Brute Force - Bubble Sort - Sequential Search and Brute-force string matching - Divide and conquer - Merge sort - Quick Sort - Binary Search - Binary tree- Decrease and Conquer - Insertion Sort - Depth first Search and Breadth First Search.

## UNIT IV ALGORITHMIC TECHNIQUES 10 + 3

Transform and conquer - Presorting - Balanced Search trees - AVL Trees - Heaps and Heap sort - Dynamic Programming - Warshall's and Floyd's Algorithm - Optimal Binary Search trees - Greedy Techniques - Prim's Algorithm - Kruskal's Algorithm - Dijkstra's Algorithm - Huffman trees.

## UNIT V ALGORITHM DESIGN METHODS 9 + 3

Backtracking - n-Queen's Problem - Hamiltonian Circuit problem - Subset-Sum problem - Branch and bound - Assignment problem - Knapsack problem - Traveling salesman problem.

**TOTAL : 60 Hrs.**

# 19150H25P- SOFTWARE ENGINEERING

## AIM

To make the students understand the methodologies in preparing a software.

## **OBJECTIVES:**

- To know the generic models to structure the software development process.
- To understand different notion of complexity at both the module and system level.
- To be aware of some widely known design methods.
- To understand the role and contents of testing activities in different life cycle phases.

## UNIT I SOFTWARE PROCESS 9

Introduction -S/W Engineering Paradigm - life cycle models (water fall, incremental, spiral, WINWIN spiral, evolutionary, prototyping, object oriented)-- system engineering - computer based system - verification - validation - life cycle process - development process -system engineering hierarchy.

## UNIT II SOFTWARE REQUIREMENTS 9

Functional and non-functional - user - system -requirement engineering process - feasibility studies - requirements - elicitation - validation and management - software prototyping - prototyping in the software process - rapid prototyping techniques - user interface prototyping S/W document. Analysis and modeling - data, functional and behavioral models - structured analysis and data dictionary.

## UNIT III DESIGN CONCEPTS AND PRINCIPLES 9

Design process and concepts - modular design - design heuristic - design model and document. Architectural design - software architecture - data design - architectural design - transform and transaction mapping - user interface design - user interface design principles. Real time systems Real time software design - system design - real time executives - data acquisition system monitoring and control system. SCM - Need for SCM - Version control - Introduction to SCM process - Software configuration items.

## UNIT IV TESTING 9

Taxonomy of software testing - levels - test activities - types of s/w test - black box testing - testing boundary conditions - structural testing - test coverage criteria based on data flow mechanisms - regression testing - testing in the large. S/W testing strategies - strategic approach and issues unit testing - integration testing - validation testing - system testing and debugging.

## UNIT V SOFTWARE PROJECT MANAGEMENT 9

Measures and measurements - S/W complexity and science measure - size measure - data and logic structure measure - information flow measure. Software cost estimation - function point models - COCOMO model- Delphi method.- Defining a Task Network - Scheduling - Earned Value Analysis - Error Tracking Software changes - program evolution dynamics - software maintenance - Architectural evolution. Taxonomy of CASE tools.

**TOTAL : 45hrs**

## **TEXT BOOK:**

1. Roger S.Pressman, Software engineering- A practitioner's Approach, McGraw-Hill International Edition, 5<sup>th</sup> edition, 2001.

4. Ali Behforooz and Frederick J Hudson, "Software Engineering Fundamentals", Oxford University Press, New Delhi, 1996.

# 19148S31P- DISCRETE MATHEMATICS

## **AIM:**

This course will develop the intuition for discrete mathematics reasoning involving numbers and sets.

## **OBJECTIVES:**

On completing the course, students should be able to

- Write a clear statement of a problem as a theorem in mathematical notation;
- Prove and disprove assertions using a variety of techniques.
- Understand the logic of Propositional and predicate formulas and their relationship to informal reasoning, truth tables, validity.
- Understand the Proving of propositional and predicate formulas in a structured way.
- Know the basic set theory. Relations, graphs, and orders

## **UNIT I                      PROPOSITIONAL CALCULUS                      10 + 3hrs**

Propositions - Logical connectives - Compound propositions - Conditional and bi-conditional propositions - Truth tables - Tautologies and contradictions - Contrapositive - Logical equivalences and implications - DeMorgan's Laws - Normal forms - Principal conjunctive and disjunctive normal forms - Rules of inference - Arguments - Validity of arguments.

## **UNIT II                      PREDICATE CALCULUS                      9 + 3hrs**

Predicates - Statement function - Variables - Free and bound variables - Quantifiers - Universe of discourse - Logical equivalences and implications for quantified statements - Theory of inference - The rules of universal specification and generalization - Validity of arguments.

## **UNIT III                      SET THEORY                      10 + 3hrs**

Basic concepts - Notations - Subset - Algebra of sets - The power set - Ordered pairs and Cartesian product - Relations on sets - Types of relations and their properties - Relational matrix and the graph of a relation - Partitions - Equivalence relations - Partial ordering - Poset - Hasse diagram - Lattices and their properties - Sublattices - Boolean algebra - Homomorphism.

## **UNIT IV                      FUNCTIONS                      7 + 3hrs**

Definitions of functions - Classification of functions - Type of functions - Examples - Composition of functions - Inverse functions - Binary and n-ary operations - Characteristic function of a set - Hashing functions - Recursive functions - Permutation functions.

## **UNIT V                      GROUPS                      9 + 3hrs**

Algebraic systems - Definitions - Examples - Properties - Semigroups - Monoids - Homomorphism - Subsemigroups and Submonoids - Cosets and Lagrange's theorem - Codes and group codes - Basic notions of error correction - Error recovery in group codes.

**CSE/Sem III**

## **19150H32P- OPERATING SYSTEM**

### **AIM:**

To understand the functions of an operating system.

### **OBJECTIVES:**

- To have an overview of different types of operating systems.
- To know the components of an operating system.
- To have a knowledge of process management and storage management.
- To know the concepts of I/O and file systems.
- To know the concepts of Distributed Operating System

### **UNIT I**

9

Introduction--Mainframe systems - Desktop Systems - Multiprocessor Systems - Distributed Systems - Clustered Systems - Real Time Systems - Handheld Systems - Hardware Protection-- System Components - Operating System Services - System Calls - System Programs--Process Concept - Process Scheduling - Operations on Processes - Cooperating Processes - Inter-process Communication.

## **UNIT II**

**9**

Threads - Overview - Threading issues - CPU Scheduling - Basic Concepts - Scheduling Criteria - Scheduling Algorithms - Multiple-Processor Scheduling - Real Time Scheduling - The Critical-Section Problem - Synchronization Hardware - Semaphores - Classic problems of Synchronization - Critical regions - Monitors.

## **UNIT III**

**9**

System Model - Deadlock Characterization - Methods for handling Deadlocks -Deadlock Prevention - Deadlock avoidance - Deadlock detection - Recovery from Deadlocks - Storage Management - Swapping - Contiguous Memory allocation - Paging - Segmentation - Segmentation with Paging.

## **UNIT IV**

**9**

Virtual Memory - Demand Paging - Process creation - Page Replacement - Allocation of frames - Thrashing - File Concept - Access Methods - Directory Structure - File System Mounting - File Sharing - Protection

File System Structure - File System Implementation - Directory Implementation - Allocation Methods - Free-space Management. Kernel I/O Subsystems - Disk Structure - Disk Scheduling - Disk Management - Swap-Space Management. Case Study: The Linux System, Windows

**TOTAL : 45hrs**

**TEXT BOOK:**

4. Pramod Chandra P. Bhatt - "An Introduction to Operating Systems, Concepts and Practice", PHI, 2003.

**CSE/Sem III**

**19150H33P- ARTIFICIAL INTELLIGENCE**

**AIM:**

To create general understanding of major concepts and approaches in knowledge representation, planning, learning, robotics and other AI areas.

## **OBJECTIVES:**

- To study various complex problem solving AI tools like Search and optimization
- To facilitate of logic, Probabilistic methods for uncertain reasoning, Classifiers and statistical learning methods, Neural networks, Control theory & Languages.
- To develop programming skills for AI applications.
- To provide exposure to logic programming with practical topics.

### **UNIT I INTRODUCTION**

**8 + 3**

Intelligent Agents – Agents and environments - Good behavior – The nature of environments – structure of agents - Problem Solving - problem solving agents – example problems – searching for solutions – uniformed search strategies - avoiding repeated states – searching with partial information.

### **UNIT II SEARCHING TECHNIQUES**

**10 + 3**

Informed search and exploration - Informed search strategies - heuristic function - local search algorithms and optimistic problems - local search in continuous spaces - online search agents and unknown environments - Structure of problems - Adversarial Search.

### **UNIT III KNOWLEDGE REPRESENTATION**

**10 + 3**

First order logic - representation revisited - Syntax and semantics for first order logic - Using first order logic - Knowledge engineering in first order logic - Inference in First order logic - prepositional versus first order logic - unification and lifting - forward chaining - backward chaining - Resolution - Knowledge representation - Ontological Engineering - Categories and objects - Actions - Simulation and events - Mental events and mental objects.

### **UNIT IV LEARNING**

**9 + 3**

Learning from observations - forms of learning - Inductive learning - Learning decision trees - Ensemble learning - Knowledge in learning - Logical formulation of learning - Explanation based learning - Learning using relevant information - Inductive logic programming - Statistical learning methods - Learning with complete data - Learning with hidden variable .

### **UNIT V APPLICATIONS**

**8 + 3**

Communication – Communication as action – Formal grammar for a fragment of English – Syntactic analysis – Augmented grammars – Semantic interpretation – Ambiguity and disambiguation – Discourse understanding – Grammar induction .

**TOTAL : 60**

## **TEXT BOOK:**

1. Stuart Russell, Peter Norvig, “Artificial Intelligence - A Modern Approach”, 2nd Edition, Pearson Education / Prentice Hall of India, 2004.

## **REFERENCES:**

2. Elaine Rich and Kevin Knight, “Artificial Intelligence”, 2<sup>nd</sup> Edition, Tata McGraw-Hill, 2003.

## 19150H34P - COMPUTER NETWORKS

**AIM:**

To introduce the concepts, terminologies and technologies used in modern days data communication and computer networking.

**OBJECTIVES:**

- To understand the concepts of data communications.
- To study the functions of different layers.
- To introduce IEEE standards employed in computer networking.
- To make the students to get familiarized with different protocols and network components.

**UNIT I DATA COMMUNICATIONS****9**

Components - Direction of Data flow - networks - Components and Categories - types of Connections - Topologies - Protocols and Standards - ISO / OSI model - Transmission Media - Coaxial Cable - Fiber Optics - Line Coding - Modems - RS232 Interfacing sequences.

**UNIT II DATA LINK LAYER****9**

Error - detection and correction - Parity - LRC - CRC - Hamming code - low Control and Error control - stop and wait - go back-N ARQ - selective repeat ARQ- sliding window - HDLC. - LAN - Ethernet IEEE 802.3 - IEEE 802.4 - IEEE 802.5 - IEEE 802.11 - FDDI - SONET - Bridges.

**UNIT III NETWORK LAYER****9**

Internetworks - Packet Switching and Datagram approach - IP addressing methods - Subnetting - Routing - Distance Vector Routing - Link State Routing - Routers.

**UNIT IV TRANSPORT LAYER****9**

Duties of transport layer - Multiplexing - Demultiplexing - Sockets - User Datagram Protocol (UDP) - Transmission Control Protocol (TCP) - Congestion Control - Quality of services (QOS) - Integrated Services.

**UNIT V APPLICATION LAYER****9**

Domain Name Space (DNS) - SMTP - FTP - HTTP - WWW - Security - Cryptography.

**TOTAL: 45hrs****TEXT BOOK:**

1. Behrouz A. Forouzan, "Data communication and Networking", Tata McGraw-Hill, 2004.

**CSE/Sem III**

**19150H41P- PRINCIPLES OF CRYPTOGRAPHY**

**AIM:**

To understand the principles of encryption algorithms, conventional and public key cryptography. To have a detailed knowledge about authentication, hash functions and application level security mechanisms.

**OBJECTIVES:**

- To be familiar with the methods of conventional encryption.
- To recognize the concepts of public key encryption and number theory
- To understand authentication and Hash functions.
- To know the network security tools and applications.

**UNIT I INTRODUCTION**

**10+3**

OSI Security Architecture - Classical Encryption techniques - Cipher Principles - Data Encryption Standard - Block Cipher Design Principles and Modes of Operation - Evaluation criteria for AES - AES Cipher - Triple DES.

**UNIT II PUBLIC KEY CRYPTOGRAPHY**

**10+3**

Key Management - Diffie-Hellman key Exchange - Introduction to Number Theory - Confidentiality using Symmetric Encryption - Public Key Cryptography and RSA.

**UNIT III AUTHENTICATION AND HASH FUNCTION**

**9+3**

Authentication requirements – Authentication functions – Message Authentication Codes – Hash Functions - Security of Hash Functions and MACs - MD5 message Digest algorithm - Secure Hash Algorithm- HMAC Digital Signatures - Authentication Protocols - Digital Signature Standard

**UNIT IV NETWORK SECURITY**

**8+3**

Authentication Applications: Kerberos - X.509 Authentication Service - Electronic Mail Security - PGP - S/MIME - IP Security - Web Security.

**UNIT V SYSTEM LEVEL SECURITY**

**8+3**

Intrusion detection - password management - Viruses and related Threats - Virus Counter measures - Firewall Design Principles - Trusted Systems.

**TOTAL : 60 hrs**

**TEXT BOOK:**

1. William Stallings, "Cryptography And Network Security - Principles and Practices", Prentice Hall of India, Third Edition, 2003.

**SE/Sem IV**

**19150H42P- WEB TECHNOLOGY**

**AIM:**

To highlight the features of different technologies involved in Web Technology and various Scripting Languages.

**OBJECTIVES:**

- Students will get an introduction about various Scripting Languages.
- Students will be provided with an up-to-date survey of developments in Web Technologies.
- To gain knowledge about the socket programming , RMI and Dynamic web page development.
- Enable the students to know techniques involved to support real-time application development.

**UNIT I**

**9+3**

Internet principles - Basic Web concepts - Client -Server model - Retriving data from Internet - HTML and Scripting Languages - Protocols and applications.

**UNIT II**

**9+3**

HTML forms - CGI concepts - HTML tags emulation - Server browser communication - E-mail generation - CGI client side Applets - CGI Server side Applets - Authorization and Security.

**UNIT III**

**9+3**

Streaming - Networking Principles - Sockets for Clients - Sockets for Servers - Protocols handlers - Content handlers - Multicast sockets - Remote method invocation.

**UNIT IV**

**9+3**

Server-Dynamic Web content - Cascading Style Sheets, DHTML, XML - Applet-Servlets communication - Interactive Java Servlets - Active and Java Server Pages.

**UNIT V**

**9+3**

Simple applications - On-line Databases - Monitoring user events - Plugins - Database Connectivity.

**TOTAL : 60hrs**

**TEXT BOOK:**

1. Eillotte Rusty Harold, "Java Network Programming", O'Reilly Publications, 1997.

## **REFERENCES:**

1. Jason Hunter, William Crawford, "Java Servlets Programming", O'Reilly Publications, 1998.

## 19150H43P-C # AND . NET FRAMEWORK

### AIM:

The goal of this course is to provide students with the knowledge and skills they need to develop C# applications for the Microsoft .NET Platform.

### OBJECTIVES:

- An ability to understand C# program structure, language syntax, and implementation details.
- An ability to develop application using C# on .NET frame work.

### UNIT I INTRODUCTION TO C# 8+3

Introducing C#, Understanding .NET, Overview of C#, Literals, Variables, Data Types, Operators, Expressions, Branching, Looping, Methods, Arrays, Strings, Structures, Enumerations.

### UNIT II OBJECT ORIENTED ASPECTS OF C# 9+3

Classes, Objects, Inheritance, Polymorphism, Interfaces, Operator Overloading, Delegates, Events, Errors and Exceptions.

### UNIT III APPLICATION DEVELOPMENT ON .NET 8+3

Building Windows Applications, Accessing Data with ADO.NET.

### UNIT IV WEB BASED APPLICATION DEVELOPMENT ON .NET 8+3

Programming Web Applications with Web Forms, Programming Web Services.

### UNIT V THE CLR AND THE .NET FRAMEWORK 12+3

Assemblies, Versioning, Attributes, Reflection, Viewing MetaData, Type Discovery, Reflecting on a Type, Marshaling, Remoting, Understanding Server Object Types, Specifying a Server with an Interface, Building a Server, Building the Client, Using SingleCall, Threads.

**TOTAL : 60hrs**

### TEXT BOOKS:

1. E. Balagurusamy, "Programming in C#", Tata McGraw-Hill, 2004. (Unit I, II)
2. J. Liberty, "Programming C#", 2<sup>nd</sup> ed., O'Reilly, 2002. (Unit III, IV, V)

## 19150H51P- OBJECT ORIENTED ANALYSIS AND DESIGN

### AIM:

Study and learn the analysis techniques and methodologies.

**OBJECTIVES:**

- To study the concepts of modeling in object oriented context.
- To learn about the Object Constraint Language.
- To study the Use cases, Interaction Diagrams, Class Diagrams and System Sequence Diagrams.
- To study implementation related issues.
- To study and learn how to apply advanced techniques including Architectural Analysis and Design Patterns.

**UNIT I INTRODUCTION**

8

An Overview of Object Oriented Systems Development - Object Basics - Object Oriented Systems Development Life Cycle.

**UNIT II OBJECT ORIENTED METHODOLOGIES**

12

Rumbaugh Methodology - Booch Methodology - Jacobson Methodology-- Patterns - Frameworks - Unified Approach - Unified Modeling Language - Use case - class diagram - Interactive Diagram - Package Diagram Collaboration Diagram - State Diagram Activity Diagram.

**UNIT III OBJECT ORIENTED ANALYSIS**

9

Identifying use cases - Object Analysis - Classification - Identifying Object relationships Attributes and Methods.

**UNIT IV OBJECT ORIENTED DESIGN**

8

Design axioms - Designing Classes - Access Layer - Object Storage Object Interoperability.

**UNIT V SOFTWARE QUALITY AND USABILITY**

8

Designing Interface Objects - Software Quality Assurance - System Usability Measuring User Satisfaction

**TOTAL : 45hrs**

**TEXT BOOKS:**

1. Ali Bahrami, "Object Oriented Systems Development", Tata McGraw-Hill, 1999 (Unit I, III, IV, V).
2. Martin Fowler, "UML Distilled", Second Edition, PHI/Pearson Education, 2002. (UNIT II)

3. Hans-Erik Eriksson, Magnus Penker, Brain Lyons, David Fado, "UML Toolkit", OMG Press Wiley Publishing Inc., 2004.

**19150H52P- SOFTWARE QUALITY MANAGEMENT****AIM:**

To introduce an integrated approach to software development incorporating quality management methodologies.

**OBJECTIVES:**

- Software quality models.
- Quality measurement and metrics.
- Quality plan, implementation and documentation.
- Quality tools including CASE tools.
- Quality control and reliability of quality process.
- Quality management system models.
- Complexity metrics and Customer Satisfaction.
- International quality standards - ISO, CMM.

**UNIT I INTRODUCTION TO SOFTWARE QUALITY 9+3**

Software Quality – Hierarchical models of Boehm and McCall – **Quality measurement** – Metrics measurement and analysis – Gilb's approach – GQM Model

**UNIT II SOFTWARE QUALITY ASSURANCE 9+3**

Quality tasks - SQA plan - Teams - **Characteristics - Implementation** - Documentation - Reviews and Audits

**UNIT III QUALITY CONTROL AND RELIABILITY 9+3**

Tools for Quality - Ishikawa's basic tools - CASE tools - **Defect prevention and removal** - Reliability models - Rayleigh model - Reliability growth models for quality assessment

**UNIT IV QUALITY MANAGEMENT SYSTEM 9+3**

Elements of QMS - Rayleigh model framework - Reliability Growth models for QMS - **Complexity metrics and models** - Customer satisfaction analysis.

**UNIT V QUALITY STANDARDS 9+3**

Need for standards - ISO 9000 Series - **ISO 9000-3 for software development** - CMM and CMMI - Six Sigma concepts.

**TOTAL : 60 hrs****TEXT BOOKS:**

1. Allan C. Gillies, "Software Quality: Theory and Management", Thomson Learning, 2003. (UI : Ch 1 -4 ; UV : Ch 7-8)

## **19150S61P- EMBEDDED SYSTEMS**

### **AIM:**

To teach students all aspects of the design and development of an embedded system, including hardware and embedded software development.

### **OBJECTIVES:**

- To Understand and design embedded systems.
- Understand the basics of an embedded system.
- Program an embedded system.
- Design, implement and test an embedded system.

### **UNIT I EMBEDDED COMPUTING 9**

**Challenges of Embedded Systems** - Embedded system design process. Embedded processors - 8051 Microcontroller, ARM processor - Architecture, Instruction sets and programming.

### **UNIT II MEMORY AND INPUT / OUTPUT MANAGEMENT 9**

**Programming Input and Output** - Memory system mechanisms - Memory and I/O devices and interfacing - Interrupts handling.

### **UNIT III PROCESSES AND OPERATING SYSTEMS 9**

Multiple tasks and processes - Context **switching** - **Scheduling policies** - Interprocess communication mechanisms - Performance issues.

### **UNIT IV EMBEDDED SOFTWARE 9**

**Programming** embedded systems in assembly and C - Meeting real time constraints - Multi-state systems and function sequences. Embedded software development tools - Emulators and debuggers.

### **UNIT V EMBEDDED SYSTEM DEVELOPMENT 9**

**Design issues and techniques** - Case studies - Complete design of example embedded systems.

**TOTAL = 45 hrs**

### **TEXT BOOKS:**

1. Wayne Wolf, "Computers as Components: Principles of Embedded Computer System Design", Elsevier, 2006.

**TEXT BOOKS:**

1. Elliotte Rusty Harold, "Java Network Programming", O'Reilly publishers, 2000 (UNIT II)

## 19150H63P- SOFTWARE TESTING

### AIM:

It explains how to review, test and manage test requirements and how to incorporate testing into the software development life cycle.

### OBJECTIVES:

- To determine software testing objectives and criteria.
- To develop and validate a test plan.
- To select and prepare test cases.
- To identify the need for testing.
- To prepare testing policies and standards.
- To use testing aids and tools.
- To test before buying a software package and Test after maintenance and enhancement changes.
- To measure the success of testing efforts.

### UNIT I INTRODUCTION

9

Testing as an Engineering Activity - Role of Process in Software Quality - Testing as a Process - Basic Definitions - Software Testing Principles - The Tester's Role in a Software Development Organization - Origins of Defects - Defect Classes - The Defect Repository and Test Design - Defect Examples - Developer/Tester Support for Developing a Defect Repository.

### UNIT II TEST CASE DESIGN

9

Introduction to Testing Design Strategies - The Smarter Tester - Test Case Design Strategies - Using Black Box Approach to Test Case Design Random Testing - Requirements based testing - positive and negative testing - Boundary Value Analysis - decision tables - Equivalence Class Partitioning state-based testing - cause-effect graphing - error guessing - compatibility testing - user documentation testing - domain testing Using White-Box Approach to Test design - Test Adequacy Criteria - static testing vs. structural testing - code functional testing - Coverage and Control Flow Graphs - Covering Code Logic - Paths - Their Role in White-box Based Test Design - code complexity testing - Evaluating Test Adequacy Criteria.

### UNIT III LEVELS OF TESTING

9

The Need for Levels of Testing - Unit Test - Unit Test Planning - Designing the Unit Tests. The Test Harness - Running the Unit tests and Recording results - Integration tests - Designing Integration Tests - Integration Test Planning - scenario testing - defect bash elimination - System Testing - types of system testing - Acceptance testing - performance testing - Regression Testing - internationalization testing - ad-hoc testing - Alpha - Beta Tests - testing OO systems - usability and accessibility testing

### UNIT IV TEST MANAGEMENT

9

People and organizational issues in testing - organization structures for testing teams - testing services - Test Planning - Test Plan Components - Test Plan Attachments - role of three groups in Test Planning and Policy Development - Introducing the test specialist - Skills needed by a test specialist - Building a Testing Group.

### UNIT V CONTROLLING AND MONITORING 9

Software test automation - skills needed for automation - scope of automation - design and architecture for automation - requirements for a test tool - challenges in automation - Test metrics and measurements - project,

progress and productivity metrics - StatusMeetings - Reports and Control Issues - Criteria for Test Completion - SCM - Types of reviews - Developing a review program - Components of Review Plans- Reporting Review Results. - evaluating software quality - defect prevention - testing maturity model

**TOTAL: 45hrs**

**TEXT BOOKS:**

## 19150S71P-TOTAL QUALITY MANAGEMENT

### AIM:

Learning various TQM techniques to tackle and analyze problems in improving quality with particular reference to their own working environment.

### OBJECTIVE:

- Develop the ability to adopt new techniques and synthesize new knowledge.
- Analyze basic operational and research data using TQM techniques in a systematic way.
- Cooperate efficiently and effectively in a team to apply TQM techniques and tools for accomplishing pre-determined goals.
- Identify opportunities for improvement in the business, service, administrative and manufacturing environments of applying the methodology such as Six Sigma, Kaizen, and other appropriate tools to achieve breakthrough improvements in these processes.

### UNIT I FUNDAMENTALS

9

Definition of quality – Dimensions of quality – Quality planning – Quality costs – Analysis techniques for quality costs – Basic concepts of total quality management – Historical review – Principles of TQM – Leadership – Concepts – Role of senior management – Quality council – Quality statements – Strategic planning – Deming philosophy – Barriers to TQM implementation.

### UNIT II TQM PRINCIPLES

9

Customer Satisfaction – Customer Perception of Quality – Customer Complaints – Service Quality – Customer Retention – Employee Involvement – Motivation – Empowerment – Teams – Recognition and Reward – Performance Appraisal – Benefits – Continuous Process Improvement – Juran Trilogy – PDCA Cycle – 5S – Kaizen – Supplier Partnership – Partnering – Sourcing – Supplier Selection – Supplier Rating – Relationship Development – Performance Measures – Basic Concepts – Strategy – Performance Measure.

### UNIT III STATISTICAL PROCESS CONTROL (SPC)

9

The Seven Tools of Quality – Statistical Fundamentals – Measures of Central Tendency and dispersion – Population and Sample – Normal Curve – Control Charts for Variables and Attributes – Process Capability – Concept of Six Sigma – New Seven Management Tools.

### UNIT IV TQM TOOLS

9

Benchmarking – Reasons to Benchmark – Benchmarking Process – Quality Function Deployment (QFD) – House of Quality – QFD Process – Benefits – Taguchi Quality Loss Function – Total Productive Maintenance (TPM) – Concept – Improvement Needs – FMEA – Stages of FMEA.

### UNIT V QUALITY SYSTEMS

9

Need for ISO 9000 and Other **Quality Systems – ISO 9000:2000** Quality System - Elements – Implementation of Quality System–Documentation–Quality Auditing–TS 16949–ISO 14000 - Concept–Requirements and Benefits.

**Total: 45hrs**

## 19150H72P - GRID COMPUTING

### AIM:

To introduce the what's, why's and how's of Grid Computing; what is Grid Computing able to do for you today and what will it bring to you in time to come.

### OBJECTIVES:

- Understand and explain the basic concepts of Grid Computing;
- Explain the advantages of using Grid Computing within a given environment;
- Prepare for any upcoming Grid deployments and be able to get started with a potentially available Grid setup.

<b>UNIT I</b>	<b>GRID COMPUTING</b>	<b>9</b>
Introduction - Definition and Scope of grid computing		
<b>UNIT II</b>	<b>GRID COMPUTING INITIALIVES</b>	<b>9</b>
Grid Computing Organizations and their roles - Grid Computing analog - Grid Computing road map.		
<b>UNIT III</b>	<b>GRID COMPUTING APPLICATIONS</b>	<b>9</b>
Merging the Grid sources - Architecture with the Web Devices Architecture.		
<b>UNIT IV</b>	<b>TECHNOLOGIES</b>	<b>9</b>
OGSA - Sample use cases - OGSA platform components - OGSI - OGSA Basic Services.		
<b>UNIT V</b>	<b>GRID COMPUTING TOOL KITS</b>	<b>9</b>
Globus GT 3 Toolkit - Architecture, Programming model, High level services - OGSI .Net middleware Solutions.		
		<b>TOTAL : 45 hrs</b>

### TEXT BOOK:

1. Joshy Joseph & Craig Fellenstein, "Grid Computing", Pearson/PHI PTR-2003.

### REFERENCE:

1. Ahmar Abbas, "Grid Computing: A Practical Guide to technology and Applications", Charles River media - 2003.

## 19150H73P - MIDDLEWARE TECHNOLOGIES

### AIM:

Students are able to gain in-depth knowledge popular middleware platforms.

### OBJECTIVES:

Students can able to

- Understand that middleware is an intermediary software layer between the application and the operating system, which encapsulates the heterogeneity of the underlying communication network, operating system or hardware platform.
- Acquire the knowledge of integrating these systems by using middleware technologies.

**UNIT I CLIENT / SERVER CONCEPTS 9+3**

Client server - File server - Database server - Group server - Object server - Web server - Middleware - General middleware - Service specific middleware - Client / Server building blocks - RPC - Messaging - Peer-to-Peer.

**UNIT II EJB ARCHITECTURE 9+3**

EJB - EJB Architecture - Overview of EJB software architecture - View of EJB - Conversation - Building and deploying EJB - Roles in EJB.

**UNIT III EJB APPLICATIONS 9+3**

EJB session beans - EJB entity beans - EJB clients - EJB deployment - Building an application with EJB.

**UNIT IV CORBA 9+3**

CORBA - Distributed systems - Purpose - Exploring CORBA alternatives - Architecture overview - CORBA and networking model - CORBA object model - IDL - ORB - Building an application with CORBA.

**UNIT V COM 9+3**

COM - Data types - Interfaces - Proxy and stub - Marshalling - Implementing server / client - Interface pointers - object creation - Invocation - Destruction - Comparison COM and CORBA - Introduction to .NET - Overview of .NET architecture - Marshalling - Remoting.

**TOTAL: 60 hrs**

**TEXT BOOKS:**

1. Robert Orfali, Dan Harkey and Jeri Edwards, "The Essential Client / Server Survival Guide", Galgotia Publications Pvt. Ltd., 2002.
2. Tom Valesky, "Enterprise Java Beans", Pearson Education, 2002.

**REFERENCES:**

1. Mowbray, "Inside CORBA", Pearson Education, 2002.
2. Jeremy Rosenberger, "Teach Yourself CORBA in 14 days", TEC Media, 2000.
3. Jason Pritchard, "COM and CORBA Side by Side", Addison Wesley, 2000.
4. Jesse Liberty, "Programming C#", 2nd Edition, O'Reilly Press, 2002.

**CSE/Sem IV/Electives**

**SEMESTER - IV (ELECTIVE I)**

**19150E44AP- THEORY OF COMPUTATION**

**AIM:**

To introduces basic computation models and the necessary mathematical techniques to express computer science problems as mathematical statements and to formulate proofs

**19150E44BP- REAL TIME SYSTEMS****AIM:**

To understand the implementation of real time systems

**OBJECTIVES:**

- To be familiar with Real-Time systems, Task scheduling, resource management, real-time operating systems and fault tolerant techniques.
- To study the priorities of transactions in real time databases.
- To understand how to achieve multitasking and concurrency in real time systems.

**UNIT I INTRODUCTION****9+3**

**Introduction - Issues in Real Time Computing**, Structure of a Real Time System. TaskClasses, Performance Measures for Real Time Systems, Estimating Program Runtimes. Task Assignment and Scheduling - Classical Uniprocessor scheduling algorithms, UniProcessor scheduling of IRIS Tasks, Task Assignment, Mode Changes, and FaultTolerant Scheduling.

**UNIT II PROGRAMMING LANGUAGES AND TOOLS****9+3**

Programming Language and Tools - Desired **Language characteristics, Data Typing, Control structures**, Facilitating Hierarchical Decomposition, Packages, Run-time(Exception) Error handling, Overloading and Generics, Multitasking, Low Levelprogramming, Task scheduling, Timing Specifications, Programming Environments, Run-time Support.

**UNIT III REAL TIME DATABASES****9+3**

Real time Databases - **Basic Definition, Real time Vs General** Purpose Databases, MainMemory Databases, Transaction priorities, Transaction Aborts, Concurrency ControlIssues, Disk Scheduling Algorithms, Two-phase Approach to improve Predictability, Maintaining Serialization Consistency, Databases for Hard Real Time systems.

**UNIT IV COMMUNICATION****9+3**

Real-Time Communication - Communications Media, **Network Topologies Protocols, Fault Tolerant Routing**. Fault Tolerance Techniques - Fault Types, Fault Detection. FaultError containment Redundancy, Data Diversity, Reversal Checks, Integrated Failurehandling.

**UNIT V EVALUATION TECHNIQUES****9+3**

Reliability Evaluation Techniques - **Obtaining Parameter Values, Reliability Models for Hardware Redundancy**, Software Error models. Clock Synchronization - Clock, A Nonfault-Tolerant Synchronization Algorithm, Impact of Faults, Fault Tolerant Synchronization in Hardware, Fault Tolerant Synchronization in Software

**TOTAL:60 hrs****TEXT BOOKS:**

1. C.M. Krishna, Kang G. Shin, "Real-Time Systems", McGraw-Hill International Editions, 1997.

## **19150E44CP-USER INTERFACE DESIGN**

### **AIM:**

It focuses on the basic concepts of how human perceives and interacts with computers.

### **OBJECTIVES:**

- Able to critique problems that exist in current interactive software and websites.
- To learn several usability evaluation methods.

- To learn several characteristics of controls in windows.
- To understand how to exercise with multimedia tools.
- To learn different kinds of tests in windows.

### UNIT I INTRODUCTION 8+3

Human-Computer Interface - Characteristics Of Graphics Interface -Direct Manipulation Graphical System - Web User Interface -Popularity -Characteristic & Principles.

### UNIT II HUMAN COMPUTER INTERACTION 10+3

User Interface Design Process - Obstacles -Usability -Human Characteristics In Design- Human Interaction Speed -Business Functions -Requirement Analysis - Direct -Indirect Methods - Basic Business Functions - Design Standards - System Timings -Human Consideration In Screen Design - Structures Of Menu - Functions Of Menus-Contents Of Menu- Formatting - Phrasing The Menu - Selecting Menu Choice-Navigating Menus- Graphical Menus.

### UNIT III WINDOWS

9+3

Characteristics- Components- Presentation Styles- Types- Managements-Organizations- Operations- Web Systems- Device- Based Controls Characteristics-Screen - Based Controls - Operate Control - Text Boxes- Selection Control-Combination Control- Custom Control- Presentation Control.

### UNIT IV MULTIMEDIA 9+3

Text For Web Pages - Effective Feedback- Guidance & Assistance- Internationalization- Accessibility- Icons- Image- Multimedia - Coloring.

### UNIT V WINDOWS LAYOUT- TEST

9+3

Prototypes - Kinds Of Tests - Retest - Information Search - Visualization -Hypermedia - WWW- Software Tools.

**TOTAL: 60hrs**

### TEXT BOOKS:

1. Wilbent. O. Galitz ,“The Essential Guide To User Interface Design”, John Wiley& Sons, 2001.
2. Ben Sheiderman, “Design The User Interface”, Pearson Education, 1998.

### REFERENCES:

1. Alan Cooper, “The Essential Of User Interface Design”, Wiley - Dream Tech Ltd.,2002.

**CSE/Sem IV/Electives**

## 19150E44DP- ADVANCED DATABASES

### AIM:

To have strong knowledge on Database Management Systems, Database technologies , an application-oriented , system-oriented approach towards databasedesign.

### OBJECTIVES:

- Be able to design high-quality relational databases and database applications.

- Have developed skills in advanced visual & conceptual modeling and database design.
- Be able to translate complex conceptual data models into logical and physical database designs.
- Have developed an appreciation of emerging database trends as they apply to semi-structured data, the internet, and object-oriented databases.

## **UNIT I DISTRIBUTED DATABASES**

**9+3**

Distributed DBMS Concepts and Design - Introduction - Functions and Architecture of DDBMS - Distributed Relational Database Design - Transparency in DDBMS - Distributed Transaction Management - Concurrency control - Deadlock Management - Database recovery - The X/Open Distributed Transaction Processing Model - Replication servers - Distributed Query Optimisation - Distribution and Replication in Oracle.

## **UNIT II OBJECT ORIENTED DATABASES**

**9+3**

Object Oriented Databases - Introduction - Weakness of RDBMS - Object Oriented Concepts Storing Objects in Relational Databases - Next Generation Database Systems - Object Oriented Data models - OODBMS Perspectives - Persistence - Issues in OODBMS - Object Oriented Database Management System Manifesto - Advantages and Disadvantages of OODBMS - Object Oriented Database Design - OODBMS Standards and Systems - Object Management Group - Object Database Standard ODMG - Object Relational DBMS - Postgres - Comparison of ORDBMS and OODBMS.

## **UNIT III WEB DATABASES**

**9+3**

Web Technology And DBMS - Introduction - The Web - The Web as a Database Application Platform - Scripting languages - Common Gateway Interface - HTTP Cookies - Extending the Web Server - Java - Microsoft's Web Solution Platform - Oracle Internet Platform - Semi

structured Data and XML - XML Related Technologies - XML Query Languages

## **UNIT IV INTELLIGENT DATABASES**

**9+3**

Enhanced Data Models For Advanced Applications - Active Database Concepts And Triggers - Temporal Database Concepts - Deductive databases - Knowledge Databases.

## **UNIT V CURRENT TRENDS**

**9+3**

Mobile Database - Geographic Information Systems - Genome Data Management - Multimedia Database - Parallel Database - Spatial Databases - Database administration - Data Warehousing and Data Mining.

**TOTAL : 60 hrs**

### **TEXT BOOK:**

1. Thomas M. Connolly, Carolyn E. Begg, "Database Systems - A Practical Approach to Design , Implementation , and Management", Third Edition , Pearson Education, 2003

### **REFERENCES:**

1. Ramez Elmasri & Shamkant B.Navathe, "Fundamentals of Database Systems", Fourth Edition , Pearson Education , 2004.

## SEMESTER - V(ELECTIVE II)

## 19150E54AP- SOFT COMPUTING

**AIM:**

To understand the overall knowledge of soft computing theories and fundamentals.

**OBJECTIVES:**

- To study the fundamentals of artificial neural networks, fuzzy sets and fuzzy logic and genetic algorithms.
- Fuzzy sets to solve hard real-world problems.
- To given an overview of Genetic algorithms and machine learning techniques to solving hard real-world problems.
- To study about the applications of these areas.

**UNIT I FUZZY SET THEORY****10+3**

Introduction to Neuro - Fuzzy and Soft Computing - Fuzzy Sets - Basic Definition and Terminology - Set-theoretic Operations - Member Function Formulation and Parameterization - Fuzzy Rules and Fuzzy Reasoning - Extension Principle and Fuzzy Relations - Fuzzy If-Then Rules - Fuzzy Reasoning - Fuzzy Inference Systems - Mamdani Fuzzy Models - Sugeno Fuzzy Models - Tsukamoto Fuzzy Models - Input Space Partitioning and Fuzzy Modeling.

**UNIT II OPTIMIZATION****8+3**

Derivative-based Optimization - Descent Methods - The Method of Steepest Descent - Classical Newton's Method - Step Size Determination - Derivative-free Optimization - Genetic Algorithms - Simulated Annealing - Random Search - Downhill Simplex Search.

**UNIT III ARTIFICIAL INTELLIGENCE****10+3**

Introduction, Knowledge Representation - Reasoning, Issues and Acquisition: Propositional and Predicate Calculus Rule Based knowledge Representation Symbolic Reasoning Under Uncertainty Basic knowledge Representation Issues Knowledge acquisition - Heuristic Search: Techniques for Heuristic search Heuristic Classification - State Space Search: Strategies Implementation of Graph Search Search based on Recursion Patent-directed Search Production System and Learning.

**UNIT IV NEURO FUZZY MODELING****9+3**

Adaptive Neuro-Fuzzy Inference Systems - Architecture - Hybrid Learning Algorithm - Learning Methods that Cross-fertilize ANFIS and RBFN - Coactive Neuro Fuzzy Modeling - Framework Neuron Functions for Adaptive Networks - Neuro Fuzzy Spectrum.

**UNIT V APPLICATIONS OF COMPUTATIONAL INTELLIGENCE 8+3**

Printed Character Recognition - Inverse Kinematics Problems - Automobile Fuel Efficiency Prediction - Soft Computing for Color Recipe Prediction.

**TOTAL: 60hrs****TEXT BOOKS:**

1. J.S.R. Jang, C.T. Sun and E. Mizutani, "Neuro-Fuzzy and Soft Computing", PHI, 2004, Pearson Education 2004.

2. N.P. Padhy, "Artificial Intelligence and Intelligent Systems", Oxford University Press, 2006.

### **REFERENCES:**

2. Timothy J. Ross, "Fuzzy Logic with Engineering Applications", McGraw-Hill, 1997.

**CSE/Sem V/Electives**

## **19150E54BP- PRINCIPLES OF COMPILER DESIGN**

### **AIM:**

To understand the design and implementation of a simple compiler.

### **OBJECTIVES:**

- To understand the functions of the various phases of a compiler.
- To learn the overview of the design of lexical analyzer and parser.
- To study the design of the other phases in detail.
- To learn the use of compiler construction tools.

### **UNIT I INTRODUCTION TO COMPILING 9+3**

Compilers – Analysis of the source program – Phases of a compiler – Cousins of the Compiler – Grouping of Phases – Compiler construction tools – Lexical Analysis – Role of Lexical Analyzer – Input Buffering – Specification of Tokens.

### **UNIT II SYNTAX ANALYSIS 9+3**

Role of the parser - Writing Grammars - Context-Free Grammars - Top Down parsing – Recursive Descent Parsing - Predictive Parsing - Bottom-up parsing – Shift Reduce Parsing - Operator Precedent Parsing - LR Parsers – SLR Parser - Canonical LR Parser - LALR Parser.

### **UNIT III INTERMEDIATE CODE GENERATION 9+3**

Intermediate languages - Declarations - Assignment Statements - Boolean Expressions - Case Statements - Back patching - Procedure calls.

### **UNIT IV CODE GENERATION 9+3**

Issues in the design of code generator - The target machine - Runtime Storage management - Basic Blocks and Flow Graphs - Next-use Information - A simple Code generator - DAG representation of Basic Blocks - Peephole Optimization.

### **UNIT V CODE OPTIMIZATION AND RUN TIME ENVIRONMENTS 9+3**

Introduction- Principal Sources of Optimization - Optimization of basic Blocks - Introduction to Global Data Flow Analysis - Runtime Environments - Source Language issues - Storage Organization - Storage Allocation strategies - Access to non-local names - Parameter Passing.

**TEXT BOOK:**

1. Alfred Aho, Ravi Sethi, Jeffrey D Ullman, "Compilers Principles, Techniques and Tools", Pearson Education Asia, 2003.

**REFERENCES:**

1. Allen I. Holub "Compiler Design in C", Prentice Hall of India, 2003.

# 19150E54CP- DISTRIBUTED SYSTEMS

## AIM:

This course discuss the fundamental aspects on design of distributed systems, and the principles underlying them with an emphasis on fault tolerance and security.

## OBJECTIVES:

- To understand distributed computing system models and introduction to distributes databases.
- To have an in-depth knowledge of distributed algorithms .
- To understand asynchronous shared memory model, mutual exclusion, resource allocation, consensus, asynchronous network model, basic asynchronous network algorithms, shared memory Vs networks and introduction to parallel distributed processing.
- To understand the various security algorithms in distributing environment.

## **UNIT I INTRODUCTION**

**9+3**

Introduction to Distributed systems-examples of distributed systems, challenges-architectural models-fundamental models - Introduction to interprocess communications-external data representation and marshalling- client server communication-group communication - Case study: IPC in UNIX

## **UNIT II DISTRIBUTED OBJECTS AND FILE SYSTEM**

**9+3**

Introduction - Communication between distributed objects - Remote procedure call - Events and notifications - Java RMI case Study - Introduction to DFS - File service architecture - Sun network file system - Introduction to Name Services- Name services and DNS - Directory and directory services

## **UNIT III DISTRIBUTED OPERATING SYSTEM SUPPORT**

**11+3**

The operating system layer - Protection - Process and threads - Communication and invocation - Operating system architecture - Introduction to time and global states - Clocks, Events and Process states - Synchronizing physical clocks - Logical time and logical clocks - Global states - Distributed debugging - Distributed mutual exclusion.

## **UNIT IV TRANSACTION AND CONCURRENCY CONTROL – DISTRIBUTED TRANSACTIONS**

**8+3**

Transactions - Nested transaction - Locks - Optimistic concurrency control - Timestamp ordering - Comparison of methods for concurrency control - Introduction to distributed transactions - Flat and nested distributed transactions - Atomic commit protocols - Concurrency control in distributed transactions - Distributed deadlocks - Transaction recovery

## **UNIT –V SECURITY AND REPLICATION**

**8+3**

Overview of security techniques - Cryptographic algorithms - Digital signatures - Cryptography pragmatics - Replication - System model and group communications - Fault tolerant services - Highly available services - Transactions with replicated data

**TOTAL : 60hrs**

## **TEXT BOOK:**

1. George Coulouris, Jean Dollimore, Tim Kindberg “Distributed Systems Concepts and Design” Third Edition - 2002- Pearson Education Asia.

## REFERENCES:

1. A.S.Tanenbaum, M.Van Steen " Distributed Systems" Pearson Education 2004
2. Mukesh Singhal, Ohio State University, Columbus "Advanced Concepts In Operating Systems"  
McGraw-Hill Series in Computer Science, 1994.

## 19150E54DP- MOBILE COMPUTING

### AIM:

The aim of the course is to make student to be familiar with the basics concept of Mobile Communication and mobile devices .Focus will be on cellular mobile system units and different aspects of cellular communication.

### OBJECTIVES:

- To present necessary concepts for Mobile Communication.
- Understanding different mobile devices and system.
- Understanding the Cellular System design.
- Study Co-channel and Non Co-channel Interference.
- Understanding channel assignment and hand off.
- Study Digital Cellular System.

### **UNIT I            WIRELESS COMMUNICATION FUNDAMENTALS            9+3**

Introduction - Wireless transmission - Frequencies for radio transmission - Signals - Antennas - Signal Propagation - Multiplexing - Modulations - Spread spectrum - MAC - SDMA - FDMA - TDMA - CDMA - Cellular Wireless Networks.

### **UNIT II            TELECOMMUNICATION NETWORKS            11+3**

Telecommunication systems - GSM - GPRS - DECT - UMTS - IMT-2000 - Satellite Networks - Basics - Parameters and Configurations - Capacity Allocation - FAMA and DAMA - Broadcast Systems - DAB - DVB.

### **UNIT III            WIRELESS LAN            9+3**

Wireless LAN - IEEE 802.11 - Architecture - services - MAC - Physical layer - IEEE 802.11a - 802.11b standards - HIPERLAN - Blue Tooth.

### **UNIT IV            MOBILE NETWORK LAYER            9+3**

Mobile IP - Dynamic Host Configuration Protocol - Routing - DSDV - DSR - Alternative Metrics.

### **UNIT V TRANSPORT AND APPLICATION LAYERS            7+3**

Traditional TCP - Classical TCP improvements - WAP, WAP 2.0.

**Total:60 hrs**

### **TEXT BOOKS:**

1. Jochen Schiller, "Mobile Communications", PHI/Pearson Education, Second Edition, 2003.(Unit I Chap 1,2 &3- Unit II chap 4,5 &6-Unit III Chap 7.Unit IV Chap 8- Unit V Chap 9&10.)
2. William Stallings, "Wireless Communications and Networks", PHI/Pearson Education, 2002. (Unit I Chapter - 7&10-Unit II Chap 9)

***CSE/Sem VI/Electives***

**SEMESTER - VI  
(ELECTIVE III)**

**19160E64AP- PRINCIPLES OF MANAGEMENT**

**AIM:**

To understand the basic principles of management.

**OBJECTIVES:**

Knowledge on the principles of management is essential for all kinds of people in all kinds of organizations. After studying this course, students will be able to have a clear understanding of the managerial functions like planning, organizing, staffing, leading and controlling. Students will also gain some basic knowledge on international aspect of management.

**UNIT I HISTORICAL DEVELOPMENT 9**

**Definition of Management - Science or Art** - Management and Administration - Development of Management Thought - contribution of Taylor and Fayol - Functions of Management - Types of Business Organization.

**UNIT II PLANNING 9**

Nature & Purpose - Steps involved in planning - **Objective - Setting** Objectives - Process of Managing by Objectives - Strategies, Policies & Planning premise - Forecasting - Decision-making.

**UNIT III ORGANISING 9**

Nature and purpose - Formal and informal organization - **Organization Chart - Structure and Process** - Departmentation by difference strategies - Line and Staff authority - Benefits and Limitations - Selection Process - Techniques - HRD - Managerial Effectiveness.

**UNIT IV DIRECTING 9**

Scope - Human Factors - Creativity and Innovation - **Harmonizing Objectives** - Leadership - Types of Leadership Motivation - Hierarchy of needs - Motivation theories - Motivational Techniques - Job Enrichment - Communication - Process of Communication - Barriers and Breakdown - Effective Communication - Electronic media in Communication.

**UNIT V CONTROLLING 9**

**System and process of Controlling** - Requirements for effective control - The Budget as Control Technique - Information Technology in Controlling - Use of computers in handling the information - Productivity - Problems and Management - Control of overall Performance

- Direct and Preventive Control - Reporting - The Global Environment - Globalization and Liberalization - International Management and Global theory of Management.

**TOTAL:45 hrs**

**TEXT BOOKS:**

1. Harold Kooritz & Heinz Weihrich "Essentials of Management", Tata McGraw-Hill, 1998.
2. Joseph L Massie "Essentials of Management", Prentice Hall of India, (pearson) Fourth Edition, 2003.

**REFERENCES**

4. Fraidoon Mazda, "Engineering Management", Addison Wesley, 2000.

## 19150E64BP- UNIX INTERNALS

**AIM:**

This course focus to bend the learning curve for those system programmers who need to cast free software kernels.

**OBJECTIVES:**

- An ability to understand design and implementation of a multi-programmable operating system.
- A good understanding of the fundamentals of a monolithic kernel.
- A basic-to-intermediate experience in kernel and driver/module programming.

**UNIT I****9**

General Review of the System-History-System structure-User Perspective-OperatingSystem Services-Assumptions About Hardware. Introduction to the Kernel-ArchitectureSystem Concepts-Data Structures-System Administration.

**UNIT II****9**

The Buffer Cache-Headers-Buffer Pool-Buffer Retrieval-Reading and Writing DiskBlocks-Advantages and Disadvantages. Internal Representation of Files-Inodes-Structure-Directories-Path Name to Inode- Super Block-Inode Assignment-Allocation ofDisk Blocks -Other File Types.

**UNIT III****9**

System Calls for the File System-Open-Read-Write-Lseek-Close-Create-Special filesCreation-Change Directory and Change Root-Change Owner and Change Mode- Stat-Fstat-Pipes-Dup-Mount-Unmount-Link-Unlink-File System Abstraction-Maintenance.

**UNIT IV****9**

The System Representation of Processes-States-Transitions-System Memory-Contextof a Process-Saving the Context-Manipulation of a Process Address Space-SleepProcess Control-signals-Process Termination-Awaiting-Invoking other Programs-TheShell-System Boot and the INIT Process.

**UNIT V****9**

Memory Management Policies-Swapping-Demand Paging-a Hybrid System-I/OSubsystem-Driver Interfaces-Disk Drivers-Terminal Drivers.

**TOTAL: 45 hrs****TEXTBOOK:**

1. Maurice J. Bach, "The Design of the Unix Operating System", Pearson Education, 2002.

**REFERENCES:**

1. Uresh Vahalia, "UNIX Internals: The New Frontiers", Prentice Hall, 2000.

## 19150E64CP- PARALLEL COMPUTING

### AIM:

To study the scalability & clustering issues, understand the technologies used for parallel computation, study the different inter connection networks and the different software programming models.

### OBJECTIVES:

- To study the scalability and clustering issues and the technology necessary for them.
- To understand the technologies enabling parallel computing.
- To study the different types of interconnection networks and parallel programming models.
- To study the software support needed for shared memory programming.

### **UNIT I SCALABILITY AND CLUSTERING**

**9**

Evolution of Computer Architecture - Dimensions of Scalability - Parallel Computer Models - Basic Concepts Of Clustering - Scalable Design Principles - Parallel Programming Overview - Processes, Tasks and Threads - Parallelism Issues - Interaction / Communication Issues - Semantic Issues In Parallel Programs.

### **UNIT I IENABLING TECHNOLOGIES**

**9**

System Development Trends - Principles of Processor Design - Microprocessor Architecture Families - Hierarchical Memory Technology - Cache Coherence Protocols - Shared Memory Consistency - Distributed Cache Memory Architecture - Latency Tolerance Techniques - Multithreaded Latency Hiding.

### **UNIT III SYSTEM INTERCONNECTS**

**9**

Basics of Interconnection Networks - Network Topologies and Properties - Buses, Crossbar and Multistage Switches, Software Multithreading - Synchronization Mechanisms.

### **UNIT IV PARALLEL PROGRAMMING**

**9**

Paradigms And Programmability - Parallel Programming Models - Shared Memory Programming.

### **UNIT V MESSAGE PASSING PROGRAMMING**

**9**

Message Passing Paradigm - Message Passing Interface - Parallel Virtual Machine.

**TOTAL : 45hrs**

### TEXT BOOK:

1. Kai Hwang and Zhi.Wei Xu, "Scalable Parallel Computing", Tata McGraw-Hill, New Delhi,2003.

### REFERENCES:

1. David E. Culler & Jaswinder Pal Singh, "Parallel Computing Architecture: A Hardware/Software Approach", Morgan Kaufman Publishers, 1999.
2. Michael J. Quinn, "Parallel Programming in C with MPI & OpenMP", Tata McGraw-Hill, NewDelhi,2003.
3. Kai Hwang, "Advanced Computer Architecture" Tata McGraw-Hill, New Delhi, 2003.

**19150E64DP- PROGRAMMING PARADIGMS****AIM:**

Develop a greater understanding of the issues involved in programming language

Design and implementation

**OBJECTIVES:**

- Develop an in-depth understanding of functional, logic, and object-oriented programming paradigms.
- Implement several programs in languages other than the one emphasized in the core curriculum (Java/C++).
- Understand design/implementation issues involved with variable allocation and binding, control flow, types, subroutines, parameter passing.
- Develop an understanding of the compilation process.

**UNIT I OBJECT-ORIENTED PROGRAMMING – FUNDAMENTALS 9**

**Review of OOP** - Objects and classes in Java - defining classes - methods - access specifiers - static members - constructors - finalize method - Arrays - Strings - Packages - JavaDoc comments

**UNIT II OBJECT-ORIENTED PROGRAMMING – INHERITANCE 9**

Inheritance - class hierarchy - **polymorphism - dynamic binding** - final keyword - abstract classes - the Object class - Reflection - interfaces - object cloning - inner classes - proxies

**UNIT III EVENT-DRIVEN PROGRAMMING 9**

**Graphics programming - Frame - Components** - working with 2D shapes - Using color, fonts, and images - Basics of event handling - event handlers - adapter classes - actions - mouse events - AWT event hierarchy - introduction to Swing - Model-View- Controller design pattern - buttons - layout management - Swing Components

**UNIT IV GENERIC PROGRAMMING 9**

Motivation for generic programming - generic classes - **generic methods - generic code** and virtual machine - inheritance and generics - reflection and generics - exceptions - exception hierarchy - throwing and catching exceptions - Stack Trace Elements - assertions - logging

**UNIT V CONCURRENT PROGRAMMING 9**

Multi-threaded programming - **interrupting threads - thread states** - thread properties - thread

synchronization - thread-safe Collections - Executors - synchronizers - threads and event-driven programming.

]

**TOTAL:45hrs**

**TEXT BOOK:**

1. Cay S. Horstmann and Gary Cornell, "Core Java: Volume I - Fundamentals", Eighth Edition, Sun Microsystems Press, 2008.

**SEMESTER - VII (ELECTIVE VI)**  
**19150E73AP- HIGH SPEED NETWORKS**

**AIM:** This course provides introduction to emerging high speed network technologies and facilitates the students identify where the new technology can be used to enhance performance of business networks.

**OBJECTIVES:**

- Good understanding of packet-switched networking concepts and principles of operation.
- Good understanding of Internet protocols and architectures (e.g., IP protocol stack).
- Solid foundation in computer operating systems fundamentals.
- Ability to perform independent research, analyze findings in high speed networks.

**UNIT I HIGH SPEED NETWORKS 9**

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - ATM Service Categories - AAL. High Speed LAN's: Fast Ethernet, Gigabit Ethernet, Fibre Channel - Wireless LAN's: applications, requirements - Architecture of 802.11

**UNIT II CONGESTION AND TRAFFIC MANAGEMENT 8**

Queuing Analysis- Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control - Traffic Management - Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

**UNIT III TCP AND ATM CONGESTION CONTROL 12**

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management - Exponential RTO backoff - KARN's Algorithm - Window management - Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Frame work, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

**UNIT IV INTEGRATED AND DIFFERENTIATED SERVICES 8**

Integrated Services Architecture - Approach, Components, Services- Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ - Random Early Detection, Differentiated Services

**UNIT V PROTOCOLS FOR QOS SUPPORT 8**

RSVP - Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol Architecture, Data Transfer Protocol,

RTCP.

**TOTAL:45hrs**

**TEXT BOOK:**

**19150E73BP- BIO INFORMATICS**

**AIM:**

To impart knowledge, on basic techniques of Bioinformatics.

**OBJECTIVE:**

- To learnt about Sequencing Alignment and Dynamic Programming.
- To gain knowledge about various secondary ,ternary structures .
- To have ability to design drugs.
- To understand Evolutionary Trees and Phylogeny.

**UNIT I**

**9**

Introduction to molecular biology - **the genetic material - gene** structure - proteinstructure - chemical bonds -

molecular biology tools - genomic information content.

## UNIT II

9

Data searches - simple alignments - **gaps - scoring matrices** - dynamic programming - global and local alignments - database searches - multiple sequence alignments - Patterns for substitutions - estimating substitution numbers - evolutionary rates - molecular clocks - evolution in organelles.

## UNIT III

9

Phylogenetics - history and advantages - **phylogenetic trees - distance** matrix methods - maximum likelihood approaches - multiple sequence alignments - Parsimony - ancestral sequences - strategies for faster searches - consensus trees - tree confidence - comparison of phylogenetic methods - molecular phylogenies.

## UNIT IV

9

Genomics - **prokaryotic genomes: prokaryotic** gene structure - GC content - gene density - eukaryotic genomes: gene structure - open reading frames - GC content - gene expression - transposition - repeated elements - gene density.

## UNIT V

9

Amino acids - **polypeptide composition - secondary structure** - tertiary and quaternary structure - algorithms for modeling protein folding - structure prediction - predicting RNA secondary structures - Proteomics - protein classification - experimental techniques - inhibitors and drug design - ligand screening - NMR structures - empirical methods and prediction techniques - post-translational modification prediction.

**TOTAL: 45 hrs**

## **19150E73CP- SOFTWARE PROJECT MANAGEMENT**

### AIM:

Software Project Management provides insight to the importance of careful project management

### OBJECTIVES:

- Understand Project planning and management
- Identify Client management and project definition
- Understand testing based approach to development
- Team management and ongoing schedule tracking

## UNIT 1 SOFTWARE MANAGEMENT

9

Conventional Software Management - The Waterfall Model - **Conventional Software Management** Performance. Evolution of Software Economics - Pragmatic Software Cost Estimation. Reducing Software Product Size - Languages -Object-Oriented Methods and Visual Modeling - Reuse. Improving Software Processes - Team Effectiveness - Automation through Software Environments - Achieving Required Quality. Modern Software Management - Transitioning to an Iterative Process

## UNIT 2 SOFTWARE MANAGEMENT PROCESS FRAMEWORK

9

Life-Cycle Phases - **Engineering and Production Stages - Inception** Phase - Elaboration Phase - Construction Phase -Transition Phase. Artifacts of the Process - Artifact Sets - Management Set - Engineering Sets - Artifact Evolution overthe Life Cycle - Test Artifacts - Management Artifacts - Engineering Artifacts - Pragmatic Artifacts. Model-BasedSoftware Architectures - Management Perspective - Technical Perspective. Workflows of the Process - Software ProcessWorkflows - Iteration Workflows - Checkpoints of the Process.

## UNIT 3 SOFTWARE MANAGEMENT DISCIPLINES

9

Iterative Process Planning - **Work Breakdown Structures - Conventional WBS Issues** - Planning Guidelines - Cost and Schedule Estimating Process - Iteration Planning Process. Project Organizations and Responsibilities - Line-of-BusinessOrganizations - Project Organizations - Evolution of Organizations. Process Automation - Tools: Automation BuildingBlocks - Project Environment - Round-Trip Engineering - Change Management. Project Control and ProcessInstrumentation - Seven Core Metrics - Management Indicators - Quality Indicators - . Pragmatic Software Metrics -Metrics Automation.

## UNIT 4 PROJECT PROFILES

9

Continuous Integration - **Early Risk Resolution - Evolutionary Requirements** - Teamwork among Stakeholders - Top 10 Software Management Principles - Software Management Best Practices - Next-Generation Software Economics - Next-Generation Cost Models - Modern Software Economics - Modern Process Transitions.

## UNIT 5 PROJECT EXECUTION AND CLOSURE

9

Review Process - Planning - Overview **and Preparation - Group Review Meeting** - Rework and Follow-up -Guidelines for Reviews in Projects - Analysis and Control Guidelines - Case Studies. Project Monitoring and Control - ProjectTracking - Activities Tracking - Defect Tracking - Issues Tracking - Status Reports - Milestone Analysis. DefectAnalysis and Prevention - Process Monitoring and Audit. Project Closure - Analysis - Analysis Report.

**TOTAL**  
45hrs

## 19150E73DP-DIGITAL IMAGE PROCESSING

### **AIM:**

The purpose of this course is to introduce the basic concept and methodologies for digital image processing.

### **OBJECTIVES :**

- To understand the fundamentals of image processing.
- To learn about the various transforms used in image processing.
- To introduce for enhancing the quality of images
- To gain knowledge about the various techniques of image enhancement, reconstruction, compression and segmentation.

### **UNIT 1 DIGITAL IMAGE FUNDAMENTALS 9**

Introduction-Elements of Digital Image Processing system- Visual perception and properties of human eye-image representation-A simple image model-Some basic relationship between pixels-Image geometry.

### **UNIT 2 IMAGE TRANSFORMS 9**

Introduction to Fourier Transform and DFT - Properties of 2D Fourier Transform-FFT- Separable Image Transforms -Walsh - Hadamard - Discrete Cosine Transform, Haar, -KL transforms.

### **UNIT 3 IMAGE ENHANCEMENT 9**

Image Enhancement b-Histogram Modeling-equalization and modification. Image smoothing-Image Sharpening-Spatial Filtering-Homomorphic Filtering for image enhancement.

### **UNIT 4 IMAGE RESTORATION 9**

Model of Image Degradation/restoration process –Inverse filtering -Least mean square(wiener) filtering –Constrained least mean square restoration – Singular value decomposition-Recursive filtering.

### **UNIT 5 IMAGE COMPRESSION AND SEGMENTATION 9**

Fundamentals -Image compression models- Lossless compression: Variable length coding-LZW coding. Lossy Compression: Transform coding-Wavelet coding. Image Segmentation: Detection of discontinuities-Edge linking and boundary detection-thresholding-Region oriented segmentation and Texture.

**TOTAL 45 hrs**

# 19248S11A - HIGHER MATHEMATICS

L T P C  
3 1 0 4

## AIM

To extend student's mathematical maturity and ability to deal with abstraction and to introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems.

## OBJECTIVES

At the end of the course, students would

- Have knowledge of the concepts needed to test the logic of a program.
- Have gained knowledge which has application in expert system, in data base and a basic for the prolog language.
- Have an understanding in identifying patterns on many levels.
- Be aware of a class of functions which transform a finite set into another finite set which relates to input output functions in computer science.
- Be exposed to concepts and properties of algebraic structures such as semigroups, monoids and groups.

## UNIT I SETS, RELATIONS AND FUNCTIONS

9

Basic Concepts – Relationships between sets-Operations on sets-Principles of inclusion and exclusion – Minterms and Maxterms of a set – Relations partial ordering relation-Equivalence relation-Binary relations-Cyclic order relation –  $a \equiv (mod\ m)$  relations: Partitions sets – Hassee diagram- functions: Properties- Composition - inverse function

## UNIT II LOGIC

9

Propositional logic – Logical connectivity's-Truth table-Normal forms(Connective and disjunctive)-Predicate logic-Universal and existential quantifiers induction.

## UNIT III COMBINATORICS

9

Basic of counting - counting arguments - Pigeonhole principle - Permutations and combinations - Recursion and Recurrence relations - Generating functions.

## UNIT IV MODELLING COMPUTATION AND LANGUAGES

9

Finite state machines-Deterministic and Non-Deterministic finite state machines-Turing Machines-Formal Languages-Classes of Grammars-Type\_0 – Context Sensitive-Context-Free-Regular Grammars-Ambiguity.

## UNIT V LATICE AND BOOLEAN ALGEBRA

9

Partial order relation, poset-lattices, Hasse diagram-Boolean Algebra

Total No of periods: 45

## 19250H12 - MODERN OPERATING SYSTEM

L T P C  
4 0 0 4

### AIM:

To have a thorough knowledge of processes, scheduling concepts, memory management, I/O and file systems, multimedia operating system and recent operating systems.

### OBJECTIVES:

- To have an overview of different types of operating systems.
- To know the components of an operating system.
- To have a thorough knowledge of process management.
- To have a thorough knowledge of storage management.
- To know the concepts of I/O and file systems.
- To know the concepts of multimedia operating systems.

### UNIT I

9

Introduction – computer hardware review – operating system zoo - Operating System Concepts - System Calls - Operating System Structure -.Process And Threads : Processes – Threads - Interprocess Communication - Scheduling.

### Unit II

9

Memory Management Memory Abstraction:Address Spaces, No Memory Abstraction - Virtual Memory - Page Replacement Algorithms - Modeling Page Replacement Algorithms - Design Issues For Paging Systems – Segmentation. File Systems:File Directories File System Implementation

### Unit III

9

Deadlocks - Introduction To Deadlocks - The Ostrich Algorithm - Deadlock Detection And Recovery - Deadlock Avoidance - Deadlock Prevention - Other Issues – Input/output Principles of I/O Hardware – Principles of I/O Software – I/O Software Layers – Disks – Clocks – Thin Clients.

### Unit IV

9

Multiple processor systems - multiprocessors - multicomputers - virtualization - distributed systems - multimedia operating systems . Multimedia files - video compression audio compression – multimedia scheduling - disk scheduling for multimedia.

### Unit V

9

Case Study – LINUX , WINDOWS VISTA , SYMBIAN OS

**Total : 45 hrs**

### TEXT BOOK:

1. Andrew S. Tanenbaum , “Modern Operating Systems “ , Pearson Education , 3<sup>rd</sup> Edition , 2009

**19250H13 - PARALLEL AND HIGH PERFORMANCE COMPUTING**

**L T P C**

**4 0 0 4**

**AIM:**

The main objective of this paper is to make the students to know the need of Parallel Computing.

**OBJECTIVES:**

- To understand the models and parameters used.
- To understand the Matrix Algorithms and Design Issues.

**Unit I : Introduction : 9**

Need for Parallel Computing - Scope of Parallel Computing - Issues in Parallel Computing - Parallel Processing Concepts (Overview) - Levels of parallelism (instruction, transaction, task, thread, memory, function) - Models (SIMD, MIMD, SIMT, SPMD, Dataflow Models, Demand-driven Computation etc) -Architectures.

**Unit II : Models of Parallel Computing : 9**

Taxonomy of Parallel Architectures -Dynamic Interconnection Networks - Static Interconnection Networks - Message Transfer - Reduction, Parallel Prefix - GPU thread model.

**Unit III : Performance Modelling : 9**

Metrics – Granularity – Scalability – Overhead – Isoefficiency.

**Unit IV : Matrix Algorithms : 9**

Matrix Partitioning - Matrix Transposition - Matrix Vector Multiply - Matrix Multiply - CUDA, vector add, matrix multiply, sequence alignment - Linear Equations - LU(P) Decomposition

**Unit V : Fundamental Design Issues in Parallel Computing 9**

Synchronization – Scheduling - Job Allocation -Job Partitioning - Dependency Analysis - Mapping Parallel Algorithms onto Parallel Architectures - Performance Analysis of Parallel Algorithms

**Total : 45 hrs**

**TEXTBOOK:**

Introduction to Parallel Computing, 2<sup>nd</sup> Edition- AnanthGrama, Anshul Gupta, George Karypis, Vipin Kumar. The Addison Wesley Publishing Company, ISBN 0-201-64865-2.

**19250H14 -ADHOC AND SENSOR NETWORK**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand the current and emerging applications of the adhoc sensor networks.

**OBJECTIVE:**

To understand

- A broad overview of the state of wireless and ad hoc networking.
- The overview of the physical, networking and architectural issues of ad hoc networks.
- The technologies that will enable the next generation of ad hoc networks and the proliferation of ubiquitous computing.
- The sensor networks and the unique set of design challenges that they introduce.

**UNIT I AD-HOC MAC 9**

Introduction – Issues in Ad-Hoc Wireless Networks. MAC Protocols – Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

**UNIT II AD-HOC NETWORK ROUTING & TCP 9**

Issues – Classifications of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc – Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.

**UNIT III WSN -MAC 9**

Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

**UNIT IV WSN ROUTING, LOCALIZATION & QOS 9**

Issues in WSN routing – OLSR, AODV. Localization – Indoor and Sensor Network Localization. QoS in WSN.

**UNIT V MESH NETWORKS 9**

Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

**Total : 45 hrs**

**19250H15 - ADVANCED DATA STRUCTURES AND  
ALGORITHMS**

**L T P C  
3 1 0 4**

**AIM:**

To make the learners to understand the Analysis of algorithms and Data Structures.

**OBJECTIVES :**

To Understand

- The Different Heap Structures, Search Structures and Multimedia Structures.
- The various coding scheduling and algorithms.
- The various multimedia structures.

**UNIT I FUNDAMENTALS : 9+3**

Mathematical Induction -Asymptotic Notations -Properties of Big-oh Notation - Conditional Asymptotic Notation -Algorithm Analysis -Amortized Analysis -NP-Completeness -NP-Hard -Recurrence Equations -Solving Recurrence Equations -Memory Representation of Multi-dimensional Arrays -Time-Space Tradeoff.

**UNIT II HEAP STRUCTURES : 9+3**

Min/Max heaps -Deaps -Leftist Heaps -Binomial Heaps -Fibonacci Heaps -Skew Heaps -Lazy-Binomial Heaps.

**UNIT III SEARCH STRUCTURE : 9+3**

Binary Search Trees -AVL Trees -Red-Black trees -Multi-way Search Trees -B-Trees - Splay Trees -Tries.

**UNIT IV MULTIMEDIA STRUCTURES : 9+3**

Segment Trees -k-d Trees - Point Quad Trees -MX -Quad Trees - R-Trees -TV - Trees.

**UNIT V ALGORITHMS : 9+3**

Huffman Coding -Convex Hull -Topological Sort -Tree Vertex Splitting -Activity Networks -Flow Shop Scheduling -Counting Binary Trees -Introduction to Randomized Algorithms.

**Total :60 hrs**

**CSE/Semester - I**

## **19250L17 -ADVANCED WEB TECHNOLOGIES LAB**

**L T P C**  
**0 0 3 3**

1. Creation of HTML pages with frames, links, tables and other tags.
2. Usage of internal and external CSS along with HTML pages.
3. Client side Programming
  - i. Java script for displaying date and comparing two dates.
  - ii. Form Validation including text field, radio buttons, check boxes, list box and other controls.
4. Usage of ASP/JSP objects response, Request, Application, Session, Server, ADO etc.
  - i. Writing online applications such as shopping, railway/air/bus ticket reservation system with set of ASP/JSP pages.
  - ii. Using sessions and cookies as part of the web application.
5. Writing Servlet Program using HTTP Servlet.
6. Any online application with database access.
7. Creation of XML document for a specific domain.
8. Writing DTD or XML schema for the domain specific XML document.
9. Parsing an XML document using DOM and SAX Parsers.
10. Sample web application development in the open source environment.

**19250H21 - MIDDLEWARE TECHNOLOGIES**

**L T P C**  
**3 1 0 4**

**AIM:**

The aim of the course is to teach the role of middleware in the distributed environment and its common services.

**OBJECTIVES:**

- To study the set of services that a middleware system constitutes of.
- To understand how middleware facilitates the development of distributed applications in heterogeneous environments.
- To study how it helps to incorporate application portability, distributed application component interoperability and integration.
- To learn the object oriented middleware basics through the example of the following CORBA objects.
- To understand the basics of Web services that is the most often-used middleware technique.

**UNIT – I**

**9+3**

**Introduction :** What is a distributed system- Client server Architecture – Multi-tier Architecture- Middleware - Classification of middleware- Event based middleware-Object based Middleware - Message based middleware and its Principal functions- Introduction to concepts of database middleware.

**UNIT – II**

**9+3**

**RPC & message Passing middleware -** Introduction to procedure calls - Principles of RPC Architecture- Structure of Communication - Java RMI

**UNIT – III**

**9+3**

**Other middleware:** Introduction to EJB- Introduction to JDBC & ODBC **Interface Definition Language:** Introduction to specification - IDL Identifiers-Attributes type correction -Classes- Arrays- Documentation -Any type-Modules -Interfaces- Exceptionhandling -pre Compiler Directives -OO Design using IDL.

**UNIT – IV**

**9+3**

**CORBA:** CORBA 2 Standard- Standard Object model- CORBA Architecture-CORBA Client and Object Implementation- Interface & Implementation repository-CORBA Services- Key Issues- Naming Services -Relationships- Event Services- life Cycle services- ObjectQuery Services-properties Services-Time Services- CORBA facilities & CORBA Domains.

**UNIT –V**

**9+3**

**COM:** Classes- Objects-Query Interface-Dynamic Composition- Apartments-In process Activation -Server Lifetime-Server Lifetime-COM Security-Access Control-Tokenmanagement- Introduction to DCOM.

**Total :60hrs**

**REFERENCE BOOKS:**

1. Daniel Serian, "Middleware", Springer Verlag, 1999.
2. Troy Bryan Downing, "Java RMI: Remote Method Invocation", IDG Books India, 2000.
3. Thomas J Mowbray & William A Ruh, "Inside CORBA Distributed Objects and Application", Addison Wesley, 1999.

**19250H22 - OBJECT ORIENTED SOFTWARE ENGINEERING**

**L T P C**  
**4 0 0 4**

**AIM:**

To learn the advanced software engineering principles and methodologies for effective software development.

**OBJECTIVES:**

- To learn about software prototyping, analysis and design.
- To learn UML and its usage.
- Case studies to apply the principles.

**UNIT - 1 INTRODUCTION 8**

Software Engineering Paradigms - Software Development process models - Project & Process - Project management – Process & Project metrics - Object Oriented concepts & Principles.

**UNIT - 2 PLANNING & SCHEDULING 9**

Software prototyping - Software project planning – Scope – Resources - Software Estimation - Empirical Estimation Models-Planning-Risk Management - Software Project Scheduling – Object Oriented Estimation & Scheduling.

**UNIT - 3 ANALYSIS & DESIGN 12**

Analysis Modeling - Data Modeling - Functional Modeling & Information Flow-Behavioral Modeling-Structured Analysis - Object Oriented Analysis - Domain Analysis-Object oriented Analysis process - Object Relationship Model - Object Behaviour Model. Design Concepts & Principles - Design Process - Design Concepts - Modular Design –Design Effective Modularity - Introduction to Software Architecture - Data Design – Transform Mapping – Transaction Mapping – OOD - Design System design process- Object design process -Design Patterns.

**UNIT - 4 IMPLEMENTATION & TESTING 8**

Top-Down, Bottom-Up, object oriented product Implementation & Integration. Software testing methods-White Box, Basis Path-Control Structure –Black Box-Unit Testing- Integration testing-

Validation & System testing. Testing OOA & OOD models-Object oriented testing strategies.

**UNIT – 5**

**MAINTENANCE**

**8**

Maintenance process-System documentation-program evolution dynamics-Maintenance costs-Maintainability measurement – Case StudiesThe laboratory shall include development of systems applying the Software Engineering principles and methods for specific applications.

**Total: 45 hr**

**TEXT BOOKS:**

1. Roger S. Pressman, “ Software Engineering A Practitioner’s Approach” , Fifth Edition,Tata McGraw Hill.
2. Grady Booch, James Rumbaugh, Ivar Jacobson –“the Unified Modeling Language User Guide” – Addison Wesley,1999. (Unit III)

**CSE/Semester - II**

## **19250CRM - RESEARCH METHODOLOGY**

**L T P C**  
**3 0 0 3**

### **AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

### **OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

### **OUTCOME:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

### **PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

### **UNIT I**

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-**Basic principles of experimental designs**-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

### **UNIT II**

**Formulation of Hypothesis** – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- **Processing and analysis of data** – **editing – coding** – transcription – tabulation –outline of statistical analysis.

### **UNIT III**

Data Analysis using Excel- Tabulation of Data in excel ( Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

### **UNIT IV**

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software

### **UNIT V**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references

## 17250H31 - SOFTWARE PROJECT MANAGEMENT

L T P C  
4 0 0 4

### AIM:

Software Project Management provides insight to the importance of careful project management

### OBJECTIVES:

- Understand Project planning and management.
- Identify Client management and project definition.
- Understand testing based approach to development.
- Team management and ongoing schedule tracking.

### UNIT I FUNDAMENTALS

9

Conventional Software Management – Evolution of Software Economics – Improving Software Economics – Conventional versus Modern Software Project Management.

### UNIT II SOFTWARE MANAGEMENT PROCESS FRAMEWORK

9

Lifecycle Phases – Artifacts of the Process – Model Based Software Architectures – Workflows of the Process – Checkpoints of the Process.

### UNIT III SOFTWARE MANAGEMENT DISCIPLINES

9

Iterative Process Planning – Organization and Responsibilities – Process Automation – Process Control and Process Instrumentation – Tailoring the Process.

### UNIT IV MANAGED AND OPTIMIZED PROCESS

9

Data Gathering and Analysis – Principles of Data Gathering – Data Gathering Process – Software Measures – Data Analysis – Managing Software Quality – Defect Prevention.

### UNIT V CASE STUDIES

9

COCOMO Cost Estimation Model – Change Metrics – CCPDS–R.

**Total: 45hrs**

### TEXT BOOKS:

1. Walker Royce “Software Project Management A Unified Framework”, Pearson Education, 2004
2. Humphrey Watts, “Managing the software process”, Addison Wesley, 1989. (Unit IV)

**SEMESTER - I - ELECTIVE - I**  
**19250E16A - MULTIMEDIA SYSTEMS**

**L T P C**  
**4 0 0 4**

**AIM:**

To impart knowledge on Multimedia system and design.

**OBJECTIVES:**

- To study the graphics techniques and algorithms.
- To study the multimedia concepts and various I/O technologies

**UNIT 1 Introduction**

**9**

Line - Curve and Ellipse Drawing Algorithms – Attributes – Two-Dimensional Geometric Transformations – Two-Dimensional Clipping and Viewing.

**UNIT II Three-Dimensional Concepts**

**9**

Three-Dimensional Object Representations – Three-Dimensional Geometric and Modeling Transformations – **Three-Dimensional Viewing** – Color models – Animation.

**UNIT III Multimedia Systems Design**

**9**

An Introduction – Multimedia applications – Multimedia System Architecture – Evolving technologies for Multimedia – **Defining objects for Multimedia systems** – Multimedia Data interface standards – Multimedia Databases.

**UNIT IV Multimedia File Handling**

**9**

Compression & Decompression – Data & File Format standards – Multimedia I/O technologies - Digital voice and audio – **Video image and animation** – Full motion video – Storage and retrieval Technologies.

**UNIT V Hypermedia**

**9**

Multimedia Authoring & User Interface – Hypermedia messaging - Mobile Messaging – Hypermedia message component – **Creating Hypermedia message** – Integrated multimedia message standards – Integrated Document management – Distributed Multimedia Systems.

**Total: 45 Hours**

## 19250E16B- GENETIC ALGORITHMS

L T P C

4 0 0 4

### AIM:

To make the students learn the fundamentals of Genetic Algorithms and search technique used in computing.

### OBJECTIVES:

1. Understand and be able to apply fundamental GA theory.
2. be able to implement or modify simple genetic algorithms.
3. be able to apply GAs to problems in the student's field.
4. to find exact or approximate solutions to optimization and search problems.

### UNIT-I

9

**Introduction** :A brief history of evolutionary computation, Elements of Genetic Algorithms, A simple genetic algorithm, Applications of genetic algorithms. Genetic Algorithms in Scientific models - Evolving computer programs, data analysis & prediction, evolving neural networks, modeling interaction between learning & evolution, modeling sexual selection, measuring evolutionary activity.

### UNIT-II

9

**Theoretical Foundation of genetic algorithm** :Schemas & Two-Armed and k-armed problem, royal roads, exact mathematical models of simple genetic algorithms, Statistical- Mechanics Approaches.

### UNIT-III

9

**Computer Implementation of Genetic Algorithm** : Data structures, Reproduction, crossover & mutation, mapping objective functions to fitness form, fitness scaling, coding, a multiparameter, mapped, fixed point coding, discretization and constraints.

### UNIT-IV

9

**Some applications of genetic algorithms** :The risk of genetic algorithms, De Jong & function optimization, Improvement in basic techniques, current application of genetic algorithms

### UNIT-V

9

**Advanced operators & techniques in genetic search** :Dominance, duplicity, & abeyance, inversion & other reordering operators, other micro operators, Niche & speciation, multi objective optimization, knowledge based techniques, genetic algorithms & parallel processors.

**Total : 45hrs**

### TEXT BOOKS:

1. David E. Goldberg, “Genetic algorithms in search, optimization & Machine Learning”  
Pearson Education, 2006

## 19250E16C - SOFTWARE METRICS

L T P C  
4 0 0 4

### AIM:

To understand software quality metrics.

### OBJECTIVES:

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

### UNIT I MEASUREMENTS THEORY

9

- Measurements In Software Engineering - Scope Of Software Metrics - Measurements Theory - Goal Based Framework – Software Measurement Validation.

### UNIT II DATA COLLECTION AND ANALYSIS

9

Empirical Investigation - Planning Experiments - Software Metrics Data Collection - Analysis Methods – Statistical Methods.

### UNIT III PRODUCTS METRICS

9

Measurement Of Internet Product Attributes - Size And Structure - External Product Attributes - Measurement Of Quality.

### UNIT IV QUALITY METRICS

9

Software Quality Metrics - Product Quality - Process Quality - Metrics For Software Maintenance - Case Studies Of Metrics Program - Motorola - Hp And IBM.

### UNIT V MANAGEMENT METRICS

9

Quality Management Models - Rayleigh Model - Problem Tracking Report (PTR) Model - Reliability Growth Model - Model Evaluation - Orthogonal Classification.

**TOTAL = 45**

**19250E24A - ADVANCED DISTRIBUTED COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

This course discusses the depth concepts of distributed computing and its features.

**OBJECTIVES:**

Understanding the concepts of

- processing . distributed systems, operating system issues.
- learn about distributed transaction
- study about the distributed databases.

**UNIT-I INTRODUCTION 9**

Characterization of Distributed Systems - Examples - Resource Sharing and the Web - Challenges – System Models - **Architectural and Fundamental Models** - Networking and Internetworking - Types of Networks - Network Principles - Internet Protocols - Case Studies: Ethernet, WiFi.

**UNIT-II PROCESSES AND DISTRIBUTED OBJECTS 9**

Interprocess Communication - The API for the Internet Protocols - External Data Representation and Marshalling - Client-Server Communication - **Group Communication** - Case Study: Interprocess communication in UNIX - Distributed Objects and Remote Invocation - Communication Between Distributed Objects - Remote Procedure Call - Events and Notifications - **Case Study: Java RMI.**

**UNIT-III OPERATING SYSTEM ISSUES 9**

The OS Layer - Protection - Processes and Threads - Communication and Invocation – OS Architecture - Security - Overview - **Cryptographic Algorithms** - Digital Signatures - Cryptography Pragmatics – Case Studies Kerberos, 802.11 WiFi - Distributed File Systems - File Service Architecture - Sun Network File System - **Distributed Debugging** - Distributed Mutual Exclusion – Elections – Multicast Communication Related Problems.

**UNIT-IV DISTRIBUTED TRANSACTION PROCESSING 9**

Transactions - Nested Transactions - **Locks - Optimistic Concurrency Control** - Timestamp Ordering - Comparison - Flat and Nested Distributed Transactions - Atomic Commit Protocols - Concurrency Control in Distributed Transactions - Transaction Recovery - Overview of Replication And Distributed Multimedia Systems.

**UNIT-V DISTRIBUTED DATABASES 9**

Features of Distributed versus Centralized Databases -Principles of Distributed Databases - Levels of Distribution Transparency -Reference Architecture for Distributed Databases - Types of Data Fragmentation - Integrity Constraints in Distributed Databases.

**Total : 45 hrs**  
**CSE/Elective -II/Semester - II**

**TEXT BOOKS :**

## **19250E24B- DATA WAREHOUSING & DATA MINING**

**L T P C**  
**4 0 0 4**

### **AIM:**

To serve the students with an emphasis on the design aspects of Data Mining and Data Warehousing.

### **OBJECTIVES:**

- To introduce the concept of data mining with in detail coverage of basic tasks, metrics, issues, and implication. Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of data warehousing with special emphasis on architecture and design.

### **UNIT-I INTRODUCTION 9**

Introduction: Fundamentals of data mining, Data Mining Functionalities, Classification of Data Mining systems, Major issues in Data Mining, Data Warehousing and Business Analysis: - Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – **DBMS Schemas for Decision Support – Data Extraction, Cleanup,** and Transformation Tools –Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

### **UNIT-II DATA MINING AND ASSOCIATION RULE MINING 9**

Data Mining: - Data Mining Functionalities – **Data Preprocessing** – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.

Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – **Association Mining to Correlation Analysis – Constraint-Based Association Mining.**

### **UNIT-III CLASSIFICATION AND PREDICTION 9**

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – **Bayesian Classification – Rule Based Classification – Classification by Back propagation** – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

### **UNIT IV CLUSTER ANALYSIS 9**

Cluster Analysis: - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – **Density-Based Methods** – Grid-Based

Methods – Model-Based Clustering Methods – Clustering High- Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

***CSE/Elective -II/Semester - II***

**UNIT V                      MINING OTHER DATA                      9**

Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web.

**TOTAL = 45HRS**

**REFERENCES:**

1. Jiawei Han and Micheline Kamber “Data Mining Concepts and Techniques” Second Edition, Elsevier, Reprinted 2008.

## **19250E24C- ARTIFICIAL NEURAL NETWORKS**

**L T P C**  
**4 0 0 4**

### **AIM:**

To give out the students with an importance on the various aspects of artificial neural networks.

### **OBJECTIVES:**

- To introduce the concepts of artificial neural networks such as biological neural networks, clustering and structures
- To study the linear models for regression , classification, kernel methods and feed forward neural networks

**UNIT-I Introduction to artificial neural networks 9**  
Biological neural networks - Pattern analysis tasks: Classification, Regression, Clustering - Computational models of neurons - Structures of neural networks - **Learning principles.**

**UNIT-II Linear models for regression and classification 9**  
Polynomial curve fitting - Bayesian curve fitting - Linear basis function models – Bias - variance decomposition - Bayesian linear regression - **Least squares for classification** - Logistic regression for classification - Bayesian logistic regression for classification

**UNIT-III Feed forward neural networks 9**  
Pattern classification using perception - Multilayer feed forward neural networks (MLFFNNs) - **Pattern classification and regression using MLFFNNs** - Error back propagation learning - Fast learning methods: Conjugate gradient method – Auto associative neural networks - Bayesian neural networks.

**UNIT-IV Kernel methods for pattern analysis 9**  
Statistical learning theory - **Support vector machines for pattern classification** - Support vector regression for function approximation - Relevance vector machines for classification and regression - **Self-organizing maps:** Pattern clustering - Topological mapping - Kohonen’s self-organizing map.

**UNIT-V Feedback neural networks 9**  
Pattern storage and retrieval - **Hopfield model** - Boltzmann machine - Recurrent neural networks.

**Total: 45 hrs**

***CSE/Elective -II/Semester - II***

**TEXT BOOKS:**

1. B.Yegnanarayana, Artificial Neural Networks, Prentice Hall of India, 1999
2. Satish Kumar, Neural Networks – A Classroom Approach, Tata McGraw-Hill, 2003
3. S.Haykin, Neural Networks – A Comprehensive Foundation, Prentice Hall, 1998
4. C.M.Bishop, Pattern Recognition and Machine Learning, Springer, 2006

## **19250E25A- SERVICE ORIENTED ARCHITECTURE**

**AIM:**

To familiarize the students with the concepts of service oriented architectures. (SOA).

**OBJECTIVES:**

- Understand SOA, service orientation and web services
- Analyzing and designing business based on SOA principles.
- Learning the concepts of XML.

**UNIT I**

**9**

Software Architecture – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models.

**UNIT II**

**9**

Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder objectives – benefits of SPA – Cost Savings

**UNIT III**

**9**

SOA implementation and Governance – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software s a service – SOA technologies – proof-of-concept – process orchestration – SOA best practices

**UNIT IV**

**9**

Meta data management – XML security – XML signature – XML Encryption – SAML – XACML – XKMS – WS-Security – Security in web service framework – advanced messaging

**UNIT V**

**9**

Transaction processing – paradigm – protocols and coodination – transaction specifications – SOA in mobile – research issues

**Total: 45 hrs**

**REFERENCES:**

1. Shankar Kambhampaly, “Service –Oriented Architecture for Enterprise Applications”, Wiley India Pvt Ltd, 2008.
2. Eric Newcomer, Greg Lomow, “Understanding SOA with Web Services”, Pearson Education.
3. Mark O’ Neill, et al. , “Web Services Security”, Tata McGraw-Hill Edition, 2003.

## **19250E25B - HIGH SPEED NETWORKS**

**L T P C**  
**4 0 0 4**

### **AIM:**

To study the various performance and analysis issues involved in high-speed data transmission.

### **OBJECTIVES:**

Be able to

- Describe and interpret the basics of high speed networking technologies.
- Apply the concept learnt in this course to optimize and troubleshoot high-speed network.
- Demonstrate the knowledge of network planning and optimization

### **UNIT - 1 : HIGH SPEED NETWORKS**

**9**

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - **ATM Service Categories - AAL. High Speed LANs: Fast Ethernet, Gigabit Ethernet, Fiber Channel - Wireless LANs: applications, requirements - Architecture of 802.11**

### **UNIT - 2 : CONGESTION AND TRAFFIC MANAGEMENT**

**9**

Queuing Analysis- Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control - Traffic Management - **Congestion Control in Packet Switching Networks** - Frame Relay Congestion Control.

### **UNIT - 3 : TCP AND ATM CONGESTION CONTROL**

**9**

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management - Exponential RTO backoff - KARN's Algorithm - Window **management - Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Frame work, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.**

### **UNIT - 4 : INTEGRATED AND DIFFERENTIATED SERVICES**

**9**

Integrated Services Architecture - Approach, Components, Services- Queuing Discipline, FQ, PS, BRfq, GPS, WFQ - **Random Early Detection**, Differentiated Services

### **UNIT - 5 : PROTOCOLS FOR QOS SUPPORT**

**9**

RSVP - Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, **Label Stacking, Protocol details - RTP** - Protocol

Architecture, Data Transfer Protocol, RTP.

**Total: 45 hrs**

***CSE/Elective -III/Semester - II***

**TEXT BOOK:**

1. William Stallings, "HIGH SPEED NETWORKS AND INTERNET", Pearson Education, Second Edition, 2002.

**REFERENCES:**

1. Warland & Pravin Varaiya, "HIGH PERFORMANCE COMMUNICATION NETWORKS", Jean Harcourt Asia Pvt. Ltd., II Edition, 2001.

## **19250E25C- EMBEDDED SYSTEMS**

**L T P C**  
**4 0 0 4**

### **AIM:**

To give sufficient background for embedded systems design.

### **OBJECTIVES:**

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To explain programming concepts and embedded programming in C and C++.
- To explain real time operating systems, inter-task communication and an exemplary case of MUCOS – IIRTS.

### **UNIT-I INTRODUCTION TO EMBEDDED SYSTEMS**

**9**

Definition and Classification – **Overview of Processors and hardware units in an embedded system** – Software embedded into the system – Exemplary Embedded Systems – Embedded Systems on a Chip (SoC) and the use of VLSI designed circuits

### **UNIT-II DEVICES AND BUSES FOR DEVICES NETWORK**

**9**

I/O Devices - Device I/O Types and Examples – Synchronous - Iso-synchronous and Asynchronous Communications from Serial Devices - Examples of Internal Serial-Communication Devices - **UART and HDLC - Parallel Port Devices** - Sophisticated interfacing features in Devices/Ports- Timer and Counting Devices - ‘12C’, ‘USB’, ‘CAN’ and advanced I/O Serial high speed buses- ISA, PCI, PCI-X, cPCI and advanced buses.

### **UNIT-III EMBEDDED PROGRAMMING**

**9**

Programming in assembly language (ALP) vs. High Level Language - C Program Elements, Macros and functions -Use of Pointers - **NULL Pointers - Use of Function Calls** – Multiple function calls in a Cyclic Order in the Main Function Pointers – Function Queues and Interrupt Service Routines Queues Pointers – Concepts of EMBEDDED PROGRAMMING in C++ - Objected Oriented Programming – Embedded Programming in C++, ‘C’ Program compilers – Cross compiler – **Optimization of memory codes.**

### **UNIT-IV REAL TIME OPERATING SYSTEMS – PART - 1**

**9**

OS Services – Interrupt Routines Handling, Task scheduling models - Handling of task scheduling and latency and deadlines as performance metrics - **Inter Process Communication** And Synchronisation – Shared data problem – Use of Semaphore(s) – Priority Inversion Problem

and Deadlock Situations – Inter Process Communications using Signals – Semaphore Flag or mutex as Resource key – Message Queues – Mailboxes – Pipes – Virtual (Logical) Sockets – RPCs.

***CSE/Elective -III/Semester - II***

**UNIT-V REAL TIME OPERATING SYSTEMS – PART - 2**

**9**

Study of RTOS, VxWorks - Basic Features - Task Management Library at the System - Library Header File - VxWorks System Functions and System Tasks - Inter Process (Task) Communication Functions - Case Study of Coding for Sending Application Layer Byte Streams on a TCP/IP Network Using RTOS Vxworks

**Total : 45hrs**

**REFERENCE:**

1. Rajkamal, Embedded Systems Architecture, Programming and Design, TATA McGraw Hill, First reprint 2003
2. David E.Simon, An Embedded Software Primer, Pearson Education Asia, First Indian Reprint 2000.

## **19250E32A - CLOUD COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To acquire basic knowledge on cloud computing and its applications.

**OBJECTIVES:**

- Identify cloud computing models, characteristics, and technologies.
- Get knowledge about the different architectures in cloud.
- Identify the information about service management and cloud securities.

**UNIT-I**

**9**

Overview of Computing Paradigm- **Recent trends in Computing** - Evolution of cloud computing - Introduction to Cloud Computing -Cloud Computing (NIST Model)- Properties, Characteristics & Disadvantages - Cloud computing vs. Cluster computing vs. Grid computing - Role of Open Standards

**UNIT-II**

**9**

Cloud Computing Architecture - **Cloud computing stack** - Service Models (XaaS) - Infrastructure as a Service(IaaS) - Platform as a Service(PaaS) - Software as a Service(SaaS)- Deployment Models

**UNIT-III**

**9**

Infrastructure as a Service(IaaS) - **Introduction to IaaS - Resource Virtualization** – Examples. Platform as a Service(PaaS) - Introduction to PaaS - Cloud Platform and Management – Examples - Software as a Service(SaaS) - Introduction to SaaS

**UNIT-IV**

**9**

Service Management in Cloud Computing - Service Level Agreements(SLAs)- Identity & Access Management - Access Control - Trust, Reputation, Risk - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations - **Authentication in cloud computing, Client access in cloud**, Cloud contracting Model, Commercial and business considerations.

**UNIT-V**

**9**

Cloud Security - Infrastructure Security - Network level security - Host level security - Application level security - **Data security and Storage** - Data privacy and security Issues,

Jurisdictional issues raised by Data location - Case Study on Open Source & Commercial Clouds – Eucalyptus - Microsoft Azure - Amazon EC2.

**Total:45hrs**

***CSE/Elective -IV/Semester - III***

**REFERENCE BOOKS:**

## **19250E32B - INFORMATION SECURITY**

**L T P C**  
**4 0 0 4**

**AIM:**

To study the critical need for ensuring Information Security in Organizations

**OBJECTIVES**

- To understand the basics of Information Security.
- To know the legal, ethical and professional issues in Information Security.
- To become aware of various standards in this area.
- To know the technological aspects of Information Security.

**UNIT-I**

**9**

An overview of Computer Security, Access Control Matrix, Security Policies, Confidentiality Polices, Integrity policies and Hybrid Policies

**UNIT-II**

**9**

Cryptography- Key Management- Session and Interchange and generation, Cryptography Key Infrastructure, Storing and revoking Keys, Digital Signature, Cipher Techniques

**UNIT-III**

**9**

Systems: Design Principle, Representing Identity, Access Control Mechanisms, Information flow and Confinement Problems

**UNIT-IV**

**9**

Malicious logic, Vulnerability Analysis, Auditing and Intrusion Detection

**UNIT-V**

**9**

Network Security, System Security, User Security and Program Security.

**Total:45hrs**

**TEXT BOOK:**

Matt Bishop, "Computer Security arts and science" 2<sup>nd</sup> edition, Pearson Education

**CSE/Elective –IV/Semester – III**

## **19250E32C - SOFT COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand the concepts of Artificial Intelligence , ANN , Genetic Algorithms and Fuzzy systems and its applications.

**OBJECTIVES:**

- To introduce the ideas of Neural networks, fuzzy logic and use of heuristics base on human experience.
- To have a general understanding of soft computing methodologies, including artificial neural networks, fuzzy sets, fuzzy logic, fuzzy clustering techniques and genetic algorithms;
- To Design and development of certain scientific and commercial application using computational neural network models, fuzzy models, fuzzy clustering applications and genetic algorithms in specified applications.

**UNIT-I FUZZY SET THEORY**

**10**

Introduction to Neuro – Fuzzy and Soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set–Theoretic Operations – Member Function Formulation and Parameterization – Fuzzy Rules and Fuzzy Reasoning – Extension Principle and Fuzzy Relations – Fuzzy If Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

**UNIT-II OPTIMIZATION**

**8**

Derivative based Optimization – Descent Methods – The Method of Steepest Descent – Classical Newton’s Method – Step Size Determination – Derivative Free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

**UNIT-III NEURAL NETWORKS**

**10**

Supervised Learning Neural Networks – Perceptrons – Adaline – Backpropagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

**UNIT-IV NEURO FUZZY MODELING****9**

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – Learning Methods that Cross fertilize ANFIS and RBFN – Coactive Neuro Fuzzy Modeling – Framework – **Neuron Functions for Adaptive Networks** – Neuro Fuzzy Spectrum.

***CSE/Elective –IV/Semester – III***

**UNIT-V APPLICATION OF COMPUTATIONAL INTELLIGENCE****8**

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – **Soft Computing for Color Recipe Prediction.**

**Total: 45 hrs**

**TEXTBOOK:**

**19250E33A - ADVANCED DATABASE TECHNOLOGY**

**L T P C**  
**4 0 0 4**

**AIM:**

To prepare the student to understand, develop, and manage more advanced database applications.

**OBJECTIVES:**

Be able to

Know the operations of parallel and distributed databases.

Understand the structures and standards of object relational databases.

Get familiar with the concepts of XML, Mobile and Multimedia Databases.

**UNIT-I PARALLEL AND DISTRIBUTED DATABASES 9**

Database System Architectures: Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts - Distributed Data Storage – **Distributed Transactions** – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture-Case Studies.

**UNIT-II OBJECT AND OBJECT RELATIONAL DATABASES 9**

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – **Encapsulation of Operations** – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL – OQL – Object Relational and Extended – **Relational Systems** : Object Relational features in SQL/Oracle – Case Studies.

**UNIT-III XML DATABASES 9**

XML Databases: XML Data Model – DTD - XML Schema - XML Querying – Web Databases – JDBC – Information Retrieval – **Data Warehousing** – Data Mining

**UNIT-IV MOBILE DATABASES 9**

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - **Mobile Transaction Models** - Concurrency Control - Transaction Commit Protocols- Mobile Database Recovery Schemes.

**UNIT-V MULTIMEDIA DATABASES 9**

Multidimensional Data Structures – Image Databases – Text/Document Databases- Video Databases – Audio Databases – **Multimedia Database Design**.

**Total = 45 hrs**

**19250E33B - MOBILE COMMUNICATION AND COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand the mobile computing and mobile application development.

**OBJECTIVES:**

- Learning the basics of Wireless voice and data communications technologies.
- Enhancing working knowledge on various telephone and satellite networks.
- studying the working principles of wireless LAN and its standards.
- Studying various wireless operating systems.

**UNIT-I**

**9**

**Introduction :** Evolution of Mobile Computing – Important terminologies - Mobile computing functions – Mobile computing Devices – Networks: Wireline, Wireless , Adhoc - Comparison of wired and wireless mechanism - Various types of wireless communication technologies used in Mobiles, Antennas - **Architecture : Architecture of Mobile Computing** – 3- Tier Architecture – Presentation ( Tier-1), Application ( Tier -2), Data ( Tier – 3).

**UNIT-II:**

**9**

**Mobile computing through Telephony:** Evolution through telephony – Multiple Access Procedures: FDMA, TDMA, CDMA, SDMA – features – Satellite Communication System : Communicating through satellite – Low orbit satellite – **Medium orbit satellite** – Geo stationary Satellite – Satellite phones

**UNIT-III**

**9**

**Wireless LAN:** Introduction - Definition – **Applications of WLAN** – Infrared versus Radio transmission – Features of WI-FI and WI-MAX - Roaming Issues.

**UNIT-IV**

**9**

**Mobile Transport Layer:** Traditional TCP - **Congestion control - Slow start** - Fast retransmit & fast recovery - Transmission / time out freezing - Selective retransmission – Indirect TCP – Snooping TCP – Mobile TCP

**UNIT-V**

**9**

**Wireless Application languages and operating systems** - Understanding of Wireless Application languages - XML, JAVA, **J2ME, JAVA CARD** - Understanding of Mobile operating system - Palm OS, Windows CE , Android

**Total :45hrs**

## **19250E33C - GREEN COMPUTING**

**L T P C**  
**4 0 0 4**

### **AIM:**

To Understand Green Technology and to implement Green computing practices to efficiently use the computers and its resources.

### **OBJECTIVES:**

- Understanding scientific and social environment.
- Minimizing energy consumption from the IT estate.
- Purchasing green energy and using green suppliers.
- Reducing the paper and other consumables used.
- Minimizing equipment disposal requirements.

<b>UNIT-I</b> Origins, Regulations and industry initiatives- <b>Government, Industry.</b>	<b>9</b>
<b>UNIT-II</b> Approaches to green computing- <b>Product longevity</b> , Algorithmic efficiency.	<b>9</b>
<b>UNIT-III</b> Resource allocation, Virtualization.	<b>9</b>
<b>UNIT-IV</b> Terminal servers, Power management, <b>Operating system support</b> , Power supply, Storage, Video card, Display.	<b>9</b>
<b>UNIT-V</b> Web, Temporal and Spatial Data Mining Materials recycling, Telecommuting, Middleware support for green computing, Tools for monitoring, <b>HPC computing, Green Mobile</b> , embedded computing and networking, Management Frameworks Standards and metrics for computing green	<b>9</b>

**Total: 45hrs**

## 19250E34A - SOFTWARE QUALITY ASSURANCE

L T P C  
4 0 0 4

### AIM:

To develop the ability to analyze and estimate the quality of the software.

### OBJECTIVES:

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

### UNIT I

9

**Introduction to software quality** - challenges – objectives – quality factors – components of SQA– contract review – development and quality plans – **SQA components in project life cycle** –SQA defect removal policies – Reviews

### UNIT II

9

**Basics of software testing** – **test generation from requirements** – finite state models – combinatorial designs - test selection, minimization and prioritization for regression testing – test adequacy, assessment and enhancement

### UNIT III

9

**Testing strategies** – white box and black box approach – integration testing – system and acceptance testing – performance testing – **regression testing** - internationalization testing – adhoc testing – website testing – usability testing – accessibility testing Test plan – management – execution and reporting – **software test automation** – automated testing tools

### UNIT IV

9

**Hierarchical models of software quality** – software quality metrics – **function points** –Software product quality – software maintenance quality – effect of case tools – software quality infrastructure – procedures – **certifications** – configuration management – documentation control.

### UNIT V

9

**Project progress control** – costs – **quality management standards** – project process standards – management and its role in SQA – SQA unit

**Total = 45hrs**

### REFERENCES

**CSE/Elective –VI/Semester – III**

## **19250E34B - BIO-INFORMATICS**

**L T P C**  
**4 0 0 4**

### **AIM:**

To impart knowledge, on basic techniques of Bioinformatics.

### **OBJECTIVES:**

- Build a solid foundation and acquire the vocabulary you need to supervise or to communicate with others who use these tools.
- To have ability to design drugs.
- To understand Evolutionary Trees and Phylogeny.
- Learn the key methods and tools used in bioinformatics.

### **UNIT I FUNDAMENTALS 7**

The Central Dogma – Killer Application – Parallel Universes – Watson’s Definition – Top Down Vs Bottom Up Approach – **Information Flow** – Conversance – Communications.

### **UNIT II DATABASE AND NETWORKS 9**

Definition – Data Management – Data Life Cycle – Database Technology – Interfaces – Implementation – Networks Communication Models – **Transmission Technology** – Protocols – Bandwidth – Topology – Contents – Security – Ownership – Implementation.

### **UNIT III SEARCH ENGINES AND DATA VISUALIZATION 10**

Search Process – Technologies – Searching and Information Theory – Computational Methods – Knowledge Management – **Sequence Visualizations** – Structure Visualizations – User Interfaces – Animation Vs Simulation.

### **UNIT IV STATISTICS– DATA MINING AND PATTERN MATCHING 11**

Statistical Concepts – Micro Arrays – Imperfect Data – Basics – Quantifying – Randomness – Data Analysis – Tools Selection – Alignment – Clustering – Classification – Data Mining Methods – Technology – Infrastructure Pattern Recognition – **Discovery – Machine Learning** – Text Mining – Pattern Matching Fundamentals – Dot Matrix Analysis – Substitution Matrix – Dynamic Programming – Word Method – **Bayesian Method** – Multiple Sequence Alignment Tools.

### **UNIT V MODELING SIMULATION AND COLLABORATION 8**

Drug Discovery Fundamentals – Protein Structure – **System Biology Tools** – Collaboration and Communication – Standards – Issues – Case Study.

**Total: 45hrs**

**TEXT BOOK:**

1. Bryan Bergeron, "Bio Informatics Computing", Prentice Hall, 2003.

**REFERENCES:**

1. T.K. Affward, D.J. Parry Smith, "Introduction to Bio Informatics", Pearson Education, 2001.

## **19250E34C - WIRELESS APPLICATION PROTOCOLS**

**L T P C**  
**4 0 0 4**

**AIM:**

To introduction the advanced element in the field of wireless communication.

**OBJECTIVE:**

- Be able to discuss current and emerging technology in Wireless technology.
- Understand fundamental trends of technological evolution of Wireless technology.
- Have hands-on knowledge in developing simple and comprehensive WAP contents.
- Be able to create simple Wireless applicaitions.

**UNIT-I:**

**9**

Wireless Concepts - Technologies - An Overview of WAP - WAP Application Environment - WAP Gateways - **WAP Gateway Services and Security.**

**UNIT-II:**

**9**

WAP Components - Specification - Standard Execution Environment - Agent Characters - Main Protocols - **WTP/WSP/WDP(UDPYWEMP** Transportation and WTLS Protocol.

**UNIT- III:**

**9**

WAP Design and Development - The Development Tools - **WML Language** - WML Script Language.

**UNIT-IV:**

**9**

Implementing an Enterprise WAP Strategy, Wireless transmission- Spread spectrum - MAC - SDMA - **FDMA - TDMA - CDMA** - Cellular Wireless Networks.

**UNIT-V:**

**9**

Application Area of WAP: Wireless Operator's Interrelated Services -Mailbox Management - Searching the Phone Directory - **Managing Personal Information.**

**Total:45hrs**

**TEXT BOOKS :**

1. Steve Mann & Scott Sbihli, - Wireless Application Protocols - Wiley Computer Publishing - 2000
2. S.Ruseyev - WAP Technology & Applications - Easwar Press - 2003 .

**REFERENCE BOOKS :**

1. Sandeep singhal , Jari Alwinen., -The Wireless Application Protocol: Writing Applications for the Mobile Internet - Addison Wesley Publications - 2000 .

## RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the students; both have their justification in the common pursuit of knowledge.

Integrating research skills or Inquiry based learning becomes apparent to meet the changing needs of learners and their teachers, professional practice and society. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital.

Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability these are some of the terms that mark out the world of the twenty-first century.

Teaching and research is correlated when they are co-related suggests that one way of achieving this is to 'exploit further the link between teaching and research in the design of curricula.

Growing out of the research on Teaching- Research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions to analyze their curricula and consider ways of strengthening students understanding through research.

The Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

**Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B .Tech. (CSE) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
IV	Research Led Seminar	1
V	Research Methodology	3
VI	Participation in Bounded Research	2
VII	Design Project/ Socio Technical Project ( Scaffolded Research)	4
VIII	Project Work	12

➤ **Blueprint for assessment of student’s performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**

- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
  - **Semester Examination** : **60 Marks**
- (Essay type Questions set by the concerned resource persons)

➤ **Blueprint for assessment of student's performance in Design Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

➤ **Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial : 10 Marks

**Model Paper Writing:** **40 Marks**

- Abstract : 5 Marks
- Introduction : 10 Marks
- Discussion : 10 Marks
- Review of Literature : 5 Marks
- Presentation : 10 Marks

**Semester Examination:** **40 Marks**

**Total:**

**100 Marks**

## 19248S11AP - HIGHER MATHEMATICS

L T P C  
3 1 0 4

### AIM

To extend student's mathematical maturity and ability to deal with abstraction and to introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems.

### OBJECTIVES

At the end of the course, students would

- Have knowledge of the concepts needed to test the logic of a program.
- Have gained knowledge which has application in expert system, in data base and a basic for the prolog language.
- Have an understanding in identifying patterns on many levels.
- Be aware of a class of functions which transform a finite set into another finite set which relates to input output functions in computer science.
- Be exposed to concepts and properties of algebraic structures such as semigroups, monoids and groups.

### UNIT I SETS, RELATIONS AND FUNCTIONS

9

Basic Concepts – Relationships between sets-Operations on sets-Principles of inclusion and exclusion – Minterms and Maxterms of a set – Relations partial ordering relation-Equivalence relation-Binary relations-Cyclic order relation –  $a = (\text{mod } m)$  relations: Partitions sets – Hassee diagram- functions: Properties- Composition - inverse function

### UNIT II LOGIC

9

Propositional logic – Logical connectivity's-Truth table-Normal forms(Connective and disjunctive)-Predicate logic-Universal and existential quantifiers induction.

### UNIT III COMBINATORICS

9

Basic of counting - counting arguments - Pigeonhole principle - Permutations and combinations - Recursion and Recurrence relations - Generating functions.

### UNIT IV MODELLING COMPUTATION AND LANGUAGES

9

Finite state machines-Deterministic and Non-Deterministic finite state machines-Turing Machines-Formal Languages-Classes of Grammars-Type<sub>0</sub> – Context Sensitive-Context-Free-Regular Grammars-Ambiguity.

### UNIT V LATTICE AND BOOLEAN ALGEBRA

9

Partial order relation, poset-lattices, Hasse diagram-Boolean Algebra

**Total No of periods: 45**

## 19250H12P - MODERN OPERATING SYSTEM

**L T P C**  
**4 0 0 4**

**AIM:**

To have a thorough knowledge of processes, scheduling concepts, memory management, I/O and file systems, multimedia operating system and recent operating systems.

**OBJECTIVES:**

- To have an overview of different types of operating systems.
- To know the components of an operating system.
- To have a thorough knowledge of process management.
- To have a thorough knowledge of storage management.
- To know the concepts of I/O and file systems.
- To know the concepts of multimedia operating systems.

**UNIT I**

**9**

Introduction – computer hardware review – operating system zoo - Operating System Concepts - System Calls - **Operating System Structure** -.Process And Threads : Processes – Threads - Interprocess Communication - Scheduling.

**Unit II**

**9**

Memory Management Memory Abstraction:Address Spaces, No Memory Abstraction - Virtual Memory - **Page Replacement Algorithms** - Modeling Page Replacement Algorithms - Design Issues For Paging Systems – Segmentation. File Systems:File Directories File System Implementation

**Unit III**

**9**

Deadlocks - Introduction To Deadlocks - **The Ostrich Algorithm** - Deadlock Detection And Recovery - Deadlock Avoidance - Deadlock Prevention - Other Issues – Input/output Principles of I/O Hardware – Principles of I/O Software – I/O Software Layers – Disks – Clocks – Thin Clients.

**Unit IV**

**9**

Multiple processor systems - multiprocessors - multicomputers - **virtulazitation** - distributed systems - multimedia operating systems . Multimedia files - video compression audio compression – multimedia scheduling - disk scheduling for multimedia.

**Unit V**

**9**

Case Study – LINUX , WINDOWS VISTA , SYMBIAN OS

**Total : 45 hrs**

**TEXT BOOK:**

1. Andrew S. Tanenbaum , “Modern Operating Systems “ , Pearson Education , 3<sup>rd</sup> Edition , 2009

***CSE/Semester - I***

**19250H13P - PARALLEL AND HIGH PERFORMANCE  
COMPUTING**

**L T P C  
4 0 0 4**

**AIM:**

The main objective of this paper is to make the students to know the need of Parallel Computing.

**OBJECTIVES:**

- To understand the models and parameters used.
- To understand the Matrix Algorithms and Design Issues.

**Unit I : Introduction : 9**

Need for Parallel Computing - Scope of Parallel Computing - Issues in Parallel Computing - Parallel Processing Concepts (Overview) - Levels of parallelism (instruction, transaction, task, thread, memory, function) - Models (SIMD, MIMD, SIMT, SPMD, Dataflow Models, Demand-driven Computation etc) -Architectures.

**Unit II : Models of Parallel Computing : 9**

Taxonomy of Parallel Architectures -Dynamic Interconnection Networks - Static Interconnection Networks - Message Transfer - Reduction, Parallel Prefix - GPU thread model.

**Unit III : Performance Modelling : 9**

Metrics – Granularity – Scalability – Overhead – Isoefficiency.

**Unit IV : Matrix Algorithms : 9**

Matrix Partitioning - Matrix Transposition - Matrix Vector Multiply - Matrix Multiply - CUDA, vector add, matrix multiply, sequence alignment - Linear Equations - LU(P) Decomposition

**Unit V : Fundamental Design Issues in Parallel Computing 9**

**Synchronization – Scheduling - Job Allocation** -Job Partitioning - Dependency Analysis - Mapping Parallel Algorithms onto Parallel Architectures - Performance Analysis of Parallel Algorithms

**Total : 45 hrs**

***CSE/Semester - I***

## 19250H14P -ADHOC AND SENSOR NETWORK

L T P C  
4 0 0 4

### AIM:

To understand the current and emerging applications of the adhoc sensor networks.

### OBJECTIVE:

To understand

- A broad overview of the state of wireless and ad hoc networking.
- The overview of the physical, networking and architectural issues of ad hoc networks.
- The technologies that will enable the next generation of ad hoc networks and the proliferation of ubiquitous computing.
- The sensor networks and the unique set of design challenges that they introduce.

### UNIT I AD-HOC MAC 9

Introduction – Issues in Ad-Hoc **Wireless Networks**. MAC Protocols – Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

### UNIT II AD-HOC NETWORK ROUTING & TCP 9

Issues – Classifications of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based, **Ad Hoc Transport Layer Issues**. TCP Over Ad Hoc – Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.

### UNIT III WSN -MAC 9

Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, **Hybrid TDMA/FDMA** and CSMA based MAC.

### UNIT IV WSN ROUTING, LOCALIZATION & QOS 9

Issues in WSN routing – **OLSR, AODV. Localization** – Indoor and Sensor Network Localization. QoS in WSN.

### UNIT V MESH NETWORKS 9

Necessity for Mesh Networks – **MAC enhancements** – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

**Total : 45 hrs**

**CSE/Semester - I**

## **19250L17 -ADVANCED WEB TECHNOLOGIES LAB**

**L T P C**  
**0 0 3 3**

1. Creation of HTML pages with frames, links, tables and other tags.
2. Usage of internal and external CSS along with HTML pages.
3. Client side Programming
  - i. Java script for displaying date and comparing two dates.
  - ii. Form Validation including text field, radio buttons, check boxes, list box and other controls.
4. Usage of ASP/JSP objects response, Request, Application, Session, Server, ADO etc.
  - i. Writing online applications such as shopping, railway/air/bus ticket reservation system with set of ASP/JSP pages.
  - ii. Using sessions and cookies as part of the web application.
5. Writing Servlet Program using HTTP Servlet.
6. Any online application with database access.
7. Creation of XML document for a specific domain.
8. Writing DTD or XML schema for the domain specific XML document.
9. Parsing an XML document using DOM and SAX Parsers.
10. Sample web application development in the open source environment.

## 19250H21 - MIDDLEWARE TECHNOLOGIES

L T P C  
3 1 0 4

### AIM:

The aim of the course is to teach the role of middleware in the distributed environment and its common services.

### OBJECTIVES:

- To study the set of services that a middleware system constitutes of.
- To understand how middleware facilitates the development of distributed applications in heterogeneous environments.
- To study how it helps to incorporate application portability, distributed application component interoperability and integration.
- To learn the object oriented middleware basics through the example of the following CORBA objects.
- To understand the basics of Web services that is the most often-used middleware technique.

### UNIT – I

9+3

**Introduction** : What is a distributed system- **Client server Architecture** – Multi-tier Architecture- Middleware - Classification of middleware- Event based middleware-Object based Middleware - Message based middleware and its Principal functions- Introduction to concepts of database middleware.

### UNIT – II

9+3

**RPC & message Passing middleware** - **Introduction to procedure calls** - Principles of RPC Architecture- Structure of Communication - Java RMI

### UNIT – III

9+3

**Other middleware:** Introduction to EJB- Introduction to JDBC &ODBC **Interface Definition Language:** Introduction to specification - IDL Identifiers-Attributes type correction -Classes- Arrays- Documentation -**Any type-Modules** -Interfaces- Exceptionhandling -pre Compiler Directives -OO Design using IDL.

### UNIT – IV

9+3

**CORBA:** CORBA 2 Standard- Standard Object model- CORBA Architecture-CORBAClient and Object Implementation- Interface & Implementation repository-CORBA Services- Key Issues- Naming Services -Relationships- **Event Services**- life Cycle services- ObjectQuery Services-properties Services-Time Services- CORBA facilities & CORBA Domains.

**UNIT –V**

**9+3**

**COM:** Classes- Objects-Query Interface-Dynamic Composition-Apartments-In  
processActivation -Server Lifetime-Server Lifetime-COM Security-Access Control-  
Tokenmanagement- Introduction to DCOM.

**Total :60hrs**

**REFERENCE BOOKS:**

1. Daniel Serian, "Middleware", Springer Verlag, 1999.
2. Troy Bryan Downing, "Java RMI: Remote Method Invocation", IDG Books India, 2000.

5. Don Box, "Essential Com", Addison Wesley, 1999

**17250H22 - OBJECT ORIENTED SOFTWARE ENGINEERING**

**L T P C**  
**4 0 0 4**

**AIM:**

To learn the advanced software engineering principles and methodologies for effective software development.

**OBJECTIVES:**

- To learn about software prototyping, analysis and design.
- To learn UML and its usage.
- Case studies to apply the principles.

**UNIT - 1 INTRODUCTION 8**

Software Engineering Paradigms - **Software Development process models** - Project & Process - Project management – Process & Project metrics - Object Oriented concepts & Principles.

**UNIT - 2 PLANNING & SCHEDULING 9**

Software prototyping - **Software project planning** – Scope – Resources - Software Estimation - Empirical Estimation Models-Planning-Risk Management - Software Project Scheduling – Object Oriented Estimation & Scheduling.

**UNIT - 3 ANALYSIS & DESIGN 12**

Analysis Modeling - **Data Modeling** - Functional Modeling & Information Flow-Behavioral Modeling-Structured Analysis - Object Oriented Analysis - Domain Analysis-Object oriented Analysis process - Object Relationship Model - Object Behaviour Model. Design Concepts & Principles - **Design Process** - Design Concepts - Modular Design –Design Effective Modularity - Introduction to Software Architecture - Data Design – Transform Mapping – Transaction Mapping – OOD - Design System design process- Object design process -**Design Patterns.**

**UNIT - 4 IMPLEMENTATION & TESTING 8**

**Top-Down, Bottom-Up, object oriented product Implementation & Integration.** Software testing methods-White Box, Basis Path-Control Structure –Black Box-Unit Testing- **Integration testing- Validation & System testing. Testing OOA & OOD models-Object oriented testing strategies.**

**UNIT – 5 MAINTENANCE 8**

Maintenance process-System documentation-program evolution dynamics-Maintenance costs-Maintainability measurement – **Case Studies**The laboratory shall include development of systems applying the Software Engineering principles and methods for specific applications.

**Total: 45 hrs**

**TEXT BOOKS:**

1. Roger S. Pressman, “ Software Engineering A Practitioner’s Approach” , Fifth Edition,Tata McGraw Hill.
2. Grady Booch, James Rumbaugh, Ivar Jacobson –“the Unified Modeling Language User Guide” – Addison Wesley,1999. (Unit III)

**REFERENCE BOOKS:**

1. Ian Sommerville, “Software Engineering”, V Edition Addison- Wesley 1996.
2. PankajJalote “An Integrated Approach to Software Engineering” Narosa Publishing House 1991
3. Carlo Ghezzi Mehdi Jazayer, Dino Mandrioli “Fudamentals of Software Engineering”Prentice Hall of India 2002.
4. Fairley, “Software Engineering Concepts”, Mc.Graw Hill 1985.

**REFERENCES:**

2. Anil Jain.K, Fundamentals of Digital image Processing, Prentice Hall of India, 1989.
3. Sid Ahmed, Image Processing, McGraw Hill, New York, 1995.

**19250L26 - .NET TECHNOLOGIES LAB**

**L T P C**  
**0 0 3 3**

**Develop the following in ASP .NET or VB.NET.**

1. Query textbox and Displaying records
2. Display records by using database
3. Datalist link control
4. Databinding using dropdownlist control
5. Datagrid paging

**Develop the following in C#.NET.**

1. Demonstrate Use Of Virtual and override keyword in C# with a simple Program.
2. Write a Program in C# to implement Stack operations.
3. Write a Program to demonstrate Operator overloading.
4. Demonstrate arrays of interface types with a C# program.
5. Write a Program in C# to build a class which implements an interface which already exists.

## **19250CRM - RESEARCH METHODOLOGY**

**L T P C**  
**3 0 0 3**

### **AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

### **OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

### **OUTCOME:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

### **PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

### **UNIT I**

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - **Necessity of defining the problem** - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – **Measurement and Scaling** – Different scales. Ethics & Misconduct in research, Plagiarism,

### **UNIT II**

Formulation of Hypothesis – Sampling techniques – **Sampling error and sample size-Methods of data collection** – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation – **outline of statistical analysis.**

### **UNIT III**

**Data Analysis using Excel**- Tabulation of Data in excel ( Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. **Z-test, t- test F-test, ANOVA one way classification**, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

### **UNIT IV**

**Various research methods**-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - **Graph Theory**- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software

### **UNIT V**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – **steps in drafting a report**. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, **result, conclusions, Concepts of Bibliography and references**

## 19250H31 - SOFTWARE PROJECT MANAGEMENT

L T P C  
4 0 0 4

### AIM:

Software Project Management provides insight to the importance of careful project management

### OBJECTIVES:

- Understand Project planning and management.
- Identify Client management and project definition.
- Understand testing based approach to development.
- Team management and ongoing schedule tracking.

**UNIT I FUNDAMENTALS 9**  
Conventional Software Management – Evolution of Software Economics – Improving Software Economics – Conventional versus Modern Software Project Management.

**UNIT II SOFTWARE MANAGEMENT PROCESS FRAMEWORK 9**  
Lifecycle Phases – Artifacts of the Process – Model Based Software Architectures – Workflows of the Process – Checkpoints of the Process.

**UNIT III SOFTWARE MANAGEMENT DISCIPLINES 9**  
Iterative Process Planning – Organization and Responsibilities – Process Automation – Process Control and Process Instrumentation – Tailoring the Process.

**UNIT IV MANAGED AND OPTIMIZED PROCESS 9**  
Data Gathering and Analysis – Principles of Data Gathering – Data Gathering Process – Software Measures – Data Analysis – Managing Software Quality – Defect Prevention.

**UNIT V CASE STUDIES 9**  
COCOMO Cost Estimation Model – Change Metrics – CCPDS–R.

**Total: 45hrs**

**SEMESTER - I - ELECTIVE - I**

**19250E16A - MULTIMEDIA SYSTEMS**

**L T P C**  
**4 0 0 4**

**AIM:**

To impart knowledge on Multimedia system and design.

**OBJECTIVES:**

- To study the graphics techniques and algorithms.
- To study the multimedia concepts and various I/O technologies

**UNIT 1 Introduction**

**9**

**Line - Curve and Ellipse Drawing Algorithms** – Attributes – Two-Dimensional Geometric Transformations – Two-Dimensional Clipping and Viewing.

**UNIT II Three-Dimensional Concepts**

**9**

Three-Dimensional Object Representations – **Three-Dimensional Geometric and Modeling Transformations** – Three-Dimensional Viewing – **Color models – Animation.**

**UNIT III Multimedia Systems Design**

**9**

An Introduction – Multimedia applications – **Multimedia System Architecture** – Evolving technologies for Multimedia – Defining objects for Multimedia systems – Multimedia Data interface standards – **Multimedia Databases.**

**UNIT IV Multimedia File Handling**

**9**

**Compression & Decompression** – Data & File Format standards – Multimedia I/O technologies - Digital voice and audio – **Video image and animation** – Full motion video – Storage and retrieval Technologies.

**UNIT V Hypermedia**

**9**

Multimedia Authoring & User Interface – **Hypermedia messaging** - Mobile Messaging – Hypermedia message component – Creating Hypermedia message – Integrated multimedia message standards – Integrated Document management – **Distributed Multimedia Systems.**

**Total: 45 Hours**

**REFERENCES:**

**19250E16B- GENETIC ALGORITHMS**

**L T P C**  
**4 0 0 4**

**AIM:**

To make the students learn the fundamentals of Genetic Algorithms and search technique used in computing.

**OBJECTIVES:**

1. Understand and be able to apply fundamental GA theory.
2. be able to implement or modify simple genetic algorithms.
3. be able to apply GAs to problems in the student's field.
4. to find exact or approximate solutions to optimization and search problems.

**UNIT-I**

**9**

**Introduction** :A brief history of evolutionary computation, Elements of Genetic Algorithms, A simple genetic algorithm, Applications of genetic algorithms. Genetic Algorithms in Scientific models - Evolving computer programs, data analysis & prediction, evolving neural networks, modeling interaction between learning & evolution, modeling sexual selection, measuring evolutionary activity.

**UNIT-II**

**9**

**Theoretical Foundation of genetic algorithm** :Schemas & Two-Armed and k-armed problem, royal roads, exact mathematical models of simple genetic algorithms, Statistical- Mechanics Approaches.

**UNIT-III**

**9**

**Computer Implementation of Genetic Algorithm** : Data structures, Reproduction, crossover & mutation, mapping objective functions to fitness form, fitness scaling, coding, a multiparameter, mapped, fixed point coding, discretization and constraints.

**UNIT-IV**

**9**

**Some applications of genetic algorithms** :The risk of genetic algorithms, De Jong & function optimization, Improvement in basic techniques, current application of genetic algorithms

**UNIT-V**

**9**

**Advanced operators & techniques in genetic search** :Dominance, duplicity, & abeyance, inversion & other reordering operators, other micro operators, Niche & speciation, multi objective optimization, knowledge based techniques, genetic algorithms & parallel processors.

**Total : 45hrs**

**TEXT BOOKS:**

**19250E16C - SOFTWARE METRICS**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand software quality metrics.

**OBJECTIVES:**

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

**UNIT I MEASUREMENTS THEORY**

**9**

- Measurements In Software Engineering - Scope Of Software Metrics - Measurements Theory - **Goal Based Framework** – Software Measurement Validation.

**UNIT II DATA COLLECTION AND ANALYSIS**

**9**

Empirical Investigation - Planning Experiments - **Software Metrics Data Collection** - Analysis Methods – Statistical Methods.

**UNIT III PRODUCTS METRICS**

**9**

Measurement Of Internet Product Attributes - Size And Structure - External Product Attributes - **Measurement Of Quality.**

**UNIT IV QUALITY METRICS**

**9**

Software Quality Metrics - Product Quality - Process Quality - **Metrics For Software Maintenance** - Case Studies Of Metrics Program - Motorola - **Hp And IBM.**

**UNIT V MANAGEMENT METRICS**

**9**

Quality Management Models - **Rayleigh Model - Problem Tracking Report (PTR) Model** - Reliability Growth Model - Model Evaluation - Orthogonal Classification.

**TOTAL = 45**

**REFERENCES:**

**19250E24A - ADVANCED DISTRIBUTED COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

This course discusses the depth concepts of distributed computing and its features.

**OBJECTIVES:**

Understanding the concepts of

- processing . distributed systems, operating system issues.
- learn about distributed transaction
- study about the distributed databases.

**UNIT-I INTRODUCTION 9**

Characterization of Distributed Systems - Examples - Resource Sharing and the Web - Challenges – System Models - **Architectural and Fundamental Models** - Networking and Internetworking - Types of Networks - Network Principles - Internet Protocols - **Case Studies: Ethernet, WiFi.**

**UNIT-II PROCESSES AND DISTRIBUTED OBJECTS 9**

Interprocess Communication - **The API for the Internet Protocols** - External Data Representation and Marshalling - Client-Server Communication - **Group Communication** - Case Study: Interprocess communication in UNIX - Distributed Objects and Remote Invocation - Communication Between Distributed Objects - Remote Procedure Call - Events and Notifications - **Case Study: Java RMI.**

**UNIT-III OPERATING SYSTEM ISSUES 9**

The OS Layer - Protection - Processes and Threads - Communication and Invocation – OS Architecture - Security - Overview - Cryptographic Algorithms - Digital Signatures - Cryptography Pragmatics – **Case Studies Kerberos, 802.11 WiFi** - Distributed File Systems - File Service Architecture - Sun Network File System - Distributed Debugging - Distributed Mutual Exclusion – Elections – **Multicast Communication Related Problems.**

**UNIT-IV DISTRIBUTED TRANSACTION PROCESSING 9**

Transactions - Nested Transactions - Locks - Optimistic Concurrency Control - Timestamp Ordering - Comparison - **Flat and Nested Distributed Transactions** - Atomic Commit Protocols - Concurrency Control in Distributed Transactions - Transaction Recovery - Overview of Replication And Distributed Multimedia Systems.

**UNIT-V DISTRIBUTED DATABASES 9**

Features of Distributed versus Centralized Databases -Principles of Distributed Databases - Levels of Distribution Transparency -Reference Architecture for Distributed Databases - **Types of Data Fragmentation - Integrity Constraints in Distributed Databases.**

**Total : 45 hrs**  
**CSE/Elective -II/Semester - II**

**19250E24B- DATA WAREHOUSING & DATA MINING**

**L T P C**  
**4 0 0 4**

**AIM:**

To serve the students with an emphasis on the design aspects of Data Mining and Data Warehousing.

**OBJECTIVES:**

- To introduce the concept of data mining with in detail coverage of basic tasks, metrics, issues, and implication. Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of data warehousing with special emphasis on architecture and design.

**UNIT-I INTRODUCTION 9**

Introduction: Fundamentals of data mining, Data Mining Functionalities, Classification of Data Mining systems, Major issues in Data Mining, Data Warehousing and Business Analysis: - **Data warehousing Components** –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – **OLAP and Multidimensional Data Analysis.**

**UNIT-II DATA MINING AND ASSOCIATION RULE MINING 9**

Data Mining: - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.

**Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods** – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint-Based Association Mining.

**UNIT-III CLASSIFICATION AND PREDICTION 9**

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – **Bayesian Classification** – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – **Lazy Learners** – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

**UNIT IV CLUSTER ANALYSIS 9**

**Cluster Analysis:** - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – **Grid-Based**

**19250E24C- ARTIFICIAL NEURAL NETWORKS**

**L T P C**  
**4 0 0 4**

**AIM:**

To give out the students with an importance on the various aspects of artificial neural networks.

**OBJECTIVES:**

- To introduce the concepts of artificial neural networks such as biological neural networks, clustering and structures
- To study the linear models for regression , classification, kernel methods and feed forward neural networks

**UNIT-I Introduction to artificial neural networks 9**  
**Biological neural networks** - Pattern analysis tasks: Classification, Regression, Clustering - Computational models of neurons - Structures of neural networks - Learning principles.

**UNIT-II Linear models for regression and classification 9**  
Polynomial curve fitting - **Bayesian curve fitting** - Linear basis function models – Bias - variance decomposition - Bayesian linear regression - Least squares for classification - Logistic regression for classification - Bayesian logistic regression for classification

**UNIT-III Feed forward neural networks 9**  
Pattern classification using perception - Multilayer feed forward neural networks (MLFFNNs) - **Pattern classification and regression using MLFFNNs** - Error back propagation learning - Fast learning methods: Conjugate gradient method – Auto associative neural networks - Bayesian neural networks.

**UNIT-IV Kernel methods for pattern analysis 9**  
Statistical learning theory - Support vector machines for pattern classification - Support vector regression for function approximation - Relevance vector machines for classification and regression - **Self-organizing maps:** Pattern clustering - Topological mapping - **Kohonen's self-organizing map.**

**UNIT-V Feedback neural networks 9**  
Pattern storage and retrieval - Hopfield model - **Boltzmann machine** - Recurrent neural networks.

**Total: 45 hrs**

***CSE/Elective -II/Semester - II***

**TEXT BOOKS:**

1. B.Yegnanarayana, Artificial Neural Networks, Prentice Hall of India, 1999
2. Satish Kumar, Neural Networks – A Classroom Approach, Tata McGraw-Hill, 2003
3. S.Haykin, Neural Networks – A Comprehensive Foundation, Prentice Hall, 1998
4. C.M.Bishop, Pattern Recognition and Machine Learning, Springer, 2006

**19250E25A- SERVICE ORIENTED ARCHITECTURE**

**AIM:**

To familiarize the students with the concepts of service oriented architectures. (SOA).

**OBJECTIVES:**

- Understand SOA, service orientation and web services
- Analyzing and designing business based on SOA principles.
- Learning the concepts of XML.

**UNIT I**

**9**

**Software Architecture** – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – **SOA programming models.**

**UNIT II**

**9**

Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – **SOAP – WSDL – JAX – WS – XML WS for .NET** – Service integration with ESB – Scenario – Business case for SOA – stakeholder objectives – benefits of SPA – Cost Savings

**UNIT III**

**9**

**SOA implementation and Governance** – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software as a service – SOA technologies – proof-of-concept – process orchestration – **SOA best practices**

**UNIT IV**

**9**

Meta data management – **XML security – XML signature – XML Encryption** – SAML – XACML – XKMS – WS-Security – Security in web service framework – advanced messaging

**UNIT V**

**9**

Transaction processing – paradigm – protocols and coordination – transaction specifications – **SOA in mobile** – research issues

**Total: 45 hrs**

## 19250E25B - HIGH SPEED NETWORKS

L T P C  
4 0 0 4

### AIM:

To study the various performance and analysis issues involved in high-speed data transmission.

### OBJECTIVES:

Be able to

- Describe and interpret the basics of high speed networking technologies.
- Apply the concept learnt in this course to optimize and troubleshoot high-speed network.
- Demonstrate the knowledge of network planning and optimization

### UNIT - 1 : HIGH SPEED NETWORKS

9

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - ATM Service Categories - AAL. High Speed LANs: Fast Ethernet, Gigabit Ethernet, Fiber Channel - Wireless LANs: applications, requirements - Architecture of 802.11

### UNIT - 2 : CONGESTION AND TRAFFIC MANAGEMENT

9

Queuing Analysis- Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control - Traffic Management - Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

### UNIT - 3 : TCP AND ATM CONGESTION CONTROL

9

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management - Exponential RTO backoff - KARN's Algorithm - Window management - Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Frame work, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

### UNIT - 4 : INTEGRATED AND DIFFERENTIATED SERVICES

9

Integrated Services Architecture - Approach, Components, Services- Queuing Discipline, FQ, PS, BRfq, GPS, WFQ - Random Early Detection, Differentiated Services

### UNIT - 5 : PROTOCOLS FOR QOS SUPPORT

9

RSVP - Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol

Architecture, Data Transfer Protocol, RTP.

**Total: 45 hrs**

***CSE/Elective -III/Semester - II***

**19250E25C- EMBEDDED SYSTEMS**

**L T P C**  
**4 0 0 4**

**AIM:**

To give sufficient background for embedded systems design.

**OBJECTIVES:**

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To explain programming concepts and embedded programming in C and C++.
- To explain real time operating systems, inter-task communication and an exemplary case of MUCOS – IRTOS.

**UNIT-I INTRODUCTION TO EMBEDDED SYSTEMS**

**9**

Definition and Classification – Overview of Processors and hardware units in an embedded system – Software embedded into the system – Exemplary Embedded Systems – Embedded Systems on a Chip (SoC) and the use of VLSI designed circuits

**UNIT-II DEVICES AND BUSES FOR DEVICES NETWORK**

**9**

**I/O Devices - Device I/O Types and Examples** – Synchronous - Iso-synchronous and Asynchronous Communications from Serial Devices - Examples of Internal Serial-Communication Devices - **UART and HDLC** - Parallel Port Devices - Sophisticated interfacing features in Devices/Ports- Timer and Counting Devices - ‘12C’, ‘USB’, ‘CAN’ and advanced I/O Serial high speed buses- ISA, PCI, PCI-X, cPCI and advanced buses.

**UNIT-III EMBEDDED PROGRAMMING**

**9**

Programming in assembly language (ALP) vs. High Level Language - C Program Elements, Macros and functions -Use of Pointers - NULL Pointers - Use of Function Calls – Multiple function calls in a Cyclic Order in the Main Function Pointers – Function Queues and Interrupt Service Routines Queues Pointers – **Concepts of EMBEDDED PROGRAMMING in C++** - Objected Oriented Programming – Embedded Programming in C++, ‘C’ Program compilers – Cross compiler – Optimization of memory codes.

**UNIT-IV REAL TIME OPERATING SYSTEMS – PART - 1**

**9**

**OS Services** – Interrupt Routines Handling, Task scheduling models - Handling of task scheduling and latency and deadlines as performance metrics - Inter Process Communication And Synchronisation – Shared data problem – Use of Semaphore(s) – Priority Inversion Problem

and Deadlock Situations – Inter Process Communications using Signals – Semaphore Flag or mutex as Resource key – Message Queues – Mailboxes – Pipes – Virtual (Logical) Sockets – RPCs.

***CSE/Elective -III/Semester - II***

**UNIT-V REAL TIME OPERATING SYSTEMS – PART - 2**

**9**

Study of RTOS, VxWorks - Basic Features - Task Management Library at the System - Library Header File - VxWorks System Functions and System Tasks - Inter Process (Task) Communication Functions - Case Study of Coding for Sending Application Layer Byte Streams on a TCP/IP Network Using RTOS Vxworks

**Total : 45hrs**

**REFERENCE:**

**19250E32A - CLOUD COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To acquire basic knowledge on cloud computing and its applications.

