.

**Aim:**

- To develop communicative skills

**Objective:**

- To extract the main ideas from a text
- To understand the meaning of text
- To expand an idea
- To shorten a text
- To develop vocabulary
- To enhance writing skills
- To write simple, compound and complex sentences

**Outcome:**

- Develop communicative skills

**UNIT –I**

Jumbled words

Paragraph writing

**UNIT –II**

Prefix and suffix

Precise writing

**UNIT –III**

Eponyms

Summarizing

**UNIT –IV**

Compound words

Simple, Compound and Complex

**UNIT –V**

Homophones

Essay writing

### **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

#### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

#### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

#### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

#### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Taking into consideration the above mentioned facts in respect of integrating research into the B.Sc (Physics)curriculum, the following Research Skill Based Courses are introduced in the B.Sc (Physics)curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

**Blueprint for assessment of student’s performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination** : **60 Marks**

(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student’s performance in Research Methodology Courses**

- Continuous Internal Assessment:** **20 Marks**
- Research Tools( Lab) : 10 Marks
  - Tutorial: 10 Marks

- Model Paper Writing:** **40 Marks**
- Abstract: 5 Marks
  - Introduction: 10 Marks
  - Discussion: 10 Marks
  - Review of Literature: 5 Marks
  - Presentation: 10 Marks

- Semester Examination:** **40 Marks**
- Total:** **100 Marks**

<b>Course Code</b>	<b>CORE PAPER – I ADVANCED MATHEMATICAL PHYSICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213SEC11</b>		<b>6</b>	<b>2</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn various mathematical concepts and techniques in vector space, groups and functions of special types to solve physical problems

**UNIT – I: MATRIX THEORY**

Definitions of basic matrix theory – Rank of matrix – Inverse matrix – characteristic matrix and characteristic equation of a matrix – Cayley –Hamilton theory – characteristic root and vectors of a matrix [eigen values & eigen vectors] – Diagonalization of matrices.

**VECTOR FIELDS:**

Line, surface and volume integrals – Divergence of vector function – curl of vector function – Gauss divergence theorem – Stokes theorem – Green's theorem – Orthogonal curvilinear coordinate systems: Expression for gradient, divergence, curl and Laplacian.

**UNIT – II: COMPLEX ANALYSIS**

Functions at Complex Variables- Differentiability – Cauchy – Riemann Conditions – Complex Integration – Cauchy's Integral Theorem and Integral Formula – Taylor's and Laurent's series – Residues and Singularities – Cauchy Residue Theorem – Evaluation of Definite Integrals.

**UNIT – III**

Fourier Series – Sine and Cosine Half Range Series – Fourier Transformations – Sine and Cosine Transforms – Faultung Theorem- Application to Heat and Wave Equation.

Laplace Transform – Convolution Theorem – Solution of Ordinary Equations.

**UNIT – IV**

Gamma and Beta Functions – Series Solution – Legendre, Bessel, Laguerre and Hermite Differential Equations – Rodriguez Formula – Generating Functions – Orthogonality Relations – Important Recurrence Relations.

**UNIT - V: NUMERICAL METHODS**

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Principals of Least Square – Curve Fitting – Parabola- Exponential – Solutions of Numerical Algebraic and Transedential Equations – Newton Raphson Method – solution of simultaneous Linear Algebraic Equations – Gauss Elimination Method – Numerical Integration – Trapezoidal Rule, Simpson's 1/3 Rule- Solution of Ordinary Differential Equations – Euler's Method – Second Order and fourth order Runge Kutta Method.

**Books for Study and Reference:**

1. E. Kreyszig, Advanced Engineering Mathematics. (Wiley Eastern, New Delhi, 1983)
2. G. Arfken and H.J. Weber, Mathematical Methods of Physics.
3. A.K. Ghatak, I.C. Goyal and A.J. Chua, Mathematical physics.
4. W.W. Bell, Special Functions for Scientists and Engineers.
5. Transforms – Goyal Gupta.
6. Numerical methods for scientist and engineers – M.K. Venkatraman.
7. Mathematical Physics – B.D. Gupta.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**

<b>Course Code</b>	<b>CORE PAPER – II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213SEC12</b>	<b>CLASSICAL AND STATISTICAL MECHANICS</b>	<b>6</b>	<b>1</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn various mathematical techniques of classical mechanics and their applications to physical systems and introduce relativistic dynamics.

**UNIT – I: FUNDAMENTAL PRINCIPLES AND LAGRANGIAN FORMULATION**

Constraints - Generalised Co-ordinates – D'Alembert's Principle and Lagrange' Equation – Hamilton Formulation – Lagrange's Equation of Motion.

**LAGRANGIAN FORMULATIONS – APPLICATIONS:**

Theory of Small Oscillations – Normal Modes – Wave Motion – Wave Equation. Euler Angles – Euler's Equations – Linear Tri Atomic Molecule.

**UNIT – II: HAMILTON'S FORMULATION**

Hamilton's Canonical Equation of Motion – Hamilton's Equation from Variation Principle – Principle of Least Action Poisson Brackets – Invariance of PB Under canonical Transformation Method – Action Angle Variable.

**UNIT –III: NON – LINEAR DYNAMICS**

Regular and Chaotic Motions – Linear and Non-Linear Forces – Dissipative and Conservative Systems – Discrete and Continues Time Dynamical System – Logistic Map – Fixed Point Analysis – Period Doubling Phenomena – Route to Chaos – Characterization of Chaos – Dynamic of MLC Circuits.

**SOLUTION:** Linear and Non – Linear Waves – Solitary – Kdv Equation.

**UNIT – IV: CLASSICAL STATISTICAL MECHANICS**

Macro and Micro States – Statistical Equilibrium – Phase Space and Ensembles – Density Function – Liouville's Theorem – Maxwell – Boltzmann Distribution Laws – Micro Canonical Ensembles – Ideal Gas Entropy – Partition Function – Principle of Equipartition of Energy - Canonical and Grand Canonical Ensembles.

**UNIT – V: QUANTUM STATISTICAL MECHANICS**

Basic Concepts – Quantum Ideal Gas – Bose Einstien and Fermi Dirac Statistics – Distribution Laws – Sackur – Tetrode Equation – Equation of State – Bose Einstein Condensation.

Ideal Bose Gas – Black Body and Plank's Radiation – Phonons – Liquid Helium – Degeneracy – Fermi Gas – Pauli's Para Magnetism.

**References:**

1. Classical Mechanics – Golstien
2. Classical Mechanics – Gupta Kumar

<b>Course Code</b>	<b>CORE PAPER – III</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213SEC13</b>	<b>ELECTRONICS AND COMMUNICATIONS</b>	<b>6</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Aim:**

• To understand the working of advanced semiconductor devices and digital circuits and the utility of OP-AMP and learn the basics of integrated circuit fabrication, applications of timer IC-555 and building block of digital systems.

**UNIT – I: OPTO ELECTRONICS**

LED – applications – Photo emissive devices – Photomultiplier tube – photovoltaic devices – Bulk type photoconductive cell – Photodiodes – Phototransistor – LCD – applications.

**POWER ELECTRONICS**

TRIAC – construction – operation – characteristics – application – DIAC – application – Unijunction transistor (UJT) – equivalent circuit – application.

**UNIT – II: TELEVISION FUNDAMENTALS**

Introduction to Antenna – Current and voltage Distribution – UHF Antenna – Horn Antenna – Wide Band Antenna – Log Periodic Type – Loop Antenna.

Essential of Colour T.V.: Colour perception – Three colour theory – Luminance, Hue and Saturation – Colour T.V. camera – Luminance signal – colour T.V. display tubes – Delta-gun – Gun-in-line – trinitron colour picture tube – NTSC colour T.V. system – PAL colour T.V. system.

**UNIT – III: COMMUNICATION SYSTEMS**

Pulse Modulation – Time Division Multiplexing – Pulse Time Modulation – Pulse width Modulation – Pulse code Modulation – Basic Digital Communication System – Amplitude Shift Keying – Phase Shift keying and Frequency Shift Keying.

**UNIT – IV: FIBER OPTIC COMMUNICATION**

Basic Optical Laws and Definitions – Optic Fiber Modes and Configurations- Wave equation for Step Index Fiber – Graded Index Fiber Structure – Fiber materials – Fiber Fabrications – Double Crucible Method – Attenuation – Lensing Schemes for Coupling – Fiber to Fiber Joints – Optical Fiber Connectors- Optical Source – LED, Laser Diode – Photo Detectors – Noise Detector Responding Time.

**UNIT – V: SATELLITE COMMUNICATION**

Introduction Satellite Communication System – Satellite orbits – Basic Components of Satellite Communication – Constructional Features – Commonly used Frequencies – Communication Package Communication in India. ISDN, LAN, VAN.

**Books for Study and Reference:**

1. Principals of Communication Engineering – Anokh Singh, A.K. Chabra, S. Chand.
2. Electronic Communication System – Kenndy and Davis, Tata McGraw Hill Edition.
3. Optical Fiber Communications – Gerd Keiser, McGraw Hill International Editions.
4. Basic electronics solid state – B.L. Theraja, S. Chand & co.
5. Principals of Electronics – V.K. Metha, Rohit Metha, S. Chand & co Ltd.
6. Monochrome and colour television – R.R. Gultai, New Age International (P) Ltd Publishers, New Delhi.

**Thanjavur, Tamilnadu, India.**

Course Code	CORE PRACTICAL –I SPECTROSCOPY AND GENERAL ELECTRONICS LAB	L	T	P	C
17213SEC14L		0	0	4	3

**Aim:**

- Experimental determination of certain physical constants and its properties.
- Experimental verification of characteristics and applications of electronic components with devices.

**SECTION A**

1. Determination of  $q$ ,  $n$ ,  $\sigma$  by elliptical fringes method.
2. Determination of  $q$ ,  $n$ ,  $\sigma$  by hyperbolic fringes method.
3. Determination of Stefan's Constant.
4. Determination of dielectric constant at a high frequency by Lecher wire.
5. Determination of  $e/m$  of an electron by Thomson's method.
6. Iron Arc spectrum.
7. Copper Arc spectrum.
8. Brass Arc spectrum.

**SECTION B**

1. Feed back amplifier.
2. Characteristics of JFET.
3. Characteristics of UJT.
4. Characteristics of SCR.
5. Characteristics of LDR.
6. Common sources amplifier using FET.
7. Design and study of Bistable multivibrator using 555 timer.
8. Opamp CMRR, inverting and non inverting amplifiers.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213DSC15A</b>	<b>INSTRUMENTATION</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To understand the concepts and application of electronic Instrumentation in the Medical field.

**UNIT I: DISPLACEMENT MEASUREMENT**

Electrical Method – The Strain Gauge – The LVDT – Capacitance Gauges – Piezoelectric Material – Piezo Electrical Transducers.

**UNIT II: PRESSURE MEASUREMENT**

Manometers – Elastic Types – Bourdon Tubes – Diaphragm Elements – Bellows Elements – Electrical Transducers as Secondary Transducers – Resistive Transducers – Inductive Transducers – Measurements of Low Pressure (Vacuum gauges) - Thermo Couple Vacuum Gauge – Pirani Gauges.

**UNIT III: TEMPERATURE MEASUREMENT**

Resistance Thermometers – Bi Metallic Thermometers - Radiation Pyrometers – Radiation Receiving Elements – Total Radiation Pyrometers – Infra-red Pyrometers – Optical Pyrometers – Measurements of Very High or Stellar Temperature.

**UNIT IV: FLOW MEASUREMENT**

Flow Rate Sensing Elements – Measurement of Flow – Turbine Meters – Electromagnetic Flow Meters - Hot Wire Anemometers – Flow Meter Using Thermistors – Ultrasonic Flow Transducers.

**UNIT V: MEASUREMENT OF LEVEL, THICKNESS AND HUMIDITY**

Electrical Methods – Resistive Method – Inductive Methods – Capacitive Methods – Measurement of Liquid Level with Gamma Rays – Liquid Level Measurement Using Float. Measurement of Thickness: Inductive Methods – Ultrasonic Vibration Methods – Measurement of Humidity.

**Book for Study:**

1. A Course in Electrical and Electronic Measurement and Instrumentation – A.K. Sawhney

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213DSC15B</b>	<b>CRYSTAL GROWTH PROCESSES</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**AIM:**

To introduce the knowledge on crystal growth and characterization.

**OBJECTIVE:**

To expose the students with theories of nucleation & crystal growth, crystal growth by from solution, melt and vapour phase and their characterization.

**Unit – 1: Crystal growth theory**

Classical theory of nucleation: Gibbs Thomson equation for vapour and solution – Modified Thomson's Equation for melt – Spherical nucleus – Cylindrical nucleus – Heterogeneous nucleation – cap-shaped nucleus – disc shaped nucleus – Kinetics of crystal growth – Kossel, Stranski, Volmer (KSV) theory – Burton, Cabrera and Frank (BCF) theory.

**Unit – 2: Solution growth**

Low temperature solution growth – Expression of supersaturation – Methods of crystallization – Constant temperature bath – Nonlinear phenomena in KDP family crystals – High temperature solution growth – Principles of Flux growth.

**Unit – 3: Gel growth**

Growth from gel: structure and properties of gel – single diffusion method – Double diffusion method.

**Unit – 4: Melt growth**

Growth from melt: Bridgmann and related technique – Crystal pulling technique – Liquid encapsulated Czochralski technique – Zone melting technique – Skull melting process – Verneuil process.

**Unit – 5: Vapour Growth**

Physical vapour deposition – Chemical vapour transport – hydrothermal growth – low pressure autoclaves – high pressure autoclaves – growth of zinc oxides – growth of garnets Electrocrystalization – electro chemical potential – Nernst relation – Voltametry.

**References:**

1. Crystal Growth processes and methods – P.Ramasamy, P. Santhanaraghavan, KRU Publication.
2. J.C. Brice, The growth of crystals from liquid (North Holland Publishing Co., Amsterdam).

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	CORE PAPER – IV MICROPROCESSOR AND MICROCONTROLLER	L	T	P	C
17213SEC21		6	0	0	5

**Aim:**

- To learn basic principles of architecture and functioning of microprocessor and microcontroller and programming and interfacing aspects of them.

**UNIT – I: MICROPROCESSOR 8085**

8085 Microprocessor – Bus Architecture – registers – Central processing unit – timing and control unit – Instruction and Data flow – System timings – Examples – Instruction set – Data transfer group – Logical group – Branch group – Stack and I/O control instructions – Addressing modes.

**UNIT – II: ASSEMBLY LANGUAGE PROGRAMS (8085 ONLY)**

Addition – Subtraction – Multiplication – Division – BCD arithmetic – Searching an array for a given number – Choosing the biggest and smallest numbers from a list – Ascending and Descending order – Square root of a number – Time Delay – Square wave generator.

**UNIT – III: MICROPROCESSOR 8086**

Organization of the 8086 Microprocessor – Memory organization – Register structure – Addressing modes in 8086 – Minimum mode and maximum mode – Exception handling in 4086 – Assembler and Multiprocessing – Assembler – Directives and operators – Data definition and storage allocation – Assigning names and expressions – Segment definition – Program definition – Alignment directives.

**UNIT – IV: INTERFACING MEMORY AND I/O DEVICES**

Interfacing memory and devices – I/O and memory mapped I/O – Types of interfacing devices – Data transfer schemes – Programmed and DMA data transfer schemes – Programmable Peripheral Interface (8255 A) – 8253 Timer Interface – DMA controller – Programmable Interrupt Controller (8259) – Programmable communication interface (8251).

**UNIT – V: MICROCONTROLLER 8051**

Introduction of Microprocessor and Micro controllers – Comparison of microprocessor and microcontrollers – 8051 architecture – Internal memory – Input output pins, ports external memory – Addressing modes.

Instruction set of 8051 – Data transfer instruction – Arithmetic instruction – Branch instruction – Bit manipulation instruction.

**Books for Study and Reference:**

1. R. Goankar, Microprocessor Architecture, programming and applications (Wiley Eastern).
2. B. Ram, Fundamentals of Microprocessor and Microcomputers (Dhanapet Rai & Sons).
3. Introduction to Microprocessor – Aditya P. Mathur.
4. Microcomputer System 8086/8088 Family – Yuchngliv and clenn A Gibson Prentice Hall.
5. Microprocessors and Interfacing – Programming and Hardware Douglas V Hall.
6. The 8051 Microcontroller Architecture, Programming & Applications – Kenneth J. Ayla, Penram International Publishing (India).

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	CORE PAPER – V QUANTUM MECHANICS	L	T	P	C
17213SEC22		6	0	0	5

**Aim:**

- To learn the fundamental concepts and certain theoretical methods of quantum mechanics and their applications to microscopic systems.

**UNIT I: SCHRODINGER EQUATION AND GENERAL FORMULATION**

Schrodinger Equation – Physical Meaning and Condition on the Wave Function – Expectation Values and Ehrenfest's Theorem – Hermiltian Operators and their Properties – Commutation Relation Uncertainty Relation – Bra and Ket Vectors – Schrodiger, Heisenberg and Interaction Pictures.

**UNIT II: EXACTLY SOLVABLE SYSTEM**

Liner Harmonic Oscillator – Solving the one Dimensional Schrodinger Equation – Abstract Operator Method – Particle in a Box-Square Well Potential – Rectangular Barrier Potential – Rigid Rotator – Hydrogen Atom.

**UNIT III: APPROXIMATION METHODS**

Time Independent Perturbation Theory: Non-degenerate and Degenerate Perturbation Theories – Stark Effect – WKB Approximation – Application to Tunneling Problem and Quantization Rules.

Time Dependent Perturbation Theory: Harmonic Perturbation – Transition Probability.

**UNIT IV: SCATTERING THEORY**

Scattering Cross Section – Born Approximation – Partial Wave Analysis.

Angular Momentum: Matrix Representation of J-Spin Angular Momentum – Eigen Values – Addition of Angular Momenta – Clebsch –Gordan Coefficients (Basics Idea only).

**UNIT V: RELATIVISTIC QUANTUM MECHANICS**

Klien-Gordan Equation for a Free Particle and in Electromagnetic Filed – Dirac Equation for a Free Particle. Charge and Current Densities – Dirac Matrices – Plane Wave Solution – Negative Energy States – Spin Angular Momentum – Spin-Orbit Coupling.

**Books for Study:**

1. Quantum Mechanics by L.Schiff - Tata McGraw Hill.
2. A Text Book of Quantum Mechanics by P.M.Mathews and K.Venkatesan - Wiley Eastern.
3. Quantum Mechanics by V.K.Thankappan – Wiley Eastern.
4. Quantum Mechanics by A.Goswamy

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>CORE PAPER – VI</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213SEC23</b>	<b>CONDENSED MATTER PHYSICS</b>	<b>6</b>	<b>0</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn the basics of crystal structure and underlying theoretical development for the description of certain properties and phenomena of solid states.

**UNIT – I: CRYSTAL STRUCTURE**

Crystal classes – symmetry elements – 2D, 3D lattices – Bravais lattices – Symmetry point groups – Atomic scattering factor – Structure factor.

Defects in solids: Point defect – Line defect – Surface defect – volume defect – effects of crystal imperfections.

**UNIT – II: LATTICE, VIBRATIONS AND THERMAL PROPERTIES**

Vibration of monoatomic lattice – Lattices with two atoms per primitive cell – Quantization of lattice vibrations – Phonon momentum – Inelastic scattering of neutrons by phonons – Lattice heat capacity – Einstein model – Density of modes in one-dimension and three-dimension – Debye model of the lattice heat capacity – Thermal conductivity.

**UNIT – III: FREE ELECTRON THEORY, ENERGY BANDS AND SEMICONDUCTOR CRYSTALS**

Introduction – Free electron gas – sommerfield model – density of electron states – Schottky effect – Photoelectric effect – Photoelectric emission. Band theory: Energy spectra in atoms molecules and gases – Wave equation in a periodic potential – Bloch theorem – Kronig-penney model – Electrical conductivity and Ohm's law – Motion in magnetic fields – Hall effect – Thermo-electric effect – Peltier effect – Semiconductors – Band gap – Effective mass – Intrinsic carrier concentration.

**UNIT – IV: DIAMAGNETISM, PARAMAGNETISM, FERRO MAGNETISM AND ANTIFERROMAGNETISM**

Langevin classical theory of diamagnetism and paramagnetism – Weiss theory – Quantum theory of paramagnetism – Demagnetisation of a paramagnetic salt – paramagnetic susceptibility of conduction electrons – Hund's rules – Kondo effect – Ferroelectric order – Curie point and exchange integral – Temperature dependence of saturation magnetization – Ferromagnetic order – Antiferromagnetic order – Ferromagnetic domains – Origin of domains – Coercive force and hysteresis.

**UNIT – V: DIELECTRICS AND FERROELECTRICS AND SUPERCONDUCTIVITY**

Macroscopic electric field – Local electric field at an atom – Dielectric constant and polarizability – Clausius-Mossotti equation – Polarization catastrophe – Ferroelectric domain – Occurrence of superconductivity – Meissner effect – Thermodynamics of superconducting transition – London equation – Coherence length – BCS theory – Flux Quantization – Type I and Type II superconductors – Josephson superconductor tunneling – DC and AC Josephson effect.

**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>CORE PRACTICAL – II ADVANCED GENERAL EXPERIMENTS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213SEC24L</b>		<b>0</b>	<b>0</b>	<b>4</b>	<b>3</b>

**Aim:**

- Experimental determination of certain physical constants and its properties with the suitable experiments.

**(Any 10 from the following)**

1. Determination of magnetic susceptibility of liquid by Guoy method.
2. Determination of magnetic susceptibility of solid by Guoy method.
3. Determination of magnetic susceptibility of powder sample by Guoy method.
4. Determination of magnetic susceptibility of liquid by quinck's method.
5. Determination of wavelength and thickness of a film by using Michelson's interferometer.
6. Charge of an electron by spectrometer.
7. Polarizability of liquids by finding the refractive index at different wavelength.
8. Determination of wavelength of monochromatic source using biprism.
9. Determination of refractive index of liquids using biprism (scale and telescope method).
10. Determination of specific rotatory power of a liquid using polarimeter.
11. Rydberg's constant using spectrometer.
12. Forbe's method – Thermal conductivity.
13. Laser grating – Determination of wavelength.
14. Optical Fiber – Numerical aperture.
15. Brass Arc spectrum.

**PRIST UNIVERSITY**

**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213DSC25A</b>	<b>ATOMIC AND MOLECULAR PHYSICS</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To familiarize with the basic principles of various spectroscopic techniques and their applications in the determination of atomic structure, chemical composition and physical properties of materials.

**UNIT - I: ATOMS IN EXTERNAL FIELDS AND QUANTUM CHEMISTRY**

Quantum theory of Zeeman, Stark and Paschen Back effect.

**QUANTUM CHEMISTRY OF MOLECULES:**

Born – Oppenheimer approximation – Heitler – London theory of hydrogen – Concept of atomic, hybrid and molecular orbital's- LCAO treatment of molecular orbitals of CH<sub>4</sub>, C<sub>2</sub>H<sub>6</sub> and C<sub>2</sub>H<sub>4</sub>- Huckels molecular approximation- Application to butadiene and benzene.

**UNIT – II: MICROWAVE SPECTROSCOPY**

Rotational spectra of diatomic molecules – Rigid rotator – Non rigid rotator – Effect of isotopic substitution – Rotation spectra of polyatomic molecules – linear, symmetric top and asymmetric top molecules – Experimental technique.

**IR SPECTROSCOPY:**

Vibrating diatomic molecule – Vibrating Rotator – Linear symmetric top molecule – characteristics and group frequencies – Experimental technique.

**UNIT –III: RAMAN SPECTROSCOPY**

Raman effect and Quantum theory of Raman effect - Rotational and vibration Raman shifts of diatomic molecules

**ELECTRONIC SPECTROSCOPY OF MOLECULES:**

Electronic Spectra of Diatomic Molecules – Frank Conden Principle – Dissociation energy and Dissociation products – Rotational fine structure of electronic vibration transitions .

**UNIT – IV: RESONANCE SPECTROSCOPY**

**NMR:**

Basic principles – Classical and Quantum Mechanical Description – Bloch equations – Spin – Spin and Spin lattice relation times – Experimental method – Single coil & double coil methods – high resolution methods.

**ESR:**

Basic Principle ESR Spectrometer – Nuclear interaction & Hyperfine structure – Relaxation effects – g- factor – characteristics – Free radical studies & biological application.

**UNIT – V: LASERS**

Emission and absorption of radiation – Einstein relations – absorption of radiation – population inversion – Optical feedback – Threshold conditions – Laser modes – Single mode operation – frequency Stabilization – mode locking – laser applications – Holography – Holographic computer memories – Laser induced nuclear fusion.

**PRIST UNIVERSITY**

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213DSC25B</b>	<b>RADIATION PHYSICS</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

The material in this section is designed to teach the basics of radiological physics, interaction of radiation with matter, basic dosimetric concepts and radiation detectors.

**Unit1: Ionizing & Non ionizing Radiation**

Electromagnetic spectrum- Different sources of Non Ionizing radiation-Radiofrequency, Microwaves, Infrared, Visible and Ultra violet radiation production, physical properties and their interaction with tissues. Radiation quantities and units - Radiometry - particle flux and fluence - energy flux and fluence -Linear and mass attenuation coefficients – Mass energy transfer and mass energy absorption coefficients

**Unit 2: X-Ray Generators**

Discovery- Production – Properties of X-rays – Characteristics and continuous spectra– Design of hot cathode X-ray tube – Basic requirements of medical diagnostics, therapeutic and industrial radiographic tubes – Rotating anode tubes – Hooded anode tubes – Industrial X-ray tubes - Safety devices in X-ray tubes –X ray tubes for crystallography.

**Unit 3: Particle Accelerators**

Particle accelerators for industrial, medical and research application – The Resonant transformer – Cascade generator – Van De Graff Generator – Pelletron – Cyclotron – Betatron Synchro-Cyclotron – Linear Accelerator – Klystron and magnetron –Travelling and Standing Wave Accelerations – Microtron – Electron Synchrotron –Proton synchrotron.

**Unit 4: Interaction of photons with Matter**

Interaction of electromagnetic radiation with matter- Photoelectric and Compton process and energy absorption – Pair production – Attenuation and mass energy absorption coefficients – Relative importance of various processes.

**Unit 5: Interaction of charged particles with Matter**

Classical theory of inelastic collisions with atomic electrons- Energy loss per ion pair by primary and secondary ionization –Dependence of collision energy losses on the physical and chemical state of the absorber - Cerenkov radiation – Electron absorption process – Scattering Excitation and Ionization –Radiative collision - Bremstrahlung – Range energy relation - Continuous slowing down approximation(CSDA) – transmission and depth dependence methods for determination of particle penetration – empirical relation between range and energy

<b>17213RMC26</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Aim:**

- To enhance the ability of research work along with document preparation for journal publication.

**UNIT I: INTRODUCTION TO RESEARCH METHODOLOGY**

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT II: DATABASE AND LITERATURE SURVEY**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

**UNIT III: DATA ANALYSIS AND CHEMICAL PACKAGES:**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis – Chemical Packages – ChemDraw – ChemSketch – ISIS draw – Origin.

**UNIT IV: THESIS AND PAPER WRITING:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

**UNIT V: LABORATORY SAFETY AND NUMERICAL METHODS**

Basic laboratory guidelines – safety equipment – Leaking compressed gas cylinders – electrical safety. Fire – fire extinguishers. Laboratory injuries and treatment. Chemical spills – Mercury and Biohazardous – clean up procedure - Accident management - Disposal of chemicals and glass wares.

Solutions of equations - Simple iterative methods - Newton - Raphson method - Numerical Integration - Simpson's 3/8 rule - Runge Kutta method II order - Solution of Simultaneous equation - Differentiation - Numerical differentiation with interpolation polynomials.

<b>Course Code</b>	<b>CORE PAPER – VII</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17213SEC31	<b>ELECTROMAGNETIC THEORY</b>	<b>6</b>	<b>0</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn the theory for the fields produced by stationary and moving charge and charged systems and propagation of electromagnetic fields.

**UNIT – I: INTRODUCTION TO ELECTROSTATICS**

Coulomb's law- Electric field – Gauss Law – Scalar potential – Surface distribution of charges and dipoles – Poisson and Laplace Equation – Green's theorem – Dirichlet and Neumann boundary conditions – electrostatic boundary value problems : Methods of Images Illustrations: Point charge in the presence of (i) a grounded conducting sphere. (ii) a charged insulated and conducting sphere.

**UNIT – II: ELECTROSTATICS OF MACROSCOPIC MEDIA**

Multipole expansion – Boundary value problems with dielectric Illustration (i) a point charge embedded at a distance away from a dielectric interface. (ii) Dielectric sphere in a uniform electric field. Molecular polarizability and electric susceptibility Electrostatic energy in dielectric media.

**UNIT – III: MAGNETOSTATICS**

Biot and Savart law – Force between current carrying conductors – Differential equations of magnetostatics and Ampere's law – Vector potential – Force and torque and energy of a localized current distribution in an external magnetic induction – Macroscopic equations.

**UNIT – IV: ELECTROMAGNETICS**

Faraday's law in induction – Maxwell's displacement current – Maxwell equations Maxwell equations in terms of vector and scalar potentials – Gauge transformations Lorentz gauge, Coulomb gauge – Poynting's theorem – Conservation of energy and momentum for a system of charged particles and electromagnetic fields.

**UNIT – V: ELECTROMAGNETIC WAVES AND WAVE PROPAGATION**

Electromagnetic waves – reflection – refraction – dispersion and polarization – wave guides – charge particle in electric and magnetic fields – Radiation from moving charges, dipoles and retarded potentials.

Course Code	CORE PAPER – VIII NUCLEAR AND PARTICLE PHYSICS	L	T	P	C
17213SEC32		6	0	0	5

**Aim:**

- To learn the various aspects of nucleus and its behavior under various conditions.

**UNIT I: BASIC NUCLEAR PROPERTIES**

Nuclear Size, Shape, Mass – Charge Distribution – Spin and Parity – Binding Energy – Semi Empirical Mass Formula – Nuclear Stability – Mass Parabola – Nature of Nuclear Forces – Ground State of Deuteron – Magnetic Dipole Moment of Deuteron – Proton-Neutron Scattering at Low energies – Scattering Length, Phase Shift – Properties of Nuclear Forces – Spin Dependences – Charge Symmetry – Charge Independence – Repulsion at Short Distances – Exchange Forces – Meson Theory.

**UNIT II: RADIO ACTIVE DECAYS**

Alpha Emission – Geiger-Nuttal Law – Gamow Theory – Neutrino Hypothesis – Fermi Theory of Beta Decay – Selection Rules – Non-conservation of Parity – Gamma Emission – Selection Rules – Internal Conversion – Nuclear Isomerism – Interaction of Charged Particles and X-rays with Matter – Basic Principles of Particle Detectors – Ionization Chamber – Proportional Counter and G.M. Counters – Solid State Detectors – Scintillation and Semiconductor Detectors.

**UNIT III: NUCLEAR REACTION AND NUCLEAR MODELS**

Q-Values and Kinematics of Nuclear Cross Section – Energy and Angular Dependence – Reciprocity Theory – Briet-Wigner Formula – Compound Nucleus – Resonance Theory – Optical Model – Shell Model – Liquid Drop Model – Collective Model.

**UNIT IV: ACCELERATORS AND REACTORS**

Cyclotron – Synchrocyclotron – Betatron Synchrotron – Linear Accelerators – Characteristic of Fission – Mass Distribution of Fragments – Radioactive Decay Process – Fission Cross Section – Energy in Fission – Bohr-Wheeler's Theory of Nuclear Fission – Fission Reactors – Thermal Reactors – Homogeneous – Reactor – Heterogeneous Reactors – Basic Fusion Processes – Characteristic of Fusion – Solar Fusion – Controlled Fusion Reactors.

**UNIT V: ELEMENTARY PARTICLES**

Building Block of Nucleus – Nucleons, Leptons, Mesons, Baryons, Hyperons, Hadrons, Strange Particles – Classification of Fundamental Forces and Elementary Particles – Basic Conservation Laws – Additional Conservation Laws: Baryonic, Leptonic, Strangeness and Isospin Charges/Quantum Numbers – Gell-Mann-Nishijima Formula – Multiplets – Invariance Under Time Reversal (T) Charge Conjugation (C) and Parity (P) – TCP Theorem – Parity Non-conservation in Weak Interactions – CP Violation – Eight-Fold Way and Supermultiple – SU(3) Symmetry and quark model – Basic Ideas on the Theories of Weak and Strong Interaction.

**Book for Reference:**

1. Nuclear Physics, an Introduction by S.B. Patel – (Wily –Eastern, New Delhi).
2. Concepts of Nuclear Physics by B.L. Cohen – (Tata McGraw Hill, New Delhi).
3. Introduction to Elementary Particles by D. Griffiths – (Wily International, New York).

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>CORE PRACTICAL – III</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213SEC33L</b>	<b>ADVANCED ELECTRONICS LAB</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>3</b>

**Aim:**

- Verification of characteristics and applications of electronic components and devices.

**(Any 12 from the following)**

1. Logic gates – Universality of NAND/NOR gates using IC's.
2. Verification of Demorgans theorems and Boolean Expressions.
3. Astable and bistable and monostable multivibrator using IC 555.
4. Wein's bridge oscillator using IC 741.
5. Construction of dual regulated power supply.
6. Half and Full wave precision rectifier using IC 741.
7. Study of the characteristics of Load cell.
8. Digital to analog converter – R-2R method and weighted method.
9. Study the function of multiplexer and demultiplexer.
10. Study the function of decoder and encoder.
11. Flip flops.
12. Half adder and Full adder (using only NAND gates).
13. Half subtractor and Full subtractor (using only NAND gates).
14. Digital comparator using XOR and NAND gates.
15. Study of counter using IC 7490 (0 - 9).
16. Analog to digital converters – Born approximation method.
17. Calibration of thermistor.
18. Study of the characteristics of Strain gauge.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	DISCIPLINE SPECIFIC ELECTIVE	L	T	P	C
17213DSC34A	COURSE-III NON CONVENTIONAL ENERGY PHYSICS	5	0	0	4

**Aim:**

- To learn about geothermal energy, energy from oceans and hydrogen and its applications.

**UNIT – I: GEOTHERMAL ENERGY**

Geothermal Energy – Nature of geothermal fields – Geothermal sources – Hydrothermal resources – Vapour Dominated systems – Liquid dominated systems – Geopressed resources – Hot dry rock resources – Magma resources – Advantages and disadvantages – applications of geothermal energy.

**UNIT –II I: ENERGY FROM OCEANS**

Ocean thermal electric conversion – Open cycle OTEC system – closed cycle OTEC system – Energy from tides – Principle of tidal power – Components of tidal plants – operation methods of utilization of tidal energy – wave energy conversion by floats – High level reservoir wave machine – The Dolphin type wave power machine – Estimate of energy and power in Tidal system – Advantages and Limitations of Tidal power generation.

**UNIT –II I: HYDROGEN ENERGY**

Introduction to Hydrogen energy – Properties of Hydrogen – Hydrogen production – Electrolytic production – tank type electrolyzer – Fossil field methods – Coal gasification for the production of Hydrogen – Coal gasification plants – Solar energy methods - Hydrogen Transportation – Safty rules in handling Hydrogen fuel – Hydrogen storage.

**UNIT – IV: MHD POWER**

Magneto hydro dynamic power generation (MHD) – Principles of MHD power generation – MHS systems – open cycle systems – closed cycle systems – Liquid metal system – Advantages of MHD.

**UNIT – V: ENERGY CONSERVATION**

Economic concept of energy – Principles of energy conservation and energy Audit – Different types of Audit – Co-Generation – types of Co-generation – Heat Recuperators – Uses of heat recuperators – Heat generators.

**Books for Study:**

1. Non- Conventional Energy Sources – G.D. Rai, Kannah Publication.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-III	L	T	P	C
17213DSC34B	PHOTONICS DEVICES AND APPLICATIONS	5	0	0	4

**Aim:**

- To learn the basic principles and working of lasers, basic processes and features of nonlinear optical materials and fiber optics.

**UNIT – I: SOLID STATE LASERS**

Solid state crystalline and glass Lasers – Advantages – Construction of the Ruby Laser – Mechanism of Excitation of the Ruby Laser – Neodymium Lasers – Nd-YAG Laser Nd-glass Laser – Alexandrite Laser – Fiber Glass Laser – Solid state Tunable Laser – Titanium Dapphire Laser – Colour center Lasers – DPSSL.

**UNIT – II: LIQUID (DYE) AND LASERS**

Geometry of Dye lasers – Pulsed Dye lasers pumped by Flash lamps – Tunable pulsed lasers pumped by other lasers – Tunable continuous Wave Dye lasers – Mode-locked Ring Dye lasers – Mechanism of Excitation of Mode – locked Ring Dye laser – Helium-neon Laser – Argon Iron Laser – Krypton Ion laser – Metal Vapour lasers – Carbon Dioxide Laser – Gas Dynamic Laser – Nitrogen Laser.

**UNIT – III: CHEMICAL, X-RAY AND FREE ELECTRON LASERS**

Hydrogen chloride laser – Hydrogen fluoride laser – X-ray lasers – Free Electron Lasers (FEL) – Characteristics of semiconductors lasers – Semiconductor diode lasers – Heterojunction semiconductors materials – Double Hetrostructure Laser – Quantum – well Lasers – Higher power Semiconductor Diode Lasers – Single Mode Lasers – Multimode Lasers – Surface – Emitting Lasers (Sels).

**UNIT – IV: INDUSTRIAL APPLICATIONS OF LASERS (MATERIAL PROCESSING)**

High Power Gas Lasers – Material Processing with Lasers – Metals and Lasers Interactions – Materials Processing mechanism – Hole Drilling with Lasers – Cutting Process with Lasers - Laser Welding – The Welding Process – Micro Laser Welding – Deep Penetration Welding (High Power laser Welding) Laser Hardening – Marking with Lasers – Wire Striping With laser – Lasers in Nuclear Science – Isotope Separation – Lasers in Spectroscopy – Lasers in Chemistry – Light Detecting and Ranging (LIDAR).

**UNIT – V: LASER COMMUNICATION / HOLOGRAPHY AND ITS APPLICATIONS / MEDICAL SCIENCE**

Optical Sources for fiber optical communication – Photo (or photon) Detectors – Operation of Optical Receivers – Essential Characteristics of Laser in Fiber Optic Communication – Types of Holograms – Intensity Distribution in a Hologram – Fourier Hologram – Thick Hologram – Colour Holograms – Computer Holograms – Holographic Microscopy & Applications – Laser Diagnostics – Photomedicine – Lasers in Ophthalmology – Lasers for General Surgery – Lasers In Dermatology – Cardiology – Lasers In Dermatology – Cardiology – Lasers In Density – Lasers Used in Medicine.

**Books for Study:**

1. Koehner. W. Solid State laser engineering (Springer – Verlog, New York, 1992).
2. Svelto, O. Principles of Lasers (Olenum Press, New York, 1976).
3. Schafer F.P. Dye Lasers (Springer – Verlog, Berlin, 1973).
4. Rampal, V.V. Lasers and Applications (South Asian Publishers, New Delhi, 1993).

**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>GENERAL ELECTIVE COURSE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>172—GEC35</b>	<b>WRITING FOR THE MEDIA</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

- To equip students to enter into the realm of mass media.

**Objectives:**

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluating news.

**UNIT-III**

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

**UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Course Code	Course Title	L	T	P	C
172—GEC35	General Elective Course Applicable Mathematical Techniques	4	0	0	2

**Aim:**

- To acquaint with the basic concept of Interpolation.

**Objectives:**

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

**Outcomes:**

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

**UNIT I**

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

**UNIT II**

Assignment Problems

**UNIT III**

Replacement Problems

**UNIT IV**

Decision Analysis

**UNIT V**

Game Theory

**References**

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

<b>Course Code</b>	<b>GENERAL ELECTIVE COURSE-III GREEN CHEMISTRY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>172—GEC35</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Objectives:** To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

### **Unit I - Introduction**

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution Pollution prevention.

### **Unit II - Principles**

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

### **Unit III - Bio Catalytic Reactions**

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Trends.

### **Unit IV - Green House Effect**

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

### **Unit V - Green Analytical Methods**

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

### **Outcomes:**

- To understand the environmental status and evolution.
- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

### **References:**

1. Introduction to Green Chemistry – M.Rayan and M.Tinnesand
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>GENERAL ELECTIVE COURSE-III BIOANALYTICAL TECHNIQUES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>172—GEC35</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Unit I**

Separation techniques – Solvent extraction – principles and applications of soxhlet extraction and super critical fluid extraction; Distillation – Theory of distillation, method and application of fractional and steam distillation; Techniques of sublimation and its applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hassel balch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

**Unit II**

Chromatography – Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC .

**Unit III**

Centrifugation – Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges. Radioisotopes – Radioactivity, types, law of radioactivity, decay processes, units of radioactivity; Applications of radioisotopes in biology.

**Unit IV**

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

**Unit V**

Spectroscopy – Principles and components of instruments and applications of Colorimeter, Spectrophotometer, Fluorescence spectrometry, AAS and Flame photometer. Principles and applications of Raman spectroscopy, IR spectrometry, NMR and ESR.

Course Code	General Elective Course	L	T	P	C
172—GEC35	Internet and Web Design	4	0	0	2

**Aim**

To equip the students with basic programming skill in Web Designing

**Objective**

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**Outcomes:**

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

**Reference Book**

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

**Thanjavur, Tamilnadu, India.**

Course Code	General Elective Course	L	T	P	C
172—GEC35	Insurance Services	4	0	0	2

**Aim:**

- To look after the interests of people from uncertainty by providing certainty of compensation.

**Objectives:**

- To learn the fundamental concepts and principles of insurance.
- To explain the nature of different insurance policies, insurance contracts and settlement of claims.

**Out Come:**

- The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

**UNIT – I**

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

**UNIT – II**

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

**UNIT – III**

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

**UNIT – IV**

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

**UNIT – V**

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

**Reference Books:**

Course Code	General Elective Course	L	T	P	C
172—GEC35	Counselling Psychology	4	0	0	2

**Aim:**

- To acquaint with counselling and its process

**Objectives:**

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

**Out Come:**

- Learn counselling and its process

**UNIT I**

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

**UNIT II**

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

**UNIT III**

Approaches to Counselling

Counselling Process

**UNIT IV**

Psychological Testing

Diagnosis

**UNIT V**

Educational Counselling

Family Counselling

<b>Course Code</b>	<b>CORE PAPER – IX</b> <b>PROGRAMMING IN C++</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213SEC41</b>		<b>6</b>	<b>0</b>	<b>0</b>	<b>5</b>

**Aim:**

- To develop programming skills of C & C++ programming in solving some mathematical problems and their applications.

**UNIT – I: PRINCIPALS OF OBJECTS ORIENTED PROGRAMMING (OOP)**

Software evolution – object oriented programming paradigm – basic concepts of OOP's – benefits of OOP's – Introduction to C++ - token's keywords – identifiers, variables, operators, manipulators, expression.

**UNIT – II: CONTROL STATEMENTS & FUNCTIONS**

Control structures in C++ - Functions in C++ - main functions – function prototyping – call by reference – return by reference – functions over loading – friend and virtual functions.

**UNIT – III: CLASSES AND OBJECTS**

Specification of a class – Accessing class members – member functions of class – objects – array of objects – passing objects as Function arguments – Friend functions – Const Member functions – Special member functions constructors – Destructors Operator overloading – overloading operators – Rules for overloading operators – Type conversions.

**UNIT – IV: INHERITANCE**

Single inheritance – multilevel inheritance – multiple inheritance – hierarchical inheritance – hybrid inheritance pointers – virtual function and polymorphism managing console I/O operations working with files – Classes for file stream operations – opening and closing a file – eof-of-file, deduction – file pointers updating a file error handling during file operations – Command line arguments.

**UNIT – V: PROGRAMS**

1. Arranging words in alphabetical order
2. Picking largest and smallest of a set of numbers
3. Solving quadratic equation
4. Multiplication of two square matrices
5. Least square curve fitting
6. Programs for handling files
7. To solve simultaneous equation by Gauss elimination method
8. Write a program to convert a number given in base to other bases and number to words
9. Write functions for (i) find the length of the string (ii) to find a substring with a given string
10. Write functions for (i) reversing the string (ii) converting integer into string
11. Write functions for (i) string copy (ii) string compare (iii) to replace a substring with another string
12. Read in a string of characters and determine if they are palindrome (i) to replace the half with first half (ii) reverse them half separately.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

**Text Book:**

E. Balagurusamy – Objects Oriented Programming with C++, Tata McGraw Hill Publishing Company.

Course Code	CORE PRACTICAL – IV MICROPROCESSORS AND COMPUTER LABORATORY	L	T	P	C
17213SEC42L		0	0	5	5

**Aim:**

• To develop programming skills of microprocessor and C++ programming in solving some mathematical problems and their applications.

**(Any 12 experiments only, minimum 6 from each section)**

**SECTION A**

1. 8 bit addition, subtraction, multiplication and division using 4085.
2. 16 bit addition, 2's complement and 1's complement subtraction (4086/4088).
3. Conversion from decimal to octal and hexa systems.
4. Conversion from octal, hexa to decimal systems.
5. Study of seven segment display add on board.
6. Study of ADC interfacing (DAV 0900)
7. Traffic control system using microprocessor.
8. Microprocessor as digital clock.
9. Generation of square, triangular, saw-tooth staircase and sine waves using DAC 0400.
10. Control of stepper motor using microprocessor.

**SECTION B**

1. Roots of algebraic equations – Newton-Raphson method.
2. Least-square curve fitting-Straight line fit.
3. Solution of simultaneous linear algebraic equations – Gauss elimination method.
4. Solution of simultaneous linear algebraic equations – Gauss Seidal method.
5. Interpolation – Lagrange method.
6. Numerical integration – Composite trapezoidal rule.
7. Numerical integration – Composite Simpson's rule.
8. Numerical differentiation – Euler method.
9. Solution of ordinary differential equations – Runge – Kutta 2<sup>nd</sup> order method.
10. Solution of ordinary differential equations – Runge – Kutta 4<sup>th</sup> order method.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-IV</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213DSC43A</b>	<b>NANO SCIENCE AND TECHNOLOGY</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To learn the structures, properties, characterization and applications of nanomaterials.

**UNIT – I: NANO POWDERS AND NANO MATERIALS**

Preparation – Plasma arcing chemical vapour deposition – Sol–gel Technique – Silica gels – Hydrolysis – Condensation and Polymerization of monomer to form particles – Zirconia and yttrium gels – Aluminosilicate gels – Forming nanostructured surfaces using the sol – gel process – Trapping by Sol – gel Electrodeposition – Ball millig – Application of nanomaterials – Insulation materials – Machines tools–Phosphors – Batteries – High power magnets – Motors vehicles and aircraft – Medical Implants – Other medical uses.

**UNIT – II: MOLECULAR NANOTECHNOLOGY TOOLS**

Atoms by inference Electron microscope – Scanning electron microscope – Modern transmission electron microscopes – Scanning probe microscopy – Atomic force microscope – Scanning tunneling microscope – Nanomanipulator – Nanotweezers – Atom manipulation – Nanodots.

**UNIT – III: THE CARBON AGE AND NANO BIOMATERIALS**

New forms of carbon – Types of nanotubes – Formation of nanotubes – Methods and reactants – Arcing in the presence of cobalt – Laser methods – Chemical vapour deposition method – ballmilling – other methods – Assemblies – purification of carbon nanotubes – The properties of nanotubes – Conductivity – Strength and elasticity – Uses of nanotubes – Electronics – hydrogen storage – Materials – Mechanical machines – Space elevators.

**UNIT-II: OPTICS, PHOTONICS AND SOLAR ENERGY**

Properties of light and nanotechnology – Reflectance of light – Transmission of light – Polarization of Radiation – Interaction of light and nanotechnology – Photon trapping and plasmas – Dielectric constant and polarization - Refractive index – nanoholes and photons – Imaging – New low cost energy efficient windows in solar absorbers, base on nanoparticles – Nanometals – Nanotechnology and day night – Solar cells, nanoparticles and nanostructure – Optically use full nanostructured polymers – Polymeric crystals, surface wave guides and control of light paths.

**UNIT – V: NANO ELECTRONICS & FUTURE APPLICATION**

The tools of micro and nanofabrication – Optical lithography – electron beam lithography – Atomic lithography – molecular beam epitaxy – Quantum electronics devices – High electron mobility transistors – Quantum interface transistors – Carbon nanotube transistors Molecular electronics –DNA –

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Directed assembly and application in electronics – Quantum Information and quantum computers – Nanomachines and nano elasticity – nanoparticle coating – special new effects – Nano electronics and magnetic devices – new computing systems – Optoelectronics devices – Light emitting diodes – Thermionic solar power –Environmental applications.

**Books for Study:**

Mick Wilson, K.K Geroff Smith,Michelle and Bukhard Raguse, Nano technology –Basic science and Emerging technologies, Overseas press 2005.

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-IV</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213DSC43B</b>	<b>NON-LINEAR DYNAMICS</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To learn the basic principles and working of linear and nonlinear systems with the applications.

**UNIT – I: LINEAR AND NONLINEAR SYSTEMS**

Linear and non linear forces – Non linear dynamical systems – Effects of non linearity – Phase space – Liouville theorem – Solution of damped and forced linear oscillator – Resonance phenomenon – Duffin oscillator – Jump phenomenon.

**UNIT – II: FIXED POINTS AND STABILITY ANALYSIS**

Stable and unstable fixed points – Classification of fixed points in first and second order systems – Limits cycle motion – Bifurcations; Saddle node, Pitchfork, Transcritical and Hopf bifurcations.

**UNIT – III: BIFURCATION AND CHAOS**

Logistic map: Stability of period – 1 and 2 fixed points – Period doubling phenomenon – Onset of chaos – Bifurcation diagram – Different routes to chaos: Period doubling quasiperiodic route and intermittency route – Necessary conditions for chaos.

**UNIT – IV: FRACTALS**

Self-similarity – Self similarity in Henon attractor – Properties of fractals – Examples of fractals – Fractal dimension – Construction and properties of middle – Third cantor set, Koch curve and sierpinski triangle.

**UNIT – V: SOLUTION AND INTERGRABILITY**

Complete integrability of finite dimensional systems – Painleve analysis to deduct integrability – Linear and non linear waves – Conoidal and solitary waves – John Scott Russel's observation of solitary waves – K-dv equation – Fermi – Pasta Ulam problem – Numerical experiment of Zabusky and Kruskal – Soliton – Lax pair – Inverse scattering transform method for K-dv equation – Other solution equations – Applications.

**Books for Study and Reference:**

**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

1. M. Lakshmanan and S. Rajasekar, Nonlinear Dynamics: Intergrability Chaos and Patterns (Spriner-verlag, Berlin, 2003).
2. E. Ott. Chaos in Dynamical Systems (Cambridge University Press Cambridge, 1993).
3. H. G. Schuster: Diterministic Chaos (Verlag, Weintein, 1988).
4. H. O. Peiten, P. H. Richter, The Beauty of Fractals (Springer, Berlin, 1986).
5. P. G. Drazin and R. S. Johnson, Solitons: (Cambridge University Press, Cambridge, 1985).
6. M. J. Ablowitz and P. E. Clarkson, solution, non linear Evolution Equation and Inverse Scattering (Cambridge University Press, Cambridge, 1991).

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

**PRIST UNIVERSITY**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India.**

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc (Physics) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffolding Research)	4
IV	Project Work	12

**Blueprint for assessment of student’s performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**  
 (Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student’s performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

**Blueprint for assessment of student’s performance in Research Methodology Courses**

- **Continuous Internal Assessment:** **20 Marks**
  - Research Tools( Lab) : 10 Marks
  - Tutorial: 10 Marks
- **Model Paper Writing:** **40 Marks**
  - Abstract: 5 Marks
  - Introduction: 10 Marks
  - Discussion: 10 Marks
  - Review of Literature: 5 Marks
  - Presentation: 10 Marks
- **Semester Examination:** **40 Marks**
- **Total:** **100 Marks**

## M Phil- SYLLABUS

(For the candidates admitted from the academic year 2017-2018 onwards)

### PAPER – I RESEARCH METHODOLOGY (SUB.CODE: 173PHC11)

(Common for all Subjects except Languages)

#### **Unit – I:**

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

#### **Unit – II:**

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

#### **Unit – III:**

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

#### **Unit – IV:**

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Main (E-mail) – Intranet and Extranet.

## **Unit – V:**

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

## PAPER – II ADVANCED PHYSICS

(SUB.CODE: 173PHC12)

### Unit-I: Crystal Physics and Physical Properties of Crystals

Representation of physical quantities by scalars, vectors and tensors – Tensors of second rank- Transformations of components of a second-rank tensor – Representation quadric – Simplification of equations referred to principal axes – Effect of crystal symmetry on crystal properties: Neumann's principle – Magnitude of a property in a given direction – Geometrical properties of the representation quadric – Equilibrium properties represented by second-rank tensor: Electric Polarization: relations between D, E and P in a parallel plate condenser – Stress tensor: homogeneous and inhomogeneous stresses – Strain tensor: homogeneous three-dimensional strain.

### Unit-II: Crystal Optics and Non-Linear and Electro-Optical Effects in Crystals

Double refraction: Optical indicatrix – Effect of crystal symmetry on optical indicatrix – Wave surface: Uniaxial and Biaxial crystals – Non-Linear Optics: Harmonic generation – Second Harmonic Generation – Phase matching – Third Harmonic Generation – Optical Mixing: Sum and difference frequencies – Parametric generation of light – Self-focusing of intense light beams – Electro-Optic Effect: Phase retardation – Longitudinal electro-optic modulators: Amplitude modulation – Phase modulation of light – Transverse electro-optic modulators – Electro-optic beam deflection.

### Unit- III: Nanomaterials and their applications

Properties of metallic and semiconducting Nanoparticles – various physical and chemical methods of preparation –self assembly and catalysis assisted growth methods - synthesis of carbon nanostructures and their applications –nanostructured ferromagnetism–size and dimensionality effects in nanostructures – biological application of nanomaterials.

### Unit – IV: Surface analysis techniques

Atomic Collision and Backscattering Spectrometry: – Energy loss of Light Ions and Backscattering Depth Profiles – Sputter Depth Profile and Secondary Ion Mass Spectroscopy – Channeling: Basics and its application in Thin Film analysis - X-ray Photoelectron Spectroscopy – Electron Microprobe analysis of surface – Nonradiative Transitions and Auger Electron Spectroscopy.

### Unit – V: Spectroscopic methods

Spectrophotometer – UV –VIS Near IR, - Basic concepts of FTIR and Raman and its applications to various materials - NMR and ESR and its applications – Thermal analysis (TG/DTA, DSC) of different Materials. X-ray Method The Bragg Law – X- ray Spectroscopy – Diffraction Directions – Diffraction Methods – Powder Method – Particle size Calculation – X ray scattering by electrons, atomic and unit cells.

### Books for Study for

1. 'Physical Properties of Crystals: Their Representation by Tensors and Matrices' by J.F. Nye, 1985, Oxford University Press, New York.
2. 'Lasers and Non-Linear Optics' by B.B. Laud, Chapter-13, Wiley Eastern Ltd., 1985,
3. 'Quantum Electronics' by Amnon Yariv, Chapter-14, John Wiley & Sons, Inc., 1975, New York.
4. Introduction to Nanotechnology by C.P Pool Jr. and F.J Owens, John Wiley & Sons

5. Nanostructures & Nanomaterials Synthesis, Properties and Applications by Guozhong Cao ( World Scientific Publishing)
6. Fundamentals of surface and thin film analysis – Leonard C. Feldman and James W. Mayer
7. Basic Principles of Spectroscopy – Raymond Chang, McGraw Hill International book company
8. Elements of x-Ray Diffraction (Second Edition) BD Cullity
9. Fundamentals of Molecular Spectroscopy by Banwell

## PAPER-III CRYSTAL GROWTH METHODS AND CHARACTERIZATION TECHNIQUES

(SUB.CODE: 173PHC13)

### Unit I - Thermodynamics of Crystal Growth

Saturation and super saturation – solubility curve – expression for super saturation–solubility diagram –nucleation – Theories of nucleation – Gibbs Thomson equation for vapour –Modified Thomson’s equation for melt – Gibbs Thomson equation for solution – Kinetic of crystal growth– Single and rough faces – Models of surface roughness - KSU theory and BCF theory.

### Unit II - Growth from solutions

Low temperature solution growth: Slow cooling process – solvent evaporation process –Temperature difference process – Use of electrolytic process high temperature solution growth: Solvent & solutions - slow cooling methods – temperature difference methods – high pressure method – solvent evaporation method – electrolytic process - liquid phase epitaxial.

### Unit III - Growth from melt

Bridgeman and related techniques – crystal pulling – convection in melts – modeling and simulation of bulk crystal growth considering melt growth – czocharalski technique – zone melting technique – skull melting process – verneuil process-Heat exchange method.

### Unit IV - Other Crystal Growth Techniques

Physical vapour deposition-chemical vapour deposition – chemical vapour transport –definition – fundamentals – choice of transport reactions – specifications – Transported materials and agents-STP,LTVTP,OTP-Hydrothermal growth: Design aspect of autoclave-electro crystallization-Gel method: principle-types of gels-structure of gels-growth in gels-experimental procedure-biological crystallization.

### Unit V - Analysis and Characterization of Crystals

Optical transmission studies (UV) Micro hardness studies-Structural analysis-XRD-Fourier Transform-IR-Spectral analysis-Scanning Electron Microscope (SEM)-different etching techniques.

### Books for Reference:

1. Brice J.C, Crystal Growth Processes, John Wiley & sons , New York 1986,
2. Santhanaraghavan P, Ramasamy . P, Crystal Growth – Process and Methods, KRU Publications, Kumbakonam, 2000.
3. Buckley H.E, Crystal Growth, John Wiley & Sons, New York, 1986.
4. Gilman J, The Art of Science of Growing Crystals, John Wiley & Sons, New York, 1956.
5. William Kemp, Organic spectroscopy, 3 rd Edition, , Palgrave, New York, 2004.

## RESEARCH AND PUBLICATION ETHICS

Course Code	Course Title	L	T	P	C
CPE_RPE	Research and publication ethics	-	-	-	2

### UNIT I: PHILOSOPHY AND ETHICS

1. Introduction to philosophy, definition, nature and scope, concept, branches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

### UNIT II: SCIENTIFIC CONDUCT

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

### UNIT III : PUBLICATION ETHICS

1. Publication ethics: definition, introduction and importance.
2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

### PRACTICE

#### UNIT IV: OPEN ACCESS PUBLISHING

1. Open access publications and initiatives.
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies.
3. Software tool to identify predatory publications developed by SPPU.
4. Journal finder / journal suggestion tools viz, JANE, Elsevier Journal Folder, Springer Journal Suggester, etc.

#### UNIT V : PUBLICATION MISCONDUCT

##### A. Group Discussions

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest.
3. Complaints and appeals: examples and fraud from India and abroad.

Use of plagiarism software like Turnitin, Urkund and other open source software tools.

## **UNIT VI: DATABASES AND RESEARCH METRICS**

### **A. Databases**

1. Indexing databases.
2. Citation database: Web of Science, Scopus etc.

### **B. Research Metrics**

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score.
2. Metrics: h-index, g index, i10 index, altmetrics.

## Employability/Entrepreneurship and Skill Development

SCHOOL OF ARTS AND SCIENCE

DEPARTMENT OF BIOCHEMISTRY

B. Sc., Curriculum-Regulation 2018-2019

Course Code	Course Title	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

### UNIT – I

Glossary of grammar terms

Figures of speech

### UNIT – II

Foreign words and phrases

British and American Vocabulary

### UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

Skill development

### UNIT – IV

Editing

Proof reading

### UNIT – V

Comparison and contrast

Cause and effect

Course Code	Course Title	L	T	P	C
1711AEC12	English-I	4	0	0	2

### UNIT –I

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-Aruna Gnanadason

### UNIT – II

The Merchant of Death

-Nanda Kishore Mishra & John Kennet

She Spoke for all Nature

-Young world 'The Hindu'

### UNIT –III

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

Skill development

### UNIT –IV

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

### UNIT –V

Oliver Twist

-Charles Dickens

Course Code	Course Title	L	T	P	C
17115AEC13	Biomolecules	6	1	0	5

## Unit I

Carbohydrates – Definition, Biological significance, D and L designations, classification; Physical and chemical properties of monosaccharides; sugars – reducing and non-reducing sugars; Epimers and Mutarotation Structural elucidation of glucose and fructose; Structure and functions of Maltose, Lactose, Sucrose, Fructans, Starch, Cellulose, Chitin, Glycogen and Heparin. Blood group and bacterial cell wall polysaccharides.

## Unit II

Amino acids – Protein and non-protein amino acids; Classification of amino acids based on structure, chemical properties and functions; Chemical reactions of amino acids.

Proteins – Peptides, peptide bond, solid phase peptide synthesis; Biological functions and classification; Primary structure of insulin; secondary structures – Helix, sheet and Turns; Tertiary

structures of myoglobin; Quaternary structure of hemoglobin; Protein sequencing; structural stability of proteins.

### Unit III

Nucleic acids – Purine and pyrimidine bases; ribose and deoxy ribose sugars; Nucleosides and nucleotides; significances of nucleotides; Nucleic acids – DNA and RNA; DNA – Genetic material, Genome, C-value paradox; Double helical structure of DNA; A, B and Z forms of DNA; Sequencing of DNA by enzymatic method; Types of RNA and their biological roles; Differences between DNA and RNA.

### Unit IV

Lipids – Definition, classification, nomenclature, Properties and biological importance; Fatty acids and essential fatty acids; Structure of triglycerides – classification - Quality analysis of oils; Structures and functions of phospholipids, spingophospho lipids, steroids and prostaglandins. Types of lipoproteins and their significance.

### Unit V

Vitamins – Definition and classification; Natural sources, structures, biological roles and deficiency manifestations of Vitamins A, C, D, E, K and B complexes. Minerals – Macro and micro minerals (Na,K,Ca,Mg,P,Fe,Se,Zn,Cu,Mn) Antibiotics – Definition, types and general properties; Structure and significance of Penicillin and tetracycline.

### Skill development

Course Code	Course Code	Course Title	L	T	P	C
17115AEC14L		Biomolecules Lab-I	0	0	3	2

#### 1. Qualitative Analysis of Carbohydrates:

- (a) Glucose
- (b) Fructose
- (c) Xylose
- (d) Maltose

(e) Lactose

(f) Sucrose.

2. Qualitative Analysis of Protein:

(a) Egg Albumin

(b) Egg Flakes

(c) Casein

3. Colour Reactions for Amino Acids.

4. Qualitative Analysis of Lipids.

5. Preparations:

(a) Starch from Potato.

(b) Casein from Milk.

**ENTREPRENEURSHIP**

Course Code	Course Code	Course Title	L	T	P	C
17114AEC15		Chemistry - I	5	1	0	4

**UNIT- I**

**Polar effect:**

Inductive effect

+I and -I groups, relative strength of - foamic , acetic and propionic acids - acetic and chloroacetic acids - ammonia and methyl amine. Resonance - resonating structure of benzene , butadiene and COOH groups - conditions - applications (resonance energy and stability). Acidic & basic properties of phenol & aniline. Hyperconjugation.- consequence of hyperconjugation. Steric effects -Steric accelerated reaction and steric inhibited reaction.