**OBJECTIVES:**

- Identify cloud computing models, characteristics, and technologies.
- Get knowledge about the different architectures in cloud.
- Identify the information about service management and cloud securities.

**UNIT-I**

**9**

**Overview of Computing Paradigm-** Recent trends in Computing - Evolution of cloud computing - Introduction to Cloud Computing - **Cloud Computing (NIST Model)**- Properties, Characteristics & Disadvantages - Cloud computing vs. Cluster computing vs. Grid computing - Role of Open Standards

**UNIT-II**

**9**

Cloud Computing Architecture - Cloud computing stack - **Service Models (XaaS) - Infrastructure as a Service(IaaS) - Platform as a Service(PaaS) - Software as a Service(SaaS)**- Deployment Models

**UNIT-III**

**9**

**Infrastructure as a Service(IaaS)** - Introduction to IaaS - Resource Virtualization – Examples. Platform as a Service(PaaS) - Introduction to PaaS - Cloud Platform and Management – Examples - Software as a Service(SaaS) - Introduction to SaaS

**UNIT-IV**

**9**

Service Management in Cloud Computing - **Service Level Agreements(SLAs)**- Identity & Access Management - Access Control - Trust, Reputation, Risk - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations.

**UNIT-V**

**9**

**Cloud Security** - Infrastructure Security - Network level security - Host level security - Application level security - Data security and Storage - Data privacy and security Issues,

Jurisdictional issues raised by Data location - Case Study on Open Source & Commercial Clouds – Eucalyptus - Microsoft Azure - Amazon EC2.

**Total:45hrs**

**19250E32B - INFORMATION SECURITY**

**L T P C**  
**4 0 0 4**

**AIM:**

To study the critical need for ensuring Information Security in Organizations

**OBJECTIVES**

- To understand the basics of Information Security.
- To know the legal, ethical and professional issues in Information Security.
- To become aware of various standards in this area.
- To know the technological aspects of Information Security.

**UNIT-I**

**9**

An overview of Computer Security, Access Control Matrix, Security Policies, Confidentiality Polices, Integrity policies and Hybrid Policies

**UNIT-II**

**9**

Cryptography- Key Management- Session and Interchange and generation, Cryptography Key Infrastructure, Storing and revoking Keys, Digital Signature, Cipher Techniques

**UNIT-III**

**9**

Systems: Design Principle, Representing Identity, Access Control Mechanisms, Information flow and Confinement Problems

**UNIT-IV**

**9**

Malicious logic, Vulnerability Analysis, Auditing and Intrusion Detection

**UNIT-V**

**9**

Network Security, System Security, User Security and Program Security.

**Total:45hrs**

**TEXT BOOK:**

**CSE/Elective –IV/Semester – III**

## **19250E32C - SOFT COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand the concepts of Artificial Intelligence , ANN , Genetic Algorithms and Fuzzy systems and its applications.

**OBJECTIVES:**

- To introduce the ideas of Neural networks, fuzzy logic and use of heuristics base on human experience.
- To have a general understanding of soft computing methodologies, including artificial neural networks, fuzzy sets, fuzzy logic, fuzzy clustering techniques and genetic algorithms;
- To Design and development of certain scientific and commercial application using computational neural network models, fuzzy models, fuzzy clustering applications and genetic algorithms in specified applications.

**UNIT-I FUZZY SET THEORY**

**10**

Introduction to Neuro – Fuzzy and Soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set–Theoretic Operations – Member Function Formulation and Parameterization – Fuzzy Rules and Fuzzy Reasoning – Extension Principle and Fuzzy Relations – Fuzzy If Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

**UNIT-II OPTIMIZATION**

**8**

Derivative based Optimization – Descent Methods – The Method of Steepest Descent – Classical Newton’s Method – Step Size Determination – Derivative Free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

**UNIT-III NEURAL NETWORKS**

**10**

Supervised Learning Neural Networks – Perceptrons – Adaline – Backpropagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

#### **UNIT-IV NEURO FUZZY MODELING**

**9**

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – Learning Methods that Cross fertilize ANFIS and RBFN – Coactive Neuro Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – **Neuro Fuzzy Spectrum.**

***CSE/Elective –IV/Semester – III***

#### **UNIT-V APPLICATION OF COMPUTATIONAL INTELLIGENCE**

**8**

Printed Character Recognition – **Inverse Kinematics Problems** – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

**Total: 45 hrs**

#### **TEXTBOOK:**

**19250E33A - ADVANCED DATABASE TECHNOLOGY**

**L T P C**  
**4 0 0 4**

**AIM:**

To prepare the student to understand, develop, and manage more advanced database applications.

**OBJECTIVES:**

Be able to

Know the operations of parallel and distributed databases.

Understand the structures and standards of object relational databases.

Get familiar with the concepts of XML, Mobile and Multimedia Databases.

**UNIT-I PARALLEL AND DISTRIBUTED DATABASES 9**

Database System Architectures: **Centralized and Client-Server Architectures** – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts - Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture- Case Studies.

**UNIT-II OBJECT AND OBJECT RELATIONAL DATABASES 9**

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: **ODMG Model – ODL – OQL** – Object Relational and Extended – Relational Systems : Object Relational features in SQL/Oracle – **Case Studies**.

**UNIT-III XML DATABASES 9**

**XML Databases:** XML Data Model – DTD - XML Schema - XML Querying – Web Databases – JDBC – Information Retrieval – Data Warehousing – Data Mining

**UNIT-IV MOBILE DATABASES 9**

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols- **Mobile Database Recovery Schemes**.

**UNIT-V          MULTIMEDIA DATABASES**

**9**

**Multidimensional Data Structures** – Image Databases – Text/Document Databases- Video Databases – Audio Databases – Multimedia Database Design.

**Total = 45 hrs**

***CSE/Elective -V/Semester - III***

**19250E33B - MOBILE COMMUNICATION AND COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To understand the mobile computing and mobile application development.

**OBJECTIVES:**

- Learning the basics of Wireless voice and data communications technologies.
- Enhancing working knowledge on various telephone and satellite networks.
- studying the working principles of wireless LAN and its standards.
- Studying various wireless operating systems.

**UNIT-I**

**9**

**Introduction :** Evolution of Mobile Computing – Important terminologies - Mobile computing functions – Mobile computing Devices – Networks: Wireline, Wireless , Adhoc - Comparison of wired and wireless mechanism - Various types of wireless communication technologies used in Mobiles, Antennas - **Architecture :** Architecture of Mobile Computing – 3- Tier Architecture – Presentation ( Tier-1), Application ( Tier -2), Data ( Tier – 3).

**UNIT-II:**

**9**

**Mobile computing through Telephony:** Evolution through telephony – Multiple Access Procedures: **FDMA, TDMA, CDMA, SDMA** – features – Satellite Communication System : Communicating through satellite – Low orbit satellite – Medium orbit satellite – Geo stationary Satellite – Satellite phones

**UNIT-III**

**9**

**Wireless LAN:** Introduction - Definition – **Applications of WLAN** – Infrared versus Radio transmission – Features of WI-FI and WI-MAX - Roaming Issues.

**UNIT-IV**

**9**

**Mobile Transport Layer:** **Traditional TCP** - Congestion control - Slow start - Fast retransmit & fast recovery - Transmission / time out freezing - Selective retransmission – Indirect TCP – Snooping TCP – Mobile TCP

## UNIT-V

9

**Wireless Application languages and operating systems** - Understanding of Wireless Application languages - XML, JAVA, J2ME, JAVA CARD - Understanding of Mobile operating system - Palm OS, Windows CE , Android

**Total :45hrs**

***CSE/Elective –V/Semester – III***

**19250E33C - GREEN COMPUTING**

**L T P C**  
**4 0 0 4**

**AIM:**

To Understand Green Technology and to implement Green computing practices to efficiently use the computers and its resources.

**OBJECTIVES:**

- Understanding scientific and social environment.
- Minimizing energy consumption from the IT estate.
- Purchasing green energy and using green suppliers.
- Reducing the paper and other consumables used.
- Minimizing equipment disposal requirements.

**UNIT-I**

**9**

Origins, Regulations and industry initiatives- Government, Industry.

**UNIT-II**

**9**

Approaches to green computing- Product longevity, Algorithmic efficiency.

**UNIT-III**

**9**

Resource allocation, Virtualization.

**UNIT-IV**

**9**

Terminal servers, Power management, Operating system support, Power supply, Storage, Video card, Display.

**UNIT-V**

**9**

Web, Temporal and Spatial Data Mining Materials recycling, Telecommuting, Middleware support for green computing, Tools for monitoring, HPC computing, Green Mobile, embedded computing and networking, Management Frameworks Standards and metrics for computing green

**Total: 45hrs**

**REFERENCES:**

**CSE/Elective –VI/Semester – III**

## **19250E34A - SOFTWARE QUALITY ASSURANCE**

**L T P C**  
**4 0 0 4**

### **AIM:**

To develop the ability to analyze and estimate the quality of the software.

### **OBJECTIVES:**

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

### **UNIT I**

**9**

**Introduction to software quality** - challenges – objectives – quality factors – components of SQA– contract review – development and quality plans – **SQA components in project life cycle** –SQA defect removal policies – Reviews

### **UNIT II**

**9**

**Basics of software testing** – test generation from requirements – finite state models – combinatorial designs - **test selection, minimization and prioritization for regression testing** – test adequacy, assessment and enhancement

### **UNIT III**

**9**

**Testing strategies** – white box and black box approach – integration testing – system and acceptance testing – performance testing – regression testing - internationalization testing – adhoc testing – website testing – usability testing – **accessibility testing Test plan** – management – execution and reporting – software test automation – automated testing tools

### **UNIT IV**

**9**

**Hierarchical models of software quality** – software quality metrics –function points –Software product quality – **software maintenance quality** – effect of case tools – software quality infrastructure – procedures – certifications – configuration management – documentation control.

### **UNIT V**

**9**

**Project progress control** – costs – quality management standards – project process standards – management and its role in SQA – **SQA unit**

Total = 45hrs

## 19250E34B - BIO-INFORMATICS

**L T P C**  
**4 0 0 4**

### AIM:

To impart knowledge, on basic techniques of Bioinformatics.

### OBJECTIVES:

- Build a solid foundation and acquire the vocabulary you need to supervise or to communicate with others who use these tools.
- To have ability to design drugs.
- To understand Evolutionary Trees and Phylogeny.
- Learn the key methods and tools used in bioinformatics.

### UNIT I      FUNDAMENTALS      7

The Central Dogma – Killer Application – Parallel Universes – Watson’s Definition – Top Down Vs Bottom Up Approach – Information Flow – Conversance – Communications.

### UNIT II      DATABASE AND NETWORKS      9

Definition – Data Management – Data Life Cycle – Database Technology – Interfaces – Implementation – Networks Communication Models – Transmission Technology – Protocols – Bandwidth – Topology – Contents – Security – Ownership – Implementation.

### UNIT III      SEARCH ENGINES AND DATA VISUALIZATION      10

Search Process – Technologies – Searching and Information Theory – Computational Methods – Knowledge Management – Sequence Visualizations – Structure Visualizations – User Interfaces – Animation Vs Simulation.

### UNIT IV      STATISTICS– DATA MINING AND PATTERN MATCHING      11

Statistical Concepts – Micro Arrays – Imperfect Data – Basics – Quantifying – Randomness – Data Analysis – Tools Selection – Alignment – Clustering – Classification – Data Mining Methods – Technology – Infrastructure Pattern Recognition – Discovery – Machine Learning – Text Mining – Pattern Matching Fundamentals – Dot Matrix Analysis – Substitution Matrix – Dynamic Programming – Word Method – Bayesian Method – Multiple Sequence Alignment Tools.

**UNIT V      MODELING SIMULATION AND COLLABORATION**

**8**

Drug Discovery Fundamentals – Protein Structure – System Biology Tools – Collaboration and Communication – Standards – Issues – Case Study.

**Total: 45hrs**

***CSE/Elective –VI/Semester – III***

**TEXT BOOK:**

1. Bryan Bergeron, “Bio Informatics Computing”, Prentice Hall, 2003.

**19250E34C - WIRELESS APPLICATION PROTOCOLS**

**L T P C**  
**4 0 0 4**

**AIM:**

To introduction the advanced element in the field of wireless communication.

**OBJECTIVE:**

- Be able to discuss current and emerging technology in Wireless technology.
- Understand fundamental trends of technological evolution of Wireless technology.
- Have hands-on knowledge in developing simple and comprehensive WAP contents.
- Be able to create simple Wireless applicaitions.

**UNIT-I:**

**9**

Wireless Concepts - Technologies - An Overview of WAP - WAP Application Environment - WAP Gateways - WAP Gateway Services and Security.

**UNIT-II:**

**9**

**WAP Components** - Specification - Standard Execution Environment - Agent Characters - Main Protocols - WTP/WSP/WDP(UDPYWEMP Transportation and WTLS Protocol.

**UNIT- III:**

**9**

WAP Design and Development - The Development Tools - **WML Language** - WML Script Language.

**UNIT-IV:**

**9**

Implementing an Enterprise WAP Strategy, Wireless transmission- Spread spectrum - MAC - SDMA - FDMA - TDMA - CDMA - **Cellular Wireless Networks.**

**UNIT-V:**

**9**

Application Area of WAP: Wireless Operator's Interrelated Services -Mailbox Management - Searching the Phone Directory - **Managing Personal Information.**

**Total:45hrs**

**TEXT BOOKS :**

1. Steve Mann & Scott Sbihli, - Wireless Application Protocols - Wiley Computer Publishing -

2000

2. S.Ruseyev - WAP Technology & Applications - Easwar Press - 2003 .

### **REFERENCE BOOKS :**

1. Sandeep singhal , Jari Alwinen., -The Wireless Application Protocol: Writing Applications for the Mobile Internet - Addison Wesley Publications - 2000 .

## **RESEARCH INTEGRATED CURRICULUM**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the students; both have their justification in the common pursuit of knowledge.

Integrating research skills or Inquiry based learning becomes apparent to meet the changing needs of learners and their teachers, professional practice and society. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital.

Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability these are some of the terms that mark out the world of the twenty-first century.

Teaching and research is correlated when they are co-related suggests that one way of achieving this is to 'exploit further the link between teaching and research in the design of curricula.

Growing out of the research on Teaching- Research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions to analyze their curricula and consider ways of strengthening students understanding through research.

The Curricula can be:

**Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

**Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student’s knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

**Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

**Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B .Tech. (CSE) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
IV	Research Led Seminar	1
V	Research Methodology	3
VI	Participation in Bounded Research	2
VII	Design Project/ Socio Technical Project ( Scaffolded Research)	4

VIII	Project Work	12
------	--------------	----

➤ **Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**  
(Essay type Questions set by the concerned resource persons)

➤ **Blueprint for assessment of student's performance in Design Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

➤ **Blueprint for assessment of student's performance in Research Methodology Courses**

- **Continuous Internal Assessment:** **20 Marks**
  - Research Tools( Lab) : 10 Marks
  - Tutorial : 10 Marks
- **Model Paper Writing:** **40 Marks**

- Abstract : 5 Marks
- Introduction : 10 Marks
- Discussion : 10 Marks
- Review of Literature : 5 Marks
- Presentation : 10 Marks

**Semester Examination: 40 Marks**

**Total: 100 Marks**

## **M.COMPROGRAMME**

The students of commerce today occupy key position both in public and private sector. They are able to make plan for the promotion and development of industry. The aim of the M.Com programme is to produce professional managers, accountants and innovative businessmen. M.Com programme requires advanced commercial knowledge and understanding of Corporate Accounting, Human Resource Management, Financial Management, Globalization Aspects etc. the post graduate students in commerce are able to prove themselves as a good manager and have a creative and helpful in problem solving.

Students of Commerce should possess knowledge power to develop new ideas and applications to latest information technology in the business and are able to implement these ideas in practice. At this backdrop, the syllabus for the M.Com programme of the **PRIST UNIVERSITY** is designed.

<b>COURSE TITLE</b>
---------------------

Marketing Research and Consumer Behavior
--

**AIM**

- To plan for Marketing Research and to predict the behaviour of a consumer at the marketplace.

**OBJECTIVES**

- I. To ascertain Marketing Research aids and their impacts.
- II. To plan for a new product pricing, marketing policy and strategy.
- III. To identify the different types of consumers and their behaviour.

**UNIT- I**

Introduction: Marketing research – An Introduction – Problem, discovery and formulation – Marketing research process- Scientific method – Research design – experimental design.

**UNIT- II**

Data Collection and Data analysis: primary data – secondary data collection – Survey method and its administration – Questionnaire design- Attitude measurement and scaling techniques -observation method-Sampling concepts – Selecting a sample – processing of collected data Tabulation of data – Data analysis and interpretation- Presentation of Research project

**UNIT- III**

Product Research – Advertising Research- Motivation Research- Sales control Research- Ethical issues in Marketing Research – Future of marketing Research.  
Employability

**UNIT- IV**

Consumer Behaviour: Introduction of Consumer Behaviour – Consumer Research – Family – Women Consumers – Rural Consumers – Special Area Consumers market segmentation- Consumers needs and Motivation – Consumer Personality – Consumer Perception- the process of learning Consumer Behaviour.

**UNIT- V**

The nature of consumer attitudes – Models of consumer behavior – Group dynamics and consumer reference groups – Communication, Advertising and Consumer buying behavior – the family and life style marketing – Culture, Social class and consumer behavior – Consumer protection – Consumer profiling – Digital marketing

**OUTCOME**

The course helped the students to understand Marketing Research and Consumer Behaviour.

**REFERENCE BOOKS**

1. Marketing Research – Dr. D. D. Sharma
2. Consumer Behaviour- Dr. S. L. Gupta
3. Marketing Research and Consumer Behavior – M. S. Raju
4. Marketing Research and Consumer Behavior- Dr. Dominique Xardel
5. Consumer Behaviour – Sumitra Pal

COURSE TITLE
Human Resource Management

**AIM**

To consider the implications of diversity for the development and synthesis of specific Human Resource Policy area.

**OBJECTIVES**

- I. To identify the objectives of recruiting and selecting a diverse workforce as an important organizational goal.
- II. To adopt suitable performance appraisal methods, promotion policies etc.

**UNIT- I**

Meaning – Nature and scope, characteristics – Functions – Objectives of organization of Human Resource department – HRM- Revaluation and Development of HRM – Role Qualification and qualities of H.R. Manager – HRM- Human Resource Planning.

**UNIT- II**

Recruitment – Sources and Techniques of Recruitment- Selection , Placement and Induction – Interviews – Training – Principal Methods- Steps- Evaluation of Training Performance.

**UNIT- III**

Human Resource Development (HRD) – Management Development programmes – performance Appraisal – Counseling – Managerial Appraisal.  
Employability

**UNIT- IV**

Promotion – Transfer – demotion and discipline – Compensation – Career Planning – Career Development – Absenteeism – Managing change – Resistance and Approaches to Organization change.

**UNIT- V**

Job Evaluation – Advantages and Problems of job evaluation- Wages and Salary Administration – Bonus – Fringe Benefits – Motivation and Motivation theories – Leadership – Morale – Communication – Job Satisfaction.

**OUTCOME**

The students provided basic knowledge of human resource management and its importance in the working of Organization.

**REFERENCE BOOKS**

1. K.Davies – Personnel and Human Resource Management.
2. L.M.Prasad, C.B.Memoria – Human Resource Management.
3. P.Subbarao – Essential of Human Management and Industrial relations.
4. C.S.Venkataraman and B.K.Subtava – Personnel Management and Human Resources.
5. Dr.L.M.Prasad – Human Resource Management.

COURSE TITLE
Services Marketing

**AIM**

To focus the Organizations offering social services including health centers communication organizations, educational institutions

**OBJECTIVES**

- I. To study the total quality management in maintaining and improving the quality of services.
- II. To know the tourism and other service marketing activities.

**UNIT- I**

Introduction – Reasons for growth in service sector – Role of services in an economy – distinction between goods and services – Classification of services – Marketing Management process for Service marketing.

**UNIT- II**

Development of service marketing mix – Components in the mix – People – Process – Physical evidence in managing demand and supply.

**UNIT- III**

Managing service quality – Dimensions and measurement of service quality – gap analysis – Total Quality Management – Guidelines for managing service competition – Globalization of services – Challenges to global service marketers – Typical international services Barrier to international marketing services.

**Employability**

**UNIT- IV**

Marketing of Insurance Services – Users – Benefits – Formation of marketing mix for insurance products – Tourism – Marketing mix for tourism, Hotel – Market segmentation for hotels – Marketing mix for hotels.

**UNIT- V**

Hospitals: Marketing of Health care- Types of Hospitals- Marketing mix for health care, Personal care: Marketing mix for personal care, Education marketing- Literacy – The concept- Marketing mix for adult, elementary, secondary and higher education.

**OUTCOME**

The course helped the student to identify the different types of services and their marketability.

**REFERENCE BOOKS**

1. S.M.Jha – Services Marketing
2. Vasanthi Venugopal – Services Marketing
3. B.Balaji – Services Marketing Furthermore Management
4. Valarie A Zeithaml – Services Marketing
5. Dwayne D. Gremler – Services Marketing
6. Mary Jo Bitner – Services Marketing
7. Ajay Pandit – Services Marketing

<b>COURSE TITLE</b>
Advanced Cost Management

**AIM**

To provide information to cost management to serve as a guide for making decisions for a better future of the business.

**OBJECTIVES**

- I. To use costing data for making decisions.
- II. To learn modern cost management concepts.

**UNIT- I**

Self-Study Unit: Cost concepts in decision making - Relevant cost - Differential cost – Incremental cost and opportunity cost – Objectives of a costing- System – Implementation of Costing system – Essentials of good costing system.

**UNIT- II**

Marginal costing – Distinction between Marginal Costing and Absorption Costing – Break Even Analysis - Cost – Volume – Profit analysis – Various decisions – making problems.

**UNIT -III**

Costing of Service Sector – Cost units – Transport Costing- Operating Cost of Cinema Houses – Hotel Operating Costing.

**UNIT- IV**

Standard Costing and Variance analysis.

**UNIT- V**

Budgetary Control – Flexible Budgets – Performance Budget – Zero based Budget.  
Employability

**OUTCOME**

The course helped the students to gain expert knowledge in Cost Management.

**REFERENCE BOOKS**

1. A.Murthy & S.Gurusamy – Cost Accounting
2. Charles T.Horgrew and Geoge Foster - Cost Accounting a Managerial Emphasis

3. AsbishK.Bhattacharya –PrinciplesandPracticeofCostAccounting.
4. Dr.Radha–CostAccounting
5. M.Wilson–AccountingforManagement.

## SEMESTER-I

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Elective– I-AstrategicManagement

### AIM

To understand the importance of strategic management in modern business.

### OBJECTIVES

- I. To consider corporate strategy formulation at the business level to have competitive advantages.
- II. To study situational and SWOT analysis.
- III. To focus on strategy formulation and evaluation.

### UNIT– I

Business Policy and strategic management – Conceptualization – Features of Strategy – Strategy and Tactics-Corporate, Business and Functional level of Strategy.

### UNIT– II

Environmental Scanning of Analysis - Features- Methods of Environmental analysis and Forecasting-External and Internal Environment–SWOT analysis.

### UNIT– III

Corporate Appraisal-Process–Methods And Techniques used–Internal analysis-Comparative analysis–Corporate Capability.

### UNIT– IV

Corporate Strategy formulation-Implementation-Expansion through Integration–Vertical Integration-Diversification-Mergers-Takeovers–Acquisition–Joint venture-Divestment Strategy–Liquidation Strategy.

### UNIT– V

Strategy Evaluation and Control-Strategic Control–Types–Differences Between Strategic and operational control-Evaluation for Strategic and Operational Control.  
Skill development

### OUTCOME

The course helped the students to gain knowledge in corporate strategy formulation and SWOT analysis.

### REFERENCE BOOKS

1. Micheal Proter-Competitive Strategy, Competitive advantage.
2. Peter Drucker–Management tasks, responsibilities and Practices.

3. Azharkazmi –BusinessPolicyandStrategicManagement.
4. R.N.Srivastava– InternationalStrategicManagement.
5. P.K.Ghosh–StrategicPlanningandManagement

## SEMESTER-I

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Elective- I–BOrganizationalBehaviour

### AIM

To learn about the Individual and Group behaviour in an Organization.

### OBJECTIVES

- I. To study the approaches and characteristics of Organizational Behaviour.
- II. To know the Leadership Styles and Leadership Theory.
- III. To highlight the importance of Motivation in an Organization.

#### UNIT– I

Introduction: Concept and meaning of OB – Nature of OB – Role of OB – Approaches to OB – Characteristics of OB.

#### UNIT– II

Individual Behavior – Perception – Personality – Meaning and Definition of perception – Nature of Perception – Importance of Perception – Perception Process – Stages in the Development of Personality – Nature of Personality – Group Dynamics – Types of Groups.

#### UNIT– III

Leadership – Meaning and Definitions – Nature and Characteristics of Leadership – Leadership Styles (or) Types of Leadership – Functions – Importance of Leadership – Successful Leadership – Leadership Theory.

#### Skill development

#### UNIT– IV

Authority – Elements and Characteristics – Types of Authority – Nature of Accountability – Delegation of Authority – Elements of Delegation – Principles of Delegation – Types of Delegation – Importance of Delegation.

#### UNIT– V

Motivation – Meaning and Definition of motivation – Nature – Types – Importance of Motivation – Theories of Motivation – Features of Theory Z – Motivational Techniques – Limitations of MBO – Implementation of MBO – Job Enrichment.

### OUTCOME

The course helped the student to learn about the Organizational Behaviour in depth.

### REFERENCE BOOKS

6. Micheal Proter-Competitive Strategy, Competitive advantage.

7. PeterDrucker–Managementtasks,responsibilitiesandPractices.
8. Azharkazmi –BusinessPolicyandStrategicManagement.
9. R.N.Srivastava– InternationalStrategicManagement.
10. P.K.Ghosh–StrategicPlanningandManagement

## SEMESTER-II

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Quantitative Techniques For Decisions Making

### AIM

To understand Quantitative tools and their applications in business problems.

### OBJECTIVES

- I. To make the student to learn the various techniques of statistics used in business for taking decisions
- II. To study theory of probability, testing of hypothesis and linear Programming

### UNIT- I

Meaning of Quantitative Techniques – Role of Quantitative Techniques- Advantages and limitations of quantitative Techniques correlation analysis– Simple– partial and multiple, Regression analysis– Time series..

### UNIT- II

Probability– Elements of probability– Theorems of probability– Theoretical distributions– Binomial– Poisson– Normal distribution.

### UNIT- III

Definition of Hypothesis – Types of Hypothesis – Type I Error – Type II Error – t test – F test – ANOVA – Chi-Square test.

### Skill development

### UNIT- IV

Transportation problem –  
Initial Basic feasible solutions by North West Corner rule Minimization method – Maximization method – Vogel's approximation method – Optimization test by Modi method – Assignment methods.

### UNIT-V

Linear programming – Basic Concepts and notation – Linear programming formulation – Solution through graphic methods, Simplex Method (Simple problem)

### OUTCOME

The course helped the students to understand important quantitative techniques and their applications in solving business problems.

## REFERENCE BOOKS

1. Quantitative Technique – C.R. Kothari
2. Statistical Methods – S.C. Gupta
3. Statistical Methods – S.P. Gupta
4. Advanced Statistics – D.L. Enclave

## SEMESTER-II

PRIST UNIVERSITY,  
THANJAVURM.COM

COURSE TITLE
Total Quality Management

### AIM:

Continual improvement of business operations. It strives to ensure all associated employees work toward the common goals of improving product or service quality, as well as improving the procedures that are in place for production.

### OBJECTIVES

1. To understand the concept of Quality
2. To understand the Implication of Quality on Business
3. To Implement Quality Implementation Programs
4. To have exposure to challenges in Quality Improvement Programs

### UNIT-I

Total Quality Management (TQM): Elements – TQM in global perspective – Global bench marking – Business process reengineering – Global standards – ISO 9000 series – Environmental QS 14000- Quality manual – Barrier to TQM.

### UNIT-II

Total Quality Management and Leadership: Implementing TQM – Market choices – Meeting customer requirements – Maintaining competitive advantage – Core competence and strategic alliances for ensuring quality – Quality review, recognition and reward – Quality awards: Japanese Deming Award, US Malcolm Baldrige National Quality Award & Indian Golden Peacock National Quality Award.

### UNIT- III

Quality Management Tools for Business Applications: Principles and Applications of Quality Function Development – Failure Mode and Effect Analysis – Taguchi Techniques – Seven old QC Tools – Seven New Management Tools – Statistical Quality Control Techniques (only Theory and no Problems) – Mistake Proofing – Benchmarking – 8D Methodology

### UNIT- IV

Quality Imperatives for Business Improvement: Dimensions of Quality - Reliability Prediction Analysis – Total Productive Maintenance – Costs of Quality – Business Process Reengineering – Process Capability Analysis – Quality Assurance and ISO 9000 Certification – ISO 9001:2000. 40

### UNIT-V

TQM Implementation Strategies: Organizational Structure and Mindset of Individuals –  
Motivational aspects of TQM – Change Management Strategies – Training for TQM – TQM Road  
Map – Quality Improvement Index– Six Sigma concept.  
Skill development

**OUTCOMES:**

1. To realize the importance of significance of quality
2. Manage quality improvement teams
3. Identify requirements of quality improvement programs

**REFERENCE BOOKS:**

1. Total Quality Management – Dale H. Besterfield et al – Pearson Education.
2. Quality Control and Total Quality Management – P.L. Jain – Tata McGraw Hill.
3. Total Quality Management – Poornima M. Charantimath – Pearson Education

**SEMESTER-II**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Advanced Management Accounting

**AIM**

To enable the management to perform its managerial functions more effectively and efficiently.

**OBJECTIVES**

- I. To gain expert knowledge in respect of management accounting.
- II. To have sufficient information for taking vital managerial decisions.
- III. To help the management in planning, coordination, communicating and controlling.

**UNIT – I**

Nature and scope of Management Accounting- Objectives and Functions-  
Distinction between Financial Accounting and Management Accounting –  
Tools and Techniques of Management Accounting- Merits / Uses of Management Accounting –  
Limitations – Functions of Management Accounting.

**UNIT – II**

Financial Statement Analysis – Ratio analysis –  
Revenue Statement and Financial Statement analysis- Preparation of Fund flow statement and  
Cash flow statement.

**UNIT – III**

Working Capital management: Meaning and Importance and Advantages-  
Factors determining the working capital requirement – Estimates of working capital requirement –  
Financing of working capital – New trends in Financing of working capital by Bank.  
Employability

**UNIT – IV**

Marginal costing and differential cost analysis – Managerial applications of Marginal costing-  
Decisions involving alternative choices.

**UNIT – V**

Capital budgeting–Importance of capital budgeting-  
Factors influencing capital expenditure decisions– Different methods of Capital budgeting.

## OUTCOME

The courses guided the students in taking vital managerial decisions by using the available tools to the maximum efficiency of the business.

## REFERENCE BOOKS

1. T.S.Raddy & Dr. Hari Prasad Reddy– Management Accounting
2. Sharma & Gupta -Management Accounting
3. S.N.Maheswari-Management Accounting
4. Khan & Jain -Management Accounting
5. R.Ramachandran & R.Srinivasan-Management Accounting

## SEMESTER-II

PRIST UNIVERSITY,  
THANJAVURM.COM

COURSE TITLE

Security Analysis and Portfolio Management

## AIM

It aims at providing an in-depth knowledge of the theory and practice of portfolio management. Important theories, techniques, regulations and certain advancements in theory of investment will be covered with an aim of helping the participants make sound investment decisions in the context of portfolio investment

## OBJECTIVES

- I. Understand the various alternatives available for investment.
- II. Learn to measure risk and return. Find the relationship between risk and return. Value the equities and bonds.
- III. Gain knowledge of the various strategies followed by investment practitioners.

## UNIT-I

Investment – Meaning- Nature and Scope – objectives – Speculation – Gambling – investment process – Financial System in India – Risk & Return – Measurement of Risk & Return - Nature-scope-Elements of Investment-Approaches to investment analysis-Securities-types-Features.

## UNIT II

Investment alternatives and strategies: Financial investment - Non financial investment - Inbound and outbound investments – Sources of Investment Information - valuation of fixed income securities and variable income securities (excluding Derivatives).

## UNIT III

Fundamental Analysis: Economic–Industry and company analysis–Sources of information for analysis

Employability

## UNIT IV

Technical Analysis – Types of charts – Dow Theory, Elliott wave theory, Odd-lot Theory, Breadth of Market, Relative Strength Analysis – Moving Average analysis - Efficient Market Hypothesis. UNIT V

Portfolioanalysis&Management: Portfolioriskandreturn–Diversification-Markowitzmodel  
–Sharpeindexmodel–CAPM–Arbitragepricingtheory.

## OUTCOME

The course helped the students to developing an understanding of the changing domestic and global investment scenario in general and Indian capital market in particular with reference to availability of various financial products and operations of stock exchanges

## REFERENCE BOOKS

1. Security Analysis and Portfolio Management : S. Kevin, PHI Learning Pvt Ltd, New Delhi.
2. Security Analysis and Portfolio Management: V. A. Avadhani, Himalaya Publishing House, Mumbai.
3. Investment Management : L. Natarajan, Margham Publication, Chennai.
4. Investment Management : Bhalla, Tuteja, S. Chand & Sons Publisher, New Delhi.

## SEMESTER-II

PRIST UNIVERSITY,  
THANJAVURM.COM

COURSE TITLE
Elective-II–A–Corporate Legal Framework

## AIM

To understand the fundamental principles of legal and regulatory framework of corporate business.

## OBJECTIVES

- I. To familiarize the students to understand the provisions of corporate laws.
- II. To study the problems involving issues in corporate laws.
- III. To know the implications of other relevant laws in the corporate management.

## UNIT- I

Company; Definition – kinds of companies – Lifting of corporate veil – Pre-Incorporation Memorandum of Association – Incorporation of a company – Legal Position of a Promoter.

## UNIT- II

Membership of companies – Definition – Meeting of the Board of Directors – Kinds of meeting – Quorum – powers of the Chairman – Duties of the chairman – Minutes of meeting.

## UNIT- III

Environmental legislation - legal and regulatory framework – Procedures for obtaining various Environment clearances – functions of Environment Tribunal – Environment Authority – Environment Audit.

## Skill development

## UNIT- IV

Consumer Protection Act-Genesis of the law-Objects of consumer protection-Definition – Rights of consumer protection Act - Nature and Scope of Remedies – Indemnity and Guarantee- Bailment and pledge.

#### **UNIT- V**

Insurance Act, 1938 – Insurance Regulatory & Development Act, 1999 – Insurance sector Reforms – IRDA (Investment) Regulations 2000 – IRDA Guidelines for Insurance Brokers Securities and Exchange Board of India SEBI Act, 1992 – SEBI Guidelines.

#### **OUTCOME**

The students are now familiarized with the principles of legal and regulatory framework of corporate business.

#### **REFERENCE BOOKS**

1. K.C.MISHRA – Legal and Regulatory Aspects of Insurance.
2. K.C.GARG – Company Law.
3. N.D.KAPOOR – Elements of mercantile laws.
4. N.D.KAPOOR – Legal and Regulatory framework of business.
5. N.K.SENGUPTA – Environment & Management

### **SEMESTER-II**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Elective-II-B-Retail Management

#### **Elective-II-B-Retail Management**

#### **AIM:**

To familiarize students with the decisions involved in running a retail firm and the concepts and principles for making those decisions.

#### **OBJECTIVES**

1. To familiarize students with the decisions involved in running a retail firm and the concepts and principles for making those decisions.
2. To introduce the scope and significance of Retail industry, Trends and Challenges.
3. To comprehend knowledge on all areas of Retail business operations.

#### **UNIT I:**

Introduction to Retailing: Concept of retailing, Functions of retailing, Terms & Definition, Retail formats and types, Retailing Channels, Retail Industry in India, Importance of retailing, changing trends in retailing.

**UNIT II:** Understanding the Retail Consumer: Retail consumer behavior, Factors influencing the Retail consumer, Customer decision making process, Types of decision making, Market research for understanding retail consumer

#### **UNIT III: Retail Market Segmentation and Strategies:**

Market Segmentation and its benefits, Kinds of markets, Definition of Retail strategy, Strategy for effective market segmentation, Strategies for penetration of new markets, Growth strategies, Retail value chain.

## Skill development

**UNIT IV:** Retail Location Selection: Importance of Retail locations, Types of retail locations, Factors determining the location decision, Steps involved in choosing retail locations, Measurement of success of location

**UNIT V:** Merchandise Management:

Meaning of Merchandising, Factors influencing Merchandising, Functions of Merchandising Manager, Merchandise planning, Merchandise

buying, Analyzing Merchandise performance

### **OUTCOMES:**

Upon completion of this course, it will enable students to develop decision making skills related to retailing, define retailing, understand what marketing means to business executives and academics, understand the ways that retailers use marketing tools and techniques to interact with their customers.

### **REFERENCE BOOKS:**

1. Retail Management, Michael Levy & Barton A Weitz, Tata McGraw Hill
2. Retailing Management, Gibson C Vedamani, Jaico Publishing House, Mumbai
3. Retail Strategies - understanding why we shop, Jim, Jaico Publishing House, Mumbai
4. Retail Management, Dunne Lusch, South Western Cengage Learning

## **SEMESTER-II**

### **PRIST UNIVERSITY, THANJAVURM.COM**

COURSE TITLE	L	T	C
Research Methodology	4	0	3

### **AIM**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

### **OBJECTIVES**

- I. To understand the approaches towards and consumers in good research.
- II. To identify various statistical tools used in research methodology
- III. To appreciate and compose the manuscript for publication

### **UNIT-I**

**INTRODUCTION:** Research – Importance and its types – research approaches – process – problem formulation – development of Hypothesis – Research design – Determining the sample design – Collecting data – Analysis of data – Identifying research problem.

### **UNIT-II**

**MEASUREMENT AND ITS TECHNIQUES:** Measurement in research and its problems – meaning of scaling – Tests of sound measurement – Types of scaling – Techniques of measurements – Attitude scales – Summed rating scale – Equal appearing Interview scale – Cumulative scale – Rating scale – Scale constructing Techniques – Time series analysis – Projection Techniques.

### **UNIT-III**

**DATA COLLECTION AND HYPOTHESIS:** Classification of data – Sources of data – Collection of primary and secondary data – Questionnaire method – Guidelines for Questionnaire

design – Interview technique – Observation Techniques – Processing of Data – Editing – Coding – Tabulation – Interpretation of data – Formulation of Hypothesis – Test of Hypothesis.

**Skill development**

**UNIT-IV**

**STATISTICAL TECHNIQUES:** Statistical Techniques – Quantitative and qualitative techniques – Measures of central Tendency – Arithmetic mean, Median and Mode – Standard deviation – Karl Pearson's coefficient of correlation – Regression – Chi Square test – Conditions for applying chi-square test – ANOVA – Spearman's Rank Correlation.

**UNIT- V**

**INTERPRETATION AND REPORT WRITING :** Interpretation – Techniques of Interpretation – Significance of Report Writing – Different steps in Writing report – Layout of research report – types – oral presentation – mechanics of writing a research report – precautions for writing research reports – Role of computers in Research.

**OUTCOME**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**REFERENCE BOOKS**

1. Business Research Methods – Dr. T.N. Srivastava and Mrs. Shailaja Rego
2. Business Research methods – Alan Bryman and Emmabell
3. Research Methodology – R. Panneer Selvam
4. Research Methods Indian – Donald H. Mcburney and Theresa

**SEMESTER-III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

**COURSE TITLE**

Project Planning and Control

**AIM**

To understand the issues relating to project management and control.

**OBJECTIVES**

- I. To know the infrastructure for projects and project financing.
- II. To conduct project appraisal.
- III. To understand the purposes of a project report.
- IV. To highlight the role of the exiting project administrative setup.
- V.

**UNIT- I**

Meaning and Definition of project – project management- an over view – The project Identification – Formulation of projects – project planning – stages of Life cycle of a project – system approach of project.

**UNIT- II**

Prefeasibility and post conception studies – project feasibility studies and considerations – Detailed project Report as submitted to the financial

Institutions. **UNIT- III**

**Project appraisal – various methods of appraising a project, Financial appraisal – Technical appraisal – socioeconomic appraisal – Managerial appraisal. Employability**

**UNIT– IV**

Project financing – sources and patterns of finance – public sector financing – Role of Tax planning in project.

**UNIT– V**

Project cost estimation and control – Role of the cost accountant in project management – Role and Leadership of the project managers – Structure and Team Building of project organization – Best practices.

**OUTCOME**

The course helped the students to learn the issues relating to project management and control.

**REFERENCE BOOKS**

1. Dr.P.C.K.Rao – project management and control. – Sultan Chand & Sons
2. B.M.Patel – project management – Vikas
3. Rajdeep Roy – Entrepreneurship
4. Dr.Radha – Entrepreneurial Development – Prsana Publication

**SEMESTER-III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Advanced Corporate Accounting

**AIM**

To gain comprehensive understanding of all aspects relating to Advanced corporate accounting.

**OBJECTIVES**

- I. To know the importance of Human Resources accounting, inflation accounting and Government accounting in corporate businesses.
- II. To learn the holding, banking and Insurance companies accounting in new formats.
- III. To practice public utilities accounting.

**UNIT– I**

Self study unit: Human Resource Accounting – Inflation Accounting – Government Accounting.

**UNIT– II**

Holding companies accounting – consolidated Balance sheet of holding companies

### **UNIT- III**

Bank Accounts (New Format) – profit and Loss account – Balance sheet as per the Guidelines of RBI – classification of advances – Provision for advances.

### **UNIT- IV**

Insurance companies Accounts – New Format- Life Insurance Revenue accounts with schedule surplus and valuation balance sheet – Fire and Marine Revenue accounts with schedules.

### **UNIT-V**

Double Account system (or) Accounts of Electricity companies and public utilities.  
Employability

### **OUTCOME**

The course helped the students to gain expert knowledge in Advanced Corporate Accounting.

### **REFERENCE BOOKS**

1. T.S.Reddy & Dr.A.Murthy. Corporate Accounting
2. S.P.Jain & K.L.Narang – Advanced Accounting.
3. R.Ramachandran and R. Srinivasan – Corporate Accounting.
4. M.C.Shukla and T.S.Grewal – Advanced Accounts.
5. S.P.Iyengar – Advanced Accountancy Vol. – II.

**SEMESTER-III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

**COURSE TITLE**

Investment Management

### **AIM**

To familiarize with the functioning of the Investment Management Systems.

### **OBJECTIVES**

- I. To understand the basic principles and practice of investment management.
- II. To learn about portfolio construction and portfolio management.
- III. To know the role of SEBI in regulating securities market.

### **UNIT- I**

Nature and Scope of Investment Management: Definitions of Investment- Classification of Investment- Investment and Speculation- Popularity of Investments- Alternative Investment – Investments in Gold, Real Estate, Deposits, Mutual Funds, Government Securities- Promissory Notes- shares and debentures .

### **UNIT- II**

Approaches to security analysis –Fundamental analysis –Economic analysis –savings and Investment -Inflation – Technological Development, Infrastructural factors-Political stability –Analysis of Financial statements by important ratios from the Investment Point of view.

### **UNIT- III**

Portfolio Construction –Objectives –Risk Return analysis –Methods of Diversification – Portfolio Revision –Techniques – problems- Approaches in portfolio construction – Traditional approach and Markowitz efficient frontier approach.

### **UNIT- IV**

Portfolio Management, Meaning and Definition – Contributing factors –Principles of Portfolio Management –The role of Portfolio managers in portfolio management.

### **UNIT- V**

The Securities and Exchange Board of India (SEBI) constitution-Objectives–Functions –Powers Organization and Management –Dept of SEBI –SEBI guidelines-permissible securities– Nature of clients–Issue of capital Listing and trading.  
Employability

### **OUTCOME**

Students are now aware of the scope of Investment Management and the role of SEBI in regulating securities market.

### **REFERENCE BOOKS**

1. V.k.Bhalla–Investment Management and Portfolio Management
2. Gordon, J. Alexander, William, F. Sharpe, Seffery V. Baliey–Fundamentals of Investments
3. Prasanna Chandra–Security Analysis and Portfolio Management
4. Avathani V.A– Investment and Securities Management in India
5. Gupta L.C –Return of Equities –The Indian experience.

**SEMESTER-III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Elective-III–A-Indian Financial System

### **AIM**

To familiarize with the overall functioning of Indian Financial system.

### **OBJECTIVES**

- I. To gain knowledge on financial and capital market
- II. To understand the importance of primary and secondary markets of shares and securities
- III. To know the functioning of various financial institutions in India

### **UNIT- I**

Indian Financial System – Financial Markets participants and instruments – Money market – Commercial banks – Call money markets – Treasury Bill Market – commercial Bills market and Bill Rediscounting scheme (BRs) – Certificate of Deposits (CDs) and Commercial papers (Cps)

**UNIT- II**

New issues markets – Function and issue mechanism – New issue markets – Operations – Reforms and investor Protection

**UNIT- III**

Stock Exchange – Operations – Reforms in secondary market and investor protection – over the counter exchange of India – Depositories

**UNIT- IV**

Export Import Bank of India – Unit Trust of India – Mutual funds in India – Insurance companies – venture capital funds in India – Seed Capital

**UNIT- V**

National Housing Bank – National Bank for Agriculture and Rural development – Non – Banking companies – Factoring companies – Securitization and Assets Reconstruction companies. Employability

**OUTCOME**

The Course helped the students to understand the overall functioning of Indian financial system.

**REFERENCE BOOKS**

1. P.N. Varshney & D.K. Mittal – sultan chand & sons, Indian Financial System
2. H.R. Machiraju – Indian Financial System
3. Gordon, Natrajan – Financial Market & Services
4. Dr. S. Gurusamy – Financial services & Market
5. B. Santhanam – Financial Services.

**SEMESTER-III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Elective- III – B International Marketing

**AIM**

It deals With Why, When, What, Where, and How of global Marketing?

**OBJECTIVES**

- I. To know all data developments and policies for International marketing.
- II. To study the role of global marketing mix.
- III. To identify global marketing issues.

**UNIT- I**

Framework of International Marketing – Basis of International Trade – Recent Trends in world Trade – Foreign Trade and economic growth – Trends in India’s foreign Trade –

Institutions Infrastructure for Export promotion in India – Indian Trade policy – Export Assistance.

#### **UNIT– II**

Identifying Foreign Markets – Product planning for export – Pricing for exports market entry and overseas distribution system – distribution Logistics for exports promoting products internationally – Overseas market Research – Marketing plan for export.

#### **UNIT– III**

New Techniques in International marketing Terms of payments and export finance – Management of risks in International marketing – Global marketing of services – Multinational and their role in Internal marketing state Trading in India.

#### **UNIT– IV**

Legal Dimension of International Marketing – Export Documents and procedure – Outward FDI flow India and Indian multinationals.

#### **UNIT– V**

Issues relating to Globalization – Major Drivers – Status and implications of Globalization – Globalization and Indian economy – Global financial Institutions and Indian economy.  
**Employability**

#### **OUTCOME**

The course helped the student to learn the importance of International Marketing and the role of exporting assisting Institutions.

#### **REFERENCE BOOKS**

1. Dr.R.L.Varshney and B.Bhattacharya – International Marketing Management.
2. P.Subbo Rao – International Business.
3. Rathor B.S. and Rathor J.S. – Export Marketing.
4. Balagopal T.A.S. – Export Marketing.
5. Francis Cherunilam – International Trade and Export Management
6. Dr.D.C.Kappor – Export Management

**SEMESTER -III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

**Course Title**

**Open Elective - Writing for the Media**

**Open Elective - Writing for the Media**

#### **Aim:**

- To equip students to enter into the realm of mass media.

#### **Objectives:**

- To help students understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media

- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication-Barrier to mass communication and mass culture-Function of mass media- Media effects, Qualities of media men.

**UNIT-II**

News-Hard and soft news-Expected and unexpected news-Box news-Follow up news-Scoop-Filters-Human interest stories-Recognizing and evaluating news.

**UNIT-III**

News and views-News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features. Skill development

**UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries-Writing Advertisements-Practical

**References-**

<b>Course Title</b>
<b>Open Elective-Applicable Mathematical Techniques</b>

**Open Elective - Applicable Mathematical**

**Techniques Objectives:**

- To understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

**Outcomes:**

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students get the knowledge about interpolation

**Unit I**

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

**Unit II**

Assignment Problems

**Unit III**

Replacement Problems

Skill development

**Unit IV**

Decision Analysis

**Unit V**

Game Theory

**References**

Unit I, "Numerical Methods in Science and Engineering"

M.K. Venkatraman Units II to V,

"Operations Research", Kantiswarup, P.K. Gupta and Manmohan

**SEMESTER-III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

**BIOMEDICAL INSTRUMENTATION**

**Aim:**

- To understand the concepts and application of electronic Instrumentation in the Medical field.

**Objective:**

The students will be able to

- Interpret technical aspects of medicine
- Solve Engineering Problems related to medical field
- Understand medical diagnosis and therapy

**UNIT-I: BIOELECTRIC SIGNALS AND ELECTRODES**

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

**UNIT-II: RECORDING SYSTEM AND RECORDERS**

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

**UNIT-III: MEASUREMENT AND ANALYSIS TECHNIQUES**

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording setup – Analysis of EEG.

**Skill development****UNIT-IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS**

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological effects of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultrasound – Physics of ultrasonic waves – medical ultrasound – basic pulse – echo apparatus, A-Scan – echocardiograph (M mode).

**UNIT-V: ADVANCED BIO MEDICAL SYSTEMS**

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical stimulation.

**OUTCOMES:**

- To familiarize students with various medical equipments and their technical aspects

- To introduce students to the measurements involved in some medical equipment.
- Ability to understand diagnosis and therapy related equipments
- Understanding the problem and ability to identify the necessity of an equipment to a specific problem

#### **Books for Study**

1. R.S Khandpur, Handbook of Biomedical Instrumentation, Tata McGraw Hill publishing company Limited, New Delhi, (2003). (Unit I, II, IV & V)
2. Leslie Cromwell, Fred J. Weibull, Erich A. Pfeiffer, Biomedical Instrumentation and Measurements, PHI, New Delhi. (Unit-III)

#### **Book for Reference**

1. M. Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

**SEMESTER-III**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>Course Title</b>
<b>Open Elective-GREEN CHEMISTRY</b>

**Objectives:** To learn about the environmental status, public awareness evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

## **Unit I-Introduction**

Introduction-Current status of chemistry and the Environment-  
Evolution of the Environmental movement: Public awareness-Dilution is the solution  
to pollution Pollution prevention.

## **Unit II-Principles**

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area  
of Chemistry getting to much attention- Why should chemist pursue the Goals of Green Chemistry  
- The roots of innovation – Limitations.

## **Unit III-BioCatalytic Reactions**

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and  
Biotransformations - Production of Bulk and fine chemicals by microbial  
fermentation Antibiotics – Vitamins-  
Biocatalysis synthesis of industrial chemicals by bacterial constructs-Future Trends.

### **Skill development**

## **Unit IV-Green House Effect**

Greenhouse effect and Global Warming – Introduction-How the greenhouse effect is produced  
- Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect  
on global climate - Control and remedial measures of green house effect - Global warming a  
serious threat-Important points.

## **Unit V-Green Analytical Methods**

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green  
catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature,  
Biomimetic, Proliferation of solvent-less reactions; Non-covalent  
derivatization, Biomass conversion, emission control

### **Outcomes:**

- To understand the environmental status and evolution.
- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.

- To understand about the vitamins and antibiotics.

**References:**

1. Introduction to Green Chemistry–M.Rayan and M.Tinnes and
2. New Trends in Green Chemistry– V.K.Ahluwalia and M.Kidwai

**SEMESTER-III**

## AIM

To equip the students with basic programming skill in Web Designing

## OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice markup languages
- To learn Style Sheet and Frames

## UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

## UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

## UNIT III

Ordered and unordered lists – Table handling.

Skill development

## UNIT IV

DHTML and Style Sheet – Frames.

## UNIT V

A webpage design project – Forms.

## OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design frontend webpage and connect to the backend databases.

## REFERENCE BOOK

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.  
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Title
Open Elective-Counseling Psychology

Open Elective-Counseling Psychology

**UNIT I**

Definition of Counseling  
Counseling As a Solution To Human Problems  
Counseling-Expectations & Goals

**UNIT II**

Personality  
Determinates Intellectual  
Determinates, Emotional  
Determinates Social Determinates

**UNIT III**

Approaches To Counseling  
Counseling Process

**UNIT IV**

Psychological Testing  
Diagnosis

**UNIT V**

Educational Counseling  
Family Counseling

**References Book:**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
Income Tax Law and Tax Planning

**AIM**

To gain knowledge of the basic principles underlying the substantive provisions of the Income Tax Law and their applications.

**OBJECTIVES**

- I. To compute Income of an Individual under various Heads of Income.
- II. To learn the provisions relating to Tax exemptions and Tax deductions.
- III. To gain knowledge on Tax Planning.

**UNIT-I**

Direct and Indirect Taxes in India – Charge of Income Tax – Computation of total income and tax Liability – Income as per Sec 2 (24) – Assessment year – Previous year – Residential Status and Incidence of Tax – Basis of charge- Exemptions Income under Sec 10, 11, 12, 13 and 13A.

**UNIT-II**

Income under the Head Salaries – Definition of the Head ‘Salaries’ – Features of salary- Receipts included under Salaries – Different forms of Salaries – Computation of Taxable salaries – Allowances – Different types- Perquisites – Different types – Valuation of perks Different types of Provident Funds – Tax Planning – Deductions under Sec 80C.

**UNIT-III**

Income under the Head House Property – charge on Annual Value – Exempted Incomes of House Property- Computation of Income from House Property – Let out House- Annual Value- Gross Annual Value- Gross Annual Value of self occupied house property- Deductions allowed – Tax Planning – Interest on Housing Loan maximum limit.

**Employability****UNIT-IV**

Incomes under the Head Profits and Gains of Business or Profession – Meaning of Business and Profession – Business Income and Professional Income- Computation of Profits and Gains of business or Professions – Admissible and Inadmissible deductions – Exemptions for Tax Planning.

**UNIT- V**

Income under Capital Gains – Capital Assets- Exempted Assets- Transfer of Assets- Short term and Long term Capital Gains- Application of Cost Inflation Index – Exempted Capital Gains- Taxable Capital Gains- Tax Planning in Capital Gaining – Income from Other Sources – Taxable Income from Other Sources- General Income and Specific Income- causal Income – Deductions – Tax Planning.

**OUTCOME**

The course helped the students to know how to compute Income of an individual under various heads and to reduce the tax burden through ideal tax planning schemes.

**REFERENCE BOOKS**

1. Income Tax Act, 1961 as amended upto late.
2. Dr. Vinod K. Singhania – Students Guide to Income Tax
3. T.S.Reddy & Y. Hari Prasad Reddy – Income Tax Law and Practice
4. T.N. Manoharan – Students, Hand Book on Income Tax Law.

PRIST UNIVERSITY,

COURSE TITLE
International Business

**AIM**

To understand the importance of the Global Business and the functions of multinational corporations.

**OBJECTIVES**

- I. To learn latest available information and data on International Business.
- II. To explain the various methods of entry to foreign market.
- III. To study the role of multinational corporation in the Global context.

**UNIT- I**

**International Business:** An overview – Evolution of International business – Drivers of Globalization – Influences of International business – Stages of Internationalization – Differences between domestic business and International business – International business Approaches – Modes of entry – Goals of International business – Advantages of International business – Problems of International business.

**UNIT- II**

**International Business Environment:** Introduction – Social and cultural environment – Technological environment – Economic environment – Political environment – Legal environment.

**UNIT- III**

**Modes of Entering International Business:** Introduction – Modes of entry – Exporting, Licensing, Franchising, Contract manufacturing, Management contracts, turnkey projects, foreign direct investment, Joint ventures – comparison of Different modes of entry – Functional Alliances – managing conflict situations – Break-Up of Alliances..

Employability

**UNIT- IV**

**Foreign Direct Investment:** Meaning – International Investment Theories – Factors Influencing FDI – Reasons for FDI – costs and benefits of FDI – Trends in FDI – Foreign Direct Investment in India.

**UNIT- V**

**Multinational Corporations:** Definitions and concepts – Factors that contributed for the growth of MNCs – Advantages and Disadvantages – control over MNCs – Organizational structure of MNCs – Relationship between headquarters and subsidiaries – MNCs in India – The Indianisation of Transnationals..

**OUTCOME**

The course helped the students to learn the importance of Global Business and the functioning of Multinational Corporation.

**REFERENCE BOOKS**

1. Francis Cherunilam–International Business Text and Cases
2. Dr.R.L.Varshney&Bhattacharya– International Marketing Management
3. P.SubbaRao– International Business.

## SEMESTER-IV

### PRIST UNIVERSITY, THANJAVURM.COM

<b>COURSE TITLE</b>
Co-operation in India and Abroad

#### AIM

To understand the basic principles of co-operation and their applications in India and Abroad.

#### OBJECTIVES

- I. To study the functioning of various co-operative organizations in India.
- II. To gain knowledge about co-operative movement in foreign countries.

#### UNIT– I

Meaning and Definitions of Co-operation – reformulated principles of ICA- Co-operatives as a Via – Media between capitalism and Communism –Evolution of Co-operative thought –Co-operative thought of Raiffeisen, Robert Owen-Rochdale Pioneers.

#### UNIT– II

Evolution of Co-operative movement in India –Pre-independence –Post independence- Co-operation during five year plans. Co-operative Agricultural Credit –Short term credit structure – Primary Agricultural Co-operative banks- Central Co-operative Banks–State Co-operative Bank.

#### UNIT– III

Long–term credit structure–Working of Primary and State Co-operative Agricultural and Rural Development Bank –NABARD and NCDC- Non-Agricultural credit –Urban Banks – Employees credit societies–Housing Co-operatives.  
Employability

#### UNIT– IV

Objects–working and problems of marketing co-operatives-Consumer Co-operatives, Industrial Co-operatives-Co-operative farming and milk-Co-operatives– State aid and Co-operative education and training –State Co-operative Union and National Co-operative Union. .UNIT –V

Co-operative Movement in Foreign Countries: England, Germany, Denmark and Japan, Impact of Globalization on Co-operatives.

#### OUTCOME

The course helped the students to learn the basic principles of co-operation and their applications in India and Abroad.

## REFERENCEBOOKS

1. B.S.Mathur –Co-operationinIndia
2. Hajeela –Co-operationinIndiaandAbroad
3. TamilnaduJournalofCo-operation

## SEMESTER-IV

**PRIST UNIVERSITY,  
THANJAVURM.COM**

COURSE TITLE
Elective- IV – A- Information Technology and Computer Applications

### AIM:

To develop understanding and appreciation of broad nature of application of Information Technology.

### OBJECTIVES:

- I. To know Hardware and Software in Computer system.
- II. To study web Technology, information system including Networking.
- III. To familiarize with Accounting Packages and Computer Assisted Audit Technology

### UNIT-I

Hardware – Types of Computers – Mainframes – Mini Computers, Micro Computers, advantages and limitations – Anatomy Computer-Functions and components of computer.  
Software: System Software – Application Software –  
Other experts specialized systems. (decisions support, artificial intelligence system setc.)

### UNIT-II

Web Technology and Information System: Introduction – Definition of Information System – Decision – making and decision levels – Categories of Information systems – Information systems for competitive advantage – Networking – Classification of Networks – Local Area Network – Metropolitan Area Network – Wide Area Network – Network Topologies – Data Transmission Modes – internet and World Wide Web – Working of W.W.W – TCP/IP – Intranet – Extranet – OSI Models – Technological Infrastructure of Internet.

### UNIT-III

Office Productivity Tools: Word Processing – Electronic Spreadsheets –  
Business Project management and Presentation tools.

### UNIT-IV

Computer Assisted Audit Techniques (CAAT): Introduction to CAAT and usage in accounting/  
Audit.

### UNIT-V

Mobile Commerce: Introduction – Factors that Drive M-Commerce – Differences between E-Commerce and M-Commerce – Growth of M-Commerce in India – Advantages of Mobile Commerce – Technology behind Mobile Commerce – Application of M-Commerce – Types of Mobile Payment – Future of Mobile Commerce

### Skill development

### OUTCOME:

The course helped the students to understand the broad nature of application of Information Technology.

### REFERENCEBOOKS:

- Dr.K.Abirami Devi Dr.M.Alagammai –E-Commerce, Margham Publications

- IT Essentials PC Hardware and Software Labs and Study Guide”, Third Edition – Patrick Regan– Cisco Press – Pearson Education(Chapters1-9, 11-16)
- Dr.P.Rizwan Ahamed- Computer Application in Business with Tally ERP9- Margham Publications.
- S.Arunajatesan–TechnologyinBusiness.

**SEMESTER-IV**

**PRIST UNIVERSITY,  
THANJAVURM.COM**

<b>COURSE TITLE</b>
IV-B-International Financial Management

**AIM:**

To learn the finance function in the international context.

**OBJECTIVES:**

- To understand the international monetary system
- To study foreign exchange management in India.
- To know the working capital management in a multinational context.

**UNIT-I**

The finance function in the international context – The Balance of Payments – International monetary system – Functions of financial management – Challenges of international financial management.

**UNIT-II**

The foreign exchange market structure and the participants - Types of transactions - Meaning of Currency - Dealing - Exchange rate - Forward rates - Exchange rate computation.

**UNIT-III**

Working Capital Management in a multinational Context – Short term Borrowing and Investment – Centralized Vs Decentralized cash management – Cash transactions – Equity Financing in the international markets – Accounts receivable and Inventory management. Employability

**UNIT-IV**

Long term borrowing in international capital markets – The major market segment – International leasing – Foreign direct investments by multinationals - Capital Budgeting.

**UNIT-V**

International project appraisal – Review of NPV approach – Adjusted present value - Frame work – Project appraisal in the international context – Exchange rate risk and cost of Capital – Joint ventures.

**OUTCOME:**

The course helped the students to learn the finance function in the international context.

**REFERENCE BOOKS:**

1. Jaiswal – Doing Business on InternatE-Commerce, Galgotia Publications in New Delhi.
2. Ravilalakota & Andrew, B. Whinston, Frontiers of Electronic Commerce, Addison Wesley.
3. Dr. R.L. Varshney and Dr. S. Bhashyam - International Financial Management.
4. Alan C. Shapiro – Multinational Financial Management
5. Jeff Madura – International Financial Management – Southwest Publications.

**PRIST UNIVERSITY,**

**THANJAVURM.COM**

## **RESEARCH INTEGRATED CURRICULUM**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff; course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research–Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research–Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research–Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and/or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes

for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research-Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level

1: Prescribed Research

Level 2: Bounded

Research Level 3: Scaffolded

Research Level 4: Self-actuated R

Research Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Com curriculum, the following Research Skill Based Courses are introduced in the curriculum.

<b>Semester</b>	<b>RSBCourses</b>	<b>Credits</b>
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/Socio Technical Project (Scaffold Research)	4
IV	Project Work	12

### Blueprint for assessment of student's performance in Research Led Seminar Course

● <b>Internal Assessment:</b>		<b>40 Marks</b>
● Seminar Report (UG)/Concept Note (PG)	: 5 X 4 = 20 Marks	
● Seminar Review Presentation	: 10 Marks	
● Literature Survey	: 10 Marks	
● <b>Semester Examination</b>	:	<b>60</b>
<b>Marks</b>		
(Essay type Questions set by the concerned resource persons)		

### Blueprint for assessment of student's performance in Socio Technical Project

● <b>Continuous Internal Assessment through Reviews:</b>		<b>40 Marks</b>
● Review I	: 10 Marks	
● Review II	: 10 Marks	
● Review III	: 20 Marks	
● <b>Evaluation of Socio Technical Practicum Final Report:</b>		<b>40 Marks</b>
● <b>Viva-Voce Examination:</b>		<b>20 Marks</b>
● <b>Total:</b>		<b>100 Marks</b>

### Blueprint for assessment of student's performance in Research Methodology

<b>Courses Continuous Internal Assessment:</b>		<b>20 Marks</b>
● Research Tools (Lab):		10 Marks
	● Tutorial:	10 Marks
<b>Model Paper Writing:</b>		<b>40 Marks</b>
● Abstract:		5 Marks
● Introduction:		10 Marks
● Discussion:		10 Marks
● Review of Literature:		5 Marks
● Presentation:		10 Marks
<b>Semester Examination:</b>		<b>40 Marks</b>
<b>Total:</b>		<b>100 Marks</b>

## **B.COM– CAPROGRAMME**

Computer Application is a professional course among the various art subjects. Computer Application is instrumental in bringing about changes in all aspects of the society. It promotes growth and development. The changes in the economic policies of the country and the computer application in business offer variety of opportunities for innovative and creative people to carry out their career with new vigor and enthusiasm.

In the present scenario the market based system has gradually expanded across the world securing a strong position in the market overcoming all borders and barriers.

The rapid changes in the field of economics, information technology, politics and also in the organizational structure and the increased complexities of the business world possess a series of problems to the modern commerce student. At this backdrop the new syllabus is designed for the B.Com Programme of the **PRIST UNIVERSITY**

**PRIST UNIVERSITY,  
THANJAVURB.COM- CA**

CourseCode	CourseTitle	L	T	P	C
19111AEC11	AdvancedEnglish-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proofread
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT –I**

Glossary of grammar terms  
Figures of speech

**UNIT –**

Foreign words and phrases  
British and American Vocabulary

**II UNIT –**

Speeches of famous people:  
Mahatma Gandhi- Abraham Lincoln- Swami Vivekananda- John F. Kennedy

**III UNIT –**

Editing  
Proofreading

**IV UNIT –**

Comparison and contrast  
Cause and effect

COURSECODE	COURSE TITLE	L	T	P	C
19198SEC 13	FinancialAccounting	5	0	0	5

**AIM:**

- This programme is designed to provide high quality education in theoretical and practical knowledge and skills in various aspects of accounting

**OBJECTIVE :** you should be able to

- Define accounting and trace the origin and growth of accounting.
- Explain the nature and objectives of accounting.
- Discuss the branches, role and limitations of accounts

**UNIT -I**

Definition of 'account'—the nature, Objects and utility of accounting in Industrial and Business enterprises—Books for accounts — Accounting concepts and postulates.

**UNIT -II**

The theory of double entry — book keeping — Journal — Subsidiary books — Ledger Trail Balance.

**UNIT -III**

Statement of accounts — Manufacturing account—Trading account — Profit and Loss account.

**Employability****UNIT -IV**

The Balance sheet and various forms it may take. Capital and revenue — income and expenditure account — Receipts and payments. Depreciation, reasons and provisions.

**UNIT-V**

Consignment- meaning, features of consignment transaction, distinction between consignment and sale, joint venture, meaning, features, difference 'between joint venture and partnership, joint venture and consignment.

**OUTCOME:** The course helped the students the principles and objectives of basic Financial accounting.

**Text Book reference:**

1. Advanced Accounting —S.P.Jain and K. L.Narang—Kaliyani Publisher.
2. Principles of Accounting— Finney H. A. Miller H.E., PHLAuditing - Tandon

COURSECODE	COURSE TITLE	L	T	P	C
19198AEC15	Information Technology	4	0	0	4

**AIM**

- To provide opportunity for the study of modern methods of information processing and its applications

**OBJECTIVES**

- Show awareness of what the major computer components are and how they act as a system
- appreciate that computers need instructions to operate and acquire simple programming skills

**UNIT-I:**

Information Concepts and Processing: Concepts of data, data type, information, need for information evolution of information processing.

**UNIT-2:**

Elements of computer processing systems: Classification of computers, Hardware CPU, storage devices and media, Software systems and applications.

**UNIT-3:**

Programming languages, Machine language, assembly language, high-level language, Fourth generation language, compilers, interpreters.

Employability

**UNIT-4:**

General Concept of OOPS  
(Object oriented programming) Operating Systems: Concept and function of Operating system.

**UNIT-5:**

Batch processing, Multiprogramming, Realtime, timesharing, distributed system.

**OUTCOME:** This course will be guided to the student business technologies around the world.

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19198AEC16	OperatingSystem	4	0	0	4

**AIM:**

- Provide proficiency skill of operating system to the target students

**OBJECTIVES**

1. To learn the fundamentals of Operating Systems.
2. To learn the mechanisms of OS to handle processes and threads and their communication
3. To learn the mechanisms involved in memory management in contemporary OS

**UNIT-I**

Evolution of Operating Systems — Types of Operating Systems — Different views of OS — Design and implementation of Operating Systems — I/O Programming concepts — Interrupt structure and Processing.

**UNIT-II**

Memory management: Single contiguous allocation — Partitioned Allocation — Relocatable Partitioned Allocation — Paged and Demand Pages Memory Management — Segment Memory Management — Segmented and Demand Paged Memory Management — Swapping and Overlay Techniques.

**UNIT-III**

Processor management: Job Scheduling — Process Scheduling — Functions and Policies — Evaluation of Round Robin Multiprogramming performance — Process synchronization — Race condition — Synchronization Mechanism — Deadly Embrace Prevention and Detect and Recover Methods.

**UNIT-IV**

Device management: Techniques for device management — Device Characteristics — I/O Traffic controller, I/O scheduler, I/O device handler — Virtual Devices Spooling

**UNIT-V**

File management: Simple file system, General Model of a file system, Physical and Logical file system. Case studies: DOS, UNIX/LINUX Operating systems

**OUTCOMES:** Students will be able to: Analyze the structure of OS and basic architectural components involved in OS design

**Text Book:**

1. Operating systems — E. Madnick and John J. Donovan — Tata McGraw Hill
2. Operating Systems (Concepts and Design) Milan Milenkovic - McGraw Hill International Edition

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19198SEC 24	Business Law	4	0	0	4

**AIM**

**Developing proficiency skill of Business law**

**OBJECTIVE**

1. Undertake and promote research on Business laws & attract students of the highest caliber to the Law School's programs and
2. Provide opportunities for their involvement in Business law research projects.

**Unit I**

Nature and Sources of law — Law of contracts — Essentials of valid contract — Classification of contracts

**Unit—II**

Offer and acceptance — consideration -- capacity to contract — Free consent Legality of object

**Unit—III**

Performance of contracts — Discharge of contract — Remedies for breach of contract — Quasi contracts

**Employability****Unit—IV**

Contracts of agency — Different classes of agents — creation of agency — Rights and duties of an agent - scope of agents authority — Liability of principles to third parties — Personal liability of agent — Bailment and pledge.

**Unit— V**

Contract of Indemnity and guarantee — Rights of Indemnity holder — Rights of surety — Nature and extent of surety's liabilities

**OUTCOME:** Students will demonstrate competent knowledge and understanding of substantive and, to the extent applicable, procedural law related to corporations

**Reference Books**

1. N.D.Kapoor — Elements of commercial law.
2. MLC.Shukla — Mercantile law.
3. P.P.S.Gogna — A Text book of Business Law.
4. S.N.Maheswari — Mercantile law.

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19198AEC25	Programming in C	6	0	0	6

**AIM**

This course is aimed at advancing concepts of programming and software code organization within the framework of structural and procedural programming paradigms.

**OBJECTIVE**

- Students will be able to develop logics which will help them to create programs, applications in C
- Also by learning the basic programming constructs they can easily switch over to any other language in

**UNIT -I**

Evolution and Applications of C — Structure of a C Program — Data Types — Declarations — Operators — Expressions — Type conversions — Built-in functions. -

**UNIT-II**

Data Input and Output — Control statements: if, else-if, goto, switch, while-do, do-while, for, break & continue.

**UNIT -III**

Functions: Defining and accessing functions-passing parameters of functions- Arguments - Recursive functions — Storage classes, Arrays: Defining and processing Arrays + Multi dimensional arrays—passing array to functions~ Arrays and strings—String functions — String Manipulations

**UNIT-IV**

Pointers: Pointers Declarations — Operations on pointers — pointers to functions — Pointer and Strings—pointers and arrays—array of pointers Structures: Structures and pointers—unions.

**UNIT-V**

Data files-Opening, Closing, and processing files—Files with structures and unions — Register variables—Bit wise Operations-Macros-Preprocessing.

**TEXT BOOK:** “Programming in C” ~ E. Balagurusamy — Tata McGraw-Hill

**Publications OUTCOMES:** After the completion of this course, the students will be able to develop applications.  
**Book for Reference:**

1. “Programming with C” — Byron S. Gottfried — Schaum’s outline series — Tata McGraw-Hill publications.
2. “Let us C” ~ Yeswantkanetkar—BPB Publications.

**PRISTUNIVERSITY, THANJAVUR**  
**B.COM-CA**

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19198AEC26L	Programming in C Lab	0	0	3	2

**AIM**

- Focusing on discussing how to write a program of moderate complexity by using C language.

**OBJECTIVE**

1. Ability to work with textual information, characters and strings.
2. Understanding a concept of object thinking within the framework of functional model
1. Solution of a Quadratic Equation (all cases)
2. Sum of Series (Sine, Cosine, e)
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication - use functions).
6. String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings — use function pointers).
7. Creation and processing of Sequential files for Mark list preparation (Use Structures for Record Description)
8. Develop an Invoice application
9. Payroll preparation
10. EB bill preparation

**OUTCOME:**

Understanding a functional hierarchical code organization. Ability to define and manage data structures based on problem subject domain.

**PRIST UNIVERSITY, THANJAVURB.COM-  
CA**

<b>Course Code</b>	<b>CourseTitle</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC02A	PackagesLab-II	0	0	2	1

**MS-EXCEL**

1. Prepare the addressing methods in excel
2. Describe the type of function
3. Draw a graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark list preparation for a student.
6. Prepare a Worksheet preparation for a company.
7. Prepare an Inventory Preparation
8. Prepare an Electricity Bill Preparation

**SEMESTER-II**

பாட குறியீடு : 20110AET31

தமிழ்

மூன்றாம் பருவம்

முதலாம் ஆண்டு ( BA , Bsc , B.COM, BBA)

செய்யுள் , காப்பியங்கள் இலக்கிய வரலாறு

செய்யுள்

அலகு : 1

- 1 . சிலப்பதிகாரம் - மனையறம் படுத்த காதை
- 2 . மணிமேகலை - ஆதிரை பிச்சையிட்ட காதை
- 3 . சுவக சிந்தாமணி - விமலையர் இலம்பகம்

அலகு : 2

- 4 . பெரியபுராணம் - இளையான் குடிமாற நாயனார் புராணம்
- 5 . கம்பராமாயணம் - கைகேயி சூழ்வினைப் படலம்

அலகு : 3

- 6 . சூறாப்புராணம் - நபி அவதாரப் படலம் - 24 வரிகள்
- 7 . தேம்பாவணி - வாமன் ஆட்சி படலம் - முதல் 5 பாடல்கள்

அலகு : 4

- 8 . நளவேண்பா - சுயம்வர காண்டம் (20 - 51)

அலகு . 5 : இலக்கிய வரலாறு

- 9 . காப்பியங்கள் , ஐஞ்சிறு காப்பியங்கள் , புராணங்கள் , இதிகாசங்கள்

## PRIST UNIVERSITY, THANJAVURB.COM-CA

CourseCode	CourseTitle	L	T	P	C
19111AEC31	AdvancedEnglish-III	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT – I**

The organs of  
speech  
Classification of speech  
sounds  
Vowels and Diphthongs

**UNIT – II**

Consonants  
Consonant cluster

**UNIT – III**

## SEMESTER-III

### PRIST UNIVERSITY, THANJAVURB.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
19161SEC33	CostAccounting	3	1	0	5

#### AIM

To ascertain the costs of products manufactured or services rendered and exercising control over the expenditure.

#### OBJECTIVES

- I. To know the cost of each process and each element.
- II. To serve management in the execution of policies according to the situations.

#### UNIT – I

Cost accounting definitions – Functions, Importance, Advantages and Limitations – Relationship between cost and Financial Accounting – Installation of costing system – Cost Unit and Cost Centre – Elements of Cost – Cost sheet – Tender and quotation.

#### UNIT – II

Materials cost control – Material Purchases – Storage of Material – Various levels of Stock – Pricing of Materials Issues.

#### UNIT – III

Labour Cost Control – Piece and Time Rates – Incentive Plans – Labour turnover – Idle time – Overheads – Allocation – Apportionment – Re Apportionment and Absorption.  
Employability

#### UNIT -IV

Process Costing (Excluding Inter Process, Equivalent Production – By product – Joint product) and – Operating Costing.

#### UNIT -V

Contract Costing – Reconciliation of Cost and Financial Accounting.

#### OUTCOME:

The students gained knowledge on cost ascertainment and cost control.

#### REFERENCE BOOKS

1. Palekhar & Pattan Shetty – Costing.
2. Jain & Narang – Cost Accounting.
3. S.P. Iyengar – Cost Accounting.
4. Ahuja & Others – Cost Accounting.
5. R. Srinivasan & R. Ramachandran – Cost Accounting.

## PRIST UNIVERSITY, THANJAVUR.B.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
19161SEC34	BankingTheoryLaw andPractice	4	0	0	4

**AIM**

To provide a comprehensive view of Banking Services to know the application of Banking Theory Law and Practice.

**OBJECTIVES**

- I. To highlight the functions and services of a modern bank.
- II. To understand the relationship between banker and customer.
- III. To learn law relating to Negotiable Instruments, Securities and Advances.

**UNIT – I**

Bank and Banking – Role and importance of Banking – Classification of Commercial Banks – Functions of commercial Banks – Investment Policy of a Commercial Bank – Functions of RBI.

**UNIT – II**

E – Banking – Forms of E- Banking Automatic Teller Machine (ATMS) – Credit Cards, Debit Cards – Types of Credit Cards – Types of Bank Accounts – Types of Deposits – Electronic Funds Transfer.

**UNIT – III**

Special Types of Bank customers – The Paying Banker – The Collecting Banker.

**UNIT – IV**

Negotiable Instruments – Characteristics – Parties to Negotiable Instruments – Endorsement – Types of Endorsement.

**UNIT – V**

Bills of exchange and Promissory notes – Cheques and Bank Drafts Crossing of Cheques.

Employability

**OUTCOME:**

The course helped the students to understand the basic important functions and principles and practices of Banking Theory Law in day to day business.

**REFERENCE BOOKS**

1. B.S.Raman-Banking, Theory, Law and Practice
2. S.M.Sundaram -Banking Theory Law and Practice
3. Varshney and Sundaram-A Text Book on Banking Theory Law Practice
4. K.P.M.Sundaram -Banking Theory Law and Practice

## SEMESTER-III

### PRIST UNIVERSITY, THANJAVURB.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
19198AEC35	ProgramminginC++	6	0	0	6

#### AIM:

Implementseveralprograms inlanguages otherthantheoneemphasizedinthecore curriculum(Java/C++)

#### OBJECTIVES:

- **To understand how C++ improves C with object-oriented features.**
- **To learn how to write inline functions for efficiency and performance**

#### UNIT-I

Object oriented programming: Software evolution- OOP paradigm- concepts, benefits, Object oriented languages and applications.

#### UNIT-II

Introduction to the basic concepts of C++ language - Tokens, keywords, identifiers, data type, variables, manipulators- expression and control structures - functions: main function- function prototyping - call by reference function overloading- friend and inline functions.

#### UNIT-III

Classes and objects - constructors and destructors- operator overloading- type conversions.

#### UNIT-IV

Inheritance - single inheritance - multiple inheritances - hierarchical, hybrid inheritance - polymorphism - pointers- virtual functions - console I/O operations.

#### UNIT-V

Files - Classes for file stream operations - opening, closing and processing files - end of file detection - file pointers - updating a file - error handling during file operations - command line arguments - templates- exception handling.

#### OUTCOMES:

Apply C++ features to program design and implementation.

#### TEXTBOOK:

"Object oriented programming with C++". E. Balagurusamy , Tata McGraw . Hill publishing ltd., New Delhi, 1995.

#### REFERENCE BOOKS:

1. C++ The complete reference- Herbert Schildt, 3rd edition, Tata McGraw Hill Pub- Ltd., 1999.
2. Let us C++- Yeswant Kanetkar- BPB Publications, 1999.

## SEMESTER-III

### PRIST UNIVERSITY, THANJAVURB.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
19198AEC 36L	ProgramminginC++lab	0	0	3	2

#### AIM:

UseC++todemonstratepracticalexperiencein developingobject-oriented solutions

#### OBJECTIVES:

- Analyseaproblemdescriptionanddesignandbuildobject-orientedsoftwareusinggoodcodingpracticesand techniques
  - designandimplement programsusingC++
1. Write C++ program using a class to represent a bank account with data members- name of depositor,accountnumber,type ofaccount,balanceandmemberfunctions- depositamount,withdrawamount,show Name andbalance. Check the programwithyour own data.
  2. Design anabstractbaseclass"Shapes"andderivethreeclasses "Rectangle", "Circle"and"Triangle".Develop polymorphic functions "Circumference" and "Compute-Area" to calculate thecircumference and area of these objects and display it. Develop a main program to create each oftheseand applythesepolymorphicfunctions.
  2. WriteC++programsfor implementinginheritance.
  3. WriteaC++program toillustrateinlinefunctions.
  4. WriteaC++program usingfriend operatorfunction.

#### SkillDevelopment

5. WriteaC++program toillustratevirtual baseclass,virtualfunctionandabstractclass.
6. Writeaprogram whichreads a text from afileand the displaythefollowinginformation.
7. NumberofLines
8. Numberofwords.
9. Numberofcharacters.
10. Stringsshouldbeleft-justifiedandnumbers shouldberight-justifiedin\_ asuitablefieldwidth.
11. WriteaC++program toimplement fileconcept: Createafileandstoresometext, displaythecontentofthe filewith line numbers.
12. FileProcessing:Marksheetpreparation.
13. FileProcessing: Inventorypreparation.

#### OUTCOME:

Thecourseistobuildstudents'conceptualandpracticalskillsinbuildingsoftwareprojectsintheC++programminglanguage to reasonablyadvanced level.

## SEMESTER-III

### PRIST UNIVERSITY, THANJAVUR B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
19198RMC37	Research Methodology	3	0	0	3

### GENERAL RESEARCH METHODOLOGY

#### AIM:

To create a basic appreciation towards research process and awareness of various research publications

#### OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

#### OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

#### PREREQUISITES:

Basic computer literacy & skills for working in window-environment

#### **UNIT I: Introduction to Research Methodology**

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

#### **UNIT II: Research Methods**

Research methods versus methodology – Research and scientific method – Criteria of good research –

Problems encountered by researchers in India.

### **UNIT III: Literature Survey**

Articles–Thesis– Journals–Patents–Primarysourcesofjournalsandpatents–Secondarysources–

Listingof titles–Abstracts – Reviews–General treatises – Monographs.

#### **Skill Development**

### **UNIT IV: Database Survey**

Databasesearch–NIST–MSDS–PubMed–Scopus – Science citation index–  
Informationaboutaspecific search.

### **UNIT -V**

#### **Business Research**

Research in Management: An Introduction– Definition, meaning and nature – Scope and objects of Research. Types of Research-Research Design–Defining Research Problem and Formulation of Hypothesis – Experimental Designs.-Sampling and types of sampling-Research Process – Steps in the process of Research, Data Collection and Measurement: Sources of Secondary data – Methods of Primary data collection – Questionnaire construction.-Data presentation and Analysis – Data Processing – Methods of Statistical analysis and interpretation of Data .

### SEMESTER-III

#### PRIST UNIVERSITY, THANJAVURB.COM-CA

CourseCode	CourseTitle	L	T	P	C
19120SEC03A	PackagesLab-III	0	0	2	1

#### POWERPOINT

1. Create a slideshow presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slideshow presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create a slideshow presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slideshow presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. Create a slideshow presentation for a shop advertisement to be open shortly
6. Create a slideshow presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slideshow presentation for tourists places
8. Create a slide for a calendar using appropriate text attributes and insert an object from a bitmap file

## SEMESTER-III

### PRIST UNIVERSITY, THANJAVURB.COM-CA

CourseCode	CourseTitle	L	T	P	C
19160SEC03B	SOFTSKILL- III InterpersonalRelationsandSocialResponsibilities	0	0	3	2

#### Part-IIIInterpersonalRelationsandSocialResponsibilities

##### UNITI:Interpersonal Relations

Nature of groups and teams, Team effectiveness, Group discussions and decision making, EmotionalIntelligence(EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Interdependence,Peer Reviews.

##### UNITII:EthicsandSocialResponsibilities

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Greencomputing,Social accounting, Auditing, Civic sense.  
Skilldevelopment

## SEMESTER-III

### PRIST UNIVERSITY, THANJAVURB.COM-CA

CourseCode	CourseTitle	L	T	P	C
19111SEC03L	CommunicativeEnglishLab-III	0	0	2	1

#### Aim:

- To acquaint with the basic grammar and develop language skills

#### Objective:

- To change a sentence from active to passive and vice versa
- To make sentences
- To write a letter
- To improve vocabulary
- To enhance speaking skills
- To enrich writing skills

#### Outcome:

- Understand grammar
- Develop speaking and writing skills

#### UNIT –1

Active and Passive

#### UNIT –II

Developing the hints

#### UNIT –III

Letter writing

#### UNIT –IV

Speaking-benefits-features of a good speaker-Tip for improving speech-types

#### UNIT –V

Writing-benefits-types-tips for improving writing

**Lab Note-1.** Anagrams, Word Traps, Stinging Words, letter writing from Globarena Software, Self-introduction, 2. Picture writing note book

**Viva-**Self introduction, Picture talk

**Exam components-** Theory-50+MCQ online exam -20+ Viva-15+Labnote-10=100

## SEMESTER-IV

### PRIST UNIVERSITY, THANJAVURB.COM-CA

CourseCode	CourseTitle	L	T	P	C
19198SEC43	Auditing	5	0	0	5

**AIM:** To define the aim of your clinical audit project consider what it is that you hope to achieve

#### OBJECTIVES:

- The students will enable the system of internal check.
- Checking arithmetical accuracy of books of accounts, verifying posting, casting, balancing etc.

#### Unit-I

Auditing—Definition—Objectives—Types of Audit—Advantages—Qualities of a Professional auditor— Investigation Vs Auditing

#### Unit-II

Internal Check—Objectives, Principles, Advantages—Internal check system and Auditor—Internal Control—  
Internal Audit

#### Unit— III

Vouching—Objectives, Importance, -  
Vouching of Cash Transactions, Trading Transactions and Impersonal ledger.

Employability

#### Unit-IV

Verification and valuation of Assets and Liabilities—Cash—  
Investments Advances, Land and Building, Plant and Machinery, Furniture, Stock, Capital, Creditors, Bills  
Payable

#### Unit— V

Company Audit—Provision in the Companies Act relating to auditor's qualifications, appointment, removal,  
Rights, duties and liabilities, (Civil and Criminal)

#### OUTCOMES:

This course helped the students that who to calculate financial activities Refer

#### ence Books

1. B.N.Tandon— 'A Practical] Hand Book of Auditing'
2. Dinkar Pagare— 'Principles and Practice of Auditing'
3. R.G.Saxena— 'Principles and Practice of Auditing'
4. Rupram Gupta— Auditing.
5. C.R.M. Depuala— The Principles of Auditing

**PRISTUNIVERSITY, THANJAVUR**  
**B.COM-CA**

CourseCode	CourseTitle	L	T	P	C
19198SEC44	BusinessStatistics	4	0	0	5

**Aim:**

- Provide a foundation and motivation for exposure to statistical ideas subsequent to the course.

**Objective:**

- Motivate students an intrinsic interest in statistical thinking.
- Instill the belief that Statistics is important for scientific research.

**UNIT -I**

Meaning and scope of statistics, uses of statistics in business, statistical data -- primary and secondary -- classification of data — frequency distribution — graphs and diagrams.

**UNIT -II**

Measures of central tendency — arithmetic, geometric and harmonic mean - characteristics — measures of dispersion — range — mean deviation and standard deviation — skewness — correlation -- regression.

**UNIT -III**

Time series — secular trend — index numbers — uses — cost of living index — index numbers of wholesale prices.

**EMPLOYABILITY****UNIT -IV**

Quantitative analysis in the practice of management — models and their development — matrices — addition — multiplication — transpose — inverse — introduction to linear programming — concepts of optimization — solving LP using graphical and simplex method — transportation — assignment — (only simple problems).

**UNIT -V**

Simulation - Queuing model (M/M/I) — replacement decisions.

**OUTCOMES:** The ability to apply fundamental concepts in exploratory data analysis. Distinguish between different types of data

**References:**

1. V.K.Srinivastave, Gv.Senoy, S.C.Sharma, Quantitative techniques for managerial decision making.
2. N.D.Vohra Quantitative techniques in management.
3. Sharma, Operation research, theory and applications.
4. Gupta S.P. statistics methods.
5. Elhance D.N, Fundamentals of statistics.

**PRISTUNIVERSITY, THANJAVUR**  
**B.COM**

CourseCode	CourseTitle	L	T	P	C
19198AEC45	VisualBasicProgramming	6	0	0	6

**Aim:**

- Students must know about the Core programming of visual basic

**Objective: students will understand**

- The ability of the system to adjust to the changing requirement of user.
- The ability of the system to be able to withstand long period of time operation by the user

**UNIT I**

Introduction to Visual Basic—Integrated Development Environment (IDE) features—VB editor—customizing the IDE— anatomy of a form working with form properties— setting form's properties— introducing form events and form methods.

**UNIT II**

Variables in Visual Basic: Declaring variables — Data types — Null values, Error value — empty value — the scope of a variable — Module level variables — Constants — Creating your own constants — Scope of a constant — Converting data types — arrays — Declaring arrays — Fixed size arrays - Dynamic arrays — Preserve keywords — ReDim. Writing Code in Visual Basic - The anatomy of a procedure — Subroutine and Functions — Language constructs - For...Next, The While loop, Select case....End select, Exit statement, with structure.

**UNIT III**

Selecting and Using controls—Introduction to standard controls-command buttons—Textboxes—labels—option buttons—Checkboxes-frame controls—Listboxes-Comboboxes—Image objects — Pictureboxes-Timer-ScrollBars-File System Controls(Drive, Dirlist, FileListboxes).

**UNIT IV**

Introduction to Built-in ActiveX control—Toolbar—The Treeview control—The ListView control—the ImageList control-Command Dialog Control—statusbar Control—Rich text box control—Menu editor.

**UNIT V**

DDE properties — DDE Methods — OLE properties — Active control Creation and Usage and ActiveX DLL creation and usage — Database access — Data Control — Field control — Data grid record set using SQL to manipulate data— Open DataBase Connectivity.

**OUTCOMES:** This course will be helped the students understanding on database operations Text Books:

1. Mohammed Azam Programming with Visual Basic 6.0—Vikas Publishing House Pvt.Ltd—2002.
2. Content Development Group Visual Basic 6.0—Tata McGraw Hill Publishing Company Limited—2002.

**PRISTUNIVERSITY, THANJAVUR**  
**B.COM**

<b>CourseCode</b>	<b>CourseTitle</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19198AEC46L	VisualBasicProgrammingLab	0	0	3	2

**Aim:**

**It gives practical knowledge to the students on visual Basic Programming**

**Objective:**

1. To know the process of visual program design and development.
2. To understand the event-driven programming.
3. To acquire the concepts of objects, properties, and methods.
  
1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to expand and shrink an object—while program is running.
4. Write a code to design and implement a scientific calculator.
5. Write a program to create animation by using move method and timer Object.
6. Write a program for preparing students mark list.
7. Write a program to populate the label entities using data bound control.
8. Write a program to expand and shrink Objects using timer control and move method

**OUTCOME: Visual Basic provides a huge number of graphic tools that students can be used to solve all sorts of problems.**

## SEMESTER-IV

### PRIST UNIVERSITY, THANJAVURB.COM

COURSECODE	COURSETITLE	L	T	P	C
19111SEC04L	CommunicativeEnglishLab-IV	0	0	1	1

#### Aim:

- To develop communicative skills

#### Objective:

- To change sentences from direct to indirect and vice versa
- To comprehend a passage
- To enhance language skill
- To improve presentation skill
- To enrich vocabulary

#### Outcome:

- Understand grammar
- Develop language and presentation skills

#### UNIT –I

Direct and Indirect

#### UNIT –II

Comprehension

#### UNIT –III

Conversation

#### UNIT –IV

Descriptive Writing

#### UNIT –V

Soft skills-Importance-aspects-SWOT analysis-values-positive attitude-perception

**Lab Note**-Confusing Words, Word families, Non-

English words, Presentation skills, Oral presentation, Conversation from Global arena software

**Viva**-Presenting a topic

**Exam components**-Theory-50+MCQ online exam-20+Viva-15+Lab note-15=100

## SEMESTER-IV

### PRIST UNIVERSITY, THANJAVURB.COM

COURSECODE	COURSETITLE	L	T	P	C
191ENVSTU	Environmentalstudies	1	0	0	1

#### AIM:

To help the students to acquire knowledge of pollution and environmental degradation

#### OBJECTIVES: Students can help and care

- Social groups and individuals to acquire a set of values for environmental protection.
- An opportunity to be actively involved at all levels in environmental decision making.

#### UNIT-I

The Multidisciplinary Nature of Environmental Studies – Definition, Scope and Importance – Need for Public awareness- natural Resources: Renewable and Non – Renewable Resources- Forest Resources – Water Resources- Mineral Resources- Food Resources – Energy Resources – Land Resources.

#### UNIT-II

Ecosystems- Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers and decomposers – Energy flow in the ecosystem – Ecological succession- Food chains, food webs and ecological pyramids – Types of ecosystem – Forest ecosystem – Greenland ecosystem – Desert ecosystem – Aquatic ecosystems.

#### UNIT-III

Biodiversity and its Conservation – Definition- Genetic, Species and ecosystem diversity – Biogeographical classification of India – Values of biodiversity – Biodiversity at global, National and local levels – India as a mega-diversity nation – Hot-spots of biodiversity- Threat to biodiversity – Endangered and endemic species of India – Conservation of biodiversity.

Skill development

#### UNIT-IV

Environmental Pollution – Definition – Air Pollution – Water pollution – Soil Pollution- Marine Pollution- Noise Pollution – Thermal Pollution – Nuclear hazards – Solid waste Management – Role of an individual in prevention of pollution – Disaster management.

#### UNIT-V

Social Issues and the Environment – From Unsustainable to Sustainable development – Urban problems related to energy – Water conservation, rainwater harvesting, watershed management – Environmental Ethics – Climate change greenhouse effect and global warming – Ozone depletion – Wasteland reclamation – Consumerism and waste products – Environmental Legislation – Issues involved in enforcement of environmental legislation – Public awareness – Human population and the environment.

#### OUTCOME:

**This course created awareness about environment ecosystem TE**

#### XTBOOK:

‘ENVIRONMENTAL STUDIES’, K. Kumarasamy, A. Alagappa Moses, M. vasanthy.

## SEMESTER-V

### PRIST UNIVERSITY, THANJAVURB.COM

COURSECODE	COURSETITLE	L	T	P	C
19198SEC51	CorporateAccounting	5	0	0	5

#### AIM

To train the student to grasp the principles and practice of corporate accounting

#### OBJECTIVES

- I. To get broad picture of inflation and human resources accounting.
- II. To gain expert knowledge in advanced corporate accounting on Banking, Insurance and Electricity services.
- III. To learn Holding companies accounting.

#### UNIT – I

Holding Companies-consolidated Balance Sheet with single subsidiary

#### UNIT – II

Accounts of Insurance Companies

#### UNIT – III

Accounts of Insurance Companies  
Employability

#### UNIT – IV

Double Accounts System-Electricity-Repairs and renewals

#### UNIT – V

Principles of Government Accounting–Human Resource Accounting and Inflation Accounting.

#### OUTCOME

The course helped the student to gain expert knowledge on advanced corporate accounting.

#### REFERENCE BOOKS

1. R.L.Gupta and M.Radhaswamy – Advanced accountancy vol– II
2. S.P.Jain K.L. Narang – Advanced Accountancy Vol –II
3. T.S. Reddy and Dr.A.Murthy – Corporate Accounting Vol –II
4. S.P.Iyenger – Advanced accountancy–Vol –II

## SEMESTER-V

### PRIST UNIVERSITY, THANJAVURB.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
19198SEC52	BusinessEconomics	5	0	0	5

**AIM:** Students will learn how markets and other governance structures organize core economic activities

**OBJECTIVE:** Students will be able to

- Identify and explain economic concepts and theories related to the behavior of economic agents, markets, industry and firm structures, legal institutions, social norms, and government policies.
- Integrate theoretical knowledge with quantitative and qualitative evidence in order to explain past economic events and to formulate predictions on future ones.

#### Unit-I

Definition—Methods of Economics—Meaning of Business Economics—Objectives of Business Economics —Nature of Business Economics—Economic Laws —Micro—Macro Economics.

#### Unit— II

Demand Analysis—Demand Schedule—Law of Demand—Demand Curves—Elasticity of Demand—Indifference Curves.

#### Unit— III

Production Function—Factors of Production—Law of Return—Cost of Production—curve—Scale of Production—Isoquant curve-Economies of Large scale production.

#### EMPLOYABILITY

#### Unit-IV

Cost concepts-Different costs-Long and short run cost curves—Relationship between costs—Break even analysis

#### Unit-V

Market Structure—Firm—Equilibrium Firm and Industry—Optimum Firm—Pricing—Pricing under Perfect competition— Monopoly— Duopoly— Oligopoly

**OUTCOME:** Students learned through this course about economic structure, policy and application Reference Books:

ooks:

1. K.P.M.Sundaram & N.Sundaram - Business Economics
2. S., Sankaran- Business Economics
3. P.N.Reddy & Appanaiyah—Business Economic

## SEMESTER-V

### PRIST UNIVERSITY, THANJAVURB.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
19198SEC53	FinancialManagement	5	0	0	5

#### AIM:

Optimum funds utilization. Once the funds are procured, they should be utilized in maximum possible way at least cost.

#### OBJECTIVE:

1. To ensure regular and adequate supply of funds to the concern.
2. To ensure adequate return to the shareholders which will depend upon the earning capacity, market price of the share, expectations of the shareholders

#### Unit—I

Introduction—Finance and related disciplines—Scope of financial management—Objectives of financial management—Financial Decisions -Organization of finance function

#### Unit-II

Cost of capital—cost of debt—cost of preference shares—cost of equity—cost of retained earnings—weighted average cost of capital.

#### Unit-III

Introduction—Capital structure—Determinants-Theories-Net income approach—Net operating income approach— M.M. Approach—Traditional approach

#### Employability

#### Unit—IV

Leverage—Meaning and types—Significance—Operating leverage—Financial leverage-Combined leverage

#### Unit— V

Dividend policy—Factors influencing dividend policy—Theories-Relationship with value of firms—Stock dividend— Stock splits

**OUTCOME: This course guided the students various relationship among the financial movements**  
**Reference Books**

1. Kulkarni-Financial Management
2. S.N.Maheswari-Financial Management
3. R.K.Sharma-Financial Management
- 4, Prasanna Chandra-Fundamentals of Financial Management 5.R.Ramachandran,R.Srinivasan—Financial of Management

## SEMESTER-V

### PRIST UNIVERSITY, THANJAVURB.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
19198SEC54	SoftwareEngineering	4	0	0	4

**AIM:** To produce programmersequippedwith an understandingoffundamentalcomputationalconceptsunderlyingmost programminglanguages

**OBJECTIVE:Studentsto** knowabout:

- techniques forsolvingproblems
- basiccomputationalconceptsandelementarydata structures
- theedit-compile-link-run cyclefromauserpointofview

#### UNITI

Introduction — definition-size factors- quality and productivity factors- managerial issues. Planning - softwareproject—introduction—definingtheproblem-developingastrategy-planningthedevelopmentprocess-planningan organizational structure.

#### UNITII

Softwarecostestimation—costfactors—costestimationtechniques—staffing —levelestimation — estimatingsoftwaremaintenancecosts.Softwarerequirementsdefinition— softwarerequirements specificationtechniques— languages andprocessors forrequirements.

#### UNITIII

Software design — fundamental design concepts — modules and modulation criteria — designnotations—designtechniques—detaildesignconsiderations—realtimeanddistributedsystemdesign — testplans—milestoneswalkthroughsandinspections—designguidelines.

#### UNIT -IV

Implementationissues—structuredcodingtechniques—codingstyle—standardsandguidelines — documentationguidelines —data abstraction—exceptionhandling—concurrencymechanisms.

#### UNITV

Verification and validation techniques — quality assurance — walkthrough and inspections — staticanalysis — symbolic executions — unit testing and debugging — system testing — formal verification.Softwaremaintenances—enhancingmaintainabilityduringdevelopment—managerialaspects— configurationmanagement— sourcecodemetrics.

#### OUTCOMES:

**Thestudent**would understandtheproblem;plans;top-downdesign/stepwiserefinement;recognitionof similarities between problems leadingto adaptation and reuse.

**Leaders:**theirskills,roles,andresponsibilities.Vision,Empoweringanddelegation,motivatingothers,organizationalskills,teambuilding,decisionmaking,givingsupport,Vision,Mission,Coaching,Mentoringandcounseling,Appraisalsandfeedback,conflict,PowerandPolitic,Organizingandconductingmeetings,PublicSpeaking

**UNITII Bodylanguage**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks- reading and analyzing body language, Body language signals and meanings - eyes,mouth,head , arms , hands, handshakes, legs and feet, personal space

COURSECODE	COURSETITLE	L	T	P	C
19161SEC61	ManagementAccounting	5	1	0	6

**AIM**

To emphasize the importance of accounting information for managerial decision making and solving problems.

**OBJECTIVES**

- i. To gain expert knowledge of the techniques of managerial accounting.
- ii. To know the application of various financial tools for making managerial decisions.
- iii. To apply techniques of costing for business decisions.

**Unit-I**

Definition of Management accounting—Nature, scope, objectives, Functions of management accounting — Management Accounting and Financial Accounting Management Accounting and Cost Accounting— Advantages & Limitations of Management Accounting

**Unit-II**

Financial Statement Analysis-Comparative statement—Common Size statement—Trend percentages — Ratio Analysis.

**Unit-III**

Fund Flow Analysis and Cash Flow Analysis  
Employability

**Unit-IV**

Marginal costing and Break—Even analysis—Budget and budgetary controls—Classification of budgets

**Unit— V**

Standard costing and variance analysis, Capital budgeting-Importance—Techniques of capital budgeting

**OUTCOMES:**

The course helped the students to learn the analyzes and interpretation of financial statements and application of Marginal costing and Standard costing techniques.

**Reference Books**

1. Shashi K. Gupta & R. K. Sharma - Management Accounting
2. S: N. Maheswari - Management Accounting
3. R. Ramachandran and R. Srinivasan — Management Accounting
4. Hingorani and Ramanathan—Management Accounting

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVURB.COM- CA

COURSECODE	COURSE TITLE	L	T	P	C
19198SEC62	IncomeTax LawandPractice	5	0	0	5

#### AIM

#### OBJECTIVES

##### Unit— I

Basic Concepts—Definitions—Assesses—Person, income, assessment year, previous year, basis of charge: Determination of Residential Status— Income exempt from tax

##### Unit-II

Salary: Definition—Salary under section 17—allowances, perquisites, profit in lieu of salary—deductions under section 16-computation of salary income.

##### Unit— III

House property: Definition, exempted incomes from house property—Annual value—determination of annual value — Let out — Self occupied — Deductions — computation of property income.

##### Employability

##### Unit—IV

Profits and Gains of business or profession—definition—charging provisions—deductions—computation of business and professional income

##### Unit— V

Capital Gains: Basis of charge—Cost of acquisition, cost of improvement—exempted capital gain—computation of capital gain—Income from other sources—Chargeability—deductions—Computation of Income under other sources.

#### OUTCOMES:

#### Reference Books

1. Gaurand Narang- Income Tax Law and Practice
2. Jayakumar and Dr. Hariharan- Income Tax Law and Practice
3. Rajavelu—Income Tax Law & Practice  
Bagawathi Prasad—Income Tax

4.

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVURB.COM- CA

COURSECODE	COURSE TITLE	L	T	P	C
19198SEC63	Database Management Systems	4	0	0	4

#### AIM

#### OBJECTIVES

##### UNIT-I:

Concepts of DBMS, advantages, various views of data, data independence, schema and Sub-schema, data models, database languages, database administration & Users.

##### UNIT-II:

Data dictionary, overall system architecture, E-R models, mapping constraints, Keys: Primary, Candidate, Super Key, Foreign Key.

##### UNIT-III:

Access Concepts & terms: database tables, relational database, record, fields controls & objects, queries and dynaset.

##### UNIT-IV:

Forms, reports, properties, wizards, macros, Access requirements, starting & quitting access, the access workspace & views.

##### UNIT-V:

Creating database & tables with & without wizard, field name, data types and properties, adding & deleting fields in fields.

#### OUTCOME:

#### References:

1. Working in MS-Office—“Ron Mansfield”(TMH)
2. Complete Reference Access 2002-Virginia Anderson(TMH)
3. Database-Management System—Silberchatz, Korth

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVURB.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
19198DSC64_	Discipline Specific Elective-II <del>MULTIMEDIA</del>	4	0	0	4

**AIM:** This course provide to the students support of self-efficacy learning methods and strategies with visual-design tools

#### **OBJECTIVES: The Course will be able**

- to support and motivate the students coming from disadvantaged environments towards the achievement of their educational potential, through experiential learning;
- To back the development of a Virtual Reflective Learning approach to foster the real involvement of all the students.

#### **UNIT I**

Introduction to Multimedia-CDROM and the Multimedia highway—Use of Multimedia- Introduction to making Multimedia— Multimedia skills.

#### **UNIT II**

Multimedia hardware and software—Macintosh and windows production platforms—Connections-Memory and storage devices—Input devices—Output devices Communication devices—Basic software tools—

Text editing and word processing tools—Painting and drawing tools—3D modeling and animation tools-Making instant multimedia-Multimedia authoring tools.

#### **UNIT III**

Multimedia Building Blocks — Text — Fonts and Faces — Using Text in Multimedia: — Computers and Text — Font Editing and Design Tools - Hypermedia and hypertext — Sound — Multimedia System Sounds ~ MIDI Versus Digital Audio — Digital Audio - Making MIDI Audio - Audio File Formats — Images — Making Still Images — Color — Image File Formats- Animation- Principle of Animation — Making Animations That Work — Video—How Video Works—Integration Video Standards—Integrating computers and Television— Shooting and Editing— Video—Video Tips—Recording Formats— Digital Video.

#### **UNIT IV**

Multimedia and the Internet— The Internet and How it Works— Internetworking — Connections - Internet Services — The World Wide Web — Web Services- Web Browsers — Plug-ins and Delivery Vehicles — Designing for the World Wide Web— Working on the Web— Text for the Web— Images for the Web— Sound for the Web — Animation for the Web.

#### **UNIT V**

Assembling and Delivering a Project — Planning and Costing — Project Planning — Estimating — Designing and Producing — Content and Talent -- Using Content Created by others — Using Content Created for a Project — Delivering — Testing — Preparing for Delivery — Delivery — Delivering on CD — ROM — Delivering of World Wide Web.

#### **OUTCOME: This course encouraged the students to appear in**

#### **Multimedia World Text Book:**

Multimedia Making It Work—Fifth Edition-Tay Vaughan — Tata McGraw Hill Edition 2001

#### **Reference Books:**

- Multimedia In Action — James E. Shuman — Vikas Publishing House Multimedia an Introduction — John Villamil— Casanova, Louis Moliva,

## SEMESTER-VI

### PRISTUNIVERSITY, THANJAVURB.COM Open Elective-Journalism

COURSECODE	COURSE TITLE	L	T	P	C
191110EC	UG Open Elective-Journalism	4	0	0	2

**Aim:**

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT-I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT-II**

News – Definition – Kinds – Elements – Sources

**UNIT-III**

Reporters

**UNIT-IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style and Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

**References:-**

Journalism - Susan  
Professional Journalism - John Hogenberg

**PRISTUNIVERSITY, THANJAVURB.COM**  
**Open Elective: Development of Mathematical Skills**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19112OEC	<b>Open Elective: Development of Mathematical Skills</b>	4	0	0	2

**Objectives**

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**References**

1. P.A. Navanitham, Business Mathematics & Statistics
2. Kantiswarup, P.K. Gupta and Manmohan, "Operations Research"

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

## SEMESTER-VI

PRISTUNIVERSITY, THANJAVURB.COM

Open Elective: Instrumentation

COURSE CODE	COURSE TITLE	L	T	P	C
19113OEC	Open Elective: Instrumentation	4	0	0	2

### Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

### Objectives:

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

### UNIT –I: Introduction

Potentiometer- calibration of voltmeter and ammeter, measurement of resistance, Principles of network theorems– Thevenin's and Norton's theorem– Bridges :

AC bridges– Maxwell, Owen, Schering and de Sauty's bridges– Wien bridges.

### UNIT –II: ELECTRONIC INSTRUMENTS –I

Basic characteristics of instruments– resolution– sensitivity- Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter– resistance meter- Amplified D.C. meter– Chopper stabilized amplifier– A.C. Voltmeter using

rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters –

Component measuring instruments (quantitative studies)

### UNIT –III: ELECTRONIC INSTRUMENTS –II

Signal conditioning systems– DC and AC carrier systems– Instrumentation

amplifiers– Vibrating capacitor amplifier– Analog to digital data and sampling– A/D and D/A convertor (successive approximation, ladder and dual slope converters).

Recorders necessity–Recording requirements–Analog recorders–Graphic recorders–strip chart recorders–Galvanometer types recorders –Null type recorders.

## **Unit V–CRO**

CRO–Construction and action–Beam transit time and frequency limitations–

Measurement of potential, current, resistance, phase and frequency–Special purpose oscilloscopes–Sampling storage oscilloscope.

## **Books for Study**

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn.– 1989

## **Learning Outcomes:**

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amp etc.

Acquire sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

## **Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation – A.K.Sawhney–Dhanpat Rai and Sons– 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

## SEMESTER-VI

PRISTUNIVERSITY, THANJAVURB.COM  
Open Elective: FOOD AND ADULTERATION

COURSE CODE	COURSE TITLE	L	T	P	C
19114OEC	Open Elective: FOOD AND ADULTERATION	4	0	0	2

### Aim:

To introduce students to food safety and standardization act and quality control of foods.

### Objectives:

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislator aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

### Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

### Unit-II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

### Unit-III Food Preservation

Introduction- Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization - Canning - Freezing - Refrigeration.

### Unit-IV Food Additives

Introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

### Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices, Grains, Coffee, Tea, Oil fats, Food colours and Milk. Health hazards and risks.

### References:

1. The Food Safety and Standard Act, 2006 – Seth & Kapoor
2. Handbook of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B. Srilakshmi

## SEMESTER-VI

PRISTUNIVERSITY,THANJAVURB.COM

OpenElective:MushroomTechnology

COURSECODE	COURSETITLE	L	T	P	C
19117OEC	OpenElective:MushroomTechnology	4	0	0	2

### UNIT-1

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calacybleindica, volvariella vulvae, pleurotus sp. Agaricus bisporus

### UNIT-II

Pure culture-preparation of media(PDA and oat meal agar media)sterilization-preparation of test tube slantstostoremotherculture-culturing of pleurotus mycelium on petri plates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

### UNIT-III

Cultivation technology: infrastructure, substrates(locally available)polythene bag, vessels, inoculation hood-inoculation loop-low cost stove-sieves-cultural rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy straw, sugarcane trash, maize straw, banana leaves

### UNIT-IV

Storage and nutrition: short term storage-long term storage(Scanning, pickles, papads, drying, storage in salt solutions)-nutrition: proteins, amino acids, mineral elements, nutrition: carbohydrates-crude fiber content, vitamins

### UNIT-V

Food preparation, types of foods prepared from mushroom-soup, cutlet, omelette, samosa, pickles, curry, research centres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>191200EC</b>	<b>OpenElective Web Technology</b>	4	0	0	2

**AIM:**

To equip the students with basic programming skill in Web Designing

**OBJECTIVE:**

- To understand the concepts and architecture of the Worldwide Web.
- □□ To understand and practice mark up languages
- To learn Style Sheet and Frames

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**OUTCOMES:**

Acquire knowledge about functionalities of world wide web  
 Explore markup languages features and  
 create interactive web pages using them Learn and design Client side validation  
 using scripting languages  
 Acquire knowledge about Open source JavaScript libraries  
 Able to design frontend webpage and connect to the backend databases.

**Text Book**

World Wide Web design with HTML – C.Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Ordered and unordered lists – Table handling.

<b>CourseCode</b>	<b>CourseTitle</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19122OEC</b>	<b>Open Elective E-Commerce and its Applications</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**AIM:**

To equip the students with PC hardware and software

**OBJECTIVES:**

- To study the architecture of microprocessors like 8085 and higher versions
- To understand the Assembly language programming
- To know the methods of connecting them to the peripheral devices.
- To learn the basic concepts and Microprocessor applications

**UNIT I**

Introduction to the Personal Computer – Safe Lab Procedures and Tool use – Computer Assembly – Step by step.

**UNIT II**

Basics of Preventive maintenance and troubleshooting – Fundamental Operating Systems – Fundamental Laptops and Portable Devices

**UNIT III**

Fundamental printers and scanners – Fundamental networks – Fundamental security

**UNIT IV**

Advanced personal computers – Advanced operating systems – Advanced Laptops and portable devices.

**UNIT V**

Advanced printers and scanners – Advanced networks – Advanced security.

**OUTCOMES:**

Understand and be able to use Assembly Language.

Understand number systems and the ASCII character set as to how they relate to developing and writing Assembly Language programs.

Understand the basic architectural structure, and the various hardware components including Input/output, Memory, and Control Systems.

Understand the purpose of each of the architecture registers..

Recognize the relationship of high-level programming language constructs to the equivalent Assembly Language instructions.

**Aim:**

- To develop communicative skills

**Objective:**

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills
- To learn to manage time and stress
- To widen creative thinking

- To enrich the skill of working in a group

**Outcome:**

- Develop communicative skills
- To be a good team worker

#### UNIT –I

Simple, Compound and Complex

#### UNIT –II

Note making

#### UNIT –III

Precise writing

#### UNIT –IV

Developing a story

#### UNIT –V

Essay writing

**Lab Note-** Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

**Viva-** Group discussion

**Exam components-** Theory-50+MCQ online exam-20+Viva-15+Lab note-15=100

### RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first

On teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

#### **Research–Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

#### **Research–Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

#### **Research–Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and/or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

#### **Research-Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level

1: Prescribed Research

Level 2: Bounded

ResearchLevel 3: Scaffold

ResearchLevel4:SelfactuatedR

esearchLevel5:Open Research

TakingintoconsiderationtheabovementionedfactsinrespectofintegratingresearchintotheB.Com curriculum,thefollowingResearchSkillBasedCoursesareintroducedintheB.Comcurriculum.

## DEPARTMENT OF ENGLISH

## SYLLABUS FOR UG PART I - ENGLISH - REGULATION 2019

Course Code	Course Title	L	T	P	C
19111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proofread
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases British

and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi - Abraham Lincoln - Swami Vivekananda - John F. Kennedy

**UNIT – IV**

Editing

Proofreading

**UNIT – V**

Comparison and contrast

Cause and

effect

<b>COURSECODE</b>	<b>COURSETITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19161SEC13	BasicAccounting	5	0	0	4

**AIM**

To develop conceptual understanding of the fundamentals of basic accounting system in a business.

**OBJECTIVES**

- I. To process transactions and other events through a bookkeeping mechanism to prepare final accounts.
- II. To impart skills in basic accounting for various kinds of business transactions.
- III. To generate basic data for business information.

**UNIT – I**

Self Study Unit: Introduction – Accounting Concepts and Conventions Book Keeping and Accounting – Accounting Cycle – Objectives and Advantages of Accounting – Journal – Books of Accounts – Format of Journal – Rules of Journalizing.

**UNIT – II**

Journalizing – Ledger – Subsidiary Books – Trail balance – Rectification of Errors.

**UNIT – III**

Bills of Exchange – Self balancing – Single Entry System.  
**EMPLOYABILITY**

**UNIT – IV**

Final accounts of trading and – Non Trading Concerns.

**UNIT – V**

Depreciation – Methods Fixed – Diminishing Annuity – Depreciation Fund – Provisions and Reserves – Fire Claims.

**OUTCOME**

Students are now familiarized with the basic accounting principles and practices and the ascertainment of profit and the financial statement of the business.

**REFERENCE BOOKS**

1. R.L. Gupta and V.K. Gupta – Financial Accounting – Sultan Chand & Sons.
2. S.P. Jain and K.L. Narang – Principles of Accounting – Kalyan Publications.
3. Reddy and Murthy – Financial Accounting – Murgham Publications.
4. Dr. Radha – Financial Accounting – Prasana Publications

## SEMESTER-I

### PRIST UNIVERSITY, THANJAVURB.COM

COURSECODE	COURSETITLE	L	T	P	C
19161SEC14	BusinessEnvironment	5	0	0	4

#### AIM

To study about the different types of environments which influence a business.

#### OBJECTIVES

- I. To learn the social responsibility of a business.
- II. To study about the basic aspects of a business.
- III. To highlight the economic and other environments of a business.

#### UNIT – I

Introduction of Business Environment – Nature and Scope of Business – Characteristics of Business – Objectives of Business – Social Responsibilities of Business – Economic Environment – Social and Cultural Environment.

#### UNIT – II

Political and Legal Environment – Constitutional Environment in India – Legal Environment – Technological Environment – Socio – Cultural Environment.

#### UNIT – III

Economic Environment; - Economic Systems – Economic Systems – Economic Planning – Economic Policies – Business Cycle – Control of Business – Characteristics of Inflation – Control of Inflation

#### UNIT – IV

Financial Environment and Financial System – What is a Financial System – Importance and Role of Banks in the Economy – Functions of Commercial Banks.

#### UNIT – V

Environment Analysis and Managerial Development – Techniques of Environmental Analysis – SWOT Analysis – Training and Development of Professional Managers – Management by Objectives – Methods – Advantages of Management Training – Limitations of MBO

#### EMPLOYABILITY

#### OUTCOME

The course helped the students to understand the different types of environments which influence a business.

#### REFERENCE BOOKS

1. Dr.S.Sankaran– Business Environment
2. Dr.C.B.Gupta– Business Environment
3. Dr.P.K.Ghosh– Business Environment
4. V.Alagappan– Business Environment
5. Dr.D.N.Dwivedi– Business Environment

#### POWERPOINT

1. Create a slideshow presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slideshow presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create a slideshow presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slideshow presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. Create a slideshow presentation for a shop advertisement to be open shortly
6. Create a slideshow presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slideshow presentation for a tourist's places
8. Create a slide for a calendar using appropriate text attributes and insert an object from a bitmap file

## SEMESTER-III

PRIST UNIVERSITY, THANJAVURB.COM

CourseCode	CourseTitle	L	T	P	C

**PART-V Leadership Skills and Body Language**

**UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politics, Organizing and conducting meetings, Public Speaking

**UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks- reading and analyzing body language, Body language signals and meanings - eyes, mouth, head, arms, hands, handshakes, legs and feet, personal space

**SEMESTER-V**  
**PRIST UNIVERSITY, THANJAVURB.COM**

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19111SEC05L	CommunicativeEnglishLab-V	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To understand the degrees of comparison
- To build up a thought
- To write a resume
- To construct a report, agenda and minutes
- To prepare for an interview

**Outcome:**

- Develop communicative skills
- To get a job

**UNIT –I**

Degrees of comparison

**UNIT –II**

Proverb expansion

**UNIT –III**

Resume writing

**UNIT –IV**

Interview

**UNIT –V**

Corporate skills - body language - etiquette - good manners - interpersonal skills

**Lab Note-** Report writing, Resume writing, Interview from Globarena software, Writing agenda, Writing minutes

**Viva-** Mock Interview

**Exam components-** Theory-50+MCQ online exam-20+Viva-15+Lab note-15=100

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVURB.COM

COURSECODE	COURSETITLE	L	T	P	C
19161SEC61	ManagementAccounting	5	1	0	5

#### AIM

To emphasize the importance of accounting information for managerial decision making and solving problems.

#### OBJECTIVES

- i. To gain expert knowledge of the techniques of managerial accounting.
- ii. To know the application of various financial tools for making managerial decisions.
- iii. To apply techniques of costing for business decisions.

#### UNIT – I

Definition of management accounting – Nature, scope, objectives, Functions of management accounting – Management Accounting and Financial Accounting Management Accounting and Cost Accounting – Advantages & Limitations of Management Accounting.

#### UNIT – II

Financial Statement Analysis – Comparative statement – Common size statement – Trend percentages – Ratio Analysis.

#### UNIT – III

Fund Flow Analysis and Cash Flow Analysis.  
Employability

#### UNIT – IV

Marginal costing and Break – Even analysis – Budget and budgetary controls – Classification of budgets.

#### UNIT – V

Standard costing and variance analysis, Capital budgeting – Importance – Techniques of Capital budgeting.

#### OUTCOME

The course helped the students to learn the analyzes and interpretation of financial statements and applications of Marginal costing and Standard costing techniques.

#### REFERENCE BOOKS

1. Shashi K. Gupta & R. K. Sharma – Management Accounting
2. S. N. Maheswari – Management Accounting
3. R. Ramachandran and R. Srinivasan – Management Accounting
4. Hingorani and Ramanathan – Management Accounting

**PRISTUNIVERSITY, THANJAVURB  
.COM**

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17161SEC62	Entrepreneurship and Small Business Management	5	0	0	5

**AIM:**

To know the role of entrepreneurs and small businesses in the economic development of the country.

**OBJECTIVES:**

- I. To study the environment for entrepreneurship development.
- II. To identify suitable business opportunities for small businesses.
- III. To prepare project report and appraise project implementation.

**UNIT-I**

Concept of Entrepreneurship – Definitions – Types of Entrepreneurship – Functions – Characteristics – Role of Entrepreneurs in the Economic Development – Factors affecting entrepreneurial growth.

**UNIT -II**

Entrepreneurial Development Programmes – Self-Employment schemes – Objectives of EDP – Women entrepreneurs – Phases of EDP – Govt. Policies on entrepreneurial development – Small Entrepreneurs development.

**UNIT-III**

Steps Involved in Establishing a small business – generation of Project ideas – Project identification – Selection of a product – Project formulation – assessment of project feasibility study.  
**ENTREPRENURSHIP**

**UNIT-IV**

Legal formalities; Registration and licensing of small scale industrial unit Benefits – Stages of Registration – Procedures for Registration – Deregistration – Filing of Entrepreneur Memorandum – Licensing for SSI sector.

**UNIT-V**

Issues in small business marketing – small entrepreneurs in International Business – Accounting for small business – office organization for small business – sickness in small industries.

**OUTCOME:**

The course helped the student to learn the role of entrepreneurs and small businesses in the economic development of the country.

**REFERENCE BOOKS:**

1. P. Saranavel – Entrepreneurial Development.
2. Dr. C. B. Gupta – Entrepreneurship & Small Business Management.
3. Dr. S. S. Khanka – Entrepreneurship & Small Business Management.
4. Dr. Radha – Entrepreneurial Development.
5. Dr. P. T. Vijayshree – Entrepreneurship & Small Business Management

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVURB.COM

COURSECODE	COURSE TITLE	L	T	P	C
19161SEC63	Auditing	4	1	0	4

#### AIM

To study and report about the state of affairs of business in the Organization.

#### OBJECTIVES

- I. To trace errors and frauds in business.
- II. To analyze the available evidences of all receipts and payments.
- III. To protect the interest of stakeholder and outsiders.

#### UNIT – I

Auditing–Definition–Objectives–Types of Audit–Advantages–Qualities of a professional auditor– Investigation Vs Auditing.

#### UNIT – II

Internal Check–Objectives, Principles, Advantages –Internal Check system and Auditor – Internal Control–Internal Audit.

#### UNIT – III

Vouching–Objectives, Importance, -  
Vouching of Cash Transactions, Trading Transactions and Impersonal Ledger.  
Employability

#### UNIT – IV

Verification and valuation of assets and Liabilities–Cash–Investments– Advances, Land and Building, Plant and Machinery, Furniture, Stock, Capital, Creditors, Bills payable.

#### UNIT – V

Company Audit – Provision in the companies Act relating to auditor’s qualifications, appointment, removal, Rights, duties and liabilities, (Civil and Criminal).

#### OUTCOME

The course helped the students to learn the principles and practices of auditing of various business organizations.

#### REFERENCE BOOKS

1. B.N.Tandon–‘A Practical Handbook of Auditing’
2. Dinkar Pagare–‘Principles and Practice of Auditing’
3. R.G.Saxena–‘Principles and Practice of Auditing’
4. Rupram Gupta–Auditing

**SEMESTER-VI**

<b>COURSECODE</b>	<b>COURSETITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19161DSC64A 19161DSC64B	Elective paper – I- A- Income Tax Law and Practice Elective paper – II- B- Co-operation Theory	5	0	0	4

**Elective paper-I-A-Income Tax Law and Practice**

**AIM:**

To understand the basic elements of Income Tax theory, Law and Practice.

**OBJECTIVES:**

- I. To learn the basic concepts in Income Tax Law
- II. To identify the various sources of income.
- III. To know tax exemptions and deductions.

**UNIT – I**

Basic Concepts – Definitions – Assesses – Person, income, assessment year, previous year, basis of charge: Determination of Residential Status – Incomes exempt from tax under Sections 10,11,12,13 and 13A.

**UNIT – II**

Salary: Definition – Salary under section 17 – allowances, perquisites, profit in lieu of salary – deductions under section 16 – computation of salary income.

**UNIT – III**

House property: Definition, exempted incomes from house property – Annual value – determination of annual value – Let out – Self occupied – Deductions – computation of property income.

**UNIT – IV**

Profits and Gains of business or profession – definition – charging provisions – deductions – computation of business and professional income

**UNIT – V**

Capital Gains: Basis of charge – Cost of acquisition, cost of improvement – exempted capital gain – computation of capital gain – Income from other sources – Chargeability – deductions – Computation of Income under other sources.

**REFERENCE BOOKS**

1. Gaur and Narang – Income Tax Law and Practice
2. Jayakumar and Dr. Hariharan – Income Tax Law and Practice
3. Rajavelu – Income Tax Law & Practice

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVUR.B.COM

COURSECODE	COURSETITLE	L	T	P	C
19161DSC64A 19161DSC64B	Elective paper – I- A- Income Tax Law and Practice Elective paper – II- B- Co-operation Theory	5	0	0	4

#### Elective paper-II-A-Co-operation Theory

##### AIM:

To understand the basic principles of co-operation and their application to the various co-operative organization.

##### OBJECTIVES:

- I. To study the functioning of various co-operative organizations.
- II. To analyze the impact of co-operative credit on agriculture.

##### UNIT – I

Principles of Co-operation – Meaning – Rochdale Principles – Reformulation of Co-operative Principles – Committee on Co-operative Principles 1937 and 1966 – Application of Co-operative Principles in Practice – Evolution of Co-operative Principles

##### UNIT – II

Co-operation and other forms of economic organization: Co-operation and Capitalism – Communism and Socialism – Co-operation as a balancing sector – Co-operative as a system, a sector & a movement – Characteristics of Co-operative economy – Benefits of Co-operation, Economic, Social, Educational and Political.

##### UNIT – III

History of Co-operative Movement in India – Co-operative Credit Societies Act 1904 – 1912 – Multi Unit Co-operative Societies Act 1957 – Recent trends in Co-operative act – Producer companies

##### UNIT – IV

Co-operative credit movement in India – Primary Agricultural co-operative bank central co-operative Banks – State co-operative Banks – co-operative Agricultural and Rural development Bank – State Co-operative Agricultural and Rural Development Bank

##### UNIT – V

Co-operative Marketing – Service Co-operatives – Non Credit Societies – Co-operative Urban Banks – Employees Credit Society – Consumer Co-operatives – Housing Co-operatives – Dairy Co-operatives

##### REFERENCE BOOKS

1. B.S.Mathur-Co-operation Theory
2. Hajeela-Principles of Co-operation
3. Rangasamy– Co-operation

**OpenElective-Journalism**

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19111OEC	OpenElective-Journalism	4	0	0	2

**Aim:**

- To acquaint with the basic knowledge of journalism so that it may entice the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT-I**

Journalism–Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT-II**

News–Definition–Kinds –Elements–Sources

**UNIT-III**

Reporters

**UNIT-IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style and Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

## SEMESTER-VI

PRIST UNIVERSITY, THANJAVURB.COM

**Open Elective: Development of Mathematical Skills**

COURSE CODE	COURSE TITLE	L	T	P	C
19112OEC	<b>Open Elective: Development of Mathematical Skills</b>	4	0	0	2

### Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

### Unit I

Simple interest and compound interest

### Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

### Unit III

Set theory – Series

### Unit IV

Matrices – Determinants

### Unit V

Assignment problems

### References

1. P.A. Navanitham, Business Mathematics & Statistics
2. Kantiswarup, P.K. Gupta and Manmohan, "Operations Research"

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVURB.COM Open Elective: Instrumentation

COURSE CODE	COURSE TITLE	L	T	P	C
19113OEC	Open Elective: Instrumentation	4	0	0	2

#### Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

#### Objectives:

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

#### UNIT –I: Introduction

Potentiometer- calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems- Thevenin's and Norton's theorem- Bridges :

AC bridges- Maxwell, Owen, Schering and de Sauty's bridges- Wien bridges.

#### UNIT –II: ELECTRONIC INSTRUMENTS –I

Basic characteristics of instruments- resolution- sensitivity- Audio frequency oscillator, Conversion of galvanometer into volt meter and ammeter- resistance meter- Amplified D.C. meter- Chopper stabilized amplifier- A.C. Voltmeter using rectifiers- Electronic multimeter- Differential volt meter- Digital voltmeters -

Component measuring instruments (quantitative studies)

### **UNIT –III: ELECTRONIC INSTRUMENTS–II**

Signal conditioning systems–DC and AC carrier systems–Instrumentation

amplifiers–Vibrating capacitor amplifier–Analog to digital data and sampling–A/D and D/A converter (successive approximation, ladder and dual slope conversions).

#### **Unit IV–Recording Devices**

Recorders necessity–Recording requirements–Analog recorders–Graphic recorders–strip chart recorders – Galvanometer types recorders–Null type recorders.

#### **Unit V–CRO**

CRO–Construction and action–Beam transit time and frequency limitations–

Measurement of potential, current, resistance, phase and frequency–Special purpose oscilloscopes–Sampling storage oscilloscope.

#### **Books for Study**

1. Electronic Instrumentation and Measurement techniques– W.D.Cooper and A.D.Helfrick–PHI  
–Third edn.– 1989

#### **Learning Outcomes:**

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

#### **Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation –  
A.K.Sawhney–Dhanpat Rai and Sons– 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill –  
1975.

**PRIST UNIVERSITY,  
THANJAVURB.COM  
Open Elective: Mushroom Technology**

COURSE CODE	COURSE TITLE	L	T	P	C
19117OEC	Open Elective: Mushroom Technology	4	0	0	2

**UNIT-1**

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calocybe indica, volvariella vulvae, pleurotus sp. Agaricus bisporus

**UNIT-II**

Pure culture-preparation of media (PDA and oat meal agar media) sterilization-preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petri plates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

**UNIT-III**

Cultivation technology: infrastructure, substrates (locally available) polythene bag, vessels, inoculation hood-inoculation loop-low cost stove-sieves-cultural rack mushroom unit (Thatched house)-mushroom bed preparation-paddy straw, sugarcane trash, maize straw, banana leaves

**UNIT-IV**

Storage and nutrition: short term storage-long term storage (Scanning, pickles, papads, drying, storage in salt solutions)-nutrition: proteins, amino acids, mineral elements, nutrition: carbohydrates-crude fiber content, vitamins

**UNIT-V**

Food preparation, types of foods prepared from mushroom-soup, cutlet, omelette, samosa, pickles, curry, research centres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

**REFERENCES:**

1. Marimuthu et al., (1991) oyster mushrooms, Dept of plant pathology, TNAU, Coimbatore

5. Swaminathan M. (1990) food nutrition, bapco. The Bangalore printing and publishing co Ltd., Bangalore.

## SEMESTER-VI

PRIST UNIVERSITY, THANJAVURB.COM

Open Elective: FOOD AND ADULTERATION

COURSE CODE	COURSE TITLE	L	T	P	C
19114OEC	Open Elective: FOOD AND ADULTERATION	4	0	0	2

### Aim:

To introduce students to food safety and standardization act and quality control of foods.

### Objectives:

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislator aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

### Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry -  
Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food - Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

### Unit-II Food Pigments

Introduction - classification, types of food pigments - chlorophyll, carotenoids, anthocyanins, flavanoids.

### Unit-III Food Preservation

Introduction - Importance, principle and Types.

High and low temperature preservation - Pasteurization - Sterilization - Canning - Freezing - Refrigeration.

### Unit-IV Food Additives

Introduction -  
antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

### Unit-V Food Adulteration

Types of adulterants - intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices, Grains, Coffee, Tea, Oil fats, Food colours and Milk. Health hazards and risks.

### References:

1. The Food Safety and Standard Act, 2006 – Seth & Kapoor
2. Handbook of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B. Srilakshmi

<b>COURSECODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19120OEC</b>	<b>OpenElectiveWeb Technology</b>	4	0	0	2

**AIM:**

To equip the students with basic programming skill in Web Designing

**OBJECTIVE:**

- To understand the concepts and architecture of the Worldwide Web.
- □□ To understand and practice mark up languages
- To learn Style Sheet and Frames

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A webpage design project – Forms.

**OUTCOMES:**

Acquire knowledge about functionalities of world wide web

Explore markup languages features and

create interactive web pages using them Learn and design Client side

validation using scripting languages

Acquire knowledge about Open source JavaScript libraries

Able to design frontend webpage and connect to the backend databases.

**Text Book**

World Wide Web design with HTML – C.Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001

THANJAVURB.COM**

**Open Elective–E-COMMERCE AND ITS APPLICATIONS**

<b>CourseCode</b>	<b>CourseTitle</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
	<b>Open Elective</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>
<b>19122OEC</b>	<b>E-Commerce and its Applications</b>				

**AIM:**

To equip the students with PC hardware and software

**OBJECTIVES:**

- To study the architecture of microprocessors like 8085 and higher versions
- To understand the Assembly language programming
- To know the methods of connecting them to the peripheral devices.
- To learn the basic concepts and Microprocessor applications

**UNIT I**

Introduction to the Personal Computer – Safe Lab Procedures and Tool use – Computer Assembly – Step by step.

**UNIT II**

Basics of Preventive maintenance and troubleshooting – Fundamental Operating Systems – Fundamental Laptops and Portable Devices

**UNIT III**

Fundamental printers and scanners – Fundamental networks – Fundamental security

**UNIT IV**

Advanced personal computers – Advanced operating systems – Advanced Laptops and portable devices.

**UNIT V**

Advanced printers and scanners – Advanced networks – Advanced security.

**OUTCOMES:**

Understand and be able to use Assembly Language.

Understand number systems and the ASCII character set as to how they relate to developing and writing Assembly Language programs.

Understand the basic architectural structure, and the various hardware components including Input/output, Memory, and Control Systems.

Understand the purpose of each of the architecture registers..

Recognize the relationship of high-level programming language constructs to the equivalent Assembly Language instructions.

Open Elective – Banking Services**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>C</b>
19161OEC	Open Elective - <b>BANKING SERVICES</b>	4	0	2

**AIM**

To provide the Bank is financial institution which is involved in borrowing and lending money.

**OBJECTIVES:**

- I. To provide lending money to firms, customers and home buyers.
- II. To provide keep money for customers
- III. To provide offering financial advice and related financial services, such as insurance.

**UNIT – I**

Banking-Functions-Features-Types-Merits and Demerits.

**UNIT – II**

Retail banking-Mobile banking-Online banking-Merchant banking.

**UNIT – III**

Savings-Deposits-Types-Financial institutions-Nonfinancial institutions.

**Unit – IV**

Loans-Treasury Services-Merchant Services-Business banking.

**Unit-V**

Foreign exchange-History of banking-List of banking services.

**OUTCOMES:**

The course helped the students to make money, Banks used deposit and wholesale deposit, share equity and fees interest from dept. Loans and consumer lending, Such as Credit cards and bank fees.

**REFERENCES:**

1. Elements of Banking and Insurance-Jyotsna Sethi & Nishwan Bhatia

**UNIT I            LifeSkills**

**LifeSkills**- Know how to use technology to communicate safely and effectively. - Know how to access community resources in case of emergency. - Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. - Occupational Safety, First-aid

**UNIT II            Other  
Skills Other Skills**

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

## SEMESTER-VI

### PRIST UNIVERSITY, THANJAVURB.COM

CourseCode	CourseTitle	L	T	P	C
19111SEC06L	CommunicativeEnglishLab-VI	0	0	2	1

#### Aim:

- To develop communicative skills

#### Objective:

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills
- To learn to manage time and stress
- To widen creative thinking
- To enrich the skill of working in a group

#### Outcome:

- Develop communicative skills
- To be a good team worker

#### UNIT –I

Simple, Compound and Complex

#### UNIT –II

Note making

#### UNIT –III

Precise writing

#### UNIT –IV

Developing a story

#### UNIT –V

Essay writing

**Lab Note**-Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

## **RESEARCH INTEGRATED CURRICULUM**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching-research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyze their curricula and consider ways of strengthening in students understanding of and through research. Curricula can be:

### **Research–Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research–Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research–Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

## Research-Tutored:engagingin researchdiscussions

Herethefocus is on students and staffcriticallydiscussingongoingresearch in thediscipline.

**(2019 ONWARDS)**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professional of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

#### RESEARCH-LED: LEARNING ABOUT CURRENT RESEARCH IN THE DISCIPLINE

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

#### RESEARCH-ORIENTED: DEVELOPING RESEARCH SKILLS AND TECHNIQUES

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

#### RESEARCH-BASED: UNDERTAKING RESEARCH AND INQUIRY

Here the curriculum focus is on ensuring that as much as possible the student learns in research and inquiry mode (i.e. the students become producers of knowledge not just consumers).

The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level

1: Prescribed Research

Level 2: Bounded

Research Level 3: Societal

Research Level 4: Self-actuated

Research Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the BBA 2019 Curriculum, the following Research Skill Based Courses are introduced in the BBA 2019 Curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation Bounded Research	2
VI	Project Work	4

## BLUEPRINT FOR ASSESSMENT OF STUDENT'S PERFORMANCE IN RESEARCH LED SEMINAR COURSE

<b>Internal Assessment:</b>	<b>40 Marks</b>
• Seminar Report (UG)/Concept Note (PG)	: 5X 4=20 Marks
• Seminar Review Presentation	
• Literature Survey	: 10 Marks
<b>Semester Examination:</b>	
	: 10 Marks
	<b>60 Marks</b>
(Essay type Questions set by the concerned resource persons)	

## BLUEPRINT FOR ASSESSMENT OF STUDENT'S PERFORMANCE IN RESEARCH METHODOLOGY

<b>COURSE CONTINUOUS INTERNAL ASSESSMENT:</b>	<b>20 MARKS</b>
• Research Tools (Lab):	10 Marks
• Tutorial:	10 Marks
<b>MODEL PAPER WRITING:</b>	<b>40 MARKS</b>
• Abstract:	5 Marks
• Introduction:	10 Marks
• Discussion:	10 Marks
• Review of Literature:	5 Marks
• Presentation:	10 Marks
<b>SEMESTER EXAMINATION:</b>	<b>40 MARKS</b>
<b>Total:</b>	<b>100 Marks</b>

SEMESTER-I

- பிரிஸ்ட் நிகர்நிலைப் பல்கலைக்கழகம்- வல்லம் தஞ்சாவூர்  
தமிழ்

முதல் பருவம்

முதலாம் ஆண்டு -( BBA , BA, B.COM, CS ,Bsc )

இக்கால இலக்கியம் - செய்யுள், சிறுகதை , நாடகம், இலக்கிய வரலாறு

அலகு : 1.செய்யுள் :

1. தாயுமானவ சுவாமிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள்
2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள் - தமிழ் இனிமை , தமிழ் உணர்வு

அலகு : 2. செய்யுள்:

- 6 . நாமக்கல் கவிஞர் - தமிழ் தேன், தமிழ் வளர்ச்சி சபதம் செய்வோம் , 40 அடிகள்
7. ந.பிச்சமுர்த்தி - வழித்துணை - கவிதை கருடன் , 42 அடிகள்
- 8.சுரதா - தேன்மழை, கலப்பை , 22 அடிகள்
9. கண்ணதாசன் - இலக்கியம் , ஒரு பாணையின் கதை , 54 அடிகள்
10. அப்துல் ரகுமான் - சொந்த சிறகுகள், குப்பையை கிளறும் சிறகுகள், 80 அடிகள்

அலகு : 3. சிறுகதை :

11. சு.சமுத்திரம் - வேரில் பழுத்த பலா

அலகு : 4. நாடகம் :

12. கு. வெ. பாலசுப்பிரமணியன் , கௌதம புத்தர் (உரைநடை நாடகம்)

அலகு : 5. இலக்கிய வரலாறு

13. சிறுகதை , புதினம், நாடகம் உரைநடை , கவிதை , புதுக்கவிதை

CourseCode	CourseTitle	L	T	P	C
19111AEC11	ADVANCED ENGLISH-I	4	0	0	2

**AIM:**

- To improve the knowledge of English

**OBJECTIVE:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proofread
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**OUTCOME:**

- Develop vocabulary
- Read and comprehend literature

**UNIT-I**

Glossary of grammar terms  
Figures of speech

**UNIT-II**

Foreign words and phrases  
British and American Vocabulary

**UNIT-III**

Speeches of famous people:

Mahatma Gandhi- Abraham Lincoln- Swami Vivekananda- John F. Kennedy

**UNIT-IV**

Editing  
Proofreading

**UNIT-V**

Comparison and contrast  
Cause and effect

**Aim:**

- To acquaint students with learning English through literature

*OBJECTIVE:*

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

*OUTCOME:*

- Read and comprehend literature

**UNIT-I**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision - Aruna Gnanadasan

**UNIT-II**

The Merchant of Death - Nanda Kishore Mishra & John Kennet

She Spoke for all Nature - Young world 'The Hindu'

**UNIT-III**

Because I could not stop for Death - Emily

Dickinson Stopping by Woodson a Snowy Evening - Robert Frost

**UNIT-IV**

Enterprise - Nissim Ezekiel

Lovepoem forawife

-A.KRamanujam

UNIT-V

19160SEC13	PRINCIPLESOFMANAGEMENT	5	0	0	3

**AIM:** To enhance production and productivity, decrease cost of production and maximize prosperity both for employer and employees having common interests.

### COURSE OUTCOMES

1. Evaluate the global context for taking managerial actions of planning, organizing and controlling.
2. Assess global situation, including opportunities and threats that will impact management of an organization.
3. Integrate management principles into management practices.
4. Assess managerial practices and choices relative to ethical principles and standards.
5. Specify how the managerial tasks of planning, organizing, and controlling can be executed in a variety of circumstances.

**OBJECTIVE:** To familiarize the students to the basic concepts of management in order to aid in understanding how an organization functions, and in understanding the complexity and wide variety of issues managers face in today's business firms.

**PREREQUISITE:** Introduction to the management process, emphasizing planning and strategy, and organizational behavior, direction and control including leadership, motivation, team building, management information systems.

#### UNIT-I

Organization - Management – Importance – concepts- Nature – functions- Role of managers- Management and administration – Evolution of management thought – Modern management approaches– MBO–Merits and Demerits.

#### UNIT-II

Nature and purpose of planning – Planning process - types of plans - strategies – Types of strategies– Decision Making-Types -Process-Rational decision making process.

#### UNIT-III

Nature and purpose of organizing-Organization structure–Process of organization– Span of control–Delegation of authority, responsibility–Accountability

Departmentalization–

–Centralization and decentralization-Selection and Recruitment.

Skill development

#### UNIT-IV

Directing–Principles–Elements–

Motivation, Theories of motivation: Maslow, Herzberg, Vroom models – Communication-Hurdles to effective communication

#### UNIT– V

Control–Controlling–Need for control–Control process–Control techniques. Leadership leadership theories– Styles –Managerial grid. Co-ordination– meaning–need –types.

CourseCode	CourseTitle	L	T	P	C
19160SEC14	MANAGERIALECONOMICS	5	0	0	3

### MANAGERIALECONOMICS

**AIM:** Economics is inevitable to business and hence to teach basic of economics to students of Business Administration

#### COURSE OUTCOMES

1. Apply the knowledge of the mechanics of supply and demand to explain working of markets
2. Describe how changes in demand and supply affect markets
3. Understand the choices made by a rational consumer
4. Explain relationships between production and costs
5. Define key characteristics and consequences of different forms of markets

#### COURSE OBJECTIVES

1. To educate the students to understand the fundamentals of economics
2. To understand the application of economics in business decisions
3. To familiarize the students with the economic tools for business analysis.

**PREREQUISITE:** A minimum level knowledge to understand and applications of Economics

**UNIT I** Introduction – Natural & Scope of Managerial Economics – Significance of Managerial Economics.

**UNIT II** Demand Analysis – Basic Concepts and Tools for Analysis of Demand – Demand forecasting.

**UNIT III** Cost Concepts and Cost Analysis – Production Function – Cost Price – Output Relations.

**UNIT IV** Price and Output Decisions under different Market Structures Perfect Competition – Monopoly – Monopolistic Competition – Oligopoly – Pricing Policy – Pricing Methods and Approaches – Product Line Pricing – Price Forecasting.

**UNIT V National Income-definition, measurement – Factors – difficulties in measurement. GDP-NDP-Business cycle-phases–Inflation-types and control measures. Managerial Economics in the Context of Globalization.**

### **Skill development**

CourseCode	CourseTitle	L	T	P	C
19160AEC15	BUSINESSCOMMUNICATION	5	0	0	4

## COURSE OBJECTIVES

To provide an overview of Prerequisites to Business Communication. To put in use the basic mechanics of Grammar. To provide an outline to effective Organizational Communication. To underline the nuances of Business communication. To impart the correct practices of the strategies of Effective Business writing.

## COURSE OUTCOMES

- To be familiar with the complete course outline/Course Objectives/Learning Outcomes/ Evaluation Pattern &
- Assignments
- To participate in an online learning environment successfully by developing the implication-based
- understanding of Paraphrasing, deciphering instructions, interpreting guidelines, discussion boards &
- Referencing Styles.
- To demonstrate his/her ability to write error free while making an optimum use of correct Business Vocabulary
- & Grammar.
- To distinguish among various levels of organizational communication and communication barriers while
- developing an understanding of Communication as a process in an organization.
- To draft effective business correspondence with brevity and clarity.

## PREREQUISITE:

Prerequisites to Business Communication- Introduction to Blended Learning & Blackboard. Nuances of Academic writing will be discussed which is a prerequisite to Blended Learning.

## UNIT

Introduction-Definition, Characteristics and need for communication-

Importance of effective communication-Process, Principles of Communication -

Barriers of communication.

## UNIT II

Means of communication – Oral and Written Communication – Flow of Communication –  
Types of Communication – Non Verbal Communication.

## UNIT III

Introduction to Business Correspondence – Structure Layout –  
Letters of Enquiries, Offers, Quotations and Tenders – Orders, its execution and Cancellation Letters –  
Sales Letters.

## Entrepreneurship

## UNIT IV

Bank Correspondence – Letter between banker and customer, Letter between Head office and Branch Office, Letter between Customer and banker. Insurance Correspondence – Fire, Marine, General and Life Insurance. Export and Import Correspondence.

## UNIT V

Reports-Structure and Layout – Business Report Writing – Reports by Individuals, Committees, Press Reports, Market Reports – Proposal Writing. Technology – Aided Business Communication – Internet, E-Mail, Web-based Communication, IT Trends in Communication.

CourseCode	CourseTitle	L	T	P	C
20160AEC16	BUSINESSMATHEMATICSANDSTATISTICS	2	2	0	4

**Aim:** To learn the concepts, applications and methods of mathematics and statistics useful for Business operations.

**Prerequisite:** The learners should have Elementary knowledge in mathematics and statistics.

**COURSE OBJECTIVES;** To develop the students ability to deal with numerical and quantitative issues in business . To enable the use of statistical, graphical and algebraic techniques wherever relevant. To have a proper understanding of Statistical applications in Economics and Management.

#### UNIT-I FUNDAMENTALS OF BUSINESS MATHEMATICS

**Arithmetic** - Ratios and Proportions - Simple and Compound interest including application of Annuity- Set theory and simple application of Venn diagram- Mathematical reasoning – basic application

#### UNIT-II INTRODUCTION TO STATISTICS

Meaning and scope of statistics, uses of statistics in business, statistical data – primary and secondary – classification of data – frequency distribution – Diagrammatic presentation .

#### UNIT-III MEASURES OF CENTRAL TENDENCY AND DISPERSION

Mean, Median, Mode, Mean Deviation - Quartiles and Quartile Deviation - Standard Deviation - Co-efficient of Variation, Coefficient of Quartile Deviation

#### Skill development

#### UNIT-IV CORRELATION AND REGRESSION

Scatter diagram- Karl Pearson's Coefficient of Correlation- Rank Correlation- Regression lines, Regression equations, Regression coefficients **UNIT-V INDEX NUMBERS & TIME SERIES ANALYSIS**

Index Numbers- Uses of Index Numbers- Methods of construction of Index Numbers- Problems involved in construction of Index Numbers - **Time Series Analysis** – Components of Time series – Methods of computing time series - Moving Average Method - Method of Least Squares

#### TEXT BOOKS

- Statistical Methods – S.P. Gupta
- Fundamentals of Statistics – D.L. Elhance
- Business Mathematics and Statistics – N. G. Das and J.K. Das.

#### REFERENCES:

- Economics and Business Statistics – M. Sivathanupillai

CourseCode	CourseTitle	L	T	P	C
19120SEC01AL	FUNDAMENTALSOFCOMPUTERS	0	0	2	1

**Aim:** This is a basic course to practically learn the fundamentals of computer operations. It helpsthelearner to knowtheapplications of computersin thefield ofBusiness.

**Prerequisite:**Thelearner shouldhaveelementaryknowledgeaboutcomputers.

## OBJECTIVES

The main objective of this course is to introduce the fundamentals of computing devices and reinforce computer vocabulary, particularly with respect to personal use of computer hardware and software, the Internet, networking and mobile computing. It focuses on such computer literacy that prepares students for life-long learning of computer concepts and skills. Students discovers why computers are essential components in education, business and society in this course.

## COURSE OUTCOMES

- Converse in basic computer terminology
- Formulate opinions about the impact of computers on society
- Possess the knowledge of basic hardware peripherals
- Know and use different number systems and the basics of programming
- Solve basic computational problems with C language

### UNIT I BASICS OF COMPUTER AND ITS EVOLUTION

Evolution of computer, Characteristics of computers, Various fields of application of computers, Advantages and Limitations of computer, Classification of computers

i) **On the basis of technology** (Digital, Analog and Hybrid)

ii) **On the basis of processing speed and storage capacity** (Micro, Mini, mainframe and Super)

iii) On the basis of Purpose (General & Special), Different Generation of computers (I to V),

#### UNIT III INPUT AND OUTPUT DEVICES

Keyboard, Mouse, Joystick, Digitizer, Scanner, MICR, OCR, OMR, Light Pen, Touch Screen, Bar Code Reader, Voice Input Device, Monitor and its type (VGA, SVGA and XGA), Printer and its type (Impact and Non-Impact with example), Plotter

#### UNIT III COMPUTER MEMORY

Primary Memory (ROM and its type – PROM, EPROM, EEPROM, RAM) Secondary memory – SASD, DASD Concept, Magnetic Disks – Floppy disks, Hard disks, Magnetic Tape, Optical disks – CD ROM and its type (CD ROM, CD ROM-R, CD ROM-EO, DVD ROM) Flash Memory

#### Unit IV Operating

#### System Concept

Introduction to operating system; Function of OS, Types of operating systems, Booting Procedure, Start-up sequence, Details of basic system configuration, Important terms like Directory, File, Volume, Label, Drive name, etc.

#### UNIT V CONCEPT OF DATA COMMUNICATION AND NETWORKING:

Networking Concepts, Types of networking (LAN, MAN & WAN), Communication Media.

#### Skill development

SEMESTERII

- பிரிஸ்ட் நிகர்நிலைப் பல்கலைக்கழகம் வல்லம் தஞ்சாவூர்  
பாட குறியீடு :

தமிழ்

இரண்டாம் பருவம்

முதலாம் ஆண்டு - (BA, Bsc, B.COM, BBA)

செய்யுள், சக்தி இலக்கியம், சிற்றிலக்கியம், இலக்கிய வரலாறு

அலகு : 1. செய்யுள்:

1. திருஞானசம்பந்தர் தேவாரம் - கோளறு பதிகம்
2. திருநாவுக்கரசர் தேவாரம் - தனிக் குறுந்தொகை
3. சுந்தரர் தேவாரம் - திருநொடித் தான் மலை
4. மாணிக்கவாசகர் - திருவாசகம் - தருப்பொன் ஊசல்

அலகு : 2. செய்யுள்:

5. குலசேகராழ்வார் - பெருமாள் திருமொழி
6. நம்மாழ்வார் திருவாய் மொழி - இரண்டாம் பத்து - உலகிற்கு உபதேசம்
7. ஆண்டாள் - நாச்சியார் திருமொழி - திருமணக்கனவை உரைத்தல்
8. திருமங்கை ஆழ்வார் - சிறிய திருமடல்

அலகு : 3. செய்யுள்:

9. தினமலர் - மூன்றாம் திருமுறை
10. குமரகுருபரர் - மீனாட்சியம்மைப் பிள்ளை - தமிழ் வருகைப் பருவம்
11. திரிசூடராசப்ப கவிராயர் - குற்றால குறவஞ்சி - குறத்தி நாட்டு வளங் கூறுதல்
12. வீரமாமுனிவர் - திருக்காவ லூர்க் கலம்பகம்

அலகு : 4. புதினம்

13. கு.வெ. பாலசுப்ரமணியன் - காளவாய்

அலகு : 5. இலக்கிய வரலாறு

14. சைவ வைணவ இலக்கியங்கள், சிற்றிலக்கியங்கள், (பள்ளு - பிள்ளைத்தமிழ், - பரணி)

CourseCode	CourseTitle	L	T	P	C
19111AEC21	ADVANCED ENGLISH-II	4	0	0	2

**AIM:**

- To improve the knowledge of English

**OBJECTIVE:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**OUTCOME:**

- Develop writing skill
- Read and comprehend literature

**UNIT-I**

E-  
mail  
Fax  
Memo  
Circular

**UNIT-II**

Itinerary  
Checklist

**UNIT-III**

CourseCode	CourseTitle	L	T	P	C
19160AEC25	BUSINESSENVIRONMENT	5	0	0	4

**AIM:**To enable the learner to understand the various business and economic environments in a changing business scenario.

### OBJECTIVES

To enable students to evaluate business and its environment. To enable students to understand business and society. To enable students to discuss the contemporary issues in business. To enable students to examine and evaluate business in International Environment.

### COURSE OUTCOMES

- Students would be acquainted with business objectives, dynamics of business and environment, various types of business environment and its analysis.
- Students would recall and relate various concepts like business ethics, ethical dilemmas, corporate culture and ethical climate. They would also be acquainted about development of various acts applicable to business in India.
- Students would describe and discuss Corporate Social Responsibility, Corporate Governance and Social Audit.
- Students would be acquainted with various strategies of Global Trade. They would also discuss Foreign Trade in India, Foreign Direct Investments and its implications on Indian Industries.

#### UNIT-I

Business environment- concept-significance- factors-environmental influence on business.

#### UNIT-II

Social and cultural environment- demographic trend-Indian social structure- impact on business- interplay of various systems.

#### UNIT-III

Political environment-directive principles of state policy-centre-state relations-impact on business-economic environment-sectors of economy and their significance-agriculture, industry-service-multinational corporations-meaning-importance-advantages-weakness.

### Skill development

#### UNIT-IV

Technological environment- choice of technology- problems in selecting appropriate technology-importance to business-social responsibility-meaning-importance-responsibility towards various interest groups.

#### UNIT-V

Economic planning and development-government and planning-industrial policies and promotion schemes-government policy and SSI.

Course Code	Course Title	L	T	P	C
19160AEC2 6	MANAGEMENT INFORMATION SYSTEM	4	0	0	3

### MANAGEMENT INFORMATION SYSTEM

**AIM:** The objective of this course is to help the student acquire the basic knowledge of information system so as to enable them to make more efficient use of information for decision making.

**PreRequisite:** The Learners should have elementary knowledge about information systems

### COURSE OBJECTIVES

To describe the role of information technology and decision support systems in business and record the current issues with those of the firm to solve business problems. To introduce the fundamental principles of computer-based information systems analysis and design and develop an understanding of the principles and techniques used. To enable students understand the various knowledge representation methods and different expert system structures as strategic weapons to counter the threats to business and make business more competitive.

### COURSE OUTCOMES

1. Relate the basic concepts and technologies used in the field of management information systems;
2. Compare the processes of developing and implementing information systems.
3. Outline the role of the ethical, social, and security issues of information systems.
4. Translate the role of information systems in organizations, the strategic management processes, with the implications for the management.
5. Apply the understanding of how various information systems like DBMS work together to accomplish the information objectives of an organization.

Management information System- An overview- concept- evolution and element of MIS- definition- characteristics and basic requirement of MIS- structure- computerized MIS- pre-requisites of an effective MIS.

#### UNIT-II

System analysis and design- An overview- System study- System design- development and implementation.

#### UNIT-III

Computers and its effect on MIS- Limitations- MIS and DSS- MIS and information resource management- executive information artificial intelligence and expert system- MIS in Indian organizations- recent developments in information technology.

#### Skill development

#### UNIT-IV

Computers and communication- An overview- the information technology- concept of global village- communication channels- communication networks- local area networks- wide area networks- video conferencing.

#### UNIT-V

Client/server computing communication servers- digital networks- ERP systems- inter-organizational information systems- value added networks- networking E-commerce and internet- application of internet and website management.

CourseCode	CourseTitle	L	T	P	C
19120SEC02A	MSOFFICEPACKAGES	0	0	2	1

**Aim:** The learner of this course will learn the different features and applications of Microsoft packages in office automation and Professional Management of Business Concern.

**Prerequisite:** This course does not require any prerequisite knowledge for the learner. The learners should have primary knowledge about computers and its uses.

#### MS-WORD

**Introduction to Ms-Word** - What is Word-Processing, Important Features of Ms-Word, Getting Started with Ms-Word, Main menu option.

**Creating and Editing a documents** - Creating a Documents, Entering Text In the documents, Moving Around the documents, Editing Operations, Inserting, Replacing and Deleting Character, Using the toolbar.

#### **Formatting a Document-**

Character Formatting, Line Spacing, Alignment, Boarding and Shading, Page Breaks, Columns, Changing Case, Adding and Removing Numbers. **Advanced Formatting-** Tab Setting, Indenting, Margins, Header and Footer, Spell Checking the Documents, Creating and Managing Tables.

**Mail Merge** - What is Mail Merge, Concepts of Mail Merge and its Components, Mail Merge option of word

#### MS-EXCEL

**Introduction to Ms-Excel** – Creating, saving, Opening, Closing, and Naming the worksheet, entering data in worksheet.

**Performing Calculations in Ms-Excel** – Writing Formula – Inserting formulas – Application of various formula tools.

**Creating Charts and Diagrams in Ms-Excel** – Creating Charts, Selecting chart and Chart elements, moving and Resizing Charts, Changing Chart type, Data ranges, Chart Style, Chart Layout.

**Sorting and Filtering Data** – Sorting of Data, Sorting options, Custom sorting etc.

**Ms-PowerPoint**

**IntroductiontoMs-PowerPoint**– Opening,Closing,Creatingand SavingaPresentation.

**CreatingaPresentation**–InsertingaSlide–Addingtexttoslides–Formattingtext–  
usingofvariousmenu and tools.

**UsingClipartandSmartart**–Inserting, Formattingclipartandsmartart.

### Applying Animation and Transition–

Adding Slide Transition and animation, Adding Custom animation.

**Inserting Videos, Sounds and Objects-** Inserting Sounds, voice clips, audios, videos, charts and objects.

19160SEC33	MANAGEMENT ACCOUNTING	4	0	0	3

**AIM:** To help students understand the nature and scope of management accounting. Gain knowledge in the preparation of financial statement analysis, fund flow and Cash flow analysis. Utilize the management tools and techniques to take appropriate financial decisions.

### OBJECTIVES

To help students to explain basic concepts, importance & functions of Management Accounting.

To help the students to illustrate the format of Vertical Financial Statements, analysis and interpretations of Financial Statement. To enable students to calculate the various ratios and interpret it. To enable students to prepare Cash flow statements using Indirect method.

### COURSE OUTCOMES

- Students would explain the significance of basic concept, importance & functions of Management Accounting.
- Students would illustrate the Vertical format of financial statements, and also tools of financial analysis such as Trend Analysis, Comparative Analysis and Common Size Statement.
- Students would calculate the various ratios and would be able to discuss the significance and use of the various ratios.
- Students would be able to prepare cashflow statements using Indirect method.
- Students would calculate the estimated working capital requirement of the entity.

**Prerequisite:** The Learner Should have Elementary knowledge about financial accounting reports and statements.

### UNIT-I

Management accounting – Meaning, Objectives, Nature and Scope of Management accounting – Utility and limitations of management accounting.

## UNIT– II

Financial Statement Analysis – Comparative Statements – Common Size Statements Ratio Analysis – significance, Uses and limitations – Computation of various ratio – Profitability, Liquidity, Solvency and Turnover ratio.

## UNIT– III

Fund flow analysis – concept of funds – sources and uses of funds – managerial uses of fund flow analysis – construction of fund flow statement.

## UNIT– IV

Cash flow analysis – Distinct of Cash flow from fund flow – utility of Cash flow statement – Construction of Cash flow statement.

## UNIT– V

**Marginal Costing:** Meaning, Features, Advantages, Limitations, Absorption costing **Cost–Volume**

– **Profit Analysis:** Contribution, Break even analysis, Profit Volume Ratio, Margin of safety

### Skill development

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19160AEC3 5	BUSINESS LAW	5	0	0	4

**OBJECTIVES:**

- To enlighten the students on the basic principles and legal aspects of business laws.
- To promote the understanding of various legislations relating to business.
- To make them acquire knowledge on the legal aspects in the business environment.

**COURSE OUTCOMES:**

- ☐ On completion of this course, learners will be able to: appreciate the relevance of business law to individuals and businesses and the role of law in an economic, political and social context.
- ☐ Identify the fundamental legal principles behind contractual agreements.

- ☐ Examine how businesses can be held liable in tort for the actions of their employees.
- ☐ Understand the legal and fiscal structure of different forms of business organizations and their responsibilities as an employer.
- ☐ Acquire problem solving techniques and to be able to present coherent, concise legal argument.

#### PREREQUISITE

Students must have knowledge of Basic business legislations and concepts

#### UNIT-I

Contract Act–Definition, Classification–Essentials of a Contract–Offer and Acceptance– Consideration– Contractual Capacity– Free Consent–Legality of Object.

#### UNIT-II

Performance of Contract–Modes of Discharge of Contract–Remedies for Breach of Contract.

#### UNIT-III

Law of Agency–Mode of creation-Agency by Ratification–Sub-Agent and Substituted Agent- Termination of Agency.

#### UNIT-IV

Sale of Goods Act–Definition–Conditions and Warranties–Transfer of Property– Performance of Contract of Sale – Rights of an Unpaid Seller.

#### UNIT-V

Partnership–Definition-Essentials- Rights, duties and Liabilities of partners- Types of partnership- Dissolution of partnership.

#### Skill development

Course Code	Course Title	L	T	P	C
19160AEC3 6	HUMAN RESOURCE MANAGEMENT	4	0	0	3

**AIM:** To support programs for improving organizational effectiveness by developing policies in such areas as knowledge management, talent management and generally creating a great place to work.

**OBJECTIVE:** To provide knowledge about management issues related to staffing, training, performance, compensation, human factors consideration and compliance with human resource requirements.

### COURSE OUTCOMES

- To develop the understanding of the concept of human resource management and to understand its relevance in organizations.
- To develop necessary skill set for application of various HR issues.
- To analyze the strategic issues and strategies required to select and develop manpower resources.
- To integrate the knowledge of HR concepts to take correct business decisions.

#### UNIT I

Human Resource Management - Introduction and Importance - Evolution – objectives of Human resource management – role of Human resource management - Human resource policies.

#### UNIT II

Objectives - Importance of HRP - process of HRP – Job analysis - Job Description - Job Specification - Recruitment - Sources of Recruitment - Selection process – Retention of Employees

#### UNIT III

Training and Development - Training Process - Methods of Training - Need - Evaluation of Training programmes – Concept of Performance appraisal - methods of Performance Appraisal - Rating Errors - Grievances – causes and its functions – Career Planning - career management.

CourseCode	CourseTitle	L	T	P	C
19160RMC3 7	RESEARCH METHODOLOGY	3	0	0	3

**AIM:** To create a basic appreciation towards research process and awareness of various research publications

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases

**OUTCOME:** Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

**PREREQUISITES:** Basic computer skills for working in window-environment & Conceptual Knowledge on basic matrices

**UNIT I**

Research in Management: An Introduction – Definition, meaning and nature – Scope and objects of Research. Types of Research

**UNIT II**

Research Design – Defining Research Problem and Formulation of Hypothesis – Experimental Designs.-Sampling and types of sampling

**UNIT III**

Research Process – Steps in the process of Research, Data Collection and Measurement: Sources of Secondary data – Methods of Primary data collection – Questionnaire construction.

**UNIT IV**

Data presentation and Analysis – Data Processing – Methods of Statistical analysis and interpretation of Data – Testing of Hypothesis and theory of inference- correlation and regression analysis.

**UNIT V**

Report writing and presentation – steps in Report writing- types of reports – Format of Reports – Presentation of a Report.

**AIM:**

- To improve the knowledge of English

**OBJECTIVE:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**OUTCOME:**

- Develop communicative skill
- Read and comprehend literature

**UNIT-I**

Interviews Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation–Type of questions– Answering techniques.

**UNIT-II**

Flowchart  
Proposals

**UNIT-III**

Discourse markers  
Review

**UNITIV**

Grammatical forms  
Paraphrasing

**UNIT-V**

Definition  
Writing for and against a topic.

Course Code	Course Title	L	T	P	C
19160SEC43	TOTAL QUALITY MANAGEMENT	5	0	0	3

OBJECTIVE: TO LEARN THE QUALITY PHILOSOPHIES AND TOOLS IN THE MANAGERIAL PERSPECTIVE.

#### COURSE OUTCOMES

☑ TO REALIZE THE IMPORTANCE OF SIGNIFICANCE OF QUALITY

☑ MANAGE QUALITY IMPROVEMENT TEAMS

☑ IDENTIFY REQUIREMENTS OF QUALITY IMPROVEMENT PROGRAMS

#### UNIT I

Quality – vision, mission and policy statements. Customer Focus–customer perception of quality, Translating needs into requirements, customer retention. Dimensions of product and service quality-Cost of quality.

#### UNIT II

Overview of the contributions of Deming, Juran Crosby, Taguchi techniques – Introduction to loss function. Concepts of Quality circle, Japanese 5S principles and 8D methodology

#### UNIT III

Meaning and significance of statistical process control (SPC) – construction of control charts for variables and attributes.–Six sigma- concepts of process capability. Total productive maintenance (TMP). Business process improvement (BPI)–principles, applications, reengineering process, benefits and limitations.

#### Skill development

#### UNIT IV

Quality functions development (QFD) – Benefits, Voice of customer, House of quality (HOQ), QFD process. Failure mode effect analysis (FMEA) –FMEA stages, Process and documentation. Seven Tools (old & new)-Bench marking.

#### UNIT V

Introduction to IS/ISO 9004:2000 – quality management systems – guidelines for performance improvements. Quality Audits. TQM culture–quality council, motivation, recognition and reward. TQM framework, benefits, awareness and obstacles.

REFERENCES:

<b>Course Code</b>	<b>CourseTitle</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19160SEC44	COST ACCOUNTING	4	0	0	3

### COURSE OBJECTIVES

- TO UNDERSTAND THE BASIC ACCOUNTING CONCEPTS AND CONVENTIONS OF ACCOUNTING. TO KNOW HOW THE TRANSACTIONS ARE ENTERED
- IN DOUBLE ENTRY BOOK KEEPING SYSTEM AND VARIOUS BOOKS OF ACCOUNTS. TO PREPARE THE FINAL ACCOUNTS OF AN ORGANIZATION
- AND TO EXAMINE THE FINANCIAL DATA.

### COURSE OUTCOMES

- DEVELOPING THE ABILITY TO USE ACCOUNTING CONCEPTS AND PRINCIPLES.
- UNDERSTANDING THE NATURE AND PURPOSE OF FINANCIAL STATEMENT.
- DEMONSTRATING THE ABILITY TO USE A BASIC ACCOUNTING SYSTEM TO CREATE (RECORD, CLASSIFY AND SUMMARIZE) THE BUSINESS TRANSACTIONS.
- APPLYING THE USE OF THE FUNDAMENTAL ACCOUNTING EQUATION TO ANALYZE THE EFFECT OF BUSINESS TRANSACTIONS ON AN ORGANIZATION.

### UNIT-I

Meaning and scope of cost account – Relationship of cost accounting and Financial account – cost analysis – concept and classification – element of cost method – preparation of cost sheet, tender and quotation.

### UNIT-II

Purchasing of material -Procedure and documentation involved in purchasing – requisition for store – maximum stock level maximum level reorder level economic ordering quantity perpetual inventory – Bin card – ABC Analysis control over wages – scarp and spoilage. Inventory records method of valuing material.

### UNIT- III

Overhead–Classification of overhead –allocation and absorption of overhead.

### UNIT- IV

Process costing – Losses – normal process loss – abnormal loss – abnormal gain – Job costing – contract costing.

### UNIT- V

Reconciliation of costs and Financial accounts–Budgetary control.

Employability

Course Code	Course Title	L	T	P	C
19160SEC63	LOGISTICSANDSUPPLYCHAIN MANAGEMENT	5	0	0	4

**Objectives:** To explain basic theory and techniques of Logistics and Supply Chain and to examine the issues and problems faced in a changing and competitive

Business Environment

**Prerequisite:** Students should have transportation and operational process knowledge. Students must have basic documentation in Business.

### COURSE OUTCOMES

- Understand the fundamentals of elements and functions of supply chain, role of drivers and demand forecasting.
- To apply various techniques of inventory management and their practical situations.
- Analyze how supply chain decisions related to facility location can be applied to various industries and designing the supply chain.
- How various warehousing management system and transportation can be practiced in various industries
- How logistics and supply chain strategies can create value generation and utilise IT applications

#### UNIT I

**INTRODUCTION**-Defining logistics and supply chain management-Growth and Development-Components of supply chain-Importance of supply chain strategies-SCM Performance.

#### UNIT II

**LOGISTICS MANAGEMENT**-Logistics-Functions, Objectives-Management of Materials flow in supply chain-Warehouse and Materials storage-Material Handling-Benchmark in best practices

#### UNIT III

**CUSTOMER RELATIONSHIP MANAGEMENT**-Customer Relationship Management-outbound logistics resource planning and Management-Quick response system in Manufacturing.

Employability

#### UNIT IV

**LOGISTICS AND SUPPLY CHAIN PERFORMANCE** -Management of Inbound logistics-Supply chain cases, Role of a manager in supply chain-Supply chain performance drivers, Value of Supply chain and improvement

#### UNIT V

**CURRENT TRENDS** - Supply chain relationships – Supply chain cost analysis – Issues in Global Supply chain-E Logistics-E SCM-Reverse Logistics-Global Logistics

19160DSC64 A	CUSTOMER RELATIONSHIP MANAGEMENT	5	0	0	3

**Objective:** To improve and enhance relationship with customer and Business. To inculcate the habit in to mate relationship with target customer.

### COURSE OUTCOMES

- Understand the basic concepts of Customer relationship management.
- To understand marketing aspects of Customer relationship management.
- Learn basics of analytical Customer relationship management.
- Understand basics of operational Customer relationship management.

**Prerequisite:** Students must have the attitude of customer is our business. Students should think that customer is job provider

#### UNIT I

Introduction to Customer Support Product & Customer – Overview-Importance of a Customer- Consumer behaviour

#### UNIT II

Customer support Methodology Customer Centric approach- External Layers Vs Internal Layers  
-Need of Customer Support Methodologies for Customer Support

#### UNIT III

Introduction to ERP Introduction: ERP- An Overview- Enterprise- An Overview- Benefit of ERP - ERP and Related Technologies

Employability

#### UNIT IV

CRMBasicsCRM–Meaning&Definition-DimensionsofCRM-NatureofCRM-GoalsofCRM-Advantages of CRM

#### UNIT V

ImplementationofCRM–A comprehensive model-  
DevelopingCRMvisionandstrategyManagementsupport

### OBJECTIVE:

Development of an understanding of the process of interpersonal Communication. Development of students' critical reading and writing skills. Apply appropriate communication skills across settings purposes and audiences. Improve listening and observational skills.

### COURSE OUTCOMES

- To have competence in Oral, Written and visual Communication.
- Demonstrating critical and innovative thinking.
- Communicate ethically.
- Understanding the process of communication and its effect on giving and receiving information.
- Apply effective communication skills in a variety of public and interpersonal settings.

#### UNIT-I

Introduction–FinancialMarket–Meaningandsignificance–FunctionsofFinancialservices–  
Evolution– Regulating Authorities– Features–Constitutions.

#### UNIT-II

MerchantBanking–Meaning–Registration-scope-Functions–IssueManagement–CostofPublic  
Issues – SEBIguidelines on Merchant Banking

#### UNIT-III

MutualFund–Evolution–Types–FinancialRisk–PerformanceMeasures–(Treynor,Sharpe,Jenson)–  
Organization –Advantages–RegulatoryAspects–GrowthofMutualFunds –UTI.

Employability

#### UNIT-IV

Leasing–Evaluation–ClassificationAccountingTreatment–RegulatoryAuthority–Advantages -  
 Hire purchase – Features – Evolution – Sources of Law – Problems in HirepurchaseIndustry–  
 Factoring–Meaning–Mechanism–Types–FinancialAspect–Advantages.

**UNIT–V**

StockMarkets–History–OrganizationandManagementofStock–exchanges–N.S.E–OTCEI–  
 ShareMarket–indices –Investor protection–Credit Rating.

19120GEC	OPENELECTIVE:WEBTECHNOLOGY	4	0	0	2

**AIM:**

To equip the students with basic programming skill in Web Designing

**OBJECTIVE:**

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice markup languages
- To learn Style Sheet and Frames

**OUTCOMES:**

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design frontend webpage and connect to the backend databases.

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A webpage design project – Forms.

Employability

## **MASTER OF BUSINESS ADMINISTRATION**

**CURRICULUM**

**(2019 onwards)**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professional of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

**RESEARCH-LED: LEARNING ABOUT CURRENT RESEARCH IN THE DISCIPLINE**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

**RESEARCH-ORIENTED: DEVELOPING RESEARCH SKILLS AND TECHNIQUES**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

**RESEARCH-BASED: UNDER TAKING RESEARCH AND INQUIRY**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and inquiry mode (i.e. the students become producers of knowledge not just consumers).

The strongest curricula form of this is in those special undergraduate programme for selected students, but such research and inquiry may also be mainstreamed for all or many students.

**RESEARCH-TUTORED: ENGAGING IN RESEARCH DISCUSSIONS**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level 1:

Prescribed Research

Level 2: Bounded Research

Level 3: Societal Research

Level 4: Self-actuated

Research Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the MBA 2019 Curriculum, the following Research Skill Based Courses are introduced in the curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Participation in Societal Research	4
IV	Project Work	12

## BLUEPRINTFORASSESSMENTOFSTUDENT'SPERFORMANCEINRESEARCHLEDEMINARCOURSE

## ORGANIZATIONAL BEHAVIOUR

**COURSE OBJECTIVE:** To provide an overview of theories and practices in organizational behavior in individual, group and organizational level.

**COURSE OUTCOME:** Students will have a better understanding of human behavior in organization. They will know the framework for managing individual and group performance.

**UNIT I FOCUS AND PURPOSE** Definition, need and importance of organizational behaviour – Nature and scope – Framework – Organizational behaviour models.

### UNIT III INDIVIDUAL BEHAVIOUR

Personality – types – Factors influencing personality  
 – Theories – Learning – Types of learners – The learning process – Learning theories – Organizational behaviour modification. Misbehaviour – Types – Management Intervention. Emotions - Emotional Labour – Emotional Intelligence – Theories. Attitudes – Characteristics – Components – Formation – Measurement Values. Perceptions – Importance – Factors influencing perception – Interpersonal perception Impression Management. Motivation – Importance – Types – Effects on work behavior.

### UNIT III GROUP BEHAVIOUR

#### Skill development

**UNIT IV LEADERSHIP AND POWER** Meaning – Importance – Leadership styles – Theories – Leaders Vs Managers – Sources of power – Power centers – Power and Politics.

**UNIT V DYNAMICS OF ORGANIZATIONAL BEHAVIOUR** Organizational culture and climate – Factors affecting organizational climate – Importance. Jobsatisfaction – Determinants – Measurements – Influence on behavior. Organizational change – Importance – Stability Vs Change – Proactive Vs Reaction change – the change process – Resistance to change – Managing change. Stress – Work Stressors – Prevention and Management of stress – Balancing work and Life. Organizational development – Characteristics – objectives –.

Organizational effectiveness Developing Gender sensitive workplace

## ACCOUNTING FOR MANAGERS

**COURSE OBJECTIVE:** To acquaint the students with the fundamental principles of financial, cost & Management Accounting. Enable the students to take decisions using management accounting tools and to expose the students to various concepts and principles of accounting for making efficient decisions.

**COURSE OUTCOME:** Student would be able to know the accounting systems carried out in an organization and its utilization for the betterment of an organization through analysis of financial statements and cash flow analysis. Student would benefit by being able to study, understand and analyse financial statements.

**UNIT-I Financial Accounting:** Introduction to Financial, Cost and Management Accounting - Generally accepted accounting principles, Preparation of Journal, Ledger and Trial Balance.

**UNIT – II Company Accounts:** Meaning of Company - Maintenance of Books of Account - Statutory Books - Preparation of Final Accounts – Provisions relating to preparation of final accounts – Profit and loss account and Balance sheet

Introduction - types of shares: Issue of Shares at par, Premium and at Discount - Forfeiture and Reissue of Shares - Rights issue - Recording of transactions relating to issue of shares.

Issue and Redemption of Debentures - Redemption out of profits – sinking fund method / Recording of transactions relating to issue and redemption of debentures, Underwriting of Issue of Shares (Simple Problems)

**UNIT-III Management Accounting:** Analysis of Financial Statements – Ratios, Comparative Statement, Common Size Balance Sheet, Cash flow Statement, Fund Flow Statement, Trend Analysis.

**UNIT-IV Cost Accounting:** Cost Accounts - Classification of manufacturing costs - Accounting for manufacturing costs. Cost Accounting Systems: Job order costing - Process costing - Activity Based Costing - Costing and the value chain - Target costing - Marginal costing including decision making

**UNIT–VBudgetingandBudgetarycontrol:BudgetaryControl–MeaningandConcepts-  
Preparationof VariousBudgets,VarianceAnalysis–Material,Labour andOverhead.**

**Employability**

## ECONOMICS FOR MANAGERS

**COURSE OBJECTIVE:** To make the students aware of the various economic theories and principles - To equip them with the required tools and techniques for improving their decision making skills.

**COURSE OUTCOME:** The student must have micro and macro-economic perspective to understand the underpinning of management.

**UNIT – I** Nature and scope of Managerial Economics - Managerial Economics and other disciplines - Basic concepts, Tools and Techniques of analysis - The Role of Managerial Economists - Analysis of Demand and Supply.

**UNIT – II** Theory Production Functions - Laws of Production - Economies of scale - Cost Concepts - Cost-Output Relationship - Revenue Analysis - Objectives of the firm - Break even analysis - Uses

**UNIT – III** Market Morphology - Monopolistic Competition - Features - Product Differentiation - Sources of Product differentiation - Equilibrium output and price determination of a firm - Selling cost Vs Production cost - Oligopoly - Features - kinked demand curve - Behavior of oligopolistic market - Price leadership, Price Wars, collusion, cartel and market share.

**Employability**

**UNIT – IV** Pricing Policies - Objectives - Pricing Methods

**UNIT – V** Market Economy - Market mechanism - Government and Market Economy - Failures of Market Mechanism - Need for Government intervention - Cases of state intervention - role of Government - Tools of Intervention - Fiscal and Monetary policy - Redefining the role of Government in a mixed economy - Knowledge Based economy - Features of K-Economy.

## LEGALASPECTSOFBUSINESS

**COURSEOBJECTIVE:** To createtheknowledgeofLegalperspectiveanditspracticesto improvise thebusiness.

**COURSEOUTCOME:** Legalinsightwillbeestablishedinthebusinesspracticesaccordingto thesituationofchangingenvironment.

**UNIT-I: The Contract Act, 1871** Natureandclassificationofcontracts-Essentialelementsof a valid contract - Offer and Acceptance - Consideration - Capacities of Parties -Provisionsrelating to free consent, void agreements - Provisions relating to performance and discharge ofcontract- Breach of contract-Meaningand remedies.

**UNIT - II: Contract Act, 1872** Contracts of Indemnity - Meaning, nature - Right of IndemnityHolder and Indemnifier- Contracts of Guarantee - Meaning, Nature and Features - Types ofGuarantee - Provisions relating to various types of Guarantee - Agency - Agent and Principal -Creation of Agency - Classification of Agents- Relationship between Principal and Agent -Rights,Duties andLiabilitiesofAgent and Principal– Termination ofAgency

**UNIT - III: Sales of Goods Act, 1930** Contract for Sale of Goods - Meaning - Essentials of aContract of Sale - Formalities of a Contract of sale - Provisions relating to conditions andWarranties - Provisions relating to performance of Contract of Sale - Rights of Unpaid - Seller –Rules as to delivery of goods - Patents Act ; Conceptual understanding of patents, copyrights,trademarksand designs

**UNIT - IV: The Negotiable Instruments Act, 1881**NegotiableInstruments-Meaning,Characteristics, Types, Parties – Holder and holder in Due Course - Negotiation and Types ofEndorsements- Dishonour of NegotiableInstrument- Noting and Protest-Liability of partiesonNegotiableInstrument.

**UNIT- V: The Companies Act, 1956andTheInformationTechnologyAct, 2000**Company

-Definition,Meaning,FeaturesandTypesofcompanies-Incorporationofacompany-MemorandumofAssociation,ArticlesofAssociationandProspectus-theinformationtechnology act, 2000; Digital Signature - Digital Signature Certificate- Electronic Governance - ElectronicRecords -CertifyingAuthorities-Penalty&Adjudication

## STATISTICS FOR MANAGERS

**COURSE OBJECTIVE:** This course mainly deals with the use of Statistical concepts in the resolution of managerial decision problems. As such the course will deal not only with some of the theoretical concepts in Statistics but will also be concerned with their application.

**COURSE OUTCOME:** Students will achieve statistical literacy and will be able to find ways to move beyond the-what of statistics to the how and why of statistics.

**UNIT - I Fundamental of Statistics** Statistics – Definition, Types. Types of variables– Organising data -Descriptive Statistics – measures of central tendency – measures of dispersion;Skewness & Kurtosis – Frequency distribution – Histograms – Polygons - Definition of random variable.

### UNIT-

**II Fundamental of Probability** Basic definitions and rules for probability, conditional probability independence of events, Baye's theorem, and random variables, Probability distributions: Binomial, Poisson, Uniform and Normal distributions.

**UNIT - III Sampling Distribution and Estimation** Introduction to Sampling Distributions - Sampling Distribution of Sample Mean and Sample Proportion - Application of Central Limit Theorem - Sampling Techniques - Estimation and Confidence Intervals - Point and Confidence Interval Estimates for Population Parameters of Large-Sample and Small Samples- Determining the Sample Size.

### Skill development

**UNIT - IV Testing of Hypothesis** Hypothesis Testing - General Procedure for Hypothesis Testing - Errors in Hypothesis Testing – One Sample and Two Sample Tests for Means and Proportions of Large Samples (Z-Test)-

One Sample and Two Sample Tests for Means of Small Samples (T-Test), (F-test) for two sample standard deviations. ANOVA one and two way classification.

**UNIT - V Non-Parametric Methods** The Chi-Square Test - Statistic - Applications of Chi-Square Tests - Test of Independence of Attributes - Goodness of Fit - Theory of Correlation and Regression: Meaning of Correlation and regression – Principles of Least squares – Simple Linear Regression – Simple correlation – Co-efficient – Rank Correlation Time Series Analysis – Variations in Time Series.

COURSECODE		19220SEC01		0	2	0	1

## MANAGERIALSKILLDEVELOPMENT

**COURSEOBJECTIVE:** This course will focus on overall Personality Development of students by enhancing their communication skills, shaping their attitudes and behaviours and ultimately preparing them for corporate roles.

**COURSEOUTCOME:** Learners are able to speak confidently and effortlessly in different contexts – informal and formal. They can be 'think on feet' even in difficult circumstances. To get into the habit of expressing themselves in different genres of writing from creative to critical to factual writing. The student will be able to manage communication in the organization and develop interpersonal relationships.

**UNIT I:** Self introduction – News Reading – Story Telling – Etiquettes for Managers – Review of Articles, Movies and Books

**UNIT II:** Role Play – Debate – Group Discussions – Paper Presentation – Mock Interview

**UNIT III:** Corporate Writing, Creative Writing, Report Writing, Preparing Press Notes.

**UNIT IV:** Case Studies – Analyzing and presenting Cases, Poster Making, Framing Advertisements, Slogans, Captions.

**UNIT V:** Use of Computer & Technology (MS Word, Powerpoint) (Using Internet as a tool for effective Management)

**Skill development**

# SEMESTER -II

SEMESTER	TWO	NATURE	CORE	L	P	T	C
COURSECODE		19260SEC21		3	0	1	4
<b>FINANCIAL MANAGEMENT</b>							

**COURSE OBJECTIVE::** Facilitate student to understand the operational nuances of a Finance Manager. Comprehend the technique of making decisions related to finance function

**COURSE OUTCOME:** Learners can recall and understand Indian financial systems. Evaluate the investments projects and companies. Prepare capital budget and appropriations. Decide upon the capital structure and working capital budgeting decisions. Take decision on higher dividend payout or lower dividend payout.

**UNIT – I: Introduction of Financial Management:** Concept of Finance, Corporate Finance, Finance Functions and other functions. Structures of the Financial System. Financial Management – Meaning, functions and Objectives of Financial Management - Financial Planning and Forecasting of short term and long term – time value of money – risk and return.

**UNIT – II: Financing Decision** Sources of funds - Relative merits and demerits, Capitalization - Under Capitalization and Over Capitalization - Capital Structure - theories of capital structure

- Factors affecting capital structure - Financing decision in practice - leverage - Operating, Financial and combined leverage - Cost of capital - Costs of individual components of capital - Weighted Average cost of capital.

**UNIT – III: Investment Decision** Nature and Significance of Investment Decision - Estimation of cash flows - Capital Budgeting Process - techniques of investment appraisal: Payback period; Accounting Rate of Return - DCF Techniques - Net present value, Profitability Index and Internal Rate of Return - Investment appraisal practices in Indian companies.

**Employability**

**UNIT – IV: Working Capital Decision** Meaning - Nature of working capital - Classification and significance of working capital - financing of Working capital - Component of working capital, Cash, Short-term marketable securities - Management of Cash and Receivables

**UNIT–V:DividendDecision**ManagementofProfits-MeaningandSignificance-Theoriesof Dividend - Determinants ofdividend - Dividend Policy - Dividend policies in practice - Legalaspects of Dividends– Bonus shares – stock splits.

## HUMAN RESOURCE MANAGEMENT

**COURSE OBJECTIVE:** To provide knowledge about management issues related to staffing, training, performance, compensation, human factors consideration and compliance with human resource requirements.

**COURSE OUTCOME:** Understanding of importance of Human Resource Management Understanding of concepts and practices of Human Resource Management Designing strategies in Human Resource Management Ability to take up activities in Human Resource Management.

Basic knowledge about prevailing legislations related to labour

**UNIT – I: HR Roles and Functions** Human Resource Management - Introduction and Importance - Evolution - Difference between Personnel Management and HRM – HR functions

- Structure of HR Department – Role, Duties and responsibilities of HR manager - HRDS System  
- HR Strategies and organisational Strategies.

**UNIT - II: Human Resources planning and recruitment** Objectives - Importance - HR Process - Manpower Estimation - Job analysis - Job Description - Job Specification - Recruitment - Sources of Recruitment - Selection Process - Placement and Induction - Retention of Employees - merit rating - promotion - transfers - job enlargement - job enrichment - job rotation.

**UNIT – III: Training and Development and performance appraisal** Training and Development - Training Process and Methodology - Need and objectives - Training procedure - Methods of Training - Evaluation of Training programmes Performance Management System - Definition, Concepts and Ethics - Different methods of Performance Appraisal - Rating Errors - Competency management – Career Planning.

**UNIT – IV: Compensation Management** Concepts and Components - Compensation Plan – Reward – Motivation - job evaluation - Fringe benefits and services - Employee Welfare – retirement / Separation - Kinds of Retirement - Resignation, Discharge, Dismissal, Suspension, Retirement, Layoff, Voluntary Retirement / Separation Schemes, Golden handshake.

**UNIT – V: Industrial Relations** Factors influencing industrial relations - State Interventions and Legal Framework - Role of Trade Unions - Collective Bargaining - Workers' participation in management - time management – Corporate Social Responsibility.

**Employability**

## MARKETINGMANAGEMENT

**COURSEOBJECTIVE:** To understand fundamental concepts of Marketing in Modern Marketing Practices

**COURSEOUTCOME:** knowledge of analytical skills in solving marketing related problems, awareness of marketing management process

**UNIT I Marketing:** Meaning – Concept & its types – Functions and organisation – Marketing Planning –

Core concepts of marketing (such as Need, Want, Demand, Customer Value, Exchange, Customer & Consumer, Customer Satisfaction, Customer Delight, Customer Loyalty, Marketing v/s Market, Selling versus Marketing). Concept of Marketing Myopia – Marketing Segmentation and Consumer Behaviour – Marketing Research

**UNIT II** Product Characteristics – Classification – Product Differentiation – Product Hierarchy

– Co-Branding – Packaging – Labeling – Warranties & Guarantees – New Product Development

**UNIT III** Understanding Pricing – Setting the Price – Types of Pricing Strategies – Initiating & Responding to the Price Changes

Employability

**UNIT IV** Role of Marketing Communication – Components of Promotion (Advertising, Sales Promotion, Personal Selling, Public Relations – Basic Concepts), Direct Marketing (Direct Mail, Catalogue, Tele Marketing),

**UNIT V** Importance of Marketing Channels – Functions – Channel Design – Channel

Management – E-Commerce – Marketing Practices – Retailing – Types & Recent Trends – Wholesaling – Market Logistics – Managing Sales Force

## **PRODUCTION AND OPERATIONS MANAGEMENT**

**COURSE OBJECTIVE:** To provide a broad introduction to the field of production and operations management and explain the concepts, strategies, tools and techniques for managing the transformation process that can lead to competitive advantage.

**COURSE OUTCOME:** The students would have learned about various concepts related to the production and operations management. Also understood the decision role and responsibilities of operations function vis-à-vis other functions in an organization.

### **UNIT-I: INTRODUCTION OF PRODUCTION AND OPERATIONS MANAGEMENT**

Production & Operations Management – Meaning, Scope, Functions, Relationship between POM & other functional areas of Management – Effect of Time Element on POM. Classification of Production Systems – Intermittent, Job shop, Batch, Continuous, Flow and Mass Production Systems.

### **UNIT-II: PRODUCTION PLANNING AND CONTROL** Production Planning & Control

– Preplanning – Forecasting – Scheduling – Dispatching – Routing – Expediting – Plant Location – Factors Influencing Plant Location, Importance of Environmental Health & Safety factors in deciding the location of plant – Cost Factor – Plant Layout – Principles, Flow Patterns, Types of Plant Layout – Capacity Planning – Types of Capacity, Capacity Decision, Capacity Planning Strategies – Manufacturing Model, P&Q Systems, MRP-I & MRP-II.

### **UNIT-III: DESIGN OF PRODUCT, PROCESS AND WORK SYSTEMS** Product Design

– Influencing factors, Approaches, Legal, Ethical and Environmental issues. Process – Planning, Selection, Strategy, Major Decisions. Work Study – Objectives, Procedure. Method Study and Motion Study. Work Measurement and Productivity – Measuring Productivity and Methods to improve productivity.

### **UNIT-IV: SCHEDULING AND PROJECT MANAGEMENT** Project Management –

Scheduling Techniques, PERT, CPM; Scheduling - work centers – nature, importance; Priority rules and techniques, shop floor control; Flow shop scheduling – Johnson's Algorithm – Gantt charts; personnel scheduling in services.

**UNIT-V: MATERIALS MANAGEMENT** Materials Management, Components of Materials Management- Materials Planning, Inventory Control, Purchase Management, Stores Management. Inventory Management- Inventory Decisions, Models of Inventory- ABC Analysis, XYZ Analysis and JIT.

**Employability**

**TEXT/REFERENCES**

SEMESTER	TWO	NATURE	CORE	L	P	T	C
COURSECODE		19260RMC25		3	0	1	3

### RESEARCH METHODOLOGY

**AIM:** To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:** To understand the approaches towards and constraints in good research. To identify various statistical tools used in research methodology. To appreciate and compose the manuscript for publication.

**COURSE OUTCOME:** Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:** Research Methodology course in UG level or equivalent knowledge.

**Unit I: INTRODUCTION** Research – Importance and its types – research approaches – process

– problem formulation – development of hypothesis – Research design – determining the sample design – collecting data – analysis of data – identifying research problem.

**Unit II: Measurement and its techniques** Measurement in research and its problems – meaning of scaling – tests of sound measurement – types of scaling- Techniques of measurement

– Attitude scales – summated rating scale – Equal appearing Interview scale – cumulative scale – Rating scale – Scale constructing Techniques- Time series analysis- Projection Techniques

**Unit III: DATA COLLECTION AND HYPOTHESIS** Classification of data – sources of data

– collection of primary and secondary data – Questionnaire method – Guidelines for Questionnaire design – Interview technique – Observation techniques – Processing of data – Editing – Coding – Tabulation – Interpretation of data – Formulation of hypothesis – Test of hypothesis.

#### Skill development

**Unit IV: Statistical Techniques** Statistical Techniques-Quantitative and qualitative techniques- Measures of Central Tendency – Arithmetic mean, Median and Mode- Standard deviation – Karl Pearson's coefficient of correlation – Regression – Chi-square test – conditions for applying chi-square test – ANOVA – Spearman's Rank Correlation.

**Unit V : INTERPRETATION AND REPORT WRITING** Interpretation – Techniques of Interpretation – Significance of Report Writing- Different steps in writing report – layout of research report – types – oral presentation – mechanics of writing a research report – precautions for writing research reports– Role of computers in Research

COURSECODE		19260SEC26		4	0	0	3

## STRATEGIC MANAGEMENT

**COURSE OBJECTIVE:** To provide an integrated view of the functional areas and to acquaint the students with the strategic management process. Focuses to critically examine the management of the entire enterprise from the Top Management viewpoints.

**COURSE OUTCOME:** Create knowledge and understanding of management policies and strategies within a changing context to meet stakeholder interests information systems to learn from failure key tools and techniques for the analysis and design of information systems, including their human and organisational as well as technical aspects.

**UNIT-I INTRODUCTION TO STRATEGIC MANAGEMENT** Strategic Management and Competitiveness- Technology and Technology- Stakeholders in business – Vision, Mission and Purpose- Business definition, Objectives and Goals- Strategic Business Unit (SBU); Functional level strategies- Corporate Governance and Social responsibility

**UNIT-II ENVIRONMENTAL ANALYSIS** The External Environment: Opportunities, Threats, Competition and Competitor Analysis. External Environmental Analysis, Segments of the External Environment, Porter's 5 Forces Model, The internal Environment: Resource, Capabilities, Competencies and Competitive advantages. Analyzing internal organization- Building Core Competencies- Value Chain Analysis, Outsourcing.

**UNIT-III: STRATEGIES** The generic strategic alternatives- Stability, Expansion, Retrenchment and Combination strategies - Business level strategy- Strategy in the Global Environment- Corporate Strategy- Vertical Integration-Diversification and Strategic Alliances-Building and Restructuring the corporation- Strategic analysis and choice- Environmental Threat and Opportunity Profile (ETOP)- Organizational Capability Profile- Strategic Advantage Profile - Corporate Portfolio Analysis - SWOT Analysis - GAP Analysis - McKinsey's 7s Framework - GE 9 Cell Model – Distinctive competitiveness - Selection of matrix - Balance Score Card

**UNIT-IV STRATEGY IMPLEMENTATION & EVALUATION** The implementation

process, Resource allocation, Designing organisational structure-Designing Strategic Control Systems- Matching structure and control to strategy-Implementing Strategic change-Politics-Power and Conflict-Techniques of strategic evaluation & control-case study

#### **UNIT-V-STRUCTURE AND CONTROL Structure and Controls with Organizations-**

Organizational Structure and controls, Evolutionary Patterns of strategy and organizational structure. Leadership Implications for Strategy- Entrepreneurial Implications for Strategy –Functional Strategies.

#### **SKILL DEVELOPMENT**

## **DATA ANALYSIS (MS-EXCELLAB)**

**COURSE OBJECTIVE:** The course aims to understand MS Excel for applying statistical tools.

**COURSE OUTCOME:** Learning Outcome: The learning outcome is that the students should be able to: Analyse the data to draw inference for decision making. Understand application of statistical measures of central tendency. Understand application of ANOVA. Analyse trends.

Test hypotheses.

1. Tabulation of Data in excel (Creating Master Table and Sub Table)
2. Formulas and Functions
3. Filters and Sort and Validation Lists, Data from External Sources.
4. Data Analysis Using Charts and Graphs (Pivot Table & Charts)
5. Time Value of Money

### **Skill development**

6. Measure of central tendency: mean, median, mode,
7. Measure of dispersion: variance, standard deviation, Coefficient of variation.
8. Correlation, regression lines.
9. t-test
10. F-test
11. ANOVA one way classification,
12. Chi square test, independence of attributes.
13. Time series: forecasting Method of least squares,
14. Moving average method

## OPERATIONSRESEARCH

**COURSEOBJECTIVE:** To learn the concepts of operations research applied in business decision making using Operations Research Models. To facilitate the student to find out optimal solution for transportation and assignment problems and to empower to equip with the skills of decision making using quantitative techniques

**COURSEOUTCOME:** To facilitate quantitative solutions in business decision making under conditions of certainty, risk and uncertainty. Develop mathematical models using various techniques for successful project implementation.

**Unit I** Scope and application of Operation Research in managerial decision-making-Decision-making environments: Decision-making under certainty, uncertainty and risks situations; Uses of Decision tree.

**Unit II** Linear programming: Mathematical formulations of LP Models for product-mix problems; graphical and simplex method of solving LP problems; sensitivity analysis; duality Transportation problem: Various method of finding Initial basic feasible solution and optimal cost-Assignment model: Algorithm and its applications

**Unit III** Game Theory: Concept of game; Two-person zero-sum game; Pure and Mixed Strategy Games; Saddle Point; Odds Method; Dominance Method and Graphical Method for solving Mixed Strategy Game

Sequencing Problem: Johnsons Algorithm for n Jobs and Two machines, n Jobs and Three Machines, Two jobs and m Machines Problems.

**Unit IV** Queuing Theory: Characteristics of M/M/I Queue model; Application of Poisson and Exponential distribution in estimating

Arrival Rate and Service Rate; Applications of Queue model for better service to the customers Replacement Problem: Replacement of assets that deteriorate with time, replacement of assets which fail suddenly.

**Unit V Project Management: Rules for drawing the network diagram, Application of CPM and PERT techniques in project planning and control; Crashing and resource leveling of operations Simulation and its uses in Queuing theory & Materials Management**

**Employability**

## ENTREPRENEURIAL DEVELOPMENT

**COURSE OBJECTIVE:** The objective of this course is to familiarize the students with the ground realities of starting & managing their own Entrepreneurial ventures.

**COURSE OUTCOME:** Students will gain knowledge and skills needed to run a business. Gives required competencies to run the successful enterprise. Prepared to become an entrepreneur.

**UNIT I INTRODUCTION TO ENTREPRENEURSHIP** Understanding the Meaning of Entrepreneur; Characteristics and Qualities of an Entrepreneur; Classification of Entrepreneurs; Factors Influencing Entrepreneurship; Entrepreneurial Environment; Entrepreneurial Growth; Problems and Challenges of Entrepreneurs; Entrepreneurial Scenario in India

**UNIT II ENTREPRENEURSHIP FEASIBILITY ANALYSIS** Starting an Enterprise; Idea Generation; Identification of Business Opportunities; Market Entry Strategies; Marketing Feasibility; Financial Feasibilities; Political Feasibilities; Economic Feasibility; Social and Legal Feasibilities; Technical Feasibilities; Managerial Feasibility, Location and Other Utilities Feasibilities

**UNIT III LAUNCHING OF SMALL BUSINESS** Business plan – Meaning, Scope and Need; Business plan Formats; Project report preparation and presentation; Project appraisal; Why some business plan fails? MSMEs, Financial support banks, institutions and agencies; Venture capital; Government schemes and Policies

### Employability

**UNIT IV DEVELOPMENT OF SMALL BUSINESS** Role of Government and other Agencies in Promoting Small Business - Preventing Sickness and Rehabilitation of Business Units - Incentives, Subsidies and Grants - Training for Effective Management of small Business.

**UNIT V WOMEN ENTREPRENEURS** Women Entrepreneurs Problems &

Prospects in Women Entrepreneurships, Role of Government in Promoting Women Entrepreneurs. Development of Self Help Groups, Steps taken by Government in Promoting SHGs..

# MARKETING

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		19260EA33		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

## **CONSUMER BEHAVIOUR**

**COURSE OBJECTIVE:** The basic objective of this course is to develop an understanding about the consumer decision making process and its applications in marketing function of firms.

**COURSE OUTCOME :** Able to explain the basic concepts and models of consumer behavior. Able to analyze the effects of psychological, socio-cultural and demographic factors on the consumer decision process with their results. Able to distinguish the relationship between consumer behavior and marketing practices. Able to define the importance of consumer behavior for businesses. Able to compare the relationship between consumer behavior and other disciplines.

**UNIT I Introduction** - Scope & importance, the consumer research process, quantitative and qualitative research. Market segmentation: Importance and use- Application of Consumer behaviour principles to strategic marketing - Theories of Consumer Behaviour - Consumer decision: Process approach - Factors influencing consumer decision making, Segmentation, Psychographics & VALS; Diffusion of Innovations

**UNIT-II Consumer Motivation & Perception**- Consumer needs and motivation, Psychographics - Rational vs emotional motives. Dynamic nature of motivation. Motivational research. Personal and psychological influences - Product and Service Positioning, Perceived price, quality and risk - Consumer Attitude formation and Change Concept of attitude, Attitude formation,

### **UNIT-**

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EB39		3	0	0	3

**SUBJECT TITLE: CONFLICT AND NEGOTIATION MANAGEMENT**

**OBJECTIVE:**

The course plan to develop an understanding of conflict dynamics and the art and science of negotiation. On the completion of syllabus, students will be in a position to answer the role that can be played by conflict resolution techniques such as mediation.

**COURSE OUTCOMES**

□ Students will recognize the nature of conflict and its impact on interpersonal relationships and organizations. Students will demonstrate the role of communication in generating productive conflict outcomes and to use communication skills effectively in a range of specific conflict situations.

**UNIT I:**

Conflict: concept, definition – sources of conflict – individual differences – power and influence – Changing view of conflict at work – Role of conflict in organizations – Conflict and organizational culture – transitions in Conflict thought – Conflict Process.

**UNIT II:**

Types & Levels of conflict: Functional Vs Dysfunctional Conflict - Individual & Group Level Conflict; Organization level Conflict; Preventing & Resolving interpersonal conflict and intergroup conflict - Coalitions - Conflict resolution, Superior/subordinate interactions and conflict resolution – ethics in conflict resolution – leadership approaches to conflict situation – managerial approaches to conflict.

**UNIT III:**

Meaning and definition of stress, link between conflict and stress, sources of stress, distress vs eustress, consequences of stress, measures individuals and organizations can adopt for eliminating or managing stress.

Employability

**UNITIV:**

Negotiations: meaning, definition and importance of negotiation, concept of bargaining and exchange, types of bargain. Approaches towards effective negotiation - Negotiation process

-Negotiations as an approach to conflict management.

.

**UNITV:**

Negotiations Strategies - Integrative bargaining- Targets and aspirations- Contingent contracts – Trust and relationships - Issues in Negotiations - Developing negotiating skills -

Negotiations simulations-in basket exercises.

**SUBJECTTITLE:TRAININGANDDEVELOPMENT**

**OBJECTIVE:**

The objective of this course is to help the students gain understanding of the objectives of training in the organization and provide them tools and techniques to be used in training the employees. This paper will attempt to orient the students to tailor themselves to meet the specific needs of the organizations in training and development activities.

**Unit I** – Training – Concept – training and development- training and HRD – Scope – Objectives – Importance of training – Problems of training – Role and responsibilities of training – Technology in Training – Future trends in training.

**Unit II** – Training Process - Analysis of Training Needs – Organizational analysis: Task, Person, Requirement Analysis – Methods and Techniques of TNA – why conduct TNA – When to conduct TNA – Gathering TNA data – TNA Process – TNA Approaches.

**Unit III** — Important Considerations while designing training – Factors affecting training design – Constraints in design – budgeting for training – types of cost involved in training – Developing Training Objectives – types of training objectives – Designing the training programme, training implementation, training policy and plan, types of training, training methods & its advantages and disadvantages.

**EMPLOYABILITY**

**Unit IV** - Logistical and Physical Arrangements – Implementation of Training - Tips for trainer for effective implementation – Evaluation – Types of evaluation instruments, evaluation design & techniques, training audit – Classroom Management – Training Policy.

**Unit V** - The need & importance of management development - Approach to management development - Sources of knowledge and skills - Special needs of Technical Managers, Strategies to develop Technical Managers - Training for Executive Level Management – Self Development – Career Management.

**SUGGESTED READINGS:**

1. B.Janakiraman, Training and Development, Biztantra, New Delhi, 2008.
2. Employee Training And Development - Raymond Noe
3. Every Trainers Handbook - Devendra Agochia

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	19260EC33			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECT TITLE: SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT**

**OBJECTIVE:**

The objective of this course is to impart knowledge to students regarding the theory and practice of Security Analysis and to give the students an in-depth knowledge of the theory and practice of Portfolio Management.

**COURSE OUTCOME:** To provide a theoretical and practical background in the field of investments.

Designing and managing the bond as well as equity portfolios in the real world. □ Valuing equity and debt instruments.

Measuring the portfolio performances.

**UNIT-I: Introduction to Investment and Securities**

Introduction to Securities – Types of Securities – Investment Process – Investment Alternatives

– Securities Markets – Stock Exchanges and its Functions – Functions and guidelines of SEBI. Risk Return: Security Returns – Risk Measurements – Picturing Risk and Return.

**UNIT II FUNDAMENTAL ANALYSIS**

Economic Analysis – Economic forecasting and stock Investment Decisions – Forecasting techniques. Industry Analysis : Industry classification, Industry life cycle – Company Analysis Measuring Earnings – Forecasting Earnings – Applied Valuation Techniques

– Graham and Dodds investor ratios.

Employability

**UNIT IV TECHNICAL ANALYSIS**

Fundamental Analysis Vs Technical Analysis – History of Technical Analysis – Technical Tools – Dow theory - Trend Models - Market Indicators – Efficient Market Theory : Basic Concepts – The Random Walk Theory.

**UNIT-III: Valuation of Securities**

Valuation of Bonds: Bond VS Debenture- Classification of Bonds – Time Value Concept – Methods of Bond Return and Valuation- Bond Value Theorems – Convexity – Immunisation – Valuation of Equity: Return on Equity – Various Model of Equity Valuation.

## **UNIT–5:PortfolioManagement**

Portfolio Management: Definition – Selection of portfolio – Markowitz model – Sharp Index Model – Capital Asset Pricing Theory and Arbitrage Pricing Model – Portfolio Evaluation – Portfolio Revision.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		100605EC119		2	0	0	0

**SUBJECT TITLE: MERCHANT BANKING AND FINANCIAL SERVICES**

**OBJECTIVES:** To enable student to understand the modes of issuing securities, Acquire and financial evaluation technique of leasing and hire purchase.

**UNIT I MERCHANT BANKING**

Introduction – An Over view of Indian Financial System – Merchant Banking in India – Recent Developments and Challenges ahead – Institutional Structure – Functions of Merchant Bank -Legal and Regulatory Framework– Relevant Provisions of Companies Act- SERA- SEBI guidelines- FEMA, etc.-Relation with Stock Exchanges and OTCEI.

**UNIT II ISSUE MANAGEMENT**

Role of Merchant Banker in Appraisal of Projects, Designing Capital Structure and Instruments

Issue Pricing – Book Building – Preparation of Prospectus Selection of Bankers, Advertising Consultants, etc. - Role of Registrars – Bankers to the Issue, Underwriters, and Brokers. – Offer for Sale – Green Shoe Option – E-IPO, Private Placement – Bought out Deals – Placement with FIs, MFs, FIIs, etc. Off - Shore Issues. – Issue Marketing – Advertising Strategies – NRIMarketing– Post Issue Activities.

**UNIT III OTHER FEE BASED SERVICES**

Mergers and Acquisitions – Portfolio Management Services – Credit Syndication – Credit Rating – Mutual Funds -Business Valuation.

**EMPLOYABILITY**

**UNIT IV FUND BASED FINANCIAL SERVICES**

Leasing and Hire Purchasing – Basics of Leasing and Hire purchasing – Financial Evaluation.

**UNIT V OTHER FUND BASED FINANCIAL SERVICES**

Consumer Credit – Credit Cards – Real Estate Financing – Bills Discounting – factoring and Forfaiting – Venture Capital.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	19260ED33			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECTTITLE:PROJECTMANAGEMENT**

**OBJECTIVE:**

This course focuses on project management methodology that will increase the ability of students to initiate and manage projects more efficiently and effectively. Also they will learn key project management phases through an innovative model.

**COURSE OUTCOME**

Assumes responsibility as a professional practitioner of project management, applying PM principles and practices while maintaining high standards of practice, making ethical judgments and decisions in a respectful, and sustaining professional standing through a commitment to life-long learning

## **UNIT I INTRODUCTION TO PROJECT MANAGEMENT**

Project Management – Definition – Goal-  
Lifecycles. Project Selection Methods. Project Portfolio Process –  
Project Formulation. Project Manager – Roles- Responsibilities and Selection  
– Project Teams.

## **UNIT II PLANNING AND BUDGETING**

The Planning Process – Work Break down Structure – Role of Multidisciplinary teams.  
Budget the Project –  
Methods. Cost Estimating and Improvement. Budget uncertainty and risk management.

## **UNIT III SCHEDULING & RESOURCE ALLOCATION**

PERT & CPM Networks - Crashing – Project Uncertainty and Risk Management – Simulation –  
Gantt Charts – Expediting a project – Resource loading and leveling. Allocating scarce resources  
– Goldratt's Critical Chain.

## **UNIT IV CONTROL AND COMPLETION**

The Plan-Monitor-Control cycle – Data Collecting and reporting – Project Control –  
Designing the control system. Project Evaluation, Auditing and Termination.

## **UNIT V PROJECT ORGANISATION & CONFLICT MANAGEMENT**

Project Management Information System: Computer based tools, features of PMIS, using project  
management software, (MS Projects). Project Evaluation, Reporting &  
Termination: Project reviews & reporting, closing the contract.

**Employability**

## **SUGGESTED READINGS:**

1. Clifford Gray and Erik Larson, Project Management, Tata McGraw Hill Edition, 2005.
2. John M. Nicholas, Project Management for Business and Technology- Principles and Practice, Second Edition, Pearson Education, 2006.
3. Gido and Clements, Successful Project Management, Second Edition, Thomson Learning, 2003.
4. Harvey Maylor, Project Management, Third Edition, Pearson Education, 2006.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260ED34		3	0	0	3

**SUBJECTTITLE:PLANNING&CONTROLOFOPERATIONS**

**OBJECTIVE:**

This course is designed to acquaint the student with the methods of planning and control for Operations. It helps to identify and discuss forecasting models in the qualitative and quantitative areas.

**COURSE OUTCOME**

Identify the elements of operations management and various transformation processes to enhance productivity and competitiveness. Analyze and evaluate various facility alternatives and their capacity decisions, develop a balanced line of production & scheduling and sequencing techniques in operation environments. Develop aggregate capacity plans and MPS in operation environments.. Plan and implement suitable materials handling principles and practices in the operations. Plan and implement suitable quality control measures in Quality Circles to TQM.

## UNIT-I

**Planning & Control of Operations:** Need, Functions - Routing, Scheduling, shop loading and dispatch, follow up. Relations with other departments, Routing-Process layout indicating flow Chart of material from machine to machine. Dispatch in production control-documentation.

## UNIT-II

**Demand Forecasting:** Forecasting as a planning tool, Why do we forecast, Forecasting time horizon, Design of forecasting systems, Developing the logic of forecasting, Sources of data, Models for forecasting, Extrapolative methods using time series, Causal methods of forecasting, Accuracy of forecasts, Using the forecasting system.

## UNIT-III

**Aggregate Production Planning:** Planning Hierarchies in operations, Aggregate Production planning, Need for Aggregate Production planning, Alternatives for managing demand, Alternatives for managing supply, Basic strategies for aggregate production planning, Aggregate production planning methods, Master Production Scheduling.

## UNIT-IV

**Resources Planning:** Dependent Demand Attributes, Planning a framework - the basic building blocks: Multiple levels in products, Product Structure, The Bill of Materials, Time phasing of the requirements, Determining the Lot Size, Incorporating Lead time information, Establishing the planning premises. MRP Logic, Using the MRP system, Capacity Requirements planning, Manufacturing Resources Planning (MRP II), Enterprise Resource Planning (ERP), Resource Planning in services.

## UNIT-V

**Scheduling of Operations:** Need for Scheduling, Scheduling - Alternative terms, Loading of machines, Scheduling Context, Scheduling of Flow Shops, Scheduling of Job Shops, Input-Output Control, Operational Control Issues in Mass production systems.

## EMPLOYABILITY

### SUGGESTED READINGS:

1. Operations Management: Theory and Practice by B Mahadevan, Pearson, 2nd Edition.
2. Operations Management by Terry Hill, Palgrave, 2nd Edition

3. The fundamentals of Production Planning and Control by Stephen Chapman, Pearson, 1st Ed.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		19260ED35		3	0	0	3

**SUBJECT TITLE: TECHNOLOGY MANAGEMENT**

**OBJECTIVE:**

This course helps to understand the dynamics of technological innovation and be familiar with how to formulate technology strategies.

**COURSE OUTCOME-**

Apply Measurement And Analytical Tools To Improve Process Systems

- o Apply Measurement And Analytical Tools To Increase The Quality Of Products And/Or Services
- o Provide Leadership, Guidance, And Assistance To Coworkers When Implementing Changes
- o Understand The Financial And Legal Workings Of Organizations.

## **UNIT-I**

### **Introduction**

Definition, Characteristics of Technology, Role and Importance of Management of Technology - Technological Environment - Levels of Environment - Changes in the Technological Environment, Major Developments in Technological Environment.

## **UNIT-II**

**Innovation Management:** Concept of Innovation; invention and creativity, Drivers and process of innovation - Classification of innovation management of innovation. Technology Evolution -

Technology progression, Technology change agents, Evolutionary characteristics of technological change - Drivers of Change in Value Chain, Modes of Value Chain Configuration, Value Chain Configuration and Organizational Characteristics

## **UNIT-III**

**Technological Forecasting:** Meaning of Technology forecasting, uses of Technology forecasting,

Technology forecasting techniques : Exploratory and Normative: technique; Process and application of techniques like Delphi, Growth Curves, S-curve, Pearl Curve, Gompertz curve: Relevance Tree, Morphological Analysis, Mission Flow Diagram

## **EMPLOYABILITY**

## **UNIT-IV**

### **Technology and Competition**

Competitive Consequences of Technological Change, Technological Characteristics of Competitive Domains, Dynamics of Change in Competitive Domains -

Technology Intelligence

-

Technology Strategy

## **UNIT-V**

**Technology and Organizational Issues:** Technological change and Industrial Relations, Technology Assessment and Environmental Impact Analysis Integration of People and Technology, Organizational

and Psychological Factors, Organizational Structure.

**SUGGESTED READINGS:**

1. Managing Technology and Innovation for Competitive Advantage, V.K. Narayanan, Pearson Education.
2. Managing Technology – The Strategic View, Lowell W. Steele, McGraw Hill.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	19260ED36			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECTTITLE:LOGISTICSMANAGEMENT**

**OBJECTIVE:**

The objective of this course is to get the exposure of logistics management and to understand the relationship between the logistics and packaging.

**COURSE OUTCOME**

□ learn logistics concepts and basic activities

Know the history of Logistics.

Define basic logistics activities.

Associate logistics activities with other business activities.

**UNIT-I:IntroductiontoLogisticsandCompetitiveStrategy**

Definition and Scope of Logistics – Functions and Objectives – Customer Value Chain – Service Phases and Attributes – Value Added Logistics Services – Role of Logistics in Competitive Strategy.

**UNIT-II:WarehousingandMaterialsHandling**

Warehousing Functions – Types – Site Selection – Decision Model – Layout Design – Costing

– Virtual Warehouse. Material Handling equipment and Systems – Role of Material Handling in Logistics. Material Storage Systems – Principles – Benefits – Methods. Automated Material Handling.

**UNIT-III: Performance Measurement and Costs**

Performance Measurement – Need, System, Levels and Dimensions. Internal and External Performance Measurement. Logistics Audit. Total Logistics Cost – Concept, Accounting Methods. Cost – Identification, Time Frame and Formatting.

**EMPLOYABILITY**

**UNIT-IV:TransportationandPackaging**

Transportation System – Evolution, Infrastructure and Networks. Freight Management – Route Planning – Containerization. Modal Characteristics, Inter-

Modal Operators and Transport Economies. Packaging – Design considerations, Material and Cost. Packaging as Unitization – Consumer and Industrial Packaging.

#### **UNIT-V: Current Trends**

Logistics Information Systems – Need, Characteristics and Design. E-Logistics – Structure and Operation. Logistics Resource Management. Automatic Identification Technologies. Warehouse Simulation. Reverse Logistics – Scope, Design and as a Competitive Tool. Global Logistics – Operational and Strategic Issues. Strategic Logistics Planning.

#### **SUGGESTED READINGS:**

1. Douglas M Lambert et al., *Fundamentals of Logistic Management*, McGraw Hill, 1997.
2. Sople Vinod V, *Logistics Management – The Supply Chain Imperative*, Pearson Education, Indian Reprint 2004.
3. Ronald H Ballou, *Business Logistic Management*, PHI, 2005.
4. Benjamin S Blanchard, *Logistic Engineering and Management*, Pearson Education, 2009.
5. Bloomberg David J et al., *Logistics*, Prentice Hall India, 2005.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE	19260ED37			3	0	0	3

**SUBJECT TITLE: SUPPLY CHAIN MANAGEMENT**

**OBJECTIVE:**

The objective of this course is to get the exposure of supply chain management and to understand the relationship between the procurement and supply chain management.

**COURSE OUTCOME:** Develop a sound understanding of the important role of supply chain management in today's business environment. Become familiar with current supply chain management trends Understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations

**UNIT-I: Introduction**

Supply Chain Fundamentals, Importance, Decision Phases, Process View. Supplier – Manufacturer – Customer Chain. Drivers of Supply Chain Performance. Structuring Supply Chain Drivers. Overview of Supply Chain Models and Modeling Systems.

**UNIT-II: Strategic Sourcing**

In-sourcing and Out-sourcing – Types of Purchasing Strategies. Supplier Evaluation, Selection and Measurement. Supplier Quality Management. Creating a world class Supply Base. World Wide Sourcing.

**UNIT-III: Supply Chain Network**

Distribution Network Design – Role, Factors Influencing, Options, Value Addition. Models for Facility Location and Capacity Location. Impact of uncertainty on Network Design. Network Design Decisions Using Decision Trees. Distribution Center Location Models. Supply Chain Network Optimization Models.

**EMPLOYABILITY**

**UNIT-IV: Planning Demand, Inventory And Supply**

Overview of Demand Forecasting in the Supply Chain. Aggregate Planning in the Supply Chain. Managing Predictable Variability. Managing Supply Chain Cycle Inventory. Uncertainty in the Supply Chain –

Safety Inventory. Determination of Optimal Level of Product Availability. Coordination in the Supply Chain.

### **UNIT-V: Current Trends**

E-Business – Framework and Role of Supply Chain in e-Business and B2B Practices. Supply Chain IT Framework. Internal Supply chain management. Fundamentals of Transaction Management. Supply Chain in IT Practice. Supplier Relationship Management. Information Systems Development. Packages in Supply Chain – eSRM, eLRM, eSCM. Supply Base Management.

### **SUGGESTED READINGS:**

1. Sunil Chopra and Peter Meindi, Supply Chain Management – Strategy Planning and Operation, Pearson Education, Third Indian Reprint, 2004.
2. Monczka et al., Purchasing and Supply Chain Management, Thomson Learning, Second edition, Second Reprint, 2002.
3. Shapiro Jeremy F, Modeling the Supply Chain, 2nd Edition, Thomson Learning, 2002.
4. Janat Shah, Supply Chain Management Text and Cases, Pearson 2009
5. RPMohanty and SG Deshmukh, Supply Chain Management Theory and Practices, Biztantra, 2009.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE	10260ED122			2	0	0	2

**SUBJECT TITLE: BUSINESS PROCESS REENGINEERING**

**OBJECTIVE:**

The objectives of this course are to acquaint the student with understanding process orientation in business management and develop skills and abilities in re-engineering and business process for optimum performance.

**COURSE OUTCOME** Understanding various BPR methodologies and their applications. Understanding the critical success factors for implementing BPR. Appreciate various alternative techniques of BPR – TQM, Work Study, Benchmarking and their applications. Basic understanding of ISO standard 9001:2015, IACBE and their applications in education and industry. Analyze and integrate issues and challenges of applying tools/techniques of Information Technology for BPR and learn to apply them in the industry.

**UNIT-I**

**Introduction to Business Process Reengineering (BPR):** Definition of business process- History, Basics, Definition, Emergence of BPR, The need for reengineering, Benefits of BPR, Role of leader & manager, Breakthrough reengineering model, BPR guiding principles, Business process reengineering & performance improvement, Key targets of BPR.

**UNIT-II**

**BPR in Manufacturing Industry:** Introduction, Enablers of BPR in manufacturing Agile Manufacturing, Lean Manufacturing, JIT, Collaborative Manufacturing, Intelligent Manufacturing, Production Planning, Product design & development.

**UNIT-III**

**BPR & Information Technology:** Introduction, Relationship between BPR & Information Technology, Role of Information Technology in reengineering, Role of IT in BPR (with practical examples), Criticality of IT in business process, BPR tools & techniques, Enablers of process reengineering, Tools to support BPR, Future role of IT in reengineering.

**UNIT-IV**

**BPR implementation methodology:** Reasons of implementation of BPR, Necessary attributes, BPR team characteristics, BPR methodology, Different phases of BPR, BPR model, Common steps to be taken for BPR implementation, Steps of process reengineering, Organizational redesign using BPR, Impact of BPR on organizational performance, Performance measures of BPR, Business process reengineering project management.

**EMPLOYABILITY**

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE	19260ED122			2	0	0	2

**UNIT-V**

**Success factors and Managing barriers of BPR:** Reengineering success factors, Critical success factors of BPR, Reasons for BPR project failure & success, Reengineering drives cause many changes - Potential project implementation success, Risks associated with business process reengineering projects, Business process reengineering implementation barriers, Information Technology barriers, A framework for barrier management.

**SUGGESTED READINGS:**

1. Business Process Reengineering by Radhakrishnan, Balasubramanian, PHI, Eastern Economy Edition, 2008.
2. Business Process Reengineering by Jayaraman, Ganesh Natrajan and Rangaramanujan, TMGH
3. Business Process Reengineering and Change Management by Dey, Biztantra

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
COURSE CODE	10260ED124			2	0	0	2

**SUBJECT TITLE: MATERIALS MANAGEMENT**

**OBJECTIVE:**

To understand the working of a materials management department, Aspects of Stores management, Warehousing management and material requirement planning.

**COURSE OUTCOME**

Identifying the scope for integrating materials management function over the logistics and supply chain operations. Integrate the organization wide materials requirement to develop an overall plan (MRP). Identify, study, compare, and evaluate alternatives, select and relate with a good supplier. Apply various purchasing method and inventory controlling techniques into practice. Analyzing the materials in storage, handling, packaging, shipping distributing and standardizing.

**UNIT – I** Dynamics of material management , Level of material management, Scope, Objective, Importance – Integrated material managements – System approach to material managements

**UNIT – II** Warehousing management, purchasing cycle, material handling

**UNIT –**

**III** Vendor rating, contract management. Legal aspects of buying spare parts management, material requirement planning,.

**Skill development**

**UNIT – IV** Capacity management, Forecasting, Product & Processes, Just-in-time manufacturing, TQM, Incoming, Material quality.

**UNIT – V** Cost-

effectiveness & performance management, material management, Information system, stores management, material management

**SUBJECT TITLE: MAINTENANCE MANAGEMENT**

**OBJECTIVE:**

To enable the student to understand the principles, practices and applications in Maintenance Management.

**COURSE OUTCOME**

To present modern basic maintenance theory, especially related to industrial challenges within terminology, maintenance management, concepts, indicators, CMMS, modern analyses within maintenance and maintenance optimization.

**UNIT – I Objectives, Importance of Maintenance- Roles and responsibilities of maintenance professionals**

**UNIT–II Safety management-Productivity and maintenance. Scheduled maintenance–preventive maintenance–predictive maintenance–planned maintenance–corrective maintenance routine maintenance–inspection, lubrication, calibration and maintenance quality.**

**UNIT – III Typical causes of BDM- disadvantages- maintenance as a perspective of asset management- Total Productive Management –Contract maintenance – Breakdown history and other maintenance records**

**SKILL DEVELOPMENT**

**UNIT – IV** Technical and financial factors for replacement – Methods of replacement analysis salvaging spare parts procurement

**UNIT–V** warehousing and logistics management. Emerging trends in maintenance management – Global scenario-Indian experience – need for maintenance training – Managing obsolescence.

**References:**

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260ED43		3	0	0	3

**SUBJECT TITLE: SERVICE OPERATIONS MANAGEMENT**

**OBJECTIVE:**

To help understand how service performance can be improved by studying service operations management.

**COURSE OUTCOME** Implement statistical methods and management techniques to monitor, control and improve service processes of an organisation. Propose solutions with which a service organisation can improve its operations and achieve sustainable competitive advantage.

**UNIT I INTRODUCTION** Services – Importance, role in economy, service sector – growth; Nature of services – Service classification, Service Package, distinctive characteristics, open-systems view; Service Strategy – Strategic service vision, competitive environment, generic strategies, winning customers; Role of information technology; stages in service firm competitiveness; Internet strategies – Environmental strategies.

**UNIT II SERVICE DESIGN** New Service Development – Design elements – Service Blue-printing - process structure – generic approaches – Value to customer; Retail design strategies – store size – Network configuration ; Managing Service Experience – experience economy, key dimensions ; Vehicle Routing and Scheduling

**UNIT III SERVICE QUALITY** Service Quality- Dimensions, Service Quality Gap Model; Measuring Service Quality –SERVQUAL- Walk-through Audit; Quality service by design - Service Recovery -Service Guarantees; Service Encounter – triad, creating service orientation, service profit chain; Front-office Back-office Interface- service decoupling.

**SKILL DEVELOPMENT**

**UNIT IV SERVICE FACILITY** Service gaps – behaviour – environmental dimensions – framework; Facility design – nature, objectives, process analysis – process flow diagram, process steps, simulation; Service facility layout; Service Facility Location – considerations, facility location techniques – metropolitan metric, Euclidean, centre of gravity, retail outlet location , location set covering problem **UNIT V MANAGING CAPACITY AND DEMAND** Managing Demand – strategies; Managing capacity – basic strategies, supply management tactics, operations planning and control; Yield management; Inventory Management in Services – Retail Discounting Model, News vendor Model; Managing Waiting Lines – Queuing systems, psychology of waiting; Managing for growth – expansion strategies, franchising, globalization.

LOGISTICS  
AND  
SUPPLYCHAIN  
MANAGEMENT

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE	19260EE33			3	0	0	3

**SUBJECT TITLE: PURCHASING AND PROCUREMENT MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge on purchase function of the organization, material planning, source selection and negotiation techniques.

**COURSE OUTCOME** Understand the basic concepts of Purchasing & Supplier Relationship Management. To understand the purchasing integration for competitive advantage Learn the basics of strategic sourcing & its issues, challenges & strategies in developing a World Class Supply Base: Supplier Evaluation and Development Understand basics of strategic sourcing process & its application

**UNIT I** The role of Purchase in business, Objectives, Relationship of purchasing department with Other Departments, Profit Centre Concept, Partnership Sourcing, Network Sourcing, Benchmarking, Buying Decision Models, Purchasing Market Research, Role of Information Technology in Purchasing and the Portfolio of Purchasing Skills.

**UNIT II** Materials Planning, Materials Codification: Evolution of Codes, Classification, Methodology, Advantages. Standardization: Definition, Specification, Advantages, Techniques. Value Analysis: Concept, Organization for Value Analysis, Application, Techniques, Steps for Value Analysis.

**UNIT III** Supply Sources: Importance of Source Selection, Vendor Development & Maintenance, Vendor Rating, Competitive Bidding, Selecting the Source. Pricing Principles: Economic Consideration in Determining the Right Price, Price Analysis, Discounts. Cost Analysis: Elements of Affecting Costs, Sources of Cost Data, Direct & Indirect Costs, Target Costing.

**Employability**

**UNIT IV** Purchasing capital equipment – contract buying, retail buying, engineering and construction contracting, state and institutional purchasing, international buying, negotiations. Purchasing Environment: Changes in Environmental Conditions, Strategic Purchasing Management.

**UNIT V** Negotiation: Objectives, Process, Techniques, Price Negotiation Contract Management. Import Substitution Public Buying Traffic: Transportation Cost, Shipping Terms, Modes of

Transportation, Loss and Damage of Freight, Demurrage, Transportation Strategy and Cost reduction.

**SUGGESTED READINGS:**

1. Dobler & Burt : Purchasing & Supply Management
2. P. Gopala Krishan: Purchasing & Materials Management
3. L.N. Aggarwal & Parag Diwan: Management & Production Systems
4. N.G. Nair: Production & Operations Management

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EE34		3	0	0	3
<b>SUBJECTTITLE:MATERIALMANAGEMENT</b>							
<b>OBJECTIVE:</b>							
<p>The aims of the course are to make the students familiar, understand and realize the importance of effective materials management to an organization's survival and profitability. Also, they learn about the major activities of materials management and linkages between one another.</p> <p><b>COURSE OUTCOME</b> Identifying the scope for integrating materials management function over the logistics and supply chain operations. Integrate the organization wide materials requirement to develop an overall plan (MRP). Identify, study, compare, and evaluate alternatives, select and relate with a good supplier. **OBJECTIVE:**

Theobjectiveofthismoduleistoprovidethestudentwithagoodknowledgeoncorporatebusinesscommunication channel, hierarchyand thereport writingmethodologies.

**COURSE OUTCOME**

comprehend the dynamics of inventory management’s principles, concepts, and techniques as they relate to the entire supply chain (customer demand, distribution, and product transformation processes),

- 2.understand the methods used by organizations to obtain the right quantities of stock or inventory,
- 3.familiarize themselves with inventory management practices.

**UnitIInventory–InventoryManagement-InventoryControl-Importance&ScopeofInventory Control - Types of Inventory - Costs Associated with Inventory – Organizational setup for inventorymanagement.**

Unit II Selective Inventory Control - Economic Order Quantity - Safety Stocks - InventoryManagement Systems- ForecastingTechniques-Material RequirementPlanningandexecution

–RatioAnalysison Inventory-ProfitMargin.

**Unit III Manufacturing Planning (MRP-II) - Just in Time (JIT) - Work in Process Inventories - Make or Buy Decisions: Concept of outsourcing, Factors influencing Make Or Buy Decisions - Trends in MakeOr BuyDecisions incontext of corecompetency.**

**EMPLOYABILITY**

Unit IV Purpose of Inventory - Goods – Types of Goods - Finished Goods Inventories - GeneralManagementofInventory– Stocks– Types ofStocks–Trackingthe PaperLife.

Unit V Spare Parts Inventories - Use of Computers in Inventory Management - Evaluation of Performance of Materials Function-Criteria and methodology of evaluation.

**SUGGESTED READINGS:**

1. Inventory Management: By Bose & D Chandra, 1st edition.
2. Sridhara Bhat, Inventory Management, 2nd edition.
3. Zipkin, Foundations of Inventory Management, McGraw Hill 1st edition.
4. Seetharama LNarasimhan, Dennis W McLeavy, Peter J Billington, Production Planning and Inventory Control, Prentice Hall of India
5. J.R. Tony Arnold, Stephen N Chapman, Introduction to materials management, Prentice Hall of India 3rd edition.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	19260EE36			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECTTITLE: SUPPLYCHAINMANAGEMENT**

**OBJECTIVE:**

At the end of the subject, the students will be able to analyze an existing supply chain of a company, apply various supply chain management concepts, and improve the supply chain and design an efficient supply chain in alignment with the strategic goals of the company.

**COURSE OUTCOME**

- Develop a sound understanding of the important role of supply chain management in today's business environment
- Become familiar with current supply chain management trends Understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations
- Learn to use and apply computer-based supply chain optimization tools including the use of selected state of the art supply chain software suites currently used in business

UNIT I The concept of Supply Chain Management - The Supply Chain Revolution - Extended organization - Integrative Management – Responsiveness – Financial Sophistication – Globalization-Digital Business Transformation.

UNIT II Building Blocks of a Supply Chain Network – Performance Measures – Decisions in the Supply Chain World – Models for Supply Chain Decision-making – Economic Order Quantity Model – Reorder Point Model.

UNIT III Supply Chain Process - Supply Chain Planning – Supply Chain Facilities Layout – Capacity Planning – Inventory Optimization – Dynamic Routing and Scheduling.

UNIT IV E-procurement – E-Logistics – Internet Auctions – E-Markets - E-commerce advantages and disadvantages for SCM – EDI – Exchanges, hubs and marketplaces – ERP.

UNIT V Evolution of world class supply chains - Global Supply Chain Integration - Supply Chain Security - International Sourcing.

**Employability**

**SUGGESTED READINGS:**

1. SupplyChainLogisticsManagement-Bowersox,Closs&Cooper–McGraw-Hill,2ndIndian ed.
2. WorldClassSupplyManagement -Burt,Dobbler, Starling,TMGH, 7thed.
3. DesigningandManagingthesupplychain-DavidSimchi,Levi&PhilipKaminski,McGraw-HillCompaniesInc., 2000.
4. Y.NarahariandS.Biswas. SupplyChainManagement:Models andDecisionMaking.
5. RamGaneshan andTerryP.Harrison.AnIntroductiontoSupplyChainManagement.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		LOGGEE151		3	0	0	3

**SUBJECT TITLE: LOGISTICS MANAGEMENT**

**OBJECTIVE:**

The course outlines the historical background of Logistics Management. It is considered to prepare students to acquire knowledge and skills that lead them to fill management and analysis in positions that will enable them to focus on the processes and systems of Logistics Management.

**COURSE OUTCOMES**

Learn to logistics trends

Know the third, fourth and fifth party logistics

Explain the reverse logistics concept

Know the relationship between logistics and supply chain management

Know the global logistics concepts

UNIT I Logistics – Objectives, Components, Significance - The Logistical Value Proposition- The Work Of Logistics-Logistical Operating Arrangements - Supply Chain Synchronization – Logistic fields-The Quality Imperative-Procurement–Manufacturing–Logistics Outsourcing– Logistics Automation.

UNIT II Inventory Functionality and Definitions-Inventory Carrying Cost-Planning Inventory - Managing Uncertainty - Inventory Management Policies - Inventory Management Practices.

UNIT III Strategic Warehousing- Warehousing Operations- Warehousing Ownership Arrangements- Warehouse Decisions.

UNIT IV Transport Functionality, Principles and Participants- Transportation Service- Transportation Economic and Pricing -Transport Administration – Documentation.

**EMPLOYABILITY**

UNIT V Packaging Perspectives - Packaging For Materials Handling Efficiency – Principles of Material Handling System-Materials Handling Equipments– Safety Issues.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
<b>SUGGESTED READINGS:</b>							
<ol style="list-style-type: none"> <li>1. Harrison, A. and Rvan Hoek (2005). Logistics Management and Strategy (2nd Edition) Prentice Hall.</li> <li>2. Muller, M. (2003), Essentials of inventory management, American Management Association, NY 10019</li> </ol>							

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
<b>SUBJECT TITLE: CUSTOM HOUSE PRACTICE AND LEGALITIES</b>							
<b>OBJECTIVE:</b>							
<p>The subject deals with the business transaction with the Customs and Central Excise for successfully executing an Import or Export transaction. This deals with various rules and regulations and schemes adopted by the Indian Customs as per the directions of the Ministry of Finance and provides an opportunity for the student to get a job opportunity in a CUSTOM HOUSE AGENCY.</p> <p><b>COURSE OUTCOME</b> Explain the concepts in custom clearance in international business with respect to foreign trade CO2. Apply the current custom clearance phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects CO3. Analyse the principle of international business and strategies adopted by firms to for exporting products globally CO4. Integrate concept in custom clearance concepts with functioning of global trade</p>							
<b>UNIT I: Role of Customs - Powers of Customs - Custom House Agent - Custom house agents duties - Licensing of Custom House Agents - Restrictions of Custom House Agents - Customs Power to bring a ceiling on the License - Temporary and regular license - Customs Power to Advise fees chargeable by Custom House Agent.</b>							
<b>UNIT II: Import Bill Processing - Important Papers for filing Bill of Entry - Apprising - Open Inspection - Payment of Duties - Out of Charge - Clearance of goods - payment of duties - Duty exemption - Bonding of Cargo - Ex-bonding.</b>							
<b>UNIT III: Export Bills - Important papers for filing Shipping Bills - Factory Stuffing - Port or CFS Stuffing - Supervision by Customs - Sealing and print out - Custom officer overtime - Importance of Shipping Bill - Comparison of Shipping Bill with Mate's Receipt and Bills of Lading.</b>							
<b>SKILL DEVELOPMENT</b>							
<b>UNIT IV: Duties and Obligations - Liabilities of Custom house agents - Custom house agent and Information Technology - ICE GATE and On line filing of Bills - Records to be maintained by Custom House Agents .</b>							
<b>UNIT V: Custom House Licensing - Certification and Qualifications to become a Custom House Agent - Rule 8 -G Card - Identity to enter Custom Houses - Power of Customs to cancel the License of a CHA- Drawbacks and Duties- Support of CHA to Importers and Exporters.</b>							
<b>SUGGESTED READINGS:</b>							
1. Hand Book of Procedure of Exim Policy 1997-2002.							

<b>SEMESTER</b>	<b>FOUR</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>	19260EE39			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECTTITLE:EXPORTTRADEANDDOCUMENTATION**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge on Export trade,types of trades, formalities for trade, legalities of export trade and the documentation process of it.

**COURSE OUTCOME**

Explain the concepts in trade documentation in international business with respect to foreign trade

Apply the current business phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects Analyse the principle of international business and strategies adopted by firms to expand globally Integrate concept in international business concepts with functioning of global trade

**Unit I** Exporting Preliminary Consideration -Generation of Foreign enquiries, obtaining local quotation & offering to overseas buyers scrutinizing export order, opening L/C by buyers- Export Controls and Licenses –Patent, Trade Mark, Copy Right Registrations – ConfidentialityandNDA.

**Unit II**ExportSales–SellingandPurchasing- Consignment–Leases–Marine andAirCausality Insurances - Export Finance - Forex - Major currencies, Exchange rates, relations &impact- Export costingandpricing&Incoterms–ExportLicense –Import License.

**UnitIII**ExportPackaging-Preparationofpreshipmentdocumentation–MethodsofTransportation – Country of Origin Marking- Inspection of Export consignment - Export byPost,Road, Air&Sea- ClaimingforExport benefits and Dutydrawbacks.

**Employability**

**Unit IV** Shipment & Shipping documents - Complicated problems in shipments & negotiationof shipping documentations - Corporate marketing strategies - 100% EOU & Free trade zone - DeemedExport –IsolatedSales Transactions.

**UnitV**Actsforexport/import-Commencement-CustomsFormalities-ExportDocumentation - Export of Services - Export of Excisable Goods - Import Documentation -Clearance - 100% export oriented units - customs house agents - import of different products - import/exportincentives-import licenses etc.

**SUGGESTED READINGS:**

1. Export and Import Procedures and Documentations – Thomas E Johnson and Donna LBade–4th Edition.
2. ExportImportProcedures-Documentationand Logistics,Publisher:NewAgeInternational,ShriC Rama Gopal, Chartered Accountant.
3. ExportImportManagement,JustinPaul&RajivAserkar.
4. ExportManagement, PKKhurana

<b>COURSECODE</b>	19260EE42			<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECTTITLE:QUALITYMANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge and importance of quality concept, quality culture, quality control and organizations for quality. It also incorporates the managerial reasoning and analyzing in order to derive an appropriate course of action by focusing quality in products and services.

**COURSE OUTCOME**

To realize the importance of significance of quality Manage quality improvement teams Identify requirements of quality improvement programs

**UNIT I** Quality - Concepts, Role of Quality in Changing Business Conditions, Contributions of Deming, Juran, Philip Crosby, Kaizen and Continuous Improvement, Tradeoff between Quality Costs and Schedules, Quality Costs and its Analysis, Life Cycle Costs, Quality Problems and Causes.

**UNIT II** Pareto Analysis, Ishikawa Cause and Effect Diagnosis. Quality Control - Control of Quality, quality control techniques, Statistical Process Control, Control Charts, Acceptance Sampling.

**UNIT III** Strategic Quality Management, Quality Management in Marketing, Quality Management in Designing, Quality Management in Manufacturing, Quality Management in Suppliers, Quality Management System.

**EMPLOYABILITY**

**UNIT IV** Total Quality Management - Concepts, Organization for Quality, Developing a Quality Culture. Quality Certification - Quality Assurance, ISO 9000 Series Concepts and Procedure - Six Sigma, Certification Requirements - Standards for Quality.

**UNIT V** Introduction to Benchmarking – Quality Function Deployment – Quality Circle – Quality Awards.

**SUGGESTED READINGS:**

1. Juran, J.M. & Gryna, P.M. Quality Planning & Analysis
2. James Evans and William M. Lidsay, The Management and Control of Quality, Thomson Learning, 5<sup>th</sup> edition, 2002.
3. Narayana V and N. S. Sreenivasan, Quality Management - Concepts and Tasks, New Age International, 1996.
4. Shailendra Nigam, Total Quality Management, Excel Books, New Delhi.
5. Feigenbaum, A. V. "Total Quality Management, McGraw-Hill, 1991

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10060EE159		3	0	0	3

**SUBJECT TITLE: AIR CARGO LOGISTICS MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge of air freight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales.

**COURSE OUTCOME**

1. Understand concept of freight forwarding and air cargo
2. Understand the process involved in the air cargo management
3. Quote the rates for transfer of air cargo from origin to the destination

**Unit I** Introduction to Airline Industry - History - Regulatory Bodies- Navigation systems–Air Transport System– Management –Operations – Civil Aviation - Safety and Security -Aircraft operator’s security program–ICAO security manual- Training and awareness–Rescue and firefighting-Industry regulations- Future of the Industry.

**Unit II** Introduction to Air Cargo: Aviation and airline terminology - IATA areas - Country – Currency– Airlines- Aircraft layout- different types of aircraft- aircraft manufacturers-ULD

- International Air Routes- Airports- codes– Consortium– Hub & Spoke – Process Flow.

**Unit III** Standardization in Logistics - Air freight Exports and Imports - Sales & Marketing, Environment, Marketing Research, Strategies and Planning, Audits, Segmentation, SWOT, Marketing Management Control, Consignee controlled cargo– Sales leads– Routing Instructions- Customer service, Future trends..

**Unit IV** Advices – Booking - SLI – Labeling – Volume/ Weight Ratio – Shipment Planning - TACT – Air Cargo Rates and Charges - Cargo operations- Cargo Operations process- Customs clearance.

**EMPLOYABILITY**

**Unit V** Air Freight Forwarding: Air freight Exports and Imports- Special Cargoes- Consolidation - Documentation - Air Way Bill (AWB) – Communication – Handling COD shipments – POD – Conditions of contract - Dangerous (DGR) or Hazardous goods.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
<b>SUGGESTED READINGS:</b>							
1. Airtransport logistics by Simon Taylor (Hampton)							
2. Air cargo distributions: a management analysis of its economic and marketing benefits/[by] Paul Jackson and William Brackenridge (Gower Press)							
3. Air freight: operations, marketing and economics/(by) Peter S. Smith (Faber)							
4. 4th Party Cyber Logistics for Air Cargo by Sung Chi-Chu (Boston: Kluwer Academic Publishers)							
5. Accelerated Logistics by Mark Wang (Santa Monica CA)							
6. Airports; some elements of design and future development - John Walter Wood							
7. Fundamentals of air transport management by P.S. Senguttavan.							
8. Oxford ATLAS - OXFORD PUBLISHING

**SUBJECT TITLE: SHIPPING AND OCEAN FREIGHT LOGISTICS MANAGEMENT**

**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge of ocean freight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales.

**COURSE OUTCOME** Analyse issues in International sourcing and trade and take a strategic view of the global business environment impacting International supply chains Apply analytical techniques to arrive at cost effective solutions to meet SC requirements of efficiency and responsiveness. Decide optimal financing options for International trade Manage International Logistics & Supply chain partners and service providers Deploy knowledge of regional and international trading blocs in solving problems of International logistics

Unit I Shipping industry and business - description of a ship. Uses of a ship or a floating vessel. Classification of ship (route point) (cargo carried) - superstructure - tonnages & cubics - drafts & load lines - flag registration - Different types of cargo. (packaging, utility or value). Trimming - Cleansing - Unitized cargo.

Unit II Stevedoring, Lighterage Services and Security - Port trusts - operational unit - services - Seaports - Vessel Operations - pilotage - Stevedoring - Dock Labour Boards - charges - Automated Container Handling - security at ports and harbors. Role of security agencies - lighterage services.

Unit III Shipping Lines - Hub & Spoke - Process flow - Advices - Booking - Containerization - Containers - Container numbering - Process flow - Shipping Sales - Leads - Quotations - Customer Service.

**EMPLOYABILITY**

Unit IV Operations - Volume / Weight calculations - Shipment Planning basics - Preparing & loading containers - Types of container services - FCL - Consolidation - LCL - Advanced Scientific shipment planning - Container de-stuffing.

Unit V Documentation - Bill of Lading basics - MBL - HBL - CY - CFS - Advanced learning in Bills of Lading - Sea Way bill - Combined transport - MTO - Multimodal Transport Document (MTD) - Invoicing - Release of cargo - Cross Trade & Documentation - Conditions of Contract - Managing Key Accounts - Trade Lane Development - Consortium.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10260EE170		2	0	0	2

**SUBJECT TITLE: GLOBAL LOGISTICS AND SUPPLY CHAIN MANAGEMENT**

Objective: The course provides the analytical framework for understanding the logistic models and supply chain techniques in an international perspective.

**COURSE OUTCOME**

Analyse issues in International sourcing and trade and take a strategic view of the global business environment impacting International supply chains. Apply analytical techniques to arrive at cost effective

solutions to meet SC requirements of efficiency and responsiveness. Decide optimal financing options for

International trade Manage International Logistics & Supply chain partners and service providers Deploy

knowledge of regional and international trading blocs in solving problems of International logistics

**UNIT I** Logistics Management: Concepts – Importance – Elements of the logistic System – Marketing and logistic mix – Logistics and marketing interface – Value-chain and production efficiency.

**UNIT II** Shipping Industry: Types of ships – Shipping systems: linear, Tramp, conference, chartering, Baltic freight exchange – Shipping intermediaries: agent, forwarder, brokers and others – containerization – types of containers – ICDs – CFS – CONCOR.

**UNIT III** Air Transport: Air transport – Air freight – IATA – Cargo handling – Designing the International Information system – system modules – Distribution and Transportation.

**UNIT IV** Supply chain: Definition – scope and importance of supply chain – supply chain drivers and metrics - efficient and responsive supply chain - Designing supply chain network: Distribution network – Factor influencing distribution - Transportation decision in supply chain management

**EMPLOYABILITY**

**UNIT V** Forecasting and planning in supply chain management – Pricing in supply

<p><b>UNIT I</b> Concept, Characteristics and Dimensions of Strategic Management – Emergence of International Strategic Management (ISM) – Logic and process of Internationalization – Forces necessitating the adoption of ISM concept by MNC’s as well as Indian Companies – Corporate global strategy</p>							
<p><b>UNIT II</b> Nature, components and significance of environmental scanning – Corporate capability analysis – Diagnosing industry globalization potential – Building global market participation – Competition in global industries</p>							
<p><b>UNIT III</b> Core competencies – Significance of core competence concept in strategy making – Value Chain Analysis – Significance of value chain analysis in strategy making – Balanced Scorecard to link today’s action with tomorrow’s goals</p>							
<p><b>UNIT IV</b> Setting corporate objectives in MNC’s – External and internal forces interacting with corporate objectives – Identifying strategic alternatives – Stability strategy – Growth and diversification strategy – Merger, acquisitions and retrenchment</p>							
<p><b>UNIT V</b> Choice of corporate strategy: CIT, CASCADE and PORTFOLIO MODELS – Formulating generic competitive strategy – Implementing corporate strategy – Strategic control and operational control</p>							

## SKILL DEVELOPMENT

### **TextBooks**

1. John A. Pearce & Richard B. Robinson. Strategic Management AITBS Publication.

### **ReferenceBooks:**

1. Azhar Kazmi, Business Policy, Tata McGraw-Hill Publishing Co Ltd, New Delhi, 2. Srivastava, Management Policy and Strategic Management, Himalaya Publishing Co. 3. Porter. M, Competitive Strategy Techniques for Analyzing Industries and Competitors, The Free Press, New York.

4. Thompson and Strickland, Strategic Management – Concepts and Cases, Tata McGraw Hill, New Delhi.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EF39		3	0	0	3

**SUBJECT TITLE: GLOBAL BUSINESS ETHICS & CORPORATE GOVERNANCE**

**Objectives:** The course is to sensitize the student to issues pertaining to sustainable development and business ethics and enable development and business ethics and enable them to understand the implications of various statutory and policy guidelines concerning corporate governance for actual business decision making.

**COURSE OUTCOME**

Comprehend the relationship between ethics, morals and values in the workplace.  
 Analyze and understand various ethical philosophies to explain how they contribute to current management practices. Critically apply understanding of ethics of real-world contexts and gather and analyse information by way of undertaking a research project on a topic relevant to business ethics.

**UNIT I** Business Ethics – trans-cultural Human Values in Management Education – Relevance of Values in Management – Need for values in Global Change – Indian Perspective – Values for Global managers

**UNIT II** Ethical Dilemma – Ethical decision making – Ethical Reasoning – Benefits of managing ethics in work place – Organization Ethics Development System - Organizational Culture – Ethics Tools – Code of ethics – Guidelines for developing code of ethics – Value based leadership

**UNIT III** Work ethics – work culture – Ethical theories – Ethical Values – Environmental ethics – Environmental Management - Environmental Management System - Environmental Laws - Consumer Protection

**SKILL DEVELOPMENT**

**UNIT IV** Corporate Governance – Meaning – Code of Corporate Governance – Audit Committee – Corporate Excellence – Role of Independent Directors – protection of Stakeholders – Corporate

Social Responsibility – Changing Role of Corporate Boards with changing times – Corporate Governance for Market capitalism

**UNIT V** Indian Ethos in Management – Principles – Approaches – Role of Gita – Karma Yoga  
– Wisdom Management – Quality of Work Life – Strategies for Work Life Balance

**Text Books**

1. John R Boatright, (2007), Ethics and the conduct of Business - Dorling Kindersley (India) Pvt Ltd New Delhi for Pearson Education, Third Impression

**Reference Books:**

6. Laura P Hartman, *Perspectives in Business Ethics* - Tata McGraw Hill, New Delhi
7. O C Ferrell, John Paul Frederick, Linda Ferrell; *Business Ethics – Ethical Decision Making & Cases*, - Biztantra, New Delhi.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EF42		3	0	0	3

**SUBJECT TITLE: MANAGEMENT OF INTERNATIONAL DEVELOPMENT ORGANIZATIONS**

**Objectives:** The course is to sensitize the student to issues pertaining to sustainable development and business ethics and enable development and business ethics and enable them to understand the implications of various statutory and policy guidelines concerning corporate governance for actual business decision making.

**COURSE OUTCOME**

Explain the role of incentives in political behaviour and economic performance .Discuss what stable institutional constellations comprise, how they come about, and under which conditions they perish.Map the links from incentive systems to micro and macro level economic performance Compare and contrast why certain organisations are better suited to certain types of services and/or environments than others

**Unit-**

**1: International Development Organizations (IDO) Nature, Scope and Functions government/Non-government IDOs (UNESCO, UNIDO, DFID, UNAID, IMF, UNDP, DEEP)**

- IDOs & Specific Development Areas (Health, Education, HIV & AIDS, Disability, Rights and Empowerment, Women Empowerment, Child Rights, Environment, Energy conservation, etc.)-legal and Political factors.

**Unit-2: Assistance and funding to IDOs: Prerequisites, Regulations and Formalities to avail funding to IDOs -International aid flows ILO, UNESCO, UNDP, UNESCAP, UN-HABITAT, UNAID, USAID, DFID and other International NGOs.**

**Unit-3: Evaluation of Performance Based on parameters such as: Economic planning logical Framework-Financial and Economic Analysis-Process of Documentation-Social audit-Monitoring and Evaluation-Accountability-Estimation of Welfare, Poverty Inequality-Economic Growth-Ethical and Social issues**

**SKILL DEVELOPMENT**

**Unit-4:** Cooperation and Collaborations: Role of Nations Policies-  
Role of International Government organizations, NGOs, INGOs, MNCs

**Unit-5:** Functional Strategies: In specific issues pertaining to HR, Marketing Management  
and Finance-Case studies.

# SYSTEMS

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG33		3	0	0	3

**SUBJECTTITLE:SOFTWAREENGINEERING**

**OBJECTIVE:**

This course aims to understand the software engineering and apply the knowledge of a disciplined approach to the development of software and to the management of the software product lifecycle.

**COURSE OUTCOME**

- How to apply the software engineering lifecycle by demonstrating competence in communication, planning, analysis, design, construction, and deployment
- An ability to work in one or more significant application domains
- Work as an individual and as part of a multidisciplinary team to develop and deliver quality software

**Unit-I OVERVIEW OF SOFTWARE ENGINEERING**

Software engineering as a discipline, Software processes, Software projects, Requirements engineering processes, System models, Software prototyping, and Formal specification.

**Unit-II SOFTWARE DEVELOPMENT MODELS**

Software Life Cycle, Waterfall model, Spiral model, Incremental Development, Evolutionary Development, Re-use oriented Development.

**Unit-III SOFTWARE DESIGN**

Architectural design, Distributed Systems architecture, OO design, Real-time software design, Design with reuse, User Interface design. Software Metrics: software process and project metrics, technical metrics for software.

**EMPLOYABILITY**

**Unit-IV SOFTWARE QUALITY**

Verification and Validation, Software testing, Critical systems validation, CMM and PCMM concepts.

## **Unit–V        SOFTWAREMANAGEMENT**

Managing people, Software cost construction, Quality Management, Process empowerment. Legacy Systems, Software change, Software re-engineering, Configuration Management.

### **SUGGESTED READINGS:**

1. Roger S. Pressman: Software Engineering – A Practitioner’s Approach – Tata McGraw Hill – IV edition.
2. Sommerville, Ian: Software Engineering, Addison Wesley.
3. S.A. Kelkar, Software Project Management, PHI
4. Carlo Ghezzi, Mehdi Jazayeri, Dino Mandrioli – Fundamentals of Software Engineering – PHI.

<b>SEMESTER</b>	<b>THREE</b>	<b>NATURE</b>	<b>ELECTIVE</b>	<b>L</b>	<b>P</b>	<b>T</b>	<b>C</b>
<b>COURSECODE</b>		19260EG34		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**SUBJECTTITLE:SOFTWAREPROJECTMANAGEMENT**

**OBJECTIVE:**

This course gives an overview of software project management and the project planning. It also covers the Step Wise framework in project planning. It also imparts knowledge to the student on how to evaluate and assess the projects and to find the cost of the project using cost benefit evaluation techniques.

**COURSE OUTCOME** Identify the different project contexts and suggest an appropriate management strategy. Practice the role of professional ethics in successful software development. Identify and describe the key phases of project management. Determine an appropriate project management approach through an evaluation of the business context and scope of the project.

**Unit I SYSTEM ANALYSIS & DESIGN**

Overview of system analysis & Design : Introduction to different methodologies & Structured system analysis – Details of SDLC approach – E.R. diagrams – DFD concepts – Data dictionary concepts. Structure charts – modular programming – I/O & file design consideration.

**Unit II SYSTEM IMPLEMENTATION**

System implementation & maintenance: Implementation Strategies – SW / HW selection & procurement – Control & security – issues of designing & implementing on-line systems – data communication requirements – selection issues

**Unit III PROJECT DEVELOPMENT & DATABASE DESIGN**

Introduction to Database technologies & CASE tools with specific packages – overview of relational model – Database creation – SQL command – Normalization – designing forms & reports – using CASE tools for system analysis & design – case studies – Cost / benefit analysis – project & resource planning – design & development testing & documentation.

**EMPLOYABILITY**

**Unit IV SOFTWARE PROJECT MANAGEMENT**

Software project management: challenges & opportunities – changing technologies & approaches – choice development of methodologies & technical platforms, project management techniques – monitoring & measurement of progress.

### **Unit V SOFTWARE PROJECT MANAGEMENT**

Software project management – elements, cost estimation, manpower planning, Software & Product Metrics – Quality assurance & control – standards & documentation – testing –

implementation – training – technology management – quality standards – certificate – handling multiple projects, issues of shared development.

### **SUGGESTED READINGS:**

1. Software Engineering Principles and practice by Waman S. Jawadekar Tata Mcgraw Hill Co. – Chennai.
2. Walker Royce, 'Software Project Management' - A unified Framework, Pearson Education Asia, New Delhi 2000.
3. Software Project Management by S.A. Kelkar, PHI Learning India PVT Ltd.,
4. Software project management (2 volumes set) by Prof. S.N. Singh and S.L. Gupta – Global India publications PVT Ltd., New Delhi.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG35		3	0	0	3

**SUBJECT TITLE: RELATIONAL DATABASE MANAGEMENT SYSTEMS**

**OBJECTIVE:**

This course helps the students to understand the roles and technology of databases for the Internet and Worldwide Web. This also helps to understand the roles of database administration in the enterprise and be able to perform common database administration functions.

**COURSE OUTCOME**

Understand the basic concepts and the applications of database systems. Master the basics of SQL and construct queries using SQL. Understand the relational database design principles.

**UNIT-I Introduction**

Basic concepts of Database – purpose of database - characteristics of database; roles of database manager, database administrator and database users. Database systems, concepts and architecture. Distributed databases - structure and design.

**UNIT-II Data Models**

Data models, schema and instances. E-R models – E-R diagram. Hierarchical model, relational model, object oriented model, object relational model – comparison of models.

**UNIT-III Database system and query languages**

Relational model, Languages and system, structure of relational database, modifying the database. Relational commercial language – SQL. Relational database management system ORACLE/DB2.

**UNIT-IV Relational Database design**

Normalization process – First, second, Third, Fourth normal forms. Mapping relational data to files, data dictionary storage.

**EMPLOYABILITY**

**UNIT-V Database Security**

Database integrity, security, concurrency, recovery, client/server architecture.

**SUGGESTED READINGS:**

1. Leon.A, Database Management Systems, 'BPB publications', Delhi, 1997.
2. Date.C.J., An introduction to Database Systems, 7<sup>th</sup> edition, Pearson Education Asia.
3. Naveen Prakash, Introduction to Database Management, TMH, 1993.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG36		3	0	0	3

**SUBJECT TITLE: E-BUSINESS TECHNOLOGY AND MANAGEMENT**

**OBJECTIVE:**

This course will help the student to recognize and understand ways of fusing digital technologies to improve intra and inter-organizational processes; and to analyze the impact that electronic commerce is having and will likely have on key sectors of the economy and assess the strategic implications this analysis holds for an organization.

**COURSE OUTCOME** 1. understand the issues around defining ‘technology’, ‘innovation’ and ‘innovation management’ 2. recognise the diversity of types of innovation, innovators and innovation settings 3. understand the nature and extent of technological change and innovation 4. critically assess and explain key current issues in our understanding of innovation as a field of study.

**UNIT-I**

Introduction to E-Business: Overview of E-Business; Information Services; Interpersonal Communication; Shopping Services; Virtual Enterprises. E-Commerce: Origin and Need of E-Commerce; Factors affecting E-Commerce; Business dimension and technological dimension of E-Commerce; Internet as an E-Commerce enabler handling business transactions.

**UNIT-II**

E-commerce business models. Consumer oriented e-commerce –etailing and models-Marketing on web – advertising, e-mail marketing, e-CRM; Business oriented e-commerce – E-Government, SCM; Web Auctions, Virtual communities and Web portals. Mobile Commerce.

**UNIT-III**

EDI: EDI application in business development; EDI technology; EDI as a re-engineering tool; Financial EDI. E-Commerce and retailing: On-line retail industry dynamics; On-line mercantile models from customer perspective; Management challenges in on-line retailing

**UNIT-IV**

Handling payments: Electronic Fund Transfer System, Digital Token and notational based electronic payments system, smart card, credit card and emerging financial instruments. E-payments - Characteristics of payment of systems, protocols, E-cash, E-check

and Micropayments systems. E-Commerce and Banking: changing dynamics in banking industry; Management Issues in online banking.

## **EMPLOYABILITY**

### **UNIT-V**

Indian Perspective: Benefits of E-Commerce; Drawbacks and limitations of E-Commerce; Major requirements in E-Business; Emerging trends and technologies in E-Business; From E-Commerce to E-Business; Web security: Introduction; Firewalls and transaction security.

**SUGGESTED READINGS:**

1. Henry Chan & el, E-Commerce – fundamentals and Applications, Wiley India Pvt Ltd, 2007.
2. Gary P. Schneider, Electronic commerce, Thomson course technology, Fourth annual edition, 2007.
3. Bharat Bhasker, Electronic Commerce – Framework technologies and Applications, 3<sup>rd</sup> Edition. Tata McGraw Hill Publications, 2008.
4. Krishnamurthy - E-Commerce Management: Text and Cases (Vikas)

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG37		3	0	0	3

**SUBJECTTITLE:DATA WAREHOUSING AND DATA MINING**

**OBJECTIVE:**

This course helps the students to understand the overall architecture of a data warehouse and Techniques and methods for data gathering and data pre-processing tools. The different data mining models and techniques will be discussed in this course. Data mining and data warehousing applications will also be explored.

**COURSE OUTCOME**

- Analyzing Dimensionality. Reduction. Feature Subset Selection. Understanding. Discretization and. Analyzing Similarity – Basics and Dissimilarity. Understanding. Association Rules.
- Understanding APRIORI. principal, support and.

**UNIT-I**

Data – Types of Data - Data warehousing concepts – difference between operational system and data warehouse system- Applications of data warehouse – Benefits of data warehousing systems- Metadata.

**UNIT-II**

Data warehousing methodology - Data warehousing process - Data warehouse architecture - Designing data warehouse.

**UNIT-III**

Data mining concepts – Integration of a Data Mining System with a Data Warehouse - Benefits of data mining systems- Data Mining Functionalities- Interestingness of patterns- Classification of Data Mining Systems.

**UNIT-IV**

Data mining process - Data mining techniques – Data mining tools - Data mining applications - Issues in data mining.

**EMPLOYABILITY**

## **UNIT-V**

WebData Mining- AssociationRule Mining

### **SUGGESTED READINGS:**

1. G.K. Gupta, Introduction to Data Mining with Case Studies, Eastern Economy Edition, Prentice Hall India, 2006.
2. McLaren & McLaren: Data Warehousing and Data Mining, Tata McGraw-Hill, New Delhi, 2003.
3. Alex Berson and Stephen J. Smith, "Data Warehousing, Data Mining & OLAP", Tata McGraw-Hill Edition, Tenth Reprint 2007.
4. Jiawei Han and Micheline Kamber, "Data Mining Concepts and Techniques", Second Edition, Elsevier, 2007.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE	19260EG38			3	0	0	3

**SUBJECT TITLE: KNOWLEDGE MANAGEMENT**

**OBJECTIVE:**

The goal of the course is to prepare students to become familiar with the current theories, practices, tools and techniques in knowledge management (KM), and to assist students in pursuing a career in the information sector for profit and not-for-profit organizations. In addition, students will learn to determine the infrastructure requirements to manage the intellectual capital in organizations.

**COURSE OUTCOME** Use a framework and a clear language for knowledge management concepts; • Describe how valuable individual, group and organizational knowledge is managed throughout the knowledge management cycle; • Define the different knowledge types and explain how they are addressed by knowledge management; • Describe the major roles and responsibilities in knowledge management implementations;

**Unit-I: The Knowledge Economy:** Data – Information - Knowledge, Attributes of Knowledge as an Economic Resource – Knowledge Capital Vs Physical Capital - Types of Knowledge - Scope of Knowledge Management - Building Knowledge Societies.

**Unit-**

**II: Knowledge Management and Information Technology:** Role of Information Technology in Knowledge Management Systems, Knowledge Management Tools and Knowledge Portals – Knowledge Organization & Managing Knowledge Workers

**Unit-III: The Knowledge Process:** Knowledge Management Systems Life Cycle - Stages of KM Process, Knowledge Creation & Knowledge Architecture – Knowledge Capturing Techniques – Knowledge Codification – Transferring and Sharing Knowledge.

**EMPLOYABILITY**

**Unit-IV: Implementation of Knowledge Management:** Business Intelligence and Internet Platforms, KM & the Indian experience, Net Banking in India –

Role of Knowledge Management in Organizational Restructuring – The Mystique of a Learning Organization - Management of Intellectual Property.

**Unit-V: Future of Knowledge Management and Industry Perspective: Knowledge Management in Manufacturing and service industry, Challenges and Future of Knowledge Management- Measures for meeting the Challenges of KM- Business Ethics and KM.**

**SUGGESTED READINGS:**

Mattison: Web Warehousing & Knowledge Management, Tata McGraw-Hill, 2009

2. Becerra Fernandez: Knowledge Management: An Evolutionary View, PHI, 2009

3. Fernando: Knowledge Management, Pearson, 2009

4. B. Rathan Reddy: Knowledge Management, Himalaya, 2009

5. Madan Mohan Rao, Leading with Knowledge, Tata McGraw-Hill, 2011.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG39		3	0	0	3
<b>SUBJECTTITLE:ENTERPRISERESOURCEPLANNING</b>							
<p><b>OBJECTIVE:</b></p> <p>To understand about ERP systems, ERP software and modules, Implementation of ERP, and Emerging trends on ERP.</p> <p><b>OUTCOMES</b></p> <ol style="list-style-type: none"> <li>1. Make basic use of Enterprise software, and its role in integrating business functions</li> <li>2. Analyze the strategic options for ERP identification and adoption.</li> <li>3. Design the ERP implementation strategies.</li> <li>4. Create reengineered business processes for successful ERP implementation</li> </ol>							
<p><b>UNIT–I:Introduction</b></p> <p>Overview of Enterprise Systems – Evolution – Risks and Benefits – Fundamental Technology – Issues to be consider in Planning Design and Implementation of Cross Functional Integrated ERP Systems.</p>							
<p><b>UNIT–II:ERP Solutions and Functional Modules</b></p> <p>Overview of ERP Softwares – SAP – Baan – IFS – Oracle – People Soft – Comparison of ERP software, Overview of ERP Modules – Sales and Marketing, Accounting and Finance, Materials and Production Management. Business Process Reengineering concepts.</p>							
<p><b>UNIT–III:ERP Implementation</b></p> <p>Planning Evaluation and selection of ERP systems – Implementation Life Cycle – ERP implementation, Methodology and Frame Work – Training – Data Migration. People Organization in Implementation – Consultants, Vendors and Employees.</p>							
<p><b>UNIT–IV:Post Implementation</b></p> <p>Maintenance of ERP – Organizational and Industrial Impact; Success and Failure factors of and ERP Implementation. Measuring ERP Benefits – Balanced Score Card Method – ABCD Checklist.</p>							

## **UNIT–V:EmergingTrends onERP**

Extended ERP Systems – CRM, SCM, Business Analytics – Future Trends in ERP Systems – WebEnabled, Wireless Technologies.

### **EMPLOYABILITY**

#### **SUGGESTED READINGS:**

1. Alexis Leon, ERP Demystified, second Edition Tata McGraw–Hill, 2006.
2. Jagan Nathan Vaman, ERP in Practice, Tata McGraw–Hill, 2008
3. Mahadeo Jaiswal and Ganesh Vanapalli, ERP Macmillan India, 2006.
4. Vinod Kumar Grag and N.K. Venkitakrishnan, ERP–Concepts and Practice, Prentice

Hallof India,2006.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG42		3	0	0	3
<b>SUBJECTTITLE:INFORMATIONSTORAGEANDMANAGEMENT</b>							
<b>OBJECTIVE:</b> Thiscoursehelpstolearnandunderstandthestoragemangement,virtualizationtechnologies,infrastr uctureand storagesecurity. <b>OUTCOMES</b> CO1: Design business continuity plan. CO2: Select a local replication technology to provide data backup. CO3: Distinguish different remote replication technologies. CO4: Discuss security issues and mitigate them. CO5: Select appropriate storage management software.							

## **Unit I**

Review data creation and the amount of data being created and understand the value of data to a business, challenges in data storage and data management, Solutions available for data storage, Core elements of a data center infrastructure, role of each element in supporting business activities Intelligent Storage system – Introduction to Flash Drives.

## **Unit II**

Hardware and software components of the host environment, Physical and logical components of a connectivity environment, Major physical components of a disk drive and their function, logical constructs of a physical disk, access characteristics - Concept of RAID and its components - Storage Area Networks – Attached Storage: Benefits, components – NAS Protocol & Implementation – File level Virtualization – Object based and Unified Storage: Devices and components.

## **Unit III**

List reasons for planned/unplanned outages and the impact of downtime, Impact of downtime. Differentiate between business continuity (BC) and disaster recovery (DR) - Backup and Recovery – Local Replication: Technologies – Backup in NAS Environments – Data duplication – Remote replication.

## **Unit V**

Information security, Critical security attributes for information systems, Storage security domains, List and analyzes the common threats in each domain, Virtualization technologies – Security implementations in Storage Networking.

## **Unit V**

Managing Storage infrastructure - Storage infrastructure Management Activities & Challenges – Ideal solutions for Storage Infrastructure management – Storage tiering.

## **EMPLOYABILITY**

### **SUGGESTED READINGS:**

1. G. Somasundaram, Alok Shrivastava, "Information Storage and Management", EMCEducation Services, Wiley Publishing, Inc, Edition 2010.
2. Robert Spalding, "Storage Networks: The Complete Reference", Tata McGraw Hill, Osborne, 2003.

3. MarcFarley,“BuildingStorageNetworks”,TataMcGrawHill,Osborne.2001.
4. MeetaGupta,StorageAreaNetworkFundamentals,PearsonEducationLimited,2002.

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG43		3	0	0	3

**SUBJECTTITLE: CLOUD COMPUTING**

**COURSEOBJECTIVE:** To understand basics of cloud computing for business management

**OUTCOMES** 1. Explain the core concepts of the cloud computing paradigm: how and why this paradigm shift came about, the characteristics, advantages and challenges brought about by the various models and services in cloud computing. 2. Apply the fundamental concepts in datacenters to understand the tradeoffs in power, efficiency and cost. 3. Identify resource management fundamentals, i.e. resource abstraction, sharing and sandboxing and outline their role in managing infrastructure in cloud computing. 4. Analyze various cloud programming models and apply them to solve problems on the cloud.

**UNIT I INTRODUCTION:** Introduction to Cloud Computing, Evolution - Cloud Computing, Hardware, Internet and Software, Virtualization, Web Services on Cloud, Infrastructure-as-a-Service, Platform-as-a-Service, Software-as-a-Service, Building Cloud Network.

**UNIT II IMPLEMENTATION AND CONTROL** Privacy and its relation to Cloud-based Information Systems, Security in the Cloud, Common Standards in the Cloud, End-User Access to the Cloud Computing, legal and ethical dimensions.

**UNIT III CLOUD COMPUTING FOR MANAGERS** Centralizing Email Communications – Collaborating on Schedules, To-Do Lists, Contact Lists – online Community development – online collaboration tools for projects – Cloud Computing for business.

**UNIT IV APPLICATIONS OF CLOUD SERVICES** Applications – Online Planning and Task Management – Event Management – CRM-Cloud service development tools- word processing, databases, storing and file sharing on cloud.

**UNIT V VIRTUAL OFFICE MANAGEMENT** Web-based communication tools – Web Mail Services – Web Conference Tools – Social Networks and Groupware – collaborating via blogs and Wikis; IBM, Amazon Ec2, Google Apps for Business, Salesforce.com, Ramco-On-Demand

**EMPLOYABILITY**

**TEXTBOOK**

1. John W. Rittinghouse and James F. Ransome, "Cloud Computing Implementation, Management and Security", 2010, CRC Press, Taylor & Francis Group, Boca Raton London New York.
2. Kumar Saurabh, Cloud Computing – Insights into new era infrastructure, Wiley India, 2<sup>nd</sup> Edition, 2012

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EG44		3	0	0	3

**SUBJECT TITLE: DECISION SUPPORT SYSTEM AND INTELLIGENT SYSTEMS**

**OBJECTIVE:** To understand the components of DSS and IS. To know the appropriate model to be used for a problem

**OUTCOMES**

- Apply techniques of IDSS (e.g. artificial neural networks, machine learning, rule-based systems, etc.) and validate IDSS techniques to solve a complex industrial problem
- Identify decision factors, models, and analysis of intelligent decision support systems (IDSS) to support a smart production system.
- Appraise the frameworks of IDSS.
- Design a knowledge-based system for a smart production system.

**UNIT I INTRODUCTION** Management Support systems, Decision making, Models, DSS Overview, Data, Model, Knowledge Management system.

**UNIT II DATA AND MODEL MANAGEMENT SYSTEMS** Data Collection, Data Warehousing, Data Mining, Data visualization, Modeling, Static and dynamic, Optimization, Heuristic, Simulation, Multidimensional modeling.

**UNIT III GSS, ENTERPRISE DSS, KMS** Group support system, Technologies, Enterprise DSS, Knowledge management methods, Technologies, Tools.

**UNIT IV KNOWLEDGE BASED DSS** Artificial Intelligence, Expert System, Knowledge Acquisition and validation, Knowledge representation, Inference techniques.

**UNIT V ADVANCED INTELLIGENT SYSTEMS** Neural Computing, Fuzzy Logic, Intelligent Agents, Implementation, Integration, Intelligent DSS.

**EMPLOYABILITY**

# HOSPITAL MANAGEMENT

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EH33		3	0	0	3

**SUBJECTTITLE:MANAGEMENTOFHOSPITALSERVICES**

**OBJECTIVE:**

To enable the students gain insights into various aspects like importance, functions, policies and procedures, equipping, controlling, co-ordination, communication, staffing, reporting and documentation of both clinical and nonclinical services in a hospital.

**OUTCOMES**

CO1: Describe the health systems of various Countries including India

CO2: Discuss and learn public health care system in India

CO3: Develop, implement and manage various public health programs

CO4: Critically analyze the various components of health care delivery system in India

Unit- I Overview: Hospital operations management, role

**Unit- I Overview:** Hospital operations management, role and decisions, Difference of hospital operations from other service and manufacturing organizations.

**Unit – II Out Patient Services:** Overview of the department, day care, accident and emergency services, physical medicine and rehabilitation, occupational therapy unit, physiotherapy department. **In Patient Services:** Ward design (general & specialized), critical care services – ICU, CCU, NICU, , medical services, surgical services – operation theater, nuclear medicine, burn unit, nursing services and administration.

**Unit – III Specialty Services:** Pediatrics, OBG & GYN, ENT, Ophthalmology, Orthopedic, Psychiatry, Anesthesia, Dental. **Super-specialty Services:** Cardiology, Thoracic Surgery, Neurology, Neurosurgery, Nephrology- Dialysis Unit, Transplantation Services

!

**Unit– IV Hospital Acquired Infection:** Source and Control, Modern trends in Hospital Administration, Disaster Management, Information Systems, Telemedicine.

**EMPLOYABILITY**

**Unit–**

**VDisasterManagementServices:** Basics of disaster management and Mass casualties Components of disaster plan: pre-hospital and hospital, Disaster alertness in Hospital Disaster management planning and implementation, Severity of illness amongst disaster victims and risk assess - **Disaster preparedness-** Policies & procedures for general safety, fire safety procedure for evacuation, disaster plan and crisis management.

**SUGGESTED READINGS:**

Essentials for Hospital Supportive Services, Jaypee Brothers, New Delhi
9. Tabish, Syed Amin- Hospital Planning, Organization and Management

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE	19260EH34			3	0	0	3

**SUBJECT TITLE: OPERATIONS MANAGEMENT IN HEALTHCARE**

**OBJECTIVE:**

Gives understanding about various operations related to hospital administrations such as purchase procedures of healthcare equipments and materials, store maintenance, quality management and conduction of healthcare events

**OUT COMES**

- Explore the challenges and opportunities for improving healthcare operations;
- Develop an understanding of the systems of care and how they translate into operational strategies and activities;
- Understand the relationship between business strategy and operations (or the lack thereof);
- Explore methods and tools for problem solving and decision making in healthcare operations;

**Unit I HOSPITAL PURCHASE MANAGEMENT: Objectives and Elements of Purchasing- Purchasing System- Purchase Cycle- Purchase methods and Procedures; Planning and Selection of Equipment- Purchase, Inspection and Installation; Import of Equipment**

**Unit II HOSPITAL STORES MANAGEMENT: Planning Consideration of Stores- Inspection and Verification of Materials- Storage of Materials- Codification and Standardization- Value Analysis- Inventory Control- Economic Order Quantity (EOQ), Distribution of Materials- Condemnation and Disposal; Hospital Wastes Management**

**Unit III HOSPITAL MATERIALS AND MAINTENANCE MANAGEMENT: Functions of Materials Manager- Information Systems for Materials Management; Policy and Procedures- Equipments Types and Characteristics; Records, Responsibilities- Level of Maintenance; Equipment Utilization and Operation- Equipment Repair and Maintenance- Equipment Audit**

**EMPLOYABILITY**

**Unit IV QUALITY ASSURANCE IN HOSPITALS:** Patient safety and satisfaction, Patient feedback system, Job Description of Quality Manager- Quality Steering Committee- Quality Council, Quality Audit; Quality Teams: Task Force, Quality Circle- ISO Certification; BSMARK, Accreditation: JCI, Quality Awards Scheme - MBNQA; NABH, Six sigma in hospitals; Obstacles to Practice Quality in Hospitals

#### **Unit V**

**HEALTH PROGRAM / EVENT MANAGEMENT:** Healthcare programs, campaigns and camps; Program need analysis, Planning/Preproject phase (CPM & PERT Analysis), Execution phase – Manpower and quality service delivery requirements, Post project impact analysis

#### **SUGGESTED READINGS:**

1. Donna Deepro, Project Management, Capstone Publishing, Oxford, 2007
2. H. Kerzner, Project Management: A System Approach to Planning, Scheduling and Controlling, Wiley Eastern publication, 2008
3. Shakti Gupta and Sunil Kant, Hospital Stores Management: An Integrated Approach Jaypee Publications, New Delhi, India, 2010
4. WHO, Maintenance and Repair of Laboratory, Diagnostic, Imaging and Hospital Equipment, 2006
5. Wilson CRM, Hospital Wide Quality Assurance, Saunders publication, 2005

6. Hugh C.H. Kogh, Total Quality Management in Health Care, Longman Publication, 2008
7. Roger Ellis and Dorothy Whittington, Quality Assurance in Health Care – A Handbook, Edward Arnold publication, 1998

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EH35		3	0	0	3

**SUBJECT TITLE: MARKETING MANAGEMENT OF HOSPITAL AND HEALTH CARE SERVICES**

**OBJECTIVE:**

Gives better understanding about the way to market health care services. Gives view about the marketing mix for health care services

**OUTCOMES CO101:** Students will have an idea of the overall Managerial Functions which can be applied in any organizational set up Basics of Hospital Administration

CO103: Students will have a general idea about the fundamentals of hospital administration Health Economics

CO105: Students will have the complete understanding about micro and macroeconomics Basics of Medical Sciences

CO107: Students will have a basic understanding of structure & functions of various organ system of a human body. Students will have basic knowledge on various aspects of community medicine

**Unit I APPLICATION OF MARKETING IN HEALTH CARE** Concept of Marketing - Importance of Marketing to Healthcare Organizations - Challenges in Practicing Marketing in Healthcare Industry - Marketing Intelligence, Information and Research System - Marketing Organization: Chart, Fulltime Staff and Hiring Consultants

**Unit II MARKETING MIX DECISIONS** Product (Service) Decisions - Nature and Characteristics of Services - Marketing Approaches to New Services Development - Pricing Decisions - Place Decisions - Promotion Decisions - Advertising in Healthcare Industry - Marketing Strategies - Service Portfolio Strategy - Market Expansion Strategy - Target Market Strategy - Price Quality Strategy - Competitive Positioning Strategy.