**UNIT -II**

**Industrial chemistry**

Fuel gases – Watergas, products gas, L.P.G gas, Gobar gas and natural gas. Fertilizers – NPK and mixed fertilizers, micronutrients, and their role in plant life and biofertilizers, soap and detergents an elementary idea about preparation cleaning action of soap detergents.

### UNIT III

**Aromatic compounds :** structure, stability, resonance and aromaticity of benzene. Substitution reactions, Nitration, Halogenation and Alkylation Naphthalene Isolation, Synthesis, properties, and structural elucidation and uses .Organic compounds: Benzoin, Perkin, Cannizzaro, Claisen reactions. Chemotherapy: Definition and uses of Antibiotic, Analgesic Antibacteria, Antiviral, Antidiabetic, Antihypertensive, Antiseptic and disinfectant, Antimalarial- Anaesthetics – local and general.

### SKILL DEVELOPMENT

#### UNIT –IV

**Energetic:** Review first law of thermodynamic state and path functions need for the second law Carnot cycle and thermodynamic scale of temperature spontaneous and non spontaneous process and Third law.

#### UNIT – V

**Chemical kinetics:** Order of reactions and their determinations. Activation energy, effect of temperature on reaction rate. Catalysis Types, mechanism of catalytic reactions, industrial applications.

Course Code	Course Title	L	T	P	C
17114AEC16L	Volumetric Analysis Lab	0	0	3	2

1. Strong Acid and Strong Base
2. Weak acid vs Strong base
3. Estimation of ferrous sulphate.
4. Estimation of oxalic acid.
5. Estimation of copper.
6. Estimation of potassium dichromate
7. Estimation of potassium permanganate

### SKILL DEVELOPMENT

#### Skill Based Elective-I MS-WORD

Course Code	Course Title	L	T	P	C
1720SEC01AL	Package Lab-I	0	0	2	1

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. picture insertion and alignment
  - a. prepare a greeting card
  - b. prepare a handout
7. Create a mark sheet using tables. And find out the total marks.
8. Prepare a business letter for more than one company using mail merge

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17160SEC01B	Soft Skill I	0	0	2	1

## Part- I Effective Communication

### UNIT I                      Effective communication I

**Oral Communication:** Listening skills -Speaking skills (what to say and how to say it) – Gender neutral Language-Conflict, criticism, anger- Telephone skills.

### UNIT II                      Effective communication II

**Written Communication:** Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos.

**Nonverbal Communication:** Behavior, Body language and Attitude.

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17111SEC01L	Communicative English Lab-I	0	0	1	1

#### UNIT –I

Noun

Pronoun

Adjective

#### UNIT – II

Verb

Adverb

#### UNIT –III

Conjunction

Preposition

Interjection

#### UNIT – IV

Kinds of Sentences

#### UNIT –V

Patterns of sentences

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
1711INDCON S	Indian Constitution	0	0	0	0

#### Unit I::The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

#### Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

#### Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

#### Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court - functions and position of supreme court and high court

**Unit V:** State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

**SKILL DEVELOPMENT**

E-mail

Fax

Memos

**UNIT – II**

Itinerary

Checklist

**UNIT – III**

Invitation

Circular

**UNIT – IV**

Instruction

Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111AEC22	English-II	4	0	0	2

**UNIT – I**

Ecology

Gift

The First Meeting

-A.K. Ramanujan

-Alice Walker

-Sujata Bhatt

**UNIT –II**

Fueled  
Asleep  
Buying and selling

-Marcie Hans  
-Ernst Jandl  
-Khalil Gibran

**UNIT –III**

The End of living and The Beginning of Survival  
My Wood  
The Meeting of Races

- Chief Seattle  
- E.M.Forster  
- Rabindranath Tagore

**UNIT – IV**

The Refugee  
I Have a Dream  
Those People Next Door

-K.A. Abbas  
-Martin Luther king  
-A.G. Gardiner

**UNIT – V**

Marriage is a private Affair  
The Fortune Teller  
Proposal

-Chinua Achebe  
-Karel Capek  
-Anton Chekov

**SKILL DEVELOPMENT**

Course Code	Course Code	Course Title	L	T	P	C
171115AEC23		Biochemical Techniques	6	1	0	5

Unit I:

Colorimetry: Beer Lambert's Law, Light absorption and its transmittance, Absorption Spectroscopy - Principle, instrumentation and applications of colorimetry and UV-Vis spectrophotometer. Emission Spectroscopy – Spectrofluorimeter - Principle, instrumentation and applications. Flame photometry - principle and applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hassel balch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

Unit II:

Chromatography techniques: Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC.

### Unit III:

Centrifugation: Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges.

### Unit IV:

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

### Unit V:

Radio isotopic techniques: Types of radioactive decay, rate of radioactive decay, decay constant, Units of radio activity, measurement of radioactivity based on ionization- GM counter and excitation- Scintillation counter. Autoradiography. Applications of radioisotopes in biology. Hazards of radioactivity.

### **EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
17115AEC24L	Biochemical Technique Lab-I	0	0	3	2

1. Estimation of Amino Acid (Glycine) by formal titration.
2. Estimation of Ascorbic Acid by using 2, 6- Dichloro phenol indophenols.
3. Determination of Acid Number of edible oil.
4. Estimation of reducing sugar by Benedict's method.
5. Determination of Saponification Number.
6. Estimation of RNA by Orcinol Method.
7. Estimation of DNA by Diphenyl amine method.

### **EMPLOYABILITY/ ENTREPRENEURSHIP**

Course Code	Course Title	L	T	P	C
17114AEC25	Chemistry –II	5	0	0	5

## UNIT – I

### Amino acids and proteins

Aminoacids- Classification based on structure and essential and non - essential aminoacids – preparation and properties – peptides – (elementary treatment) proteins – Classification, based on physical properties and functions. Structure of proteins – primary and secondary (elementary treatment)

## UNIT – II

### Coordination chemistry

Nomenclature of mononuclear complexes – Werner sidgwick, and pauling’s theories – Chelation and its industrial importance to EDTA. Biological role of hemoglobin and chlorophyll Metallic bond Electron gas, pauling and band theories. Semiconductors intrinsic, n- type and p-type.

## UNIT –III

### Synthetic polymers:

Teflon, Alkyl and epoxy resins, poly esters – General treatment only. Heterocyclic compounds – Furan, Thiophene, pyrrole and pyridine – preparation and properties of pyridine and pyrrole – Quinoline and isoquinoline.

**Stereoisomerism** – lactic and tartaric acid – racemic mixture and resolution. Geometrical keto – enol tautomerism Meaning of E,Z,R,S,D,L, meso, (+),(-) in stereochemistry.

## UNIT- IV

**Electrochemistry:** Specific and equivalent conductivities – their determination – Oswald’s dilution law, Kohlrausch law.  $P^H$  and Buffer: Importance of ph and buffers in living systems –  $P^H$  determination by colorimetric and electrometric methods.

## SKILL DEVELOPMENT

## UNIT –V

### Surface chemistry:

Emulsion, gels preparation, properties and applications. Electrophoresis, Chromatography – Column, paper and thin layer chromatography.

Course Code	Course Title	L	T	P	C
17114AEC26L	Organic Analysis Lab	0	0	3	2

A study of elemental analysis of the following compounds:

- a. Carbohydrates,
- b. Amides,
- c. Aldehydes,
- d. Ketones,
- e. Acids,
- f. Phenols.

The students may be trained to perform the analysis like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional groups present and record their observations.

#### SKILL DEVELOPMENT

#### Skill Based Elective-II MS-EXCEL

Course Code	Course Title	L	T	P	C
17120SEC02AL	Package Lab-II	0	0	2	1

1. Prepare the addressing methods in excel
2. Describe the type of function
3. Draw a graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark list preparation for a student.
6. Prepare a Worksheet preparation for a company.
7. Prepare a Inventory Preparation

8. Prepare a Electricity Bill Preparation

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17160SEC02B	SOFT SKILL - II	0	0	2	1

**Part -II Self Development**

**UNIT I: Self -Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

**UNIT II: Self- Management**

Managing Time, Managing Stress, Conflict Management

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111SEC02L	Communicative English Lab-II	0	0	1	1

**UNIT –I**

Auxiliaries

**UNIT –II**

Modals

**UNIT –III**

Tenses-Simple, Perfect

**UNIT –IV**

Tenses-Continuous, Perfect continuous

**UNIT –V**

Articles

Participle

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111AEC31	Advanced English-III	4	0	0	2

**UNIT –I**

The organs of speech  
 Classification of speech sounds  
 Vowels and Diphthongs

**UNIT –II**

Consonants  
 Consonant cluster

**UNIT – III**

Syllable  
 Word accent

Intonation

**UNIT – IV**

Idiom  
 Interpretation of graphics

**UNIT – V**

Slogan writing  
 Writing advertisement

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17111AEC32	English-III	4	0	0	2

**UNIT – 1**

The Doctor's World - R.K. Narayan  
 The Postmaster - Rabindranath Tagore  
 Princess September - E.Somerest Maugham

**UNIT – II**

The Price of Flowers -Prabhat Kumar Mukhopadhyay  
 The Open Window -Saki  
 The Model Millionaire -Oscar Wilde

**UNIT –III**

My Brother My Brother - Norah Burke  
 Uneasy Home Coming - Will F. Jenkins  
 Resignation - Premchand

**UNIT –IV**

The Referee -W.H. Andrews & Geoffrey Dreamer  
 The Case of the Stolen Diamonds -Farrell Mitchell

**UNIT – V**

The Dear Departed -Stanley Houghton  
 The Princess and the Wood Cutter -Alan Alexander Milne

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17115AEC33	Cell Biology and Genetics	5	0	0	5

## Unit I

An Overview of cells: Origin and evolution of cells. Cell theory, Classification of cells – Prokaryotic and Eukaryotic cells. Comparison of prokaryotic and eukaryotic cells. Cell Membrane – Fluid mosaic model of membrane structure and its composition. Cell cycle.

## Unit II

Cytoplasmic organelles – Golgi bodies – Endoplasmic reticulum – Ribosomes – mitochondria – plastids – Lysosomes – micro bodies - peroxisomes – microfilaments –microtubules – centrosomes – Basal bodies -Cilia and flagella.

## Unit III

Cell growth and division – Nucleus, Nucleolus, chromatin chromosomes – structure of DNA - cell cycle – division – mitosis – meiosis .

## Unit IV

Genetics – Mendel’s laws – Epistasis – Gene interaction - Lethal genes – inheritance of multiple genes - multiple alleles – structure of gene – gene mutation.

## Unit V

Linkage and crossing over – mapping of chromosomes – Human cytogenetics – sex linked inheritance – sex differentiation and determination - Eugenics – Euphenics – population genetics.

## **SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17115AEC34L	Cell Biology and Genetics Lab-I	0	0	3	2

1. Separation of Carbohydrates by Ascending, Decending, Circular & Two Dimensional Paper Chromatography.
2. Separation of Amino acids by TLC method.
3. Separation of Lipids by TLC.
4. Separation of Plant pigments by Column Chromatography.
5. Separation of Serum protein by Paper Electrophoresis.

### EMPLOYABILITY

Course Code	Course Title	L	T	P	C
17120AEC3 5	Programming in C	5	1	0	5

#### UNIT I

Evolution and Applications of C – Structure of a C Program – Data Types –Declarations – Operators – Expressions – Type conversions – Built-in functions.

#### UNIT II

Data Input and Output – Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE-DO, DO-WHILE, FOR, BREAK and CONTINUE.

#### UNIT III

**Functions:** Defining and accessing functions-passing parameters of functions -Arguments – Recursive functions – Storage classes.

**Arrays:** Defining and processing Arrays – Multi dimensional arrays – passing arrays to functions – Arrays and strings – String functions – String Manipulations.

### SKILL DEVELOPMENT

#### UNIT IV

**Pointers:**Pointers Declarations – Operations on pointers – pointers to functions – Pointer and Strings – pointers and arrays – array of pointers - Structures and pointers – unions.

#### UNIT V

Data files – Opening, Closing, and processing files – Files with structures and unions – Register variables – Bit wise Operations – Macros- Preprocessing

--	--	--	--	--	--

Course Code	Course Title	L	T	P	C
17120AEC36 L	Programming in C lab	0	0	3	2

1. Write a C program to find the roots of Quadratic Equation (all cases).
2. Write a C program to find the Sum of Series (Sine, Cosine,  $e^x$ )
3. Write a C program to reads an integer N and determine whether N is prime or not.
4. Write a C program to Finding factorials, generating Fibonaccci Numbers using recursive functions
5. Write a C program to find the numbers in Ascending and Descending order (use it to find largest and smallest numbers).
6. Write a C program to find the sum of natural numbers using WHILE statement.
7. Write a C program for Sorting of given names in alphabetical order.
8. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication – use functions).
9. Write a C program for String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings – use function pointers).

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17115RMC37	Research Methodology	2	0	0	2

#### UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

#### UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

#### UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

#### **UNIT IV: Database Survey**

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

#### **UNIT V:**

#### **B. Sc. (Life Sciences)**

#### **Basic Principles of Laboratory Life Sciences Laboratory**

Introduction - Access to Laboratory and Emergency Exits - Basic Biostatistics, Mean, Median, Mode and its Application - Fundamental of Biosafety, Bioethics, Replication – Advantages and Disadvantages, Standard division, Standard Error, Preparation of Chemicals – Percentage, Molarity and Normality, Ratio Solution, PPM Solution etc. Ethical Issue in Animal Handling, Basic of DMRT, ANOVA etc.

#### **SKILL DEVELOPMENT**

#### **Skill Based Elective-III**

#### **POWER POINT**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17120SEC03AL	Package Lab-III	0	0	2	1

1. Create a slideshow presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slideshow presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create slide show presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slideshow presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide

5. *Create a slideshow presentation for a shop advertisement to be open shortly*
6. Create a slideshow presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slideshow presentation for a tourists places
8. Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17160SEC03B	SOFT SKILL III	0	0	2	1

### Part -III Interpersonal Relations and Social Responsibilities

#### UNIT I: Interpersonal Relations

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

#### UNIT II: Ethics and Social Responsibilities

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17111SEC03L	Communicative English Lab-III	0	0	1	1

#### UNIT –1

Clauses

Phrases

#### UNIT –II

Degrees of comparison

#### UNIT –III

Active and Passive

#### UNIT –IV

Communication

Characteristics -Process -Forms - Barriers

#### UNIT –V

Punctuation

Forming sentences

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17111AEC41	Advanced English-IV	4	0	0	2

### UNIT –I

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

### UNIT – II

Flowchart

Proposals

### UNIT – III

Discourse markers

Review

### UNIT IV

Grammatical forms

Paraphrasing

### UNIT –V

Definition

Writing for and against a topic.

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17111AEC42	English-IV	4	0	0	2

### UNIT –I

How to be a Doctor

-Stephen Leacock

My Visions for India

-A.P.J. Abdul Kalam

Woman, not the weaker sex

-M.K. Gandhi

### UNIT –II

My Last Duchess

-Robert Browning

The Toys

-Coventry Patmore

I, too

-Langston Hughes

### UNIT –III

The Best Investment I ever made-A.J.Cronin

The Verger

-W.S Maugham

A Willing Slave

-R.K.Narayan

### UNIT –IV

Macbeth

As You Like It

### UNIT –V

Henry IV

Tempest

## SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
17115AEC43	Human Physiology	5	0	0	4

### Unit I Digestive system

Anatomy of digestive system, Types of digestion, salivary, gastric and biliary secretions-composition and its physiological role. Intestinal hormones. Movements in GIT. Digestion and absorption of carbohydrate, lipids & proteins. Digestion and absorption in small intestine.

### Unit II Circulation

Respiratory system – Mechanism of respiration - Blood – Composition – Haemopoiesis – functions of cells – Haemoglobin – Blood coagulation – Lymph- composition and function - Heart - Cardiac cycle - ECG

### Unit III Excretory system

Structure of kidney and Nephron, Composition and formation of urine, role of kidney in regulation of acid-base balance. Muscle: Kinds of muscle, structure, muscle proteins – functions – Mechanism of muscle contraction.

### Unit IV Central Nervous system

Central nervous system- General organization. Functional units. Resting and action potential-conduction of nerve impulse. Synaptic transmission. Brainchemical composition, metabolism, metabolic adaptation, neurotransmitters and cAMP. Biochemical aspects of learning and memory. Enkephalins and endorphins.

### Unit V Physiology of reproductive system

General anatomy of the male and female reproductive organs, steps of spermatogenesis, spermatozoan, transportation of sperm, female reproductive process – Maturation of ovum(Oogenesis) and fertilization process. Hormonal regulation of reproduction and pregnancy – Male and female sex hormones

## EMPLOYABILITY

Course Code	Course Title	L	T	P	C
17115AEC44L	Biochemical Techniques Lab-II	0	0	3	2

1. Preparation of Buffer varying in their strength and pH value of Acetate, Phosphate, Bicarbonate and Citrate buffers.

2. Determination of pKa value of Amino acids

3. Hematology

ABO Blood grouping,

Haemoglobin estimation,

RBC Count WBC count

Blood smear preparation,

ESR,

PCV

### EMPLOYABILITY

Course Code	Course Title	L	T	P	C
17120AEC4 5	Fundamentals of Computing	6	0	0	5

#### UNIT I

Introduction to Computer – Classification of Digital Computer system – Computer Architecture – Memory Units – Auxiliary Storage Devices – Input and Output devices.

#### UNIT II

Introduction to Computer Software - Operating System – Programming Languages – General Software features and trends.

#### UNIT III

Database System: Introduction – Data processing – Introduction to Data Base Management System - Data base design.

#### UNIT IV

**Internet** -Introduction - hardware and software requirement web browser-email concepts- chatting – Intranet – WWW concepts.

#### UNIT V

Multimedia tools – Virtual Reality – E-Commerce – Data warehousing – Data mining – Geographical Information System – Computer in Business, industry, home, education and training.

**sKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17120AEC46L	WEB DESIGN LAB	0	0	3	2

1. Create a Web page for ABC INFOTECH LTD., with necessary images and marquee.
2. Create Web pages which display the menu card of a hotel. The first page should contain the list of items available. After selection of one item, the corresponding details should be displayed on the next page.
3. Create a Web page which displays the balance sheets for the given list of companies (same as above problem).
4. Create a Web page for XYZ INFOTECH LTD., to display the company profile employee details balance sheet, receive resume, customer service using links.
5. Using frames create web pages for a travel agency
6. Create a Web page using forms for our college students' admission process. (Use list box, push button, radio button, command button, rich text box, text box, etc wherever applicable)
7. Create a Web page which receives suggestions from customers for a software development & consultancy agency using necessary.

**sKILL DEVELOPMENT**

**Skill Based Elective IV  
MS-ACCESS**

Course Code	Course Title	L	T	P	C
19120SEC04AL	Package Lab-IV	0	0	2	1

1. Create a database and a simple table
2. Create a database for sorting the marks scored by the student in the universality exams
3. Create a database for sorting the date of joining by the employee in the organization.
4. Create queries to select records that matches specific condition
5. Create relationships among the different tables
6. Create queries using built-in functions
7. Develop forms to enter data in to the student marks database
8. Develop forms to enter data in to the employee database

**sKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
17160SEC04B	SOFT SKILL IV	0	0	2	1

## PART -IV Etiquette And Interviewing Skills

### UNIT I Corporate

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

#### sKILL DEVELOPMENT

### UNIT II Interviewing Skills

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

Course Code	Course Title	L	T	P	C
17111SEC04 L	Communicative English lab -IV	0	0	1	1

### UNIT -I

Gerund

Infinitive

### UNIT -II

Direct and Indirect

### UNIT -III

Listening -types-features of a good listener-active and passive listening-effective listening

### UNIT -IV

Reading-purpose-technique-types-reading rates-reading & interpretation

### UNIT -V

Singular and Plural

Letter writing

#### sKILL DEVELOPMENT

## ENVIRONMENTAL STUDIES (for undergraduate students)

Course Code	Course Title	L	T	P	C
171ENVTSTU	Environmental Studies	2	0	0	2

### 1. Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

### 2. Natural Resources and Associated Problems.

- a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
- b) Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
- c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
- e) Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,  
Role of an individuals in conservation of natural resources.

### 3. Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,

d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

## SKILL DEVELOPMENT

### 4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot— spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

### 5. Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution.

### SKILL DEVELOPMENT

### 6. Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global wanTling, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

### 7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

### 8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

Course Code	Course Title	L	T	P	C
17115AEC51	Enzymes	5	0	0	4

### Unit I

Enzymes – Definition, Nomenclature, Classification of enzymes based on IUB system, Properties, Enzymes Specificity, Specific activity, Coenzymes – Functions, (NAD,NADH,FAD,FMN,TPP,PLP)

Units of enzyme activity, turn over number. Metalloenzymes and metal activated enzymes. Non-protein enzyme-ribozymes and abzymes.

## **Unit II**

Mechanism of Enzyme action – Active site, Lock and key hypothesis, Koshland’s model, Mechanism of enzyme catalysis – Acid base catalysis, covalent catalysis; enzyme regulation - Allosteric enzymes – properties - Feedback regulation;

## **Unit III**

Enzyme Kinetics: Factors influencing enzyme activity. Derivation of Michaelis – Menten equation, Line weaver – Burk plot, activators,- enzyme inhibition (competitive, Non-Competitive and uncompetitive)- enzyme inhibitors.

## **Unit IV**

Multienzyme complex – PDH, isoenzymes - lactate dehydrogenase - Immobilized enzymes – principles, methods and applications

## **Unit V**

Applications of enzymes in industry and therapeutics - Clinical significance of serum enzymes - Enzyme electrodes, enzyme biosensors ,principles, types and their applications - Biochips.

## **Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
17115AEC52	Bioenergetics and Metabolism	5	0	0	3

## **Unit I : Approaches to Biochemical Investigations.**

Whole Organism studies – perfusion of isolated organs – Tracer Techniques and mutant studies. Studies of elucidation of metabolic pathways.

Bioenergetics: Free energy concept, standard free energy – loss of thermodynamics - endergonic and exergonic reactions, high and low energy phosphates – energy Transfer in metabolism.

## **Unit II: Carbohydrate metabolism**

Glycolysis – reactions – energetics – oxidation of pyruvate – TCA cycle – reactions – amphibolic role - energetics – glycogenesis – glycogenolysis - Gluconeogenesis – HMP shunt - metabolic significance. Glucuronic acid cycle.

## **Unit III: Lipid metabolism**

Lipogenesis – Fatty Acid synthase complex – Oxidation of fatty acids – (⋈,Ⓢ, ⌈) – Role of carnitine – metabolism of Triglycerides and Phospholipids – Ketogenesis – ketolysis – Synthesis and degradation of cholesterol – lipoprotein metabolism.

**Unit IV: Protein, nucleic acid and porphyrin metabolims**

Biological value of protein - Nitrogen balance – Deamination – Transamination – Decarboxylation – Urea cycle. Biosynthesis and degradation of purine and pyrimidine nucleotides – *Denovo* and salvage pathway . Biosynthesis and degradation porphyrin and Heme.

**Unit V: Biological oxidation**

Biological Oxidation- Enzyme and Coenzymes in Oxidation – reduction reactions – Electron Transport chain – Inhibitors – Oxidative phosphorylation – Chemiosmotic Theory – mechanism– structure of ATP synthase complex - Inhibitors, uncouplers, Ionophores – substrate level phosphorylation.

**Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
17115AEC53	Immunology	4	1	0	4

**Unit I**

The immune system-Components – Lymphoid Organs, Primary, Secondary, Tertiary – Lymphoid Tissues – Cells of the immune system. Immunity-Innate, Acquired – Active and Passive immunity – phagocytosis – Inflammation.

**Unit II**

Antigens-Antigenicity – Immunogenicity – Types of antigens – Haptens – specificity–Blood group antigens – Blood grouping and applications. Immunoglobulins. Structure – Functions – classes of immunoglobulins and functions.Complement system - Complement – classical and alternative pathway – Consequence of activation .

**Unit III**

Immune response- B and T cell development Cellular interactions – Antigen Presenting Cell(APC) –Major Histocompatibility complex ( MHC) – cytokines – T Cell Receptor(TCR) – cluster of differentiation – Humoral Immunity (HI) and Cell Mediated Immunity (CMI) – Regulation of immune response – Primary and secondary immune response – Immuno tolerance.

**Employability/Entrepreneurship/Skill development**

**Unit IV**

Serological Techniques- Antigen – Antibody reactions -characteristics – Precipitation – types – immunodiffusion – Immuno electrophoresis - Agglutination – Complement Fixation - opsonization –

bacteriolysis - Immunofluorescence – RIA and ELISA . Production of antisera – Production of monoclonal and polyclonal antibodies – Hybridoma technology.

### Unit V

Immunity to infection - Autoimmunity – causes – types – hypersensitivity – classification – mechanism – organ transplantation – graft rejection- tissue typing – immunosuppressive drugs.

Course Code	Course Title	L	T	P	C
17115AEC54L	Food and Enzyme Analysis Lab	0	0	3	2

1. Moisture Content of Food Materials.
2. Ash Content of Food Materials.
3. Determination of calcium in food.
4. Estimation of Fat Content in Food Materials.
5. Estimation of Nitrogen in Food
6. Estimation of Iron in Food
7. Estimation of Phosphorus in Food
8. Estimation of Vitamin C in Food by Dye method
9. Determination of Alkaline Phosphatase Activity.
  - a. Effect of PH
  - b. Effect of Temperature.
  - c. Specific Activity
  - d. Km (Saturation Method).
10. Determination of Salivary Amylase Activity.
  - a. Effect of PH
  - b. Effect of Temperature.
  - c. Specific Activity
  - d. Km (Saturation Method).

**Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
17115AEC55L	Immunology Lab	0	0	3	2

**EXPERIMENTS**

1. Double Immunodiffusion
2. Single Radial Immuno diffusion
3. Rocket Immunoelectrophoresis
4. Direct ELISA
5. Haemeagglutination tests for indentification of human blood groups
6. Detection by viral fever by slide agglutination tests.
7. Dialysis.

**Employability/Entrepreneurship/Skill development**

**Discipline Specific Elective -I**

Course Code	Course Title	L	T	P	C
17115DSC56A	Pharmaceutical Biochemistry	5	0	0	3

**Unit I**

Pharmacodynamics and kinetics- Drug – Definition, Nomenclature, Classification. Routes of drug administration. Drug Absorption, Drug Distribution. Principles of Drug action , Mechanism of drug action – physical, chemical, enzymes, receptors. Combined effect of drugs. Dose – response relationship. Factors modifying drug action- novel methods of drug administration. Drug excretion – kinetics of elimination.

**Unit II**

Biotransformation – endogenous and exogenous substance – benzpyrene and phenacetin – bilirubin – corticosteroids - Phase I and Phase II reactions - Drug metabolizing enzymes. Cytochrome P450 monooxygenase and flavin monooxygenase – Physiological importants of Xenpbiotic metabolism.

**Unit III**

Chemotherapy – Antibacterial , Antifungal, Antiviral agents. Cholinergic and Anticholinergic drugs. Cardiac glycosides – digitalis – hypolipidemic drugs - statins – Plasma expanders.

**Unit IV**

Adverse Drug Effects – Side effects – secondary effects – Toxic effects – Poisoning – Intolerance – Idiosyncrasy – Drug allergy – Photosensitivity – Drug addiction – Drug abuse – Drug withdrawal reactions – Teratogenicity. Biochemical Mechanism of Drug resistance. Toxicity assessment- acute, subchronic, chronic exposure, determination of ED<sub>50</sub> and LD<sub>50</sub> values.

### Unit V

Anaesthesia – Stages of Anaesthesia. Anaesthetic classification – Inhalational and Intravenous anaesthetics. Antiepileptic drugs – Phenobarbitone, Phenytoin. Antianxiety drugs. Benzodiazepines. beta-blockers. Antimaniac drugs – Lithium carbonate. Antiseptics and Disinfectants – phenol and related compounds, formaldehyde, ethanol.

### Employability

Course Code	Course Title	L	T	P	C
17115DSC56B	Basic Biotechnology	5	0	0	3

**Unit I: Fermentation Biotechnology** –Biotechnology – scope and importance, Basic principles of microbial growth, Bioreactor- batch and continuous bioreactor, fermentation culture medium, downstream processing. Fermentation production of penicillin and vitamin B12.

**Unit II: Food and Industrial Biotechnology** – Fermentation production of yoghurt and cheese. Production of single cell protein; spirulina: cultivation and uses. Biofertilizers – blue green algae: cultivation and uses. Production of amylase and protease.

**Unit III: Molecular Biotechnology** - Basic principles of cloning, Introduction of foreign DNA in to host by particle bombardment gun, electroporation and microinjection. Basic Polymerase Chain Reaction (PCR), applications, Micro arrays, the human genome project.

**Unit IV: Animal and Plant Biotechnology** – Elementary details of Animal cell and tissue culture, medium, transfection, targeted gene transfer, transgenic animals. Plant cell and tissue culture, medium, totipotent, pluripotent cells, protoplast culture, artificial seeds, and transgenic plants.

### Employability

**Unit V: Environmental Biotechnology** – Biological fuel generation- ethanol and methane from biomass. Sewage treatment. Bioremediation: oil spill cleanup, bioleaching, IPR, Biosafety and hazards of environmental engineering.

## SKILL BASED ELECTIVE - V

### PHOTO SHOP

Course Code	Course Title	L	T	P	C
17120SEC05AL	Package Lab -V	0	0	2	1

1. Design a Visiting card.
2. Design an Identity card.
3. Design a letterhead with LOGO.
4. Create an advertisement for Newspaper and Poster creation.
5. Design a calendar with pictures.
6. Design a Magazine.
7. Create a front page for a Magazine
8. Design a CD Cover.

#### Skill development

Course Code	Course Title	L	T	P	C
17160SEC05B	SOFT SKILL V	0	0	2	1

### PART -V Leadership Skills and Body Language

#### UNIT I Leadership Skills

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

#### UNIT II Body language

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head, arms, hands, handshakes, legs and feet, personal space

#### Skill development

## SEMESTER VI

Course Code	Course Title	L	T	P	C
17115AEC61	Clinical Biochemistry	5	0	0	4

### Unit 1

Gastric function tests- hyper, hypo and achlorhydria. Liver function tests. Jaundice hemolytic, hepatic and obstructive jaundice. Renal function tests. Biochemical findings in nephritic and nephrotic syndrome. Normal and abnormal constituents of urine.

### Unit 2

Disorders of carbohydrate metabolism: Sugar level in normal blood maintenance of blood sugar concentration- endocrine influence on carbohydrate metabolism, hypoglycemia, hyperglycemia, glycosuria, renal threshold value, diabetes mellitus classification, complications; Glucose tolerance test (GTT), diabetic coma, diabetic ketoacidosis, glycogen storage diseases, fructosuria, galactosemia and hypoglycemic agents.

### **Unit 3**

Disorders of lipid metabolism. Plasma lipoproteins- lipoproteinemias, lipid metabolism in liver and adipose tissue. Fatty liver. Hypo and hypercholesterolemia. Atherosclerosis.

### **Unit 4**

Disorders of amino acid metabolism. Plasma proteins in health and disease. Disorders of purine, pyrimidine and porphyrin metabolism. Hyperuricemia and gout. Lesch- Nyhan syndrome. Orotic aciduria, porphyrias.

### **Unit 5**

Disorders of the endocrine system. Disorders of thyroid, pituitary, adrenal medulla, and sex hormones. Disturbances in blood clotting mechanisms- hemophilia and anemia. Complications of Acquired immune deficiency syndrome (AIDS)

**Employability/Entrepreneurship/Skill development**

Course Code	Course Code	Course Title	L	T	P	C
	17115SEC62	Molecular Biology	5	0	0	5

### **Unit I**

DNA – Types, Properties, Structure and Functions. DNA as genetic material – Griffith experiment. Watson and Crick Model of DNA. RNA-, Types, Properties, Structure and Functions.

### **Unit II**

DNA Replication – conservative, Semiconservative, Dispersive mode of Replication. Enzymes involved in replication. X 174 Replication. Eukaryotic genome organization.

**Unit III**

RNA synthesis – RNA processing. Genetic code – Wobble hypothesis – Protein synthesis. Post translational modification. Inhibitors of transcription and Translation.

**Unit IV**

Operon concept – Lac Operon, Trp Operon, DNA methylation. DNA repair, Mutation - types – Recombination – Transposition – transposable elements..

**Unit V**

Cancer – characteristics, Oncogenesis mechanism, proto oncogenes, Antioncogenes – tumor suppressor gene, anti cancer agents,. Recombinant DNA Technology – Cloning vehicles – plasmids – phages – cosmids – yeast – transgenic plants and transgenic animals - Applications of genetic engineering.

**Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
17115AEC63L	Hematology and Clinical Biochemistry Lab	0	0	3	2

**Hematology Experiment:**

1. To determine total platelet count
2. To perform PT
3. To perform APTT
4. To perform thrombin time
5. Determination of haemoglobin by various methods.
6. Determination of Total RBC count.

**Clinical Biochemistry experiment:**

1. Estimation of Glucose by Ortho Toluidine Method
2. Estimation of Cholesterol by Zak’s Method
3. Estimation of Protein by Biuret Method
4. Estimation of Iron by Dipyriddy Method
5. Estimation of Urea by DAM Method
6. Estimation of Uric Acid by Caraway's Method

7. Estimation of Calcium by Clark and Collip Method
8. Estimation of Bilirubin by Malloy and Evelyn Method

**Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
17115SEC64L	Molecular biology Lab	0	0	3	2

**EXPERIMENTS:**

1. Estimation of DNA by Diphenylamine method
2. Estimation of RNA by Orcinol method
3. Isolation of DNA from bacterial, plant and animal cells
4. Separation of DNA by Agarose gelelectrophoresis
5. Isolation of Plasmid DNA from E.coli
6. Estimation of DNA and purity determination by UV absorption method.

**Employability/Entrepreneurship/Skill development**

Course code	Course Title	L	T	P	C
17115DSC65A	Biochemistry of Plants and Microbes	5	0	0	3

**Unit I**

Photosynthesis: Photosynthetic pigments and photosynthetic apparatus. Light Reaction, Hill Reaction. Emerson effect. Dark Reaction – CO<sub>2</sub> fixation in C<sub>3</sub>,C<sub>4</sub>, CAM Plants. Factors affecting photosynthesis and photorespiration. Plant growth regulators – growth hormones - growth inhibitors.

**Unit II**

Nitrogen Fixation – Symbiotic & Non Symbiotic enzymes - Nitrogenase, Nitrate assimilation, nitrate and nitrite reductase. Mineral Nutrients.

### Unit III

Bacteria: Morphology – Ultra structure. Bacterial growth curve. Factors affecting growth.  
Blue Green Algae – Morphology – Algae – Biological Importance. Fungi :Classification,  
Cultivation and morphology of yeast and moulds. Life cycle of Yeast.

### Unit IV

Food Microbiology : Food spoilage, Food Preservation. Fermented foods, Infected food and  
human illness – botulism, clostridium welchi poisoning, staphylococcus poisoning. Salmonella infection.

### Unit V

Water Microbiology: Purification of drinking water. Test for purity of Water, water borne diseases.  
Air borne Diseases. Antimicrobial agents. Viruses: Structure and replication of Viruses infecting  
bacteria, plants and animals.

### Employability

Course Code	Course Title	L	T	P	C
17115DSC65B	Hospital Management	4	0	0	4

## HOSPITAL MANAGEMENT

**Unit I: Introduction to Hospital management:** Eligibility and personal skills required for Hospital management. Job opportunities in Hospital management. Important hospital management Institutes in India and around the World.

**Unit II: Hospital management system:** Benefits and Modules of Hospital management systems. Interfacing of analyzer. Pathology lab management. Radiology, Blood Bank, Pharmacology, management softwares.

**Unit III: Health Care Services:** Health and Hospitals Services, Classification and Characteristics of Service Organizations, , Healthcare Revolution, Dimensions of Health, Indicators of Health-Composition of Health Sector, Types of Care, Pyramidal Structure of Health Services, Hospitals, Types of Hospitals and Role of Hospital in Healthcare.

**Unit IV: Health care Facilities:** Functioning of modern hospitals & changing need of patients Hospitality in Hospital Care, Invasive and non-invasive diagnostic facilities in modern hospital Care offered in Specialty and Super specialty Hospitals.

**Unit V: Health and Management:** Current Issues in Healthcare Accreditation-Telemedicine-Health Tourism-Health Insurance and Managed Care-Disaster Management-Hospital Wastes Management.

## Employability

Course Code	Course Title	L	T	P	C
171ENOC-	Open Elective - Journalism	4	0	0	2

### Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

### Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

### Outcome:

- Become a journalist

### UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

### UNIT- II

News – Definition, Kinds, Elements, Sources

### UNIT- III

Reporters, Qualities, types

### Skill development

### UNIT- IV

The Editor and the Sub Editor-qualities, types, editorial department,

### UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

### References:-

Course code	Course Title	L	T	P	C
171MAOE C-	<b>Open Elective Development of Mathematics Skills</b>	4	0	0	2

**Aim:**

- To understand the concepts from the five branches of mathematics

**Course Objectives**

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student’s ability to apply both conventional and creative techniques to the solution of mathematical problems

**Course Outcomes**

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**SKILL DEVELOPMENT**

**References**

P.A.Navanitham, Business Mathematics & Statistics

Kanti Swarup, P.K.Gupta and Manmohan, “Operations Research”

Course Code	Course Title	L	T	P	C
171PHOEC	Open Elective-	4	0	0	2

	Instrumentation				
--	-----------------	--	--	--	--

**Aim:**

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Course Objectives:**

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**Course Outcomes:**

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.
- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

**UNIT – II: Electronic Instruments – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

**UNIT – III: Electronic Instruments – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

**Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

**Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

**SKILL DEVELOPMENT**

**Books for Study**

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

**Books for Reference:**

A Course In Electrical And Electronic Measurements and Instrumentation – A.K.

Sawhmey – Dhanpat Rai and Sons – 1990.

Electronic Measurements And Instrumentation – Oliver Cage – McGraw Hill –1975.

Course Code	Course Title	L	T	P	C
171CEOEC-	Open Elective-Food and Adulteration	4	0	0	2

**Aim:**

- To introduce students to food safety and standardization act and quality control of foods.

**Course Objectives:**

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and the role of consumers.

**Course Outcomes:**

- The students will have knowledge about different processing and preservation methods and principles involved.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agents, sweeteners, humectants and anti-caking agents, coloring and flavoring substances.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk.

Health hazards and risks.

**SKILL DEVELOPMENT**

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
171CSOEC	Open Elective- E-Learning	4	0	0	2

**COURSE OBJECTIVES**

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

**COURSE OUTCOMES**

- Develop e – learning applications on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

**UNIT I INTRODUCTION**

Introduction – Training and Learning, Understanding elearning, components and models of e- learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

**UNIT II CONCEPTS and DESIGN**

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

**UNIT III APPLICATIONS**

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

**UNIT IV COURSE MANAGEMENT**

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

**UNIT V ENHANCEMENT**

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

## SKILL DEVELOPMENT

2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.
4. Moodle 2.0 First Look, Mary Cooch, 2010.

Course Code	Course Title	L	T	P	C
171CAOEC	Open Elective -Web Technology	4	0	0	2

### Aim:

- To equip the students with basic programming skill in Web Designing

### Course Objective:

- To understand and practice markup languages
- To learn Style Sheet and Frames

### Course Outcomes:

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

### UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

### UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A web page design project – Forms.

## SKILL DEVELOPMENT

### Text Book

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
171CMOEC	Open Elective-Banking service	4	0	0	2

**Aim:**

- To provide the bank is a financial institution which is involved in borrowing and lending money.

**Course Objective:**

- To provide lending money to firms, customers and home buyers.
- To provide keep money for customers
- To offer financial advice and related financial services, such as insurance.

**Course Outcome:**

- To help to gather knowledge on banking and financial system in India
- To provide knowledge about commercial banks and its products
- To create awareness about modern banking services like e-banking-banking and internet banking, ATM System
- To introduce recent trends in banking system
- To make the student understand the basic concept of banking and financial institutions and expose various types of risk based by banks

**UNIT – I**

**Commercial Banking – An Overview:** Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

**UNIT – II**

**E-banking –An Overview:** Meaning-Service-E-banking and Financial Services –Benefits-Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking-Services

**UNIT – III**

**Mobile Banking and Telephone Banking –An Overview: Meaning-Features- Registration- Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers**

## **SKILL DEVELOPMENT**

### **Unit – IV**

**ATM and Electronic Money:** Concept of ATM-Features-Functions-Strategic importance of ATM- Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

### **Unit-V**

**EFT System and INFINET:** Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

### **References Books**

1. Banking theory law and Practice
2. Banking Theory law and practice -Santhanam
3. Banking Awareness - N.K.Gupta
4. Management of Banking and financial Services-Padmalatha Suresh,Justin paul .

**Mapping of courses to Employability/Entrepreneurship and Skill Development**

SCHOOL OF ARTS AND SCIENCE

DEPARTMENT OF BIOCHEMISTRY

M. Sc., Curriculum-Regulation 2019

Course Code	Course Title	L	T	P	C
17215SEC11	Biomolecules	6	1	0	5

### UNIT-I

Carbohydrates-Structure, properties, stability and biomedical importance of monosaccharides; significance of sugar derivatives-sugar acids, Deoxy sugars, Amino sugars, Sulphate derivatives, Phosphate derivatives, and Glycosides; Structural features of reducing and non-reducing sugars; Structures and significance of Fructans, Xylans, Galactans, Starch, Cellulose, Glycogen, Chitin, Heparin, Hyaluronic acid and Chondroitin-4-sulphate; Blood group and bacterial cell wall polysaccharides, Glycosylated proteins and glycoproteins.

### UNIT-II

Lipids-Structure and properties of fatty acids and glycerol. Structure and function of triglycerides, phospholipids, sphingolipids, cholesterol, Ergosterol, Bile acids, Cerebrosides, Gangliosides, prostaglandins, Thromboxanes and leukotrienes; structure and significance of lipid bilayer, micelles and liposomes, chemistry and functions of lipoproteins.

### UNIT-III

Proteins-Amino Acids-Classification, acid-base properties, and stereochemistry Non-protein amino acids and their biological roles; peptides- peptide bond, solid phase peptide synthesis, Ramachandran plot. proteins- classification and biological functions; protein structural orders; structures- super secondary structures- protein sequencing - N and C terminal analysis. protein folding - Folding and unfolding; protein disulfide isomerase and molecular chaperones; Implications of protein folding to medicinal chemistry.

### UNIT-IV

Nucleic acids - structure and chemistry of purines , pyrimidines and nucleotides; Double helical structure of DNA; stability of DNA - sugar puckering, base stacking and ionic interactions; Types of RNA and their biological significance.

#### **UNIT-V**

Terpenes - classification - isoprene rule - isolation - structural formula of Geraniol , nerol , menthol and terpenol. Alkaloids - general methods of isolation - structural formula of cocaine , papaverine , nicotine-applications. Vitamin- classification - occurrence- biological importance of fat soluble and water soluble vitamins. Minerals - macro and micro nutrients -examples.

#### **Employability**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17215SEC12	Biochemical and instrumental Analysis	6	1	0	5

#### **UNIT - I**

Electrochemical techniques - General principles and electrochemical reactions, pH measurements, Standard hydrogen electrode, oxygen electrode, metallic indicator and membrane indicator electrodes, Biosensors and biochips – Principles, methods and applications. Radioisotopes - Law of radioactivity and decay processes, Detection methods - Scintillation counter and autoradiography; Applications of radioisotopes in biology.

#### **UNIT - II**

Chromatography - Principles, materials, packing, instruments, optimization of column performance and application of Affinity chromatography, Immunoaffinity chromatography, size-exclusion chromatography, Ion-exchange chromatography, RPHPLC, HPLC, GLC, GSC, Super critical fluid chromatography and chromatofocussing. Centrifugation - Typing of centrifuges; Principles and application of differential, density gradient and analytical ultracentrifuges.

#### **UNIT - III**

Electrophoresis – Principles- theories – Factors affecting electrophoretic mobility; Agar gel electrophoresis, PAGE, SDS-PAGE, Capillary electrophoresis, Isoelectric focussing electrophoresis and Pulse Field gel electrophoresis.

#### **UNIT – IV**

Spectroscopy – Principles, Instrumentation, application and limitations of UV-Visible spectrometry, Fluorescence spectrometry, Raman Spectroscopy, IR Spectroscopy, AAS, ORD, CD, ESI – and MALADI- Mass Spectrometry, Basic concepts and applications of ESR, NMR, X-Ray crystallography and laser techniques.

#### **UNIT – V**

PCR – general principles; Types of PCR – Single sided PCR, Reverse PCR, RT-PCR and RACE-PCR; Applications of PCR in general and clinical diagnosis; ELISA – DAS-ELISA, DAC-ELISA and PAC-ELISA; Use of molecular probes in analyzing RFLP, DNA fingerprinting and DNA footprinting; Hybridization techniques; Chromosomes walking, Blotting techniques – Southern, Northern and Western blotting.

#### **Employability/Entrepreneurship/Skill development**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17215SEC13	Enzymology	6	1	0	4

#### **UNIT-I**

Enzymes- Introduction to enzymes, purification, localization, extraction of enzymes, properties, Nomenclature and IUB classification of enzymes,specificity of enzymes,units of enzyme activity,assay of enzymes-principal,turnover number-Coenzymes-Active site -investigation of active site structure, formation of ES complex.

#### **UNIT-II**

Enzyme inhibition and kinetics- Michaelis- Menten plot, linear transformation, line weaver- Burk plot, Eadie - Hofstee plot equations, Factors affecting enzyme action. Irreversible and reversible competitive, non competitive, uncompetitive inhibition. Pre steady state kinetics,

Kinetics of Allosteric enzymes, sequential bisubstrate mechanism. Ping-Pong reactions ,End product inhibition and substrate inhibition- K<sub>cat</sub>

### UNIT-III

Enzyme regulation:General mechanism of enzyme regulation,allosteric regulation, feedback inhibition and feed forward stimulation, Enzyme repression, induction and degradation, control of enzymatic activity by products and substrates.

### UNIT-IV

Mechanism of enzyme catalysis- Acid base catalysis, covalent catalysis,Mechanism of action of lysozyme, carboxypeptidase-A, chymotrypsin, DNA polymerase, RNAase and serine proteases. Isoenzyme forms and multi functional enzymes- FAS system, PDH. Metal dependent and metalloenzymes.

### UNIT-V

Enzyme technology- immobilization of enzymes- methods- properties and applications- abzymes- ribozymes- artificial enzymes- DNA enzymes- enzyme engineering - Enzymes in Pharmaceutical industry, Leather industry, detergent industry and Food industry- Research, therapeutical and clinical diagnosis.

Employability

Course Code	Course Title	L	T	P	C
17215SEC14L	Biochemical Techniques Lab - I	0	0	4	2

### EXPERIMENTS:

1. Estimation of proteins, DNA, RNA and Carbohydrates by Colorimetric methods.
2. Determination of Concentration and extinction co-efficient of proteins spectrophotometer.
3. Analyzing the Quality of Oils – acid number, Saponification number and Iodine number.
4. Estimation of ascorbic acid and calcium from natural sources.
5. Estimation of Sodium, Potassium and Phosphorus in body fluids by flame photometry.
6. Separation of amino acids and lipids by Thin layer chromatography.
7. SDS- PAGE of proteins.

## 8. Separation of proteins by Size –exclusion chromatography.

### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17215DSC15A	Biostatistics	5	0	0	4

#### UNIT – I

Research – definition, importance and types – Literature survey – journals – types, abstracting and indexing journals – Internet and its applications-eMail – Web browsing – selection of topics – research schedule – sample collection – techniques – data collection – interpretation of data - art of scientific writing – presenting a scientific seminar.

#### UNIT – II

Probability:- Definition – Addition theorem – Multiplication Theorem (Statement only) – Conditional Probability – Independent events – Simple Problems.

#### UNIT – III

Measure of Averages – Mean, Median and mode, Use of these measures in biological studies, Measures of Dispersion for biological characters – Quartile Deviation, Mean Deviation and Standard deviation and coefficient of variation, Measures of skewness and Kurtosis, Correlation and Regression – Rank Correlation – Regression equations, Simple problems based on biochemical data.

#### UNIT – IV

Basic concepts of sampling – Simple random sample, stratified sample and systematic sampling, Sample statistics, Sampling distribution and standard error, Tests of significance based large samples, Test for mean, difference of mean, proportions and equality of proportion.

#### UNIT – V

Small sample tests – Student ‘t’ test for mean, difference of two means, test for correlation and regression coefficients, Chi-square test for goodness of an independence of attributes, F test for equality of variances.

## Employability

Course Code	Course Title	L	T	P	C
17215DSC15B	Immunology	5	0	0	4

### UNIT-I

#### Infection

Types – Factors influencing infection – endotoxins and exotoxins – pathogenicity and virulence – sources of infection agents – carriers – portals of entry.

#### Immunity

Innate – Acquired – Active and Passive Immunity – phagocytosis – Inflammation.

#### Immune system

Components – Lymphoid organs, Primary, Secondary, Tertiary – Lymphoid Tissues – Cells of the immune system.

### UNIT-II

#### Antigens

Antigenicity – Immunogenicity – Types of antigens – Haptens – specificity – Blood group antigens – Blood grouping.

#### Immunoglobulins

Isolation – structure and function – Antibodies – classes of immunoglobulins – Biosynthesis and antibody diversity.

#### Complement

Complement – chemical and alternate pathway – Consequence of activation – Anaphylotoxins.

### UNIT-III

#### Immune response

B and T cell development Cellular interaction – APC – MHC – cytokines – TCR – cluster of differentiation – HI and CMI – Regulation of immune response – Primary and secondary immune response – Immune tolerance - Immune suppression.

### UNIT-IV

## Immunological Techniques

Antigen – Antibody reaction – Precipitation – Agglutination – CTI – Torsion neutralization – Immunodiffusion – Immunofluorescence – Immune adherence – Immunoelectrophoresis – EIA – ELISA – RIA – Immunohematology – Hybridoma Technology – Merits and Demerits – Production of Vaccines and their uses.

Production of antisera – Fractionation of leukocytes – Identification of lymphocytes and their subsets – Experimental animal models – Inbred strains – SCID Mice , Nude mice – mice cell culture system.

## UNIT-V

**Immunodeficiency disorders** – Cancer and AIDS – Immunity to bacteria and viruses – Autoimmunity – Hypersensitivity – classification. Organ Transplantation – Graft rejection – mechanism – Tissue typing – immuno supporting drugs – Immunotherapy.

Employability

Course Code	Course Title	L	T	P	C
17215SEC21	Cellular Biochemistry	5	1	0	5

## UNIT I

### Cell & cell cycle

Cell structures- plant and animal cell structures, Types of tissues- Epithelium – Organization and its types. Bones, Cartilage structure. Extracellular matrix- ECM components, Collagen, Elastin, Fibrillin, Fibronectin, Laminin, Proteoglycans.

## UNIT II

**Biomembrane-** Membrane assembly- Unit membrane concept, physical, Physiological functions and properties. Different forms of plasma membrane- gap junction, tight junction, Plasmadesmata, desmosomes- Active, passive transport system- Endocytosis, Exocytosis.

## UNIT III

**Cell division-** mitosis-meiosis- significance. Cell cycle-phases and regulation-checkpoints in cell cycle- programmed cell death-Apoptosis- Necrosis-Autolysis.

#### **UNIT IV**

**Signal Transduction**-types of signaling-receptors- signaling pathways-second messengers- cyclic nucleotides- lipids- calcium ions- crosstalk signaling pathways.

#### **UNIT V**

**Cancer biology**-morphology and characteristics of cancer cells- Benign and malignant tumors- tumor markers- agents causing cancer- mechanism of carcinogenesis- Oncogenes and proto oncogenes- tumor suppressor genes- p53-Telomerase-anti cancer agents

Employability/Skill development

Course Code	Course Title	L	T	P	C
17215SEC22	Metabolism and Regulation	5	1	0	5

#### **UNIT -I**

##### **BIOENERGETICS**

Thermodynamics-Free energy-energy Transfer-energy Compounds -ATP-Enzymes involved in redox reactions. Electron transport chain -Inhibitors- Oxidative Phosphorylation - Chemiosmotic Theory-Inhibitors -uncouplers-Ionophores-Regulation-substrate level Phosphorylation. Electron transport system -Mitochondrial and Microsomal system -Shuttle Mechanism -Malate and glycerol phosphate shuttle.

#### **UNIT -II**

##### **CARBOHYDRATE METABOLISM**

Glycogen metabolism -Glycogen storage diseases -Regulation -Glycolysis -control - Oxidative decarboxylation -PDH complex -energetics -TCA cycle -regulation - energetics. Gluconeogenesis -Glucogenic substates -Cori cycle and Glucose alanine cycle-

regulation -HMP shunt and metabolic significance-Glucuronic acid cycle-Blood glucose homeostasis.

### **UNIT-III**

#### **LIPID METABOLISM**

Adipose Tissue-Lipogenesis -FA Synthase complex -Regulation -Oxidation of fatty acids - alpha,beta,omega-carnitine shuttle-Metabolism of Triglycerides-Phospholipids and glycolipids-Regulation. Ketogenesis-Ketolysis-Metabolism of cholesterol-Bile acids -lipoprotein metabolism.

### **UNIT-IV**

#### **NITROGEN METABOLISM**

Nitrogen balance -Oxidative and NonOxidative deamination -Transamination - And Deamination -decarboxylation -Biogenic amines -Ureogenesis and regulation. Essential and nonessential amino acids - Ketogenic and glucogenic amino acids - Anabolism and catabolism of individual amino acids - disorders of amino acid metabolism. Biosynthesis of purine and pyrimidines -*Denovo* and salvage pathway - Catabolism of purines and pyrimidines - disorders of nucleic acid metabolism.

### **UNIT-V**

#### **METABOLIC INTEGRATION AND REGULATION**

Role of hormones -Insulin - Role of organs - Liver, Brain, Kidney, Muscle and Adipose tissue - Metabolic interrelationship in well-fed state, fasting state, Obesity, starvation, Diabetes Mellitus, Exercise, injury, stress and pregnancy and lactation.

Employability/Skill development

Course Code	Course Title	L	T	P	C
17215SEC23	<b>Neuro Biochemistry</b>	5	0	0	4

### **UNIT I**

#### **NERVOUS SYSTEM**

Structure and function of the brain. Central Nervous System, Peripheral and Autonomic Nervous system. Cells of Nervous System – Neurons, Astrocytes, Glial cells, Oligodendrocytes and Schwann cells. Chemical composition of brain – utilization and uptake of glucose and amino acids, Blood – Brain barrier.

## **UNIT II**

### **NEUROTRANSMISSION**

Membrane potentials, Resting potential – Depolarization, repolarization and hyperpolarization, Action potential. Mechanism of axonal neurotransmission. Membrane channels – Types of channels, ion gated, voltage gated, chemically gated, mechanically gated and responsive to intracellular messengers. DISEASES OF NERVOUS SYSTEM Molecular basis of Parkinson's disease, Alzheimer's disease, Schizophrenia, Myasthenia gravis and Multiple sclerosis.

## **UNIT III**

### **NEUROTRANSMITTERS**

Synthesis, storage, release, uptake, degradation and action of neurotransmitters. Acetylcholine, GABA, Serotonin, Dopamine, Glutamate, Aspartate, Nitrous oxide, etc. Neuropeptides. Synaptic transmission – Cholinergic receptors – Nicotinic and Muscarinic receptors, Agonists and Antagonists – their mode of action and effects. Adrenergic receptors, serpentine receptors and intracellular signaling. Fast and slow receptors. Exocytosis of neurotransmitter – Role of synapsins, synaptogamins, SNAP, SNARE and other proteins in docking, exocytosis and recycling of vesicles.

Employability/Skill development

## **UNIT IV**

### **LEARNING AND MEMORY**

Mechanism of short term memory and Long Term Potentiation. NMDA and AMPA glutamate receptors. Retrograde messengers in synaptic transmission. Role of CAM kinase II, Calcium, protein kinases, cAMP, NO, Calpain and other proteins in memory and learning process. Synaptic plasticity INTERACTION OF DRUGS WITH CNS Mechanism of action of anesthetics,

analgesics, hallucinogens, depressants, stimulants and toxins on the nervous system. Addiction and drugs of abuse.

#### UNIT IV

##### BIOCHEMISTRY OF VISION AND MUSCLE CONTRACTION:

Rod and cone cells, visual cycle, mechanism and regulation of vision, color vision. Thick and thin filaments, interaction of actin and myosin muscle contraction, role of calcium and regulation of muscle contraction. Smooth muscle contraction and its regulation

Course Code	Course Title	L	T	P	C
17215SEC24L	Enzymology Lab- II	0	0	4	2

##### EXPERIMENTS:

1. Determination of enzyme activity and specific activity of Salivary amylase, Lipase, Catalase , Lactate dehydrogenase and Glucose -6-phosphate dehydrogenase.
2. The progress curve of acid phosphatase and amylase – catalyzed reactions.
3. Effect of PH and Temperature on enzyme activity of urease and alkaline phosphatase.
4. Determination of activation energy and Km value of any two enzymes.
5. Effect of activation and inhibitors on activity of any one enzyme.
6. Estimation of free energy of any two enzymes.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17215DSC25A	Endocrinology	5	0	0	4

UNIT: I

Hormones in general - definition – types of secretions – nature – classification synthesis and their role – Feedback control with specific examples Hormones action Proteins and Steroids – Cell Signaling in hormone action.

#### UNIT: II

Hypothalamo hypophysial axis - Hormones of hypothalamus and their role Structure of pituitary - Secretions - Physiology role -Pathophysiology Current status of pituitary as a master gland.

#### UNIT: III

Thyroid - Parathyroid - structure - hormones – synthesis – storage – releases- carrier proteins (eg. TBA and TBG) – Physiology role – Pathophysiology

#### UNIT: IV

Adrenal and Gonadal Hormones – Steroid biosynthesis – maintenance of cyclicity. Physiological role – Pathophysiology – Steroids in metabolism

#### UNIT: V

Gastrointestinal hormones – pancreas as an endocrine organ – secretions- functions – physiological role and pathophysiology other endocrine organs in vertebrate Insect and crustacean hormones – their role in growth and metamorphosis.

#### Employability/Skill development

Course Code	Course Title	L	T	P	C
17215DSC25B	Clinical nutrition and dietetics	5	0	0	4

#### UNIT I

Definition of nutrition,over nutrition and undernutrition and malnutrition. signs of good and poor nutrition – relation of good nutrition to health. Nutritional deficiency disease – anaemia, protein. Calorie malnutrition, vitamin-A deficiency. Aetiology, symptoms, prevention and treatment. Role of dietary fibre in health and disease.

## UNIT II

Energy- definition of calorie and joule. Energy value of foods – bomb calorimeter. Direct and indirect calorimeter. Basal metabolism, definition, methods of determining basal metabolism rate (BMR), factors influencing BMR – calculation of total energy requirement. Factors affecting total energy requirement, food sources.

## UNIT III

Purpose and principles of therapeutic diets, hospital diets- etiology and dietary modifications.

(a) Obesity, etiology treatment.

(b) Underweight – definition, etiology, treatment.

(c) Diet in febrile conditions- typhoid, tuberculosis.

(d) Diabetes mellitus -definition, predisposing factors, factors that maintain blood glucose level, symptoms, diagnosis, biochemical changes in the metabolism of carbohydrates, fats, protein, food exchange list and treatment.

## UNIT IV

(a) Diet in disease of gastrointestinal tract, peptic ulcer and duodenal ulcer, acute and chronic diarrhea, constipation.

(b) Diet in disease liver-cirrhosis and hepatitis

(c) Diet in disease of cardiovascular system- atherosclerosis and hypertension.

(d) Diet in disease of kidney and urinary tract- acute and chronic nephritis and nephritic syndrome.

Employability/Skill development

## UNIT V

(a) Assessing the food nutritional problems in the community methods available for the assessment of the nutritional status of an individual and the community. Assessment methods- nutritional anthropometry- biochemical tests-diet surveys.

(b) Measures to overcome malnutrition. Role of nutrition education and nutrition intervention programmes. Role of ICMR, ICAR, CFTRI, ICDS,- nutritious noon meal programme, contribution of international organizations- WHO, UNICEF, FAO.

Course Code	Course Title	L	T	P	C
17215DSC25C	Bioinformatics	5	0	0	4

### **UNIT-I**

Bioinformatics - Definition, the history and scope of Bioinformatics; Bioinformatics as a tool; Role of computers in Biology; The CPU and operating systems - computer networks - the internet, modem, the world wide web, search engines; FTP,HTML, URL and IP address; Virtual Library; search the biochemical information on SWISS - PROT, NCBI and MEDLINE.

### **UNIT-II**

Software in Bioinformatics - C, C++, bioperl, Biopython and oracle. The Bioinformatics workstation, Unix system - Files, directories, Functions and application of Unix system.

### **UNIT-III**

Data base - Types, database management systems and data base security; biological data bases - sequence databases for proteins and nucleic acids; searching sequence data bases; structural data base - PDB; Motif data bases; Genome data bases; Miscellaneous data bases, Data submission and data retrieval with Entrez.

### **UNIT-IV**

Definition and concepts on homology, analogy, orthology and paralogy; sequence similarity searches - FASTA, BLAST, DBGET, SRS, Enterz. Theory and data bases of pair wise and multiple sequence alignments; BLOSUM matrices; phylogenetics - phylogenetic trees; sequence annotation, Markov models for data base similarity searches.

### **Employability/Skill development**

### **UNIT-V**

Protein secondary structure predictions - Chow - Fasman, JPRED, AGADIR; Quandex; protein tertiary structure prediction - comparative modelling, fold Recognition and Ab initio prediction; Visualization of protein structures - RASMOL; Drug discovery - combinatorial chemistry and docking;

DNA microarrays - Methodology, types and applications - Goals of human genome project- structural and functional genome - Agroinformatics - Medical informatics - Metabolomics - E-cell.

Course Code	Course Title	L	T	P	C
17215RMC26	Research Methodology	3	0	0	2

### **UNIT I:**

Selection of problem-stages in the execution of research: choosing a topic to publish- preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal ; standard of research journals – Impact factor.

### **UNIT II:**

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

### **UNIT III:**

Coparision of means, chisquard test, student test (ANOVA ‘’portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

### **UNIT IV:**

Chromatography – priniciple, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic

techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, Isoelectric focusing, pulsed field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

#### **UNIT V:**

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radiochemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

Employability/Entrepreneurship/Skill development

Code	Course Title	L	T	P	C
17215SEC31	Molecular Biology	6	1	0	6

#### **UNIT-I**

Structure and functions of DNA, Eukaryotic genome organization .DNA replication . DNA damage and repair . Gene arrangements . Recombination

#### **UNIT-II**

Prokaryotic and Eukaryotic RNA polymerases – structures and function Mechanism of prokaryotic and eukaryotic transcription. Regulation of gene expression-In prokaryotes- Operon concept ,Attenuation and termination . In Eukaryotes – hormonal (steroid hormone receptors) Phosphorylation (STAT proteins). Activation of transcription elongation by HIV Tat protein . Post transcriptional processing in prokaryotes and eukaryotes , Ribozymes, Antisense RNA.