**Unit III SOCIAL MARKETING** Steps in Social Marketing - Cognitive, Action, Behavior and Value Changes, Media in social Marketing, Social media sources; Social Events and Printed sources; Online sources; Role of social marketing in healthcare

**Unit IV PUBLIC RELATIONS** Introduction to Public Relations, Classification of Public from Healthcare Marketing Perspective, Identifying the Relevant Publics - Measuring Images and Attitude of the Relevant Public - Establishing Image Goals for the Key Publics - Developing Cost Effective Public Relations Strategies - Implementing Actions and Evaluating Results; Health Service Public Relations Officer - Changing Role and Responsibilities of Health Service PRO.

## **EMPLOYABILITY**

### **Unit V COMMUNITY OPINIONS SURVEYS AND MARKET RESEARCH** Market

research–

Model Questionnaire used in Healthcare Services; Public Relations Tools and Materials: Written and Audiovisual; Media: News, Events, Speeches and Telephone Information Services; Data analysis;

Research report preparation and presentation; Decision making based on market research.

**SUGGESTED READINGS:**

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE	10260PH142			2	0	0	2

**SUBJECT TITLE: MANAGEMENT OF CLINICAL AND SUPER SPECIALTY SERVICES IN HOSPITALS**

**OBJECTIVE:**

This course is aimed at developing awareness among students regarding concept of location, layout and the infrastructure and staff requirements. They would be able to enumerate general procedure and policies and procedures followed in each of these.

**OUTCOMES** CO1: Describe the health systems of various Countries including India

CO2: Discuss and learn public health care system in India

CO3: Develop, implement and manage various public health programs

CO4: Critically analyze the various components of health care delivery system in India

CO5: Apply various principles of planning and management in implementing health projects and programmes.

**UNIT – I Hospital Management Of Clinical Services (Medical + Ancillary):** Detailed Management, Layout, Design of - OPD Services, Emergency Services, Clinical Laboratories, Radiological Services, Operation Theatres.

**UNIT – II Overview of Management Layout & Design of:** Radiation Therapy department, Nuclear Medicine, Labour and Delivery Suite, Physical Therapy, Pulmonary Medicine, Cath Lab.; Equipment Planning, utilization survey of super-specialty service equipment.

**UNIT – III Clinical services-3: Operation theatre – Intensive care units – Hospital acquired infections – Sterilization – Nursing services – Ward management.**

**UNIT – IV Nursing Services: Detailed Layout, Design & Management of:** General Nursing Unit including general wards and private rooms, Intensive Care Units; Decision making in nursing profession: Nurse-Patient relationship, health education to patients; Pediatric Nursing Unit, Obstetric Nursing Unit, Psychiatric Nursing Unit, Isolation Rooms, ICU/CCU, New born Nursery.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10260PH142		2	0	0	2
<p><b>UNIT – V Emerging areas in Hospital Services:</b> Alternative and Complimentary medicine, Palliative medicine, promotive Healthcare, home health care; Rehabilitation and De-addiction – Role of hospitals, duties and responsibilities of clinical and paraclinical staff.</p> <p><b>EMPLOYABILITY</b></p>							
<p><b>SUGGESTED READINGS:</b></p> <ol style="list-style-type: none"> <li>1. B.M.Sakhankar: Principles of Hospital Administration &amp; Planning, Jaypee Publications.</li> <li>2. SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10260PH1144		2	0	0	2

**SUBJECT TITLE: PATIENT CARE MANAGEMENT**

**OBJECTIVE:** To understand the processes and details related to effective patient care and to further increase the satisfaction levels of patients

**OUTCOMES** CO1: Describe the health systems of various Countries including India

CO2: Discuss and learn public health care system in India

CO3: Develop, implement and manage various public health programs

CO4: Critically analyze the various components of health care delivery system in India

CO5: Apply various principles of planning and management in implementing health projects and programmes.

**Unit I Patient centric management:** Concept of patient care, Patient-centric management, Organization of hospital departments, Roles of departments/managers in enhancing care, Patient counseling & Practical examples of patient centric management in hospitals. Patient safety and patient risk management.

**Unit II Quality in patient care management:** Defining quality, Systems approach towards quality, Towards a quality framework, Key theories and concepts, Models for quality improvement & Variations in practice.

**Unit III Patient classification systems and the role of case mix:** Why do we need to classify patients, Types of patient classification systems, ICD 9 (CM, PM), Casemix classification systems, DRG, HBG, ARDRG, Casemix innovations and Patient empowering classification systems.

**Unit IV Medical ethics & auditory procedures:** Ethical principals, Civic rights, Consumer protection act, CPA, Guideline of the CPA, Patient complaints powers & procedures of the district forum, State and National commission, Role of supreme court, Patient appeals, Autopsy, Tort liability, Vicarious liability, Medical negligence, Central & state laws, Use of investigational drugs, Introduction/need & procedures for medical audit, Audit administration & Regulating

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C

Publications Ltd:New Delhi.							

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EH39		3	0	0	3

**SUBJECT TITLE: HEALTH RELATED LAWS AND ETHICS**

**OBJECTIVE:**

To Understand Laws relating to Health services, Legal reports, License, Risk Management.

**OUTCOMES**

1. Demonstrate systematic knowledge of the substantive law relevant to a range of key areas of healthcare law;
2. Demonstrate systematic knowledge of major western traditions in bioethics and key ethical principles relevant to the provision of healthcare;
3. Demonstrate a critical understanding of how these different traditions and principles apply to current key issues in healthcare law;

**UNIT – I:**

Laws relating to Hospital formation: Promotion-Forming society-The Companies Act-Law of Partnership-A Sample Constitution for the Hospital-The Tamil Nadu Clinics Act.

**UNIT – II:**

Laws relating Purchases and funding: Law of contracts-Law of Insurance-Export Import Policy-FEMA-Exemption of Income Tax for Donations-Tax Obligations:Filing Returns and Deductions at Source.

**UNIT – III:**

Laws pertaining to Health: Central Births and Deaths Registration Act, 1969-Recent amendments – Medical Termination of Pregnancy Act, 1971 – Infant Milk Substitutes, Feeding Bottles and Infant Food Act, 1992.

**UNIT – IV:**

Laws pertaining to Hospitals: Transplantation of Human Organs Act, 1994–Pre-natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act, 1994–Medical Negligence

- Medico Legal Case - Dying Declaration-MCI act on medical education. The Biomedical Waste (Management and Handling) Rules-Radiation Safety System.

### SKILL DEVELOPMENT

#### UNIT-V:

Laws pertaining to Manufacture and sale of Drugs: Drugs and Cosmetics Acts, 1940-

Pharmacy Act, 1948 - Drugs and Magic Remedies (Objectionable Advertisement) Act, 1954 -

Poison Act, 1919 - Legislation for Tobacco control.

#### SUGGESTED READINGS:

1. The Law of Health Care Administrations - Stuart Showalter
2. Dynamics of Industrial Relations - C.B. Memoria
3. Industrial laws - N.D. Kapoor

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10260FH140		2	0	0	2

**SUBJECT TITLE: MEDICAL TOURISM**

**OBJECTIVE:**

To understand the Significance of Medical Tourism, Role of government, Communication for medical tourists. This will enable students to learn effects of medical tourism in nation's economy, Pricing of Medical Services, Emerging trends on Medical Tourism.

**COURSE OUTCOME**

- Define the basic concepts related to medical tourism
- Have information about intermediary institutions and organizations in medical tourism
- Discuss medical tourism practices in Turkey and the World
- Explain digital transformation in the field of health

**Unit-I** Introduction to Medical Tourism – History – Evolution of Medical Tourism – Scope of Medical Tourism – Importance – Medical Tourism Process.

**Unit-II** Medical Tourism Destinations – National & International Destinations – Travel Retailing and Logistics for Health Tourism.

**Unit-III** Marketing Concepts and Strategies – Hospitality and Hotel Industry linkages – Spa and Wellness Tourism.

**Unit-IV** Medical Tourism – Ethical, Legal and Social Concerns – Medical Tourism – Issues & Challenges.  
**SKILL DEVELOPMENT**

**Unit-V**

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10260PH150		2	0	0	0
<p>Quality Standards in Medical Tourism- Medical Tourism- The Future of Health Services – International Healthcare Accreditation.</p>

SEMESTER	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10260PH152		2	0	0	2

**SUBJECT TITLE: HOSPITAL WASTE MANAGEMENT**

**Objective:** The Objective of the Course is to familiarize the learner with the importance, techniques and the procedures involved in the management of Hospital Waste.

**COURSE OUTCOME**

Learn basic concepts of solid waste management, beginning from source generation to waste disposal in

a system of municipality organizational structure.

- Develop understanding on various technological applications for processing of waste and their disposals in various ways.
- Acquire knowledge on waste to energy productions in the perspectives of sustainable development.
- Apply basic concepts in hazardous waste management and integrated waste management for urban areas.

**UNIT-1:** Hospital Hazards: Meaning – Types – Physical – Biological – Mechanical – Psychological – Its Impact on Employees – Preventive measures.

**UNIT-2:** Hospital Hazards Management: Meaning – Need – Principles – Purpose.

**UNIT-3:** Control of Hospital Acquired Infection: Types of Infection – Common Nosocomial Infection and their Causative Agents – Prevention of Hospital Acquired Infection – Role of Central Sterile Supply Department – Infection Control Committee – Monitoring and Control or Cross-Infection – Staff Health.

**UNIT-4:** Biomedical Waste Management: Meaning – Categories of Biomedical wastes – Disposal of biomedical waste products – Incineration and its importance – Standards for Waste Autoclaving, Micro Waving and Deep Burial – Segregation – Packaging – Transportation – Storage.

**SUBJECT TITLE: AGRISUPPLYCHAINMANAGEMENT**

**Objective** The course introduces students to the concepts and processes of agricultural supply chain management, framework for structuring supply chain drivers; network designs, demand forecasting, inventory planning, sourcing decisions and IT enablement of supply chain.

**COURSE OUTCOME**

Understand the fundamentals of elements and functions of supply chain, role of drivers and demand forecasting. To apply various techniques of inventory management and their practical situations. Analyze

how supply chain decisions related to facility location can be applied to various industries and designing the

supply chain. How various warehousing management system and transportation can be practiced in various

industries

**UNIT I** Supply Chain: Changing Business Environment; SCM: Present Need; Conceptual Model of Supply Chain Management; Evolution of SCM; SCM Approach; Traditional Agri. Supply Chain Management Approach; Modern Supply Chain Management Approach; Elements in SCM.

**UNIT II** Demand Management in Supply Chain: Types of Demand, Demand Planning and Forecasting; Operations Management in Supply Chain, Basic Principles of Manufacturing Management.

**UNIT III** Procurement Management in Agri. Supply chain: Purchasing Cycle, Types of Purchases, Contract/Corporate Farming, Classification of Purchases Goods or Services, Traditional Inventory Management, Material Requirements Planning, Just in Time (JIT), Vendor Managed Inventory (VMI).

**UNIT IV** Logistics Management: History and Evolution of Logistics; Elements of Logistics; Management; Distribution Management, Distribution Strategies; Pool Distribution; Transportation Management; Fleet Management; Service Innovation; Warehousing; Packaging for Logistics, Third-Party Logistics (TPL/3PL); GPS Technology.

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
<p><b>UNIT V</b> Concept of Information Technology: IT Application in SCM; Advanced Planning and Scheduling; SCM in Electronic Business; Role of Knowledge in SCM; Performance Measurement and Controls in Agri. Supply Chain Management- Benchmarking: introduction, concept and forms of Benchmarking.</p> <p style="text-align: center;"><b>SKILL DEVELOPMENT</b></p>							
<p><b>Suggested Readings</b></p> <p>Altekar RV. 2006. <i>Supply Chain Management: Concepts and Cases</i>. Prentice Hall of India.</p> <p>Monczka R, Trent R &amp; Handfield R. 2002. <i>Purchasing and Supply Chain Management</i>. SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		103CCE1105		3	0	0	3

**SUBJECT TITLE: AGRICULTURE ECONOMICS**

**Objective:** Basic objective of this course is to impart knowledge about current Indian agriculture, policies and changes which have taken place in the post independence period with a special focus upon problems being faced in the light of challenges of food security and sustainable agriculture.

**COURSE OUTCOME**

Able to acquire knowledge and analytical skills in addressing the issues of agricultural marketing. Enhancing expertise in improving the performance of the marketing institutions and the players in marketing of agricultural commodities.

**UNIT-I** Role and importance of Agriculture in Economic Development, Features of Indian Agriculture, Causes of low productivity, Socio-cultural and Institutional constraints, Suggestive measures for improving Agricultural Productivity, Brief review of agricultural development under the Five year plans, Problems of Indian Agriculture

**UNIT-II** Land reforms: Meaning, Need and objectives, Measures contemplated to achieve the objectives of land reforms, Abolition of Intermediaries, Tenancy Reforms, Reorganisation of Agriculture, Rural Development Programmes and its impact on Rural Development and Agricultural development, MNREGA, Bharat Nirman

**UNIT-III** Agricultural Labour: Definition, causes of growth, conditions and problems, measures for improvement, Farm size and Efficiency, Food Security and Public Distribution System, Food Security System Act 2013

**UNIT-IV** Modern Technology Vs Institutional Reforms. New agricultural technology and Farm Mechanisation, Choice of appropriate technology in agriculture. Green Revolution- concept, impact and scope, Agriculture and economic reforms.

**EMPLOYABILITY**

**UNIT-**

**V: AGRICULTURE AND GLOBALIZATION** International trade in agricultural commodities- Role of World Trade Organization; Issues in liberalization of domestic and

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE: 19360E1106							
international trade in agriculture - Impact of WTO on Indian agriculture							
<p><b>Suggested Reading:</b></p> <ol style="list-style-type: none"> <li>1. Mishra and Puri: Indian Economy, (Latest Edition) Himalaya Publishing House, New Delhi</li> <li>2. Rudrar Dutt and K.P.M. Sundaram: Indian Economy, (Latest Edition) S. Chand &amp; Co., New Delhi</li> <li>3. Ministry of Finance, Govt. of India: Economic Survey, various issues</li> <li>4. Economic and Political Weekly, Selected Articles</li> <li>6. Ministry of Agriculture, Govt. of India, "Indian Agriculture at a Glance 2012"</li> </ol>							

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE		10360E1107		2	0	0	2

**SUBJECT TITLE: AGRICULTURAL AND MICRO-FINANCE**

**Objective:** Objective: To familiarize students with the Agricultural Financial System, Microfinance System and tools and techniques used for better management decisions.

**COURSE OUTCOME**

Understand the fundamentals of management with reference to agribusiness.

Acquaint with various functional areas of agribusiness

Study the managerial functions and its applications with reference to agribusiness

Learn the concepts and process of Planning and Organizing

Provides knowledge about the Staffing, Directing and Control.

**UNIT-I** Need and Importance of Agriculture Finance, Essential Features of Agriculture credit system, Agricultural credit Structure in India. Non-institutional financing for Agriculture, Merits and Demerits. Management of Agri-Finance: View point of Borrower and lender. Economic feasibility Tests of Farm credit proposal (Three R's of credit & Four C's of Credit).

**UNIT-II** Methods and mechanics of Lending to Agriculture, Role and functions of NABARD for Agriculture Finance Role of Commercial Bank and Agricultural Finance, Regional Rural Banks and Rural Finance, Its viability, Problems and challenges

**UNIT-III** Multi-agency Approach to agricultural Finance, Problems of Over dues of Agricultural loans. Measures to overcome the Problem of over dues. Public Farm Financing Schemes: Financing of Bio-Gas Plant, Financing of Poultry Development, Financing of Dairy Development, Financing of Customs Services Units, Financing of Minor Irrigation Schemes

**UNIT-**

**IV** Microfinance: Concept and Revolution, Grameen experiment. Growth and development of Micro-finance in Bangladesh, World without poverty- Views of Muhammad Yunus. Microfinance and SHGs in India and its importance for socio-economic development of poor families.

**EMPLOYABILITY**

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
<p><b>UNIT-V</b> Microfinance and women empowerment. Role of NABARD in linking SHGs with Banks, Growth and Development. SGSY and SHGs. Role of MFIs (Non-Banking Financial Institutions) in expanding micro-credit facilities for the poorest of poor in the country. These MFIs include SKS microfinance, SHARE, BASIX, etc. Some case studies on microfinance and Agriculture Finance.</p>							
<p><b>Suggested Readings:</b></p> <ol style="list-style-type: none"> <li>1. S.S.M. Desai: Agriculture &amp; Rural Banking in India, HPH</li> <li>3. Pension: Agricultural Finance, Tata McGraw Hill</li> <li>4. Bauman, I. Dieselam &amp; EC: Capital and Credit Needs in Changing Agriculture, PHI</li> <li>5. Rais Ahmed: Micro-Finance and Women Empowerment. Mittal Pub. New Delhi</li> <li>6. Malcolm Harper: Practical Micro-Finance - A Training Guide for South Asia</li> <li>7. K.G. Karmakar, Rural and Self Help Groups Microfinance Needs and concepts in India, S Aga Pub.</li> </ol>							

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EJ44		3	0	0	3

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		19260EJ44		3	0	0	3

**SUBJECT TITLE: NEW TRENDS AND DEVELOPMENT IN AGRICULTURE SECTOR**

**Objective:** Objective: To familiarize students with the Agricultural Financial System, Microfinance System and tools and techniques used for better management decisions.

**COURSE OUTCOME** Enable students to gain knowledge on agricultural marketing, challenges and prospects for improving agricultural marketing system Gain skills to analyze Marketing Functions, Market Information and Intelligence Imparting knowledge of the marketing efficiency and agricultural prices Learn the Markets and Market Structure Provide the platform to the students of Marketing of Agricultural Inputs.

**UNIT I Agribusiness Management**

Concept of E-agribusiness, Need & importance of E-agribusiness, Different models in E-agribusiness, Microfinance with special reference to SHGs.

**UNIT II Greenhouse/Polyhouse techniques**

Basic concept of Green house / Polyhouse, Constructing Green House / Polyhouse, Different commercially important horticultural and other plants grown in Green House / Polyhouse, Importance & future scope of the technique.

**UNIT III Plant Tissue culture** Basic concept, scope & importance of plant tissue culture, Fundamental technique followed in tissue culture, Major crop plants exploited in tissue culture technique.

**Biodiesel sector** Basic concept of biodiesel, Different crop plants used in biodiesel, Benefit of biodiesel in comparison to crude diesel/petrol, Manufacturing biodiesel, Algal biodiesel.

**EMPLOYABILITY**

**UNIT IV Managerial aspects in Food Processing Industry** Organization of a food processing unit: Different department involved in a food processing company and importance of coordination in those departments etc. Importance of production, marketing & distribution aspects in food processing sector. **Management of Agro Processing Industry** Factors to be considered

SEMESTER	THREE	NATURE	ELECTIVE	L	P	T	C
----------	-------	--------	----------	---	---	---	---

while establishing food processing plant including government norms & requirements, Actual processing of Agri-produce into final products, Utilization of byproducts in agro processing industry

**UNIT V Water Management:**

Sources of water and water requirement of crops, irrigation water use efficiency Micro-irrigation systems, economic use of water Water conservation measures, rainwater harvesting, gully plugging, contour bunding, terracing, checking run-

off water Watershed development programmes, problems of water management, water pollution and strategies to overcome them

செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC11	Advanced English-I	4	0	0	2

Aim:

To improve the knowledge of English

Objective:

To familiarize with the glossary terms, figures of speech

To improve vocabulary

To learn how to edit and proof read

To know the comparison and contrast and cause and effect forms

To understand the impact of the speeches of famous people

Outcome:

Develop vocabulary

Read and comprehend literature

UNIT –I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

UNIT – IV

Editing

Proof reading

UNIT – V

Comparison and contrast

Cause and effect

References:

- Sudhir Kumar Sharma Galaxy Publishers

English Work Book-I&II

-Jewelcy Jawahar

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC12	English-I	4	0	0	2

Aim:

To acquaint students with learning English through literature

Objective:

To improve English delightfully through simple poems, essays

To throw light on fiction

To read and comprehend literature

Outcome:

Read and comprehend literature

UNIT –I

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-Aruna Gnanadason

UNIT – II

The Merchant of Death

-Nanda Kishore Mishra & John

Kennet

She Spoke for all Nature

-Young world 'The Hindu'

UNIT –III

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

UNIT –IV

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

UNIT –V

Oliver Twist

-Charles Dickens

Emerald Publishers

COURSE CODE	COURSE TITLE	L	T	P	C
19114AEC13	General Chemistry - I	6	1	0	5

Aim:

To study about the theoretical and molecular models of chemical compounds.

Objective:

To provide a broad foundation in chemistry that stresses scientific reasoning and analytical problem solving with a molecular perspective.

To expose the students to a breadth of experimental techniques using modern instrumentation.

Outcome:

The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.

UNIT – I

Basic concepts in organic chemistry -Electron displacement effects –

Inductive, electrometric and mesmeric effects, resonance, hyperconjugation and steric effects. Homolytic and heterolytic fission of carbon - carbon bonds. Reaction intermediates: - free radicals, carbocations, carbanions, carbenes, nitrenes and arynes - their stability.

## UNIT II

Standard solution - primary and secondary standards solution, Types of titrimetric reactions - redox and precipitation titrimetric reactions. Indicators - effect of change in pH - neutralization – mixed and fluorescent indicators. Halogen family comparative study of halogens and their compounds- unique nature of fluorides and Oxides and oxyacids of halogens - preparation and properties

## UNIT III

Nomenclature of organic compounds - IUPAC naming of simple and substituted Aliphatic, aromatic and alicyclic compounds\_ Alkanes : Mechanism of free radical substitution in alkanes. Petroleum-thermal and catalytic process of cracking Synthetic petrol - Fischer, Tropsch and Bergtius processes, flash point, fire point, smoke point, knocking, octane number

## UNIT IV

Liquid State: Liquid crystals classification, structures Properties and applications. Colloidal State: Size of colloidal particles-gold number- peptisation, stability of colloids, coagulation and protection. Reverse Osmosis and desalination of sea water. Electrophoresis and endosmosis.

## UNIT V

Solid state: Nature of the solid state - seven crystal systems - Bravais lattice unit cell, law of rational indices (Weiss indices), Miller indices, symmetry) elements in crystals (for cubic system)

X-Ray diffraction by crystals — derivation of Bragg's equation – Bragg method - Crystal structure of NaCl, KCl, ZnS, CsCl determination of Avogadro number

COURSE CODE	COURSE TITLE	L	T	P	C
19112AEC15A	Calculus and Fourier Series	4	0	0	4

Aim:

To equip the students with basic differentiation, integration and Fourier series.

Objectives:

This course is designed to give students, basic elementary calculus to allow them to tackle to solve Fourier series problems.

Outcomes:

By the end of this course, the student should solve the differentiation, integration and Fourier series.

Unit – I

Leibnitz theorem (Proof not needed) and its applications – curvature and radius of curvature in Cartesian only (Proof not needed) – total differential coefficient (Proof not needed) – Jacobians of two & three variables – Simple problems in all these.

Unit – II

Reduction formula (when n is a +ve integer) for (i)

$$\int_a^b e^{ax} x^n dx$$

$$\int_a^b \sin^n x dx$$

$$\int_a^b \cos^n x dx$$

$$\int_0^x e^{ax} x^n dx$$

$$\int_0^x \sin^n x dx$$

without proof  $\int_0^{\pi/2} \sin^n x \cos^n x dx$  and illustrations

Unit – III

Beta and Gamma functions

Unit – IV

Evaluation of double and triple integrals in simple cases – changing the order and evaluating of the double integration (Cartesian only)

Unit – V

Definition of Fourier series – Finding fourier coefficients for a given periodic function with period  $2\pi$  and with period  $2l$  – use of odd and even functions in evaluating fourier coefficients – half range sine and cosine series.

Reference:

Calculus – T.K.M. Pillai

Trigonometry & Fourier series – T.K.M. Pillai.

COURSE CODE	COURSE TITLE	L	T	P	C
19112AEC16A	Algebra and Trigonometry	4	0	0	4

Aim:

To study Algebra and Trigonometry to solve various applications in chemistry.

Objectives:

This course is designed to give students, the student should know the algebra and trigonometry.

Outcomes:

By the end of this course, the student should solve the algebra and Trigonometry concepts to solve the problems.

Unit – I

Binomial, Exponential & Logarithmic series (Formulae only) – Summation

Unit – II

Nonsingular, symmetric, skew symmetric, orthogonal, Hermitian, skew Hermitian and unitary matrices – Characteristics equation, eigen values, eigen vector – Cayley Hamilton's theorem (proof not needed) Simple application only.

Unit – III

Expansion of  $\sin^n \theta$ ,  $\cos^n \theta$ ,  $\tan^n \theta$  (n being a positive integer) – Expansion of  $\sin^n \theta$ ,  $\cos^n \theta$ ,  $\sin^n \theta \cos^m \theta$  in a series of sines and cosines of multiples of  $\theta$  ( $\theta$  – given in radius) Expansion of  $\sin \theta$ ,  $\cos \theta$  and  $\tan \theta$  in terms of powers of  $\theta$  (only

problems in all the above)

Unit – IV

Euler’s formula for  $ei\theta$  – definition of hyperbolic functions – formulae involving hyperbolic functions – relation between hyperbolic and circular function – expansion of  $\sinh x$ ,  $\cosh x$ ,  $\tanh x$  in power of  $x$ .

Unit – V

Expansion of inverse hyperbolic function –  $\sinh^{-1}x$ ,  $\cosh^{-1}x$  and  $\tanh^{-1}x$  - Separation of real and imaginary parts of  $\sin(x+iy)$ ,  $\cos(x+iy)$ ,  $\tan(x+iy)$ ,  $\sinh(x+iy)$ ,  $\cosh(x+iy)$ ,  $\tanh(x+iy)$

19120SEC01AL	Package Lab-I	0	0	2	1

## Package Lab -1 (MS-Word)

Prepare a bio-data with photo using text styles.

Prepare a college course details with headings, bullets and numbering.

Prepare a document in a newspaper format with header and footer.

Create a calendar by using auto format.

Prepare a contemporary letter using templates.

picture insertion and alignment

prepare a greeting card

prepare a handout

Create a mark sheet using tables. And find out the total marks.

Prepare a business letter for more than one company using mail merge

COURSE CODE	COURSE TITLE	L	T	P	C
19111SEC01L	Communicative English Lab-I	0	0	1	1

Aim:

To acquaint with the basic grammar

Objective:

To know English grammar and all the concomitant linguistic items

To be aware of basic concepts related to the study of communication

To understand the types of sentences and its patterns

Outcome:

Understand grammar

UNIT –I

Noun

Pronoun

Adjective

UNIT – II

Verb

Adverb

UNIT –III

Conjunction

Preposition

Interjection

UNIT – IV

Kinds of Sentences

UNIT –V

## Patterns of sentences

A Practical English Grammar, A.J Thomson and A.V.Martinet

English Grammar, Wren and Martin

### Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
191INDCONS	Indian Constitution	1	0	0	1

### Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
2. To appreciate the salient features of the Indian constitution
3. To know the fundamental rights and constitutional remedies
4. To make familiar with powers and positions of the union executive ,union parliament and the supreme court .
5. To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

### Learning Out comes:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

### Unit I::The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

### Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies - fundamental duties .

### Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles - differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court - high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India.

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC23	General Chemistry -II	6	1	0	5

Aim:

Develop an appreciation of chemistry and its application in daily life.

Objective:

To teach students to analyze data from experiments or from other sources.

To acquire students a readiness in becoming responsible citizens in a changing world.

Outcome:

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to explore new areas of research in both chemistry and allied fields of science and technology.

UNIT I

Alkynes: Acidity of acetylene, formation of acetylides, addition of water with HgSO<sub>4</sub> catalyst, addition of hydrogen halides and halogens, oxidation, ozonolysis and hydroboration (mechanisms).

Cycloalkanes: Preparation using Wurtz's reaction, Dieckmann's ring closure and reductions of aromatic hydrocarbons, Substitution and ring opening reactions.

Baeyer's strain theory and theory of stainless rings.

## UNIT II

Quantum numbers - principal, Azimuthal, magnetic and spin quantum numbers and their significance - Pauli exclusion principle - Hund's rule - Aufbau principle, (n+1) rule, stability of half-filled and fully filled orbitals - inert pair effect.

## UNIT III

Quantum theory: Bohr's model of atoms. Bohr's theory of hydrogen and spectral lines. Limitations of Bohr model. Sommerfeld's extension. Photoelectric effect and Compton Effect. Debroglie's equation and verification (Davisson and Germer expt)

## UNIT IV

Chemical Kinetics: Rate of reactions, rate laws, rate constant, order and molecularity of reactions. Rate equations for zero, first, second and third order reactions. Derivation of rate constant for Zero, first and second order reactions. Fractional order reactions. Examples- Half-life period, Pseudo first order reactions.

## UNIT V

Polymerization: Types- free radical, cationic and anionic polymerizations with mechanisms.

Preparation of polymers - addition polymers (PE, PVC, Teflon and PS)- Condensation polymers (Nylon6.6, tereylene) - synthetic rubbers (Buna, Butyl rubber, SBR, neoprene) - natural rubber.

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC24L	Organic Analysis Lab 1931	0	0	3	2

A study of the reactions of the following organic compounds,:

Carbohydrate,

Amide,

Aldehyde,

Ketone,

Acid,

Phenol.

The students may be trained to perform the specific reactions like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional group present and record their observations.

Preparation (Single stage) involving

Nitration,

Hydrolysis

Bromination.

Employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19112AEC25A	ODE, PDE and Laplace Transform	4	0	0	4

Aim:

To study the Ordinary Differential Equations, Partial Differential Equations and

Laplace Trans for my to solve mathematical applications in chemistry.

Objectives:

This course is designed to give students, the student should know the Differential Equations and Laplace Transform.

Outcomes:

By the end of this course, the student should solve the ODE, PDE and LAPLACE TRANSFORM concepts to solve the problems.

UNIT I:

Ordinary differential equations of first order but of higher degree- Equations solvable for x and y – solvable for dy/dx, Clairaut's form (simple case only)- homogeneous linear differential equation (Variable coefficients), variation of parameter.

UNIT II:

Formation of partial differential equation by eliminating constants and by eliminating of arbitrary functions- definition of general, particular and complete solution – singular integral (Geometrical meaning not required) solution of first order equations in the slanted forms  $f(p,q)=0$ ,  $f(x,p,q)=0$ ,  $f(z,p,q)=0$   $f_1(x,p)=f_2(y,p)$   $z=(x,p+yq)=f(p,q)$ .

UNIT III:

Lagrange's method for solving  $Pp + Qq = R$  where p,q,r functions of X, Y, Z- (geometrical meaning is not needed)- (only problem in all the above- No proof needed for any formula ) Charpit's method The four standard forms.

UNIT IV:

Laplace Transforms- Definitions-

$L(e^{at})$ ,  $L(\cos at)$ ,  $L(\sin at)$ ,  $L(t^n)$  where n is a positive integer – Basic theorem in Laplace (transform only)  $L(e^{-st} \cos bt)$ ,  $L(e^{-st} \sin bt)$ ,  $L[e^{-st} f(t)] = L[F(t)]$ ,  $L[f'(t)]$

UNIT V:

Inverse Laplace transform related to the above standard forms- solving second order ODE with constant coefficients using Laplace transforms and simultaneous equation, variable coefficients. Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions change of interval — Half range series.

References:

1. S. Narayanan – differential equations
2. T.K.M Pillai & S.Narayanan- calculus
3. M.L.Khanna- differential calculus

COURSE CODE	COURSE TITLE	L	T	P	C
19112AEC26A	Analytical Geometry in Vector Calculus	4	0	0	4

Aim:

To study analytical geometry in vector calculus for the application in Chemistry.

Objectives:

This course is designed to give students; the student should know and solve the analytical geometry in vector calculus.

Outcomes:

By the end of this course, the student should solve problems of analytical Geometry in vector calculus.

UNIT – I

Vector differentiation – velocity & acceleration vectors- Gradient of a vector directional derivative - Unit normal vector- tangent plane

Unit- II

Divergence- Curl – Solenoidal & Irrotational vector- Double operators – Properties connecting grad, div & curl of a vector.

Unit –III

Vector integration –Line integrals – Conservative force field – Scalar field- Scalar potential- work done by d Force- Surface integrals – Volume integrals.

Unit –IV

Gauss divergence theorem , Stoke's theorem (statement, application & verification only)

Unit –V

Equation of sphere – Tangent plane – plane section of a sphere – Finding the centre & radius of the circle of integration – sphere through the circle of integration (only problem in all above)

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC33	General Chemistry - III	5	0	0	5

Aim:

To acquaint with the knowledge of nature of metals and its characters.

Objective:

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.

The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

Outcome:

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.

### UNIT I

Alkali and alkaline earth metals:

Comparative study of alkali and alkaline metal compounds (oxides, halides, hydroxides, carbonates, sulphates). Diagonal relationship between lithium and magnesium, lithium aluminium hydride and sodium borohydride — preparation, properties and uses. Coinage metals: Comparative study of coinage metals. Zinc Group metals: Comparative study of Zinc group metals. Galvanization, existence of mercurous ion and  $Hg^{2+}$  principles of qualitative analysis -solubility product, principles of elimination of interfering radicals, common effect, reactions including spot tests in qualitative analysis.

### UNIT II

Inner transition elements:

Lanthanides—occurrence—electronic configuration — oxidation states, magnetic properties, complexation behaviour. Actinides —occurrence — electronic configuration — oxidation states, magnetic properties and complexation behavior. Lanthanide contraction. Chemistry of thorium and uranium — occurrence, extraction and uses. Mineral wealth of India —minerals found in India. Steel and

alloy steels — Heat treatment of steel.

### UNIT III

Aromatic hydrocarbons and Aromaticity:

Structure and stability of benzene ring — resonance in benzene — delocalized  $\pi$  electron cloud in benzene. Aromaticity — Huckel's Rule — examples — benzene, naphthalene, anthracene, furan, pyrrole, thiophene and ferrocene. Electrophilic substitution reactions in aromatic compounds. General mechanism of electrophilic substitution reactions — Nitration, sulphonation, halogenation, Friedel-Crafts alkylation and acylation reactions — nuclear and side chain halogenations.

### UNIT IV

Polynuclear hydrocarbons-

Naphthalene and anthracene — isolation, properties, structure and uses. Aromatic nucleophilic substitution — Benzyne mechanism and intermediate complex formation mechanism — effect of substituents on reactivity.

### UNIT V

Magnetic properties of matter- magnetic flux- magnetic permeability —magnetic susceptibility. diamagnetism, paramagnetism, ferro and anti-ferro magnetism — Curie temperature. Determination of magnetic susceptibility —Buoy's method — number of unpaired electrons. Application to structural problems  $K_3Fe(CN)_6$ ,  $K_4Fe(CN)_6$  and  $Ni(CO)_4$ .

 Temperature method.

Employability/Entrepreneurship/Skill development.

COURSE CODE	COURSE TITLE	L	T	P	C
19113AEC35	Physics - I	5	0	0	4

Aim:

The course presents an introduction to the physics of the objects whose sizes span from atomic dimensions to macroscopic, human scale dimensions, and beyond: atoms, molecules, gases, liquids, and solids.

The aim is to show how the properties of macroscopic bodies can be derived from the knowledge that matter is made up from atoms.

Objectives:

Recognize the difference between physical and chemical properties

Distinguish between extensive and intensive properties

Outcomes:

On completion successful students will be able to demonstrate an understanding of:

1. The relationships between physics on the atomic scale and the properties of

matter.

2. The roles played by microscopic states of system, their numbers and their accessibility.

3. Techniques for finding appropriate averages to predict macroscopic behavior.

#### Unit I: Mechanics

Center of gravity of a solid hemisphere – Hollow hemisphere – Solid cone. Stability of floating bodies – Meta center – Determination of Meta centric height of a ship.

#### Unit II: Sound

Simple harmonic motion – comparison of two simple harmonic motion – A long straight line – At right angle to each other Lissa Hou's figures and their application – Acoustics of buildings reverberation – reverberation time Sabine's formula – conditions for good acoustics.

Decibel – phon – Intensity measurements by hotwire microphone method.

#### Unit III: Properties of matter

Diffusion: Fick's law – Coefficients of diffusion – experimental determination of coefficient of diffusion – application.

Osmosis: Laws of osmotic pressure Berkeley and Hartly method of determining osmotic pressure – elimination of boiling and depression of freezing point – application.

#### Unit IV

Thermal Physics: Newton's law of cooling – Verification – specific heat capacity of liquid by cooling – bomb calorimeter.

Conduction: Coefficient of thermal conductivity – good and bad conductor – Stefan's law of radiation - Solar constant – Angstrom's pyro heliometers – temperature of the sun.

#### Unit V

Optics: Electro magnetic spectrum – spectral response of human eye – UV and IR spectroscopy

Raman effect – experimental arrangement – application of Raman effect.

Fiber optic communication: Introduction – optic fiber – numerical aperture – coherent bundle – fiber optic communication system and its advantage – multimode optic sensors.

COURSE CODE	COURSE TITLE	L	T	P	C
19113AEC36L	Physics Lab - I	0	0	3	3

List of Experiments

Semi-conductor diode characteristics

Surface tension – Drop weight method

Meter Bridge – Determinations of resistance

Post office Box – Resistance

Non-uniform Bending – Young’s modulus

Potentiometer – Voltmeter calibration

Sonometer – Verification of laws

Spectrometer – Determinations of refractive index

Bridge Rectifier

Basic Logic Gates – Discrete components

COURSE CODE	COURSE TITLE	L	T	P	C
19114RMC37	Research Methodology	3	0	0	3

AIM:

To create a basic appreciation towards research process and awareness of various research publication

OBJECTIVES:

To understand the steps in research process and the suitable methods.

To identify various research communications and their salient features

To carry out basic literature survey using the common data-bases

To give exposure to standard laboratory precautions and best practices for experimental work

To provide orientation for basic mathematical computation useful in basic research

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

PREREQUISITES:

Basic mathematical and experimental skills and exposure to window-based computer operation system.

UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

UNIT IV: Database Survey

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

UNIT V: Laboratory Safety

General guidelines. Hygiene – Eye, foot, skin and hand protection – Safety rules Equipment protection – Respiratory protective equipment – safety equipment – Leaking

compressed gas cylinders – electrical safety. Fire – fire extinguishers.

### ஒப்படைவு மதிப்பெண்-40

பாடத்தொடர்புடைய கட்டுரை 20 மதிப்பெண் பாரதியார்,  
பாரதிதாசன் புதிய ஆத்திச்சூடி 20 மதிப்பெண்

#### பாரதியார்

அச்சம் தவிர்,ஆண்மை தவறேல்,இளைத்தல்  
இகழ்ச்சி,உடலினை உறுதி செய்,எண்ணுவது உயர்வு,ஏறுபோல்  
நட,ஐம்பொறி ஆட்சி கொள்,ஒற்றுமை வலிமையாம்,காலம்  
அழியேல்,கீழோருக்கு அஞ்சேல்,குன்றென நிமிர்ந்து  
நில்,கொடுமையை எதிர்த்து நில், சிதையா நெஞ்சு  
கொள்,செய்வது துணிந்து செய், தீயோருக்கு  
அஞ்சேல்,பெரிதினும் பெரிது கேள்,வையத்தலைமை  
கொள்,யாரையும் மதித்து வாழ்

#### பாரதிதாசன்

காற்றினைத் தூய்மை செய்,குற்ற நினைவு தீர்,தளையினைக்  
களைந்து வாழ் தூய நீராடு, தெருவெல்லாம் மரம் வளர்,தைக்க  
இனிதுரை,தொன்மை மாற்று,நிவினில் தெளிவு கொள்,  
நீனிலம் உன் இல்லம்,போர்த் தொழில் பழகு,மாறுவது  
இயற்கை, வையம் வாழ வாழ்.

(மேற்கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை(  
மரபு அல்லது புதுக்கவிதை) கதை,கட்டுரை,நாடகம் எழுதி வரச்  
செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC41	Advanced English-IV	4	0	0	2

Aim:

To improve the knowledge of English

## Objective:

To familiarize with the objectives and types of interview  
To know the types of questions and answering techniques  
To prepare reviews and proposals  
To learn the grammatical forms  
To understand the meaning of a poem and write the content  
To write for and against a topic  
To draw a flowchart  
To write definitions

## Outcome:

Develop communicative skill  
Read and comprehend literature

## UNIT –I

### Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation  
–Presentation– Type of questions – Answering techniques.

## UNIT – II

### Flowchart

### Proposals

## UNIT – III

### Discourse markers

### Review

## UNIT IV

### Grammatical forms

### Paraphrasing

## UNIT –V

### Definition

Writing for and against a topic.

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC42	English-IV	4	0	0	2

Aim:

To acquaint students with learning English through literature

Objective:

To introduce learners to the standard literary texts

To impart wisdom through morally sound poems and essays

To introduce Shakespeare to non-literature students

Outcome:

Read and comprehend literature

UNIT –I

How to be a Doctor -Stephen Leacock

My Visions for India -A.P.J. Abdul Kalam

Woman, not the weaker sex -M.K. Gandhi

UNIT –II

My Last Duchess -Robert Browning

The Toys -Coventry Patmore

I, too -Langston Hughes

UNIT –III

The Best Investment I ever made-A.J.Cronin

The Verger -W.S Maugham

A Willing Slave -R.K.Narayan

UNIT –IV

Macbeth, As You Like It

UNIT –V

Henry IV, Tempest

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC43	General Chemistry - IV	6	0	0	6

**Aim:**

To acquaint with the knowledge of nature of metals and its characters.

**Objective:**

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature. The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

**Outcome:**

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.

**UNIT I**

**TRANSITION METALS AND THEIR COMPOUNDS** - Group study of Titanium, Vanadium, Chromium, Manganese and Iron. Metallurgy and uses of V, W and Mo. Comparison of lanthanides and actinides and their position in the periodic table. Elements with atomic number 104 and 105; preparation and their position in the periodic table. Chemistry of Thorium and Uranium — occurrence, ores, extraction and uses.

**UNIT II**

**BIOLOGICALLY IMPORTANT COORDINATION COMPOUNDS** — Chlorophyll, Hemoglobin, Vitamin B 12 — their structure, application (Structure elucidation is not required). Metal carbonyls — Mono and poly nuclear carbonyls of Ni, Fe, Cr, Co and Mn — synthesis, reactions, structure and uses. Nitrosyl compounds — classification, preparation, properties and structure of nitrosyl chloride and sodium nitroprusside.

**UNIT III**

ALIPHATIC NUCLEOPHILIC SUBSTITUTIONS — mechanism of SN1, SN2, and SNii reactions, effect of solvents, leaving groups, nucleophiles and structure of substrates.

Elimination reactions — Hoffmann and Saytzeff's eliminations — cis, trans eliminations. Mechanism of E1 and E2 reactions. Relative reactivity of ethyl, vinyl, allyl and benzyl halides.

#### UNIT IV

POLYHYDRIC ALCOHOLS: Ethylene glycol, glycerol - properties including oxidation using periodic acid and LTA.

Unsaturated alcohols: Thioalcohols — preparation, properties and uses of ethyl mercaptan. Ethers- Methods of preparation of aliphatic and aromatic ethers — reactions of ethers — 1,4-dioxane — preparation and uses — Epoxides — Preparation and reactions. Thioethers — Preparation and uses.

#### UNIT V

Thermodynamics: system and surrounding — isolated, closed and open systems — homogeneous & heterogeneous systems, State of the system, intensive and extensive variables. Thermodynamic process — cyclic processes, reversible and irreversible, isothermal and adiabatic processes — state and path functions, concept of heat and work. First law of thermodynamics — statements, definition of internal energy (U), enthalpy (H), heat capacity. Relation between Cp and Cv;

 FAS VS  $\text{K}_2\text{Cr}_2\text{O}_7$   
 KI Vs  $\text{K}_2\text{Cr}_2\text{O}_7$   
 Determination of solubility of silver salts.

COURSE CODE	COURSE TITLE	L	T	P	C
19113AEC45	Physics- II	5	0	0	5

Aim:

To develop a basic understanding of electric and magnetic fields in free space using the Integral forms of Maxwell's laws.

Objectives:

Describe the electric field and potential and related concepts, for stationary charges.

Calculate electrostatic properties of simple charge distributions using Coulomb's law, Gauss's law and electric potential.

Outcomes:

Describe the magnetic field for steady currents and moving charges.

Calculate magnetic properties of simple current distributions using Biot-Savart and Ampere's Laws.

Describe electromagnetic induction and related concepts, and make calculations using Faraday and Lenz's laws.

Describe the basic physical content of Maxwell's laws in integral form.

Unit I: Electrostatics

Coulomb's law-Gauss theorem, its application Field due to an infinite long plane,

Sphere and Cylinder- Mechanical force on the surface of a charged conductor – Electrostatics energy in The Medium – Capacitors – Principles of a capacitor – Capacity of a capacitor – Capacity of an Isolated sphere and cylinder – Energy of a charged capacitor – Sharing charges and loss of energy.

#### Unit II: Electricity

Kirchoff's law's and their applications to Wheatstone's network – condition for bridge balance – Carey Forster's bridge – Laws of electromagnetic Induction – Expression for induced EMF – Self and Mutual Induction – Self Inductance of a Solenoid – Mutual inductance of a solenoid Inductor – Coefficient of coupling – Determination of coefficient of self induction by Raleigh's method

#### Unit III: Atomic Physics

Atom models – Summerfield's and Vector atom Models – Pauli's exclusion principle – various quantum numbers and quantization of orbits.

X-rays – Continuous and Characteristic X-ray – Mosle's Law and its importance Bragg's Law – Miller indices – Determination of Crystal structure by Laue's Powder photograph method.

#### Unit IV: Nuclear Physics

Nucleus – Nuclear size – charge – Mass and spin – Liquid drop and Shell models. Nuclear Radiations and their properties, particle accelator – Betatron and Proton Synchrotron, Particle Detectors – Cloud Chamber and Bubble Chambers. Four types of reactions – Elementary particles and their classifications

#### Unit V: Digital Electronics

Decimal – Binary – Octal and Hexa Decimal number systems and their Mutual conversions – 's and 2's complement of a Binary number and Binary arithmetic (Addition, Subraction, Multiplication and Division) – Binary subtraction by 1's and 2's complement methods – Basic logic gates – AND, OR, NOT, NOR, NAND and EXOR gates – NAND & NOR as universal building gates – Boolean algebra – Laws of Boolean algebra – De-Morgan's Theorems – Their verifications using truth tables

.

#### List of Experiments

Figure of merits of Galvanometer

Potentiometer – Ammeter calibration

Carey Forster Bridge

Viscosity of Liquid – Poiseuille’s flow method

Lee’s Disc – Thermal conductivity

Specific capacity of a liquid

Spectrometer – Wavelength determination using Grating

Meter Bridge verification of serial and parallel connections of resistance wires

Logic Gates – IC Version

Zener Diode characteristics

COURSE CODE	COURSE TITLE	L	T	P	C
19120SEC04A L	Packages Lab-IV	0	0	2	1

## Package Lab -IV (MS-Access)

Create a database and a simple table

Create a database for sorting the marks scored by the student in the universality exams

Create a database for sorting the date of joining by the employee in the organization.

4. Create queries to select records that matches specific condition
5. Create relationships among the different tables
6. Create queries using built-in functions
7. Develop forms to enter data in to the student marks database
8. Develop forms to enter data in to the employee database

COURSE CODE	COURSE TITLE	L	T	P	C
19111SEC04L	Communicative English-IV	0	0	1	1

Aim:

To develop communicative skills

Objective:

To use gerund and make sentences

To change sentences from direct to indirect and vice versa

To understand the listening skill

To enhance reading skill

To familiarize with the singular and plural forms

To describe a picture

Outcome:

Understand grammar

Develop listening and reading skills

UNIT –I

Gerund

Infinitive

UNIT –II

Direct and Indirect

UNIT –III

Listening -types-features of a good listener-active and passive listening-effective listening

## UNIT –IV

Reading-purpose-technique-types-reading rates-reading & interpretation

## UNIT –V

Singular and Plural

Letter writing

Sangeetha Sharma

COURSE CODE	COURSE TITLE	L	T	P	C
191ENVTSTU	Environmental Studies	1	0	0	1

### Aim:

To study about the awareness of environmental pollution and its issues.

### Objectives:

Creating the awareness about environmental problems among people.

Imparting basic knowledge about the environment and its Ancillary problems.

Developing an attitude of concern for the environment.

Motivating public to participate in environment protection and environment improvement.

Acquiring skills to help the concerned individuals in identifying and solving environmental problems.

Striving to attain harmony with Nature.

### Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;

Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;

Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;

Apply their ecological knowledge to illustrate and graph a problem and describe the

realities that managers face when dealing with complex issues; and  
Understand how politics and management have ecological consequences.

### Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

### Natural Resources and Associated Problems.

Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.

Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.

Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.

Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.

Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.

Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

### Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

- a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
- d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

#### 4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot — spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

#### Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

#### Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

#### 7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

#### 8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland

/ Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC51	Inorganic Chemistry - I	5	0	0	5

Aim:

To know about the details of co-ordination compounds and nature of metals.

Objective:

To know about ligand types and their different methods of coordination

To know about isomerism in transition metal complexes.

To know some basic Chemistry of first row transition metal ions.

Outcome:

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

The bonding models, structures, reactivities, and applications of coordination complexes, boron hydrides, metal carbonyls, and organometallics

UNIT - I

Coordination Compounds: Types of ligands. IUPAC nomenclature. Theories of coordination compounds — Werner, Sidgwick, valence bond, crystal field, molecular orbital and ligand field theories.

UNIT- II

Isomerism — stability of complexes — factors affecting the stability of complexes.

Unimolecular and bimolecular nucleophilic substitution reactions in octahedral and square planar complexes — Trans effect. Application of coordination compounds -

Detection of potassium ions, separation of copper and cadmium ions. Estimation of nickel using DMG and aluminium using oxime. Structure of EDTA and its complexes. Complexometric titrations — principles and applications.

UNIT — III

Metallic state: Packing of atoms in metal (BCP,CCP(FCC),HCP).Theories of

metallic bonding — electron gas, Pauling and band theories. Structure of alloys — substitutional and interstitial solid solutions — HUME Rothery ratios. Ionic Bond, crystal structure and advanced covalent bonding: Radius ratio rules — Calculation of some limiting radius ratio values for C.N.3(planar triangle), C.N.4 (tetrahedral) & C.N.6 (octahedral).

#### UNIT — IV

Binary compounds — hydrides, borides, carbides and nitrides —classification, preparation, properties and uses. Organometallic compounds of alkenes and cyclopentadienes.

#### UNIT - V

Group Theory and it's Applications: Symmetry elements —symmetry operations — mathematical group of multiplication tables, point group of simple molecules (H<sub>2</sub>, HCl, CO<sub>2</sub>, H<sub>2</sub>O, BF<sub>3</sub> and NH<sub>3</sub>).

#### References:

Cotton and Wilkinson, Advanced Inorganic Chemistry, 5th edn

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC52	Organic Chemistry - I	5	0	0	5

#### Aim:

To know about the organic molecules and its reactivity.

#### Objective:

To know about isomerism types and their different reactivity.

To detail about carbonyl compounds and its reactions.

To know some basic acids and its derivatives .

#### Outcome:

Describe bonding models and appreciate how these impact on the properties of a simple molecule.

Understand the importance of stereo isomerism and carbonyl compounds on a molecule structure and reactivity.

Stereoisomerisms — definition — optical and geometrical isomerism — classification of optical isomerism — optical activity — observed and specific rotation — conditions for optical activity in solid, liquid and gaseous phases — criteria for optical activity. Asymmetric center chirality's — achiral molecule — meaning of + and — and D and L notations — elements of symmetry — racemisation — methods of racemisation (by substitution and tautomerism) — resolution — methods of resolution (mechanical separation, seeding, biochemical and conversion to diastereoisomers) — asymmetric synthesis partial and absolute asymmetric synthesis — Walden inversion, Vant Hoff rule of superposition — m Freudenberg's rule of shift. Notations for optical isomers — Cahn — Ingold — Prelog rules — R.S. Notations for optical isomer with one asymmetric carbon — erythro and threo representations. Fischer projections, Sawhorse, Newman projections - representation of molecules with two asymmetric carbon atoms.

#### UNIT- II: STEREOISOMERISM - II

Optical activity in compounds containing no asymmetric carbons -biphenyls, allenes and spiranes. Optical activity on symmetric system (lactic acid, dissymmetric system (1,2- trans cyclopropane dicarboxylic acid). Geometrical isomerism — cis, —trans, syn and anti and E — Z notations-geometrical isomerism in maleic and fumaric acids and in unsymmetrical ketoximes — methods of distinguishing geometrical isomers (dipole moment, dehydration, heat of hydrogenation, cyclisation , melting points) — methods of determining the configuration of geometrical isomers no details required). Geometrical and optical isomerism in three member rings.

#### UNIT III: REACTIONS OF CARBONYL COMPOUNDS

Carbonyl polarization - reactivity of carbonyl group — acidity of  $\alpha$ -hydrogen. Mechanisms of aldol, Perkin, Knoevenagel and benzoin condensations. Mechanisms of Claisen, Reformatsky, Wittig and Cannizzaro reactions. Mechanisms of reduction (sodium borohydride,  $\text{LiAlH}_4$ , Wolff — Kishner and MPV reductions) — mechanisms of haloform reaction and Michael addition and Oppenauer oxidation. Photochemistry of carbonyl compounds — Norrish I and II Types. Problems and conversion wherever applicable.

#### UNIT IV: ACIDS AND ACID DERIVATIVES

Ionization of carboxylic acids — acidity constant- comparison of acid strengths of substituted halo acids — acid strengths of substituted benzoic acids Hammett equation. Hell — Volhard — Zeliniski reaction. Dicarboxylic acids — preparation and properties of oxalic, malonic, succinic, glutaric and adipic acids, unsaturated acids and hydroxy acids. malonic acid, acetoacetic esters — characteristics of reactivities of methylene group — synthetic uses of malonic and acetoacetic esters. Tautomerism — definition — keto-enol tautomerism (identification, acid and bases catalysed interconversion mechanisms. Preparations - amido — imido and — acnitro tautomerisms). Nucleophilic acyl substitutions, acid — base hydrolysis of ester,

hydrolysis of amides and trans esterification.

#### UNIT V: HETEROCYCLIC COMPOUNDS

Aromatic characteristics of heterocyclic compounds. Preparation, properties and uses of furan, pyrrole, & thiophene. Synthesis and reactions of pyridine and piperidine — comparative basic characters of pyrrole, pyridine and piperidine with amines. Synthesis and reactions of Quinoline, isoquinoline and indole with reference to Skraup, Bischer Napieralski and Fischer indole synthesis. Structural elucidation of pyridine, quinoline and isoquinolines.

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC53	Physical Chemistry – I	4	1	0	4

#### Aim:

To know about the physical properties of molecules and its reactivity.

#### Objective:

To understand different properties of molecular structure.

To understand the basic features of spectroscopy.

To know some basic acids and its derivatives.

To knowledge about thermodynamics and its applications.

#### Outcome:

Able to recognize different regions for thermodynamics.

Able to explain the concept of thermochemistry.

Able to explain the concept and applications of surface chemistry.

#### UNIT- I THERMOCHEMISTRY:

Internal energy and enthalpy changes in chemical reactions. Relation between  $E$  and  $H$ . Relation between enthalpy of reaction at constant volume ( $q_v$ ) and at constant pressure ( $q_p$ ). Thermochemical equations, laws of thermochemistry — Hess's law and its applications. Standard states — standard enthalpy of formation, enthalpy of combustion, enthalpy of neutralization, integral and differential heats of solution and dilution. Bond dissociation energy — its calculation from thermochemical data, temperature dependence of  $H$  - Kirchoff's equation.

#### UNIT - II SECOND LAW OF THERMODYNAMICS:

Need for the law, different statements of the law- concept of entropy. Entropy as a state function — entropy as a function of  $P, V$  and  $T$ . Entropy changes in phase changes — entropy of mixing. Gibbs and Helmholtz functions. Gibbs function ( $G$ ) and Helmholtz function ( $A$ ) as thermodynamic quantities-  $A$  and  $G$  as criteria for thermodynamic equilibrium and spontaneity — variation of  $A$  and  $G$  with  $P, V, T$ - Gibbs- Helmholtz equation and their applications — Maxwell's relations.

#### UNIT - III

##### APPLICATIONS OF II LAW OF THERMODYNAMICS:

Equilibrium constants and free energy change. Thermodynamic derivation of law of mass action. Equilibrium constants in terms of pressure and concentration —  $NH_3$ ,  $PCl_5$ ,  $CaCO_3$ . Thermodynamic interpretation of LeChatelier's principle. (concentration, temperature, pressure and addition of inert gases). Equilibrium between different phases — system of variable composition — partial molar quantities — chemical potential of component in an ideal mixture — Gibbs - Duhem equation — variation of chemical potential with  $T, P, S$  and  $X$  (mole fraction). Reaction isotherm — van't Hoff's equation — van't Hoff's isochore - Clapeyron equation and Clausius Clapeyron equation — Applications.

#### UNIT - IV

##### THIRD LAW OF THERMODYNAMICS:

Need for the law. Nernst heat theorem, third law of thermodynamics — statement and concept of residual entropy. Evaluation of absolute entropy from heat capacity data. Exception to third law. (ortho & para hydrogen,  $CO_2, N_2O$  and ice). Thermodynamic properties of real gases — fugacity — definition, calculation (real gases) and variation of fugacity with temperature, pressure and composition (Duhem-Margules equation).

#### UNIT - V

## SURFACE PHENOMENA:

Adsorption and free energy reaction relation at interphase — physisorption and chemisorption — potential energy diagram- Lennard-Jones plot— Langmuir, BET isotherm — surface area determination-heats of adsorption, determination — adsorption from solutions — Gibbs adsorption isotherm. Activity and activity coefficient—definitions. experimental determination of activity and activity coefficients of non-electrolytes — activities in electrolytic solutions — determination of activity coefficient of electrolytes by freezing points.

<p>Estimation of:</p> <p>Barium as barium chromate</p> <p>Nickel as nickel dimethylglyoxime complex.</p> <p>Lead as lead chromate.</p> <p>Calcium as calcium oxalate.</p> <p>Lead as lead sulphate.</p>					

COURSE CODE	COURSE TITLE	L	T	P	C
19114DSC56A	Discipline Specific Elective: I Pharmaceutical Chemistry	5	0	0	4

Aim:  
To develop pharmaceutical knowledge to the learners.

Objectives:  
Imparting basic knowledge about the drugs.  
Developing knowledge about pharmacy.

Students who graduate with a major in Pharmaceutical Chemistry will be able to:  
Understand the principles of Pharmaceutical Chemistry.

To know the knowledge about antiseptic and anaesthetics.

To have employability.

#### UNIT I

ALKALOIDS — general methods of extraction from a plant source, colour reaction and detection — morphine and quinine with special reference to structure relationship (SAR) and uses. Chemistry of sulphonamides — sulphapyridine phthalyl sulphathiazole — sulpha furazole and protosil — preparation and uses — vitamins — classification of vitamins — vitamin A, B<sub>1</sub> and B<sub>2</sub>, ascorbic acid — their synthesis, estimation and uses.

#### UNIT II

ENZYMES — characteristics — classification — composition and biological functions — composition of blood and blood plasma — analysis of serum proteins — functions of plasma proteins — osmotic regulation — functions of hemoglobin, transport of oxygen and maintenance of pH of blood — analysis of hemoglobin in blood — Rh factor — blood pressure — normal, high and low and to control — diagnostic test for sugar, salt and cholesterol in serum — medically important compounds of Al, P, As and Fe — their preparation and applications.

#### UNIT III

SYNTHESIS OF HETEROCYCLICS - drugs derived from — pyridine derivatives — triphenyl amine and mepyramine — quinoline derivatives — chloroquine and primaquine — pyrimidines — urides and barbiturates. Antibiotics — pharmacological action — structural elucidation — synthesis and uses of chloramphenicol and penicillin.

#### UNIT IV

ORGANIC DIAGNOSTIC AGENTS — x-ray contrast media (radiopaques) sodium diatrizolate, — evan's blue — indigocarmine — methylene blue — histamine — pentagastrin — xylose and sodium benzoate — clinical estimation of proteins, glucose, urea, blood, cholesterol and hemoglobin — analgesic — classification — narcotic analgesics — morphine and derivatives — totally synthetic analgesic — pethidine and methadones — antipyretic analgesics — salicylic acid derivatives, indolyl derivatives and p-aminophenol derivatives — synthetic — action and uses.

#### UNIT V

ANAESTHETICS — preparation and uses of general and local gaseous anaesthetics — ether, vinyl ether, methoxy flourane, halogenated hydrocarbons like chloroform, halothane, trichloroethylene, ethyl chloride, cyclopropane, nitrous oxide. Thiopentane sodium, methohexitone and propanoid- local anaesthetics- cocaine and its

derivatives. Antiseptic and disinfectants- phenols and related compounds, organic mercurials- dyes, cationic surface active agents, chloramine-T, chlorhexidine, diqualinium chloride. Preservatives, antioxidants, coloring, flavoring and sweetening agents, emulsifying agents-and suspending agents- ointment bases- disintegrating agents.

COURSE CODE	COURSE TITLE	L	T	P	C
19114DSC56B	Discipline Specific Elective: I Agricultural Chemistry	5	0	0	4

Aim:

To develop agricultural knowledge to the learners.

Objectives:

Imparting basic knowledge about the soil nature.

Developing knowledge about fertilizers and pesticides.

Learning Outcomes:

Students who graduate with a major in Agricultural Chemistry will be able to:

Understand the principles of Agricultural Chemistry.

To know the knowledge about nutrients and its importance.

To have employability.

UNIT-I

DEFINITION OF SOIL-SOIL composition. Soil Physical properties-soil separates and particle size distribution-soil texture and structure —Bulk density, particle density, pore space, soil air, soil temperature, soil water, soil consistence-significance of physical properties to plant growth. Soil chemical properties — soil colloids —Inorganic colloids — clay minerals — amorphous — Ion exchange reactions —organic colloids — soil organic matter-Decomposition-Humus

formation —significance on soil fertility, soil reaction —Biological properties of soil —nutrient availability.

#### UNIT-II

FERTILIZER — definition-fertilizer recommendation based on soil testing- Nitrogenous fertilizers — Effect of Nitrogen on plant growth and development .Phosphate fertilizers — Effect of phosphorous on plant growth and development.- super phosphate & Bone meal .Potassium fertilizers — function of Potassium on plant growth. Secondary and micronutrient fertilizers — complex and mixed fertilizer- sources. Manufacture, properties and reactions in soils. Biofertilizersnitrogen fixing biofertilizer- rhizobium, azospirillum- Phosphate Mobilizing.

#### UNIT-III

ORGANIC MANURES —Agricultural, industrial and urban Wastes — preparation of enriched farm yard manures — Zinc enriched organics. Green manures-green leaf manure-bulky organic and concentrated organic manures -compost — enriched farm yard manures, oil cakes, bone meal, fish meal, guano poultry manures- Fertilizer use efficiency —integrated nutrient management. Preparation of slow release fertilizer- compatibility of fertilizers —fertilizers Blending- preparation of different fertilizer mixtures — fertilizer prescription for different soils and crops.

#### UNIT - IV

PEST MANAGEMENT AND CONTROL .PESTICIDES — formulations — emulsifiable concentrate, water miscible liquids, wettable powders, dusts, granules , classification of pesticides — mode of action — characteristics — uses — fate of pesticides in soil and plants — impact of pesticides on environment — safety measures in the analysis of pesticides.

Insecticides — plant products — Nicotine, pyrethrum, rotenone, petroleum oils. In organic pesticides — Arsenical fluorides, borates. Organic pesticides — organo chlorine compounds — D.D.T , B.H.C, methoxychlor, chloredane, endosulfon.

#### UNIT - V

FUNGICIDES-inorganic-sulphur compounds-copper compounds- Mercuric compounds-organic- dithio carbamates – dithane M.boredeaux mixture Herbicides: Inorganic herbicides- Arsenical compounds Boron compound- cyanamide- cyanides and thiocyanates, chlorates and sulphamates. Organic herbicides & Nitro – compounds- chlorinated compound – urea herbicides, Alachlor.

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC61	Inorganic Chemistry - II	5	1	0	5

Aim:

To develop knowledge about inorganic metals and its characteristics.

Objective:

To know the differences between transition elements and main group elements.

To know about ligand types and their different methods of coordination.

To know about isomerism in transition metal complexes

Outcome:

Able to write electronic configuration of given atomic number.

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

#### UNIT I

**NUCLEAR CHEMISTRY:** Introduction—composition of nucleus and nuclear forces, nuclear stability — o/p ratio, mass defect, binding energy, packing fraction and magic numbers, shell and drop models. Isotopes —detection and separation. Isotopic constitution of elements and whole number rule-deviation of atomic weights from whole numbers-isobars, isotones and isomers.

#### UNIT — II

**RADIOACTIVITY:** Discovery, detection and measurements (Wilson cloud chamber). Radioactive emanations-disintegration theory — decay — group displacement law — rate of disintegration — half-life and average life — Radioactive series. Nuclear transformations — uses of projectiles, nuclear reactors. Applications of radio isotopes — carbon dating — radioactive waste disposal - radiolysis of water and hydrated electron.

#### UNIT — III

**X-RAY CRYSTALLOGRAPHY:** Solid state-difference between point groups and space groups — screw axis — glide planes. Crystal symmetry elements-crystal classes-crystal systems-unit cell, Bravais lattices, Asymmetric unit space group-equivalent positions — relations between molecular symmetry and crystallographic symmetry — basic concepts. The concept of reciprocal lattice and its application. X-ray diffraction by single crystal — structure factor — systematic absences. Determination of space group — heavy atom method. Neutron diffraction — elementary treatment. Comparison of X-ray diffraction, electron diffraction — basic principles.

#### UNIT — IV

**SOME SPECIAL CLASSES OF COMPOUNDS:** Clathrates-examples and structures. Interstitial compounds and non-stoichiometric compounds. Silicones-composition, raw materials, manufacture, structures, properties and uses. Metal alkyls, co-ordination polymers and phosphonitrilic polymers. Silicates — classification into discrete anions, one, two and three dimensional structures with typical examples. Composition, properties and uses of beryl, asbestos, talc, mica, zeolites and ultramarines.

#### UNIT-V

**FOSSIL FUELS:-** Varieties of coal and petroleum- petroleum refineries in India. Gaseous fuels-natural, gohar, coal, water, semiwater and producer gases, liquefied petroleum gas (LPG). Safety matches, fire-works and explosives, paints and varnishes. Effluents and their treatment (dye, cement, tannery, distillery units).

S.Glasstone, Source Book on Atomic Energy, 3rd Edn., East West Press.

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC62	Organic Chemistry – II	5	1	0	5

**Aim:** To study about the organic and bioorganic molecules and its characteristics.

**Objective:**

Structural theory, Lewis structures, isomers, basic resonance theory.

Atomic, molecular, and hybrid orbitals, covalent bonding, shapes of molecules.

Polarity of molecules and bonds.

**Outcome:**

Students will have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in Organic Chemistry.

Able to study of biomolecules and its activity.

**UNIT — I**

**NITROCOMPOUNDS AND AMINES :** Conversion of nitrobenzene to ortho-, para- and meta- dinitrobenzenes. TNT - aromatic nitro compounds —reduction in neutral, acidic and alkaline media. Relative basic characters of aliphatic and

aromatic amines. Ring substitution in aromatic amines, diazotisation and its mechanism. Synthetic applications of diazonium salts, diazomethane and diazoacetic ester — preparation, structure and their synthetic uses. Phenylene diamines, sulphanilic acid, sulphanilamide, saccharin, chloramine-T, diamide — preparation, properties and uses of urea and thiourea.

#### UNIT — II

**AMINOACIDS AND PROTEINS:** Classification of amino acids. Essential and non-essential amino acids. Preparation of L — amino acids, properties and reactions. Zwitter ions, isoelectric points, peptide synthesis. Structure determinations of polypeptides - end group analysis. Proteins-classification based on physical and chemical properties based on physiological functions. Primary and secondary structures of proteins. Helical and sheet structures (elementary treatment only) - denaturation of proteins. Nucleic acid-structures of nucleobases — adenine, guanine, thiamine, uracil and cytosine-nucleosides- nucleotides- polynucleotides - types of nucleic acids — DNA and RNA — biological functions.

#### UNIT—III

**CARBOHYDRATES:** Classification, constitution of glucose and fructose. Reactions of glucose and fructose - oxazone formation, mutarotation, and its mechanism, cyclic structure, pyranose and furanose forms. Determination of ring size, formulas, configuration of monosaccharide. Epimerisation, chain lengthening and chain shortening

#### UNIT—IV

**MOLECULAR REARRANGEMENTS:** Classification (anionotrophics, cationotrophic) Intermolecular and intramolecular. Pinacol- Pinacolone rearrangement (Mechanism, Evidences for carbonium ion intermediate formation — Migratory aptitude) Beckmann, Benzidine, Hofmann, Curtius, Benzilic acid rearrangements (mechanisms only) Claisen Rearrangement (sigmatropic rearrangement) — Evidence for intramolecular nature and allylic carbon attachment paraclaisen rearrangement, cope and oxyclope rearrangements, Fries rearrangement (Two mechanisms).

#### UNIT — V

**NATURAL PRODUCTS:** Terpenes, geraniol, nerol, menthol, and  $\alpha$  - terpinol Alkaloids — general and methods of isolation and general methods of structural determination of coniine, piperine and nicotine. Vitamins — thiamine, riboflavin, pyridoxine and ascorbic acid occurrence and biological importance. Structural elucidations of pyridoxine and ascorbic acid.

1. P.L. Soni and H.M. Chawla, Text Book of Organic Chemistry',27th Edn., Sultan Chand 1997.

COURSE CODE	COURSE TITLE	L	T	P	C
19114SEC63	Physical chemistry - II	5	1	0	4

Aim:

To know about the electrical properties and spectroscopy characteristics of molecules.

Objective:

To understand the shapes of different orbitals.

To understand different principles for filling electrons.

To understand how to draw energy diagrams.

Outcome:

Able to write electronic configuration of given atomic number.

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

UNIT - I

**ELECTRICAL CONDUCTANCE:** Electrical transport and ohm's law, conduction in metals and in electrolyte solutions. Specific conductance and equivalent conductance, measurement of equivalent conductance using Kohlrausch's bridge - variation of equivalent conductance with concentration - migration of ions- Kohlrausch's law and its applications. Arrhenius theory of electrolytic dissociation and its limitations. Weak and strong electrolyte Ostwald's dilution law, its uses and limitations. The elementary treatment of the Debye-Huckel-Onsager equation for strong electrolytes. Evidence for ionic atmosphere. The conductance at high fields(Wien effect) and high frequencies(Debye-Falkenhagen effect). Transport number and Hittorf s rule-determination by Hittorf s method and moving boundary method. Application of conductance measurements,determination of  $\alpha$  of a strong electrolyte and acids, determination of  $K_a$  of acids, determination of solubility

product of a sparingly soluble salt, common ion effect and conductometric titrations.

## UNIT -II

**ELECTROKINETIC'S PHENOMENA:** Theories of electrical double layer - electrical double layer potential — theory of multiple layers at electrode and electrolyte interface — double layer capacity — electrokinetic's phenomena (zeta potential, electro osmosis, sedimentation potential).

## UNIT- III

**FAST REACTION TECHNIQUES:** Flow methods (continuous and stopped flow methods), relaxation methods (T and P jump methods), pulse techniques (pulse radiolysis, flash photolysis, shock tube method), molecular beam method — lifetime method.

## UNIT- IV

**EQUILIBRIA IN ELECTROCHEMICAL CELLS:** Electrolytic and galvanic cells, reversible and irreversible cells, conventional representation of electrochemical cells. Electromotive force of a cell and its measurements. Computation of cell, e.m.f. calculation of thermodynamic quantities of cell reactions ( $\Delta G$ ,  $\Delta H$ ,  $\Delta S$  and  $K$ ). Applications of Gibbs - Helmholtz equation. Types of reversible electrodes — gas/metal ion, metal/metal ion, metal insoluble salt/anion and redox electrodes, electrode reactions. Nernst equation — derivation of cell E.M.F. and single electrode potentials. Standard hydrogen electrode — reference electrodes — standard electrode potentials — sign conventions — electrochemical series and its significance. Concentration cell with and without transport, liquid junction potential. Application of concentration cells — valency of ions, solubility product and activity co-efficient, potentiometric titrations. Determination of pH using hydrogen, quinhydrone and glass electrode. Determination of pKa of acids by potentiometric methods. Corrosion — general theory — electrochemical theory — passivity and prevention of corrosion.

## UNIT- V

**MOLECULAR SPECTROSCOPY:** Definition of spectrum, electromagnetic radiation, interaction of electromagnetic radiation with molecules and quantization of different forms of energies in molecules (translational, rotational, vibrational and electronic).

**MICROWAVE SPECTROSCOPY:** Theory of microwave spectroscopy — condition — molecular rotation — selection rules. Effect of isotopic substitution, calculation of moment of inertia and bond length of diatomic molecules.

COURSE CODE	COURSE TITLE	L	T	P	C
19112DSC64A	Discipline Specific Elective:II Nano Science	4	0	0	4

Aim: To study about the importance and applications of Nano science.

Objective:

To foundational knowledge of the Nanoscience and related fields.

To make the students acquire an understanding the Nanoscience and Applications.

To help them understand in broad outline of Nanoscience.

Outcome:

Learn about the background on Nanoscience

Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment

Apply their learned knowledge to develop Nanomaterial's.

UNIT I:

INTRODUCTION AND HISTORY

Background to nanotechnology - scientific revolutions –atomic structure-atomic size – bottom up/top down nanotechnology-chemical reactivity-Incremental nanotechnology-Evolutionary nanotechnology-Radical nanotechnology-Emergence of nanotechnology-Challenging in nanotechnology-Misnomers and misconception of Nanotechnology.

## UNIT II:

### EVOLUTION AND GROWTH OF NANOSYSTEM

Basic problems and limitations - opportunities of nano scale -evolution of band structures and Fermi surface. Nanoparticles through homogeneous and heterogeneous nucleation-Growth controlled by surface and diffusion process-Oswald ripening process - influence of reducing agents-solid state phase segregation- grain growth and sintering precipitation in solid solutionhume rothery rule.

## UNIT III:

### NANOMATERIALS AND CLASSIFICATIONS

Carbon Nanotubes (CNT) - Metals (Au, Ag, Pd, Cu) - Metal oxides (TiO<sub>2</sub>, CeO<sub>2</sub>, ZnO, MgO) - Semiconductors (Si, Ge, CdS, ZnSe). Classifications of nanomaterials-zero dimensional-onedimensional-two dimensional-three dimensional nanostructures- Quantum dots-Quantum wireQuantum well-semiconductors and ceramics.

## UNIT IV: SPECIAL NANOMATERIALS

Carbon fullerenes-fullerene derived crystals- carbon nanotubes. Micro and Mesoporous materialOrdered mesoporous materials-Random mesoporous materials-crystalline microporous materials.Core/Shell structures-Metal oxide structures-Metal polymer structures-Intercalation compounds-nanograined materials.

## UNIT V: MATERIALS STRUCTURE AND PROPERTIES

Space lattice and unit cells, crystal system, Symmetry operation, Structures of common metallic, Semiconductor ceramic and superconductor materials, Miller Indices, Packing fractions, Formation of dangling bonds-atom like behavior of nanomaterials-physicochemical properties. Optical properties of nanomaterials-semiconductor-metal nanoparticles-Electrical and electronic propertiesThermal properties-Ferro electric properties-mechanical and magnetic properties.

COURSE CODE	COURSE TITLE	L	T	P	C
19112DSC66A	Discipline Specific Elective:II Polymer Chemistry	4	0	0	4

Aim:

To develop knowledge about polymers to the learners.

Objectives:

Imparting basic knowledge about the different types of polymers.

Developing knowledge about production and advantages of polymers.

Learning Outcomes:

Students who graduate with a major in Polymer Chemistry will be able to:

Understand the principles of Polymer Chemistry.

To know the knowledge about various techniques of polymers and its importance.

To have employability.

#### UNIT — I

Basic concepts- an introduction of polymers and macromolecules. Natural and synthetic polymers. Molecular forces and chemical bonding polymers. Classification of polymers-addition and condensation polymers. General methods of preparation of polymers. Polymerisation through functional groups, multiple bonds and ring opening. Polymerisation techniques- bulk, solution, suspension and emulsion polymerization.

#### UNIT—II

Copolymerisation- homo and copolymers. Block copolymers and graft copolymers. Kinetics of free radical and cationic polymerization reactions. Mean kinetic chain length, degree of polymerization. Inhibition and retardation.

#### UNIT — III

Thermoplastic and thermosetting resins. Constituents of plastics, fillers, dyes, pigments, plasticizers, lubricants and catalysts. Acrylics, polyvinyl and cellulose derivatives of thermoplastic resins. Silicone resins, epoxy resins, phenolic resins and alkyl resins of thermosetting resins.

#### UNIT — IV

Nylon 66, terylene, viscose rayon, polyesters —definition and polymer requirement.  
Polymers of acrylic acid, methacrylic acid and poly acrylates.

#### UNIT — V

Polymer structure- linear, branched and cross-linked polymers- isotactic, syndiotactic and atactic. Properties- melting point, glassy state, glass transition temperature. Thermal analysis of polymers, thermal high energy radiation, oxidative and hydrolytic polymer degradation.

Course Code	Course Title	L	T	P	C
19211OEC	Open Elective -Writing for the Media	4	0	0	2

#### Aim:

To equip students to enter the realm of mass media.

#### Objectives:

To help students to understand the intricacies of mass media

To know about the barriers to mass communication

To understand the function of mass media

To learn the different kinds of news

To enhance the different kinds of writing for media

#### Outcome:

Understand the intricacies of mass media

#### UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

#### UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluating news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

Course Code	Course Title	L	T	P	C
19212OEC	Open Elective – Applicable Mathematical Techniques	4	0	0	2

Aim:

To acquaint with the basic concept of Interpolation.

Objectives:

Understand the basic concept of Interpolation.

To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

Outcomes:

Students using OR techniques in business tools for decision making

Students develop Assignment problem and Replacement problems

Understand the concept of decision analysis and game theory

Students gets the knowledge about interpolation

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

## UNIT II

Assignment Problems

## UNIT III

Replacement Problems

## UNIT IV

Decision Analysis

## UNIT V

Game Theory

## References

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Course Code	Course Title	L	T	P	C
19213OEC	Open elective Biomedical Instrumentation	4	0	0	2

### Aim:

To understand the concepts and application of electronic Instrumentation in the Medical field.

### Objective:

Interpret technical aspects of medicine

Solve Engineering Problems related to medical field

Understand medical diagnosis and therapy

### Outcomes:

To familiarize students with various medical equipments and their technical aspects

To introduce students to the measurements involved in some medical equipment.

Ability to understand diagnosis and therapy related equipments

Understanding the problem and ability to identify the necessity of an equipment to a specific problem

## UNIT – I: Bio Electric Signals And Electrodes

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

## UNIT – II: Recording System And Recorders

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

## UNIT – III: Measurement And Analysis Techniques

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

## UNIT – IV: Magnetic Resonance And Ultrasonic Imaging Systems

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

## UNIT – V: Advanced Bio Medical Systems

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

### Books for Study

R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)

Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

### Book for Reference

M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
19214OEC	Open Elective-Green Chemistry	4	0	0	2

### Aim:

To reduce the soil and water pollution in environment.

### Objectives:

To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control

measures, availability of green analytical methods.

Outcomes:

To understand the environmental status and evolution.

- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

### Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution- Pollution prevention.

### Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

### Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

### Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

### Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	Course Title	L	T	P	C
19215OEC	Open elective-Bio-Analytical Techniques 1985	4	0	0	2

Aim:

Bioanalysis is a sub-discipline of analytical chemistry covering the quantitative measurement of xenobiotics (drugs and their metabolites, and biological molecules in unnatural locations or concentrations) and biotics (macromolecules, proteins, DNA, large molecule drugs, metabolites) in biological

Objectives

To teach students on various techniques used for the assessment of various diseases and research studies.

To teach the good laboratory practice required to execute the learned techniques.

Outcomes

The students learn various techniques and acquire the skills to use appropriate methods.

The students acquire the good laboratory practices.

Unit I

Separation techniques – Solvent extraction – principles and applications of soxhlet extraction and super critical fluid extraction; Distillation – Theory of distillation, method and application of fractional and steam distillation; Techniques of sublimation and its applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hassel balch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

Unit II

Chromatography – Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC .

Unit III

Centrifugation – Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges. Radioisotopes – Radioactivity, types, law of radioactivity, decay processes, units of radioactivity; Applications of radioisotopes in biology.

Unit IV

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

Unit V

Spectroscopy – Principles and components of instruments and applications of Colorimeter, Spectrophotometer, Fluorescence spectrometry, AAS and Flame

photometer. Principles and applications of Raman spectroscopy, IR spectrometry, NMR and ESR.

References:

Biophysical Chemistry – Nirmalendu nath

Biophysical Chemistry – Upadhyay, Upadhyay and nath.

Principles and techniques of practical Biochemistry – Keith Wilson and Walker.

Principles of Instrumental analysis – B.K.Sharma.

Instrumental analysis – Chatwall Anand

Course Code	Course Title	L	T	P	C
19220OEC	Open Elective-Internet & Web Design	4	0	0	2

Aim :

To provide the conceptual and technological developments in the field of internet and web designing with the emphasis on comprehensive knowledge of internet.

Objectives:

To understand the web designing and web development with the knowledge of internet.

To learn the overview of the design of HTML & Scripting Languages.

To learn the use of website and internet design and development.

Outcomes:

Acquire knowledge about functionalities of Internet

Acquire knowledge about functionalities of world wide web

Explore markup languages features and create interactive web pages using them

Learn and design Client side validation using scripting languages

Acquire knowledge about Open source JavaScript libraries

Able to design front end web page and connect to the back end databases.

UNIT I

Internet, Growth of Internet, Owners of the Internet, Anatomy of Internet, ARPANET and Internet history of the World Wide Web, basic Internet Terminology, Net etiquette. Internet Applications – Commerce on the Internet, Governance on the Internet, Impact of Internet on Society – Crime on/through the Internet. Connectivity types: level one, level two and level three connectivity, Setting up a connection: hardware requirement, selection of a modem, software requirement, modem configuration, Internet accounts by ISP: Telephone line

options, Protocol options, Service options, Telephone line options – Dialup connections through the telephone system, dedicated connections through the telephone system, ISDN, Protocol options – Shell, SLIP, PPP, Service options – E-mail, WWW, News Firewall

## UNIT II

Network definition, Common terminologies: LAN, WAN, Node, Host, Workstation, bandwidth, Interoperability, Network administrator, network security, Network Components: Servers, Clients, Communication Media, Types of network: Peer to Peer, Clients Server, Addressing in Internet: DNS, Domain Name and their organization, understanding the Internet Protocol Address. Network topologies: Bus, star and ring, Ethernet, FDDI, ATM and Intranet.

## UNIT III

Email Networks and Servers, Email protocols –SMTP, POP3, IMAP4, MIME6, Structure of an Email – Email Address, Email Header, Body and Attachments, Email Clients: Netscape mail Clients, Outlook Express, Web based E-mail. Email encryption- Address Book, Signature File.

## UNIT IV

HTML page structure, HTML Text, HTML links, HTML document tables, HTML Frames, HTML Images, multimedia - ASP, VB Script, JAVA Script, JAVA and Front Page, Flash

## UNIT V

Overview, SGML, Web hosting, HTML. CGL, Documents Interchange Standards, Components of Web Publishing, Document management, Web Page Design Consideration and Principles, Search and Meta Search Engines, WWW, Browser, HTTP, Publishing Tools Overview of Internet Security, Firewalls, Internet Security, Management Concepts and Information Privacy and Copyright Issues, basics of asymmetric cryptograms.

## Text Book

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

Course Code	Course Title	L	T	P	C
19261OEC	Open Elective-Insurance Services	4	0	0	2

Aim:

To look after the interests of people from uncertainty by providing certainty of compensation.

Objectives:

To learn the fundamental concepts and principles of insurance.

To explain the nature of different insurance policies, insurance contracts and settlement of claims.

Outcome:

The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

UNIT – I

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

UNIT – II

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

UNIT – III

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

UNIT – IV

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

UNIT – V

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment Insurance Agents and career Agents –

Investments by Insurance companies in housing sector and other infrastructure projects.

Pandy & Ratogi – Insurance

M.N.Mishra & S.Chand - Principles and Practice of Insurance

Course Code	Course Title	L	T	P	C
19280OEC	Open Elective-Counselling Psychology	4	0	0	2

Aim:

To acquaint with counselling and its process

Objectives:

To learn the fundamental concepts of counselling.

To know the nature of different determinates.

To familiarize with the approaches of counselling

Outcome:

Learn counselling and its process

UNIT I

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

UNIT II

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

UNIT III

Approaches to Counselling

Counselling Process

UNIT IV

Psychological Testing

Diagnosis

UNIT V

Educational Counselling

Family Counselling

COURSE CODE	COURSE TITLE	L	T	P	C
19120SEC06AL	Package Lab-VI	0	0	2	1

Drawing and painting original art in flash.

Creating simple objects using flash.

Creating a frame-by-frame animation techniques.

Develop a program for animation with motion Twenning.

Develop a program for animation with shape Twenning.

Develop a program for adding sound to your movies.

Create a simple Banner.

Create a simple animations techniques movie clip and graphic symbols.

COURSE CODE	COURSE TITLE	L	T	P	C
19111SEC06L	Communicative English Lab - VI	0	0	2	1

Aim:

To develop communicative skills

Objectives:

To extract the main ideas from a text 1991

To understand the meaning of text  
To expand an idea  
To shorten a text  
To develop vocabulary  
To enhance writing skills  
To write simple, compound and complex sentences

Outcome:

Develop communicative skills

UNIT –I

Jumbled words, Paragraph writing

UNIT –II

Prefix and suffix, Precise writing

UNIT –III

Eponyms, Summarizing

UNIT –IV

Compound words, Simple, Compound and Complex

UNIT –V

Homophones, Essay writing

**M.Sc CHEMISTRY – REGULATION 2019**  
**COURSE STRUCTURE**

**M.Sc. Graduate Attributes**

- Domain knowledge
- Investigative
- Critical thinking
- Resourceful and Responsible
- Effective Communication
- Ethical and Moral values

**M.Sc. Programme Educational Objective – PEO**

- PEO1-To demonstrate broad knowledge of descriptive Chemistry.
- PEO2-To impart the basic analytical and technical skills to work effectively in the various fields of chemistry.
- PEO3- To motivate critical thinking and analysis skills to solve complex chemical problems, e.g., analysis of data, synthetic logic, spectroscopy, structure and modeling, team-based problem solving, etc.
- PEO4-To demonstrate an ability to conduct experiments in the above sub-disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling methods.
- PEO5-To demonstrate the ability to perform accurate quantitative measurements with an understanding of the theory and use of contemporary chemical instrumentation, interpret experimental results, perform calculations on these results and draw reasonable, accurate conclusions.
- PEO6-To develop skills in quantitative modeling of static and dynamic chemical systems.
- PEO7-To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
- PEO8-To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment, and modern instrumentation.

## **M.Sc Programme Outcome –PO**

- PO1-Think critically and analyze chemical problems.
- PO2-Present scientific and technical information resulting from laboratory experimentation in both written and oral formats.
- PO3-Work effectively and safely in a laboratory environment.
- PO4-Use technologies/instrumentation to gather and analyze data.
- PO5-Work in teams as well as independently.
- PO6-Apply modern methods of analysis to chemical systems in a laboratory setting.

**SEMESTER – I**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214SEC11	Organic Chemistry – I	5	0	0	5

**Aim:**

- To acquaint students with learning Organic Chemistry.

**Objective:**

- To sensitize students to learn Important components of Organic Chemistry.

**Outcome:**

Having successfully completed this module you will be able to:

- Recognise many functional groups and their reactivity
- Set up glassware and apparatus to conduct experiments in Organic Chemistry.
- Interpret data from a range of physical techniques to characterise Organic compounds.
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis

**Unit - I****Bonding, Structure & Aromaticity**

Hybridization with reference to carbon compounds-Shapes of simple organic molecules-bond angle and bond length in organic molecules. Electronegativity of atoms and groups. Dipole moments of molecules-Applications of dipole moment to study the properties of organic molecules. Polarity of solvents. Hydrogen bonding-Inter and Intramolecular hydrogen bonding. **Electronic Effects**-Inductive, resonance and hyperconjugative effects and their influence-rules of resonance. Tautomerism. Steric effects. Aromatic character-Huckel's rule and applications-Craig's rule and applications-Consequences of aromaticity – non-alteration in bond length-Resonance energy from heat of hydrogenation, heat of combustion and Huckel's MO calculation, antiaromatic compounds.

## **Unit - II**

### **Essentials of Organic Stereochemistry**

Principles of symmetry-concept of chirality. Molecular symmetry and chirality. Newmann, Sawhorse, Fischer and Wedge representations and their interconversions. Types of molecules exhibiting optical activity. Configurational nomenclatures of acyclic and cyclic molecules: *cis-trans* and *E,Z* – and *D, L; R, S*; erythro and threo; *syn* and *anti*; *endo* and *exo*. Stereochemistry of molecules with axial chirality-atropisomerism – biphenyls-allenes, spiranes and analogues. Helicity and chirality. Topocity and prostereoisomerism- Diastereotopic ligands and faces. Resolution –methods of Resolution. Conformations six membered ring systems and their optical activity. Quantitative correlation between conformation and reactivity- Winstein-Eliel equation

## **Unit - III**

### **Reactive Intermediates Methods of Determining Reaction Mechanisms**

Carbocations, Carbanions, Carbenes and Nitrenes – Generation and stability of reactive intermediates. Correlation of reactivity with structure of reactive intermediates. Free radicals – Configurations – Identification by chemical and spectral methods – Free radical halogenation - NBS. Types of reactions: Homolytic and Heterolytic cleavages of bonds. Thermodynamic and kinetic aspects, Hammond's postulate, isotope effects. Energy profile diagrams –Intermediate versus transition state, Product analysis and its importance, Crossover experiments, Kinetic methods, Stereochemical studies, Isotopic and substituent effects

## **Unit - IV**

### **Nucleophilic Substitutions in Aliphatic and Aromatic Substrates**

SN1 and SN2 mechanisms-effect of substrate structure, leaving group, attacking nucleophile and solvent polarity-neighbouring group participation-substitution at vinylic and allylic carbons and reactivity. Ambient nucleophiles and substrates. Hydrolysis of esters-mechanisms. Selected reactions-Von-Braun, Dieckmann, Williamson. SNAr mechanism- SN1 (Aromatic) mechanism with evidences - Benzyne mechanism - Effect of substrate structure, leaving group, attacking nucleophile and solvent.

## **Unit -V**

### **Heterocycles**

Nomenclature of heterocycles having not more than two hetero atoms such as oxygen, nitrogen and sulphur. Synthesis, reactivity and applications of the following heterocycles: Pyrazoles, Oxazoles, Pyridazines, Pyrimidine and Pyrazines.

employability/Entrepreneurship/Skill development

- To learn Important Concepts of Inorganic Chemistry

### Outcome:

- Having successfully completed this module you will be able to:
- .
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis

## Unit - I

**18 electron rule - EAN rule** - theories of coordination compounds - valence bond theory - crystal field theory - splitting of d orbitals in different symmetries - crystal field stabilization energy - factors affecting the magnitude of  $10 Dq$  - evidence for crystal field stabilization - spectrochemical series - site selection in spinels - tetragonal distortion from octahedral symmetry - Jahn-Teller distortion - molecular orbital theory - octahedral complexes - tetrahedral and square planar complexes - pi bonding and molecular orbital theory - experimental evidence for pi bonding.

## **Unit - II**

**Term states of dn ions** - electronic spectra of coordination compounds - selection rules - band intensities and band widths - energy level diagrams of Orgel and Tanabe - Sugano - spectra of  $Ti^{3+}$ ,  $V^{3+}$ ,  $Ni^{2+}$ ,  $Cr^{3+}$ ,  $Co^{2+}$ ,  $Cr^{2+}$  and  $Fe^{2+}$  - calculation of  $10Dq$  and  $B$  for  $V^{3+}$  (oct) and  $Ni^{2+}$  (oct) complexes.

Magnetic properties of coordination compounds - change in magnetic properties of complexes in terms of spin orbit coupling - temperature independent paramagnetism - spin cross over phenomena.

## **Unit - III**

**Substitution reactions in square planar complexes** - the rate law for nucleophilic substitution in a square planar complex - the trans effect - theories of trans effect - mechanism of nucleophilic substitution in square planar complexes - kinetics of octahedral substitution - ligand field effects and reaction rates - mechanism of substitution in octahedral complexes - reaction rates influenced by acid and bases - racemization and isomerization - mechanisms of redox reactions - outer sphere mechanisms - excited state outer sphere electron transfer reactions - inner sphere mechanisms - mixed valent complexes.

## **Unit - IV**

**Structure of coordination compounds** with reference to the existence of various coordination numbers - complexes with coordination number two - complexes with coordination number three - complexes with coordination number four - tetrahedral and square planar complexes - complexes with coordination number five - regular trigonal bipyramidal and square pyramidal - site preference in trigonal bipyramidal complexes - site preference in square planar complexes - isomerism in five coordinate complexes - coordination number six - distortion from perfect octahedral symmetry - trigonal prism - geometrical isomerism in octahedral complexes - coordination number seven and eight.

## **Unit - V**

**Inorganic chains** - rings - cages and clusters - catenation - heterocatenation - intercalation chemistry - one dimensional conductor - isopolyanions - heteropolyanions - borazines - phosphazenes - phosphazene polymers - ring compounds of sulphur and nitrogen - homocyclic inorganic systems - cages - boron cage compounds - metal clusters - dinuclear clusters - trinuclear clusters - tetranuclear clusters - hexanuclear clusters - structural prediction of organometallic clusters.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC13	Physical Chemistry – I	5	0	0	4

### Aim:

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry .

### Objective:

- To learn the importance of Physical Chemistry.

### Outcome:

- Having successfully completed this module you will be able to:

- Determine rate constants and half-life for 0, 1st and 2nd order reactions from experimental datasets.
- Understand and apply the Boltzmann distribution and its effect on the observed spectra integrate most functions encountered in chemical practice.
- Solve separable first-order ordinary differential equations.

## **UNIT - I**

### **Classical Mechanics**

Symmetry of space and its relation to conservation laws-Conservation theorems - conservation of linear momentum, angular momentum and energy-Equations of motion - Newtonian, Lagrangian, Hamiltonian- Definition of classical mechanics, quantum mechanics and relativistic mechanics- Assumptions of classical mechanics. Classical wave equation- Conversion of classical wave equation into Schrodinger wave equation- Failure of Classical mechanics-Black body radiation-Photoelectric effect-Heat capacity of substances-Hydrogen atom spectrum.

## **UNIT- II**

### **Mathematics for Quantum Chemistry**

Functions - definition, classification-Linearly dependent and independent functions, odd and even functions-Inner product - normalization - orthogonality - orthonormal functions-Kronecker delta - Eigen functions - need for normalization. Operators - Linear, angular momentum, energy operators-Linear and non-linear operators. Hermitian operators and their properties- Proof for Hermiticity of linear, angular, position and Hamiltonian operators-Commutator of operators-Commutation relation among angular momentum operators  $L_x, L_y, L_z$ - Vectors - vector space - Euclidean space, Hermitian space, Hilbert space.

## **UNIT - III**

### **Basic Quantum Chemistry**

Wave - particle dualism-Compton effect-Uncertainty principle and its applications-Postulates of quantum mechanics-Setting up Schrodinger wave equation and solving for particle in a 1D and 3D box, Harmonic oscillator, Rigid rotor, Hydrogen atom-Hydrogen atomic orbitals-Analytical and graphical representations-Radial probability distribution function-Orthogonality of 1s, 2s, 2p orbitals- Many electron atom – one electron orbital and one electron potential, Pauli's exclusion principle, Slater's determinant.

## **UNIT -IV**

### **Fundamentals of Statistical Thermodynamics**

Permutations and combinations-Combinatory rule – probability theorems. Microstates, macrostates-Methods of counting microstates of distinguishable and indistinguishable particles-Heat capacity of solids-Einstein and Debye models-Maxwell-Boltzmann statistics-Phase space-Thermodynamic probability-Statistical equilibrium. Derivation of

M.B. statistics-Relationship between entropy and probability-Statistical meaning of third law of thermodynamics.

## UNIT -V

### Applications of Statistical Thermodynamics

Partition functions -Translational, rotational and vibrational partition functions of diatomic molecules-Translational, rotational and vibrational partition functions of polyatomic molecules-Electronic partition function-Derivation of thermodynamic quantities E, S, A, H, G, K and Cp, Cv using partition function-Sackur-Tetrode equation- Quantum statistics. Bose Einstein statistics-Behaviour of helium at low temperature-Fermi Dirac statistics.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC14L	Organic Chemistry Lab – I	0	0	5	3

**Aims:** The organic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecturebased part of the course. The students will be introduced to key synthetic techniques and will regularly employ spectroscopic techniques to examine the outcome of experiments.

**Objectives:** To perform seven experiments that have been divided into 3 topics:

Functional group interconversions, carbon-carbon bond formation / enolate chemistry, and electrophilic aromatic substitution. To take part in spectroscopy workshops that will demonstrate further topics in spectroscopy and the use of spectroscopic techniques in the characterisation of organic compounds. To learn new synthetic techniques: distillation under reduced pressure, reactions involving continuous removal of water and preparative chromatography. To gain experience in the identification and characterisation of unknown products using  $^1\text{H}$  NMR spectroscopy,  $^{13}\text{C}$  NMR spectroscopy, IR spectroscopy and mass spectrometry. To introduce the concept of multi-step organic synthesis.

## ORGANIC CHEMISTRY LAB – I

### Qualitative analysis of an organic mixture containing two components.

- Pilot separation
- Bulk separation
- Analysis
- Derivatization

### Preparation of Organic compounds (Single stage)

- Glucose pentaacetate from glucose(acetylation)
- Resorcinol from resorcinol (acetylation)
- Benzophenoneoxime from benzophenone (addition)
- p*-Benzoquinone from hydroquinone (oxidation)
- Phenyl-azo-2-naphthol from aniline(diazotization).

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC15L	Inorganic Chemistry Lab – I	0	0	5	3

### Aims:

The inorganic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture-based part of the course. To equip students with the basic skills and expertise required to carry out

careful and precise procedures in the modern practical chemistry laboratory whilst providing experiments that illustrate and support the lecture course. To train students in the art of good scientific report writing and in the use of spectroscopic techniques for the structural elucidation of inorganic compounds. To encourage student to become more aware of the risks and hazards associated with careful laboratory work and to assess risks and methods for minimizing them.

### **Objectives:**

#### **Analytical Experiments:**

(1) To be familiar with the use of pipettes, burettes and analytical balances. To be able to transfer quantitatively liquids and solids.

(2) To be familiar with the techniques of gravimetric analysis, complexometric titration, colorimetry and atomic absorption spectrometry for the analysis of inorganic compounds.

(3) To learn about gases in the environment and how to analyse for concentrations of gas components via spectrophotometry and IR spectroscopy. In modern analytical chemistry instrumental methods are replacing traditional titration and gravimetric methods. Nevertheless, a good grasp of the basic techniques is essential in all forms of instrumental analysis.

Among these techniques are:

- (a) the ability to make up a standard solution
- (b) the ability to make careful measurements
- (c) an appreciation of errors and significant figures.

## **INORGANIC CHEMISTRY LAB – I**

1. Qualitative analysis: Qualitative analysis employing semi-micro methods and spot tests of mixtures of common cations and ions of the following less familiar elements. Molybdenum, tungsten, selenium, tellurium, cerium, thorium, titanium, zirconium, vanadium, uranium and lithium.

2. Colorimetry: Colorimetric estimations of copper, nickel, iron and chromium using photoelectric colorimeter.

3. Industrial analysis: (i) Analysis of two of the following alloys: brass, bronze, stainless steel, solder type metal. (ii) Analysis of any one of the following: cement, glass, ultramarine.

4. Titrimetry: Complexometric titrations involving estimations of calcium, magnesium, nickel, zinc and hardness of water.

5. Quantitative analysis: Quantitative analysis involving volumetric and gravimetric estimations of at least four mixtures of cations.

6. Preparation of inorganic complexes: About six preparations involving different techniques selected from the following.

(i) Potassium tris(oxalato)aluminate

(ii) Nickel ammonium sulphate

(iii) Tris(thiourea)copper(I) chloride

(iv) Potassium tris(oxalato)ferrate

(v) Hexamminecobalt(III) chloride

(vi) Ammonium hexachloro stannate(IV)

(vii) Tetrammine copper(II) sulphate

(viii) Cis and trans bis(glycinate) copper.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214DSC16A	Discipline Specific Elective - I Environmental Chemistry	5	0	0	4

**Aim:** To learn the important of Environmental Chemistry.

**Objective:**

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its Ancillary problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

**Outcomes:**

Students who graduate with a major in environmental science will be able to:

- Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
- Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
- Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
- Apply their ecological knowledge to illustrate and graph a problem and describe the realities that managers face when dealing with complex issues; and
- Understand how politics and management have ecological consequences.

**UNIT – I**

**Pollution**

Environmental pollution - structure of atmosphere - biogeological cycles - oxygen - nitrogen – carbon – phosphorous – sulphur - biodistribution of elements - air pollutions - reactions in atmosphere - primary pollutants - air quality standards - analysis of CO, nitrogen oxides, sulphur oxides, hydrocarbons and particulate matter - particulate pollution - control methods - vehicular pollution - green house effect and global warming - climatic changes – ozone - photochemical smog - acid rain - sampling - monitoring – control.

**UNIT – II**

**Water Pollution**

Hydrosphere: Water pollution - hydrological cycle - chemical composition - sea water composition - water quality criteria for domestic and industrial uses - BIS and WHO standards - ground water pollution - surface water pollution - lake and river water - eutrophication - marine pollution - water pollutants - biodegradability of detergents – pesticides - endosulfan and related case studies.

**UNIT – III**

**Water Treatment**

Principles of water and waste water treatment - aerobic and anaerobic treatment - industrial waste water treatment - heavy metal pollution - hard water - softening - purification of water for drinking purposes - water treatment for industrial use -

electrodialysis - reverse osmosis - other purification methods - chemical speciation of elements.

#### UNIT – IV

##### Water Analysis

Color - odor - conductivity - TDS - pH - acidity - alkalinity - chloride - residual chlorine - hardness - trace metal analysis - elemental analysis - ammonia - nitrite - nitrate - fluoride - sulphide - phosphate - phenols - surfactants - BOD - COD - DO - TOC - nondispersive IR spectroscopy - anode stripping - ICP - AES - Chromatography - ion selective electrodes - neutron activation analysis.

#### UNIT – V

##### Soil Pollution:

Soil humus - soil fertility - inorganic and organic components in soil - acid - base and ion exchange reactions in soils - micro and macro nutrients - wastes and pollutants in soil - introduction to geochemistry - solid waste management - treatment and recycling soil analysis - radioactive pollution - disposal of radioactive waste.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC16B	Discipline Specific Elective - I Supramolecular Chemistry	5	0	0	4

- To focuses on non-covalent bonding interactions of molecule.

#### **Objective:**

- To explain the chemical reactions and molecular rearrangements of non-covalent bond molecules.
- To forces include hydrogen bonding ,metal coordination, van der waals forces, pi-pi interactions and electrostatic effects.

#### **Outcome:**

- Understand the reactivity of non-covalent bonding molecules.
- Develop the interaction and nature of organic solvents to others.

#### **UNIT- I**

**Definition of supramolecular chemistry:** Nature of binding interactions in supramolecular structures: ion-ion, ion-dipole, dipole-dipole, hydrogen bonding, cation- $\pi$ , anion- $\pi$ ,  $\pi$ - $\pi$ , and van der Waals interactions.

#### **UNIT -II**

**Synthesis and structure of crown ethers:** lariat ethers, podands, cryptands, spherands, calixarenes, cyclodextrins, cyclophanes, cryptophanes, carcerands and hemicarcerands.

#### **UNIT- III**

**Host-Guest interactions:** pre-organization and complimentarity, lock and key analogy. Binding of cationic, anionic, ion pair and neutral guest molecules. Crystal engineering: role of H-bonding and other weak interactions.

#### **UNIT- IV**

**Self-assembly molecules:** design, synthesis and properties of the molecules, self assembling by H-bonding, metal-ligand interactions and other weak interactions, metallomacrocycles, catenanes, rotaxanes, helicates and knots.

#### **UNIT -V**

**Molecular devices:** molecular electronic devices, molecular wires, molecular rectifiers, molecular switches, molecular logic.

Relevance of supramolecular chemistry to mimic biological systems: cyclodextrins as enzyme mimics, ion channel mimics, supramolecular catalysis.

employability/Entrepreneurship/Skill development

## SEMESTER - II

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC21	Organic Chemistry - II	4	0	0	4

### Aim:

- To acquaint students with learning Organic Chemistry

### Objective:

- To sensitize students to learn Important components of Organic Chemistry

### Outcome:

- Having successfully completed this module you will be able to:
- Gaining knowledge about Carbon –Carbon Double bonds
- About rearrangements
- Interpret data from a range of physical techniques to characterise Organic compounds.
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis.

## UNIT- I

### Addition to Carbon–Carbon Multiple Bonds

Electrophilic and nucleophilic additions, addition to conjugated systems, orientation and reactivity, addition of halogen and nitrosyl chloride to olefins, hydration of olefins and acetylenes, hydroboration, hydroxylation epoxidation, Michael addition, 1,3 dipolar addition, Diels-Alder reaction.

## UNIT- II

### Addition to Carbon–Hetero Atom Multiple Bonds

Mechanism and reactivity, Mannich, Stobbe, Darzen-Glycidic ester condensation, Benzoin condensation, Peterson olefination (Silyl Wittig reaction), Strecker synthesis, Wittig, Wittig Horner, Perkin, Thorpe, Ritter, Prins reactions.

## UNIT -III

### Elimination Reactions

E<sub>1</sub>,E<sub>2</sub>,E<sub>1</sub>CB mechanisms, Orientation of the double bond, Hofmann and Saytzeff rule, competition between elimination and substitution, dehydration and dehydrohalogenation reactions. Stereochemistry of E<sub>2</sub> eliminations in cyclohexane ring systems, mechanism of pyrolytic eliminations, Chugaev reaction and Cope elimination.

## UNIT - IV

### Molecular Rearrangements

A detailed study of the mechanism of the following rearrangements: Nucleophilic. Electrophilic and Free radical rearrangements-memory effects, Migratory aptitudes,

Pinacol-Pinacolone. Oppener-Wagner-Meerwin, Demyanov, Dienone-Phenol, Favorski, Baeyer-Villiger, Wolff, Stevens and Von-Richter (a few examples in each rearrangement are to be studied), rearrangements involving nitrenes- Hofmann, Curtius, Lossen, and Beckmann.

## UNIT –V

### Oxidation and Reduction

Study of the following oxidation reaction with mechanism: Oxidation of alcohols by  $\text{CrO}_3$  - DMSO. DMSO in combination with DCC; acetic anhydride and oxyl chloride, oxidation of aryl methane, allylic oxidation of olefins, oxidative cleavage of glycols, oxidative cleavage of double bonds by ozonolysis., NBS Oxidation.

Study of the following reduction reactions with mechanism: Reduction of carbonyl compounds by hydrides, selectivity in reduction of 4-ter-butylcyclohexanone using selenides, Clemmenson and Wolff-Kishner reductions, Birch reduction, MPV reduction.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214SEC22	Inorganic Chemistry - II	4	0	0	5

**Aim:**

- To acquaint students with learning Inorganic Chemistry

**Objective:**

- To learn Important Concepts of Inorganic Chemistry

**Outcome:**

- Having successfully completed this module you will be able to:
- .
- Present the results of a practical investigation in a concise manner.
- Recognise Nuclear chemistry and transition Elements

**UNIT- I**

**Nuclear Chemistry:**

Radioactive decay and equilibrium, Nuclear reactions; Q value, cross sections, types of reactions, Chemical effects of nuclear transformations; fission and fusion, fusion products and fission yields. Radioactive techniques; tracer technique, neutron activation analysis, counting techniques such as G.M. ionization and proportional counter.

**UNIT - II**

**Chemistry of Non-transition Elements:**

General discussion on the properties of the no transition element special features of individual elements; synthesis, properties and structure of their halides and oxides, polymorphism of carbon, phosphorus and sulphur. Synthesis, properties and structure of boranes, carbonates, borazines, silicates carbides, silicones, phosphazenes, sulphur-nitrogen compounds; peroxo compounds of boron, carbon and sulphur; oxy acids of nitrogen, phosphorous, sulphur and halogens, interhalogens pseudohalides and noble gas compounds.

**UNIT- III**

**Chemistry of Transition Elements:**

Coordination chemistry of transition metal ions; stability constants of complexes and their determination; stabilization of unusual oxidation states. Stereochemistry of coordination compounds. Ligand field theory, splitting of d-orbital in low-symmetry environments. , John – Teller effect : interpretation of electronic spectra including charge transfer spectra; spectrochemical series , nephelauxetic series Magnetism; Dia, para; ferro- and antiferromagnetism, quenching of orbital angular momentum, spin-orbit coupling,

inorganic reaction mechanisms; substitution reactions, trans effect and electron transfer reactions.

#### **UNIT - IV**

##### **Chemistry of Lanthanides and Actinides:**

Spectral and magnetic properties ; Use of lanthanide compounds as shift reagents molecules metal clusters, Spin crossover in coordinating Photo chemical reaction of chromium and ruthenium complexes. Fluxional compounds.

#### **UNIT -V**

##### **Organometallic Chemistry of Transition Elements:**

Synthesis, structure and bonding, organometallic reagents in organic synthesis and in homogeneous catalytic reaction (hydrogenation, hydroformylation, isomerisation and polymerization); pi-acid metal complexes, activation of small molecules by coordination.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214SEC23	Physical Chemistry - II	4	0	0	4

**Aim:**

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry.

**Objective:**

- To learn the importance of Physical Chemistry.

**Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of Surface Phenomenon and Spectroscopy.
- 

**UNIT - I**

**Surface Phenomena:**

Adsorption and free energy reaction at inter –phase-physorption and chemisorption-potential energy diagram-Lennard –Jones Plot-Langmuir,BET isotherm-Gibbs & Freundlich’s adsorption isotherms.

Role of surfaces in catalysis- Semiconductor catalysis-n and p type surfaces-kinetics of surface reactions involving adsorbed species-Langmuir-Hinshelwood mechanism of biomolecular reaction- Langmuir-Rideal mechanism of biomolecularr reaction- Rideal-Eley mechanism.

**UNIT- II**

**Partition Functions:**

Calculation of thermodynamic probability of a system –difference between thermodynamics and statistical probability-definition of micro and macro states – different methods of counting macro states-distinguishable and indistinguishable particles classical statistics-derivation of Maxwell-Boltzman Distribution law.

Transational ,rotational.vibrational,electronic-calculation of enthalpy internal energy,entropy and other thermodynamic functions – applications of partition functions to monoatomic and diatomic molecules.

**UNIT - III**

## **Spectroscopy:**

Microwave Spectroscopy - Theory of linear, symmetric top and asymmetric top molecules.

IR Spectroscopy - Vibrational spectra- selection rules-harmonic and unharmonic oscillator- (fundamental absorption, first and second overtones, hot bands etc)-rotation, vibration spectra of diatomic molecules-influence of rotation on the spectra of polyatomic molecules- FT- IR spectrometry.

## **UNIT- IV**

**Raman Spectroscopy:** Raman's effect – elastic and inelastic scattering- selection rules- pure rotational Raman spectra( linear, spherical top, symmetric top and asymmetric top molecules)-vibrational Raman's spectra-polarisation of lights and Raman effect-comparison of IR and Raman spectra –simple molecules-mutual exclusion principle-fermi resonance- Laser Raman's Spectroscopy (LRS).

## **UNIT-V**

**Group Theory:** Elements of group theory- properties of subgroup –classes –group multiplication table –isomorphism groups –symmetry element and symmetry operations –inter relation among symmetry operation- generations- points group of molecules- matrix representation theory –construction of character tables- reducible and irreducible representations –MOs for systems like ethylene, butadiene, monocyclic and aromatic compounds

## ORGANIC CHEMISTRY LAB – II

### Qualitative analysis of Organic Compounds:

#### Estimation of

- a) Phenol
- b) Aniline
- c) Ketone
- d) Glucose

### Preparation of Organic Compounds (Double stage)

- a) p-bromoacetanilide from aniline (acetylation & bromination)
- b) 1,3,5- tribromobenzene from aniline (bromination, diazotization & hydroxylation)
- c) p-nitroaniline from acetanilide (nitration & hydrolysis)
- d) p-aminobenzoic acid from para- nitrotoluene, (oxidation & reduction).

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC25L	Inorganic Chemistry Lab - II	0	0	5	3

### Aims:

The inorganic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture-based part of the course. To equip students with the basic skills and expertise required to carry out careful and precise procedures in the modern practical chemistry laboratory whilst providing experiments that illustrate and support the lecture course. To train students in the art of good scientific report writing and in the use of spectroscopic techniques for the structural elucidation of inorganic compounds. To encourage student to become more aware of the risks and hazards associated with careful laboratory work and to assess risks and methods for minimizing them.

### Objectives:

#### Analytical Experiments:

- (1) To be familiar with the use of pipettes, burettes and analytical balances. To be able to transfer quantitatively liquids and solids.
- (2) To be familiar with the techniques of gravimetric analysis, complexometric titration, colorimetry and atomic absorption spectrometry for the analysis of inorganic compounds.
- (3) To learn about gases in the environment and how to analyse for concentrations of gas components via spectrophotometry and IR spectroscopy. In modern analytical chemistry instrumental methods are replacing traditional titration and gravimetric methods. Nevertheless, a good grasp of the basic techniques is essential in all forms of instrumental analysis.

Among these techniques are:

- (a) the ability to make up a standard solution
- (b) the ability to make careful measurements
- (c) an appreciation of errors and significant figures.

#### Titrimetry and gravimetry (any two)

A mixture(s) of solution given for estimation.

Cu (V)	AND	Ni (G)
Cu (V)	AND	Zn (G)
Fe (V)	AND	Zn (G)
Zn (V)	AND	Cu (G)
Ca (V)	AND	Ba (G)

#### Preparation of the following compounds (any three)

Tetramminecopper(II) sulphate  
 Potassium trioxalatochromate  
 Potassium trioxalatoaluminate  
 Trithioureacopper(I) chloride

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214DSC26A	Discipline Specific Elective - II Industrial Chemistry	4	0	0	4

**Aim:**

- The aim of this course is to provide a core for future studies in chemistry and aspects of Industrial Chemistry .

**Objective:**

- To learn the importance of Industrial Chemistry.

**Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of industries using Chemicals.

**Unit – I**

**Water conditioning for chemical factories** – reuse – methods of conditioning – Demineralisation – Precipitation – Desalting – Industrial and Sewage waste water treatment. Vegetable oils – Refining of edible oils – Solvent extraction – Processing of animal fat – Hydrogenation – Interesterification - Manufacture of soap and detergents . Biodegradability of surfactants – Methods.

**Unit – II**

**Pulp and paper industries** – Sulphite, Sulphate, soda, ground wood pulp for paper – Manufacture of paper – Speciality paper – Paper stock – Structural Boards. Plastics – Manufacture – Resin – Manufacturing process – Condensation polymerization – Manufacture of laminates and other derivatives – Hexamethylene tetramine plastics – Vinyl esters.

**UNIT – III**

**Basic ideas – Flow charts** – Chemical Conversion – Batch Versus Continuous processing – Design – Chemical Process control and economics – Market evaluation – Plant location – Management for productivity and Creativity – Research & Development and its role in Chemical industries.

## **Unit – IV**

**Rubber industries** – Natural rubber – Synthetic rubber – Monomer production – Synthetic rubber polymerization – Butadiene – Styrene copolymers – Butadiene acrylonitrile copolymer – Neoprene – Thiokol – Silicon Rubber – Butyl rubber – Urethane rubber – Rubber processing- chemicals – Rubber compounding – Rubber fabrication – Latex compound- reclaimed rubber- Rubber derivatives.

## **UNIT – V**

**Industrial and military explosives** – Manufacture – Pyrotechniques – Manufacture of safety matches. Colour photography – Theory – material and process – special applications of photography.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214DSC26B	Discipline Specific Elective - II Macromolecules as Engineering Materials	5	0	0	4

**Aim:**

- To study about the macromolecules as engineering materials in various fields.

**Objective:**

- To develop the concept and reactivity of macromolecules.

**Outcome:**

- Develop the knowledge of characterization and its applications of macromolecules.

**UNIT - I**

**Concepts - Small molecules to macromolecules.** Definitions and nomenclature. Classification of polymers, types of polymerizations (chain growth, step growth and living), molecular weights and distribution.

**UNIT- II**

**Study on physical methods of determining molecular weights and distribution.**

Synthesis of macromolecules – thermodynamics and kinetics of chain polymerization with reference to industrially important polymers such as polyethylene, polypropylene, polystyrene, polyvinyl chloride.

**UNIT- III**

**Thermodynamics and kinetics** of step polymerization with reference to specialty polymers such as PET, Nylon, PC, and PU. Step growth polymerizations involving crosslinking (gelation) or formation of insoluble polymer mass. Determination of polymer structure via IR and NMR spectroscopies.

**UNIT - IV**

**Characterization of polymer structure in the solid state** – Characteristics of Amorphous and semicrystalline polymers. Viscoelasticity. Glass transition temperature

and elementary theories of glass transition. Rubber elasticity and thermodynamic theory of rubber elasticity.

#### **UNIT -V**

**Applications – Engineering and specialty polymers, high performance fibres (Kevlar), Composite materials (BMC and SMC), conducting plastics. Polymers for separation science, biomedical devices, electronics and photonics.**

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214RMC27	Research Methodology	3	-	-	3

**Aim:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**Objective:**

To understand the approaches towards and constraints in good research.

To identify various statistical tools used in research methodology

To appreciate and compose the manuscript for publication

To train in basic computational and software skills for research in physical and chemical sciences.

**Outcome:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

**UNIT I:**

**Introduction to Research Methodology**

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT II:**

**Database and Literature Survey**

**2026**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

### **UNIT III:**

#### **Data Analysis and Chemical Packages**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co-variance (ANCOVA) correlation and multiple regression analysis – Chemical Packages – ChemDraw – ChemSketch – ISIS draw – Origin.

### **UNIT IV:**

#### **Thesis and Paper writing**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

### **UNIT V:**

#### **Laboratory Safety**

Basic laboratory guidelines – safety equipment – Leaking compressed gas cylinders – electrical safety. Fire – fire extinguishers. Laboratory injuries and treatment. Chemical spills – Mercury and Biohazardous – clean up procedure - Accident management - Disposal of chemicals and glass wares.

### SEMESTER - III

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC31	Organic Chemistry - III	5	0	0	4

**Aim:**

- To acquaint students with learning Organic Chemistry

**Objective:**

- To sensitize students to learn Important components of Organic Chemistry

**Outcome:**

- Having successfully completed this module you will be able to:
- Gaining knowledge organic Synthesis.

#### Unit I

##### Reagents in Organic Synthesis:

Use of the following reagents in organic synthesis and functional group transformations, complex metal hydrides, Gilman's reagent, lithium dimethylcuprate, lithium diazopropylamine (LDA), 1,3-dithiane, trimethylsilyl iodide, tri-n-butyltin hydride, Woodward and Prevost hydroxylation, osmium tetroxide, DDQ, selenium dioxide, Peterson's synthesis, Wilkinson's catalyst, baker yeast.

#### Unit II

##### Photochemistry:

Cis-trans isomerism, Paterno-Buchi reaction, Norrish type I and II reactions. Photoreduction of ketones, di-pimethane rearrangement, photochemistry of arenes.

#### Unit III

##### Pericyclic Reactions:

Selection rules and stereochemistry of electrocyclic reactions, cycloaddition, and sigmatropic shifts, Sommet, Hauser, Cope and Claisen rearrangements.

#### Unit IV

### **Selective Organic Name Reactions:**

Favorski, Mannich, Stork-Enamine reactions, Sharpless asymmetric epoxidation, Ene reaction, Barton reaction, Hoffmann-Löffler-Freytag reaction, Shapiro, Chichibabin and Bayer-Villiger reactions.

### **Unit V**

#### **Spectroscopy:**

Applications of Mass, UV-VIS, IR and NMR spectroscopy for structural elucidation of organic molecules.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214SEC32	Inorganic Chemistry - III	5	0	0	4

**Aim:**

- To acquaint students with learning Inorganic Chemistry

**Objective:**

- To learn Important Concepts of Inorganic Chemistry

**Outcome:**

- Having successfully completed this module you will be able to:
- Recognise Analytical Techniques and Spectroscopy.

**UNIT – I**

**Topics in Analytical Chemistry:**

Adsorption partition, exclusion electrochromatography, solvent extraction and ion exchange methods. Application of atomic and molecular absorption and emission spectroscopy in quantitative analysis. Light scattering techniques including nephelometry. Raman Spectroscopy: Electroanalytical techniques; voltammetry, cyclic voltammetry, polarography, amperometry coulometry and conductometry. Ion-selective electrodes, anodic stripping voltammetry, TGA, DTA, DSC and online analyzer.

**UNIT –II**

**Electronic Spectroscopy:**

Electronic configuration, terms states and microstates, derivation of term symbols ( $p^2$ ,  $d^2$ ) and arranging the various terms according to their energies. Spectroscopic terms – effect of inter electronic repulsion and spin – orbit coupling – Racah parameters B and C- R-S coupling and JJ coupling. Selection rules and the breakdown of selection rules- group theoretical explanation. Ground states of free ions for  $d^n$  systems- Oh and Td

systems and the corresponding energy level diagrams- mixing of orbitals. Orgel diagram – characteristics – prediction and assignment of transitions for d<sup>n</sup> weak field cases. Tanabe-Sugano diagrams- characteristics – prediction and assignment of transition for weak field and strong field – d<sup>n</sup> systems band intensity, band widths – band shapes – factors affecting these – distortion and spin-orbit coupling calculation of B and 10q for simple octahedral complexes of Co and Ni.

### **UNIT – III**

#### **IR and Raman Spectroscopy:**

Combined uses of IR and Raman spectroscopy in the structural elucidation of simple molecules like H<sub>2</sub>O, ClF<sub>3</sub>, NO<sub>3</sub>, ClO<sub>3</sub>. Effect of coordination on ligand vibrations – uses of group vibrations in the structural elucidation of metal complexes of urea, thiourea, cyanide, thiocyanate nitrate, sulphate and dimethylsulphoxide. Effect of isotopic substitution on the vibrational spectra of molecules – vibrational spectra of metal carbonyls with reference to the nature of bonding, geometry and number of C-O stretching vibrations (group theoretical treatment).

### **UNIT – IV**

#### **NMR Spectroscopy:**

Chemical shifts and coupling constants (spin-spin coupling involving different nuclei <sup>1</sup>H, <sup>31</sup>P & <sup>13</sup>C) interpretation and applications to inorganic compounds. Effects of Quadrupole nuclei (<sup>1</sup>H, <sup>10</sup>B, <sup>11</sup>B) on the <sup>1</sup>H NMR spectrum. NMR paramagnetic molecules - isotopic shifts, contact and pseudocontact interactions- lanthanide shift reagents. Stereochemistry of non-rigid molecules, satellite spectra – Applications of <sup>31</sup>P, <sup>13</sup>C and <sup>1</sup>H NMR of inorganic molecules.

### **UNIT – V**

#### **EPR Spectroscopy:**

Basic principles – characteristics of 'g' – hyperfine splitting - selection rules- hyperfine splitting on various structure – bis (salicyldiamine)copper(II) – factors affecting the magnitude of the 'g' values of transition metal ions – dependence on spin – orbit coupling crystal field. Three conditions (i) spin-orbit coupling crystal field (ii) strength of the crystal field effects, (iii) very large crystal field. Ni(II) octahedral complex- Cu<sup>2+</sup> in a tetragonal – field. Zero-field splitting and signal-affecting spins mixing of saturated zero field splitting. Line widths in solid state EPR – spin – lattice – spin – spin relaxation – exchange processes. Effect of distortion – T, A<sub>g</sub>, E<sub>g</sub> ground terms – g (parallel), g (perpendicular), g (average)  $\alpha^2\beta^2$  and G parameters from EPR and information obtained from them.

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC34L	Physical Chemistry Lab -I	0	0	5	3

**Aims:** The physical laboratory class consists of a series of experiments designed to be completed in either one or two sessions. The laboratory is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to a number of spectroscopic and analytical techniques.

**Objectives:** To perform eight experiments covering analytical chemistry, catalysis, diffraction, IR spectroscopy, kinetics and thermodynamics

1. Kinetics – Acid hydrolysis of Esters - Comparison of strengths of acids.

2. Kinetics – Acid hydrolysis of Esters – Determination of Energy of Activation ( $E_a$ )

3. Kinetics – Saponification of Ester - Determination of Energy of Activation ( $E_a$ ) by conductometry

4. Kinetics – Persulphate – Iodine Reaction - Determination of order, effect of ionic strength on rate constant

5. Distribution Law – Study of Iodine – Iodide equilibrium

6. Distribution law – Study of Association of Benzoic acid in Benzene.

7. Adsorption – Oxalic acid / Acetic acid on charcoal using Freundlich

Isotherm.

8. Conductometry –Determination of dissociation constant of weak acids

9. Acid - alkali titrations

10. Displacement titrations

11. Precipitation titrations

12. Solubility product of sparingly soluble silver salts.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC35L	Physical Chemistry Lab -II	0	0	5	3

**Aims:** The physical laboratory class consists of a series of experiments designed to be completed in either one or two sessions. The laboratory is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to a number of spectroscopic and analytical techniques.

**Objectives:** To perform eight experiments covering analytical chemistry, catalysis, diffraction, IR spectroscopy, kinetics and thermodynamics

1. Determination of molecular weight of substances by cryoscopy

2. Determination of molecular weight of substances by Transition Temperature method

3. Determination of molecular weight of substances by Rast method

4. Determination of Critical Solution Temperature (CST) of phenol – water system and effect of impurity on CST

5. Study of phase diagram of two components forming simple eutectic

6. Study of phase diagram of two components forming a compound.

7. Study of phase Diagram of three components (Acetic acid, Benzene and water)

8. Potentiometric titration's –Acid alkali titration

9. Precipitation titration's

10. Redox titration's

11. Determination of dissociation constant of weak acids.

12. Determination of solubility of silver salts

13. Determination of activity and activity co-efficient of ions

employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19111OEC	Open Elective - Journalism	4	0	0	2

### Aim:

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

### Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

### Outcome:

- Become a journalist

### UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

### UNIT- II

News – Definition, Kinds, Elements, Sources

### UNIT- III

Reporters, Qualities, types

### UNIT- IV

The Editor and the Sub Editor-qualities, types, editorial department,

## UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

Course code	Course Title	L	T	P	C
19112OEC	Open Elective: Development of Mathematics Skills	4	0	0	2

### Aim:

- To understand the concepts from the five branches of mathematics

### Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

### Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

### Unit I

Simple interest and compound interest

### Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**References**

P.A.Navanitham, Business Mathematics & Statistics

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19113GEC	Open Elective- Instrumentation	4	0	0	2

**Aim:**

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**Outcomes:**

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

### **UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

### **UNIT – II: Electronic Instruments – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

### **UNIT – III: Electronic Instruments – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

### **Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

### **Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

### **Books for Study**

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

### **Books for Reference:**

A Course In Electrical And Electronic Measurements and Instrumentation – A.K. Sawhney – Dhanpat Rai and Sons – 1990.

Electronic Measurements And Instrumentation – Oliver Cage – McGraw Hill –1975.

Course Code	Course Title	L	T	P	C
19114OEC	Open Elective-Food and Adulteration	4	0	0	2

**Aim:**

- To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

**Outcomes:**

- The students will have knowledge about different processing and preservation methods and principles involved.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

### **Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection.

Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

### **References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19117OEC	Open Elective-Mushroom Technology	4	0	0	2

### **Aim:**

- Mushrooms represent microbial technology that recycles agricultural residues into food and manure
- Mushroom technological interventions aims to increase productivity, quality, and income of farmers through cultivation of mushrooms.

### **Objectives:**

- To strengthen the promotion of mushroom cultivation by establishing a well-equipped laboratory and offices
- To provide the Unit with appropriately trained personnel for the promotion of mushroom production in the country
- To increase the production and consumption of mushrooms.

### **Outcomes:**

- Light. Mushrooms cannot extract nutrients from the sun as green plants do, so they do not need light.
- Cultivating specialty mushrooms is the most accessible way to growing edible mushrooms for profit. The two most popular specialty mushrooms grown in the United States are shiitake and oyster.

### **Unit – I**

Introduction – history – scope of edible mushroom cultivation – Types of edible mushroom available in India – *Calacybeindica*, *VolvariellaVolvacea*, *Pleurotussp.*, *Agaricusbisporus*

### **Unit – II**

Pure culture – preparation of media (PDA and Oatmeal agar media) sterilization – Preparation of test tube slants to store mother culture – culturing of Pleurotus mycelium on petriplates – Preparation of mother spawn in saline bottle and polypropylene bags and their multiplication.

### **Unit – III**

Cultivation Technology : Infra structure, Substrates (locally available) polythene bag, vessels, Inoculation hood – inoculation loop – low cost stove – sieves – Culture rack mushroom unit (Thatched house) – Mushroom bed preparation – Paddy straw, sugarcane trash, maize straw, banana leaves.

### **Unit – IV**

Storage and nutrition : Short term storage – Long term storage (scanning, Pickles, papads, drying, storage in salt solutions) – Nutrition : Proteins, amino acids, mineral elements. Nutrition : Carbohydrates – Crude fiber content, vitamins.

### **Unit – V**

Food preparation, Types of foods prepared from mushroom - soup, cutlet, omelette, samosa, pickles, curry. Research Centres – National level and Regional Level Cost benefit ratio – Marketing in India and abroad – Export value

### **Reference:**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120OEC	Open Elective -Web Technology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Objective:**

- To understand and practice mark up languages
- To learn Style Sheet and Frames

**Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
19122OEC	Open Elective- E-Commerce and its Application	4	0	0	2

**Aim:**

- To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

**Objectives:**

- To be aware of all aspects of communication and information exchange in Electronic Commerce, including:
  - Navigation, brokerage, advertising and catalogue exchange in pre-sales activities.
  - Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
  - Secure exchange of documents, content and value in open trading protocols.
  - Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

**Outcomes:**

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

**UNIT-I:**

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective

distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

**UNIT-II:**

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script – XML.

**UNIT- III:**

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

E-Security: Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

**UNIT-V**

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet baking-History’s lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stack trading: The high speed alternative.

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition.

Course Code	Course Title	L	T	P	C
19161OEC	Open Elective – Indirect Taxes	4	0	0	2

**Aim:**

- To acquaint with the knowledge of indirect taxes

**Objectives:**

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

**Outcome**

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

#### **UNIT – V**

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

#### **Reference Books:**

Income Tax Law and Practice - N.Hariharan.

Business Taxation – T.S.Reddy/Hari Prasad Reddy.

### **SEMESTER – IV**

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214SEC33	Physical Chemistry - III	5	1	0	5

#### **Aim:**

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry.

#### **Objective:**

- To learn the importance of Physical Chemistry.

#### **Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of Electro Chemistry.
- Learning various concepts of Quantum Chemistry.
- Learning various concepts of Thermodynamics

#### **UNIT –I**

#### **Electrochemistry:**

Electrochemical cell reactions, Nernst equation, electrode kinetics, electrical double layer, electrode /electrolyte interface, batteries-primary & secondary fuel cells, corrosion and corrosion prevention.

## **UNIT –II**

### **Non-Equilibrium Thermodynamics:**

Postulates and methodologies, linear laws, Gibbs equation, Onsagar reciprocal theory.

### **Ideal and Non-Ideal Solutions:**

Excess functions, activities, concept of hydration number, activities in electrolytic solutions, mean ionic activity coefficient, Debye-Huckel treatment of dilute electrolyte solutions.

## **UNIT –III**

### **Quantum Chemistry:**

Planck's quantum theory, wave-particle duality, uncertainty principle, operators and commutation relations, postulates of quantum mechanics, free particle, particle in a box, degeneracy harmonic oscillator, rigid rotator and the hydrogen atom. Angular momentum, including spin coupling of angular momenta including spin-orbit coupling.

## **UNIT –IV**

### **Born-Oppenheimer Approximation:**

Hydrogen molecule ion, LCAO-MO and VB treatments of the hydrogen molecule, electron density, forces, and their role in chemical binding. Hybridization and valence MOs of H<sub>2</sub>O, NH<sub>3</sub> and CH<sub>4</sub>. Huckel pi-electron theory and its applications to ethylene, butadiene and benzene, idea of self-consistent fields.

## **UNIT –V**

### **Statistical Thermodynamics:**

Thermodynamic probability, and entropy , Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics, partition function, rotational, translational, vibrational and electronic partition functions for diatomic molecules, calculations of thermodynamic functions and equilibrium constants. Theories of specific heat for solids.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC41A	Discipline Specific Elective - III Medicinal Chemistry	5	1	0	4

**Aim:**

- The aim of this course is to provide a core for future studies and aspects of Medicinal Chemistry.

**Objective:**

- To learn the importance of Medicinal Chemistry.

**Outcomes:**

- Having successfully completed this module you will be able to:
- Learning various concepts of Drugs.
- Learning various concepts in medicinal Chemistry.

## General Introduction

Introduction to medicinal chemistry, general mechanism of drug action on lipids, carbohydrates, proteins and nucleic acids, drug metabolism and inactivation, receptor structure and sites, drug discovery development, design and delivery systems, gene therapy and drug resistance.

## UNIT - II

### Drugs

Drugs based on structure or pharmacological basis with examples, synthesis of important drugs such as  $\alpha$  - methyl dopa, chloramphenicol, griseofulvin, cephalosporins and nystatin. Molecular modeling, conformational analysis, qualitative and quantitative structure activity relationships.

## UNIT - III

### Antibiotics

Mechanism of action of lactam antibiotics and non lactam antibiotics, antiviral agents, chemistry, stereochemistry, biosynthesis and degradation of penicillins - An account of semisynthetic penicillins - acid resistant, penicillinase resistant and broad spectrum semisynthetic penicillins.

## UNIT- IV

### DNA Interactions

DNA-protein interaction and DNA-drug interaction. Introduction to rational approach to drug design, physical and chemical factors associated with biological activities, mechanism of drug action.

## UNIT V

**Enzyme Reactions:** Nomenclature and classification of enzymes, Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors. Enzyme kinetics, Michaelis-Menten and Lineweaver-Burk plots.

employability/Entrepreneurship/Skill development

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19214DSC41B	Discipline Specific Elective - III Green Organic Synthesis: Principles and Applications	5	0	0	4

**Aim:**

- To develop the study about green organic synthesis and its principles.

**Objective:**

- To explain the awareness about soil and water pollution in environment.

**Outcome:**

- Develop the advanced techniques to reduce chemical waste pollution.

**UNIT - I**

**Green Chemistry:** Definition, need for Green chemistry, evolution of Green Chemistry, principles of Green Chemistry.

**UNIT - II**

**Classification of organic reactions under Green chemistry principles:** a) Atom economic and non-toxic byproduct reactions: rearrangements, addition reaction, condensations, cascade strategies under catalysis, b) atom uneconomic reactions: substitutions, eliminations, Wittig reactions, degradation reactions.

### **UNIT - III**

**Green Strategies and techniques for Organic Synthesis:** use of Microwave, Sonochemistry, Ball mill technique, electrochemical reactions, photochemical reactions.

### **UNIT- IV**

**Catalysis:** Principles of various catalysis techniques in terms of Green Organic Synthesis i) Homogeneous, ii) Heterogeneous, iii) bio (enzyme) catalysis, iv) catalysis with nontoxic metals (Ca, Fe, Co, etc.), v) solid supported catalysis, vi) metal free/organocatalysis, vii) Visible light catalysis viii) phase transfer catalysis  
**Alternative/Green Solvents for Organic Synthesis** i) Water, ii) Ionic liquids, iii) Supercritical liquids (SCL), iv) Poly(ethylene glycol) (PEG), v) Fluorous biphasic Solvents.

### **UNIT- V**

**Comparison of greenness of solvents.** Understanding the role/effect of these solvents on organic reactions. Solvent Free Organic Synthesis. Reactions at Room Temperature, Applications of the Green strategies in Organic Synthesis. Comparing organic reactions under classical conditions and Green conditions.

employability/Entrepreneurship/Skill development

## SEMESTER I

19110AEC11	Tamil-I	4	0	0	2
------------	---------	---	---	---	---

### முதல் பருவம் - தாள் - 1

#### அலகு - I

##### பாரதியார் தேசபக்திப் பாடல்கள்

- சுதந்திரப் பெருமை
- சுதந்திரப் பயிர்
- சுதந்திர தேவியின் துதி
- தொண்டு செய்யும் அடிமை

##### பாரதிதாசன்

- வீரத்தாய்

#### அலகு -II

சுரதா - நல்ல தீர்ப்பு

கண்ணதாசன் - கந்தல் துணியின் கதை

பட்டுக்கோட்டை கல்யாணசுந்தரம் - நண்டு செய்த தொண்டு - காலம் சரியில்லே

மு.மேத்தா - வாழையடி வாழை

வாலி - தாய்

#### அலகு - III

சிறுகதை - இளவேனிற் குழிப்புகள் - திருவையாறு பாலகுமார்

#### அலகு - IV

இலக்கணம்

எழுத்து

மண்பாடப்பகுதி

#### அலகு - V

இலக்கிய வரலாறு

சிறுகதை, புதினம், நாடகம், உரைநடை, கவிதை, புதுக்கவிதை

SKIL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Learn to edit and do proof reading
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Comparison and contrast

Cause and effect

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**SKILDEVELOPMENT**

**Reference book:**

Author	Title of the book	Edition / Year	Publisher
Wren and Martin	English Grammar	2009	S.Chand & Company Ltd

Sudhir Kumar Sharma	The World's Great Speeches	-	Galaxy Publishers

Course Code	Course Title	L	T	P	C
19111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature
- Appreciate the different types of poetry and prose

**UNIT –I**

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT – II**

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

**UNIT –III**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

**UNIT –IV**

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

**UNIT –V**

Oliver Twist -Charles Dickens SKILDEVELOPMENT

**Text book:**

Author	Title of the book	Edition / Year	Publisher
S.Murugesan/ Dr.K.Chellappan	The Art of Reading/ Experiencing Poetry	Reprint 2004	Emerald Publishers

Course Code	Course Title	L	T	P	C
19116AEC13	Fundamentals of Microbiology	6	1	0	5

### **Aim**

- To impart the basic principles and applications of microorganism

### **Objectives**

- To provide a essential informations of microorganism for progressive and applied reforms in biological sciences for human welfare

### **Out Comes**

CO1 – To Describe the characteristics of microorganisms and classification

CO2 – To Understand the concepts of growth and reproduction of microbes

CO3 – To explain the beneficial and detrimental effects of microorganisms

CO4 - To Gather theoretical background of microbial cultivation

### **Unit – I**

Introduction – definition, scope and history of microbiology, differences between the prokaryotic and eukaryotic microorganisms. Classification of microorganisms – general principles and nomenclature – Haeckel’s three kingdom concept, Whittaker’s five kingdom concept – Classification and characterization of bacteria according to Bergey’s manual of Systematic Bacteriology. Basic understanding of classification of viruses, algae, fungi and protozoa.