#### **UNIT –III**

Genetic code- Translation in bacteria and eukaryotes. Translational control in bacteria and eukaryotes .Regulation of protein synthesis. Inhibitors of protein synthesis . Co and post translational modifications. Protein targeting membrane and organelles. Protein degradation – Protein folding

#### **UNIT –IV**

Levels of Gene expression. Principle of gene regulation , Cis acting elements and trans acting factors . Upregulation ,Down regulation, Induction ,Repression ,Global and narrow domain mechanisms. Comparison of gene regulation strategies in prokaryotes and eukaryotes. Epigenetic gene regulation by DNA methylation. Transposable elements .

### UNIT –V

Mutation and mutagenesis – chemical and UV mutagenesis-types –Ames test-Bacterial genetic system – Transformation –Conjugation- Transduction. Development genetics – Overview. Drosophila development maternal effect gene ;zygotic genes .

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17215SEC32	Clinical Biochemistry	6	1	0	6

### UNIT-I

Disorder of blood –Sickle cell disease - hereditary methemoglobinemia-Thalassemiias-Porphyrrias- Agranulocytosis, Thrombocytopenia, aplastic-hemolytic, Anemia, Hematuria, disorders of clotting mechanism.

### UNIT –II

Inborn errors of metabolism – PKU – Tyrosinosis - Alkaptonuria – maple syrup urine disease – homocystinuria – histidinuria – albinism – parkinson’s diseases – Diseases involving lysine and ornithine – Folic acid deficiency – Clinical problems related to glutathione. Disorders of purine metabolism – lesch nyhan syndrome, immune deficiency diseasaes , gout. Diabetes mellitus – lactic acidosis – G-6-PD deficiency- mucopolysaccharides – galactosemia – glycogen storage diseases

### UNIT: III

Apolipoproteinuria and genetic abnormalities in lipid energy Transport – Lipid storage diseasaes – Fatty liver – causes– types and features – Atherosclerosis – Hypertension.

Cerebrospinal fluid – protein concentration and gold curve – glucose and protein level in CSF under pathological condition.

**UNIT: IV**

Liver function test, metabolism of bilirubin, differential diagnosis of jaundice, hepatitis, cirrhosis and hepatic coma. Gastric analysis – acidity curves – stimulation tests- insulin and pentagastrin, peptic ulcer- gastritis and Zollinger-Ellison syndrome – gallstones

**UNIT: V**

Biochemical changes in pregnancy – menstrual cycle- hormonal changes – placental hormones – parturition - lactation – prenatal and postnatal diagnosis. Amniotic Fluid – origin , composition and analysis of amniotic acid.

Employability/Skill development

Course Code	Course Title	L	T	P	C
17215SEC33L	Clinical Biochemistry Lab	0	0	5	3

**EXPERIMENTS:**

1. Urine qualitative Analysis- normal and abnormal constituents.
2. Blood- ESR, TC/DC, blood grouping, hemoglobin.
3. Quantitative analysis of blood- sugar, urea, uric acid, creatinine, TG, Cholesterol, HDL, phospholipids, calcium, iron, inorganic phosphorus, protein (biuret method), bilirubin, chloride.
4. Assay of serum enzyme- SGOT, SGPT, Acid phosphatase and alkaline phosphatase, amylase.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17215DSC34A	Genetics and Genetic Engineering	5	0	0	4

**UNIT- I**

Overview of genetics; relation between genes and traits; mendelian genetics –three postulates- dihybrid cross-test cross-punnett square-trihybrid cross-pedigree analysis-linkage-

complete and incomplete linkage- crossing over-four crossing over-recombination frequencies- gene mapping in eukaryotes.

Sex determination – sex chromosomes- klinefelter and turner's syndrome- sex differentiation in humans- dosage compensation- barr bodies-sex linked epigenetic inheritance-gene mutations.

Eugenics- gene interactions- pleiotropism.

## **UNIT – II**

Population genetics- gene frequency-gene pool- hardy Weinberg equilibrium- allele frequencies- factors influencing – human cytogenetics.

Evolutionary genetics- origin of species- genetic drift-polymorphism- natural selection- genetic code- genetic death- genetic homeostasis.

## **UNIT-III**

Genetic engineering- overview-Analyzing DNA sequences- Maxam and Gilbert method,chain- termination method and semi –automated method; southern and northern blotting – methods,merits and limitations ;polymerase chain reactions-basic principles ,types,special features and applications cutting and joining DNA molecules- nomenclature, target sites and applications;site- directed mutagenesis- cassette mutagenesis, primer extension and PCR- based mutagenesis.

## **UNIT- IV**

Gene cloning- general strategies- cloning vehicles- plasmids, bacteriophages, cosmids, plasmids and YAC; shuttle and broad host range vectors; recombinant DNA and methods for introducing rDNA into host cells; screening: expression of cloned DNA; cloning in e-coli, bacillus subtilis and saccharomyces cerevisiae- merits and limitations; gene transfer into plants through Ti plasmids; transferring gene into animal cells- eggs and embryos.

## **UNIT-V**

Transgenic plants- insect and herbicide resistant plants; transfer of Nif genes; transgenic animals- animal bioreactors, molecular farming and breeding strategies; genetic engineering in the production of insulin, somatostatin, vaccines and antibodies; gene therapy- types, methods and prevention of diseases; Manipulation of reproduction in animals.

Employability/Skill development

Course Code	Course Title	L	T	P	C
17215DSC34B	Pharmaceutical Biotechnology	5	0	0	4

**Unit-I:** Definition and scope – potential and achievements – Fermentation technology and industrial microbiology Fermentation as a biochemical process, bioconversion and biotransformation.

**Unit-II:** Fermented construction and working, downstream processing, fermentation monitoring, in-situ recovery of fermentation products, proof of efficacy of biotech products. General application of fermentation in the manufacturing of antibiotics (Penicillin, streptomycin, tetracycline) dextran, vitamin (Vit.B2 and Vit.B12).

**Unit-III:** Microbial enzymes, microbial limit tests and assays (antibodies, Vitamin, amino acids etc.). standards of water used in fermentation, pharmaceutical and cosmetic industry.

**Unit-IV:** Preparation and characteristics of immunologicals – Preparation and standardization of vaccines , sera, allergenic extracts, diagnostics, biologicals. Introduction to veterinary vaccines, immunomodulating substances, lymphokines, preparation of monoclonal antibodies, applications of monoclonal antibodies.

**Unit-V:** Biotechnology derived products (therapeutic proteins) Examples of biotechnology derived therapeutic products of human Insulin, Interferon, somatostatin and somatotropin.

Employability/Skill development

Course Code	Course Title	L	T	P	C
17215SEC41	Molecular Basis of diseases	6	0	0	6

**UNIT I:**

Overview of infectious diseases, infectious agents - Bacteria, Viruses, protozoa and fungi, pathogenicity and virulence; Facultative / obligate intracellular pathogens.

**UNIT II:**

Emerging and re-emerging infectious diseases and pathogens including X-MDR M. tuberculosis, MRSA, SARS virus, Bird flu, prions, AIDS, Dengue Hemorrhagic Fever, and Chlamydiae, opportunistic fungal pathogens.

### **UNIT III:**

Viral diseases, epidemiology, signs and symptoms, causative agent, history, infection and pathogenesis, Detection, Drugs and inhibitors, Vaccines, molecular mechanisms for AIDS, hepatitis, influenza, dengue, polio, herpes.

### **UNIT IV:**

Bacterial disease, epidemiology, signs and symptoms, causative agent, history, infection and pathogenicity, Diagnostics, Therapeutics and vaccines. Drug resistance, mechanisms, Multidrug efflux pumps, extended spectrum  $\beta$ -lactamases (ESBL) and implications on public health, molecular mechanisms for Tuberculosis, Typhoid, Cholera.

Employability/Skill development

### **UNIT V:**

Parasitic diseases epidemiology, signs and symptoms, causative agents, history, Vectors, life cycle, Host parasite interactions, Diagnostics, Drugs and Inhibitors, Resistance, Vaccine development, molecular mechanisms for Malaria.

Course Code	Course Title	L	T	P	C
17215SEC42	Environmental Biochemistry	6	1	0	6

### **UNIT I**

Definition, scope and importance. Concept of an ecosystem. Structure and functions of the ecosystem. Producers, consumers and decomposers. Energy flows in an ecosystem. Ecological succession. Food chains, food webs and ecological pyramids Introduction, types, characteristic features, structure and function of the following ecosystem. Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (Pond, streams, lakes, rivers, oceans, estuaries.)

### **UNIT II**

Causes, effects and control measure of, Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal Pollution, Bioleaching,

### UNIT III

Introduction – Definition, genetic, species and ecosystem diversity. Value of Biodiversity : Consumptive use, Productive uses social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. Hotspots of biodiversity, Threats to biodiversity Endangered and endemic species of India Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

### UNIT IV

Enzymes: Immobilization of enzymes, enzymes engineering ,isolation and culturing of microorganisms, production of enzymes ,fermentation ,antibiotics, use of microbes to treat sewage water and industrial effluents and mining.

### Employability/Skill development

### UNIT V

Pollution Control: Cleaner technologies, reducing environment impact of industrial effluents, chemical pesticides, herbicides and fertilizers. Renewable source of energy through waste materials; biogas, energy crops, cellulose current levels of biodiversity and gene banks.

Course Code	Course Title	L	T	P	C
17215SEC43L	Molecular and Environmental Biochemistry lab	0	0	5	3

### EXPERIMENTS:

1. Isolation & Purification of genomic DNA from bacteria
2. Isolation & Purification of plasmid DNA
3. Agarose gel electrophoresis of chromosomal & plasmid DNA
4. Restriction Digestion of chromosomal & plasmid DNA
5. Isolation of DNA fragment from agarose gel
6. Western blotting (Demonstration only).
7. Animal tissue culture (demonstration only).

8. Determination of BOD and COD form contaminated water
9. Bacterial examination of drinking water by MPN techniques

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17215DSC44A	Medical Biotechnology	5	0	0	4

**Unit I:**

Classification of genetic diseases: Chromosomal disorders – Numerical disorders e.g. trisomies & monosomies, Structural disorders e.g deletions, duplications, translocations & inversions, Chromosomal instability syndromes. Gene controlled diseases – Autosomal and X-linked disorders, Mitochondrial disorders.

**Unit II:**

Molecular basis of human diseases: - Pathogenic mutations Gain of function mutations: Oncogenes, Huntingtons Disease, Pittsburg variant of alpha 1 antitrypsin. Loss of function - Tumour Suppressor. Genomic. Dynamic Mutations - Fragile- X syndrome, Myotonic dystrophy. Mitochondrial diseases

**Unit III:**

Gene therapy: Ex-vivo, In vivo, In situ gene therapy, Strategies of gene therapy: gene augmentation Vectors used in gene therapy Biological vectors – retrovirus, adenoviruses, Herpes Synthetic vectors– liposomes, receptor mediated gene transfer. Gene therapy trials – Familial Hypercholesterolemia, ADA, AIDS, Cystic Fibrosis, Solid tumors.

**Unit IV:**

Nucleic acid based Therapy: Gene silencing technology, siRNA, Aptamers, antisense oligodeoxynucleotides (AS-ODN), Ribozymes, Peptide Nucleic Acids, Clinical management and Metabolic syndrome: – PKU, Familial Hypercholesterolemia, Rickets, ADA, Congenital hypothyroidism.

Employability/Skill development

#### UNIT V:

Recombinant & Immunotherapy; Clinical applications of recombinant technology; Erythropoietin; Insulin analogs and its role in diabetes; Recombinant human growth hormone; Streptokinase and urokinase in thrombosis; Recombinant coagulation factors, Monoclonal antibodies and their role in cancer; Role of recombinant interferons; Immunostimulants; Immunosuppressors in organ transplants; Role of cytokine therapy in cancers;

#### REFERENCE

Course Code	Course Title	L	T	P	C
17215DSC44A	Applied Microbial Biochemistry	5	0	0	4

#### Unit-I: Microbiological techniques

Culture techniques: Isolation of microbes from various sources, serial dilution techniques, pure culture techniques, anaerobic culture methods – chemical and physical methods. Culture preservation techniques. Nutritional requirements: - different kinds of media, composition of media-carbon sources, nitrogen sources, vitamin and growth factors, mineral, inducers, precursors and inhibitors. Sterilization methods.

#### Unit-II: Sources of energy

Energy from inorganic compounds - ET in chemolithotrophs, production of reducing power

in chemolithotrophs; Energy from visible radiation – photosynthesis in eukaryotes, blue-green algae, bacteria. Bioenergy: Renewable and non-renewable energy sources - Green technology - Biofuels, biogas, bioethanol.

Employability/Skill development

### **Unit III- Microbial metabolism-**

overview. Photosynthesis in microbes. Role of chlorophylls, carotenoids and phycobilins, Calvin cycle. Chemolithotrophy; Hydrogen– iron– nitrite oxidising bacteria; nitrate and sulfate reduction; methanogenesis and acetogenesis, fermentations– diversity, syntrophy–role of anoxic decompositions. Nitrogen metabolism, nitrogen fixation, hydrocarbon transformation.

### **Unit-IV: Medical microbiology**

Infectious Diseases process – Diagnosis – Process of sample collection, transport and examinations of the specimens. AntibioGram. Bacteriology: Morphology, cultural characteristics, pathogenicity and laboratory diagnosis of Gram positive organisms - Staphylococcus aureus, Mycoplasma; Gram negative organisms: E. coli. Infections, antimicrobial agents for textiles, international standards for the assessment of antimicrobial activity of textiles.

### **Unit-V: Microbial products in pharmaceutical and agriculture industry:**

Production, harvest, recovery and uses– Enzymes, Antibiotics (Penicillins, Tetracycline), vitamins (B2, B12), Aminoacids (lysine, glutamic acid).

Employability/Skill development

**Ponnaiyah Ramajayam Institute of Science and Technology (PRIST)**  
**Declared Under Section 3 of UGC Act, 1956**  
**Thanjavur, Tamilnadu, India**

**DEPARTMENT OF BIOTECHNOLOGY**

**B.Sc. BIOTECHNOLOGY**  
**Syllabus**

[Regulation 2017]

[Candidates admitted from the academic year 2017-18 onwards]

**EMPLOYABILITY**

**SKILL DEVELOPMENT**

**ENTREPRENEURSHIP**

**EMPLOYABILITY/ SKILL DEVELOPMENT**

பிரிஸ் ட்நிகர்நிலைப் பைகலைக்கழகம்- வைவம், தஞ்சாவூர்

பாட குறியாடு :

தமிழ்முதைப் பருவம்

முதைம்ஆண் டு

இக்கை இக்கியம் - சசய்யுள், சிறுகலத , நாடகம், இக்கிய வரைறு

அகு : 1.சசய்யுள்

1. தாயுமானவ சுவாமிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள் 2.

இராமலிங்க அடிகள் - திருவருட்பா - கருலணவிண் ணப்பம் - 40 அடிகள் 3.

கவிமணி ததசிக விநாயகம் பிள்ளை - மைரும் மாலையும் - 52 அடிகள் 4.

பாரதியார்- புதுலமப்பண் - 40 அடிகள்

5. பாரதிதாசன் - பாரதிதாசன் கவிலதகள், தமிழ் இனிலம், தமிழ் உணவு

அகு : 2. சசய்யுள்:

6. நாமக்கை கவிஞர்- தமிழ் ததன் - தமிழ் வளர்க்க சபதம் சசய்தவாம் , 40

## அடிகள்

7. ந.பிச்சமூர்த்தி - வழித்துலண- கவிலத கருடன் , 42 அடிகள்

8.சுரதா - ததன் மலழ, கைப்லப, 22 அடிகள்

9. கண்ணதாசன் - இைக்கியம் , ஓரு பாலனயின் கலத , 54 அடிகள்

10. அப்தைர் ரகுமான் - சசாந்த சிறகுகள், குப்லபலய கிளறும் சிறகுகள், 80 அடிகள்

ஐஅகு : 3. சிறுகலத :

11. சு.சமுத்திரம் - தவரைி பழுத்த பைா

ஐஅகு : 4. நாடகம் :

12. கு. சவ. பைாகுப்பிரமணியன் , சகளதம் புத்தர்(உலரநலட நாடகம்)

ஐஅகு : 5. இைக்கிய வரைாறு

13. சிறுகலத , புதினம், நாடகம் உலரநலட , கவிலத , புதுக்கவிலத

Course Code	Course Title	L	T	P	C
17111AEC11	Advanced English-I	4	0	0	2

### Aim:

- To improve the knowledge of English

### Objective:

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

### Outcome:

- Develop vocabulary
- Read and comprehend literature

## UNIT –I

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

**References:**

Great Speeches - Sudhir Kumar Sharma Galaxy Publishers English Work Book-I&II

-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
17111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays •  
To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson Stopping by  
Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel Love poem for a wife -A.K  
Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

Emerald Publishers

<b>Course Code</b>	<b>Course Title</b>
<b>17117AEC13</b>	<b>Fundamentals of Biological system</b>

### **UNIT I**

Basics in life science: definition of Biology- evolution and organization of life- living and non-living things- prokaryotes and eukaryotes- basis of classification of microbes, plants and animals upto order with 2 examples and salient features- nomenclature.

### **UNIT II**

Inorganic perspective of life: atoms molecules, chemical reactions and concept of equilibrium, colligative properties of solution, laws of thermodynamics, bonding, water and its significance, pH maintenance- acids and bases.

### **UNIT III**

Introduction to biomolecules: carbohydrates, proteins, lipids and Nucleic acids classification- general properties- functions

### **UNIT IV**

Cellular organization of life: cell theory- cell organization-cell organelles- plant and animal cell- tissue organisation- cell size and its constraints- movement in and out of the cell

### **UNIT V**

Biology of environment: biotic and abiotic factors- influence of environmental factors on life- major biogeo cycles-carbon, nitrogen, oxygen cycles- ecosystems- food web food chain and pyramids.

### **REFERENCE**

1. Biology 2<sup>nd</sup> edition, George H. Fried and George J. Hademenos, Tata MacGraw Hill Publishers.

Course Code	Course Title
17117AEC14L	Fundamentals of Biological system Lab

1. Microscopic techniques- types
2. Observation of prokaryotic and eukaryotic cells
3. Living cell / temporary/ permanent preparations histochemical techniques
4. Staining procedure *in vivo* and *in vitro*, living and non-living 5. Different types of cells and tissues
6. Taxonomical identification of any 2 plants
7. Species diversity studies- any 2 methods
8. Study of representative animals for each group
9. Plankton analysis

**REFERENCE:**

1. Experimental procedures in Life Sciences, S.Rajan and R. Selvi Christy, 2010, Anjanaa book house.

Course Code	Course Title
17115AEC15	Biological Chemistry

### UNIT I

Carbohydrates : definition- classification- monosaccharide – structure , function and biological significance- disaccharides- polysaccharides- types and biological importance- carbohydrate metabolism- glycolysis- TCA cycle- HMP shunt glycogenesis- glycogenolysis- oxidative phosphorylation.

### UNIT II

Amino acids and proteins: amino acid classification- essential and non-essential amino acids- structure and properties- proteins- definition- classification- functions protein metabolism- deamination – decarboxylation- transamination of amino acids urea cycle.

### UNIT III

Lipids: classification- physical and chemical properties- saturated and unsaturated fatty acids- structure of cell membrane- fluid mosaic model- lipid metabolism- beta oxidation- biosynthesis of saturated fatty acids.

### UNIT IV

Nucleic acids: Nucleoside, Nucleotide, DNA- Base composition, double helical structure, RNA - Types.

### UNIT V

Vitamins, minerals and hormones: classification – occurrence- deficiency symptoms biochemical functions.

<b>17117AEC23</b>	<b>Cell Biology and Genetics</b>

### **UNIT I**

Mendelian genetics: Mendel's experiment- principle of segregation- principle of independent assortment- genetic vs environmental effect- multiple alleles.

### **UNIT II**

Cell division- mitosis and meiosis- significance- cell cycle- chromosome organisation- structural hierarchy-Linkage, mechanism of crossing over- genetic variability,

### **UNIT III**

Gene concept: modern concept of gene- DNA as a genetic material- Watson and Crick model of DNA- DNA replication- repair- recombination- mutation.

### **UNIT IV**

Gene expression: Transcription – operon concept- translation

### **UNIT V**

Human Genetics- disorder due to mutant gene, inborn errors of metabolism, human cytogenetics, banding techniques, sex determination. Sex linkage, chromosomal aberrations. Cancer and oncogenes.

<b>Course Code</b>	<b>Course Title</b>
17116AEC25	Microbiology

**Unit I** (12 Hrs) Overview of history of Microbiology - Biogenesis and abiogenesis  
Contributions of Redi, Spallanzani, Needham, Pasteur, Tyndal, Joseph Lister, Koch  
[Germ Theory], Edward Jenner and Flemming [Penicillin], Scope of Microbiology.  
Classification of Microbes - Nutritional types [Definition and examples].  
Classification on the basis of oxygen requirement.

**Unit II** (12 Hrs) Ultrastructure and characteristics of bacteria, fungi, algae, and  
protozoans. Microbes in Extreme Environment – thermophilic, methanogenic and  
halophilic. Archaea - live in extreme conditions like cold, and space. Beneficial  
aspects of microorganisms.

**Unit III** (12 Hrs) Pathogenic Microorganisms – List of common bacterial, fungal and  
viral diseases of human beings [Name of the disease, causative pathogen, parts  
affected]. Concept of Sterilization - Definition of sterilization, dry and moist heat,  
pasteurization, tyndalization; radiation, ultrasonication, filtration. Physical and  
Chemical methods of sterilization; disinfection sanitization, antiseptics sterilants and  
fumigation.

**Unit IV** (12 Hrs) Stains and staining techniques – Definition of auxochrome ,  
chromophores, dyes, Classification of stains, Theories of staining, Mechanism of  
gram staining, acid fast staining, negative staining, capsule staining, flagella staining,  
endospore staining. Fungal staining.

**Unit V** (12 Hrs) Basic concepts of Virology - General characteristics of viruses,  
differences between bacteria and viruses. Classification of viruses. Ultrastructure of  
TMV and Bacteriophage.

**REFERENCE:**

<b>17117AEC33</b>	<b>Plant Physiology</b>

### **UNIT – I**

Properties of water, Water potential, Osmotic potential and stomatal physiology. Uptake, transport and translocation of water, ions through cells, xylem and phloem. Transpiration and anti-transpirants. Solute transport, Ascent of sap.

### **UNIT-II**

Mineral nutrition – deficiency symptoms, mineral salt absorption mechanism, Ion exchange theory and cytochrome-pump hypothesis, factors affecting salt absorption

### **UNIT-III**

Principles of light absorption, energy transfer and electron transfer; CO<sub>2</sub> fixation - C<sub>3</sub>, C<sub>4</sub> and CAM pathway, Mechanism of Photosynthesis. Respiration: Glycolysis, TCA cycle Electron transport system and Photorespiration. Bioluminescence.

### **UNIT-IV**

Application of Auxins, Gibberellins, Ethylene and Abscisic acid in agriculture. Biological Nitrogen fixation, Nitrogen cycle, nif gene. Structure and function of Phytochrome, Photoperiodism and Biological clocks.

### **UNIT-V**

Stress physiology-definition and types, Physiological responses to biotic and abiotic stresses, Mechanism of resistance to biotic stress and tolerance to abiotic stress.

<b>17117AEC35</b>	<b>Immunology</b>

### **Unit I**

Introduction, Lymphocytes, their origin and differentiation, antigens, their structure and classification, complement and their biological functions, types of immune responses, anatomy of immune response.

### **Unit II**

B-Lymphocytes and their activation, structure and function of immunoglobulin, immunoglobulin classes and subclasses, genetic control of antibody production, mono-clonal antibodies and diagnosis, idiotypic and antibodies, major histocompatibility complex.

### **Unit III**

Thymus derived Lymphocytes (T Cells) their classification antigen presenting cells (APC), macrophages, langerhans cells, their origin and function, mechanisms of phagocytosis, identification of cell types of immune system, immunosuppression.

### **Unit IV**

Hypersensitivity reactions, mechanisms of T cell activation, cytokines and their role in immune response macrophage activation and granuloma formation.

### **Unit V**

Graft rejection, evidence and mechanisms of graft rejection, prevention of graft rejection, immunosuppressive drugs, HLA and disease, mechanisms of immunity to tumour antigens.

<b>17117AEC45</b>	<b>Bioinformatics and Biostatistics</b>

### **UNIT I**

Introduction to bioinformatics- scope and applications- characteristics of hardware and software- types of computer- computer network- sending and receiving email searching biological articles in net.

### **UNIT II**

Uses of databases in biology- sequence databases- structural databases- tools for analysis- BLAST, FASTA, CLUSTAL W. Database organizations- NCBI, EMBL, DDBJ

### **UNIT III**

Sequence analysis of proteins/ nucleic acids- structural comparisons- molecular modeling

### **UNIT IV**

Applications of statistics in biology- measures of central tendency- mean, median and mode- measures of dispersion- standard deviation and standard error.

### **UNIT V**

Test of significance- student's t test, chi square test. Correlation and its types.

<b>17117AEC51</b>	<b>Developmental Biology</b>

### **UNIT-I:**

A brief historical account, microsporangium and male gametophyte-structure and development; incompatibility-types, mechanism and methods to overcome incompatibility. Megasporogenesis, development of female gametophyte (3 types).

### **UNIT-II:**

Organization and ultra structure of mature embryosac, nutrition. Fertilization - germination of pollen, path of pollen tube; Endosperm – types and function; embryogenesis-development of a typical monocot and dicot embryo, polyembryony

### **UNIT III**

Germ cell: structure of sperm and egg (human)- types of eggs- egg membranes- egg organization- role of pituitary and other related endocrines in gametogenesis

### **UNIT IV**

Fertilization: mechanics- physiology- theories and development- experimental work in fertilization- biochemical changes during fertilization.

### **UNITV**

Cleavage and gastrulation: General principles- outlines of physiology- comparative account in frog, chick and man- embryonic adaptations

### **REFERENCES:**

Balinsky- Text book of embryology

Nelson- comparative vertebrate embryology

Berril- Developmental Biology

Course Code	Course Title
17117AEC52	Cell and Tissue culture

### UNIT I

History of plant cell, tissue and organ culture- laboratory organization- aseptic techniques- nutritional requirement

### UNIT II

Culture media- types of culture- solid- liquid- stationary- agitated- batch culture.Organogenesis- callus induction- rhizogenesis- induction of multiple shoots

### UNIT III

Micropropagation- mass production of plantlets- hardening and mist chamber transplantation to field- techniques for maintaining plantlets in the field- somatic embryogenesis-protoplast isolation and culture.

### UNIT IV

Principle of animal cell and tissue culture- advantages and disadvantages of culture methods- types of cells- primary and established cell lines- kinetics of cell growth applications of animal tissue culture

### UNIT V

Techniques of animal cell and tissue culture: Sources of cells- techniques of cell culture- cell culture media- culture procedure- preparation of animal materials- slide and coverslip culture- double cover slip culture- flask culture- test tube culture measurement of cell death.

#### UNIT I:

DNA as the genetic material – RNA as a genetic material – genetic code.

#### UNIT II:

Organization and function of prokaryotic and eukaryotic genetic material, replication of DNA and RNA.

#### UNIT III:

DNA damage – mechanism of repair – excision repair, recombinational repair, promoter, operator, terminator and attenuator.

#### UNIT IV:

Organisation of chromosomes, specialized chromosomes, chromosome abnormalities, population genetics, gametic cell genetics, crossing over, Epistasis chromosome mapping, gene linkage, three point cross, tetrad analysis.

#### UNIT V:

Discovery of types and structure of plasmids natural and artificial plasmid transfer and their applications. Insertion sequence in prokaryotes. Transposable elements – discovery and characterization.

### UNIT-I

Sericulture: History and origin of sericulture in India; Silk worms, rearing, controlling factors, harvesting techniques; Host plant varieties, distribution, cultivation techniques. Silk reeling; Natural enemies of mulberry garden and silk worms; By products of sericulture.

### UNIT – II

Vermiculture: Compost development, Quantification and characterization of solid waste, factors responsible for composting. Earthworm- rearing of earthworm, role of earthworms in vermicompost, vermispices, earthworms and microorganisms vermicompost- methods and steps, nutrition enrichment- applications of vermiculture.

### UNIT –III

Mushroom cultivation: Mushroom culture. Historical background; Present status of Mushroom culture in India. Cultivation methods – infrastructure substrates; Preparation of spawns; Formulation and preparation of composts; Spawn running and cropping; Control of pathogens and pests. Cultivation of *Volvariella* sp, *Pleurotus* sp and *Agaricus bisporus*. Nutritional values, Recipes from

### Mushroom. UNIT – IV

Aquaculture:Definition- extensive, intensive and semi intensive practices- preparation and management of ponds- estimation of live feed organisms- natural and artificial feeds- nutritional ecology- spawning and breeding- cultural techniques. UNIT – V

Apiculture:Species of honey bees- life history- bee colony, castes, developmental significance of social life- natural colonies and their yield. Honey extraction- uses of honey and bee wax

17117DSC65A	<b>Disciplinary Specific Elective Paper-II a. Environmental Biotechnology</b>

#### **UNIT: I**

Environment: Basic Concepts; Environmental Pollution; Types of Pollution; Measurement of Pollution; Environmental Management. Water Pollution and Its Control: Water as a Resource; Water Bodies; Need for Water Management; Sources of Water Pollution; Measurement of Water Pollution

#### **UNIT: II**

Sewage/Waste water treatment - collection, Primary treatment, and Secondary treatment –Aerobic process: Activated sludge, Oxidation ditches, Trickling filters, towers, rotating discs, rotating drums, oxidation ponds. Anaerobic processes: Anaerobic digestion, Anaerobic filters, Tertiary treatment. Waste water treatment for some industries - dairy, distillery, tannery, sugar, antibiotic industries.

#### **UNIT: III**

Biopesticides and biofertilizers; their role in pest and nutrient Management; Wormiculture Solid Wastes: Sources and Management; Composition; Methane Production; Food, Feed and Fuel from Biomass

#### **UNIT: IV**

Degradation of Xenobiotic Compounds in Environment: Decay Behaviour and Degradative Plasmids; Hydrocarbons; Substituted Hydrocarbons; Oil Pollution; Surfactants; Bioremediation of Contaminated Soils

#### **UNIT – V**

Global environmental problems: Ozone depletion, Greenhouse effect and acid rain, their impact and biotechnological approaches for management. Environmental protection agencies

Course Code	Course Title
17117DSC65B	<b>Disciplinary Specific Elective Paper-II</b> <b>b. Environmental Management</b>

#### **UNIT-I**

Water pollution – sources & types of water pollution – physical, chemical & biological – effect of water pollution. Drinking water quality standards waste water treatment – primary, secondary, tertiary-water pollution prevention & control act – 1974.

#### **UNIT-II**

Air pollution –structure and composition of atmosphere – classification, sources & effects of air pollution – Acid rain –greenhouse effect – global warming – Ozone depletion.

#### **UNIT-III**

Prevention and control of air pollution particulate control – settling chamber, scrubber, bag filter, cyclones electrostatic precipitators. Gaseous emission control methods. Air pollution prevention and control Act 1981.

#### **UNIT-IV**

Soil Pollution – soil pollutants – types – sources, effects & Control. Noise Pollution – sources effects & Control.

#### **UNIT-V**

Government Agencies & Programs – The Tiwari committee – creation of NCEPC, Department of Environment & Forest – Function of State Pollution Control Board.

Course Code	Course Title	L	T	P	C
17111GEC	General Elective - Journalism	4	0	0	2

**Aim:**

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

**Objective:**

- To instil in the minds of students the different aspects of journalism • To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor • To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT- II**

News – Definition, Kinds, Elements, Sources

**UNIT- III**

Reporters

**UNIT- IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

**References:-**

Course Code	Free Elective Instrumentation	L	T	P	C
17113GEC		4	0	0	2

### Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

### Objectives:

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

### UNIT – I: Introduction

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges: AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

### UNIT – II: ELECTRONIC INSTRUMENTS – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using Rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

### UNIT – III: ELECTRONIC INSTRUMENTS – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

### Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

### Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

### Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

### Learning Outcomes:

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyses the behavior and stability of complex systems.

**Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhmey – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill –1975.

<b>17217SEC11</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **Unit I**

Definition and historical account of microbiology. Diversified microbial world

Classification of microbes based on Whittaker's five kingdom system of classification.

Structure of Algae, Bacteria, Fungi and Virus.

### **Unit II**

Nutritional requirements and growth cycles of the above mentioned groups. Media for growth: Types, preparation, methods of sterilization. Isolation and enumeration of

microorganisms in soli., water and air. Isolation of microorganisms from contaminated food.

Techniques of pure culture, maintenance and preservation; staining: stains and dyes, types of staining; General techniques involved in Virology and Protozoology. **Unit III**

Microbial physiology: Factors influencing the growth of microbes-classification based on the temperature, pH, nutrition, symbiotic associations, commonsals, saprophytes, etc.,

Microbiology of fermented foods-dairy products, meat and fish, alcoholic beverages beer, wine etc., Food spoilage and preservation process. Microbes as source of food. Application of microbes in industries production of antibiotics, amino acids, organic acids, bioconversion process, microbial insecticides.

### **Unit IV**

Biochemistry of Metabolism: Carbohydrates and energy metabolism – fermentation or glycolysis, TCA cycle and oxidative phosphorylation, ammonia metabolism.

Biosynthesis of glutamate. Purine and pyrimidine biosynthesis. Synthesis of DNA and RNA. Biosynthesis of cell wall – Peptidogylcon and Teichoic acid.

### **Unit V**

Microbes as components of the environment –nutrient cycles – C, N, S, H, O, Mn, K, Mg, Cl and phosphorus cycles, Degradation of industrial wastes, petroleum hydrocarbons, pesticides, biofouling and corrosion. Bacterial photosynthesis,

symbiotic and non-symbiotic nitrogen fixation, antimicrobial agents – structure of antibiotics, antibacterial and antiviral (function & mechanism of action)

- 6) Chemical Microbiology – Antony H. Rose, Butterworths, 3rd Edition, Plenum Press, 1976.

Course Code	Molecular genetics	L	T	P	C
17217SEC12		5	0	0	4

### Unit I

Gene as the unit of mutation and recombination. Identification of DNA as the genetic material. Mutations: Molecular nature, mutagenesis by nitrous acid, hydroxylamine, alkylating agents, intercalators and UV, origin of spontaneous mutations and control, parasexual process in bacteria, transformation, transduction and conjugal gene transfer the phenomena, mechanisms and applications. Fine structure genetic analysis with examples.

### Unit II

Recombinations – Control, models and mechanisms. Gene as the unit of expression. Gene – cistron relationship in prokaryotes and eukaryotes. Colinearity of gene and polypeptide. Elucidation of the genetic code. Wobble base pairing. Suppression of nonsense, missense and frameshift mutations. Regulation of gene expression in prokaryotes and eukaryotes. The operon concept – positive and negative control, attenuation control. Control sequences, promoter, operator, terminator and attenuator, DNA methylation and epigenic regulation.

### Unit III

DNA damage and repair DNA damage by UV, alkylating agents, cross linkers. Mechanisms of repair – photoactivation, excision repair, recombinational repair. The SOS and adoptive responses and their regulation, heat shock response. **Unit IV**

Extrachromosomal heredity, Biology of plasmids – discovery, types and structure of F, RTF, col-factors and Ti. Replication and partitioning. Incompatibility and copy number control. Natural and artificial plasmid transfer and their applications. Transposable genetic elements: discovery, early experiments of McClintock in maize. Insertion sequences in prokaryotes. Complex transposons – Tn 10, Tn 5, Tn 9 and Tn 3 as

examples. Mechanisms control, consequences and applications of transposition by simple and complex elements. Retro elements.

## **Unit V**

Genetics of Eukaryotes

Gene linkage and chromosome mapping, crossing over, three point cross, tetrad analysis.

Complementation. Organization of chromosomes, specialized chromosomes.

Chromosome abnormalities, quantitative inheritance, population genetics.

Developmental genetics using *Drosophilla* as model system. Somatic cell genetics.

<b>17217SEC13</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **Unit I**

Principles of Bioenergetics. Glycolysis and carbolism of hexoses the citric acid cycle.

Oxidation of fatty acids. Oxidation of amino acids. Oxidative phosphorylation.

Glyoxylate cycle, TCA cycle, Kreb cycle, Pentose Phosphate pathway. Nitrogen cycle. .

### **Unit II**

Carbohydrate – types, structure and functions of carbohydrates, biosynthesis, lipid

biosynthesis, C2, C3, C4 cycles. Biosynthesis of fatty acids and triacyl glycerol.

Secondary metabolites – occurrence, classification and functions of phenolics,

terpenes, flavonoids, alkaloids, saponins, glycosides. Applications of secondary

metabolites in food, dairy, agricultural, cosmetics and pharmaceutical Industries.

### **Unit III**

Biosynthesis of amino acids, nucleotides and related molecules. Classification of

proteins based on functions and solubility, types of proteins structure and functions.

Chemical synthesis of peptides and oligosaccharides. A general account of secondary

metabolic pathway.

### **Unit IV**

Integration and hormkonal regulation of mammalian metabolism. Biological

membrane and transport. Enzymes classification, mechanism, factors affecting enzyme

action. Vitamins and minerals.

### **Unit V**

Lipids classification, importance, fatty acids, essential non essential fatty acids.

Prostaglandins, leukotrienes, thromboxanes, interferons and interleukins. Antibiotics,

cytoskeletal organization, ribozymes.

<b>17217SEC14L</b>		<b>0</b>	<b>0</b>	<b>5</b>	<b>4</b>

1. Culture media preparation liquid and solid media.
2. Selective differential media
3. Methods of sterilization and testing of sterility
4. Enumeration of bacteria, fungi and actinomycetes from soil
5. Pure culture techniques – Pour, spread and looping methods
6. Maintenance and preservation of cultures
7. Staining of Bacteria – gram, spore and AFB, Fungal wet mount – LPB
8. Motility test – hanging drop and soft agar inoculation
9. Water quality test – MPN
10. Effect of different parameters on bacterial growth kinetics (Substrate, pH, Temperature)
11. Single colony – isolation and checking for genetic markers, measurements of growth rate one step growth curve using T7 phage.
12. Induced mutagenesis and isolation of antibiotic resistant and auxotrophic mutants enrichment methods for auxotrophic and antibiotic resistant mutants.
13. Genetic mapping by p1 transduction, genetic mapping of conjugation and transformation.
14. Transposon mutagenesis of chromosomal DNA, Transposon mutagenesis of plasmid DNA
15. Experiments with gene fusion.

### Unit I

Molecular cells & organs of Immune system, Historical perspective, Innate Immunity:- Skin, Mucosal Surface, Physiological barrier, Inflammation, Adaptive Immunity, Molecules of innate & Acquired immune system:- Complement, Interferon, other molecules Cells of Innate & Acquired Immune system. Organs of the immune system:- Primary Lymphoid organs, Secondary Lymphoid organs, Lymphatic etc. **Unit**

### II

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity, Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, auto antigens. Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

### Unit III

Mechanism of Immune response, Generation of Immunological diversity, Antigen Recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & Lymphoid system.

### Unit IV

MHC & Transplantation Immunology - MHC:- General organization, MHC molecules & genes, Cell recognition of self & nonself, MHC restriction, Tolerance:- Central Peripheral & acquired tolerance. HLA typing methods using serological and molecular techniques.

### Unit V

The Immune system in Health & Disease, AIDS & other Immunodeficiencies,

Autoimmunity & autoimmune diseases. Hypersensitivity, Vaccines:- Principle & types of vaccines, Recent advances in vaccination, Monoclonal & Recombinant antibodies. Immunological techniques: RIA, ELISA, Immunocytochemistry, Immunoblotting, Fluorescence antibody techniques.

<b>17217DSC15B</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **Biosafety:**

**Unit 1:** Introduction and historical background. Introduction to biological safety cabinets, primary containment for biohazards, biosafety levels, biosafety levels of specific microorganisms, recommended biosafety levels for infectious agents and infected animals. Biosafety guidelines by Government of India. Definition of GMOs and LMOs.

**Unit 2:** Environmental release of GMOs, risk assessment; risk management and communication. Overview of national regulations and relevant international agreements including gCartagena protocol.

### **Biodiversity**

**UNIT 3 :** Biodiversity – Concept and Definition Scope and Constraints of Biodiversity Science, Composition and Scales of Biodiversity: Genetic Diversity, Species/ Organismal Diversity, Ecological/ Ecosystem Diversity, Landscape/ Pattern Diversity, Agrobiodiversity, Biocultural Diversity and Urban Biodiversity.

**UNIT 4 :** Values of biodiversity Instrumental/Utilitarian value and their categories, Direct use value; Indirect/ Non-consumptive use value, Introduction to Ecological Economics; Monetizing the value of Biodiversity; Intrinsic Value; Ethical and aesthetic values, Anthropocentrism, Biocentrism, Ecocentrism and Religions; Intellectual Value; Deep Ecology.

**UNIT 5:** Threats to biodiversity Habitat Destruction, Fragmentation, Transformation, Degradation and Loss: Causes, Patterns and consequences on the Biodiversity of Major Land and Aquatic Systems Invasive Species' pathways, biological impacts on terrestrial and aquatic systems. Extinction: Types of Extinctions, Processes responsible for Species Extinction, Current and Future Extinction Rates, IUCN Threatened Categories, Sixth Extinction/Biological Crisis.

<b>17217SEC21</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

#### UNIT-I:

Cell architecture: Structure of cells – structure of prokaryotic and eukaryotic cells; Surface appendages – Cilia and Flagella, Capsules, Pili, Fimbriae and slime layers; Cell walls – Algae, fungi, bacteria ; Membranes of Gram positive,

Gram negative bacteria and acid fast bacteria; protoplast, spheroplast and endospores; Transport across membrane – active and passive transport, transport channels and pumps, transport across nuclear membrane; Neurotransmission, neuromuscular junction.

#### UNIT-II:

Cellular constituents: Cytoskeleton and structural components – Microfilaments, Intermediate filaments, Microtubules; Mitochondria – structure, biogenesis; Chloroplast –structure, biogenesis; Endoplasmic reticulum and Golgi complex – structure, function, vesicular transport and import into cell organelles; Structure and function of ribosomes, mesosomes, lysosomes, peroxysomes.

#### UNIT-III:

Nucleus: Nucleus structure – structural organization, nucleosome, supranucleosomal structures, specialized chromosomes, polytene and lamp brush chromosomes and chromosome banding; Nucleic acid structure: DNA and RNA.

#### UNIT-IV:

Cell cycle: Mechanism of cell division – Mitosis, meiosis and genetic recombination; regulation of cell cycle – factors and genes regulating cell cycle (Cyclins, CDK and CDKI). Biochemistry and molecular biology of Cancer – malignant growth, tumour suppressor genes (p53, RB) and oncogenes (Ras), chemical carcinogenesis, hormonal imbalances.

#### UNIT-V:

Cellular development: Extracellular matrix – cell to cell and cell-matrix adhesion, cell junctions; Cellular systematic – components of systematic, receptors (cell surface – GPCR, RTK, TGF- $\beta$ , Hedgehog, Wnt, Notch-Delta, NF-Kb, ion channels; intracellular – NO, Nuclear receptor), secondary messengers, effectors ; cell differentiation; gametogenesis and fertilization; development of Drosophila and Arabidopsis – spatial and temporal regulation of gene expression.

### **UNIT-1**

Physics and biology: scope and methods of biophysics. Levels of molecular organization. Association of macromolecules, lipids in biological membranes. Protein in biological membranes. Molecular mechanics and dynamics.

### **UNIT-II**

Understanding structures of proteins at different levels.- primary, secondary, tertiary and quaternary: conformational analysis and forces. Understanding structures of nucleic acids at different levels- primary, secondary, tertiary and quaternary : conformational analysis of interactions- polysaccharides

### **UNIT-III**

Introduction to Bio informatics-scope and application characteristics of hardware and software. Types of computer, Bio- chips, computer network sending and receiving e-mail. Internet browsing- searching biological articles information in internet.

### **UNIT-IV**

Computer applications in biology- uses of databases in biology- analysis of proteins and nucleic acid sequence- molecular modeling- introduction to data processing- files- data collection preparation-editing- backup- file recovery-procedure-sorting-searching and merging.

### **UNIT-V**

Biomolecules- carbohydrate, protein, lipids and nucleic acids, protein conformation-prediction of protein structure-fold recognition, comparative modeling (homology)-basic principles of X-ray diffraction studies, NMR, Mass spectroscopy in identifying protein information.

<b>17217SEC23</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **UNIT-I**

Industrial microbiology an introduction- modern fermentation process and biochemical engineering- isolation, screening and strain improvement of microorganisms.

### **UNIT-II**

Media design and sterilization for fermentation processes- media requirements for fermentation processes- examples of simple and complex media. Design and usage of commercial media for industrial fermentations- batch and continuous fermentations system- sterilization system of liquid media and air.

### **UNIT-III**

Basic principles of bioprocess-media formulation- fermentation equipment and its use- type of fermentor (Batch and continuous fermentor) and its application. Tray, CSTR, BCF, HFMB, RBC and inner and outer loop.

### **UNIT-IV**

Traditional industrial process – anaerobic process ethanol, lactic acid, acetone- butanol production)- aerobic process (citric acid baker's yeast penicillin production).

### **UNIT-V**

Medical application of bioprocess engineering- commercial tissue culture process- gene therapy using viral vectors- models of viral infections- mass production of retrovirus. Advanced biological waste water treatment applications

<b>Course Code</b>	<b>ENDOCRINOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17217DSC25A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Objective:** To have a basic understanding of the endocrine system.

To know the pathophysiological significance of the system with special reference to humans.

### **UNIT-I**

Hormones in general- definition- types of secretions- nature-classification, synthesis and their role- feedback control with specific examples hormone action proteins and steroids- cell signaling in hormone action

### **UNIT-II**

Hypothalamo hypo physical axis – hormones of hypothalamus and their role structure of pituitary –secretions-physiological role- pathophysiology current status of pituitary as a master gland.

### **UNIT-III**

Thyroid- parathyroid – structure- hormones- synthesis-storage-release-carrier proteins (eb. TBA&TBG)-physiological role-pathophysiology.

### **UNIT-IV**

Adrenal and gonadal hormones- steroid biosynthesis- maintenance of cyclicity physiological role pathophysiology- steroids in metabolism

### **UNIT-V**

Gastro intestinal hormones-pancreas as an endocrine organ- secretions- functions-physiological role and pathophysiology other endocrine organs in vertebrates insect and crustacean hormones their role in growth and metamorphosis

### **REFERENCE:**

Text book of endocrinology-williams

Physiological review of biochemistry-harper and others

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE INTELLECTUAL PROPERTY RIGHTS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17217DSC25B</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **Unit 1: Overview of Intellectual Property**

Introduction and the need for intellectual property right (IPR) - Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design, Geographical Indication, Plant Varieties and Layout Design – Genetic Resources and Traditional Knowledge – Trade Secret - IPR in India : Genesis and development – IPR in abroad - Major International Instruments concerning Intellectual Property Rights: Paris Convention, 1883, the Berne Convention, 1886, the Universal Copyright Convention, 1952, the WIPO Convention, 1967, the Patent Co-operation Treaty, 1970, the TRIPS Agreement, 1994

### **Unit2: Patents**

Patents - Elements of Patentability: Novelty , Non Obviousness (Inventive Steps), Industrial Application - Non - Patentable Subject Matter - Registration Procedure, Rights and Duties of Patentee, Assignment and licence , Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties - Patent office and Appellate Board

### **Unit 3: Copyrights**

Nature of Copyright - Subject matter of copyright: original literary, dramatic, musical, artistic works; cinematograph films and sound recordings - Registration Procedure, Term of protection, Ownership of copyright, Assignment and licence of copyright - Infringement, Remedies & Penalties – Related Rights - Distinction between related rights and copyrights

### **Unit 4: Trademarks**

Concept of Trademarks - Different kinds of marks (brand names, logos, signatures, symbols, well known marks, certification marks and service marks) - Non Registrable Trademarks - Registration of Trademarks - Rights of holder and assignment and licensing of marks - Infringement, Remedies & Penalties - Trademarks registry and appellate board

### **Unit 5: Other forms of IP**

**Design:** meaning and concept of novel and original - Procedure for registration, effect of registration and term of protection

**Geographical Indication (GI):** Geographical indication: meaning, and difference between GI and trademarks - Procedure for registration, effect of registration and term of protection Plant Variety Protection

**Plant variety protection:** meaning and benefit sharing and farmers' rights – Procedure for registration, effect of registration and term of protection Layout Design Protection

**Layout Design protection:** meaning – Procedure for registration, effect of registration and term

of protection

<b>17217RMC26</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

### **Unit I –Research**

Selection of problem-stages in the execution of research: choosing a topic to publication preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal; standard of research journals – Impact factor.

### **Unit II: Statistical method**

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

### **Unit III**

Coparision of means, chisquard test, student test (ANOVA ‘portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

### **UNIT IV:**

Chromatography – principle, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, Isoelectric focusing, plused field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

### **UNIT V:**

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

### **UNIT-I**

Core techniques in gene manipulation. Cutting and joining of DNA, introduction of DNA into cells.

### **UNIT-II**

Cloning strategies, construction of genomic libraries and cDNA libraries. Probe construction, recombinant selection and screening, molecular cloning.

### **UNIT-III**

Analysis of expression. Analysis of recombinant DNA, sequencing, mutagenesis, altered expression and engineering genes. Site-directed mutagenesis.

### **UNIT-IV**

DNA amplification using polymerase chain reaction (PCR): key concepts analysis of amplified products. Application of PCR: ligase chain reaction. RFLP, RAPD, DNA fingerprinting.

### **UNIT-V**

Expression systems and their application. E.coli., bacillus streptomycin, yeast, Baculovirus and animal cells as cloning hosts. Yeast shuttle vectors, cosmid, production of antibodies and vaccines.

<b>17217SEC32</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **UNIT-I**

Plant genome organization, structural features of a representative plant gene, gene families in plants. Organization of chloroplast genome, nucleus- encode and chloroplast- encoded genes for chloroplast proteins to chloroplast.

### **UNIT-II**

Organization of mitochondrial genome, nuclear and mitochondria- encoded genes for mitochondrial proteins, RNA editing in plant mitochondria, mitochondrial genome and cytoplasmic male sterility. Seed storage proteins. Regulation of gene expression in plant development. Plant hormones and phytochrome.

### **UNIT-III**

Symbiotic nitrogen fixation in legumes by Rhizobia- biochemistry and molecular biology agrobacterium and crown gall tumour. Mechanism of t-DNA transfer to plants.

Ti plasmid vectors for plant transformation. Classification and molecular biology of plant viruses. Molecular biology of plant stress response.

### **UNIT-IV**

Genetic engineering in plants, selectable markers, reporter genes and promoters used in plant vectors. Genetic engineering of plants for virus resistance, pest resistance, herbicide tolerance, cytoplasmic male-sterility, delay of fruit ripening, resistance to fungi and bacteria.

### **UNIT-V**

Production of antibodies, viral antigens and peptide hormones in plants. Gene silencing in transgenic plants. Management aspects of plant genetic engineering. Molecular biology of plant pathogen interactions.

### **REFERENCE:**

### **UNIT-I**

Genetic engineering in animals. Transformation of animal cells. Cloning vectors and expression vectors-animal viral vectors and yeast vectors.

### **UNIT-II**

Genetic engineering as applied to specific areas- regulatory proteins, blood products, vaccines and hormones. Production of useful proteins in transgenic animals AIDS. Signal transduction. Oncogenes and anti-oncogenes.

### **UNIT-III**

Pest management using juvenile analogues, pheromones and genetic manipulations, biotechnology of silk worms, baculoviruses in biocontrol and foreign gene expression.

### **UNIT-IV**

Biotechnology of aquaculture. Transgenic animals- in vitro fertilization and embryo transfer.

### **UNIT-V**

Uses of nucleic acid probes and antibodies in clinical diagnosis and tissue typing. Mapping of human genome. RFLP and application. Gene therapy. Ethical issues in animal biotechnology. Management aspects of biotechnology and genetic engineering.

<b>17217DSC34A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

### **Unit- I**

Basic biology principles and practice of micro fabrication techniques, Atomic force microscopy, biological production of metal nano particles, macro molecular assemblies.

### **Unit-II**

Application in Biomedical and biological research, nano particles, viruses as nano particles, nano chemicals and application., tumor targeting and other diagnostic application.

### **Unit-III**

Developing drug delivery tools through nano biotechnology, nano particle based immobilization assays, quantum dots technology and its application.

### **Unit-IV**

Synthesis and characterization of different classes of biomedical polymers their uses in pharmaceutical, cardiovascular ophthalmologic orthopedic areas.

### **Unit-V**

Biosensors and nano biotechnology principles used in construction of microelectronic devices sensors and macro mechanical structures.and their functioning, immunonanotechnology.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-III	L	T	P	C
17217DSC34B	Environmental biotechnology	5	0	0	4

### Unit I

Introduction, Importance and Scope of Environment Biotechnology. Renewable and Non-Renewable Resources of Energy. Conventional fuels and their impact on Environment – Firewood, Animal wastes, Coal, Petroleum and Animal oils.

### Unit II

Modern fuels and their impact on environment – Methanogenic Bacteria, Biogas Production, Microbial Hydrogen Production, Conversion of Sugar to Alcohol, Gasohol. Effect of Green Revolution and Industrial Revolution on Environment.

### Unit III

Waste Water Pollution (Sewage) Treatment Process - Septic tank, Mechanical and Biological Treatment, Tricking Filters, Activated Sludge Process, Oxidation Ponds, Anaerobic Sludge Digestion. Solid Waste Disposal Sanitary Landfills, Composting, Vermicompost

### Unit IV

Biofertilizers- Definition, Distinguished Features of Biofertilizers and Organic Manures. Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil, Algal and fungal biofertilizers (VAM).

### Unit V

Bioleaching- Ore Leaching and Role of Microbes in Mines ( copper, and Uranium). Environmental significance of Genetically modified microbes, plants and animals. Bio- assessment of environmental quality.

<b>17211GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

- To equip students to enter into the realm of mass media.

**Objectives:**

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop Filters- Human interest stories- Recognizing and evaluating news.

**UNIT-III**

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features. **UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

Course Code	Course Title	L	T	P	C
17212GEC	General Elective Course Applicable Mathematical Techniques	4	0	0	2

**Aim:**

- To acquaint with the basic concept of Interpolation.

**Objectives:**

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

**Outcomes:**

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

**UNIT I**

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

**UNIT II**

Assignment Problems

**UNIT III**

Replacement Problems

**UNIT IV**

Decision Analysis

**UNIT V**

Game Theory

**References**

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman

<b>Course Code</b>	<b>FREE ELECTIVE PAPER BIOMEDICAL INSTRUMENTATION</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17213GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

- To understand the concepts and application of electronic Instrumentation in the Medical field.

**UNIT – I: BIO ELECTRIC SIGNALS AND ELECTRODES**

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

**UNIT – II: RECORDING SYSTEM AND RECORDERS**

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

**UNIT – III: MEASUREMENT AND ANALYSIS TECHNIQUES**

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

**UNIT – IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS**

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

**UNIT – V: ADVANCED BIO MEDICAL SYSTEMS**

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical stimulation.

<b>Course Code</b>	<b>GENERAL ELECTIVE COURSE-III GREEN CHEMISTRY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>17214GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Objectives:** To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

### **Unit I - Introduction**

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution Pollution prevention.

### **Unit II - Principles**

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

### **Unit III - Bio Catalytic Reactions**

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

### **Unit IV - Green House Effect**

Green house effect and Global Warming – Introduction - How the greenhouse effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

### **Unit V - Green Analytical Methods**

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

### **Outcomes:**

- To understand the environmental status and evolution.
- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.

- To understand about the vitamins and antibiotics.

**References:**

1. Introduction to Green Chemistry – M.Rayan and M.Tinnesand
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	General Elective Course	L	T	P	C
17220GEC	Internet and Web Design	4	0	0	2

### Aim

To equip the students with basic programming skill in Web

### Designing Objective

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice markup languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to the Internet – Internet Technologies – Internet

### browsers. UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A web page design project – Forms.

### Outcomes:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

### Reference Book

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	General Elective Course	L	T	P	C
17261GEC	Insurance Services	4	0	0	2

**Aim:**

- To look after the interests of people from uncertainty by providing certainty of compensation.

**Objectives:**

- To learn the fundamental concepts and principles of insurance.
- To explain the nature of different insurance policies, insurance contracts and settlement of claims.

**Out Come:**

- The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

**UNIT – I**

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

**UNIT – II**

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

**UNIT – III**

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

**UNIT – IV**

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

**UNIT – V**

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

**Research – Led: Learning about current research in the discipline** Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

**Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student’s knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

**Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

**Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level 1: Prescribed Research.

Level 2: Bounded Research Level 3: Scaffolded Research Level 4: Self actuated Research Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc. Microbiology curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffolding Research)	4

IV	Project Work	12
----	--------------	----

#### **Blueprint for assessment of student's performance in Research Led Seminar Course**

##### **Internal Assessment: 40 Marks**

- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
    - Literature Survey : 10 Marks

##### **Semester Examination : 60 Marks**

(Essay type Questions set by the concerned resource persons)

#### **Blueprint for assessment of student's performance in Socio Technical Project**

##### **Continuous Internal Assessment through Reviews: 40 Marks**

- Review I : 10 Marks
- Review II : 10 Marks
- Review III : 20 Marks

##### **Evaluation of Socio Technical Practicum Final Report: 40 Marks**

##### **Viva- Voce Examination: 20 Marks**

##### **Total: 100 Marks**

#### **Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment: 20 Marks**

□

## **M.Phil BIOTECHNOLOGY**

### **COURSE STRUCTURE**

**Paper II ADVANCED BIOTECHNOLOGY (Sub. Code: 173BTC12)**

#### **UNIT – I**

##### **INTRODUCTION TO GENETIC ENGINEERING**

Salient features of cloning vectors, restriction enzymes and their mode of action, Recombinant DNA- types of cloning vectors, plasmids, cosmids, M-13 Phage. Microinjection, particle bombardment, electroporation (Vector less mode), Construction of genomic DNA library and cDNA library.

#### **UNIT– II**

##### **PLANT BIOTECHNOLOGY**

Vectors for gene transfer ( Ti , Ri plasmids, cointegrate, intermediate and helper plasmids) Binary vectors, viruses as vectors gene transfer techniques using Agrobacterium, selectable markers, reporter genes and promoters , transgenic plants, crop improvement , resistance to herbicide insects, pests and viruses, cytoplasmic male sterility, delayed fruit ripening, antibody vaccine and interferon production in plants, synthetic seeds.

#### **UNIT – III**

##### **BIOPROCESS**

Bioreactor designs and types of fermentation and fermentors. Concepts & basic modes of fermentation - Batch, fed batch and continuous fermentation. Conventional fermentation versus biotransformation. Solid substrate, surface and submerged fermentation. Fermentation economics and fermentation media. Fermenter design - mechanically agitated, pneumatic and hydrodynamic fermenters. Large scale animal and plant cell cultivation and air sterilization. Upstream processing - media formulation, sterilization, aeration and agitation. Measurement and control of bioprocess parameters, scale up and scale down process

## **UNIT- IV**

### **TECHNIQUES IN BIOTECHNOLOGY**

PCR- key concept- applications- PCR variants- analysis of amplified product by gel electrophoresis- Nucleic acid blotting techniques- sequencing – Sangers method, Maxam and Gilbert method- primer walking- automated sequencing DNA chips and microarray-DNA fingerprinting.

## **UNIT – V**

### **BIOTECHNOLOGY – INTELLECTUAL PROPERTY**

- i) Intellectual property of rights, patents, trade secrets, copyrights, trade mark, choice of Intellectual Property Protection (IPR), and Plant genetic Resources ( PGR), GATT ( Genetic Agreement of Tariff and Trade), TRIP ( trade Related Intellectual property).
- ii) Patents for higher plants, patenting transgenic organism and isolated genes, patenting genes and DNA sequences, Plant Breeders Rights ( PBR) and farmers Right.
- iii) Ethical issues in animal biotechnology. Management aspects of biotechnology and genetic engineering.

## M.PHIL - BIOTECHNOLOGY

### PAPER- III - ENVIRONMENTAL BIOTECHNOLOGY (Sub. Code: 173BTE13)

#### **UNIT – I**

Environment: Basic concepts –Environmental Pollution: Types of pollution, Pollution monitoring and measurement; Methodology of environmental management – The problem solving approach and its limitations.

#### **UNIT – II**

Biofertilizers- Definition, Distinguished Features of Biofertilizers and Organic Manures. Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil, Algal and fungal biofertilizers (VAM). Bioremediation- Ore Leaching and Role of Microbes in Mines (copper, and Uranium). Environmental significance of Genetically modified microbes, plants and animals. Bio assessment of environmental quality.

#### **UNIT – III**

Sewage/Waste water treatment - collection, Primary treatment, Secondary treatment –Aerobic process: Activated sludge, Oxidation ditches, Trickling filters, towers, rotating discs, rotating drums, oxidation ponds. Anaerobic processes: Anaerobic digestion, Anaerobic filters, Tertiary treatment. Waste water treatment for some industries - dairy, distillery, tannery, sugar, antibiotic industries. Water recycling.

#### **UNIT – IV**

Solid waste treatment and disposal - : Sources and management - Composting, vermiculture and methane production. Biodegradation and bioremediation - Xenobiotics Hydrocarbons, oil pollution, surfactants, pesticides.

#### **UNIT – V**

Global environmental problems: Ozone depletion, Green house effect and acid rain, their Bioremediation of contaminated soils and waste land.

**DEPARTMENT OF CIVIL ENGINEERING**

**PROGRAM HANDBOOK**

**B.TECH (CIVIL ENGINEERING)**

**FULL TIME**

**[REGULATION 2017]**

[for candidates admitted to B.Tech (Civil Engineering) program from June 2017 onwards]

## Program Educational Objectives

PEO1 To produce graduates who have developed the skills required to design Civil Engineering systems and facilities, including the graduate's abilities to formulate problems, to think creatively, to synthesize information, and to work collaboratively in teams.

PEO2 To produce graduates who are trained thoroughly in methods of analysis, including the mathematical and computational skills appropriate for Civil Engineers to use when problem solving.

PEO3 To produce graduates who are prepared for life-long learning and successful careers as Civil Engineers & also taught to use current, experimental and data analysis techniques for Civil Engineering applications.

### PROGRAMME OUTCOMES:

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **The engineer and society:** An ability to develop the professional status using the broad education to understand the potential impact of Engineering solutions in various geographical settings including societal and environmental contexts.
6. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
7. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
8. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
9. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
10. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

11. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills

**UNIT I SHARING INFORMATION RELATED TO ONESELF/FAMILY & FRIENDS 12**

**Reading-** short comprehension passages, practice in skimming-scanning and predicting-**Writing-** completing sentences- - developing hints. **Listening-** short texts- short formal and informal conversations. **Speaking-** introducing oneself - exchanging personal information-**Language development-** What Questions- asking and answering-yes or no questions- parts of speech. **Vocabulary development-** prefixes- suffixes- articles.- count/ uncount nouns.

**UNIT II GENERAL READING AND FREE WRITING 12**

**Reading -** comprehension-pre-reading-post reading- comprehension questions (multiple choice questions and /or short questions/ open-ended questions)-inductive reading- short narratives and descriptions from newspapers including dialogues and conversations (also used as short Listening texts)- register- **Writing** – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –**Listening-**telephonic conversations. **Speaking**– sharing information of a personal kind—greeting – taking leave- **Language development** – prepositions, conjunctions **Vocabulary development-**guessing meanings of words in context.

**UNIT III GRAMMAR AND LANGUAGE DEVELOPMENT 12**

**Reading-** short texts and longer passages (close reading) **Writing-** understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences **Listening** –listening to longer texts and filling up the table- product description- narratives from different sources. **Speaking-** asking about routine actions and expressing opinions. **Language development-** degrees of comparison- pronouns- direct vs indirect questions- **Vocabulary development** – single word substitutes- adverbs.

**UNIT IV READING AND LANGUAGE DEVELOPMENT 12**

**Reading-** comprehension-reading longer texts- reading different types of texts- magazines **Writing-** letter writing, informal or personal letters-e-mails-conventions of personal email-**Listening-** listening to dialogues or conversations and completing exercises based on them. **Speaking-** speaking about oneself-speaking about one's friend- **Language development-**Tenses- simple present-simple past- present continuous and past continuous- **Vocabulary development-** synonyms-antonyms- phrasal verbs

**UNIT V EXTENDED WRITING 12**

**Reading-** longer texts- close reading-**Writing-** brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing-**Listening** – listening to talks- conversations- **Speaking**– participating in conversations- short group conversations-**Language development-**modal verbs- present/ past perfect tense – **Vocabulary development-**collocations- fixed and semi-fixed expressions

**OUTCOMES: At the end of the course, learners will be able to:**

- Read articles of a general kind in magazines and newspapers.
- Participate effectively in informal conversations; introduce themselves and their friends and express opinions in English.
- Comprehend conversations and short talks delivered in English
- Write short essays of a general kind and personal letters and emails in English.

**OBJECTIVES :**

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus. The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modelling the engineering problems mathematically and obtaining solutions. This is a foundation course which mainly deals with topics such as single variable and multivariable calculus and plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

**UNIT I DIFFERENTIAL CALCULUS 12**

Representation of functions - Limit of a function - Continuity - Derivatives - Differentiation rules - Maxima and Minima of functions of one variable.

**UNIT II FUNCTIONS OF SEVERAL VARIABLES 12**

Partial differentiation – Homogeneous functions and Euler’s theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor’s series for functions of two variables – Maxima and minima of functions of two variables – Lagrange’s method of undetermined multipliers.

**UNIT III INTEGRAL CALCULUS 12**

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

**UNIT IV MULTIPLE INTEGRALS 12**

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variables in double and triple integrals.

**UNIT V DIFFERENTIAL EQUATIONS 12**

Higher order linear differential equations with constant coefficients - Method of variation of parameters – Homogenous equation of Euler’s and Legendre’s type – System of simultaneous linear differential equations with constant coefficients - Method of undetermined coefficients.

**TOTAL : 60 PERIODS****OUTCOMES :**

After completing this course, students should demonstrate competency in the following skills:

- Use both the limit definition and rules of differentiation to differentiate functions.
- Apply differentiation to solve maxima and minima problems.
- Evaluate integrals both by using Riemann sums and by using the Fundamental Theorem of Calculus.
- Apply integration to compute multiple integrals, area, volume, integrals in polar coordinates, in addition to change of order and change of variables.
- Evaluate integrals using techniques of integration, such as substitution, partial fractions and integration by parts.
- Determine convergence/divergence of improper integrals and evaluate convergent improper integrals.
- Apply various techniques in solving differential equations.

**OBJECTIVES:**

- To enhance the fundamental knowledge in Physics and its applications relevant to various streams of Engineering and Technology.

**UNIT I PROPERTIES OF MATTER 9**

Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment - I-shaped girders - stress due to bending in beams.

**UNIT II WAVES AND FIBER OPTICS 9**

Oscillatory motion – forced and damped oscillations: differential equation and its solution – plane progressive waves – wave equation. Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Semiconductor lasers: homojunction and heterojunction – Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers - fibre optic sensors: pressure and displacement.

**UNIT III THERMAL PHYSICS 9**

Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conduction in solids – thermal conductivity - Forbe's and Lee's disc method: theory and experiment - conduction through compound media (series and parallel) – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar water heaters.

**UNIT IV QUANTUM PHYSICS 9**

Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – tunnelling (qualitative) - scanning tunnelling microscope.

**UNIT V CRYSTAL PHYSICS 9**

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances - coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures - crystal imperfections: point defects, line defects – Burger vectors, stacking faults – role of imperfections in plastic deformation - growth of single crystals: solution and melt growth techniques.

**TOTAL :45 PERIODS****OUTCOMES:**

Upon completion of this course,

- the students will gain knowledge on the basics of properties of matter and its applications,
- the students will acquire knowledge on the concepts of waves and optical devices and their applications in fibre optics,
- the students will have adequate knowledge on the concepts of thermal properties of materials and their applications in expansion joints and heat exchangers,
- the students will get knowledge on advanced physics concepts of quantum theory and its applications in tunneling microscopes, and
- the students will understand the basics of crystals, their structures and different crystal growth techniques.

**TEXT BOOKS:**

1. Bhattacharya, D.K. & Poonam, T. "Engineering Physics". Oxford University Press, 2015.
2. Gaur, R.K. & Gupta, S.L. "Engineering Physics". Dhanpat Rai Publishers, 2012.
3. Pandey, B.K. & Chaturvedi, S. "Engineering Physics". Cengage Learning India, 2012.

2. Serway, R.A. & Jewett, J.W. "Physics for Scientists and Engineers". Cengage Learning, 2010.
3. Tipler, P.A. & Mosca, G. "Physics for Scientists and Engineers with Modern Physics". W.H.Freeman, 2007.

**OBJECTIVES:**

- To make the students conversant with boiler feed water requirements, related problems and water treatment techniques.
- To develop an understanding of the basic concepts of phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys.
- Preparation, properties and applications of engineering materials.
- Types of fuels, calorific value calculations, manufacture of solid, liquid and gaseous fuels.
- Principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuel cells.

**UNIT I WATER AND ITS TREATMENT 9**

Hardness of water – types – expression of hardness – units – estimation of hardness of water by EDTA – numerical problems – boiler troubles (scale and sludge) – treatment of boiler feed water – Internal treatment (phosphate, colloidal, sodium aluminate and calgon conditioning) external treatment – Ion exchange process, zeolite process – desalination of brackish water - Reverse Osmosis.

**UNIT II SURFACE CHEMISTRY AND CATALYSIS 9**

Adsorption: Types of adsorption – adsorption of gases on solids – adsorption of solute from solutions – adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – contact theory – kinetics of surface reactions, unimolecular reactions, Langmuir - applications of adsorption on pollution abatement. Catalysis: Catalyst – types of catalysis – criteria – autocatalysis – catalytic poisoning and catalytic promoters - acid base catalysis – applications (catalytic convertor) – enzyme catalysis– Michaelis– Menten equation.

**UNIT III ALLOYS AND PHASE RULE 9**

Alloys: Introduction- Definition- properties of alloys- significance of alloying, functions and effect of alloying elements- Nichrome and stainless steel (18/8) – heat treatment of steel. Phase rule: Introduction, definition of terms with examples, one component system -water system - reduced phase rule - thermal analysis and cooling curves - two component systems - lead-silver system - Pattinson process.

**UNIT IV FUELS AND COMBUSTION 9**

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufacture of metallurgical coke (Otto Hoffmann method) - petroleum - manufacture of synthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas - compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel. Combustion of fuels: Introduction - calorific value - higher and lower calorific values- theoretical calculation of calorific value - ignition temperature - spontaneous ignition temperature - explosive range - flue gas analysis (ORSAT Method).

**UNIT V ENERGY SOURCES AND STORAGE DEVICES 9**

Nuclear fission - controlled nuclear fission - nuclear fusion - differences between nuclear fission and fusion - nuclear chain reactions - nuclear energy - light water nuclear power plant - breeder reactor - solar energy conversion - solar cells - wind energy. Batteries, fuel cells and supercapacitors: Types of batteries – primary battery (dry cell) secondary battery (lead acid battery, lithium-ion-battery) fuel cells – H<sub>2</sub>-O<sub>2</sub> fuel cell.

**TOTAL: 45 PERIODS****OUTCOMES:**

- The knowledge gained on engineering materials, fuels, energy sources and water treatment techniques will facilitate better understanding of engineering processes and applications for further learning.

**TEXT BOOKS:**

1. S. S. Dara and S. S. Umare, "A Textbook of Engineering Chemistry", S. Chand & Company LTD, New Delhi, 2015
2. P. C. Jain and Monika Jain, "Engineering Chemistry" Dhanpat Rai Publishing Company (P) LTD, New Delhi, 2015

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
- To expose them to existing national standards related to technical drawings.

**CONCEPTS AND CONVENTIONS (Not for Examination)**

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

**UNIT I PLANE CURVES AND FREEHAND SKETCHING 7+12**

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects

**UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACE 6+12**

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

**UNIT III PROJECTION OF SOLIDS 5+12**

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.

**UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES 5+12**

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.

**UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 6+12**

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method .

**TOTAL: 90 PERIODS****OUTCOMES:**

On successful completion of this course, the student will be able to

- familiarize with the fundamentals and standards of Engineering graphics
- perform freehand sketching of basic geometrical constructions and multiple views of objects.
- project orthographic projections of lines and plane surfaces.
- draw projections and solids and development of surfaces.
- visualize and to project isometric and perspective sections of simple solids.

4. IS 11669 – 1986 & SP 46 – 2003: Dimensioning of Technical Drawings.
5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods.

**Special points applicable to University Examinations on Engineering Graphics:**

1. There will be five questions, each of either or type covering all units of the syllabus.
2. All questions will carry equal marks of 20 each making a total of 100.
3. The answer paper shall consist of drawing sheets of A3 size only. The students will be permitted to use appropriate scale to fit solution within A3 size.
4. The examination will be conducted in appropriate sessions on the same day

**OBJECTIVES:**

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures — lists, tuples, dictionaries.
- To do input/output with files in Python.

**UNIT I ALGORITHMIC PROBLEM SOLVING 9**

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

**UNIT II DATA, EXPRESSIONS, STATEMENTS 9**

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

**UNIT III CONTROL FLOW, FUNCTIONS 9**

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

**UNIT IV LISTS, TUPLES, DICTIONARIES 9**

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

**UNIT V FILES, MODULES, PACKAGES 9**

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

**TOTAL : 45 PERIODS****OUTCOMES:**

**Upon completion of the course, students will be able to**

- Develop algorithmic solutions to simple computational problems
- Read, write, execute by hand simple Python programs.
- Structure simple Python programs for solving problems.
- Decompose a Python program into functions.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data from/to files in Python Programs.

**TEXT BOOKS:**

6. Timothy A. Budd, ``Exploring Python'', Mc-Graw Hill Education (India) Private Ltd., 2015.

**OBJECTIVES:**

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data **from/to files in Python.**

**LIST OF PROGRAMS**

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton's method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Programs that take command line arguments (word count)
11. Find the most frequent words in a text read from a file
12. Simulate elliptical orbits in Pygame
13. Simulate bouncing ball using Pygame

**PLATFORM NEEDED**

Python 3 interpreter for Windows/Linux

**TOTAL : 60 PERIODS**

**OUTCOMES:**

**Upon completion of the course, students will be able to**

- Write, test, and debug simple Python programs.
- Implement Python programs with conditionals and loops.
- Develop Python programs step-wise by defining functions and calling them.
- Use Python lists, tuples, dictionaries for representing compound data.
- Read and write data from/to files in Python.

**OBJECTIVES:**

- To introduce different experiments to test basic understanding of physics concepts applied in optics, thermal physics, properties of matter and liquids.

**LIST OF EXPERIMENTS: PHYSICS LABORATORY (Any 5 Experiments)**

1. Determination of rigidity modulus – Torsion pendulum
2. Determination of Young's modulus by non-uniform bending method
3. (a) Determination of wavelength, and particle size using Laser  
(b) Determination of acceptance angle in an optical fiber.
4. Determination of thermal conductivity of a bad conductor – Lee's Disc method.
5. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer
7. Determination of wavelength of mercury spectrum – spectrometer grating  
Determination of band gap of a semiconductor
8. Determination of thickness of a thin wire – Air wedge method

**TOTAL: 30 PERIODS****OUTCOMES:**

Upon completion of the course, the students will be able to

- apply principles of elasticity, optics and thermal properties for engineering applications.

**CHEMISTRY LABORATORY: (Any seven experiments to be conducted)****OBJECTIVES:**

- To make the student to acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
- To acquaint the students with the determination of molecular weight of a polymer by viscometry.

1. Estimation of HCl using  $\text{Na}_2\text{CO}_3$  as primary standard and Determination of alkalinity in water sample.
2. Determination of total, temporary & permanent hardness of water by EDTA method.
3. Determination of DO content of water sample by Winkler's method.
4. Determination of chloride content of water sample by argentometric method.
5. Estimation of copper content of the given solution by Iodometry.
6. Determination of strength of given hydrochloric acid using pH meter.
7. Determination of strength of acids in a mixture of acids using conductivity meter.
8. Estimation of iron content of the given solution using potentiometer.
9. Estimation of iron content of the water sample using spectrophotometer (1, 10-Phenanthroline / thiocyanate method).
10. Estimation of sodium and potassium present in water using flame photometer.
11. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.
12. Pseudo first order kinetics-ester hydrolysis.
13. Corrosion experiment-weight loss method.
14. Determination of CMC.
15. Phase change in a solid.
16. Conductometric titration of strong acid vs strong base.

**TOTAL: 30 PERIODS****OUTCOMES:**

- The students will be outfitted with hands-on knowledge in the quantitative chemical analysis of water quality related parameters.

**TEXTBOOKS:**

1. Vogel's Textbook of Quantitative Chemical Analysis (8<sup>TH</sup> edition, 2014)

**OBJECTIVES:**

The Course prepares second semester engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialisation.

**UNIT I INTRODUCTION TECHNICAL ENGLISH 12**

**Listening-** Listening to talks mostly of a scientific/technical nature and completing information-gap exercises-  
**Speaking** –Asking for and giving directions- **Reading** – reading short technical texts from journals- newspapers-  
**Writing-** purpose statements – extended definitions – issue- writing instructions – checklists-recommendations-  
**Vocabulary Development-** technical vocabulary **Language Development** –subject verb agreement - compound words.

**UNIT II READING AND STUDY SKILLS 12**

**Listening-** Listening to longer technical talks and completing exercises based on them-**Speaking** – describing a process-**Reading** – reading longer technical texts- identifying the various transitions in a text- paragraphing- **Writing-** interpreting charts, graphs- **Vocabulary Development** - vocabulary used in formal letters/emails and reports **Language Development-** impersonal passive voice, numerical adjectives.

**UNIT III TECHNICAL WRITING AND GRAMMAR 12**

**Listening-** Listening to classroom lectures/ talks on engineering/technology -**Speaking** –introduction to technical presentations- **Reading** – longer texts both general and technical, practice in speed reading; **Writing-**Describing a process, use of sequence words- **Vocabulary Development-** sequence words- Misspelled words. **Language Development-** embedded sentences.

**UNIT IV REPORT WRITING 12**

**Listening-** Listening to documentaries and making notes. **Speaking** –mechanics of presentations- **Reading** – reading for detailed comprehension- **Writing-** email etiquette- job application – cover letter –Résumé preparation( via email and hard copy)- analytical essays and issue based essays--**Vocabulary Development-** finding suitable synonyms- paraphrasing-. **Language Development-** clauses- if conditionals.

**UNIT V GROUP DISCUSSION AND JOB APPLICATIONS 12**

**Listening-** TED/Ink talks; **Speaking** –participating in a group discussion -**Reading**–reading and understanding technical articles **Writing**– Writing reports- minutes of a meeting- accident and survey-**Vocabulary Development-** verbal analogies **Language Development-** reported speech.

**TOTAL :60 PERIODS**

**OUTCOMES:**

At the end of the course learners will be able to:

- Read technical texts and write area- specific texts effortlessly.
- Listen and comprehend lectures and talks in their area of specialisation successfully.
- Speak appropriately and effectively in varied formal and informal contexts.
- Write reports and winning job applications.

**TEXT BOOKS:**

3. Kumar, Suresh. E. **Engineering English**. Orient Blackswan: Hyderabad, 2015
4. Means, L. Thomas and Elaine Langlois, **English & Communication For Colleges**. Cengage Learning, USA: 2007
5. Raman, Meenakshi and Sharma, Sangeetha- **Technical Communication Principles and Practice**. Oxford University Press: New Delhi, 2014.

**OBJECTIVES :**

- This course is designed to cover topics such as Matrix Algebra, Vector Calculus, Complex Analysis and Laplace Transform. Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering. Vector calculus can be widely used for modelling the various laws of physics. The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines.

**UNIT I MATRICES****12**

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

**UNIT II VECTOR CALCULUS****12**

Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Area of a curved surface - Volume integral - Green's, Gauss divergence and Stoke's theorems – Verification and application in evaluating line, surface and volume integrals.

**UNIT III ANALYTIC FUNCTIONS****12**

Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates - Properties – Harmonic conjugates – Construction of analytic function – Conformal mapping – Mapping by functions  $w = z + c$ ,  $c\bar{z}$ ,  $1/z$ ,  $z^2$  - Bilinear transformation.

**UNIT IV COMPLEX INTEGRATION****12**

Line integral - Cauchy's integral theorem – Cauchy's integral formula – Taylor's and Laurent's series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour.

**UNIT V LAPLACE TRANSFORMS****12**

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulse function – Basic properties – Shifting theorems - Transforms of derivatives and integrals – Initial and final value theorems – Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear second order ordinary differential equations with constant coefficients.

**TOTAL: 60 PERIODS****OUTCOMES :**

After successfully completing the course, the student will have a good understanding of the following topics and their applications:

- Eigenvalues and eigenvectors, diagonalization of a matrix, Symmetric matrices, Positive definite matrices and similar matrices.
- Gradient, divergence and curl of a vector point function and related identities.
- Evaluation of line, surface and volume integrals using Gauss, Stokes and Green's theorems and their verification.
- Analytic functions, conformal mapping and complex integration.
- Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.

5. Wylie, R.C. and Barrett, L.C., "Advanced Engineering Mathematics" Tata McGraw Hill Education Pvt. Ltd, 6<sup>th</sup> Edition, New Delhi, 2012.

**OBJECTIVE:**

- To introduce the principles of thermal, acoustics, optics and new materials for civil engineering applications.

**UNIT I THERMAL PERFORMANCE OF BUILDINGS 9**

Heat transfer through fenestrations, thermal insulation and its benefits - heat gain and heat loss estimation - factors affecting the thermal performance of buildings, thermal measurements, thermal comfort, indices of thermal comfort, climate and design of solar radiation, shading devices central heating. Principles of natural ventilation - ventilation measurements, design for natural ventilation - Window types and packaged air conditioners - chilled water plant - fan coil systems - water piping - cooling load - Air conditioning systems for different types of buildings - Protection against fire to be caused by A. C. Systems.

**UNIT II ACOUSTICS 9**

Classification of sound- decibel- Weber–Fechner law – Sabine’s formula- derivation using growth and decay method – Absorption Coefficient and its determination –factors affecting acoustics of buildings and their remedies. Methods of sound absorptions - absorbing materials - noise and its measurements, sound insulation and its measurements, impact of noise in multi-storeyed buildings.

**UNIT III LIGHTING DESIGNS 9**

Radiation quantities – spectral quantities – relationship between luminescence and radiant quantities – hemispherical reflectance and transmittance – photometry: cosines law, inverse square law. Vision – photopic, mesopic, scotopic visions. Colour – luminous efficiency function - Visual field glare, colour - day light calculations - day light design of windows, measurement of day-light and use of models and artificial skies, principles of artificial lighting, supplementary artificial lighting.

**UNIT IV NEW ENGINEERING MATERIALS 9**

Composites - definition and classification - Fibre reinforced plastics (FRP) and fiber reinforced metals (FRM) - Metallic glasses - Shape memory alloys - Ceramics - Classification - Crystalline - Non Crystalline - Bonded ceramics, Manufacturing methods - Slip casting - Isostatic pressing - Gas pressure bonding - Properties - thermal, mechanical, electrical and chemical ceramic fibres - ferroelectric and ferromagnetic ceramics - High Aluminium ceramics.

**UNIT V HAZARDS 9**

Seismology and Seismic waves - Earth quake ground motion - Basic concepts and estimation techniques - site effects - Probabilistic and deterministic Seismic hazard analysis - Cyclone and flood hazards - Fire hazards and fire protection, fire-proofing of materials, fire safety regulations and firefighting equipment - Prevention and safety measures.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

Upon completion of this course,

- the students will have knowledge on the thermal performance of buildings,
- the students will acquire knowledge on the acoustic properties of buildings,
- the students will get knowledge on various lighting designs for buildings,
- the students will gain knowledge on the properties and performance of engineering materials, and
- the students will understand the hazards of buildings.

**TEXT BOOKS:**

**REFERENCES:**

1. Gaur R.K. and Gupta S.L., Engineering Physics. Dhanpat Rai publishers, 2012.
2. Reiter, L. “Earthquake hazard analysis - Issues and insights”, Columbia University Press, 1991.
3. Shearer, P.M. “Introduction to Seismology”, Cambridge University Press, 1999.

**OBJECTIVES:**

- To study the nature and facts about environment.
- To finding and implementing scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To study the dynamic processes and understand the features of the earth's interior and surface.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.

**UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY****14**

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hill slopes, etc.

**UNIT II ENVIRONMENTAL POLLUTION****8**

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

**UNIT III NATURAL RESOURCES****10**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

**UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT****7**

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

**UNIT V HUMAN POPULATION AND THE ENVIRONMENT****6**

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

**TOTAL: 45 PERIODS****OUTCOMES:****SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

- Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental Protection. One will obtain knowledge on the following after completing the course.
- Public awareness of environmental is at infant stage.
- Ignorance and incomplete knowledge has lead to misconceptions
- Development and improvement in std. of living has lead to serious environmental disasters

**TEXTBOOKS:**

1. Benny Joseph, 'Environmental Science and Engineering', Tata McGraw-Hill, New Delhi, 2006.
2. Gilbert M.Masters, 'Introduction to Environmental Engineering and Science', 2<sup>nd</sup> edition, Pearson Education, 2004.

4. Rajagopalan, R, 'Environmental Studies-From Crisis to Cure', Oxford University Press, 2005.

**OBJECTIVES:**

- To explain the basic theorems used in Electrical circuits and the different components and function of electrical machines.
- To explain the fundamentals of semiconductor and applications.
- To explain the principles of digital electronics
- To impart knowledge of communication.

**UNIT I ELECTRICAL CIRCUITS & MEASUREMENTS 9**

Fundamental laws of electric circuits– Steady State Solution of DC Circuits – Introduction to AC Circuits – Sinusoidal steady state analysis– Power and Power factor – Single Phase and Three Phase Balanced Circuits. Classification of instruments – Operating Principles of indicating Instruments

**UNIT II ELECTRICAL MACHINES 9**

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

**UNIT III SEMICONDUCTOR DEVICES AND APPLICATIONS 9**

Introduction - Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier.

**UNIT IV DIGITAL ELECTRONICS 9**

Binary Number System – Boolean Algebra theorems– Digital circuits - Introduction to sequential Circuits– Flip-Flops – Registers and Counters – A/D and D/A Conversion – digital processing architecture.

**UNIT V FUNDAMENTALS OF COMMUNICATION ENGINEERING 9**

Introduction – Elements of Communication Systems– Modulation and Demodulation: Principles of Amplitude and Frequency Modulations. Digital Communication - Communication Systems: Radio, Antenna, TV, Fax, ISDN, Microwave, Satellite and Optical Fibre (Block Diagram Approach only).

**TOTAL: 45 PERIODS****OUTCOMES:**

- ability to identify the electrical components and explain the characteristics of electrical machines.
- ability to identify electronics components and understand the characteristics

**TEXT BOOKS:**

1. D P Kothari and I.J Nagarath, "Electrical Machines "Basic Electrical and Electronics Engineering", McGraw Hill Education(India) Private Limited, Third Reprint ,2016

6. Nagsarkar T K and Sukhija M S, "Basics of Electrical Engineering", Oxford press 2005.

**OBJECTIVES:**

- To develop capacity to predict the effect of force and motion in the course of carrying out the design functions of engineering.

**UNIT I STATICS OF PARTICLES 9+6**

Introduction – Units and Dimensions – Laws of Mechanics – Lami's theorem, Parallelogram and triangular Law of forces – Vectorial representation of forces – Vector operations of forces - additions, subtraction, dot product, cross product – Coplanar Forces – rectangular components – Equilibrium of a particle – Forces in space – Equilibrium of a particle in space – Equivalent systems of forces – Principle of transmissibility .

**UNIT II EQUILIBRIUM OF RIGID BODIES 9+6**

Free body diagram – Types of supports – Action and reaction forces – stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon's theorem – Single equivalent force -Equilibrium of Rigid bodies in two dimensions – Equilibrium of Rigid bodies in three dimensions

**UNIT III PROPERTIES OF SURFACES AND SOLIDS 9+6**

Centroids and centre of mass – Centroids of lines and areas - Rectangular, circular, triangular areas by integration – T section, I section, - Angle section, Hollow section by using standard formula – Theorems of Pappus - Area moments of inertia of plane areas – Rectangular, circular, triangular areas by integration – T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Principal moments of inertia of plane areas – Principal axes of inertia-Mass moment of inertia – mass moment of inertia for prismatic, cylindrical and spherical solids from first principle – Relation to area moments of inertia.

**UNIT IV DYNAMICS OF PARTICLES 9+6**

Displacements, Velocity and acceleration, their relationship – Relative motion – Curvilinear motion Newton's laws of motion – Work Energy Equation – Impulse and Momentum – Impact of elastic bodies.

**UNIT V FRICTION AND RIGID BODY DYNAMICS 9+6**

Friction force – Laws of sliding friction – equilibrium analysis of simple systems with sliding friction – wedge friction-. Rolling resistance -Translation and Rotation of Rigid Bodies – Velocity and acceleration – General Plane motion of simple rigid bodies such as cylinder, disc/wheel and sphere.

**TOTAL : (45+30)=75 PERIODS**

**OUTCOMES:**

On successful completion of this course, the student will be able to

- illustrate the vectorial and scalar representation of forces and moments
- analyse the rigid body in equilibrium
- evaluate the properties of surfaces and solids
- calculate dynamic forces exerted in rigid body
- determine the friction and the effects by the laws of friction

**TEXT BOOKS:**

**OBJECTIVES:**

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

**GROUP A (CIVIL & MECHANICAL)****I CIVIL ENGINEERING PRACTICE****14****Buildings:**

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

(a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.

(b) Study of pipe connections requirements for pumps and turbines.

(c) Preparation of plumbing line sketches for water supply and sewage works.

(d) Hands-on-exercise:

Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.

(e) Demonstration of plumbing requirements of high-rise buildings.

**Carpentry using Power Tools only:**

(a) Study of the joints in roofs, doors, windows and furniture.

(b) Hands-on-exercise:

Wood work, joints by sawing, planing and cutting.

**II MECHANICAL ENGINEERING PRACTICE****18****Welding:**

(a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.

(b) Gas welding practice

**Basic Machining:**

(a) Simple Turning and Taper turning

(b) Drilling Practice

**Sheet Metal Work:**

(a) Forming & Bending:

(b) Model making – Trays and funnels.

(c) Different type of joints.

(a) Study of centrifugal pump

(b) Study of air conditioner

(a) Smithy operations, upsetting, swaging, setting down and bending. Example – Exercise – Production of hexagonal headed bolt.

(b) Foundry operations like mould preparation for gear and step cone pulley.

(c) Fitting – Exercises – Preparation of square fitting and V – fitting models.

**GROUP B (ELECTRICAL & ELECTRONICS)****III ELECTRICAL ENGINEERING PRACTICE****12****13**

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.

2. Fluorescent lamp wiring.

3. Stair case wiring

4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.

5. Measurement of energy using single phase energy meter.

6. Measurement of resistance to earth of an electrical equipment.

**IV ELECTRONICS ENGINEERING PRACTICE****16**

1. Study of Electronic components and equipments – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.
2. Study of logic gates AND, OR, EX-OR and NOT.
3. Generation of Clock Signal.
4. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
5. Measurement of ripple factor of HWR and FWR.

**TOTAL: 60 PERIODS****OUTCOMES:**

On successful completion of this course, the student will be able to

- fabricate carpentry components and pipe connections including plumbing works.
- use welding equipments to join the structures.
- Carry out the basic machining operations
- Make the models using sheet metal works
- Illustrate on centrifugal pump, Air conditioner, operations of smithy, foundry and fittings
- Carry out basic home electrical works and appliances
- Measure the electrical quantities
- Elaborate on the components, gates, soldering practices.

**LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:****CIVIL**

- |   |          |
|---|----------|
| 1. Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings. | 15 Sets. |
| 2. Carpentry vice (fitted to work bench)  | 15 Nos.  |
| 3. Standard woodworking tools   | 15 Sets. |
| 4. Models of industrial trusses, door joints, furniture joints  | 5 each   |
| 5. Power Tools:   |          |
| (a) Rotary Hammer   | 2 Nos    |
| (b) Demolition Hammer   | 2 Nos    |
| (c) Circular Saw  | 2 Nos    |
| (d) Planer  | 2 Nos    |
| (e) Hand Drilling Machine   | 2 Nos    |
| (f) Jigsaw  | 2 Nos    |

**MECHANICAL**

- |   |           |
|---|-----------|
| 1. Arc welding transformer with cables and holders                            | 5 Nos.    |
| 2. Welding booth with exhaust facility  | 5 Nos.    |
| 3. Welding accessories like welding shield, chipping hammer, wire brush, etc. | 5 Sets.   |
| 4. Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.    | 2 Nos.    |
| 5. Centre lathe   | 2 Nos.    |
| 6. Hearth furnace, anvil and smithy tools                                     | 2 Sets.   |
| 7. Moulding table, foundry tools  | 2 Sets.   |
| 8. Power Tool: Angle Grinder  | 2 Nos     |
| 9. Study-purpose items: centrifugal pump, air-conditioner                     | One each. |

**ELECTRICAL**

- |   |         |
|---|---------|
| 1. Assorted electrical components for house wiring                  | 15 Sets |
| 2. Electrical measuring instruments                                 | 10 Sets |
| 3. Study purpose items: Iron box, fan and regulator, emergency lamp | 1 each  |
| 4. Megger (250V/500V)   | 1 No.   |
| 5. Power Tools: (a) Range Finder                                    | 2 Nos   |
|   | Nos     |
| (b) Digital Live-wire detector                                      | 2       |

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

## **ELECTRONICS**

- |   |         |
|---|---------|
| 1. Soldering guns   | 10 Nos. |
| 2. Assorted electronic components for making circuits                 | 50 Nos. |
| 3. Small PCBs   | 10 Nos. |
| 4. Multimeters  | 10 Nos. |
| 5. Study purpose items: Telephone, FM radio, low-voltage power supply |         |

**OBJECTIVES:**

- To introduce the students to draft the plan, elevation and sectional views of buildings in accordance with development and control rules satisfying orientation and functional requirements as per National Building Code.

**LIST OF EXPERIMENTS**

1. Principles of planning, orientation and complete joinery details (Paneled and Glazed Doors and Windows)
2. Buildings with load bearing walls
3. Buildings with sloping roof
4. R.C.C. framed structures.
5. Industrial buildings – North light roof structures

**TOTAL: 60 PERIODS****OUTCOMES:**

- The students will be able to draft the plan, elevation and sectional views of the buildings, industrial structures, and framed buildings using computer softwares.

**TEXTBOOKS:**

1. Sikka V.B., A Course in Civil Engineering Drawing, 4<sup>th</sup> Edition, S.K.Kataria and Sons, 2015.
2. George Omura, Mastering in Autocad 2005 and Autocad LT 2005– BPB Publications, 2008

3. Shah.M.G., Kale. C.M. and Patki.S.Y., Building Drawing with an Integrated Approach to Built Environment, Tata McGraw Hill Publishers Limited, 2007.
4. Verma.B.P., Civil Engineering Drawing and House Planning, Khanna Publishers, 2010.

**OBJECTIVES :**

- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.

**UNIT I PARTIAL DIFFERENTIAL EQUATIONS 12**

Formation of partial differential equations – Singular integrals - Solutions of standard types of first order partial differential equations - Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.

**UNIT II FOURIER SERIES 12**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis.

**UNIT III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12**

Classification of PDE – Method of separation of variables - Fourier Series Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heat conduction.

**UNIT IV FOURIER TRANSFORMS 12**

Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

**UNIT V Z - TRANSFORMS AND DIFFERENCE EQUATIONS 12**

Z-transforms - Elementary properties – Inverse Z-transform (using partial fraction and residues) – Initial and final value theorems - Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

**TOTAL: 60 PERIODS****OUTCOMES :**

Upon successful completion of the course, students should be able to:

- Understand how to solve the given standard partial differential equations.
- Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
- Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
- Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

**OBJECTIVE:**

- At the end of this course the students will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and to apply this knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor.

**UNIT I PHYSICAL GEOLOGY 9**

Geology in civil engineering – branches of geology – structure of earth and its composition weathering of rocks – scale of weathering – soils - landforms and processes associated with river, wind, groundwater and sea – relevance to civil engineering. Plate tectonics – Earth quakes – Seismic zones in India.

**UNIT II MINEROLOGY 9**

Physical properties of minerals – Quartz group, Feldspar group, Pyroxene - hypersthene and augite, Amphibole – hornblende, Mica – muscovite and biotite, Calcite, Gypsum and Clay minerals.

**UNIT III PETROLOGY 9**

Classification of rocks, distinction between Igneous, Sedimentary and Metamorphic rocks. Engineering properties of rocks. Description, occurrence, engineering properties, distribution and uses of Granite, Dolerite, Basalt, Sandstone, Limestone, Laterite, Shale, Quartzite, Marble, Slate, Gneiss and Schist.

**UNIT IV STRUCTURAL GEOLOGY AND GEOPHYSICAL METHODS 9**

Geological maps – attitude of beds, study of structures – folds, faults and joints – relevance to civil engineering. Geophysical methods – Seismic and electrical methods for subsurface investigations.

**UNIT V APPLICATION OF GEOLOGICAL INVESTIGATIONS 9**

Remote sensing for civil engineering applications; Geological conditions necessary for design and construction of Dams, Reservoirs, Tunnels, and Road cuttings - Hydrogeological investigations and mining - Coastal protection structures. Investigation of Landslides, causes and mitigation.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students completing this course

- Will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and the action of various geological agencies.
- Will get basics knowledge on properties of minerals.
- Gain knowledge about types of rocks, their distribution and uses.
- Will understand the methods of study on geological structure.
- Will understand the application of geological investigation in projects such as dams, tunnels, bridges, roads, airport and harbor

3. Dobrin, M.B "An introduction to geophysical prospecting", McGraw Hill, New Delhi, 1988.

**OBJECTIVE:**

- To introduce students to various materials commonly used in civil engineering construction and their properties.

**UNIT I STONES – BRICKS – CONCRETE BLOCKS 9**

Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacturing of clay bricks – Tests on bricks – Compressive Strength – Water Absorption – Efflorescence – Bricks for special use – Refractory bricks – Concrete blocks – Lightweight concrete blocks.

**UNIT II LIME – CEMENT – AGGREGATES – MORTAR 9**

Lime – Preparation of lime mortar – Cement – Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar – Hydration – Compressive strength – Tensile strength – Fineness– Soundness and consistency – Setting time – fine aggregates – river sand – crushed stone sand – properties – coarse Aggregates – Crushing strength – Impact strength – Flakiness Index – Elongation Index – Abrasion Resistance – Grading

**UNIT III CONCRETE 9**

Concrete – Ingredients – Manufacturing Process – Batching plants –mixing – transporting – placing – compaction of concrete –curing and finishing – Ready mix Concrete – Mix specification.

**UNIT IV TIMBER AND OTHER MATERIALS 9**

Timber – Market forms – Industrial timber– Plywood – Veneer – Thermocol – Panels of laminates – Steel – Aluminum and Other Metallic Materials – Composition – Aluminium composite panel – Market forms – Mechanical treatment – Paints – Varnishes – Distempers – Bitumens.

**UNIT V MODERN MATERIALS 9**

Glass – Ceramics – Sealants for joints – Fibre glass reinforced plastic – Clay products –Refractories – Composite materials – Types – Applications of laminar composites – Fibre textiles– Geomembranes and Geotextiles for earth reinforcement.

**TOTAL: 45 PERIODS****OUTCOMES:**

On completion of this course the students will be able to

- Compare the properties of most common and advanced building materials.
- understand the typical and potential applications of lime, cement and aggregates
- know the production of concrete and also the method of placing and making of concrete elements.
- understand the applications of timbers and other materials
- Understand the importance of modern material for construction.

**OBJECTIVES:**

- To learn the fundamental concepts of Stress, Strain and deformation of solids.□
- To know the mechanism of load transfer in beams, the induced stress resultants and deformations.□
- To understand the effect of torsion on shafts and springs.□
- To analyze plane and space trusses□

**UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 12**

Simple Stresses and strains – Elastic constants - Relationship between elastic constants – Stress Strain Diagram – Ultimate Stress – Yield Stress – Deformation of axially loaded member - Composite Bars - Thermal Stresses – State of Stress in two dimensions – Stresses on inclined planes – Principal Stresses and Principal Planes – Maximum shear stress - Mohr's circle method.

**UNIT II TRANSFER OF LOADS AND STRESSES IN BEAMS 12**

Types of loads, supports, beams – concept of shearing force and bending moment - Relationship between intensity of load, Shear Force and Bending moment - Shear Force and Bending Moment Diagrams for Cantilever, simply supported and overhanging beams with concentrated load, uniformly distributed load, uniformly varying load and concentrated moment. Theory of Simple Bending – Stress Distribution due to bending moment and shearing force - Flitched Beams - Leaf Springs.

**UNIT III DEFLECTION OF BEAMS 12**

Elastic curve – Governing differential equation - Double integration method - Macaulay's method - Area moment method - conjugate beam method for computation of slope and deflection of determinant beams.

**UNIT IV TORSION 12**

Theory of Torsion – Stresses and Deformations in Solid and Hollow Circular Shafts – combined bending moment and torsion of shafts - Power transmitted to shaft – Shaft in series and parallel – Closed and Open Coiled helical springs – springs in series and parallel – Design of buffer springs.

**UNIT V ANALYSIS OF TRUSSES 12**

Determinate and indeterminate trusses - Analysis of pin jointed plane determinate trusses by method of joints, method of sections and tension coefficient – Analysis of Space trusses by tension coefficient method.

**TOTAL :60 PERIODS****OUTCOMES:**

Students will be able to

- Understand the concepts of stress and strain, principal stresses and principal planes.
- Determine Shear force and bending moment in beams and understand concept of theory of simple bending.
- Calculate the deflection of beams by different methods and selection of method for determining slope or deflection.
- Apply basic equation of torsion in design of circular shafts and helical springs, .
- Analyze the pin jointed plane and space trusses

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To understand the basic properties of the fluid, fluid kinematics, fluid dynamics and to analyze and appreciate the complexities involved in solving the fluid flow problems.

**UNIT I FLUID PROPERTIES AND FLUID STATICS 12**

Fluid – definition, distinction between solid and fluid - Units and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapour pressure, capillarity and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures - pressure measurements by manometers- forces on planes – centre of pressure – buoyancy and floatation.

**UNIT II FLUID KINEMATICS AND DYNAMICS 12**

Fluid Kinematics – Classification and types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- stream line-streak line-path line- stream function - velocity potential function - flow net. Fluid dynamics - equations of motion -Euler's equation along a streamline - Bernoulli's equation – applications - venturi meter, orifice meter and Pitot tube- linear momentum equation and its application to pipe bend.

**UNIT III DIMENSIONAL ANALYSIS AND MODEL STUDIES 12**

Fundamental dimensions - dimensional homogeneity - Rayleigh's method and Buckingham Pi-theorem - dimensionless parameters - similitudes and model studies - distorted models.

**UNIT IV FLOW THROUGH PIPES 12**

Reynold's experiment - laminar flow through circular pipe (Hagen poiseulle's) - hydraulic and energy gradient – flow through pipes - Darcy - Weisbach's equation - pipe roughness -friction factor-Moody's diagram- major and minor losses of flow in pipes - pipes in series and in parallel.

**UNIT V BOUNDARY LAYER 12**

Boundary layer – definition- boundary layer on a flat plate – laminar and turbulent boundary layer-displacement, energy and momentum thickness – Momentum integral equation-Boundary layer separation and control – drag on flat plate.

**TOTAL: 60 PERIODS****OUTCOMES:**

At the end of the course students will be able to

- Get a basic knowledge of fluids in static, kinematic and dynamic equilibrium.
- Understand and solve the problems related to equation of motion.
- Gain knowledge about dimensional and model analysis.
- Learn types of flow and losses of flow in pipes.
- Understand and solve the boundary layer problems.

**OBJECTIVES :**

- To introduce the rudiments of plane surveying and geodetic principles to Civil Engineers.
- To learn the various methods of plane and geodetic surveying to solve the real world Civil Engineering problems.
- To introduce the concepts of Control Surveying
- To introduce the basics of Astronomical Surveying

**UNIT I FUNDAMENTALS OF CONVENTIONAL SURVEYING AND LEVELLING 12**

Classifications and basic principles of surveying - Equipment and accessories for ranging and chaining - Methods of ranging - Compass - Types of Compass - Basic Principles- Bearing – Types - True Bearing - Magnetic Bearing - Levelling- Principles and theory of Levelling – Datum- - Bench Marks – Temporary and Permanent Adjustments- Methods of Levelling- Booking – Reduction - Sources of errors in Levelling - Curvature and refraction.

**UNIT II THEODOLITE AND TACHEOMETRIC SURVEYING 12**

Horizontal and vertical angle measurements - Temporary and permanent adjustments - Heights and distances - Tacheometer - Stadia Constants - Analytic Lens -Tangential and Stadia Tacheometry surveying - Contour – Contouring – Characteristics of contours – Methods of contouring – Tacheometric contouring - Contour gradient – Uses of contour plan and map

**UNIT III CONTROL SURVEYING AND ADJUSTMENT 12**

Horizontal and vertical control – Methods – specifications – triangulation- baseline – satellite stations – reduction to centre- trigonometrical levelling – single and reciprocal observations – traversing – Gale’s table. - Errors Sources- precautions and corrections – classification of errors –true and most probable values - weighed observations – method of equal shifts – principle of least squares - normal equation – correlates- level nets- adjustment of simple triangulation networks.

**UNIT IV ADVANCED TOPICS IN SURVEYING 12**

Hydrographic Surveying – Tides – MSL – Sounding methods – Three point problem – Strength of fix – astronomical Surveying – Field observations and determination of Azimuth by altitude and hour and methods- Astronomical terms and definitions-coordinate systems-different time systems-Nautical corrections-Field observations and determination altitude and hour angle method

**UNIT V MODERN SURVEYING**

Total Station : Advantages - Fundamental quantities measured- Parts and a principle On board calculations - Field procedure - Errors and good station GPS Surveying : Different segments – space control configuration-signal structure - Orbit determination and representation. Selective availability- Task of control segment –processing – traversing and triangulation.

**TOTAL : 60 PERIODS****OUTCOMES :**

At the end of the course the student will be able to understand

- The use of various surveying instruments and mapping
- Measuring Horizontal angle and vertical angle using different instruments
- Methods of Leveling and setting Levels with different instruments
- Concepts of astronomical surveying and methods to determine time, longitude, latitude and azimuth
- Concept and principle of modern surveying.

5. Arora K.R., "Surveying Vol I & II", Standard Book house, 10<sup>th</sup> Edition 2008

**OBJECTIVE :**

- At the end of the course the student will possess knowledge about Survey field techniques

**LIST OF EXPERIMENTS:****Chain Survey 12**

1. Study of chains and its accessories, Aligning, Ranging, Chaining and Marking Perpendicular offset
2. Setting out works – Foundation marking using tapes single Room and Double Room

**Compass Survey 12**

3. Compass Traversing – Measuring Bearings & arriving included angles

**Levelling - Study of levels and levelling staff**

4. Fly levelling using Dumpy level & Tilting level
5. Check levelling

**Theodolite - Study of Theodolite 12**

6. Measurements of horizontal angles by reiteration and repetition and vertical angles
7. Determination of elevation of an object using single plane method when base is accessible/inaccessible.

**Tacheometry – Tangential system – Stadia system 12**

8. Determination of Tacheometric Constants
9. Heights and distances by stadia Tacheometry
10. Heights and distances by Tangential Tacheometry

**Total Station - Study of Total Station, Measuring Horizontal and vertical angles 12**

12. Traverse using Total station and Area of Traverse
13. Determination of distance and difference in elevation between two inaccessible points using Total station

**TOTAL: 60 PERIODS****OUTCOME:**

- Students completing this course would have acquired practical knowledge on handling basic survey instruments including Theodolite, Tacheometry, Total Station and GPS and have adequate knowledge to carryout Triangulation and Astronomical surveying including general field marking for various engineering projects and Location of site etc.

**LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS**

<b>Sl.No.</b>	<b>Description of Equipment</b>	<b>Quantity</b>
1.	Total Station	3 Nos
2.	Theodolites	Atleast 1 for every 5 students
3.	Dumpy level / Filling level	Atleast 1 for every 5 students
4.	Pocket stereoscope	1
5.	Ranging rods	1 for a set of 5 students
6.	Levelling staff	
7.	Cross staff	
8.	Chains	
9.	Tapes	
10.	Arrows	
11.	Prismatic Compass	10 nos
12.	Surveyor Compass	2 nos
13.	Survey grade or Hand held GPS	3 nos

**OBJECTIVE:**

- To facilitate the understanding of the behavior of construction materials.

**I. TEST ON FINE AGGREGATES**

12

1. Grading of fine aggregates
2. Test for specific gravity and test for bulk density
3. Compacted and loose bulk density of fine aggregate

**II. TEST ON COARSE AGGREGATE**

12

1. Determination of impact value of coarse aggregate
2. Determination of elongation index
3. Determination of flakiness index
4. Determination of aggregate crushing value of coarse aggregate

**III. TEST ON CONCRETE**

12

1. Test for Slump
2. Test for Compaction factor
3. Test for Compressive strength - Cube & Cylinder
4. Test for Flexural strength

**IV. TEST ON BRICKS AND BLOCKS**

12

1. Test for compressive strength of bricks and blocks
2. Test for Water absorption of bricks and blocks
3. Determination of Efflorescence of bricks
4. Test on tiles

**TOTAL: 60 PERIODS****OUTCOME:**

- The students will have the required knowledge in the area of testing of construction materials and components of construction elements experimentally.

**REFERENCES:**

1. Construction Materials Laboratory Manual, Anna University, Chennai-600 025.
2. IS 4031 (Part 1) – 1996 – Indian Standard Method for determination of fineness by drysieving.
3. IS 2386 (Part 1 to Part 6) – 1963 – Indian Standard methods for test for aggregate for concrete
4. IS 383 – 1970 Indian Standard specification for coarse and fine aggregates from natural sources for concrete.

**OBJECTIVES:**

The Course will enable learners to:

- Equip students with the English language skills required for the successful undertaking of academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage in specific academic speaking activities.
- improve general and academic listening skills
- Make effective presentations.

**UNIT I****6**

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation - pronunciation basics taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances.

**UNIT II****6**

Listen to a process information- give information, as part of a simple explanation - conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics.

**UNIT III****6**

Lexical chunking for accuracy and fluency- factors influence fluency, deliver a five-minute informal talk - greet - respond to greetings - describe health and symptoms - invite and offer - accept - decline - take leave - listen for and follow the gist- listen for detail

**UNIT IV****6**

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizing academic readings and lectures conversational speech listening to and participating in conversations - persuade.

**UNIT V****6**

Formal and informal talk - listen to follow and respond to explanations, directions and instructions in academic and business contexts - strategies for presentations and interactive communication - group/pair presentations - negotiate disagreement in group work.

**TOTAL : 30 PERIODS****OUTCOMES:**

At the end of the course Learners will be able to:

- Listen and respond appropriately.
- Participate in group discussions
- Make effective presentations
- Participate confidently and appropriately in conversations both formal and informal

**TEXTBOOKS:**

4. Richards C. Jack. Person to Person (Starter). Oxford University Press: Oxford, 2006.
5. Ladousse, Gillian Porter. Role Play. Oxford University Press: Oxford, 2014

**OBJECTIVES :**

- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the numerical techniques of interpolation in various intervals in real life situations.
- To acquaint the student with understanding of numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquaint the knowledge of various techniques and methods of solving ordinary differential equations.
- To understand the knowledge of various techniques and methods of solving various types of partial differential equations.

**UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 12**

Solution of algebraic and transcendental equations - Fixed point iteration method – Newton Raphson method - Solution of linear system of equations - Gauss elimination method – Pivoting - Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel - Eigenvalues of a matrix by power method and Jacobi's method for symmetric matrices.

**UNIT II INTERPOLATION AND APPROXIMATION 12**

Interpolation with unequal intervals - Lagrange's interpolation – Newton's divided difference interpolation- Cubic Splines - Difference operators and relations Interpolation intervals-with equal - Newton's forward and backward difference formulae.

**UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 12**

Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson's 1/3 rule – Romberg's Method - Two point and three point Gaussian quadrature formulae – Evaluation of double integrals by Trapezoidal and Simpson's 1/3 rule – Romberg's Method - Two point and three point simpson's 1/3 rule

**UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 12**

Single step methods - Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge - Kutta method for solving first order equations - Multi step methods - Milne's and Adams - Bash forth predictor corrector methods for solving first order equations.

**UNIT V BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 12**

Finite difference methods for solving second order two - point linear boundary value problems - Finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain – One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods – One dimensional wave equation by explicit method.

**TOTAL : 60 PERIODS****OUTCOMES :**

Upon successful completion of the course, students should be able to:

- Understand the basic concepts and techniques of solving algebraic and transcendental equations.
- Appreciate the numerical techniques of interpolation and error approximations in various intervals in real life situations.
- Apply the numerical techniques of differentiation and integration for engineering problems.
- Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.
- Solve the partial and ordinary differential equations with initial and boundary conditions by using certain techniques with engineering applications.

**OBJECTIVE:**

- The main objective of this course is to make the student aware of the various construction techniques, practices and the equipment needed for different types of construction activities. At the end of this course the student shall have a reasonable knowledge about the various construction procedures for sub to super structure and also the equipment needed for construction of various types of structures from foundation to super structure.

**UNIT I CONSTRUCTION TECHNIQUES 9**

Structural systems - Load Bearing Structure - Framed Structure - Load transfer mechanism – floor system - Development of construction techniques - High rise Building Technology - Seismic effect - Environmental impact of materials – responsible sourcing - Eco Building (Green Building) - Material used - Construction methods - Natural Buildings - Passive buildings - Intelligent(Smart) buildings - Meaning - Building automation - Energy efficient buildings for various zones-Case studies of residential, office buildings and other buildings in each zones.

**UNIT II CONSTRUCTION PRACTICES 9**

Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork - masonry – stone masonry – Bond in masonry - concrete hollow block masonry – flooring – damp proof courses – construction joints – movement and expansion joints – pre cast pavements – Building foundations – basements – temporary shed – centering and shuttering – slip forms – scaffoldings – de-shuttering forms – Fabrication and erection of steel trusses – frames – braced domes – laying brick – weather and water proof – roof finishes – acoustic and fire protection.

**UNIT III SUB STRUCTURE CONSTRUCTION 9**

Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques - well and caisson - sinking cofferdam - cable anchoring and grouting - driving diaphragm walls, sheet piles - shoring for deep cutting - well points -Dewatering and stand by Plant equipment for underground open excavation.

**UNIT IV SUPER STRUCTURE CONSTRUCTION 9**

Launching girders, bridge decks, off shore platforms – special forms for shells - techniques for heavy decks – in-situ pre-stressing in high rise structures, Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors - Erection of articulated structures, braced domes and space decks.

**UNIT V CONSTRUCTION EQUIPMENT 9**

Selection of equipment for earth work - earth moving operations - types of earthwork equipment - tractors, motor graders, scrapers, front end loaders, earth movers – Equipment for foundation and pile driving. Equipment for compaction, batching, mixing and concreting - Equipment for material handling and erection of structures – types of cranes - Equipment for dredging, trenching, tunneling.

**TOTAL: 45 PERIODS****OUTCOMES:**

On successful completion of this course, students will be able to:

- know the different construction techniques and structural systems
- Understand various techniques and practices on masonry construction, flooring, and roofing.
- Plan the requirements for substructure construction.
- Know the methods and techniques involved in the construction of various types of super structures
- Select, maintain and operate hand and power tools and equipment used in the building construction sites.

**OBJECTIVES:**

- To know the method of finding slope and deflection of beams and trusses using energy theorems and to know the concept of analysing indeterminate beam
- To estimate the load carrying capacity of columns, stresses due to unsymmetrical bending and various theories for failure of material.

**UNIT I ENERGY PRINCIPLES 12**

Strain energy and strain energy density – strain energy due to axial load (gradual, sudden and impact loadings), shear, flexure and torsion – Castigliano's theorems – Maxwell's reciprocal theorem - Principle of virtual work – unit load method - Application of energy theorems for computing deflections in determinate beams, plane frames and plane trusses – lack of fit and temperature effects - Williot Mohr's Diagram.

**UNIT II INDETERMINATE BEAMS 12**

Concept of Analysis - Propped cantilever and fixed beams - fixed end moments and reactions – sinking and rotation of supports - Theorem of three moments – analysis of continuous beams – shear force and bending moment diagrams.

**UNIT III COLUMNS AND CYLINDERS 12**

Euler's column theory – critical load for prismatic columns with different end conditions – Effective length – limitations - Rankine-Gordon formula - Eccentrically loaded columns – middle third rule - core of a section – Thin cylindrical and spherical shells – stresses and change in dimensions - Thick cylinders – Compound cylinders – shrinking on stresses.

**UNIT IV STATE OF STRESS IN THREE DIMENSIONS 12**

Stress tensor at a point – Stress invariants - Determination of principal stresses and principal planes - Volumetric strain. Theories of failure: Maximum Principal stress theory – Maximum Principal strain theory – Maximum shear stress theory – Total Strain energy theory – Maximum distortion energy theory – Application problems.

**UNIT V ADVANCED TOPICS 12**

Unsymmetrical bending of beams of symmetrical and unsymmetrical sections – Shear Centre - curved beams – Winkler Bach formula – stresses in hooks.

**TOTAL: 60 PERIODS****OUTCOMES:**

Students will be able to

- Determine the strain energy and compute the deflection of determinate beams, frames and trusses using energy principles.
- Analyze propped cantilever, fixed beams and continuous beams using theorem of three moment equation for external loadings and support settlements.
- find the load carrying capacity of columns and stresses induced in columns and cylinders
- Determine principal stresses and planes for an element in three dimensional state of stress and study various theories of failure
- Determine the stresses due to Unsymmetrical bending of beams, locate the shear center, and find the stresses in curved beams.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines. At the completion of the course, the student should be able to relate the theory and practice of problems in hydraulic engineering.

**UNIT I UNIFORM FLOW 12**

Definition and differences between pipe flow and open channel flow - Types of Flow - Properties of open channel - Velocity distribution in open channel - Steady uniform flow: Chezy equation, Manning equation - Best hydraulic sections for uniform flow – Wide open channel - Specific energy and specific force – Critical flow .

**UNIT II GRADUALLY VARIED FLOW 12**

Dynamic equations of gradually varied flows – Types of flow profiles - Classifications: Computation by Direct step method and Standard step method – Control section – Break in Grade – Computation.

**UNIT III RAPIDLY VARIED FLOW 12**

Application of the momentum equation for RVF - Hydraulic jumps - Types - Energy dissipation – Celerity – Rapidly varied unsteady flows (positive and negative surges)

**UNIT IV TURBINES 12**

Impact of Jet on flat, curved plates, Stationary and Moving –Classification of Turbines – Pelton wheel – Francis turbine – Kaplan turbine - Specific speed – Characteristic Curves of Turbines-Draft tube and cavitation.

**UNIT V PUMPS 12**

Classification of Pumps - Centrifugal pumps – Work done - Minimum speed to start the pump - NPSH - Multistage pumps – Characteristics curve - Reciprocating pumps - Negative slip - Indicator diagrams and its variations – Air vessels - Savings in work done.

**TOTAL : 60 PERIODS****OUTCOMES:**

On completion of this course the students will be able to

- Apply their knowledge of fluid mechanics in addressing problems in open channels.
- Able to identify a effective section for flow in different cross sections.
- To solve problems in uniform, gradually and rapidly varied flows in steady state conditions.
- Understand the principles, working and application of turbines.
- Understand the principles, working and application of pumps.

**OBJECTIVE:**

- To impart knowledge to the students on the properties of materials for concrete by suitable tests, mix design for concrete and special concretes.

**UNIT I      CONSTITUENT MATERIALS      9**

Cement - Different types - Chemical composition and Properties – Hydration of cement - Tests on cement - IS Specifications - Aggregates – Classification - Mechanical properties and tests as per BIS - Grading requirements – Water - Quality of water for use in concrete.

**UNIT II      CHEMICAL AND MINERAL ADMIXTURES      9**

Accelerators – Retarders - Plasticizers - Super plasticizers - Water proofers - Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaoline - Effects on concrete properties.

**UNIT III      PROPORTIONING OF CONCRETE MIX      9**

Principles of Mix Proportioning - Properties of concrete related to Mix Design - Physical properties of materials required for Mix Design - Design Mix and Nominal Mix - BIS Method of Mix Design - Mix Design Examples

**UNIT IV      FRESH AND HARDENED PROPERTIES OF CONCRETE      9**

Workability - Tests for workability of concrete - Segregation and Bleeding - Determination of strength Properties of Hardened concrete - Compressive strength – split tensile strength - Flexural strength - Stress-strain curve for concrete - Modulus of elasticity – durability of concrete – water absorption – permeability – corrosion test – acid resistance.

**UNIT V      SPECIAL CONCRETES      9**

Light weight concretes - foam concrete- self compacting concrete – vacuum concrete - High strength concrete - Fibre reinforced concrete – Ferrocement - Ready mix concrete – SIFCON - Shotcrete – Polymer concrete - High performance concrete - Geopolymer Concrete.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to understand

- The various requirements of cement, aggregates and water for making concrete
- The effect of admixtures on properties of concrete
- The concept and procedure of mix design as per IS method
- The properties of concrete at fresh and hardened state
- The importance and application of special concretes.

**OBJECTIVE:**

- To impart knowledge to classify the soil based on index properties and to assess their engineering properties based on the classification. To familiarize the students about the fundamental concepts of compaction, flow through soil, stress transformation, stress distribution, consolidation and shear strength of soils. To impart knowledge of design of both finite and infinite slopes.

**UNIT I SOIL CLASSIFICATION AND COMPACTION 9**

History – formation and types of soil – composition - Index properties – clay mineralogy structural arrangement of grains – description – Classification – BIS – US – phase relationship – Compaction – theory – laboratory and field technology – field Compaction method – factors influencing compaction.

**UNIT II EFFECTIVE STRESS AND PERMEABILITY 9**

Soil - water – Static pressure in water - Effective stress concepts in soils – Capillary phenomena— Permeability – Darcy’s law – Determination of Permeability – Laboratory Determination (Constant head and falling head methods) and field measurement pumping out in unconfined and confined aquifer – Factors influencing permeability of soils – Seepage - Two dimensional flow – Laplace’s equation – Introduction to flow nets – Simple problems Sheet pile and weir.

**UNIT III STRESS DISTRIBUTION AND SETTLEMENT 9**

Stress distribution in homogeneous and isotropic medium – Boussinesq of theory – (Point load, Line load and udl) Use of Newmarks influence chart –Components of settlement – Immediate and consolidation settlement – Factors influencing settlement – Terzaghi’s one dimensional consolidation theory – Computation of rate of settlement. –  $\sqrt{t}$  and  $\log t$  methods.  $e$ - $\log p$  relationship consolidation settlement N-C clays – O.C clays – Computation.

**UNIT IV SHEAR STRENGTH 9**

Shear strength of cohesive and cohesion less soils – Mohr-Coulomb failure theory – shear strength - Direct shear, Triaxial compression, UCC and Vane shear tests – Pore pressure parameters – Factors influences shear strength of soil.

**UNIT V SLOPE STABILITY 9**

Infinite slopes and finite slopes — Friction circle method – Use of stability number –Guidelines for location of critical slope surface in cohesive and  $c - \phi$  soil – Slope protection measures.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- classify the soil and assess the engineering properties, based on index properties.
- Understand the stress concepts in soils
- Understand and identify the settlement in soils.
- Determine the shear strength of soil
- Analyze both finite and infinite slopes.

**TEXTBOOKS:**

**OBJECTIVE:**

- To expose the students to the testing of different materials under the action of various forces and determination of their characteristics experimentally.

**LIST OF EXPERIMENTS**

1. Tension test on steel rod
2. Compression test on wood
3. Double shear test on metal
4. Torsion test on mild steel rod
5. Impact test on metal specimen (Izod and Charpy)
6. Hardness test on metals (Rockwell and Brinell Hardness Tests)
7. Deflection test on metal beam
8. Compression test on helical spring
9. Deflection test on carriage spring

**TOTAL: 60 PERIODS****OUTCOME:**

- The students will have the required knowledge in the area of testing of materials and components of structural elements experimentally.

**REFERENCES:**

1. Strength of Materials Laboratory Manual, Anna University, Chennai - 600 025.
2. IS1786-2008 (Fourth Revision, Reaffirmed 2013), 'High strength deformed bars and wires for concrete reinforcement – Specification', 2008.

**LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS**

Sl. No.	Description of Equipment	Quantity
1.	UTM of minimum 400 kN capacity	1
2.	Torsion testing machine	1
3.	Izod impact testing machine	1
4.	Hardness testing machine Rockwell Vicker's } (any 2) Brinell }	1 each
5.	Beam deflection test apparatus	1
6.	Extensometer	1
7.	Compressometer	1
8.	Dial gauges	Few
9.	Le Chatelier's apparatus	2
10.	Vicat's apparatus	2
11.	Mortar cube moulds	10

**OBJECTIVE:**

- Students should be able to verify the principles studied in theory by performing the experiments in lab.

**LIST OF EXPERIMENTS****A. Flow Measurement**

1. Calibration of Rotameter
2. Calibration of Venturimeter / Orificemeter
3. Bernoulli's Experiment

**B. Losses in Pipes**

4. Determination of friction factor in pipes
5. Determination of minor losses

**C. Pumps**

6. Characteristics of Centrifugal pumps
7. Characteristics of Gear pump
8. Characteristics of Submersible pump
9. Characteristics of Reciprocating pump

**D. Turbines**

10. Characteristics of Pelton wheel turbine
11. Characteristics of Francis turbine/Kaplan turbine

**E. Determination of Metacentric height**

12. Determination of Metacentric height of floating bodies

**TOTAL: 60 PERIODS****OUTCOMES:**

- The students will be able to measure flow in pipes and determine frictional losses.
- The students will be able to develop characteristics of pumps and turbines.

**REFERENCES:**

**LIST OF EQUIPMENTS**

1. One set up of Rotometer
2. One set up of Venturimeter/Orifice meter
3. One Bernoulli's Experiment set up
4. One set up of Centrifugal Pump
5. One set up of Gear Pump
6. One set up of Submersible pump
7. One set up of Reciprocating Pump
8. One set up of Pelton Wheel turbine
9. One set up of Francis turbines/one set of Kaplan turbine
10. One set up of equipment for determination of Metacentric height of floating bodies
11. One set up for determination of friction factor in pipes
12. One set up for determination of minor losses.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- Strengthen the reading skills of students of engineering.
- Enhance their writing skills with specific reference to technical writing.
- Develop students' critical thinking skills.
- Provide more opportunities to develop their project and proposal writing skills.