### **Unit – II**

Microscopy: Principles and application of simple, compound, bright field, dark field, phase contrast, fluorescent and Electron microscopy. Principles of staining: Nature of dyes, types of staining – simple, differential, negative and spore staining. Sterilization: Principles and methods – physical and chemical.

### **Unit – III**

General characteristics and nature of archacbacteria, Eubacteria, Cyanobacteria, Rickettsiae, Chlamydiae, Spirochaetes, Actinomycetes, Protozoa, Viruses including phages, Mycoplasmas, Algae and fungi.

### **Unit – IV**

Microbial Cell: Ultrastructure of bacteria, subcellular structures and cell envelope – slime, capsule, cell wall, pili, flagella, cell inclusions, biosynthesis of bacterial cell wall, cell membrane – Biomembrane, liposomes – membrane transport – diffusion, active and passive transport and osmoregulation SKILDEVELOPMENT

### **Unit – V**

Culture techniques: types of media simple, defined, enriched and transport media with specific examples for each type. Methods of maintenance and preservation of cultures  
SKILDEVELOPMENT

**Text book:**

S. No	Author Name	Title of the Book	Edition/year	Publisher
1.	Jr. M.J. Pelczar, E.C.S. Chan and N.R. Kreig.	Microbiology	5 <sup>th</sup> /1993	Tata McGraw-Hill, Inc, Newyork

**Reference Book:**

1. Stainer R.Y., Ingraham J.L. Wheelia M.L. and Painter P.R. (1986). General Microbiology, Macmillan Education Ltd, London.
2. Fundamental of Microbiology (2005) By Purohit, Agrobios Publishers, Meerut

Course Code	Course Title	L	T	P	C
19115AEC14B	Bio Chemistry I	6	1	0	4

### **Aim**

- To provide the basic of biochemistry and its application.

### **Objectives**

- It serves as good research techniques and the ability to combine and analyze information.

### **Outcomes**

CO1 – To Develop fundamental knowledge about various biomolecules

CO2 - To Understand the basic concepts related to enzymes

CO3 - To Know various biochemical pathway

CO4 - To Understand the concept of microbial metabolism.

### **Unit I**

Carbohydrates: Definition, Classification and Properties; Structural Elucidation of Glucose and fructose; Biological Functions of Glucose, fructose, starch, Cellulose, Chitin and Heparin.

### **Unit II**

Amino acids: Structure, Classification, Properties.

Peptides: Amides and Peptides, Peptide bond, Peptide synthesis, Biologically important Peptides.

Proteins: Biological importance, Classification, properties; Structural orders; Protein stability; Separation and purification of proteins.

### **Unit III**

Nucleotides and Polynucleotides; Terminology –Components. DNA and RNA – Composition, Structure, their biological importance.

### **Unit IV**

Lipids: Biological Significance, Classification of lipids. Analysis of oils – Iodine Number, Saponification Value, Acid number, Acetyl value and Reichert-Meisel value; Qualitative Tests for Lipids.

### **Unit V**

Vitamins: Source, Structure of Biological Role requirement, deficiency manifestation of fat soluble (A, D, E and K) and water soluble (B complexes and C) vitamins.  
SKILDEVELOPMENT

5. Text book of Biochemistry – West & Todd.
6. Harper's Biochemistry, 25<sup>th</sup> edn., McGraw Hill.

Course Code	Course Title	L	T	P	C
19116AEC15L	Fundamentals of Microbiology Lab	0	0	3	2

### Aim

- To understand the basic principles of Microbiology laboratory.

### Objectives

- Microbiology laboratory guidelines and necessary equipment
- Isolation methods for microorganisms.
- Various staining techniques for the observation of microbes.

### Outcomes

CO1 – To Develop basic skills in aseptic techniques formicrobiology practical.

CO2 – To gain Hands on experience in handling ofvarious important instruments.

CO3 - Able to perform basic experiments to grow and study microorganism in laboratory

CO4 - To Develop knowledge on identification of microorganisms.

1 Microscope and its operation

2 Cleaning of glassware's and sterilization methods – autoclaving and hot air oven

3 Preparation of culture media

4 Experimental demonstration of ubiquitous nature of microorganisms.

5 Quantitative estimation of microorganisms.

6 Observation of permanent slides to study the structural characteristics of algae(*Anabaena*, *Nostoc*, *Scytonema*, *Spirulina*, *Oscillatoria*,) Fungi (*Pythium*, *Rhizopus*, *Saccharomyces*, *Penicillium*, *Aspergillus*, *Agricus*) and protozoa (*Entamoeba histolytica* and *Plasmodium Spp*)

7 Isolation of microorganisms from soil, water and air.

8 Test for motility of bacteria – Hanging drop method and semi solid media inoculation

9 Staining techniques – simple staining. Gram's staining, Spore staining, Capsular staining

### EMPLOYABILITY

Course Code	Course Title	L	T	P	C
19115AEC16BL	Bio Chemistry I Lab	0	0	3	2

### **Aim**

- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.

### **Objectives**

- To familiarize the students with the basic cellular processes at molecular level

### **Outcomes**

CO1 - To gain Practical knowledge about various techniques used in Biochemistry

CO2 - To Exhibit the well practical knowledge about estimation of carbohydrates, protein.

CO3 – To Learn the quantitative and qualitative estimation biochemical analysis.

1. Qualitative Analysis of Carbohydrate.

2. Qualitative Analysis of Proteins.

3. Colour Reactions for Amino Acids.

### **SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
191ACLSICN	Indian Constitution	-	-	-	2

### Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
  2. To appreciate the salient features of the Indian constitution
  3. To know the fundamental rights and constitutional remedies
  4. To make familiar with powers and positions of the union executive, union parliament and the supreme court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

### Outcome

- CO1- To gain Democratic values and citizenship Training
- CO2- To know the Awareness on fundamental Rights are established
- CO3- To learn the functions of union Government and State Government
- CO4- To learn the Power and functions of the Judiciary thoroughly
- CO5- To learn the Appreciation of Democratic Parliamentary Rule

### Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

### Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion-cultural and educational rights -right to constitutional remedies -fundamental duties .

### Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

### Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court - functions and position of supreme court and high court

### Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy. Employability

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

**Aim:**

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

**Course Objectives :**

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realise one's potentials.

**Course Outcomes :**

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practised human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realise their potential as human beings and conduct themselves properly in the ways of the world.

**Unit I**

- Introduction: What is love? Forms of love—forself, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love.
- Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
- Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Casestudies

**Unit II**

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)
- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
- Learners' individual and/or group experience(s)

- Simulated situations
- Casestudies

### **Unit III**

- Introduction: What is non-violence? Its need. Love, compassion, empathy sympathy for others as pre-requisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non-violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Casestudies

### **Unit IV**

- Introduction: What is righteousness?
- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

### **Unit V**

- Introduction: What is peace? Its need, relation with harmony and balance
- Individuals and organisations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Casestudies SKILDEVELOPMENT

### **Unit VI**

- Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature

including local folklore

- Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s) regarding service
- Simulated situations
- Casestudies

## **Unit VII**

- Introduction: What is renunciation? Renunciation and sacrifice. Self-restraint and Ways of overcoming greed. Renunciation with action as true renunciation
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.
- Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

## SEMESTER II

Course Code	Course Title	L	T	P	C

Course Code	Course Title	L	T	P	C
19116AEC23	Microbial Physiology	6	1	0	6

### Aim

- To instruct the importance of microbial metabolism and energetics for regulation and application of microbes in industry.

### Objectives

- To understand the microbial growth and nutritional requirements.
- Studying the comprehensive awareness on metabolic process involved in prokaryotic and eukaryotic microorganisms.

### Outcomes

CO1- To Determining the growth features of the microbes with various environmental factors.

CO2– To Analysis the essential nutrients ensuring microbial growth.

CO3 - To understand the significance of microbial surveillance

CO4- To know the Electron transport and metabolic pathway of living systems

### Unit – I

Nutrition and growth of microorganisms: Nutritional types of microorganisms, nutritional requirements. Factors influencing the growth of microorganisms temperature, pH, Osmotic pressure, moisture, radiations and different chemicals. Physiology of growth – significance of various phases of growth - Growth Measurements – batch, continuous and synchronous

### Unit – II

Enzymes and co –enzymes: classification and nomenclature of enzymes, active site, Lock and key Mechanism and induced fit hypothesis, Enzyme kinetics- negative and positive co-operatively, enzyme inhibition: Reversible – Competitive, Noncompetitive, uncompetitive, Irreversible inhibition.

### Unit – III

Metabolism of carbohydrates: Anabolism – photosynthesis – oxygenic –anoxygenic, synthesis of carbohydrate – catabolism of glucose – Embden Mayer – Hoff – Parnas pathway – Pentose pathway, Kreb's cycle (TCA) – electron transport system and ATP production.

### Unit – IV

Metabolism of protein – metabolic pathways of nitrogen utilization (urea cycle), synthesis of amino acids, peptides, proteins

### Unit – V

Anaerobic – Respiration and fermentations. Anabolic and catabolic processes of lipids - Reproductive physiology of microorganisms. SKILDEVELOPMENT

- 3 Murray R.K., Cranner M.D., Mayea P.A. and Rodwell V.W.(1990). Biochemistry-prentice Hall International Inc., London

**Reference:**

1. Holt J.S., Krieg N.R., Sneath P.H.A and Williams S.T.(1994). Bergey's Manual of Determinative Bacteriology(9<sup>th</sup> Edition) – Williams & Wilkins, Baltimore.
2. Brige E.A.(1992) Modern Microbiology – Wrn.C. Brown Publishers, Deubque, USA
3. Goodfellow M. and O'Dennell A.C.(1994) Chemical methods of prokaryote systematic – John Wiley & Sons, New York
4. Murray R.K., Cranner M.D., Mayea P.A. and Rodwell V.W.(1990). Biochemistry-prentice Hall International Inc., London
5. Bryant D.A. (1994). The molecular Biology of Cyan Bacteria – Khrwer Academic Publisher, London

Course Code	Course Title	L	T	P	C
19116AEC24L	Microbial Physiology Lab	0	0	3	2

#### **Aim**

- To impart the chemical characterization of microbes

#### **Objectives**

- It Gives brief description on the microbial metabolism and its energetic
- It deals with the various aerobic and anaerobic processes through which the organisms obtain and utilize the energy for their growth.
- Explains photosynthesis and photosynthetic bacteria

#### **Outcomes**

- The students will be able to understand and predict the various metabolic reactions in microbial cell.
- This will make them predict the intermediate products which can be employed in industrial production processes

1. Bacterial culture / isolation techniques, a streaking method, b. Pour plate method

2. Isolation and cultivation of fungi

3. Bacterial growth curve: cell count / viable count / absorbance (total count)

4. Carbohydrate fermentation test:

- Glucose
- Lactose,
- Maltose
- Sucrose
- Mannitol

5. Biochemical test for identification of Bacteria:

- Indole test
- Methyl red
- Voges – Proskaur test
- Citrate utilization
- TSI agar test
- Urease
- Catalase
- Oxidase

##### **Text Books:**

1. Pelezar Jr. M.J. Chan E.C.S. and Kroig N.R.(1993). Microbiology – Mcgraw Hill Inc., New York
2. Stainer R.Y., Ingraham J.L. Wheelia M.L. and Painter P.R. (1986). General Microbiology, Macmillan Education Ltd, London  
Pelczar, Jr. M.J.
3. Bucker, J.M. Caldwell, G.A., Zachgo, E.A. 1990. A Laboratory Course, Academic Press
4. Harold J.Benson, 1994. Microbial Applications, WM.C. Brown Publishers

Course Code	Course Title	L	T	P	C
19115AEC25	Bio Chemistry II	5	0	0	5

### **Aim**

- To provide the basic of biochemistry and its application.

### **Objectives**

- It serves as good research techniques and the ability to combine and analyze information.

### **Outcomes**

- A candidate able to understand structures and functions of enzymes, proteins, carbohydrates, fats, process of metabolism.
- This course will provide clear understanding of Nucleic acid.

### **Unit I**

Organization of Life. Water – Physical Properties, Structure of Water, Weak Interactions in aqueous environment; Role of Water in life.  
 Bioenergetics – Laws of thermodynamics; Free energy concepts; ATP and ADP cycles; ATP as energy currency of cells.

### **Unit II**

Release of energy into cells - Major metabolic pathways – Glycolysis, TCA cycle, Glycogenolysis, Gluconeogenesis, Fatty acid oxidation, ETC and Oxidative phosphorylation.

### **Unit III**

Composition and functions of plant and bacterial cell wall. Biological membrane – Fluid mosaic model; Transport across membranes. Phytohormones – Auxin, Gibberlin and cytokinin.

### **Unit IV**

Cell and cell organelles – Structure and functions of cell organelles – Nucleus, Mitochondria, Chloroplast - Photosynthesis, Golgi apparatus, Endoplasmic reticulum and Micro bodies.

### **Unit V**

Enzymes – Classification, Nomenclature, Mechanism of enzyme action; factors influencing enzyme action – pH and Temperature; Specific activity; MM equation and its significances. Employability

### **References:**

1. Principles of Biochemistry – Lehninger.
2. Cell Biology – DeRobertis and DeRobertis

3. Cell Biology – Rastogi
4. Cell Biology – C.B.Powar.
5. Biophysical Chemistry – Principles and techniques – Upadhayay, Upadhyay and Nath.
6. Principles and techniques of practical Biochemistry – Wilson & Walker.

Course Code	Course Title	L	T	P	C
19115AEC26L	Bio Chemistry II Lab	0	0	3	3

### **Aim**

- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.

### **Objectives**

- To familiarize the students with the basic cellular processes at molecular level

### **Outcomes**

- Students will get practical knowledge about various techniques used in Biochemistry

1. Estimation of reducing sugar by Benedict's Quantitative Method.

2. Estimation of Ascorbic acid by Titrimetric Method.

3. Estimation of Amino Acid by Formal Titration.

4. Estimation of RNA by Orcinol Method.

5. Estimation of DNA by Diphenylamine method.

6. Determination of Acid Number of edible oil.

7. Separation of amino acids by paper chromatography.

8. Separation of amino acids by TLC.

9. Separation of plant pigments by column chromatography.

## SEMESTER – III

Course Code	Course Title	L	T	P	C
19110AEC31	Tamil-III	4	0	0	2

### அலகு-I

சிலப்பதிகாரம்-  
மணிமேகலை -  
சீவகசிந்தாமணி -

வழக்குரை காதை  
ஆதிரை பிச்சையிட்ட காதை  
நாட்டுவளம் 10 பாடல்கள்

### அலகு-II

பெரியபுராணம்-  
கம்பராமாயணம்

மெய்ப்பொருள் நாயனார் புராணம்  
-வாலி வதைப்படலம்

### அலகு-III

சீறாப்புராணம் -  
இயேசுகாவியம் -

கரம் பொருத்து படலம்  
மலைப்பொழிவு

### அலகு-IV

இலக்கணம்-  
மனப்பாடப்பகுதி

யாப்பு இலக்கணம்

### அலகு-V

இலக்கிய வரலாறு  
காப்பியங்கள்  
ஐஞ்சிறுகாப்பியங்கள்  
புராணங்கள், இதிகாசங்கள்

### SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
19111AEC31	Advanced English-III	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand Phonetics
- Develop writing skill

**UNIT –I**

The organs of speech

Classification of speech sounds

Vowels and Diphthongs

**UNIT –II**

Consonants

Consonant cluster

**UNIT – III**

Syllable

Word accent

Intonation

**UNIT – IV**

Idiom

Interpretation of graphics

**UNIT – V**

Slogan writing

Writing advertisement

**SKILDEVELOPMENT**

A text book of Phonetics for Indian Students

-T.B. Balasubramaniyan

Course Code	Course Title	L	T	P	C
19111AEC32	English-III	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – I**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E. Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

**UNIT – V**

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

**SKILDEVELOPMENT**

Nine Short Stories	-Steuart H.King Blackie Books
One-Act plays of Today	-T.Prabhakar Emerald Publishers

Course Code	Course Title	L	T	P	C
19116AEC33	Immunology	5	0	0	5

**Aim:**

- Designed to introduce the essential fundamentals of Immunology.

**Objectives**

- This course focuses on the concepts of immunology
- To create awareness on immunity
- To give knowledge on antigen and antibody
- To learn human diseases and vaccine

**Outcomes**

- The importance of Active and passive immunity, T and B cell significans, Immunoglobuline, complement components, Monoclonal antibodies, Major histocompatibility complex, vaccines.

Unit I

Introduction- History of immunology-scope of immunology. Immunity and their types- Innate and Acquired immunity, Active and Passive immunity. Immune response- Humoral and Cell mediated immune response.

Unit II

Lymphoid organs- primary and secondary lymphoid organs and their role. Cells of the immune system – Stem cell, Lymphocytes, T and B lymphocytes. Plasma cell, T Helper cell, T suppressor cell, T-cytotoxic cell, Null cells, Killer cell, Macrophages, Blood cells and platelets.

Unit III

Antigen- types, chemical nature and essential factors of antigen, Hapten, Adjuvants, Immunoglobulin - Structure, classes, properties and functions. Antigen- antibody reactions.

Unit IV

Complement- Salient features, complement activation, Classical pathway, Alternative pathway, Biological function of complement system. Major Histocompatibility complex (MHC)- Types and functions.

Unit V

Monoclonal antibodies, Hypersensitivity reactions, Immunoprophylaxis, Vaccines – types, Toxoid and antitoxin, Immunoelectrophoresis, HLA typing, ELISA and RIA

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19116AEC34L	Immunology Lab	0	0	3	3

### Aim

- To create the value on Immunology

### Objectives

- Acquire knowledge on medical experiments

### Outcomes

- Able to know about principles and techniques Blood grouping
- Understanding the immunological experiments for clinical field

### Lab work

1. ABO Blood Grouping
2. Rh typing
3. WIDAL Test
4. White Blood Cell Count
5. Red Blood Cell Count
6. Antigen preparation
7. Radial Immunodiffusion
8. Double Immunodiffusion
9. Demonstration of ELISA
10. Demonstration of RIA

Course Code	Course Title	L	T	P	C
19112AEC35	Biostatistics	4	0	0	4

**Aim:**

- To represents an introduction to the field and provides a survey of data and data types.

**Objectives**

- Recognize and give examples of different types of data arising in public health and clinical studies
- Interpret differences in data distributions via visual displays
- Calculate standard normal scores and resulting probabilities

**Outcomes**

- Distinguish, calculate, and interpret measures of occurrence of diseases, including prevalence, incidence, risk, and odds of disease.

**Unit – I**

Use of statistics in biology – Measures of Central tendency – Mean, Median, Mode, Measure of dispersion Standard deviation – Standard error – Correlation Coefficient - Probability

**Unit – II**

Marginal conditional distribution – continuous and discrete distribution – Regression analysis – ‘t’ test, Chi-Square test, binomial, Normal and exponential, Biostat program.

**Unit – III**

Null hypothesis, level of significance, test of significance for mean / different

**Unit – IV**

Curve fitting – least square method – finite differences – difference operators – Newton’s forward and backward formula, Basics of the application of SPSS 7.5 window software package

**Unit – V**

MS Excel for computing data – Newton Raphson method, false position method – Solution of simultaneous algebraic equation.

19112AEC36L	Biostatistics Lab	0	0	3	3

**Aim:**

- To represent an introduction to the field and provide a survey of data and data types.

**Objectives**

- Recognize and give examples of different types of data arising in public health and clinical studies
- Interpret differences in data distributions via visual displays
- Calculate standard normal scores and resulting probabilities

**Outcomes**

- Distinguish, calculate, and interpret measures of occurrence of diseases, including prevalence, incidence, risk, and odds of disease.

1. Mean and Standard deviation using biological samples

2. Chi – Square test, Student ‘t’ test and Correlation coefficient

3. Regression Coefficient and regression lines

**EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
19116RMC37	Research Methodology	3	0	0	3

**Aim:**

To create a basic appreciation towards research process and awareness of various research publication

**Objectives:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

**Outcomes:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

**Prerequisites:**

Basic computer literacy & skills for working in window-environment

**UNIT I: Introduction to Research Methodology**

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

**UNIT II: Research Methods**

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT III: Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

**UNIT IV: Database Survey**

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

**UNIT V:**

**Basic Principles of Laboratory Safety and Waste management**

Introduction - Access to Laboratory and Emergency Exits - Personal Protective Clothing and Equipment - Good Working Practices-Maintenance of Laboratory Equipment - Working with Hazardous Substances - Storage of Chemicals - Working with Flammable Solvents - Gas Cylinders-Fire Precautions - Emergency Procedures - First Aid - Accident Follow-Up - Safety Manual - Safety Training - Management of Laboratory Safety and Responsibilities - Waste Management.

**SKILDEVELOPMENT**

## Skill Based Elective-III

### POWER POINT

Course Code	Course Title	L	T	P	C
19120SEC03AL	PackageLab-III	0	0	2	1

1. Create a slide show presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slide show presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create slide show presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. ***Create a slide show presentation for a shop advertisement to be open shortly***
6. Create a slide show presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for a tourists places
8. Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

**SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
19160SEC03B	SOFT SKILL III	0	0	2	1

### Part -III Interpersonal Relations and Social Responsibilities

#### UNIT I: Interpersonal Relations

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

#### UNIT II: Ethics and Social Responsibilities

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
19111SEC03L	Communicative English Lab-III	0	0	2	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To familiarize with the clauses and phrases
- To learn the different degrees of comparison
- To change a sentence from active to passive and vice versa
- To know where to use punctuations
- To frame sentences
- To know the features, process, forms and barriers of communication

**Outcome:**

- Understand grammar

**UNIT –I**

Clauses

Phrases

**UNIT –II**

Degrees of comparison

**UNIT –III**

Active and Passive

**UNIT –IV**

Communication

Characteristics -Process -Forms - Barriers

-Emerald Publishers

Course Code	Course Title	L	T	P	C
19116AEC43	Virology	6	0	0	6

**Aim:**

- To study the general aspects of viral morphology

**Objectives**

- To study general aspects of viral morphology and classification, replication, interactions and immunity to viruses
- To discuss the application of various immunological and molecular diagnostic tools.

**Outcomes**

- This paper will have clear understanding the role of various in plant, animal and human disease
- Candidate able to understand their various mechanisms to enter and escape from host.

**UNIT – I**

Introduction – Definition, History of virology. General properties of Viruses classification of Viruses – cultivation of Viruses – Structure and replications Viruses.

**UNIT – II**

Bacterial Viruses – structure of bacteriophage, The Lytic life cycle (T-Even coliphages) – Lysogenic life cycle (*Escherchia coli*, Phage Lambda) noninteractive lysogeny (*Escheirchia coli*).

**UNIT – III**

Plant Viruses, Common plant viral diseases: Tobacco Mosaic **Virus** (TMV), Bunchy top of banana, satellite virus. Cucumber Mosaic **Virus** (CMV), Cauliflower Mosaic **Virus** (CaMV). Bacteriophages, Viroids.

**UNIT – IV**

Animal viruses: Morphology, pathogenesis and laboratory diagnosis of Prions, Animal viruses Rinder pest, Blue tongue, Raniket dion, Foot and Mouth Disease. Human Viruses – Herpes, HIV, Hepatitis Viruses. Viral Vaccines. Prevention and treatment of viral diseases. Antiviral agents.

**UNIT - V**

Virus: Assay, purification and characterization of Viruses, Separation and characterization of viral components and quantification of Viruses. Immune responses to viruses, Interferon and other cytokines, Antiviral therapy.

**SKILDEVELOPMENT**

7. James, C.Cappuccino. 1996. Microbiology. The Benjamin/Cummings Pub. Co. California.

Course Code	Course Title	L	T	P	C
19116AEC44L	Soil Microbiology and Virology Lab	0	0	3	3

### Aim:

- To study the general aspects of virus

### Objectives

- To study general aspects of viral morphology and classification.
- Cultivation of viruses and various methods of propagation.
- To discuss the application of various immunological and molecular diagnostic tools

### Outcomes

- Upon paper completion, students will have knowledge on structure of plants, animal, bacteria and viruses.
- This paper also enables the student on isolation, propagation of various viruses.

### Lab work

1. Isolation and enumeration of soil microorganisms (fungi, bacteria and actinomycetes).

2. Isolation and staining of vesicular arbuscular mycorrhizae from roots of higher plants.

3. Isolation and testing of antagonistic microorganisms from soil

4. Isolation of microorganisms from Rhizosphere and Rhizoplane

5. Determination of soil pH

6. Estimation of soil chlorides.

7. Estimation of soil calcium.

8. Estimation of magnesium

9. Estimation total phosphorus.

10. Isolation & characterization of bacteriophage from natural resources.

### SKILDEVELOPMENT

### Demonstrations

1. Isolation of microorganisms from Phyllosphere.
2. Study of the following viral diseases: Tobacco mosaic; Cucumber Mosaic Virus.
3. Demonstrations of some plant, animal & human viruses (photographs, diagram etc.).

Course Code	Course Title	L	T	P	C
19116AEC45	Bioinformatics	6	0	0	6

**Aim:**

- To learn about the bioinformatics databases, databanks, data format and data retrieval from the online sources.

**Objectives**

- To make students understand the essential features of the interdisciplinary field of science- for better understanding biological data.
- To provide the student with a strong foundation for performing further research in- bioinformatics.

**Outcomes**

- Decipher the importance of bioinformatics.
- Master the aspects of protein-protein interaction, BLAST and PSI-BLAST.
- Describe the features of the databases of local and multiple alignments.
- Interpret the characteristics of phylogenetic methods and bioinformatics applications.

**Unit – I**

Introduction to Bioinformatics – Scope and application – Characteristics of Hardware and Software – Types of computer – Sending and receiving e-mails – Internet searching biological articles in internet

**Unit – II**

Computer application in biology – Information theory and biology – Analysis tools for databases – BLAST, FASTA and DNA database – NCBI, DDBJ and EMBL.

**Unit – III**

Protein structure determination by X- ray diffraction methods – Sequence alignment – Global alignment using Needleman – Wunsch algorithm and Local alignment using Smith – Waterman algorithm

**Unit – IV**

Application to DNA and protein sequence – Biochips, Biosensors.

**Unit – V**

Use of databases in biology: Sequence databases, structure databases. Sequence analysis – Protein and nucleic acids, Structure comparisons, molecular modeling, genome projects  
SKILDEVELOPMENT

4. Comutational methods for macromolecular analysis 1996 methods in Enzymology Vol.266 by R.F. Dorlitttle Academic press.

Course Code	Course Title	L	T	P	C
19116AEC46L	Bioinformatics Lab	0	0	3	3

**Aim:**

- To learn about the bioinformatics databases, databanks and data format data retrieval from the online sources.

**Objectives**

- To make students understand the essential features of the interdisciplinary field of science for better understanding biological data.

**Outcomes**

- Search the literature data of the given protein using PubMed.
- Search the nucleotide sequence data of the given species using NCBI / EMBL / DDBJ.
- Search the protein sequence of the species using PIR and Swissprot / UniProt.

1. Pairwise alignment using FASTA, BLAST.

2. Multiple alignments using Clustal W.

3. Study of internet resources in Bioinformatics – NCBI, ENBL, EBI.

**SKILDEVELOPMENT**

**Skill Based Elective IV**  
**MS-ACCESS**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC04AL	Package Lab-IV	0	0	2	1

1. Create a database and a simple table
2. Create a database for sorting the marks scored by the student in the universality exams
3. Create a database for sorting the date of joining by the employee in the organization.
4. Create queries to select records that matches specific condition
5. Create relationships among the different tables
6. Create queries using built-in functions
  7. Develop forms to enter data in to the student marks database
  8. Develop forms to enter data in to the employee database

**SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C

## PART -IV Etiquette And Interviewing Skills

### **UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

### **UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

**SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
19111SCE04L	Communicative English Lab-IV	0	0	1	1

**Aim:**

- To develop communicative skills

**Objective:**

- To use gerund and make sentences
- To change sentences from direct to indirect and vice versa
- To understand the listening skill
- To enhance reading skill
- To familiarize with the singular and plural forms
- To describe a picture

**Outcome:**

- Understand grammar
- Develop listening and reading skills

**UNIT –I**

Gerund

Infinitive

**UNIT –II**

Direct and Indirect

**UNIT –III**

Listening -types-features of a good listener-active and passive listening-effective listening

**UNIT –IV**

Reading-purpose-technique-types-reading rates-reading & interpretation

**UNIT –V**

Singular and Plural

Letter writing

## ENVIRONMENTAL STUDIES (for under graduate students)

Course Code	Course Title	L	T	P	C
191ENVTSTU	Environmental Studies	1	0	0	1

### Objectives:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

### 1. Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

### 2. Natural Resources and Associated Problems.

a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.

b) Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.

c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.

d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.

e) Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.

f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

Role of an individuals in conservation of natural resources.

### 3. Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,

d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

### 4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot — spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

### 5. Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes.

Role of a individual in prevention of pollution.

### 6. Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global wanTling, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

### 7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

### 8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

(R) Reference

(TB) Textbook

Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
4. Apply their ecological knowledge to illustrate and graph a problem and
5. describe the realities that managers face when dealing with complex issues; and
6. Understand how politics and management have ecological consequences.

## SEMESTER V

Course Code	Course Title	L	T	P	C
19116AEC51	Food and Dairy Microbiology	5	0	0	5

### Aim:

- To learn about the epidemiology of foodborne diseases and the pathogens.

### Objectives

- To learn about food spoilage factors
- To know the preservation methods
- To make aware of food borne disease

### Outcomes

- Better understanding of cause of microbes in food spoilage
- Get information regarding food preservation
- Enable them to work food fermentation industries

### UNIT – II

Food fermentations: Cheese, bread, wine, fermented vegetables – methods and organisms used. Food and enzymes from microorganisms – single cell protein, production of enzymes.

### UNIT – III

Contamination, spoilage and preservation of different kinds of foods, cereals and cereal products – sugar and sugar products – vegetable and fruits – meat and meat products – fish and other sea foods – eggs and poultry – dairy and fermentative products (ice cream/milk/bread/wine).

### UNIT – IV

Food Poisoning: food borne infections (a) Bacterial: *Staphylococcal*, *Brucella*, *Bacillus*, *Clostridium*, *Escherichia*, *Salmonella* (b) Fungal: Mycotoxins including aflatoxins, (c) Viral: Hepatitis, (d) Protozoa – Amoebiasis.

### UNIT – V

Food preservation: Principles of food preservation – methods of preservation. a. Physical (irradiation, drying, heat processing, chilling and freezing, high pressure and modification of atmosphere) b. Chemical (Sodium benzoate Class I & II). Food Sanitation: Good manufacturing practices – Hazard analysis, Critical control points, Personnel hygiene. Employability/Entrepreneurship/Skill development

3. Robinson, R.K.1990. Dairy Microbiology, Elsevier Applied Science, London.
4. Hobbs, B.C. and Roberts, D.1993. Food Poisiong and Food Hygiene, Edward Arnold (A division of Hodder and Stoughton), London.

Course Code	Course Title	L	T	P	C
19116AEC52	Molecular Biology	5	0	0	5

**Aim:**

- To introduce the fundamentals and basic biology of life.

**Objectives**

- To learn the basic principles of inheritance at the molecular, cellular and organismal levels.
- To understand causal relationships between molecule/cell level phenomena (“modern” genetics) and organism-level patterns of heredity (“classical” genetics)
- To test and deepen their mastery of genetics by applying this knowledge in a variety of problem-solving situations

**Outcomes**

- It will elaborate the central dogma of the cell i.e., gene expression viz. transcription and translation in both prokaryotes and eukaryotes.

**UNIT – I**

Historical and conceptual background - Discovery of DNA as genetic material, Griffith’s experiment, Hershey and Chase warring blender experiment, Chargaff’s rule. Structures of DNA and RNA: Types of genetic material. DNA Structure: Salient features of double helix, types of DNA. RNA Structure. Denaturation and renaturation, cot curves. DNA topology: linking number, topoisomerases. DNA organization in prokaryotes, viruses, eukaryotes

**UNIT – II**

DNA replication in prokaryotes: Replicons – models of DNA replication – origin and termination of replication – rolling circle replication – proof for semi conservative replication (Meselson and Stahl Experiment) – enzymes and proteins involved in DNA replication (nucleases, polymerases, ligases, helicases, gyrases, single strand binding protein, replisome and primosome) – mechanism of semi discontinuous replication.

**UNIT – III**

Transcription: Steps involved in transcription of prokaryotes, promoters, transcription factors, RNA polymerases I, II and III – ribosomal RNA transcription and processing – genetic code, deciphering the genetic code, characteristics of genetic code, Wobble hypothesis, central dogma of life and reversal of central dogma.

**UNIT – IV**

Translation: Steps involved in translation of prokaryotes – role of proteasomes in protein degradation – mechanism of action of antibiotics on protein synthesis (puromycin, chloramphenicol and streptomycin). Regulation of gene expression in prokaryotes – polycistronic mRNA and operons (lac operon and trp operon and attenuation mechanism).

**UNIT – V**

Mutation: spontaneous and induced mutations – UV and X - rays – mechanism of action of base analogues, alkylating agents, intercalating agents and teratogens – reversion suppressor

mutations and mutation rate – repair of damaged DNA - excision repair, SOS, photoreactivation – CRISPR and their role in genome stability

Course Code	Course Title	L	T	P	C
19116AEC53	Agricultural and Environmental Microbiology	4	1	0	3

**Aim:**

- To learn about microorganisms in environment

**Objectives**

- To know the role of microbes in environmental field
- To get information on aquatic Microorganism

**Outcome**

- Students acquire the information about microbes
- Know about microbes and its role in environment.
- Able to understand about microbes in agriculture and environmental field

**UNIT – I**

Classification of soils. Physical and chemical characteristics and microflora of various soil types. Interactions among microorganisms: Symbiosis – mutualism – commensalisms – competition – amensalism – synergism – parasitism – predation. Biogeochemical cycles. Carbon, nitrogen, phosphorus and sulphur.

**UNIT – II**

Biofertilizers. Symbiotic nitrogen fixation – (*Rhizobium*, *Frankia*) –Symbiotic nutrient mobilizers – Endomycorrhizae and Ectomycorrhizae – Non symbiotic microbes – *Azotobacter* – *Azospirillum* – Cyanobacteria (*Nostoc*, *Gloeocapsa* *Anabaena*).

**UNIT – III**

Microbial Association with higher plants – Rhizosphere – *Rhizobium* – infection – inoculation – nodule formation. Phylloplane association with animals. A brief account of the symptoms, etiology, life-cycle and management of bacterial (blight of paddy, citrus canker) and fungal (late blight of potato and red rot of sugarcane) diseases.

**UNIT – IV**

Microbiology of air – organisms in air, distribution and sources. Droplet nuclei, aerosol, assessment of air quality. Types of aquatic ecosystems: fresh water – ponds, lakes, streams. Marine habitats – estuaries, mangroves, deepsea, hydrothermal vents, salt pans, coral reefs. Zonations – upwelling – eutrophication – food chain. Potability of water – microbial assessment of water quality – water purification – brief account of water - borne diseases.

**UNIT – V**

Types of wastes – characterization of solid and liquid wastes. Solid waste treatment – saccharification – gasification – composting, Utilization of solid wastes – food (SCP, mushroom, yeast); fuel (ethanol, methane, hydrogen); fertilizers (composting). Liquid waste treatment. Treatment methods – primary –secondary (anaerobic – methanogenesis; aerobic-trickling activated sludge – oxidation pond – tertiary treatment.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19116AEC54L	Food and Dairy Microbiology and Molecular Biology Lab	0	0	3	3

### Aim:

- To analyze results for routine microbiological samples.

### Objectives

- Apply analyses used commonly in the food industry.
- Correctly predict the types and levels of organisms commonly occurring in different foods.
- Clearly communicate in different oral and written formats, to different audiences, the results of laboratory analyses in food microbiology.

### Lab work

1. Assessment of milk quality by methylene blue reduction test
  2. Wet mount preparation of fungal organism from spoiled bread, tomato, grapes, potato.
  3. Observation of food samples to study *Leuconostoc sp.*, *Lactobacillus sp.*, *Streptococcus lacti* and *Saccharomyces*
  4. Preparation of yoghurt
  5. Determination of thermal death time (TDT) and thermal death point (TIP) of microorganisms from spoiled foods
  6. Direct microscopic examination of milk by standard plate count (SPC) method
  7. Isolation of plasmid DNA from bacteria by Spectrophotometric assay.
  8. Isolation of chromosomal DNA from bacteria by Spectrophotometric assay.
  9. Development of competent cells in *E. coli*.
  10. Isolation of antibiotic resistant auxotrophic mutants.
  11. Protoplast and Spheroplast isolation
- Employability/Entrepreneurship/Skill development

### Demonstration

1. Fermenting ability of yeast
2. Antibiotic resistance – plasmid mediated – chromosomal mediated – Gel Electrophoretic methods.
3. Principles and applications of agarose gel electrophoresis and plasmid separation in agarose gel.

Course Code	Course Title	L	T	P	C
19116AEC55L	Agricultural and Environmental Microbiology Lab	0	0	3	3

### Aim:

- To use appropriate lab techniques and analyze results for routine microbiological samples

### Objectives

- To know the role of microbes in environmental field
- To get information on aquatic Microorganism

### Outcome

- Students acquire the information about microbes
- Know about microbes and its role in environment

### Lab work

1. Isolation and culturing of *Rhizobium* from root nodules.
2. Isolation and culturing of *Azospirillum* from grassplant.
3. Isolation and culturing of *Azotobacter* from paddy field
4. Isolation and culturing of *Phosphobacter* from paddy field
5. Isolation and culturing of Blue Green Algae from paddy field
6. Isolation and identification of air-borne bio-particles using Open plate method
7. Effects of high salt concentration on microbial growth
8. Microbial flora of polluted water – Microbial flora of sewage
9. Bacterial examination of drinking water by membrane filter technique and MPN

### EMPLOYABILITY

## Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
19116DSC56A	Proteomics	5	0	0	4

### Aim

To acquaint the students to the versatile tools and techniques employed in proteomics.

### Objectives

- To illustrate creative use of modern biology linked with proteomics.
- To expose students to importance of proteomics
- To learn different approach and types of proteomics.

### Outcome

Students acquire huge knowledge in protein functional and expressions, Gel based and Non gel based proteomics.

### Unit I

Introduction to protein structure, Chemical properties of proteins. Physical interactions that determine the property of proteins. Short-range interactions, electrostatic forces, Van der Waal interactions, hydrogen bonds, hydrophobic interactions.

### Unit II

Proteomics: structural, functional, expression, interaction proteomics. Importance of proteomics. Determination of protein sizes (Sedimentation analysis, gel filtration, SDS-PAGE); Native PAGE,

### Unit III

Protein-protein interactions, gel based proteomic tools e.g. 2D, DIGE, Non-gel based proteomic tools, Gel based proteomics, LC-based proteomics.

### Unit IV

Protein array, Protein Identification and data evaluation, Identification of post-translational modifications: Phosphorylation, Glycosylation, Acetylation

### Unit V

Mass Spectrometry-Fundamental parameters: Mass accuracy, Resolution, Sensitivity, Ion sources: Electrospray ionization, Matrix assisted laser desorption and ionization. Peptide mass finger printing, Tandem mass spectrometry

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19116DSC56B	Bioinoculants	5	0	0	4

**Aim:**

- To introduce students to basic characteristics of microorganisms (morphology, cytology, metabolism), their ecologies and importance for life cycles in the nature, for plants growing, animal husbandry and processing of plant and animal products.

**Objectives**

- To give an overview about role of microorganisms for the cycle of carbon, nitrogen, phosphorus and sulphur in the nature with a special focus on agrosystems.
- Importance of microorganisms for agricultural production and commercial composts.

**Outcomes**

- Students acquire knowledge in microbial preparates, enzymes, and secondary metabolites in agricultural practices.

**UNIT – I**

General account of the microbes used as a biofertilizers for crop plants and their advantages. Symbiotic N<sub>2</sub> fixers: Rhizobium- Isolation, characterization, identification, classification, inoculum, production and field application. Frankia- Isolation, characterization- actinorrhizal nodules-non-leguminous crop symbiosis.

**UNIT – II**

Non-symbiotic N<sub>2</sub> fixers-Azospirillum-Free living-Azotobacter-free isolation, characterization, mass inoculum production and field application.

**UNIT – III**

Symbiotic N<sub>2</sub> fixers- Cyanobacteria, Azolla- Isolation, characterization, mass multiplication- role in rice cultivation- Crop response- field application- immobilization.

**UNIT – IV**

Phosphate solubilizers- phosphate solubilizing microbes- Isolation, characterization, mass inoculum production, field application- Phosphate solubilization mechanism.

**UNIT – V**

Mycorrhizal bioinoculants- classification- importance of mycorrhizal Ectomycorrhizae- Endomycorrhizae- Ectendo mycorrhizae- Taxonomy of mycorrhizae- Isolation of VA mycorrhizae- quantification and assessment of VAM in roots- Mass inoculum production VAM- field applications of Ectomycorrhizae and VAM.

19160SEC05B	SOFT SKILL V	0	0	2	1

### **PART -V Leadership Skills and Body Language**

#### **UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

#### **UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space  
Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19111SEC05L	Communicative English Lab-V	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To develop vocabulary
- To comprehend meaning from context
- To involve in a dialogue
- To note the important points from the text.
- To write a letter
- To understand the subject verb agreement
- To teach the different genders

**Outcome:**

- Develop communicative skills

**UNIT –I**

Correct the spelling mistakes

Comprehension

**UNIT –II**

Find the odd one out

Picture description

**UNIT –III**

Abbreviations

Note making

**UNIT –IV**

Gender

Dialogue writing

**UNIT –V**

## SEMESTER VI

Course Code	Course Title	L	T	P	C
19116AEC61	Industrial Microbiology	4	0	0	5

### **Aim:**

- To train students practically in basic principles of food and industrial microbiology.

### **Objectives**

- It also emphasis to learn about the production of various fermented products and field trip to dairy, food industries, sewage treatment plants.

### **Outcomes**

- Students acquire hands on training various microbes of industrial importants

### **UNIT – I**

Historical development of Industrial Microbiology, Industrially important microorganisms, Primary and secondary screening and preservation of industrially important strains. Microbial strains improvement. Primary and secondary metabolites.

### **UNIT – II**

Fermenter: Design, types and basic functions of fermenter. Fermentation media formulation strategies, Essential factors (pH and temperature, incubation), carbon, nitrogen, vitamin and mineral sources, role of buffers, precursors, inhibitors, inducers and antifoams, types of fermentation.

### **UNIT – III**

Downstream processing: Product recovery and purification (intracellular and extracellular), cell disruption, precipitation, filtration, centrifugation, solvent recovery, chromatography, ultrafiltration, drying, Enzyme and cells immobilizations and its applications.

### **UNIT – IV**

Microbial products of pharmaceutical value – raw materials, organism and Industrial processes involved in the production of Pencillin, Streptomycin, Vitamin B12, Riboflavin and rabies vaccine.

### **UNIT – V**

Microbial products of Industrial value – Raw materials, organism and Industrial processes involved in the production of ethanol, vinegar, amylase, protease, glutamic acid. Recycling and safe disposal of Industrial wastes through microbes.

Employability/Entrepreneurship/Skill development

### **Text Book**

1. Stanbury, P.F. Whitaker, A.Hall, S.J. 1995. Principles of Fermentation Technology, Pergamon Press.

5. Venkataraman, L.V.1983. A Monograph on Spirulina platensis. CFTRI, Mysore.

Course Code	Course Title	L	T	P	C
19116SEC62	Clinical Microbiology	4	0	0	4

**Aim:**

- To understand about the pathogenic microbes

**Objectives**

- To inculcate on the role of normal flora and pathogenic microbes
- To understand the pathogenesis of various diseases
- To understand the various clinical microbiological techniques.

**Outcomes**

- Get information about various mechanisms of infection
- Knowledge on clinical lab techniques
- Acquire knowledge on control measures of diseases

**UNIT – I**

Basics in Medical microbiology - Infectious diseases overview. Medically important microbes. Normal microbial flora of the human body, Host-microbe interactions – virulence factors of microbes. Invasiveness and pathogenicity. Immunity of microbial diseases

**UNIT – II**

Diagnostic Microbiology – collection and transport of specimen for Microbiological examination – General methods for isolation and identification of bacteria. Typing of bacterial isolates. Sero-diagnosis.

**UNIT – III**

Clinical symptoms. Epidemiology, pathogenesis, laboratory diagnosis, prevention and treatment of the following bacterial infections (a) Streptococcal infections, (b) Staphylococcal infections, (c) Meningitis, (d) Tuberculosis, (e) Leprosy, (f) Gastrointestinal disorders – typhoid, cholera, bacillary dysentery, (g) Sexually transmitted diseases – syphilis, gonorrhoea. (h) Anaerobic wound infection – tetanus, gas gangrene.

**UNIT – IV**

Clinical symptoms. Epidemiology, pathogenesis, laboratory diagnosis, prevention and treatment of the following viral infections (a) Respiratory infections, common cold, influenza, measles, mumps and rubella. (b) neurological infection – encephalitis (Dengue, Japanese encephalitis), Rabies (c) Liver diseases : Hepatitis A,B,C,D & E (d) Immunodeficiency diseases, AIDS, CMV (Cytomegaloviruses) Herpes simplex viruses.

**UNIT – V**

Clinical symptoms. Epidemiology, pathogenesis, laboratory, prevention and treatment of the following fungal and protozoan infections (a) Fungal – superficial, subcutaneous and systemic mycoses, (b) Protozoan: Amoebiasis, Malaria, Leishmaniasis, (c) Helminths – Filariasis, Ascariasis, Zoonotic diseases, Hospital acquired infections.

**EMPLOYABILITY**

**Text Book**

1. Schaechter, M. Medoff, G. and Eisenstein, B.C. (1993). Mechanism of Microbial Diseases. 2nd edition. Williams & Wilkins, Baltimore.

4. Hume W.B. and Russell A.D. (1989). Pharmaceutical Microbiology. IV edition. Blackwell Scientific Publications, Oxford.
5. Topley / Wilson's (1990). Principles of Bacteriology, Virology and Immunity, VIII edition, Vol. III Bacterial Diseases, Edward Arnold, London.

Course Code	Course Title	L	T	P	C
19116AEC63L	Industrial Microbiology Lab	5	0	0	3

**Aim:**

- To train students practically in basic principles of food and industrial microbiology.

**Objectives**

- It also emphasis to learn about the production of various fermented products and field trip to dairy, food industries, sewage treatment plants.

**Outcomes**

- Students acquire hands on training various microbes of industrial importants

**Lab work**

1. Whole cell immobilization – alginate –Cyanobacteria
2. Estimation of citric acid - *Aspergillus*
3. Estimation of ethanol - Fruit juice
4. Spawn production - Mushroom
5. Mushroom cultivation
6. Starch hydrolysis

**Demonstration**

Preparation of fermented food –cheese

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19116SEC64L	Clinical Microbiology Lab	0	0	3	3

**Aim:**

- To provide technical knowledge on collection and processing of clinical samples

**Objectives**

- To prepare them to work in clinical laboratory 3. To learn the technique for isolation and identification of pathogens

**Outcomes**

- Get practical knowledge in specimen collection and processing
  - Become technically expert which will helpful to work in clinical laboratory
  - Able to identify clinical pathogens
1. Examination of parasitic ova and cysts from faecal samples.
  2. Identification of pathogenic organism with a smear, culture and biochemical test
  3. *Staphylococcus sp, E.coli, Klebsiella sp, and Salmonella typhi*

**Demonstration**

1. LP Mount - *Trichophyton sp. Microsporum sp*

**Spotters:**

2. Slides of pathogenic bacteria, fungi and parasites:
  3. Electron micrographs of viruses – Pox viruses, Herpes simplex virus, HIV, HBV,
    - *Staphylococci*
    - *Streptococci*
    - *Mycobacterium leprae*
    - *Trypanema pallidum*
    - *Leptospira sp.*
    - *Bacillus subtilis*
    - *Klebsiella sp.*
- *E.coil.*
  - *Clostridium tetani.*
  - Permanent mounts of dermatophytes
  - *Candida sp.*
  - *Cryptococcus sp.*
  - *Maduromycetes.*

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19116DSC65A	Recombinant DNA Technology	4	0	0	4

### Aim

To acquaint the students to the versatile tools and techniques employed in recombinant DNA technology.

### Objectives

- To illustrate creative use of modern tools and techniques for manipulation and analysis of genomic sequences
- To expose students to application of recombinant DNA technology in biotechnological research.
- To train students in strategizing research methodologies employing genetic engineering techniques.

### Outcome

- Students acquire knowledge in gene cloning, plasmid and target DNA isolation, genomic and cDNA library

#### Unit -I

History and achievements of rDNA technology. Nomenclature, classification of Restriction Endonucleases - ligases, types - gene cloning in prokaryotes - Expression and cloning strategies. Construction of genomic library and cDNA library.

#### Unit II

Restriction enzymes - restriction analysis of genomes- restriction sites- cloning of blunt end DNA, adapters. DNA analysis: labeling of DNA and RNA probes. Southern and fluorescence *in situ* hybridization, DNA fingerprinting, chromosome walking.

#### Unit- III

Gene transfer Techniques - Physical - Biolistic method, Chemical - Calcium chloride and DEAE methods, Biological invitro pakage method - Screening and selection of recombinants.

#### Unit-IV

Microbial synthesis of commercial products - Insulin, Interferons, Human growth hormone, antibiotics, biopolymers.

#### Unit- V

Transgenic Plants - Ti plasmid, insect resistant plant. Transgenic animal - mice - retroviral method- DNA microinjection method. PCR methods and its applications.

#### EMPLOYABILITY

Course Code	Course Title	L	T	P	C
19116DSC65B	Bioethics	4	0	0	4

**Aim:**

- To recognise and identify ethical dilemmas in a clinical encounter
- To analyse an ethical dilemma and come to a conclusion

**Objectives**

- Understands and can apply the various theories and principles of bioethics
- Can scrutinise and identify health, administrative and public health policies to identify ethical issues
- Can develop and teach a curriculum in Bioethics for their field of medicine

**Outcomes**

- Students will identify ethical issues in a research proposal and suggest appropriate methods to ensure ethical conduct of biomedical research

**UNIT – I**

General Ethical concerns: the use of nature, Different views of nature, Dynamic nature, interfering with nature, integrity of species; Reducing genetic diversity; Biological warfare; public perception of science.

**UNIT – II**

Medical ethics; History and culture: The Hippocratic tradition: a profession, Philanthropy, Do no harm, adoption to the oath by western medicine. Competing ethical.

Traditions; Retaining the Hippocratic oath.

**UNIT – III**

Status of Human embryo: Human Embryonic development; Ethics through embryo development: Fertilization, the fetus and feeling pain; Scientific Research on Human Embryos: Experimental goals of Human Embryo Research, Human Development; How much Embryo experimentation in ethical?

**UNIT – IV**

Animal Rights: Making new strains of animal: Ethical limits of animal use: Religious views of animal status; Philosophical views of animal status; regulations.

**UNIT –V**

Human Gene therapy: Ethics of somatic cells gene therapy: Efficiency of treatment; safety of transferred genes; protecting human life; Affect on family life; Economic factors; when we should use Gene therapy? EMPLOYABILITY

Course Code	Course Title	L	T	P	C
19111OEC	Open Elective - Journalism	4	0	0	2

**Aim :**

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT- II**

News – Definition, Kinds, Elements, Sources

**UNIT- III**

Reporters

**UNIT- IV**

The Editor and the Sub-editor

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

**SKILDEVELOPMENT**

Course code	Course Title	L	T	P	C
19112OEC	Open Elective: Development of Mathematics Skills	4	0	0	2

**Aim:**

- To understand the concepts from the five branches of mathematics

**Objectives**

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Outcomes**

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**SKILDEVELOPMENT**

**References**

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti Swarup, P.K.Gupta and Manmohan, "Operations Research"

Course Code	Course Title	L	T	P	C
19113GEC	Open Elective- Instrumentation	4	0	0	2

**Aim:**

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**Outcomes:**

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.
- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

**UNIT – II: Electronic Instruments – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

**UNIT – III: Electronic Instruments – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

**Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

**Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope. SKILDEVELOPMENT

**Books for Study**

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

**Books for Reference:**

2. A Course In Electrical And Electronic Measurements and Instrumentation – A.K. Sawhmey – Dhanpat Rai and Sons – 1990.

3. Electronic Measurements And Instrumentation – Oliver Cage – McGraw Hill –1975.

Course Code	Course Title	L	T	P	C
19114OEC	Open Elective-Food and Adulteration	4	0	0	2

**Aim:**

- To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

**Outcomes:**

- The students will have knowledge about different processing and preservation methods and principles involved.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

Introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

**SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
19120OEC	Open Elective -Web Technology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Objective:**

- To understand and practice mark up languages
- To learn Style Sheet and Frames

**Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**SKILDEVELOPMENT**

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
19122OEC	Open Elective-E-Commerce and its Application	4	0	0	2

**Aim:**

- To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

**Objectives:**

- To be aware of all aspects of communication and information exchange in Electronic Commerce, including:
  - Navigation, brokerage, advertising and catalogue exchange in pre-sales activities.
  - Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
  - Secure exchange of documents, content and value in open trading protocols.
  - Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

**Outcomes:**

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

**UNIT-I:**

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal  
 Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

**UNIT-II:**

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script - XML

**UNIT- III:**

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

E-Security: Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

**UNIT-V**

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet banking-History’s lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-

cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stock trading: The high speed alternative.

Course Code	Course Title	L	T	P	C
19161OEC	Open Elective – Indirect Taxes	4	0	0	2

**Aim:**

- To acquaint with the knowledge of indirect taxes

**Objectives:**

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

**Outcome**

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

**UNIT – V**

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

## **SCHOOL OF ARTS AND SCIENCE**

Department of Microbiology

**M.Sc. Microbiology Syllabus**

**[Regulation 2019]**

Course Code	Course Title	L	T	P	C
19216SEC11	Prokaryotic Microbiology	6	1	0	5

## AIM

**Prokaryotes** are important to all life on earth and play a critical role in the recycling of nutrients by decomposing dead organisms and allowing their nutrients.

## OBJECTIVES

- To explore cell structure and morphology in prokaryotes.
- To gain more experience using the microscope.
- To obtain a better understanding of prokaryotes

## COURSE OUTCOME

CO1- Scope and historical importance of microbiology

CO2- Understanding the features and classification of prokaryotes.

CO3- study about isolation and identification of microbes

CO4- Economic value of beneficial bacteria

### Unit – I

Microbial classification and diversity of microorganisms – classification based on cellularity, cell and kingdom concepts – Whittaker’s classification – major group of prokaryotic microorganisms – their characteristics – microbial diversity of viruses, bacterial and cyanobacteria.

### Unit – II

Viruses: Introduction – Classification of viruses – cultivation of viruses, purification and assay, various methods of viral assays. Basic structure of viruses – symmetry – biochemical composition of viruses – Bacteriophages – Ultra structure of T<sub>4</sub> phage – multiplication of bacteriophages – viruses of fungi and algae, slow viruses, viroids, satellite viruses.

### Unit – III

Plant viruses: Classification of plant viruses. Tobacco Mosaic Virus – Ultra structure of TMV, Multiplication of TMV. Viruses of various plant hosts / crops and diseases - Plant viruses as gene vectors.

### Unit – IV

Bacteriology: Introduction – Diversity of bacterial flora – distribution – morphology of typical bacterial cell – Chemical composition of bacterial cell wall, Reproduction and genetic recombination, Transformation, Conjugation, Transduction, Bacterial growth rate, Bacterial culture methods and culture media for various bacteria. Isolation and enumeration of bacterial cultures, Identification – Gram staining technique, Bacterial diseases of Man.

### Unit – V

General characteristics of other Bacteria – Mycobacteria, Myxobacteria, Rickettsia and Chlamydiae and Cyanobacteria – Classification of cyanobacteria – significance of Cyanobacteria in biofertilizers – *Archaeobacteria*, *Actinomycetes*, *Streptomyces*, *Actinoplanes*, *Maduramycetes* and their general characters **Employability/Entrepreneurship/Skill development**

### Text Books

S. No	Author Name	Title of the Paper	Edition/year	Publication
1.	Jr. M.J. Pelczar, E.C.S. Chan and N.R. Kreig.	Microbiology	5 <sup>th</sup> /1993	Tata McGraw-Hill, Inc, New york
2.	R.C. Dubey, D.K. Maheshwari	A Text Book of Microbiology	3 <sup>rd</sup> / 2003	Chand Publishing

### Reference Book:

1. Fundamental of Microbiology (2005) By Purohit, Agrobios Publishers, Meerut

Course Code	Course Title	L	T	P	C
19216SEC12	Eukaryotic Microbiology	6	1	0	5

### AIM

- To describe the basic structures and essential characteristics of eukaryotic cells

### OBJECTIVES

- Students will understand the structures and purposes of basic components of eukaryotic cells, especially macromolecules, membranes, and organelles.
- To generate and utilize energy in cells

### COURSE OUTCOME

CO1- General Features and taxonomy of eukaryotes

CO2- Knowledge about advanced research in mycology, phycology.

CO3- Scope of Algae used as a food

CO4- Economic importance of Lichens and algae

### Unit – I

Differentiation of Eukaryotes and Prokaryotes – Salient features of Eukaryotes – Major groups of Eukaryotes – Algae, Fungi, Protozoa and lichens – Classification of Algae, Fungi and Protozoans. Significance of various Algae and fungi in Agricultural Microbiology - Significance of various fungi, algae in environmental biology – biodegradation of Xenobiotics, heavy metals and pesticides, Eukaryotic microbes in Bio pesticides.

### Unit – II

Algae: Phycology – Introduction – Distribution of Algae, General features of algae Classification and general characters of prochlorophyta, Rhodophyta, Phaeophyta: Significance of Algae in production.

### Unit – III

Biology of Lichens – fungal components and algal component: general characteristics of lichens, physiology of lichens, classification of lichens, Reproduction of lichens, Economic uses of lichens. Single cell protein (SCP) – Spirulina and significance: BGA and significance in agriculture.

### Unit – IV

Mycology – Introduction – General characters of Fungi – Structure of fungi – Fungal cell, multiplication of fungi – Fungal diseases of Plants, Animals and Human - Beneficial fungi, VAM – fungi in soil fertility. Predaceous fungi and nematophagous fungi – Fungi in food spoilage and food infections.

### Unit – V

Protozoans – Classification of Protozoa – General Characters of protozoa – general structure and life cycle of Amoeboid form – Nutrition and Reproduction in protozoans – Protozoan diseases of Animals and Man

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19216SEC13	Microbial Physiology	6	1	0	4

**AIM:**

- Microbial physiology has traditionally played a very important role in both fundamental research and in industrial applications of microorganisms.

**OBJECTIVES:**

- To understand the major goal of Microbial Physiology and Metabolism is to assist students in rapidly communicating their research and education.
- The overall function is studied through analysis of the cellular response to different environmental conditions.

**COURSE OUTCOME (CO'S):**

CO1- Understand the factors influencing the growth of microbes in ecosystem

CO2- Learn about Bioluminescence and their advantages.

CO3- Learn about microorganism to assimilate the nutrients for growth.

CO4- Study about metabolic pathway

**Unit – I**

Cell structure and function: Biosynthesis of peptidoglycan – Outer membrane, teichoic acid Exopolysaccharides; Cytoplasmic membrane – Pilli, fimbriae, S-layer, Transport mechanisms – active, passive, facilitated diffusions – uni, sym, antiports. Electron carriers – artificial electron donors, inhibitors, uncouplers – energy bond – phosphorylation.

**Unit – II**

Microbial growth: Phases of growth curve – measurement of growth – calculations of growth rate – generation time – synchronous growth – induct on of synchronous growth, synchrony index – factors affecting growth – pH, temperature, substrate and osmotic condition. Survival at extreme environments – starvation – adaptive mechanisms in thermophilic, alkalophilic, osmophilic and psychrophilic-Bioluminescence – mechanism – advantages.

**Unit – III**

Microbial pigments and carbon assimilation: Autotrophs – Cyanobacteria – photosynthetic bacteria and green algae – heterotrophs – bacteria, fungi, myxotrophs. Brief account of photosynthetic and accessory pigments – chlorophyll – fluorescences, phosphorescences – bacterochlorophyll – rhodopsin – carotenoids – phycobiliproteins: Carbohydrates – anabolism – autotrophy – oxygenic – anoxygenic photosynthesis – autotrophic generation of ATP; fixation of CO<sub>2</sub> – Calvin cycle – C<sub>3</sub> – C<sub>4</sub> pathways. Chemolithotrophy – sulphur – iron – hydrogen – nitrogen oxidations – Brief account of methanotrophs in relation to CO<sub>2</sub> fixation.

**Unit – IV**

Microbial respiration and fermentative pathway: Respiratory metabolism – Embden Mayer Hoff pathway – Enter Doudroff pathway – glyoxalate pathway – Krebs cycle – Oxidative and substrate

level phosphorylation – reverse TCA cycles – Gluconeogenesis – Pasteur Effect – Fermentation of carbohydrates – homo and heterolactic fermentations. Cell division – endospore – structure – properties – germination.

#### Unit – V

Spore structure – Function: Cell division – endospore – structure – properties – germination – Microbial development, sporulation and morphogenesis. Hyphae vs yeast forms and their significance. Multicellular organization of selected microbes – Dormancy.

Employability/Entrepreneurship/Skill development

2.	S. Meenakumari	Microbial physiology	1 <sup>st</sup> / 2006	MJP Publishers

#### Reference Book:

1. Microbial physiology and metabolism (1995) D.R. Caldwell, Wm. C.Brown, Publishers. USA
2. Microbial Physiology (1988). A.G. Moat and J.W. Foaster, John Wiley & Sons, New York.

Course Code	Course Title	L	T	P	C
19216SEC14L	Fundamentals of Microbiology Lab	0	0	4	2

## AIM

- To impart knowledge of the **basic principles** of microbiology

## OBJECTIVES

- The goals for this laboratory course is to provide the students with a basic fundamental knowledge of how microorganisms grow, react with specific types of growth media and their biochemical reactions with media used in identification.
- Laboratory procedures are used to show students to learn the vital techniques.

## COURSE OUTCOME:

CO1- practical knowledge about isolation and purification of microbes from various sources.

CO2- Training about staining experiments

CO3- Handling on light and compound microscope.

CO4- Learn essential biochemical analysis

Principles and methods and sterilization – (Wet, dry and cold sterilization)

Direct microscopic observations of bacterial shape – cocci, rods, chains, fungal spores, mycelium, yeast budding.

Preparation of Media: Nutrient broth, Nutrient agar, plates, slants, soft agar. Pure culture technique: Streak plate, spread plate and pour plate methods

Measurement of size of microbes – micrometry method. Motility determination – Hanging drop method.

Isolation and purification of cyanobacteria, actinomycetes, fungi and protozoans.

Staining methods: Simple, Negatives, acid fast, Gram staining, Capsule Metachromatic granular staining, Lactophenol cotton blue staining – Fungal slide preparation.

Measurement of growth – Direct haemocytometer count, viable count – growth curve,

Determination of growth rate and generation time.

Effect of pH, temperature and osmotic pressure on growth of bacteria.

Biochemical test: carbohydrate fermentation – acid – gas production: IMViC test; - Hydrolysis of starch: cellulose, gelatin, casein, catalase test, oxidase, urease test, nitrate reduction – triple sugar iron test, ONPG test, amino acid decarboxylase

Blood grouping

Widal test

Total count of RBC

Total count of WBC

Differential count of WBC

Erythrocyte Sedimentation Rate

Preparation of Buffer; pH measurement (Tris, phosphate, acetate buffer)

## Discipline Specific Elective-I

Course Code	Course Title	L	T	P	C
19216DSC15A	Immunotechnology	5	0	0	4

### AIM:

- Immunotechnology is a diverse and growing discipline that can be defined as the study of the tissues, cells and molecules involved in host defense mechanisms

### OBJECTIVES:

- To understand how the immune system develops, how the body defends itself against disease, and what happens when it all goes wrong.

### COURSE OUTCOMES (CO'S):

- CO1- Learn scope and history of immunology.
- CO2- Study about immune system and lymphatic organs.
- CO3- Learn tumor immunology
- CO4- gain knowledge about various immunological techniques.

### Unit – I

Introduction: History of immunology – types of immunity – Innate and Acquired – Passive and Active - Humoral and cell Mediated Immunity. Lymphoid organs – autoimmunity, physiology of immune response — Immunohaematology

### Unit - II

Antigens and Antibodies: Antigens – structure and properties – types – ISO and allo –haptons; adjuvants – antigen specificity, vaccines and toxoids. Immunoglobulins – structure - heterogeneity – types and subtypes – properties (physico – chemical and biological); theories of antibody production - Complement – structure – components - properties and functions of complement components; complement pathways and biological consequences of complement activation

### Unit - III

Major Histocompatibility complex: Structure and function of MHC and the HLA system. Gene regulation and Ir – genes. HLA tissue and transplantation – tissue typing methods for organ and tissue transplantation in humans; Graft versus host reaction and rejection. Autoimmunity – diseases-mechanism and disease with their diagnosis

### Unit - IV

Tumor Immunology: tumour antigens – immune response to tumors immunodiagnosis of tumors – detection of tumor markers alphafoetal proteins, carcinoembryonic antigen etc. Immunotherapy of malignancy, Hypersensitivity – monoclonal antibody – production and their applications

### Unit - V

Immunological techniques and their principles: In vitro of immunological methods – agglutination, precipitation, complement fixation, Immunofluorescence, ELISA, Radio Immuno Assays. Immunodiffusion, Immunoelectrophoresis, isoelectric focusing – cytotoxicity assay – labeled – antibody technique in light and Electron Microscopy and Immunohistochemistry. Techniques of Immunization – use of adjuvants – separation of lymphocytes – and preparation of Rosette forming cells - In vivo methods – skin tests and immune complex tissue demonstrations - Applications of these methods in diagnosis of microbial diseases.

3. Essentials Immunology (1994) M.Rolt Blackwell Scientific Publication, Oxford

Course Code	Course Title	L	T	P	C
19216DSC15B	Bioremediation and Waste Management	5	0	0	4

#### AIM

- To reduce pollutant levels to undetectable, nontoxic or acceptable levels.

#### OBJECTIVES:

- The **bioremediation** technology offers the potential to treat contaminated soil and groundwater on-site without the need for excavation and thus, it requires little energy input and preserves the soil structure.

#### COURSE OUTCOMES:

CO1- Understanding on the management of solid and liquid wastes

CO2- Learn the principles of remedial measures of recycling, reuse and recover from the wastes.

CO3- Understand the mechanism and role of microbes in the degradation of various pollutants

#### UNIT – I

Wastes– Classification and Quantification – Solid Waste Management and Disposal: Sources and Generation of Solid Waste – characterization, composition and classification. Hazardous Waste Management: Cyanides, Dioxins, Detergents, Plastics, Nylon and Paper. Waste Minimization approaches – Monitoring and Management strategies. Radioactive Waste: Sources, half life of radioactive elements, modes of decay. Effects on Plants, Animal and Man. Low and High-level Radioactive Waste Management – Waste Minimization and Treatment, Radiation standards.

#### UNIT - II

Recycling of Wastes – Types – sources – composition of waste – recycling of waste for Industrial, Agricultural and Domestic Purposes; Recycling of Metals, Reuse, recovery and reduction of paper and plastics; Recycling in Food Manufacturing, Beverages, Apparel, Leather, Paper, Pulp, Chemical and other industries; Fly Ash utilization. Waste Disposal Methods – composting, incineration, pyrolysis, medical waste disposal strategies.

#### UNIT – III

Microbial Activity in Soil and Ground Water, Lithosphere as Microbial habitat, Microorganisms in rock and minerals, Mineral soil and Organic soil. Physiological groups of prokaryotes, Geomicrobial transformations – Biodegradation of carbonates – Biomobilization of silicon, phosphate, nitrogen. Geomicrobiology of fossil fuel, methane, peat, coal and petroleum.

#### UNIT – IV

Principles of Bioremediation – Rapid growth and Metabolism- Genetic plasticity – Metabolic pathways for the degradation of xenobiotics, hydrocarbons – Microbial site characterization – Biodegradation potential – Bioprocess design, optimization – Microbial removal rates – inherent problems associated with biotreatment studies. Microbiological methodologies – Standard biotreatability protocols – Quantification of biodegradation; Biocleaning -Chernobyl radioactive contaminated area - Phytoremediation.

#### UNIT – V

Aerobic Bioremediation: Bioremediation of Surface Soils: Fate and transport of contaminants in the Vadose zone – Biodegradation in soil ecosystems – Types of soil treatment systems – Bioreactors. Subsurface Aerobic Bioremediation: in situ Bioremediation – in situ Bioventing – in situ treatments of

Harbour Sediments and Lagoons. Bioremediation in fresh water and marine systems: Bench and Pilot Scale studies – in situ Bioreactor treatment of sediments – in situ treatment in marine ecosystem. Anoxic/Anaerobic Bioremediation: Anoxic/Anaerobic Processes –Fermentation, Degradation of xenobiotics – Anoxic/Anaerobic bioremediation of hydrocarbons, Phenols, Chlorophenolic compounds, Polycyclic Aromatic Hydrocarbons (PAH), Heterocyclic Compounds, Cyanide, dyes.

## SEMESTER II

Course Code	Course Title	L	T	P	C
19216SEC21	Industrial Microbiology	5	1	0	5

### AIM

To create **industrial** products in mass quantities, often using **microbial** cell factories.

### OBJECTIVE

- There are multiple ways to manipulate a microorganism in order to increase maximum product yields.
- To learn complete knowledge on upstream and downstream processing.

### COURSE OUTCOME

CO1- Students will get knowledge on strain improvement.

CO2- Enable them to work in fermentation industry.

CO3- Students will get idea on upstream and downstream fermentation process

CO4- Economic importance of Bio products

### Unit I

Historical development of industrial microbiology: major classes of products and processes and micro organisms used in industrial processes. Industrially important microbes and their development: Screening methods for industrial microbes –strain selection and improvement – Mutation and recombinant DNA techniques for strain development. Batch culture and continuous culture

### Unit – II

Fermenters – Design of a fermenter, and components – asepsis and containment requirements – body construction and temperature control – aeration and agitation systems – sterilization of fermenter, air supply, and medium; aseptic inoculation methods – sampling methods, valve systems –monitoring and control devices and types of fermenters and its basic functions.

### Unit – III

Downstream processing – extraction, separation, precipitation, filtration, centrifugation, cell disruptions, liquid-liquid extraction, chromatography, recovery & purification, process and quality control.

### Unit – IV

Production of Primary metabolites: Organic acids (citric acid, lactic acid, acetic acid) and Amino acids (glutamic acid, lysine). Production of Vitamins (B2 and B12). Production of Secondary metabolites: Antibiotics: beta-lactams (Penicillins, Cephalosporins), aminoglycosides (streptomycin), macrolides (erythromycin) and Quinones (Tetracycline).

### Unit –V

Bio products: Bio-pesticides, bio-fertilizers, natural bio-preservatives (Nisin), High Fructose Corn Syrup, Bioplastics and biopolymers (Poly Lactic acid, Poly Glutamic acid, Poly hydroxyl alkoanates, Xanthum Gum and Dextran), Biotransformations - steroids and non-steroids. Enzymes - Proteases, amylases, lipases, cellulases, pectinases, glucose isomerase, L-Asparaginase. Production of vaccines and recombinant proteins (Insulin, Streptokinase). Production of Biofuels (Biomethanol, Bioethanol,

Course Code	Course Title	L	T	P	C
19216SEC22	Environmental and Agricultural Microbiology	5	1	0	5

### AIM

To address problems in environmental agricultural practices in microbial communities.

### OBJECTIVES

- To understand the role of Microbes, especially bacteria, are of great importance in the sense that their symbiotic relationship (either positive or negative) have special effects on the ecosystem.
- To improve soil fertility, such as microbial degradation of organic **matter** and soil nutrient transformations.

### COURSE OUTCOME (CO)

CO1- Huge Insights into these precious areas of Environmental microbiology.

CO2- Students able to know detailed idea about biofertilizer production and plantdisease.

CO3- Role ofMicrobes in marine and fresh water environment

CO4- Scope of Recycling of Liquid and Solid wastes

### Unit I

Aerobiology- Significance of air microflora - Microbial air pollution- sources, biological indicators and effects on plants and human beings. Enumeration of bacteria from air, Air sampling devices, Outline of Airborne diseases (Bacterial, Fungal and Viral), Air sanitation. Biogeochemical cycles -Nitrogen, Carbon, Phosphorous, Sulphur, Iron and their importance.

### Unit II

Microbes in marine and fresh water environment – eutrophication – Water pollution – sources and nature of pollutants in water – sewage – treatment of liquid waste – primary, secondary and tertiary treatment – water borne diseases – Assessment of water quality – BOD and COD. Solid waste treatment – saccarification and pyrolysis.

### Unit III

Recycling of Liquid and Solid wastes-Composting-Biogas, Mushroom and SCP production from waste. Biodegradation of complex polymers (Cellulose, Hemicellulose, Lignin, Chitin and Pectin), Bioremediation (*In-situ*, *Ex-situ*, Intrinsic), Bioaugmentation and Biostimulation. Bioleaching (Copper and Uranium) -Xenobiotics degradation (Heavy metals).

### Unit IV

Microbial association with plants - Phyllosphere, Rhizosphere, Mycorrhizae, nitrogen fixing organism – symbiosis, asymbiosis, associate symbiosis – phosphate solubilizers – application of biofertilizers in agriculture. Biology of nitrogen fixation – genes and regulations in *Rhizobium*.

### Unit V

Bacterial, viral and fungal plant pathogens. Morphological, physiological changes with reference to disease establishment in plants – plant protection – phenolics – phytoalexins and related compounds. Disadvantages of chemical pesticides. Microbial pesticides- types, mechanisms, advantages and limitations.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19216SEC23	Clinical Microbiology	5	0	0	4

### AIM

To introduce basic principles and application the relevance of **clinical** disease.

### OBJECTIVE

To learn bacteria, viruses and other pathogens related with infectious diseases in humans.

### OUTCOME

CO1-Learn normal flora of human body.

CO2- Get information about various sources of infection and transmission.

CO3- Epidemiology, pathogenesis and treatment of bacterial, fungal and viral diseases.

CO4- Learn Strategy of antimicrobial therapy.

### Unit – I

Normal microbial flora of human – Host – parasite interaction: The Process of infection. Infective syndromes and diagnostic procedure - Strategy of antimicrobial therapy – Epidemiology and control of community infections.

### Unit – II

General properties, epidemiology, transmission, pathogenesis, Symptoms, laboratory diagnosis, prevention and Treatment of the following Bacterial diseases:a) Pneumonia, b) Whooping-cough, c) Meningitis d) Diphtheria e) Pulmonary Tuberculosis, f) Leprosy, g) Typhoid, h) Cholera i) Tetanus, j) Syphilis, k) Gonorrhoea, d) Dental carries.

### Unit - III

Mycobacterium: Mycobacterium tuberculosis, Mycobacterium leprae. Spirochaetes, Mycoplasma, Actinomycetes, Helicobacter, Compylobacter and other miscellaneous bacteria, Rickettsia, Chlamydia.

### Unit – IV

General properties, epidemiology, transmission, pathogenesis, Symptoms, laboratory diagnosis, prevention and Treatment of the following viral diseases: Small pox, Influenza, Measles, Poliomyelitis, Common cold(Rhino virus), Hepatitis, Encephalitis, Rabies, AIDS.

### Unit – V

Pathogenic Fungal diseases- Superficial, Subcutaneous and systemic mycoses, **Protozoa**- Amoebiasis, Malaria, **Helminthes**-Liverfluke, Filariasis, **Hospital acquired infections**:Hospital infections Principles of control – Committee – functions; Hospital waste disposal – Ethical committee – functions.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19216SEC24L	Industrial, Clinical and Environmental and Agricultural Microbiology Lab	0	0	4	2

### AIM

To provide technical knowledge on collection and processing of industrial, clinical and environmental samples.

### OBJECTIVE

- To test specimens from patients for microorganisms
- To prepare them to work in clinical laboratory.
- To learn the technique for isolation and identification of pathogens.

### COURSE OUTCOME

CO1- Get practical knowledge in specimen collection and processing

CO2- Become technically expert which will helpful to work in clinical laboratory

CO3- Learn practical understanding of diagnosis of pathogens.

CO4- Acquire knowledge on fermentation process

CO5- Learn bio fertilizer and inoculants production

### Industrial and Clinical Microbiology

1. Citric acid fermentations by *Aspergillus niger*
2. Alcoholic fermentation of fruit juice by yeast (*Saccharomyces cerevisiae*).
3. Immobilization techniques using any microbe- alginate beads
4. Hydrolysis of starch
5. Testing sensitivity of bacteria to antibiotics and Assessing minimum inhibitory concentration(MIC) of antibiotics
6. Isolation and identification of certain pathogenic microbes from urine
7. Hemoglobin content of blood
8. Serum analysis, sugar analysis in blood and urine

### Agricultural and Environmental Microbiology

1. Isolation and enumeration of soil microorganisms (fungi, bacteria and actinomycetes)
2. Isolation and staining of vesicular arbuscular mycorrhizae from plant.
3. Isolation and culturing of Rhizobium from root nodules of higher plant
4. Mushroom cultivation
5. Isolation and identification of air-borne microbes
6. Effects of high salt concentration on microbial growth
7. Determination of BOD and COD of polluted/pond water.
8. Bacterial examination of drinking water by membrane filter technique and MPN

Visit to commercial production units – ethanol, acetic acid, vaccine and Spirulina

Visit to CFTRI/DFRL/FOOD INDUSTRIES and report should be written in the practical record

## Discipline Specific Elective-II

Course Code	Course Title	L	T	P	C
19216DSC25A	Biomolecules	5	0	0	4

### AIM

To teach students about important biomolecules essential to life processes.

### OBJECTIVES:

- To learn the principles of organic chemistry in the structure and function of important biomolecules.
- To understand the structure and function of important biological molecules such as DNA, RNA and some enzymes.
- To understand biological processes such as protein biosynthesis, DNA replication and RNA biosynthesis.

### COURSE OUTCOME:

CO1- They acquire knowledge in the quantitative and qualitative estimation of biomolecules

CO2- They study the influence and role of structure in reactivity of biomolecules

CO3- Students have a thorough understanding on the role of biomolecules and their functions.

### Unit I

Carbohydrates: Structure and biological functions of Mono, di and Polysaccharides. Types of polysaccharides: Homo polysaccharides -chitin, fructans, mannans, xylans, and galactans. Structure and biological importance of Hetero polysaccharides- Glycoprotein – bacterial cell wall polysaccharides, marine polysaccharides and Lectins.

### Unit II

Aminoacids and its general properties. Classification of amino acids. Proteins– classification and general properties. Orders of protein structure, Primary- Secondary structure– the  $\alpha$ -helix,  $\beta$ -pleated sheet. Protein sequencing methods.

### Unit III

Lipids: Definition and classification of lipids. Biological significance of lipids. Types of Fatty acids-Essential, Non essential. Structure and biological functions of phospholipids, sphingolipids, glycolipids. Steroids – structure and functions of cholesterol, bile acids, sex hormones, ergosterol. Structure and biological role of prostaglandins, thromboxanes and leukotrienes.

### Unit IV

Nucleic acid: Structure of purines, pyrimidines, nucleosides and nucleotides. DNA double helical structure. A, B and Z forms of DNA. Properties of DNA- Density, viscosity, hypochromicity, denaturation

and renaturation. DNA sequencing– chemical and enzymatic methods. Chemical synthesis of DNA. RNA– types and biological role- Secondary, tertiary structures of RNA.

## Unit V

Vitamins: Definition and Classification - Source, Structure and biological role - Daily requirements and deficiency manifestation of fat soluble vitamins and water soluble vitamins.

## SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
19216DSC25B	Genomics and Proteomics	5	0	0	4

## AIM

To monitor the properties of the entire complement of proteins from a given cell or organism,

## OBJECTIVES:

To gain the knowledge and analyze the varying proteomes of an organism at different times in order to highlight differences between them.

## COURSE OUTCOME:

CO1- Students gain the knowledge about the interactions between the proteins

CO2- Get the information to predict cell behavior or develop drug targets.

CO3- Rapidly evolving scientific area into *genomes*, proteomes and databases

CO4- Learn to store various data NCBI, DDBJ and EMBL

### Unit I

Genomics: genetic and physical maps, physical mapping and map-based cloning, choice of mapping population, simple sequence repeat loci, southern and fluorescence in situ hybridization(FISH) for genome analysis, chromosome microdissection, molecular markers in genome analysis

### Unit II

Genome sequencing: genome sizes, organelle genomes, genomic libraries, strategies for genome sequencing, packaging, transfection and recovery of clones, application of sequence information for identification of defective genes. Pharmacogenetics, cancer genetics; immunogenetics; mapping of human genome; somatic cell genetics; DNA polymorphism in mapping; structure and function; biochemical genetics; polygenic inheritance

### Unit III

Proteomics: Sample preparation, Gel-based proteomics - two-dimensional gel electrophoresis (2-DGE), two-dimensional fluorescence difference in-gel electrophoresis (DIGE), Staining methods, PF-2D, Tandem FPLC, Mass spectroscopy: basic principle, ionization sources, mass analyzers, different types of mass spectrometers (MALDI-TOF Q-TOF, LC-MS).

### Unit IV

Nuclear magnetic resonance spectroscopy (NMR), basic principles, chemical shift, spin-spin interaction, NOE, 2D-NMR, NOESY, COSEY. X-ray Crystallography: Principle of X-ray diffraction, scattering vector, structure factor, phase problem, reciprocal lattice and Ewald sphere, Miller indices, Zone axes, crystal lattice, Lane Equations, Bragg's law, special properties of protein crystals, model building, refinement and R-factor.

### Unit V

Protein Engineering: Protein sources, Industrial and medical application of proteins, different expression of proteins for large scale purifications, protein engineering strategy, rational and random mutagenesis. Applications of protein engineering-protein in Chemical and Medical Industries: Generation

of heat stable, pH stable enzymes, application in vaccine development, drug development, sensor development.

Course Code	Course Title	L	T	P	C
19216RMC26	Research Methodology	3	0	0	2

**AIM:**

To systematically solve a research problem

**OBJECTIVES:**

- To learn and practice the literature survey aspects of projects and prepare the scope and goal of the proposed project.
- To learn, practice, improve the research presentation skill.

**COURSE OUTCOMES:**

- CO1- Understanding research questions and tools
- CO2- Experience in scientific writings
- CO3-Practice in various aspects of scientific publications
- CO4-Inculcation of research ethics

**Unit I**

Research Selection of problem-stages in the execution of research: choosing a topic to publication-preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal ; standard of research journals – Impact factor.

**Unit II:**

Statistical method -Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

**Unit III**

Coparision of means, chisquard test, student test (ANOVA ‘portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

**UNIT IV:**

Chromatography – priniciple, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, Isoelectric focusing, plused field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

**UNIT V:**

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

**Employability/Entrepreneurship/Skill development**

### SEMESTER III

Course Code	Course Title	L	T	P	C
19216SEC31	Microbial Genetics	6	1	0	6

#### AIM

- To study the gene transfer from one organism to another.

#### OBJECTIVE

- To understanding molecular biological studies, the manipulation of eukaryotic organisms, and for practical applications (biotechnology) in diverse areas of life sciences.
- To provide relatively simple system for studying **genetic** phenomenon and thus useful to other higher organisms.

#### COURSE OUTCOME

CO1- Understood genome organization of model organisms.

CO2 - Learn molecular mechanisms that underlie mutations.

CO3- Study about transformation, transduction and conjugation.

CO4- Are able to describe the nature of the transposable elements

#### Unit I

Trends in Gene discovery. Nucleic acids as genetic information carriers: concept of gene – allele, cistron, replicon – origin of mutation – mutagens – physical, chemical and biological agents. Induced mutation types – mechanisms of mutation induction – suppression of mutations – Intergenic and intragenic suppression.

#### Unit II

Transformation- Griffith experiments, natural or artificial competence transformation in *Bacillus*, *E. coli*, *Haemophilus* and *Streptococcus* – mechanism of recombination – genetic mapping.

#### Unit III

Bacterial conjugation – F plasmid – structure and functions. Origin of Conjugation – Hfr and F' strains. Interrupted and uninterrupted mating – time map and recombination map. Conjugation in *E. coli*, *Pseudomonas*. Plasmids, F-factors description and their uses in genetic analysis. Colicins and col factors.

#### Unit IV

Transduction – generalized and specialized transduction – P1 phage – mechanism of gene transfer through lambda and P1 phages. HFT and LFT lysate. Co- transduction – transduction mapping.

#### Unit V

Regulation of bacterial gene expression – Operon model – lac, ara, trp and his operons, operon concept, catabolite repression, instability of bacterial RNA, positive and negative regulation, inducers and co-repressors. Attenuation – lac and trp operons; Human genetics: pedigree Analysis, Genetic disease through gene map, Micro array techniques, Single nucleotide polymorphisms (SNPs)

#### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
17216SEC32	Microbial Biotechnology	6	1	0	6

## AIM

- To adapt the **microbial** metabolism, so that the product is produced at maximum theoretical yield, whereas also ATP is produced to support growth and maintenance.

## OBJECTIVES

- To develop industrial processes for production of antibiotics, enzymes etc.
- To develop gene surgery and gene therapy to cure genetic disease.
- To create improved varieties of plants and animals through genetic engineering and plant breeding.

## COURSE OUTCOME

CO1- Developed an understanding in recombinant DNA technology.

CO2- candidate to recollect the basics of Molecular Genetics and apply a cognitive thinking.

CO3-Possibilities ranging from the treatment of human diseases to develop novel medicines

### Unit I:

Nucleic acids – Types- DNA, RNA- structures, functions. Vectors – plasmids (Ti plasmids, pBR322, pSC101, pUC), cosmids, bacteriophages- Structures and functions. DNA replication-process,enzymology and inhibitors of replication. Enzymes-DNA polymerases, RNAses, Ligases, Taq polymerases, Topoisomerases-uses and applications. DNA damage-Types (deamination,oxidative damage, alkylation, pyrimidine dimmers. Repair mechanisms.

### Unit II:

Gene-definition, concepts, structure and functions. Cloning techniques, Genomic library. RAPD, RFLP, AFLP and SSR marker in molecular studies and its application. Principles and techniques of Nucleic acid hybridization, protein sequencing and blotting techniques, PCR, DNA fingerprinting.

### Unit III:

Biotechnology-Definitions, Concepts and Scope, History and achievements. Screening for products from microorganisms – Inoculum development – Long term preservation of microbes. Biological approaches in microbial production of aminoacids, organic acids, antibiotics, vitamins, steroids and sterols.

### Unit IV:

Strain improvement – Applications of mutation, Recombination and DNA Technology. Recombinant DNA Technology – Principles and applications, enzymology of process. Restriction enzymes – Types, recognition sites and specificity.

### Unit V:

Biotransformation – Strategies and techniques involved in the process. Immobilization methods – advantages, immobilization production of Mabs. Insulin, somatotropin, IFNs, Vaccines by cloning. Microalgal biotechnology – Dunaliella, Biotechnological potentials of microalgae as food, feed, fuel and pharmaceuticals. **Employability/Entrepreneurship/Skill development**

**Text Books:**

2. Berg. M.M. and Howe, M.M(1989). Mobile DNA. American society for Microbiology, Washington D.C.
3. Brown, T.(1991) Essential Molecular Biology – A Practical approach. Vol.I  
Vol II Oxford Univ. Press. Oxford.

Course Code	Course Title	L	T	P	C
19216SEC33L	Microbial Genetics and Biotechnology Lab	0	0	5	3

**AIM:**

- To understand the **microbial genes**, genomes, and gene expression and evolution of microorganisms and their interactions with the environment.

**OBJECTIVES**

- To provide 'hands-on' experience in the investigation and manipulation of microorganisms and their **genes**.
- To develop the ability to think critically and devise **genetic** strategies that might be used to address interesting biological problems.

**OUTCOMES**

CO1- Has acquired a fairly good knowledge of the tools and the methods for genetic engineering

CO2- Separation of DNA and Protein by gel electrophoresis.

CO3- Students can perform isolation of DNA, amplification of any gene by PCR

CO4- Hands on experience on Molecular genome isolation and identification techniques

**Experiments**

1. Isolation of plasmid DNA from bacteria by Spectrophotometric assay.
2. Isolation of chromosomal DNA from bacteria by Agarose gel electrophoresis.
3. Development of competent cells in *E. coli*.
4. Separation of protein by SDS PAGE
5. Isolation of antibiotic resistant auxotrophic mutants.
6. Separation of proteins using Column chromatographic techniques (Gel filtration).
7. Immobilization techniques – alginate beads.
8. Estimation of citric acid and ethanol. SKILDEVELOPEMENT

**DEMONSTRATION**

1. Gel Electrophoretic methods.
2. UV transillumination

Course Code	Course Title	L	T	P	C
19216SEC34A	Plant Tissue Culture	5	0	0	4

### AIM

- To understand the knowledge on culturing **plant** seeds, organs, explants, tissues.

### OBJECTIVE

- To understanding the basic process of preparing media for plant tissue culture.
- To learn micronutrients, macronutrients and organic elements.

### COURSE OUTCOME

CO1- To inculcate the basics of plant tissue culture

CO2- To impart the knowledge about the various aspects of tissue culture and their applications

CO3- Learn the role of micro and macro- nutrients in tissue culture plantation.

### Unit I

Introduction - history, scope and concepts of basic techniques in plant tissue culture. Laboratory requirements and organisation. Sterilization-filter, heat and chemical. Media preparation - inorganic nutrients, organic supplements, carbon source, gelling agents, growth regulators and composition of important culture media (MS, White,s and Gamborg's media).

### Unit II

Cell, tissue and organ culture - Isolation of single cells, selection and types of cells, tissue explants and organs for culture - paper, raft nurse technique, plating method, microchamber techniques, cell suspension cultures - batch, continuous, chemostat culture - synchronization of suspension culture, cellular totipotency, cytological, cytochemical and vascular differentiations - totipotency of epidermal and crown – gall cells.

### Unit III

Micropropagation - clonal propagation of elite germplasm, factors affecting morphogenesis and proliferation rate, technical problems in micropropagation. Organogenesis - formation of shoots and roots - role of growth regulators and other factors, somaclonal and gametoclonal variations. Somatic embryogenesis - Process of somatic embryogenesis, structure, stages of embryo development, factors affecting embryogenesis, synthetic seeds.

### Unit IV

Haploid production - androgenesis, gynogenesis - techniques of anther culture – segmentation pattern in microspore - isolated pollen culture - plantlets from haploids - diploidisation - factors influencing androgenesis, haploidy through gynogenesis, haploid

mutants, utilization of haploids in plant breeding. Protoplast culture: Isolation of protoplasts - mechanical and enzymatic sources, culture of protoplasts, viability. Protoplast fusion - spontaneous, mechanical, induced electrofusion, selection of somatic hybrids, cybrids, importance.

## Unit V

Cryopreservation and gene bank - Modes of preservation, preparation of materials for deep freezing, cryoprotectors, storage strategies, assessment of successful cryopreservation, application and limitations. Application of tissue culture in forestry, horticulture, agriculture and pharmaceutical industry, transgenic plants.

Course Code	Course Title	L	T	P	C
19216SEC34B	Nanotechnology	5	0	0	4

## AIM

- To provide basic knowledge in the interface between chemistry, physics and biology on the nanostructural level with a focus on biotechnological usage.

## OBJECTIVE

- Nanoscience is the study of materials which are in nanoscale range. Conversion of any material in nanoscale results in alteration of its physicochemical, biological, mechanical, optical, electronic, etc. properties.
- To learn advance research and promoting innovation through applications of nanobiotechnology to address issues in health, energy, agriculture and environment.

## COURSE OUTCOME

CO1- Describe the basic science behind the properties of materials at the nanometre scale

CO2- Advanced experimental and computational techniques for studying nanomaterials.

CO3- Learn clearly and effectively using conventional scientific and mathematical notation.

CO4- Systematically solve scientific problems related specifically to nanotechnological materials.

### Unit I Introduction to bionanotechnology

Milestones in History – bionanotechnology – concept and future prospects – application in Life Sciences. Terminologies – nanotechnology, bionanotechnology, nanobiomaterials, biocompatibility, nanomedicine, nanowires, quantum Dots, nanocomposite, nanoparticles, nanosensors. Biotechnology to bionanotechnology, natural bionanomachines. Current status of bionanotechnology.

### Unit II Synthesis of nanoparticles

Molecular nanotechnology – nanomachines – collagen. Uses of nanoparticles – cancer therapy – manipulation of cell and biomolecules. Cytoskeleton and cell organelles. Types of nanoparticles production – physical, chemical and biological. Microbial synthesis (bacteria, fungi and yeast) of nanoparticles – mechanism of synthesis.

### Unit III Types of nanoparticles and methods of characterization

Nanoparticles – types, functions – Silver, Gold and Titanium. Physical and chemical

properties of nanoparticles. Characterization of nanoparticles – UV- Vis spectroscopy, particle size analyzer, Electron Microscopy – HRTEM, SEM, AFM, EDS, XRD. Other tools and techniques required for bionanotechnology: rDNA technology, site directed mutagenesis, fusion proteins, X- Ray crystallography, NMR. Bioinformatics: molecular modeling, docking, computer assisted molecular design.

#### **Unit IV Applications of bionanotechnology**

Drug and gene delivery – protein mediated and nanoparticle mediated. Uses of nanoparticles in MRI, DNA and Protein Microarrays. Nanotechnology in health sectors. Nanomedicines, Antibacterial activities of nanoparticles. Nanotechnology in agriculture. Toxicology in nanoparticles – Dosimetry.

#### **Unit V Merits and demerits of nanoparticles**

Advantages of nanoparticles – drug targeting, protein detection, MRI, development of green chemistry – commercial viability of nanoparticles. Disadvantages – pollution and health risks associated with nanoparticles.

#### **SKILDEVELOPMENT**

## SEMESTER IV

Course Code	Course Title	L	T	P	C
19216SEC41	Pharmaceutical Microbiology	6	1	0	6

### AIM

To ensure safety and efficacy of **pharmaceutical** products.

### OBJECTIVES

To test and ensure sterility, determine effectiveness, contamination or bioburden, analyze toxins (exotoxin or endotoxin) of the drugs.

### COURSE OUTCOME

CO1- Acquired detailed knowledge of antimicrobial agents, their mechanism of action.

CO2- Developed understanding of different types of disinfectants/antiseptics bactericidal and bacteriostatic actions

CO3- Regulatory practices, biosensors and applications in Pharmaceuticals.

CO4- Quality Assurance and Validation.

### Unit – 1 Antibiotics and synthetic antimicrobial agents

Antibiotics and synthetic antimicrobial agents, Antifungal antibiotics, antitumor substances. Peptide antibiotics, Chloramphenicol, Sulphonamides and Quinolone antimicrobial agents. Chemical disinfectants, antiseptics and preservatives.

### Unit – 2 Mechanism of action of antibiotics

Mechanism of action of antibiotics (inhibitors of cell wall synthesis, nucleic acid and protein synthesis). Molecular principles of drug targeting. Drug delivery system in gene therapy Bacterial resistance to antibiotics. Mode of action of non – antibiotic antimicrobial agents. Penetrating defenses – How the antimicrobial agents reach the targets (cellular permeability barrier, cellular transport system and drug diffusion).

### Unit – 3 Microbial production and Spoilage of pharmaceutical Products

Microbial contamination and spoilage of pharmaceutical products (sterile injectibles, non injectibles, ophthalmic preparations and implants) and their sterilization. Manufacturing procedures and in process control of pharmaceuticals. Other pharmaceuticals produced by microbial fermentations (streptokinase, streptodornase). New vaccine technology, DNA vaccines, synthetic peptide vaccines, multivalent subunit vaccines. Vaccine clinical trials.

### Unit – 4 Regulatory practices, biosensors and applications in Pharmaceuticals

Financing R&D capital and market outlook. IP, BP, USP. Government regulatory practices and policies, FDA perspective. Reimbursement of drugs and biologicals, legislative perspective. Rational drug design. Immobilization procedures for pharmaceutical applications (liposomes). Macromolecular, cellular and synthetic drug carriers. Biosensors in pharmaceuticals. Application of microbial enzymes in pharmaceuticals.

## **Unit – 5: Quality Assurance and Validation**

Good Manufacturing Practices (GMP) and Good Laboratory Practices (GLP) in pharmaceutical industry. Regulatory aspects of quality control. Quality assurance and quality management in pharmaceuticals ISO, WHO and US certification. Safety in microbiology laboratory.

Employability/Entrepreneurship/Skill development

### **BOOKS/REFERENCE**

1. Pharmaceutical Microbiology – Edt. by W.B.Hugo & A.D.Russell Sixth edition. Blackwell scientific Publications.

Course Code	Course Title	L	T	P	C
19216SEC42	Biostatistics and Bioinformatics	6	1	0	6

### AIM

To provide the statistical, analytical and computational training

### OBJECTIVES

To advance statistical science and its application to problems of human health and disease, with the ultimate goal of advancing statistics.

To designing studies and analyzing data from research problems.

### COURSE OUTCOME

CO1- Learn about probability/variable analysis and collection, classification of data

CO2- Basic ideas of significance test (T-test, ANOVA)

CO3- Understanding about the information on the search engines and various software tools

CO4- Scope of Biological databases related software used in the bioinformatics

### Unit I – Definitions

Scope of Biostatistics, probability analysis – variables in Biology, collection, classification and tabulation of data – Graphical and diagrammatical representation – scale diagrams – Histograms – frequency polygon – frequency curves. Measures of central tendency – arithmetic Mean, Median and Mode – calculation of mean, median, mode in series of individual observations, discrete series, continuous open – end classes. Measure of dispersion – Standard Deviation and Standard curves, Measures of central tendency on Variance.

### Unit II – Correlation and regression

Simple correlation – Correlation coefficient – Regression simple linear regression. Basic ideas of significance test – Hypothesis testing level of significance – Test based on student ‘t’ ‘chi’ square and goodness of fit. ‘F’ test – ANOVA.

### Unit III – Databases

Biological resource databases – Examples and application – Sequence Analysis – protein and nucleic acid.

### Unit IV – Genomics and proteomics

Sequencing genomes – sequence assembly – genome on the web – annotating and analyzing genome sequences. Proteomics pathway databases.

### Unit V – Sequence analysis

Pair wise sequence comparison, protein data bank, SWISS-PROT, Genbank – sequence queries against biological databases – BLAST and FASTA – multifunctional tools for sequence analysis, multiple sequence alignments, phylogenetic alignment – profiles and motifs.

### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19216SEC43L	Pharmaceutical Microbiology Lab	5	0	0	4

### AIM

To provide a knowledge and understanding of **pharmaceutical microbiology** relevant to healthcare

### OBJECTIVES

To gain the knowledge on culture and identification of microorganism, important human pathogens, microbial growth conditions, effect of antimicrobial agents, development of resistance against antimicrobial agents, sterilization and disinfection, bacterial virulence factors, production and control of vaccines.

### COURSE OUTCOME

CO1 - Aseptic condition relevance to healthcare and the pharmaceutical industry.

CO2 - Knowledge and understanding of the practical aspects of pharmaceutical microbiology.

CO3 - Perform practicals on antimicrobial activity

CO4- Learn the production of antibiotics from microbes.

### Lab Work

1. Introduction to equipment and glassware used in microbiology laboratory (BOD, Incubator, laminar flow, aseptic hood, autoclave, hot air sterilizer, deep freezer, etc.,)
2. Study of morphology of different microbes
3. Preparation of various culture media (Determination of microbial colony characteristics)
4. Isolation of pure cultures by streak plate, spread plate & pour plate techniques.
5. Enumeration of bacteria by direct microscopic count.
6. Motility test by Hanging drop method
7. Microbiological assay of antibiotics by cup plate method and other methods
8. Characterization of microbes through Bio chemical reactions (IMViC)
9. Evaluation of any disinfectant by phenol coefficient test
10. Study of Oligodynamic action (of metals on bacteria)
11. Preservation of microorganisms (slant and stab cultures)
12. Sterility testing of Pharmaceuticals
13. Microbiological Analysis of Water.
14. Production of antibiotics using microbes

### SKILDEVELOPMENT

Course Code	Course Title	L	T	P	C
19216SEC44A	Bioethics and IPR	5	0	0	4

### AIM

- To understand Bioethics and Human Rights in order to assist their application and promotion in the areas of science

### OBJECTIVES

- To encourage investigation, analysis and studying the **bioethical** principles, values, concepts, and social and juridical implications contained in the Universal Declaration on **Bioethics**.

### COURSE OUTCOME

CO1- Students will gain awareness about *Intellectual Property Rights (IPRs)*

CO2- To take measure for the protecting their ideas

CO3- Able to develop business strategies by taking account of *IPRs*

CO4- Able to assists in technology up gradation and enhancing competitiveness.

## Unit I

**Bioethics** Concept, philosophical considerations, epistemology of science, ethical terms, principles and theories and relevance to biotechnology. Ethics and the law issues - genetic engineering, stem cells, cloning, medical techniques, transhumanism and bioweapons. Research concerns - animal rights, ethics of human cloning, reproduction and stem cell research.

## Unit II

Emerging issues - biotechnology's impact on society, DNA on the witness stand and use of genetic evidence in civil and criminal court cases. Challenges to public policy, regulations, improving public understanding of biotechnology products to correct misconceptions.

## Unit III Introduction to IPR & Legal Protection

Basics of patents, types of patents, Indian Patent Act 1970, recent amendments, filing patent application, precautions before patenting – disclosure and non-disclosure. WIPO treaties, Budapest treaty, PCT and implications, role of a country patent office and procedure for filing a PCT application. Types of IP - patents, trademarks, copyright & related rights, industrial design, traditional knowledge, geographical indications and international framework for the protection of IP. Introduction to history of GATT, WTO, WIPO and TRIPS. Global scenario of patents and Indian position, patenting of biological materials. IP as a factor in R&D and IP relevance to Biotechnology.

## Unit IV Patent Filing and Infringement

Patent application - forms and guidelines, fee structure and time frames. Types of patent applications, provisional and complete specifications, PCT and convention patent applications. International patenting - requirement, procedures and costs. Financial assistance for patenting and introduction to existing schemes. Publication of patents -gazette of India, status in Europe and US. Patenting by research students, lecturers and scientists. University/organizational rules in India and abroad, credit sharing by workers and financial incentives. Patent infringement - meaning, scope, litigation, case studies and examples.

## **Unit V Biosafety**

Introduction and historical background. Introduction to biological safety cabinets, primary containment for biohazards, biosafety levels, biosafety levels of specific microorganisms, recommended biosafety levels for infectious agents and infected animals. Biosafety guidelines by Government of India. Definition of GMOs and LMOs. Roles of Institutional Biosafety Committee, RCGM, GEAC etc. for GMO's applications in food and agriculture. Environmental release of GMOs, risk assessment; risk management and communication. Overview of national regulations and relevant international agreements including Cartagena protocol.**SKILDEVELOPMENT**

Course Code	Course Title	L	T	P	C
19216SEC44B	Molecular Immunology	5	0	0	4

## AIM

- To learn **immunological** response at the **molecular**, cellular and functional levels of innate and acquired **immunity**. It includes immune regulation, cell signaling and Immunochemistry.

## OBJECTIVES

- To identify the cellular and **molecular** basis of immune responsiveness.
- To describe the roles of the immune system in both maintaining health and contributing to disease.
- To understanding of humoral and cellular **immunity** and their relative significances.

## COURSE OUTCOME

CO1 - Able to identify the cellular and molecular basis of immune responsiveness.

CO2- Learn about Biosensor assays for assessing ligand –receptor interaction.

CO3- Rationale for vaccine design about new generation antibodies

CO4- Multi-gene organization of immunoglobulin gene

### Unit I Fundamental Concepts and Anatomy of the Immune System

Terminology – Antigen, immunogen, hapten, allergen, tolerogen, super antigens, antibody, immunoglobulin, antigenicity, immunogenicity. Self & nonself, innate & acquired immunity. Haematopoiesis. Organs, tissues, cells and mediators of immune system - primary lymphoid organs, secondary lymphoid tissues, lymphocytes, cytokines and lymphokines. Lymphatic system, lymphocyte circulation and lymphocyte homing. Mucosal and Gut associated lymphoid tissue (MALT&GALT) and mucosal immunity. Principles of cell signaling.

### Unit - II Immune Responses Generated by B and T lymphocytes

**B cell:** B cell development, maturation, activation and differentiation. B cell receptor and determinants. B cell subsets. Immunoglobulins - basic structure, classes & subclasses of immunoglobulins, antigenic determinants, multigene organization of immunoglobulin genes and immunoglobulin super gene family. Generation of antibody diversity.

**T cell:** T cell development, maturation, activation and differentiation. T cell receptor and determinant. T cell subsets. TCR complex. Antigen processing and presentation - endogenous antigens, exogenous antigens, non-peptide bacterial antigens Cell to cell co-operation and hapten-carrier system.

### Unit - III Immune Response

**Recognition & response:** Non specific and Specific. **Nonspecific:** Natural built-in barrier, phagocytosis. Complements, natural killing, inflammatory response. **Specific:** HI & CMI.

Antigen recognition and response. Major Histocompatibility Complex - MHC genes, MHC in immune responsiveness and disease susceptibility. HLA typing. Kinetics of immune response and memory. **Unresponsiveness:** tolerance, suppression and potentiation.

#### **Unit - IV Vaccinology**

Active, passive and combined immunization. Live, killed, attenuated, plasma derived, sub unit, recombinant DNA, protein based, plant-based, peptide, anti-idiotypic and conjugate vaccines – production & applications. Role and properties of adjuvants & ISCOMS. Antibody genes and antibody engineering - chimeric and hybrid monoclonal antibodies, catalytic antibodies and generation of immunoglobulin gene libraries.

#### **Unit - V Clinical Immunology**

Immunity to infection, bacteria, viral, fungal and parasitic infections (with examples from each group). Hypersensitivity – Type I, II, III and IV. Autoimmunity and types of autoimmune diseases. Mechanism and role of CD4<sup>+</sup> T cells, MHC and TCR in autoimmunity. Treatment of autoimmune diseases. Transplantation – immunological basis of graft rejection, clinical transplantation and immunosuppressive therapy. Tumor immunology, tumor antigens, immune response to tumors and tumor evasion of the immune system. Cancer immunology and immunotherapy. Immunodeficiency - primary immuno - deficiencies, acquired or secondary immuno – deficiencies.

Skildevelopment.

Course Code	Course Title	L	T	P	C
19211OEC	Writing for the Media	4	0	0	4

**AIM:**

- To equip students to enter into the realm of mass media.

**OBJECTIVE:**

- To comprehend the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**OUTCOME:**

- Understand the intricacies of mass media
- Learn to write for the media

**UNIT-I**

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluation news.

**UNIT-III**

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

**UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical SKILDEVELOPEMENT.

**Reference Book:-**

Author	Title of the book	Edition / Year	Publisher
Susan	Journalism		
John Hogenberg	Professional Journalism	2012	
M.James Neal	News Writing and Reporting		Surjeet Publication
M.V Komath	The Journalist's Handbook		
D.S Mehta	Mass Communication & Journalism		

Course Code	Course Title	L	T	P	C
19212OEC	Applicable Mathematical Techniques	4	0	0	4

**AIM:**

- To acquaint with the basic concept of Interpolation.

**OBJECTIVES:**

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

**OUTCOMES:**

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

**UNIT I**

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

**UNIT II**

Assignment Problems

**UNIT III**

Replacement Problems

**UNIT IV**

Decision Analysis

**UNIT V**

Game Theory

**SKILDEVELOPEMENT**

**References**

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Course Code	Course Title	L	T	P	C
19213OEC	Biomedical Instrumentation	4	0	0	4

**AIM:**

- To understand the concepts and application of electronic Instrumentation in the Medical field.

**OBJECTIVE:**

- Understanding basic principles and phenomena in the area of medical diagnostic instrumentation,
- Theoretical and practical preparation enabling students to maintain medical instrumentation

**OUTCOMES:**

- Define basic medical terms and physical values that can be handled by medical instrumentation,
- Describe methods and implementation of electrical and nonelectrical medical parameters diagnostic,
- demonstrate measuring of basic medical parameters,
- Calculate basic parameters of the equipment for using in electro diagnostic and electro therapy,
- Apply safety standards and select disposal method and procedures for electrical diagnostic equipment.

**UNIT – I: BIO ELECTRIC SIGNALS AND ELECTRODES**

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

**UNIT – II: RECORDING SYSTEM AND RECORDERS**

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

**UNIT – III: MEASUREMENT AND ANALYSIS TECHNIQUES**

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

**UNIT – IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS**

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

**UNIT – V: ADVANCED BIO MEDICAL SYSTEMS**

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

**SKILDEVELOPEMENT**

**Books for Study**

1. R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)
2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

**Book for Reference**

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
19214OEC	Open Elective-Green Chemistry	4	0	0	2

**Aim:**

- To reduce the soil and water pollution in environment.

**Objectives:**

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

**Outcomes:**

- To understand the environmental status and evolution.
  - To know about the Pollution and its prevention measures.
  - To familiarize the green chemistry.
  - To learn about the bio-catalytic reactions.
  - To understand about the vitamins and antibiotics.

**Unit I - Introduction**

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

**Unit II - Principles**

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

**Unit III - Bio Catalytic Reactions**

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Trends.

**Unit IV - Green House Effect**

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

**Unit V - Green Analytical Methods**

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

**SKILDEVELOPEMENT**

**References:**

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	Course Title	L	T	P	C
19220OEC	M-Marketing	4	0	0	4

## OBJECTIVES

- Understand Mobile Business strategies.
- To understand Mobile marketing tools and techniques.
- To know Mobile technologies.

## OUTCOMES

- Upon Completion of the course, the students should be able to:
- Analyze various mobile marketing strategies.
- Market Mobile based Applications.
- Apply various tools in mobile marketing.

### UNIT I Introduction

Mobile Marketing Campaign, Fortune 500 and Mobile Marketing, consumers engagement with mobile, Terminologies.

### UNIT II Businesses Vs mobile marketing

classic mistakes in mobile marketing, laying foundation for successful mobile marketing campaign, understanding technology behind mobile marketing – Android, iOS, Windows Phone.

### UNIT III

Strategic thinking about Mobile marketing campaign, Mobile Marketing Tools – setting up mobile website for different firms, using SMS, MMS and apps to drive customers to business and other ways to attract customers.

### UNIT IV Location Based Marketing

LBS, NFC, Bluetooth and LBA, 2D codes, Tablet, Other Mobile Applications, Business Firms connecting to customers using Mobile – case study, Mobile Marketing for B2B companies, Mobile E-commerce to Drive Revenue.

### UNIT V Mobile Payments

Present and Future Mobile Technology, Mobile Application Development.

## SKILDEVELOPEMENT

## REFERENCE BOOKS:

1. Go Mobile: Location Based Marketing, Apps, Mobile Optimized Ad Campaigns, 2D codes and other Mobile Strategies to Grow your Business, Jeanne Hopkins, Jamie Turner, John Wiley&Sons Inc., 2012.
2. M- Commerce, Paul Skeldon, Crimson Publishing, 2012.
3. M-Commerce Technologies, Services and Business Models, Norman Sadeh , Wiley 2002.
4. Mobile Commerce, Opportunities, Applications and Technologies of Wireless Business, Paul Mary, Tom Jell, Cambridge University Press, 2001.

Course Code	Course Title	L	T	P	C
19261OEC	Open Elective-Insurance Services	4	0	0	2

**Aim:**

- To look after the interests of people from uncertainty by providing certainty of compensation.

**Objectives:**

- To learn the fundamental concepts and principles of insurance.
- To explain the nature of different insurance policies, insurance contracts and settlement of claims.

**Outcome:**

- The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

**UNIT – I**

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

**UNIT – II**

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

**UNIT – III**

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

**UNIT – IV**

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

**UNIT – V**

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

**SKILDEVELOPMENT**

**Reference Books:**

- Dr.MR.Mishra – Law of Insurance – Central Law Agency Allahabad  
 Dr.M.M.Verma & R.K.Agarwal – Insurance  
 Pandey & Ratogi – Insurance  
 M.N.Mishra & S.Chand - Principles and Practice of Insurance

Course Code	Course Title	L	T	P	C
19280OEC	Open Elective-Counselling Psychology	4	0	0	2

**Aim:**

- To acquaint with counselling and its process

**Objectives:**

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

**Outcome:**

- Learn counselling and its process

**UNIT I**

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

**UNIT II**

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

**UNIT III**

Approaches to Counselling

Counselling Process

**UNIT IV**

Psychological Testing

Diagnosis

**UNIT V**

Educational Counselling

Family Counselling

**SKILDEVELOPMENT**

<b>Course Title</b>
<b>Financial Service</b>

## AIM

To analyze the various financial institutions and their services.

## OBJECTIVES

- I. To gain knowledge on financial services.
- II. To understand importance of various services including banking, insurance, mutual funds.

## OUTCOME

To introduces meaning and functions of Financial Intermediaries  
 To understand the role of merchant bank and its services  
 To provide information regarding management of mutual funds and Regulations  
 To understand the role and functions of financial services Marketing  
 To know the structure and types of debt Instruments  
 To realize Foreign Exchange Market

## UNIT – I

**Financial system-An Overview:** Indian Financial System-Global Financial System-Financial Services Environment- Credit Rating –Factoring and Forfeiting –Leasing

## UNIT – II

**Financial Markets –An Overview:** Definition-Role-Functions-Constituents-Financial Instruments-Capital Market instruments-Indian money and Capital Market-Global Financial Markets.

## UNIT – III

**Money Market –An Overview:** Definition-Characterstistics-Objectives-Imporatance-Functions-Segment-Financial Institutions-Indian Money Market-Global Money Market

## Unit – IV

**Capital Market:** Money Market-Characteristics-Functions-New financial Instruments-measures of Investor Protection-Indian Capital Market-Major Issues

## Unit-V

**Stock Exchange:** History of Stock Exchange-Functions-Indian Stock Exchanges-Organization structure-Regulations of Stock Exchange –Recent Developments

## SKILDEVELOPMENT

## REFERENCE BOOKS

1. Gordon , Natarajan – Financial Market and Services.
2. Dr. S. Gurusamy – Financial services and Market.
3. Kucchol S.C. – Financial Management
4. Pandey I.M. – Financial Management.

**DEPARTMENT OF MICROBIOLOGY**

**M.PHIL., MICROBIOLOGY SYLLABUS**

**REGULATION 2019**

## **DEPARTMENT OF MICROBIOLOGY**

### **M.PHIL., MICROBIOLOGY**

#### **PROGRAM OUTCOME**

PO 1 - Recognize and think critically towards the science curricula with sound knowledge and theoretical skills by questioning and plausible explanations.

PO2 - Motivate themselves and develop an interest in planning and implementation of research

PO 3 - Handle equipments needed for material preparation, characterization and to analyze and interpret the data with theoretical background and software.

PO 4 -Practice the teaching-learning process by being the proponent in classroom and laboratory experience

PO 5 - Apply the scientific context to develop innovative ideas, products and methods for the benefits of biosphere

PO 6 - Adopt changes in the environment with high integrity and transpire ethical professionals

PO 7 - Recognize and integrate life-long learning skills to become pro-active in personal and professional live

PO 8 - Opt for careers demanding writing and communicative skills locally and globally

#### **PROGRAMME SPECIFIC OUTCOME**

PSO 1 - Critically evaluate the basic information and ideas from various fields of microbiology.

PSO 2 - Developing skilled persons in the sector of Disease diagnosis, treatment and prevention.

PSO 3 - To integrate the knowledge microbes and improving the quality of life through sustainable microbiological applications.

PSO 4 - To train the students to develop, design and apply research projects independently to accommodate them in research.

PSO 5 -To encourage the students to do original research that ends up in new technological or process application.

PSO 6 -To enrich the Graduates with solid fundamentals of microbiology and advanced technologies.

PSO 7 - To equip the students to identify, define and solve the emerging problem.

PSO 8 - Make the student to understand complex ethical and professional issues to accommodate them in Industry and/or Institutes, to better placement.

## M Phil- SYLLABUS

(For the candidates admitted from the academic year 2020-2021 onwards)

### PAPER – I RESEARCH METHODOLOGY

(Common for all Subjects except Languages)

Course Code	Course Title	L	T	P	C
203__ _11	Research Methodology	2	2	0	2

#### Unit – I:

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

#### Unit – II:

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

#### Unit – III:

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

#### **Unit – IV:**

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Mail (E-mail) – Intranet and Extranet.

#### **Unit – V:**

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

#### **Employability/Entrepreneurship/Skill development**

#### **References:**

## PAPER II - ADVANCED MICROBIOLOGY

Course Code	Course Title	L	T	P	C
203MBC12	Advanced Microbiology	2	2	0	2

### Course Outcome

CO1: To learn about microbial taxonomy and molecular characterization of microbes

CO2: To Learn about applications of microbes in research aspects

CO3: To Gain the knowledge about biotechnological engineering concept in research

CO4: To Learn immune system and its mechanism

CO5: To gain knowledge about nanotechnology and synthesis of nano-particles from microbes.

### Unit I:

Prokaryotic and eukaryotic microbial diversity – bacteria, cyanobacteria, microalgae, microfungi, Habitats, nutrition, ultrastructure and mode of reproduction. Isolation, cultivation and preservation of microorganisms. Classification - Haeckel's three kingdom concept. Whittaker's five kingdom concept. Three domine concept of Carl Woese. Classification of bacteria according to Bergey's manual of determinative bacteriology. Criteria for classification and identification of microorganisms – morphological, physiological & biochemical. Numerical taxonomy. Phage typing. Nomenclature – bacteriological code. Introduction - DNA finger printing – RFLP, Plasmid profiles, G+C content. Importance of 16S rRNA in taxonomy & phylogeny.

### Unit II:

Basic concepts in medium design – design procedure growth limiting nutrient in designed medium – cell growth and product formation – immobilization and cell culture – cell immobilization – enzyme immobilization. Microbes involved in biodegradation of organic wastes and xenobiotic compounds – heavy metals, pesticides, insecticides. Bioinsecticides – BT toxin. Microbial leaching – Extraction of metals from ores. Biofuels, Microbial hydrogen production. biodegradation of oils and petroleum products.

### Unit III:

Diagnostic Immunology- methods for immunoglobulin determination – Quantative and qualitative antigen and antibody reactions. Agglutination – precipitation Immunoflourescence, Immunoblotting, Immunometric methods, Immunology of transplantation and malignancies. Enzyme immunoassays, flow cytometry- Assessment of human allergic diseases-Molecular

methods- HLA typing- Immunohaematology- transfusion and compatibility testing, Transfusion reactions. Chemiluminescent detection of proteins.

#### **Unit IV:**

Introduction to molecular biology – DNA and RNA – composition and structure. DNA replication, Recombination and repair – Transcription and Translation, Regulation of gene expression. PCR based finger printing – RT PCR, 16S rDNA amplification, cloning, transformation, DNA sequencing. RAPD, STRR & LTRR, Blotting and hybridization. DNA Microarrays/Chips. Genome sequence comparison, alignment and data base searching. GenBank – NCBI, EMBL & DDBJ – retrieving sequences. Tools used for phylogenetic analysis – Ribosomal Database Project, FASTA, BLAST, Phylip. RNA structure prediction, Restriction enzyme patterns. Designing primers & probes. DNA barcoding. Submission of rDNA sequences – Bankit & Sequin guidelines.

#### **Unit V:**

History of nanobiotechnology; Terminologies of nanobiotechnology; Nanoparticles; Nanotubes; Nanowires; Silver nanoparticles. Protein functions at the cellular level. biosensors; drug delivery, and tissue engineering. Microbial growth response to inorganic nanoparticles; Nanoparticle internalization and cytotoxicity; Nano curcumin(Polymeric nanoparticle-encapsulated curcumin) – a novel strategy for human cancer;Therapeutic application of gold nanoparticles.

#### **Employability/Entrepreneurship/Skill development**

---

Course Code	Course Title	L	T	P	C
203MBC13A	Microbial Biotechnology	2	2	0	2

### Course Outcomes

CO1: To gain Knowledge about isolation, purification and preservation of microorganisms.

CO2: To learn about the molecular tools of genetic engineering

CO3: To Know about the production of value added products

CO4: To gain the knowledge about industrial production from microbes.

CO5: To learn the methods of biofertilizer and biofuels production

### Unit I:

Historical development of microbial technology. Products obtained from microorganism through recombinant techniques. Introduction to genetic engineering. Molecular tools of genetic engineering- vectors-Methods of gene transfer. Gene cloning strategies. Basic techniques in genetic engineering.

### Unit II:

Biotechnology & Bioprocess Engineering, steps in bioprocess development, Microbial culture, Screening and selection for fermentation processes; Preservation and improvement of industrially important microorganisms, Strain development. Fermentation Material and Energy balance, Microbial growth kinetics: Microbial growth cycle, measurement of growth, Batch culture, continuous culture, fed-batch culture, applications and examples. . Bioinstrumentation and computer control of fermentation processes. Bioreactors - Solid State fermentation - Submerged fermentation. Downstream processing of industrial products

### Unit III:

Bacteriology and starter rotations, improving starter cultures for food fermentation by genetic manipulation, recombination technology. Genetic improvement of lactic starters to enhance their technological functions for industrial applications e.g. acid, flavour, EPS, probiotic functions, Metabolic engineering of lactic acid bacteria, Production of recombinant dairy / food enzymes / proteins e.g. Chymosin, lactoferrin, lysozyme, lipases, proteases, etc. Single Cell Protein

### Unit IV:

Microbial products of pharmaceutical value – raw materials, organism and Industrial processes involved in the Microbial production of antibiotics - Penicillin, Cephalosporins, Aminoglycosides, Tetracycline and aromatic antibiotics, Enzymes , Vitamins - B12, Riboflavin, aminoacids and Recombinant vaccines.

#### **Unit V:**

Soil microbes and fertility of soil. Role of microbes in biogeochemical cycles Microbial association – beneficial – nitrogen fixing organism – symbiosis, asymbiosis, associate symbiosis – bacteria actinomycetes, cyanobacteria – mycorrhizae –phosphate solubilizers. Nitrogen fixation and role of Ti plasmids in biotechnology: Biology of nitrogen fixation – nitrogen fixation genes and their regulation in *Klebsiella* – *Rhizobium* – *Azospirillum* & *Azotobacter* – *Agrobacterium* and plant tumour – Ti plasmids Ri plasmids – Genetic regulation of tumorigenicity in plants. Production of Biofertilizer

#### **Employability/Entrepreneurship/Skill development**

### PAPER III - BIOPROCESS AND ENZYME ENGINEERING

Course Code	Course Title	L	T	P	C
203MBC13B	Bioprocess and Enzyme Engineering	2	2	0	2

#### Course Outcome

CO 1- To understand different fundamentals concepts and specialized knowledge of different applied microbiology area

CO 2 - To apply the knowledge gained in developing industrial enzyme products.

CO 3- To become an entrepreneur through this industrial based learning strategies

CO 4 -To start an independent research and can contribute in solving new problems faced in current science

#### Unit-I

Bioprocesses- batch, fed-batch and continuous cultivation, sterile operations, design of experiment for bioprocess optimization, industrial synthetic biology, high throughput bioprocess design, bioseparation and downstream processing- membrane separation techniques, chromatographic separation techniques, water purification etc., interactions and integration of microorganisms, bioreactor and downstream processing, experimental basis and methods for biosystems analysis, modelling of bioreactors, dynamic behaviour of bioprocesses, analysis, modelling and simulation of biological networks.

#### Unit-II

Development of reactors and processes for stabilization of organic and industrial wastes, miniaturisation of bioreaction systems, miniplant technology for integration of biosynthesis and downstream processing, technical and economic assessment of bioproduction processes, application of bioinformatics for development of bioprocesses, biocatalysis for the sustainable synthesis of chemicals and pharmaceuticals from renewable resources, rational engineering of biological systems for sustainable bioprocessing, small mimics, microfluidics and mathematical models for process understanding, scale-translation.

#### Unit-III

Strain improvement – Applications of mutation, Recombination and DNA Technology.– Principles and applications, enzymology of process. Industrial enzymes production - Proteases, amylases, lipases, cellulases, pectinases, glucose isomerase, L-Asparaginase.

#### Unit - IV

Kinetics of enzyme reactions, biochemical characterization of enzymes, graphical analysis of kinetic data, pH and temperature dependence, development of recombinant clones for overproduction of enzymes and metabolites, development of expression systems in bacteria and yeasts, bioenergetics and biological molecular machines, protein conformation study and structure-function relationship using biophysical methods, protein engineering by combinatorial methods.

#### Unit-V

Enzyme engineering and design: substitution, insertion, hybrid proteins, genes for novel enzymes Aequorin and Enviropig, directed evolution and site directed mutagenesis approaches to improve industrial enzymes, engineering more stable enzymes, analysis and design of microbial and enzyme reactors for production of industrially important products such as biofuels, industrial enzymes, biopolymers, etc., development of bio-sensors for detection of various analytes, development of cell culture techniques for cultivation of plant and animal cells in specialized reactors for production of therapeutic compounds.

## PAPER IV - RESEARCH AND PUBLICATION ETHICS

Course Code	Course Title	L	T	P	C
CPE_RPE	Research and publication ethics				2

### THEORY

#### Unit I: PHILOSOPHY AND ETHICS ( 3 hours)

1. Introduction to philosophy, definition, nature and scope, concept, branches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

#### Unit II: SCIENTIFIC CONDUCT ( 5 hours )

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

#### Unit III : PUBLICATION ETHICS ( 7 hours )

1. Publication ethics: definition, introduction and importance.
2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

### PRACTICE

#### Unit IV: OPEN ACCESS PUBLISHING ( 4 hours.)

1. Open access publications and initiatives.
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies.
3. Software tool to identify predatory publications developed by SPPU.

4. Journal finder / journal suggestion tools viz, JANE, Elsevier Journal Folder, Springer Journal Suggester, etc.

## **UNIT V : PUBLICATION MISCONDUCT ( 4 hours)**

### **A. Group Discussions ( 2 hours )**

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest.
3. Complaints and appeals: examples and fraud from India and abroad.

### **B. Software tools ( 2 hours )**

Use of plagiarism software like Turnitin, Urkund and other open source software tools.

## **UNIT VI: DATABASES AND RESEARCH METRICS (7 hours )**

### **A. Databases ( 4 hours )**

1. Indexing databases.
2. Citation database: Web of Science, Scopus etc.

### **B. Research Metrics ( 3 hours )**

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score.
2. Metrics: h-index, g index, i10 index, altmetrics.

**B.A. ENGLISH LITERATURE SYLLABUS -REGULATION 2019  
SYLLABUS  
SEMESTER – I**

Course Code	Course Title	L	T	P	C
19110AEC11	Tamil-I	4	0	0	2

DEPARTMENT OF TAMIL 2019

SEMESTER – I

Semester	Subject Code	Title of the Course
I	19110AEC11	இக்கால இலக்கியம்,செய்யுள்,சிறுகதை,இலக்கணம்,இலக்கிய வரலாறுமையடங்குதல்

முதல் பகுதி - தாள் - 1

**அலகு - I**

**பாதிப்பர் தேர்ப்புட்டிப் பட்டிகள்**

- கதத்திர்ப் பெருமை
- கதத்திர்ப் பட்டி
- கதத்திர தேவியின் துதி
- தொண்டு செய்யும் அடிமை

**பாதித்தாள்**

- வீரத்தாய்

**அலகு -II**

**சுதா** - நல்ல தீர்ப்பு

**கண்ணதாசன்** - கத்தல் துணியின் கதை

**பட்டுக்கோட்டை கல்பாணசுத்தரம்** - நண்டு செய்த தொண்டு - காலம் சரியில்லே

**முடித்தாள்** - வாழ்ப்பு வாழை

**வாலி** - தாய்

**அலகு - III**

**சிறுகதை** - இளவேலிற் குறியுடன் - திருவையாறு பாலகுமார்

**அலகு - IV**

**இலக்கணம்**

**எழுத்து**

மையடங்குதல்

**அலகு - V**

**இலக்கிய வரலாறு**

சிறுகதை, புதினம், நாடகம், உரைநடை, கவிதை,புதுக்கவிதை

**EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
19111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Comparison and contrast

Cause and effect

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

### SEMESTER III

Course Code	Course Title	L	T	P	C
19211SEC31	Critical Approaches to English Literature	5	0	0	5

**Aim:**

- To acquaint the students with various approaches to literature.

**Objective:**

- To make the students realize that an impassioned scientific approach even to aesthetic delight has its own validity.
- To analyse a text using various approaches

**Outcome:**

- Analyse a text using various approaches to English Literature

**UNIT-I**

Archetypal Approach

**UNIT-II**

Moral Approach

**UNIT-III**

Formalistic Approach

**UNIT-IV**

Psychological Approach

**UNIT-V**

Sociological Approach

**References:**

Five Approaches to Literature -F.R.Scott

A Handbook of Critical Approaches to Literature -Wilfred L.Guerin

**Term paper:**

Analyse a text using various approaches to English Literature

### ENTREPRENEURSHIP

Course Code	Course Title	L	T	P	C
19211AEC32	American Literature	5	0	0	5

**Aim:**

- To acquaint how American Literature has evolved to be an independent entity.

**Objective:**

- To know the genesis and growth of literature such as ‘American’, involving the confluence of varied and variegated cultures
- To provide a historical background to American history and literature
- To understand the major themes and concerns reflected in American literature

**Outcome:**

- Understand the major themes and concerns reflected in American literature

**UNIT I**

Origin and growth of American Literature - Prose,Poetry and Drama

**UNIT II**

Daddy -Sylvia Plath  
 After Apple Picking -Robert Frost  
 Helen -Edger Allen Poe

**UNIT III**

The American Scholar -Emerson  
 Walden-The Battle of Ants -Thoreau

**UNIT IV**

The Scarlet Letter -Hawthorne  
 Farewell to Arms -Hemingway

**UNIT V**

The Hairy Ape -O’ Neil  
 All My sons -Arthur Miller

**References-**

History of American Literature - Dr.Varshiney  
 Objective English Literature - Dr.Sathish Kumar.

**Self study topics:**

The Age of Innocence -Edith Wharton  
 Who’s Afraid of Virginia Woolf? -Edward Albee

**EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
19211AEC33	Literary Criticism	6	0	0	5

**Aim:**

- To let the students recapitulate the origin and development of criticism from the period of Aristotle to modern age.

**Objective:**

- To instill in the minds of students that criticism is a creative work bringing about far reaching impact.
- To analyse a text using various criticism
- To understand the theories formulated by various writers

**Outcome:**

- Analyse a text using various criticism

**UNIT – I**

Poetics. -Aristotle

An Apology for Poetry. -Sir Philip Sidney

**UNIT – II**

Preface to the Fables -Dryden

Essay on Criticism -Alexander Pope

**UNIT – III**

Preface to Shakespeare -Samuel Johnson

The Preface to Lyrical Ballads -William Wordsworth

## SEMESTER – IV

Course Code	Course Title	L	T	P	C
19211SEC41	Translation	5	1	0	5

### Aim:

- To initiate the students into the mechanics of translations

### Objective:

- To let the students know the origin and development of translation.
- To promote translation
- To understand the theories of translation
- To encounter the problems in translation.
- To develop their translation skill

### Outcome:

- Develop the translation skill

### UNIT – I

History of translation

### UNIT – II

Theories of translation

Theory of meaning

### UNIT – III

Literary Translation

Non-Literary Translation

### UNIT – IV

Translatability

Difficulties in Translation

### UNIT – V

Modern Translation

Cultural translation

### References-

Towards Translation

-Dr. R Shanthi

Translation

-Sreedevi K.Nair

Translation

-Dr.Raman

Techniques of Translation

-Dr.A.Nihamathullah

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19211SEC42	English Language Teaching	4	1	1	5

**Aim:**

- To let the students have a good stead for the career of English teacher

**Objective:**

- To analyse language theories
- To learn different approaches and methods
- To explore the audio-visual techniques
- To orient in the practical application of ELT
- To understand the principles of foreign language teaching

**Outcome:**

- Enhance students to have a good stead for the career of English teacher

**UNIT- I**

The place of mother tongue in teaching English

English as a second language

**UNIT-II**

Principles of foreign language teaching

Theories of Language Learning

**UNIT-III**

Approaches

Methods

**UNIT-IV**

Techniques for language teaching

Audio – Visual Teaching

**UNIT-V**

Micro Teaching

Macro Teaching

Case study

**References-**

Methods of Teaching English -Dr. P.S.S Sastry Book I, II (Madhava Publishers)

Teaching of English - P.P.Khatri

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19211AEC43	English Literature for Competitive Examination	6	0	0	5

**Aim:**

- To attempt a relation of what is learnt to take up a competitive exam.

**Objective:**

- To make the students resuscitate what has been learnt in every branch of English Language and Literature and compete with others for a career.
- To instill in students the confidence and skills to face the challenge of a competitive exam

**Outcome:**

- To take up a competitive exam.

**UNIT-I**

British Literature

**UNIT-II**

American Literature

**UNIT-III**

Indian Writing in English

**UNIT-IV**

Literary Forms

**UNIT-V**

English Language Teaching

**References-**

Objective English Literature - Dr.Sathish Kumar.

**EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
19211DSC44A	Discipline Specific Elective - IVA Australian Literature	5	0	0	4

**Aim:**

- To acquaint the students with the Australian literature

**Objective:**

- To trace the origin and growth of Australian literature
- To appreciate the works of different writers
- To enable learners to understand Australian literature, their landscape, tradition, milieu, spirit, socio-cultural ethos, national identity etc.

**Outcome:**

- Learn the origin and growth of Australian literature
- Understand Australian literature, their landscape, tradition, milieu, spirit, socio-cultural ethos, national identity etc.

**UNIT – I**

Origin and growth of Australian Literature-Poetry, Prose and Drama

**UNIT – II**

Legend -Judith Wright.

Mister Man -Kevin Gilbert

The Australian Dream -David Campbell

**UNIT – III**

The Drover's Wife -Henry Lawson

The Seizure of the Cyprus -Marcus Clarke

**UNIT – IV**

Tirra Lirra by the River -Jessica Anderson

Voss -Patrick White

**UNIT – V**

Remembering Babylon -Malouf

The Piano Teacher -Elfriedie Jelinek

## DEPARTMENT OF ENGLISH

### M.Phil ENGLISH LITERATURE-2019 SYLLABUS OF REVISED COURSES

#### RESEARCH METHODOLOGY AND THEORY OF LITERATURE-193ENC11

##### Aim:

- To acquaint with the research methodology

##### Objective:

- To know the convention and format of thesis
- To understand the methods and mechanics of research writing

##### Outcome:

- Can do research activity
- Interpret any text using various criticisms and theories

##### UNIT-1

Research, Types of Research

Planning the thesis

Writing the thesis- General format, Chapter format

##### UNIT-II

Mechanics of writing

Documentation-Quotation, Works cited, Bibliography

##### UNIT-III

Discourse: Narration,Argumentation,Exposition,Description

##### UNIT-IV

Computer uses in research

Modern technology applied in research

Statistical techniques and data analysis

##### UNIT-V

The Extrinsic approach to the study of literature-Literature and biography, literature and psychology, literature and society

The Intrinsic approach to the study of literature-The mode of existence of a literary work of art, The nature and modes of narrative fiction.

##### Reference Books-

Theory of Literature - Wellek and Warren

Thesis and Assignment Writing -Anderson et al

MLA Handbook for writers of research papers -Eighth edition

Research Methodology Methods and Techniques - C.R Kothari

##### Employability

## LITERARY THEORY-193ENC12

### **Aim:**

- To acquaint with the concepts and features of different literary theories

### **Objective:**

9. To sharpen the critical ability by learning the literary theories
10. To appreciate, interpret and critically evaluate any text

### **Outcome:**

- Understand literary theory
- Evaluate any text using various theories
- Sharpen critical analysis

### **UNIT – I**

Modernism: Meaning, origin, present condition

Structuralism: Meaning, origin, Saussure, Levi Strauss, Genette, reactions

### **UNIT – II**

Post-Structuralism: Meaning, origin, types, Derrida, Deconstruction, reactions

New Historicism: Meaning, origin, Foucault, Old historicist, New historicist, Stephen Grennblat, reactions

### **UNIT – III**

Reader Response Theory: Meaning, influences, limitations

Psychoanalytical Criticism: Meaning, origin, influences, limitations

### **UNIT – IV**

Feminism: Definition, Feminist movement, studies of women writers, influence

Marxism: Definition, Marx and Engelstheories, Marxist literary critics

### **UNIT – V**

Post-colonialism: Meaning, influences, principles, postcolonial critics

Eco-Criticism: Meaning, tradition, Ecocritics

### **Reference Books:**

Beginning Theory-Peter Harry

### **EMPLOYABILITY**

## **-MODERN CRITICISM -193ENC13A**

### **Aim:**

- To acquaint with the modern criticism

### **Objective:**

- To understand the different concepts of modern criticism

### **Outcome:**

- Comprehend modern criticism
- Evaluate any text using various criticisms

### **UNIT – I**

“The Language of Paradox”.	- Cleanth Brooks
“Criticism as Language”.	- Ronald Barthes
“Realism and the Contemporary Novel”	- Raymond Williams

### **UNIT – II**

“Structuralism and Literature”	-Jonathan Culler
“Towards Feminist Poetics”	-Elaine Showalter
“The Seven Types of Ambiguity”	-William Empson

### **UNIT – III**

“Religion and Literature”	-T.S.Eliot
“Four Kinds of Meaning”	-I.A.Richards
“Creative Writers and Day Dreaming”	-Sigmund Freud

### **UNIT – IV**

“Is there a text in the class?”	-Stanley Fish
“Orientalism”	- Edward Said
“Cultural Studies and its Theoretical Legacies”-	Stuart Hall

### **UNIT – V**

“What is an Author?”	-Michael Foucault
“Post-colonial Criticism”	- Homi Bhabha
“Can the Subaltern Speak”	- Gayatri Spivak

### **Reference Book:**

Twentieth Century Literary Criticism	-Bijay Kumar Dass.
Literary Criticism	-V.S.Sethuraman

19111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT – I**

The Art of Reading -Lin Yutang  
 An Eco-Feminist Vision -Aruna Gnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet  
 She Spoke for all Nature -Young world 'The Hindu'

**UNIT – III**

Because I could not Stop for Death -  
 Emily Dickinson Stopping by Woods on a Snowy Evening -  
 Robert Frost

**UNIT – IV**

Enterprise -Nissim Ezekiel  
 Love poem for a wife -A.K.Ramanujam

**UNIT – V**

Oliver Twist -Charles Dickens

## CoreI-BASICMATHEMATICS-I

Coursecode	CourseTitle	L	T	P	C
19112AEC13	Core -I Basic Mathematics -I (DifferentialCalculusandVector Differentiation)	4	1	0	4

### DIFFERENTIALCALCULUSANDVECTORDIFFERENTIATION

#### Objectives:

This course is designed to give students a secure base in elementary calculus to allow them to tackle the mathematics needed in other sciences. Students wishing to do more mathematics will be given a good foundation from which they can proceed to other courses.

#### UNITI:

Successivedifferentiation—Leibnitztheoremwithproof—Problems,partialderivative of a function.

#### UNITII:

Maxima&Minimaforfunctionsoftwovariables—Lagrangemultipliermethod.

#### UNITIII:

Curvature(Cartesian,PolarandPedalform)—evolutes.

#### UNITIV:

Asymptotes—envelopes

#### UNITV:

Differentiationofvectors—gradient—divergenceandcurlvectors.