**UNIT I**

Reading - Strategies for effective reading-Use glosses and footnotes to aid reading comprehension- Read and recognize different text types-Predicting content using photos and title Writing-Plan before writing-Develop a paragraph: topic sentence, supporting sentences, concluding sentence –Write a descriptive paragraph.

**UNIT II**

Reading-Read for details-Use of graphic organizers to review and aid comprehension Writing-State reasons and examples to support ideas in writing- Write a paragraph with reasons and examples- Write an opinion paragraph

**UNIT III**

Reading- Understanding pronoun reference and use of connectors in a passage- speed reading techniques- Writing- Elements of a good essay-Types of essays- descriptive-narrative- issue-based-argumentative-analytical.

**UNIT IV**

Reading- Genre and Organization of Ideas- Writing- Email writing- visumes – Job application-project writing-writing convincing proposals.

**UNIT V**

Reading- Critical reading and thinking- understanding how the text positions the reader- identify Writing- Statement of Purpose- letter of recommendation- Vision statement

**TOTAL: 30 PERIODS****OUTCOMES:**

At the end of the course Learners will be able to:

- Write different types of essays.
- Write winning job applications.
- Read and evaluate texts critically.
- Display critical thinking in various professional contexts.

**TEXT BOOKS:**

**OBJECTIVES:**

- To introduce the different types of philosophies related to design of basic structural elements such as slab, beam, column and footing which form part of any structural system with reference to Indian standard code of practice.

**UNIT I INTRODUCTION 9+6**

Objective of structural design-Steps in RCC Structural Design Process- Type of Loads on Structures and Load combinations- Code of practices and Specifications - Concept of Working Stress Method, Ultimate Load Design and Limit State Design Methods for RCC –Properties of Concrete and Reinforcing Steel - Analysis and Design of Singly reinforced Rectangular beams by working stress method - Limit State philosophy as detailed in IS code - Advantages of Limit State Method over other methods - Analysis and design of singly and doubly reinforced rectangular beams by Limit State Method.

**UNIT II DESIGN OF BEAMS 9+6**

Analysis and design of Flanged beams for – Use of design aids for Flexure - Behaviour of RC members in Shear, Bond and Anchorage - Design requirements as per current code - Behaviour of rectangular RC beams in shear and torsion - Design of RC members for combined Bending, Shear and Torsion.

**UNIT III DESIGN OF SLABS AND STAIRCASE 9+6**

Analysis and design of cantilever, one way simply supported and continuous slabs and supporting beams- Two way slab- Design of simply supported and continuous slabs using IS code coefficients- Types of Staircases – Design of dog-legged Staircase.

**UNIT IV DESIGN OF COLUMNS 9+6**

Types of columns –Axially Loaded columns – Design of short Rectangula Square and circular columns – Design of Slender columns- Design for Uniaxial and Biaxial bending using Column Curves

**UNIT V DESIGN OF FOOTINGS 9+6**

Concepts of Proportioning footings and foundations based on soil properties-Design of wall footing – Design of axially and eccentrically loaded Square, Rectangular pad and sloped footings – Design of Combined Rectangular footing for two columns only.

**TOTAL: 75 PERIODS****OUTCOMES:**

Students will be able to

- Understand the various design methodologies for the design of RC elements.
- Know the analysis and design of flanged beams by limit state method and sign of beams for shear, bond and torsion.
- design the various types of slabs and staircase by limit state method.
- Design columns for axial, uniaxial and biaxial eccentric loadings.
- Design of footing by limit state method.

8. Shah V L Karve S R., "Limit State Theory and Design of Reinforced Concrete", Structures Publications, Pune, 2013

**OBJECTIVE:**

- To introduce the students to basic theory and concepts of classical methods of structural analysis

**UNIT I STRAIN ENERGY METHOD 9**

Determination of Static and Kinematic Indeterminacies – Analysis of continuous beams, plane frames and indeterminate plane trusses by strain energy method (up to two degree of redundancy).

**UNIT II SLOPE DEFLECTION METHOD 9**

Slope deflection equations – Equilibrium conditions - Analysis of continuous beams and rigid frames – Rigid frames with inclined members - Support settlements- symmetric frames with symmetric and skew-symmetric loadings.

**UNIT III MOMENT DISTRIBUTION METHOD 9**

Stiffness and carry over factors – Distribution and carryover of moments - Analysis of continuous Beams-Plane rigid frames with and without sway – Support settlement - symmetric frames with symmetric and skew-symmetric loadings.

**UNIT IV FLEXIBILITY METHOD 9**

Primary structures - Compatibility conditions – Formation flexibility matrices - Analysis of indeterminate pin-jointed plane frames, continuous beams and rigid jointed plane frames by direct flexibility approach.

**UNIT V STIFFNESS METHOD 9**

Restrained structure –Formation of stiffness matrices - equilibrium condition - Analysis of Continuous Beams, Pin-jointed plane frames and rigid frames by direct stiffness method.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- Analyze continuous beams, pin-jointed indeterminate plane frames and rigid plane frames by strain energy method
- Analyze the continuous beams and rigid frames by slope deflection method.
- Understand the concept of moment distribution and analysis of continuous beams and rigid frames with and without sway.
- Analyze the indeterminate pin jointed plane frames continuous beams and rigid frames using matrix flexibility method.
- Understand the concept of matrix stiffness method and analysis of continuous beams, pin jointed trusses and rigid plane frames.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To equip the students with the principles and design of water treatment units and distribution system.

**UNIT I SOURCES OF WATER 12**

Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater – Impounding Reservoir – Development and selection of source – Source Water quality – Characterization – Significance – Drinking Water quality standards.

**UNIT II CONVEYANCE FROM THE SOURCE 12**

Water supply – intake structures – Functions; Pipes and conduits for water – Pipe materials – Hydraulics of flow in pipes – Transmission main design – Laying, jointing and testing of pipes – appurtenances – Types and capacity of pumps – Selection of pumps and pipe materials.

**UNIT III WATER TREATMENT 12**

Objectives – Unit operations and processes – Principles, functions, and design of water treatment plant units, aerators of flash mixers, Coagulation and flocculation – Clariflocculator-Plate and tube settlers - Pulsator clarifier - sand filters - Disinfection - Residue Management – Construction, Operation and Maintenance aspects.

**UNIT IV ADVANCED WATER TREATMENT 12**

Water softening – Desalination- R.O. Plant – demineralization – Adsorption - Ion exchange–Membrane Systems – RO Reject Management - Iron and Manganese removal - Defluoridation - Construction and Operation & Maintenance aspects – Recent advances - MBR process

**UNIT V WATER DISTRIBUTION AND SUPPLY 12**

Requirements of water distribution – Components – Selection of pipe material – Service reservoirs – Functions – Network design – Economics – Analysis of distribution networks -Computer applications – Appurtenances – Leak detection. Principles of design of water supply in buildings – House service connection – Fixtures and fittings, systems of plumbing and types of plumbing.

**TOTAL:60 PERIODS****OUTCOMES:**

The students completing the course will have

- an insight into the structure of drinking water supply systems, including water transport, treatment and distribution
- the knowledge in various unit operations and processes in water treatment
- an ability to design the various functional units in water treatment
- an understanding of water quality criteria and standards, and their relation to public health
- the ability to design and evaluate water supply project alternatives on basis of chosen criteria.
- 

**TEXTBOOKS:**

1. Garg, S.K. Environmental Engineering, Vol.I Khanna Publishers, New Delhi, 2010.
2. Modi, P.N., Water Supply Engineering, Vol.I Standard Book House, New Delhi, 2010.
3. Punmia, B.C., Ashok Jain and Arun Jain, Water Supply Engineering, Laxmi Publications (P) Ltd., New Delhi, 2014.

**REFERENCES:**

2. Syed R. Qasim and Edward M. Motley Guang Zhu, Water Works Engineering Planning, Design and Operation, Prentice Hall of India Learning Private Limited, New Delhi, 2009.

**OBJECTIVE:**

- To impart knowledge to plan and execute a detail site investigation programme, to select geotechnical design parameters and type of foundations. Also to familiarize the students for the geotechnical design of different type of foundations and retaining walls.

**UNIT I SITE INVESTIGATION AND SELECTION OF FOUNDATION 9**

Scope and objectives – Methods of exploration – Auguring and boring – Wash boring and rotary drilling – Depth and spacing of bore holes – Soil samples – Representative and undisturbed – Sampling methods – Split spoon sampler, Thin wall sampler, Stationary piston sampler – Penetration tests (SPT and SCPT) – Data interpretation - Strength parameters - Bore log report and Selection of foundation.

**UNIT II SHALLOW FOUNDATION 9** Location and depth of foundation – Codal provisions – Bearing capacity of shallow foundation on homogeneous deposits – Terzaghi's formula and BIS formula – Factors affecting bearing capacity – Bearing capacity from in-situ tests (SPT, SCPT and plate load) – Allowable bearing pressure – Seismic considerations in bearing capacity evaluation. Determination of Settlement of foundations on granular and clay deposits – Total and differential settlement – Allowable settlements – Codal provision – Methods of minimizing total and differential settlements.

**UNIT III FOOTINGS AND RAFTS 9**

Types of Isolated footing, Combined footing, Mat foundation – Contact pressure and settlement distribution – Proportioning of foundations for conventional rigid behaviour – Minimum thickness for rigid behaviour – Applications – Compensated foundation – Codal provision

**UNIT IV PILE FOUNDATION 9**

Types of piles and their functions – Factors influencing the selection of pile – Carrying capacity of single pile in granular and cohesive soil – Static formula – Dynamic formulae (Engineering news and Hileys) – Capacity from insitu tests (SPT and SCPT) – Negative skin friction – Uplift capacity-Group capacity by different methods (Feld's rule, Converse – Labarra formula and block failure criterion) – Settlement of pile groups – Interpretation of pile load test (routine test only), Under reamed piles – Capacity under compression and uplift – Cohesive – expansive – non expansive – Cohesionless soils – Codal provisions.

**UNIT V RETAINING WALLS 9**

Plastic equilibrium in soils – Active and passive states – Rankine's theory – Cohesionless and cohesive soil – Coulomb's wedge theory – Condition for critical failure plane – Earth pressure on retaining walls of simple configurations – Culmann's Graphical method – Pressure on the wall due to line load – Stability analysis of retaining walls – Codal provisions.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- Understand the site investigation, methods and sampling.
- Get knowledge on bearing capacity and testing methods.
- Design shallow footings.
- Determine the load carrying capacity, settlement of pile foundation.
- Determine the earth pressure on retaining walls and analysis for stability.

17. IS Code 14458 (Part 3) : 1998 “Retaining Wall for Hill Area – Guidelines, Construction Of Dry Stone Walls” , Bureau of Indian Standards, New Delhi.

**OBJECTIVE:**

- To develop skills to test the soils for their index and engineering properties and to characterise the soil based on their properties.

**EXERCISES:****1. DETERMINATION OF INDEX PROPERTIES 20**

- Specific gravity of soil solids
- Grain size distribution – Sieve analysis
- Grain size distribution - Hydrometer analysis
- Liquid limit and Plastic limit tests
- Shrinkage limit and Differential free swell tests

**2. DETERMINATION OF INSITU DENSITY AND COMPACTION CHARACTERISTICS 12**

- Field density Test ( Sand replacement method and core cutter method)
- Determination of moisture – density relationship using standard Proctor compaction test.
- Determination of relative density (Demonstration only)

**3. DETERMINATION OF ENGINEERING PROPERTIES 28**

- Permeability determination (constant head and falling head methods)
- One dimensional consolidation test (Determination of Co-efficient of consolidation only)
- Direct shear test in cohesionless soil
- Unconfined compression test in cohesive soil
- Laboratory vane shear test in cohesive soil
- Tri-axial compression test in cohesionless soil (Demonstration only)
- California Bearing Ratio Test

**TOTAL: 60 PERIODS****OUTCOME:**

- Students are able to conduct tests to determine both the index and engineering properties of soils and to characterize the soil based on their properties.

**LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS**

Sl.No.	Description of Equipment	Quantity
1.	Sieves	2 sets
2.	Hydrometer	2 sets
3.	Liquid and Plastic limit apparatus	2 sets
4.	Shrinkage limit apparatus	3 sets
5.	Proctor Compaction apparatus	2 sets
6.	UTM of minimum of 20kN capacity	1
7.	Direct Shear apparatus	1
8.	Thermometer	2
9.	Sand replacement method accessories and core cutter method accessories	2
10.	Tri-axial Shear apparatus	1
11.	Three Gang Consolidation test device	1
12.	Relative Density apparatus	1
13.	Van Shear apparatus	1
14.	Weighing machine – 20kg capacity	1 No
15.	Weighing machine – 1kg capacity	3 No

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**COURSE OBJECTIVES:**

- To analyse the physical, chemical and biological characteristics of water and wastewater
- To quantify the dosage requirement for coagulation process
- To study the growth of micro-organism and its quantification
- To quantify the sludge

**Course Content:**

1. Physical, Chemical and biological characteristics of water and wastewater
2. Jar test
3. Chlorine demand and residual test
4. Growth of micro-organism

**COURSE OUTCOME:**

On the completion of the course, the students will be able to:

- Quantify the pollutant concentration in water and wastewater
- Suggest the type of treatment required and amount of dosage required for the treatment
- Examine the conditions for the growth of micro-organisms

**TOTAL: 60 PERIODS**

**List of Experiments:**

1. Determination of pH, Turbidity and conductivity
2. Determination of Hardness
3. Determination of Alkalinity and Acidity
4. Determination of Chlorides
5. Determination of Phosphates and Sulphates
6. Determination of iron and fluoride
7. Determination of Optimum Coagulant dosage
8. Determination of residual chlorine and available chlorine in bleaching powder
9. Determination of Oil, and Grease
10. Determination of suspended, settleable, volatile and fixed solids
11. Determination Dissolved Oxygen and BOD for the given sample
12. Determination of COD for given sample
13. Determination of SVI of Biological sludge and microscopic examination
14. Determination of MPN index of given water sample

The objective of the survey camp is to enable the students to get practical training in the field work. Groups of not more than six members in a group will carry out each exercise in survey camp. The camp must involve work on a large area of not less than 40 acres outside the campus (Survey camp should not be conducted inside the campus). At the end of the camp, each student shall have mapped and contoured the area. The camp record shall include all original field observations, calculations and plots.

Two weeks Survey Camp will be conducted during summer vacation in the following activities:

1. Traverse - using Total station

2. Contouring

(i). Radial tachometric contouring - Radial Line at Every 45 Degree and Length not less than 60 Meter on each Radial Line

(ii). Block Level/ By squares of size at least 100 Meter x 100 Meter atleast 20 Meter interval

(III). L.S & C.S - Road and canal alignment for a Length of not less than 1 Kilo Meter atleast L.S at Every 30M and C.S at every 90 M

3. Offset of Buildings and Plotting the Location

4. Sun observation to determine azimuth (guidelines to be given to the students)

5. Use of GPS to determine latitude and longitude and locate the survey camp location

6. Traversing using GPS

7. Curve setting by deflection angle

Apart from above students may be given survey exercises in other area also based on site condition to give good exposure on survey.

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to standard laboratory precautions and best practices for experimental work
- To provide orientation for basic mathematical computation useful in basic research

**OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

**PREREQUISITES:**

Basic mathematical and experimental skills and exposure to window-based computer operation system.

**UNIT I 9**

Introduction to Research – Definition, Objectives, Motivation and purpose – types of research – Pure and applied, survey, case study experimental, exploratory – Research Design – Steps in selection and formulation of research problem - Steps in research – Criteria of Good Research, Problems Encountered by Researchers in India.

**UNIT II 9**

Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem - Research design - Needs and features of good design - Different research design - Basic principles of experimental designs. Development of a research plan, Formulation of Hypothesis – Sampling techniques – Sampling error and sample size. Literature types- compendia and tables of information, Reviews, General treatises, Monographs.

**UNIT III 9**

Methods of data collection – Primary and secondary data – observation – interview – Questionnaire – Tools for questionnaire; surveying & literature survey, spreadsheets, Technical writing, Construction of tools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, Practical Exercises. Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection.

**UNIT IV 9**

Processing and analysis of data – editing – coding – transcription – tabulation – outline of statistical analysis- Uncertainty, accuracy and precision- Mean value; standard deviation; error on the mean-Using a spreadsheet for data analysis- Graphs and graph plotting-Least squares methods – descriptive statistics – elements of processing through computer- packages for analysis (Excel).

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references, Technical Presentation.

**TOTAL: 45 PERIODS**

6. Archibald Fripp, Jon Fripp, Michael Fripp; Just-in-Time Math for Engineers, Elsevier Science & Technology Books, 2003.

**OBJECTIVE:**

- To introduce the students to limit state design of structural steel members subjected to compressive, tensile and bending loads, including connections. Design of structural systems such as roof trusses, gantry girders as per provisions of current code (IS 800 - 2007) of practice for working stress and Limit state Method.

**UNIT I INTRODUCTION AND ALLOWABLE STRESS DESIGN 9**

Structural steel types – Mechanical Properties of structural steel- Indian structural steel products-Steps involved in the Design Process -Steel Structural systems and their Elements- -Type of Loads on Structures and Load combinations- Code of practices, Loading standards and Specifications - Concept of Allowable Stress Method, and Limit State Design Methods for Steel structures-Relative advantages and Limitations- Strengths and Serviceability Limit states.

Allowable stresses as per IS 800 section 11 -Concepts of Allowable stress design for bending and Shear – Check for Elastic deflection-Calculation of moment carrying capacity –Design of Laterally supported Solid Hot Rolled section beams-Allowable stress design of Angle Tension and Compression Members and estimation of axial load carrying capacity.

**UNIT II CONNECTIONS IN STEEL STRUCTURES 9**

Type of Fasteners- Bolts Pins and welds- Types of simple bolted and welded connections Relative advantages and Limitations-Modes of failure-the concept of Shear lag-efficiency of joints- Axially loaded bolted connections for Plates and Angle Members using bearing type bolts –Prying forces and Hanger connection– Design of Slip critical connections with High strength Friction Grip bolts.-Design of joints for combined shear and Tension- Eccentrically Loaded Bolted Bracket Connections- Welds-symbols and specifications- Effective area of welds-Fillet and butt Welded connections-Axially Loaded connections for Plate and angle truss members and Eccentrically Loaded bracket connections.

**UNIT III TENSION MEMBERS 9**

Tension Members - Types of Tension members and sections –Behaviour of Tension Members-modes of failure-Slenderness ratio- Net area – Net effective sections for Plates ,Angles and Tee in tension –Concepts of Shear Lag- Design of plate and angle tension members-design of built up tension Members-Connections in tension members – Use of lug angles – Design of tension splice.

**UNIT IV COMPRESSION MEMBERS 9**

Types of compression members and sections–Behaviour and types of failures-Short and slender columns-Current code provisions for compression members- Effective Length, Slenderness ratio –Column formula and column curves- Design of single section and compound Angles-Axially Loaded solid section Columns-Design of Built up Laced and Battened type columns – Design of column bases – Plate and Gusseted bases for Axially loaded columns- Splices for columns.

**UNIT V DESIGN OF FLEXURAL MEMBERS 9**

Types of steel Beam sections- Behaviour of Beams in flexure- Codal Provisions – Classification of cross sections- Flexural Strength and Lateral stability of Beams –Shear Strength-Web Buckling, Crippling and deflection of Beams- Design of laterally supported Beams- Design of solid rolled section Beams- Design of Plated beams with cover plates - Design Strength of Laterally unsupported Beams – Design of laterally unsupported rolled section Beams- Purlin in Roof Trusses-Design of Channel and I section Purlins.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- Understand the concepts of various design philosophies
- Design common bolted and welded connections for steel structures
- Design tension members and understand the effect of shear lag.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

- Understand the design concept of axially loaded columns and column base connections.
- Understand specific problems related to the design of laterally restrained and unrestrained steel beams.

7. SP 6(1) Hand book on structural Steel Sections

**OBJECTIVES :**

- To learn the method of drawing influence lines and its uses in various applications like beams and plane trusses.
- To analyse the arches, suspension bridges and space trusses.
- Also to learn Plastic analysis of beams and rigid frames.

**UNIT I INFLUENCE LINES FOR DETERMINATE BEAMS 9**

Influence lines for reactions in statically determinate beams – Influence lines for shear force and bending moment – Calculation of critical stress resultants due to concentrated and distributed moving loads – absolute maximum bending moment - influence lines for member forces in pin jointed plane frames.

**UNIT II INFLUENCE LINES FOR INDETERMINATE BEAMS 9**

Muller Breslau's principle– Influence line for Shearing force, Bending Moment and support reaction components of propped cantilever, continuous beams (Redundancy restricted to one), and fixed beams.

**UNIT III ARCHES 9**

Arches - Types of arches – Analysis of three hinged, two hinged and fixed arches - Parabolic and circular arches – Settlement and temperature effects.

**UNIT IV CABLES AND SUSPENSION BRIDGES 9**

Equilibrium of cable – length of cable - anchorage of suspension cables – stiffening girders- cables with three hinged stiffening girders – Influence lines for three hinged stiffening girders.

**UNIT V PLASTIC ANALYSIS 9**

Plastic theory – statistical indeterminate structures-plastic moment of resistance-plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – collapse load - Static and kinematic methods – Upper and lower bound theorems - Plastic analysis of indeterminate beams and frames.

**TOTAL:45 PERIODS****OUTCOMES:**

Students will be able to

- Draw influence lines for statically determinate structures and calculate critical stress resultants.
- Understand Muller Breslau principle and draw the influence lines for statically indeterminate beams.
- Analyse of three hinged, two hinged and fixed arches.
- Analyse the suspension bridges with stiffening girders
- Understand the concept of Plastic analysis and the method of analyzing beams and rigid frames.

**OBJECTIVE:**

- The student is exposed to different phases in irrigation practices and Planning and management of irrigation. Further they will be imparted required knowledge on Irrigation storage and distribution canal system and Irrigation management.

**UNIT I CROP WATER REQUIREMENT 9**

Need and classification of irrigation- historical development and merits and demerits of irrigation-types of crops-crop season-duty, delta and base period- consumptive use of crops- estimation of Evapotranspiration using experimental and theoretical methods

**UNIT II IRRIGATION METHODS 9**

Tank irrigation – Well irrigation – Irrigation methods: Surface and Sub-Surface and Micro Irrigation – design of drip and sprinkler irrigation – ridge and furrow irrigation-Irrigation scheduling – Water distribution system- Irrigation efficiencies.

**UNIT III DIVERSION AND IMPOUNDING STRUCTURES 9**

Types of Impounding structures - Gravity dam – Forces on a dam -Design of Gravity dams; Earth dams, Arch dams- Diversion Head works - Weirs and Barrages-

**UNIT IV CANAL IRRIGATION 9**

Canal regulations – direct sluice - Canal drop – Cross drainage works-Canal outlets – Design of prismatic canal-canal alignments-Canal lining - Kennedy's and Lacey's Regime theory-Design of unlined canal

**UNIT V WATER MANAGEMENT IN IRRIGATION 9**

Modernization techniques- Rehabilitation – Optimization of water use-Minimizing water losses- On farm development works-Participatory irrigation management- Water resources associations-Changing paradigms in water management-Performance evaluation-Economic aspects of irrigation

**TOTAL :45 PERIODS****OUTCOMES:**

Students will be able to

- Have knowledge and skills on crop water requirements.
- Understand the methods and management of irrigation.
- Gain knowledge on types of Impounding structures
- Understand methods of irrigation including canal irrigation.
- Get knowledge on water management on optimization of water use.

**OBJECTIVE:**

- To give an overview about the highway engineering with respect to, planning, design, construction and maintenance of highways as per IRC standards, specifications and methods.

**UNIT I HIGHWAY PLANNING AND ALIGNMENT 9**

Significance of highway planning – Modal limitations towards sustainability - History of road development in India – factors influencing highway alignment – Soil suitability analysis - Road ecology - Engineering surveys for alignment, objectives, conventional and modern methods - Classification of highways – Locations and functions – Typical cross sections of Urban and Rural roads

**UNIT II GEOMETRIC DESIGN OF HIGHWAYS 9**

Cross sectional elements - Sight distances – Horizontal curves, Super elevation, transition curves, widening at curves – Vertical curves - Gradients, Special consideration for hill roads - Hairpin bends – Lateral and vertical clearance at underpasses.

**UNIT III DESIGN OF FLEXIBLE AND RIGID PAVEMENTS 9**

Pavement components and their role - Design principles -Design practice for flexible and rigid Pavements (IRC methods only) – Embankments- Problems in Flexible pavement design.

**UNIT IV HIGHWAY CONSTRUCTION MATERIALS AND PRACTICE 9**

Highway construction materials, properties, testing methods – CBR Test for subgrade - tests on aggregate & bitumen – Test on Bituminous mixes-Construction practice including modern materials and methods, Bituminous and Concrete road construction, Polymer modified bitumen, Recycling, Different materials – Glass, Fiber, Plastic, Geo-Textiles, Geo-Membrane (problem not included) – Quality control measures - Highway drainage — Construction machineries.

**UNIT V EVALUATION AND MAINTENANCE OF PAVEMENTS 9**

Pavement distress in flexible and rigid pavements – Types of maintenance – Pavement Management Systems - Pavement evaluation, roughness, present serviceability index, skid resistance, structural evaluation, evaluation by deflection measurements – Strengthening of pavements –Highway Project formulation.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- Get knowledge on planning and aligning of highway.
- Geometric design of highways
- Design flexible and rigid pavements.
- Gain knowledge on Highway construction materials, properties, testing methods
- Understand the concept of pavement management system, evaluation of distress and maintenance of pavements.

9. IRC 58-2012. The Indian Road Congress, Guideline for the Design of Rigid Pavements for Highways, New Delhi.

**OBJECTIVE:**

- The objectives of this course is to help students develop the ability to apply basic understanding of physical, chemical, and biological phenomena for successful design, operation and maintenance of sewage treatment plants.

**UNIT I PLANNING AND DESIGN OF SEWERAGE SYSTEM 9**

Characteristics and composition of sewage - population equivalent -Sanitary sewage flow estimation – Sewer materials – Hydraulics of flow in sanitary sewers – Sewer design – Storm drainage-Storm runoff estimation – sewer appurtenances – corrosion in sewers – prevention and control – sewage pumping-drainage in buildings-plumbing systems for drainage - Rain Water ting.

**UNIT II PRIMARY TREATMENT OF SEWAGE 9**

Objectives – Unit Operations and Processes – Selection of treatment processes – Onsite sanitation - Septic tank- Grey water harvesting – Primary treatment – Principles, functions and design of sewage treatment units - screens - grit chamber-primary sedimentation tanks – Construction, Operation and Maintenance aspects.

**UNIT III SECONDARY TREATMENT OF SEWAGE 9**

Objectives – Selection of Treatment Methods – Principles, Functions, - Activated Sludge Process and Extended aeration systems -Trickling filters– Sequencing Batch Reactor(SBR) – Membrane Bioreactor - UASB – Waste Stabilization Ponds – - Other treatment methods -Reclamation and Reuse of sewage - Recent Advances in Sewage Treatment – Construction, Operation and Maintenance aspects.

**UNIT IV DISPOSAL OF SEWAGE 9**

Standards for– Disposal - Methods – dilution – Mass balance principle - Self purification of river- Oxygen sag curve – deoxygenation and reaeration - Streeter–Phelps model - Land disposal – Sewage farming – sodium hazards - Soil dispersion system.

**UNIT V SLUDGE TREATMENT AND DISPOSAL 9**

Objectives - Sludge characterization – Thickening - Design of gravity thickener- Sludge digestion- Standard rate and High rate digester design- Biogas recovery – Sludge Conditioning and Dewatering – Sludge drying beds- ultimate residue disposal – recent advances.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students completing the course will have

- An ability to estimate sewage generation and design sewer system including sewage pumping stations
- The required understanding on the characteristics and composition of sewage, self-purification of streams
- An ability to perform basic design of the unit operations and processes that are used in sewage treatment
- Understand the standard methods for disposal of sewage.
- Gain knowledge on sludge treatment and disposal.

**TEXTBOOKS:**

1. Garg, S.K., Environmental Engineering Vol. II, Khanna Publishers, New Delhi, 2015.
2. Duggal K.N., “Elements of Environmental Engineering” S.Chand and Co. Ltd., New Delhi, 2014.

3. Syed R. Qasim “Wastewater Treatment Plants”, CRC Press, Washington D.C.,2010
4. Gray N.F, “Water Technology”, Elsevier India Pvt. Ltd., New Delhi, 2006.

**OBJECTIVE :**

- To learn the principles and procedures of testing of highway materials

**EXERCISES :****I TEST ON AGGREGATES**

- a) Specific Gravity
- b) Los Angeles Abrasion Test
- c) Water Absorption of Aggregates

**II TEST ON BITUMEN**

- a) Specific Gravity of Bitumen
- b) Penetration Test
- c) Viscosity Test
- d) Softening Point Test
- e) Ductility Test

**III TESTS ON BITUMINOUS MIXES**

- a) Stripping Test
- b) Determination of Binder Content
- c) Marshall Stability and Flow Values

**IV DEMONSTRATION OF ANY ONE FIELD TESTING EQUIPMENT LIKE SKID RESISTANCE TESTER/ BENKELMAN BEAM ETC****TOTAL: 60 PERIODS****OUTCOME:**

- Student knows the techniques to characterize various pavement materials through relevant tests.

**REFERENCES:**

4. Mix Design Methods Asphalt Institute Manual Series No. 2, Sixth Edition, 1997, Lexington, KY, USA.

**LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS**

Sl.No	Description of Equipment	Quantity
1.	Concrete cube moulds	6
2.	Concrete cylinder moulds	3
3.	Concrete Prism moulds	3
4.	Sieves	1 set
5.	Concrete Mixer	1
6.	Slump cone	3
7.	Flow table	1
8.	Vibrator	1
9.	Trowels and planers	1 set
10.	UTM – 400 kN capacity	1
11.	Vee Bee Consistometer	1
12.	Aggregate impact testing machine	1
13.	CBR Apparatus	1
14.	Blains Apparatus	1
15.	Los - Angeles abrasion testing machine	1
16.	Marshall Stability Apparatus	1

**OBJECTIVE:**

- At the end of the semester, the student shall conceive, design and draw the irrigation and environmental engineering structures in detail showing the plan, elevation and Sections.

**PART A: IRRIGATION ENGINEERING**

**1. TANK COMPONENTS 9** Fundamentals of design - Tank surplus weir – Tank sluice with tower head - Drawings showing foundation details, plan and elevation

**2. IMPOUNDING STRUCTURES 6**

Design principles - Earth dam – Profile of Gravity Dam

**3. CROSS DRAINAGE WORKS 6**

General design principles - Aqueducts – Syphon aqueduct (Type III) – Canal drop (Notch Type) – Drawing showing plan, elevation and foundation details.

**4. CANAL REGULATION STRUCTURES 9**

General Principles - Direct Sluice - Canal regulator - Drawing showing detailed plan, elevation and foundation details.

**PART B: ENVIRONMENTAL ENGINEERING**

**1. WATER SUPPLY AND TREATMENT 15**

Design and Drawing of flash mixer, flocculator, clarifier – Rapid sand filter – Service reservoirs – Pumping station – House service connection for water supply and drainage.

**4. SEWAGE TREATMENT & DISPOSAL 15**

Design and Drawing of screen chamber - Grit channel - Primary clarifier - Activated sludge process – Aeration tank – Trickling filter – Sludge digester – Sludge drying beds – Septic tanks and disposal arrangements.

**TOTAL: 60 PERIODS**

**OUTCOME:**

- The students after completing this course will be able to design and draw various units of Municipal water treatment plants and sewage treatment plants.

**TEXTBOOKS:**

1. Satya Narayana Murthy Challa, “Water Resources Engineering: Principles and Practice”, New Age International Publishers, New Delhi, 2002.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- The students will acquire knowledge in estimation, tender practices, contract procedures, and valuation and will be able to prepare estimates, call for tenders and execute works.

**UNIT I QUANTITY ESTIMATION 9**

Philosophy – Purpose – Methods of estimation – Types of estimates – Approximate estimates – Detailed estimate – Estimation of quantities for buildings, bituminous and cement concrete roads, septic tank, soak pit, retaining walls – culverts (additional practice in class room using computer softwares)

**UNIT II RATE ANALYSIS AND COSTING 9**

Standard Data – Observed Data – Schedule of rates – Market rates – Standard Data for Man Hours and Machineries for common civil works – Rate Analysis for all Building works, canals, and Roads– Cost Estimates (additional practice in class room using Computer softwares) - (Analysis of rates for the item of work asked, the data regarding labour, rates of material and rates of labour to be given in the Examination Question Paper)

**UNIT III SPECIFICATIONS, REPORTS AND TENDERS 9**

Specifications – Detailed and general specifications – Constructions – Sources – Types of specifications – Principles for report preparation – report on estimate of residential building – Culvert – Roads – TTT Act 2000 – Tender notices – types – tender procedures – Drafting model tenders , E-tendering-Digital signature certificates- Encrypting -Decrypting – Reverse auctions.

**UNIT IV CONTRACTS 9**

Contract – Types of contracts – Formation of contract – Contract conditions – Contract for labour, material, design, construction – Drafting of contract documents based on IBRD / MORTH Standard bidding documents – Construction contracts – Contract problems – Arbitration and legal requirements.

**UNIT V VALUATION 9**

Definitions – Various types of valuations – Valuation methods - Necessity – Capitalised value – Depreciation – Escalation – Valuation of land – Buildings – Calculation of Standard rent – Mortgage – Lease

**TOTAL: 45 PERIODS****OUTCOMES:**

The student will be able to

- Estimate the quantities for buildings,
- Rate Analysis for all Building works, canals, and Roads and Cost Estimate.
- Understand types of specifications, principles for report preparation, tender notices types.
- Gain knowledge on types of contracts
- Evaluate valuation for building and land.

**TEXTBOOKS:**

1. B.N Dutta ‘Estimating and Costing in Civil Engineering’, UBS Publishers & Distributors (P) Ltd, 2010.

4. Standard Bid Evaluation Form, Procurement of Good or Works, The World Bank, April 1996
5. Standard Data Book for Analysis and Rates, IRC, New Delhi, 2003

**OBJECTIVE:**

- To introduce the students about Railways planning, design, construction and maintenance and planning design principles of airport and harbour

**UNIT I RAILWAY PLANNING AND CONSTRUCTION 10**

Elements of permanent way – Rails, Sleepers, Ballast, rail fixtures and fastenings, Selection of gauges - Track Stress, coning of wheels, creep in rails, defects in rails – Route alignment surveys, conventional and modern methods--Geometric design of railway, gradient, super elevation, widening of gauge on curves- Level Crossings. .

**UNIT II RAILWAY CONSTRUCTION AND MAINTENANCE 8**

Earthwork – Stabilization of track on poor soil - Track drainage – Calculation of Materials required for track laying - Construction and maintenance of tracks – Railway Station and yards and passenger amenities- Signalling

**UNIT III AIRPORT PLANNING 7**

Air transport characteristics - airport classification – ICAO - airport planning: Site selection typical Airport Layouts, Case Studies, parking and Circulation Area

**UNIT IV AIRPORT DESIGN 10**

Runway Design: Orientation, Wind Rose Diagram, Problems on basic and Actual Length, Geometric Design – Elements of Taxiway Design – Airport Zones – Passenger Facilities and Services – Runway and Taxiway Markings.

**UNIT V HARBOUR ENGINEERING 10**

Definition of Basic Terms: Harbour, Port, Satellite Port, Docks, Waves and Tides – Planning and Design of Harbours: Harbour Layout and Terminal Facilities – Coastal Structures: Piers, Break waters, Wharves, Jetties, Quays, Spring Fenders, Dolphins and Floating Landing Stage – Inland Water Transport – Wave action on Coastal Structures and Coastal Protection Works – Coastal Regulation Zone, 2011

**TOTAL: 45 PERIODS****OUTCOMES:**

Students who successfully complete this course will be able to:

- Understand the methods of route alignment and design elements in Railway Planning and Constructions.
- Understand the Construction techniques and Maintenance of Track laying and Railway stations.
- Gain an insight on the planning and site selection of Airport Planning and design.
- Analyze and design the elements for orientation of runways and passenger facility systems.
- Understand the various features in Harbours and Ports, their construction, coastal protection works and coastal Regulations to be adopted.

**TEXTBOOKS:**

2. Mundrey J S, Railway Track Engineering, McGraw Hill Education ( India) Private Ltd, New Delhi, 2013

**OBJECTIVE:**

- This course aims at providing students with a solid background on the principles of structural engineering design. Students will be acquire the knowledge of liquid retaining structures, bridges components, retaining wall and industrial structures.

**UNIT I RETAINING WALLS 9+6**

Reinforced concrete Cantilever and Counter fort Retaining Walls–Horizontal Backfill with Surcharge– Design of Shear Key-Design and Drawing.

**UNIT II FLAT SLAB and BRIDGES 9+6**

Design of Flat Slabs with and without drops by Direct Design Method of IS code- Design and Drawing - IRC Specifications and Loading – RC Solid Slab Bridge – Steel Foot-over Bridge-design and drawing.

**UNIT III LIQUID STORAGE STRUCTURES 9+6**

RCC Water Tanks - On ground, Elevated Circular, underground Rectangular Tanks– Hemispherical Bottomed Steel Water Tank –Design and Drawing

**UNIT IV INDUSTRIAL STRUCTURES 9+6**

Structural steel Framing - Steel Roof Trusses – Roofing Elements – Beam columns – Codal provisions - Design and Drawing.

**UNIT V GIRDERS AND CONNECTIONS 9+6** Plate Girders – Behaviour of Components-Deign of Welded Plate Girder-Design of Industrial Gantry Girders – Design of Eccentric Shear and Moment Resisting connections.

**TOTAL: 75 PERIODS****Design and Drawing Exercises for practical component Part****A - RCC Structures**

1. Rectangular Column and Footing
2. Combined footing with Two columns
3. RCC one way & Two way Slab and beam system
4. Cantilever Retaining wall
5. RCC T beam bridge deck
6. Underground Rectangular Water Tank
7. Elevated circular water Tank

**Part B- Steel Structures**

1. Built up column, column base and Foundation
2. Simple Steel Roof Trusses
3. Industrial building Elements
4. Plate Girder (welded)
5. Framed Connections and Detailing
6. Gantry girder
7. Steel water Tank

STRUCTURAL DESIGN AND DRAWING	Theory Examination		Practicals	
	Question paper Pattern	Marks to awarded	Question paper Pattern	Marks to awarded
This paper is a theory cum practical course weightage for theory 80% and for practical 20%	Five Either/Or type questions 5 x20 = 100 marks : covering all the five units Total Duration of Examination will be 3 hours  Each Question include  Design - 12 Marks  Free hand Drawing (Not to scale) - 8 marks	Theoretical component Marks will carry 80% weightage. End Semester Examination will be conducted by COE	2 Questions, one from Part A - RCC Structures & one from Part B- Steel Structures	Practical component Marks will carry 20% weightage. Practical Examination will be conducted by the respective institution as internal mode.

#### OUTCOMES:

At the end of the course the student will be able to

- Design and draw reinforced concrete Cantilever and Counterfort Retaining Walls
- Design and draw flat slab as per code provisions
- Design and draw reinforced concrete and steel bridges
- Design and draw reinforced concrete and steel water tanks
- Design and detail the various steel trusses and cantry girders

**CREATIVE AND INNOVATIVE PROJECT**  
(Activity Based - Subject Related)

**L T P C**  
**0 0 4 2**

**OBJECTIVE:**

- To use the knowledge acquired in Civil Engineering to do a mini project, which allows the students to come up with designs, fabrication or algorithms and programs expressing their ideas in a novel way.

**TOTAL: 60 PERIODS**

**STRATEGY**

To identify a topic of interest in consultation with Faculty/Supervisor. Review the literature and gather information pertaining to the chosen topic. State the objectives and develop a methodology to achieve the objectives. Carryout the design / fabrication or develop computer code. Demonstrate the novelty of the project through the results and outputs.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- To train the students in field work so as to have a firsthand knowledge of practical problems in carrying out engineering tasks. To develop skills in facing and solving the field problems.

**STRATEGY:**

The students individually undertake training in reputed civil engineering companies for the specified duration. At the end of the training, a report on the work done will be prepared and presented. The students will be evaluated through a viva-voce examination by a team of internal staff.

**OUTCOMES:**

At the end of the course the student will be able to understand

- The intricacies of implementation textbook knowledge into practice
- The concepts of developments and implementation of new techniques

17155PW83

**PROJECT WORK**

**L T P C**  
**0 0 20 10**

**OBJECTIVE:**

- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

**STRATEGY:**

The student works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction. The student will be evaluated based on the report and the viva voce examination by a team of examiners including one external examiner.

**TOTAL: 300 PERIODS**

**OUTCOME:**

- On Completion of the project work students will be in a position to take up any challenging practical problems and find solution by formulating proper methodology.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- To introduce the students to the cadastral survey Methods and its applications in generation of Land information system.

**UNIT I INTRODUCTION 9**

History of cadastral survey - Types of survey - Tax - Real Property – Legal cadastre -Graphical and Numerical Cadastre, Legal Characteristics of Records, Torrens System.

**UNIT II CADASTRAL SURVEY METHODS 9**

Steps in survey of a village - Instruments used for cadastral survey & mapping - Orthogonal, Polar survey methods - Boundary survey - Rectangulation - Calculation of area of Land- GPS and Total Station in Cadastral survey.

**UNIT III PHOTOGRAMMETRIC METHODS 9**

Photogrammetry for cadastral surveying and mapping - Orthophoto map – Quality control measures - Organisation of cadastral offices – international scenario.

**UNIT IV CADASTRAL MAPPING AND LIS 9**

Cadastral map reproduction - Map projection for cadastral maps – Conventional symbols - map - reproduction processes - Automated cadastral map, Management of Digital Cadastral. Creation of Land Information System. Integrating LIS –Land administration.

**UNIT V MAINTENANCE AND MEASUREMENTS 9**

Cadastral survey maintenance - Resurveys - Measurement of sub-division - Measurement of obstructed lines - Survey of urban areas - Control requirement for Urban survey use of Satellite Imagery in boundary fixing.

**TOTAL: 45 PERIODS****OUTCOMES:**

On completion of this course students will be able to

- Gain knowledge about cadastre survey.
- Understand the methods of cadastral survey.
- Get the knowledge about photogrammetric methods.
- Understand Land Record System and computational procedure for modernization of the same.
- The students will be in position to understand the Government procedure in Land Record Management.

**TEXTBOOKS:**

1. Paul. R Wolf., Bon A. DeWitt, Elements of Photogrammetry with Application in GIS McGraw Hill International Book Co., 4th Edition, 2014
2. R.Subramanian, Surveying and Levelling, Oxford University Press, Second Edition, 2012.

**REFERENCES:**

1. Karl Kraus, Photogrammetry: Geometry from Images and Laser Scans, Walter de Gruyter GmbH & Co. 2nd Edition, 2007.
2. E. M. Mikhail, J. S. Bethel, J. C. McGlone, Introduction to Modern Photogrammetry, Wiley Publisher, 2001.
3. James, M. Anderson and Edward N. Mikhail, Introduction to Surveying, McGraw Hill Book Co, 1985.

**OBJECTIVES :**

- To introduce the fundamentals and components of Geographic Information System
- To provide details of spatial data structures and input, management and output processes.

**UNIT I FUNDAMENTALS OF GIS 9**

Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attribute data- types of attributes – scales/ levels of measurements.

**UNIT II SPATIAL DATA MODELS 9**

Database Structures – Relational, Object Oriented – Entities – ER diagram - data models - conceptual, logical and physical models - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector Models- TIN and GRID data models.

**UNIT III DATA INPUT AND TOPOLOGY 9**

Scanner - Raster Data Input – Raster Data File Formats – Georeferencing – Vector Data Input –Digitiser – Datum Projection and reprojection -Coordinate Transformation – Topology - Adjacency, connectivity and containment – Topological Consistency – Non topological file formats - Attribute Data linking – Linking External Databases – GPS Data Integration

**UNIT IV DATA QUALITY AND STANDARDS 9**

Data quality - Basic aspects - completeness, logical consistency, positional accuracy, temporal accuracy, thematic accuracy and lineage – Metadata – GIS Standards –Interoperability - OGC - Spatial Data Infrastructure

**UNIT V DATA MANAGEMENT AND OUTPUT 9**

Import/Export – Data Management functions- Raster to Vector and Vector to Raster Conversion - Data Output - Map Compilation – Chart/Graphs – Multimedia – Enterprise Vs. Desktop GIS-distributed GIS.

**TOTAL: 45 PERIODS****OUTCOMES:**

This course equips the student to

- Have basic idea about the fundamentals of GIS.
- Understand the types of data models.
- Get knowledge about data input and topology.
- Gain knowledge on data quality and standards.
- Understand data management functions and data output

**TEXT BOOKS:**

1. Kang - Tsung Chang, Introduction to Geographic Information Systems, McGraw Hill Publishing, 2nd Edition, 2011.
2. Ian Heywood, Sarah Cornelius, Steve Carver, Srinivasa Raju, “An Introduction Geographical Information Systems, Pearson Education, 2nd Edition,2007.

**REFERENCE:**

1. Lo.C.P., Albert K.W. Yeung, Concepts and Techniques of Geographic Information Systems, Prentice-Hall India Publishers, 2006

**OBJECTIVE:**

- To solve the Civil Engineering problems with the help of Geoinformatics technique.

**UNIT I      LAND RESOURCE MANAGEMENT      6**

Total Station and GPS Surveys – Topographic and Bathymetric Surveys – Cadastral Information – Soil and Land Use Surveys - Land Information System (LIS) – Real Estate Information System

**UNIT II      STRUCTURAL STUDIES      6**

Deformation studies of deflection - Dam deformation - structural movement - Pavement yield - shifting sand-bank and shoreline – Landslide Risk Analysis

**UNIT III      SOIL CONSERVATION AND MANAGEMENT      9**

Soil survey interpretation and mapping - impact of agricultural and industrial activity on soil properties - soil erosion - factors influencing soil erosion - soil contamination using Hyper spectral Remote Sensing - mining pollution- EMR responses with contaminated soil - modeling soil characteristics using satellite data - soil degradation assessment using Remote Sensing and GIS - Land reclamation studies

**UNIT IV      URBAN AND TRANSPORTATION MANAGEMENT      12**

Monitoring Urban Growth through Remote Sensing - Geo-demographic Analysis – Property Market Analysis Urban Renewal - traffic analysis - accident analysis - site suitability analysis for transport infrastructure –transportation databases: creation and maintenance - Vehicle routing – Highway maintenance system-Intelligent Transportation System.

**UNIT V      WATER RESOURCES PLANNING AND MANAGEMENT      12**

Location of storage/diversion works – capacity curve generation – sediment yield - modelling of catchments – Delineation of watershed - Watershed modelling for sustainable development - Rainfall – Runoff modelling –LiDAR Mapping for Urban area –Water quality mapping and monitoring – Flood Risk Zoning - Flood damage assessment – Flood Modelling - Assessment of droughts and mitigation

**TOTAL: 45 PERIODS****OUTCOMES:**

On completion of this course students will be able to

- Get knowledge about the land resource management.
- Study structural deformation and movement.
- Model soil characteristics, soil degradation assessment and management.
- Monitor urban growth and management of transport infrastructure.
- Model catchments and management of water resources.

**TEXTBOOKS:**

1. Basudeb Bhatta, 'Remote Sensing and GIS', Second edition, Oxford University Press 2011.

4. Gert A. Schulitz Edwin T. Engman, Remote Sensing in hydrology and Water Management, Springer - verlag Berlin Heidelberg Germany - 2000.

**OBJECTIVE :**

- To understand the working of Total Station equipment and solve the surveying problems.

**UNIT I FUNDAMENTALS OF TOTAL STATION AND ELECTROMAGNETIC WAVES 9**

Methods of Measuring Distance, Basic Principles of Total Station, Historical Development, Classifications, applications and comparison with conventional surveying. Classification - applications of Electromagnetic waves, Propagation properties, wave propagation at lower and higher frequencies- Refractive index (RI) - factors affecting RI- Computation of group for light and near infrared waves at standard and ambient conditions-Computation of RI for microwaves at ambient condition - Reference refractive index- Real time application of first velocity correction. Measurement of atmospheric parameters- Mean refractive index- Second velocity correction - Total atmospheric correction- Use of temperature - pressure transducers.

**UNIT II ELECTRO-OPTICAL AND MICROWAVE SYSTEM 9**

Electro-optical system: Measuring principle, Working principle, Sources of Error, Infrared and Laser Total Station instruments. Microwave system: Measuring principle, working principle, Sources of Error, Microwave Total Station instruments. Comparison between Electro-optical and Microwave system. Care and maintenance of Total Station instruments – Traversing and Trilateration-COGO functions, offsets and stake out-land survey applications.

**UNIT III SATELLITE SYSTEM 9**

Basic concepts of GPS - Historical perspective and development - applications - Geoid and Ellipsoid- satellite orbital motion - Keplerian motion – Kepler's Law - Perturbing forces - Geodetic satellite - Doppler effect - Positioning concept –GNSS, IRNSS and GAGAN - Different segments –space, control and user segments-satellite configuration- GPS signal structure- Orbit determination and representation- Anti Spoofing and Selective Availability - Task of control segment - GPS receivers.

**UNIT IV GPS DATA PROCESSING**

GPS observables - code and carrier phase observation - linear combination and derived observables - concept of parameter estimation – downloading the data RINEX Format – Differential data processing – software modules - solutions of cycle slips, ambiguities, Concepts of rapid, static methods with GPS - semi Kinematic and pure Kinematic methods -satellite geometry accuracy measures - applications- long baseline processing- use of different softwares available in the market.

**UNIT V HYDROGRAPHIC, MINE AND CADASTRAL SURVEYING 9**

Reconnaissance – Route surveys for highways, railways and waterways – Hydrographic survey-Tides – MSL – Sounding methods – Three point problem – River surveys – Measurement of current and discharge – Mine surveying Equipment – Weisbach triangle – Tunnel alignment and setting out – Transfer of azimuth – Gyro Theodolite – Shafts and audits - Cadastral survey- Legal – Real – Taxcadastre – Land record system – Settlement procedure – deformation studies.

**TOTAL : 45 PERIODS****OUTCOMES:**

At the end of the course the student will be able to understand

- Working principles of total station and GPS instruments
- Propagation of EMR through atmosphere and corrections for its effects
- The functioning various types total station and GPS equipments and their applications
- Various techniques available for surveying and mapping with total station and GPS.

**TEXTBOOKS:**

1. Rueger, J.M. Electronic Distance Measurement, Springer-Verlag, Berlin, 1996

**OBJECTIVES:**

- To provide students an exposure to disasters, their significance and types.
- To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention and risk reduction
- To gain a preliminary understanding of approaches of Disaster Risk Reduction (DRR)
- To enhance awareness of institutional processes in the country and
- To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity

**UNIT I INTRODUCTION TO DISASTERS 9**

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Disasters: Types of disasters – Earthquake, Landslide, Flood, Drought, Fire etc - Classification, Causes, Impacts including social, economic, political, environmental, health, psychosocial, etc.- Differential impacts- in terms of caste, class, gender, age, location, disability - Global trends in disasters: urban disasters, pandemics, complex emergencies, Climate change- Dos and Don'ts during various types of Disasters.

**UNIT II APPROACHES TO DISASTER RISK REDUCTION (DRR) 9**

Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stake-holders- Institutional Processes and Framework at State and Central Level- State Disaster Management Authority(SDMA) – Early Warning System – Advisories from Appropriate Agencies.

**UNIT III INTER-RELATIONSHIP BETWEEN DISASTERS AND DEVELOPMENT 9**

Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams, embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios in the context of India - Relevance of indigenous knowledge, appropriate technology and local resources.

**UNIT IV DISASTER RISK MANAGEMENT IN INDIA 9**

Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, Disaster Management Act and Policy - Other related policies, plans, programmes and legislation – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment.

**UNIT V DISASTER MANAGEMENT: APPLICATIONS AND CASE STUDIES AND FIELD WORKS 9**

Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Differentiate the types of disasters, causes and their impact on environment and society
- Assess vulnerability and various methods of risk reduction measures as well as mitigation.
- Draw the hazard and vulnerability profile of India, Scenarios in the Indian context, Disaster damage assessment and management.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To sensitize the Engineering students to various aspects of Human Rights.

**UNIT I**

9

Human Rights – Meaning, origin and Development. Notion and classification of Rights – Natural, Moral and Legal Rights. Civil and Political Rights, Economic, Social and Cultural Rights; collective / Solidarity Rights.

**UNIT II**

9

Evolution of the concept of Human Rights Magna carta – Geneva convention of 1864. Universal Declaration of Human Rights, 1948. Theories of Human Rights.

**UNIT III**

9

Theories and perspectives of UN Laws – UN Agencies to monitor and compliance.

**UNIT IV**

9

Human Rights in India – Constitutional Provisions / Guarantees.

**UNIT V**

9

Human Rights of Disadvantaged People – Women, Children, Displaced persons and Disabled persons, including Aged and HIV Infected People. Implementation of Human Rights – National and State Human Rights Commission – Judiciary – Role of NGO's, Media, Educational Institutions, Social Movements.

**TOTAL : 45 PERIODS****OUTCOME :**

- Engineering students will acquire the basic knowledge of human rights.

**REFERENCES:**

1. Kapoor S.K., "Human Rights under International law and Indian Laws", Central Law Agency, Allahabad, 2014.
2. Chandra U., "Human Rights", Allahabad Law Agency, Allahabad, 2014.

**OBJECTIVE:**

- Students will be exposed to various problems associated with soil deposits and methods to evaluate them. The different techniques will be taught to them to improve the characteristics of difficult soils as well as design techniques required to implement various ground improvement methods.

**UNIT I PROBLEMATIC SOIL AND IMPROVEMENT TECHNIQUES 8**

Role of ground improvement in foundation engineering – Methods of ground improvement – Geotechnical problems in alluvial, lateritic and black cotton soils – Selection of suitable ground improvement techniques based on soil conditions.

**UNIT II DEWATERING 10**

Dewatering Techniques - Well points – Vacuum and electroosmotic methods – Seepage analysis for two dimensional flow for fully and partially penetrated slots in homogeneous deposits – Design for simple cases.

**UNIT III INSITU TREATMENT OF COHESIONLESS AND COHESIVE SOILS 10**

Insitu densification of cohesionless soils – Shallow as deep compaction – Dynamic compaction - Vibroflotation, Sand compaction piles and deep compaction. Consolidation of cohesionless soils - Preloading with sand drains, and fabric drains, Stabilization of soft clay ground using stone columns and Lime piles-Installation techniques – Simple design - Relative merits of above methods and their limitations.

**UNIT IV EARTH REINFORCEMENT 9**

Concept of reinforcement – Types of reinforcement material – Reinforced earth wall – Mechanism – Simple design - Applications of reinforced earth; Functions of Geotextiles in filtration, drainage, separation, road works and containment applications.

**UNIT V GROUTING TECHNIQUES 8**

Types of grouts – Grouting equipments and machinery – Injection methods – Grout monitoring – Stabilization with cement, lime and chemicals – Stabilization of expansive soil.

**TOTAL: 45 PERIODS****OUTCOMES:**

At the end of the course the student will be able to

- Gain knowledge on methods and selection of ground improvement techniques.
- Understand dewatering techniques and design for simple cases.
- Get knowledge on insitu treatment of cohesionless and cohesive soils.
- Understand the concept of earth reinforcement and design of reinforced earth.
- Get to know types of grouts and grouting technique.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To understand the basics of soil dynamics – dynamic behaviour of soils – effects of dynamic loads and the various design methods.

**UNIT I THEORY OF VIBRATION****9**

Introduction – Nature dynamic loads – Vibrations of single degree freedom system – Free vibrations of spring – mass systems – Forced vibrations – Viscous damping - Transmissibility – Principles of vibration measuring instruments – Effect of Transient and Pulsating loads.

**UNIT II WAVE PROPAGATION****9**

Elastic waves in rods of infinite length – Longitudinal and Torsional – Effect of end conditions – Longitudinal and torsional vibrations of rods of finite length – Wave Propagation in infinite, homogeneous isotropic and elastic medium – Wave propagation in elastic half space – Typical values of compress wave and shear wave velocity – Wave propagation due to Machine foundation– Surface wave – Typical values – Particle movements and velocity.

**UNIT III DYNAMIC PROPERTIES OF SOILS****9**

Dynamic stress – Strain characteristics – Principles of measuring dynamic properties – Laboratory Techniques – Field tests – Factors affecting dynamic properties – Typical values – Dynamic bearing capacity – Dynamic earth pressure.

**UNIT IV FOUNDATION FOR DIFFERENT TYPES OF MACHINES****9**

Types of machines and foundation – General requirements – Modes of vibration of a rigid foundation – Method of analysis – Linear elastic weightless spring method – Elastic half space method – Analog Method – Design of block foundation – Special consideration for rotary, Impact type of machines – Codal Provisions.

**UNIT V INFLUENCE OF VIBRATION AND REMEDIATION****9**

Mechanism of Liquefaction – Influencing factors – Evaluation of Liquefaction potential based on SPT-Force Isolation – Motion Isolation – Use of spring and damping materials – Vibration control of existing machine foundation – Screening of vibration – Open trenches – Pile Barriers – Salient construction aspects of machine Foundations.

**TOTAL: 45 PERIODS****OUTCOMES:**

At the end of the course the student will be able to

- Understand the theory and measurement of vibration.
- Understand the concept of wave propagation in infinite medium and due to machine foundation.
- Get knowledge on dynamic properties of soils and laboratory and field testing.
- Design of foundation for different types of machines
- Understand liquefaction, motion isolation and vibration control.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To impart knowledge on fundamentals of rock mechanics and its application in solving simple problems associated with rock slopes and underground openings. Student gains the knowledge on the mechanics of rock and its applications in underground structures and rock slope stability analysis.

**UNIT I CLASSIFICATION AND INDEX PROPERTIES OF ROCKS 6**

Geological classification – Index properties of rock systems – Classification of rock masses for engineering purpose – Rock Mass Rating and Q System.

**UNIT II ROCK STRENGTH AND FAILURE CRITERIA 12**

Modes of rock failure – Strength of rock – Laboratory measurement of shear, tensile and compressive strength. Stress-strain behaviour of rock under Hydrostatic compression and deviatoric loading – Mohr –Coulomb failure criteria and Hock and Brown empirical criteria

**UNIT III INITIAL STRESSES AND THEIR MEASUREMENTS 10**

Estimation of initial stresses in rocks – influence of joints and their orientation in distribution of stresses – measurements of in-situ stresses – Hydraulic fracturing – Flat jack method – Over coring method

**UNIT IV APPLICATION OF ROCK MECHANICS IN ENGINEERING 10**

Simple engineering application – Underground openings – Rock slopes – Foundations and mining subsidence.

**UNIT V ROCK STABILISATION 7**

Introduction – Rock support and Rock reinforcement – Principles – Support reaction curves – Shotcreting.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

At the end of the course the student will be able to

- Classify the rocks, study the index properties of rock systems.
- Understand the modes of rock failure, stress-strain characteristics, failure criteria.
- Estimate the stresses in rocks.
- Apply rock mechanics in engineering.
- Get knowledge on rock stabilization.

**OBJECTIVE:**

- To enable students to have the knowledge on planning process and to introduce to the students about the regulations and laws related to Urban Planning.

**UNIT I BASIC ISSUES 8**

Definition of Human settlement, Urban area, Town, City, Urbanisation, Suburbanisation, Urban sprawl, Peri - urban areas, Central Business District (CBD), Classification of urban areas – Trend of Urbanisation at International, National, Regional and State level.

**UNIT II PLANNING PROCESS 8**

Principles of Planning – Types and Level of Plan, Stages in Planning Process – Goals, Objectives, delineation of Planning Areas, Surveys and Questionnaire Design.

**UNIT III DEVELOPMENT PLANS, PLAN FORMULATION AND EVALUATION 10**

Scope and Content of Regional Plan, Master Plan, Detailed Development Plan, Development Control Rules, Transfer of Development Rights , Special Economic Zones- Development of small town and smart cities-case studies

**UNIT IV PLANNING AND DESIGN OF URBAN DEVELOPMENT PROJECTS 9**

Site Analysis, Layout Design, Planning Standards, Project Formulation – Evaluation, Plan Constraints and Implementation, Financing of Urban Development Projects.

**UNIT V LEGISLATION, DEVELOPMENT AND MANAGEMENT OF URBAN SYSTEM 10**

Town and Country Planning Act, Land Acquisition and Resettlement Act etc., Urban Planning Standards and Regulations, Involvement of Public, Private, NGO, CBO and Beneficiaries.

**TOTAL : 45 PERIODS****OUTCOMES:**

The students completing the course will have the ability to

- Describe basic issues in urban planning
- Formulate plans for urban and rural development and
- Plan and analyse socio economic aspects of urban and rural planning
- Design of urban development projects.
- Manage urban development projects.

**OBJECTIVE:**

- To impart knowledge on the principle and design of control of Indoor/ particulate/ gaseous air pollutant and its emerging trends.

**UNIT I INTRODUCTION 7**

Structure and composition of Atmosphere – Definition, Scope and Scales of Air Pollution – Sources and classification of air pollutants and their effect on human health, vegetation, animals, property, aesthetic value and visibility- Ambient Air Quality and Emission standards –Ambient and stack sampling and Analysis of Particulate and Gaseous Pollutants.

**UNIT II METEOROLOGY 6**

Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Atmospheric Diffusion Theories – Dispersion models, Plume rise.

**UNIT III CONTROL OF PARTICULATE CONTAMINANTS 11**

Factors affecting Selection of Control Equipment – Gas Particle Interaction – Working principle, Design and performance equations of Gravity Separators, Centrifugal separators Fabric filters, Particulate Scrubbers, Electrostatic Precipitators – Operational Considerations.

**UNIT IV CONTROL OF GASEOUS CONTAMINANTS 11**

Factors affecting Selection of Control Equipment – Working principle, Design and performance equations of absorption, Adsorption, condensation, Incineration, Bio scrubbers, Bio filters – Process control and Monitoring - Operational Considerations.

**UNIT V INDOOR AIR QUALITY MANAGEMENT 10**

Sources, types and control of indoor air pollutants, sick building syndrome and Building related illness- Sources and Effects of Noise Pollution – Measurement – Standards –Control and Preventive measures.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students completing the course will have

- an understanding of the nature and characteristics of air pollutants, noise pollution and basic concepts of air quality management
- ability to identify, formulate and solve air and noise pollution problems
- ability to design stacks and particulate air pollution control devices to meet applicable standards.
- Ability to select control equipments.
- Ability to ensure quality, control and preventive measures.

**OBJECTIVE:**

- To give an idea about IPR, registration and its enforcement.

**UNIT I INTRODUCTION 9**

Introduction to IPRs, Basic concepts and need for Intellectual Property - Patents, Copyrights, Geographical Indications, IPR in India and Abroad – Genesis and Development – the way from WTO to WIPO –TRIPS, Nature of Intellectual Property, Industrial Property, technological Research, Inventions and Innovations – Important examples of IPR.

**UNIT II REGISTRATION OF IPRs 10**

Meaning and practical aspects of registration of Copy Rights, Trademarks, Patents, Geographical Indications, Trade Secrets and Industrial Design registration in India and Abroad

**UNIT III AGREEMENTS AND LEGISLATIONS 10**

International Treaties and Conventions on IPRs, TRIPS Agreement, PCT Agreement, Patent Act of India, Patent Amendment Act, Design Act, Trademark Act, Geographical Indication Act.

**UNIT IV DIGITAL PRODUCTS AND LAW 9**

Digital Innovations and Developments as Knowledge Assets – IP Laws, Cyber Law and Digital Content Protection – Unfair Competition – Meaning and Relationship between Unfair Competition and IP Laws – Case Studies.

**UNIT V ENFORCEMENT OF IPRs 7**

Infringement of IPRs, Enforcement Measures, Emerging issues – Case Studies.

**TOTAL:45 PERIODS****OUTCOME:**

- Ability to manage Intellectual Property portfolio to enhance the value of the firm.

**TEXTBOOKS:**

1. V. Scople Vinod, Managing Intellectual Property, Prentice Hall of India pvt Ltd, 2012
2. S. V. Satakar, "Intellectual Property Rights and Copy Rights, Ess Ess Publications, New Delhi, 2002

3. Edited by Derek Bosworth and Elizabeth Webster, The Management of Intellectual Property, Edward Elgar Publishing Ltd., 2013.

**OBJECTIVE:**

- Student gains knowledge on various IRC guidelines for designing rigid and flexible pavements. Further, the student will be in a position to assess quality and serviceability conditions of roads.

**UNIT I TYPE OF PAVEMENT AND STRESS DISTRIBUTION ON LAYERED SYSTEM 12**

Introduction – Pavement as layered structure – Pavement types rigid and flexible. Resilient modulus - Stress and deflections in pavements under repeated loading.

**UNIT II DESIGN OF FLEXIBLE PAVEMENTS 12**

Flexible pavement design Factors influencing design of flexible pavement, Empirical – Mechanistic empirical and theoretical methods – Design procedure as per IRC guidelines – Design and specification of rural roads.

**UNIT III DESIGN OF RIGID PAVEMENTS 12**

Cement concrete pavements Factors influencing CC pavements – Modified Westergaard approach – Design procedure as per IRC guidelines – Concrete roads and their scope in India.

**UNIT IV PERFORMANCE EVALUATION AND MAINTENANCE 12**

Pavement Evaluation - Causes of distress in rigid and flexible pavements – Evaluation based on Surface Appearance, Cracks, Patches and Pot Holes, Undulations, Raveling, Roughness, Skid Resistance. Structural Evaluation by Deflection Measurements - Pavement Serviceability index, - Pavement maintenance (IRC Recommendations only).

**UNIT V STABILIZATION OF PAVEMENTS 12**

Stabilisation with special reference to highway pavements – Choice of stabilizers – Testing and field control - Stabilisation for rural roads in India – Use of Geosynthetics in roads.

**TOTAL: 60 PERIODS****OUTCOMES:**

The students completing the course will

- Get knowledge about types of rigid and flexible pavements.
- Able to design of rigid pavements.
- Able to design of flexible pavements.
- Determine the causes of distress in rigid and flexible pavements.
- Understand stabilisation of pavements, testing and field control.

**TEXTBOOKS:**

1. Khanna, S.K. and Justo C.E.G. and Veeraragavan, A, “Highway Engineering”, New Chand and Brothers, Revised 10th Edition, 2014.
2. Kadiyali, L.R., “Principles and Practice of Highway Engineering”, Khanna tech. Publications, New Delhi, 2005.

**REFERENCES:**

2. Guidelines for the Design of Flexible Pavements, IRC-37-2001, The Indian roads Congress, New Delhi.
3. Guideline for the Design of Rigid Pavements for Highways, IRC 58-1998, The Indian Road Congress, New Delhi.

**OBJECTIVE:**

- To give an overview of Traffic engineering, traffic regulation, management and traffic safety with integrated approach in traffic planning as well.

**UNIT I TRAFFIC PLANNING AND CHARACTERISTICS 12**

Road Characteristics – Road user characteristics – PIEV theory – Vehicle – Performance characteristics – Fundamentals of Traffic Flow – Urban Traffic problems in India – Integrated planning of town ,country ,regional and all urban infrastructure – Towards Sustainable approach. – land use & transport and modal integration.

**UNIT II TRAFFIC SURVEYS 12**

Traffic Surveys – Speed, journey time and delay surveys – Vehicles Volume Survey including nonmotorized transports – Methods and interpretation – Origin Destination Survey – Methods and presentation – Parking Survey – Accident analyses -Methods, interpretation and presentation – Statistical applications in traffic studies and traffic forecasting – Level of service – Concept, applications and significance.

**UNIT III TRAFFIC DESIGN AND VISUAL AIDS 12**

Intersection Design - channelization, Rotary intersection design – Signal design – Coordination of signals – Grade separation - Traffic signs including VMS and road markings – Significant roles of traffic control personnel - Networking pedestrian facilities & cycle tracks.

**UNIT IV TRAFFIC SAFETY AND ENVIRONMENT 12**

Road accidents – Causes, effect, prevention, and cost – Street lighting – Traffic and environment hazards – Air and Noise Pollution, causes, abatement measures – Promotion and integration of public transportation – Promotion of non-motorized transport.

**UNIT V TRAFFIC MANAGEMENT 12**

Area Traffic Management System - Traffic System Management (TSM) with IRC standards –Traffic Regulatory Measures-Travel Demand Management (TDM) – Direct and indirect methods –Congestion and parking pricing – All segregation methods- Coordination among different agencies – Intelligent Transport System for traffic management, enforcement and education.

**TOTAL: 60 PERIODS****OUTCOMES:**

On completing this course, the Students will be able to

- Analyse traffic problems and plan for traffic systems various uses
- Design Channels, Intersections, signals and parking arrangements
- Develop Traffic management Systems.

**TEXTBOOKS:**

1. Kadiyali.L.R. "Traffic Engineering and Transport Planning", Khanna Publishers, Delhi, 2013

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- The objective of this course is to create an awareness / overview of the impact of Transportation Projects on the environment and society..

**UNIT I INTRODUCTION 12**

Environmental Inventory, Environmental Assessment, Environmental Impact Assessment (EIA), Environmental Impact of Transportation Projects, Need for EIA, EIA Guidelines for Transportation Project, Historical Development.

**UNIT II METHODOLOGIES 12**

Elements of EIA – Screening and Scoping – Methods of Impact Analysis – Applications – appropriate methodology.

**UNIT III ENVIRONMENTAL IMPACT, PREDICTION AND ASSESSMENT 12**

Prediction and Assessment of Impact of Transportation Project at various stages on water, air, noise, land acquisition and resettlement, Socio economic impact, indigenous people, aesthetics, health and safety, energy studies, IRC guidelines.

**UNIT IV ENVIRONMENTAL MITIGATION AND MANAGEMENT PLAN 12**

Mitigation of the impact on Natural and Man-made Environment, Health, Water, Land, Noise, Air, Public participation, Environmental Management Plan, Energy Conservation, Methods to reduce Global Warming.

**UNIT V EIA CASE STUDIES 12**

EIA Case Studies on Highway, Railway, Airways and Waterways Projects

**TOTAL: 60 PERIODS**

**OUTCOMES:**

Students will be able to

- Understood the impact of Transportation projects on the environment.
- Get knowledge on methods of impact analysis and their applications.
- Understand environmental Laws on Transportation Projects and the mitigative measures adopted in the planning stage.
- Predict and assess the impact of transportation projects.

**TEXTBOOKS:**

**17155E75D**

**INDUSTRIAL STRUCTURES**

**L T P C**  
**4 0 0 4**

**OBJECTIVE:**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

- To learn the planning, layout, functional aspects of industries and design of major steel and R.C structures needed for industries.

**UNIT I PLANNING 12**

Classification of industries and industrial structures – Site Planning and Selection – Exterior and interior Layout for Industries and buildings - Guidelines from factories act

**UNIT II FUNCTIONAL REQUIREMENTS 12**

Lighting – Ventilation – Noise and Vibration control – Fire safety

**UNIT III DESIGN OF STEEL STRUCTURES 12**

Pre-engineered and Mill buildings – Transmission Lines Towers – plate girders. Bunkers and Silos – pipe/cable racks- Chimney.

**UNIT IV DESIGN OF R.C. STRUCTURES 12**

Corbels, Brackets and Nibs - Silos and bunkers –Chimney –Cooling Towers (Principles only)

**UNIT V PREFABRICATION 12**

Principles of prefabrication and pre cast construction – Prestressed precast roof trusses - Floor slabs - Wall panels- Handling and erection stresses –joints in precast structures.

**TOTAL: 60 PERIODS**

**OUTCOMES:**

Upon completion of this course, students will be able to

- Know the requirements of various industries and get an idea about the materials used and planning of various industrial components
- Understand the functional requirements for industrial structures.
- Design special steel structures like bunkers, silos, crane girders, chimneys and pre-engineered buildings.
- Design special RC structures like corbels, silos, bunkers, chimneys, plates and shells.
- Understand the principles of prefabrication and prestressing

**TEXTBOOKS:**

1. Ramamrutham.S., Design of Reinforced Concrete Structures, Dhanpat Rai Publishing Company, 2007.
2. Varghese.P.C., Advanced Reinforced Concrete Design, PHI, Eastern Economy Editions, Second Edition, 2005.

4. Koncz, J., Manual of Precast Construction Vol. I and II, Bauverlay GMBH, 1971.
5. Handbook on Precast Construction, An Indian Concrete Institute Publication, 2016

**OBJECTIVE:**

- To impart the knowledge and skills to identify, assess and mitigate the environmental and social impacts of developmental projects

**UNIT I INTRODUCTION 12**

Impacts of Development on Environment – Rio Principles of Sustainable Development-Environmental Impact Assessment (EIA) – Objectives – Historical development – EIA Types – EIA in project cycle –EIA Notification and Legal Framework–Stakeholders and their Role in EIA– Selection & Registration Criteria for EIA Consultants

**UNIT II ENVIRONMENTAL ASSESSMENT 12**

Screening and Scoping in EIA – Drafting of Terms of Reference,Baseline monitoring, Prediction and Assessment of Impact on land, water, air, noise and energy, flora and fauna - Matrices – Networks – Checklist Methods - Mathematical models for Impact prediction – Analysis of alternatives

**UNIT III ENVIRONMENTAL MANAGEMENT PLAN 12**

Plan for mitigation of adverse impact on water, air and land, water, energy, flora and fauna – Environmental Monitoring Plan – EIA Report Preparation – Review of EIA Reports – Public Hearing-Environmental Clearance Post Project Monitoring.

**UNIT IV SOCIO ECONOMIC ASSESSMENT 12**

Baseline monitoring of Socio economic environment – Identification of Project Affected Personal – Rehabilitation and Resettlement Plan- Economic valuation of Environmental impacts – Cost benefit Analysis-

**UNIT V CASE STUDIES 12**

EIA case studies pertaining to Infrastructure Projects – Real Estate Development - Roads and Bridges – Mass Rapid Transport Systems - Ports and Harbor – Airports - Dams and Irrigation projects - Power plants – CETPs- Waste Processing and Disposal facilities – Mining Projects.

**TOTAL: 60 PERIODS****OUTCOMES:**

The students completing the course will have ability to

- carry out scoping and screening of developmental projects for environmental and social assessments
- explain different methodologies for environmental impact prediction and assessment
- plan environmental impact assessments and environmental management plans
- evaluate environmental impact assessment reports

**TEXTBOOKS:**

1. Canter, R.L, “Environmental impact Assessment “, 2nd Edition, McGraw Hill Inc, New Delhi,1995.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- To introduce the need for prestressing in a structure
- To explain the methods, types and advantages of prestressing to the students.
- To make the students to design a prestressed concrete structural elements and systems
- To introduce the students the effect of prestressing in the flexural and shear behaviour of structural elements.

**UNIT I INTRODUCTION – THEORY AND BEHAVIOUR 12**

Basic concepts – Advantages and disadvantages – Materials required – Systems and methods of prestressing – Analysis of sections – Stress concept – Strength concept – Load balancing concept – Effect of loading on the tensile stresses in tendons – Effect of tendon profile on deflections – Factors influencing deflections – Calculation of deflections – Short term and long term deflections - Losses of prestress – Estimation of crack width.

**UNIT II DESIGN FOR FLEXURE AND SHEAR 12**

Basic assumptions of flexural design – Permissible stresses in steel and concrete as per I.S.1343 Code – Different Types of sections - Design of sections of Type I and Type II post-tensioned and pre tensioned beams – Check for flexural capacity based on I.S. 1343 Code – Influence of Layout of cables in post-tensioned beams – Location of wires in pre-tensioned beams – Design for shear based on I.S. 1343 Code.

**UNIT III DEFLECTION AND DESIGN OF ANCHORAGE ZONE 12**

Factors influencing deflections – Short term deflections of uncracked members – Prediction of long term deflections due to creep and shrinkage – Check for serviceability limit states. Determination of anchorage zone stresses in post-tensioned beams – design of anchorage zone reinforcement – Check for transfer bond length in pre-tensioned beams.

**UNIT IV COMPOSITE BEAMS AND CONTINUOUS BEAM 12**

Analysis and design of composite beams – Methods of achieving continuity in continuous beams – Analysis for secondary moments – Concordant cable and linear transformation – Calculation of stresses – Principles of design.

**UNIT V TENSION AND COMPRESSION MEMBERS 12**

Role of prestressing in members subjected to Tensile forces and compressive forces - Design of tension and compression members – Tanks, pipes and poles – Partial prestressing – Definition, methods of achieving partial prestressing, merits and demerits of partial prestressing.

**TOTAL: 60 PERIODS****OUTCOMES:**

On successful completion of this course, students will be able to:

- Understand the behaviour of prestressed concrete members and able to analyze the prestressed concrete beams.
- Design the prestressed concrete members for flexure and shear as per the relevant design code (IS 1343).
- Analyze for deflection of prestressed concrete members and design the anchorage zone.
- Analyze and design of composite beams and continuous beams.
- Design of prestressed concrete structures - sleepers, Tanks, pipes and poles.

**TEXTBOOKS:**

1. Krishna Raju N., "Prestressed concrete", 5th Edition, Tata McGraw Hill Company, New Delhi, 2012
2. Pandit.G.S. and Gupta.S.P., "Prestressed Concrete", CBS Publishers and Distributors Pvt.
3. Rajagopalan.N, "Prestressed Concrete", Narosa Publishing House, 2002.
4. Dayaratnam.P., "Prestressed Concrete Structures", Oxford and IBH, 2013
5. Lin T.Y. and Ned.H.Burns, "Design of prestressed Concrete Structures", Third Edition, Wiley India Pvt. Ltd., New Delhi, 2013.
6. IS1343:1980, Code of Practice for Prestressed Concrete, Bureau of Indian Standards, New Delhi, 2012
7. IS 3370- Part 4 (2008) Indian standard Code of practice for concrete structures for the storage of liquid- Design tables, code of practice, bureau of Indian standards, new Delhi.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To make the students to learn about planning of construction projects, scheduling procedures and techniques, cost and quality control projects and use of project information as decision making tool.

**UNIT I CONSTRUCTION PLANNING 12**

Basic concepts in the development of construction plans-Choice of Technology and Construction method-Defining Work Tasks- Work breakdown structure- Definition- Precedence relationships among activities-Estimating Activity Durations-Estimating Resource Requirements for work activities-coding systems.

**UNIT II SCHEDULING PROCEDURES AND TECHNIQUES 12**

Relevance of construction schedules-Bar charts - The critical path method-Calculations for critical path scheduling-Activity float and schedules-Presenting project schedules-Critical path scheduling for Activity-on-node and with leads, Lags and Windows-Calculations for scheduling with leads,lags and windows-Resource oriented scheduling-Scheduling with resource constraints and precedences -Use of Advanced Scheduling Techniques-Scheduling with uncertain durations-Crashing and time/cost tradeoffs -Improving the Scheduling process – Introduction to application software.

**UNIT III COST CONTROL MONITORING AND ACCOUNTING 12**

The cost control problem-The project budget-Forecasting for Activity cost control - financial accounting systems and cost accounts-Control of project cash flows-Schedule control-Schedule and Budget updates-Relating cost and schedule information.

**UNIT IV QUALITY CONTROL AND SAFETY DURING CONSTRUCTION 12**

Quality and safety Concerns in Construction-Organizing for Quality and Safety-Work and Material Specifications-Total Quality control-Quality control by statistical methods -Statistical Quality control with Sampling by Attributes-Statistical Quality control by Sampling and Variables-Safety.

**UNIT V ORGANIZATION AND USE OF PROJECT INFORMATION 12**

Types of project information-Accuracy and Use of Information-Computerized organization and use of Information - Organizing information in databases-relational model of Data bases-Other conceptual Models of Databases-Centralized database Management systems-Databases and application programs-Information transfer and Flow.

**TOTAL: 60 PERIODS****OUTCOMES:**

The students completing the course will have ability to

- Understand basic concepts of construction planing.
- Schedule the construction activities.
- Forecast and control the cost in a construction.
- Understand the quality control and safety during construction.
- Organize information in Centralized database Management systems.

**TEXTBOOKS:**

4. Halpin,D.W., “Financial and Cost Concepts for Construction Management”, John Wiley and Sons, New York, 1985.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To make the students conversant with the types, sources, generation, storage, collection, transport, processing and disposal of municipal solid waste.

**UNIT I SOURCES AND CHARACTERISTICS 12**

Sources and types of municipal solid wastes- Public health and environmental impacts of improper disposal of solid wastes- sampling and characterization of wastes - factors affecting waste generation rate and characteristics - Elements of integrated solid waste management – Requirements and salient features of Solid waste management rules (2016) – Role of public and NGO's- Public Private participation – Elements of Municipal Solid Waste Management Plan.

**UNIT II SOURCE REDUCTION , WASTE STORAGE AND RECYCLING 12**

Waste Management Hierarchy - Reduction, Reuse and Recycling - source reduction of waste – On-site storage methods – Effect of storage, materials used for containers – segregation of solid wastes – Public health and economic aspects of open storage – case studies under Indian conditions – Recycling of Plastics and Construction/Demolition wastes.

**UNIT III COLLECTION AND TRANSFER OF WASTES 12**

Methods of Residential and commercial waste collection – Collection vehicles – Manpower – Collection routes – Analysis of waste collection systems; Transfer stations –location, operation and maintenance; options under Indian conditions – Field problems- solving.

**UNIT IV PROCESSING OF WASTES 12**

Objectives of waste processing – Physical Processing techniques and Equipment; Resource recovery from solid waste composting and biomethanation; Thermal processing options – case studies under Indian conditions.

**UNIT V WASTE DISPOSAL 12**

Land disposal of solid waste- Sanitary landfills – site selection, design and operation of sanitary landfills – Landfill liners – Management of leachate and landfill gas- Landfill bioreactor – Dumpsite Rehabilitation

**TOTAL: 60 PERIODS****OUTCOMES:**

The students completing the course will demonstrate

- understanding of the nature and characteristics of municipal solid wastes and the regulatory requirements regarding municipal solid waste management.
- Reduction, reuse and recycling of waste.
- ability to plan and design systems for storage, collection, transport, processing and disposal of municipal solid waste.
- knowledge on the issues on solid waste management from an integrated and holistic perspective, as well as in the local and international context.
- Design and operation of sanitary landfill.

**TEXTBOOKS:**

1. William A. Worrell, P. Aarne Vesilind (2012) Solid Waste Engineering, Cengage Learning, 2012.
2. John Pitchel (2014), Waste Management Practices-Municipal, Hazardous and industrial – CRC Press, Taylor and Francis, New York.

**REFERENCES:**

2. George Tchobanoglous and Frank Kreith (2002). Handbook of Solid waste management, McGraw Hill, New York.

**OBJECTIVE:**

- To facilitate the understanding of Quality Management principles and process.

**UNIT I INTRODUCTION 12**

Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention.

**UNIT II TQM PRINCIPLES 12**

Leadership - Quality Statements, Strategic quality planning, Quality Councils - Employee involvement - Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership - Partnering, Supplier selection, Supplier Rating.

**UNIT III TQM TOOLS AND TECHNIQUES I 12**

The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark, Bench marking process - FMEA - Stages, Types.

**UNIT IV TQM TOOLS AND TECHNIQUES II 12**

Quality Circles - Cost of Quality - Quality Function Deployment (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures.

**UNIT V QUALITY MANAGEMENT SYSTEM 12**

Introduction—Benefits of ISO Registration—ISO 9000 Series of Standards—Sector-Specific Standards—AS 9100, TS16949 and TL 9000-- ISO 9001 Requirements—Implementation— Documentation—Internal Audits—Registration--**ENVIRONMENTAL MANAGEMENT SYSTEM:** Introduction—ISO 14000 Series Standards—Concepts of ISO 14001—Requirements of ISO 14001—Benefits of EMS.

**TOTAL: 60 PERIODS****OUTCOME:**

- The student would be able to apply the tools and techniques of quality management to manufacturing and services processes.

**TEXTBOOK:**

1. Dale H.Besterfield, Carol B.Michna,Glen H. Besterfield, Mary B.Sacre,Hemant Urdhwareshe and Rashmi Urdhwareshe, "Total Quality Management", Pearson Education Asia, Revised Third Edition, Indian Reprint, Sixth Impression, 2013.

4. ISO9001-2015 standards

**OBJECTIVES:**

- The main purpose of coastal engineering is to protect harbors and improve navigation.
- The students to the diverse topics as wave mechanics, wave climate, shoreline protection methods and laboratory investigations using model studies.

**UNIT I INTRODUCTION TO COASTAL ENGINEERING 9**

Indian Scenario - Classification of Harbours. Introduction - wind and waves - Sea and Swell - Introduction to small amplitude wave theory - use of wave tables- Mechanics of water waves - Linear (Airy) wave theory, Introduction to Tsunami

**UNIT II WAVE PROPERTIES AND ANALYSIS 9**

Behaviour of waves in shallow waters, Introduction to non-linear waves and their properties - Waves in shallow waters - Wave Refraction, Diffraction and Shoaling -Hindcast wave generation models, wave shoaling; wave refraction; wave breaking; wave diffraction random and 3D waves-Short term wave analysis - wave spectra and its utilities - Long term wave analysis- Statistics analysis of grouped wave data.

**UNIT III COASTAL SEDIMENT TRANSPORT 9**

Dynamic beach profile; cross-shore transport; along shore transport (Littoral transport), sediment movement

**UNIT IV COASTAL DEFENSE 9**

Field measurement; models, groins, sea walls, offshore breakwaters, artificial nourishment - planning of coast protection works - Design of shore defense structures

**UNIT V MODELING IN COASTAL ENGINEERING 9**

Physical modeling in Coastal Engineering - Limitations and advantages - Role of physical modeling in coastal engineering - Numerical modeling - Modeling aspects - limitations - Tsunami mitigation measures –

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Understand coastal engineering aspects of harbors methods to improve navigation
- Understand the wave properties and analysis of wave.
- Understand the concepts of sediment transport.
- Design of shore defense structures.
- Gain knowledge in modeling in coastal engineering.

**REFERENCES:**

**OBJECTIVE:**

- To gain an insight on local and global perceptions and approaches on participatory water resource management

**UNIT I FUNDAMENTALS: SOCIOLOGY AND PARTICIPATORY APPROACH 6**

Sociology – Basic concepts – Perspectives- Social Stratification – Irrigation as a Socio technical Process - Participatory concepts– Objectives of participatory approach

**UNIT II UNDERSTANDING FARMERS PARTICIPATION 10**

Farmers participation –need and benefits – Comparisons of cost and benefit -Sustained system performance - Kinds of participation – Context of participation, factors in the environment – WUA - Constraints in organizing FA – Role of Community Organiser – Case Studies.

**UNIT III ISSUES IN WATER MANAGEMENT 9**

Multiple use of water – Issues in Inter-sectoral Water Allocation - domestic, irrigation, industrial sectors - modernization techniques – Rehabilitation – Command Area Development - Water delivery systems

**UNIT IV PARTICIPATORY WATER CONSERVATION 10**

Global Challenges -Social – Economic – Environmental - Solutions –Political - Water Marketing – Water Rights -Consumer education – Success Stories Case Studies

**UNIT V PARTICIPATORY WATERSHED DEVELOPMENT 10**

Concept and significance of watershed - Basic factors influencing watershed development –Principles of watershed management - Definition of watershed management – Identification of problems - Watershed approach in Government programmes – People’s participation – Entry point activities - Evaluation of watershed management measures.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Gain knowledge on various processes involved in participatory water resource management.
- Understand farmers participation in water resources management.
- ware of the issues related to water conservation and watershed Development
- Get knowledge in participatory water conservation
- Understand concept, principle , approach of watershed management.

**TEXTBOOKS:**

1. Sivasubramaniyan, K. Water Management, SIMRES Publication, Chennai, 2011
2. Uphoff.N., Improving International Irrigation management with Farmer Participation – Getting the process Right – Studies in water Policy and management, No.11, Westview press, Boulder,CO, 1986.
3. Tideman, E.M., “Watershed Management”, Omega Scientific Publishers, New Delhi, 1996.

**REFERENCE:**

1. Chambers Robert, Managing canal irrigation, Cambridge University Press, 1989

**OBJECTIVES:**

- To introduce the students to the interdisciplinary analysis of water and conceptual design of intervention strategies.
- To develop a knowledge-base on capacity building on IWRM.

**UNIT I IWRM FRAMEWORK 9**

Definition-objective-principles-evaluation of IWRM- IWRM relevance in water resources management- paradigm shift: process and prospective outcomes

**UNIT II CONTEXTUALIZING 9**

UN formulations - SDG goals - IWRM in Global, Regional and Local Institutional transformation - Bureaucratic reforms - Inclusive development

**UNIT III EMERGING ISSUES IN WATER MANAGEMENT 9**

Emerging Issues — Drinking water management in the context of climate change - IWRM and irrigation - Flood – Drought – Pollution – Linkages between water, health and poverty

**UNIT IV IWRM AND WATER RESOURCES DEVELOPMENT IN INDIA 9**

Rural Development - Ecological sustainability- -Watershed development and conservation - Ecosystem regeneration – Wastewater reuse - Sustainable livelihood - Food security

**UNIT V ASPECTS OF INTEGRATED DEVELOPMENT 9**

Capacity building - Conceptual framework of IWRM – Problems and policy issues - Solutions for effective integrated water management - Case studies

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Understand objectives, principles and evolution of integrated water resources management.
- Have an idea of contextualizing IWRM
- Gain knowledge in emerging issues in water management, flood, drought, pollution and poverty.
- Understand the water resources development in India and wastewater reuse.
- Gain knowledge on integrated development of water management.

**TEXTBOOKS:**

1. Mollinga P. *et al.* “Integrated Water Resources Management”, Water in South Asia Volume I, Sage Publications, 2006.
2. Sithamparanathan, Rangasamy, A., and Arunachalam, N., “Ecosystem Principles and Sustainable Agriculture”, Scitech Publications (India) Pvt.Lt, Chennai, 1999.

**REFERENCES:**

2. Murthy, J.V.S., “Watershed Management in India”, Wiley Eastern Ltd., New York, 1995.
3. Dalte, S.J.C., “Soil Conservation and Land Management”, International Book Distribution, India, 1986.

**OBJECTIVES:**

- To introduce the student to the principles of Groundwater governing Equations and Characteristics of different aquifers,
- To understand the techniques of development and management of groundwater.

**UNIT I HYDROGEOLOGICAL PARAMETERS 9**

Introduction – Water bearing Properties of Rock – Type of aquifers - Aquifer properties – permeability, specific yield, transmissivity and storage coefficient – Methods of Estimation – GEC norms - Steady state flow - Darcy's Law - Groundwater Velocity – Dupuit Forchheimer assumption – Steady Radial Flow into a Well

**UNIT II WELL HYDRAULICS 9**

Unsteady state flow - Theis method - Jacob method – Chow's method – Law of Times – Theis Recovery – Bailer method – Slug method - tests - Image well theory – Partial penetrations of wells – Well losses – Specific Capacity and Safe yield - Collector well and Infiltration gallery

**UNIT III GROUNDWATER MANAGEMENT 9**

Need for Management Model – Database for Groundwater Management – Groundwater balance study – Introduction to Mathematical model – Model Conceptualization – Initial and Boundary Condition – Calibration – Validation – Future Prediction – Sensitivity Analysis – Uncertainty – Development of a model

**UNIT IV GROUNDWATER QUALITY 9**

Ground water chemistry - Origin, movement and quality - Water quality standards – Drinking water – Industrial water – Irrigation water - Ground water Pollution and legislation - Environmental Regulatory requirements.

**UNIT V GROUNDWATER CONSERVATION 9**

Artificial recharge techniques – Reclaimed wastewater recharge – Soil aquifer treatment (SAT) – Aquifer Storage and Recovery (ASR) Seawater Intrusion and Remediation – Ground water Basin management and Conjunctive use – Protection zone delineation, Contamination source inventory and remediation schemes

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Understand aquifer properties and its dynamics
- Get an exposure towards well design and practical problems
- Develop a model for groundwater management.
- Students will be able to understand the importance of artificial recharge and groundwater quality concepts
- Gain knowledge on conservation of groundwater.

**TEXTBOOKS:**

1. Raghunath H.M., "Ground Water Hydrology", New Age International (P) Limited, New Delhi, 2010.
2. Todd D.K., "Ground Water Hydrology", John Wiley and Sons, New York, 2000.

**REFERENCES:**

1. Fitts R Charles, "Groundwater Science". Elsevier, Academic Press, 2002.
2. Ramakrishnan, S, Ground Water, K.J. Graph arts, Chennai, 1998.

**OBJECTIVES:**

- To introduce the student to the concept of Mathematical approaches for managing the water resources system.
- To make the students apply an appropriate system approach to optimally operate a water resource system.

**UNIT I SYSTEM APPROACH 9**

Definition, classification, and characteristics of systems - Philosophy of modelling – Goals and Objectives – Basics of system analysis concept – steps in systems engineering.

**UNIT II LINEAR PROGRAMMING 9**

Introduction to Operation research - Linear programming Problem Formulation-graphical solution-Simplex method –Sensitivity analysis - application to operation of single purpose reservoir

**UNIT III DYNAMIC PROGRAMMING 9**

Bellman's optimality criteria, problem formulation and solutions – Water Allocation for three state (user), Forward and Backward Recursion techniques in Dynamic Programming - Shortest pipe line route problem - Application to reservoirs capacity expansion

**UNIT IV SIMULATION 9**

Basic principles and concepts – Monte Carlo techniques – Model development – Inputs and outputs – Single and multipurpose reservoir simulation models – Deterministic simulation – Rule Curve development for reservoir.

**UNIT V ADVANCED OPTIMIZATION TECHNIQUES 9**

Integer and parametric linear programming – Goal programming types – Applications to reservoir release optimization – application of evolutionary algorithms like Genetic algorithm, Particle swarm, Simulated Annealing to reservoir release optimization

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be

- Eexposed to the economic aspects and analysis of water resources systems by which they will get an idea of comprehensive and integrated planning of a water resources project.
- Understanding the concept of linear programming and apply in water resource system.
- Understanding the concept of dynamic programming and apply in water resource system.
- Develops simulation models.
- Ddeveloping skills in solving problems in operations research through LP, DP and Simulation techniques.

**TEXTBOOK:**

1. Vedula, S., and Majumdar, P.P. "Water Resources Systems" – Modeling Techniques and Analysis Tata McGraw Hill, 5th reprint, New Delhi, 2010.

**REFERENCES:**

5. Goodman Aluvin S., "Principles of Water Resources Planning", Prentice Hall of India, 1984

**OBJECTIVE:**

- The student acquires the knowledge on the Geotechnical engineering problems associated with soil contamination, safe disposal of waste and remediate the contaminated soils by different techniques thereby protecting environment.

**UNIT I GENERATION OF WASTES AND CONSEQUENCES OF SOIL POLLUTION 8**

Introduction to Geo environmental engineering – Environmental cycle – Sources, production and classification of waste – Causes of soil pollution – Factors governing soil pollution interaction clay minerals - Failures of foundation due to waste movement.

**UNIT II SITE SELECTION AND SAFE DISPOSAL OF WASTE 10**

Safe disposal of waste – Site selection for landfills – Characterization of land fill sites and waste – Risk assessment – Stability of landfills – Current practice of waste disposal – Monitoring facilities – Passive containment system – Application of geosynthetics in solid waste management – Rigid or flexible liners.

**UNIT III TRANSPORT OF CONTAMINANTS 8**

Contaminant transport in sub surface – Advection, Diffusion, Dispersion – Governing equations – Contaminant transformation – Sorption – Biodegradation – Ion exchange – Precipitation – Hydrological consideration in land fill design – Ground water pollution.

**UNIT IV WASTE STABILIZATION 10**

Stabilization - Solidification of wastes – Micro and macro encapsulation – Absorption, Adsorption, Precipitation – Detoxification – Mechanism of stabilization – Organic and inorganic stabilization – Utilization of solid waste for soil improvement – case studies.

**UNIT V REMEDIATION OF CONTAMINATED SOILS 9**

Exsitu and Insitu remediation-Solidification, bio-remediation, incineration, soil washing, phyto remediation, soil heating, vetrification, bio-venting.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Assess the contamination in the soil
- Understand the current practice of waste disposal
- To prepare the suitable disposal system for particular waste.
- Stabilize the waste and utilization of solid waste for soil improvement.
- Select suitable remediation methods based on contamination.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To introduce the student to the concept of hydrological aspects of water availability and requirements and should be able to quantify, control and regulate the water resources.

**UNIT I      PRECIPITATION AND ABSTRACTIONS      10**

Hydrological cycle- Meteorological measurements – Requirements, types and forms of precipitation - Rain gauges-Spatial analysis of rainfall data using Thiessen and Isohyetal methods-Interception - Evaporation, Horton's equation, pan evaporation measurements and evaporation suppression - Infiltration-Horton's equation - double ring infiltrometer, infiltration indices.

**UNIT II      RUNOFF      8**

Watershed, catchment and basin - Catchment characteristics - factors affecting runoff - Run off estimation using empirical - Strange's table and SCS methods – Stage discharge relationships-flow measurements-Hydrograph – Unit Hydrograph – IUH

**UNIT III      FLOOD AND DROUGHT      9**

Natural Disasters-Flood Estimation- Frequency analysis- Flood control- Definitions of droughts-Meteorological, hydrological and agricultural droughts- IMD method-NDVI analysis- Drought Prone Area Programme (DPAP)

**UNIT IV      RESERVOIRS      8**

Classification of reservoirs, General principles of design, site selection, spillways, elevation – area - capacity - storage estimation, sedimentation - life of reservoirs – rule curve

**UNIT V      GROUNDWATER AND MANAGEMENT      10**

Origin- Classification and types - properties of aquifers- governing equations – steady and unsteady flow - artificial recharge - RWH in rural and urban areas

**TOTAL: 45 PERIODS****OUTCOMES:**

The students completing the course will have

- an understanding of the key drivers on water resources, hydrological processes and their integrated behaviour in catchments,
- ability to construct and apply a range of hydrological models to surface water and groundwater problems including Hydrograph, Flood/Drought management, artificial recharge
- ability to conduct Spatial analysis of rainfall data and design water storage reservoirs
- Understand the concept and methods of ground water management.

**TEXTBOOKS:**

1. Subramanya .K. "Engineering Hydrology"- Tata McGraw Hill, 2010
2. Jayarami Reddy .P. "Hydrology", Tata McGraw Hill, 2008.
3. Linsley, R.K. and Franzini, J.B. "Water Resources Engineering", McGraw Hill International Book Company, 1995.

**REFERENCES:**

3. Raghunath .H.M., "Hydrology", Wiley Eastern Ltd., 1998.

**OBJECTIVE:**

- To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

**UNIT I HUMAN VALUES 10**

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

**UNIT II ENGINEERING ETHICS 9**

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

**UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION 9**

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

**UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS 9**

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

**UNIT V GLOBAL ISSUES 8**

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of Conduct – Corporate Social Responsibility.

**TOTAL: 45 PERIODS****OUTCOME:**

- Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

**TEXT BOOKS:**

1. Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2003.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- To introduce the students about computer graphics, structural analysis, design and optimization and expert systems, applications in analysis.

**UNIT I INTRODUCTION 9**

Fundamental reason for implementing CAD - Software requirements – Hardware components in CAD system – Design process - Applications and benefits.

**UNIT II COMPUTER GRAPHICS 9**

Graphic Software – Graphic primitives - Transformations - 2 Dimensional and 3 Dimensional transformations – Concatenation - Wire frame modeling - Solid modeling - Graphic standards - Drafting packages .

**UNIT III STRUCTURAL ANALYSIS 9**

Principles of structural analysis - Fundamentals of finite element analysis - Concepts of finite elements – Stiffness matrix formulation – Variational Method – Weighted residual method – Problems – Convergence criteria – Analysis packages and applications.

**UNIT IV DESIGN AND OPTIMIZATION 9**

Principles of design of steel and RC structures - Beams and Columns - Applications to simple design problems - Optimization techniques - Algorithms - Linear programming – Simplex Method

**UNIT V EXPERT SYSTEMS 9**

Introduction to artificial intelligence - Knowledge based expert systems – Applications of Knowledge Based Expert Systems - Rules and decision tables - Inference mechanisms - simple applications

**TOTAL: 45 PERIODS**

**OUTCOMES:**

On successful completion of this course, students will be able to:

- Understand the concepts of Computer-Aided Design, Software requirements and Hardware components in CAD system.
- Acquire the knowledge in Computer Graphics and Computer aided drafting using Auto CAD software.
- Understand the fundamentals of finite element analysis and be able use software for modeling, analysis and design of structures.
- Understand the concepts of Optimization techniques and its practical applications to structural engineering.
- Acquire the knowledge in Artificial Intelligence and Knowledge based expert systems.

**TEXTBOOKS:**

1. Groover M.P. and Zimmers E.W. Jr., “CAD/CAM, Computer Aided Design and Manufacturing”, Prentice Hall of India Ltd, New Delhi, 1993.
2. Krishnamoorthy C.S.Rajeev S., “Computer Aided Design”, Narosa Publishing House, New Delhi, 2001.

**REFERENCES:**

2. Rao S.S., “Optimisation Theory and Applications”, Wiley Eastern Limited, New Delhi, 1984.
3. Richard Forsyth (Ed), “Expert System Principles and Case Studies”, Chapman and Hall, London, 1989.

**OBJECTIVE:**

- To acquire the knowledge on Quality of concrete, durability aspects, causes of deterioration, assessment of distressed structures, repairing of structures and demolition procedures.

**UNIT I MAINTENANCE AND REPAIR STRATEGIES 9**

Maintenance, Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance, Various aspects of Inspection, Assessment procedure for evaluating damaged structure, causes of deterioration.

**UNIT II STRENGTH AND DURABILITY OF CONCRETE 9**

Quality assurance for concrete–Strength, Durability- Cracks, different types, causes–Effects due to climate, temperature, Sustained elevated temperature, Corrosion

**UNIT III SPECIAL CONCRETES 9**

Polymer concrete, Sulphur infiltrated concrete, Fibre reinforced concrete, High strength concrete, High performance concrete, Vacuum concrete, Self compacting concrete, Geopolymer concrete, Reactive powder concrete, Concrete made with industrial wastes.

**UNIT IV TECHNIQUES FOR REPAIR AND PROTECTION METHODS 9**

Non-destructive Testing Techniques, Load Test for Stability-Epoxy injection, Shoring, Underpinning, Corrosion protection techniques–Corrosion inhibitors, Corrosion resistant steels, Coatings to reinforcement, cathodic protection.

**UNIT V REPAIR, REHABILITATION AND RETROFITTING OF STRUCTURES 9**

Strengthening of Structural elements, Repair of structures distressed due to corrosion, fire, leakage, earthquake-Transportation of Structures from one place to other –Structural Health Monitoring-demolition techniques-Engineered demolition methods-Case studies

**TOTAL: 45 PERIODS**

**OUTCOMES:**

Students will be able to understand

- the importance of maintenance and assessment method of distressed structures.
- the strength and durability properties ,their effects due to climate and temperature.
- recent development in concrete
- the techniques for repair and protection methods
- repair, rehabilitation and retrofitting of structures and demolition methods.

4. 4.Hand Book on “Repair and Rehabilitation of RCC Buildings”–Director General works CPWD ,Govt of India , New Delhi–2002

**OBJECTIVE:**

- To understand the behaviour of dynamic loading. Study the effect of earthquake loading on the behaviour of structures. Understand the codal provisions to design the structures as earthquake resistant.

**UNIT I SINGLE DEGREE OF FREEDOM SYSTEM 9**

Definition of degree of freedom – Idealization of structure as Single Degree of Freedom (SDOF) system – Formulation of equation of motion for various SDOF system – D’ Alemberts Principles – Effect of damping – Free and forced vibration of damped and undamped structures – Response to harmonic forces and periodic forces.

**UNIT II MULTI DEGREE OF FREEDOM SYSTEM 9**

Formulation of equation of motion for multidegree of freedom (MDOF) system – Evaluation of natural frequencies and modes – Eigen values and Eigen vectors – Response to free and forced vibration of undamped and damped MDOF systems – Modal superposition methods.

**UNIT III INTRODUCTION TO EARTHQUAKE ENGINEERING 9**

Elements of Engineering Seismology – Definitions, Introduction to Seismic hazard, Earthquake phenomenon – Seismotectonics – Seismic Instrumentation – Characteristics of Strong Earthquake motion – Estimation of Earthquake Parameters.

**UNIT IV EARTHQUAKE EFFECTS ON STRUCTURES 9**

Effect of earthquake on different types of structures – Behaviour of RCC, Steel and prestressed Concrete Structures under earthquake loading – Pinching Effect – Bouchinger Effects – Evaluation of Earthquake forces – IS Code 1893: 2002 – Response Spectra – Lessons learnt from past earthquakes.

**UNIT V CONCEPTS OF EARTHQUAKE RESISTANT DESIGN 9**

Causes of damage – Planning considerations/Architectural concept (IS 4326–1993) – Guidelines for Earthquake resistant design – Earthquake resistant design of masonry buildings – Design consideration – Guidelines – Earthquake resistant design of R.C.C. buildings – Lateral load analysis – Design and detailing (IS 13920:1993).

**TOTAL: 45  
PERIODS**

**OUTCOMES:**

- Student will develop knowledge in the simulation and mathematical model development.
- Students will be trained to identify, formulate and solve complicated problem.
- Students will be able to understand the role of natural calamity in the damage of structures.
- Students will be able to develop the skill to analyse data and to apply the same in the practical problems.
- Students will be able to apply the developed methodologies for the safe and stable design of structures.

9. IS 4326-1993 Earthquake Resistant Design and Construction of Buildings--Code of Practice (Second Revision)

**OBJECTIVE:**

- To impart knowledge to students on modular construction, industrialised construction and design of prefabricated elements and construction methods.

**UNIT I INTRODUCTION 9**

Need for prefabrication – Principles of prefabrication – Modular coordination – Standardization – Materials – Systems – Production – Transportation – Erection.

**UNIT II PREFABRICATED COMPONENTS 9**

Behaviour and types of structural components – Large panel systems- roof and floor slabs- Walls panels - Beams - Columns - Shear walls

**UNIT III DESIGN PRINCIPLES 9**

Design philosophy- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation - Demountable precast concrete systems.

**UNIT IV JOINTS AND CONNECTIONS IN STRUCTURAL MEMBERS 9**

Types of Joints – based on action of forces - compression joints - shear joints - tension joints - based on function - construction, contraction, expansion. Design of expansion joints - Dimensions and detailing - Types of sealants - Types of structural connections - Beam to Column - Column to Column - Beam to Beam - Column to foundation.

**UNIT V DESIGN FOR ABNORMAL LOADS 9**

Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

**TOTAL: 45 PERIODS****OUTCOMES:**

- The student will have good knowledge about design principles, layout of factory and stages of loading in precast construction.
- Acquire knowledge about panel systems, slabs, connections used in precast construction and they will be in a position to design the elements.
- Acquire knowledge about types of floor systems, stairs and roofs used in precast construction.
- Acquire knowledge about types of walls used in precast construction, sealants, design of joints.
- Acquire knowledge about components in industrial building.

**TEXTBOOKS:**

3. "Structural design manual", Precast concrete connection details, Society for the studies in the use of precast concrete, Netherland Betor Verlag, 2009.

**OBJECTIVE:**

- To make the student to know about various bridge structures, selection of appropriate bridge structures and its design for given site conditions.

**UNIT I INTRODUCTION 9**

History of bridges - Components of a bridge - Classification of road bridges - Selection of site and initial decision process - Survey and alignment; Geotechnical investigations and interpretations. River Bridge: Selection of Bridge site and planning - Collection of bridge design data - Hydrological calculation

Road Bridges - IRC codes - Standard Loading for Bridge Design - Influence lines for statically determinate and indeterminate structures - Transverse distribution of Live loads among deck longitudinal - Load combinations for different working state and limit state designs

Railway Bridges: Loadings for Railway Bridges; Railroad data. Pre-design considerations - Railroad vs. Highway bridges.

**UNIT II SUPERSTRUCTURES 9**

Bridge decks – Structural forms and behaviour – Choices of superstructure types – Behaviour and modeling of bridge decks – Simple beam model – Plate model – Grillage method – Finite Element method - Different types of superstructure (RCC and PSC); Longitudinal Analysis of Bridge.-Transverse Analysis of Bridge - Temperature Analysis - Distortional Analysis - Effects of Differential settlement of supports - Reinforced earth structures.

**UNIT III DESIGN OF STEEL BRIDGES 9**

Design of Truss Bridges – Design of Plate girder bridges.

**UNIT IV DESIGN OF RC AND PSC BRIDGES 9**

Design of slab bridges – T beam bridges – PSC bridges

**UNIT V SUBSTRUCTURE, BEARINGS AND EXPANSION JOINTS, PARAPETS AND RAILINGS 9**

Substructure - Pier; Abutment - Wing walls- Importance of Soil-Structure Interaction - Types of foundations - Open foundation- Pile foundation- Well foundation- Simply supported bridge- Continuous Bridge - Bearings and Expansion Joints - Different types of bridge bearings and expansion joints - Parapets and Railings for Highway Bridges

**TOTAL: 45 PERIODS****OUTCOMES:**

On successful completion of this course, students will be able to:

- Identify loads on bridges and selection of type of bridge for the site condition
- Analyze the super structure by various methods.
- Design the trussed bridge and plate girder bridges
- Design reinforced concrete slab and T beam bridges and prestressed concrete bridges
- Decide the appropriate sub structural systems , bearings and expansion joints for the bridges.

**TEXTBOOKS:**

1. Johnson Victor D., “Essentials of Bridge Engineering”, Oxford and IBH Publishing Co., New Delhi, 2009.
2. Jagadeesh. T.R. and Jayaram. M.A., "Design of Bridge Structures", Prentice Hall of India Pvt. Ltd, Learning Pvt. Ltd., 2013

**REFERENCES:**

1. Phatak D.R., “Bridge Engineering”, Satya Prakashan, New Delhi, 1990.
2. Ponnuswamy S., “Bridge Engineering”, Tata McGraw-Hill, New Delhi, 1996.
3. Rajagopalan. N. “Bridge Superstructure”, Alpha Science International, 2006

**OBJECTIVE:**

- To learn about basis of nanomaterial science, preparation method, types and application

**UNIT I INTRODUCTION 8**

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering- Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilms-multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

**UNIT II GENERAL METHODS OF PREPARATION 9**

Bottom-up Synthesis-Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

**UNIT III NANOMATERIALS 12**

Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications-Nanometal oxides-ZnO, TiO<sub>2</sub>, MgO, ZrO<sub>2</sub>, NiO, nanoalumina, CaO, AgTiO<sub>2</sub>, Ferrites, Nanoclays-functionalization and applications-Quantum wires, Quantum dots-preparation, properties and applications.

**UNIT IV CHARACTERIZATION TECHNIQUES 9**

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques-AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation.

**UNIT V APPLICATIONS 7**

NanoInfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nanobiotechnology: nanoprobe in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery.

**TOTAL : 45 PERIODS****OUTCOMES:**

- Will familiarize about the science of nanomaterials
- Will demonstrate the preparation of nanomaterials
- Will develop knowledge in characteristic nanomaterial

**TEXT BOOKS :**

[for candidates admitted to B.Tech CE program from June 2017 onwards]

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

## Program Educational Objectives

PEO1 To produce graduates who have developed the skills required to design Civil Engineering systems and facilities, including the graduate's abilities to formulate problems, to think creatively, to synthesize information, and to work collaboratively in teams.

PEO2 To produce graduates who are trained thoroughly in methods of analysis, including the mathematical and computational skills appropriate for Civil Engineers to use when problem solving.

PEO3 To produce graduates who are prepared for life-long learning and successful careers as Civil Engineers & also taught to use current, experimental and data analysis techniques for Civil Engineering applications.

### PROGRAMME OUTCOMES:

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **The engineer and society:** An ability to develop the professional status using the broad education to understand the potential impact of Engineering solutions in various geographical settings including societal and environmental contexts.
6. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
7. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
8. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
9. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

10. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

11. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## SEMESTER – I

### 17148S11P    TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS

**L T P C**  
**3 1 0 4**

#### AIM & OBJECTIVES

The course objective is to develop the skills of the students in the areas of boundary value problems and transform techniques. This will be necessary for their effective studies in a large number of engineering subjects like heat conduction, communication systems, electro-optics and electromagnetic theory. The course will also serve as a prerequisite for post graduate and specialized studies and research.

#### **UNIT-I      PARTIAL DIFFERENTIAL EQUATIONS      9**

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange’s linear equation – Linear partial differential equations of second and higher order with constant coefficients.

#### **UNIT-II      FOURIER SERIES      9**

Dirichlet’s conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval’s identify – Harmonic Analysis.

#### **UNIT-III      BOUNDARY VALUE PROBLEMS      9**

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

#### **UNIT-IV      FOURIER TRANSFORM      9**

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval’s identity.

#### **UNIT-V      Z -TRANSFORM AND DIFFERENCE EQUATIONS      9**

Z-transform - Elementary properties – Inverse Z – transform – Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

**L: 45 T: 15**

**Total: 60 Periods**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**UNIT I STRESS STRAIN AND DEFORMATION OF SOLIDS, STATES OF STRESS 9**

Rigid bodies and deformable solids – Stability – Strength – Stiffness – Tension, Compression and shear stresses – Strain – Elasticity – Hooke's law – Limit of proportionately, modulus of elasticity – stress-strain curve – lateral strain – temperature stresses – deformation of simple and compound bars – shear modulus – bulk modulus – relationship between elastic constants – biaxial state of stress – stress at a point – stress on inclined plane – principal stresses and principal planes – Mohr's circle of stresses.

**UNIT II ANALYSIS OF PLANE TRUSS, THIN CYLINDERS / SHELLS 9**

Stability and equilibrium of plane frames – Types of trusses – Analysis of forces in truss members – Method of joints – Method of sections – Method of tension coefficients – Thin cylinders and shells – Under internal pressure – Deformation of thin cylinders and shells.

**UNIT III TRANSVERSE LOADING ON BEAMS 9**

Beams statically determinate and indeterminate beams – Types of supports – Simple and fixed, types of loads – Concentrated – Uniformly distributed – Varying distributed load – Combination of above loading – Relationship between bending moment and shear force – Bending moment and shear force diagram for simply supported, cantilever and over hanging beams – Theory of simple bending – Analysis of stresses – Load carrying capacity of beams – Proportioning of sections

**UNIT IV DEFLECTION OF BEAMS AND SHEAR STRESSES 9**

Deflection of beams – Double integration method – Macaulay's method – Slope and deflection using moment area method – Conjugate Beam method – Variation of shear stress – Shear stress distribution in rectangular – Various sections.

**UNIT V TORSION AND SPRINGS 9**

Stresses and deformation in circular (solid and hollow shafts) – Stepped shafts – Shafts fixed at both ends – Leaf springs – Stresses in helical springs – Deflection of springs.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

1. Egor P. Popov, "Engineering Mechanics of Solids", Prentice Hall of India, 2003.

3. Srinath, L.S., "Advanced Mechanics of Solids", Tata McGraw-Hill Publishing Co., 2003.

**UNIT I DEFINITIONS AND FLUID PROPERTIES 10**

Definitions – Fluid and fluid mechanics – Dimensions and units – Fluid properties – Continuum Concept of system and control volume.

**UNIT II FLUID STATICS and KINEMATICS 10**

Pascal's Law and Hydrostatic equation – Forces on plane and curved surfaces – Buoyancy – Meta centre – Pressure measurement – Fluid mass under relative equilibrium Fluid Kinematics – Stream, streak and path lines – Classification of flows – Continuity equation (one, two and three dimensional forms) – Stream and potential functions – flow nets – Velocity measurement (Pitot tube, current meter, Hot wire and hot film anemometer, float technique, Laser Doppler velocimetry)

**UNIT III FLUID DYNAMICS 10**

Euler and Bernoulli's equations – Application of Bernoulli's equation – Discharge measurement – Laminar flows through pipes and between plates – Hagen Poiseuille equation – Turbulent flow – Darcy-Weisbach formula – Moody diagram – Momentum Principle.

**UNIT IV BOUNDARY LAYER AND FLOW THROUGH PIPES 10**

Definition of boundary layer – Thickness and classification – Displacement and momentum thickness – Development of laminar and turbulent flows in circular pipes – Major and minor losses of flow in pipes – Pipes in series and in parallel – Pipe network

**UNIT V SIMILITUDE AND MODEL STUDY 10**

Dimensional Analysis – Rayleigh's method – Buckingham's Pi-theorem – Similitude and models – Scale effect and distorted models.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

**UNIT I INTRODUCTION****8**

Definition – Principles – Classification – Chain Surveying – Ranging and chaining – Reciprocal ranging – Prismatic compass – Surveyor's compass – Bearing – Systems and conversions – Local attraction – Magnetic declination – Dip – Traversing – Plotting – Adjustment of errors – Plane table instruments and accessories – Merits and demerits – Methods – Radiation – Intersection – Resection – Traversing.

**UNIT II LEVELLING & THEODOLITE SURVEYING****12**

Level line – Horizontal line – Levels and staves – Spirit level – Sensitiveness – Bench marks – Temporary and permanent adjustments – Fly and check leveling – Theodolite surveying – Vernier and microptic – Description and uses – Horizontal angles – Vertical angles – Heights and distances – Traversing – Closing error and distribution .

**UNIT III TACHEOMETRIC SURVEYING****6**

Tachometric systems – Tangential, stadia and subtense methods – Stadia systems – Horizontal and inclined sights – Vertical and normal staffing – Fixed and movable hairs – Stadia constants – Anallactic lens – Subtense bar.

**UNIT IV CONTROL SURVEYING & ASTRONOMICAL SURVEYING****9**

Triangulation – Signals – Base line – Instruments and accessories – Trigonometric leveling – Single and reciprocal observations – Astronomical surveying – Celestial sphere – Astronomical terms and definitions – Motion of sun and stars – Apparent altitude and corrections – Celestial co-ordinate systems – Different time systems – Nautical almanac – Star constellations – calculations for azimuth of a line.

**UNIT V ENGINEERING SURVEYS****10**

Curve ranging – Horizontal and vertical curves – Simple curves – Setting with chain and tapes tangential angles by theodolite – Double theodolite – Basic concept of Compound and reverse curves – Transition curves .

**UNIT I INTRODUCTION 12**

Irrigation – Need and mode of irrigation – Merits and demerits of irrigation – Crop and crop seasons – consumptive use of water – Duty – Factors affecting duty – Irrigation efficiencies – Planning and Development of irrigation projects.

**UNIT II IRRIGATION METHODS 10**

Canal irrigation – Lift irrigation – Tank irrigation – Flooding methods – Merits and demerits – Sprinkler irrigation – Drip irrigation.

**UNIT III DIVERSION AND IMPOUNDING STRUCTURES 14**

Weirs – elementary profile of a weir – weirs on pervious foundations – Types of impounding structures - Tanks, Sluices and Weirs – Gravity dams – Earth dams – Arch dams – Spillways – Factors affecting location and type of dams – Forces on a dam – Hydraulic design of dams.

**UNIT IV CANAL IRRIGATION 14**

Alignment of canals – Classification of canals – Canal drops – Hydraulic design of drops – Cross drainage works – Hydraulic design of cross drainage works – Canal Head works – Canal regulators – River Training works.

**UNIT V IRRIGATION WATER MANAGEMENT 10**

Need for leveling ion of water use – Minimising irrigation water losses – On farm development works – Percolation ponds – Participatory irrigation management – Water users associations – Changing paradigms in water management – Performance evaluation.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

## SEMESTER II

17148S21P

NUMERICAL METHODS

L T P C  
3 1 0 4

### **UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 9**

Linear interpolation methods (method of false position) – Newton’s method – Statement of fixed point theorem – Fixed point iteration:  $x=g(x)$  method – Solution of linear system by Gaussian elimination and Gauss-Jordan methods - Iterative methods: Gauss Jacobi and Gauss-Seidel methods - Inverse of a matrix by Gauss Jordan method – Eigen value of a matrix by power method.

### **UNIT II INTERPOLATION AND APPROXIMATION 9**

Lagrangian Polynomials – Divided differences – Interpolating with a cubic spline – Newton’s forward and backward difference formulas.

### **UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 9**

Derivatives from difference tables – Divided differences and finite differences – Numerical integration by trapezoidal and Simpson’s 1/3 and 3/8 rules – Romberg’s method – Two and Three point Gaussian quadrature formulas – Double integrals using trapezoidal and Simpsons’s rules.

### **UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 9**

Single step methods: Taylor series method – Euler and modified Euler methods – Fourth order Runge – Kutta method for solving first and second order equations – Multistep methods: Milne’s and Adam’s predictor and corrector methods.

### **UNIT V BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 9**

Finite difference solution of second order ordinary differential equation – Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations.

**L: 45 T: 15**

**Total: 60 Periods**

#### **TEXT BOOKS**

1. C.F. Gerald and P.O. Wheatley, ‘Applied Numerical Analysis’, Sixth Edition, Pearson Education Asia, New Delhi, 2002.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**UNIT I ENERGY PRINCIPLES**

9

Strain energy and strain energy density – Strain energy in traction, shear in flexure and torsion – Castigliano's theorems – Principle of virtual work – Application of energy theorems for computing deflections in beams and trusses – Maxwell's reciprocal theorems.

**UNIT II INDETERMINATE BEAMS**

9

Propped cantilever and fixed beams-fixed end moments and reactions for concentrated load (central, non central), uniformly distributed load, triangular load (maximum at centre and maximum at end) – Theorem of three moments – Analysis of continuous beams – shear force and bending moment diagrams for continuous beams – Slope deflections in continuous beams (qualitative study only)..

**UNIT III COLUMNS**

9

Eccentrically loaded short columns – Middle third rule – Core section – Columns of unsymmetrical sections – (angle channel sections) – Euler's theory of long columns – critical loads for prismatic columns with different end conditions – Rankine-Gordon formula for eccentrically loaded columns – Thick cylinders – Compound cylinders.

**UNIT IV STATE OF STRESS IN THREE DIMENSIONS**

9

Spherical and deviatoric components of stress tensor – Determination of principal stresses and principal planes – Volumetric strain – Dilatation and distortion – Theories of failure – Principal stress dilatation – Principal strain – Shear stress – Strain energy and distortion energy theories – Application in analysis of stress, load carrying capacity and design of members – Residual stresses.

**UNIT V ADVANCED TOPICS IN BENDING OF BEAMS**

9

Unsymmetrical bending of beams of symmetrical and unsymmetrical sections – Curved beams – Winkler Bach formula – Stress concentration – Shear flow – Center.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

**UNIT I OPEN CHANNEL FLOW 8**

Open channel flow – Types and regimes of flow – Velocity distribution in open channel – Wide open channel – Specific energy – Critical flow and its computation.

**UNIT II UNIFORM FLOW 8**

Uniform flow – Velocity measurement – Manning's and Chezy's formula – Determination of roughness coefficients – Determination of normal depth and velocity – Most economical sections – Non-erodible channels

**UNIT III VARIED FLOW 10**

Dynamic equations of gradually varied flow – Assumptions – Characteristics of flow profiles – Draw down and back water curves – Profile determination – Graphical integration, direct step and standard step method – Flow through transitions - Hydraulic jump – Types – Energy dissipation – Surges – Surge channel transitions.

**UNIT IV TURBINES 10**

Turbines - draft tube and cavitations – Application of momentum principle – Impact of jets on plane and curved plates - turbines - classification - radial flow turbines - axial flow turbines – Impulse and Reaction.

**UNIT V PUMPS 9**

Centrifugal pump - minimum speed to start the pump – multistage Pumps – Jet and submersible pumps - Positive displacement pumps - reciprocating pump - negative slip - flow separation conditions - air vessels -indicator diagram and its variation - savings in work done - rotary pumps.

**UNIT 1 CONCRETE MAKING MATERIALS 9**

Aggregates classification-IS Specifications-Properties-Grading-Methods of combining aggregates-Specified gradings-Testing of aggregates-Cement-Grade of cement-Chemical composition-Testing of concrete-Hydration of cement-Structure of hydrated cement-Special cements-Water chemical admixtures-Mineral admixture.

**UNIT II CONCRETE 9**

Properties of fresh concrete-Hardened concrete-Strength-Elastic properties-Creep and shrinkage-Variability of concrete strength.

**UNIT III MIX DESIGN 9**

Principles of concrete mix design-Methods of concrete mix design-Testing of concrete.

**UNIT IV SPECIAL CONCRETE 9**

Light weight concrete-Fly ash concrete-Fibre reinforced concrete-Polymer concrete-Super plasticized concrete-Epoxy resins and screeds for rehabilitation-Properties and applications-High performance concrete.

**UNIT V CONCRETING METHODS 9**

Process of manufacturing of concrete-Methods of transportation, placing and curing-Extreme weather concreting-Special concreting methods-Vacuum dewatering-Underwater concrete-Special form work

**L: 45 T: 15**

**UNIT I SOIL INTER RELATIONS****8**

Nature of Soil – Problems with soil – Phase relation – Sieve analysis – Sedimentation analysis – Atterberg limits – Classification for engineering purposes – BIS Classification system – Soil compaction – Factors affecting compaction – Field compaction methods and monitoring.

**UNIT II SOIL WATER AND WATER FLOW****8**

Soil water – Various forms – Influence of clay minerals – Capillary rise – Suction – Effective stress concepts in soil – Total, neutral and effective stress distribution in soil – Permeability – Darcy's law – Permeability measurement in the laboratory – Quick sand condition – Seepage – Laplace equation – Introduction to flow nets – Properties and uses – Application to simple problems.

**UNIT III STRESS DISTRIBUTION, COMPRESSIBILITY AND SETTLEMENT****10**

Stress distribution in soil media – Boussinesque formula – Stress due to line load and Circular and rectangular loaded area – Approximate methods – Use of influence charts – Westergaard equation for point load – Components of settlement – Immediate and consolidation settlement – Terzaghi's one dimensional consolidation theory – Governing differential equation – Laboratory consolidation test – Field consolidation curve – NC and OC clays – Problems on final and time rate of consolidation.

**UNIT IV SHEAR STRENGTH****9**

Shear strength of cohesive and cohesionless soils – Mohr – Coulomb failure theory – Saturated soil and unsaturated soil (basics only) – Strength parameters – Measurement of shear strength, direct shear, triaxial compression, unconfined compressive strength and vane shear tests – Types of shear tests based on drainage and their applicability – Drained and undrained behaviour of clay and sand – Stress path for conventional triaxial test.