#### Reference

1. Differentialcalculus—T.K.M.Pillai
2. Vectorcalculus—T.K.M.Pillai.

#### Learning outcomes

Bythe endofthiscourse,youshould:

- ✓ beabletomanipulate,andsolveproblemsusing,successivedifferentiation&vector operators;
- ✓ beabletocalculateMaxima&MinimaforfunctionsoftwovariablesandLagrange multiplier method
- ✓ beabletosolvecurvature,evolutes,asymptotesandenvelopesinsimplecases
- ✓ beabletocalculategradient,divergenceandcurlvectorsin  $R^3$

## CoreII- BASICMATHEMATICS-II

Coursecode	CourseTitle	L	T	P	C
19112AEC14	Core-II BasicMathematics -II (Trigonometry,AnalyticalGeometry3D and Calculus)	4	0	0	4

### Objectives:

Thiscourseisdesignedheretogetsufficientideasaboutintegralcalculus,trigonometryand analytical geometry to tackle the mathematics needed in other sciences.

### UNITI:

Expansionsof $\cos n\theta$ , $\sin n\theta$ , $\cos^n\theta$ , $\sin^n\theta$ (forpositive integralvaluesofn) —seriesfor  $\cos \theta$ ,  $\sin \theta$ ,  $\tan \theta$ .

### UNITII:

Hyperbolic functions—Principalandgeneralvaluesoflogarithmsofcomplexnumbers. Separation of real and imaginary parts — factorization.

### UNITIII:

Summationoftrigonometricseries — methodofdifference - sumofseriesofangles in A.P,  $C+$  is form, Gregory's series.

### UNITIV:

AnalyticalGeometry(3-D)  
Spheres(SimplePropertiesonly)generalseconddegreeequationstocone cylinder.

### UNIT V:

Integralcalculus.  
EvaluationofdoubleandTripleintegral—Betaandgammaintegrals.

### References

1. Trigonometry—T.K.M.Pillai
2. AnalyticalGeometry(3D) AndIntegralCalculus—T.K.M.Pillai

### Learning outcomes

Bythe endofthiscourse,youshould:

- ✓ beabletomanipulatetheexpansionsofbasictrigonometricfunctions
- ✓ beabletocalculatesummationoftrigonometricseriesandGregory'sseries
- ✓ understand the concept ofanalyticalgeometryand be able to use properties ofspheres, cone and cylinder in real cases.
- ✓ beabletomanipulate,andsolveproblemsusing,integralcalculus

Coursecode	CourseTitle	L	T	P	C
19120AEC15	Allied- I-Paper-IProgrammingInC	6	0	0	6

**Objectives:**

- To learn the concept of programming
- To understand input and output functions
- To study about Structures
- To learn Pointers in C Language

**UNIT I**

Evolution and Applications of C — Structure of a C Program — Data Types — Declarations — Operators — Expressions — Type conversions — Built-in functions.

**UNIT II**

Data Input and Output — Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE-DO, DO-WHILE, FOR, BREAK and CONTINUE.

**UNIT III**

**Functions:**

Defining and accessing functions - passing parameters of functions - Arguments - Recursive functions — Storage classes.

**Arrays:**

Defining and processing Arrays — Multidimensional arrays — passing array to functions — Arrays and strings String functions — String Manipulations.

**UNIT IV**

**Pointers**

Pointers Declarations — Operations on pointers — pointer to functions — Pointer and Strings — pointers and arrays — array of pointers - Structures and pointers — unions.

**UNIT V**

Data files — Opening, Closing, and processing files — Files with structures and unions Register variables — Bit wise Operations - Macros - Pre-processing

**Reference:**

“Programming in C” — E. Balagurusamy — Tata McGraw Hill Publications

**Reference:**

1. “Programming with C” — Byron S. Gottfried — Schauni’s outline series — Tata McGraw Hill publications.
2. “Let us C” — Yeswantkanetkar — BPB Publications.

**Learning Outcomes:**

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications

## Allied-IPractical-IPROGRAMMINGINCLAB

Coursecode	CourseTitle	L	T	P	C
19120AEC16L	Allied-I -Paper-IProgramminginC Lab	0	0	3	2

### Objectives

Programming in C Lab provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Quadratic Equation, Sum of Series (Sine, Cosine,  $e^x$ ), Fibonacci Numbers using recursive functions, Sorting of given names in alphabetical order, Matrix Operations (Addition, Subtraction, Multiplication — use functions) would be taught.

Students are able to the C program

1. Write a C program to find the roots of Quadratic Equation (all cases).
2. Write a C program to find the Sum of Series (Sine, Cosine,  $e^x$ )
3. Write a C program to read an integer N and determine whether N is prime or not.
4. Write a C program to find factorials, generating Fibonacci Numbers using recursive functions.
5. Write a C program to find the numbers in Ascending and Descending order (use it to find largest and smallest numbers).
6. Write a C program to find the sum of natural numbers using WHILE statement.
7. Write a C program for Sorting of given names in alphabetical order.
8. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication — use functions).
9. Write a C program for String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings — use function pointers).

### Learning Outcomes:

At the end of the course, the student should be able to:

- Students learned program techniques
- Understand the concept of various functions and pointers
- Acknowledge of writing C program
- Design/development of solutions

## PackageLab-1

### MS-WORD

CourseCode	CourseTitle	L	T	P	C
19120SEC01AL	PackagesLab-I	0	0	2	1

1. Prepare a bio-data with photos using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. picture insertion and alignment
  - a. prepare a greeting card
  - b. prepare a handout
7. Create a marks sheet using tables. And find out the total marks.
8. Prepare a business letter for more than one company using mail merge.

## INDIAN CONSTITUTION

CourseCode	CourseTitle	L	T	P	C
191INDCONS	IndianConstitution	1	0	0	1

### Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
  2. To appreciate the salient features of the Indian constitution
  3. To know the fundamental rights and constitutional remedies
  4. To make familiar with powers and positions of the union executive, union parliament and the supreme court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

### Unit I: The making of Indian constitution

The constitution assembly organization – character – works salient features of the constitution – written and detailed constitution – socialism – secularism – democracy and republic.

### Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality – right of freedom – right against exploitation – right to freedom of religion – cultural and educational rights – right to constitutional remedies – fundamental duties .

### Unit III: Directive principles of state policy

Socialistic principles – Gandhian principles – liberal and general principles – differences between fundamental rights and directive principles

### Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president – qualification – method of election of president and vice president – prime minister – Rajya Sabha – Lok Sabha . the supreme court – high court – functions and position of supreme court and high court

### Unit V: State council – elections system and parliamentary democracy in India

State council of ministers – chief minister – elections system in India – main features – selection commission – features of Indian democracy.

### References:

- 1) Palekar. s. a. Indian constitution government and politics, ABD publications, India
- 2) Aiyer, alladi krishnaswami, Constitution and fundamental rights 1955.
- 3) Markandan. k. c. directive Principles in the Indian constitution 1966.
- 4) Kashyap. Subashc, Our parliament, National book trust, New Delhi 1989

## **Learning Outcomes:**

1. democratic values and citizenship training are regained
2. awareness on fundamental rights are established
3. the function of union government and state government are learnt
4. the power and functions of the judiciary are learnt thoroughly
5. appreciation of democratic parliamentary rule is learnt

## SEMESTER- II

மேல். இயற்கணிதம் பக்கவாக்கமுடைய வல்லம், தஞ்சாவூர்

பல. குறியீட்டு : தயிற் இலக்கியம் பருவம்

முதலாம் பிழைப்பு

கேள்விகள் , பத்திர இலக்கியம், சிறு இலக்கியம் , இலக்கிய வரலாறு

பிழைப்பு : 1 . கேள்விகள் :

1. சிறுமுனைப்பிற் றே வாரம் - வேளாறு பருவம்
2. சிறுமுனைப்பிற் றே வாரம் - தனிச் சூழற் றே வாரம்

**Core—III-BASICMATHEMATICS-III**

**DIFFERENTIAL EQUATIONS**

Coursecode	Coursecode	CourseTitle	L	T	P	C
	19112AEC23	CoreIIIBasicMathematics -III <b>DifferentialEquations</b>	4	1	0	4

**Objectives:**

This course provides an introduction to a variety of techniques that are used throughout applied mathematics. It discusses how to translate physical problems into mathematics and covers such topics as differential equations, Laplace transformation and Fourier series. It illustrates how these are used when solving problems.

**UNIT I:**

Ordinary differential equations—Second order differential equation with constant coefficients —  $x \sin x$ ,  $x \cos x$ ,  $x^2 \sin x$ ,  $x^2 \cos x$  types only, variable coefficients.

**UNIT II:**

Variations of parameter — total differential equations. Exact differential equation  $M dx + N dy$

**UNIT III:**

Partial differential equations. Formation of equation — General, particular and complete integrals of PDE — Lagrange's method for solving  $P_p + Q_q = R$  the four standard forms.

**UNIT IV:**

Laplace Transforms: Laplace transform and its application for solving ordinary differential equations — convolution theorem for Laplace transform — problems.

**UNIT V:**

Fourier series: Periodic functions—Dirichlet conditions (Without Proof) Odd and Even functions change of interval — Half range series.

**Reference**

Calculus — Vol—III— T.K.M.Pillai.

**Learning outcomes**

By the end of this course, you should:

- ✓ understand the theory of, and be able to solve (in simple cases), ordinary differential equations and partial differential equations, and standard types of linear equations;
- ✓ understand the theory of Fourier and Laplace transforms and apply it to the solution of ordinary and partial differential equations.

**Core IV - BASIC MATHEMATICS -IV**  
**VECTOR INTEGRATION & CLASSICAL ALGEBRA**

Coursecode	CourseTitle	L	T	P	C
19112AEC24	Core-IV Basic Mathematics IV (Vector integration and Classical Algebra)	4	0	0	4

**Objectives:**

This course is designed to divulge sufficient ideas about vector calculus and theory of equations to tackle the mathematics needed in other areas. Fundamental theorems such as Green's Theorem, Stokes' Theorem and Gauss's Divergence Theorem will be studied in this course. It provides the foundation for many of the courses available in applied mathematics later in the PG programme.

**UNIT I:**

**Vector Calculus:**

Integration of vectors—Gauss divergence theorem, simple illustrative problems.

**UNIT II:**

Stoke's Theorem—Green's Theorem—Simple illustrative problems

**UNIT III:**

**Algebra:**

Theory of equations — relation between root and coefficients — symmetric functions of the roots in terms of the coefficients — irrational roots — transformation of equation.

**UNIT IV:**

Reciprocal equations—Descartes' rule of sign—Horner's method of finding +ve root.

**UNIT V:**

Summation related to Binomial, Exponential and Logarithmic series—Summation of recurrence series.

**Reference:**

- (i) Vector Algebra and Analysis—T.K.M.Pillai
- (ii) Vector Analysis — T.V.Lakshmi Narashima
- (iii) Algebra—T.K.M.Pillai
- (iv) Algebra—Suriyanarayanan
- (v) Algebra—V.Seetharaman

**Learning outcomes**

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Green's Theorem, Stokes' Theorem and Gauss's Divergence Theorem
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

## Allied-IPaper—11WEBPROGRAMMING

Coursecode	CourseTitle	L	T	P	C
19120AEC25	Allied-I-Paper-IIWebProgramming	6	0	0	6

### Objectives

- giveyou ageneralunderstanding ofhowacomputerworks
- introduceyou toassembly-levelprogramming
- Prepareyouforfuturecourses. .

### UNIT-I

Introduction toHTML- Head and body sections- Hypertextand Linkin HTMLdocuments.

### UNIT-II

Designingthebodysection- Managingimages inHTML.

### UNIT-III

OrderedandUnorderedLists–TableHandling.

### UNIT-IV

DHTMLandStyleSheet–Frames.

### UNIT-V

### REFERENCEBOOKS:

1. WorldWideWebDesignwithHTML –c.Xavier –TataMcGraw-Hill-2000.
2. Principlesofwebdesign –JoelSklar–VikasPublishingHouse 2001.

### Learning outcomes

Bytheend ofthiscourse,you shouldbeableto:

- describethefetch-executecycle ofa computer
- understandthedifferenttypesofinformationwhichmaybestoredwithinacomputer memory
- writeasimpleassemblylanguage program

## Allied-IPractical—II WEBDESIGNINGLAB

Coursecode	CourseTitle	L	T	P	C
19120AEC26L	Allied-IPractical-IIWebDesigningLab	0	0	3	2

### Objectives

1. To create a fully functional website with mvc architecture
2. To develop an online bookstore
3. To provide an understanding of the language translation peculiarities by designing a complete translator for a mini language
1. Create a Webpage for ABC INFOTECH LTD., with necessary images and marquee.
2. Create Webpages which displays the menu card of a hotel. The first page should contain the list of items available. After selection of one item, the corresponding details should be displayed on the next page.
3. Create a Web page which displays the balance sheets for the given list of companies (same as above problem).
4. Create a Webpage for XYZ INFOTECH LTD., to display the company profile, employee details, balance sheet, receive resume, customer service using links.
5. Using frames create webpages for a travel agency
6. Create a Webpage using forms for our college students admission process. (Use list box, push button, radio button, command button, rich text box, text box, etc where ever applicable)
7. Create a Web page which receives suggestions from customers for a software development & consultancy agency using necessary.

### Learning outcomes

By the end of this course, you should be able to:

- Will create a fully functional website (online bookstore) using mvc architecture
- Will create a complete translator for a mini language
- Understand the basic terminology used in computer programming
- Use different data types in a computer program.
- Design programs involving decision structures, loops and functions.

## CoreV -NUMBER THEORY

Coursecode	CourseTitle	L	T	P	C
19112AEC33	Core-VNumberTheory	5	0	0	5

### Objectives:

The objective is for the students to obtain a foundational knowledge of elements of Number Theory through step-by-step proofs of classical theorems, as well as to sharpen their skills through problem-solving.

### UNIT1:

**THE FUNDAMENTAL THEOREM OF ARITHMETIC:-** Introduction - Divisibility — Greatest Common divisor — Prime numbers — The fundamental theorem of arithmetic — The series of reciprocals of the primes — The Euclidean algorithm — The greatest Common divisor of more than two numbers.

### UNIT2:

**ARITHMETICAL FUNCTIONS AND DIRICHLET MULTIPLICATION:-** The Möbius function  $\mu(n)$  — The Euler totient function — A relation connecting  $\phi$  and  $\mu$  — A product formula for  $\mu(n)$  — The Dirichlet product of arithmetical functions — Dirichlet inverses and the Möbius inversion formula — the Mangoldt function  $\Lambda(n)$  — Multiplicative functions — Multiplicative function and Dirichlet multiplication.

### UNIT3:

**AVERAGES OF ARITHMETICAL FUNCTIONS:-** The big O notation Asymptotic equality of functions — Euler's summation formula — some elementary asymptotic formulas- the average order of  $d(n)$  — the average order of the divisor fraction  $\delta\alpha(n)$  - the average order of  $\phi(n)$ .

### UNIT4:

**SOME ELEMENTARY THEOREMS ON THE DISTRIBUTION OF PRIME NUMBERS:-** Chebyshev's function  $\psi(x)$  and  $\vartheta(x)$  - Relations connection  $\vartheta(x)$  and  $\pi(x)$  - some equivalent forms of the prime number theorem — Inequalities of  $\pi(n)$  and  $P_n$  — Shapiro's Tauberian theorem — Application of Shapiro's theorem — An asymptotic formula for the partial sums  $\sum_{p_n \leq x} (1/p)$  - the partial sums of the Möbius function.

### UNIT5:

**CONGRUENCES:-** Definition and basic properties of congruence's — Residue classes complete residue systems — Linear congruence's — Reduced residue systems — Ruler Fermat's Theorem — Polynomial congruence's module Lagrange's theorem — Applications of Lagrange's Theorem — Chinese Remainder theorem.

Onsatisfyingtherequirementsofthiscourse,studentswillhavetheknowledgeandskillsto:

- ✓ Solveproblems inelementarynumbertheory
- ✓ Applyelementarynumbertheorytocryptography
- ✓ Developadeeper conceptualunderstandingofthetheoreticalbasisofnumber theoryand cryptography
- ✓ Defineand interprettheconceptsofdivisibility,congruence,greatestcommondivisor, prime, and prime-factorization,

## Core VI-NUMERICAL ANALYSIS

Coursecode	CourseTitle	L	T	P	C
19112AEC34	Core –VI Numerical Analysis	4	0	0	4

### Objectives:

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solution of simultaneous equations, solution of ordinary differential equations. Solution of Linear systems, Numerical differentiation and integration interpolation with equal & unequal intervals are concentrated.

**UNIT1:** Solution of Algebraic and transcendental equation iterative method, Bisection method, Aitken's process Method of False Position, Newton-Raphson methods.

### UNIT2: Finite differences-

Forward differences backward differences Central differences symbolic rel

ations. Newton's formula for interpolation.  
Interpolation with unevenly spaced points

Lagrange's interpolation formula-divided differences and their properties-Newton's General interpolation formula.

### UNIT3: Numerical differentiation and integration

Numerical differentiation—integration—Trapezoidal rule and Simpson's rule.

### UNIT4: Solution of Linear systems

Gaussian Elimination method — Iterative methods Jacobi and Gauss seidal Methods.

**UNIT5:** Numerical solution of Ordinary—Differential Equations. Solution by Taylor's series — Picard's method of successive approximations —Euler method Modifies Euler's method—Runge Kutta methods—Predictor Corrector methods —Adams method and Mines method.

**TextBook****Numerical Methods in Science and Engineering by M.K. Venkatraman****Reference:**

Introductory methods of Numerical Analysis By

S.S. Sastry - Prentice Hall of India Pvt. Ltd.

Chapters: 2. 2.1 to 2.5

3. 3.1, 3.3, 3.6, 3.9, 3.9.1, 3.10, 3.10.1

4.4.2, 4.4, 4.4.1, 4.4.2

5.5, 4

6. 6.1 to 6.5 and 6.6.1 and 6.6.2

**Learning Outcomes:**

- Solving problems in algebraic and transcendental equations
- Understanding about finite differences
- Students develop and analyze numerical techniques
- Applying various numerical methods to solve ordinary differential equations
- Students get the research inquiry and analytical thinking abilities

## ALLIEDII-PAPER1-MATHEMATICALSTATISTICSI

Coursecode	CourseTitle	L	T	P	C
19118AEC3 5	Allied–II–Paper–I–Mathematical StatisticsI	3	0	0	3

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course random variables, discrete distributions, continuous distributions, chi-square distribution and sampling distributions Tchebychev's inequality and weak law of large numbers — Simple form of central limit theorem for i.i.d random variables. Construction and uses of fixed and chain based index numbers — Simple and Weighted index numbers would be taught.

### UNIT I:

Statistical data — Primary and Secondary data. Formation of frequency distribution Various measures of Central tendency and their merits and demerits various measures of dispersion and their merits and demerits Concept of Skewness and Kurtosis.

### UNIT II:

Axiomatic Probability and classical, probability addition, multiplication and Baye's theorems, Simple problems.

### UNIT III:

Concept of random variable—discrete and continuous distribution function, probability mass function, probability density function — their properties — mathematical expectation — moment generating function — Simple problems.

### UNIT IV:

Tchebychev's inequality and weak law of large numbers — Simple form of central limit theorem for i.i.d random variables.

### UNIT V:

Index numbers and their definition—Construction and uses of fixed and chain based index numbers — Simple and Weighted index numbers.

### Reference:

1. Fundamentals of Applied Statistics — S.C.Gupta and V.K.Kapoor. Sultan Chand & Sons.
2. Fundamentals of Mathematical Statistics — S.C.Gupta and V.K.Kapoor, Sultan Chand & Sons.

## **Learning outcomes**

By the end of this course, you should:

- Students get the methodology for the planning and execution for any scientific enquiry
- Students learning statistical techniques and statistical data
- Understand the concept of random variables
- Understand the concept of central limit theorem for i.i.d random variables.
- Knowledge of constructions and uses of fixed and chain based index numbers

## ALLIEDII—PAPERII-MATHEMATICALSTATISTICSII

Coursecode	CourseTitle	L	T	P	C
19118AEC36	Allied–II–PaperMathematicalStatisticsII	3	0	0	3

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Karl Pearson's Correlation coefficient and its properties Linear Regression and its properties, Test of significance would be taught.

### UNIT I:

Correlation — Rank Correlation, Karl Pearson's Correlation coefficient and its properties Linear Regression and its properties — Concept of multiple and partial correlation for three variables only.

### UNIT II:

Point estimation, Properties of point estimate Neyman's Factorization theorem (Statement only) methods of moments and maximum likelihood estimation — Properties of these estimators based on these two methods.

### UNIT III:

Interval estimation — Test of Hypothesis — Null and alternative hypothesis (Concept only) One tail and two tail tests, tests of significance based on normal and  $t$  distribution for mean, simple correlation and properties.

### UNIT IV:

Test of significance based on chi square and  $F$  distributions for variance, test for goodness of fit and independence of attributes Analysis of variance — One way and two — way classifications with simple problems.

### UNIT V:

Design and Experiments.

### Reference:

1. Fundamentals of Mathematical Statistics — S.C. Gupta and V.K. Kapoor, Sultan Chand.
2. Fundamentals of Applied statistics - S.C. Gupta and V.K. Kapoor, Sultan Chand & Sons.

### Learning outcomes

By the end of this course, you should:

- Students learning statistical techniques and statistical data
- Understood the concept of correlation and regression
- Acknowledge test of significance based on parametric and non-parametric test
- Students get the methodology for the planning and execution for any scientific enquiry

## RESEARCH METHODOLOGY

Coursecode	CourseTitle	L	T	P	C
19112RMC37	ResearchMethodology	3	0	0	3

### UNIT I

Research – Definition, Objectives, Motivation and purpose – types of research – Pure and applied, survey, case study, experimental, exploratory – Concept of Research Design – Criteria of Good Research, Problems Encountered by Researchers in India. General guidelines for Good housekeeping & Lab-safety- Hygiene (Eye, foot, skin and hand protection) – Safety rules - Equipment protection – Respiratory protective equipment – safety equipment – Leaking, compressed gas cylinders – electrical safety. Fire – extinguishers.

### UNIT II

Research Problem: Definition & need of research problem, Types & selection of proper research question and suitable research design with Examples, Literature types- compendia and tables of information, Reviews, General treatises, Monographs.

### UNIT III

Methods of data collection – Primary and secondary data – observation – interview – Questionnaire – Tools for questionnaire; surveying & literature survey, spreadsheets, Technical writing, Construction of tools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, Practical Exercises.

### UNIT IV

Processing and analysis of data – editing – coding – transcription – tabulation – outline of statistical analysis – descriptive statistics – elements of processing through computer-packages for analysis (Excel).

### UNIT V

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Technical Presentation

## SEMESTER- IV

மேலும் இவற்றினால் பன்னாட்டுக்கழகம் கல்வி, தஞ்சாவூர்

பல. குடியாடு :தமிழ்.

நாங்கள் பருவம் இரண்டாம் ஆண்டு

கேள்விகள் , சர்க இலக்கியம், சிறு இலக்கியம் , கெய்கொழி , இலக்கிய வரலாறு

பகுதி . 1 : பன்னாட்டு இலக்கியம் - நன்றினை;

1. கெய்கொழி - கேள்வி கூற்று - பட்டம் எண் . 11
2. குறியீடு - தகவல் கூற்று - பட்டம் எண் . 64
3. பருவம் - தகவல் கூற்று - பட்டம் எண் . 142
4. பருவம் - நன்றி கூற்று - பட்டம் எண் . 29
5. கெய்கொழி - தகவல் கூற்று - பட்டம் எண் . 70

பன்னாட்டு இலக்கியம் குறியீடுகளை

- 1 . குறியீடு - கேள்வி கூற்று - பட்டம் எண் .1
2. பருவம் - கெய்கொழி, தகவல் கூற்று - பட்டம் எண் .167
3. கெய்கொழி - தகவல் கூற்று - பட்டம் எண் . 181
4. கெய்கொழி - தகவல் கூற்று - பட்டம் எண் . 290
5. பருவம் - தகவல் கூற்று - பட்டம் எண் . 347

பன்னாட்டு இலக்கியம் ஓர் குறியீடு

1. கெய்கொழி - கல்வி பகுதி - பருவம் இரண்டு பட்டங்கள்
2. கெய்கொழி - கேள்விக் குறியீடு பகுதி - பருவம் இரண்டு பட்டங்கள்
3. குறியீடு - குறியீடு குறியீடு பகுதி - பருவம் இரண்டு பட்டங்கள்
4. பருவம் - இரண்டாம் பகுதி - பருவம் இரண்டு பட்டங்கள்
5. பருவம் - பருவம் பகுதி - பருவம் இரண்டு பட்டங்கள்

பகுதி . 2 : கெய்கொழி

- 1 . பருவம் - பட்டம் எண் . 2
2. குறியீடு - பட்டம் எண் . 37

CourseCode	CourseTitle	L	T	P	C
19111AEC41	AdvancedEnglish-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT – I**

Interviews

Objectives, types, ten success factors, ten failure factors- Planning and preparation- Presentation-

Type of questions – Answering techniques.

**UNIT- II**

Flowchart

Proposals

**UNIT –**

**III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT – V**

Definition

Writing for and against a topic.

### Core-VI SEQUENCE AND SERIES

Coursecode	CourseTitle	L	T	P	C
19112AEC43	Core-VI SEQUENCE AND SERIES	4	0	0	4

**UNIT1:**

Sequence, Limits, Convergence-Cauchy's general principle of convergence-Cauchy's first theorem on Limits-Bounded sequences-Monotonic sequence always tend to a limit, finite or infinite-Limit superior and limit inferior.

**UNIT2:**

Infinite series-Definition of convergence, Divergence and Oscillation-Necessary condition for convergence-Convergence of  $\sum 1/n^p$  and Geometric series. Comparison test,  $D^1$  Alembert's ratio test and Raabe's test –Simple problems.

**UNIT3:**

Cauchy's condensation test, Cauchy's root test and their simple problems Alternating series with simple problems.

**UNIT4:**

General summation of series including successive difference and recurring series.

**UNIT5:**

Inequalities-Geometric and Arithmetic means Weierstrass inequalities-Cauchy's inequality.

**TEXTBOOK:**

Algebra Volume I & IIT. K.M. Pillai (Relevant problem only)

- Unit I : Chapter 2(4,7)
- Unit II : Chapter 2(8-14,16,18,19)
- Unit III : Chapter 2(15,17,21-24)
- Unit IV : Chapter 5
- Unit V : Chapter 4(second volume)

**General Reference**

Sequence and series: Arumugam and Isaac

### Core VIII-OPERATIONS RESEARCH

Coursecode	CourseTitle	L	T	P	C
19112SEC44	Core-VIII Operations Research	4	0	0	4

**Objectives:**

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

**UNIT1:**

Introduction to operations Research—Elementary treatment of linear programming simplex Method  $<, =, >, =$  constraints.

**UNIT2:**

Application to Transportation problem - Transportation Algorithm - Degeneracy in Transportation problem, unbalanced transportation problem, Assignment problem - The assignment algorithm - unbalanced assignment problem.

**UNIT3:**

PERT and CPM network—critical and subcritical jobs—Determining the critical path. Network calculation PERT networks probability aspect of PERT —PERT time — PERT cost (omitting Crashing)

**UNIT4:**

Sequencing problem: Processing of  $n$  jobs through 2 machines - processing  $n$  jobs through 3 machines - processing 2 jobs through  $m$  machines  
 Games Theory: Characteristics of games —Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving  $2 \times 2$  games.

**UNIT5:**

Inventory Theory--Variables in an Inventory problem Techniques of Inventory Control with known demand.

1. Purchasing model with no shortage. 2. Purchasing model with shortages.

3. Manufacturing model with no shortages, 4. Manufacturing model with shortages.

5. Technique of Inventory Control with uncertain demand. 6. Buffer stock of safety stock model

[In all the units Application of the concept only. No bookwork]

**Reference:**

1. Operations Research by Kantiswarup, P.K. Gupta and Manmohan.
2. Resource Management Techniques (Operations Research) V.Sundaresan, K.S. Ganapathy Subramanian, K. Ganesan.
3. Operations Research Methods and Applications, P.Mariappan

**Learning outcomes**

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory
- Students get the knowledge about inventory theory

## Core IX-ASTRONOMY

Coursecode	CourseTitle	L	T	P	C
19112SEC45	Core-IX Astronomy	4	0	0	4

### Objectives

Knowledge and understanding about celestial objects . Apply scientific reasoning to future astronomical discoveries to understand their validity as well as to everyday situations..Discuss the astronomical refraction zones of Earth, phases of Moon, seasonal Variations, Kepler's law of motion, anomalies, eclipses.

#### UNIT-I:

Relevant properties of a sphere & relevant formulae for spherical trigonometry (all without proof) — Celestial sphere — Diurnal motion

#### UNIT-II:

Earth-Dip of the horizon-Twilight-Astronomical refraction-Tangent & Cosines Formula- Properties & simple problems applying them

#### UNIT-III:

Kepler's laws of planetary motion (statement only) — Newton's deductions from them — Three anomalies of the Earth and relation between them.

#### UNIT-IV:

Time: Equation of time – Seasons - Years and calendar – Conversion of time — geocentric parallax - Heliocentric parallax- Aberration of light — simple problems in the above

#### UNIT-V:

Moon (except Moon's librations)-Motions of planet (assume that orbits are circular- Eclipses

### Reference

(1) S.Kumaravelu and Prof. Susheela Kumaravelu, Astronomy, SKV Publications, 2004

UNIT-I — Chapter 1 & 2

UNIT-II — Chapter 3 Section 1, 2, 5, 6 & Chapter 4

UNIT-III — Chapter 6

UNIT-IV — Chapter 7, Chapter 8 Section 190-193 & Chapter 9

UNIT—V — Chapter 12, 13 & 14

### Reference(s)

[1] J.V. Thiruvengkatacharya, A Text Book of Astronomy, S.Chand and Co., Pvt Ltd., 1972

### Learning outcomes

By the end of this course, you should:

- Understand about celestial objects
- Knowledge about Eclipses
- Different zones of Earth
- Astronomical refraction
- Different phases of Moon

## ALLIEDII-PAPERIII-MATHEMATICALSTATISTICS-III

Coursecode	CourseTitle	L	T	P	C
19118AEC4 6	Allied –II–Paper–III–Mathematical StatisticsIII	3	1	0	3

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course various discrete and continuous distributions, and sampling distributions would be taught.

### UNITI:

Bivariate distribution—discrete and continuous, marginal and conditional distribution, Statistical independence, Conditional expectation.

### UNITII:

Binomial, Poisson, Negative binomial, geometric distribution—Constants, moment generating function, Cumulant generating function.

### UNITIII:

Normal distribution—Constants, mgf Binomial, Poisson and Chi—square distribution tending to normal — Statement of Central limit theorem. Statement of Uniqueness theorem and Continuity theorem.

### UNITIV:

Continuous distribution—rectangular, exponential, beta, gamma distributions.

### UNITV:

Sampling distributions—F, T and Chi—Square distributions—Relations b/w F and T distributions, Relation b/w F and Chi — Square distributions.

### Reference

Fundamentals of Mathematical Statistics. S.C. Gupta and V.K. Kapoor, Sultan Chand.

### Learning outcomes

By the end of this course, you should:

- learned statistical techniques and statistical data
- Understood the concept of various distributions
- Knowledge of test of significance based on parametric and non-parametric test
- Design/development of solutions
- Understood the concept of sampling theory

## ALLIED-II PRACTICAL MATHEMATICAL STATISTICS

Coursecode	CourseTitle	L	T	P	C
19118AEC47L	Allied-II- Practical- Mathematical Statistics	0	0	2	2

### Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course random variables, discrete distributions, continuous distributions, chi-square distribution and sampling distributions would be taught.

### List of Practical's

1. Measures of Central tendencies and measures of dispersion.
2. Moments, Skewness and Kurtosis.
3. Fitting of binomial distribution.
4. Fitting of Poisson distribution.
5. Fitting of Normal distribution.
6. Correlation.
7. Regression.
8. Goodness of fit.
9. Attributes, Contingency table.
10. Large sample tests.
11. t—tests.
12. Variance tests.
13. ANOVA.
14. Design of Experiments.

### Learning outcomes

By the end of this course, you should:

- Students learned statistical techniques and statistical data
- Understand the concept of various distributions
- Acknowledge of test of significance based on parametric and non-parametric test
- Design/development of solutions

## PackageLab-IV

### MS-ACCESS

CourseCode	CourseTitle	L	T	P	C
19120SEC04AL	PackagesLab-IV	0	0	2	1

1. Create a database and a simple table
2. Create a database for sorting the marks scored by the student in the university exams
3. Create a database for sorting the date of joining by the employee in the organization.
4. Create queries to select records that match specific conditions
5. Create relationships among the different tables
6. Create queries using built-in functions
7. Develop forms to enter data into the student marks database
8. Develop forms to enter data into the employee database

CourseCode	CourseTitle	L	T	P	C
19160SEC04B	SOFTSKILLIV	0	0	2	1

## **PART-IV Etiquette and Interviewing Skills**

### **UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

### **UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

Theory exam	50
Lab note	10
Listening Comprehension	20
Reading Comprehension	20
Total	100

### Theory exam pattern:

Section A	$10 \times 2 = 20$
Section B	$2 \times 15 = 30$
Total	$= 50$

## ENVIRONMENTAL STUDIES (for undergraduate students)

Coursecode	CourseTitle	L	T	P	C
191ENVTSTU	Environmental Studies	1	0	0	1

### Objectives:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

### 2. Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

### 3. Natural Resources and Associated Problems.

- a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
- b) Water resources: Use and over — utilization of surface and groundwater, floods, drought, conflicts over water, dams benefits and problems.
- c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
- e) Energy resources: Growing energy needs, renewable and non-renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

Role of an individual in conservation of natural resources.

### 4. Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics, features, structure and function of the following ecosystem:

- a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
- d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

#### **4. Biodiversity and its conservation**

Introduction—Definition: genetic, species and ecosystem diversity. Bio

— geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghats as a biodiversity region. Hot — spot of biodiversity.

Threats to biodiversity: habitat loss, poaching of wildlife, man—wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

#### **5. Environmental Pollution**

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

#### **6. Social Issues and the Environment**

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Wasteland reclamation.

Consumerism and waste products.

#### **7. Environmental Protection**

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and Control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

## 8. FieldWork

Visittoalocalareatodocumentenvironmentalassets—River/Forest/Grassland/Hill / Mountain.

or

Visittoalocalpolluted site—Urban/Rural/Industrial/ Agricultural.

or

Studyofcommonplants,insects,birds.

or

Studyofsimpleecosystems—ponds,river,hillslopes,etc.

(TB) Textbook

Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
4. Apply their ecological knowledge to illustrate and graph a problem and
5. describe the realities that managers face when dealing with complex issues; and
6. Understand how politics and management have ecological consequences.

**SEMESTER– V**  
**CoreX.MODERNALGEBRA**

Objectives:

Algebraic structures like Groups, Rings, and Vector spaces are studied. The existence of subgroups of given order and the number of such subgroups are studied. The properties of

Coursecode	CourseTitle	L	T	P	C
19112AEC51	Core-X-ModernAlgebra	6	0	0	6

Euclidean rings are discussed. Vector spaces and its properties which will be useful in the study of Field Theory are exposed. Finally, Lattices and their types and finite Boolean algebras are introduced.

**UNIT1:**

Permutation Groups -SubGroups—Cosets and Lagrange's theorem

**UNIT2:**

Normal subgroups-Quotient groups.-Homeomorphisms–Isomorphism

**UNIT3:**

**RING THEORY:**

Definition and Examples of Rings — some special Classes of Rings — Homeomorphisms - Ideals and Quotient Rings — More ideals and Quotient Rings — Euclidean Rings.

**UNIT4:**

**VECTOR SPACE:**

Elementary Basic concepts — Linear independence and Bases and spaces- Inner product Spaces

**UNIT5:**

**VECTOR SPACE:**

Rank and Nullity- Matrix of a linear transformation

**INNER PRODUCT SPACES:**

Introduction-Definitions and examples-Orthogonality-Orthogonal Complement

**Text Books:**

“TOPIC IN ALGEBRA” by Arumugam. Sand Isaac. A.T (Second edition)

**For UNIT1-**Chapter3: Section3.4 to 3.8

**For UNIT2-**Chapter3: Section3.9 to 3.11

**For UNIT3-**Chapter4: Section4.1 to 4.14

**For UNIT4-**Chapter5: Section5.0 to 5.6

**For UNIT5-**Chapter5: Section5.7 to 5.8, Chapter6 section6.0 to 6.3

**General References**

1. Modern Algebra: A.R. Vasistha
2. Modern Algebra: Dr.S. Arumugam.

## **Learning outcomes**

By the end of this course, you should:

- Knowledge and understand about Algebraic structures like Groups, Rings, Vector spaces
- Understood about Morphisms
- Skillness in Linear dep. , in-dep. and bases problems

## CoreXI-REALANALYSIS

Coursecode	CourseTitle	L	T	P	C
19112AEC52	Core–XI-RealAnalysis	6	0	0	5

### Objectives:

This paper is intended to cover all elementary topics in Real analysis such as sequence of real numbers, series of real numbers, continuous functions, connectedness, completeness and compactness. This paper is essential for studying Riemann integrals, fundamental theorem of calculus and improper integrals. This enhances the mathematical maturity of the students.

### UNIT1:

**BASICTOPOLOGY:-**Finite, countable and uncountable sets — Metrics spaces — Compact spaces — Perfect sets — Connected sets.

### UNIT2:

**NUMERICALSEQUENCESANDSERIES:-**Convergent sequences-Subsequence's — Cauchy Sequences — Upper and Lower limits — some special sequences — Series — Series of Nonnegative Terms — The Number E — The Root and Ratio Tests — Powerseries — Summation by parts -Absolute convergence — Addition and Multiplication of series.

### UNIT3:

**CONTINUITY:-**Limits of functions — continuous functions — Continuity and compactness — Continuity and connectedness — Discontinuity — Monotonic functions — Infinitelimits and limits at infinity.

### UNIT4:

**DIFFERENTIATION:-** The derivative of a Real function — Mean value theorems — The continuity of Derivatives — L'Hospital's Rule — Derivatives of Higher order — Taylor's theorem.

### UNIT5:

**THERIEMANN-INTEGRALS:-**Definition and Existence of the Integral — Properties of the Integral — Integration and Differentiation.

### Reference:

Principles of Mathematical Analysis by Walter Rudin, McGraw Hill.

**For UNIT1-**Chapter-2

**For UNIT2-**Chapter-3 (section 3.1 to 3.50)

**For UNIT3-**Chapter-4

**For UNIT4-**Chapter-5

**For UNIT5-**Chapter-6

### General References:

1. Real Analysis: Bartle and Schurhast.
2. Real Analysis: Albert Smith E.H.

### Learning outcomes

By the end of this course, you should

- Knowledge about Connectedness, completeness and compactness
- Understanding the Riemann integrals, fundamental theorem of calculus
- Analyse the problem and finding the solution

## CoreXII-STATICS

Coursecode	CourseTitle	L	T	P	C
19112SEC53	Core–XII– Statics	4	1	0	5

### Course Objectives:

Develop an understanding of the principles of statics, and the ability to analyze problems in a systematic and logical manner, including the ability to draw free-body diagrams.

#### UNIT-I

Forces and equilibrium –Forces-Resultant of two forces-Three forces related to a triangle – Equilibrium of a particle under three or more forces.

#### UNIT-II

Forces on a rigid body –Moment –Equivalent systems of forces-Parallel forces varignon's theorem –Forces along a triangle-Couples –Equilibrium of a rigid body under three coplanar forces –Reduction of coplanar forces into a force and a couple.

#### UNIT-III

Friction–Lawsoffriction-Coefficient offriction, angle and cone of friction-Limiting equilibrium of a particle on a rough inclined plane, tilting of a body Simple problems.

#### UNIT-IV

Virtual work-principle of virtual work-applied to a body or a system of bodies in equilibrium- Equation of virtual work-Simple problems.

#### UNIT-V

String–Equilibriumofstringundergravity–commoncatenary- suspensionbridge.

(3) S.L. Lony, Elements of Statics and Dynamics, part-1, A.I.T. Publishers, 1991

### Course Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. An ability to construct free-body diagrams and to calculate the reactions necessary to ensure static equilibrium.
2. An understanding of the analysis of couples and friction.

## Core-XIII-PROGRAMMINGinC++

Coursecode	CourseTitle	L	T	P	C
19112SEC54	Core-XIII-Programming inC++	4	0	0	4

### Objectives

- Utilize Object Oriented techniques to design C++ programs.
- Use the standard C++ library.
- Exploit advanced C++ techniques

**UNIT 1:** Principles of OOP — Software evolution — OOP paradigm — basic Concepts of OOP's — Object oriented languages — applications of OOP. (Chapter 1)

**UNIT 2:** Introduction of C++ - tokens, keywords, identifiers, variables, operators, manipulators, expression and control structures in C++ - main function in function prototyping — call by reference — return by reference — function overloading and virtual functions (Chapter 2, 3 & 4)

**UNIT 3:** Classes and objects - Constructors and destructors — operator overloading and type conversions, (Chapter 5, 6 & 7)

**UNIT 4:** Inheritance — single inheritance — multilevel inheritance — multiple inheritances — hybrid inheritance. (Chapter 8)

**UNIT 5:** Pointer — virtual functions and polymorphism — managing console I/O operations (Chapter 9 & 10)

### Reference

Object oriented programming with C++ by E. Balagurusamy, 2e, Tarn. McGraw Hill publishing Co. Ltd., New Delhi.

### Reference

1. C++ The Complete Reference by Herbert Schildt.
2. OOP's with C++ from the foundation by N.R. Parsa, Dream Tech Press India Pvt. Ltd., New Delhi.

### Learning Outcomes:

At the end of the course, the students should be able to:

- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to use the code with extensible Class types, User-defined operators and function Overloading
- Understand functions and parameter passing.
- Understand object-oriented design and programming
- Understand dynamic memory allocation and pointers

### Elective1-FUZZYANALYSIS

Coursecode	CourseTitle	L	T	P	C
19112DSC55 A	ElectivePaper– IFuzzyAnalysis	5	0	0	4

#### Objectives

Humans have a remarkable capability to reason and make decisions in an environment of uncertainty, imprecision, incompleteness of information, and partiality of knowledge, truth and class membership. The principal objective of **fuzzy logic** is formalization/mechanization of this capability.

#### UNIT I:

Fuzzy sets - basic types - basic concepts -  $\alpha$ -cuts - additional properties of  $\alpha$ -cuts - extension principle for fuzzy sets.

#### UNIT II:

Operation on fuzzy sets - types of operations - fuzzy complements -  $t$ -norms - fuzzy unions - combinations of operations.

#### UNIT III:

Fuzzy arithmetic - fuzzy numbers - arithmetic operations on intervals - arithmetic operations on fuzzy numbers.

#### UNIT IV:

Fuzzy relations - binary fuzzy relation - fuzzy equivalence relation - fuzzy compatibility relation - fuzzy operation relations - fuzzy morphism.

#### UNIT V:

Fuzzy relation equation - general discussion - problem partitioning - solution method - fuzzy relation equations based on  $\sup$ - $i$  compositions - fuzzy relation equations based on  $w_i$  compositions.

#### Reference

FUZZY SETS AND FUZZY LOGIC. J. KLIR AND BOYUAN. PNI, NEW DELHI, 2004.

#### Learning outcomes

By the end of this course, you should,

- Be able to get the knowledge and understand Classical Sets vs Fuzzy Sets (FS) – Types of FS – Operations on FS
- Be able to get the knowledge and understand Zadeh's Extension Principle
- Be able to get the knowledge and understand Fuzzy Relations – Fuzzy Relational Equations – Possibility Theory :
- Be able to get the knowledge and understand Fuzzy Measures. Fuzzy relation equations based on  $\sup$ - $i$  compositions - fuzzy relation equations based on  $w_i$  compositions.

## ELECTIVE-I-FORMAL LANGUAGES AND AUTOMATA THEORY

Coursecode	CourseTitle	L	T	P	C
19112DSE55B	Elective Paper-I-Formal Languages and Automata Theory	5	0	0	4

### Objectives

1. The course aims to develop an appreciation of the theoretical foundations of computer science through study of mathematical and abstract models of computers and the theory of formal languages.
2. Theory of formal languages and use of various abstract machines as ‘recognizers’ and parsing will be studied for identifying the synthetic characteristics of programming languages.
3. To understand the fundamental models of computation that underlies modern computer hardware, software, and programming languages.
4. Explain computational thinking  
Learn the foundations of automata theory, computability theory.
5. Discuss the applications of theory to other areas of computer science such as algorithms, programming languages, compilers, natural language translation, operating systems, and software verification.

**UNIT I :** The Theory of Automata — definition of an Automaton — Description of a finite Automaton — Transition system — properties of transition function — Acceptability of a string by a finite Automaton — Non deterministic finite state machine — the equivalence of DFA and NFA — Mealy and Moore models — minimization of finite Automata.

**UNIT II:** Formal language — basic definition and examples — Chomsky classification of languages — language and their relation — recursive and recursively enumerable sets — operations on languages — languages and Automata.

**UNIT III:** Regular sets and regular grammars — regular expressions — finite Automaton and regular expressions — Pumping lemma for regular sets — application of pumping lemma.

**UNIT IV:** Context — free languages — context — free languages and derivation Trees — Ambiguity in context — free grammars — Simplification of context — free grammars — normal forms for context — free grammars.

**UNIT V:** Push Down Automata — basic definitions — Acceptance by PDA — Push Down Automata and context — free languages — parsing and Push down Automata.

### Reference

K.L.P. Mishra and N. Chandrasekaran, “**Theory of Computer Science**”, ( Automata, languages and computation ) — Prentice Hall of India private 2: limited — New Delhi, 3.

UNIT I: CHAPTER 2: (2.1 to 2.9)

UNIT II: CHAPTER 3: (section 3.1 to 3.6) UNIT

III: CHAPTER 4: (section 4.1 to 4.4) UNIT IV:

CHAPTER 5: (section 5.1 to 3.4) UNIT

V: CHAPTER 6: (section 6.1 to 6.4)

### Learning outcomes

By the end of this course you should be able,

- Design deterministic and non-deterministic machines.
- Design the pushdown automata.
- Comprehend the hierarchy of problems arising in the computer sciences.
- The student will get an idea for designing Compiler Design.
- The students will get knowledge about regular expressions and computability theory
- Acquire a fundamental understanding of the core concepts in automata theory and formal languages.
- An ability to design grammars and automata (recognizers) for different language classes.
- An ability to identify formal language classes and prove language membership properties.
- An ability to prove and disprove theorems establishing key properties of formal languages and automata.

### CoreXIV- COMPLEX ANALYSIS

Coursecode	CourseTitle	L	T	P	C
19112AEC61	Core-XIV-ComplexAnalysis	5	0	0	5

#### Objectives:

This paper is an introduction to the theory of analytic functions of one complex variable. Properties of analytic functions, results on linear transformations, problems on complex integration are discussed. Calculus of residues are also studied.

#### UNIT— I: AnalyticFunctions:

Functions of complex variables-Limits theorems on limits-continuous functions functions-Differentiability-C.R. Equations-Analytic Functions Harmonic functions (section 2. 1 to 2.8)

#### UNIT— 2: Bilinear Transformations:

Elementary transformations-Bilinear Transformations-cross ratio-fixed points of bilinear transformations-Some special bilinear transformations. (Section 3. 1 to 3.5)

#### UNIT—3: Complex Integration:

Definite Integral-Cauchy's Theorem-Cauchy's integral formula-Higher derivations(Section 6.1 to 6.4)

#### UNIT—4: Series Expansions:

Taylor's series-Laurent series-Zeros of analytic functions-Singularities (Section 7.1 to 7.4)

#### UNIT—5: Calculus of residues:

Residues- Cauchy's Residue theorem — Evaluation of definite integrals (Section 8.1 to 8.3)

#### Reference:

1. Complex Analysis by T.K. Manikavasakam Pillai & Others Ananda Book Depot. Madras.
2. Functions of Complex Variable by E.G. Phillips.
3. Complex Variable by Dr. P.P. Gupta Kedar Nath Ram Nath Meerut—Delhi.
4. Functions of Complex Variable by J.N. Sharma Krishna Prakashan Mandir Meerut.

#### Learning outcomes

By the end of this course you should be able

- Represent complex numbers algebraically and geometrically,
- Define and analyze limits and continuity for complex functions as well as consequences of continuity,
- Apply the concept and consequences of analyticity and the Cauchy-Riemann equations and of results on harmonic and entire functions including the fundamental theorem of algebra,
- Analyze sequences and series of analytic functions and types of convergence,
- Evaluate complex contour integrals directly and by the fundamental theorem, apply the Cauchy integral theorem in its various versions, and the Cauchy integral formula, and
- Represent functions as Taylor, power and Laurent series, classify singularities and poles, find residues and evaluate complex integrals using the residue theorem.

## CoreXV -DYNAMICS

Coursecode	CourseTitle	L	T	P	C
19112SEC62	Core–XV Dynamics	4	0	0	4

### Course Objectives:

Develop an understanding of the principles of dynamics, and the ability to analyze problems in a systematic and logical manner. Ability to analyze the dynamics of particles, systems of particles and rigid bodies.

#### UNIT-I:

Kinematics velocity-Relative velocity-Acceleration–coplanar motion components of velocity & acceleration-Newton's laws of motion.

#### UNIT-II:

Simple harmonic motion-Simple pendulum-Loads suspended by an elastic string-projectile-Maximum height reached, range, time of flight-projectile.

#### UNIT-III:

Impulsive force-conversion of linear momentum-impact of a sphere & a plane-Direct & oblique impact of two smooth spheres –kinetic energy and impulsive.

#### UNIT-IV:

Central orbit –central force-Differential EQUATION TO A CENTRAL ORBIT IN polar & pedal coordinates-Given the central orbit, to find the law of force-Kepler's laws of planetary motion's.

#### UNIT-V:

Motion of a rigid body-Moment of inertia of simple bodies-Theorem of parallel & perpendicular axes-motion in two dimension-motion of a rigid body about a fixed axis.

#### TEXTBOOKS:

1. P.DURAI PANDIAN, VECTOR TREATMENT AS IN MECHANICS,  
Unit-I-Chapter 1 & 2 sec 2.1, 2.1.1  
Unit-II-Cha 12 sec 12.1 to 12.3 & cha 13  
Unit-III-Cha 14  
Unit-IV-cha 16  
Unit-V-Cha 4 sec 4.2 cha 17 & cha 18

#### General References:

Dynamics–Dr.K. Viswanath Naik and Dr.M.S.Kasi.

#### Course Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of internal forces and moments in members.
2. An ability to calculate centroids and moments of inertia.
3. A knowledge of kinematic and kinetic analyses and energy and momentum methods for particles and systems of particles.
4. A knowledge of kinematic and kinetic analyses and energy and momentum methods for rigid bodies.

## CoreXVI –DISCRETE MATHEMATICS

Coursecode	CourseTitle	L	T	P	C
19112AEC63	Core-XVIDiscreteMathematics	4	0	0	4

### Objectives:

Discrete Mathematics is a bridge connecting various branches of Computer Science and Mathematics. In Discrete Mathematics, we essentially study various finite (discrete) structures of Mathematics which are essential to develop the various concepts of computer science.

### UNIT1 :

#### RELATIONS:

Cartesian Product of Two sets – Relations – Representation of Relation – Operations  
Relations – Equivalence Relation

#### FUNCTIONS:

Function and Operators – One-to-One, Onto Functions – Special Types of Functions –  
Invertible Functions – Composition of Functions

### UNIT2:

#### LOGIC:

Introduction – TF – Statements – Connectives – Atomic and Compound Statements – Well  
Formed (Statements) Formulae – Truth Table of a Formula – Tautology – Tautological  
Implications and Equivalence of Formulae

### UNIT3:

#### LATTICES AND BOOLEAN ALGEBRA

Lattices – Some Properties of Lattices – New Lattices – Modular and Distributive  
Lattices – Boolean algebra

### UNIT4:

#### RECURRENCE RELATIONS AND GENERATING FUNCTIONS:

Recurrence an introduction – Polynomials and their Evaluations – Recurrence Relations –  
Solution of Finite Order Homogeneous (linear) Relations – Solution of Non-homogeneous  
Relations – Generating Functions – Some Common Recurrence Relations – Primitive  
Recursive Functions – Recursive and Partial Recursive Functions

### UNIT5:

#### AUTOMATA, LANGUAGES AND COMPUTATIONS:

Introduction – Finite Automata – Definition of Finite Automaton – Representation of Finite  
Automaton – Acceptability of a string by a Finite Automaton – Languages accepted by a  
Finite Automaton – Non-deterministic Finite Automata – Acceptability of a String by Non-  
Deterministic Finite Automata – Equivalence of FA and NFA

**Text Books: Dr. M.K. Venkataraman and N. Sridharan. N. Chandrasekaran**

**For UNIT 1 - .Chapter 2: Section 2.1 to 2.21 & Chapter 3 Section 3.1 to 3.13**

**For UNIT 2 - Chapter 9: Section 9.1 to 9.30**

**For UNIT 3 - Chapter 10: Section 10.1 to 10.34**

**For UNIT 4 - Chapter 5: Section 5.1 to 5.33**

**For UNIT 5 - Chapter 12: Section 12.1 to 12.18**

## Learning outcomes

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of Relations and functions
2. A knowledge of logical reasoning is used in mathematics to prove theorems, in computer science to verify the correctness of programs and to prove theorems in physical science to draw the conclusions..
3. An ability to find the solutions of Recurrence relations.
4. A knowledge of study on ordering relations.

## CorePractical—ProgramminginC++

Coursecode	CourseTitle	L	T	P	C
19120SEC64L	CorePractical- ProgramminginC++	0	0	3	2

### Objectives

Programming in C ++Lab provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Quadratic Equation, Sum of Series (Sine, Cosine,  $e^x$ ), Fibnoacci Numbers using recursive functions, Sorting of given names in alphabetical order, Matrix Operations (Addition,Subtraction, Multiplication — use functions) would be taught.

1. BankTransaction

2. ShapesUsingPolymorphism

3. a)SingleInheritance

b)MultilevelInheritance

4. Inline

Function5, Friend

Function

6. a)VirtualBase Class

b)VirtualAbstractFunction

7. StringHandling

8. DisplayFileWithLines

9. MarklistPreparation

10. InventoryPreparation

### Learning outcomes

Bytheendofthiscourse,you shouldbeable

- Studentslearnedprogramtechniques
- Understandtheconceptofvariousfunctions
- Aknowledgeofwriting C++ program
- Design/developmentofsolutions

## ElectiveII-GRAPH THEORY

Coursecode	CourseTitle	L	T	P	C
19112DSC65 A	ElectivePaper–IIGraphTheory	5	0	0	4

### Objectives:

Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory 20 such as Trees, Directed graphs, Connectivity, Euler tours, Hamilton cycles, Matchings, Colourings, Planar graphs

**UNIT 1:** Definitions of graph — finite and infinite graphs — incidence and degree isolated andpendent vertices — isomorphism — sub graphs — walks, puths and circuits — Connected and disconnected graphs — components — Euler graphs — Operations ongraphs — more on Euler graphs — Harniltonian paths and circuits.

**UNIT 2:** Trees — Properties of trees — pendent vertices in a tree — distances and centers in atree — Rooted and binarytrees — Spanning trees — fundamentalCircuits — Findingall spanning trees of a graph — Spanning trees in a weighted graph.

**UNIT 3:** Cut-sets — Properties of cut-set- All cut-sets in a graph — Fundamental circuits andcut-sets — connectivity and reparability.

**UNIT 4:** Planar graphs — Knratowski's two graphs — Representation of a planar graph — Detection of planarity — Geometrical dual — Combinational dual.

**UNIT 5:** Matrix representation of graphs — Incidence Matrix — circuit matrix Fundamentalcircuit and matrixandrankofthecircuit matrix— cut-set matrix— Adjacencymatrix.Chromatic number — Chromatic partitioning — Chromatic polynomial.

Treatment and content as in “Graph Theory with applications to engineering andcomputer science” by Narsing Deo, Prentice Hall of India, New Delhi.

### Learning outcomes

Bytheendofthiscourse,you shouldbeable

- KnowledgeinGraphTheory
- UnderstandingthepropertiesofGraphTheory
- UnderstandingtheconceptofKuratowski'sgraph
- UnderstandingMatrixrepresentationofgraphs

## ElectiveII- MATHEMATICALMODELLING

Coursecode	CourseTitle	L	T	P	C
19112DSC65B	ElectivePaper–IIMathematicalModelling	5	0	0	4

### Objectives:

Mathematical modelling can be used for a number of different reasons. How well any particular objective is achieved depends on both the state of knowledge about a system and how well the modelling is done.

1. Developing scientific understanding-through quantitative expression of current knowledge of a system.
2. Test the effect of changes in a system;
3. Aid decision making, including (i) tactical decisions by managers; (ii) strategic decisions by planners.

### UNIT-I

Mathematical modeling through ordinary differential equations of first order: linear growth and decay models-nonlinear growth and decay models compartment models-dynamics problems-geometrical problems.

### UNIT-II

Mathematical modeling through systems of ordinary differential equations of first order: population dynamics-epidemics-compartment models-economics-medicine, arms race, battles and international trade-dynamics.

### UNIT-III

Mathematical modeling through ordinary differential equations of second order: planetary motions-circular motion and motion of satellites- Mathematical modeling through linear differential equations of second order-miscellaneous mathematical models.

### UNIT-IV

Mathematical modeling through difference equations: simple models-basic theory of linear difference equations with constant coefficients-economics and finance population dynamics and genetics-probability theory.

### UNIT-V

Mathematical modeling through Graphs: solutions that can be modeled through graphs-mathematical modeling in terms of directed graphs, signed graphs, weighted graphs and unoriented graphs.

### Reference:

MATHEMATICALMODELLING, J.N.KAPUR, WILEY EASTERN LIMITED, NEW DELHI, 1988.

### Learning Outcomes:

Having successfully completed this module, you will be able to demonstrate knowledge and understanding of:

- 1) The concept of mathematical modelling.
  - 2) The mathematical descriptions of some real systems.
  - 3) Correct methodology when developing mathematical models.
  - 4) Skill in applications
  - 5) Designing and developing the solutions
-

CourseCode	CourseTitle	L	T	P	C
19111OEC	OpenElective-Journalism	4	0	0	2

**Aim:**

- To acquaint with the basic knowledge of journalism so that it may entice the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub-editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT-I**

Journalism—Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

**UNIT-II**

News—Definition, Kinds, Elements, Sources

**UNIT-III**

Reporters, Qualities, types

**UNIT-IV**

The Editor and the Sub-Editor—qualities, types, editorial department,

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

**References:-**

Journalism - Susan  
Professional Journalism - John Hogenberg

Course code	CourseTitle	L	T	P	C
19112OEC	OpenElective: Development ofMathematicsSkills	4	0	0	2

**Aim:**

- To understand the concepts from the five branches of mathematics

**Objectives**

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Outcomes**

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund–discounting–trade discount–quantity discount–cash discount

**Unit III**

Set theory–Series

**Unit IV**

Matrices–Determinants

**Unit V**

Assignment problems

**References**

CourseCode	CourseTitle	L	T	P	C
19113GEC	OpenElective- Instrumentation	4	0	0	2

**Aim:**

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**Outcomes:**

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amp etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.
- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

**UNIT– I:Introduction**

Potentiometer- calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

**UNIT–II:Electronic Instruments–I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

**UNIT–III:Electronic Instruments–II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

**Unit IV –Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer type recorders – Null type recorders.

**Unit V –CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

**Books for Study**

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI –  
Third edn. – 1989

**Books for Reference:**

A Course in Electrical and Electronic Measurements and Instrumentation – A.K.

Sawhney – Dhanpat Rai and Sons – 1990.

Electronic Measurements and Instrumentation – Oliver C. Sage – McGraw Hill – 1975.

CourseCode	CourseTitle	L	T	P	C
19114OEC	OpenElective-FoodandAdulteration	4	0	0	2

**Aim:**

- To introduce students to food safety and standardization and quality control of foods.

**Objectives:**

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

**Outcomes:**

- The students will have knowledge about different processing and preservation methods and principles involved.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry-Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food-Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit-II Food Pigments**

Introduction-classification, types of food pigments-chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit-III Food Preservation**

Introduction-Importance, principle and Types.

High and low temperature preservation-Pasteurization-Sterilization-Canning-Freezing- Refrigeration.

**Unit-IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices, Grains, Coffee, Tea, Oil fats, Food colours and Milk. Health hazards and risks.

**References:**

1. The Food Safety and Standard ACT, 2006–Seth & Capoor

3. Food Science– B. Srilakshmi

CourseCode	CourseTitle	L	T	P	C
19117OEC	OpenElective-MushroomTechnology	4	0	0	2

**Aim:**

- Mushrooms represent microbial technology that recycles agricultural residues into food and manure
- Mushroom technological interventions aim to increase productivity, quality, and income of farmers through cultivation of mushrooms.

**Objectives:**

- To strengthen the promotion of mushroom cultivation by establishing a well-equipped laboratory and offices
- To provide the Unit with appropriately trained personnel for the promotion of mushroom production in the country
- To increase the production and consumption of mushrooms.

**Outcomes:**

- Light. Mushrooms cannot extract nutrients from the sun as green plants do, so they do not need light.
- Cultivating specialty mushrooms is the most accessible way to growing edible mushrooms for profit. The two most popular specialty mushrooms grown in the United States are shiitake and oyster.

**Unit-I**

Introduction – history – scope of edible mushroom cultivation – Types of edible mushroom available in India – *Calocybe indica*, *Volvariella Volvacea*, *Pleurotus* sp., *Agaricus bisporus*

**Unit-II**

Pure culture – preparation of media (PDA and Oatmeal agar media) sterilization – Preparation of test tube slants to store mother culture – culturing of *Pleurotus* mycelium on petriplates – Preparation of mother spawn in saline bottle and polypropylene bags and their multiplication.

**Unit-III**

Cultivation Technology : Infra structure, Substrates (locally available) polythene bag, vessels, Inoculation hood – inoculation loop – low cost stove – sieves – Culture rack mushroom unit (Thatched house) – Mushroom bed preparation – Paddy straw, sugarcane trash, maize straw, banana leaves.

**Unit-IV**

Storage and nutrition : Short term storage – Long term storage (scanning, Pickles, papads, drying, storage in salt solutions) – Nutrition: Proteins, amino acids, mineral elements. Nutrition: Carbohydrates – Crude fiber content, vitamins.

**Unit-V**

Food preparation, Types of foods prepared from mushroom - soup, cutlet, omelette, samosa, pickles, curry. Research Centres – National level and Regional Level Cost benefit ratio – Marketing in India and abroad – Export value

CourseCode	CourseTitle	L	T	P	C
191200EC	OpenElective -WebTechnology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Objective:**

- To understand and practice markup languages
- To learn Style Sheet and Frames

**Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A webpage design project – Forms.

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

19161OEC	OpenElective–IndirectTaxes	4	0	0	2

**Aim:**

- Toacquaintwiththeknowledgeofindirecttaxes

**Objectives:**

- Tomakethestudentstogainexpertknowledgeinindirect taxes.
- Tohavepracticalknowledgeonexcisedutiesandcustoms duties.
- Tolearnthefundamentalsoservicetax, saletaxandVATS.

**Outcome**

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

**UNIT– I**

ObjectivesofTaxation- contributionto Government revenue- cannonsofTaxation– Taxsystem in India – Direct and Indirect taxes Advantages and DisadvantagesofIndirect taxes.

**UNIT– II**

Central Excise Duty – Meaning -Levy and collection - Distinction between Excise duty and Customs Dutyand Sales Tax.Types ofexcise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT– III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods.Exemptions from customs duty.

**UNIT– IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax-exempted services from tax - Value of taxable services-Different services on which tax is payable.

**UNIT– V**

ValueAddedTax(VAT)

Meaning ofVAT, Justification ofVAT – VAT and Sales Tax Advantages and Disadvantages of VAT.Methods of Calculating VAT Levy of VAT and Types of VAT.

**SEMESTER– I**  
**Core I: ALGEBRA**

CourseCode	CourseTitle	L	T	P	C
19212AEC11	Core –I-Algebra	6	0	0	4

**Objectives:**

1. Group Theory is the fundamental building blocks for the Abstract Algebra.
2. To study the algebraic aspects of Real and Complex numbers.
3. Module is a third algebraic Model-Applicable to geometry and physics.

**UNIT I:**

**Group theory: Sylow's theorem—direct products—finite abelian groups.**

**UNIT II:**

**Ring theory: Polynomial rings—polynomial over the rational field polynomial ring over commutative rings — modules.**

**UNIT III:**

**Field: Extension fields—roots of polynomials — more about roots**

**UNIT IV:**

**Field: the elements of Galois theory—Finite fields**

**UNIT V:**

**Linear transformations—the algebra of linear transformations, Hermitian, Unitary and normal transformations.**

**Reference**

1. Topics in Algebra — I.N. Herstein

**Learning Outcomes:**

1. Understand the concept of Group Theory, Ring Theory.
  2. Knowledge of Linear Transformations.
  3. An understanding of the analysis of Fields.
  4. Research inquiry and analytical thinking abilities
-

## Core II: REAL ANALYSIS

CourseCode	CourseTitle	L	T	P	C
19212AEC12	Core-II Real Analysis	7	0	0	4

### Objectives:

1. To introduce the notion of Riemann–Stieltjes integral.
2. To study the infinite series and infinite sequences of functions.
3. To study the multivariate differential calculus.

### UNIT I:

Riemann—Stieltjes— integral

### UNIT II:

Infiniteseriesand infiniteproducts

### UNIT III:

Sequences of functions

### UNIT IV:

Multivariable Differential Calculus

### UNIT V:

Implicit functions and Extremum problems

### Reference:

Mathematical Analysis Tom.M.Apostol.2<sup>nd</sup> Edition Narosa Publishing House—1985

Unit I Chapter— 7(7.1—7.25)

Unit II Chapter—8(8.1—8.18)

Unit III Chapter—9(9.1 —9.6,9.8-9.13)

Unit IV Chapter—12(12.1—12.5,12.7—12.14)

Unit V Chapter— 13(13.1—13.6)

### Learning Outcomes:

Students will be able to

1. Know the notion of the Riemann-Stieltjes integral, prove elementary properties of the Riemann integral and the Fundamental Theorem of Calculus.
2. Describe the Infinite series and Infinite Products, Sequences of Functions.
3. An understanding of Multivariable Differential Calculus and Implicit Functions and Extremum problem.

## CoreIII-ORDINARYDIFFERENTIALEQUATIONS

Course Code	Course Title	L	T	P	C
19212AEC13	Core-III Ordinary Differential Equations	6	0	0	4

### Objectives:

1. Teaching the theory and application to students preparing for advanced training in applied sciences and social sciences.
2. Presenting in easy and lucid language the results of oscillations, boundary value problems (BVP) and elements of control theory.
3. Justifying the inclusion of qualitative theory to students who think it is out of place.
4. Emphasizing the importance of the study of Boundary problems, both in Mathematics and applied sciences.
5. Studying about the stability of stationary solutions.

### UNIT I:

Systems of linear differential equations—Chapter 4

### UNIT II:

Existence and uniqueness of solutions Chapter 5

### UNIT III:

Boundary value problems — Chapter—7

### UNIT IV:

Oscillations of second order equations—Chapter 8

### UNIT V:

Stability of linear and nonlinear system—Chapter 9

### Reference

Ordinary differential Equations and Stability Theory—S.G.GEO.V.Ragavendra, V.Lakshmikanthan

### Learning Outcomes:

Upon completing this course students should be able to:

1. Solve first order equations, systems of periodic coefficients and use these methods to solve applied problems.
2. Knowledge of Sturm-Liouville Problem.
3. Understanding about the stability of stationary solutions.

## CoreIV-PROGRAMMINGIN C++

CourseCode	CourseTitle	L	T	P	C
19220SEC14	Core –IV C++ Programming	6	0	0	4

### Objectives

- Utilize Object Oriented techniques to design C++ programs.
- Use the standard C++ library.
- Exploit advanced C++ techniques

### UNIT I:

Beginning with C++ - what is C++ - applications — simple program — structure of C program — creating the source file — compiling and linking — tokens, expressions and control structures — user defined data types — derived data types — declarations of variables — reference — variables

### UNIT II:

Operations in C++ - Manipulators — types cast operator — expressions and implicit conversions — operator over loading — operator precedence — control structures — Functions in C — the main function — functions prototyping. call by reference — return by reference — function overloading

### UNIT III:

Class and object — introduction — C structures revisited — C++ program with class — arrays within class — static member function — arrays of objects — returning objects — returning objects — constant member functions — pointers to members.

### UNIT IV:

Constructors and destructors — introduction — constructors — parameterized constructors — multiple constructors in a class — copy constructor — dynamic constructor — two dimensional Arrays — destructors — operators over loading and type conversions — defining operator loading — manipulation strings using operations — type conversions.

### UNIT V:

Inheritance: extending classes — introduction — defining derived classes — single inheritance — multiple inheritance — virtual base classes — abstract classes — nesting classes.

### Reference:

Object Oriented Programming with C++- E. Balagurusamy.

### Learning Outcomes:

At the end of the course, the students should be able to:

- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to use the code with extensible Class types, User-defined operators and function Overloading
- Understand functions and parameter passing.
- Understand object-oriented design and programming
- Understand dynamic memory allocation and pointers

## Elective-CLASSICALDYNAMICS

CourseCode	CourseTitle	L	T	P	C
19212DSC15 A	Elective-ClassicalDynamics	5	0	0	4

### Objectives.

1. Classicalmechanicsaffordthestudent anopportunityto mastermanyof mathematics techniques.
2. Itiscertainlytruethat classicalmechanicstodayisfar frombeingaclosed subject.
3. Alternativemeansexistinthecurriculumforacquiringthematematics needed in other branches.

### UNIT I:

IntroductoryConcepts—Chapter1(1.1—1.5)

### UNITII:

Lagrange'sequations— Chapter 2

### UNITIII:

SpecialapplicationsofLagrange'sequations— Chapter3

### UNITIV:

Hamiltonequations — Chapter4

### UNITV:

HamiltonJacobitheory—Chapter5

### Reference

CLASSICALDYNAMICS —DonaldT.Greenwood,PHI,India.

### LearningOutcomes:

Studentswhosuccessfullycompletethecoursewilldemonstratethefollowingoutcomes bytests, homework, and written reports:

1. Aknowledge ofmechanicalsystems,virtualworkEnergyandMomentum.
  2. UnderstandingtheconceptandApplicationsLagrange'sEquation.
  3. Aknowledge ofHamilton'sPrincipalfunction.
-

## ELECTIVE-FLUID DYNAMICS

Course Code	Course Title	L	T	P	C
19212DSC15B	Elective-Fluid Dynamics	5	0	0	4

### Objectives:

1. To introduce the behavior of fluid in motion.
2. To study the application of complex analysis in the analysis of flow of fluids.

### UNIT I

Real fluids and ideal fluids — velocity of a fluid at a point — streamlines and path lines: steady and unsteady flows — the velocity potential — The velocity vector — local and particle rates of change — the Equations of continuity — Worked examples — Accelerations of a fluid — Pressure at a point in a fluid at rest — Pressure at a point in moving fluids — Conditions at a Boundary to two inviscid immiscible fluids — Euler's equations of motions — Bernoulli's equation — worked examples.

### UNIT II

Some flows involving axial symmetry — some special two — Dimensional flow — impulsive Motion. Some three — dimensional flows: Introductions — sources, sinks and doublets — images in a rigid infinite plane — Axis-symmetric flows: Stokes stream functions.

### UNIT III

Some two — Dimensional Flows: meaning of a two — Dimensional flow — Use of cylindrical polar coordinates — The stream function — The complex potential for two Dimensional, irrotational, incompressible flow — complex velocity potentials for standard two — dimensional flows — some worked examples — The Milne — Thomson circle theorem and applications — The theorem of Blasius.

### UNIT IV

The use of conformal transformation and Hydrodynamical Aspects — stress components in real fluids — relations between Cartesian components of stress — Translational motion of fluid element — The rate of strains Quadratic and principal stresses — Some further properties of the rate of strains quadratic — stress Analysis in fluid motion — Relations between stress and rate of strain — The coefficient of viscous fluids

### UNIT V

Some solvable problems in viscous flow — steady viscous flow in tubes of uniform cross section — Diffusion of vorticity — Energy. Dissipation due to viscosity — steady flow past a fixed sphere — Dimensional Analysis; Reynolds Number — Prandtl's Boundary layer.

### Reference:

Fluid dynamics by F. Chorlton (CBS Publisher & Distributors, Delhi-110032) 1985. Unit

- I : Chapter 2. Sec 2.1 to 2.9 and Chapter 3. Sec 3.1 to 3.6  
 Unit II : Chapter 3. Sec 3.9 to 3.11 and Chapter 4. Sec 4.1, 4.2, 4.3, 4.5 Unit  
 III : Chapter 5. Sec 5.1 to 5.9 except 5.7  
 Unit IV : Chapter 5. Sec 5.10 and Chapter 8: Sec 8.1 to 8.9  
 Unit V : Chapter 8. Sec 8.10 to 8.16

### General References

Fluids Dynamics by Shantyswarup, Krishnaprakashan Mandir Meerut 1984.

### Learning Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of behaviour of fluid in motion.
2. A knowledge of Two Dimensional and conformal mapping.

### 3. Knowledge of solving problems in viscous flow-steady viscous flow

---

## SEMESTER– II

### CoreVCOMPLEXANALYSIS

CourseCode	CourseTitle	L	T	P	C
19212AEC21	Core–VComplex Analysis	5	1	0	3

#### Objectives:

1. To introduce the students to the fascinating world of complex analysis which is different from analysis of real variable.
2. To introduce the concepts of harmonic functions, elliptic functions and periodic functions.

#### UNIT I:

Harmonic functions—power series expansions partial fraction and factorization—entire functions.

#### UNIT II:

The Riemann zeta function—normal families.

#### UNIT III:

The Riemann mapping theorem—conformal mapping of polygons—Chapter 6(6.1, 6.2)

#### UNIT IV:

A closer look at harmonic functions— the Dirichlet's problem Harmonic measures — Chapter 6 sec 3.4 and 5(5.1 only)

#### UNIT V:

Simple periodic functions — double periodic functions — the weierstrass theory Chapter 7 sec 1,2,3(3.1, 3.2, 3.3)

#### Reference

Complex Analysis L.V.Ahlfors 3<sup>rd</sup> edition McGraw Hill

#### Learning Outcomes:

On completion of this unit successful students will be able to:

1. Understand the significance of harmonic functions, Riemann zeta function. A knowledge of periodic functions, the weierstrass
  2. Research inquiry and analytical thinking abilities
  3. Abilities in conformal mapping
-

## Core V MEASURE THEORY AND INTEGRATION

Course Code	Course Title	L	T	P	C
19212AEC22	Core VI-Measure Theory and Integration	5	0	0	3

### Objectives:

To gain understanding of the abstract measure theory and definition and main properties of the integral. To construct Lebesgue's measure on the real line and measurability in product space. To explain the basic advanced directions of the theory.

### UNIT I

Measure on Real line—Lebesgue outer measure— Measurable sets — Regularity — Measurable function — Borel and Lebesgue measurability.

### UNIT II

Integration of non-negative functions — The General integral — Integration of series — Riemann and Lebesgue integrals.

### UNIT III

Abstract Measure spaces— Measures and outer measures— Completion of a measure — Measure spaces— Integration with respect to a measure.

### UNIT IV

Convergence in Measure — Almost uniform convergence — Signed Measures and Hahn Decomposition — The Jordan Decomposition.

### UNIT V

Measurability in a Product space— The product Measure and Fubini's Theorem.

### Reference:

[I] G. De Barra, Measure Theory and Integration, New Age International (p) Limited.

UNIT — I : Chapter II: Sections 2.1 to 2.5

UNIT—II : Chapter III: Sections 3.1 to 3.4

UNIT — III : Chapter V: Sections 5.1 to 5.6

UNIT— IV : Chapter VII: Sections 7.1 to 7.2, Chapter VIII: Sections 8.1 and 8.2

UNIT — VI : Chapter X: Sections 10.1 to 10.2

### Reference(s)

1. Measure and Integration. Second Edition by M.E. Munroe Addison — Wesley publishing company, 1971.
2. P.K. Jain, V.P. Gupta, Lebesgue Measure and integration, New Age International Pvt Limited Publishers, New Delhi, 1986. (Reprint 2000)

4. Inder, K. Rana, An Introduction to Measure and Integration, Narosa Publishing House, New Delhi, 1997.

### Learning Outcomes:

To introduce the concepts of *measure* and *integral with respect to a measure*,

To show their basic properties,

To provide a basis for further studies in Analysis, Probability, and Dynamical Systems. Knowledge in measure spaces

## Core VII-MATHEMATICAL METHODS

Course Code	Course Title	L	T	P	C
19212SEC23	Core VII-Mathematical Methods	6	0	0	3

### Objectives:

To introduce the concept of Calculus of variations, Fourier Transforms, Hankel Transform, Linear Integral Equations, Method of successive approximations.

### UNIT I

Calculus of variations — Maxima and Minima — the simplest case — Natural boundary and transition conditions variational notation — more general case — constraints and Lagrange's multipliers — variable end points — Sturm - Liouville problems.

### UNIT II

Fourier transform—Fourier sine and cosine transform—Properties Convolution— Solving integral equations—Finite Fourier transform— Finite Fourier sine and cosine transforms—Fourier integral theorem Parseval's identity.

### UNIT III

Hankel Transform: Definition-Inverse formula—Some important results for Bessel function— Linearity property—Hankel Transform of the derivatives of the function— Hankel Transform of differential operators—Parseval's Theorem.

### UNIT IV

Linear Integral Equations—Definition, Regularity conditions—special kind of kernels — eigenvalues and eigen functions — convolution integral—the inner and scalar product of two functions — Notation— reduction to a system of Algebraic equations — examples — Fredholm alternative— examples—an approximate method.

### UNIT V

Method of successive approximations: Iterative scheme—examples— Volterra Integral equation examples—some results about the resolvent kernel. Classical Fredholm Theory: the method of solution of Fredholm—Fredholm's first theorem — second theorem — third theorem.

### References

UNIT — I : Chapter 2: Sections 2.1 to 2.9 of [2]

UNIT — II : Chapter 7 of [3]

UNIT — III : Chapter 9 of [3]

UNIT — IV : Chapter 1 and 2 of [1]

UNIT — V : Chapter 3 and 4 of [1]

**Learning Outcomes:**

On completion of this unit successful students will be able to:

1. Understand the significance of Calculus of Variations, Fourier Transforms and Hankel Transform.
  2. A knowledge of linear integralequations and Method of successive approximations.
  3. Skillness in transformation from one function into another function
  4. Applications
-

## CORE VIII-DIFFERENTIAL GEOMETRY

Course Code	Course Title	L	T	P	C
19212AEC24	Core VIII-Differential Geometry	5	0	0	3

### Objectives:

To provide an introduction to the differential geometry of curves and surfaces in space, both in its local and global aspects, with special emphasis on a geometric point of view, as a basis for further study or for applications (especially in physics, chemistry, civil and electrical engineering, graphics).

### UNIT I

**SPACE CURVES:** Definition of a space curve — Arc length — tangent — normal and binormal — curvature and torsion — contact between curves and surface — tangents surface — involutes and evolutes — Intrinsic equations — Fundamental Existence Theorem for space curves — Helices.

### UNIT II

**INTRINSIC PROPERTIES OF A SURFACE:** Definition of a surface — curves on a surface — Surface of revolution — Helicoids — Metric — Direction coefficients — families of curves — isometric correspondence — intrinsic properties.

### UNIT III

**GEODESICS:** Geodesics — Canonical. geodesic equations — Normal property of geodesics — Existence Theorems — Geodesic parallels — Geodesics curvature — Gauss-Bonnet Theorem — Gaussian curvature — surface of constant curvature.

### UNIT IV

**NONINTRINSIC PROPERTIES OF A SURFACE:** These second fundamental form — Principle curvature — Lines of curvature — Developable — Developable associated with space curves and with curves on surface — Minimal surfaces — Ruled surfaces.

### UNIT V

**DIFFERENTIAL GEOMETRY OF SURFACES:** Compact surfaces whose points are umbilics — Hilbert's lemma — Compact surface of constant curvature — Complete surface and their characterization — Hilbert's Theorem — Conjugate points on geodesics.

4. J.A. Thrope Elementary topics in Differential Geometry, Under — graduate Texts in Mathematics, Springer — Verlag 1979.

**Learning Outcomes:**

Upon completion of the programme, student will be able:

1. To explain and apply the concepts and techniques of differential geometry of curves and surfaces.
  2. To analyze and solve problems (using concepts and techniques from differential geometry).
  3. A completed discussion of surfaces.
  4. Research inquiry and analytical thinking abilities.
-

## ELECTIVE-MATHEMATICAL PROBABILITY

CourseCode	CourseTitle	L	T	P	C
19212DSC25A	Elective-MathematicalProbability	5	0	0	4

### Objectives:

The goal of the subject is to extend and master students' knowledge of probability and statistical and to provide theoretical background for studying and applying advanced statistical methods. Students are introduced to probability theory and mathematical statistics. They learn to understand important distributions, present statistical data, and fundamental statistical concepts. Emphasis is placed on evaluation of the processes encountered in the real reality and on formulation of problems that are investigated by sampling.

### UNIT I

Measure theory — Classes of sets. Singular distributions Probability measures and their distribution functions.

### UNIT II

Random Variables — Expectation — Independence — General Definitions — Properties of mathematical expectation — Independence.

### UNIT III

Convergence concept — Various modes of convergence — Almost sure convergence — Borel — Cantelli lemma — Vague convergence — continuation — Uniform integrability — convergence of moments.

### UNIT IV

Law of large numbers and random series — simple limits theorem's — weak law of large numbers — convergence of series — strong law of large numbers.

### UNIT V

Characteristic function — General properties — convolutions — Uniqueness and inversion — convergence theorems.

### Reference

A course in Probability Theory — Second Edition — by Kai Lai Chung, Academic Press, New York

Unit I : Chapter 2

Unit II : Chapter 3

Unit III : Chapter 4

Unit IV : Chapter 5 (Sec. 5.1 to 5.4 Only)

Unit V : Chapter 6 (Sec. 6.1 to 6.3 Only)

### GENERAL REGERENCE

Modern Probability theory — BR. Bhat, Willy Eastern Limited (0989).

### Learning Outcomes:

Knowledge and understanding understand the place of probability theory knowledge in cognitive process, describe the basic probability theory and mathematical statistics concepts; Special abilities and skills.

1. Calculate the probabilities of events with an appropriate choice of the method of calculation;
2. Be familiar with the types of random variables, be able to write them, calculate their numerical characteristics;
3. Evaluate numerical characteristics of the sample and interpret the meanings of the parameters of population.
4. Formulate and test hypotheses, draw the appropriate conclusions.
5. Understand impotent distribution

## ELECTIVE-MATHEMATICALMODELLING

CourseCode	CourseTitle	L	T	P	C
19212DSC25B	Elective-MathematicalModelling	5	0	0	4

### Objectives:

Mathematical modelling can be used for a number of different reasons. How well any particular objective is achieved depends on both the state of knowledge about a system and how well the modelling is done.

1. Developing scientific understanding - through quantitative expression of current knowledge of a system.
2. Test the effect of changes in a system;
3. Aid decision making, including (i) tactical decisions by managers; (ii) strategic decisions by planners.

### UNIT I

Microbial population models, single-species, non—age—structured population models.

### UNIT II

Age—structured population models.

### UNIT III

Epidemic models.

### UNIT IV

Modeling genetics.

### UNIT V

Mathematical models in Pharmacokinetics.

### Reference:

Mathematical models in Biology and Medicine By J.N. Kapur, Affiliated East — West Press Pvt. Ltd., New Delhi

Unit I	: Chapter 2,3
Unit II	: Chapter 4
Unit III	: Chapter 8
Unit IV	: Chapter 9
Unit V	: Chapter 10

### General References

1. Mathematical Modelling JN Kapur Wiley Eastern Ltd New Delhi.
2. Theory of Ordinary Differential Equations with Applications in biology and Engineering Ahmad & Mohana Rao Affiliated East — West Pvt Ltd New Delhi, (1999).

### Learning Outcomes:

Having successfully completed this module, you will be able to demonstrate knowledge and understanding of:

- 1) The concept of mathematical modelling.
- 2) The mathematical descriptions of some real systems.
- 3) Correct methodology when developing mathematical models.
- 4) Skill in applications
- 5) Designing and developing the solutions.

Multimedia Package Lab-II

---

## RESEARCH METHODOLOGY

CourseCode	CourseTitle	L	T	P	C
19212RMC26	ResearchMethodology	3	0	0	3

### AIM:

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

### OBJECTIVES:

- To understand the approach towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis

### OUTCOME:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

### PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

### UNIT I: Introduction to Research Methodology

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

### UNIT II: Database and Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

### UNIT III: Data Analysis:

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co-variance (ANCOVA) correlation and multiple regression.

**UNITIV: Thesis and Paperwriting:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

**UNITV: Application of MATLAB:**

Numerical Integration - Numerical integration, ordinary differential equations, partial differential equations, boundary value problems  
Fourier Analysis - Fourier transforms, convolution.

**SEMESTER– III**  
**COREIX- TOPOLOGY**

CourseCode	CourseTitle	L	T	P	C
19212AEC31	CoreIX-Topology	6	0	0	5

**Objectives:**

- 1) The subject of topology is of interest in its own right and it also serves to lay the foundations for future study in analysis, in Geometry and in Algebraic Topology.
- 2) To develop the students' abilities through hard thinking.
- 3) To train the students to develop analytical thinking.

**UNIT I**

**TOPOLOGICAL SPACES:** Topological spaces' —Basis for a topology— The order topology— The product topology on  $X \times Y$  — The subspace topology— Closed sets and limit points.

**UNIT II**

**CONTINUOUS FUNCTIONS:** Continuous functions—the product topology —The metric topology.

**UNIT III**

**CONNECTEDNESS:** Connected spaces—connected subspaces of the Real line — Components and local connectedness.

**UNIT IV**

**COMPACTNESS:** Compact spaces—compact subspaces of the Real line—Limit Point Compactness — Local Compactness.

**UNIT V:**

**COUNTABILITY AND SEPARATION AXIOMS:** The Countability Axioms—The separation Axioms—Normal spaces—The Urysohn Lemma —The Urysohn metrization Theorem — The Tietz extension theorem.'

**Reference:**

James R. Munkres, Topology (2<sup>nd</sup> Edition) Pearson Education Pvt. Ltd., New Delhi—2002 (Third Indian Reprint)

- UNIT—I Chapter 2: Sections 12 to 17  
 UNIT — II Chapter 2: Sections 18 to 21 (Or omit Section 22)  
 UNIT — III Chapter 3: Sections 23 to 25  
 UNIT—IV Chapter 3: Sections 26 to 29  
 UNIT—V Chapter 4: Sections 30 to 35.

**Reference(s)**

5. S. Willard, General Topology, Addison—Wesley, Mass., 1970.

**Learning Outcomes:**

Upon successful completion of this course, the student will be able to: (Knowledge based)  
distinguish among open and closed sets on different topological spaces;

- 1) know the two fundamental topologies: discrete and indiscrete topologies.
  - 2) Identify precisely when a collection of subsets of a given set equipped with a topology forms a topological space;
  - 3) Understand when two topological spaces are homeomorphic;
  - 4) Identify the concepts of distance between two sets; connectedness, denseness, compactness and separation axioms.
-

**CORE-X-STOCHASTIC PROCESSES**

<b>CourseCode</b>	<b>CourseTitle</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19212SEC32	CoreX–StochasticProcess	6	1	0	5

**Objectives**

The objective of this course is to provide the fundamentals and advanced concepts of random processes to support graduate coursework and research in engineering. The required mathematical foundations will be studied at a fairly rigorous level and the applications of the probability theory and random processes to engineering problems will be emphasized. The simulation techniques will also be studied and MATLAB will be used as a software tool for bridging the probability theory and engineering applications.

**UNIT I**

Elements of Stochastic Processes — Two simple examples of Stochastic processes — Classification of general Stochastic processes — Defining a Stochastic Processes — Markov chains — Definitions — Examples of Markov Chain — Transition probability matrices of a Markov chain — classification of states of a Markov chain — Recurrence — more on Recurrence.

**UNIT II**

The basic limit theorem of Markov chains and applications — Discrete renewal equation — proof of theorem — Absorption probabilities — criteria for recurrence — Random walk.

**UNIT III**

Classical Examples of continuous time Markov chains — General pure birth processes and Poisson processes — more about Poisson processes — A counter model — birth and death processes — Differential equations of birth and death processes — Examples of birth and death processes.

**UNIT IV**

Renewal processes — Definition of Renewal process and related concepts — Some examples of Renewal Processes — More on some special Renewal processes — Renewal equations and elementary Renewal theorem — The Renewal Theorem — Applications of Renewal theorem.

**UNIT V**

Martingales — Preliminary definitions and examples — Supermartingales and Sub martingales — The optional sampling theorem.

**Reference**

A First course in Stochastic Processes — second Edition by Samuel Karlin and M. Taylor, Academic Press New York.

Unit I : Chapter 1 (1.2, 1.3, 1.4 Only), Chapter 2 (2.1 to 2.5 and 2.7 Only)

Unit II : Chapter 3 (3.1 to 3.4 and 3.7 Only)

Unit III : Chapter 4 (4.1 to 4.6 Only)

Unit IV : Chapter 5 (5.1 to 5.6)

Unit V : Chapter 6 (6.1, 6.2, 6.3 Only)

**General references**

1. “Stochastic Processes” S.K. Srinivasan and K.M. Mehata, Tata Mcgraw — Hill Publishing Company Ltd., New Delhi.

2. “Stochastic Processes” J. Medhi, Second Edition Wiley Eastern Ltd., New Delhi/it

**Learning Outcomes**

1. On successful completion of the course, students should be able to:
2. Explain fundamentals of probability theory, random variables and random processes.
3. Understand the mathematical concepts related to probability theory and random processes
4. Understand the characterization of random processes and their properties.
5. Formulate and solve the engineering problems involving random processes.
6. Analyze the given probabilistic model of the problem.

7. Make precise statements about random processes.
8. Use computational techniques to generate simulation results.

## CoreXI-ADVANCED NUMERICAL ANALYSIS

Subject Code	Title of the paper	L	T	P	C
19212AEC33	CoreXI-Advanced Numerical Analysis	6	1	0	5

### Objectives:

- 1) Derive appropriate numerical methods to solve algebraic and transcendental equations.
- 2) Develop appropriate numerical methods to solve a differential equation.
- 3) Derive appropriate numerical methods to evaluate a derivative at a value.
- 4) Derive appropriate numerical methods to solve a linear system of equations.
- 5) Derive appropriate numerical methods to calculate a definite integral.

### Unit – I

Transcendental polynomials equation: Introduction, Methods based on first and second degree equation: secant method-Newton Raphson method-Muller method -Chebyshev method -Rate of convergence. Polynomials Equations: Birge-Viet method-Bairstow method-Graeffe's root squaring method.

### Unit–II

System of linear algebraic equation and Eigen values problems: Jacobi iteration method, Gauss-Seidal iteration method successive over relaxation method. Eigen values and vectors.

### Unit–III

Interpolation and approximation – Hermite Interpolation – Bivariate interpolation – Lagrange bivariate interpolation- Newton's bivariate Interpolation for equispaced points – approximations – Gram-Schmidt orthogonalizing process – Chebyshev polynomials.

### Unit–IV

Numerical Integration: Methods based on interpolation-Newton-Cotes methods-trapezoidal rule-Simpson's rule-Methods based on undetermined coefficients-Gauss-Legendre integration methods-Labatto integration method-Radau Integration Method and Gauss-Chebyshev Integration methods.

### Unit–V

Ordinary Differential Equations: Numerical methods – Euler method – Backward Euler method – Mid point method– Taylor series method – Runge Kutta methods – Implicit Runge – Kutta method.

### TEXTBOOK:

Numerical methods for scientific and Engineering Computation by M.K.Jain, S.R.K.Iyengar, R.K.Jain III–Edition.

Unit:I –Chapter-2 Sec 2.3,2.4,2.5,2.8

Unit:II –Chapter-3 Sec 3.4,3.5,3.6

Unit:III –Chapter-4 Sec 4.5,4.7,4.8

Unit:IV –Chapter-5 Sec 5.6,5.7,5.8

Unit:V – Chapter-6 Sec 6.2,6.3,6.4.

### Learning Outcomes

Students will be able to

- 1) Solve an algebraic or transcendental equation using an appropriate numerical method.
- 2) Solve a differential equation using an appropriate numerical method.
- 3) Evaluate a derivative at a value using an appropriate numerical method.
- 4) Solve a linear system of equations using an appropriate numerical method.
- 5) Calculate a definite integral using an appropriate numerical method.
- 6) Skill in finding the roots of the given equation

## Elective: CRYPTOGRAPHY

CourseCode	CourseTitle	L	T	P	C
19212DSC34A	Elective-Cryptography	5	0	0	4

**Objectives:**

- 1) Understand the basic concept of Cryptography and Network Security their mathematical models.
- 2) Understand mathematical foundation required for various cryptographic Algorithms.

**UNIT I:**

Simple cryptosystem—enciphering matrices.

**UNIT II:**

Idea of public key cryptography—RSA—discrete log.

**UNIT III:**

Knapsack pseudoprimes—Rho method

**UNIT IV:**

Fermat factorization and factor bases—continued fraction method.

**UNIT V:**

Basic facts—elliptic curve cryptosystems—elliptic curve factorization.

**Reference:**

A course in Number Theory and Cryptography—N. Koblitz, Springer—Verlog, New York 1987.

**Learning Outcomes**

- 1) Analyze key agreement algorithm to identify their weaknesses.
  - 2) Describe the ethical issues related to the misuse of computer security.
  - 3) Develop code to implement a cryptographic algorithm or write an analysis report on any existing security product.
-

## ELECTIVE: ALGEBRAIC CODING THEORY

Course Code	Course Title	L	T	P	C
19212DSC34B	Elective-Algebraic Coding Theory	5	0	0	4

### Objective:

- To equip students with the basic understanding of the fundamental concept of Coding Theory as they are used in communications.
- To enhance knowledge of codes. Error, Tree Codes, cyclic codes.
- To guide the student through the implications and consequences of fundamental theories and laws of coding theory with reference to the application in modern communication and computer systems

### UNIT I

The communication channel. The coding problem. Types of codes. Block codes. Error — detecting and Error — Correcting codes. Linear codes. The hamming metric. Description of linear block codes by matrices. Dual codes. Standard Array. Syndrome. Step — by — step decoding modular representation.

### UNIT II:

Error — Correction capabilities of linear codes. Bounds on minimum Distance for block codes. Plotkin bound. Hamming sphere packing bound. Varshamov — Gilbert — Sacks bound. Bounds for Burst — Error detecting and correcting codes. Important linear block codes. Hamming codes. Golay codes. Perfect codes. Quasi — perfect codes. Reed — Muller codes. Codes derived from Hadamard matrices. Product codes. Concatenated codes.

### UNIT III:

Tree codes. Convolutional codes. Description of linear tree and convolutional codes by matrices. Standard Array. Bounds on minimum distance for convolutional codes. V. G. S bound. Bounds for Burst — error detecting and correcting convolutional codes. The Lee metric, packing bound for Hamming code w.r.t. Lee metric. The Algebra of polynomial residue classes. Galois fields. Multiplicative group of a Galois field. Cyclic codes. Cyclic codes as ideals.

### UNIT IV:

Matrix description of cyclic codes. Hamming and Golay codes as cyclic codes. Error detection with cyclic codes. Error — connection procedure for short — ended cyclic codes. Pseudo cyclic codes. Code symmetry. Invariance of codes under transitive group of permutations. Bose — Chaudhary — Hocquenghem (BCH) codes. Reed — Solomon (RS) codes.

### UNIT V:

Majority — Logic decodable codes. Majority — Logic Decoding. Singleton bound. The Griesmer bound, Maximum — distance separable (MDS) codes. Generator and Parity — check matrices of MDS codes. Weight distribution of MDS code. Necessary and sufficient conditions for a linear code to be an MDS code. MDS codes from RS codes. Abramson codes. Closed — loop burst — error correcting codes ( fire codes). Error locating codes.

5. F. J. MacWilliams and N. J. A. Sloane, Theory of Error Correcting Codes "North — Roland Publishing Company, 1977.

### Learning Outcomes

Upon completion of this course, students should be able to:

- 1) Define channel capacities and properties using Shannon's Theorems.
- 2) Construct efficient codes for data on imperfect communication channels.
- 3) Generalize the discrete concepts to continuous signal on continuous channels.

## OPEN ELECTIVE

Course Code	Course Title	L	T	P	C
19220OEC	Internet and Web Design	4	0	0	2

### AIM

To equip the students with basic programming skill in Web Designing

### OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice markup languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

### UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A webpage design project – Forms.

### OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design frontend webpage and connect to the backend databases.

### REFERENCE BOOK

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001

## SEMESTER-IV

### CoreXII:FUNCTIONALANALYSIS

CourseCode	CourseTitle	L	T	P	C
19212AEC41	CoreXII-FunctionalAnalysis	5	1	0	5

#### Objectives:

- 1) TostudyaboutConverges,HilbertspacesandBessels's inequality.
- 2) TostudyaboutSpectralTheory.
- 3) Tostudyaboutconvergencesin $L(X,Y)$  –UniformboundednessandTheGelfand Neumark theorem and Banach Algebra.

#### UNIT I

Algebraic Systems: Groups — Rings — The structure of rings — Linear spaces - The dimension of a linear space — Linear transformations — Algebras — Banach Spaces : Thedefinition and some examples — Continuous linear transformations — The Hahn — Banachtheorem — The natural imbedding of  $N$  in  $N^{**}$  - The open mapping theorem — The conjugateof a operator.

#### UNIT II

HilbertSpaces:Thedefinitionandsomesimpleproperties—Orthogonalcomplements —Orthonormalsets—Theconjugatespace $H^*$ -Theadjointofanoperator—Self-adjoint operators — Normal and unitary operators — Projections.

#### UNIT III

Finite-Dimensional Spectral Theory: Matrices — Determinants and the spectrum of an operator — The spectral theorem — A survey of the situation.

#### UNIT IV

GeneralPreliminariesonBanachAlgebras:Thedefinitionandsomeexamples —Regularandsingularelements—Topologicaldivisorsofzero—Thespectrum—The formula for the spectral radius — The radical and semi- simplicity.

#### UNIT V

The Structure of Commutative Banach Algebras: The Gelfand mapping — Applications of the formula  $r(x) = \lim \|x^n\|^{1/n}$  - Involutions in Banach Algebras —TheGelfand-Neumark theorem.

#### Reference:

IntroductiontoTopologyandModernAnalysis, G.F.Simmons, McGraw-HillInternationalEd. 1963.

UNIT-I : Chapters8and9

UNIT-II : Chapter 10

UNIT-III : Chapter II

UNIT-IV : Chapter12

UNIT-V : Chapter13

#### Reference(s)

2. B.V.Limaye,FunctionalAnalysis,WileyEasternLimited,Print,1985.
3. K.Yosida,FunctionalAnalysis,Springer-Verlag,1974.
4. LaurentSchwartz,FunctionalAnalysis,CourantInstituteofmathematicalSciences,New York University, 1964.

#### LearningOutcomes

Uponsuccessfulcompletionofthiscourse,thestudent willbeableto:(Knowledgebased) distinguish among open and closed sets on different topological spaces;

- 1) knowthetwofundamentaltopologies:discreteandindiscretetopologies.
- 2) Identifypreciselywhenacollectionofsubsetsofagivenset equipped withatopology forms a topological space;
- 3) Understandwhentwotopologicalspacesare homeomorphic;

- 4) Identify the concepts of distance between two sets; connectedness, denseness, compactness and separation axioms.
  - 5) Research inquiry and analytical thinking abilities
-

## CoreXIII VISUALPROGRAMMING

CourseCode	CourseTitle	L	T	P	C
19212SEC42	CoreXIII–VisualProgramming	6	1	0	5

### Objectives

LearntodesignanddevelopWindows-basedbusinessapplicationsusingVisualBasic.NET programs that meet commercial programming standards.

- To learnthebasic principlesofvisualprogramming
- Tostudythenecessaryskillstocreatesoftwareolutionsusingvisualprogramming
- UnderstoodtheOpenDataBase Connectivityusing Visualprogramming.
- ToinculcateknowledgeonProgrammingandProjectDevelopmentusingVisualBasic.

### UNIT I

Introduction to Visual Basic — Integrated Development Environment (IDE) features — VB Editor — Customizing the IDE — Anatomy of a form — Working with form properties — setting form's properties — Introducing form events and form methods.

### UNIT II

Variables in Visual Basic; Declaring variables — Datatypes — Null value. Error value — Empty value - The scope of a variable Module level variables — Constants — Creating your own constants — Scope of a constant — Converting data types — Arrays — Declaring arrays — Fixed size arrays — Dynamic arrays — Preserve Keyword - ReDim — Writing code in Visual Basic — The anatomy of a procedure — Subroutine and functions — Language constructs — For...Next, The While loop, Select case - End select, Exit statement. With structure.

### UNIT III

Selecting and Using controls — Introduction to standard controls -- Command buttons - Text boxes — labels — Option buttons — Check boxes — Frame controls — List boxes — Combo boxes — Image objects — Picture boxes — Timer — Scrollbars - Filesystem Controls( Drive, DirList, File List boxes)

### UNIT IV

Introduction to Built-in ActiveX Control — Toolbar — The Treeview control — The Listview control — The Image list control — Common Dialog Control — Statusbar control Rich textbox control — Menu editor.

### UNIT V

DDE Properties — DDE Methods — OLE properties — Active Control Creation and Usage and ActiveX DLL creation and usage - Database access — Data Control — field control — Data grid record set using SQL to manipulated data — Open DataBase Connectivity.

### Reference:

1. Mohammed Azam, Programming with Visual Basic 6.0 — Vikas Publishing House Pvt, Ltd — 2002
2. Content Development Group, Visual Basic 6.0 — Tata McGraw Hill Publishing Company Limited — 2002.

### Learning Outcomes

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
  - Explore Visual Basic's Integrated Development Environment (IDE).
  - Implements syntax rules in Visual Basic programs.
  - Write Windows applications using forms, controls, and events
  - Write and apply decision structures for determining different operations.
  - Write and apply loop structures to perform repetitive tasks.
  - Students are able to design IDE enabled software solution to representative problems.
  - Students can use DDE data/ O component to read and write raster and vector data files.
  - Students can use OLE map component to develop a custom Windows Forms based application with a map and legend.
-

## COREXIV-NUMBERTHEORY

SubjectCode	Titleofthepaper	L	T	P	C
19212AEC43	CoreXIV -NUMBERTHEORY	6	0	0	5

### Objectives:

The objective is for the students to obtain a foundational knowledge of elements of Number Theory through step-by-step proofs of classical theorems, as well as to sharpen their skills through problem-solving.

### Unit I:

Fundamentals of Congruence's: Basic properties of Congruence's – Residue-Riffling. Solving Congruence's: Linear Congruence's – the theorems of Fermat and Wilson Revisited – the Chinese remainder Theorem – polynomial congruence's.

### Unit II :

Arithmetic functions: Combinatorial study of  $\varphi(n)$  – Formulae for  $d(n)$  and  $\sigma(n)$  – Multiplicative arithmetic functions. The Mobius inversion formula. Primitive roots: properties of reduced systems – primitive roots modulo P.

### Unit III :

Quadratic Residues: Euler's Criterion – the Legendre symbol – the quadratic Reciprocity law – Applications of the Quadratic reciprocity law, Distribution of quadratic residues: Consecutive residues and non residues – consecutive triples and Quadratic residues.

### Unit IV:

Sum of squares: Sums of two squares – Sums of four squares. Elementary partition theory; Introduction – graphical representation – Euler's partition theorem – searching for partition identities.

### Unit V :

Partition generating functions: Infinite products as generating functions – Identities between infinite series and products – partition identities: History and introduction – Euler's pentagonal number theorem – The Roger's Ramanujan identities – Series and Product identities. TEXT BOOK: Scope and treatment as in "Number Theory" by George E. Andrews, Hindustan Publishing Corporation (India) Delhi-110 007 (1989).

Unit I: Chapters IV and V

Unit II : Chapters VI and VII

Unit III : Chapters IX and X

Unit IV : Chapters XI and XII

Unit V : Chapters XIII and XIV

### Learning Outcomes:

On satisfying the requirements of this course, students will have the knowledge and skills to:

1. Solve problems in elementary number theory
2. Apply elementary number theory to cryptography
3. Develop a deeper conceptual understanding of the theoretical basis of number theory and cryptography
4. Research inquiry and analytical thinking abilities

## ELECTIVE-COMBINATORIAL.MATHEMATICS

CourseCode	CourseTitle	L	T	P	C
19212DSC44A	Elective-CombinatorialMathematics	5	0	0	4

### Objectives:

The main objective is to learn how rigorous mathematical tools can be made for the purpose of doing mathematics with help of computers.

### UNIT I

Basic combinatorial numbers.

### UNIT II

Generating functions and Recurrence relations symmetric functions.

### UNIT III

Multinomials—Inclusion and exclusion principles —permutations with forbidden positions.

### UNIT IV

Necklace problem and Burnside's Lemma — Cycle Index of a permutation group.

### UNIT V

Polya's theorems and their immediate applications—Binary operations on permutation groups.

### Reference

Combinatoric theory and applications by V. Krishnamurthy.

Unit I	:	Chapter I (Pages 1 — 15)
Unit II	:	Chapter I (Pages 26— 61)
Unit III	:	Chapter I (Pages 66 — 98)
Unit IV	:	Chapter 11 (Pages 99— 121)
Unit V	:	Chapter II (Pages 122—159)

### General Reference

Introductory Combinatorics—Kenneth P. Bogart—Pitman Publishing mc, Mashfield, Massachusetts.

### Learning Outcomes

Upon successful completion of Math 315-Combinatorics, a student will be able to:

- Apply diverse counting strategies to solve varied problems involving strings, combinations, distributions, and partitions,
  - Write and analyze combinatorial, algebraic, inductive, and formal proofs of combinatoric identities,
  - Recognize properties of graphs such as distinctive circuits or trees.
- 
- will become familiar with fundamental combinatorial structures that naturally appear in various other fields of mathematics and computer science.
  - They will learn how to use these structures to represent mathematical and applied questions, and they will become comfortable with the combinatorial tools commonly used to analyze such structures.
-

## ELECTIVE-DESIGN AND ANALYSIS OF ALGORITHMS

Course Code	Course Title	L	T	P	C
19212DSC44B	Elective- Design And Analysis of algorithms	5	0	0	4

### Objectives:

1. Analyze the asymptotic performance of algorithms.
2. Write rigorous correctness proofs for algorithms.
3. Demonstrate familiarity with major algorithms and data structures.
4. Apply important algorithmic design paradigms and methods of analysis.
5. Synthesize efficient algorithms in common engineering design situations.

### UNIT I INTRODUCTION

What is an algorithm?— Algorithm specification— Performance analysis— Randomized algorithms.

### UNIT II ELEMENTARY DATA STRUCTURES

Stacks and Queues— Trees— Dictionaries— Priority Queues— Graph representations.

### UNIT III DESIGN OF ALGORITHM METHODS

Divide— And— Conquer— General method— Binary search— finding the maximum and minimum in a set of items — Merge sort — Quick sort.

### UNIT IV DESIGN OF ALGORITHM METHODS CONTINUATION

The Greedy method — The general method — Tree vertex Splitting Problem — Tree traversal and search techniques — Techniques for Binary trees — Techniques for Graphs — Breadth first search and depth first search traversal — Connected components and spanning trees — Backtracking — General method — the 8 — Queens Problem — Branch and Bound method — Travelling sales person algorithm.

### UNIT V ALGEBRAIC PROBLEMS

Algebraic problems — The general method — Evaluation and Interpolation — The Fast Fourier transform — Modular arithmetic — Even faster evaluation and interpolation.

### Reference

1. Eills Horowitz, Sartaj Shani and Sanguthevar Rajasekaran — Fundamentals of Computer Algorithm — Galgotia Publications Pvt Ltd 2000.
  - Unit I Chapter 1 (sections; 1.1, 1.2, 1.3.1 to 1.3.4, 1.4.1 to 1.4.3)
  - Unit II Chapter 2 (section; 2.1 to 2.4, 2.6)
  - Unit III Chapter 3 (sections 3.1 to 3.5)
  - Unit IV Chapter 4 (sections 4.1, 4.3) Chapter 6 (sections 6.1 to 6.3) Chapter 7 (sections 7.1, 7.2) Chapter 8 (sections 8.1, 8.3)
  - Unit V Chapter 9 (sections 9.1 to 9.5)

### References

2. Goodman, S.E. and Hedetniemi, S.T. Introduction to the design and analysis of algorithms (McGraw Hill international Edition 1987).

### Learning Outcomes

Students who complete the course will have demonstrated the ability to do the following:

- 1) Argue the correctness of algorithms using inductive proofs and invariants.
- 2) Analyze worst-case running times of algorithms using asymptotic analysis.
- 3) Describe the greedy paradigm and explain when an algorithmic design situation calls for it. Recite algorithms that employ this paradigm. Synthesize greedy algorithms and analyze

them. Compare between different data structures. Pick an appropriate data structure for a design situation

## Open Elective - Writing for the Media

Course Code	Course Title	L	T	P	C
19211OEC	PG Open Elective - Writing for the Media	4	0	0	2

**Aim:**

- To equip students to enter into the realm of mass media.

**Objectives:**

- To help students understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication - Barriers to mass communication and mass culture - Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News - Hard and soft news - Expected and unexpected news - Box news - Follow up news - Scoop - Filters - Human interest stories - Recognizing and evaluating news.

**UNIT-III**

News and views - News analysis, Editorial, Columns, Article, Middle reviews, Letters - Features.

**UNIT-IV**

Reporting - Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media - Inverted pyramid style - Feature style - TV/Broadcast, New style writing TV/Radio Documentaries - Writing Advertisements - Practical

**References-**

## OPEN ELECTIVE – APPLICABLE MATHEMATICAL TECHNIQUES

Course Code	Course Title	L	T	P	C
19212OEC	Open Elective – <b>Applicable Mathematical Techniques</b>	4	0	0	2

### Objectives:

- 1) Understand the basic concept of Interpolation.
- 2) To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

#### Unit I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

#### Unit II

Assignment Problems

#### Unit III

Replacement Problems

#### Unit IV

Decision Analysis

#### Unit V

Game Theory

### References

1. For unit I, "Numerical Methods in Science and Engineering" M.K. Venkatraman
2. For units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

### Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students get the knowledge about interpolation

CourseCode	CourseTitle	L	T	P	C
19215OEC	Open-elective-Bio-Analytical Techniques	5	0	0	3

### Aim

Bioanalysis is a sub-discipline of analytical chemistry covering the quantitative measurement of xenobiotics (drugs and their metabolites, and biological molecules in natural locations or concentrations) and biotics (macromolecules, proteins, DNA, large molecule drugs, metabolites) in biological

### Course objectives

- To teach students on various techniques used for the assessment of various diseases and research studies.
- To teach the good laboratory practice required to execute the learned techniques.

### Course outcomes (CO's)

1. The students learn various techniques and acquire the skills to use appropriate methods.
2. The students acquire the good laboratory practices.

### Unit I

Separation techniques – Solvent extraction – principles and applications of Soxhlet extraction and super critical fluid extraction; Distillation – Theory of distillation, method and application of fractional and steam distillation; Techniques of sublimation and its applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hasselbalch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

### Unit II

Chromatography – Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC.

### Unit III

Centrifugation – Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges. Radioisotopes – Radioactivity, types, law of radioactivity, decay processes, units of radioactivity; Applications of radioisotopes in biology.

#### **UnitIV**

Electrophoresis –Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

#### **UnitV**

**Spectroscopy – Principles and components of instruments and applications of Colorimeter, Spectrophotometer, Fluorescence spectrometry, AAS and Flame photometer. Principles and applications of Raman spectroscopy, IR spectrometry, NMR and ESR.**

#### **References:**

- 1. BiophysicalChemistry–Nirmalendu nath**
- 2. BiophysicalChemistry–Upadhyay,Upadhyayandnath.**

- 5. Instrumentalanalysis–ChatwallAnand**

CourseCode	OPEN ELECTIVE PAPER	L	T	P	C
17213OEC	BIOMEDICAL INSTRUMENTATION	4	0	0	2

**Aim:**

- To understand the concepts and application of electronic instrumentation in the Medical field.

**Objective:**

The students will be able to

- Interpret technical aspects of medicine
- Solve Engineering Problems related to medical field
- Understand medical diagnosis and therapy

**UNIT-I: BIOELECTRIC SIGNALS AND ELECTRODES**

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

**UNIT-II: RECORDING SYSTEM AND RECORDERS**

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

**UNIT-III: MEASUREMENT AND ANALYSIS TECHNIQUES**

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment– Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

**UNIT – IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS**

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph (M mode).

**UNIT- V: ADVANCED BIOMEDICAL SYSTEMS**

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

**OUTCOMES:**

- To familiarize students with various medical equipments and their technical aspects
- To introduce students to the measurements involved in some medical equipment.
- Ability to understand diagnosis and therapy related equipments
- Understanding the problem and ability to identify the necessity of an equipment to a specific problem

**Books for Study**

1. R.SKhandpur, Handbook of Biomedical Instrumentation, Tata McGraw Hill publishing company Limited. New Delhi, (2003). (Unit I, II, IV & V)
2. Leslie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Biomedical Instrumentation and measurements, PHI, New Delhi. (Unit-III)

**Book for Reference**

1. M. Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

CourseCode	CourseTitle	L	T	P	C
19220OEC	OpenElective-InternetAndWebDesign	4	0	0	2

### AIM

To equip the students with basic programming skill in Web Designing

### OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice markup languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

### UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A webpage design project – Forms.

### OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design frontend webpage and connect to the backend databases.

### REFERENCE BOOK

## Open Elective-Insurance Services

Course Code	Course Title	L	T	P	C
19261OEC35D	Open Elective-Insurance Services	4	0	0	2

Aim:

To look after the interests of people from uncertainty by providing certainty of compensation.

Objectives:

To learn the fundamental concepts and principles of insurance.

To explain the nature of different insurance policies, insurance contracts and settlement of claims.

Unit – I

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts Unit –

II

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

Unit – III

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

Unit – IV

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

Unit – V

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

Out Come:

The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA.

Reference Books:

1. Dr.MR.Mishra –Law of Insurance–Central Law Agency Allahabad
2. Dr.M.M.Verma & R.K.Agarwal–Insurance
3. Pandey & Ratogi–Insurance
4. M.N.Mishra & S.Chand-Principles and Practice of Insurance

COURSECODE	COURSE TITLE	L	T	P	C
19214OEC	GreenChemistry	4	1	0	3

**Aim:** To reduce the soil and water pollution in environment.

**Objectives:** To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

### Unit I-Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution Pollution prevention.

### Unit II-Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention- Why should chemist pursue the Goals of Green Chemistry -The roots of innovation–Limitations.

### Unit III -BioCatalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins- Bio catalysis synthesis of industrial chemicals by bacterial constructs-Future Trends.

### Unit IV -Green House Effect

Greenhouse effect and Global Warming–Introduction- How the greenhouse effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate- Control and remedial measures of greenhouse effect -Global warming a serious threat - Important points.

### Unit V-Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

### Outcomes:

- To understand the environmental status and evolution.
- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

### References:

1. Introduction to Green Chemistry– M.Rayan and M.Tinnes and
2. New Trends in Green Chemistry– V.K.Ahluwalia and M.Kidwai

## Open Elective–Counselling and Psychology

Course Code	Course Title	L	T	P	C
192800EC35E	PG Open Elective- Counselling and Psychology	4	0	0	2

**Aim:**

- To acquaint with counselling and its process

**Objectives:**

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

**Out Come:**

- Learn counselling and its process

**UNIT I**

Definition of Counselling  
 Counselling as a Solution to Human Problems  
 Counselling-Expectations & Goals

**UNIT II**

Personality Determinates, Intellectual Determinates, Emotional Determinates  
 Social Determinates

**UNIT III**

Approaches to Counselling  
 Counselling Process

**UNIT IV**

Psychological Testing  
 Diagnosis

**UNIT V**

Educational Counselling  
 Family Counselling

**References Book:**

6. Lewis E.C., The Psychology Of Counselling New York Holt, Rinchart And Winston Inc. 1970

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research–Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research–Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research–Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research-Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc/M.A/M.Com/MBA/ ( ) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSBCourses	Credits
I	ResearchLed Seminar	1
II	ResearchMethodology	3
II	ParticipationinBoundedResearch	2
III	DesignProject/SocioTechnicalProject ( Scaffolded Research)	4
IV	ProjectWork	12

## MPhil-SYLLABUS

(For the candidates admitted from the academic year 2018-2019 onwards)

### PAPER – I Research Methodology

(Common for all Subjects except Languages)

#### **Unit-I:**

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

#### **Unit-II:**

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

#### **Unit-III:**

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and subdivisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

#### **Unit-IV:**

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with

worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Mail (E-mail) – Intranet and Extranet.

#### **Unit–V:**

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

- Research Methodology by C.R. Kothari, Chapter 1,2,3.
- Microsoft Office 2003 - Edward C. Willet. First Edition 2004, Wiley Publications, USA, (Chapters 2,3,4,5,6,12,14,15,26,28,29)

**Department of Mathematics M.Phil**  
**Mathematics**  
**Paper-II**  
**193MAC12-ALGEBRA AND ANALYSIS**

**Course Outcomes:**

1. To empower scholars with knowledge of pure mathematics.
2. To introduce the algebraic structure through modules.
3. To acquaint with advanced concepts in algebra
4. To understand Borel measures.
5. To enhance problem solving skills in algebra.
6. To understand the techniques in algebra.

**Unit-I: Modules**

Modules homomorphism and exact sequence – Projective and injective – Modules homomorphism and duality. (Chapter 4.1, 4.3, 4.4, Text Book -1)

**Unit-II: Commutative Rings and Modules**

Chain conditions – Prime and primary ideals – Primary decomposition – Noetherian Rings and modules (Chapter 8.1, 8.2, 8.3, 8.4, Text Book -1)

**Unit III: Positive Borel Measures**

Vectorspaces – Topological preliminaries – Urysohn's Lemma – The Riesz representation theorem. (Chapter 2, Text Book -2, Sections 2.1-2.14).

**Unit-IV: Problems in Algebra**

Groups, subgroups, normal subgroups, quotient groups, homomorphisms, cyclic groups, permutation groups, Cayley's theorem, class equations, Sylow theorems. Rings, ideals, prime and maximal ideals, quotient rings, field extensions, Galois theory. Algebra of matrices, rank and determinant of matrices, linear equations. Eigenvalues and eigenvectors, Cayley-Hamilton theorem. Matrix representation of linear transformations. Change of basis, canonical forms, diagonal forms, triangular forms, Jordan forms

**Unit V: Banach Algebras**

Banach algebras – Spectrum of an element in Banach algebra – Spectral radius formula – Quotient algebras – applications. (Chapter 18, Text Book -2)

**BooksforStudy:**

1. Algebra by Thomas W Hungerford, Springer Verlag Indian reprint
2. Real and Complex Analysis by Walter Rudin, Tata McGraw Hill (II Edn) 1996.

**ReferenceBooks:**

Abstract Algebra by David S. Dummit and Richard M. Foote, 3<sup>rd</sup> Edition, Wiley Student Edition  
2. Linear Algebra by Stephen H. Friedberg, Arnold J. Insel, Lawrence E. Spence, Fourth Edition, Pearson

## Paper –III

### M.Phil Mathematics

#### 193MAC13-ADVANCED NUMERICAL ANALYSIS

##### Course Outcomes

1. Basic Knowledge of numerical methods
2. Approximation methods.
3. Linear and nonlinear approximation
4. Understanding polynomial equations
5. Techniques in numerical analysis
6. Initial and boundary value problems.

**Unit-I:** Transcendental and Polynomial Equations - Iteration method based on second degree equation – Rate of convergence – iterative methods – Methods for finding complex roots – iterative methods: - Birge-Viet method, Bairtow's method, Gracffe's root squaring method.

**Unit-II:** System of Algebraic Linear Equations - Direct methods – Gauss-Jordan Elimination Method – Triangularization method – Cholesky method – Partition method. Error Analysis – iterative methods: Jacobi iteration method – Gauss-Seidel iteration method – SOR-method, Jacobi's method for symmetric matrices – power method – Inverse-power method.

**Unit-III:** Interpolation and Approximation - Hermite interpolation – Piecewise and spline interpolation – Approximation – Least square Approximation.

**Unit-IV:** Differentiation and Integration - Numerical differentiation – Numerical Integration – Methods based on interpolation.

**Unit-V:** Ordinary Differential Equations - Multi-step method – predictor – Corrector method – Boundary value problem – initial value methods – shooting method – Finite Difference method.

#### Text Book

M.K.Jain, S.R.K.Iyengar and R.K.Jain, Numerical Methods for scientific and Engineering Computation, III Edn, Wiley Eastern Ltd., 1993.

Unit I - Chapter 2 – 2.4 to 2.8

Unit II - Chapter 3 – 3.2 to 3.5

Unit III - Chapter 4 – 4.4 – 4.6, 4.8 to 4.9

Unit IV - Chapter 2 – 2.4 to 2.8

Unit V - Chapter 6 – 6.4, 6.5, 6.8, 6.9, 6.10

**References:**

1. Kendall E. Atkinson, An introduction to Numerical Analysis, II Edn., John Wiley & Sons, 1988.
2. M. K. Jain, Numerical Solution of Differential Equations, II Edn., New Age International Pvt. Ltd., 1983.
3. Samuel D. Conte, Carl Deboor, Elementary Numerical Analysis, McGraw-Hill International Edn., 1983.

## RESEARCH AND PUBLICATION ETHICS

CourseCode	CourseTitle	L	T	P	C
CPE_RPE	Research and publication ethics				2

### THEORY

#### Unit I: PHILOSOPHY AND ETHICS (3 hours)

1. Introduction to philosophy, definition, nature and scope, concept, branches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

#### Unit II: SCIENTIFIC CONDUCT (5 hours)

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

#### Unit III: PUBLICATION ETHICS (7 hours)

1. Publication ethics: definition, introduction and importance.
2. Best practices/standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflict of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

## **PRACTICE**

### **UnitIV:OPENACCESSPUBLISHING(4hours.)**

1. Openaccesspublicationsandinitiatives.
2. SHERPA/RoMEOonlineresoursetocheckpublishercopyright&self-archivingpolicies.
3. SoftwaretooltoideitifypredatorypublicationsdevelopedbySPPU.
4. Journalfinder/journalsuggestiontoolsviz,JANE,ElsevierJournalFolder,SpringerJournal Suggester,etc.

### **UNITV:PUBLICATIONMISCONDUCT (4 hours)**

#### **A. GroupDiscussions(2hours)**

1. Subjectspecificethicalissues,FFP,authorship
2. Conflictsofinterest.
3. Complaintsandappeals:examplesandfraudfromIndiaandabroad.

#### **B. Softwaretools(2hours)**

UseofplagiarismsoftwarelikeTurnitin,Urkundandotheropensourcesoftwaretools.

### **UNITVI:DATABASESANDRESEARCHMETRICS(7hours)**

#### **A. Databases(4hours)**

1. Indexingdatabases.
2. Citationdatabase:WebofScience,Scopusetc.

#### **B. ResearchMetric(3hours)**

1. ImpactFactor ofjournalasper JournalCitationReport,SNIP,SJR,IPP,CiteScore.  
Metric: h-index. g index, i10 index, altmetrics.

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech [Employability]

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy [Employability]

**UNIT – IV**

Editing

Proof reading [Employability]

**UNIT – V**

Comparison and contrast

Cause and effect [Employability]

**References:**

English Work Book-I&II	-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
19111AEC12	English-I	4	0	0	2

**AIM:**

To acquaint students with learning English through literature

**OBJECTIVE:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**OUTCOME:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang  
 An Eco-Feminist Vision -Aruna Gnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet  
 She Spoke for all Nature -Young world ‘The Hindu’

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson  
 Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel  
 Love poem for a wife -A.K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

**REFERENCES:-**

The Art of Reading/ Experiencing Poetry. -S.Murugesan and Dr.K.Chellappan  
 Emerald Publishers

Course Code	Course Title	L	T	P	C
19122SEC13	Programming in C with C++	5	1	0	6

**AIM**

To equip the students with fundamental programming principles and concepts of object oriented design.

**OBJECTIVES:**

The students should be made to:

- Be exposed to the syntax of C.
- Be familiar with programming in C.
- Learn to use arrays, strings, functions, pointers, structures and unions in C.
- To learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc

- To understand and apply the principles hiding, localization and modularity in software
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes

#### **UNIT -I**

Introduction - Basic Structure of C Programs - Character set -C Tokens - Constants - Variables-Data Types - Declaration and Assigning Values to Variables - Defining Symbolic Constants - Operators - Expressions - Type conversions - Built-in functions.

#### **UNIT -II**

Managing Input and Output Operators - Decision Making and Branching - Decision Making and Looping – Arrays and its Types.

#### **UNIT –III**

Functions: The Form of C Functions-Return Values and Their Types -Calling a Function-Category of Functions- Nesting of Functions-Recursion- Structures and Unions- Pointers.

#### **UNIT-IV**

Basic concepts of OOPs- Benefits and Application of OOPs- Inline functions- Function overloading – Friend and Virtual Functions -Constructors and Destructors - Operator overloading.

## UNIT-V

Inheritance and its Types- Files - Classes for file stream operations - Opening, Closing and processing files - End of file Detection - File Pointers - Updating a file - Error handling during file operations - Command Line Arguments - Templates - Exception Handling.

### OUTCOMES:

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications
- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Understand functions and parameter passing.
- Be able to do numeric (algebraic) and string-based computation.
- Understand object-oriented design and programming

### REFERENCE BOOKS:

1. "Programming in C" – E. Balagurusamy – Tata McGraw-Hill Publications
2. "Programming with C" – Byron S.Gottfried – Schaum's outline series – Tata McGraw-Hill publications.
3. "Object oriented programming with C++". E. Balagurusamy, Tata McGraw Hill Publishing Ltd., New Delhi, 1995.
4. "C++ The complete reference" - Herbert Schilt, 3rd edition, Tata McGraw Hill Pub-Ltd., 1999

Course Code	Course Title	L	T	P	C
19122SEC14L	Programming in C with C++ Lab	0	0	3	2

1. Solution of a Quadratic Equation (all cases).
2. Sum of Series (Sine, Cosine,  $e^x$ )
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a c program for Matrix Operations (Addition, Subtraction, Multiplication- use functions).
6. Write C++ program using a class to represent a bank account with data members- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.

7. Write C++ programs for implementing inheritance.
8. Write a C++ program using friend function.
9. Write a C++ program which reads a text from a file and the display the following information (Number of Lines, Number of words, and Number of characters).
10. File Processing: Mark sheet preparation.

Course code	Course Title	L	T	P	C
19112AEC15B	Classical Algebra	5	0	0	4

### OBJECTIVES:

To learn about the expansion of a Binomial Theorem for a rational index using vandermonde's theorem. Further we aim at learning problems to be solved using the different types in Binomial series .Understanding the relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods And Reciprocal equations-Descartes' rule of signs-simple problems.

#### UNIT-I

Binomial, exponential and logarithmic series (formulae only)-Summations.

#### UNIT-II

Non singular, symmetric, skew symmetric orthogonal, Hermition, skew Hermition and unitary matrices-characteristic equation, Eigen values, Eigen vector-Cayley Hamilton's theorem(proof not needed)-simple applications.

#### UNIT-III

Relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods.

#### UNIT-IV

Transformation of equations-diminishing, increasing and multiplying the roots by a constant-forming equation with the given roots.

#### UNIT-V

Reciprocal equations-Descartes' rule of signs-simple problems.

### LEARNING OUTCOMES

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Cayley Hamilton Theorem, and finding the Eigen values & Eigen vectors
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

**REFERENCE BOOKS:**

Algebra-T.K.M.Pillai, Vol1&amp;2.

Course code	Course Title	L	T	P	C
19112AEC16B	Numerical And Statistical Methods	4	0	0	4

**OBJECTIVES:**

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems, Numerical differentiation and integration interpolation with equal & unequal intervals are concentrated. Correlation coefficient and its properties Linear Regression and its properties, Test of significance would also be taught.

**UNIT-I**

Algebraic and transcendental equations-the iteration method –the Newton Raphson method-False Position method-the bisection method

**UNIT-II**

Interpolation-Finite difference –Newton’s formulae for interpolation-Lagrange’s formulae for interpolation-Gaussian elimination method –Gauss-Seidal method.

**UNIT-III**

Numerical different ion and integration-Maximum and minimum values of a tabulated functions-Trapezoidal rule-Simpson’s rule –Numerical solution of ordinary differential equations-Euler’s method –Range Kutta methods-Predictor corrector method-Boundary value problems.

**UNIT-IV**

Correlation –different types of correlation –Karl Pearson’s spearman’s correlation-Regression-Regression coefficients-Regression equations-Properties of correlation and regression coefficients.

**UNIT-V**

Test of hypothesis-null and alternative hypothesis-tests of significance based on normal and distribution for mean, simple correlation and proportion Chi square test-independents of attributes and goodness of fit-applications.

**Learning outcomes**

By the end of this course, you should be able to calculate the solution of algebraic and transcendental equations.

- solutions of simultaneous equations, be able to calculate the area of the given curve
- Understood the concept of correlation and regression
- A knowledge of test of significance based on parametric and non – parametric test

**REFERENCE BOOKS:**

Course Code	Course Title	L	T	P	C
19122SEC01AL	Packages Lab -I	0	0	2	1

**MS-WORD**

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. Picture Insertion and Alignment
  - a. Prepare a Greeting Card
  - b. Prepare a Handout
7. Create a Mark sheet using tables and find out the total marks.
8. Prepare a Business letter for more than one company using Mail Merge

Course Code	Course Title	L	T	P	C
19111SEC01L	Communicative English Lab-I	0	0	1	1

**AIM:**

- To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To know English grammar and all the concomitant linguistic items
- To learn about the auxiliary and the models
- To understand the types of sentences and its patterns
- To enrich vocabulary
- To know the features, process, forms and barriers of communication
- To enhance listening skill

**OUTCOME:**

- Understand grammar
- Develop listening skill

**UNIT –I**

Parts of speech

**UNIT – II**

Kinds of Sentences, Patterns of sentences

**UNIT – III**

Auxiliaries, Modals

**UNIT –IV**

Communication-Characteristics-Process-Forms-Barriers-Types

**UNIT-V**

Listening-benefits-types-good listener-active and passive listening-Tips for effective listening

**Lab Note-1.** Word Mentor - Level I Words and their meaning-Root and usage-Fill in the blanks-Synonyms-Antonyms-Match the Words, Listening activity from Globarena Software

2. Vocabulary diary

**Viva-**Listening activity**Exam components**-Theory-50+MCQ online exam-vocabulary-20+Viva-15+Lab note-15=100**REFERENCES:-**

 Essentials of Business Communication -Rajendra Pal &J.S Korlahalli Sultan Chand & Sons

Course Code	Course Title	L	T	P	C
191INDCONS	Indian Constitution	1	0	0	1

**OBJECTIVES:**

- To make the students understand about the Democratic Rule and Parliamentary Administration.
- To appreciate the salient features of the Indian Constitution.
- To know the fundamental Rights and Constitutional Remedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

**UNIT I: THE MAKING OF INDIAN CONSTITUTION**

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

**UNIT II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS**

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

**UNIT III: DIRECTIVE PRINCIPLES OF STATE POLICY**

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

**UNIT IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT**

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

**UNIT V: STATE COUNCIL – ELECTION SYSTEM AND PARLIAMENTARY DEMOCRACY IN INDIA**

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

**OUTCOMES**

1. Democratic values and citizenship Training are gained.
2. Awareness on Fundamental Rights are established.
3. The functions of union Government and State Governments are learnt.
4. The power and functions of the Judiciary learnt thoroughly.
5. Appreciation of Democratic parliamentary Rule is learnt.

**REFERENCE BOOKS:**

1. Palekar S.A. Indian Constitution Government and politics, ABD Publications, India.
2. Aiyer Alladi, Krishnaswami, Constitution and fundamental rights 1955.
3. Markandan K.C. Directive Principles in the Indian Constitution 1966.
4. Kashyap Subash C Our Parliament, National Book, Trust New Delhi 1989.

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC21	Advanced English-II	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**Outcome:**

- Develop writing skill
- Read and comprehend literature

**UNIT –I**

E-mail, Fax, Memos

**UNIT – II**

Itinerary, Checklist

**UNIT – III**

Invitation, Circular

**UNIT – IV**

Instruction, Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

Course Code	Course Title	L	T	P	C
19122SEC23	Data Structure and Algorithms	6	0	0	6

### AIM

To equip the students with principles data structure concepts and algorithms.

### OBJECTIVES:

The Student Should Be Made To:

- Be Familiar with the Basics of C Programming Language.
- Be Exposed To The Concepts Of Adts
- Learn Linear Data Structures – List, Stack, And Queue.
- Be Exposed To Sorting, Searching, Hashing Algorithms

### UNIT –I

Arrays and sequential Representations - Ordered Lists - stacks and Queues- Evaluation of expressions - Multiple stacks and queues - Singly Linked lists - linked stacks and queues - polynomial addition - doubly linked lists and dynamic storage management - strings. [Employability]

### UNIT-II

Trees - binary tree representations - Tree traversal - Threaded binary trees - binary tree representation of trees - set representations -decision trees - games trees and counting binary trees -graphs and representations traversals, connected components and spanning trees shortest paths and transitive closure - activity networks - topological sort and critical paths. [Employability]

### UNIT-III

Algorithms - conventions - Writing structured programs - Analyzing algorithms - sorting heap sort - binary search - finding the maximum and minimum – merge sort – quick sort - selection sort [Employability]

### UNIT-IV

Greedy method: The general method - optimal storage on tapes knapsack problem - job sequencing with deadlines - optimal merge patterns - minimum spanning trees-single source shortest paths. [Employability]

### UNIT-V

Backtracking : The general method - the 8 queens problem - sum of subsets - graph coloring - Hamiltonian cycles - knapsack problem. BRANCH AND BOUND: The general method - 0/1 knapsack problem - Traveling salesperson - Efficiency considerations. [Employability]

**OUTCOMES:**

At the end of the course, the student should be able to:

- Use the control structures of C appropriately for problems.
- Apply the different linear data structures to problem solutions.
- Critically analyze the various algorithms.

**REFERENCE BOOKS:**

1. Fundamental of Data Structure - Ellis Horowitz and Sartaj Sahni.  
Chapters 2,3,4,5 only (Excluding 2.3,3.2,4.5,4.6,4.7,4.10,4.12,6.5)
2. Fundamental of computer algorithms - Ellis Horowitz and sartaj Sahni  
Galgotia Publications.
3. Data Structures - LIPSCHUTA, Tata MaGrawHill, Schaum's Outline series.

Course Code	Course Title	L	T	P	C
19122SEC24L	Data Structure and Algorithms Lab	0	0	3	2

## 1. SORTING:

- a. Bubble sort [Employability]
- b. Heap sort [Employability]
- c. Insertion Sort [Employability]

## 2. SEARCHING:

- a. Linear search [Employability]
  - b. Binary search [Employability]
3. Operations on Stack [Employability]
  4. Operations on Queue [Employability]
  5. Operations on single Linked list [Employability]
  6. Operations on doubly linked list [Employability]
  7. Binary Tree Traversal [Employability]

Course code	Course Title	L	T	P	C
19112AEC25B	Discrete Mathematics	5	0	0	4

**OBJECTIVES:**

Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental them of homomorphism are concentrated. Graph Theory is an integral part of

Discrete Mathematics. [Employability] It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory 20 such as Trees, Directed graphs, Connectivity, Euler tours are also concentrated

**UNIT I**

Groups- Types – Propertices Of Groups- Semi Groups-Monoids – Problem In Groups- Cyclic Groups And Subgroups [Employability]

**UNIT-II**

cosets & lagrange’s thm-Normal groups and quotient groups- Different types of morphisms of groups fundamental thm of homomorphism. [Employability]

**UNIT III**

Graph theory - Basic concepts- Finite and infinite graph – Incidence and degree ideas on vertices- Isomorphism-sub graphs – Walks – Paths and circuits [Employability]

**UNIT IV**

Connected Graphs And Disconnected Graphs And Components - Euler Graphs – Hamiltonian Path And Circuits [Employability]

**UNIT V**

Trees-properties of trees -pendent vertices – Distance and centers in a tree rooted and binary trees. [Employability]

**Learning outcomes**

By the end of this course, you should be able

- Understood the concept of Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental theorem of homomorphism
- Knowledge in Graph Theory
- Understood the properties of Graph Theory
- Understood the concept of Euler theorem and its applications

**REFERENCE BOOKS:**

1. Algebra - Arumugan Issac
2. Graph theory – Narasingh deo

Course Code	Course Title	L	T	P	C
19112AEC26B	Operations Research	4	0	0	4

**OBJECTIVES:**

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to humiliate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

**UNIT — I**

Basic of operations research (OR) characteristics of OR - Necessity of OR in industry, OR and decision making - role of computers in OR Linear Programming: Formulations and graphical solution of (2 variable) canonical and standard terms of linear programming problem. [Employability]

**UNIT — II**

Algibric Solution: Simplex methods — Charnes method of penalty - Two phase simplex method. [Employability]

**UNIT — III**

Transportation Model: Definition — Formulation and solution of transportation models the row — Minima, column minima, Matrix minima and Vogel's approximation method. Assignment Model: Definition of assignment model— comparison with transportation model - Formulation and solution of assignment model **Employability]**

**UNIT — IV**

Sequencing problem: Processing of n jobs through 2 machines - processing n jobs through 3 machines - processing 2 jobs through m machine Games Theory: Characteristics of games —Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving 2 x 2 games **Employability]**

**.UNIT — V**

PERT computation — Resource scheduling. **Employability]**

**Learning outcomes**

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory
- Students gets the knowledge about inventory theory

**REFERENCE BOOKS:**

1. Hamdy A. Taha: Operation Research - An Introduction 5<sup>th</sup> Edition, PHI, New Delhi 1996
2. Ackoff, R Land Sasieni, M.N: Fundamental of Operation research, John Wiley and sons, New york 1968.

**MS –EXCEL**

1. Prepare the addressing methods in excel **Employability]**
2. Prepare an Excel Document using different type of Functions. **Employability]**
3. Draw a Graph by using your own data **Employability]**
4. Prepare an Individual Pay Bill preparation for an employee in an organization. **Employability]**
5. Prepare a Mark List for the Students. **Employability]**
6. Prepare a Worksheet for a Company. **Employability]**
7. Prepare an Inventory Report for a Shop. **Employability]**
8. Prepare an Electricity Bill for the Domestic Customers **Employability]**

Course Code	Course Title	L	T	P	C
19111SEC02L	Communicative English Lab-II	0	0	2	1

**AIM:**

To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To understand the different tenses and use it in sentences
- To form sentences
- To know subject verb agreement
- To enrich vocabulary
- To read and comprehend the context

**OUTCOME:**

- Understand grammar
- Develop reading skills

**UNIT-1**

Tenses-Simple, Perfect **Employability]**

**UNIT -II**

Tenses-Continuous, Perfect continuous **Employability]**

**UNIT -III**

Forming sentences-positive, negative and questions **Employability]**

**UNIT -IV**

Concord **Employability]**

**UNIT -V**

Reading-benefits-purpose-techniques-types-tips for effective reading **Employability]**

**Lab Note-1.** Word Mentor - Level II Words and their meaning-Root and usage-Fill in the blanks-Synonyms-Antonyms-Match the Words, reading activity from Globarena Software 2. Newspaper Article notebook

Course Code	Course Title	L	T	P	C
19122SEC33	Internet and Java Programming	4	1	0	6

**AIM**

To equip the students with basic programming skill in Java

**OBJECTIVE**

- To understand the core principles of the Java Language
- To study about Graphics programming using java Language
- To learn visual tools to produce well designed, effective applications and applets.

**UNIT-I**

Introduction to the Internet - Internet Technologies - Internet Browsers  
 [Employability]

**UNIT-II**

Decision making and looping statements -Classes, Objects and Methods  
 [Employability]

**UNIT-III**

Arrays, strings and vectors- Interfaces: Multiple Inheritance – Packages: Putting classes together - Multithreaded Programming [Employability]

**UNIT-IV**

Files and Exception Handling: Exception – File Handling. [Employability]

**UNIT-V**

Applet, AWT and Swing: Applet programming – AWT Event Handling – Swing.  
 [Employability]

## OUTCOMES:

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

## REFERENCE BOOKS:

1. “World Wide Web Design with HTML”, C.Xavier, Tata McGraw-Hill Publishing Company Limited for Unit-1.
2. “Programming with Java”, E.Balagurusamy, Tata McGraw-Hill Publishing Company Limited for Unit-2, 3, 4, 5.