**UNIT V SLOPE STABILITY****10**

Slope failure mechanisms – Modes – Infinite slopes – Finite slopes – Total and effective stress analysis – Stability analysis for purely cohesive and  $c-\phi$  soils – Method of slices – Modified Bishop's method – Friction circle method – Stability number – Problems – Slope protection measures.

## SEMESTER III

17148S31CP

PROBABILITY AND STATISTICS

L T P C  
3 1 0 4

### AIM & OBJECTIVE:

At the end of this course students can learn about the axioms of random variable, two dimensional random variables, standard distributions and testing of hypothesis.

### UNIT I PROBABILITY AND RANDOM VARIABLE 9

Axioms of probability - Conditional probability - Total probability - Bayes theorem – Random variable - Probability mass function - Probability density functions - Properties- Moments - Moment generating functions and their properties.

### UNIT II TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

### UNIT III STANDARD DISTRIBUTIONS 9

Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties - Functions of a random variable.

### UNIT IV TESTING OF HYPOTHESIS 9

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

### UNIT V DESIGN OF EXPERIMENTS 9

Analysis of variance – One way classification – CRD - Two – way classification – RBD - Latin square.

*Note : Use of approved statistical table permitted in the examination.*

L: 45 T: 15

Total: 60 Periods

### TEXT BOOKS

1. Ross. S., “A first Course in Probability”, Fifth Edition, Pearson Education, Delhi 2002. (Chapters 2 to 8)
2. Johnson. R. A., “Miller & Freund’s Probability and Statistics for Engineers”, Sixth Edition, Pearson Education, Delhi, 2000. (Chapters 7, 8, 9, 12)

### REFERENCES

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

**UNIT I METHODS OF DESIGN OF CONCRETE STRUCTURES 12**

Concept of elastic method, ultimate load method and limit state method – Advantages of limit state method over other methods – Design codes and specification – Limit state philosophy as detailed in IS code – Design of flexural members and slabs by working stress method

**UNIT II LIMIT STATE DESIGN FOR FLEXURE 12**

Analysis and design of one way and two way rectangular slabs subjected to uniformly distributed load for various boundary conditions and corner effects – Analysis and design of singly and doubly reinforced rectangular and flanged beams.

**UNIT III LIMIT STATE DESIGN FOR BOND, ANCHORAGE SHEAR AND TORSION 12**

Behaviour of RC members in bond and anchorage – Design requirements as per current code – Behaviour of RC beams in shear and torsion – Design of RC members for combined bending shear and torsion.

**UNIT IV LIMIT STATE DESIGN OF COLUMNS 12**

Types of columns – Braced and unbraced columns – Design of short column for axial, uniaxial and biaxial bending – Design of long columns.

**UNIT V LIMIT STATE DESIGN OF FOOTING AND DETAILING 12**

Design of wall footing – Design of axially and eccentrically loaded rectangular footing – Design of combined rectangular footing for two columns only –

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Varghese, P.C., “Limit State Design of Reinforced Concrete”, Prentice Hall of India, Pvt. Ltd., 2007.
2. Krishna Raju, N., “Design of Reinforced Concrete Structures”, CBS Publishers and Distributors, 2003.

**REFERENCES**

3. Unnikrishna Pillai, S. and Devadas Menon, “Reinforced Concrete Design”, Tata McGraw-Hill Publishing Company Ltd., 200

**UNIT I DEFLECTION OF DETERMINATE STRUCTURES 9**

Principles of virtual work for deflections – Deflections of pin-jointed plane frames and rigid plane frames – Willot diagram – Mohr's correction.

**UNIT II MOVING LOADS AND INFLUENCE LINES 9  
(DETERMINATE AND INDETERMINATE STRUCTURES)**

Influence lines for reactions in statically determinate structures – Influence lines for members forces in pin-jointed frames – Influence lines for shear force and bending moment in beam sections – Calculation of critical stress resultants due to concentrated and distributed moving loads – Muller Breslau's principle – Influence lines for continuous beams and single storey rigid frames – Indirect model analysis for influence lines of indeterminate structures – Beggs deformer.

**UNIT III ARCHES 9**

Arches as structural forms – Examples of arch structures – Types of arches – Analysis of three hinged, two hinged and fixed arches, parabolic and circular arches – Settlement and temperature effects.

**UNIT IV SLOPE DEFLECTION METHOD 9**

Continuous beams – Settlement rigid frames (without sway) – Principles of symmetry and anti symmetry.

**UNIT V MOMENT DISTRIBUTION METHOD 9**

Analysis of continuous beams – Settlement – Plane rigid frames with and without sway – Naylor's simplification.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Vaidyanadhan, R. and Perumal, P., "Comprehensive Structural Analysis – Vol. 1 and Vol. 2", Laxmi Publications, 2003.
2. Harrison H.B., "Structural Analysis and Design", Part I and II Pergamon Press, 1990.

**REFERENCES**

2. Negi, L.S. and Jangid, R.S., "Structural Analysis", 6th Edition, Tata McGraw-Hill Publications, 2003.

**UNIT I STONES – BRICKS – CONCRETE BLOCKS 18**

Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacture of clay bricks – Tests on bricks – Compressive Strength – Water Absorption – Efflorescence – Bricks for special use – Refractory bricks – Cement and Concrete hollow blocks – Light weight concrete blocks – Code Practices.

**UNIT II LIME – CEMENT – AGGREGATES – MORTAR 18**

Lime – Preparation of lime mortar – Cement. Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar – Hydration - Compressive strength – Tensile strength – Soundness and consistency – Setting time – Aggregates – Natural stone aggregates – Industrial byproducts – Crushing strength – Impact strength – Flakiness – Abrasion Resistance – Grading – Sand – Bulking – Code Practices.

**UNIT III SUB STRUCTURE CONSTRUCTION 13**

Techniques of Box jacking – Pipe Jacking – under water construction of diaphragm walls and basement – Tunneling techniques – Piling techniques – Driving well and caisson – Sinking cofferdam – Cable anchoring and grouting – Driving diaphragm walls – Sheet piles – Shoring for deep cutting – Large reservoir construction with membranes and Earth system – Well points – Dewatering and stand by plant equipment for underground open excavation.

**UNIT IV SUPER STRUCTURE CONSTRUCTION 12**

Launching girders – Bridge decks – Off shore platforms – Special forms for shells – Techniques for heavy decks – In-situ pre-stressing in high rise structures – Material handling – Erecting light weight components on tall structures – Support structure for heavy equipment and conveyors – Erection of articulated structures – Braced domes and space decks.

**UNIT V CONSTRUCTION EQUIPMENTS 10**

Selection of equipment for earth work – Earth moving operations – Types of earthwork equipment – Tractors – Motor graders – Scrapers – Front end waders – Earth movers – Equipment for foundation and pile driving. Equipment for compaction – Batching and mixing and concreting – Equipment for material handling and erection of structures – Equipment for dredging, trenching, tunneling.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

**OBJECTIVE**

At the end of this course, the student acquires the capacity to test the soil to assess its Engineering and Index properties.

**LIST OF EXPERIMENTS**

1. Grain size distributions – Sieve analysis
2. Grains size distribution – Hydrometer analysis
3. Specific gravity of soil grains
4. Relative density of sands
5. Atterberg limits test
6. Determination of moisture – Density relationship using standard Proctor test.
7. Permeability determination (constant head and falling head methods)
8. Determination of shear strength parameters.
  - i) Direct shear test on cohesion less soil
  - ii) Unconfined compression test on cohesive soil
  - iii) Triaxial compression test
9. One dimensional consolidation test (determination of coefficient of consolidation Only)
10. Field density test (Core cutter and sand replacement methods)

**TOTAL: 45 PERIODS**

**LIST OF EQUIPMENTS**  
(for a batch of 30 students)

Sl.No	Equipments	Qty
1.	Electrical Oven	1 No
2.	Direct Shear test apparatus	1 No
3.	Liquid limit Apparatus	2 Nos
4.	Sieve Shaker	1 No
5.	Sieves (Fine and Coarse Aggregates)	1 Set in each
6.	Soil Permeability Apparatus	1 No
7.	Standard Proctor compaction mould and hammer	1 No
8.	Soil Hydrometer	1 No
9.	Core Cutter	1 No
10.	CBR Apparatus	1 No
11.	Consolidation Apparatus	1 No
12.	Pycnometer	3 Nos
13.	Hydrometer jar	1 No
14.	Triaxial setup	1 No
15.	Compression Proving Ring	3 Nos
16.	Direct Shear test apparatus	1 No
17.	Liquid Limit Apparatus	2 No

**SEMESTER IV**

**17155H41P DESIGN OF REINFORCED CONCRETE STRUCTURES-II    L T P C**  
**3 1 0 4**

**UNIT I RETAINING WALLS** **12**

Design of cantilever and counter fort retaining walls.

**UNIT II WATER TANKS** **12**

Underground rectangular tanks – Domes – Overhead tanks.

**UNIT III SELECTED TOPICS** **12**

Design of staircases (ordinary and doglegged) – Design of flat slabs – Design of reinforced concrete walls .

**UNIT IV YIELD LINE THEORY** **12**

Application of virtual work method – Square, rectangular, circular and triangular slabs.

**UNIT V BRICK MASONRY** **12**

Introduction, classification of walls – Lateral supports and stability – Effective height of wall and columns – Effective length of walls, design loads, load dispersion, permissible stresses and design of axially and eccentrically loaded brick walls.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Krishna Raju, N., “Design of RC Structures”, CBS Publishers and Distributors, 1998.
2. Dayaratnam, P., “Brick and Reinforced Brick Structures”, Oxford and IBH Publishing House, 1997.

3. Varghese, P.C., “Limit State Design of Reinforced Concrete Structures”, 2<sup>nd</sup> Edition, Prentice-Hall of India Pvt. Ltd., 2002.

**UNIT I FLEXIBILITY METHOD FOR INDETERMINATE FRAMES 9**

Equilibrium and compatibility – Determinate Vs Indeterminate structures – Indeterminacy – Primary structure – Compatibility conditions – Analysis of indeterminate pin-jointed plane frames, continuous beams, rigid jointed plane frames (with redundancy restricted to two).

**UNIT II MATRIX STIFFNESS METHOD 9**

Element and global stiffness matrices – Analysis of continuous beams – Co-ordinate transformations – Rotation matrix – Transformations of stiffness matrices, load vectors and displacements vectors – Analysis of pin-jointed plane frames and rigid frames.

**UNIT III FINITE ELEMENT METHOD 9**

Introduction – Discretisation of a structure – Displacement functions – Truss element – Beam element – Plane stress and plane strain Triangular elements

**UNIT IV PLASTIC ANALYSIS OF STRUCTURES 9**

Statically indeterminate axial problems – Beams in pure bending – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – Plastic analysis of indeterminate beams and frames – Upper and lower bound theorems.

**UNIT V SPACE AND CABLE STRUCTURES 9**

Analysis of Space trusses using method of tension coefficients – Beams curved in plan Suspension cables – Cables with two and three hinged stiffening girders.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

**UNIT I WATER SUPPLY SYSTEMS – SOURCE & CONVEYANCE 6**

Objectives – Population forecasting – Design period – Water demand characteristics – Sources of water – Source selection – Water quality parameters & significance – Standards – Intake structures – Conveyance – Hydraulics – Laying, jointing & testing of pipes – Pump selection – appurtenances

**UNIT II DESIGN PRINCIPLES OF WATER TREATMENT 10**

Objectives – Selection of unit operations and processes – Principles of flocculation, sedimentation, filtration, disinfection – Design principles of flash mixer, flocculator, clarifiers, filters – Disinfection devices – Softening – Demineralisation – Aeration – Iron removal – Defluoridation – Operation and Maintenance aspects - Residue Management

**DISTRIBUTION**

Requirements – Components – Service reservoir design – Analysis of distribution network – Hardy Cross method – Equivalent Pipe method – computer application – Leak detection

**UNIT III SEWERAGE SYSTEM : COLLECTION & TRANSMISSION 10**

Sources of wastewater – Quantity of sanitary sewage – Storm run off estimation – Wastewater characteristics and significance – Effluent disposal standover – Design of sewers – Computer applications – Laying, jointing and testing of sewers – Sewer appurtenances – Pump selection

**UNIT IV SEWAGE TREATMENT & DESIGN PRINCIPLES 10**

Objectives – Selection of unit operation and process – Design principles of primary and secondary treatment, screen chamber, grit chamber, primary sedimentation tanks, activated sludge process – Aeration tank & oxidation ditch – Trickling filter - Stabilisation ponds – Septic tanks with soak pits – Sludge: treatment and disposal – Biogas recovery – Sewage farming

**UNIT V DISPOSAL OF SEWAGE 9**

Disposal on land – Disposal into water bodies – Oxygen sag curve – Streeter Phelp's model – Wastewater reclamation techniques

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

## SEMESTER V

17155H51P

DESIGN OF STEEL STRUCTURES

L T P C  
3 1 0 4

### UNIT I INTRODUCTION 12

Properties of steel – Structural steel sections – Limit State Design Concepts – Loads on Structures – Metal joining methods using rivets, welding, bolting – Design of bolted, riveted and welded joints – Eccentric connections - Efficiency of joints – High Tension bolts

### UNIT II TENSION MEMBERS 8

Types of sections – Net area – Net effective sections for angles and Tee in tension – Design of connections in tension members – Use of lug angles – Design of tension splice – Concept of shear lag

### UNIT III COMPRESSION MEMBERS 16

Types of compression members – Theory of columns – Basis of current codal provision for compression member design – Slenderness ratio – Design of single section and compound section compression members – Design of lacing and battening type columns – Design of column bases – Gusseted base

### UNIT IV BEAMS 12

Design of laterally supported and unsupported beams – Built up beams – Beams subjected to biaxial bending – Design of plate girders riveted and welded – Intermediate and bearing stiffeners – Web splices – Design of beam columns

### UNIT V ROOF TRUSSES AND INDUSTRIAL STRUCTURES 12

Roof trusses – Roof and side coverings – Design loads, design of purlin and elements of truss end bearing – Design of gantry girder

L: 45 T: 15

Total: 60 Periods

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

**UNIT I SITE INVESTIGATION AND SELECTION OF FOUNDATION 9**

Scope and objectives – Methods of exploration-auguring and boring – Water boring and rotatory drilling – Depth of boring – Spacing of bore hole - Sampling – Representative and undisturbed sampling – sampling techniques – Split spoon sampler, Thin tube sampler, Stationary piston sampler – Bore log report – Penetration tests (SPT and SCPT) – Data interpretation (Strength parameters and Liquefaction potential) – Selection of foundation based on soil condition.

**UNIT II SHALLOW FOUNDATION 9**

Introduction – Location and depth of foundation – codal provisions – bearing capacity of shallow foundation on homogeneous deposits – Terzaghi's formula and BIS formula – factors affecting bearing capacity – problems - Bearing Capacity from insitu tests (SPT, SCPT and plate load) – Allowable bearing pressure, Settlement – Components of settlement – Determination of settlement of foundations on granular and clay deposits – Allowable settlements – Codal provision – Methods of minimising settlement, differential settlement.

**UNIT III FOOTINGS AND RAFTS 9**

Types of foundation – Contact pressure distribution below footings & raft - Isolated and combined footings – types – proportioning - mat foundation – types – use - proportioning – floating foundation.

**UNIT IV PILES 9**

Types of piles and their function – Factors influencing the selection of pile – Carrying capacity of single pile in granular and cohesive soil - Static formula - dynamic formulae (Engineering news and Hiley's) – Capacity from insitu tests (SPT and SCPT) – Negative skin friction – uplift capacity – Group capacity by different methods (Feld's rule, Converse Labarra formula and block failure criterion) – Settlement of pile groups – Interpretation of pile load test – Forces on pile caps – under reamed piles – Capacity under compression and uplift.

**UNIT V RETAINING WALLS 9**

Plastic equilibrium in soils – active and passive states – Rankine's theory – cohesionless and cohesive soil - Coloumb's wedge theory – condition for critical failure plane - Earth pressure on retaining walls of simple configurations – Graphical methods (Rebhann and Culmann) - pressure on the wall due to line load – Stability of retaining walls.

**17155L55P COMPUTER AIDED BUILDING DRAWING LABORATORY I****L T P C**  
**0 0 3 2****AIM & OBJECTIVE:**

At the end of this course the student should be able to draft on computer building drawings (Plan, elevation and sectional views) in accordance with development and control rules satisfying orientation and functional requirements for the following:

1. Buildings with load bearing walls (Flat and pitched roof) –Including details of doors and windows	15
2. RCC framed structures	15
3. Industrial buildings – North light roof structures – Trusses	15
4. Perspective view of one and two storey buildings	15

## SEMESTER VI

17155H61P ESTIMATION AND COST EVALUATION

L T P C  
3 1 0 4

### UNIT I ESTIMATE OF BUILDINGS 11

Load bearing and framed structures – Calculation of quantities of brick work, RCC, PCC, Plastering, white washing, colour washing and painting / varnishing for shops, rooms, residential building with flat and pitched roof – Various types of arches – Calculation of brick work and RCC works in arches – Estimate of joineries for panelled and glazed doors, windows, ventilators, handrails etc.

### UNIT II ESTIMATE OF OTHER STRUCTURES 10

Estimating of septic tank, soak pit – sanitary and water supply installations – water supply pipe line – sewer line – tube well – open well – estimate of bituminous and cement concrete roads – estimate of retaining walls – culverts – estimating of irrigation works – aqueduct, syphon, fall.

### UNIT III SPECIFICATION AND TENDERS 8

Data – Schedule of rates – Analysis of rates – Specifications – sources – Detailed and general specifications – Tenders – Contracts – Types of contracts – Arbitration and legal requirements.

### UNIT IV VALUATION 8

Necessity – Basics of value engineering – Capitalised value – Depreciation – Escalation – Value of building – Calculation of Standard rent – Mortgage – Lease.

### UNIT V REPORT PREPARATION 8

Principles for report preparation – report on estimate of residential building – Culvert – Roads – Water supply and sanitary installations – Tube wells – Open wells.

L: 45 T: 15

Total: 60 Periods

### TEXT BOOKS

2. Kohli, D.D and Kohli, R.C., “A Text Book of Estimating and Costing (Civil)”, S.Chand & Company Ltd., 2004

### REFERENCE

1. PWD Data Book.

**UNIT I FUNDAMENTALS OF GROUND WATER 9**

Introduction – Characteristic of Ground water – Distribution of water - ground water column – Permeability - Darcy's Law - Laboratory permeability test - Types of aquifers - Hydrogeological Cycle–waterlevelfluctuations.

**UNIT II HYDRAULICS OF FLOW 9**

Storage coefficient - Specific field - Heterogeneity and Anisotropy -Transmissivity - Governing equations of ground water flow - Steady state flow - Dupuit Forch heimer assumptions - Velocity potential-Flownets

**UNIT III ESTIMATION OF PARAMETERS 9**

Transmissivity and Storativity – Pumping test - Unsteady state flow - Thiess method - Jacob method - Image well theory – Effect of partial penetrations of wells - Collectors wells.

**UNIT IV GROUND WATER DEVELOPMENT 9**

Infiltration gallery - Conjunctive use - Artificial recharge -Safe yield -Yield test – Geophysical methods–Selectionofpumps.

**UNIT V WATER QUALITY 9**

Ground water chemistry - Origin, movement and quality - Water quality standards - Saltwater intrusion –Environmental concern.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

1. Raghunath H.M., “Ground Water Hydrology”, Wiley Eastern Ltd., 2000.
2. Todd D.K., “Ground Water Hydrology”, John Wiley and Sons, 2000.

**REFERENCES**

1. C Walton, “Ground Water Resource Evaluation”, McGraw-Hill Publications

**UNIT I THE OWNERS' PERSPECTIVE 9**

Introduction - Project Life Cycle - Types of Construction - Selection of Professional Services - Construction Contractors - Financing of Constructed Facilities - Legal and Regulatory Requirements - Changing Environment of the Construction Industry - Role of Project Managers

**UNIT II ORGANIZING FOR PROJECT MANAGEMENT 9**

Project Management – modern trends - Strategic Planning - Effects of Project Risks on Organization - Organization of Project Participants - Traditional Designer-Constructor Sequence – Professional Construction Management - Owner-Builder Operation - Turnkey Operation - Leadership and Motivation for the Project Team

**UNIT III DESIGN AND CONSTRUCTION PROCESS 9**

Design and Construction as an Integrated System - Innovation and Technological Feasibility - Innovation and Economic Feasibility - Design Methodology - Functional Design - Construction Site Environment

**UNIT IV LABOUR, MATERIAL AND EQUIPMENT UTILIZATION 9**

Historical Perspective - Labour Productivity - Factors Affecting Job-Site Productivity – Labour Relations in Construction - Problems in Collective Bargaining - Materials Management – Material Procurement and Delivery - Inventory Control - Tradeoffs of Costs in Materials Management. - Construction Equipment - Choice of Equipment and Standard Production Rates – Construction Processes Queues and Resource Bottlenecks

**UNIT V COST ESTIMATION 9**

Costs Associated with Constructed Facilities - Approaches to Cost Estimation - Type of Construction Cost Estimates - Effects of Scale on Construction Cost - Unit Cost Method of Estimation - Methods for Allocation of Joint Costs - Historical Cost Data - Cost Indices - Applications of Cost Indices to Estimating - Estimate Based on Engineer's List of Quantities - Estimation of Operating Costs

**L: 45 T: 15****Total: 60 Periods****REFERENCES**

**OBJECTIVE:**

To learn the principles and procedures of testing Concrete and Highway materials

**LIST OF EXPERIMENTS**

**I. TESTS ON CEMENT 6**

1. Test for fineness
2. Test for setting times including normal consistency test
3. Mortar cube preparation and testing

**II. TESTS ON AGGREGATES 9**

1. Soundness And Water Absorption
2. Sieve analysis test - Grade Curves
3. Crushing Value - Test
4. Test on Aggregates - Los Angeles Abrasive Testing Machine

**III. TESTS ON HARDENED & FRESH CONCRETE 15**

1. Slump cone test
2. Compaction factor
3. Vee bee test.
4. Cube compression test
5. Tension test of concrete - cylinder split test
6. Flexural test on concrete specimen

**III. TESTS ON BITUMEN 15**

1. Penetration
2. Softening Point
3. Viscosity

**Total: 45**

**LIST OF EQUIPMENTS**

(for a batch of 30 students)

SL.NO	DESCRIPTION OF EQUIPMENTS	QUANTITY
1.	Concrete Mixer	-1No
2.	Slump cone	-3 Nos
3.	Vibrator	-1 No
4.	Trovels and planers	-1 set
5.	UTM – 400 KN capacity	-1 No
6.	Aggregate impact testing machine	-1 No
7.	90 micron sieve	- 2 Nos.
8.	Vicat's Apparatus	- 2 Nos.
9.	70.6 mm x 70.6 mm cube moulds	- 6 Nos.
10.	IS:406-1962 specification sieve	- 2 Nos.
11.	Cylindrical plunger	- 2 Nos.
12.	150 mm x 150 mm cube moulds	- 6 Nos.
13.	Cylindrical mould-150 mm dia and 300 mm height	- 6 Nos.
14.	Steel prism mould (100 mm x 100 mmx500 mm)	- 6 Nos.
10.	Vee-bee consisto meter	- 2 Nos.
11.	Compaction factor Apparatus	- 2 Nos.

## SEMESTER VII

17160S71P

TOTAL QUALITY MANAGEMENT

L T P C  
3 1 0 4

### AIM & OBJECTIVE:

- i) To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- ii) To understand the statistical approach for quality control.
- iii) To create an awareness about the ISO and QS certification process and its need for the industries.

### UNIT – I BASICS OF TQM 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

### UNIT – II PRINCIPLES OF TQM 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

### UNIT – III QUALITY CONCEPTS 9

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Concept of six sigma

### UNIT – IV TQM TOOLS 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, FMEA – Stages of FMEA.

### UNIT – V: ISO STANDARDS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, ISO 14000 – Concept, Requirements and Benefits.

L: 45 T: 15

Total: 60 Periods

### TEXT BOOKS:

1. Dale H. Besterfield, et al., “Total Quality Management”, Pearson Education, Inc. 2003. (Indian reprint 2004). ISBN 81-297-0260-6.
2. Basker, “TOTAL QUALITY MANAGEMENT”, Anuradha Agencies.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

**UNIT I INTRODUCTION TO HOUSING 9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

**UNIT II HOUSING PROGRAMMES 9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

**UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (DesignProblems)

**UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9**

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

**UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9**

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

L: 45 T: 15

Total: 60 Periods

**TEXT BOOKS**

1. Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 1999.
2. Francis Cherunilam and Odeyar D Heggade, Housing in India, Himalaya Publishing House, Bombay, 1997.

2. UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 1994.
3. National Housing Policy, 1994, Government of India.

**UNIT I MAINTENANCE AND REPAIR STRATEGIES 9**

Maintenance, repair and rehabilitation, Facets of Maintenance, importance of Maintenance various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration

**UNIT II SERVICEABILITY AND DURABILITY OF CONCRETE 11**

Quality assurance for concrete construction concrete properties- strength, permeability, thermal properties and cracking. - Effects due to climate, temperature, chemicals, corrosion – design and construction errors - Effects of cover thickness and cracking

**UNIT III MATERIALS FOR REPAIR 9**

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete.

**UNIT IV TECHNIQUES FOR REPAIR AND DEMOLITION 8**

Rust eliminators and polymers coating for rebars during repair, foamed concrete, mortar and drypack, vacuum concrete, Gunitite and Shotcrete, Epoxy injection, Mortar repair for cracks, shoring and underpinning. Methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings and cathodic protection. Engineered demolition techniques for dilapidated structures-case studies

**UNIT V REPAIRS, REHABILITATION AND RETROFITTING OF STRUCTURES 8**

Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering corrosion, wear, fire, leakage and marine exposure.

## LIST OF ELECTIVES

### SEMESTER IV

#### HARD CORE ELECTIVE I

17155E44AP

HYDROLOGY

L T P C  
3 1 0 4

#### **UNIT I PRECIPITATION 9**

Hydrologic cycle – Types of precipitation – Forms of precipitation – Measurement of Rainfall – Spatial measurement methods – Temporal measurement methods – Frequency analysis of point rainfall – Intensity, duration, frequency relationship – Probable maximum precipitation.

#### **UNIT II ABSTRACTION FROM PRECIPITATION 9**

Losses from precipitation – Evaporation process – Reservoir evaporation – Infiltration process – Infiltration capacity – Measurement of infiltration – Infiltration indices – Effective rainfall.

#### **UNIT III HYDROGRAPHS 9**

Factors affecting Hydrograph – Baseflow separation – Unit hydrograph – Derivation of unit hydrograph – S curve hydrograph – Unit hydrograph of different deviations - Synthetic Unit Hydrograph

#### **UNIT IV FLOODS AND FLOOD ROUTING 9**

Flood frequency studies – Recurrence interval – Gumbel's method – Flood routing – Reservoir flood routing – Muskingum's Channel Routing – Flood control

#### **UNIT V GROUND WATER HYDROLOGY 9**

Types of aquifers – Darcy's law – Dupuit's assumptions – Confined Aquifer – Unconfined Aquifer – Recuperation test – Transmissibility – Specific capacity – Pumping test – Steady flow analysis only.

L: 45 T: 15

Total: 60 Periods

#### **TEXT BOOKS**

1. Subramanya, K., "Engineering Hydrology", Tata McGraw-Hill Publishing Co., Ltd., 2000
2. Raghunath, H.M., "Hydrology", Wiley Eastern Ltd., 2000

#### **REFERENCES**

1. Chow, V.T. and Maidment, "Hydrology for Engineers", McGraw-Hill Inc., Ltd., 2000
2. Singh, V.P., "Hydrology", McGraw-Hill Inc., Ltd., 2000.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

**AIM & OBJECTIVE:**

The student is exposed to the different phases in Water Resources viz planning, collection of relevant data on water resources and also on National Water Policy. Reservoir planning, management and economic analysis aspects are covered in detail.

**UNIT I GENERAL 9**  
Water resources survey – Water resources of India and Tamilnadu – Description of water resources planning – Economics of water resources planning, physical and socio economic data – National Water Policy – Collection of meteorological and hydrological data for water resources development.

**UNIT II INETWORK DESIGN 9**  
Hydrologic measurements – Analysis of hydrologic data – Hydrologic station network – Station network design – Statistical techniques in network design.

**UNIT III WATER RESOURCE NEEDS 9**  
Consumptive and non-consumptive water use - Estimation of water requirements for irrigation, for drinking and navigation - Water characteristics and quality – Scope and aims of master plan - Concept of basin as a unit for development - Water budget and development plan.

**UNIT IV RESERVOIR PLANNING AND MANAGEMENT 9**  
Reservoir - Single and multipurpose – Multi objective - Fixation of Storage capacity -Strategies for reservoir operation - Sedimentation of reservoirs - Design flood-levees and flood walls – Channel improvement.

**UNIT V ECONOMIC ANALYSIS 9**  
Estimation of cost and Evaluation of Benefits - Discount rate - Discounting factors - Discounting techniques – Computer Applications.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Linsley R.K. and Franzini J.B, “Water Resources Engineering”, McGraw-Hill Inc, 2000.
2. Douglas J.L. and Lee R.R., “Economics of Water Resources Planning”, Tata McGraw-Hill Inc. 2000.
3. Duggal, K.N. and Soni, J.P., “Elements of Water Resources Engineering”, New Age International Publishers

**REFERENCES**

2. Goodman Alvin S., “Principles of Water Resources Planning”, Prentice-Hall, 1984.
3. Maass et al. Design of Water Resources Systems, Macmillan, 1968.

**AIM & OBJECTIVE:**

At the end of this course the students can expand his knowledge on site selection of sub structure and super structure, types , components of flooring and roofing and details about stair case.

**UNIT I PRELIMINARY INVESTIGATION 9**  
Principles of planning – Planning regulations and bye-laws-site works and setting out – Excavations and timbering – Sub soil drainage – Electricity lighting on building sites – Winter building – Preparation of layout – Site plan – Orientation of buildings.

**UNIT II SITE SELECTION AND SUB STRUCTURES 9**  
Site selection – Types of building as per NBC – Types of foundations – Shallow – Deep foundations – Machine foundation

**UNIT III SUPER STRUCTURE 9**  
Stone and brick masonry – Composite masonry – Load bearing walls – Cavity walls – Partition walls – Reinforced brick masonry.

**UNIT IV FLOORING AND ROOFING 9**  
Ground floors – Components – Types – Suspended flooring – Upper floors – Types – Methods of laying – Type of roofs – Types of pitched roof – Shell roofs – Folded plate roofs – Constructional practices – Roof covering details.

**UNIT V STAIRCASE AND SERVICES 9**  
Requirement of a good staircase – Type of staircase calculation for geometry – Ramps – Escalators lifts – Types – Handling capacity.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Arora, S.P. and Bindra, S.P., “Building construction Planning Techniques and Methods of Construction”, Dhanpat Rai and Sons, 1997.
2. Punmia, B.C., Ashok Kumar Jain and Arun Kumar Jain, “Building Construction”, Laxmi Publications Pvt., Ltd., 1997.

2. National Building Code of India, Parts III, IV, VII and IX 1983.

**AIM & OBJECTIVE:**

This course covers the principles of contract laws and regulations. Students can acquire knowledge on bidding and accepting, Tamil Nadu transparency in tenders act, appointment, conditions, powers and duties of arbitrator and legal requirements such as tax laws and labour regulations.

**UNIT I CONSTRUCTION CONTRACTS 10**

Indian Contracts Act – Elements of Contracts – Types of Contracts – Features – Suitability – Design of Contract Documents – International Contract Document – Standard Contract Document – Law of Torts

**UNIT II TENDERS 10**

Prequalification – Bidding – Accepting – Evaluation of Tender from Technical, Contractual and Commercial Points of View – Contract Formation and Interpretation – Potential Contractual Problems – World Bank Procedures and Guidelines – Tamilnadu Transparency in Tenders Act.

**UNIT III ARBITRATION 5**

Comparison of Actions and Laws – Agreements – Subject Matter – Violations – Appointment of Arbitrators – Conditions of Arbitration – Powers and Duties of Arbitrator – Rules of Evidence – Enforcement of Award – Costs

**UNIT IV LEGAL REQUIREMENTS 10**

Insurance and Bonding – Laws Governing Sale, Purchase and Use of Urban and Rural Land – Land Revenue Codes – Tax Laws – Income Tax, Sales Tax, Excise and Custom Duties and their Influence on Construction Costs – Legal Requirements for Planning – Property Law – Agency Law – Local Government Laws for Approval – Statutory Regulations

**UNIT V LABOUR REGULATIONS 10**

Social Security – Welfare Legislation – Laws relating to Wages, Bonus and Industrial Disputes, Labour Administration – Insurance and Safety Regulations – Workmen’s Compensation Act – Indian Factory Act – Tamilnadu Factory Act – Child Labour Act - Other Labour Laws

**L: 45 T: 15****Total: 60 Periods****REFERENCES:**

## SEMESTER V

### HARD CORE ELECTIVE II

17155E54AP

COMPUTER AIDED ANALYSIS AND DESIGN

L T P C

3 1 0 4

#### AIM & OBJECTIVE:

This course covers the principles, applications of computer in Civil Engineering systems.

#### UNIT I INTRODUCTION

Elements of Computer Aided Design and its advantages over conventional design. Hardware required for CAD works.

#### UNIT II BASIC PRINCIPLES

Principles of software design, concept of modular programming, debugging and testing.

#### UNIT III APPLICATIONS

Computer applications in analysis and design of Civil Engineering systems.

#### UNIT IV SOFTWARE PACKAGES

Use of software packages in the area of Structural, Geotechnical, and Environmental fields.

#### UNIT V NEURAL NETWORKS

Expert system, their development and applications, Introduction to Neural Networks.

**Total: 45 Periods**

#### REFERENCE:

1. Computer Aided Design – S. Rajiv, Narosa Publication
2. A.I. and Expert System – Robert L. Lertner & / Lane E. Drang, McGraw Hill
3. “Neural Computing: Wasserman, Vonnostrand.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

**OBJECTIVE**

This course imparts the students knowledge of planning, design, construction and maintenance of railway tracks. The students acquire proficiency in the application of modern techniques such as GIS, GPS and remote sensing in Railway Engineering. The student develops skills on airport planning and design with the prime focus on runway and taxiway geometrics. Students become conversant with the definition, purpose, location and materials of coastal structures such as piers, breakwaters, wharves, jetties, quays and spring fenders. The students acquire knowledge on site investigation for location and planning of harbours.

**UNIT I HIGHWAY PLANNING AND ALIGNMENT 9**

History of road construction – Highway development in India – Jayakar committee Recommendations and realisations – Twenty year road development plans – Concepts of on-going highways development programmes at national level – Institutions for highway development at national level – India road congress – Highway research board, national highway authority of India – Ministry of Road Transport and Highway (MORTH) Central road research institute – Requirements of ideal alignment – Factors controlling highway alignment engineering surveys for alignment – Conventional methods and modern methods (Remote sensing, GIS and GPS techniques) – Classification and cross section of urban and rural roads – Highway cross sectional elements – Right of way, carriage way, camber, kerbs, shoulders and footpaths (IRC Standards) – Cross sections of different class of roads – Principles of highway financing.

**UNIT II GEOMETRIC DESIGN OF HIGHWAYS 9**

Design of horizontal alignment – Horizontal curves super elevation – Widening of pavements on horizontal curves and transition curves design of vertical alignments – Rolling, limiting, exceptional and minimum gradients, summit and valley curves – Sight distances – Factors affecting sight distances – PIEV theory, stopping sight distance (SSD) – Overtaking sight distance – Sight distance at intersections – Intermediate sight distance and illumination sight distance [Derivations and problems in SSD and OSD] – Geometric design of hill roads [IRC Standards Only].

**UNIT III FLEXIBLE AND RIGID PAVEMENTS 9**

Rigid and flexible pavements – Components and their functions – Design principles of flexible and rigid pavements – Factors affecting the design of pavements – ESWL, climate, sub-grade soil and traffic – Design practice for flexible pavements (CBR method, IRC Method and Recommendations – Problems) – Design practice for rigid pavements – IRC Recommendations (concept only).

**UNIT IV RAILWAY PLANNING AND DESIGN 12**

Role of Indian Railways in National Development – Railways for Urban Transportation – LRT & MRTS. - Engineering Surveys for Track Alignment – Obligatory points - Conventional and Modern methods (Remote Sensing, GIS & GPS, EDM and other equipments) - Permanent Way, its Components and their Functions: Rails - Types of Rails, Rail Fastenings, Concept of Gauges, Coning of Wheels, Creeps and kinks -Sleepers – Functions, Materials, Density – Functions, Materials, Ballastless Tracks - Geometric Design of Railway Tracks – Gradients and Grade Compensation, Super-Elevation, Widening of Gauges in Curves, Transition Curves, Horizontal and Vertical Curves.

**UNIT V RAILWAY TRACK CONSTRUCTION, MAINTENANCE AND OPERATION 12**

Points and Crossings - Design of Turnouts, Working Principle - Signalling, Interlocking and Track Circuiting - Construction & Maintenance – Conventional, Modern methods and Materials, Track Drainage - Track Modernisation– Automated maintenance and upgrading, Re-laying of Track, Lay outs of Railway Stations and Yards, Rolling Stock, Tractive Power, Track Resistance, Level Crossings.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Saxena Subhash C and Satyapal Arora, A Course in Railway Engineering, Dhanpat Rai and Sons, Delhi, 1998.
2. Khanna, K. and Justo, C.E.G., “Highway Engineering”, Khanna Publishers, 2001.

**REFERENCES**

1. Rangwala, Railway Engineering, Charotar Publishing House, 1995.
2. Rangwala, Airport Engineering, Charotar Publishing House, 1996.
3. Oza.H.P. and Oza.G.H., “A course in Docks & Harbour Engineering”. Charotar Publishing Co.1976
4. J.S. Mundrey, “A course in Railway Track Engineering”. Tata McGraw Hill, 2000

**OBJECTIVE**

At the end of this course the student shall be able to understand about geological formations, classification and morphology of rocks, and the importance of the study of geology for civil engineers with regard to founding structures like dams, bridges, buildings, etc. The student shall also be able to appreciate the importance of geological formation in causing earthquakes and land slides.

**UNIT I GENERAL GEOLOGY****9**

Geology in Civil Engineering – Branches of geology – Earth Structures and composition – Elementary knowledge on continental drift and plate technologies – Earth processes – Weathering – Work of rivers, wind and sea and their engineering importance – Earthquake belts in India – Groundwater – Mode of occurrence – Prospecting – importance in civil engineering

**UNIT II MINERALOGY****9**

Elementary knowledge on symmetry elements of important crystallographic systems – Physical properties of minerals – Study of the following rock forming minerals – Quartz family – Feldspar family – Augite, hornblende, biotite, muscovite, calcite, garnet – properties – behaviour and engineering significance of clay minerals – Fundamentals of process of formation of ore minerals – Coal and petroleum – Their origin and occurrence in India.

**UNIT III PETROLOGY****9**

Classification of rocks – Distinction between igneous, sedimentary and metamorphic rocks – Description occurrence, engineering properties and distribution of following rocks – Igneous rocks – Granite, syenite, diorite, gabbro, pegmatite, dolerite and basalt sedimentary rocks sandstone – Limestone, shale congl, conglomerate and breccia. Metamorphic rocks – Quartzite, marble, slate, phyllite, gneiss and schist.

**UNIT IV STRUCTURAL GEOLOGY AND GEOPHYSICAL METHOD****9**

Attitude of beds – Outcrops – Introduction to geological maps Study of structures – Folds, faults and joints – Their bearing on engineering construction – Seismic and electrical methods for civil engineering investigations.

**UNIT V GEOLOGICAL INVESTIGATIONS IN CIVIL ENGINEERING****9**

Remote sensing techniques – Study of air photos and satellite images – Interpretation for civil Engineering projects – Geological conditions necessary for construction of dams - Tunnels – Buildings – Road cuttings – Land slides – Causes and preventions – Sea erosion and coastal protection.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

1. Parbin Singh, "Engineering and General Geology", Katson Publication House, 1987
2. Krynine and Judd, "Engineering Geology and Geotechniques", McGraw-Hill Book Company, 1990

**REFERENCES**

1. Legeet, "Geology and Engineering", McGraw-Hill Book Company 1998
2. Blyth, "Geology for Engineers", ELBS, 1995.

**UNIT I HIGHWAY PLANNING AND ALIGNMENT 9**

Tresaguet and Macadam's method of Road Construction, Highway Development in India - Jayakar Committee Recommendations and Realisations, Twenty-year Road Development Plans, Concepts of On-going Highway Development Programmes at National Level, Institutions for Highway Development at National level - Indian Roads Congress, Highway Research Board, National Highway Authority of India, Ministry of Road Transport and Highways (MORTH) and Central Road Research Institute.

Requirements of Ideal Alignment, Factors Controlling Highway Alignment Engineering Surveys for Alignment - Conventional Methods and Modern Methods (Remote Sensing, GIS and GPS techniques) Classification and Cross Section of Urban and Rural Roads (IRC), Highway Cross Sectional Elements – Right of Way, Carriage Way, Camber, Kerbs, Shoulders and Footpaths [IRC Standards], Cross sections of different Class of Roads.

**UNIT II GEOMETRIC DESIGN OF HIGHWAYS 9**

Design of Horizontal Alignments – Super elevation, Widening of Pavements on Horizontal Curves and Transition Curves [Derivation of Formulae and Problems] Design of Vertical Alignments – Rolling, Limiting, Exceptional and Minimum Gradients, Summit and Valley Curves Sight Distances - Factors affecting Sight Distances, PIEV theory, Stopping Sight Distance (SSD), Overtaking Sight Distance (OSD), Sight Distance at Intersections, Intermediate Sight Distance and Illumination Sight Distance

**UNIT III DESIGN OF RIGID AND FLEXIBLE PAVEMENTS 9**

Rigid and Flexible Pavements- Components and their Functions, Design Principles of Flexible and Rigid Pavements, Factors affecting the Design of Pavements - ESWL, Climate, Sub-grade Soil and Traffic. Design Practice for Flexible Pavements [CBR method, IRC Method and Recommendations- Problems]. Design Practice for Rigid Pavements – Joints

**UNIT IV HIGHWAY MATERIALS AND CONSTRUCTION PRACTICE 9**

Desirable Properties and Testing of Highway Materials: - (Tests have to be demonstrated in Highway Engineering Laboratory) Soil – California Bearing Ratio Test, Field Density Test. Aggregate - Crushing, Abrasion, Impact Tests, Water absorption, Flakiness and Elongation indices and Stone polishing value test. Bitumen - Penetration, Ductility, Viscosity, Binder content and Softening point Tests. Construction Practice - Water Bound Macadam Road, Bituminous Road and Cement Concrete Road [as per IRC and MORTH specifications] Highway Drainage [IRC Recommendations]

**UNIT V HIGHWAY MAINTENANCE 9**

Types of defects in Flexible pavements – Surface defects, Cracks, Deformation, Disintegration – Symptoms, Causes and Treatments. Types of Pavement, Failures in Rigid Pavements – Scaling, Shrinkage, Warping, Structural Cracks Spalling of Joints and Mud Pumping – and Special Repairs. Pavement Evaluation – Pavement Surface Conditions and Structural Evaluation, Evaluation of pavement Failure and strengthening - Overlay design by Benkelman Beam Method [Procedure only], Principles of Highway Financing

## SEMESTER VI

### HARD CORE ELECTIVE III

17155E64AP

REMOTE SENSING AND GIS

L T P C  
3 1 0 4

#### **UNIT I EMR AND ITS INTERACTION WITH ATMOSPHERE AND EARTH MATERIAL**

9

Definition of remote sensing and its components – Electromagnetic spectrum – Wavelength regions important for remote sensing – Wave theory, particle theory, stefan – Boltzman and Wein’s displacement law atmospheric scattering, absorption – Atmospheric windows – Spectral signature concepts – Typical spectral reflective characteristics of water, vegetation, soil.

#### **UNIT II PLATFORMS AND SENSORS**

9

Types of platforms – Orbit types, sun synchronous and geosynchronous – Passive and active sensors – Resolution concepts – Payload description of important earth resources and meteorological satellites – Airborne and space borne TIR and microwave sensors – Types of data products.

#### **UNIT III IMAGE INTERPRETATION AND ANALYSIS**

9

Types of image interpretation – Visual interpretation keys – Basic elements of image interpretation – Digital image processing – Pre-processing – Image enhancement techniques – Multispectral image classification – Supervised and unsupervised.

#### **UNIT IV GEOGRAPHIC INFORMATION SYSTEM**

9

Introduction – Maps – Definitions – Map projections – Types of projections – Map analysis – GIS definition – Basic components of GIS – Standard GIS soft wares – Data type – Spatial and non spatial (attribute data) – Measurement scales – Data Base Management Systems (DBMS).

#### **UNIT V DATA-ENTRY, STORAGE AND ANALYSIS**

9

Data models: vector and raster – Data compression – Data input by digitization and scanning – Attribute data analysis and integrated data analysis – Modeling in GIS – Highway alignment studies – Land information system.

**L: 45 T: 15**

**Total: 60 Periods**

#### **TEXT BOOKS**

- 1 Thomas, L.M. and Ralph, K.W., “Remote Sensing and Image Interpretation ”,John Wiley and Sons, 2002.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENUEURSHIP**

**AIM & OBJECTIVE:**

This course imparts the students' knowledge of planning, design, construction and maintenance of railway tracks. The students acquire proficiency in the application of modern techniques such as GIS, GPS and remote sensing in Railway Engineering.

**UNIT I INTRODUCTION 9**

Role of Indian railways in national development – Permanent way its components and their functions – Types of rails – Rail fastenings – Sleepers – Ballasts – Ballast less tracks.

**UNIT II TRACK ALIGNMENT 9**

Engineering surveys for track alignment – Obligatory points – Conventional methods – Modern methods – EDM – Remote sensing – GIS – GPS – Track in cutting – Track on embankments.

**UNIT III GEOMETRIC DESIGN OF TRACKS 9**

Gradients – Grade compensation – Super-elevation – Widening of gauges in curves – Transition curves – Vertical curves.

**UNIT IV TRACK CONSTRUCTION 9**

Points and crossings – Turnouts – Signalling – Interlocking and track circuiting – Construction – Conventional and modern methods – Materials used.

**UNIT V MAINTENANCE AND OPERATION 9**

Track drainage – Track modernization – Automated maintenance and upgrading – Lay outs of railway stations and yards – Rolling stock – Tractive power – Track resistance – Level crossings.

**Total: 45 Periods**

**TOTAL: 45 PERIODS**

**TEXT BOOK**

1. Saxena Subhash, C. and Satyapal Arora, A., "Course in Railway Engineering", Dhanpat Rai and Sons, 2003.
2. Agarwal, M..M ,and Chandra.S., "Railway Engineering", Oxford University Press,2008.

**REFERENCES**

2. Gupta, B.L. and Amit Gupta, , "Railway Engineering", Standard Publishers Distributors,2005

**AIM & OBJECTIVE:**

The student develops skills on airport planning and design with the prime focus on runway and taxiway geometrics. Students become conversant with the definition, purpose, location and materials of coastal structures such as piers, breakwaters, wharves, jetties, quays and spring fenders. The students acquire knowledge on site investigation for location and planning of harbours.

**UNIT I AIRPORT PLANNING AND DESIGN 8**

Components of airports – Airport planning – Runway design – Orientation – Wind rose diagram – Taxiway design – Separation distances – Design speed – Drainage.

**UNIT II AIRPORT AND LAYOUTS 10**

Airport zoning – Clearance over highways and railways – Airport layouts – Apron – Hangars – Terminal buildings – Airports buildings – Passenger flow – Passenger facilities.

**UNIT III AIR TRAFFIC CONTROL 8**

Visual aids – Runway and taxiway markings – Wind direction indicators – Runway and taxiway lightings – Air traffic control network – Helipads – Service equipments.

**UNIT IV DOCKS AND HARBOURS 10**

Definition of terms – Harbours – Ports – Docks – Tides – Waves – Littoral drift – Sounding, satellite ports – Classification of harbors – Site selection and investigation – Dry and wet docks – Light houses – Mooring accessories.

**UNIT V COASTAL STRUCTURES 9**

Piers – Sliways – Breakwaters – Wharves – Jetties – Quays – Spring fenders – Coastal shipping – Inland water transport – Container transportation – Pipe ways – Rope ways.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

1. Khanna, S.K., Arora, M.G. and Jain, S.S., "Airport Planning and Design", Namchand and Brother, 1999.
2. Bindra, S.P., "A course in Docks and Harbour Engineering", Dhanpat Rai and Sons, 1993.

**REFERENCES**

3. Vazirani and Chandolas, S.P., "Transportation Engineering", Khanna Publications, 1991.

**OBJECTIVE**

At the end of the course the student will possess knowledge about Electronic surveying

**UNIT I FUNDAMENTALS**

7

Methods of measuring distance, historical development, basic principles of EDM, classifications, applications and comparison with conventional surveying.

**UNIT II BASIC ELECTRONICS**

8

Fundamentals of electronics, resonant circuits, semiconductors, Lasers, Cathode ray tube, photo multiplier tube, transducers, oscillators, frequency mixing, modulation and demodulation, Kerrcell modulator, measurement of phase difference, reflectors and power sources.

**UNIT III PROPAGATION OF ELECTROMAGNETIC WAVES**

11

Definition, classification, applications, propagation properties, wave propagation at lower and higher frequencies. Refractive index, factors affecting, computation of group refractive index for light and near infrared waves at standard conditions and ambient conditions, reference refractive index, first velocity correction, computation of refractive index for microwaves, measurement of atmospheric parameters, mean refractive index, real time application of first velocity correction, second velocity correction and total atmospheric correction.

**UNIT IV ELECTROMAGNETIC DISTANCE MEASURING SYSTEM**

11

Electro-optical system, measuring principle, working principle, sources of error, infrared EDM instruments, Laser EDM instruments and total station. Microwave system, measuring principle, working principle, sources of error, microwave EDM instruments, comparison with Electrooptical system, care and maintenance of EDM instruments, Modern Positioning Systems. EDM traversing, trilateration and base line measurement using EDM.

**UNIT V FIELD STUDIES**

8

Study of different EDM instruments and Total Station. EDM traversing, trilateration and base line measurement using EDM.

**L: 45 T: 15**

**Total: 60 Periods**

**SEMESTER VII  
HARD CORE ELECTIVE IV  
AIR POLLUTION MANAGEMENT**

17155E74AP

**L T P C  
3 1 0 4**

**AIM & OBJECTIVE:**

This subject covers the sources, characteristics and effects of air and noise pollution and the methods of controlling the same. The student is expected to know about source inventory and control mechanism.

**UNIT I SOURCES AND EFFECTS OF AIR POLLUTANTS 9**

Classification of air pollutants – Particulates and gaseous pollutants – Sources of air pollution – Source inventory – Effects of air pollution on human beings, materials, vegetation, animals – global warming-ozone layer depletion, Sampling and Analysis – Basic Principles of Sampling – Source and ambient sampling – Analysis of pollutants – Principles.

**UNIT II DISPERSION OF POLLUTANTS 9**

Elements of atmosphere – Meteorological factors – Wind roses – Lapse rate - Atmospheric stability and turbulence – Plume rise – Dispersion of pollutants – Dispersion models – Applications.

**UNIT III AIR POLLUTION CONTROL 15**

Concepts of control – Principles and design of control measures – Particulates control by gravitational, centrifugal, filtration, scrubbing, electrostatic precipitation – Selection criteria for equipment - gaseous pollutant control by adsorption, absorption, condensation, combustion – Pollution control for specific major industries.

**UNIT IV AIR QUALITY MANAGEMENT 7**

Air quality standards – Air quality monitoring – Preventive measures - Air pollution control efforts – Zoning – Town planning regulation of new industries – Legislation and enforcement – Environmental Impact Assessment and Air quality

**UNIT V NOISE POLLUTION 5**

Sources of noise pollution – Effects – Assessment - Standards – Control methods – Prevention

**Total: 45 Periods**

**TEXT BOOKS**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**AIM & OBJECTIVE:**

At the end of this course the student shall be able to appreciate modular construction, industrialised construction and shall be able to design some of the prefabricated elements and also have the knowledge of the construction methods using these elements.

**UNIT I INTRODUCTION 9**

Need for prefabrication – Principles – Materials – Modular coordination – Standardization – Systems – Production – Transportation – Erection.

**UNIT II PREFABRICATED COMPONENTS 9**

Behaviour of structural components – Large panel constructions – Construction of roof and floor slabs – Wall panels – Columns – Shear walls

**UNIT III DESIGN PRINCIPLES 9**

Disuniting of structures- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation.

**UNIT IV JOINT IN STRUCTURAL MEMBERS 9**

Joints for different structural connections – Dimensions and detailing – Design of expansion joints

**UNIT V DESIGN FOR ABNORMAL LOADS 9**

Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

**TOTAL: 45 PERIODS****TEXT BOOKS**

1. CBRI, Building materials and components, India, 1990
2. Gerostiza C.Z., Hendrikson C. and Rehat D.R., Knowledge based process planning for construction and manufacturing, Academic Press Inc., 1994

2. Structural design manual, Precast concrete connection details, Society for the studies in the use of precast concrete, Netherland Betor Verlag, 1978.

**AIM & OBJECTIVE:**

At the end of this course the student shall be able to choose appropriate bridge structure and design it for given site conditions.

**UNIT I INTRODUCTION 9**

Design of through type steel highway bridges for IRC loading - Design of stringers, cross girders and main girders - Design of deck type steel highway bridges for IRC loading – Design of main girders

**UNIT II STEEL BRIDGES 9**

Design of pratt type truss girder highway bridges - Design of top chord, bottom chord, web members - Effect of repeated loading - Design of plate girder railway bridges for railway loading - Wind effects - Design of web and flange plates - Vertical and horizontal stiffeners.

**UNIT III REINFORCED CONCRETE SLAB BRIDGES 9**

Design of solid slab bridges for IRC loading - Design of kerb - Design of tee beam bridges - Design of panel and cantilever for IRC loading

**UNIT IV REINFORCED CONCRETE GIRDER BRIDGES 9**

Design of tee beam - Courbon's theory - Pigeaud's curves - Design of balanced cantilever bridges - Deck slab - Main girder - Design of cantilever - Design of articulation.

**UNIT V PRESTRESSED CONCRETE BRIDGES 9**

Design of prestressed concrete bridges - Preliminary dimensions - Flexural and torsional parameters - Courbon's theory - Distribution coefficient by exact analysis - Design of girder section - Maximum and minimum prestressing forces - Eccentricity - Live load and dead load shear forces - cable zone in girder –Check for stresses at various sections - Check for diagonal tension - Diaphragms - End block - Short term and long term deflections.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

2. Ponnuswamy S., “Bridge Engineering”, Tata McGraw-Hill, New Delhi, 1996.

**UNIT I INTRODUCTION – THEORY AND BEHAVIOUR 9**

Basic concepts – Advantages – Materials required – Systems and methods of prestressing– Analysis of sections – Stress concept – Strength concept – Load balancing concept – Effect of loading on the tensile stresses in tendons – Effect of tendon profile on deflections – Factors influencing deflections – Calculation of deflections – Short term and long term deflections – Losses of prestress – Estimation of crack width.

**UNIT II DESIGN 9**

Flexural strength – Simplified procedures as per codes – Strain compatibility method – Basic concepts in selection of cross section for bending – Stress distribution in end block – Design of anchorage zone reinforcement – Limit state design criteria – Partial prestressing – Applications.

**UNIT III CIRCULAR PRESTRESSING 9**

Design of prestressed concrete tanks – Poles and sleepers.

**UNIT IV COMPOSITE CONSTRUCTION 9**

Analysis for stresses – Estimate for deflections – Flexural and shear strength of composite members.

**UNIT V PRE-STRESSED CONCRETE BRIDGES 9**

General aspects – Pretensioned prestressed bridge decks – Post tensioned prestressed bridge decks – Principles of design only.

**L: 45 T: 15**

**17255C12P QUALITY CONTROL AND ASSURANCE IN CONSTRUCTION L T P C**  
**3 1 0 4**

**OBJECTIVE:**

- To understand the elements of quality planning and the implication
- To become aware of objectives and advantage of quality assurance
- To be exposed to means of quality control
- To study the relationship between quality control and assurance

**UNIT-I** **12**  
Construction Organisation and Quality Planning: Types of organizations - Inspection, control and enforcement - Quality Management Systems and method - Responsibilities and authorities in quality assurance and quality control - Architects, engineers, contractors, and special consultants, Quality circle.

**UNIT-II** **12**  
Quality policy, Objectives and methods in Construction Industry - Consumers satisfaction, Ergonomics - Time of Completion - Statistical tolerance - Taguchi's concept of quality - Codes and Standards - Document - Contract and construction programming - Inspection procedures - Processes and products - Total QA I QC programme and cost implication.

**UNIT-III** **12**  
Quality Assurance: Objectives - Regularity agent, owner, design, contract and construction oriented objectives, methods - Techniques and needs of QA/QC - Different aspects of quality - Appraisals, Factors influencing construction quality - Critical, major failure aspects and failure mode analysis, -Stability methods and tools, optimum design - Reliability testing, reliability coefficient and reliability prediction.

**UNIT-IV** **12**  
Quality Control: Total Quality Control- Quality Control by statistical methods — Sampling by attributes and by variables - Selection of new materials - Influence of drawings, detailing, specification,

**UNIT-V** **12**  
Standardization - Bid preparation - Construction activity, environmental safety, social and environmental factors - Natural causes and speed of construction - Life cycle costing -Value engineering and value analysis.

**TOTAL: 45 PERIODS**

**THEORY OF PLASTICITY AND ELASTICITY**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

Emphasis is placed on static problems with linear material and small deformation. Many basic 2-D problems (such as plane strain and plane stress) and 3-D problems.

**UNIT I ANALYSIS OF STRESS AND STRAIN 12**

Analysis of stress and strain, stress strain relationship. Generalized Hook's law. Plane stress and plane strain.

**UNIT II DEFORMATION 12**

Basic concepts of deformation of deformable bodies - Transformations of stresses and strains in Cartesian and polar co-ordinates - Equilibrium equations in two and three dimensions in Cartesian co-ordinates.

**UNIT III TORSION 12**

Torsion of non-circular section - methods of analysis - membrane analogy - torsion of thin rectangular section and hollow thin walled sections.

**UNIT IV THEORY OF ENERGY 12**

Energy methods – Energy principles and theorem.

**UNIT V INTRODUCTION TO PROBLEMS IN PLASTICITY 12**

Physical assumption - criteria of yielding, yield surface, Flow rule (plastic stress strain relationship). Elastic plastic problems of beams in bending - plastic torsion.

**TOTAL: 60 PERIODS**

**CORE PRACTICAL -I**  
**COMPUTER PROGRAMMING LAB- AUTO CAD**

**L T P C**  
**0 0 3 3**

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using AutoCAD.

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop civil engineering drawing using Auto CAD.

**UNIT I**

Introduction AutoCad – Definition of various commands used in AutoCAD

**UNIT II**

Simple Exercises using AutoCad commands – Produce drawing using AutoCad and output of all the drawings are taken print out in A4 sheet using Inkjet / Laser Printer or Plotter and produced in file form as regard.

**UNIT III**

Section of semicircular Arch, Section of a lean – to – roof and section of spread footing foundation

**UNIT IV**

Plan, section and elevation of a prayer hall, school building and residential building (R.C.C. Roof)

**UNIT V**

Preparation of approval drawing to be submitted to corporation or municipality showing required details in one such as site plan, ground floor plan, section and elevation, key plan, septic tank plan, rain water harvesting pit with all details and title block detail.

## SEMESTER II

17255C21P

MANAGEMENT INFORMATION SYSTEM

L T P C  
3 1 0 4

Objective:

- To bring about an exposure to information systems in a formal manner
- To study the development of information systems
- To study the means of applying information systems models to project management
- To introduce system audit and to study its features

### UNIT-I

12

System Development: Information Systems - Establishing the Framework - Business Models - Evolution of Information Systems. Modern Information System - System Development Life Cycle - Structured Methodologies - Designing Computer Based Methods, Procedures, Control - Designing Structured Programs.

### UNIT-II

12

Information Systems: Integrated Construction Management Information System – Project Management Information System - Functional Areas, Finance, Marketing, Production, Personnel .

### UNIT-III

12

Levels, DSS, EIS, ES - Comparison, Concepts and Knowledge Representation –Managing International Information System.

### UNIT-IV

12

Implementation and Control: Control - Testing Security - Coding Techniques - Defection of Error - Validating - Cost Engineering qualities - Design, Production, Service, Software specification.

### UNIT-V

12

Software Metrics, Software quality assurance - Systems Methodology - Objectives - Time and Logic, Knowledge and Human Dimension - Software life cycle models - Verification and Validation.

**TOTAL: 60 PERIODS**

**FINITE ELEMENT ANALYSIS**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

The finite element method is the most powerful structural analysis tool for the Civil Engineers. The basic formulation and programming technique are introduced. According to the same procedures, the different elements such as truss, beam, plate and shell are easily formulated.

**UNIT I INTRODUCTION:**

**12**

Differential equilibrium equations - strain displacement relation - linear constitutive relation - special cases. Principle of stationary potential energy - application to finite element methods. Some numerical techniques in finite element Analysis

**UNIT II ANALYSIS OF PLATE BENDING;**

**12**

Two Dimensional problems - Plane Stress, Plain Strain and Axisymmetric Problems - Triangular and beam element -. Analysis of plate bending - Basic theory of plate bending-displacement functions - plate bending Elements.

**UNIT III MODELS AND FUNCTION OF ELEMENT:**

**12**

Displacement models - convergence requirements. Natural coordinate systems – Shape function. Interpolation function. Linear and quadratic elements - Lagrange & Serendipity elements.

**UNIT IV ANALYSIS OF NONLINEAR AND VIBRATION PROBLEMS:**

**12**

Strain displacement matrix - Material and Geometric Nonlinearity - Methods of Treatment -Dynamic condensation-Eigen value extraction

**UNIT V ASSEMBLAGE OF ELEMENT:**

**12**

Assemblage of elements – Direct stiffness method. Special characteristics of stiffness matrix - Boundary condition & reaction - Gauss elimination –Basic steps in Finite element analysis.

**TOTAL: 60 PERIODS**

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using FEA - ANSYS

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop Civil Engineering drawing using FEA – ANSYS

**LIST OF EXPERIMENTS**

1. Calculate the displacement and the member forces / reaction for the given simple truss with concentrated loads.
2. Calculate the displacement and the member forces / reaction for the given Stepped shaft subjected to temperature change.
3. Calculate the displacement and the member forces / reaction for the given beam with concentrated and distributed loads.
4. Find the natural frequencies and mode shapes of a given cantilever beam.
5. Find the maximum normal stress and stress concentration factor for the given plate with hole.

**RESEARCH METHODOLOGY**

**L T P C**  
**3 0 0 3**

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

**OUTCOME:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

**UNIT I**

**9**

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

**UNIT II**

**9**

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

**UNIT III**

**9**

Data Analysis using Excel- Tabulation of Data in excel ( Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least

<b>17255C31P</b>	<b>SEMESTER III STRUCTURAL DYNAMICS</b>	<b>L T P C 3 1 0 4</b>
------------------	---	----------------------------

**AIM & OBJECTIVES:**

This course covers the methods for analyzing the stresses and deflections developed in any given type of structures when it is subjected to an arbitrary dynamic loading.

**UNIT I PRINCIPLES OF DYNAMICS** **12**  
 Formulation of equations of motion by different methods, single degree freedom systems, free and forced response, effect of damping.

**UNIT II MULTIDEGREE OF FREEDOM SYSTEMS** **12**  
 Formulation of structure property matrices, Eigen values problems, Modes shapes and ortho normality of modes, Approximate methods of extraction of eigen values.

**UNIT III DYNAMIC RESPONSE OF MDOF SYSTEMS** **12**  
 Mode superposition techniques, Numerical integration procedures.

**UNIT IV CONTINUOUS SYSTEMS** **12**  
 Modeling - free and forced vibration of bars and beams.

**UNIT V APPLICATIONS** **12**  
 Idealisation of structures to mathematical models, examples of wind, earthquake and impact

**3 1 0 4**

**AIM and OBJECTIVES:**

Introduction to the governmental quality assurance regulations for public works. Application of quality control concepts, statistical experimental design principles to the construction process to minimize project costs and improve quality.

**UNIT I INTRODUCTION 12**  
Definitions: Maintenance, repair and rehabilitation, Facets of and importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration-testing techniques.

**UNIT II METEOROLOGICAL EFFECTS 12**  
Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion protection

**UNIT III QUALITY CONTROL 12**  
Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking.

**UNIT IV MATERIALS AND TECHNIQUES FOR REPAIR 12**  
Special concretes and mortar, concrete chemicals, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fiber reinforced concrete. Rust eliminators and polymers coating for rebar during repair foamed concrete, mortar and dry pack, vacuum concrete, Guniting and Shot Crete Epoxy injection, Mortar repair for cracks, shoring and underpinning.

**UNIT V DEMOLITION 12**  
Engineering demolition of structures – case studies

ADVANCED STEEL STRUCTURES

L T P C  
3 1 0 4

### AIM & OBJECTIVES:

Introduction to steel structure, tensioned member, compressed member, beam, design of beam and column, bolt jointing, welding jointing and other joint design.

#### UNIT I COMPRESSION MEMBERS

12

Design of compression members – Axially – Uni axial and biaxial bending.

#### UNIT II PLASTIC ANALYSIS

12

Plastic Analysis of Structures – Introduction - Shape factors – Mechanisms - Plastic hinge - Analysis of beams and portal frames - Design of continuous beams.

#### UNIT III LIGHT WEIGHT STEEL STRUCTURES

12

Design of Light Gauge Steel Structures - Types of cross sections - Local buckling and lateral buckling - Design of compression and tension members – Beams - Deflection of beams.

#### UNIT IV LIMIT STATE DESIGN

12

Limit state design of Steel Structures – Plastic section – Section classification – Partial safety factor.

#### UNIT V DESIGN OF JOINTS AND CONNECTIONS

12

Design of joints and connections – Riveted – Bolted – Welded – Semi rigid connection.

TOTAL: 60 PERIODS

SKILL DEVELOPMENT

EMPLOYABILITY  
[Type text]

ENTREPRENEURSHIP  
[Type text]

Defects on wood – improper seasoning and defects – improving of surface of wood.

**UNIT V MISCELLANEOUS FAILURES 12**

Pin-jointed And rigid jointed frames – concrete walls - arches – reinforced concrete beams and frames – repair of concrete bridge and water retaining structures.

**TOTAL: 60 PERIODS**

1. Rasnom, W.H., Building Failures, E&F, N. SPON Ltd.
2. Moskvina V, Concrete and Reinforced Structures – Deterioration and Protection, Mir Publishers, Moscow, 1980.

**17255E23BP                      ADVANCED CONCRETE TECHNOLOGY                      L T P C**  
**3 1 0 4**

**AIM & OBJECTIVES:**

To learn the Performance of concrete as structural material and advanced technologies used in construction by using concrete.

**UNIT I INTRODUCTION TO CONCRETE 12**

Materials - Concrete materials - Reinforcements and admixtures.

**UNIT II MIX DESIGN 12**

Mix Design – Specifications - Design of concrete mixes by IS code method – ACI method - Road Note No:4 method – High strength concrete.

**UNIT III BEHAVIOUR OF CONCRETE 12**

Behavior of Concrete - Modern trends in concrete manufacture and placement techniques - Theological behavior of fresh concrete and hardened concrete - Resistance to static and dynamic loads.

**UNIT IV TESTING 12**

Testing of Concrete - Non-destructive testing and quality control – Durability - Corrosion protection and fire resistant.

**UNIT V SPECIAL CONCRETE 12**

Special Concrete - Pre-cast concrete - Light weight concrete - Under water concrete -Pumped

**SKILL DEVELOPMENT**

**EMPLOYABILITY**  
[Type text]

**ENTREPRENEURSHIP**  
[Type text]

Introduction - Behaviour of box girder bridges - Design concepts.

**UNIT V GENERAL**

**12**

Case studies on steel - Concrete composite construction in buildings - Seismic behaviour of composite structures.

**ELECTIVE- II**

**17255E33AP**

**PRESTRESSED CONCRETE DESIGN**

**L T P C  
3 1 0 4**

**AIM & OBJECTIVES:**

This course introduces students to the fundamental principles of pre-stressed concrete behavior and design, So that they can act effectively to optimize existing forms of construction and apply fundamental concepts with confidence in unusual and challenging situations.

**UNIT I INTRODUCTION**

**12**

Difference between reinforced and pre-stressed concrete – Principles of pre-stressing – Methods and systems of pre-stressing – Principles of electro thermal pre-stressing and chemical pre-stressing – Classification of pre-stressed concrete structures – Materials – High strength concrete and High strength steel – Stress-strain diagram - Losses in pre- stress.

**UNIT II LIMIT STATE DESIGN**

**12**

Design of prismatic pre-stressed concrete members for bending at working loads –Check for ultimate load stage (Limit State Design).

**UNIT III BEHAVIOR OF BEAMS**

**12**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**  
[Type text]

**ENTREPRENEURSHIP**  
[Type text]

Simple cable profiles – Calculation of deflections – Design of beams for shear and torsion at working and ultimate loads. Design of Anchorage zone by Guyon’s method – Concept of Magnel’s method – IS 1343 recommendations.

**UNIT IV COMPOSITE BEAMS 12**

Composite pre-stressed concrete beams – Design procedure – Calculation of stresses at important stages both for propped and un propped constructions – Shrinkage stresses.

**UNIT V BEHAVIOR OF CONTINUOUS BEAMS 12**

Statically indeterminate structures – Concept of concordant cable and linear transformations – Sketching of pressure lines for continuous beams – Circular pre stressing.

**17255E33BP**

**HIGH RISE STRUCTURES**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

This course covers the design criteria and loading pattern on high rise structures, behavior of structural systems and stability, design and analysis of tall buildings.

**UNIT I DESIGN CRITERIA 12**

Design philosophy, Loading, Sequential loading and materials - high performance Concrete - Fiber reinforced Concrete - Light weight Concrete - Design mixes.

**UNIT II LOADING AND MOVEMENT 12**

Gravity Loading: Dead and live load, methods of live load reduction, Impact, gravity loading, construction load. Wind loading: Static and dynamic approach, Analytical and wind tunnel experimental method. Earthquake loading: Equivalent lateral force, modal analysis, combinations of loading working stress design, Limit state design, plastic design.

**UNIT III BEHAVIOUR OF VARIOUS STRUCTURAL SYSTEMS 12**

Factors affecting growth, Height and Structural form. High rise behavior, Rigid frames, braced

**SKILL DEVELOPMENT**

**EMPLOYABILITY**  
[Type text]

**ENTREPRENEURSHIP**  
[Type text]

frames, In filled frames, shear walls, coupled shear walls, wall-frames, tubular, cores, outrigger - braced and hybrid mega system.

**UNIT IV ANALYSIS AND DESIGN 12**

Modeling for approximate analysis, Accurate analysis and reduction techniques, Analysis of building as total structural system considering overall integrity and major subsystem interaction, Analysis for member forces, drift and twist, computerized general three dimensional analysis. Structural elements: Sectional shapes, properties and resisting capacity, design, deflection, cracking, pre stressing, shear flow. Design for differential movement, creep and shrinkage effects, temperature effects and fire resistance

**UNIT V STABILITY OF TALL BUILDINGS 12**

Overall buckling analysis of frames, wall-frames, Approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first-order and P-Delta analysis, Translational, Torsional instability, out of plum effects, stiffness of member in stability, effect of foundation rotation

OPTIMIZATION IN STRUCTURAL DESIGN

L T P C  
3 1 0 4

#### AIM & OBJECTIVES:

The structural analysis is formulated through the principle of optimization. Both the manual calculation and application of the computer are introduced for the analysis of truss and frame structures using optimization techniques.

### UNIT I INTRODUCTION

12

Basic concepts of minimum weight, minimum cost design, Objective function, constraints and classical methods.

### UNIT II OPTIMIZATION TECHNIQUES

12

Linear programming, Integer Programming, Quadratic Programming.

SKILL DEVELOPMENT

EMPLOYABILITY

**17255E43BP****DESIGN OF INDUSTRIAL STRUCTURES**
**L T P C**  
**3 1 0 4**
**AIM & OBJECTIVES:**

This course deals about the requirements, planning and construction techniques of an industry. And also deals with modes of communication and transport to be used in an industrial structures.

**UNIT I REQUIREMENTS OF AN INDUSTRY****12**

General - Specific requirements for industries like textile, sugar, cement, chemical, etc - Site

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

layout and external facilities.

## **UNIT II PLANNING**

**12**

Planning of Building Work – Standards - Structural materials including plastics – Polymers - Fibre glass - Pressed card boards, etc - Multi-storey buildings - Steel skeletal structures - Reinforced concrete frames – Workshops - Ware houses - Single storey buildings - Sheds in steel and reinforced concrete - North-lights - Single span spherical and other special constructions - Cooling towers and chimneys - Bunkers and silos' prefabrication - Construction.

## **UNIT III CONSTRUCTION TECHNIQUES**

**12**

Construction Techniques - Expansion joints - Machine foundations - Other foundations - Water proofing - Roofs and roofing - Roof drainage - Floors and flooring joists - Curtain walling - Outer wall facing - Sound and shock proof mountings - Use of modern hoisting and other construction equipments.

## **UNIT IV COMMUNICATION AND TRANSPORT**

**12**

Circulation - Communication and Transport - Fixed points ( central cores) – Staircases -Grid floor sections - Lifts refuse disposals - Utilization of waste materials – Cranes - Continuous conveyors - Mobile cranes – Transporters – Doors - Sliding gates.

## **UNIT V FUNCTIONAL REQUIREMENTS**

**12**

Functional Requirements – Lighting: Natural lighting - Protection from the sun - skylights - window cleaning installations -Services: Layout – wiring – fixtures - cable and pipe bridges - electrical installations - lighting substation - Effluent. Ventilation and fire protection: Ventilation - Air-conditioning - Fire escapes and chutes - Fire alarms - Extinguishers and hydrants.

**TOTAL: 60 PERIODS**

**ELEMENTS OF EARTHQUAKE ENGINEERING**

**L T P C**

**3 1 0 4**

### **AIM & OBJECTIVES:**

This course covers the theory and applications related to Earthquake Engineering. The broad subjects discussed in this course include earthquake response of linearly elastic and inelastic buildings, structural dynamics in building codes.

## **UNIT I ELEMENTS AND FEATURES**

**12**

Elements of Seismology - Definitions of magnitude – Intensity - Epicentre etc - General features

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

[Type text]

**ENTREPRENEURSHIP**

[Type text]

of tectonics of seismic regions - Seismographs.

**UNIT II THEORY OF VIBRATIONS 12**

Theory of Vibrations - Free vibrations of single degree - Two degree and multiple degree freedom systems - Computations of dynamic response to time dependent forces - Vibrations isolation – Vibration absorbers - Brief introduction to instruments - Accelerograms.

**UNIT III PRINCIPLES OF EARTHQUAKE DESIGN 12**

Principles of earthquake resistant design - Response spectrum theory - Application of response spectrum theory to seismic design of structures. Capacity - Design Principles - Design criteria for strength - Stiffness and ductility.

**UNIT IV EARTHQUAKE ANALYSIS 12**

Earthquake Analysis and Design - Characteristics of earthquake – Earthquake response of structures – Concept of earthquake resistance design – Code provisions for design of building – IS 1893 and IS 4326 – Energy absorption capacity.

**UNIT V COMPUTER APPLICATION 12**

Seismic analysis and design of a multi storied building using Computer.

**TOTAL: 60 PERIODS**

**REFERENCE**

1. Pauley & Priestly, (1992), Seismic design of reinforced concrete and masonry buildings, John Wiley & Sons.

**ELECTIVE- IV**

**17255E51AP**

**EXPERIMENTAL STRESS ANALYSIS**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

At the end of the semester students can learn about the strain gauges, strain rosetters, model analysis, calibration of photo elastic materials.

**UNIT I STRAIN GAUGES 12**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**  
[Type text]

**ENTREPRENEURSHIP**  
[Type text]

Strain Gauges - Mechanical and optical strain gauges – Description and operation – Electrical resistance- Inductance and capacitance gauges – Detailed treatment on resistant gauges – Measurement of static and dynamic strains – Strain rosettes – Effect of transverse strains – Use of strain recorders and load cells.

**UNIT II MODEL ANALYSIS 12**

Model Analysis - Structural similitude – Use of models – Structural and dimensional analysis – Buckingham Pi Theorem – Muller Breslau’s principle for indirect model analysis – Use of Begg’s and Eney’s deformeters – Moment indicators – Design of models for direct and indirect analysis.

**UNIT III CALIBRATION 12**

Two dimensional photo elasticity - Stress optic law – Introduction to polariscope – Plane and circular polariscope – Compensators and model materials – Material and model fringe value – Calibration of photo elastic materials – Isochromatic and isoclinic fringes – Time edge effects.

**UNIT IV PHOTO ELASTICITY 12**

Three dimensional photo elasticity - Introduction – Stress freezing techniques – Stress separation techniques – Scattered light photo elasticity – Reflection polariscope.

**UNIT V MISCELLANEOUS METHODS 12**

Brittle coating method – Birefringence techniques – Moire fringe method – Non-destructive testing – Ultrasonic pulse velocity technique – Rebound hammer method – X-ray method – Gamma-ray method.

**TOTAL: 60 PERIODS**

**SOIL STRUCTURE INTERACTION**

**L T P C**  
**3 1 0 4**

**AIM & OBJECTIVES:**

This course deals with the soil- foundation interaction, analysis of beams and finite plates, elastic analysis of pile, load deflection for laterally loaded pile.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**  
[Type text]

**ENTREPRENEURSHIP**  
[Type text]

**UNIT I SOIL-FOUNDATION INTERACTION 12**

Introduction to soil-Foundation interaction problems, soil behaviour, Foundation behavior, Interface behavior, Scope of soil foundation interaction analysis, soil response models, Winkler, Elastic continuum, two parameter elastic models, Elastic plastic behavior, Time dependent behavior

**UNIT II BEAM ON ELASTIC FOUNDATION- SOIL MODELS 12**

Infinite beam, two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness

**UNIT III PLATE ON ELASTIC MEDIUM 12**

Infinite plate, Winkler, Two parameters, isotropic elastic medium, Thin and thick plates, Analysis of finite plates, rectangular and circular plates, Numerical analysis of finite plates, simple solutions

**UNIT IV ELASTIC ANALYSIS OF PILE 12**

Elastic analysis of single pile, Theoretical solutions for settlement and load distributions, analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap.

**UNIT V LATERALLY LOADED PILE 12**

Load deflection prediction for laterally loaded piles, Sub grade reaction and elastic analysis, Interaction analysis, Pile raft system, Solutions through influence charts

**TOTAL: 60 PERIODS**

**3 1 0 4**

**AIMS &OBJECTIVES:**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**  
[Type text]

**ENTREPRENEURSHIP**  
[Type text]

This course deals about seismology, seismic design concepts, codal provisions and detailing of frames.

**UNIT I INTRODUCTION 12**

Elements of Engineering Seismology - Theory of Vibration - Response Spectrum.

**UNIT II HISTORICAL 12**

Indian Seismicity - Earthquake History - Behaviour of Structures in the past Earthquakes.

**UNIT III DESIGN CONCEPTS 12**

Seismic Design Concepts - Cyclic load behaviour of RC, Steel and Prestressed Concrete elements – Design spectrum - Principles of capacity design.

**UNIT IV CODAL PROVISIONS 12**

Provisions of Seismic Code (IS 1893) - Building systems frames, shear walls, Braced Frames, Combinations - Torsion.

**UNIT V DESIGN AND DETAILING 12**

Performance of Regular Buildings 3 D Computer Analysis of Building Systems (Theory Only) - Design and Detailing of frames - Shear walls and Frame walls.

**TOTAL: 60 PERIODS**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**  
[Type text]

**ENTREPRENEURSHIP**  
[Type text]

**AIMS & OBJECTIVES:**

This course explains about design principles of Prefabricated Structures, components, application of prefabricated structures. Students can learn the usage of prefabricated structures in wall panels, industrial buildings and shell roofs.

**UNIT I DESIGN PRINCIPLES****12**

General Civil Engineering requirements- IS Code specifications. Modular co-ordination, standardization- Disuniting of Prefabricates, production, transportation, and erection-Safety factors, material properties, Deflection control.

**UNIT II REINFORCED CONCRETE****12**

Prefabricated structures - Long wall and cross-wall large panel buildings- One way and two way prefabricated slabs- Framed buildings with partial and curtain walls- Connections – Beam to column and column to column

**UNIT III FLOORS, STAIRS AND ROOFS****12**

Types of floor slabs, analysis and design example of cored and panel - Staircase slab design, types of roof slabs and insulation requirements- Description of joints, their behavior and reinforcement requirements- Ultimate strength calculations in shear and flexure

**UNIT IV WALL****12**

Types of wall panels, Blocks and large panels, Curtain- Partition and load bearing walls, load transfer from floor to wall panels- Design Curves, types of wall joints, their Behaviour and design -Leak prevention, joint sealants, sandwich wall panels

**UNIT V INDUSTRIAL BUILDINGS AND SHELL ROOFS****12**

Components of single-storey industrial sheds with crane gantry systems- R.C. Roof Trusses, Roof Panels, corbels and columns- Cylindrical, Folded plate and hyper-prefabricated shells-Erection and jointing, joint design, hand book based design

**TOTAL: 60 PERIODS****REFERENCE BOOKS**

3. Hass, A.M. Precast Concrete Design and Applications, Applied Science Publishers, 1983.

**AIMS & OBJECTIVES:**

This course deals the philosophy of the design of disaster resistant structures such as dams, bridges and emphasize about the rehabilitation, retrofitting and damage assessment of structures.

**UNIT I BEHAVIOUR OF LIFE-LINE STRUCTURES 12**

Philosophy for design to resist earthquake, cyclone and flood - National and International codes of practice - By-Law of urban and semi-urban areas - Traditional and modern structures.

**UNIT II COMMUNITY STRUCTURES 12**

Response of dams, bridges, buildings - Strengthening measures - Safety analysis and rating – Reliability assessment.

**UNIT III REHABILITATION AND RETROFITTING 12**

Testing and evaluation - Classification of structures for safety point of view - methods of strengthening for different disasters - qualification test.

**UNIT IV DETAILING OF STRUCTURES AND COMPONENTS 12**

Use of modern materials and their impact on disaster reduction - Use of modern analysis, design and construction techniques optimization for performance.

**UNIT V DAMAGE ASSESSMENT OF STRUCTURES 12**

Damage surveys - Maintenance and modifications to improve hazard resistance - Different types of foundation and its impact on safety - Ground improvement techniques.

**TOTAL: 60 PERIODS**

**TEXT BOOKS:**

1. V.Moskvin , et.al Concrete and Reinforced Concrete - Deterioration and Protection - Mir Publishers - Moscow 1980.
2. R.T.Allen and S.C.Edwards, Repair of Concrete Structures, Blakie and Sons, U.K 1987.

**AIMS & OBJECTIVES:**

This course deals about the non –linearities, non-linear equations and non linear static analysis of plates, columns, trusses and frames.

**UNIT I TYPES OF NONLINEARITIES 12**

Geometric Nonlinearity, Material Nonlinearity, Nonlinear Governing Equation for Beams: Moment-curvature Nonlinearity, Geometric Nonlinearity Due to Stretching, Material Nonlinearity, Geometrically Nonlinear Beam Problems - Moment-Curvature Nonlinearity- Cantilever Beam, Centrally Loaded beam with two supports, Cantilever Beam subjected to TipLoad

**UNIT II NONLINEAR EQUATIONS OF PLATES 12**

Nonlinear Static Analysis of Plates - Geometric and Material Nonlinearities, Governing Stress Function Approach, Displacement Equations Approach

**UNIT III NONLINEAR STATIC ANALYSIS OF PLATES 12**

Boundary Conditions and method of solution, Large Deflection of Rectangular Plates.

**UNIT IV NONLINEAR ANALYSIS OF COLUMNS 12**

Post buckling of cantilever column, large deflection of column with both ends hinged

**UNIT V NONLINEAR ANALYSIS OF TRUSSES AND FRAMES 12**

Nonlinear Analysis of Trusses and Nonlinear Elastic Analysis of Frames - Derivation of non linear stiffness matrix, Matrix displacement method for nonlinear analysis of structures, nonlinear analysis of plane frames.

**TOTAL: 60 PERIODS**

OFFSHORE STRUCTURES

L T P C  
3 1 0 4

### AIMS & OBJECTIVES:

This course includes the details of wave theories, forces in offshore structures and design and analysis of offshore structures .

### UNIT I WAVE THEORIES 12

Wave generation process, small and finite amplitude wave theories.

### UNIT II FORCES OF OFFSHORE STRUCTURES 12

Wind forces, wave forces on vertical, inclined cylinders, structures - current forces and use of Morison equation.

### UNIT III OFFSHORE SOIL AND STRUCTURE MODELING 12

Different types of offshore structures, foundation modeling, and structural modeling.

### UNIT IV ANALYSIS OF OFFSHORE STRUCTURES 12

Static method of analysis, foundation analysis and dynamics of offshore structures.

### UNIT V DESIGN OF OFFSHORE STRUCTURES 12

Design of platforms, helipads, Jacket tower and mooring cables and pipe lines.

**TOTAL: 60 PERIODS**

**STABILITY OF STRUCTURES**

**L T P C**

**3 1 0 4**

**AIMS & OBJECTIVES:**

This course deals with the concept and characteristics of stability problems and behavior of torsional buckling and lateral buckling in beams and columns.

**UNIT I INTRODUCTION**

**12**

Concept of stability approaches to stability analysis, characteristics of stability problems.

**UNIT II COLUMNS**

**12**

Buckling of columns with various end conditions, imperfect columns, elastically supported columns, non prismatic columns, Built-up columns, Inelastic buckling, Experimental study of column behavior, Empirical column formulae. Buckling of bars on elastic foundations, large deflection of buckled bars.

**UNIT III BEAMS – COLUMNS**

**12**

Beam-column theory, Application to buckling of frames.

**UNIT IV TORSIONAL BUCKLING**

**12**

Combined torsional and flexural buckling.

**UNIT V LATERAL BUCKLING**

**12**

Lateral buckling of beams, pure bending of simply supported beam and cantilever, numerical solutions.

**TOTAL: 60 PERIODS**

MECHANICS OF COMPOSITE MATERIALS

L T P C

3 1 0 4

**AIMS & OBJECTIVES:**

This course introduces the properties of materials, strength and elastic behavior of composite lamina and design of composite structures.

**UNIT I INTRODUCTION TO MODERN MATERIALS 12**

Fiber-Reinforced Polymer Composite (FRPC) Materials: Definition, Historical development, applications. Fibers and Matrix, types and their properties. Manufacturing process and methods for composites. Types and classification of composite materials, properties, advantages over conventional materials. Piezoelectric Materials: History, crystal structure, applications. Shape Memory Alloys (SMA), Functionally Graded Materials (FGM): definition and applications.

**UNIT II ENGINEERING PROPERTIES OF MODERN MATERIALS 12**

FRPC Composite Lamina: Micromechanics approach, methods. Longitudinal and transverse elastic properties of composite lamina, in-plane shear modulus for continuous fibers. Stress-strain relationship, compliance and stiffness matrices for generally anisotropic, specially orthotropic material, transversely isotropic material, orthotropic, isotropic materials, Plane stress condition for thin lamina, transformation of stress and elastic properties. Three dimensional transformations. Piezoelectric Materials: Piezoelectric coefficients, electric displacements, piezoelectric strain matrix for Quartz, Lead Zirconate-titanate, Polyvinylidene fluoride. Stiffness matrix for Functionally Graded materials.

**UNIT III STRENGTH OF COMPOSITE LAMINA 12**

Introduction. Failure theories, Maximum stress theory, Maximum strain theory, Energy based interaction theory (Tsai-Hill), Interactive tensor polynomial theory (Tsai-Wu), Failure mode based theory (Hasin-Rotem). Computation of lamina strength by Tsai-Wu theory for plane stress condition. Comparison of various failure theories.

**UNIT IV ELASTIC BEHAVIOUR OF COMPOSITE LAMINATES 12**

Basic assumptions, Laminate configurations, Strain displacement relationship, Stress-strain relationship, Force and moment resultants, Laminate compliances and stiffness matrices, Transformation of matrices. Load deformation relationship for symmetric laminates, symmetric cross-ply, symmetric angle-ply, balanced, antisymmetric cross-ply and angle ply, orthotropic, quasi-isotropic laminates.

**UNIT V HYGROTHERMAL EXPANSION AND DESIGN OF COMPOSITE STRUCTURE 12**

Coefficients of thermal and moisture expansion of various unidirectional lamina, load deformation relationship, residual stresses for cross ply symmetric laminates. Design methodology, design of pressure vessel for various laminate configurations.

3	17255E34C	Mechanics of Composite Materials	3	1	0	4

Objective:

- To understand the elements of quality planning and the implication
- To become aware of objectives and advantage of quality assurance
- To be exposed to means of quality control
- To study the relationship between quality control and assurance

**UNIT-I** **12**  
Construction Organisation and Quality Planning: Types of organizations - Inspection, control and enforcement - Quality Management Systems and method - Responsibilities and authorities in quality assurance and quality control - Architects, engineers, contractors, and special consultants, Quality circle.

**UNIT-II** **12**  
Quality policy, Objectives and methods in Construction Industry - Consumers satisfaction, Ergonomics - Time of Completion - Statistical tolerance - Taguchi's concept of quality - Codes and Standards - Document - Contract and construction programming - Inspection procedures - Processes and products - Total QA I QC programme and cost implication.

**UNIT-III** **12**  
Quality Assurance: Objectives - Regularity agent, owner, design, contract and construction oriented objectives, methods - Techniques and needs of QA/QC - Different aspects of quality - Appraisals, Factors influencing construction quality - Critical, major failure aspects and failure mode analysis, -Stability methods and tools, optimum design - Reliability testing, reliability coefficient and reliability prediction.

**UNIT-IV** **12**  
Quality Control: Total Quality Control- Quality Control by statistical methods — Sampling by attributes and by variables - Selection of new materials - Influence of drawings, detailing, specification.

**UNIT-V** **12**  
standardization - Bid preparation - Construction activity, environmental safety, social and environmental factors - Natural causes and speed of construction - Life cycle costing -Value engineering and value analysis.

**TOTAL: 45 PERIODS**

**Books for the References:**

1. O'Brian, James J. "Construction Inspection Handbook - Quality Assurance and Quality Control", Van Nostrand, New York, 1989.
2. Tenah, Kwaku A. and Guevara, Jose M., "Fundamentals of Construction Management and Organization", Reston Publishing Co., Inc., Virginia, 1985.
3. Oglesby, Clarkson H. "Productivity Improvement in Construction", McGraw-Hill, New Delhi, 1989.

**AIM and OBJECTIVES:**

Emphasis is placed on static problems with linear material and small deformation. Many basic 2-D problems (such as plane strain and plane stress) and 3-D problems.

**UNIT I ANALYSIS OF STRESS AND STRAIN 12**

Analysis of stress and strain, stress strain relationship. Generalized Hook's law. Plane stress and plane strain.

**UNIT II DEFORMATION 12**

Basic concepts of deformation of deformable bodies - Transformations of stresses and strains in Cartesian and polar co-ordinates - Equilibrium equations in two and three dimensions in Cartesian co-ordinates.

**UNIT III TORSION 12**

Torsion of non-circular section - methods of analysis - membrane analogy - torsion of thin rectangular section and hollow thin walled sections.

**UNIT IV THEORY OF ENERGY 12**

Energy methods – Energy principles and theorem.

**UNIT V INTRODUCTION TO PROBLEMS IN PLASTICITY 12**

Physical assumption - criteria of yielding, yield surface, Flow rule (plastic stress strain relationship). Elastic plastic problems of beams in bending - plastic torsion.

**TOTAL: 60 PERIODS**

4. Mendelson, A., (2002), Plasticity: Theory & Applications, Mac Millan & Co., NewYork.
5. Sadhu Singh, (2004), Theory of Plasticity, Dhanpat Rai sons Private Limited, New Delhi.

**AIM and OBJECTIVES:**

This course covers the methods for analyzing the stresses and deflections developed in any given type of structures when it is subjected to an arbitrary dynamic loading.

**UNIT I PRINCIPLES OF DYNAMICS 12**

Formulation of equations of motion by different methods, single degree freedom systems, free and forced response, effect of damping.

**UNIT II MULTIDEGREE OF FREEDOM SYSTEMS 12**

Formulation of structure property matrices, Eigen values problems, Modes shapes and ortho normality of modes, Approximate methods of extraction of eigen values.

**UNIT III DYNAMIC RESPONSE OF MDOF SYSTEMS 12**

Mode superposition techniques, Numerical integration procedures.

**UNIT IV CONTINUOUS SYSTEMS 12**

Modeling - free and forced vibration of bars and beams.

**UNIT V APPLICATIONS 12**

Idealisation of structures to mathematical models, examples of wind, earthquake and impact

**TOTAL: 60 PERIODS**

## 17255H15 MAINTENANCE & REHABILITATION OF STRUCTURES

L T P C

3 1 0 4

### AIM and OBJECTIVES:

Introduction to the governmental quality assurance regulations for public works. Application of quality control concepts, statistical experimental design principles to the construction process to minimize project costs and improve quality.

### UNIT I INTRODUCTION 12

Definitions: Maintenance, repair and rehabilitation, Facets of and importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration-testing techniques.

### UNIT II METEOROLOGICAL EFFECTS 12

Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion protection

### UNIT III QUALITY CONTROL 12

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking.

### UNIT IV MATERIALS AND TECHNIQUES FOR REPAIR 12

Special concretes and mortar, concrete chemicals, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fiber reinforced concrete. Rust eliminators and polymers coating for rebar during repair foamed concrete, mortar and dry pack, vacuum concrete, Guniting and Shot Crete Epoxy injection, Mortar repair for cracks, shoring and underpinning.

### UNIT V DEMOLITION 12

Engineering demolition of structures – case studies

**TOTAL: 60 PERIODS**

5. Lakshmi pathy, Metal Lecture notes of Workshop on "Repairs & Rehabilitation of Structures ", 29 - 30th October 1999.

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using AutoCAD.

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop civil engineering drawing using Auto CAD.

**UNIT I**

Introduction AutoCad – Definition of various commands used in AutoCAD

**UNIT II**

Simple Exercises using AutoCad commands – Produce drawing using AutoCad and output of all the drawings are taken print out in A4 sheet using Inkjet / Laser Printer or Plotter and produced in file form as regard.

**UNIT III**

Section of semicircular Arch, Section of a lean – to – roof and section of spread footing foundation

**UNIT IV**

Plan, section and elevation of a prayer hall, school building and residential building (R.C.C. Roof)

**UNIT V**

Preparation of approval drawing to be submitted to corporation or municipality showing required details in one such as site plan, ground floor plan, section and elevation, key plan, septic tank plan, rain water harvesting pit with all details and title block detail.

**TOTAL: 45 PERIODS**

**REFERENCES**

3. Shah, Kale and Patki, Building Drawing, Tata McGraw-Hill.

## SEMESTER II

17255H21

MANAGEMENT INFORMATION SYSTEM

L T P C  
3 1 0 4

Objective:

- To bring about an exposure to information systems in a formal manner
- To study the development of information systems
- To study the means of applying information systems models to project management
- To introduce system audit and to study its features

**UNIT-I** 12  
System Development: Information Systems - Establishing the Framework - Business Models -Evolution of Information Systems. Modern Information System - System Development Life Cycle - Structured Methodologies - Designing Computer Based Methods, Procedures, Control -Designing Structured Programs.

**UNIT-II** 12  
Information Systems: Integrated Construction Management Information System – Project Management Information System - Functional Areas, Finance, Marketing, Production, Personnel .

**UNIT-III** 12  
Levels, DSS, EIS, ES - Comparison, Concepts and Knowledge Representation – Managing International Information System.

**UNIT-IV** 12  
Implementation and Control: Control - Testing Security - Coding Techniques - Defection of Error -Validating - Cost Engineering qualities - Design, Production, Service, Software specification.

**UNIT-V** 12  
Software Metrics, Software quality assurance - Systems Methodology - Objectives - Time and Logic, Knowledge and Human Dimension - Software life cycle models - Verification and Validation.

**TOTAL: 60 PERIODS**

### Books for the References:

1. Laudon, Kenneth C and Laudon, Jane Price. “Management Information Systems: Organisation and Technology”, Prentice Hall of India, New Delhi, 1996.
2. Elam, Jo.yce J. “Case Series for Management Information Systems, Simon and Schuster”, Custom Publishing, 1996.
3. Sprague, Ralph H and Watson, Huge J. “Decision Support for Managers”, Prentice Hall, New Jersey, 1996

**AIM and OBJECTIVES:**

The finite element method is the most powerful structural analysis tool for the Civil Engineers. The basic formulation and programming technique are introduced. According to the same procedures, the different elements such as truss, beam, plate and shell are easily formulated.

**UNIT I INTRODUCTION: 12**  
Differential equilibrium equations - strain displacement relation - linear constitutive relation - special cases. Principle of stationary potential energy - application to finite element methods. Some numerical techniques in finite element Analysis

**UNIT II ANALYSIS OF PLATE BENDING; 12**  
Two Dimensional problems - Plane Stress, Plain Strain and Axisymmetric Problems - Triangular and beam element -. Analysis of plate bending - Basic theory of plate bending-displacement functions - plate bending Elements.

**UNIT III MODELS AND FUNCTION OF ELEMENT: 12**  
Displacement models - convergence requirements. Natural coordinate systems – Shape function. Interpolation function. Linear and quadratic elements - Lagrange & Serendipity elements.

**UNIT IV ANALYSIS OF NONLINEAR AND VIBRATION PROBLEMS: 12**  
Strain displacement matrix - Material and Geometric Nonlinearity - Methods of Treatment -Dynamic condensation-Eigen value extraction

**UNIT V ASSEMBLAGE OF ELEMENT: 12**  
Assemblage of elements – Direct stiffness method. Special characteristics of stiffness matrix - Boundary condition & reaction - Gauss elimination –Basic steps in Finite element analysis.

**TOTAL: 60 PERIODS**

**REFERENCE**

17255H23

ADVANCED CONCRETE STRUCTURAL DESIGN

L T P C

3 1 0 4

**AIM and OBJECTIVES:**

To impart knowledge about the performance of concrete as structural material and the behavior, elastic and inelastic, of reinforced – concrete members and structures, designing structures safely, economically and efficiently.

**UNIT I INTRODUCTION**

**12**

The nature of concrete- Behaviour of concrete - stress-strain relationships of concrete, - stress-strain relationships of reinforcing steel- Failure criteria for concrete (crack width calculation is must).

**UNIT II REVIEW OF OVERALL DESIGN**

**12**

Limit state analysis and design of beams in flexure - Behavior of reinforced concrete members in bending - Plastic hinge – Rotation capacity – Factors affecting rotation capacity of a section – Plastic moment – Moment curvature relationship – Redistribution of moments.

**UNIT III STRUCTURAL DESIGN**

**12**

Limit state design of deep beams. Design of Flat Slabs using BIS 456. Design of slender columns subjected to combined bending moment and axial force using SP 16 .

**UNIT IV SHEAR WALL**

**12**

Analysis and design of shear wall framed buildings.

**UNIT V DUCTILITY**

**12**

Detailing for ductility - fire resistance of buildings - field control of concrete

**TOTAL: 60 PERIODS**

**REFERENCE**

- 1.Krishnaraju, (1998), Advanced Concrete Design, CBS Publishers and distributors, Delhi.
2. Varghese P.C, Design of Reinforced Concrete Structures, Prentice hall of India.
3. Krishnamurthy, K.T, Gharpure S.C. and A.B. Kulkarni – Limit design of reinforced concrete structures, Khanna Publishers, 1985.
- 4.Unnikrishna Pillai -TMH Books
- 5.Jain and Jaikrishna, (2002), Plain and reinforced concrete, Vol. II, Nemi Chand Bros., Roorkee.
- 6.Durham, (2003), Advanced Concrete Design, Oxford Publishing private Limited.

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

**OUTCOME:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

**UNIT I****9**

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

**UNIT II****9**

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

**UNIT III****9**

Data Analysis using Excel- Tabulation of Data in excel ( Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

**UNIT IV****9**

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software.

## **UNIT V**

**9**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references.

**TOTAL: 45 PERIODS**

### **References:**

6. Archibald Fripp, Jon Fripp, Michael Fripp; Just-in-Time Math for Engineers, Elsevier Science & Technology Books, 2003.

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using FEA - ANSYS

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop Civil Engineering drawing using FEA – ANSYS

**LIST OF EXPERIMENTS**

1. Calculate the displacement and the member forces / reaction for the given simple truss with concentrated loads.
2. Calculate the displacement and the member forces / reaction for the given Stepped shaft subjected to temperature change.
3. Calculate the displacement and the member forces / reaction for the given beam with concentrated and distributed loads.
4. Find the natural frequencies and mode shapes of a given cantilever beam.
5. Find the maximum normal stress and stress concentration factor for the given plate with hole.

### SEMESTER III

17255H31

ADVANCED STEEL STRUCTURES

L T P C

3 1 0 4

#### AIM and OBJECTIVES:

Introduction to steel structure, tensioned member, compressed member, beam, design of beam and column, bolt jointing, welding jointing and other joint design.

#### **UNIT I COMPRESSION MEMBERS 12**

Design of compression members – Axially – Uni axial and biaxial bending.

#### **UNIT II PLASTIC ANALYSIS 12**

Plastic Analysis of Structures – Introduction - Shape factors – Mechanisms - Plastic hinge - Analysis of beams and portal frames - Design of continuous beams.

#### **UNIT III LIGHT WEIGHT STEEL STRUCTURES 12**

Design of Light Gauge Steel Structures - Types of cross sections - Local buckling and lateral buckling - Design of compression and tension members – Beams - Deflection of beams.

#### **UNIT IV LIMIT STATE DESIGN 12**

Limit state design of Steel Structures – Plastic section – Section classification – Partial safety factor.

#### **UNIT V DESIGN OF JOINTS AND CONNECTIONS 12**

Design of joints and connections – Riveted – Bolted – Welded – Semi rigid connection.

**TOTAL: 60 PERIODS**

#### REFERENCE

# LIST OF ELECTIVES

## SEMESTER I

### HARD CORE ELECTIVE- I

<b>17255E16A</b>	<b>PRESTRESSED CONCRETE DESIGN</b>	<b>L T P C</b>
		<b>3 1 0 4</b>

#### AIM and OBJECTIVES:

This course introduces students to the fundamental principles of pre-stressed concrete behavior and design, So that they can act effectively to optimize existing forms of construction and apply fundamental concepts with confidence in unusual and challenging situations.

#### UNIT I INTRODUCTION 12

Difference between reinforced and pre-stressed concrete – Principles of pre-stressing – Methods and systems of pre-stressing – Principles of electro thermal pre-stressing and chemical pre-stressing – Classification of pre-stressed concrete structures – Materials – High strength concrete and High strength steel – Stress-strain diagram - Losses in pre-stress.

#### UNIT II LIMIT STATE DESIGN 12

Design of prismatic pre-stressed concrete members for bending at working loads –Check for ultimate load stage (Limit State Design).

#### UNIT III BEHAVIOR OF BEAMS 12

Simple cable profiles – Calculation of deflections – Design of beams for shear and torsion at working and ultimate loads. Design of Anchorage zone by Guyon's method – Concept of Magnel's method – IS 1343 recommendations.

#### UNIT IV COMPOSITE BEAMS 12

Composite pre-stressed concrete beams – Design procedure – Calculation of stresses at important stages both for propped and un propped constructions – Shrinkage stresses.

#### UNIT V BEHAVIOR OF CONTINUOUS BEAMS 12

Statically indeterminate structures – Concept of concordant cable and linear transformations – Sketching of pressure lines for continuous beams – Circular pre stressing.

**TOTAL: 60 PERIODS**

4. Rajagopal.N, (2005), Prestressed Concrete, Second Edition, Narosa Publishing House.
5. Dayarathnam P, (2004), Prestressed Concrete Structures, S.Chand Publishers.

**AIM and OBJECTIVES:**

This course covers the design criteria and loading pattern on high rise structures, behavior of structural systems and stability, design and analysis of tall buildings.

**UNIT I DESIGN CRITERIA 12**

Design philosophy, Loading, Sequential loading and materials - high performance Concrete - Fiber reinforced Concrete - Light weight Concrete - Design mixes.

**UNIT II LOADING AND MOVEMENT 12**

Gravity Loading: Dead and live load, methods of live load reduction, Impact, gravity loading, construction load. Wind loading: Static and dynamic approach, Analytical and wind tunnel experimental method. Earthquake loading: Equivalent lateral force, modal analysis, combinations of loading working stress design, Limit state design, plastic design.

**UNIT III BEHAVIOUR OF VARIOUS STRUCTURAL SYSTEMS 12**

Factors affecting growth, Height and Structural form. High rise behavior, Rigid frames, braced frames, In filled frames, shear walls, coupled shear walls, wall-frames, tubular, cores, outrigger - braced and hybrid mega system.

**UNIT IV ANALYSIS AND DESIGN 12**

Modeling for approximate analysis, Accurate analysis and reduction techniques, Analysis of building as total structural system considering overall integrity and major subsystem interaction, Analysis for member forces, drift and twist, computerized general three dimensional analysis. Structural elements: Sectional shapes, properties and resisting capacity, design, deflection, cracking, pre stressing, shear flow. Design for differential movement, creep and shrinkage effects, temperature effects and fire resistance

**UNIT V STABILITY OF TALL BUILDINGS 12**

Overall buckling analysis of frames, wall-frames, Approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first-order and P-Delta analysis, Translational, Torsional instability, out of plum effects, stiffness of member in stability, effect of foundation rotation

**TOTAL: 60 PERIODS**

17255E16C

**COMPUTER AIDED STRUCTURAL DESIGN**

**L T P C**

**3 1 0 4**

**AIM:**

To learn design and preparation of structural drawing of concrete and steel structures (STADD-PRO).

**OBJECTIVES:**

At the end of the course the students acquires hands on experiences in design and Preparation of structural drawing for concrete and steel structures normally encountered in Civil Engineering practice.

**UNIT I COMPUTER GRAPHICS 12**

Graphic primitives - Transformations - Basics of 2-D drafting - Modeling of curves and surfaces - Solid modeling Graphic standards - Drafting software packages and usage.

**UNIT II STRUCTURAL ANALYSIS 12**

Computer methods of structural analysis - Finite Element programming - Analysis through application packages.

**UNIT III STRUCTURAL DESIGN 12**

Computer aided design of steel and RC Structural elements - Detailed drawing - Bill of materials.

**UNIT IV OPTIMIZATION 12**

Linear programming - Simplex algorithm - Post-optimality analysis - Project scheduling - CPM and PERT applications Genetic algorithm and applications.

**UNIT V ARTIFICIAL INTELLIGENCE 12**

Introduction - Heuristic search - knowledge based expert systems - Architecture and applications of KBES - Expert system shells - Principles of neural network.

## SEMESTER II

### HARD CORE ELECTIVES-II

17255E24A                      FAILURE ANALYSIS OF STRUCTURES                      L T P C  
3 1 0 4

#### AIM and OBJECTIVES:

This course introduces about the failure of structures, buckling failure of columns, deterioration of wood and miscellaneous failures.

#### UNIT I INTRODUCTION 12

Causes of failure – Types of failure – durability of materials – various durability tests on materials.

#### UNIT II STRUCTURAL FAILURE 12

Structural failure –material and load effects – environment effect - Non-structural and structural repairs

#### UNIT III BUCKLING FAILURE ON COLUMNS 12

Buckling of columns with various end conditions - Elastically supported columns- non prismatic columns - Built-up columns - Inelastic buckling, Experimental study of column behavior, Empirical column formulae.

#### UNIT IV DETERIORATION OF WOOD 12

Defects on wood – improper seasoning and defects – improving of surface of wood.

#### UNIT V MISCELLANEOUS FAILURES 12

Pin-jointed And rigid jointed frames – concrete walls - arches – reinforced concrete beams and frames – repair of concrete bridge and water retaining structures.

**TOTAL: 60 PERIODS**

17255E24B

**ADVANCED CONCRETE TECHNOLOGY**

**L T P C**

**3 1 0 4**

**AIM and OBJECTIVES:**

To learn the Performance of concrete as structural material and advanced technologies used in construction by using concrete.

**UNIT I INTRODUCTION TO CONCRETE 12**

Materials - Concrete materials - Reinforcements and admixtures.

**UNIT II MIX DESIGN 12**

Mix Design – Specifications - Design of concrete mixes by IS code method – ACI method - Road Note No:4 method – High strength concrete.

**UNIT III BEHAVIOUR OF CONCRETE 12**

Behaviour of Concrete - Modern trends in concrete manufacture and placement techniques - Theological behaviour of fresh concrete and hardened concrete - Resistance to static and dynamic loads.

**UNIT IV TESTING 12**

Testing of Concrete - Non-destructive testing and quality control – Durability - Corrosion protection and fire resistant.

**UNIT V SPECIAL CONCRETE 12**

Special Concrete - Pre-cast concrete - Light weight concrete - Under water concrete -Pumped concrete - Polymer concrete - Composites and fibre reinforced concrete.

**TOTAL: 60 PERIODS**

**AIM and OBJECTIVES:**

This course deals about the requirements, planning and construction techniques of an industry. And also deals with modes of communication and transport to be used in an industrial structures.

**UNIT I REQUIREMENTS OF AN INDUSTRY 12**

General - Specific requirements for industries like textile, sugar, cement, chemical, etc - Site layout and external facilities.

**UNIT II PLANNING 12**

Planning of Building Work – Standards - Structural materials including plastics – Polymers - Fibre glass - Pressed card boards, etc - Multi-storey buildings - Steel skeletal structures - Reinforced concrete frames – Workshops - Ware houses - Single storey buildings - Sheds in steel and reinforced concrete - North-lights - Single span spherical and other special constructions - Cooling towers and chimneys - Bunkers and silos' prefabrication - Construction.

**UNIT III CONSTRUCTION TECHNIQUES 12**

Construction Techniques - Expansion joints - Machine foundations - Other foundations - Water proofing - Roofs and roofing - Roof drainage - Floors and flooring joists - Curtain walling - Outer wall facing - Sound and shock proof mountings - Use of modern hoisting and other construction equipments.

**UNIT IV COMMUNICATION AND TRANSPORT 12**

Circulation - Communication and Transport - Fixed points ( central cores) – Staircases -Grid floor sections - Lifts refuse disposals - Utilization of waste materials – Cranes - Continuous conveyors - Mobile cranes – Transporters – Doors - Sliding gates.

**UNIT V FUNCTIONAL REQUIREMENTS 12**

Functional Requirements – Lighting: Natural lighting - Protection from the sun - skylights - window cleaning installations -Services: Layout – wiring – fixtures - cable and pipe bridges - electrical installations - lighting substation - Effluent. Ventilation and fire protection: Ventilation - Air-conditioning - Fire escapes and chutes - Fire alarms - Extinguishers and hydrants.

**TOTAL: 60 PERIODS**

2. Glover, (1997), Structural Pre cast Concrete, Tata McGraw Hill.

17255E25C

ELEMENTS OF EARTHQUAKE ENGINEERING

L T P C

3 1 0 4

**AIM and OBJECTIVES:**

This course covers the theory and applications related to Earthquake Engineering. The broad subjects discussed in this course include earthquake response of linearly elastic and inelastic buildings, structural dynamics in building codes.

**UNIT I ELEMENTS AND FEATURES**

**12**

Elements of Seismology - Definitions of magnitude – Intensity - Epicentre etc - General features of tectonics of seismic regions - Seismographs.

**UNIT II THEORY OF VIBRATIONS**

**12**

Theory of Vibrations - Free vibrations of single degree - Two degree and multiple degree freedom systems - Computations of dynamic response to time dependent forces - Vibrations isolation – Vibration absorbers - Brief introduction to instruments - Accelerograms.

**UNIT III PRINCIPLES OF EARTHQUAKE DESIGN**

**12**

Principles of earthquake resistant design - Response spectrum theory - Application of response spectrum theory to seismic design of structures. Capacity - Design Principles - Design criteria for strength - Stiffness and ductility.

**UNIT IV EARTHQUAKE ANALYSIS**

**12**

Earthquake Analysis and Design - Characteristics of earthquake – Earthquake response of structures – Concept of earthquake resistance design – Code provisions for design of building – IS 1893 and IS 4326 – Energy absorption capacity.

**UNIT V COMPUTER APPLICATION**

**12**

Seismic analysis and design of a multi storied building using Computer.

**TOTAL: 60 PERIODS**

**REFERENCE**

- 1.Pauley & Priestly, (1992), Seismic design of reinforced concrete and masonry buildings, John Wiley & Sons.
- 2.Stratta.J.L, (1998), Manual of Seismic Design, Prentice-Hall India Pvt Ltd.

**SEMESTER III**  
**HARD CORE ELECTIVE IV**  
**17255E32A      EXPERIMENTAL STRESS ANALYSIS**

**L T P C**  
**3 1 0 4**

**AIM and OBJECTIVES:**

At the end of the semester students can learn about the strain gauges, strain rosetters, model analysis, calibration of photo elastic materials.

**UNIT I STRAIN GAUGES** **12**  
Strain Gauges - Mechanical and optical strain gauges – Description and operation – Electrical resistance- Inductance and capacitance gauges – Detailed treatment on resistant gauges – Measurement of static and dynamic strains – Strain rosettes – Effect of transverse strains – Use of strain recorders and load cells.

**UNIT II MODEL ANALYSIS** **12**  
Model Analysis - Structural similitude – Use of models – Structural and dimensional analysis – Buckingham Pi Theorem – Muller Breslau's principle for indirect model analysis – Use of Begg's and Eney's deformeters – Moment indicators – Design of models for direct and indirect analysis.

**UNIT III CALIBRATION** **12**  
Two dimensional photo elasticity - Stress optic law – Introduction to polariscope – Plane and circular polariscope – Compensators and model materials – Material and model fringe value – Calibration of photo elastic materials – Isochromatic and isoclinic fringes – Time edge effects.

**UNIT IV PHOTO ELASTICITY** **12**  
Three dimensional photo elasticity - Introduction – Stress freezing techniques – Stress separation techniques – Scattered light photo elasticity – Reflection polariscope.

**UNIT V MISCELLANEOUS METHODS** **12**  
Brittle coating method – Birefringence techniques – Moire fringe method – Non-destructive testing – Ultrasonic pulse velocity technique – Rebound hammer method – X-ray method – Gamma-ray method.

**TOTAL: 60 PERIODS**

17255E32B

**SOIL STRUCTURE INTERACTION**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

This course deals with the soil- foundation interaction, analysis of beams and finite plates, elastic analysis of pile, load deflection for laterally loaded pile.

**UNIT I SOIL-FOUNDATION INTERACTION 12**

Introduction to soil-Foundation interaction problems, soil behaviour, Foundation behavior, Interface behavior, Scope of soil foundation interaction analysis, soil response models, Winkler, Elastic continuum, two parameter elastic models, Elastic plastic behavior, Time dependent behavior

**UNIT II BEAM ON ELASTIC FOUNDATION- SOIL MODELS 12**

Infinite beam, two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness

**UNIT III PLATE ON ELASTIC MEDIUM 12**

Infinite plate, Winkler, Two parameters, isotropic elastic medium, Thin and thick plates, Analysis of finite plates, rectangular and circular plates, Numerical analysis of finite plates, simple solutions

**UNIT IV ELASTIC ANALYSIS OF PILE 12**

Elastic analysis of single pile, Theoretical solutions for settlement and load distributions, analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap.

**UNIT V LATERALLY LOADED PILE 12**

Load deflection prediction for laterally loaded piles, Sub grade reaction and elastic analysis, Interaction analysis, Pile raft system, Solutions through influence charts

**TOTAL: 60 PERIODS**

**References:**

4. Structure Soil Interaction - State of Art Report,Institution of Structural Engineers,1978.
5. ACI 336, Suggested Analysis and Design Procedures for combined footings and Mats, American Concrete Institute, Delhi, 1988

**AIMS & OBJECTIVES:**

This course deals about seismology, seismic design concepts, codal provisions and detailing of frames.

**UNIT I INTRODUCTION** 12  
Elements of Engineering Seismology - Theory of Vibration - Response Spectrum.

**UNIT II HISTORICAL** 12  
Indian Seismicity - Earthquake History - Behaviour of Structures in the past Earthquakes.

**UNIT III DESIGN CONCEPTS** 12  
Seismic Design Concepts - Cyclic load behaviour of RC, Steel and Prestressed Concrete elements – Design spectrum - Principles of capacity design.

**UNIT IV CODAL PROVISIONS** 12  
Provisions of Seismic Code (IS 1893) - Building systems frames, shear walls, Braced Frames, Combinations - Torsion.

**UNIT V DESIGN AND DETAILING** 12  
Performance of Regular Buildings 3 D Computer Analysis of Building Systems (Theory Only) - Design and Detailing of frames - Shear walls and Frame walls.

**TOTAL: 60 PERIODS**

**References:**

17255E33A

**HARD CORE ELECTIVE V  
PREFABRICATED STRUCTURES**

**L T P C  
3 1 0 4**

**AIMS & OBJECTIVES:**

This course explains about design principles of Prefabricated Structures, components, application of prefabricated structures. Students can learn the usage of prefabricated structures in wall panels, industrial buildings and shell roofs.

**UNIT I DESIGN PRINCIPLES 12**

General Civil Engineering requirements- IS Code specifications. Modular co-ordination, standardization- Disuniting of Prefabricates, production, transportation, and erection-Safety factors, material properties, Deflection control.

**UNIT II REINFORCED CONCRETE 12**

Prefabricated structures - Long wall and cross-wall large panel buildings- One way and two way prefabricated slabs- Framed buildings with partial and curtain walls- Connections – Beam to column and column to column

**UNIT III FLOORS, STAIRS AND ROOFS 12**

Types of floor slabs, analysis and design example of cored and panel - Staircase slab design, types of roof slabs and insulation requirements- Description of joints, their behavior and reinforcement requirements- Ultimate strength calculations in shear and flexure

**UNIT IV WALL 12**

Types of wall panels, Blocks and large panels, Curtain- Partition and load bearing walls, load transfer from floor to wall panels- Design Curves, types of wall joints, their Behaviour and design -Leak prevention, joint sealants, sandwich wall panels

**UNIT V INDUSTRIAL BUILDINGS AND SHELL ROOFS 12**

Components of single-storey industrial sheds with crane gantry systems- R.C. Roof Trusses, Roof Panels, corbels and columns- Cylindrical, Folded plate and hypar-prefabricated shells- Erection and jointing, joint design, hand book based design

**TOTAL: 60 PERIODS**

17255E33B

**DISASTER RESISTANT STRUCTURES**

**L T P C**

**3 1 0 4**

**AIMS & OBJECTIVES:**

This course deals the philosophy of the design of disaster resistant structures such as dams , bridges and emphasize about the rehabilitation , retrofitting and damage assessment of structures.

**UNIT I BEHAVIOUR OF LIFE-LINE STRUCTURES 12**

Philosophy for design to resist earthquake, cyclone and flood - National and International codes of practice - By-Law of urban and semi-urban areas - Traditional and modern structures.

**UNIT II COMMUNITY STRUCTURES 12**

Response of dams, bridges, buildings - Strengthening measures - Safety analysis and rating – Reliability assessment.

**UNIT III REHABILITATION AND RETROFITTING 12**

Testing and evaluation - Classification of structures for safety point of view - methods of strengthening for different disasters - qualification test.

**UNIT IV DETAILING OF STRUCTURES AND COMPONENTS 12**

Use of modern materials and their impact on disaster reduction - Use of modern analysis, design and construction techniques optimization for performance.

**UNIT V DAMAGE ASSESSMENT OF STRUCTURES 12**

Damage surveys - Maintenance and modifications to improve hazard resistance - Different types of foundation and its impact on safety - Ground improvement techniques.

**TOTAL: 60 PERIODS**

**TEXT BOOKS:**

1. V.Moskvin , et.al Concrete and Reinforced Concrete - Deterioration and Protection - Mir Publishers - Moscow 1980.

17255E33C

NONLINEAR ANALYSIS OF STRUCTURES

L T P C

3 1 0 4

**AIMS & OBJECTIVES:**

This course deals about the non-linearities, non-linear equations and non linear static analysis of plates, columns, trusses and frames.

**UNIT I TYPES OF NONLINEARITIES 12**

Geometric Nonlinearity, Material Nonlinearity, Nonlinear Governing Equation for Beams: Moment-curvature Nonlinearity, Geometric Nonlinearity Due to Stretching, Material Nonlinearity, Geometrically Nonlinear Beam Problems - Moment-Curvature Nonlinearity- Cantilever Beam, Centrally Loaded beam with two supports, Cantilever Beam subjected to TipLoad

**UNIT II NONLINEAR EQUATIONS OF PLATES 12**

Nonlinear Static Analysis of Plates - Geometric and Material Nonlinearities, Governing Stress Function Approach, Displacement Equations Approach.

**UNIT III NONLINEAR STATIC ANALYSIS OF PLATES 12**

Boundary Conditions and method of solution, Large Deflection of Rectangular Plates.

**UNIT IV NONLINEAR ANALYSIS OF COLUMNS 12**

Post buckling of cantilever column, large deflection of column with both ends hinged

**UNIT V NONLINEAR ANALYSIS OF TRUSSES AND FRAMES 12**

Nonlinear Analysis of Trusses and Nonlinear Elastic Analysis of Frames - Derivation of non linear stiffness matrix, Matrix displacement method for nonlinear analysis of structures, nonlinear analysis of plane frames.

**TOTAL: 60 PERIODS**

**REFERENCE:**

1. M.Sathyamoorthy, 'Nonlinear Analysis of Structures', CRC Press, New York

## HARD CORE ELECTIVE VI

17255E34A

OFFSHORE STRUCTURES

L T P C

3 1 0 4

### AIMS & OBJECTIVES:

This course includes the details of wave theories, forces in offshore structures and design and analysis of offshore structures .

### UNIT I WAVE THEORIES 12

Wave generation process, small and finite amplitude wave theories.

### UNIT II FORCES OF OFFSHORE STRUCTURES 12

Wind forces, wave forces on vertical, inclined cylinders, structures - current forces and use of Morison equation.

### UNIT III OFFSHORE SOIL AND STRUCTURE MODELING 12

Different types of offshore structures, foundation modeling, and structural modeling.

### UNIT IV ANALYSIS OF OFFSHORE STRUCTURES 12

Static method of analysis, foundation analysis and dynamics of offshore structures.

### UNIT V DESIGN OF OFFSHORE STRUCTURES 12

Design of platforms, helipads, Jacket tower and mooring cables and pipe lines.

**TOTAL: 60 PERIODS**

17255E34B

**STABILITY OF STRUCTURES**

**L T P C**

**3 1 0 4**

**AIMS & OBJECTIVES:**

This course deals with the concept and characteristics of stability problems and behavior of torsional buckling and lateral buckling in beams and columns.

**UNIT I INTRODUCTION 12**

Concept of stability approaches to stability analysis, characteristics of stability problems.

**UNIT II COLUMNS 12**

Buckling of columns with various end conditions, imperfect columns, elastically supported columns, non prismatic columns, Built-up columns, Inelastic buckling, Experimental study of column behavior, Empirical column formulae. Buckling of bars on elastic foundations, large deflection of buckled bars.

**UNIT III BEAMS – COLUMNS 12**

Beam-column theory, Application to buckling of frames.

**UNIT IV TORSIONAL BUCKLING 12**

Combined torsional and flexural buckling.

**UNIT V LATERAL BUCKLING 12**

Lateral buckling of beams, pure bending of simply supported beam and cantilever, numerical solutions.

**TOTAL: 60 PERIODS**

**REFERENCES BOOKS:**

**AIMS & OBJECTIVES:**

This course introduces the properties of materials, strength and elastic behavior of composite lamina and design of composite structures.

**UNIT I INTRODUCTION TO MODERN MATERIALS 12**

Fiber-Reinforced Polymer Composite (FRPC) Materials: Definition, Historical development, applications. Fibers and Matrix, types and their properties. Manufacturing process and methods for composites. Types and classification of composite materials, properties, advantages over conventional materials. Piezoelectric Materials: History, crystal structure, applications. Shape Memory Alloys (SMA), Functionally Graded Materials (FGM): definition and applications.

**UNIT II ENGINEERING PROPERTIES OF MODERN MATERIALS 12**

FRPC Composite Lamina: Micromechanics approach, methods. Longitudinal and transverse elastic properties of composite lamina, in-plane shear modulus for continuous fibers. Stress-strain relationship, compliance and stiffness matrices for generally anisotropic, specially orthotropic material, transversely isotropic material, orthotropic, isotropic materials, Plane stress condition for thin lamina, transformation of stress and elastic properties. Three dimensional transformations. Piezoelectric Materials: Piezoelectric coefficients, electric displacements, piezoelectric strain matrix for Quartz, Lead Zirconate-titanate, Polyvinylidene fluoride. Stiffness matrix for Functionally Graded Materials.

**UNIT III STRENGTH OF COMPOSITE LAMINA 12**

Introduction. Failure theories, Maximum stress theory, Maximum strain theory, Energy based interaction theory (Tsai-Hill), Interactive tensor polynomial theory (Tsai-Wu), Failure mode based theory (Hasin-Rotem). Computation of lamina strength by Tsai-Wu theory for plane stress condition. Comparison of various failure theories.

**UNIT IV ELASTIC BEHAVIOUR OF COMPOSITE LAMINATES 12**

Basic assumptions, Laminate configurations, Strain displacement relationship, Stress-strain relationship, Force and moment resultants, Laminate compliances and stiffness matrices, Transformation of matrices. Load deformation relationship for symmetric laminates, symmetric cross-ply, symmetric angle-ply, balanced, antisymmetric cross-ply and angle ply, orthotropic, quasi-isotropic laminates.

**UNIT V HYGROTHERMAL EXPANSION AND DESIGN OF COMPOSITE STRUCTURE 12**

Coefficients of thermal and moisture expansion of various unidirectional lamina, load deformation relationship, residual stresses for cross ply symmetric laminates. Design methodology, design of pressure vessel for various laminate configurations.