Course Code	Course Title	L	T	P	C
19122SEC34L	Internet and Java Programming Lab	0	0	3	2

1. Simple programming using for, while, do-while, ternary and switch.
2. String handling using string and string buffer.
3. Inheritance.
4. Polymorphism
5. Interfaces and Packages
6. Data files(creation, processing)
7. Vector manipulation
8. Simple programs using Applets
9. Exercises using predefined and user defined exceptions
10. Graphics programs for drawing lines, rectangle, oval, string using Applets.

Course Code	Course Title	L	T	P	C
19161SEC35	Financial Accounting	4	0	0	4

**AIM:**

To train the students to record all business events as per standard principles and established conventions.

**OBJECTIVES:**

- To ascertain whether the business operations have been profitable or not
- To assess the financial position of the business.
- To generate information.

**UNIT – I**

Meaning of Accounting- Meaning & objects of Book Keeping – Advantages of Accounting – Concepts and conventions – Principles of double entry – Kinds of accounts – Journal and ledger accounts. [Entrepreneurship]

**UNIT – II**

Subsidiary books – Advantages Subsidiary books - Purchases Book, Sales Book, Purchases returns Book, Sales returns Book, - Cash Book. [Entrepreneurship]

**UNIT – III**

Trial balance – Preparation - Rectification of errors –Bank Reconciliation Statement. [Entrepreneurship]

**UNIT – IV**

Final Accounts – Trading Accounts - Profit and Loss Accounts - Balance Sheet. [Entrepreneurship]

**UNIT – V**

Bills of Exchange – Single Entry System – Simple Problems. [Entrepreneurship]

**OUTCOMES:**

Students are now familiarizes with the accounting principles and practices and the ascertainment of the profitability and the financial position of the business.

**REFERENCE BOOKS:**

1. R.L.Gupta – Financial Accounting
2. S.P.Jain and K.L.Narang – Principles of Accounting
3. Readdy and Murthy – Financial Accounting
4. Dr.Radha - Financial Accounting

Course Code	Course Title	L	T	P	C
19113AEC36C	Electricity and Electronics	3	0	0	4

**AIM:**

To introduce the scientific principles relevant to electric circuits, and electronic devices.

**OBJECTIVES:**

Solve simple problems in basic electrical circuit theory. Analyse and predict the behaviour of simple logic circuits and electronic devices. To prepare the student for the study of physics by introducing general concepts and methods which will be applied throughout the course.

**UNIT – I: CIRCUIT ELEMENTS:**

Resistance in series and parallel – Capacitor in series and parallel – Conversion of galvanometer into voltmeter – Conversion of galvanometer into ammeter – Multimeter – CRO, AFO (Qualitative study only). **[Employability]**

**UNIT – II: ELECTRICITY:**

Ohm's law – Kirchof's law – Wheatstone bridge – condition for bridge balance – Meter bridge – Specific resistance – Temperature co-efficient of resistance – Potentiometer – Measurement of current – voltage and resistance. **[Employability]**

**UNIT – III: SEMICONDUCTORS:**

Conductors, Insulators, Semiconductors, P-type, N-type – semiconductors – PN-Junction diode – Zener diode – Static characteristics – Voltage regulation – Rectifiers: – Half wave rectifiers – Bridge Rectifiers – Calculation of ripple factor and efficiency. **[Employability]**

**UNIT – IV: BREAK DOWN DEVICES:**

FET – Design of FET – FET characteristics – working of FET – SCR – Design – Characteristics – Triac – design and characteristics – Diac – design and characteristics. **[Employability]**

**UNIT – V: OPTO ELECTRONIC DEVICES:**

LED – voltage and current – Advantages and applications of LED – LCD – Photo diode – its operation and application – Phototransistor – LED as Seven segment display. **[Employability]**

**LEARNING OUTCOMES:**

Learn how to develop and employ circuit models for elementary electronic components, e.g., resistors, sources, inductors, capacitors, diodes and transistors;

Become adept at using various methods of circuit analysis, including simplified methods such as series-parallel reductions, voltage and current dividers, and the node method;

**REFERENCE BOOKS:**

- 1) Electricity and Magnetism by Brijlal and Subramaniam.
- 2) Principles of electronics by V.K. Metha.

Course Code	Course Title	L	T	P	C
19122RMC37	Research Methodology	3	0	0	3

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication.

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-based
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

**OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.

**PREREQUISITES:**

Basic computer skill for working in window environment & conceptual knowledge on basic matrices.

**UNIT-I Introduction to Research Methodology**

Meaning of research – Objectives of research – Type of research – Significance of research – Research approaches. **[Employability]**

**UNIT-II Research Methods**

Research methods versus Methodology – Research and scientific method – criteria of good research – Problems encountered by researchers in India. **[Employability]**

**UNIT-III Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Review – General treatises – Monographs. **[Employability]**

**UNIT-IV Database Survey**

Database search – NIST –MSDS –PubMed – Scopus – Science citation index – Information about a specific search. **[Employability]**

**UNIT-V Introduction to MATLAB:**

**What is MATLAB? Matrix and its application in different areas: MATLAB approach to environmental modeling; Arithmetic Matrix – Operators; Arithmetic Array – Operators and its applications in MATLAB; Expressions, Opening M-Files; Structure of MATLAB Programing; Programing; Concatenation of strings; Vectorization ; Basic Graphics. [Employabilit]**

**REFERENCE BOOKS:**

1. C.R. Kothari, Research Methodology, New Age International publishers. New Delhi,2004.
2. R.A Day and A.L. Underwood, Quantitative analysis, Prentice Hall, 1999.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19122SEC03AL	Packages Lab -III	0	0	2	1

**POWER POINT**

1. Create a slide show presentation for a Seminar (choose your own topics)
  - a. Enter the Text in the Outline View
  - b. Create Non-Bulleted and Bulleted Text
2. Create a slide show presentation for a Science Exhibition
  - a. Create Non-Bulleted and Bulleted text
  - b. Apply appropriate Text Attributes
3. Create slide show presentation for an Invitation
  - a. Insert an Object from a Bitmap File
  - b. Apply appropriate Text Attributes
  - c. Rotate the Object to 45 degree
  - d. Apply Shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all Students
  - a. Use Bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different Presentation Template and different Transition Effect for each slide

- c. Use different Text Attributes in each slide
5. Create a slide show presentation for a Shop Advertisement to be open shortly
  6. Create a slide show presentation to display Percentage of Sales in each quarter for the any Vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
  7. Create a slide show presentation for Tourists Places
  8. Create a slide for Calendar using appropriate Text attributes and insert an object from a Bitmap file

Course Code	Course Title	L	T	P	C
19111SEC03L	Communicative English Lab-III	0	0	2	1

**AIM:**

To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To change a sentence from active to passive and vice versa
- To make sentences
- To write a letter
- To improve vocabulary
- To enhance speaking skills
- To enrich writing skills

**OUTCOME:**

- Understand grammar
- Develop speaking and writing skills

**UNIT –1**

Active and Passive [Employability]

**UNIT –II**

Developing the hints [Employability]

**UNIT –III**

Letter writing [Employability]

**UNIT –IV**

Speaking-benefits-features of a good speaker-Tip for improving speech-types [Employability]

**UNIT –V**

Writing-benefits-types-tips for improving writing [Employability]  
[Employability]

**Lab Note-1.** Anagrams, Word Traps, Stinging Words, letter writing from Globarena Software, Self-introduction, 2. Picture writing note book

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC41	Advanced English-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT –I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques. [Employability]

**UNIT – II**

Flowchart

Proposals [Employability]

**UNIT – III**

Discourse markers

Review [Employability]

**UNIT IV**

Grammatical forms

Paraphrasing [Employability]

**UNIT –V**

Definition

Writing for and against a topic. [Employability]

**AIM:**

To acquaint students with learning English through literature

**OBJECTIVE:**

- To introduce learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

**OUTCOME:**

- Read and comprehend literature

**UNIT –I**

How to be a Doctor -Stephen Leacock  
 My Visions for India -A.P.J. Abdul Kalam  
 Woman, not the weaker sex -M.K. Gandhi [Employability]

**UNIT –II**

My Last Duchess -Robert Browning  
 The Toys -Coventry Patmore  
 I, too -Langston Hughes [Employability]

**UNIT –III**

The Best Investment I ever made-A.J.Cronin  
 The Verger -W.S Maugham  
 A Willing Slave -R.K.Narayan [Employability]

**UNIT –IV**

Macbeth  
 As You Like It [Employability]

**UNIT –V**

Henry IV  
 Tempest [Employability]

**REFERENCE BOOKS:-**

English for Enrichment -Devaraj Emerald Publishers  
 Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Course Code	Course Title	L	T	P	C
19122SEC43	Visual Programming	6	0	0	6

**AIM:**

To equip the students with principles of various visual programming environment

**OBJECTIVE:**

- To learn the basic principles of visual programming

- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

## UNIT I

Visual Basic – Integrated Development Environment (IDE) features – VB editor – customizing the IDE – anatomy of a form working with form properties – setting form’s properties – introducing form events and form methods. **[Employability]**

## UNIT II

Variables in Visual Basic : Declaring variables – Data types – Null values, Error value – empty value – the scope of a variable – Module level variable – Constants – Creating your own constants – Scope of a constant – Converting data types – arrays – Declaring arrays – Fixed size arrays – Dynamic arrays – Preserve keywords – ReDim. Writing code in Visual Basic – The anatomy of a procedure – Subroutine and Functions – Language constructs – For...Next, The While loop, Select case...End select, Exit statement, with structure. **[Employability]**

## UNIT III

Selecting and Using controls – Introduction to standard controls: command buttons – Text boxes – labels – frames – option buttons – Check boxes – Scroll Bars – Timer – working with Common Dialog Control. **[Employability]**

## UNIT IV

VB Objects - Dialog Boxes - Common Controls - Menus - MDI Forms - Testing, Debugging and Optimization - Working with Graphics. **[Employability]**

## UNIT V

Monitoring Mouse activity .- File Handling - File System Controls - File System Objects - COM/OLE - automation - DLL Servers - OLE Drag and Drop. **[Employability]**

## OUTCOMES:

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic’s Integrated Development Environment (IDE).
- Implement syntax rules in Visual Basic programs.
- Write Windows applications using forms, controls, and events
- Write and apply decision structures for determining different operations.
- Write and apply loop structures to perform repetitive tasks.

## REFERENCE BOOKS:

1. Mohammed Azam, Programming with Visual Basic 6.0 – Vikas Publishing House Pvt Ltd – 2002(unit-I, unit-II)
2. Content Development Group, Visual Basic 6.0 – Tata McGraw Hill Publishing Company Limited – 2002(unit-III, unit-IV, unit-V)
- 3.

Course Code	Course Title	L	T	P	C
19122SEC44L	Visual Programming Lab	0	0	3	4

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to expand and shrinking an object – while program is running.
4. Write a code to design and implement a scientific calculator.
5. Write a program to create animation by using move method and timer Object.
6. Write a program for preparing students mark list.
7. Write a program to populate the label entities using data bound control.
8. Write a program to expand and shrink Objects using timer control and move method

Course Code	Course Title	L	T	P	C
19113AEC45C	Allied Physics-II	5	1	0	6

### Digital Electronics

#### AIM:

To understand various digital system and their applications

#### OBJECTIVES:

To learn about the design principles of different digital electronic circuits.

To study the application digital electronics circuits

#### UNIT – I: NUMBER SYSTEMS AND CODES:

Decimal, Binary, Octal, and Hexa decimal systems – Conversion from one to another – Binary addition – Binary subtraction – Binary multiplication – Binary division – Complements, Codes: BCD, Gray, Alpha numeric. **[Employability]**

#### UNIT – II: BOOLEAN ALGEBRA:

Basic logic gates – Universal gates – Fundamental concepts of Boolean algebra – De Morgan's theorem: Simplification of expressions – Karnaugh map. **[Employability]**

#### UNIT – III: LOGIC DESIGN:

Half adder – Half subtractor – Multiplexers – Demultiplexer, Flip-flops: R-S flip flop, J-K flip flop, D-flip flop, T-flip flop. **[Employability]**

**UNIT – IV: MEMORY ELEMENTS:**

RAM – types – ROM: ROM, PROM, EPROM, EEPROM – Magnetic tape – Magnetic disc – Bubble memory. [Employability]

**UNIT – V: REGISTERS AND COUNTERS:**

Registers: Shift register – Left shift register – Right shift register – Counters: Ripple counter – Mode N counter – up counter – down counter. [Employability]

**LEARNING OUTCOMES**

- Express positive integers in different number systems (binary, octal, decimal hexadecimal)
- Codify data elements or information (signal values) by binary variables (signals) using standard codes for positive integers (binary, BCD, Gray) and characters (ASCII code)
- Codify signed integers (positive and negative) using the two's-complement system
- Perform basic arithmetic operations (addition, subtraction, multiplication) of signed integers by means of the 2's complement system
- List a set of simulation tools for digital electronics

**REFERENCE BOOKS:**

1) Digital Principles and Applications by Malvino and Leach

Course Code	Course Title	L	T	P	C
19113AEC46CL	Allied Physics Lab -I	0	0	3	2

- 1) FET-Characteristics
- 2) Logic Gates-Universality of NOR Gate.
- 3) LCR — Series Resonance Circuit.
- 4) LCR parallel – resonance circuit.
- 5) OP AMP-Addition,Subtraction.
- 6) Verification basic logic gates.
- 7) Verification of Demorgan's theorem..
- 8) Half adder and Half subtractor.
- 9) Logic Gates-Universality of NAND Gate.
- 10) OP AMP Differentiator ,Intergrator.

### Skill Based Elective-IV

Course Code	Course Title	L	T	P	C
19122SEC04AL	Packages Lab-IV	0	0	2	1

### MS-ACCESS

1. Create a Database with a simple Table
2. Create a Database for Students Mark List using Queries.
3. Create a Database for the employees in an organization and sort by their date of joining.
4. Create Queries to Select Records that matches specific condition.
5. Create Relationships among the different Tables.
6. Create Queries using Built-in Functions.
7. Develop Forms to enter data in to the Student Marks Database
8. Develop Forms to enter data in to the Electricity bill Database

Course Code	Course Title	L	T	P	C
19111SEC04L	Communicative English Lab-IV	0	0	1	1

#### AIM:

To develop communicative skills

#### OBJECTIVE:

- To change sentences from direct to indirect and vice versa
- To comprehend a passage
- To enhance language skill
- To develop presentation skill
- To enrich vocabulary

#### OUTCOME:

- Understand grammar
- Develop language and presentation skills

**UNIT –I**Direct and Indirect **[Employability]****UNIT –II**Comprehension **[Employability]****UNIT –III**Conversation **[Employability]****UNIT –IV**Descriptive Writing **[Employability]****UNIT –V**Soft skills-Importance-aspects-SWOT analysis-values-positive attitude-perception **[Employability]****Lab Note-** Confusing Words, Word families, Non-English words, Presentation skills, Oral presentation, Conversation from Globarena software**Viva-**Presenting a topic**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100**REFERENCES:-**

Soft skills	-D.Jayacandran D.J Publishers

Course Code	Course Title	L	T	P	C
191ENVTSTU	Environmental Studies	1	0	0	1

**UNIT–I**

**The Multidisciplinary Nature of Environmental Studies** – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources** - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

**UNIT-II**

**Ecosystems** - Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

**UNIT-III**

**Biodiversity and its Conservation** – Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National

and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

#### UNIT-IV

**Environmental Pollution** – Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

#### UNIT-V

**Social Issues and the Environment** - From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - Human Population and the Environment.

1. “ENVIRONMENTAL STUDIES”, K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

Course Code	Course Title	L	T	P	C
19122SEC51	Relational Database Management Systems	5	1	0	5

#### AIM

To equip the students with principles and concepts of database design

#### OBJECTIVES:

- To learn the basic principles of database and database design
- To learn the basics of RDBMS
- To learn the concepts of database manipulation SQL

#### UNIT- I

An Overview of Database Management-Introduction -Definition of Database system - Data Independence - Relational Systems - Database System Architecture - Three Levels of the Architecture - Distributed Processing. **[Employability]**

#### UNIT -II

An Introduction to Relational Databases- Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to SQL - Embedded SQL - Domains , Relations , Relvars. **[Employability]**

#### UNIT- III

Relational Algebra - Introduction - Syntax - Semantics - Examples - Additional Operators - Relational Calculus - Introduction - Tuple Calculus - Examples - Calculus Vs Algebra - Domain Calculus - SQL Specialties . **[Employability]**

#### UNIT -IV

Relational Model & SQL – RDBMS Terminology, CODD's rule for RDBMS, Concept of Relational Model, and SQL: SQL Database creation & manipulation views & queries on RDBMS **[Employability]**

#### UNIT- V

Database Recovery & Backup, Performance & Security - Introduction to database Recovery, Concurrency Control Techniques, Locking mechanism, Dead Locks, Techniques

of backup, RAID configuration, database Security techniques and storage technique- DAS, NAS, SAS. [Employability]

### OUTCOMES:

At the end of the course, the student should be able to:

- Design Databases for applications.
- Use the Relational model, ER diagrams.
- Design the Query Processor and Transaction Processor.

### REFERENCE BOOKS:

“An Introduction to Database Systems”. C.J.DATE. Addison - Wesley Publications - 7th Edition 2000.

Course Code	Course Title	L	T	P	C
19122SEC52	.NET Programming	4	1	0	5

### AIM

To cover the fundamental concepts of the .NET framework.

### OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

### UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET  
[Employability]

### UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls  
Flow-Methods. [Employability]

### UNIT III

Interfacing with the End user-ASP.NET Applications. [Employability]

### UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.  
[Employability]

### UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.  
[Employability]

### OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

**REFERENCE BOOKS:**

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.
4. Visual Basic.Net Black Book- Steven Holzner.

Course Code	Course Title	L	T	P	C
19122SEC53	Designing and supporting Computer Networks	4	0	0	5

**AIM:**

To equip the students with Computer Networks

**OBJECTIVE:**

- To learn the Network concepts
- To understand the Network Switching Concepts
- To study about Network Security.

**UNIT I**

The Internet and its uses – OSI model – ISP Troubleshooting – Planning a Network Upgrade **[Employability]**

**UNIT II**

Planning the Addressing Structure – IP Addressing in the LAN – NAT and PAT – Configuring Network Devices: Initial ISR Configuration – Configuring an ISR with SDM **[Employability]**

**UNIT III**

Configuring a Router Using IOS CLI – Connecting the CPE to the ISP – Routing: Enabling Routing Protocols – Exterior Routing Protocols **[Employability]**

**UNIT IV**

Network Layer: Routing algorithms: The optimality Principle – Shortest path routing – Routing for mobile hosts – Congestion Control Algorithms. **[Employability]**

**UNIT V**

Transport Layer: The Transport 57 Service –Services Provided to the Upper Layers. TCP: Introduction to TCP – The TCP Service Model – The TCP Protocol – TCP Connection Establishment and Connection Release. Application Layer: DNS – The Domain Name System **[Employability]**

**OUTCOMES:**

At the end of the course, the student should be able to:

- Identify the components required to build different types of networks
- Choose the required functionality at each layer for given application
- Identify solution for each functionality at each layer
- Trace the flow of information from one node to another node in the network

**REFERENCE BOOKS:**

“Working at a Small-to-Medium Business or ISP CCNA Discovery Learning Guide” – Allan Reid and Jim Lorenz – CISCO Press – Pearson Education

Course Code	Course Title	L	T	P	C
19122SEC54L	Oracle Lab	0	0	3	2

1. Write SQL queries to create the following tables and insert rows in it.  
Employee (eno, ename, deptno, salary, designation)  
Dept (deptno, deptname, location)  
Student (rollno, name, course, paper1, paper2, paper3)
2. Write SQL queries to create primary key and foreign key constraints in the above given tables and perform all types of **simple retrieval**.
3. Write SQL queries to perform all types of **advance retrieval** using (i) nested subqueries (ii) set operators.
4. Write SQL queries to perform all types of **joins**.
5. Write SQL queries to illustrate all **built-in** functions.
6. Write SQL queries to create **views** and **index/indices** for the tables Employee, Dept and Student.
7. Write a database **trigger** to prevent transactions during weekend. Create PL/SQL **procedures** and store them in a **package** and **execute** them in the command prompt.
8. Write a PL/SQL program that prints mark sheet of students in a University using **cursor**.

Course Code	Course Title	L	T	P	C
19122SEC55L	.NET Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:  
(i). Insertion (ii) Updating (iii) Deletion (iv) Selection  
Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

#### Discipline Specific Elective-I

Course Code	Course Title	L	T	P	C
19122DSC56A	Computer Organization and Architecture	5	0	0	4

#### AIM:

To equip the students with the Computer Organization and Architecture.

#### OBJECTIVES:

- To Make Students Understand The Basic Structure And Operation Of Digital Computer.
- To Familiarize The Students With Arithmetic And Logic Unit And Implementation Of Fixed Point And Floating-Point Arithmetic Operations.
- To Expose The Students With Different Ways Of Communicating With I/O Devices And Standard I/O Interfaces.

#### UNIT I

Digital logic circuits: Digital computers- Logic gates – Boolean algebra - Map simplification - Combinational circuits - Flip-flops - Sequential circuits. **[Employability]**

## UNIT II

Digital components: Integrated circuits – Decoders - Multiplexers - Registers - Shift Registers - Binary Counters - Memory unit. [Employability]

## UNIT III

Data Representation: Data types - Complements – Fixed point representation – Floating Point representation – Other binary codes – Error detection codes. [Employability]

## UNIT IV

**Central processing unit: General Register organization – Stack organization – Instruction formats – Addressing modes – Data transfer and manipulation – Program control – Reduced instruction set computers. [Employability]**

## UNIT V

Memory Organization: Memory hierarchy – Main memory – Auxiliary memory – Associative Memory – Cache Memory – Virtual Memory – Memory Management and Hardware. [Employability]

### OUTCOMES:

At the end of the course, the student should be able to:

- Design arithmetic and logic unit.
- Design and analyse pipelined control units
- Evaluate performance of memory systems.

### REFERENCE BOOKS:

1. Computer System Architecture - Morris Mano.M PHI, Third Edition - 1999
2. Digital Computer Fundamentals – Thomas C. Bartee- Sixth Edition - TataMcGrawHill.
3. Digital Design – Mano – Second Edition

#### Skill Based Elective-V

Course Code	Course Title	L	T	P	C
19122SEC05AL	Packages lab-V	0	0	2	1

## PHOTOSHOP

1. Design a Visiting card with Background Image.
2. Design an Identity card with Photo.
3. Design a Letter pad with LOGO.
4. Create an Advertisement in a News paper for a Shop.
5. Design a Calendar with Pictures.
6. Design a Magazine using different type of Tools.
7. Create a Photoshop image using Lasso Tool.

8. Design a CD Cover.

Course Code	Course Title	L	T	P	C
19111SEC05L	Communicative English Lab-V	0	0	2	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To understand the degrees of comparison
- To build up a thought
- To write resume
- To construct report, agenda and minutes
- To prepare for an interview

**OUTCOME:**

- Develop communicative skills
- To get a job

**UNIT –I**

Degrees of comparison [Employability]

**UNIT –II**

Proverb expansion [Employability]

**UNIT –III**

Resume writing [Employability]

**UNIT –IV**

Interview [Employability]

**UNIT –V**

Corporate skills-body language-etiquette-good manners-interpersonal skills

[Employability]

**Lab Note-** Report writing, Resume writing, Interview from Globarena software, Writing agenda, Writing minutes

**Viva-Mock Interview**

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**REFERENCES:-**

Soft skills	-D.Jayacandran D.J Publishers

**SEMESTER – VI**

Course Code	Course Title	L	T	P	C
19122SEC61	Advanced Web Technology	4	1	0	5

**AIM:**

To equip the students with basic programming skill in Web Designing

**OBJECTIVES:**

- To understand and practice mark up languages
- To understand and practice embedded dynamic scripting on client side Internet Programming
- To understand and practice web development techniques on client-side

**UNIT-I**

Introduction to HTML – Head and body sections – Designing the body section. Ordered and unordered lists – Table handling. **[Employability]**

**UNIT-II**

DHTML and Style Sheet – Frames-Forms. **[Employability]**

**UNIT-III**

VBScript – VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Data type Conversion Features – Putting it all together with VBScript – using the Script Debugger. **[Employability]**

**UNIT-IV**

XML: Introduction – What is XML – XML Document Structure – PHP and XML – XML Parser – The XML DOM – Simple XML – Changing a value with SimpleXML **[Employability]**

**UNIT-V**

Web Services -. Introduction - Web Services Concept - WSDL - What is UDDI? –

Introduction to -SOAP XML-RPC - Introducing XML-RPC - Creating Web services Calling Web Services - Tracking. **[Employability]**

**OUTCOMES:**

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Acquire knowledge about PHP.

**REFERENCE BOOKS:**

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.  
For UNIT I & II.
2. “Using Active Server Page”. - Scot Johnson-For UNIT III.
3. “Programming the World Wide Web” - Robert W.Sebesta , Third edition.  
For UNIT IV, V.

Course Code	Course Title	L	T	P	C
19122SEC62	Operating System	4	1	0	5

**AIM:**

To equip the students with operating system and their components

**OBJECTIVES:**

The student should be made to:

- Study the basic concepts and functions of operating systems.
- Understand the structure and functions of OS.
- Learn about Processes, Threads and Scheduling algorithms.
- Understand the principles of concurrency and Deadlocks.
- Learn various memory management schemes.
- Study I/O management and File systems.

**UNIT- I**

Evolution of Operating Systems – Types of Operating Systems – Different views of OS – Design and implementation of Operating Systems – I/O Programming concepts – Interrupt structure and Processing. **[Employability]**

**UNIT-II**

Memory management: Single contiguous allocation – Partitioned Allocation – Relocatable Partitioned Allocation – Paged and Demand Pages Memory Management – Segment Memory Management – Segmented and Demand Paged Memory Management – Swapping and Overlay Techniques. **[Employability]**

**UNIT- III**

Processor management: Job Scheduling – Process Scheduling – Functions and Policies – Evaluation of Round Robin Multiprogramming performance – Process synchronization – Race condition – Synchronization Mechanism – Deadly Embrace Prevention and Detect and Recover Methods. **[Employability]**

**UNIT- IV**

Virtual Memory: Demand Paging - Page Replacement - Page Replacement Algorithms - Thrashing. File System: File Concepts - Access Methods - Directory Structures

- Protection Consistency Semantics - File System Structures - Allocation Methods - Free Space Management. **[Employability]**

**UNIT V :**

I/O System: Overview - I/O Hardware - Application I/O Interface - Kernel I/O Subsystem-Transforming I/O Requests to Hardware Operations - Performance. Secondary Storage Structures: Protection - Goals - Domain - Access matrix - The Security Problem – Authentication - Threats - Threat Monitoring - Encryption. **[Employability]**

**OUTCOMES:**

At the end of the course, the student should be able to:

- Design various Scheduling algorithms.
- Apply the principles of concurrency.
- Design deadlock, prevention and avoidance algorithms.
- Compare and contrast various memory management schemes.
- Design and Implement a prototype file systems.
- Perform administrative tasks on Linux Servers.

**REFERENCE BOOKS:**

1. Operating systems – E. Madnick and John J. Donovan – Tata McGraw Hill
2. Operating Systems (Concepts and Design) Milan Milenkovic – McGraw Hill International Edition

Course Code	Course Title	L	T	P	C
19122SEC63L	Advanced Web Technology Lab	0	0	3	2

1. Create a small paragraph about 10 lines. Try to use different font, title, head tags, Size and colors.
2. Create a table with rows & columns and split them using row span & cols pan.
3. Create a web page in the format of front page of a newspaper using text link
4. Write a program for addition using VBScript.
5. Develop a picture gallery having at least 3 pages. Each of them is having several pictures.
6. Create a java script for automatic type conversion.
7. Develop a Java Script program that handles event using button and check box.
8. Develop a program using java script for events handling text area and text field.
9. Develop a calculator for simple calculation using java script.
10. Develop a PHP program and check message passing mechanism between pages.

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

19122SEC64L	Operating System Lab	0	0	3	2
-------------	----------------------	---	---	---	---

1. Write a menu driven shell program for the following:
  - a. List of files.
  - b. Processes of users.
  - c. Today's Date
  - d. Users of system.
  - e. Quit of Unix
2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.
3. Write a shell program which accepts the name of a file from the standard input and perform the following
  - a. Accept five names in a file.
  - b. Sorts the names in existing file.
  - c. Lists unsorted and sorted file.
  - d. Quit
4. Write a menu driven shell program to copy, edit, rename and delete a file.
5. Write a menu driven shell program to perform the following task
  - a. Write a sentence in file.
  - b. Search for a given word or pattern in an existing file.
  - c. Quit.
6. Write a shell program to prepare electricity bill for domestic consumers.  
 For first 100 units – Rs. 0.75 / Unit  
 For next 100 units – Rs. 1.50 / Unit  
 Above 200 units – Rs. 3.00 / Unit  
 Prepare the bill for the following format.
7. Write a shell program to display the result PASS or FAIL using the information given below student name, student register number, mark1, mark2, mark3, mark4 the minimum pass for each subject is 50.
8. Merge the contents of the file file1, file2 and store in another file.

### Discipline specific Elective-II

Course Code	Course Title	L	T	P	C
19122DSC56B	Data Mining	5	0	0	4

### OBJECTIVE

- To understand briefly some of the data mining Techniques.
- Discuss a number of more efficient algorithms.
- To know accuracy of classification methods and how accuracy may be improved.

### UNIT-I

Introduction: What is Data Mining- Why Data Mining now-The Data Mining Process-Data Mining Application-Data Mining Techniques-The Future of Data Mining-Guidelines for Successful Data Mining-Data Mining Software-Software Evaluation and Selection. **[Employability]**

### UNIT-II

Association Rules Mining: Introduction-Basics-The Task and a Naïve Algorithm - The Apriori Algorithm- Improving the Efficiency of the Apriori Algorithm- Apriori-Tid -Direct Hashing and Pruning (DHP)-Dynamic Itemset Counting (DIC)-Mining Frequent Pattern without Candidate Generation (FP-Growth)-Performance Evaluation of Algorithms-Software for Association Rule Mining **[Employability]**

### UNIT-III

Classification: Introduction-Decision Tree-Building a Decision Tree-The Tree Induction Algorithm-Split Algorithm Based on Information Theory-Split Algorithm based on the Gini Index-Over fitting and Pruning-Decision Tree Rules-Naïve Bayes Method-Estimating Predictive Accuracy of Classification Methods-Improving Accuracy of Classification Methods. [Employability]

### UNIT-IV

Data Cleaning, Data Integration and Transformation, Data Reduction, Discretization and concept of Hierarchy Generation, Task relevant Data, Background Knowledge, Presentation and Visualization of Discovered Patterns [Employability]

### UNIT-V

Association Rule Mining, Classification and Prediction – Decision Tree, Bayesian Classification Back Propagation, Cluster Analysis, Outlier Analysis [Employability]

### OUTCOMES:

- Understanding of data mining software available on the market.
- Acquiring Knowledge about various algorithms.
- Acquiring Knowledge about cluster analysis techniques.

### REFERENCE BOOKS:

1. “Introduction to Data Mining with Case Studies”, G.K.Gupta, Easter Economy Edition.

Course Code	Course Title	L	T	P	C
19122DSC65A	Software Engineering	5	0	0	4

### AIM:

To equip the students with the processes of software development skills

### OBJECTIVE

- To learn about the principles and methods of software engineering
- To understand the concepts of Software cost estimation
- To learn Software design and Implementation
- To study about development of software products from an industry perspective

### UNIT I

Introduction – definition-size factors- quality and productivity factors-managerial issues. Planning - software project – introduction – defining the problem - developing a strategy - planning the development process-planning an organizational structure.

[Employability]

### UNIT II

Software cost estimation – cost factors – cost estimation techniques – staffing – level estimation – estimating software maintenance costs. Software requirements definition – software requirements specification techniques – languages and processors for requirements. [Employability]

### UNIT III

Software design – fundamental design concepts – modules and modulation criteria – design notations – design techniques – detail design considerations – real time and distributed system design – test plans – milestones walkthroughs and inspections – design guidelines. **[Employability]**

#### UNIT IV

Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance. **[Employability]**

#### UNIT V

Introduction – Understanding Behavior – Organizational Behavior: A Background – Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation– The Oldman–Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress – Health And Safety – Case Studies. **[Employability]**

#### OUTCOMES:

- Get an insight into the processes of software development
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

#### REFERENCE BOOKS:

- “Software Engineering Concepts “– Richard fairly TMH  
 “Software Engineering”- Roger S.Pressman, 5th edition 2001.

Course Code	Course Title	L	T	P	C
19122DSC65B	Object oriented analysis and design	5	0	0	4

#### AIM:

To equip the students with object oriented analysis and design

#### OBJECTIVES:

The student should be made to:

- Learn the basics of object oriented analysis and design skills.
- Learn the UML design diagrams.
- Learn to map design to code.
- Be exposed to the various testing techniques.

#### UNIT- I

Introduction to object-oriented Development- object-oriented themes – Modeling- The object modeling Technique- object and classes Links and Associations concepts- Generalization and Inheritance- Grouping constructs. **[Employability]**

#### UNIT- II

Advanced object modeling- Aggregation- Abstract classes- Extension and Restriction- Multiple inheritance- Metadata – Candidate keys- Constraints. Dynamic modeling:- Events and states – Operations- Nested state diagram- Concurrency. Function

modeling:- Functional models- Data flow diagram- Specifying operations- Constraints.  
[Employability]

### UNIT- III

OMT as software Engineering Methodology- The OMT Methodology- Impact of an object oriented Approach. Analysis: - Overview of analysis – problem statement – automated teller machine example – object modeling – Dynamic modeling – functional modeling- adding operations iterating the analysis. [Employability]

### Unit IV

User interface design – View Layer Classes – Micro level processes – View Layer interface - Case Studies. [Employability]

### Unit V

Object orientation on testing – Test cases – Test plans – Continuous testing – Debugging principles – System usability – Measuring user satisfaction – Case studies [Employability]

### OUTCOMES:

At the end of the course, the student should be able to:

- Design and implement projects using OO concepts.
- Use the UML analysis and design diagrams.
- Apply appropriate design patterns.
- Create code from design.
- Compare and contrast various testing techniques.

### REFERENCE BOOKS:

1. Object Oriented Modeling and Design – James Rumbaugh, Michael Blaha, William Premerlani – PHI Twelfth Printing – 2001.
2. Object Oriented Analysis and Design with Applications- Grady Booch Second Edition – Pearson Education Asia publications.

FREE ELECTIVE					
COURSE CODE	COURSE TITLE	L	T	P	C
19111OEC	Journalism	4	0	0	2

### Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

### Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

### Outcome:

- Become a journalist

### UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements [Employability]

### UNIT- II

News – Definition – Kinds – Elements – Sources [Employability]

**UNIT- III**

Reporters [Employability]

**UNIT- IV**

The Editor and the Sub Editor [Employability]

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

[Employability]

**References:-**

Journalism -Susan

Professional Journalism - John Hogenberg

News Writing and Reporting - M.James Neal (Surjeet Publication)

Professional Journalism -M.V Komath

The Journalist's Handbook -M.V Komath

Mass Communication &amp; Journalism - D.S Mehta

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19112OEC	<b>Development Of Mathematical Skills</b>	4	0	0	2

**Objectives**

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**References**

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Course Code	COURSE TITLE	L	T	P	C
19113OEC	Instrumentation	4	0	0	2

**Aim:**

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges :

AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

**[Employability]**

**UNIT – II: ELECTRONIC INSTRUMENTS – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters –

Component measuring instruments (quantitative studies) **[Employability]**

**UNIT – III: ELECTRONIC INSTRUMENTS – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation

amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).  
[Employability]

#### Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.  
[Employability]

#### Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope. [Employability]

#### Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

#### Learning Outcomes:

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

#### Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

Course Code	COURSE TITLE	L	T	P	C
19114OEC	Food and Adulteration	4	0	0	2

**Aim:** To introduce students to food safety and standardization act and quality control of foods.

#### Objectives:

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

#### Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals. [Employability]

#### Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids. [Employability]

### Unit – III Food Preservation

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration. [Employability]

### Unit – IV Food Additives

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti -caking agents, coloring and flavoring substance. [Employability]

### Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks. [Employability]

### References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

COURSE CODE	COURSE TITLE	L	T	P	C
19120OEC	E-Learning	4	0	0	2

### COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

### COURSE OUTCOMES

- Develop e – learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

### UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding elearning, components and models of e- learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning. [Employability]

### UNIT II CONCEPTS and DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning. [Employability]

### **UNIT III APPLICATIONS**

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site. **[Employability]**

### **UNIT IV COURSE MANAGEMENT**

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback. **[Employability]**

### **UNIT V ENHANCEMENT**

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers. **[Employability]**

### **REFERENCE BOOKS:**

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.
2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.
4. Moodle 2.0 First Look, Mary Cooch, 2010.

**Skill Based Elective –VI**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17122SEC06AL	Packages Lab –VI	0	0	2	1

**FLASH**

1. Drawing and painting original art by using simple objects in flash.
2. Develop a Flash Document by applying different type of Styles in Text with Animations.
3. Create a frame-by-frame animation technique.
4. Develop a program for animation with motion Tweening.
5. Develop a program for animation with shape Tweening.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animation by using Movie Clip and Graphic Symbols.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19111SEC06L	Communicative English Lab-VI	0	0	2	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills

- To learn to manage time and stress
- To widen creative thinking
- To enrich the skill of working in a group

**OUTCOME:**

- Develop communicative skills
- To be a good team worker

**UNIT –I**

Simple, Compound and Complex [Employability]

**UNIT –II**

Note making [Employability]

**UNIT –III**

Precise writing [Employability]

**UNIT –IV**

Developing a story [Employability]

**UNIT –V**

Essay writing [Employability]

**Lab Note**-Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

**Viva**-Group discussion

**Exam components**-Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

19122PRW67	Project Work	0	0	0	4

Each student will develop and implement individually developed application software based on any of the latest technologies.

**Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of

the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

**Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

**Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student’s knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

**Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

**Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.C.A., curriculum, the following Research Skill Based Courses are introduced in the B.C.A., curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

## Blueprint for assessment of student's performance in Research Led Seminar Course

● <b>Internal Assessment:</b>	<b>40 Marks</b>
● Seminar Report (UG)/Concept Note(PG)	: 5 X 4= 20 Marks
● Seminar Review Presentation	: 10 Marks
● Literature Survey	: 10 Marks
● <b>Semester Examination</b>	<b>60</b>
<b>Marks</b>	

(Essay type Questions set by the concerned resource persons)

## Blueprint for assessment of student's performance in Research Methodology Courses

**Continuous Internal Assessment:** **20 Marks**

● Research Tools( Lab) :	10 Marks
● Tutorial:	10 Marks

**Model Paper Writing:** **40 Marks**

● Abstract:	5 Marks
● Introduction:	10 Marks
● Discussion:	10 Marks
● Review of Literature:	5 Marks
● Presentation:	10 Marks

**Semester Examination:** **40 Marks**

**Total:** **100 Marks**

Department	:	COMPUTER SCIENCE
Programme	:	B.Sc (Computer Science)

---

**B.Sc C.S. Graduate Attributes :**

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

**B.Sc C.S. Programme Objectives-PEO**

- POE1- To study about I/O management, storage management
- POE2- To know the methods of connecting them to the peripheral devices.
- POE3- To learn Software design and Implementation
- POE4- To learn the basic principles of database and database design
- POE5- To understand computational development of graphics with mathematics

## **B.Sc C.S. Programme Outcomes -PO**

- PO1- Understand dynamic memory allocation and pointers.
- PO2- Trace the flow of information from one node to another node in the network.
- PO3- Understand the format and use of objects.
- PO4- Able to Measure the product and process performance using various metrics
- PO5- Design Secure applications.
- PO6- Apply the various optimization techniques.

## **B.Sc C.S. Courses -C**

- **C1-** Programming in C with C++
- **C2-** Internet and Java Programming
- **C3-** Visual Programming
- **C4-** Active Server Programming
- **C5-** E-Business Technology
- **C6-** Operating System
- **C7-** Microprocessor and its Applications
- **C8-** .NET Programming
- **C9-** Relational Data Base Management System

**B.Sc C.S. Curriculum Mapping**

19111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

Course Code	Course Title	L	T	P	C
19111AEC12	English-I	4	0	0	2

**AIM:**

- To acquaint students with learning English through literature

**OBJECTIVE:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**UNIT –I**

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-Aruna Gnanadason

**UNIT – II**

The Merchant of Death

-Nanda Kishore Mishra & John Kennet

She Spoke for all Nature

-Young world ‘The Hindu’

**UNIT –III**

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

**UNIT –IV**

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

**UNIT –V**

Oliver Twist

-Charles Dickens

**OUTCOME:**

- Read and comprehend literature

**REFERENCES:-**

The Art of Reading/ Experiencing Poetry.

-S.Murugesan and Dr.K.Chellappan  
Emerald Publishers

Course Code	Course Title	L	T	P	C
19120SEC13	Programming in C with C++	5	1	0	6

**AIM**

To equip the students with fundamental programming principles and concepts of object oriented design.

**OBJECTIVES:**

The students should be made to:

- Be exposed to the syntax of C.
- Be familiar with programming in C.
- Learn to use arrays, strings, functions, pointers, structures and unions in C.
- To learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc

- To understand and apply the principles hiding, localization and modularity in software
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes

### UNIT -I

Introduction - Basic Structure of C Programs - Character set -C Tokens - Constants - Variables-Data Types - Declaration and Assigning Values to Variables - Defining Symbolic Constants - Operators - Expressions - Type conversions - Built-in functions.

### UNIT -II

Managing Input and Output Operators - Decision Making and Branching - Decision Making and Looping – Arrays and its Types.

### UNIT –III

#### Functions [Employability]

: The Form of C Functions-Return Values and Their Types -Calling a Function-Category of Functions- Nesting of Functions-Recursion- Structures and Unions-Pointers.

### UNIT-IV

Basic concepts of OOPs- Benefits and Application of OOPs- Inline functions-  
Function overloading [Employability]  
– Friend and Virtual Functions -Constructors and Destructors [Employability]  
- Operator overloading.

### UNIT-V

#### Inheritance and its Types- Files [Employability]

- Classes for file stream operations - Opening, Closing and processing files - End of file Detection - File Pointers - Updating a file - Error handling during file operations - Command Line Arguments - Templates - Exception Handling.

### OUTCOMES:

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications
- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Understand functions and parameter passing.
- Be able to do numeric (algebraic) and string-based computation.
- Understand object-oriented design and programming

### REFERENCE BOOKS:

1. “Programming in C” – E. Balagurusamy – Tata McGraw-Hill Publications
2. “Programming with C” – Byron S.Gottfried – Schaum’s outline series – Tata McGraw-Hill publications.
3. "Object oriented programming with C++". E. Balagurusamy,Tata McGraw Hill Publishing Ltd., New Delhi, 1995.

4. "C++ The complete reference"- Herbert Schildt, 3rd edition, Tata McGraw Hill Pub-Ltd., 1999

Course Code	Course Title	L	T	P	C
19120SEC14L	Programming in C with C++ Lab	0	0	3	2

1. Solution of a Quadratic Equation (all cases).
2. Sum of Series (Sine, Cosine,  $e^x$ )
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a c program for Matrix Operations (Addition, Subtraction, Multiplication- use functions).
6. Write C++ program using a class to represent a bank account with data members- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.
7. Write C++ programs for implementing inheritance.
8. Write a C++ program using friend function.
9. Write a C++ program which reads a text from a file and the display the following information (Number of Lines, Number of words, and Number of characters).
10. File Processing: Mark sheet preparation.

Course code	Course Title	L	T	P	C
19112AEC15B	Classical Algebra	5	0	0	4

### OBJECTIVES

To learn about the expansion of a Binomial Theorem for a rational index using vandermonde's theorem. Further we aim at learning problems to be solved using the different types in Binomial series .Understanding the relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods And Reciprocal equations-Descartes' rule of signs-simple problems.

### UNIT-I

Binomial, exponential and logarithmic series (formulae only)- Summations.

### UNIT-II

Non singular, symmetric, skew symmetric orthogonal, Hermition, skew Hermition and unitary matrices-characteristic equation, Eigen values, Eigen vector-Cayley Hamilton's theorem(proof not needed)-simple applications.

### UNIT-III

Relation between roots and coefficients of polynomial equations-symmetric functions-sum of  $r^{\text{th}}$  power of the roots-two methods.

#### **UNIT-IV**

Transformation of equations-diminishing, increasing and multiplying the roots by a constant-forming equation with the given roots.

#### **UNIT-V**

Reciprocal equations-Descartes' rule of signs-simple problems.

#### **Learning outcomes**

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Cayley Hamilton Theorem, and finding the Eigen values & Eigen vectors
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

#### **REFERENCE BOOKS:**

Algebra-T.K.M.Pillai, Vol1 &2.

<b>Course code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19112AEC16B	Numerical And Statistical Methods	4	0	0	4

#### **OBJECTIVES:**

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems ,Numerical differentiation and integration interpolation with equql & unequal intervals are concentrated. Correlation coefficient and its properties Linear Regression and its properties, Test of significance would also be taught.

#### **UNIT-I**

Algebraic and transcendental equations-the iteration method –the Newton Raphson method-False Position method-the bisection method

#### **UNIT-II**

Interpolation-Finite difference –Newton's formulae for interpolation-Lagrange's formulae for interpolation-Gaussian elimination method –Gauss-Seidal method.

#### **UNIT-III**

Numerical different ion and integration-Maximum and minimum values of a tabulated functions-Trapezoidal rule-Simpson's rule –Numerical solution of ordinary differential equations-Euler's method –Runge Kutta methods-Predictor corrector method-Boundary value problems.

#### **UNIT-IV**

Correlation –different types of correlation –Karl Pearson's spearman's correlation-Regression-Regression coefficients-Regression equations-Properties of correlation and regression coefficients.

## UNIT-V

Test of hypothesis-null and alternative hypothesis-tests of significance based on normal and distribution for mean, simple correlation and proportion Chi square test-independents of attributes and goodness of fit-applications.

### REFERENCE BOOKS:

1. Introductory methods of numerical analysis S.S.Sastry, PHI
2. Fundamentals of mathematical statistics-S.C.Gupta & V.K.Kapoor.

### Learning outcomes

By the end of this course, you should:

- be able to calculate the solution of algebraic and transcendental equations, Solutions of simultaneous equations,
- be able to calculate the area of the given curve

Course Code	Course Title	L	T	P	C
19120SEC01AL	Packages lab –I	0	0	2	1

### MS-Word

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. Picture Insertion and Alignment
  - a. Prepare a Greeting Card
  - b. Prepare a Handout
7. Create a Mark sheet using tables and find out the total marks.
8. Prepare a Business letter for more than one company using Mail Merge

## UNIT –IV

Communication-Characteristics-Process-Forms-Barriers-Types

## UNIT-V

Listening-benefits-types-good listener-active and passive listening-Tips for effective listening

**Lab Note-1.** Word Mentor - Level I Words and their meaning-Root and usage-Fill in the blanks-Synonyms-Antonyms-Match the Words, Listening activity from Globarena Software 2.  
Vocabulary diary

**Viva-**Listening activity

**Exam components-**Theory-50+MCQ online exam-vocabulary-20+Viva-15+Lab note-15=100

### OUTCOME:

- Understand grammar
- Develop listening skill

### REFERENCES:-

English Grammar -Wren and Martin  
English Grammar and Composition -Radhakrishna Pillai  
Technical Communication -Meenakshi Sharma & Sangeetha Sharma  
Essentials of Business Communication -Rajendra Pal &J.S Korlahalli Sultan Chand & Sons

Course Code	Course Title	L	T	P	C
191INDCONS	Indian Constitution	1	0	0	1

### OBJECTIVES:

- To make the students understand about the Democratic Rule and Parliamentary administration.
- To appreciate the salient features of the Indian Constitution.
- To know the fundamental Rights and Constitutional Remedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

### UNIT I:

#### The Making of Indian Constitution

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

### UNIT II:

#### Fundamental Rights and Fundamental Duties of the Citizens

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

**UNIT III:****Directive Principles of State Policy**

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

**UNIT IV:****The Union Executive, Union parliament and Supreme Court**

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

**UNIT V:****State Council – Election System and Parliamentary Democracy in India**

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

**OUTCOMES**

- Democratic values and citizenship Training are gained.
- Awareness on Fundamental Rights are established.
- The functions of union Government and State Governments are learnt.
- The power and functions of the Judiciary learnt thoroughly.
- Appreciation of Democratic parliamentary Rule is learnt.

**REFERENCE BOOKS:**

1. Palekar S.A. Indian Constitution Government and politics, ABD Publications, India.
2. Aiyer Alladi, Krishnaswami, Constitution and fundamental rights 1955.
3. Markandan K.C. Directive Principles in the Indian Constitution 1966.
4. Kashyap Subash C Our Parliament, National Book, Trust New Delhi 1989.

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC21	Advanced English-II	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**Outcome:**

- Develop writing skill
- Read and comprehend literature

**UNIT – I**

E-mail, Fax, Memos

**UNIT – II**

Itinerary, Checklist

**UNIT – III**

Invitation, Circular

**UNIT – IV**

Instruction, Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

**References:**

English Grammar	-Wren and Martin

19111AEC22	English-II	4	0	0	2

**AIM:**

- To acquaint learners with different trends of writing

**OBJECTIVE:**

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

**UNIT – I**

Ecology

-A.K. Ramanujan

Gift

-Alice Walker

The First Meeting

-Sujata Bhatt

**UNIT –II**

Fueled -Marcie Hans  
 Asleep -Ernst Jandl  
 Buying and selling -Khalil Gibran

**UNIT –III**

The End of living and The Beginning of Survival - Chief Seattle  
 My Wood - E.M.Forster  
 The Meeting of Races - Rabindranath Tagore

**UNIT – IV**

The Refugee -K.A. Abbas  
 I Have a Dream -Martin Luther king  
 Those People Next Door -A.G. Gardiner

**UNIT – V**

Marriage is a private Affair -Chinua Achebe  
 The Fortune Teller -Karel Capek  
 Proposal -Anton Chekov

**OUTCOME:**

- Read and comprehend literature

**REFERENCES:-**

Gathered Wisdom -GowriSivaraman EmeraldPublishers

Course Code	Course Title	L	T	P	C
19120SEC23	Internet and Java Programming	5	1	0	6

**AIM**

To equip the students with basic programming skill in Java

**OBJECTIVE**

- To understand the core principles of the Java Language
- To study about Graphics programming using java Language
- To learn visual tools to produce well designed, effective applications and applets.

**UNIT-I**

Introduction to the Internet - Internet Technologies - Internet Browsers

**UNIT-II**

Decision making and looping statements -Classes, Objects and Methods

**UNIT-III**

Arrays, strings and vectors- Interfaces: [Employability]

Multiple Inheritance – Packages: [Employability]

Putting classes together - Multithreaded Programming

**UNIT-IV**

Managing Errors and Exceptions - Applet programming- Graphics programming  
 [Employability]

**UNIT-V**

Managing Input/Output files in Java [Employability]

**OUTCOMES:**

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.

- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

**REFERENCE BOOKS:**

1. “World Wide Web Design with HTML”, C.Xavier, Tata McGraw-Hill Publishing Company Limited for Unit-1.
2. “Programming with Java”, E.Balagurusamy, Tata McGraw-Hill Publishing Company Limited for Unit-2, 3, 4, 5.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC24L	Internet and Java Programming Lab	0	0	3	2

1. Simple programming using for, while, do-while, ternary and switch.
2. String handling using string and string buffer.
3. Inheritance.
4. Polymorphism
5. Interfaces and Packages
6. Data files(creation, processing)
7. Vector manipulation
8. Simple programs using Applets
9. Exercises using predefined and user defined exceptions
10. Graphics programs for drawing lines, rectangle, oval, string using Applets.

<b>Course code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19112AEC25B	Discrete Mathematics	5	0	0	4

**OBJECTIVES:**

Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental thm of homomorphism are concentrated. Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory 20 such as Trees, Directed graphs, Connectivity, Euler tours are also concentrated

**UNIT I**

Groups- Types – Propertices Of Groups- Semi Groups-Monoids – Problem In Groups- Cyclic Groups And Subgroups

**UNIT-II**

cosets & lagrange’s thm-Normal groups and quotient groups- Different types of morphisms of groups fundamental thm of homomorphism.

**UNIT III**

Graph theory - Basic concepts- Finite and infinite graph – Incidence and degree ideas on vertices- Isomorphism-sub graphs – Walks – Paths and circuits

**UNIT IV**

Connected Graphs And Disconnected Graphs And Components - Euler Graphs – Hamiltonian Path And Circuits

**UNIT V**

Trees-properties of trees -pendent vertices – Distance and centers in a tree rooted and binary trees.

## **REFERENCE BOOKS**

- 1. Algebra - Arumugan Issac**
- 2. Graph theory – Narasingh deo**

## **Learning outcomes**

By the end of this course, you should be able

- Understood the concept of Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental theorem of homomorphism
- Knowledge in Graph Theory
- Understood the properties of Graph Theory
- Understood the concept of Euler theorem and its applications

Course Code	Course Title	L	T	P	C
19112AEC26B	Operations Research	4	0	0	4

### OBJECTIVES:

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

### UNIT — I

Basic of operations research (OR) characteristics of OR - Necessity of OR in industry, OR and decision making - role of computers in OR Linear Programming: Formulations and graphical solution of (2 variable) canonical and standard forms of linear programming problem.

### UNIT — II

Algebraic Solution: Simplex methods — Charnes method of penalty - Two phase simplex method.

### UNIT — III

Transportation Model: Definition — Formulation and solution of transportation models the row — Minima, column minima, Matrix minima and Vogel's approximation method. Assignment Model: Definition of assignment model— comparison with transportation model - Formulation and solution of assignment model

### UNIT — IV

Sequencing problem: Processing of n jobs through 2 machines - processing n jobs through 3 machines - processing 2 jobs through m machine  
Games Theory: Characteristics of games — Maximin, Minimax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving 2 x 2 games.

### UNIT — V

PERT computation — Resource scheduling.

### REFERENCES BOOK

1. Hamdy A. Taha: Operation Research - An Introduction 5<sup>th</sup> Edition, PHI, New Delhi 1996
2. Ackoff, R Land Sasieni, M.N: Fundamental of Operation research, John Wiley and sons, New york 1968.

### Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory
- Students gets the knowledge about inventory theory

Course Code	Course Title	L	T	P	C
19120SEC02AL	Packages lab –II	0	0	2	1

## **MS –EXCEL**

1. Prepare the addressing methods in excel
2. Prepare an Excel Document using different type of Functions.
3. Draw a Graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark List for the Students.
6. Prepare a Worksheet for a Company.
7. Prepare an Inventory Report for a Shop.
8. Prepare an Electricity Bill for the Domestic Customers.

Course Code	Course Title	L	T	P	C
19160SEC02B	Self Development	0	0	3	2

**UNIT I: Self -Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

**UNIT II: Self- Management**

Managing Time, Managing Stress, Conflict Management

Course Code	Course Title	L	T	P	C
19111SEC02L	Communicative English Lab -II	0	0	2	1

**AIM:**

- To acquaint with the basic grammar and develop language skills

**OBJECTIVE:**

- To understand the different tenses and use it in sentences
- To form sentences
- To know subject verb agreement
- To enrich vocabulary
- To read and comprehend the context

**OUTCOME:**

- Understand grammar
- Develop reading skills

**UNIT-1**

Tenses-Simple, Perfect

**UNIT -II**

Tenses-Continuous, Perfect continuous

**UNIT -III**

Forming sentences-positive, negative and questions

**UNIT -IV**

Concord

**UNIT -V**

Reading-benefits-purpose-techniques-types-tips for effective reading

One-Act plays of Today	- T.Prabhakar Emerald Publishers

Course Code	Course Title	L	T	P	C
19120SEC33	Visual Programming	5	0	0	6

**AIM:**

To equip the students with principles of various visual programming environment

**OBJECTIVE:**

- To learn the basic principles of visual programming
- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

**UNIT I**

Visual Basic – Integrated Development Environment (IDE) features – VB editor – customizing the IDE – anatomy of a form working with form properties – setting form’s properties – introducing form events and form methods.

**UNIT II**

Variables in Visual Basic : Declaring variables – Data types – Null values, Error value – empty value – the scope of a variable – Module level variable – Constants – Creating your own constants [Employability]

– Scope of a constant – Converting data types – arrays – Declaring arrays

[Employability]

– Fixed size arrays – Dynamic arrays – Preserve keywords – ReDim. Writing code in Visual Basic – The anatomy of a procedure [Employability]

– Subroutine and Functions [Employability]

– Language constructs – For...Next, The While loop, Select case...End select, Exit statement, with structure.

**UNIT III**

Selecting and Using controls – Introduction to standard controls: [Employability]

command buttons – Text boxes – labels – frames – option buttons – Check boxes – Scroll Bars – Timer – working with Common Dialog Control.

**UNIT IV**

The Image list control – the List view control – slider control – status bar control – Tool bar control – The Tree view control – Menu editor. –File System Controls (Drive, Dirlist, File List boxes).

**UNIT V**

OLE properties – OLE automation – building COM/OLE DLL servers – Data control – design time(for access – style databases) –programming with the data control

Database access – set using SQL [Employability]

–transaction control – testing the control – Open Database Connectivity.

**OUTCOMES:**

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic’s Integrated Development Environment (IDE).

- Implement syntax rules in Visual Basic programs.
- Write Windows applications using forms, controls, and events
- Write and apply decision structures for determining different operations.
- Write and apply loop structures to perform repetitive tasks.

**REFERENCE BOOKS:**

1. Mohammed Azam, Programming with Visual Basic 6.0 – Vikas Publishing House Pvt Ltd – 2002(unit-I, unit-II)

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC34L	Visual Programming Lab	0	0	3	2

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to expand and shrinking an object – while program is running.
4. Write a code to design and implement a scientific calculator.
5. Write a program to create animation by using move method and timer Object.
6. Write a program for preparing students mark list.
7. Write a program to populate the label entities using data bound control.
8. Write a program to expand and shrink Objects using timer control and move method

Course Code	Course Title	L	T	P	C
19113AEC35A	Applied physics –I	4	0	0	6

### AIM

To provide students with a broad and balanced foundation of physics knowledge and Practical Skill.

### OBJECTIVES:

- To develop in students through an education in Physics a range of transferable skills of Value in physics and other areas.
- To instill in students a sense of enthusiasm for physics, and appreciation of its applications in different contexts.
- To provide students with a knowledge and skills base for further studies in physics or multi-disciplinary areas involving physics.

### UNIT – I: ELECTROSTATIC

Gauss theorem and its application – Intensity at a point due to uniformly charged cylinders – Electrostatic potential – Equipotential surface – Capacitor – Principle of a capacitor – Spherical and cylindrical capacitors – Capacitors in series and in parallel – Energy of a charged capacitor – Energy loss due to sharing of charges.

### UNIT – II: MAGNETOSTATICS

Magnetic field – Intensity of magnetization – Permeability – Susceptibility – Relation between them – Potential due to dipole – Relation between potential and intensity – Properties of dia, para, fero magnetic materials – Hysteresis – B.H curve.

### UNIT – III: CURRENT ELECTRICITY

Ohm’s law – Kirchoff’s law – Application to Wheatstone’s Bridge – Carey Foster Bridge – Potentiometer – Measurement of current and resistance – Calibration of low and high range voltmeter – Fleming’s left and right hand rule – Theory of moving coil galvanometer – Ballistic galvanometers.

### UNIT – IV: ELECTROMAGNETIC INDUCTION

Laws of Electromagnetic induction – Relation between induced emf and mutual inductance – Eddy current – Determination of self inductance – Anderson method – Co-efficient of mutual induction – Co-efficient of coupling – Transformer theory.

### UNIT – V: ALTERNATING CURRENT

A.C Circuit with single components – Double components – Measurement of current and voltages – Power in A.C Circuits – Wattless current – Series and parallel resonance circuits – Q factor – Oscillatory discharge of a condenser.

### Learning Outcomes:

Cognitive abilities and skills relating to solution of problems in Physics and Physics Related Disciplines

Practical skills relating to the conduct of laboratory and industrial work in  
General skills relating to non-subject specific competencies, communication, ICT knowledge,  
interpersonal, organization skills and ethical standards.

**REFERENCE BOOK:**

- 1) Electricity and Magnetism – Brijlal and Subramaniam.
- 2) Electricity and Magnetism – Narayanamoorthi and Nagarathnam.
- 3) Electricity and Magnetism – D.L. Seghal and Chopra.

19113AEC36AL	Applied physics Lab-I	0	0	3	2

1. Semiconductor diode Characteristics
2. Zener diode characteristics
3. Transister characteristics –CE Configuration
4. IC Regulated power supply
5. Post office Box-Resistance
6. Figure of merit of galvanometer.
7. Potentiometer- Ammeter Calibration
8. Potentiometer- Voltmeter Calibration
9. Zener Regulated Power supply.
10. Carey foster bridge

Course Code	Course Title	L	T	P	C
19120RMC37	Research Methodology	3	0	0	3

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication.

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-based
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

**PREREQUISITES:**

Basic computer skill for working in window environment & conceptual knowledge on basic matrices.

**UNIT-I Introduction to Research Methodology**

Meaning of research – Objectives of research – Type of research – Significance of research – Research approaches.

**UNIT-II Research Methods**

Research methods versus Methodology – Research and scientific method – criteria of good research – Problems encountered by researchers in India.

**UNIT-III Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Review – General treatises – Monographs.

**UNIT-IV Database Survey**

Database search – NIST –MSDS –PubMed – Scopus – Science citation index – Information about a specific search.

**UNIT-V Introduction to MATLAB:**

What is MATLAB? Matrix and its application in different areas: MATLAB approach to environmental modeling; Arithmetic Matrix – Operators; Arithmetic Array – Operators and its applications in MATLAB; Expressions, Opening M-Files; Structure of MATLAB Programming; Programming; Concatenation of strings; Vectorization ; Basic Graphics.

**OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.

**REFERENCES BOOK:**

5. Introduction to MATLAB for Engineers by William J. Palm III.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC03AL	Packages lab – III	0	0	2	1

### **POWER POINT**

1. Create a slide show presentation for a Seminar (choose your own topics)
  - a. Enter the Text in the Outline View
  - b. Create Non-Bulleted and Bulleted Text
2. Create a slide show presentation for a Science Exhibition
  - a. Create Non-Bulleted and Bulleted text
  - b. Apply appropriate Text Attributes
3. Create slide show presentation for an Invitation
  - a. Insert an Object from a Bitmap File
  - b. Apply appropriate Text Attributes
  - c. Rotate the Object to 45 degree
  - d. Apply Shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all Students
  - a. Use Bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different Presentation Template and different Transition Effect for each slide
  - c. Use different Text Attributes in each slide
5. Create a slide show presentation for a Shop Advertisement to be open shortly
6. Create a slide show presentation to display Percentage of Sales in each quarter for the any Vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for Tourists Places
8. Create a slide for Calendar using appropriate Text attributes and insert an object from a Bitmap file

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
--------------------	---------------------	----------	----------	----------	----------

19160SEC03B	Interpersonal Relations and Social Responsibilities	0	0	3	2
-------------	---	---	---	---	---

### **UNIT I: Interpersonal Relations**

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

### **UNIT II: Ethics and Social Responsibilities**

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19111SEC03L	Communicative English Lab-III	0	0	2	1

#### **AIM:**

To acquaint with the basic grammar and develop language skills

#### **OBJECTIVE:**

- To change a sentence from active to passive and vice versa
- To make sentences
- To write a letter
- To improve vocabulary
- To enhance speaking skills

- To enrich writing skills

### **UNIT –I**

Active and Passive

### **UNIT –II**

Developing the hints

### **UNIT –III**

Letter writing

### **UNIT –IV**

Speaking-benefits-features of a good speaker-Tip for improving speech-types

### **UNIT –V**

Writing-benefits-types-tips for improving writing

**Lab Note-1.** Anagrams, Word Traps, Stinging Words, letter writing from Globarena Software, Self-introduction, 2. Picture writing note book

**Viva-**Self introduction, Picture talk

**Exam components-**Theory -50+MCQ online exam -20+Viva-15+Lab note-10=100

### **OUTCOME:**

- Understand grammar
- Develop speaking and writing skills

### **REFERENCES:-**

English Grammar

-Wren and Martin

English Grammar and Composition

-Radhakrishna Pillai

Technical Communication

-Meenakshi Sharma & Sangeetha Sharma

Essentials of Business Communication

-Rajendra Pal &J.S Korlahalli Sultan Chand & Sons

COURSE CODE	COURSE TITLE	L	T	P	C
19111AEC41	Advanced English-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT –I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

**UNIT – II**

Flowchart

Proposals

**UNIT – III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT –V**

Definition

Writing for and against a topic.

Course Code	Course Title	L	T	P	C
19111AEC42	English-IV	4	0	0	2

**AIM:**

To acquaint students with learning English through literature

**OBJECTIVE:**

- To introduce learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

**UNIT –I**

How to be a Doctor -Stephen Leacock  
 My Visions for India -A.P.J. Abdul Kalam  
 Woman, not the weaker sex -M.K. Gandhi

**UNIT –II**

My Last Duchess -Robert Browning  
 The Toys -Coventry Patmore  
 I, too -Langston Hughes

**UNIT –III**

The Best Investment I ever made-A.J.Cronin  
 The Verger -W.S Maugham  
 A Willing Slave -R.K.Narayan

**UNIT –IV**

Macbeth  
 As You Like It

**UNIT –V**

Henry IV Tempest

**OUTCOME:**

Read and comprehend literature

**REFERENCES:-**

English for Enrichment -Devaraj Emerald Publishers  
 Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Course Code	Course Title	L	T	P	C
19120SEC43	Active Server Programming	5	1	0	6

**AIM**

To equip the student to learn the Active Server Page

**OBJECTIVE:**

- To study about scripting languages concepts
- To understand scripting languages components
- To learn ADO cursors

**UNIT I**

Introduction to ASP-Active sever pages model-ASP file [Employability]  
 -The process of serving an active server page-Using scripting languages-Setting the primary scripting languages-Including other files-Understanding objects

**UNIT II**

Understanding components-Working with users-Working with HTML forms  
[Employability] -retrieving form data-using text boxes and text areas

### UNIT III

Cookies[Employability]

-Working with cookies-applications of cookies-addressing the drawbacks of using cookies-using cookies in ASP applications. Working with connections and data sources-creating connections with OLEDB and ODBC [Employability] – connecting to Microsoft SQL server-Connecting to a Microsoft access database

### UNIT IV

About the connection object – executing a SQL statement [Employability] with the connection object- Understanding session and connection pooling – working with record sets [Employability] -retrieving a record set-record set cursor and locking types-Understanding ADO cursors-paging through a record set

### UNIT V

Working with the command object [Employability] -creating stored procedures-executing stored procedures with the connection object –executing stored procedures with the command object – retrieving parameter information

### OUTCOMES

- Explain concepts of Active Server Pages.
- Apply methods and properties of various objects and components of ASP
- Develop Dynamic real life website using the concept of ADO and ASP.

### REFERENCE BOOK:

1. Practical ASP-Ivan bayross, BPB Publications, 2000
2. Special Edition using Active Server Pages – Scot Johnson, Prentice Hall of India Private Limited 2001

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC44L	Active Server Programming Lab	0	0	3	4

1. Create an ASP file to display the message “Have a good Week end” if it a Saturday other wise “Have a nice day”
2. Write an ASP program to get the rollno and display the corresponding name & mark details
3. Create a login form to expire if the user does not type the password within 100 seconds.
4. Create an advertisement for a book shop using Ad Rotator component.
5. Create a course registration form with name, address and list of available course. Reply with the corresponding course fees on selection of a single course or a collection of courses.
6. Write an ASP program to manipulate cookies with the information between HTTP sessions such as
  - a. Last date visited
  - b. Last Time visited
  - c. Number of visits
7. Create a student database and manipulate the records using the connection object in ASP
8. Create an employee database and manipulate the records using command object in ASP

Course Code	Course Title	L	T	P	C
19113AEC45A	Applied physics –II	6	0	0	6

**AIM:**

To prepare the student for the study of physics by introducing general concepts and methods this will be applied throughout the course.

**OBJECTIVES:**

- To introduce and develop the fundamental techniques of experiment in physics.
- Introduce the student to the basic concepts in electricity and magnetism.
- To expose the students to experiments in Light, Modern Physics, AC circuits, and Devices.
- To introduce the student to elementary alternating current circuits

**UNIT – I: SEMI CONDUCTOR PHYSICS**

Theory of Energy bands in crystals – Distinction between conductors, insulators and semiconductors – Hall effect in semi conductors – Zener diode – Tunnel diode – Backward diode – Breakdown voltage – Avalanche Breakdown.

**UNIT – II: TRANSISTORS**

NPN and PNP transistors – Characteristics of CE and CB configurations – H-Parameters – Transistor as an amplifier and oscillator – FET – N-Channel and P-Channel – FET Characteristics – FET amplifier.

**UNIT – III: LASER AND MASERS**

Basic concepts of stimulated emission – Principles of Laser – Population inversion and Meta stable state – Ammonia maser – Ruby laser and He-Ne laser production – Applications of laser and maser.

**UNIT – IV: OPTO ELECTRONIC DEVICES**

LED – LED Voltage and current – Advantages of LED – Applications of LED's – Photo diode – Photo diode operation – characteristics of photo diode – Photo transistor – Seven segment display.

**UNIT – V: OPERATIONAL AMPLIFIER**

The basic operational amplifier – Inverting and Non inverting operational amplifiers – CMRR – Basic uses of operational amplifier as Integrator, Differentiator, Adder, Subtractor – D/C Binary weighted method – R-2R method.

**Learning Outcomes:**

The Applied Physics program will produce intellectually engaged graduates accomplished in application of fundamental physics principles, and prepared for direct entry into the workplace or continuing professional development. Demonstrate a working knowledge of the basic concepts and theories of physics.

**REFERENCE BOOK:**

1. Principles of Electronics – V.K. Metha, S. chand and Co.,
2. Electronic Devices and Circuits – Millman and Halkias.
3. The Fundamentals of solid state physics – Theraja.

Course Code	Course Title	L	T	P	C
19113AEC46AL	Applied physics Lab –II	0	0	3	2

- 1) FET-Characteristics
- 2) Logic Gates-Universality of NOR Gate.
- 3) LCR — Series Resonance Circuit.
- 4) LCR parallel – resonance circuit.
- 5) OP AMP-Addition,Subtraction.
- 6) Verification basic logic gates.
- 7) Verification of Demorgon’s theorem..
- 8) Half adder and Half subtractor.
- 9) Logic Gates-Universality of NAND Gate.
- 10) OP AMP Differentiator ,Intergrator.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC04AL	Packages lab - IV	0	0	2	1

### **MS-ACCESS**

1. Create a Database with a simple Table
2. Create a Database for Students Mark List using Queries.
3. Create a Database for the employees in an organization and sort by their date of joining.
4. Create Queries to Select Records that matches specific condition.
5. Create Relationships among the different Tables.
6. Create Queries using Built-in Functions.
7. Develop Forms to enter data in to the Student Marks Database
8. Develop Forms to enter data in to the Electricity bill Database

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19160SEC04B	Etiquette And Interviewing Skills	0	0	3	2

### **UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

### **UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

Course Code	Course Title	L	T	P	C
19111SEC04L	Communicative English Lab -IV	0	0	1	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To change sentences from direct to indirect and vice versa
- To comprehend a passage
- To enhance language skill
- To develop presentation skill
- To enrich vocabulary

**UNIT –I**

Direct and Indirect

**UNIT –II**

Comprehension

**UNIT –III**

Conversation

**UNIT –IV**

Descriptive Writing

**UNIT –V**

Soft skills-Importance-aspects-SWOT analysis-values-positive attitude-perception

**Lab Note-** Confusing Words, Word families, Non-English words, Presentation skills, Oral presentation, Conversation from Globarena software

**Viva-**Presenting a topic

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**OUTCOME:**

- Understand grammar
- Develop language and presentation skills

**REFERENCES:-**

English Grammar	-Wren and Martin

Soft skills	-D.Jayacandran D.J Publishers

Course Code	Course Title	L	T	P	C
191ENVTSTU	Environmental Studies	1	0	0	1

**AIM:**

To create the awareness about environmental problems among the students.

## **OBJECTIVE:**

- It deals with the study of flow of energy and materials in the environment
- It deals with the study of natural and its function

## **UNIT-I**

**The Multidisciplinary Nature of Environmental Studies** – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources** - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

## **UNIT-II**

**Ecosystems** - Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

## **UNIT-III**

**Biodiversity and its Conservation** – Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

#### **UNIT-IV**

**Environmental Pollution** – Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

#### **UNIT-V**

**Social Issues and the Environment** - From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - **Human Population and the Environment.**

#### **REFERENCE BOOK:**

1. “ENVIRONMENTAL STUDIES”, K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

Course Code	Course Title	L	T	P	C
19120SEC51	Data Communication and Networking	5	0	0	5

**AIM:**

To equip the students with Computer Networks and its security.

**OBJECTIVES:**

- To learn basic network concepts.
- To understand various switching techniques and protocols.
- To study about wireless technology and network security.

**UNIT-I**

Introduction-Components-Topologies-Categories of Network-OSI model [Employability]  
-TCP/IP suite - Addressing.

**UNIT-II**

Trasmission media-Connecting Devices-Error detection and correction [Employability]  
-Flow and Error Control- piggy backing- IEEE standard.

**UNIT-III**

Switching-Namespace- DNS - TCP/UDP- Ipv4 vs Ipv6 - Remote logging- SMTP-POP-IMAP-FTP

**UNIT-IV**

Wireless WAN: [Employability] Cellular telephony- Generations- Satellite-GSM-GPRS-Internet-WWW-HTTP

**UNIT-V**

Attacks-Web security consideration-SNMP-Secure Socket Layer- Principles of public key cryptography [Employability] - Digital signature-Key management-Intruders and viruses-Firewall.

**OUTCOMES:**

At the end of the course, the student should be able to:

- Identify the components required to build different types of networks.
- Identify solution for each functionality at each layer.
- Trace the flow of data from one node to another node.

**REFERENCE BOOK:**

- 1."Data Communications and Networking "Behrouz A Forouzan, TATA McGraw-Hill
- 2." Network Security Essentials" William Stallings, Pearson Education
3. "Data and Computer Communications", William Stallings, Pearson Education

Course Code	Course Title	L	T	P	C
19120SEC52	Operating System	4	1	0	5

**AIM:**

To equip the students with operating system and their components

**OBJECTIVES:**

- To learn the fundamental functionality of Operating system
- To understand the memory management, process management
- To study about I/O management, storage management

## UNIT I

Evolution of Operating System – Types of Operating System [Employability]  
– Different views of Operating System – Design and Implementation of Operating System – I/O Programming concepts – Interrupts Structure & Processing.

## UNIT II

Memory Management [Employability] : Single Contiguous Allocation – Partitioned Allocation – Relocatable Partitioned Allocation – Paged and Demand – Paged Memory Management – Segmented Memory Management – Segmented and Demand – Paged memory Management – Swapping and overlay techniques.

## UNIT III

Process Management [Employability] : Job Scheduling – Process Scheduling – Functions and Policies – Evaluation of Round Robin multiprogramming performance – Process Synchronization [Employability] – Race Condition – Synchronization Mechanism – Deadly Embrace, Prevention , Avoidance and Detection and Recovery Methods.

## UNIT IV

Device Management [Employability] : Techniques for Device Management – Device Characteristics – I/O Traffic Controller, I/O Scheduler, I/O Device Handler – Virtual Devices [Employability] – Spooling.

## UNIT V

File management: [Employability] Simple file system, General Model of a file system, Physical and Logical file system.

### OUTCOMES:

At the end of the course, the student should be able to:

- Design various Scheduling algorithms.
- Apply the principles of concurrency.
- Design deadlock, prevention and avoidance algorithms.
- Compare and contrast various memory management schemes.
- Design and Implement a prototype file systems.

### REFERENCE BOOK:

1. Operating Systems by Stuart E. Madnick and John J. Donovan – Tata McGraw Hill Publishing Company Ltd.
- 2.. Operating Systems (Concepts and Design) Milan Milenkovic – McGraw Hill International Edition

Course Code	Course Title	L	T	P	C
19120SEC53	Microprocessor and its Applications	4	1	0	5

### AIM

To equip the students with the architecture and instruction sets of different Microprocessors and to design systems using microprocessors.

### OBJECTIVE

- To study the architecture of microprocessors like 8085 and higher versions
- To understand the Assembly language programming
- To know the methods of connecting them to the peripheral devices.
- To learn the basic concepts and Microprocessor applications

## UNIT I

### Evolution of microprocessors [Employability]

– single chip microcomputers – memory buses -memory address capacity – Intel 8085 – instruction cycle – timing diagram.

### UNIT II

Instruction set of Intel 8085 [Employability] – instruction and data formats – addressing modes – status flags – Intel 8085 instruction – programming of microprocessors – assembler [Employability] – stacks and subroutines – macros and microprogramming.

### UNIT III

Assembly language programming [Employability] – simple examples – addition and subtraction of binary and decimal numbers – complements – shift – masking – finding max and min number in an array- arranging a series of numbers – multiplication , division, multi-byte addition and subtraction.

### UNIT IV

Peripheral devices and interfacing [Employability] – address space partitioning – memory and I/O interfacing – data transfer schemes – interrupts of Intel 8085 – interfacing devices and I/O devices – I/O ports – programmable peripheral interface.

### UNIT V

Microprocessor applications [Employability] - delay subroutines – interfacing of 7 segment LED displays – frequency measurement – temperature measurement and control – water level indicator- microprocessor based traffic control.

### OUTCOMES:

At the end of the course, the student should be able to:

- Design and implement programs on 8086 microprocessor.
- Design I/O circuits.
- Design Memory Interfacing circuits.
- Design and implement 8051 microcontroller based systems

### REFERENCE BOOK:

1. Fundamental of microprocessor and microcomputers – Badri ram – Fifth revised and enlarged edition – Dhanpat rai publications – 2001.
2. Microprocessor architecture, programming and application with 8085 – Ramesh S. Goankar.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC54L	Microprocessor Lab	0	0	3	2

The following programming exercises using 8085 instruction set,

1. 8-bit addition & subtraction
2. 8-bit multiplication & division
3. Multi byte addition
4. Multi byte subtraction
5. Sum of series & data transfer
6. Maximum & minimum values
7. Hexadecimal to decimal and decimal to hexadecimal conversion
8. Sorting the numbers

Course Code	Course Title	L	T	P	C
19120SEC55L	Operating System Lab	0	0	3	2

1. Write a menu driven shell program for the following :
  - a. List of files.
  - b. Processes of users.
  - c. Today's Date
  - d. Users of system.
  - e. Quit of Unix
  
2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.
  
3. Write a shell program which accepts the name of a file from the standard input and perform the following
  - a. Accept five names in a file.
    - a. Sorts the names in existing file.
    - b. Lists unsorted and sorted file.
    - c. Quit
  
4. Write a menu driven shell program to copy, edit, rename and delete a file.
  
5. Write a menu driven shell program to perform the following task
  - a. Write a sentence in file.
  - b. Search for a given word or pattern in an existing file.
  - c. Quit.
  
6. Write a shell program to prepare electricity bill for domestic consumers.
 

For first 100 units – Rs. 0.75 / Unit  
 For next 100 units – Rs. 1.50 / Unit  
 Above 200 units – Rs. 3.00 / Unit  
 Prepare the bill for the following format.
  
7. Write a shell program to display the result PASS or FAIL using the information given below student name ,student reg.no., mark1,mark2,mark3,mark4 the minimum pass for each subject is 50.
  
8. Merge the contents of the file file1,file2 and store in another file.

Course Code	Course Title	L	T	P	C
19120DSC56A	Cloud Computing	5	0	0	4

**AIM:**

To provide a strong foundation in Developing Cloud Services.

**OBJECTIVES:**

- To understand the concept of Cloud Computing.
- To get an idea about Sharing Files.

**UNIT I**

Understanding Cloud Computing: An introduction to **Cloud Computing [Employability]**  
– Computing in the Cloud – Developing Cloud Services.

**UNIT II**

Cloud Computing for the Family – Cloud Computing for the Community – Cloud Computing for the Corporation

**UNIT III**

Collaborating on Calendars, Schedules and **Task Management [Employability]**  
– On Event Management – On Contact Management – On Project Management – On Word Processing – On Spreadsheets – On **Databases [Employability]** – On Presentations

**UNIT IV**

**Storing and Sharing Files [Employability]** and other online content – Sharing Digital Photographs – Controlling it all with Web-Based Desktops

**UNIT V**

Collaborating via **Web-Based Communication Tools [Employability]** – Collaborating via Social Networks and Groupware – Collaborating Via Blogs and Wikis

**OUTCOMES:**

- Compare the strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Apply suitable virtualization concept.
- Choose the appropriate cloud player , Programming Models and approach.
- Address the core issues of cloud computing such as security, privacy and interoperability
- Design Cloud Services and Set a private cloud

**REFERENCE BOOK:**

1. Michael Miller, Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online, Pearson, 2009.
2. Haley Beard, Cloud Computing Best Practices for Managing and Measuring Processes for On-demand Computing, Applications and Data Centers in the Cloud with SLAs, Emereo Pty Limited, July 2008.

Course Code	Course Title	L	T	P	C
19120DSC56B	Software Engineering	5	0	0	4

**AIM:**

To introduce the methodologies involved in the development and maintenance of Software (i.e) over its entire life cycle.

**OBJECTIVES:**

To be aware of

- Different Life Cycle models.
- Requirements dictation process.
- Verification Validation techniques.
- Project planning and Management.

**UNIT I**

Introduction - definitions - size factors - quality and productivity factors - managerial issues. Planning a software project [Employability] - introduction - defining the problem - developing a solution strategy - planning the development process - planning an organizational structure - other planning activities.

**UNIT II**

Software cost estimation [Employability] - cost factors - cost estimation techniques staffing level estimation - estimating software maintenance costs. Software requirements definition - software requirement specification - formal specification techniques - languages and processors for requirements.

**UNIT III**

Software design - fundamental design concepts [Employability] - modules and modularization criteria - design notations - design techniques - detailed design considerations - real time and Distributed system design [Employability] - test plans - milestones, walkthrough and inspections - design guidelines.

**UNIT IV**

Implementations issues [Employability] - structured coding techniques - coding style - standards and guidelines - documentation guidelines - data abstraction - exception handling - concurrency mechanisms.

**UNIT V**

Verification and validation techniques [Employability] - quality assurance - walkthrough and inspections - static analysis - symbolic execution - UNIT testing and debugging - system testing - formal verification. Software maintenance - enhancing maintainability during development - managerial aspects - configuration management - source code metrics - other maintenance tools and techniques.

**OUTCOMES:**

- Get an insight into the processes of software development
- Able to understand the problem domain for developing SRS and various models of software engineering
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

**REFERENCE BOOK:**

1. Software Engineering Concepts - Richard Fairley TMH
2. Roger S.pressman, "Software engineering", 5th edition, 2001, MGH publishers.
3. Marlim L.Shoeman, "Software Ezngineering", 1983, MGH Publishers.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC05AL	Packages Lab –V	0	0	2	1

## **PHOTOSHOP**

1. Design a Visiting card with Background Image.
2. Design an Identity card with Photo.
3. Design a Letter pad with LOGO.
4. Create an Advertisement in a News paper for a Shop.
5. Design a Calendar with Pictures.
6. Design a Magazine using different type of Tools.
7. Create a Photoshop image using Lasso Tool.
8. Design a CD Cover.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19160SEC05B	Leadership Skills and Body Language	0	0	3	2

**UNIT I Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

**UNIT II Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

Course Code	Course Title	L	T	P	C
19111SEC05L	Communicative English Lab-V	0	0	2	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To understand the degrees of comparison
- To build up a thought
- To write resume
- To construct report, agenda and minutes
- To prepare for an interview

**UNIT –I**

Degrees of comparison

**UNIT –II**

Proverb expansion

**UNIT –III**

Resume writing

**UNIT –IV**

Interview

**UNIT –V**

Corporate skills-body language-etiquette-good manners-interpersonal skills

**Lab Note-** Report writing, Resume writing, Interview from Globarena software, Writing agenda, Writing minutes

**Viva-Mock Interview**

**Exam components-**Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**OUTCOME:**

- Develop communicative skills
- To get a job

Course Code	Course Title	L	T	P	C
19120SEC61	.NET Programming	4	1	0	5

### AIM

To cover the fundamental concepts of the .NET framework.

### OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

### UNIT I

Visual basic.NET and the .NET Framework [Employability] –The elements of Visual Basic .NET

### UNIT II

Visual Basic .NET operators-software Design, [Employability] conditional structures, and controls Flow-Methods.

### UNIT III

Interfacing with the End user- Asp.NET Applications. [Employability]

### UNIT IV

Web Form Fundamentals [Employability] – Web Controls – Validation and Rich Controls.

### UNIT V

ADO.NET Data Access [Employability] – Data Binding –Data List, DataGrid, and Repeater.

### OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

### REFERENCE BOOKS:

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.
4. Visual Basic.Net Black Book- Steven Holzner.

Course Code	Course Title	L	T	P	C
19120SEC62	Relational Data Base Management System	4	1	0	5

### AIM

To equip the students with principles and concepts of database design

### OBJECTIVE

- To learn the basic principles of database and database design
- To learn the basics of RDBMS
- To learn the concepts of database manipulation SQL

#### **UNIT I**

An Overview of **Database Management [Employability]** -Introduction -Definition of Database system - Data Independence - Relational Systems - **Database System Architecture [Employability]** - Three Levels of the Architecture - Distributed Processing.

#### **UNIT II**

An Introduction to **Relational Databases [Employability]** - Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to **SQL [Employability]** - Embedded SQL - Domains , Relations , Relvars

#### **UNIT III**

**Relational Algebra [Employability]** - Introduction - Syntax - Semantics - Examples - Additional Operators - Relational Calculus - Introduction - Tuple Calculus - Examples - Calculus Vs Algebra - Domain Calculus - SQL Specialties .

#### **UNIT IV**

**Database Design [Employability]** - Functional Dependencies - Introduction - Basic Definitions - **Normalization [Employability]** - First , Second ,Third Normal Forms - BOYCE / CODD Normal Form.

#### **UNIT V**

**Transaction Management [Employability]** - Recovery - Introduction - Transactions - Transaction Recovery - System Recovery - Media Recovery - Concurrency -Three Concurrency Problem - Locking - **Deadlock [Employability]** - Serializability .

#### **OUTCOMES:**

At the end of the course, the student should be able to:

- Design Databases for applications.
- Use the Relational model, ER diagrams.
- Apply concurrency control and recovery mechanisms for practical problems.
- Design the Query Processor and Transaction Processor.
- Apply security concepts to databases.

#### **REFERENCE BOOK:**

" An Introduction to Database Systems - C.J.DATE Addison - Wesley Publications - 7th Edition 2000

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC63L	.NET Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:  
 (i). Insertion (ii) Updating (iii) Deletion (iv) Selection  
 Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

Course Code	Course Title	L	T	P	C
19120SEC64L	Oracle Lab	0	0	3	2

1. Write SQL queries to create the following tables and insert rows in it.  
Employee (eno, ename, deptno, salary, designation)  
Dept (deptno, deptname, location)  
Student (rollno, name, course, paper1, paper2, paper3)
2. Write SQL queries to create primary key and foreign key constraints in the above given tables and perform all types of simple retrieval.
3. Write SQL queries to perform all types of advance retrieval using (i) nested sub queries (ii) set operators.
4. Write SQL queries to perform all types of joins.
5. Write SQL queries to illustrate all built-in functions.
6. Write SQL queries to create views and index/indices for the tables Employee, Dept and Student.
7. Write a database trigger to prevent transactions during weekend. Create PL/SQL procedures and store them in a package and execute them in the command prompt.
8. Write a PL/SQL program that prints mark sheet of students in a University using cursor.
9. Payroll using forms
10. Mark sheet processing using forms

Course Code	Course Title	L	T	P	C
19120DSC65A	Data Mining	5	0	0	4

### AIM:

To emphasis on the design aspects of Data mining and Data Warehousing.

### OBJECTIVE

- To understand briefly some of the data mining Techniques.
- Discuss a number of more efficient algorithms.
- To know accuracy of classification methods and how accuracy may be improved.

### UNIT-I

Introduction: What is Data Mining [Employability]- Why Data Mining now-The Data Mining Process-Data Mining Application-Data Mining Techniques [Employability]-The Future of Data Mining-Guidelines for Successful Data Mining-Data Mining Software-Software Evaluation and Selection.

### UNIT-II

Association Rules Mining [Employability]: Introduction-Basics-The Task and a Naïve Algorithm - The Apriori Algorithm- Improving the Efficiency of the Apriori Algorithm- Apriori-Tid -Direct Hashing and Pruning (DHP)-Dynamic Itemset Counting (DIC)-Mining Frequent Pattern without Candidate Generation (FP-Growth)-Performance Evaluation of Algorithms [Employability] - Software for Association Rule Mining

### UNIT-III

Classification: [Employability] Introduction-Decision Tree-Building a Decision Tree [Employability]-The Tree Induction Algorithm-Split Algorithm Based on Information Theory-Split Algorithm based on the Gini Index-Over fitting and Pruning-Decision Tree Rules-Naïve Bayes Method-Estimating Predictive Accuracy of Classification Methods [Employability]- Improving Accuracy of Classification Methods.

### UNIT-IV

Cluster Analysis: [Employability] What is Cluster Analysis-Desired Features of Cluster Analysis-Types of Data-Computing Distance-Types of Cluster Analysis Methods-Partitional Methods-Hierarchical Methods-Density-Based Methods-Dealing with Large Databases-Quality and Validity of Cluster Analysis Methods [Employability]-Cluster Analysis Software.

### UNIT-V

**Web Data Mining:** Introduction-Web Terminology and Characteristics-Locality and Hierarchy in the Web-Web Content Mining-Web Usage Mining-Web Structure Mining-Web Mining Software.

**OUTCOMES:**

- Understanding of data mining software available on the market.
- Acquiring Knowledge about various algorithms.
- Acquiring Knowledge about cluster analysis techniques.

**REFERENCE BOOKS:**

1. “Introduction to Data Mining with Case Studies”, G.K.Gupta, Easter Economy Edition.

Course Code	Course Title	L	T	P	C
19120DSC65B	Artificial Intelligence and Expert Systems	5	0	0	4

**AIM:**

To Acquire Knowledge on various AI Techniques and Expert Systems.

**OBJECTIVE:**

- To learn AI Basic Concepts
- To understand Expert Systems Architectural-Components
- To study Expert System development process

**UNIT I**

The **AI definition - AI Techniques [Employability]**- Problems, Problem Space and search- Defining the problem as a state space search- Problem Characteristics- Heuristic Search Techniques- Generate and Test- hill Climbing- Best First Search- Problem reduction - Constraint Satisfaction- means -ends analysis.

**UNIT II**

**Game Playing [Employability]**- Min-Max Procedure- Adding Alpha-Beta Cutoffs- Additional Refinements- Searching AND/OR Graphs - Using Predicate Logic- Representing Simple Facts and Logic- Representing instance and IS a relationships- Computable functions and predicates- Use of the predicate calculus in AI Resolution- natural deduction.

**UNIT III**

**Representing knowledge using rules [Employability]**- Procedural versus declarative knowledge- Logic Programming- Forward versus Backward Reasoning- Resolving within AND/OR Graphs matching- control knowledge-Symbolic Reasoning under uncertainty- Non-monotonic reasoning- Implementation issues- - **Fuzzy Logic**.

**UNIT IV**

**Expert Systems [Employability]**- Architectural-Components- Explanation facilities- Knowledge acquisition.

**UNIT V**

**Expert System development process [Employability]**- Non-formal representation of knowledge- Semantic networks- Frames- Scripts- Expert System Tools.

**OUTCOMES:**

At the end of the course, the student should be able to:

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalize a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.

**REFERENCE BOOK**

1. For Units I, II, III: Elaine Rich and Kevin Kaight, “**Artificial Intelligence**”, Tata McGraw Hill, 2<sup>nd</sup> Edition, 1991.
  2. For Units IV, V: David W. Rolston, “**Principles of Artificial Intelligence and Expert Systems Development**”, McGraw Hill.
- Nills J.Nilsson “**Artificial Intelligence** “, Narosa Publicshing House, 1990.

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19111OEC	Journalism	4	0	0	2

**Aim :**

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT- II**

News – Definition – Kinds – Elements – Sources

**UNIT- III**

Reporters

**UNIT- IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

**References:-**

Journalism -Susan

Professional Journalism - John Hogenberg

News Writing and Reporting - M.James Neal (Surjeet Publication)

Professional Journalism -M.V Komath

The Journalist's Handbook -M.V Komath

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19112OEC	Development Of Mathematical Skills	4	0	0	2

### **Objectives**

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

### **Unit I**

Simple interest and compound interest

### **Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

### **Unit III**

Set theory – Series

### **Unit IV**

Matrices – Determinants

### **Unit V**

Assignment problems

### **References**

1. P.A.Navanitham, Business Mathematics & Statistics

2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

<b>Course Code</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19113OEC	Instrumentation	4	0	0	2

### **Aim:**

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin's and Norton's theorem – Bridges : AC bridges – Maxwell, Owen, Schering and deSauty's bridges – Wien bridges.

**UNIT – II: ELECTRONIC INSTRUMENTS – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

**UNIT – III: ELECTRONIC INSTRUMENTS – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

**Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

**Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

**Books for Study**

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

**Learning Outcomes:**

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

**Books for Reference:**

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhmey – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

Course Code	COURSE TITLE	L	T	P	C
19114OEC	Food and Adulteration	4	0	0	2

**Aim:** To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk.

Health hazards and risks.

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	COURSE TITLE	L	T	P	C
19117OEC	Mushroom Technology	4	0	0	2

### UNIT-1

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calacyble indica, volvariella volvacea ,pleurotus sp. Agaricus bisporus

### UNIT-II

Pure culture-preparation of media(PDA and oat meal agar media)sterilization- preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petriplates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

### UNIT-III

Cultivation technology:infrastructure,substrates(locally available)polythene bag,vessels,inoculation hood-inoculation loop-low cost stove-sieves-culturel rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy straw,sugarcane trash,maiza straw,banana leaves

### UNIT-IV

Storage and nutrition:short term storage-long term storage (Scanning,pickles, papads,drying,storage ion salt solutions)-nutritiion:proteins,aminoacids,mineral elements,nutrition:carbohydrates-crude fiber content,vitamins

### UNIT-V

Food preparation, types of foods prepared from mushroom-soup,cutlet,omelette,samosa,pickles,curry,research centres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

COURSE CODE	COURSE TITLE	L	T	P	C
17161OEC	Indirect Taxes	4	0	0	2

### AIM:

To make the students to gain expert knowledge in indirect taxes.

### OBJECTIVIES:

- (i) To have practical knowledge on excise duties and customs duties.
- (ii) To learn the fundamentals of service tax, sales tax and VATS.

### UNIT – I

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

### UNIT – II

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

### **UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

### **UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

### **UNIT – V**

Value Added Tax (VAT) Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

### **OUTCOME**

Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstances.

### **REFERENCE BOOKS:**

1. Income Tax Law and Practice - N.Hariharan.
2. Business Taxation – T.S.Reddy/Hari Prasad Reddy.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC06AL	Packages Lab -VI	0	0	2	1

### **FLASH**

1. Drawing and painting original art by using simple objects in flash.
2. Develop a Flash Document by applying different type of Styles in Text with Animations.
3. Create a frame-by-frame animation technique.
4. Develop a program for animation with motion Tweening.
5. Develop a program for animation with shape Tweening.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.

8. Create a simple animation by using Movie Clip and Graphic Symbols.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19160SEC06B	Life Skills and Other Skills	0	0	3	2

**UNIT I            Life Skills**

**Life Skills** - Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. -Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. - Occupational Safety , First-aid

**UNIT II            Other Skills**

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

Course Code	Course Title	L	T	P	C
19111SEC06L	Communicative English Lab -VI	2	0	0	1

**AIM:**

To develop communicative skills

**OBJECTIVE:**

- To write simple, compound and complex sentences
- To extract the main ideas from a text
- To shorten a text
- To enhance writing skills
- To learn to manage time and stress
- To widen creative thinking
- To enrich the skill of working in a group

**UNIT –I**

Simple, Compound and Complex

**UNIT –II**

Note making

**UNIT –III**

Precise writing

**UNIT –IV**

Developing a story

**UNIT –V**

Essay writing

**Lab Note**-Creative thinking, Time management, Stress management, Assertiveness, Group discussion from Globarena Software

**Viva**-Group discussion

**Exam components**-Theory -50+MCQ online exam-20+Viva-15+Lab note-15=100

**OUTCOME:**

- Develop communicative skills
- To be a good team worker

**REFERENCES:-**

19120PRW67	Project Work	0	0	0	4

Each student will develop and implement individually developed application software based on any of the latest technologies.

## Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Sc.,(CS) curriculum, the following Research Skill Based Courses are introduced in the B.Sc.,(CS) curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

**Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination** : **60 Marks**

(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing:** **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination:** **40 Marks**

**Total:** **100 Marks**

## **SCHOOL OF ARTS & SCIENCE**

### **Department of Computer Science**

---

Department	:	COMPUTER SCIENCE
Programme	:	MCA

---

#### **M.C.A., Graduate Attributes :**

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

#### **M.C.A., Programme Educational Objectives-PEO**

- PEO1-To understand the different methods of organizing large amounts of data.
- PEO2-To introduce GUI programming using Microsoft Foundation Classes
- PEO3-To learn the fundamental concept of Web Design.
- PEO4-To develop network programs in java.
- PEO5-Provides idea on VLAN, VTP, STP and Inter-VLAN Routing.
- PEO6-To know the network security tools and system level security used
- PEO7-To get an idea about Sharing Files.

#### **M.C.A., Programme Outcomes –PO**

- PO1- Apply the different data structures for implementing solutions to practical problems
- PO2- Trace the flow of information from one node to another node in the network
- PO3- Understand the format and use of objects
- PO4- Able to Measure the product and process performance using various metrics
- PO5- Design Secure applications
- PO6- Apply the various optimization techniques

## **M.C.A., Courses –C**

- **C1-** C Programming and Data structure
- **C2-** Data communication network
- **C3-** Computer Architecture
- **C4-** Programming in VB
- **C5-** OOPs with C++
- **C6-** Operating system
- **C7-** Web Designing
- **C8-** Database Management system
- **C9-** J2EE Programming
- **C10-** Relational Data Base Management System.
- **C11-** Routing and Switching in LAN
- **C12-** Python Programming
- **C13-** Cryptography Network security
- **C14-** Open Source programming
- **C15-** Web Service
- **C16-** Data mining and warehousing
- **C17-** Grid and Cloud Computing.
- **C18-** .NET Programming
- **C19-** Object Oriented System Design
- **C20-** Human Computer Interaction.
- **C21-** Software Project Management.
- **C22-** Big Data.

CourseCode	Course Title	L	T	P	C
19222SEC11	C Programming and Data structure	4	0	0	3

**AIM:**

To provide an in-depth knowledge of Creating C Programs and data structure

**OBJECTIVES:**

- To learn the systematic way of solving problems.
- To understand the different methods of organizing large amounts of data.
- To learn the programming concept.

**UNIT I**

Evaluation and Application of C – Structure of a C program – Data types – Declaration – Operators- Expression- Type conversion- Built-in-Function. Data input and output- Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE –DO, DO-WHILE, FOR, BREAK and CONTINUE. [Employability]

**UNIT II**

Functions: Defining and accessing functions – passing parameters to functions- arguments – Recursive functions- Storage classes-Arrays: Defining and processing Arrays – Multidimensional arrays – Passing arrays to functions – Arrays and Strings –String functions- String manipulation. [Employability]

**UNIT III**

Pointers- Pointer declaration- operations on pointers – pointers to functions – pointers and strings – pointers and arrays – array of pointers- structures- structures and pointers- [Entrepreneurship]

**UNIT IV**

Primitive Data Structures – The notion of a data structure – Arrays – Ordered list – Representation of arrays – Stacks – Evaluation of expressions – Queue – Circular Queue. [Employability]

**UNIT V**

List Structures: List – Singly linked lists – Linked stacks and queues – Storage pool – Polynomial addition - doubly linked lists – Tree structures fundamentals – Binary tree. [Entrepreneurship]

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Design C Programs for problems.
- Write and execute C programs for simple applications
- Apply the different data structures for implementing solutions to practical problems.
- Develop searching and sorting programs.

**REFERENCES:**

2. "Fundamentals of Data Structures" ,Ellis Horowitz, Sartaj Sahni, , Galgotia Book Source, New Delhi
3. "Programming wirh C"- Byron S Gottfried - Schaum,s Outline Series - Tata Mcgraw-Hill publications.
4. "The Sprit of C" - Mullish Cooper - Schaum's Outline Series - McGraw-Hill publications.
5. "Let us C" - Yeswant Kenetkar - BPB Publications.

Course Code	Course Title	L	T	P	C
19222SEC12	Data communication network	5	0	0	4

#### AIM

To promote the international exchange of information related to communication systems.

#### OBJECTIVES:

- To understand the concepts of data communications.
- To study the functions of different layers.
- To describe communication protocols , data transmission modes, and satellite communication.

#### UNIT I

Introduction – Basic concepts – The OSI model [Employability]

#### UNIT II

Transmission of digital data – Transmission media – Error detection and Correction [Employability]

#### UNIT III

Data link control – Data link protocols – Local area networks [Employability]

#### UNIT IV

Metropolitan area networks – Switching – ISDN [Employability]

#### UNIT V

Networking and internetworking devices – Network Security [Employability]

#### OUTCOMES:

**At the end of the course, the student should be able to:**

- Identify the components required to build different types of networks
- Choose the required functionality at each layer for given application
- Identify solution for each functionality at each layer
- Trace the flow of information from one node to another node in the network

#### REFERENCES:

1. "Data communication and Networking", Behrouz A. Forouzan Tata McGraw hill edition
2. "Data and Computer Communications", William Stallings,PHI Pvt Ltd.

Course Code	Course Title	L	T	P	C
19222SEC13	Computer Architecture	5	0	0	3

**AIM :**

To discuss the basic structure of a digital computer and to study in detail the organization of the Control unit, the Arithmetic and Logical unit, the Memory unit and the I/O unit.

**OBJECTIVES :**

- To have a thorough understanding of the basic structure and operation of a digital computer.
- To discuss in detail the operation of the arithmetic unit including the algorithms & implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To study in detail the different types of control and the concept of pipelining.
- To study the hierarchical memory system including cache memories and virtual memory.
- To study the different ways of communicating with I/O devices and standard I/O interfaces.

**UNIT I**

Digital logic circuits: Digital computers- Logic gates – Boolean algebra - Map simplification - Combinational circuits - Flip-flops - Sequential circuits.

**UNIT II**

Digital components: Integrated circuits – Decoders - Multiplexers - Registers - Shift Registers - Binary Counters - Memory UNIT.

**UNIT III**

Data Representation: Data types - Complements – Fixed point representation - Floating point representation – Other binary codes – Error detection codes.

**UNIT IV**

Central processing UNIT: General Register organization – Stack organization – Instruction formats – Addressing modes – Data transfer and manipulation – Program control – Reduced instruction set computers.

**UNIT V**

Memory Organization: Memory hierarchy – Main memory – Auxiliary memory Associative Memory – Cache Memory – Virtual Memory – Memory-Management and Hardware.

## **OUTCOMES:**

**At the end of the course, the student should be able to:**

- Design arithmetic and logic unit.
- Design and analyze pipelined control units
- Evaluate performance of memory systems.
- Understand parallel processing architectures.

## **REFERENCES:**

1. Computer System Architecture - Morris Mano.M PHI, Third Edition - 1999
2. Digital Computer Fundamentals – Thomas C. Barte- Sixth Edition - TataMcGrawHill.
3. Digital Design – Mano – Second Edition.

Course Code	Course Title	L	T	P	C
19222SEC14	Programming in VB	5	0	0	4

**AIM:**

To make the students to understand the windows programming concepts including Microsoft Foundation Classes.

**OBJECTIVES:**

- To introduce the concepts of windows programming.
- To introduce GUI programming using Microsoft Foundation Classes.
- To enable the students to develop programs and simple applications using Visual Basic.

**UNIT I**

Introduction to Visual Basic – IDE – Features of VB editor- Anatomy of a form – Working with form properties – Introducing form events and form methods. .

**UNIT II**

Variables in Visual Basic – Declaring Variables – Data types – Null values Error Value – Empty Value – Scope of a variable – Module level variables – Constants Creating our own constants – Scope of a constant – Converting data types- Arrays - Declaring arrays – PRESERVE Keyword – Redim- Writing codes in VB - Anatomy of a procedure –Subroutines and Functions – Language constructs – For.. Next, While loop Select case. End select, exit statement, with structure

**UNIT III**

Selecting and using controls - Introduction to standard controls – command buttons – textbox – Labels – option buttons - check box – Frame control - List Box - Combo box – Image Object – picture box - timer - scroll bar. File system controls –drive list box-directory list box – file list box.

**UNIT IV**

Introduction to built-in-ActiveX Control - Tool bar - Tree View Control - List View Control - Image list control - Common dialogue box control - Status Bar control - Rich Text Box Control - Menu editor.

**UNIT V**

DDE properties- DDE methods – OLE properties – Active control creation and usage – Active X DLL creation and usage - Data base access - Data control - Field control - Data grid Record set using SQL to manipulate the data - ODBC. The Data Report Designer: Design time operations - Run time operations. **[Employability]**

**OUTCOMES:**

**Upon completion of this course, the student will be able to:**

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic’s Integrated Development Environment (IDE).
- Create one and two dimensional arrays for sorting, calculating, and displaying of data.
- Write Visual Basic programs using object-oriented programming techniques including

classes, objects, methods, instance variables, composition, and inheritance, and polymorphism.

- Write Windows applications using forms, controls, and events

## **REFERENCES:**

2. Programming Microsoft Visual Basic 6.0 - Francesco Balena – WP Publishers and Distributors Pvt Ltd.
3. Visual Basic 6 from the Ground up – Gary Carnell – Tata McGraw Hill Edition
4. Mastering Visual basic 6.0 – Evangelos petroustos – BPB Publications

CourseCode	Course Title	L	T	P	C
19212AEC15	Numerical and Statistical Methods	5	0	0	4

**AIM:**

To provide an in-depth knowledge of Numerical and Statistical Methods.

**OBJECTIVES:**

- To understand that how to find the real roots by iterative methods
- To find out the solution of simultaneous Linear equations by using Gauss Jacobis, Seidel, Jordan, elimination.

**UNIT I**

Algebraic and Transcendental equations- the iteration method - the Newton Raphson method—false position method-the bisection method.

**UNIT II**

Interpolation-finite differences-Newton's formulae for interpolation-Lagrange's formulae for interpolation—Gaussian elimination method-Gauss-Seidel method.

**UNIT III**

Numerical differentiation and integration-maximum and minimum values of a tabulated functions- Trapezoidal rule-Simpson's rule - Numerical solution of Ordinary differential equations-Euler's method -Runge Kutta methods- Predictor Corrector method-boundary value problems.

**UNIT IV**

Correlation-different types of Correlation-Karl Pearson's, Spearman's Correlation-Regression –Regression coefficients-Regression equations-properties of Correlation and Regression coefficients

**UNIT V**

Test of hypothesis- null and alternative hypothesis-tests of significance based on normal and t distribution for mean, simple correlation and proportion. Chi square test-independents of attributes and goodness of fit-applications.

**REFERENCES:**

2. Fundamentals of Mathematical Statistics – S.C. Gupta & V.K. Kapoor.

Course Code	Course Title	L	T	P	C
19222SEC16L	C programming and Data structure Lab	0	0	3	2

1. Write a C program to find the roots of Quadratic Equation and hence determine the roots.
2. Write a C program to find the sum of series using a) Sine b) Cosine c) Exponential Series.
3. Write a program in C to read the marks of a student in a particular subject and sort them in ascending order. Also display the lowest and highest marks obtained in the subject.
4. Write a C program to perform Addition, Subtraction and Multiplication for two matrices using Functions depending on user's choice..
5. Write a C program to find a) Mean b) Standard Deviation and c) Variance for a set of n numbers.
6. Write a C program to find the a) Factorial value b) Fibonacci series using Recursion.
7. Write a C program to perform String Manipulations using Pointers.
  - a. Finding the length of the String
  - b. Joining two strings
  - c. String Comparison
  - d. Palindrome Checking
  - e. Counting the number of uppercase letter, Lowercase letter, digits, vowels, special characters, words and lines.
8. Prepare Payroll using sequential files in C. Use appropriate headings to print them in a neat format.
9. Write a C program to implement a Stack as a circular Linked list.
10. Write a C program to implement a Queue.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19222SEC17L	Programming in VB Lab	0	0	3	2

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to scroll your college name from left to right and right to left of the client area.
4. Write a code to design and implement a calculator.
5. Write a program to expand and shrinking an object while program is running.
6. Write a program to create animation by using move method and a timer object.
7. Write a program for preparing student mark list.
8. Write a program to populate the table entities using Data bound control.

Course Code	Course Title	L	T	P	C
19222SEC21	Oops with C++	5	0	0	4

### AIM:

To present the concept of Object Oriented Programming and discuss the important elements of C++.

### OBJECTIVES:

- To understand the concepts of Object Oriented Programming.
- To write programs in simple applications using C++.

### UNIT I

Object oriented programming: Software evolution - OOP Paradigm- concepts, benefits, object oriented languages and applications.

### UNIT II

Introduction to the basic concepts of C++ language - Tokens, keywords, identifiers, data type, variables, manipulators- expression and control structures - functions: main function - function prototyping - call by reference - function overloading - friend and inline functions.

### UNIT III

Classes and objects - constructors and destructors - operator overloading - type conversions.

### UNIT IV

Inheritance - single inheritance - multiple inheritance - hierarchical, hybrid inheritance - polymorphism - pointers - virtual functions - console I/O operations.

### UNIT V

Files - Classes for file stream operations - opening, closing and processing files - end of file detection - file pointers - updating a file - error handling during file operations - command line arguments - templates - exception handling.

### OUTCOMES

- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to use proper class protection mechanism to provide security.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Able to reuse

### REFERENCES

1. "Object Oriented Programming with C++". E. Balagurusamy Tata Mcgraw Hill publishing Ltd., New Delhi, 1995.

5. Programming with C++ - John R. Hubbard - Schaum's Outline Series, 1996.

Course Code	Course Title	L	T	P	C
19222SEC22	Operating system	5	0	0	4

### AIM :

To have a thorough knowledge of processes, scheduling concepts, memory management, I/O and file systems in an operating system.

### OBJECTIVES :

- To have an overview of different types of operating systems
- To know the components of an operating system.
- To have a thorough knowledge of process management
- To have a thorough knowledge of storage management
- To know the concepts of I/O and file systems.

### UNIT I

Operating systems objectives and functions - Operating system and user/computer interface, Operating system as a resource manager - Evaluation of operating systems - serial processing, simple batch systems, multi programmed batch systems , time sharing systems. **[Employability]**

### UNIT II

Process description, process control - processes and threads, Concurrency - principles of concurrency, mutual exclusion, software support, Dekker's algorithm - mutual exclusion - hardware support, mutual messages. Deadlock avoidance. An integrated deadlock strategy. **[Employability]**

### UNIT III

Memory management - memory management requirements. Fixed partitioning, placement algorithm, Relocation in a paging system. Simple segmentation, Virtual memory - paging – Address translation in a paging system. Segmentation – organization, address translation in a segmentation system. Combined paging and Segmentation. Virtual memory – Operating system software – fetch policy, placement policy, and replacement policy. Page buffering resident set management. **[Employability]**

### UNIT IV

Scheduling - types of scheduling, scheduling algorithms, scheduling criteria, FIFO , Round robin , shortest process next , shortest remaining time, Highest response ration and Feedback scheduling performance comparison. Fair-share scheduling I/O management and disk scheduling-organization of the i/o function – the evaluation of the i/o function, Logical structure of the i/o function, i/o buffering, Disk scheduling algorithms, Disk cache. **[Employability]**

### UNIT V

File management - Files , File management systems, File system architecture Functions of file management, File directories - File sharing - Secondary storage management, File allocation. **[Employability]**

### OUTCOMES:

- Able to understand the operating system components and its services
- Implement the algorithms in process management and solving the issues of IPC
- Able to demonstrate the mapping between the physical memory and virtual memory
- Able to understand file handling concepts in OS perspective
- Able to understand the operating system components and services with the recent OS

Course Code	Course Title	L	T	P	C
19222SEC23	Web Designing	5	0	0	4

**AIM:**

To enable the students to design and develop the Web pages.

**OBJECTIVES:**

- To learn the fundamental concept of Web Design.
- To understand the concept of Web Technology.

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers - Introduction to HTML. [Employability]

**UNIT II**

Head and body sections – Designing the body section- Ordered and unordered lists - Table handling. [Employability]

**UNIT III**

DHTML and Style Sheet – Frames – Forms. [Employability]

**UNIT IV**

What is XML – Well formed XML – XML Namespace? [Employability]

**UNIT V**

Document Type Definition – XML Schema. [Employability]

**OUTCOMES:**

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

CourseCode	Course Title	L	T	P	C
19222SEC24	Database Management system	5	0	0	4

**AIM:**

To provide a strong foundation in Database Technology and an introduction to the current trends in this field.

**OBJECTIVES:**

- To learn the fundamentals of data models and to conceptualize and depict a Database System using ER Diagram.
- To make a study of SQL and relational Database Design.
- To know the fundamental concepts of transaction processing – concurrency controls techniques and recovery procedure.

**UNIT I**

An Overview of Database Management-Introduction -Definition of Database system - Data Independence - Relational Systems - Database System Architecture - Three Levels of the Architecture - Distributed Processing.

**UNIT II**

An Introduction to Relational Databases- Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to SQL - Embedded SQL - Domains , Relations , Relvars.

**UNIT III**

Relational Algebra - Introduction - Syntax - Semantics - Examples - Additional Operators - Relational Calculus - Introduction - Tuple Calculus - Examples - Calculus Vs Algebra - Domain Calculus - SQL Specialties .

**UNIT IV**

Database Design - Functional Dependencies - Introduction - Basic Definitions - Normalization - First , Second ,Third Normal Forms - BOYCE / CODD Normal Form.

**UNIT V**

Transaction Management - Recovery - Introduction - Transactions - Transaction Recovery - System Recovery - Media Recovery - Concurrency -Three Concurrency Problem - Locking - Deadlock - Serializability .

**OUTCOMES:**

- Understand the basic concepts of the database and data models.  
design a database using ER diagrams and map ER into Relations and normalize the relations
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.
- Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

**REFERENCES:**

Course Code	Course Title	L	T	P	C
19212AEC25	Optimization Techniques.	4	0	0	3

**AIM:**

To have a thorough knowledge of understanding real world problems by using Optimization Techniques.

**OBJECTIVES:**

- To find out the solutions of the given variables using various Simplex methods
- To get the various strategies using two person zero sum and dominance properties.

**UNIT I**

Linear Programming: Introduction – History of OR – Meaning of OR- Principles of Modeling – Linear equation – Gaussian Elimination – Formulation of LP models – Graphical solution- Algebraic solutions – Simplex method – Feasibility – Optimality- Artificial variables – M Technique – Transportation problem- Assignment problem.

**UNIT II**

Sequencing Problem: Introduction – Problem of Sequencing – Basic terms used in Sequencing – Processing n jobs through Two Machines – Processing of n jobs through k Machines – processing of 2 jobs through k Machines  
 Game Theory : Introduction – Two persons Zero-sum Games – Some Basic Terms – The maximin-minmax principle – Games with out saddle points – Mixed Strategies – Graphic solution of 2 x n and m x 2 Games – Dominance Property.

**UNIT III**

PERT/ CPM – Introduction – Network and Basic Components – Logical Sequencing – Rules of Network Construction- Critical Path Analysis – Probability consideration of PERT, Distinction between PERT and CPM.

**UNIT IV**

Simulation : Introduction- Methodology of Simulation – Simulation Models – Even type Simulation – Generation of Random Numbers –Mid Square method, Linear congruential Method – Monte-Carlo Simulation – Simulation of inventory problems, Queueing system, Maintenance problems , Investment and Budgeting, Job sequencing , Networks- Advantages and Limitation of Simulation.

**UNIT V**

Replacement Problem: Introduction – Replacement of Equipment/Asset that Deteriorates Gradually - Replacement of Equipment that fails Suddenly – Requirement and Promotion problem – Equipments Renewal Problem – Reliability and system Failure Rates.(Avoid Book works)

**REFERENCES:**

1.“Operations Research “: Kanti Swarup , P.K.Gupta, Manmohan, Sultan chand & Sons – New Delhi.

Course Code	Course Title	L	T	P	C
19222SEC26L	OOPs with C++ Lab	0	0	3	2

1. Write C++ program using a class to represent a bank account with data members - name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show name and balance. Check the program with your own data.
2. Consider a shopping list of items for which orders are place with a dealer. The list should include the code number and price of the item. Operation such as adding an item to the list, deleting an item from the list and printing the total value of the order are to be ‘provided for. Write a program to implement the above using a class with arrays as data members.
3. Create a "Times" class with integer data members hours, minutes and seconds. Develop two constructions, one should initialize the data to zero and the other should initialize to fixed values, A member’s function should display it in hh:mm:ss format.
4. Design an abstract base class "Shapes" and derive three classes "Rectangle", “Circle” and Triangle". Develop polymorphic functions “Circumference" and "Computer-Area" to calculate the circumference and area of these objects and display it. Develop a main program to create each of these and apply these polymorphic functions.
5. Develop a program using operator overloading
  - I. To add two complex numbers.
  - II. To find the difference between any given time and the system time
  - III. To multiply to matrices.
6. There are "n" records present in file with each record containing a 6- character item code, a 20-character item name and an integer quantity. Write a program to read these records, arrange them in the ascending order and write them in the same file overwriting the earlier records.
7. Develop a C++ program to implement the following
  - i) Friend function, ii)Inline function iii)Virtual function
8. Write a program which reads a text from a file and the display the following information.
  - i)Number of Lines, ii)Number of words, iii)Number of characters.

Strings should be left-justified and numbers should be right-justified in a suitable field width.
9. Write C++ program to illustrate the use of the following
  - I. Default argument
  - II. Reference variable
  - III. Copy construcor.
10. Develop a "Employee" class having the data members EmpNo, Ename , Basic pay, Dept and Grade. Calculate the DA, HRA, LIC and PF (Assume your own data and percentage). Using these calculate Gross pay and Net pay.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19222SEC27L	Web Designing Lab	0	0	3	2

1. Create a small paragraph about 10 lines. Try to use Font, Title and head tags. Apply different sizes and colors using tags.
2. Write a HTML document to print your class Time Table.
3. Develop a Complete Web Page using Frames and Framesets which gives the Information about a Hospital using HTML.
4. Create a web page in the format of front page of a newspaper using text links. Align the text with colors.
5. Develop a web page for job recruitment agency in an IT industry using Forms.
6. Prepare a css for a different edition of Same Book
7. Develop a web page with Text Decoration using DHTML.
8. Develop a web page with additional table using XML.
9. Create web pages which display roll no in sorted order using XML.
10. Create a web page contains your self describing information using XML &XSL

Course Code	Course Title	L	T	P	C
19222SEC31L	J2EE Programming	4	0	0	4

**AIM:**

To enable the students to develop standalone programming and Internet based application

**OBJECTIVES:**

- To learn java programming concepts under Client Sever environment
- To develop Database Application in Java .
- To learn java programming concepts like reflection, native code interface, threads etc
- To develop network programs in java.
- To understand concepts needed for distributed and multi-tier applications.
- To understand issues in enterprise application development.

**UNIT I**

Fundamentals of OOPS-overview of java language-data type –variables and arrays-Class Fundamentals-declaring objects-constructor-overloading methods-inner classes-method overriding.

**UNIT II**

AWT classes-window fundamentals-AWT controls- handling events by extending AWT components Applet class-Applet architecture-html applet tag-passing parameters in applet.

**UNIT III**

Java Database Connectivity: JDBC/ODBC Bridge-The connectivity model being used-The java.sql Package-The JDBC Exception Classes. JDBC working with user interface: Data manipulation-Data Navigation-Data Storage.

**UNIT IV**

RMI: What is Distributed Object System? -Distributed object Technologies-RMI for distributed computing-RMI Architecture- RMI Registry service-Creating RMI Applications-Steps involved in running the RMI Applications-Removing objects from a Registry.

**UNIT V**

Java Servlets – Java Server Pages – Java and XML: Generating an XML Document.

**OUTCOMES**

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

**REFERENCES**

- 2.Web Enabled Commercial Application Development Using Java 2.0-Ivan Bayross.
3. The Complete Reference J2ee - Keogh

Course Code	Course Title	L	T	P	C
19222SEC32	Relational Data Base Management System.	4	0	0	4

**AIM :**

To provide an in-depth knowledge of Relational database system using Oracle.

**COURSE OBJECTIVES**

- To understand the fundamentals of data models and conceptualize and depict a database system using ER diagram
- To make a study of SQL and relational database design.
- To know about data storage techniques and query processing.
- To impart knowledge in transaction processing, concurrency control techniques and recovery procedures.

**UNIT-I**

Introduction- File systems versus Database systems – Data Models – DBMS Architecture – Data Independence – Introduction Relational Model and E-R model.

**UNIT-II**

Introduction to SQL - Basic structure and Basic operations of SQL – Set operations - Aggregate functions – Nested queries – Join expressions and views – Functions and procedure – Triggers

**UNIT-III**

Relational query languages - Relational algebra – Tuple relational calculus – Domain relational calculus – Relational database design - Functional dependency – Normalization – 1NF, 2NF, 3NF and BCNF

**UNIT-IV**

Transaction management - Transaction Processing – Properties of Transactions - Serializability – concurrency control lock based protocols – Deadlock handling Time Stamp based protocol - Validation Techniques - Recovery system - Log Based Recovery.

**UNIT-V**

Data base System Architecture – Centralized client-server Architecture- Server system Architecture – Parallel Data bases – Distributed data bases – Distributed Data storage – Distributed transaction – commit protocol – Concurrency control in Distributed Database.

**COURSE OUTCOMES:**

- Understand the basic concepts of the database and data models.
- Design a database using ER diagrams and map ER into Relations and normalize the relations.
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.

Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

**REFERENCES:**

1. Abraham Silberschatz, Henry F.Korth and S.Sundarshan “Database System Concepts”, Sixth Edition, McGraw Hill, 2010.
2. C.J. Date, “An Introduction to Database Systems”, Eight Edition, Pearson Education Delhi,2003.

Course Code	Course Title	L	T	P	C
19222SEC33	Routing and Switching in LAN	4	0	0	4

**AIM:**

To provide complementary perspective on the LAN routing and Switching in an Enterprise.

**OBJECTIVES:**

- Gives a systematic approach to hierarchical network that support voice, video, and data.
- Expertise the functions of basic switch.
- Provides idea on VLAN, VTP, STP and Inter-VLAN Routing.
- Teaches components of a wireless LAN and its operations.

**UNIT I**

LAN Design: Switched LAN Architecture-Matching Switches to specific LAN functions.

**UNIT II**

Basic switching concepts and configuration-Introduction to Ethernet-802.3 LANS-Forwarding frame using switches-switch management configuration.

**UNIT III**

VLAN- Introducing VLAN-VLAN Trucking- Configure VLAN and Trunks.

**UNIT IV**

VTP-VTP –Concepts-VTP Operation- configure VTP

**UNIT V**

Introduction to STP-STP convergence- Inter VLAN routing-the wireless LAN.

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Systematic approach to hierarchical network that support voice, video, and data.
- Idea on VLAN, VTP, STP and Inter-VLAN Routing.
- Components of a wireless LAN and its operations.

**REFERENCES:**

1. “LAN Switching and wireless” CCNA E xploration companion guide- wayue lewis- cisco press-pearson Education.

Course Code	Course Title	L	T	P	C
19212AEC34	Discrete Mathematics	4	0	0	4

**AIM:**

To provide in-depth knowledge of Mathematical logics, Boolean Algebra.

**OBJECTIVES:**

- To understand the concept of Set Theory and Functions.
- To solve the Recurrence Relations using Generating functions.

**UNIT I**

Sets, Relations & Functions : Property of binary relations, Equivalence, Compatibility, Partial ordering relations, Hasse diagram, Functions, Inverse function, Compositions of functions, Recursive functions.

**UNIT II**

Mathematical logic : Logic operators, Truth tables, Theory of inference and deduction, Mathematical Calculus, Predicate Calculus, Predicates and Qualifiers.

**UNIT III**

Groups & Subgroups : Group axioms, Permutation groups, Cosets, Normal subgroups, Semi groups, Free semi groups, Monoids, Sequential Machines, Error Correcting Codes, Modular arithmetic Grammars.

**UNIT IV**

Lattices & Boolean Algebra: Axiomatic definition of Boolean algebra as algebra as algebraic structures with two operations, Basic results truth values and truth tables, The algebra of propositional functions, Boolean algebra of truth tables.

**UNIT V**

Combinatorics & Recurrence Relations : Disjunctive and sequential counting, Combinations and permutations, Enumeration without repetition, Recurrence Relation, Fibonacci relation, Solving recurrence relation by Substitution, Solving non recurrence relation by conversion to linear recurrence relation.

**REFERENCES:**

Course Code	Course Title	L	T	P	C
19222SEC35L	J2EE Programming Lab	0	0	3	2

1. Develop a simple real-life application program to illustrate the use of multithreads.
2. Packages and interfaces:

Create a package called “pgmdetails” with the following details.

Pgmdetails	(character)
Broadcastday	(character)
Stationname	(character)
Directorname	(character)
Pgmtree	(character)
Broadcasttime	(character) in railway time

Create another package called “chargedetails” with the following details

if pgmtree is “commercials” – Rs 20 per min  
if pgmtree is “drama” – Rs 100 per min  
if pgmtree is “education” – Rs 50 per min

Inherit the necessary details from “pgmdetailes”

Using an interface “radio” calculate the amount to be paid by the programmers to the station, if they want their programs to broadcast display full information list about the given details by creating objects.

3. Create a try block that is likely to generate three types of exception and than incorporate necessary catch blocks to catch and handle them appropriately.
4. Load an image on to applet. As the user selects portions of this image, rectangular regions corresponding to the selection should be highlighted by enveloping them in rectangles (use mouse events). Also the user can change the colors of selected regions.
5. Create an application, which consists of a dialog box that could be used to obtain an user name and a password to connect to some on line service. The dialog box consists of two fields user name, password and two buttons of Ok & Cancel for accepting user input.
6. Write a program, which will open an existing file and then append text to that file.
7. Write a java program, which will make balls of various colors to move within the frame windows.
8. Create an Animating Program using Beans.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19222SEC36L	RDBMS Lab	0	0	3	2

1. Creating, Updating and Inserting into databases and simple queries.
2. Uses of Select statement – for queries using
  - (i) AND,OR,NOT Operations, WHERE clause
  - (ii) UNION, INTERSECTION , MINUS
  - (iii) Sorting and Grouping
3. Nested queries using SQL
  - (i) Sub queries
  - (ii) Join
4. Built-in functions of SQL
5. Creation of simple forms
6. Use of indexes, creating views and querying in views
7. Cursors, triggers and stored procedures and functions
8. Case Studies
  - i. Student Evaluation systems
  - ii. Pay-roll system
  - iii. Income tax calculation
  - iv. Seat reservation problems
  - v. Mark sheet preparation

Course Code	Course Title	L	T	P	C
19222DSC37A	Mobile Computing	4	0	0	4

#### UNIT-I

Mobile Computing: An Overview of Mobile Computing-Mobile Computing Architecture-Mobile Devices-Mobile System Networks-Mobility Management. Mobile Device and Systems: Mobile Phones-Digital Music Players-Hand Held Devices: operating System-Limitation of Mobile Devices [Entrepreneurship]

#### UNIT-II

Medium Access Control-SDMA, FDMA, TDMA-Tele Communication System: GSM-Mobile Services-System Architecture-Satellite System: Application, Basics. [Entrepreneurship]

#### UNIT-III

Wireless LAN: Infra-red Vs Radio transmission-Infra Structure and ad-hoc networks-IEEE 802.11: System Architecture, Protocol Architecture, Physical Layer-MAC Management-HIPERLAN: WATM-Bluetooth: User Scenarios, Architecture. [Employability]

#### UNIT-IV

Mobile IP: Goals, assumptions and requirements-Entities and terminology-IP Packet Delivery-Tunneling and Encapsulation-Reverse Tunneling-Mobile ad-hoc Networks: Overview ad-hoc routing protocols [Entrepreneurship]

#### UNIT-V

Mobile Application Language: XML, Java, J2ME & Java Card-Mobile Operating System . [Employability]

#### REFERENCE BOOKS:

1. "Mobile computing"-Raj Kamal, Oxford University published in 2007. For Unit1 -1,Unit-5.
- 2."Mobile Communications"-Jochen H.Schiller,published by Pearson Education Limited.For Unit-2, 3, 4.

Course Code	Course Title	L	T	P	C
19222DSC37B	Knowledge Based Decision Support System.	4	0	0	4

**AIM:**

To Explore the use of Artificial Intelligence techniques for applications development.

**OBJECTIVES:**

**To understand the various AI Techniques for application development using:**

- LISP programming
- Symbolic logic
- Matching techniques
- Knowledge Acquisition

**UNIT I**

Overview of AI – Knowledge: General Concepts – LISP and other programming languages. [Employability]

**UNIT II**

Formalized symbolic logics – Dealing with inconsistencies and uncertainties – structured knowledge: Graphs, Frames & Related Structures – Object Oriented representations. [Employability]

**UNIT III**

Search and control strategies – Matching Techniques. [Employability]

**UNIT IV**

General concepts in knowledge Acquisition – Learning by induction. [Entrepreneurship]

**UNIT V**

Natural language processing – Pattern recognition – Visual image understanding – Expert system architecture. [Employability]

**OUTCOMES:**

**At the end of the course, the student should be able to:**

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalise a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.
- Design and carry out an empirical evaluation of different algorithms on a problem
- formalisation, and state the conclusions that the evaluation supports

Course Code	Course Title	L	T	P	C
19222SEC41	Python Programming	4	0	0	4

## AIM

To enable the student to be familiar with Python Programming.

## OBJECTIVES:

On successful completion of the course the student should have understood the concepts in Python and its application.

### UNIT I

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

[Employability]

### UNIT II

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

[Employability]

### UNIT III

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

[Employability]

### UNIT IV

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

[Employability]

### UNIT V

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

[Employability]

Course Code	Course Title	L	T	P	C
19222SEC42	Cryptography & Network Security	4	1	0	4

#### AIM:

To introduce about Internet Security in terms of measures to deter, prevent, detect, and correct security violations that involve the transmission of information

#### OBJECTIVES:

- To know the methods of conventional encryption.
- To understand the concepts of public key encryption and number theory
- To understand authentication and Hash function.
- To know the network security tools and system level security used.

#### UNIT I

**CLASSICAL ENCRYPTION TECHNIQUES:** Symmetric Cipher Model-substitution techniques-transposition technique-Rotor machine-Steganography.**BLOCK CIPHERS AND THE DATA ENCRYPTION STANDARD:** Simplified DES-Block cipher principles-The data encryption standard-the strength of DES-Differential and linear cryptanalysis-Block cipher design principles-Block cipher modes of operation. . [Employability]

#### UNIT II

**PUBLIC KEY CRYPTOGRAPHY AND RSA:** Principles of public key cryptosystem-The RSA algorithm.**KEY MANAGEMENT OTHER PUBLIC KEY CRYPTOSYSTEMS:** key management-Diffie-Hellman Key Exchange-Elliptic curve Arithmetic-Elliptic curve cryptography. . [Employability]

#### UNIT III

**HASH ALGORITHM :** MD5 Message Digest Algorithm-Secure Hash Algorithm-RIPEMD-160-HMAC.**DIGITAL SIGNATURE AND AUTHENTICATION PROTOCOLS:** Digital Signatures-Authentication Protocols-Digital Signature Standard. . [Employability]

#### UNIT IV

**AUTHENTICATION APPLICATION :** Kerberos-X.509 Authentication Service-Recommended Reading and Websites.**ELECTRONIC MAIL SECURITY:** Pretty Good Privacy-S/MIME IP Security : IP Security Overview-IP security Architecture-Authentication Header- Encapsulating Security Payload- Combining Security Associations-Key Management.**WEB SECURITY :** Web security considerations – Secure Socket Layer and Transport Layer Security – Secure Electronic Transactions. . [Employability]

#### UNIT V

**INTRUDERS :** Intruders – Intrusion detection – Password management. **MALICIOUS SOFTWARES :** Viruses and Related Threats – Virus countermeasures.  
**FIREWALLS:** Firewalls Design Principles-Trusted Systems. . [Employability]

#### OUTCOMES:

Upon Completion of the course, the students should be able to:

- Compare various Cryptographic Techniques
- Design Secure applications
- Inject secure coding in the developed applications

**REFERENCES:**

1. “Cryptography and Network Security “ – William Stallings – 3<sup>rd</sup> Edition Pearson Education 2003.
2. “Network Security essentials Applications and Standards”, William Stalings , Pearson Education 2007.

Course Code	Course Title	L	T	P	C
19222SEC43	Open Source Programming	4	0	0	3

**AIM:**

To improve the Programming Knowledge of VBScript, JavaScript, Perl & PHP.

**OBJECTIVES:**

- To have the knowledge of VBScript, JavaScript.
- To explore the use of Perl & PHP.

**UNIT I:**

VBScript – VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Datatype Conversion Features – Putting it all together with VBScript – using the Script Debugger. . [Employability]

**UNIT II:**

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. JavaScript and Html Documents: The JavaScript Execution Environment – The Document Object Model – Element Access in JavaScript – Events and Event Handling – Handling Events from Body Elements, Button Elements, Text Box and Password Elements – The DOM 2 Event Model – The navigator Object. . [Employability]

**UNIT III:**

The Basics of Perl: Origins and Uses of Perl – Scalars and their Operations – Assignment Statements and Simple Input and Output – Control Statements – Fundamentals of Arrays – Hashes – References – Functions – Pattern Matching – File Input and Output. Using Perl for CGI Programming: The Common Gateway Interface – CGI Linkage – Query String Format – The CGI.pm Module – Cookies. . [Employability]

**UNIT IV:**

Introduction to PHP: Origins and Uses of PHP – Overview of PHP – General syntactic characteristics – Primitives, Operation and Expressions – Output – Control Statements – Arrays – Functions – Pattern Matching – Form Handling – Files – Cookies – Session Tracking. . [Employability]

**UNIT V:**

Database Access through the Web: Relational Databases – An Introduction to the Structured Query Language – Architecture for Database Access – The MySQL Database System – Database Access with Perl and MySQL – Database Access with PHP and MySQL – Database Access with JDBC and MySQL. . [Employability]

**OUTCOMES:**

- Understand process of executing a PHP-based script on a webserver.

- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops.
- Understand the paradigm for dealing with form-based data, both from the syntax of HTML forms, and how they are accessed inside a PHP-based script.

**REFERENCES:**

1. UNIT I: Scot Johnson “Using Active Server Page”.
2. UNIT II, III, IV, V: Robert W.Sebesta, “Programming the World Wide Web” Third edition.

Course Code	Course Title	L	T	P	C
19222SEC44	Web Service	4	0	0	3

**AIM:**

To have thorough knowledge about web service and web security.

**OBJECTIVES:**

- To provide an idea on Processing XML.
- To understand the concepts of SOAP, UDDI.
- To understand the concepts of Web security.

**UNIT I**

Introduction – What are web services? -Why Web Services are important?– Web services and enterprises. XML Fundamentals: XML: The Lingua Franca of web services- XML Documents-XML namespaces - XML Schema - Processing XML. . [Employability]

**UNIT II**

SOAP and WSDL: The SOAP Model- SOAP- SOAP Messages - SOAP encoding – SOAP RPC- Using alternative SOAP Encodings, Document, RPC, Literal, Encoded -SOAP web services and the REST Architecture- Looking back to SOAP 1.1 - WSDL– Using SOAP and WSDL UDDI: UDDI at a glance- The UDDI Business registry- UDDI under the covers – Accessing UDDI- How UDDI is playing out. . [Employability]

**UNIT III**

Conversations: Overview –Web services Conversation Language – WSCL Interface components – The Bar scenario conversations – Relationship between WSCL and WSDL Workflow: Business Process Management – Workflow and Workflow management systems. . [Employability]

**UNIT IV**

Transactions: ACID Transactions – Distributed Transactions and two phase commit – Dealing with Heuristic outcomes – Scaling transactions to web services – OASIS business transaction protocol – Other web services transaction Protocol. . [Employability]

**UNIT V**

Security: Everyday security basis – Security is an end to end product – Web service security issues – Types of Security attacks and threats - Web services security road map WS – Security. . [Entrepreneurship]

**OUTCOMES:**

**Upon Completion of the course, the students should be able to:**

- Get an idea on Processing XML.
- Understand the concepts of SOAP, UDDI.
- Understand the concepts of Web security.

**REFERENCES:**

1. Developing Enterprise Web Services - An Architect's Guide – Sandeep Chatterjee, James Webber, Pearson Education– Second Indian Reprint 2005.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19222SEC45L	Python Programming Lab	0	0	3	2

1. Find the square root of a number (Newton's method)
2. Exponentiation (power of a number)
3. Find the maximum of a list of numbers
4. Linear search and Binary search
5. Selection sort, Insertion sort
6. Merge sort
7. First n prime numbers
8. Multiply matrices
9. Programs that take command line arguments (word count)
10. Find the most frequent words in a text read from a file

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19222SEC46L	Open Source programming Lab	0	0	3	2

1. Prepare a web page in ASP which displays course submission form using objects.
2. Write a program for addition using VBScript.
3. Write a program for finding maximum number using JavaScript.
4. Develop a web page which display window shrinking using JavaScript
5. Write a program in JavaScript a)OnMouse move b)OnMouse out.
6. Write a Perl script using array find element in list.
7. Write a Perl script for simple manipulation.
8. Develop a PHP program and check message passing mechanism between pages.
9. Develop a PHP program to display student information using MYSQL table.
10. Develop a college application form using MYSQL table.

Course Code	Course Title	L	T	P	C
19222DSC47A	Game Programming	5	0	0	4

#### OBJECTIVES:

- To get subsequent understanding of game design and development, which includes the processes, mechanics, and issues in game design, game engine development, modeling, techniques, handling situations, and logic.
- To create interactive games

#### UNIT-I

Coordinate Systems, Ray Tracing, Modeling in Game Production, Vertex Processing, Rasterization, Fragment Processing and Output Merging, Illumination and Shaders, Parametric Curves and Surfaces, Shader Models, Image Texturing, Bump Mapping, Advanced Texturing, Character Animation, Physics-based Simulation. . [Employability]

#### UNIT-II

Game Logic, Game AI, Path Finding, Game Theory, Character development, Story Telling, Narration, Game Balancing, Core mechanics, Principles of level design, Genres of Games, Collision Detection. . [Employability]

#### UNIT III

Renderers, Software Rendering, Hardware Rendering, and Controller based animation, Spatial Sorting, Level of detail, collision detection, standard objects, and physics. . [Employability]

#### UNIT IV

Flash, DirectX, OpenGL, Java, Python, XNA with Visual Studio, Mobile Gaming for the Android, iOS, Game engines - Adventure Game Studio, DX Studio, Unity. [Entrepreneurship]

#### UNIT V

Developing 2D and 3D interactive games using OpenGL, DirectX – Isometric and Tile Based Games, Puzzle games, Single Player games, Multi Player games. [Entrepreneurship]

#### OUTCOMES:

- Illustrate an understanding of the concepts behind game programming techniques.
- Implement game programming techniques to solve game development tasks.
- Construct a basic game engine using open-source programming libraries.

Course Code	Course Title	L	T	P	C
19222DSC47B	Multimedia and Graphics	5	0	0	4

## AIM

To impart the fundamental concepts of Multimedia and Graphics.

## OBJECTIVES

- To study the multimedia concepts and various I/O technologies.
- To study the graphics techniques and algorithms.
- To enable the students to develop their creativity

## UNIT I

Introduction – Definition- Multimedia Hardware- Multimedia Software- MULTIMEDIA networking- Multimedia Applications- Multimedia Environments- Multimedia Computer Components- Multimedia Standards- Multimedia PC. [Employability]

## UNIT II

Multimedia Software : Basic Tools : Text Editing and Word Processing Tools – OCR Software – Painting and Drawing Tools – 3-D Modeling and Animation Tools – Image-Editing Tools – Sound Editing Tools – Animation, Video, and Digital Movie Tools – Helpful Accessories. Making Instant Multimedia : Linking Multimedia Objects – Office Suites - Word Processors – Spreadsheets – Databases – Presentation Tools – Multimedia Authoring Tools – Types of Authoring Tools – Card and Page-Based Authoring tools – Icon –Based Authoring tools – Time Based Authoring tools- Object – Oriented Authoring tools – Cross platform Authoring Notes. [Entrepreneurship]

## UNIT III

Multimedia Building blocks : Text : The Power of Meaning – About fonts and Faces Using Text in Multimedia – Computers and Text – Font Editing and Design Tools – Hypermedia and Hypertext. Sound: The Power of Sound – Multimedia System Sounds – MIDI versus Digital Audio – Making MIDI Audio – Audio File Formats –Working with Sound on the Macintosh – Toward Professional sound – Production Tips. Images: – Making Still Images – Color – Image File formats. Computer Animation - Using Digital Video in Multimedia Applications. [Entrepreneurship]

## UNIT IV

Computer Graphics and output primitives: Concepts and applications, Random and Raster scan devices, Refresh Cathode ray tubes, LCD monitors, Laser, Printers, Keyboards, Mouse, Scanners, Graphics Software output primitives: Line drawing algorithm: DDA along with Bresenhan’s. Circle generating algorithm, Midpoint algorithms: ellipse and other curves. [Employability]

## UNIT V

Two-dimensional Transformations: Translation, scaling, rotation, reflection, shear, matrix representation of all homogeneous coordinates composite transformation. Three dimensional concepts: 3D Display methods- parallel projection, perspective projection, Depth cueing. Three dimensional object representations: Polygon Surface, Tables, Plane Equation. [Employability]

**OUTCOMES:**

- Gain proficiency in 3D computer graphics API programming
- Enhance the perspective of modern computer system with modeling, analysis and interpretation of, 2D and 3D visual information.
- Able to understand different realizations of multimedia tools
- Able to develop interactive animations using multimedia tools
- Gain the knowledge of different media streams in multimedia transmission

Course Code	Course Title	L	T	P	C
19222RMC48	Research Methodology	3	0	0	3

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis.

**OUTCOME:**

Ability to develop research questions and the various research strategies and compile research results in terms of journal manual scripts.

**PREREQUISITIES:**

Research methodology course in UG level or equivalent knowledge.

**UNIT-I Introduction to research methodology**

Objectives of research – type of research – Significance of research. Research methodology – Research and scientific method – Criteria of good research – Problems encountered by research in India.

**UNIT-II Data base and Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

**UNIT-III Data Analysis:**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – normal distribution curve – Statistical treatment of finite samples – T test and F test (ANOVA) – Variance (ANCOVA) correlation and multiple regression.

**UNIT-IV Thesis and paper writing:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – Reference and Appendices.

**UNIT-V Application on MATLAB:**

Numerical Integration – Numerical integration, ordinary differential equations, partial differential equations, and boundary value problems - Fourier analysis – Fourier transforms, convolution.

Course Code	Course Title	L	T	P	C
19222SEC51	Data mining and warehousing	6	1	0	6

**AIM:**

To emphasis on the design aspects of Data mining and Data Warehousing.

**OBJECTIVES:**

- To introduce the concept of Data Mining with in detail coverage of basic tasks metrics issues and implication .Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of Data Warehousing with special emphasis on architecture and design.

**UNIT I**

Introduction: Data mining-data mining functionalities-clasification-Task Primitives-Data processing: data cleaning-data integration and transformation-data reduction-data discretization and concepts. [Employability]

**UNIT II**

Data mining concepts: Efficient and scalable mining methods-various kinds of association rules-from association mining to correlation analysis-constraint based association mining. [Entrepreneurship]

**UNIT III**

Classification and prediction: classification by decision tree-Bayesian classification-classification by backpropagation-prediction. Cluster analysis: types of data in Cluster analysis-partitioning methods –hierarchical methods. [Employability]

**UNIT IV**

Data ware house: What is data warehousing-Multidimensional data model-data ware house architecture-Dataware house implementation-From data ware housing to data mining. [Entrepreneurship]

**UNIT V**

Multidimensional analysis: spatial data mining-Multimedia data mining-Text mining-Mining and world wide web-Data mining applications [Employability]

**OUTCOMES:**

**After completing this course, the student will be able to:**

- Apply data mining techniques and methods to large data sets.
- Use data mining tools
- Compare and contrast the various classifiers.

**REFERENCES:**

1. Data Mining concept & Techniques”, Jiaweri Han & Micheline , Morgan kauffman publications –2000.
2. “Data warehouse project mangement” sid Addman & Larissa T.moss, Addison

Course Code	Course Title	L	T	P	C
19222SEC52	Grid and Cloud Computing.	6	1	0	5

## AIM

To understand the technology application and tool kits for grid computing and to provide a strong foundation in Developing Cloud Services.

## OBJECTIVES

- To understand the genesis of grid computing.
- To know the application of grid computing.
- To understand the technology and tool kits to facilitate the grid computing
- To understand the concept of Cloud Computing.
- To get an idea about Sharing Files

## UNIT I

Introduction - Definition - Scope of grid computing [Employability]

## UNIT II

Grid Computing Organizations and their roles – Grid Computing analog – Grid Computing road map [Employability]

## UNIT III

Understanding Cloud Computing: An introduction to Cloud Computing – Computing in the Cloud – Developing Cloud Services. [Entrepreneurship]

## UNIT IV

Cloud Computing for the Family – Cloud Computing for the Community – Cloud Computing for the Corporation [Employability]

## UNIT V

Collaborating via Web-Based Communication Tools – Collaborating via Social Networks and Groupware – Collaborating Via Blogs and Wikis [Entrepreneurship]

## OUTCOMES:

At the end of the course, the student should be able to

- Use the grid and cloud tool kits.
- Design and implement applications on the Grid.
- Compare the strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Design Cloud Services and Set a private cloud

Course Code	Course Title	L	T	P	C
19222SEC53	.NET Programming	5	0	0	4

**AIM**

To cover the fundamental concepts of the .NET framework.

**OBJECTIVES**

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

**UNIT I**

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET  
[Employability]

**UNIT II**

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-  
Methods. [Entrepreneurship]

**UNIT III**

Interfacing with the End user-Asp.NET Applications. [Employability]

**UNIT IV**

Web Form Fundamentals – Web Controls – Validation and Rich Controls.  
[Entrepreneurship]

**UNIT V**

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.  
[Employability]

**OUTCOMES:**

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

**REFERENCES:**

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition

4. Visual Basic.Net Black Book- Steven Holzner.

Course Code	Course Title	L	T	P	C
19222SEC54	Object Oriented System Design	5	0	0	4

## AIM

To understand the concepts of object oriented analysis and design.

## OBJECTIVES

- To understand the object oriented life cycle.
- To know how to identify objects, relationships, services & attributes through UML.
- To understand the use-case diagrams.
- To know the Object Oriented Design process.
- To know about software quality and usability.

## UNIT I

Introduction: an overview of object oriented system development object basics-object oriented system development life cycle. [Employability]

## UNIT II

Methodology, modeling, & unified modeling language: object-oriented methodologies-UML. [Entrepreneurship]

## UNIT III

Object-oriented analysis: object –oriented analysis process. Identifying use case –object analysis classification identifying object relation, attribute & methods. [Employability]

## UNIT IV

Object oriented designing: the object oriented designing process & design axioms-designing classes – access layer. [Employability]

## UNIT V

View layer –software Quality assurance- system usability & measuring user & satisfaction. [Employability]

## OUTCOMES:

- Understand the basic concepts to identify state & behavior of real world objects
- Able to learn the various object oriented methodologies and choose the appropriate one for solving the problem with the help of various case studies
- Understand the concept of analysis, design & testing to develop a document for the project
- Able to implement analysis, design & testing phases in developing a software project
- Able to understand the testing strategies and know about automated testing tools

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19222SEC55L	.NET Programming Lab.	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:
  - (i). Insertion (ii) Updating (iii) Deletion (iv) Selection
 Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

Course Code	Course Title	L	T	P	C
19222DSC56A	Information Security	5	0	0	4

## AIM

To impart the fundamental concepts of Information Security and to solve its issues

### UNIT-I

History, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC, Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues. [Employability]

### UNIT-II

Risk Management : Identifying and Assessing Risk, Assessing and Controlling Risk. [Employability]

### UNIT-III

Blueprint for Security, Information Security Policy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity [Employability]

### UNIT-IV

Security Technology, IDS, Scanning and Analysis Tools [Entrepreneurship]

### UNIT-V

Cryptography, Access Control Devices, Physical Security, Security and Personnel [Entrepreneurship]

Course Code	Course Title	L	T	P	C
19222DSC56B	Wireless communication Network	5	0	0	4

## AIM

To promote the international exchange of information related to Wireless Communication systems.

## OBJECTIVES:

- To understand the concepts of Transmission fundamentals.
- To study the functions of TCP/IP suite.
- To describe communication protocols , data transmission modes and satellite communication.

## UNIT I

Introduction – Transmission fundamentals. [Employability]

## UNIT II

Communication Networks – Protocols and TCP/IP suite. [Employability]

## UNIT III

Wireless communication Technology – Antennas and propagation – signal encoding technique – spread spectrum – coding & Error control. [Employability]

## UNIT IV

Wireless networking: satellite communication – cellular wireless networks – cordless systems and wireless local loop – mobile IP and wireless Access protocol. [Entrepreneurship]

## UNIT V

Wireless LANs: Wireless LAN Technology – WiFi and IEEE802.11 –wireless LAN standard – Bluetooth and IEEE 802.15. [Entrepreneurship]

## OUTCOMES:

**Upon Completion of the course, the students should be able to:**

- Understand the concepts of Transmission fundamentals.
- Study the functions of TCP/IP suite.
- Describe communication protocols , data transmission modes and satellite communication

## REFERENCES:

1. William Stallings “wireless communication & Networks”, Second Edition.
2. Blake “wireless communication Technology”

3. Kaveh pahlavan, Prashant Krishnamurthy “Principles of Wireless network”.

Course Code	Course Title	L	T	P	C
19222SEC61	Human Computer Interaction.	6	0	0	6

**AIM:**

To have a thorough knowledge about Human Computer Interaction.

**OBJECTIVES**

- To understand the concept of HCI Ergonomics and WIMP interface.
- To learn about Heuristic process and Evaluation techniques.

**UNIT I**

The interaction: Introduction - Models of interaction - Frameworks and HCI - Ergonomics - Interaction Styles - Elements of WIMP interface - Interactivity - The Context of the interaction - Paradigm: Introduction - Paradigms for interaction [Employability].

**UNIT II**

Interaction Design basics: Introduction - what is design? - User focus - Scenarios - Navigation design - Screen design and layout - Interaction and prototyping - HCI in the software process: Introduction - The software lifecycle - Usability engineering – interactive design and prototyping – Design rationale. [Entrepreneurship]

**UNIT III**

Design rules: Introduction - Principles to support usability - Standards – Guidelines-Golden rules and heuristics - HCI patterns - Implementation Support: Introduction -elements of windowing systems - Programming the application - Using toolkits- User interface management systems. [Employability]

**UNIT IV**

Evaluation techniques: What is evaluation - Goals of evaluation - Evaluation through expert analysis - Evaluation through user participation - Choosing an evaluation method - Universal Design: Introduction - Universal design principles - Multi-modal interaction - Designing for diversity. [Employability]

**UNIT V**

User Support: Instruction - Requirements of user support - Approaches to user support - Adaptive help system - Designing user support systems. [Employability]

**OUTCOMES:**

**Upon completion of the course, the student should be able to:**

- Design effective dialog for HCI.
- Design effective HCI for individuals and persons with disabilities.
- Assess the importance of user feedback.
- Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Websites.

**REFERENCES:**

1. "Human-computer Interaction" - Alan Dix - Pearson Education - 2004.

Course Code	Course Title	L	T	P	C
19222SEC62	Software Project Management	6	0	0	5

#### UNIT I

Project Definition – Contract Management – Activities Covered By Software Project Management – Overview Of Project Planning – Stepwise Project Planning. [Employability]

#### UNIT II

Strategic Assessment – Technical Assessment – Cost Benefit Analysis – Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation. [Employability]

#### UNIT III

Objectives – Project Schedule – Sequencing And Scheduling Activities – Network Planning Models – Forward Pass – Backward Pass – Activity Float – Shortening Project Duration – Activity On Arrow Networks – Risk Management – Nature Of Risk – Types Of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning And Control. [Employability]

#### UNIT IV

Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance. [Entrepreneurship]

#### UNIT V

Introduction – Understanding Behavior – Organizational Behaviour: A Background – Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation – The Oldman–Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress – Health And Safety – Case Studies. [Employability]

Course Code	Course Title	L	T	P	C
19222SEC63	BIG DATA	6	0	0	5

### OBJECTIVES:

- To explore the fundamental concepts of big data analytics
- To learn to analyze the big data using intelligent techniques .use various techniques for mining data stream
- To understand the various search methods and visualization techniques.

### UNIT- I

Introduction to BigData Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools - Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error **[Employability]**

### UNIT -II

Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating-Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP)Applications – Case Studies - Real Time Sentiment Analysis, Stock Market Predictions. **[Employability]**

### UNIT -III

History of Hadoop- The Hadoop Distributed File System –Basics-Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Setting up a Hadoop Cluster - Cluster specification - Cluster Setup and Installation – Hadoop Configuration-Security in Hadoop **[Entrepreneurship]**

### UNIT -IV

Link Analysis – PageRank - Efficient Computation of PageRank- Topic-Sensitive PageRank – Link Spam- Recommendation Systems- A Model for Recommendation Systems- Content- Based Recommendations - Collaborative Filtering- Dimensionality Reduction- Visualizations - Visual data analysis techniques-interaction techniques- Systems and applications. **[Entrepreneurship]**

### UNIT -V

IBM for Big Data –Framework - Hive – Sharding – NoSQL Databases –Mango DB-Casandra- Hbase – Impala – Analyzing big data with twitter – Big data for Ecommerce – Big data for blogs. **[Employability]**

### OUTCOMES:

- Work with big data platform and Understand the fundamentals of various big data analysis techniques
- Analyze the big data analytic techniques for useful business applications.
- Design efficient algorithms for mining the data from large volumes.
- Analyze the HADOOP and Map Reduce technologies associated with big data analytics
- Explore the applications of Big Data

19222PRW64	Project work	0	0	15	10

Each student will develop and implement individually developed application software based on any of the latest technologies.

## Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research  
Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.C.A., curriculum, the following Research Skill Based Courses are introduced in the curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
III	Research Led Seminar	1
IV	Research Methodology	3
IV	Participation in Bounded Research	2
V	Design Project/ Socio Technical Project ( Scaffolding Research)	4
IV	Project Work	12

**Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**  
(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student's performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

**Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing:** **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination:** **40 Marks**

**Total:** **100 Marks**

**SCHOOL OF ARTS AND SCIENCE**  
**DEPARTMENT OF COMPUTER SCIENCE**  
**M.Sc., COMPUTER SCIENCE- REGULATION 2017**

**AIM:**

To enable the students to develop standalone programming and Internet based application

**OBJECTIVES:**

- To learn java programming concepts under Client Sever environment
- To develop Database Application in Java .
- To learn java programming concepts like reflection, native code interface, threads etc
- To develop network programs in java.
- To understand concepts needed for distributed and multi-tier applications.
- To understand issues in enterprise application development.

**UNIT I**

Fundamentals of OOPS-Overview of java language-Data type-Variables and arrays-Class Fundamentals-declaring objects-constructor-overloading methods-inner classes-method overriding.

**UNIT II**

Applet class-Applet architecture-Html applet tag-Passing parameters in applet-AWT classes-Window fundamentals-AWT controls- Handling events by extending AWT components.

**UNIT III**

Java Database Connectivity: JDBC/ODBC Bridge-The connectivity model being used-The java.sql Package-The JDBC Exception Classes- JDBC working with user interface-Database connectivity- Data manipulation-Data Navigation-Data Storage.

**UNIT IV**

RMI: What is Distributed Object System? -Distributed object Technologies-RMI for distributed computing-RMI Architecture- RMI Registry service-Creating RMI Applications-Steps involved in running the RMI Applications-Removing objects from a Registry.

**UNIT V**

Java and XML: Generating an XML Document- Java Servlets- Java Server Pages

17220SEC12	Core II : RDBMS	6	0	0	4

**AIM :**

To provide an in-depth knowledge of Relational database system using Oracle.

**OBJECTIVES:**

- To understand about SQL Queries.
- To learn about Oracle Web Application.
- To impart knowledge in transaction processing, concurrency control techniques and recovery Procedures.

**UNIT-I**

Introduction- File systems versus Database systems – Data Models – DBMS Architecture – Data Independence –Introduction Relational Model and E-R model.

**UNIT-II**

Introduction to SQL - Basic structure and Basic operations of SQL – Set operations - Aggregate functions – Nested squires – Join expressions and views–Functions and procedure – Triggers

### **UNIT-III**

Relational query languages - Relational algebra – Tuple relational calculus – Domain relational calculus – Relational database design - Functional dependency – Normalization – 1NF,2NF,3NF and BCNF

### **UNIT-IV**

Transaction management - Transaction Processing – Properties of Transactions - Serializability – concurrency control lock based protocols – Deadlock handling Time Stamp based protocol - Validation Techniques - Recovery system - Log Based Recovery.

### **UNIT-V**

Data base System Architecture – Centralized client-server Architecture- Server system Architecture – Parallel Data bases – Distributed data bases – Distributed Data storage – Distributed transaction – commit protocol – Concurrency control in Distributed Database. [Employability]

### **COURSE OUTCOMES:**

- Understand the basic concepts of the database and data models.
- Design a database using ER diagrams and map ER into Relations and normalize the relations.
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.

Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

### **REFERENCES:**

Course Code	Course Title	L	T	P	C
17220SEC13	Core III : WAP & XML	6	0	0	4

**AIM :** To provide an in-depth knowledge of WAP &XML

**OBJECTIVES:**

- To make the students to understand of the various applications of XML in the areas of information representation
- To understand the concept of Presentation Oriented Publishing
- To know about Message Oriented Computing and Application Configuration.
- To have a knowledge on Web Services Protocols.

**UNIT-I**

Overview of wap: wap&wireless world- wap application architecture – wap internal Structure –Wap versus web-setting up wap: available software products –wap resources –the development tool kit

**UNIT-II**

Wap gateways: definition –functionality of a wap gateways the web model versus wap model – positioning of a wap gateway in the network-selecting a wap gateway Basic WML: extensible mark-up language- WML structure -a basic WML card-text formatting-navigation – advance display features

**UNIT-III**

Interacting with the user: making a selection-events-variable-input parameter passing-WML script-need for WML script-lexical structures-variable & literal-operators-automatic Data type conversion-control constructs-functions using the standard libraries-pragmas-dealing with errors.

**Unit-IV**

Xml-introduction to Xml-an eagle’s eye-view of xml-xml definition –life of an xml document-related technologies-an introduction to xml application-xml application-xml for xml-first xml document structuring data: xmlizing the data-the advantages of the xml format-preparing style sheet for document display.

**Unit-V**

Attributes, empty tags and xsl: attribute versus element- empty tags- xsl- well formed Xml Document- foreign language and non – roman text- non roman scripts, character set, fonts

and glyphs- legacy character set –Unicode character set- procedure to write xml in Unicode.

**[Employability]**

**TEXT BOOK:**

Unit-1, 2,3: Professional WAP with XML, WML scripts – Charles Arehat.

Unit-4, 5: XML TM BIBLE – Elliotte vusty Harold

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17212SEC14	Core IV: Discrete Mathematics	6	0	0	4

**AIM:**

To provide in-depth knowledge of Mathematical logics, Boolean Algebra.

**OBJECTIVES:**

- To understand the concept of Set Theory and Functions.
- To solve the Recurrence Relations using Generating functions.

**UNIT I**

Sets, Relations & Functions : Property of binary relations, Equivalence, Compatibility, Partial ordering relations, Hasse diagram, Functions, Inverse function, Compositions of functions, Recursive functions.

**UNIT II**

Mathematical logic : Logic operators, Truth tables, Theory of inference and deduction, Mathematical Calculus, Predicate Calculus, Predicates and Qualifiers.

**UNIT III**

Groups & Subgroups : Group axioms, Permutation groups, Cosets, Normal subgroups, Semi groups, Free semi groups, Monoids, Sequential Machines, Error Correcting Codes, Modular arithmetic Grammars.

**UNIT IV**

Lattices & Boolean Algebra: Axiomatic definition of Boolean algebra as algebra as algebraic structures with two operations, Basic results truth values and truth tables, The algebra of propositional functions, Boolean algebra of truth tables.

**UNIT V**

Combinatorics & Recurrence Relations : Disjunctive and sequential counting, Combinations and permutations, Enumeration without repetition, Recurrence Relation, Fibonacci relation, Solving recurrence relation by Substitution, Solving non recurrence relation by conversion to linear recurrence relation.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SECL15	Core Practical I: : J2EE programming Lab	0	0	3	2

1. Load an image on to applet. As the user selects portions of this image, rectangular regions corresponding to the selection should be highlighted by enveloping them in rectangles (use mouse events). Also the user can change the colors of selected regions.
2. Create an application, which consists of a dialog box that could be used to obtain an user name and a password to connect to some on line service. The dialog box consists of two fields user name, password and two buttons of Ok & Cancel for accepting user input.
3. Write a java program, which will make balls of various colors to move within the frame windows.
4. Write a JSP Program to manipulate the following information:

- a. Last Date Visited
- b. Last Time Visited
- c. Number of Visited

- 4. Create Mark List Program using JDBC with UI Concept.
- 5. Create a SERVLET Program with JDBC.
- 6. Create a JSP Program to display a message.
- 7. Create a conversation using RMI concept.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SECL16	Core Practical II: RDBMS Lab	0	0	3	2

- 1. Creating, Updating and Inserting into databases and simple queries.
- 2. Uses of Select statement – for queries using
  - (i) AND,OR,NOT Operations, WHERE clause
  - (ii) UNION, INTERSECTION , MINUS
  - (iii) Sorting and Grouping
- 3. Nested queries using SQL
  - (i) Sub queries
  - (ii) Join
- 4. Built-in functions of SQL
- 5. Creation of simple forms
- 6. Use of indexes, creating views and querying in views
- 7. Cursors, triggers and stored procedures and functions
- 8. Case Studies

- i. Student Evaluation systems
- ii. Pay-roll system
- iii. Income tax calculation
- iv. Seat reservation problems
- v. Mark sheet preparation

Course Code	Course Title	L	T	P	C
17220SEC21	Core V : Python Programming	5	0	0	4

## AIM

To enable the student to be familiar with Python Programming.

## OBJECTIVES:

On successful completion of the course the student should have understood the concepts in Python and its application.

### Unit - I

Core Python: Introduction-features-Comparative study-Comments-Operators-Variables and Assignments-Numbers-String-List and Tuple-Dictionary-Statements and Iterative statements-list comprehensive-Errors and Exception-functions-Classes-Modules-Useful function. Basics: Syntax and Statements-Variable Assignments-Identifier-Style-Memory Management-Application Example. Objects: Introduction-Standard Type- Built-in-type-Internal type-Standard type operator and Built-in functions-Categorizing standard type-Unsupported type.

### Unit – II

Numbers: Introduction- Integer-Floating Point-Complex numbers-Operators-Built-in-functions-Other numeric type-Sequence-Strings-Strings and Operator-String only operator-Built-in-Functions-Built-in-Methods-String Features-Unicode-Related Modules.

### Unit – III

List-Operators-Built-in-Functions-Built-in-Methods-Features of List-Tuple: Introduction-Operators and Built-in-Functions-Features-Related Modules-Mapping type: Dictionaries-Operators-Built-in and Factory Functions-Built-in- Methods. Set type: Introduction-Operators-Built-in Function-Built-in Methods-Related Modules-Conditional and looping statement.

### Unit – IV

File: Objects- Built in Functions-Methods-Attributes-Standard files-Command line Argument-File System-File Execution-Persistent Storage Modules-Related Module. Class: Introduction-Class and Instance- Method calls. Exception and Tools: Why use it?-Exception roles-Short story-Try/finally statement.

### Unit – V

Regular Expression: Introduction-Special Symbols and characters-Regexes and Python-Examples of Regexes. Network Programming: Architecture-Socket. Internet Client

Programming- Transferring files-Email.GUI Programming: Introduction-Tkinter and Python.DB Programming: Introduction-Python DB-API-Non-Relational DB. Web Services: Introduction-Microblogging with Twitter.

3. Lutz, Mark, Learning Python, 5th Edition, O Rielly

Course Code	Course Title	L	T	P	C
17220SEC22	Core VII: Cryptography & Network Security	5	0	0	4

## AIM:

To introduce about Internet Security in terms of measures to deter, prevent, detect, and correct security violations that involve the transmission of information

## OBJECTIVES:

- To know the methods of conventional encryption.
- To understand the concepts of public key encryption and number theory
- To understand authentication and Hash function.
- To know the network security tools and system level security used.

## UNIT I

CLASSICAL ENCRYPTION TECHNIQUES: Symmetric Cipher Model-substitution techniques-transposition technique-Rotor machine-Steganography.BLOCK CIPHERS AND THE DATA ENCRYPTION STANDARD: Simplified DES-Block cipher principles-The data encryption standard-the strength of DES-Differential and linear cryptanalysis-Block cipher design principles-Block cipher modes of operation.

## UNIT II

PUBLIC KEY CRYPTOGRAPHY AND RSA: Principles of public key cryptosystem-  
The RSA algorithm.KEY MANAGEMENT OTHER PUBLIC KEY CRYPTOSYSTEMS: key  
management-Diffie-Hellman Key Exchange-Elliptic curve Arithmetic-Elliptic curve  
cryptography.

### **UNIT III**

HASH ALGORITHM :MD5 Message Digest Algorithm-Secure Hash Algorithm-  
RIPEMD-160-HMAC.DIGITAL SIGNATURE AND AUTHENTICATION PROTOCOLS:  
Digital Signatures-Authentication Protocols-Digital Signature Standard.

### **UNIT IV**

AUTHENTICATION APPLICATION : Kerberos-X.509 Authentication Service-  
Recommended Reading and Websites.ELECTRONIC MAIL SECURITY: Pretty Good Privacy-  
S/MIME IP Security : IP Security Overview-IP security Architecture-Authentication  
Header- Encapsulating Security Payload- Combining Security Associations -Key  
Management.WEB SECURITY : Web security considerations – Secure Socket Layer and  
Transport Layer Security – Secure Electronic Transactions.

### **UNIT V**

INTRUDERS : Intruders – Intrusion detection – Password management. MALICIOUS  
SOFTWARES : Viruses and Related Threats – Virus countermeasures.  
FIREWALLS: Firewalls Design Principles-Trusted Systems. [Employability]

### **OUTCOMES:**

**Upon Completion of the course, the students should be able to:**

- Compare various Cryptographic Techniques
- Design Secure applications
- Inject secure coding in the developed applications

### **REFERENCES:**

1. “Cryptography and Network Security “ – William Stallings – 3<sup>rd</sup> Edition Pearson Education 2003.
2. “Network Security essentials Applications and Standards”, William Stalings , Pearson Education 2007.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SEC23	Core VIII: Software Engineering	5	0	0	3

**AIM:**

To introduce the methodologies involved in the development and maintenance of Software (i.e) over its entire life cycle.

**OBJECTIVES:**

- To be aware of Softwares
- Different Life Cycle models.
- Requirements dictation process.
- Verification Validation techniques.
- Project planning and Management.

**UNIT I**

Introduction - definitions - size factors - quality and productivity factors - managerial issues. Planning a software project - introduction - defining the problem - developing a solution strategy - planning the development process - planning an organizational structure - other planning activities.

**UNIT II**

Software cost estimation - cost factors - cost estimation techniques staffing level estimation - estimating soft- ware maintenance costs. Software requirements definition - software requirement specification - formal specification techniques - languages and processors for requirements.

**UNIT III**

Software design - fundamental design concepts - modules and modularization criteria - design notations - design techniques - detailed design considerations - real time and Distributed system design - test plans - milestones, walkthrough and inspections - design guidelines.

**UNIT IV**

Implementations issues - structured coding techniques - coding style - standards and guidelines - documentation guidelines -data abstraction - exception handling - concurrency mechanisms.

**UNIT V**

Verification and validation techniques - quality assurance - walkthrough and inspections - static analysis - symbolic execution - UNIT testing and debugging - system testing - formal verification. Software maintenance - enhancing maintainability during

development - managerial aspects - configuration management - source code metrics - other maintenance tools and techniques.

**OUTCOMES:**

- Get an insight into the processes of software development
- Able to understand the problem domain for developing SRS and various models of software engineering
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SECL24	Core Practical III: Python Programming Lab	0	0	3	2

1. Find the square root of a number (Newton's method)
2. Exponentiation (power of a number)
3. Find the maximum of a list of numbers
4. Linear search and Binary search
5. Selection sort, Insertion sort
6. Merge sort
7. First n prime numbers
8. Multiply matrices
9. Programs that take command line arguments (word count)
10. Find the most frequent words in a text read from a file

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SECL25	Core Practical IV : UNIX Lab	0	0	3	2

1. Write a menu driven shell program for the following :
  - a. List of files.
  - b. Processes of users.
  - c. Today's Date
  - d. Users of system.
  - e. Quit of Unix
2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.

3. Write a shell program which accepts the name of a file from the standard input and perform the following
  - a. Accept five names in a file.
    - a. Sorts the names in existing file.
    - b. Lists unsorted and sorted file.
    - c. Quit
4. Write a menu driven shell program to copy, edit, rename and delete a file.
5. Write a menu driven shell program to perform the following task
  - a. Write a sentence in file.
  - b. Search for a given word or pattern in an existing file.
  - c. Quit.
6. Write a shell program to prepare electricity bill for domestic consumers.
 

For first 100 units – Rs. 0.75 / Unit  
 For next 100 units – Rs. 1.50 / Unit  
 Above 200 units – Rs. 3.00 / Unit  
 Prepare the bill for the following format.
7. Write a shell program to display the result PASS or FAIL using the information given below student name ,student reg.no., mark1,mark2,mark3,mark4 the minimum pass for each subject is 50.
8. Merge the contents of the file file1,file2 and store in another file.

Course Code	Course Title	L	T	P	C
17220DSC26A	Artificial Intelligence and Expert Systems	4	0	0	4

**Aim:**

To Acquire Knowledge on various AI Techniques and Expert Systems.

**Objective:**

- To learn AI Basic Concepts
- To understand Expert Systems Architectural-Components
- To study Expert System development process
- 

**UNIT I**

The AI definition - AI Techniques- Problems, Problem Space and search- Defining the problem as a state space search- Problem Characteristics- Heuristic Search Techniques- Generate and Test- hill Climbing- Best First Search- Problem reduction - Constraint Satisfaction- means -ends analysis.

## UNIT II

Game Playing- Min-Max Procedure- Adding Alpha-Beta Cutoffs- Additional Refinements- Searching AND/OR Graphs - Using Predicate Logic- Representing Simple Facts and Logic- Representing instance and IS a relationships- Computable functions and predicates- Use of the predicate calculus in AI Resolution- natural deduction. [Employability]

## UNIT III

Representing knowledge using rules- Procedural versus declarative knowledge- Logic Programming- Forward versus Backward Reasoning- Resolving within AND/OR Graphs matching- control knowledge-Symbolic Reasoning under uncertainty- Non-monotonic reasoning- Implementation issues- - Fuzzy Logic.

## UNIT IV

Expert Systems- Architectural-Components- Explanation facilities- Knowledge acquisition.

## UNIT V

Expert System development process- Non-formal representation of knowledge- Semantic networks- Frames- Scripts- Expert System Tools.

## OUTCOMES:

At the end of the course, the student should be able to:

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalize a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.
-

2. For Units IV, V: David W. Rolston, “**Principles of Artificial Intelligence and Expert Systems Development**”, McGraw Hill.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220DSC26B	<b>Core XII:</b> Distributed Operating System	4	0	0	4

**Aim:** To Acquire Knowledge on Distributed Operating System

**Objectives:**

- This Subject provides students with an in-depth knowledge about the operating system.
- The former treats the standard principles of single processor system, including processes, synchronization, I/O, deadlocks, Memory Management, File Management systems, security.
- This subject covers distributed operating system in detail, including communication process, file system and memory management synchronization but this time in the context of distributed systems.

**UNIT-I:**

Introduction to distributed system-what is a distributed system-goals-h/w concepts- s/w concepts – design issues. Communication in distributed systems: layered protocols – asynchronous transfer mode network.

**UNIT-II:**

The client/server model-remote procedure call- group communication. Synchronization in distributed systems: clock synchronous-mutual exclusion-election algorithm-atomic transaction-deadlock in distributed system.

**UNIT-III:**

Process & processors in distributed system: Threads system-models-processor allocation- scheduling in distributed system-fault tolerance-real time distributed system.File system: distributed file system design-distributed file system implementation-trends in distributed file system.

**UNIT-IV:**

Distributed shared memory: Introduction to distributed shared memory- consistency models-page based distributed shared memory-shared variable distributed shared memory-object based distributed shared memory-comparison.

**UNIT-V:**

Naming facility in distributed operating system-security in distributed operating system.

**Case studies:** Amoeba-V-system-Mach-Chorus-DCE-comparison. [Employability]

**REFERENCE BOOK:**

“Distributed Operating System” – Andrew S.Tanenbaum.

“Distributed Operating Systems” – Pradeep K.Sinha.

Course Code	Course Title	L	T	P	C
17220DSC26C	Computer Architecture and Parallel Processing	4	0	0	4

**Aim:**

To understand the basic structure of a digital computer and to study the operations of internal components.

**Objective:**

- To impart the knowledge in the field of digital electronics.
- To impart knowledge about the various components of a computer and its internals.
- To design and realize the functionality of the computer hardware with basic gates and other components using combinational and sequential logic.
- To understand the importance of the hardware-software inter face.

**Unit I:**

**Introduction to Parallel Processing:** Evolution of computer system-Parallelism in Uni processor System- Parallel Computer Structure-architectural classifications schemes-Parallel processing Application.

**Unit II:**

**Memory and Input / Output Subsystems:** Hierarchical Memory Structure-Virtual Memory System- Memory Allocation and Management- Cache Memories and Management- Input / Output Subsystems.

**Unit III:**

**Principles of Pipelining and Vector Processing:** An Overlapped Parallelism- Instruction and Arithmetic Pipelines-Principles of Designing Pipelined Processors-Vector Processing Requirement-Vector Super Computer-Scientific Attached Processors- Recent Vector Processors.

**Unit IV:**

**Multiprocessor Architecture and Programming:** Functional Structures- Interconnection Networks-Parallel Memory Organization-Multiprocessor Operating Systems.

**Unit V:**

**Multiprocessing Control and Algorithms:** Inter process communication mechanism- System Deadlock and Protection-Multiprocessor Scheduling Strategies-Parallel Algorithm Multiprocessor.

**OUTCOMES:**

**After completing this course, the student will be able to:**

- Design digital circuits by simplifying the Boolean functions
- Understand the organization and working principle of computer hardware components mapping between virtual and physical memory
- Acquire knowledge about multiprocessor organization and parallel processing
- Trace the execution sequence of an instruction through the processor

**TEXTBOOK:**

**COMPUTER ARCHITECTURE AND PARALLEL PROCESSING**

-Kai Hwang and Faye' A. Briggs

Course Code	Course Title	L	T	P	C
17222CRM	Research Methodology	3	0	0	3

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis.

**OUTCOME:**

Ability to develop research questions and the various research strategies and compile research results in terms of journal manual scripts.

**PREREQUISITES:**

Research methodology course in UG level or equivalent knowledge.

**UNIT-I Introduction to research methodology**

Objectives of research – type of research – Significance of research. Research methodology – Research and scientific method – Criteria of good research – Problems encountered by research in India.

**UNIT-II Data base and Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

**UNIT-III Data Analysis:**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – normal distribution curve – Statistical treatment of finite samples – T test and F test (ANOVA) co – Variance (ANCOVA) correlation and multiple regression.

**UNIT-IV Thesis and paper writing:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – Reference and Appendices.

**UNIT-V Application on MATLAB:**

Numerical Integration – Numerical integration, ordinary differential equations, partial differential equations, and boundary value problems - Fourier analysis – Fourier transforms, convolution.

Course Code	Course Title	L	T	P	C
17220SEC31	<b>Core XI: Data Mining and Warehousing</b>	4	0	0	5

**AIM:**

To emphasis on the design aspects of Data mining and Warehousing.

**OBJECTIVES:**

- To introduce the concept of Data Mining with in detail coverage of basic tasks metrics issues and implication .Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of Data Warehousing with special emphasis on architecture and design.

**UNIT I**

Introduction: Data mining-data mining functionalities-classification-Task Primitives-Data processing: data cleaning-data integration and transformation-data reduction-data discretization and concepts.

**UNIT II**

Data mining concepts: Efficient and scalable mining methods-various kinds of association rules-from association mining to correlation analysis-constraint based association mining.

**UNIT III**

Classification and prediction: classification by decision tree-Bayesian classification-classification by back propagation-prediction. Cluster analysis: types of data in Cluster analysis-partitioning methods –hierarchical methods.

**UNIT IV**

Data ware house: What is data warehousing-Multidimensional data model-data ware house architecture-Data ware house implementation-From data ware housing to data mining.

**UNIT V**

Multidimensional analysis: spatial data mining-Multimedia data mining-Text mining-Mining and world wide web-Data mining applications

**OUTCOMES:**

**After completing this course, the student will be able to:**

- Apply data mining techniques and methods to large data sets.
- Use data mining tools
- Compare and contrast the various classifiers.

## **REFERENCES:**

1. Data Mining concept & Techniques”, Jiaweri Han & Micheline , Morgan kauffman publications –2000.

Course Code	Course Title	L	T	P	C
17220SEC32	Core X: Open Source programming	4	0	0	4

**AIM:**

To improve the Programming Knowledge of VBScript, JavaScript, Perl & PHP.

**OBJECTIVES:**

- To have the knowledge of VBScript, JavaScript.
- To explore the use of Perl & PHP.

**UNIT I:**

VBScript – VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Data type Conversion Features – Putting it all together with VBScript – using the Script Debugger.

**UNIT II:**

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. JavaScript and Html Documents: The JavaScript Execution Environment – The Document Object Model – Element Access in JavaScript – Events and Event Handling – Handling Events from Body Elements, Button Elements, Text Box and Password Elements – The DOM 2 Event Model – The navigator Object. [Employability]

**UNIT III:**

The Basics of Perl: Origins and Uses of Perl – Scalars and their Operations – Assignment Statements and Simple Input and Output – Control Statements – Fundamentals of Arrays – Hashes – References – Functions – Pattern Matching – File Input and Output. Using Perl for CGI Programming: The Common Gateway Interface – CGI Linkage – Query String Format – The CGI .pm Module – Cookies. [Employability]

**UNIT IV:**

Introduction to PHP: Origins and Uses of PHP – Overview of PHP – General syntactic characteristics – Primitives, Operation and Expressions – Output – Control Statements – Arrays – Functions – Pattern Matching – Form Handling – Files – Cookies – Session Tracking.

**UNIT V:**

Database Access through the Web: Relational Databases – An Introduction to the Structured Query Language – Architecture for Database Access – The MySQL Database System

– Database Access with Perl and MySQL – Database Access with PHP and MySQL – Database Access with JDBC and MySQL . [Employability]

### **OUTCOMES:**

- Understand process of executing a PHP-based script on a webserver.
- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops.
- Understand the paradigm for dealing with form-based data, both from the syntax of HTML forms, and how they are accessed inside a PHP-based script.

### **REFERENCES:**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SEC33	Core IX: .Net Programming	4	0	0	4

### **AIM**

To cover the fundamental concepts of the .NET framework.

### **OBJECTIVES**

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

### **UNIT I**

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

### **UNIT II**

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

### **UNIT III**

Interfacing with the End user-Asp.NET Applications.

### **UNIT IV**

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

### **UNIT V**

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

### **OUTCOMES:**

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SECL34	Core Practical V: .Net Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.

8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:
  - (i). Insertion (ii) Updating (iii) Deletion (iv) SelectionHint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SECL35	<b>Core Practical VI: Open Source programming Lab</b>	0	0	3	2

1. Prepare a web page in ASP which displays course submission form using objects.
2. Write a program for addition using VBScript.
3. Write a program for finding maximum number using JavaScript.
4. Develop a web page which display window shrinking using JavaScript
5. Write a program in JavaScript a)OnMouse move b)OnMouse out.
6. Write a Perl script using array find element in list.
7. Write a Perl script for simple manipulation.
8. Develop a PHP program and check message passing mechanism between pages.
9. Develop a PHP program to display student information using MYSQL table.
10. Develop a college application form using MYSQL table.

Course Code	Course Title	L	T	P	C
17220DSC36A	Core MULTIMEDIA AND IT'S APPLICATIONS	5	0	0	4

**AIM:**

To enable the students to learn the multimedia Systems and its applications.

**OBJECTIVES:**

- To making multimedia presentation.
- To learn the Multimedia animation.
- To study about multimedia and Internet concepts

**UNIT-I:**

Introduction – Definition- Multimedia Hardware- Multimedia Software- MULTIMEDIA networking- Multimedia Applications- Multimedia Environments- Multimedia Computer Components- Multimedia Standards- Multimedia PC.

**UNIT-II:**

Multimedia Information Systems: Limitations in workstation operating systems. Middleware System Services Architecture: Goals of Multimedia System Services- Multimedia System Services Architecture Text: Elements of Text- Using Text in Multimedia Applications- Graphics: Element of Graphics- Images and Color- Graphics file and Application Formats- Obtaining Images for Multimedia use- Using Graphics on Multimedia Applications.

**UNIT-III:**

Digital Audio Representation and Processing: Uses of Audio in Computer Applications- Digital Representations of sound- Transmission of Digital Sound- Digital Audio Signal Processing, Video Technology: Raster Scanning Principles- Sensors for TV Cameras- Color fundamentals- Color Video- Digital Video and Image Compression: Evaluating Compression System- Video Compression Techniques- JPEG Image Compression Standard- MPEG motion Video Compression Standard.

**UNIT-IV:**

Multimedia Communications Systems: Applications Network Services- Network Protocols. Multimedia Conferencing: Teleconferencing systems- Requirements for Multimedia Communications- Multimedia Conferencing Architectures.

**UNIT-V:**

Multimedia and Internet: Internet- Client/Server Technology- Communications protocol- Internet Addressing- Internet Functions- HTML and Web Authoring. Multimedia development Team: Team Approach- Assembling multimedia Production Team- Multimedia Development Process: Multimedia Project- Structured Multimedia development- casting multimedia project.

**OUTCOMES:**

- Enhance the perspective of modern computer system with modeling, analysis and interpretation of 2D and 3D visual information.
- Able to understand different realizations of multimedia tools
- Able to develop interactive animations using multimedia tools
- Gain the knowledge of different media streams in multimedia transmission

**REFERENCE BOOK:**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220DSC36B	Compiler Design	5	0	0	4

**AIM :**

To understand the design and implementation of a simple compiler.

**OBJECTIVES:**

- To understand the functions and design of the various phases of a compiler
- To learn the overview of the design lexical analyzer and parser
- To learn the use of compiler construction tools.

**UNIT I**

Introduction to Compilers – Compilers and Translators- Assembly Language – Macros – Structure of a Compiler – Compiler writing tools - Bootstrapping. Lexical Analysis : The role of Lexical Analyzer - Regular expression – Finite Automata - Implementation of lexical analyzer – Context Free Grammars- Derivation and Parse trees.

## **UNIT II**

Parsers – Shift reduce parsing – Operator precedence parsing - Top-down parsing – Predictive parsers – Simple precedence parsers – LR parsers – Constructing SLR parsing tables – Constructing Canonical LR parsing tables – Constructing LALR parsing tables – Using ambiguous grammars.

## **UNIT III**

Syntax directed translation schemes – Implementation of syntax directed translation schemes - Intermediate code - Postfix notation - Parse trees and Syntax trees - Three address codes, Quadruples and Triples - Translation of assignment statements - Boolean expressions - Postfix translation.

## **UNIT IV**

Symbol tables: The contents of a symbol table - Data structures for symbol tables Representing scope information - Implementation of simple stack allocation scheme- Implementation of block structured languages - Storage allocation in FORTRAN - Storage allocation in block structured languages. Errors - Lexical phase errors - syntactic phase errors - semantic errors.

## **UNIT V**

Code optimization : Principle sources of optimization – Loop optimization – Machine dependent optimization - DAG representation of basic blocks .Code Generation: Problems in code generation - A simple code generator – Register allocation and assignment - Code generation from DAGS – Peephole optimization.

## **OUTCOMES:**

At the end of the course, the student should be able to:

- Design and implement a prototype compiler.
- Apply the various optimization techniques.
- Use the different compiler construction tools

## **REFERENCES:**

1. Principles of Compiler Design – Alfred V.Aho , Jeffrey D. Ullman
2. Compiler Construction William A. Barrett, Rodney M.Bates
3. Compiler Construction for Digital computer- DAVID GRIES.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220DSC36B	Wireless communication Network.	5	0	0	4

## **AIM**

To promote the international exchange of information related to Wireless Communication systems.

## **OBJECTIVES:**

- To understand the concepts of Transmission fundamentals.
- To study the functions of TCP/IP suite.
- To describe communication protocols , data transmission modes and satellite communication.

## **UNIT I**

Introduction – Transmission fundamentals.

## **UNIT II**

Communication Networks – Protocols and TCP/IP suite.

## **UNIT III**

Wireless communication Technology – Antennas and propagation – signal encoding technique – spread spectrum – coding & Error control.

## **UNIT IV**

Wireless networking: satellite communication – cellular wireless networks – cordless systems and wireless local loop – mobile IP and wireless Access protocol.

## **UNIT V**

Wireless LANs: Wireless LAN Technology – WiFi and IEEE802.11 –wireless LAN standard – Bluetooth and IEEE 802.15.

## **OUTCOMES:**

Upon Completion of the course, the students should be able to:

- Understand the concepts of Transmission fundamentals.
- Study the functions of TCP/IP suite.
- Describe communication protocols , data transmission modes and satellite communication

## **REFERENCES:**

1. William Stallings “wireless communication & Networks”, Second Edition.
2. Blake “wireless communication Technology”
3. Kaveh pahlavan, Prashant Krishnamurthy “Principles of Wireless network”.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220SEC41	Core XVI :Software Testing	4	0	0	5

**AIM:**

To introduce the methodologies involved in the development and maintenance of Software

**OBJECTIVES**

To be aware of

- Different Life Cycle models software development
- Various Testing methods in software development process

**UNIT I**

Principles of testing – Software Development lifecycle models.

**UNIT II**

Testing: White box testing – Black box testing – Integration testing – System acceptance.

**UNIT III**

Performance – Regression – Internationalization – Adhoc.

**UNIT IV**

Test planning – Test management – Test process – Test reporting.

**UNIT V**

Test Metrics and Measurements.

**OUTCOMES:**

- Test the software by applying testing techniques to deliver a product free from bugs
- Evaluate the web applications using bug tracking tools.
- Investigate the scenario and the able to select the proper testing technique
- Explore the test automation concepts and tools
- Deliver quality product to the clients by way of applying standards such as TQM, Six Sigma
- Evaluate the estimation of cost, schedule based on standard metrics

**REFERENCES:**

1. “Software Testing principles and practices “ by srinivasan Desikan gopalswamy Ramesh.
- 2.” Effective methods for software testing” by William E.perry, Third Edition.

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
17220PRW42	Project work	0	0	0	15

Each student will develop and implement individually developed application software based on any of the latest technologies.

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc.,(CS) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffolding Research)	4
IV	Project Work	12

**Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**

(Essay type Questions set by the concerned resource persons)

**Blueprint for assessment of student's performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

**Blueprint for assessment of student's performance in Research Methodology Courses**

**Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

**Model Paper Writing:** **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination:** **40 Marks**

**Total:** **100 Marks**

**Department of Physics**  
**B.Sc., PHYSICS – 2019 Regulation**  
**2019-2020**

**Employability**  
**Skill development**  
**Entrepreneurship**  
**Employability/Skill development**

வினா. திருவிடைமீட்டுப் பணிகளைப்பற்றும்- கணம், தஞ்சாவூர்

பாட. குதிரைநாடு : தமிழ் முதல் பருவம்

முதலாம் பித்தண்டு

இக்கலை இலக்கியம் - செவ்வியல், சிறுகதை , நாடகம், இலக்கிய வரலாறு

பித்த : 1. செவ்வியல்

தாயுமானவை கவாமிசன் - அத்தார பருவம் - சிதம்பர ரகசியம் - 40 அத்தன்

இராமலிங்க அத்தன் - சிறுகதைநாடு - அருணை விண்ணப்பம் - 40 அத்தன்

கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாணவரும் - 52 அத்தன்

பாரதிதாசர் - புதுமைப்பெண் - 40 அத்தன்

பாரதிதாசன் - பாரதிதாசன் கவிதைகள் , தமிழ் இனிமை , தமிழ் அணவு

பித்த : 2. செவ்வியல்

நாமக்கல் கவிதர் - தமிழ் தேன் - தமிழ் வளக்க சபகம் செவ்வியம் , 40 அத்தன்

ந. பிச்சுபுத்திரர் - வந்தித்தனை - கவிதை கருடன் , 42 அத்தன்

கரதா - தேன்மழை, கவிதை , 22 அத்தன்

கண்ணதாசன் - இலக்கியம் , ஒரு பாணையில் கதை , 54 அத்தன்

அத்தன் ரகுமணி - செந்திர சிறுகதை , குப்பையை சிறையும் சிறுகதை , 80 அத்தன்

பித்த : 3. சிறுகதை

க. சமுத்திரம் - வேரில் புத்திர பண

பித்த : 4. நாடகம்

கு. வெ. பாண்டிரமணியன் , கதைம புத்திர (அரைநடை நாடகம்)

பித்த : 5. இலக்கிய வரலாறு

சிறுகதை , புதினம், நாடகம் அரைநடை , கவிதை , புதுக்கவிதை

<b>COURSE CODE</b>	<b>COURSE TITLE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature
- 

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

**References:**

<b>19111AEC12</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -ArunaGnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

**References:-**

The Art of Reading/ Experiencing Poetry. -S.Murugesan and Dr.K.Chellappan

<b>Course Code</b>	<b>Core Paper - I</b> <b>Properties Of Matter</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC13</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Aim:**

The course presents an introduction to the physics of the objects whose sizes span from atomic dimensions to macroscopic, human scale dimensions, and beyond: atoms, molecules, gases, liquids, and solids. The aim is to show how the properties of macroscopic bodies can be derived from the knowledge that matter is made up from atoms.

**Objectives:**

- Recognize the difference between physical and chemical properties
- Distinguish between extensive and intensive properties

**UNIT – I Elasticity:**

Stress – Strain – Hooke’s law – Relation between elastic constants – poisson’s Ratio – Expression for poisson’s ratio in terms of elastic constants – work done in twisting –Torsional pendulum – determination of rigidity modulus – Young’s modulus – determination – uniform – non-uniform bending.

**UNIT – II Surface Tension:**

Definition, Explanation of surface tension– Surface energy and surface tension – Pressure difference across a liquid surface – Excess of pressure inside a soap bubble – Angle of contact – Measurement of angle of contact – Experimental determination of surface tension by Jaegers method - Capillary rise method – Surface tension and vapour pressure over a liquid surface – Effect of Evaporation and condensation.

**UNIT – III Viscosity:**

Definition – flow of liquid through a capillary tube – Stokes Law – Poiseuille’s method for coefficient of viscosity – conception of poiseuille’s equation-Ostwald’s viscometer – viscosity of highly viscous liquids – Stokes method – variation of viscosity of a liquid with temperature – viscosity of Gases and kinetic energy.

**UNIT – IV Diffusion – Osmosis:**

Osmosis and osmotic pressure – Laws of osmotic pressure – Experimental determination of osmotic pressure – Preffer method – Berkley method – Elevation of Boiling point and Depression of freezing point – Diffusion – Fick’s law – Experimental measurement of Diffusivity – Graham’s Laws of Diffusion of Gases – Effusion, Transpiration and Transfusion.

**UNIT - V Gravitation:**

Newton’s Law – Kepler’s Law –Deductions of Newton’s law from Kepler’s Law – Law of Gravitation– Gravitational potential: Potential energy – Gravitation Potential and Field at a point due to spherical shell, solid sphere, Hollow sphere – Satellites – Stationary satellite – Escape velocity – Rocket – Jet plane.

**Learning outcomes:**

On completion successful students will be able to demonstrate an understanding of:

1. The relationships between physics on the atomic scale and the properties of matter.
2. The roles played by microscopic states of system, their numbers and their accessibility.
3. Techniques for finding appropriate averages to predict macroscopic behavior.
4. How these techniques are applied to the calculation of the properties of matter.

**Reference:**

1. Properties of matter – Subramaniaiyer and Jeyaraman.
2. Elements of properties of matter – D.S. Mathur, S Chand and Co.,
3. Properties of Matter – Brijlal and Subramaniam, S. Chand and Co.,

<b>Course.Code</b>	<b>PROPERTIES OF MATTER LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC14L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

### List of Experiments

1. Young's modulus – uniform bending – pin and microscope.
2. Young's modulus – non uniform bending – scale and telescope.
3. Static torsion – Rigidity modulus.
4. Torsion pendulum – Rigidity modulus.
5. Cantilever depression – scale and telescope method.
6. Surface tension – capillary rise method.
7. Viscosity – capillary flow method.
8. Newton's ring –determination of R.
9. Compound pendulum.
10. Long focus convex lens – f, R, u determination.

Course Code	Allied Paper - I Calculus and Fourier Series	L	T	P	C
19112AEC15A		5	0	0	4

### Aim and objectives:

This paper aims at enabling the students to know various concepts and principles of differential and integral calculus.

Sound Knowledge of calculus is essential for the students of mathematics for the better perceptions of the subject and its development

### Unit – I

Leibnitz theorem (Proof not needed) and its applications – curvature and radius of curvature in Cartesian only (Proof not needed) – total differential coefficient (Proof not needed) – Jacobians of two & three variables – Simple problems in all these.

### Unit – II

Reduction formula (when n is a +ve integer) for (i)

i.  $\int_a^b e^{ax} x^n dx$

ii.  $\int_a^b \sin^n x dx$

iii.  $\int_a^b \cos^n x dx$

iv.  $\int_0^x e^{ax} x^n dx$

v.  $\int_0^x \sin^n x dx$

vi. without proof  $\int_0^x \sin^n x \cos^n x dx$  and illustrations

### Unit – III

Beta and Gamma functions

### Unit – IV

Evaluation of double and triple integrals in simple cases – changing the order and evaluating of the double integration (Cartesian only)

### Unit – V

Definition of Fourier series – Finding Fourier coefficients for a given periodic function with period  $2\pi$  and with period  $2l$  – use of odd and even functions in evaluating Fourier coefficients – half range sine and cosine series.

### Outcomes:

- Calculate definite integral values using Beta and Gamma Functions
- Develop the skill of evaluating Laplace and inverse Laplace transform to solve Linear systems under initial and boundary conditions

### Text Books

Calculus – T.K.M. Pillai

Trigonometry & Fourier Series – T.K.M. Pillai.

<b>Course Code</b>	<b>Allied Paper - II Algebra and Trigonometry</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19112AEC16A</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>3</b>

### **Aim and Objectives:**

This paper emphasizes general techniques of problemsolving and explores the creation of mathematical patters. It aims at introducing a course that initiates the students into the world of Discrete Mathematics.

### **Unit – I**

Binomial, Exponential & Logarithmic series (Formulae only) – Summation

### **Unit – II**

Nonsingular, symmetric, skew symmetric, orthogonal, Hermitian, skew Hermitian and unitary matrices – Characteristics equation, Eigen values, Eigen vector – Cayley Hamilton's theorem (proof not needed) Simple application only.

### **Unit – III**

Expansion of  $\sin^n\theta$ ,  $\cos^n\theta$ ,  $\tan^n\theta$  and  $\sin^n\theta \cos^m\theta$  (m & n being a positive integer) – Expansion of in a series of sines and cosines of multiples of  $\theta$  ( $\theta$  – given in radius) Expansion of  $\sin\theta$ ,  $\cos\theta$  and  $\tan\theta$  in terms of powers of  $\theta$  (only problems in all the above)

### **Unit – IV**

Euler's formula for  $e^{i\theta}$  – definition of hyperbolic functions – formulae involving hyperbolic functions – relation between hyperbolic and circular function – expansion of  $\sinh x$ ,  $\cosh x$ ,  $\tanh x$  in power of x.

### **Unit – V**

Expansion of inverse hyperbolic function –  $\sinh^{-1}x$ ,  $\cosh^{-1}x$  and  $\tanh^{-1}x$  - Separation of real and imaginary parts of  $\sin(x+iy)$ ,  $\cos(x+iy)$ ,  $\tan(x+iy)$ ,  $\sinh(x+iy)$ ,  $\cosh(x+iy)$ ,  $\tanh(x+iy)$

### **Outcomes:**

The topic like Mathematical Logic, Set Theory, Relations, Functions, Mathematical Induction, Recursive relations and Matrices.

### **Text Books:**

### MS-WORD

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. Picture Insertion and Alignment
  - a. Prepare a Greeting Card
  - b. Prepare a Handout
7. Create a Mark sheet using tables and find out the total marks.
8. Prepare a Business letter for more than one company using Mail Merge

Course Code	Skill Based Elective -I	L	T	P	C
19160SEC01B	Effective Communication	0	0	2	1

### UNIT I

#### Effective communication I

**Oral Communication:** Listening skills -Speaking skills (what to say and how to say it) – Gender neutral Language-Conflict, criticism, anger- Telephone skills.

### UNIT II

#### Effective communication II

**Written Communication:** Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos.

**Nonverbal Communication:** Behavior, Body language and Attitude.

<b>Course Code</b>	<b>Communicative English-I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19111SEC01L</b>		<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To know English grammar and all the concomitant linguistic items
- To be aware of basic concepts related to the study of communication
- To understand the types of sentences and its patterns

**Outcome:**

- Understand grammar

**UNIT –I**

Noun

Pronoun

Adjective

**UNIT – II**

Verb

Adverb

**UNIT –III**

Conjunction

Preposition

Interjection

**UNIT – IV**

Kinds of Sentences

**UNIT –V**

Patterns of sentences

A Practical English Grammar  
English Grammar

-A.J Thomson and A.V.Martinet  
-Wren and Martin

<b>Course Code</b>	<b>Indian constitution</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>191INDCONS</b>		<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>

### **Aim and Objectives:**

1. To make the students understand about the Democratic Rule and Parliamentary Administration.
2. To appreciate the salient features of the Indian Constitution.
3. To know the fundamental Rights and Constitutional Remedies.
4. To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
5. To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

### **UNIT I: THE MAKING OF INDIAN CONSTITUTION**

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

### **UNIT II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS**

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

### **UNIT III: DIRECTIVE PRINCIPLES OF STATE POLICY**

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

### **UNIT IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT**

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

### **UNIT V: STATE COUNCIL – ELECTION SYSTEM AND PARLIAMENTARY DEMOCRACY IN INDIA**

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

### **Outcomes**

1. Democratic values and citizenship Training are gained.
2. Awareness on Fundamental Rights are established.
3. The functions of union Government and State Governments are learnt.
4. The power and functions of the Judiciary learnt thoroughly.
5. Appreciation of Democratic parliamentary Rule is learnt.

**REFERENCES:**

1. Palekar S.A. Indian Constitution Government and polities, ABD Publications, India.

**Aim:**

- To acquaint learners with different trends of writing

**Objective:**

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

**Outcome:**

- Read and comprehend literature

**UNIT – I**

Ecology -A.K. Ramanujan

Gift -Alice Walker

The First Meeting -Sujata Bhatt

**UNIT –II**

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran

**UNIT –III**

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

**UNIT – IV**

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king

Those People Next Door -A.G. Gardiner

CourseCode	Core Paper - II	L	T	P	C
19113AEC23	Mechanics and Special Theory of Relativity	6	1	0	4

**Aim:**

- To deepen understanding of Mechanics.
- To Prepare students for courses in quantum field theory and gauge theory

**Objectives:**

Find the unitary transformations linked to symmetry operations.  
Apply time-dependent perturbation theory to variety of problems.

**Unit I :Dynamics projectile , impulse, impact**

Projectile - range of horizontal and inclined plane – Impulse – Impact – Impulsive force – Laws of impact – Impact of a smooth sphere on a smooth horizontal plane – Direct and oblique impacts – Loss in kinetic energy – Motion of two interacting bodies – reduced mass.

**Unit II: Dynamics of Rigid bodies**

Kinetic energy of rotation - Theory of compound pendulum - Equivalent simple pendulum – Reversibility of centers of oscillation and suspension - Determination of 'g' and radius of gyration of a bar pendulum-period of oscillation of a Bifilar pendulum with Parallel threads.

Center of mass - velocity and acceleration of center mass - system of variable mass-equation for a rocket – Conservation of linear and angular momentum.

**Unit III: Center of Gravity and states of equilibrium:**

Center of gravity of simple bodies – Center of gravity of solid hemisphere, hemispherical bowl, and right solid cone – stable, Unstable and neutral equilibrium of a rigid body supported about an axis.

**Unit IV: Center of Pressure:**

Center of pressure of vertical rectangular Lamina – Vertical triangular lamina – Vertical circular lamina – Atmospheric Pressure – Variation of atmospheric pressure with altitude – Hydro dynamics – stream line flow of an ideal fluid – equation of continuity of flow – Bernoulli's theorem and its applications to liquids.

**Unit V: Special theory of relativity:**

Frame of reference – Newton's relativity – Inertial frame of reference – Galilean transformations – Transformation of position , velocity and acceleration – time dilation & length contraction – Lorentz Transformations – Mass –Energy relation– variation of mass with velocity.

**Learning Outcomes:**

Derive a mathematical description of quantum motion in electromagnetic fields.  
Apply the relativistic wave equations to simple single-particle problems.

**Books for Study:**

1. Mechanics – Part I and II – NarayanaMoorthy
2. Mechanics – D.S. Mathur
3. Mechanics – Brij.Lal and N. Subramaniam

<b>Course Code</b>	<b>Core Practical – II Mechanics Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC24L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

### **List of Experiments**

1. Characteristics of junction diode.
2. Characteristics of Zener diode.
3. Potentiometer – low range voltmeter calibration.
4. Potentiometer – specific resistance.
5. Transistor characteristics –CE configuration.
6. Spectrometer -  $\mu$  of a solid prism.
7. Air wedge – thickness of a wire.
8. Specific heat capacity of liquid – Newton’s law of cooling.
9. Thermal conductivity of a bad conductor- lee’s disk.
10. Carey fosters bridge – specific resistance measurement.

<b>Course Code</b>	<b>Allied Paper - III ODE, PDE And Laplace Transform</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19112AEC25A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

Introduce the Concepts of laplace and fourier transforms

**Objectives:**

Find the Fourier series representation of a function of one variable

Find the solution of the wave,diffusion and Laplace equations using the Fourier series.

**UNIT I:**

Ordinary differential equations of first order but of higher degree- Equations solvable for x and y – solvable for dy/dx, clairaut's form (simple case only)- homogeneous linear differential equation(Variable coefficients), variation of parameter.

**UNIT II:**

Formation of partial differential equation by eliminating constants and by eliminating of arbitrary functions- definition of general, particular and complete solution – singular integral(Geometrical meaning not required) solution of first order equations in the slandered forms  $f(p,q)=0$ ,  $f(x,p,q)=0$ ,  $f(z,p,q)=0$   $f_1(x,p)=f_2(y,p)$   $z=(x,p+yq)=f(p,q)$ .

**UNIT III:**

Lagrange's method for solving  $P_p + Q_q = R$  where p,q,r functions of X, Y, Z- (geometrical meaning is not needed)- (only problem in all the above- No proof needed for any formula ) Cherpit's method The four standard forms.

**UNIT IV:**

Laplace Transforms- Definitions-

$L(e^{at})$   $L(\cos at)$ ,  $L(\sin at)$ ,  $L(t^n)$  where n is a positive integer – Basic theorem in Laplace transform (Statement only)  $L(e^{-st}\cos bt)$ ,  $L(e^{-st}\sin bt)$ ,  $L[e^{-st} f(t)]-L[F(t)$ ,  $L[f(t)]$ ,  $L[f'(t)]$

**UNIT V:**

Inverse Laplace transform related to the above standard forms- solving second order ODE with constant coefficients using Laplace transforms and simultaneous equation, variable coefficients. Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions change of interval — Half range series.

**Outcomes:**

Solve an initial value problem for an  $n$ th order ordinary differential equation using the Laplace transform.

Solve a Cauchy problem for the wave or diffusion equations using the Laplace,

**Text Books**

Differential Equations - S. Narayanan

Differential Calculus T.K.M Pillai & S. Narayanan

Differential Calculus - M.L. Khanna

<b>Course Code</b>	<b>Allied Paper - IV</b> <b>3D Vector Calculus</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19112AEC26A</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Aim and Objective:**

The course is designed to lay a strong foundation of Geometry and Vector Calculus.

**UNIT – I**

Vector differentiation – velocity & acceleration vectors- Gradient of a vector directional derivative - unit normal vector- tangent plane

**Unit- II**

Divergence- Curl – Solenoidal&Irrotational vector- Double operators – Properties connecting grad, div & curl of a vector.

**Unit –III**

Vector integration –Line integrals – Conservative force field – Scalar field- Scalar potential- work done by d Force- Surface integrals – Volume integrals.

**Unit –IV**

Gauss divergence theorem ,Stoke’s theorem (statement, application & verification only)

**Unit –V**

Equation of sphere – Tangent plane – plane section of a sphere – Finding the centre& radius of the circle of integration – sphere through the circle of integration (only problem in all above)

**Outcomes:**

- Vector calculus plays an important role in deferential geometry and in the
- study of partial deferential equations. It is used extensively in physics and
- engineering, especially in the description of electromagnetic ends, gravitational elysian uid dynamics.

**Text Book**

Analytical Geometry (3D) & Vector calculus, T.K. Manickavasagem Pillai, , New Gamma Publishing House, 1991

<b>19120SEC02AL</b>		<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

### **MS –EXCEL**

1. Prepare the addressing methods in excel
2. Prepare an Excel Document using different type of Functions.
3. Draw a Graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark List for the Students.
6. Prepare a Worksheet for a Company.
7. Prepare an Inventory Report for a Shop.
8. Prepare an Electricity Bill for the Domestic Customers.

<b>Course Code</b>	<b>Skill Based Elective -II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19160SEC01B</b>	<b>Self Development</b>	<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

### **UNIT I**

#### **Self -Assessment**

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

### **UNIT II**

#### **Self- Management**

Managing Time, Managing Stress, Conflict Management

<b>Course Code</b>	<b>Communicative English-II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19111SEC02L</b>		<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To learn about the auxiliary and the models
- To understand the different tenses and use it in sentences
- To know where to use and where not to use the articles
- To familiarize with the participle

**Outcome:**

- Understand grammar

**UNIT –I**

Auxiliaries

**UNIT –II**

Modals

**UNIT –III**

Tenses-Simple, Perfect

**UNIT –IV**

Tenses-Continuous, Perfect continuous

Nine Short Stories	-SteuartH.King	Blackie Books
One-Act plays of Today	-T.Prabhakar	Emerald Publishers

<b>Course Code</b>	<b>Core Paper - III</b> <b>Heat and Thermodynamics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC33</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

To develop the ideas of classical thermodynamics

To deepen the appreciation of the link between the microscopic properties of individual atoms or other particles and the macroscopic properties of many-body systems formed from them

To demonstrate the power of statistical methods in physics

**Objectives:**

Demonstrate an understanding of the first and second laws of thermodynamics, and of the concept of entropy.

Explain and derive the fundamental thermodynamic relation.

**Unit – I: Thermodynamics**

Transport Phenomenon – Viscosity- Thermal conductivity – Diffusion – Experimental confirmation of kinetic theory – Zeroth law of thermodynamics – First law of thermodynamics – Heat engines – Reversible and irreversible process – Carnot’s theorem – Second law of thermodynamics – Entropy – Change of entropy in reversible and irreversible processes.

**Unit – II: Low Temperature**

Joule – Thomson’s effect – Porus plug experiment – Liquefaction of gases – Adiabatic expansion process – adiabatic demagnetization – practical application of low temperature – Refrigerating mechanism – Electrolux refrigeration – Air conditioning machines.

**Unit – III: Radiation**

Radiation – Stefan’s law – Boltzmann law – Black body – Rayleigh radiation – Rayleigh-Jeans law – Stefan fourth power law – Pyrometry – Solar constant – Sources of solar energy .

**Unit – IV: Specific Heat**

Specific heat of solids – Dulong and Petit’s law – Einstein’s theory of specific heat – Debye’s theory – Specific heat of gases – Variations of specific heat of Diatomic gases – Quantization of various contributions to energy of a diatomic molecules.

**Unit – V: Statistical Physics:**

Quantum statistics of identical particles – M.B statistics – Ideal gas - B.E statistics – Specific heat - F.D. Statistics – Richardson equation –Comparison of M.B,B.E and F.D statistics.

**Learning Outcomes:**

Use the formalism of thermodynamics, including the thermodynamic potentials and Maxwell's relations, and apply these tools to simple systems in thermal equilibrium.

Explain the basic concepts of statistical mechanics, including the derivation of the general formula for entropy in terms of the ensemble partition function.

Explain the statistical origin of the second law of thermodynamics; and

Construct a partition function for a system in thermal equilibrium and use it to obtain thermodynamic quantities of interest.

**Books for Reference:**

- 1) Heat and Thermodynamics – J.B. Rajam and C.L. Arora.
- 2) Thermodynamics and Statistical Physics – Sharma and Sarkan.
- 3) Heat and Thermodynamics – Brijlal and Subramanian.
- 4) Statistical Mechanics – Satyaprakash and C. Agarwal.

<b>Course Code</b>	<b>Core Practical – III Heat and Thermodynamics Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC34L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

### **List of Experiments**

- 1) Sonometer – Verification of laws.
- 2) Stokes method – Viscosity of highly viscous liquid.
- 3) P.O. Box – Temperature coefficient.
- 4) Potentiometer – Calibration of high range voltmeter.
- 5) Spectrometer – i-d curve.
- 6) Joule’s calorimeter – Specific heat capacity.
- 7) Study of logic gates – discrete components.
- 8) Potentiometer – Calibration of ammeter.
- 9) Spectrometer – Grating – normal incidence method.
- 10) Emissive power of a surface – Spherical calorimeter.

<b>Course Code</b>	<b>Allied Paper -II</b> <b>Inorganic, Organic and Physical</b> <b>Chemistry- I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19114AEC35</b>		<b>6</b>	<b>0</b>	<b>0</b>	<b>5</b>

### **UNIT- I : Polar effect:**

Inductive effect +I and – I groups, relative strength of – foamic , acetic and propionicacids – acetic and chloroacetic acids – ammonia and methyl amine. Resonance – resonating structure of benzene, butadiene and COOH groups – conditions – applications (resonance energy and stability). Acidic & basic properties of phenol & aniline. Hyperconjugation. - consequence of hyperconjugation. Steric effects – Steric accelerated reaction and steric inhibited reaction.

### **UNIT –II : Industrial chemistry**

Fuel gases – Watergas, products gas, L.P.G gas, Gobar gas and natural gas. Fertilizers – NPK and mixed fertilizers, micronutrients, and their role in plant life and biofertilizers, soap and detergents an elementary idea about preparation cleaning action of soap detergents.

### **UNIT III : Aromatic compounds :**

structure, stability, resonance and aromaticity of benzene. Substitution reactions, Nitration, Halogenation and Alkylation Naphthalene Isolation, Synthesis, properties, and structural elucidation and uses .Organic compounds: Benzoin, Perkin, Cannizzaro, Claisen reactions. Chemotherapy: Definition and uses of Antibiotic, Analgesic Antibacteria, Antiviral, Antidiabetic, Antihypertensive, Antiseptic and disinfectant, Antimalarial- Anaesthetics – local and general.

### **UNIT –IV :Energetic:**

Review first law of thermodynamic state and path functions need for the second law Carnot cycle and thermodynamic scale of temperature spontaneous and non spontaneous process and Third law.

### **UNIT – V : Chemical kinetics:**

Order of reactions and their determinations. Activation energy, effect of temperature on reaction rate. Catalysis Types, mechanism of catalytic reactions, industrial applications.

## **POWER POINT**

1. Create a slide show presentation for a Seminar (choose your own topics)
  - a. Enter the Text in the Outline View
  - b. Create Non-Bulleted and Bulleted Text
2. Create a slide show presentation for a Science Exhibition
  - a. Create Non-Bulleted and Bulleted text
  - b. Apply appropriate Text Attributes
3. Create slide show presentation for an Invitation
  - a. Insert an Object from a Bitmap File
  - b. Apply appropriate Text Attributes
  - c. Rotate the Object to 45 degree
  - d. Apply Shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all Students
  - a. Use Bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different Presentation Template and different Transition Effect for each slide
  - c. Use different Text Attributes in each slide
5. Create a slide show presentation for a Shop Advertisement to be open shortly
6. Create a slide show presentation to display Percentage of Sales in each quarter for the any Vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for Tourists Places
8. Create a slide for Calendar using appropriate Text attributes and insert an object from a Bitmap file

<b>Course Code</b>	<b>Skill Based Elective-III</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19160SEC03B</b>	<b>Interpersonal Relations and Social Responsibilities</b>	<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

### **UNIT I**

#### **Interpersonal Relations**

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

### **UNIT II**

#### **Ethics and Social Responsibilities**

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

<b>Course Code</b>	<b>Communicative English-III</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19111SEC03L</b>		<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To familiarize with the clauses and phrases
- To learn the different degrees of comparison
- To change a sentence from active to passive and vice versa
- To know where to use punctuations
- To frame sentences
- To know the features, process, forms and barriers of communication

**Outcome:**

- Understand grammar

**UNIT –I**

Clauses

Phrases

**UNIT –II**

Degrees of comparison

**UNIT –III**

Active and Passive

**UNIT –IV**

Communication

Characteristics -Process -Forms - Barriers

**UNIT –V**

Punctuation

Forming sentences

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop communicative skill
- Read and comprehend literature

**UNIT –I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

**UNIT – II**

Flowchart

Proposals

**UNIT – III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT –V**

Definition

Writing for and against a topic.

English for Enrichment -Devaraj Emerald Publishers  
 Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Sub. Code	Core Paper - IV Optics	L	T	P	C
19113AEC43		5	0	0	4

### Aim:

To introduce geometric optics and the use of ray diagrams using lenses and mirrors.  
To understand how simple optical instruments work.

### Objectives:

Produce ray diagrams to predict the position and size of the image produced by simple lenses. Measure the focal length of a simple convex lens by producing an image of a distant object. Calculate the focal length of a simple lens by making measurements of image and object distance and using the lens equation.

#### Unit – I: Geometrical Optics

Thick lens – Principal foci and principal points – Thick lens formulae – Power of a thick lens – Nodal points – Optical centre of a lens.

Chromatic , chromatic combination of lenses, Aberrations: Spherical aberration – Methods of reducing spherical aberration – Coma – Aplanatic surface – Astigmatism – Curvature of the field.

#### Unit – II: Optical Instruments

Kellner's eyepiece – Ramsden's eyepiece – Huygen's eyepiece. Rayleigh's criterion, Resolving power of Optical Instruments: Resolving power – Resolving power of Telescope, Microscope, Prism and Grating.

#### Unit – III: Interference

Colours of thin films – Air wedge – Newton's rings – Brewster's fringes – Michelson Interferometer and its applications – Fabryperrot Interferometer – Interference filter – Stationary waves in light – Colour photography – Holography.

#### Unit – IV: Diffraction

Fresnel's diffraction – Diffraction at a circular aperture, straight edge – Fraunhofer diffraction at a single slit – Double slit – Diffraction pattern – Transmission grating with theory – Experimental determination of wavelength – Oblique incidence.

#### Unit – V: Polarization and Fibre optics

Nicol prism – Nicol prism as an analyzer and polarizer – Huygen's explanation of double refraction in Uniaxial crystal – Elliptically and circularly polarized light – Production and detection – quarter wave plate and half wave plate – Basic ideas of optical fibre – Numerical aperture – Stepped and graded index fibres – Fibre optic communication (Block diagram only).

### Learning Outcomes:

Generate ray diagrams to predict the position and size of images in optical systems.  
Understand and use the mathematical formulae to predict the position and size of images produced by simple lenses.  
Measure the focal length of lenses and mirrors using various methods.  
Understand the origin of spherical aberration in lenses.

**Books for study:**

- 1) Text Book of Optics – Brijlal and Subramaniam , S. Chand & Co.,
- 2) Optics by Khanna and Gulati.
- 3) Fibre Optic Communication systems – Subirkumarsarkar, S.Chand& Co.,

<b>Sub. Code</b>	<b>Core Practical– IV Optics Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC44L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

### List of Experiments

- 1) CRO – Study of waveforms – Lissajous figures – determination.
- 2) Potentiometer – Temperature coefficient of resistance.
- 3) FET Characteristics.
- 4) Field along the axis of a coil – determination of magnetic moment.
- 5) Spectrometer – Grating – Minimum deviation method.
- 6) Potentiometer – EMF of a thermocouple.
- 7) Spectrometer - i-i' curve.
- 8) Koenig's method – Uniform bending – Young's modulus.
- 9) Cauchy's Constant determination.
- 10) IC Regulated power supply.

<b>Course Code</b>	<b>Allied Paper-II Inorganic, Organic and Physical Chemistry- II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19114AEC45</b>		<b>6</b>	<b>0</b>	<b>0</b>	<b>5</b>

### **UNIT – I : Amino acids and proteins**

Amino acids- Classification based on structure and essential and non - essential amino acids – preparation and properties – peptides – (elementary treatment) proteins – Classification, based on physical properties and functions. Structure of proteins – primary and secondary (elementary treatment)

### **UNIT – II: Coordination chemistry**

Nomenclature of mononuclear complexes – Werner Sidgwick, and Pauling's theories – Chelation and its industrial importance to EDTA. Biological role of hemoglobin and chlorophyll Metallic bond Electron gas, Pauling and band theories. Semiconductors intrinsic, n- type and p-type.

### **UNIT –III: Synthetic polymers:**

Teflon, Alkyl and epoxy resins, poly esters – General treatment only. Heterocyclic compounds – Furan, Thiophene, pyrrole and pyridine – preparation and properties of pyridine and pyrrole – Quinoline and isoquinoline.

**Stereoisomerism** – lactic and tartaric acid – racemic mixture and resolution. Geometrical keto – enol tautomerism Meaning of E, Z, R, S, D, L, meso, (+), (-) in stereochemistry.

### **UNIT- IV : Electrochemistry:**

Specific and equivalent conductivities – their determination – Oswald's dilution law, Kohlrausch law.  $P_H$  and Buffer: Importance of pH and buffers in living systems –  $P_H$  determination by colorimetric and electrometric methods.

### **UNIT –V : Surface chemistry:**

Emulsion, gels preparation, properties and applications. Electrophoresis, Chromatography – Column, paper and thin layer chromatography.

Course code	Allied-II Practical-II Volumetric Analysis Lab- II	L	T	P	C
19114AEC46L		0	0	3	2

I - A study of the reactions of the following organic compounds:

- a. Carbohydrate,
- b. Amide,
- c. Aldehyde,
- d. Ketone,
- e. Acid,
- f. Phenol.

The students may be trained to perform the specific reactions like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional group present and record their observations.

II - Preparation (Single stage) involving

- a. Nitration,
- b. Hydrolysis
- c. Bromination.

Course Code	Skill Based Elective	L	T	P	C
19120SEC04AL	Package Lab -IV	0	0	2	1

### MS-ACCESS

1. Create a Database with a simple Table
2. Create a Database for Students Mark List using Queries.
3. Create a Database for the employees in an organization and sort by their date of joining.
4. Create Queries to Select Records that matches specific condition.
5. Create Relationships among the different Tables.
6. Create Queries using Built-in Functions.
7. Develop Forms to enter data in to the Student Marks Database
8. Develop Forms to enter data in to the Electricity bill Database.

Course Code	Skill based Elective -IV	L	T	P	C
19160SEC04B	Etiquette and Interviewing Skills	0	0	2	1

### **UNIT I** **Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

### **UNIT II** **Interviewing Skills**

Researching the job-Researching the company -Questions to research the company-Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

<b>Course Code</b>	<b>Communicative English-IV</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>

A Practical English Grammar

English Grammar

Technical Communication

-A.J Thomson and A.V.Martinet

-Wren and Martin

-Meenakshi Sharma &Sangeetha Sharma

<b>Course Code</b>	<b>Environmental Studies</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>191ENVSTU</b>		<b>2</b>	<b>0</b>	<b>0</b>	<b>2</b>

### **Aim:**

Provide MESM students the opportunity to formulate learning outcomes for their degree program through interaction with URI faculty and staff involved in the six different MESM advising tracks as well with URI faculty and staff working in environmental science and management.

### **Objectives**

The fundamental objective of the course is to introduce new Master of Environmental Science and Management (MESM) students to the opportunities and structure of the degree program. Specifically, the course will:

#### **UNIT-I**

**The Multidisciplinary Nature of Environmental Studies** – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources**- Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

#### **UNIT-II**

**Ecosystems**- Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

#### **UNIT-III**

**Biodiversity and its Conservation**– Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

#### **UNIT-IV**

**Environmental Pollution**– Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

#### **UNIT-V**

**Social Issues and the Environment**- From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - **Human Population and the Environment.**

**Learning outcomes:**

Provide MESM graduate students the opportunity to identify and develop professional internships (EVS 597) through interactions with professionals representing environmental agencies, nongovernmental organizations, or private firms.

**TEXT BOOK:**

1. "ENVIRONMENTAL STUDIES", K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

<b>Course Code</b>	<b>Core Paper - V</b> <b>Electricity And Magnetism</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC51</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

To develop a basic understanding of electric and magnetic fields in free space using the integral forms of Maxwell's laws.

**Objectives:**

Describe the electric field and potential, and related concepts, for stationary charges.  
Calculate electrostatic properties of simple charge distributions using Coulomb's law, Gauss's law and electric potential.

**Unit – I: Electrostatics**

Coulomb's law – electrical images – Electric intensity and potential due to an earthed conducting sphere, Different case, applying the principle of electrical images – Electrometers: quadrant electrometers.

**Unit – II: Magnetic Properties of Materials**

Definitions – IH and BH curves for a magnetic material, Magnetometer method, Ballistic galvanometer method – Hysteresis –coercivity –retentivity – loss of energy per cycle – Difference in the magnetic properties of iron and steel – Magnetic circuit – Magnetic circuit of an iron ring with small air gap.

**Unit – III: Chemical effects of electric current**

Faraday's law's of electrolysis – Ionic velocities and Mobilities – Calculation and experimental determination of ionic mobilities – Transport numbers.

Thermo electricity – Peltier coefficient – Thomson coefficient – Application of thermodynamics to a thermocouple and Relation between Peltier and Thomson coefficients – Thermo electric diagrams – Uses.

**Unit – IV: LCR Circuits**

Determination of Self inductance by Rayleigh method – DC circuits: Growth and decay of current in a circuit containing resistance and inductance – Growth and decay of charge in a circuit containing resistance and capacitor – Application of electromagnetic induction – Flux meter.

**Unit – V:**

AC Bridges: Owen's bridge – Anderson's bridge – Electromagnetic theory – Maxwell's equations – derivation – Propagation of energy – Poynting vector.

**Learning Outcomes:**

Describe the magnetic field for steady currents and moving charges.

Calculate magnetic properties of simple current distributions using Biot-Savart and Ampere's laws.

Describe electromagnetic induction and related concepts, and make calculations using Faraday and Lenz's laws.

Describe the basic physical content of Maxwell's laws in integral form.

**Books for Reference:**

- 1) Electricity and Magnetism – Brijlal & Subramaniam.
- 2) A text book of Electricity & Magnetism – K.K. Tiwal

<b>Course Code</b>	<b>Core Paper - VI</b> <b>Atomic Physics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC52</b>		<b>4</b>	<b>1</b>	<b>0</b>	<b>3</b>

### **Aim:**

This course will introduce students to the fundamentals of atomic physics and rudimentary nuclear physics. It aims to provide a coherent and concise coverage of traditional atomic and physics.

### **Objectives:**

Important topics of current research interest will be also discussed, such as laser cooling and trapping which plays an important role in the realization of Bose-Einstein condensate in atomic vapors.

#### **Unit – I: Positive ray analysis**

Properties –  $e/m$  of positive rays: Thomson's parabola method – Aston and Bain bridges – Determination of critical potential – Franck and Hertz's experiment.

#### **Unit – II: Photo Electricity**

Photo electric emission – laws – Lenard's experiment – Richardson and Compton experiments – Einstein's photoelectric equation – Experimental verification of Einstein's photoelectric equation by Millikan's experiment.

#### **Unit – III: Vector atom model**

Various quantum numbers, L-S and j-j couplings – Pauli's exclusion principle – electronic configuration of elements and periodic classification – Magnetic dipole moment of electron due to orbital and spin motion – Bohr magneton Stern and Gerlach experiment.

#### **Unit – IV: Fine structure of special Lines**

Special terms and notations – Selection rules – Intensity rule and interval rule – Fine structure of sodium D lines – Alkali spectra – Fine structure in Alkali spectra.

Spectrum of Helium – Zeeman effect – Larmor's theorem – Debye's quantum mechanical explanation of the normal Zeeman effect – Anomalous Zeeman effect – (Qualitative study Only).

#### **Unit – V: X – Rays:**

X – Rays – Bragg's law – Bragg's, X-Ray spectrometer – Origin and analysis of continuous X – ray spectrum and characteristic X – ray spectrum – Moseley's law and its importance – Compton effect – derivation of expression for change in wavelength – its experimental verification.

### **Learning Outcomes:**

Explain how light interacting with atom; the working principle of laser trapping and cooling  
Recognize the general features of atomic/nuclear spectroscopy

### **Books for Reference:**

- 1) Modern Physics by R. Murugesan.
- 2) Modern Physics by J.B. Rajam
- 3) Atomic and Nuclear Physics – N. Subramaniam and Brijlal.

<b>Course Code</b>	<b>Core Paper - VII</b> <b>Basic Electronics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC53</b>		<b>4</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Aim:**

Electronic systems are built with components like resistance, capacitance, diodes, Transistors, etc. The intention of the course is to create awareness about the principle and

**Objectives:**

Working of the commonly used components in electronic systems. Upon completion of the Course the student is expected to be able to identify, use and check various electronic components.

**Unit – I: Semiconductors**

Introduction – Pure semiconductor – Impurity semiconductor – Fermi level in semiconductor – Hall effect – Junction diodes – PN Junction – Biased PN Junction – Volt Ampere characteristic of a PN Junction – Zener diode – Tunnel diode.

**Unit – II: Transistors**

Junction Transistor – Transistor construction – Modes of operation of a transistor –  $\alpha$  and  $\beta$  of a transistor – Relation – static characteristic in CB and CE modes – Transistor amplifier – Transistor Biasing.

**Unit – III: Special Semiconductor Devices**

Field effect transistor – FET parameters – Comparison between FET and Transistor – SCR – UJT.

**Unit – IV: Amplifiers**

Voltage and Power amplifiers: R-C coupled Transistor amplifier – Power amplifier – Class A, Class B and Class C power amplifier – Push pull amplifier – Effect of negative feedback.

**Unit – V: Oscillators**

Types of Oscillators – Concept of feedback oscillator – Hartley – Colpitts - Phase shift oscillator – Tuned collector oscillator – Wien Bridge oscillator.

**Learning Outcomes:**

- Students will be able to explain basic circuit concepts and responses.
- Will be able to do linear modeling of passive elements and sources.
- Will be able to use analytical techniques in resistive circuits energized by direct current voltage and current sources.

**Books for Reference:**

- 1) Principles of Electronics – V.K. Metha
- 2) A text book of Applied Electronics – R.S. Sedha

<b>Course Code</b>	<b>Core Practical – V Basic Electronics Lab</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC54L</b>		<b>0</b>	<b>0</b>	<b>3</b>	<b>2</b>

### **List of Experiments**

- 1) M and H – Absolute determination using deflection and vibration magnetometer.
- 2) Zener regulated power supply – percentage of Regulation.
- 3) Logic gates, IC- Version.
- 4) Universality of NOR gates.
- 5) Verification of Logical Expressions
- 6) Hartely oscillator – Transistor.
- 7) Universality of NAND gates.
- 8) Operational Amplifier – Adder and Subtractor.
- 9) 8-bit addition and subtraction using microprocessor 8085.
- 10) 8-bit multiplication and division using microprocessor 8085.

<b>Course Code</b>	<b>Discipline Specific Elective -I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19113DSC55A	<b>Energy Physics</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

To understand the physical background and mechanisms associated with power generation and related issues.

**Objectives:**

Understand the forms of energy, its production, transport and storage

Understand basic nuclear physics and interactions with matter

**Unit – I: Non- Renewable energy sources**

World Energy Futures – Energy Sources and their Availability – Coal – Oil – Natural gas – merits and demerits.

**Unit – II: Renewable Energy Sources**

Solar energy – nature of solar radiation – solar constant – Determination of Solar constant – Solar water heaters – Solar cooling – Solar ponds – Solar cookers – Water desalination.

**Unit – III: Other renewable energy sources**

Bio mass energy – gobar gas plants – geothermal energy – wind energy – Wind mill – Types of Wind mills – ocean thermal energy conversion (OTEC) – Energy from waves and tides.

**Unit – IV: Energy Storage**

Energy storage systems – Mechanical Energy storage – Compressed Air storage – Electrical storage – Thermal energy storage.

**Unit – V: Impacts of Non-conventional energy**

Energy consumption in domestic, Industrial- Transportation and Agricultural sectors – Energy options for the developing countries – Impacts due to non conventional energy sources – global warming. and its impacts.

**Learning Outcomes:**

Understand the conditions necessary for sustainable chain reactions in fissile material

Understand the design criteria for the control of a nuclear reactor

Understand the principles of nuclear fusion useful in power generation and stellar fusion

Understand physical ideas and issues associated with renewable forms of energy

**Books for Reference:**

- 1) Solar energy utilization – G.D. Rai.
- 2) Solar energy – S.P. Sukhatme

Course Code	Discipline Specific Elective -I	L	T	P	C
19113DSC55B	Laser Physics	5	0	0	4

**Objective:**

To introduce the physical and engineering principles of laser operation and their applications.

**UNIT- I: Fundamentals of LASER**

Spontaneous emission – Stimulated emission – Meta stable state – Population inversion – Pumping – Laser Characteristics

**UNIT II Production of LASER**

Helium – Neon Laser – Ruby Laser – CO2 Laser – Semiconductor Laser

**UNIT III Industrial Applications of LASER**

Laser cutting – Welding – Drilling – Hologram – Recording and Reconstruction of hologram.

**UNIT IV Lasers in Medicine**

Lasers in Surgery – Lasers in ophthalmology – Lasers in cancer treatment

**UNIT V Lasers in Communication**

Optic fibre communication – Total internal reflection – Block diagram of fibre optic communication system – Advantages of fibre optic communication.

**Books for study:**

1. N. Avadhanulu , An introduction to LASERS, S. Chand & Company,2001.

Books for References:

1. William T. Silvast, Laser fundamentals, University Press, Published in South Asia by Foundation books, New Delhi, 1998.

### **PHOTOSHOP**

1. Design a Visiting card with Background Image.
2. Design an Identity card with Photo.
3. Design a Letter pad with LOGO.
4. Create an Advertisement in a News paper for a Shop.
5. Design a Calendar with Pictures.
6. Design a Magazine using different type of Tools.
7. Create a Photoshop image using Lasso Tool.
8. Design a CD Cover.

<b>Course Code</b>	<b>Skill based Elective -V</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19160SEC05B</b>	<b>Leadership Skills and Body Language</b>	<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

## **UNIT I**

### **Leadership Skills**

Leaders: their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

## **UNIT II**

### **Body language**

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

<b>Course Code</b>	<b>Communicative English-V</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19111SEC05L</b>		<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>

**Aim:**

- To develop communicative skills

**Objective:**

- To develop vocabulary
- To comprehend meaning from context
- To involve in a dialogue
- To note the important points from the text.
- To write a letter
- To understand the subject verb agreement
- To teach the different genders

**Outcome:**

- Develop communicative skills

**UNIT –I**

Correct the spelling mistakes

Comprehension

**UNIT –II**

Find the odd one out

Picture description

**UNIT –III**

Abbreviations

Note making

**UNIT –IV**

Gender

Dialogue writing

**UNIT –V**

Acronyms

Concord

-Meenakshi Sharma &Sangeetha Sharma

<b>Course Code</b>	<b>Core Paper - VIII Digital Electronics And Microprocessors</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC61</b>		<b>4</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Aim:**

To achieve a basic understanding of logic systems and to use this understanding in simple circuit designs.

**Objectives:**

To show familiarity with basic logic gates, Boolean algebra and binary numbers.

To understand how particular logical functions may be implemented and to design systems

To implement simple truth tables.

To understand how binary addition may be implemented using logic gates.

**Unit – I: Number systems and codes**

Decimal, Binary, Octal and Hexa decimal systems – Conversion from one to another – Binary addition, subtraction, multiplication, division, complements – Codes: BCD, Weighted, excess three, Gray code.

**Unit – II: Boolean Algebra**

Fundamental concepts of Boolean algebra – Basic gates and universal gates – De Morgan’s theorem: Simplification of expressions – Karnaugh map, Sop - Pas.

**Unit – III: Logic Design**

Half adder – Full adder, Subtractors, Multiplexers, Demultiplexer, Flip-Flops: R-S Flip Flops, J-K Flip Flop, D-Flip Flop, T-Flip Flop, Master Slave – Shift Registers – Counters – BCD – Up - Down.

**Unit – IV: Memory elements**

Memory cell - RAM – types – ROM: ROM, PROM, EPROM, EEPROM – Magnetic Disk Memories – Magnetic tapes – Compact disc.

**Unit – V: Micro processor**

Organization of 8085 – working – Machine language – Assembly language – Addressing mode, Instruction set – Programming for 8 – bit addition , subtraction, Finding a Largest number in an array – Finding a smallest number in an array.

**Learning Outcomes:**

understand latches and simple memory devices.

appreciate the progression from latches to flip-flops and understand the operation of the J-K flip-flop.

be able to use and predict the behaviour of simple circuits involving J-K flip-flops.

understand excitation tables and be able to use them to design simple cyclic circuits.

**Books for Reference:**

- 1) Digital Principles and application – Albert Paul Malvino and Donald Leach.
- 2) Digital Design – M. Morris Mano.
- 3) Fundamentals of Microprocessors and Microcomputers – B.Ram.

<b>Course Code</b>	<b>Core Paper - IX ELEMENTS OF THEORETICAL PHYSICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113AEC62</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>5</b>

**Aim:**

To learn about the fundamentals of classical formalism

To learn about introduction to quantum mechanics, fundamentals of relativity and astrophysics

**Unit I Lagrangian formalism.**

Mechanics for a system of particle – Constraints – Generalized Co-ordinates – Transformation equations – Configuration space – Principle of virtual work – D’Alembert’s principle – Applications of Lagrange’s equations – Atwood’s machine – Simple pendulum.

**Unit II Hamiltonian formalism**

Phase space – Generalized momentum – Cyclic co-ordinates – Conservation theorem for generalized momentum – Conservation theorem for energy

**Unit III Dual Nature of Matter**

De Broglie concept of matter waves – de Broglie wavelength – Wave velocity and group velocity for the de Broglie waves – Experimental study of matter waves – Davison and Germer experiment – G.P. Thomson’s experiment for verifying de Broglie relation – Heisenberg’s uncertainty Principle – Electron microscope – Gamma ray microscope.

**Unit IV Schrödinger’s wave Mechanics**

Basic postulates of wave Mechanics – Development of Schrödinger wave equation – Time independent and dependent forms of equations – Properties of wave function – Orthogonal and normalized wave function Eigen function and eigen values – Applications of Schrödinger equation – particle in a box- Linear harmonic oscillator – The barrier penetration problem.

**Unit V Photo electric and Compton effects**

Photo electric effect – Lenard, Richardson and Compton experiments – laws of photoelectric emission – Einstein’s photoelectric equation – Millikan’s experiment- Determination of Planck’s constant – photo emissive cell – photo – voltaic cell – photo conductive cell – photo multiplier – Compton effect – Theory – Experimental Verification.

**Learning Outcomes:**

**Books for Reference:**

**BOOKS FOR STUDY**

1. Mechanics and Mathematical Physics – R. Murugesan – S. Chand publications , Edn.2008
2. Modern Physics – R. Murugesan and Kiruthiga Sivaprasath – S. Chand Publications – Multicolor edition – 2008.

**UNIT BOOK CHAPTER/ SECTIONS**

I 1 6.1 6.2 6.3 6.6 6.7 6.10

II 1 10.1 - 10.7

III 2 11.1 11.2 11.3 11.4

IV 2 11.8, 11.10

V 2 1.14, 1.4, 1.8, 1.7, 1.9

**BOOK FOR REFERENCE**

1. Modern Physics – Arthur Beiser – Tata Mc Graw Hill Publications(1998).
2. Astrophysics of the Solar System- K.D.Abhyankar, University Press (India) Private Limited (2012)

### List of Experiments

- 1) LCR Circuit – Series and Parallel.
- 2) Half adder and Half Subtractor.
- 3) Verification of DeMorgan’s Theorems.
- 4) Single stage RC Coupled amplifier – Transistor.
- 5) Astablemultivibrator.
- 6) FET amplifier.
- 7) Full adder.
- 8) Conversion from decimal to hexadecimal system using microprocessor 8085.
- 9) 16 – bit addition using microprocessor 8085.
- 10) Timer Using 555 IC.

<b>Course Code</b>	<b>Discipline Specific Elective -II</b> <b>Material Physics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113DSC64A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

## **Aim**

The subject-specific aims of a degree in materials science are to understand the structure, Properties, processing and performance of the principal classes of materials, and to understand and exploit the relationships between these four aspects of materials.

## **Objectives:**

To understand the design, selection and processing of materials for a wide range of applications in engineering and elsewhere.

### **Unit – I: Crystallographic fundamentals**

Crystal lattice – Primitive and Unit cell – Seven classes of crystals – Bravais lattice – Miller Indices – Structure of crystals – Simple cubic, Hexagonal close packed structure, Face centered cubic structure, Body centered cubic structure – Sodium chloride structure – Zinc Blende structure – Diamond Structure.

### **Unit – II: Crystallography**

Diffraction of X-Rays by Crystals – Bragg’s law in one dimension – Experimental method in X-Ray diffraction – Laue method, Rotating crystal method – Powder Photograph method – Vontaué’s equations.

### **Unit – III: Magnetism**

Different types of magnetic materials – Classical theory of diamagnetism (Langevin’s Theory) – Langevin’s theory of paramagnetism – Weiss theory of paramagnetism – Qualitative explanation of Heisenberg’s interpretation of internal field and quantum theory of ferromagnetism.

### **Unit – IV: Dielectrics**

Fundamental Definitions – Dielectrics – Different types of electric polarization – Frequency and Temperature effects on polarization – Dielectric loss – Local field on internal field – ClausiusMosotti Relation – Determination of Dielectric constant.

### **Unit – V : Modern materials and new materials**

Polymers – Ceramics – Super strong materials – Cermets – Electrets – Metallic glasses – Optical materials – Acoustic materials – Bio materials – Nuclear materials.

## **LearningOutcomes:**

To understand how and why the properties of materials are controlled by structure and bonding at the atomic-scale, and by features at the microstructural and macroscopic levels. To understand how and why the structure and composition of a material may be controlled by processing.

### **Books for Study:**

Material Science – M. Arumugam.

<b>Course Code</b>	<b>Discipline Specific Elective -II Communication Physics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19113DSC64B</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Objective:** To promote scientific temper among students and update the basic functioning of various communication systems.

### **UNIT- I : Radio transmission and reception**

Transmitter-modulation-need for modulation- types of modulation amplitude, frequency and phase modulation- modulation factor-sideband frequencies in AM wave-limitations of amplitude modulation - frequency modulation-block diagram of AM and FM Transmitter. Receiver- demodulation-AM & FM radio receivers-super heterodyne radio receiver.

### **UNIT -II : Fiber Optic Communication**

Introduction –structure of optical fiber –total internal reflection in optical fiber – principal and propagation of light in optical fiber - acceptance angle - numerical aperture – types of optical fibers based on material – number of modes – refractive index profile - fiber optical communication system (block diagram) - fiber optic sensors – Temperature sensor – fiber optic endoscope.

### **UNIT- III: Radar Communication**

Basic radar system -Radar range –Antenna scanning – Pulsed radar system - AScope-Plan position indicator- Tracking radar- Moving target indicator- Doppler effect-MTI Principle- CW Doppler Radar- Frequency modulator CW Radar.

### **UNIT- IV: Satellite Communication**

Introduction – history of satellites – satellite communication system – satellite orbits – classification of satellites – types of satellites – basic components of satellite communication – constructional features of satellites- multiple access – communication package – antenna- power source – satellite foot points- satellite communication in India.

### **UNIT- V: Mobile Communication**

GSM – mobile services- concept of cell – system architecture – radio interface – logical channels and frame hierarchy – protocols – localization and calling – Handover- facsimile (FAX) – application – VSAT (very small aperture terminals) – Modem – IPTV (internet protocol television ) – Wi-Fi - 3G (Basic ideas only).

### **Books for Study:**

1. Metha V.K., Principles of Electronics, S. Chand & Company Ltd., 2013
2. Anokh Singh and Chopra A.K., Principles of communication Engineering, S. Chand & Company PVT. Ltd., 2013.
3. Mani I. P., A text book of Engineering Physics, Dhanam Publications, Chennai42, 2014.

2. Dennis Roddy and John Coolen, Electronic Communication, PHI, 1990.
3. William C.Y. lee, Cellular telecommunication (second edition), Tata Mcgraw hill, 1991.

<b>Course Code</b>	<b>General Elective Journalism</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19111GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim :**

- To acquaint with the basic knowledge of journalism so that it may enthrust the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

**UNIT- II**

News – Definition, Kinds, Elements, Sources

**UNIT- III**

Reporters

**UNIT- IV**

The Editor and the Sub Editor

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

Course code	General Elective	L	T	P	C
19112GEC	Development of Mathematics Skills	4	0	0	2

**Aim:**

- To understand the concepts from the five branches of mathematics

**Objectives**

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Outcomes**

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

<b>Course Code</b>	<b>General Elective Food And Adulteration</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19114GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:** To introduce students to food safety and standardization act and quality control of foods.

### **Objectives:**

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

### **Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

### **Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

### **Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

### **Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

### **Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

### **References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor

<b>Course Code</b>	<b>General Elective Mushroom Technology</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19117GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>2</b>

### **UNIT-1**

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calocybe indica, volvariella volvacea, pleurotus sp. Agaricus bisporus

### **UNIT-II**

Pure culture-preparation of media(PDA and oat meal agar media)sterilization-preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petriplates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

### **UNIT-III**

Cultivation technology:infrastructure,substrates(locally available)polythene bag,vessels,inoculation hood-inoculation loop-low cost stove-sieves-cultural rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy straw,sugarcane trash,maize straw,banana leaves

### **UNIT-IV**

Storage and nutrition:short term storage-long term storage (Scanning,pickles,papads,drying,storage ion salt solutions)-nutrition:proteins,amino acids,mineral elements,nutrition:carbohydrates-crude fiber content,vitamins

### **UNIT-V**

Food preparation, types of foods prepared from mushroom-soup,cutlet,omelette,samosa,pickles,curry,research centres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

### **REFERENCES:**

Course Code	General Elective	L	T	P	C
19120GEC	Web Technology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Objective:**

- To understand and practice mark up languages
- To learn Style Sheet and Frames

**Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
19122GEC	E-Commerce and its Application	4	0	0	2

**Aim:**

To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

**Objectives:**

To be aware of all aspects of communication and information exchange in Electronic Commerce, including:

- Navigation, brokerage, advertising, and catalogue exchange in pre-sales activities.
- Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

**UNIT-I:**

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal

Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

**UNIT-II:**

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script - XML

**UNIT- III:**

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

E-Security: Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

**UNIT-V**

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet baking-History’s lesson about payments: People drive change-digital payment requirements-digital token-based E-

payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stock trading: The high speed alternative.

**Outcomes:**

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

**Reference Book:**

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition

Course Code	General Elective	L	T	P	C
19161GEC	Indirect Taxes	4	0	0	2

**Aim:**

- To acquaint with the knowledge of indirect taxes

**Objectives:**

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

**Outcome**

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax-exempted services from tax - Value of taxable services-Different services on which tax is payable.

**UNIT – V**

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

**Reference Books:**

- Income Tax Law and Practice - N.Hariharan.
- Business Taxation – T.S.Reddy/Hari Prasad Reddy.

<b>Course Code</b>	<b>Skill Based Elective Package Lab -V I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>

### FLASH

1. Drawing and painting original art by using simple objects in flash.
2. Develop a Flash Document by applying different type of Styles in Text with Animations.
3. Create a frame-by-frame animation technique.
4. Develop a program for animation with motion Tweening.
5. Develop a program for animation with shape Tweening.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animation by using Movie Clip and Graphic Symbols.

<b>Course Code</b>	<b>Skill based Elective -VI</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19160SEC06B</b>	<b>Life Skills and other Skills</b>	<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

### **UNIT I**

#### **Life Skills**

Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. - Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket - Occupational Safety , First-aid

### **UNIT II**

#### **Other Skills**

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

<b>Course Code</b>	<b>Communicative English-VI</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19111SEC06L</b>		<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>

**Aim:**

- To develop communicative skills

**Objective:**

- To extract the main ideas from a text
- To understand the meaning of text
- To expand an idea
- To shorten a text
- To develop vocabulary
- To enhance writing skills
- To write simple, compound and complex sentences

**Outcome:**

- Develop communicative skills

**UNIT –I**

Jumbled words

Paragraph writing

**UNIT –II**

Prefix and suffix

Precise writing

**UNIT –III**

Eponyms

Summarizing

**UNIT –IV**

Compound words

Simple, Compound and Complex

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Sc (Physics)curriculum, the following Research Skill Based Courses are introduced in the B.Sc (Physics)curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

#### Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination** : **60 Marks**  
(Essay type Questions set by the concerned resource persons)

#### Blueprint for assessment of student's performance in Research Methodology Courses

- **Continuous Internal Assessment:** **20 Marks**
  - Research Tools( Lab) : 10 Marks
  - Tutorial: 10 Marks

- **Model Paper Writing:** **40 Marks**
  - Abstract: 5 Marks
  - Introduction: 10 Marks
  - Discussion: 10 Marks
  - Review of Literature: 5 Marks
  - Presentation: 10 Marks

- **Semester Examination:** **40 Marks**
- **Total:** **100 Marks**

	<b>Total Credits for the Programme</b>				<b>96</b>

### Discipline specific Electives

Semester	Discipline specific Elective Courses- I
I	a)19213DSC15A- Instrumentation b)19213DSC15B- Crystal Growth Processes
Semester	Discipline specific Elective Courses -II
II	a)19213 DSC25A- Atomic and Molecular Physics b)19213DSC25B- Radiation Physics
Semester	Discipline specific Elective Courses -III
III	a)19213 DSC34A- Non-Conventional Energy Physics b)19213 DSC34B- Photonics Devices and Applications
Semester	Discipline specific Elective Courses -IV
IV	a)19213 DSC43A- Nano Science and Technology b)19213 DSC43B- Non-linear Dynamics

### General Electives

Semester	General Elective Courses
III	a) 19211GEC-Writing for the Media b) 19212GEC-Applicable Mathematics Techniques c) 19214GEC- Green Chemistry d) 19215GEC-Bio-analytical Techniques e) 19220GEC-Internet and Web Design f) 19261GEC- Insurance Services g) 19280GEC-Counselling Psychology

### Credit Distribution (2019)

S.No	Sem	AEC	SEC	DSC	OEC	Research	Others	Total
1.	I	14	2	4	-	1	-	21

<b>Course Code</b>	<b>CORE PAPER – I ADVANCED MATHEMATICAL PHYSICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC11</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn various mathematical concepts and techniques in vector space, groups and functions of special types to solve physical problems

**UNIT – I: MATRIX THEORY**

Definitions of basic matrix theory – Rank of matrix – Inverse matrix – characteristic matrix and characteristic equation of a matrix – Cayley –Hamilton theory – characteristic root and vectors of a matrix [eigen values & eigen vectors] – Diagonalization of matrices.

**VECTOR FIELDS:**

Line, surface and volume integrals – Divergence of vector function – curl of vector function – Gauss divergence theorem – Stokes theorem – Green's theorem – Orthogonal curvilinear coordinate systems: Expression for gradient, divergence, curl and Laplacian.

**UNIT – II: COMPLEX ANALYSIS**

Functions at Complex Variables- Differentiability – Cauchy – Riemann Conditions – Complex Integration – Cauchy's Integral Theorem and Integral Formula – Taylor's and Laurent's series – Residues and Singularities – Cauchy Residue Theorem – Evaluation of Definite Integrals.

**UNIT – III**

Fourier Series – Sine and Cosine Half Range Series – Fourier Transformations – Sine and Cosine Transforms – Parseval's Theorem- Application to Heat and Wave Equation.

Laplace Transform – Convolution Theorem – Solution of Ordinary Equations.

**UNIT – IV**

Gamma and Beta Functions – Series Solution – Legendre, Bessel, Laguerre and Hermite Differential Equations – Rodrigues Formula – Generating Functions – Orthogonality Relations – Important Recurrence Relations.

**UNIT - V: NUMERICAL METHODS**

Principles of Least Square – Curve Fitting – Parabola- Exponential – Solutions of Numerical Algebraic and Transcendental Equations – Newton Raphson Method – solution of simultaneous Linear Algebraic Equations – Gauss Elimination Method – Numerical Integration – Trapezoidal Rule, Simpson's

**1/3 Rule- Solution of Ordinary Differential Equations – Euler’s Method – Second Order and fourth order Runge Kutta Method.**

**Books for Study and Reference:**

1. E. Kreyszig, Advanced Engineering Mathematics. (Wiley Eastern, New Delhi, 1983)
2. G. Arfken and H.J. Weber, Mathematical Methods of Physics.
3. A.K. Ghatak, I.C. Goyal and A.J. Chua, Mathematical physics.
4. W.W. Bell, Special Functions for Scientists and Engineers.
5. Transforms – Goyal Gupta.
6. Numerical methods for scientist and engineers – M.K. Venkatraman.
7. Mathematical Physics – B.D. Gupta.

<b>Course Code</b>	<b>CORE PAPER – II CLASSICAL AND STATISTICAL MECHANICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC12</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn various mathematical techniques of classical mechanics and their applications to physical systems and introduce relativistic dynamics.

**UNIT – I: FUNDAMENTAL PRINCIPLES AND LAGRANGIAN FORMULATION**

Constraints - Generalised Co-ordinates – D’Alembert’s Principle and Lagrange’ Equation – Hamilton Formulation – Lagrange’s Equation of Motion.

**LAGRANGIAN FORMULATIONS – APPLICATIONS:**

Theory of Small Oscillations – Normal Modes – Wave Motion – Wave Equation. Euler Angles – Euler’s Equations – Linear Tri Atomic Molecule.

**UNIT – II: HAMILTON’S FORMULATION**

Hamilton’s Canonical Equation of Motion – Hamilton’s Equation from Variation Principle – Principle of Least Action Poisson Brackets – Invariance of PB Under canonical Transformation Method – Action Angle Variable.

**UNIT –III: NON – LINEAR DYNAMICS**

Regular and Chaotic Motions – Linear and Non-Linear Forces – Dissipative and Conservative Systems – Discrete and Continues Time Dynamical System – Logistic Map – Fixed Point Analysis – Period Doubling Phenomena – Route to Chaos – Characterization of Chaos – Dynamic of MLC Circuits.

**SOLUTION:** Linear and Non – Linear Waves – Solitary – Kdv Equation.

**UNIT – IV: CLASSICAL STATISTICAL MECHANICS**

Macro and Micro States – Statistical Equilibrium – Phase Space and Ensembles – Density Function – Liouville’s Theorem – Maxwell – Boltzmann Distribution Laws – Micro Canonical Ensembles – Ideal Gas Entropy – Partition Function – Principle of Equipartition of Energy - Canonical and Grand Canonical Ensembles.

**UNIT – V: QUANTUM STATISTICAL MECHANICS**

Basic Concepts – Quantum Ideal Gas – Bose Einstien and Fermi Dirac Statistics – Distribution Laws – Sackur – Tertrode Equation – Equation of State – Bose Einstein Condensation.

Ideal Bose Gas – Black Body and Plank’s Radiation – Phonons – Liquid Helium – Degeneracy – Fermi Gas – Pauli’s Para Magnetism.

References:

1. Classical Mechanics – Golstien
2. Classical Mechanics – Gupta Kumar

<b>Course Code</b>	<b>CORE PAPER – III ELECTRONICS AND COMMUNICATIONS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC13</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Aim:**

- To understand the working of advanced semiconductor devices and digital circuits and the utility of OP-AMP and learn the basics of integrated circuit fabrication, applications of timer IC-555 and building block of digital systems.

**UNIT – I: OPTO ELECTRONICS**

LED – applications – Photo emissive devices – Photomultiplier tube – photovoltaic devices – Bulk type photoconductive cell – Photodiodes – Phototransistor – LCD – applications.

**POWER ELECTRONICS**

TRIAC – construction – operation – characteristics – application – DIAC – application – Unijunction transistor (UJT) – equivalent circuit – application.

**UNIT – II: TELEVISION FUNDAMENTALS**

Introduction to Antenna – Current and voltage Distribution – UHF Antenna – Horn Antenna – Wide Band Antenna – Log Periodic Type – Loop Antenna.

Essential of Colour T.V.: Colour perception – Three colour theory – Luminance, Hue and Saturation – Colour T.V. camera – Luminance signal – colour T.V. display tubes – Delta-gun – Gun-in-line – trinitron colour picture tube – NTSC colour T.V. system – PAL colour T.V. system.

**UNIT – III: COMMUNICATION SYSTEMS**

Pulse Modulation – Time Division Multiplexing – Pulse Time Modulation – Pulse width Modulation – Pulse code Modulation – Basic Digital Communication System – Amplitude Shift Keying – Phase Shift keying and Frequency Shift Keying.

**UNIT – IV: FIBER OPTIC COMMUNICATION**

Basic Optical Laws and Definitions – Optic Fiber Modes and Configurations- Wave equation for Step Index Fiber – Graded Index Fiber Structure – Fiber materials – Fiber Fabrications – Double Crucible Method – Attenuation – Lensing Schemes for Coupling – Fiber to Fiber Joints – Optical Fiber Connectors- Optical Source – LED, Laser Diode – Photo Detectors – Noise Detector Responding Time.

**UNIT – V: SATELLITE COMMUNICATION**

Introduction Satellite Communication System – Satellite orbits – Basic Components of Satellite Communication – Constructional Features – Commonly used Frequencies – Communication Package Communication in India. ISDN, LAN, VAN.

**Books for Study and Reference:**

1. Principals of Communication Engineering – Anokh Singh, A.K. Chabra, S. Chand.
2. Electronic Communication System – Kenndy and Davis, Tata McGraw Hill Edition.
3. Optical Fiber Communications – Gerd Keiser, McGraw Hill International Editions.
4. Basic electronics solid state – B.L. Theraja, S. Chand & co.
5. Principals of Electronics – V.K. Metha, Rohit Metha, S. Chand & co Ltd.
6. Monochrome and colour television – R.R. Gultai, New Age International (P) Ltd Publishers, New Delhi.

<b>Course Code</b>	<b>CORE PRACTICAL –I SPECTROSCOPY AND GENERAL ELECTRONICS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC14L</b>		<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Aim:**

- Experimental determination of certain physical constants and its properties.
- Experimental verification of characteristics and applications of electronic components with devices.

**SECTION A**

1. Determination of  $q$ ,  $n$ ,  $\sigma$  by elliptical fringes method.
2. Determination of  $q$ ,  $n$ ,  $\sigma$  by hyperbolic fringes method.
3. Determination of Stefan's Constant.
4. Determination of dielectric constant at a high frequency by Lecher wire.
5. Determination of  $e/m$  of an electron by Thomson's method.
6. Iron Arc spectrum.
7. Copper Arc spectrum.
8. Brass Arc spectrum.

**SECTION B**

1. Feed back amplifier.
2. Characteristics of JFET.
3. Characteristics of UJT.
4. Characteristics of SCR.
5. Characteristics of LDR.
6. Common sources amplifier using FET.
7. Design and study of Bistable multivibrator using 555 timer.
8. Opamp CMRR, inverting and non inverting amplifiers.

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213DSC15A</b>	<b>INSTRUMENTATION</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To understand the concepts and application of electronic Instrumentation in the Medical field.

**UNIT I: DISPLACEMENT MEASUREMENT**

Electrical Method – The Strain Gauge – The LVDT – Capacitance Gauges – Piezoelectric Material – Piezo Electrical Transducers.

**UNIT II: PRESSURE MEASUREMENT**

Manometers – Elastic Types – Bourdon Tubes – Diaphragm Elements – Bellows Elements – Electrical Transducers as Secondary Transducers – Resistive Transducers – Inductive Transducers – Measurements of Low Pressure (Vacuum gauges) - Thermo Couple Vacuum Gauge – Pirani Gauges.

**UNIT III: TEMPERATURE MEASUREMENT**

Resistance Thermometers – Bi Metallic Thermometers - Radiation Pyrometers – Radiation Receiving Elements – Total Radiation Pyrometers – Infra-red Pyrometers – Optical Pyrometers – Measurements of Very High or Stellar Temperature.

**UNIT IV: FLOW MEASUREMENT**

Flow Rate Sensing Elements – Measurement of Flow – Turbine Meters – Electromagnetic Flow Meters - Hot Wire Anemometers – Flow Meter Using Thermistors – Ultrasonic Flow Transducers.

**UNIT V: MEASUREMENT OF LEVEL , THICKNESS AND HUMIDITY**

Electrical Methods – Resistive Method – Inductive Methods – Capacitive Methods – Measurement of Liquid Level with Gamma Rays – Liquid Level Measurement Using Float. Measurement of Thickness: Inductive Methods – Ultrasonic Vibration Methods – Measurement of Humidity.

**Book for Study:**

1. A Course in Electrical and Electronic Measurement and Instrumentation – A.K. Sawhney

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213DSC15B</b>	<b>CRYSTAL GROWTH PROCESSES</b>	<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**AIM:**

To introduce the knowledge on crystal growth and characterization.

**OBJECTIVE:**

To expose the students with theories of nucleation & crystal growth, crystal growth by from solution, melt and vapour phase and their characterization.

**Unit – 1: Crystal growth theory**

Classical theory of nucleation: Gibbs Thomson equation for vapour and solution – Modified Thomson’s Equation for melt – Spherical nucleus – Cylindrical nucleus - Heterogeneous nucleation – cap-shaped nucleus – disc shaped nucleus – Kinetics of crystal growth – Kossel, Stranski, Volmer (KSV) theory – Burton, Cabrera and Frank (BCF) theory.

**Unit – 2: Solution growth**

Low temperature solution growth – Expression of supersaturation – Methods of crystallization – Constant temperature bath – Nonlinear phenomena in KDP family crystals – High temperature solution growth – Principles of Flux growth.

**Unit – 3: Gel growth**

Growth from gel: structure and properties of gel – single diffusion method – Double diffusion method.

**Unit – 4: Melt growth**

Growth from melt: Bridgmann and related technique – Crystal pulling technique – Liquid encapsulated Czochralski technique – Zone melting technique – Skull melting process – Verneuil process.

**Unit – 5: Vapour Growth**

Physical vapour deposition – Chemical vapour transport – hydrothermal growth – low pressure autoclaves - high pressure autoclaves – growth of zinc oxides – growth of garnets Electrocrystalization – electro chemical potential – Nernst relation – Voltametry.

**References:**

1. Crystal Growth processes and methods – P.Ramasamy, P. Santhanaraghavan, KRU Publication.
2. J.C. Brice, The growth of crystals from liquid (North Holland Publishing Co., Amsterdam).

<b>Course Code</b>	<b>CORE PAPER – IV MICROPROCESSOR AND MICROCONTROLLER</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19213SEC21		<b>5</b>	<b>1</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn basic principles of architecture and functioning of microprocessor and microcontroller and programming and interfacing aspects of them.

**UNIT – I: MICROPROCESSOR 8085**

8085 Microprocessor – Bus Architecture – registers – Central processing unit – timing and control unit – Instruction and Data flow – System timings – Examples – Instruction set – Data transfer group – Logical group – Branch group – Stack and I/O control instructions – Addressing modes.

**UNIT – II: ASSEMBLY LANGUAGE PROGRAMS (8085 ONLY)**

Addition – Subtraction – Multiplication – Division – BCD arithmetic – Searching an array for a given number – Choosing the biggest and smallest numbers from a list – Ascending and Descending order – Square root of a number – Time Delay – Square wave generator.

**UNIT – III: MICROPROCESSOR 8086**

Organization of the 8086 Microprocessor – Memory organization – Register structure – Addressing modes in 8086 – Minimum mode and maximum mode – Exception handling in 4086 – Assembler and Multiprocessing – Assembler – Directives and operators – Data definition and storage allocation – Assigning names and expressions – Segment definition – Program definition – Alignment directives.

**UNIT – IV: INTERFACING MEMORY AND I/O DEVICES**

Interfacing memory and devices – I/O and memory mapped I/O – Types of interfacing devices – Data transfer schemes – Programmed and DMA data transfer schemes – Programmable Peripheral Interface (8255 A) – 8253 Timer Interface – DMA controller – Programmable Interrupt Controller (8259) – Programmable communication interface (8251).

**UNIT – V: MICROCONTROLLER 8051**

Introduction of Microprocessor and Micro controllers – Comparison of microprocessor and microcontrollers – 8051 architecture – Internal memory – Input output pins, ports external memory – Addressing modes.

Instruction set of 8051 – Data transfer instruction – Arithmetic instruction – Branch instruction – Bit manipulation instruction.

**Books for Study and Reference:**

1. R. Goankar, Microprocessor Architecture, programming and applications (Wiley Eastern).
2. B. Ram, Fundamentals of Microprocessor and Microcomputers (Dhanapet Rai & Sons).
3. Introduction to Microprocessor – Aditya P. Mathur.
4. Microcomputer System 8086/8088 Family – Yuchngliv and clenn A Gibson Prentice Hall.
5. Microprocessors and Interfacing – Programming and Hardware Douglas V Hall.
6. The 8051 Microcontroller Architecture, Programming & Applications – Kenneth J. Ayla, Penram International Publishing (India).

<b>Course Code</b>	<b>CORE PAPER – V QUANTUM MECHANICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19213SEC22		<b>5</b>	<b>1</b>	<b>0</b>	<b>5</b>

**Aim:**

- To learn the fundamental concepts and certain theoretical methods of quantum mechanics and their applications to microscopic systems.

**UNIT I: SCHRODINGER EQUATION AND GENERAL FORMULATION**

Schrodinger Equation – Physical Meaning and Condition on the Wave Function – Expectation Values and Ehrenfest’s Theorem – Hermiltian Operators and their Properties – Commutation Relation Uncertainty Relation – Bra and Ket Vectors – Schrodiger, Heisenberg and Interaction Pictures.

**UNIT II: EXACTLY SOLVABLE SYSTEM**

Liner Harmonic Oscillator – Solving the one Dimensional Schrodinger Equation – Abstract Operator Method – Particle in a Box-Square Well Potential – Rectangular Barrier Potential – Rigid Rotator – Hydrogen Atom.

**UNIT III: APPROXIMATION METHODS**

Time Independent Perturbation Theory: Non-degenerate and Degenerate Perturbation Theories – Stark Effect – WKB Approximation – Application to Tunneling Problem and Quantization Rules.

Time Dependent Perturbation Theory: Harmonic Perturbation – Transition Probability.

**UNIT IV: SCATTERING THEORY**

Scattering Cross Section – Born Approximation – Partial Wave Analysis.

Angular Momentum: Matrix Representation of J-Spin Angular Momentum – Eigen Values – Addition of Angular Momenta – Clebsch –Gordan Coefficients (Basics Idea only).

**UNIT V: RELATIVISTIC QUANTUM MECHANICS**

Klien-Gordan Equation for a Free Particle and in Electromagnetic Filed – Dirac Equation for a Free Particle. Charge and Current Densities – Dirac Matrices – Plane Wave Solution – Negative Energy States – Spin Angular Momentum – Spin-Orbit Coupling.

**Books for Study:**

1. Quantum Mechanics by L.Schiff - Tata McGraw Hill.
2. A Text Book of Quantum Mechanics by P.M.Mathews and K.Venkatesan - Wiley Eastern.
3. Quantum Mechanics by V.K.Thankappan – Wiley Eastern.
4. Quantum Mechanics by A.Goswamy

<b>Course Code</b>	<b>CORE PAPER – VI CONDENSED MATTER PHYSICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC23</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To learn the basics of crystal structure and underlying theoretical development for the description of certain properties and phenomena of solid states.

**UNIT – I: CRYSTAL STRUCTURE**

Crystal classes – symmetry elements – 2D, 3D lattices – Bravais lattices – Symmetry point groups – Atomic scattering factor – Structure factor.

Defects in solids: Point defect – Line defect – Surface defect – volume defect – effects of crystal imperfections.

**UNIT – II: LATTICE, VIBRATIONS AND THERMAL PROPERTIES**

Vibration of monoatomic lattice – Lattices with two atoms per primitive cell – Quantization of lattice vibrations – Phonon momentum – Inelastic scattering of neutrons by phonons – Lattice heat capacity – Einstein model – Density of modes in one-dimension and three-dimension – Debye model of the lattice heat capacity – Thermal conductivity.

**UNIT – III: FREE ELECTRON THEORY, ENERGY BANDS AND SEMICONDUCTOR CRYSTALS**

Introduction – Free electron gas – sommerfield model – density of electron states – Schottky effect – Photoelectric effect – Photoelectric emission. Band theory: Energy spectra in atoms molecules and gases – Wave equation in a periodic potential – Bloch theorem – Kronig-penney model – Electrical conductivity and Ohm’s law – Motion in magnetic fields – Hall effect – Thermo-electric effect – Peltier effect – Semiconductors – Band gap – Effective mass – Intrinsic carrier concentration.

**UNIT – IV: Diamagnetism, Paramagnetism, Ferro Magnetism And Antiferromagnetism**

Langevin classical theory of diamagnetism and paramagnetism – Weiss theory – Quantum theory of paramagnetism – Demagnetisation of a paramagnetic salt – paramagnetic susceptibility of conduction electrons – Hund’s rules – Kondo effect – Ferroelectric order – Curie point and exchange integral – Temperature dependence of saturation magnetization – Ferromagnetic order – Antiferromagnetic order – Ferromagnetic domains – Origin of domains – Coercive force and hysteresis.

## **UNIT – V: Dielectrics And Ferroelectrics And Superconductivity**

Macroscopic electric field – Local electric field at an atom – Dielectric constant and polarizability – Clausius-Mossotti equation – Polarization catastrophe – Ferroelectric domain – Occurrence of superconductivity – Meissner effect – Thermodynamics of superconducting transition – London equation – Coherence length – BCS theory – Flux Quantization – Type I and Type II superconductors – Josephson superconductor tunneling – DC and AC Josephson effect.

### **Books for Study and Reference:**

1. C. Kerrel, Introduction to Solid State Physics (Wiley Eastern, NewDelhi).
2. N.W. Ashorof and N.D. Mermin, Solid State Physics (Hot. Rinehart and Winston).
3. A.J. Dekker, Solid State Physics, (McMillian, Madras).
4. Gupta and Kumar, Solid State Physics (K. Nath & co., Meerut).
5. M. Arumugam, Material science (Anuradha agencies publishers).
6. S.O. Pillai, Solid State Physics (New Age International, NewDelhi).

<b>Course Code</b>	<b>CORE PRACTICAL – II ADVANCED GENERAL EXPERIMENTS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC24L</b>		<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Aim:**

- Experimental determination of certain physical constants and its properties with the suitable experiments.

**(Any 10 from the following)**

1. Determination of magnetic susceptibility of liquid by Guoy method.
2. Determination of magnetic susceptibility of solid by Guoy method.
3. Determination of magnetic susceptibility of powder sample by Guoy method.
4. Determination of magnetic susceptibility of liquid by quinck's method.
5. Determination of wavelength and thickness of a film by using Michelson's interferometer.
6. Charge of an electron by spectrometer.
7. Polarizability of liquids by finding the refractive index at different wavelength.
8. Determination of wavelength of monochromatic source using biprism.
9. Determination of refractive index of liquids using biprism (scale and telescope method).
10. Determination of specific rotatory power of a liquid using polarimeter.
11. Rydberg's constant using spectrometer.
12. Forbe's method – Thermal conductivity.
13. Laser grating – Determination of wavelength.
14. Optical Fiber – Numerical aperture.
15. Brass Arc spectrum.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-II	L	T	P	C
19213DSC25A	ATOMIC AND MOLECULAR PHYSICS	5	0	0	4

**Aim:**

- To familiarize with the basic principles of various spectroscopic techniques and their applications in the determination of atomic structure, chemical composition and physical properties of materials.

**UNIT - I: Atoms In External Fields And Quantum Chemistry**

Quantum theory of Zeeman, Stark and Paschen Back effect.

**Quantum Chemistry Of Molecules:**

Born – Oppenheimer approximation – Heitler – London theory of hydrogen – Concept of atomic, hybrid and molecular orbital's- LCAO treatment of molecular orbitals of CH<sub>4</sub>, C<sub>2</sub>H<sub>6</sub> and C<sub>2</sub>H<sub>4</sub>- Huckels molecular approximation- Application to butadiene and benzene.

**UNIT – II: Microwave Spectroscopy**

Rotational spectra of diatomic molecules – Rigid rotator – Non rigid rotator – Effect of isotopic substitution – Rotation spectra of polyatomic molecules – linear, symmetric top and asymmetric top molecules – Experimental technique.

**Ir Spectroscopy:**

Vibrating diatomic molecule – Vibrating Rotator – Linear symmetric top molecule – characteristics and group frequencies – Experimental technique.

**UNIT –III: RAMAN SPECTROSCOPY**

Raman effect and Quantum theory of Raman effect - Rotational and vibration Raman shifts of diatomic molecules

**ELECTRONIC SPECTROSCOPY OF MOLECULES:**

Electronic Spectra of Diatomic Molecules – Frank Condon Principle – Dissociation energy and Dissociation products – Rotational fine structure of electronic vibration transitions .

**UNIT – IV: RESONANCE SPECTROSCOPY**

**NMR:**

Basic principles – Classical and Quantum Mechanical Description – Bloch equations – Spin – Spin and Spin lattice relation times – Experimental method – Single coil & double coil methods – high resolution methods.

## **ESR:**

Basic Principle ESR Spectrometer – Nuclear interaction & Hyperfine structure – Relaxation effects – g- factor – characteristics – Free radical studies & biological application.

## **UNIT – V: LASERS**

Emission and absorption of radiation – Einstein relations – absorption of radiation – population inversion – Optical feedback – Threshold conditions – Laser modes – Single mode operation – frequency Stabilization – mode locking – laser applications – Holography – Holographic computer memories – Laser induced nuclear fusion.

### **Books for Study & Reference**

1. C.N. Bannwell – Fundamental of molecular spectroscopy
2. B.P. Straughan & S. Walker – Spectroscopy – Vol -1
3. H.S. Marry & G.K. Metita – Introduction to Modern physics
4. A.K. Chandra, Introductory quantum Chemistry
5. Proble, Sctineducer & Berstein, High Resolution NMR
6. G.M. Barrow, Introduction to Molecular Spectroscopy
7. C.P. Slotcher, Principles of Magnetic Resonance
8. R. Charng, Basic Principles of Spectroscopy.
9. J. Wilson, J.F.B. Hawkes Optoelectronics an introduction, Prentice Hall of India, New Delhi.
10. Pallab Bhattacharya, Semiconductor optoelectronic devices Prentice Hall of India, New Delhi

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-II RADIATION PHYSICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213DSC25B</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

The material in this section is designed to teach the basics of radiological physics, interaction of radiation with matter, basic dosimetric concepts and radiation detectors.

**Unit1: Ionizing & Non ionizing Radiation**

Electromagnetic spectrum- Different sources of Non Ionizing radiation-Radiofrequency, Microwaves, Infrared, Visible and Ultra violet radiation production, physical properties and their interaction with tissues. Radiation quantities and units - Radiometry - particle flux and fluence - energy flux and fluence -Linear and mass attenuation coefficients – Mass energy transfer and mass energy absorption coefficients

**Unit 2: X-Ray Generators**

Discovery- Production – Properties of X-rays – Characteristics and continuous spectra– Design of hot cathode X-ray tube – Basic requirements of medical diagnostics, therapeutic and industrial radiographic tubes – Rotating anode tubes – Hooded anode tubes – Industrial X-ray tubes - Safety devices in X-ray tubes –X ray tubes for crystallography.

**Unit 3: Particle Accelerators**

Particle accelerators for industrial, medical and research application – The Resonant transformer – Cascade generator – Van De Graff Generator – Pelletron – Cyclotron – Betatron Synchro-Cyclotron – Linear Accelerator – Klystron and magnetron –Travelling and Standing Wave Accelerations – Microtron – Electron Synchrotron –Proton synchrotron.

**Unit 4: Interaction of photons with Matter**

Interaction of electromagnetic radiation with matter- Photoelectric and Compton process and energy absorption – Pair production – Attenuation and mass energy absorption coefficients – Relative importance of various processes.

**Unit 5: Interaction of charged particles with Matter**

Classical theory of inelastic collisions with atomic electrons- Energy loss per ion pair by primary and secondary ionization –Dependence of collision energy losses on the physical and chemical state of the absorber - Cerenkov radiation – Electron absorption process – Scattering Excitation and Ionization –Radiative collision - Bremstrahlung – Range energy relation -

**Continuous slowing down approximation(CSDA) – transmission and depth dependence methods for determination of particle penetration – empirical relation between range and energy**

**Books for Reference:**

1. Faiz M. Khan, The Physics of Radiation therapy, Lippincott Williams & Wilkins, Philadelphia, 3rd edition, 2003.
2. W.R. Hendee, Medical Radiation Physics, Year Book Medical Publishers Inc., London, 2003.
3. R. E. Lapp, Nuclear Radiation Physics (Prentice-Hall Inc., New York, 1948).
4. L. Slack and K. Way, Radiations from Radioactive Atoms in frequent use, (United States Government Printing Office, Washington, 1959).
5. K. S. Krane, Introductory Nuclear Physics (John-Wiley, New York 1987).

<b>Course Code</b>	<b>RESEARCH METHODOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213RMC26</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>2</b>

**Aim:**

- To enhance the ability of research work along with document preparation for journal publication.

**UNIT I: Introduction To Research Methodology**

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT II: Database And Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

**UNIT III: Data Analysis And Chemical Packages:**

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis – Chemical Packages – ChemDraw – ChemSketch – ISIS draw – Origin.

**UNIT IV: Thesis And Paper Writing:**

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

**UNIT V: Laboratory Safety And Numerical Methods**

Basic laboratory guidelines – safety equipment – Leaking compressed gas cylinders – electrical safety. Fire – fire extinguishers. Laboratory injuries and treatment. Chemical spills – Mercury and Biohazardous – clean up procedure - Accident management - Disposal of chemicals and glass wares.

Solutions of equations - Simple iterative methods - Newton - Raphson method - Numerical Integration - Simpson's 3/8 rule - Runge Kutta method II order - Solution of

Simultaneous equation - Differentiation - Numerical differentiation with interpolation polynomials.

<b>Course Code</b>	<b>CORE PAPER – VII ELECTROMAGNETIC THEORY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC31</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>6</b>

**Aim:**

- To learn the theory for the fields produced by stationary and moving charge and charged systems and propagation of electromagnetic fields.

**UNIT – I: INTRODUCTION TO ELECTROSTATICS**

Coulomb's law- Electric field – Gauss Law – Scalar potential – Surface distribution of charges and dipoles – Poisson and Laplace Equation – Green's theorem – Dirichlet and Neumann boundary conditions – electrostatic boundary value problems : Methods of Images Illustrations: Point charge in the presence of (i) a grounded conducting sphere. (ii) a charged insulated and conducting sphere.

**UNIT – II: ELECTROSTATICS OF MACROSCOPIC MEDIA**

Multipole expansion – Boundary value problems with dielectric Illustration (i) a point charge embedded at a distance away from a dielectric interface. (ii) Dielectric sphere in a uniform electric field. Molecular polarizability and electric susceptibility Electrostatic energy in dielectric media.

**UNIT – III: MAGNETOSTATICS**

Biot and Savart law – Force between current carrying conductors – Differential equations of magnetostatics and Ampere's law – Vector potential – Force and torque and energy of a localized current distribution in an external magnetic induction – Macroscopic equations.

**UNIT – IV: Electromagnetics**

Faraday's law in induction – Maxwell's displacement current – Maxwell equations Maxwell equations in terms of vector and scalar potentials – Gauge transformations Lorentz gauge, Coulomb gauge – Poynting's theorem – Conservation of energy and momentum for a system of charged particles and electromagnetic fields.

**UNIT – V: Electromagnetic Waves And Wave Propagation**

Electromagnetic waves – reflection – refraction – dispersion and polarization – wave guides – charge particle in electric and magnetic fields – Radiation from moving charges, dipoles and retarded potentials.

**Books for Reference:**

1. J.D.Jackson, Classical Electrodynamics, Wiley Eastern 1988.

<b>Course Code</b>	<b>CORE PAPER – VIII NUCLEAR AND PARTICLE PHYSICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC32</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>6</b>

**Aim:**

- To learn the various aspects of nucleus and its behavior under various conditions.

**UNIT I: BASIC NUCLEAR PROPERTIES**

Nuclear Size, Shape, Mass – Charge Distribution – Spin and Parity – Binding Energy – Semi Empirical Mass Formula – Nuclear Stability – Mass Parabola – Nature of Nuclear Forces – Ground State of Deuteron – Magnetic Dipole Moment of Deuteron – Proton-Neutron Scattering at Low energies – Scattering Length, Phase Shift – Properties of Nuclear Forces – Spin Dependences – Charge Symmetry – Charge Independence – Repulsion at Short Distances – Exchange Forces – Meson Theory.

**UNIT II: Radio Active Decays**

Alpha Emission – Geiger-Nuttal Law – Gamow Theory – Neutrino Hypothesis – Fermi Theory of Beta Decay – Selection Rules – Non-conservation of Parity – Gamma Emission – Selection Rules – Internal Conversion – Nuclear Isomerism – Interaction of Charged Particles and X-rays with Matter – Basic Principles of Particle Detectors – Ionization Chamber – Proportional Counter and G.M. Counters – Solid State Detectors – Scintillation and Semiconductor Detectors.

**UNIT III: Nuclear Reaction And Nuclear Models**

Q-Values and Kinematics of Nuclear Cross Section – Energy and Angular Dependence – Reciprocity Theory – Briet-Wigner Formula – Compound Nucleus – Resonance Theory – Optical Model – Shell Model – Liquid Drop Model – Collective Model.

**UNIT IV: ACCELERATORS AND REACTORS**

Cyclotron – Synchrocyclotron – Betatron Synchrotron – Linear Accelerators – Characteristic of Fission – Mass Distribution of Fragments – Radioactive Decay Process – Fission Cross Section – Energy in Fission – Bohr-Wheeler's Theory of Nuclear Fission – Fission Reactors – Thermal Reactors – Homogeneous – Reactor – Heterogeneous Reactors – Basic Fusion Processes – Characteristic of Fusion – Solar Fusion – Controlled Fusion Reactors.

**UNIT V: ELEMENTARY PARTICLES**

Building Block of Nucleus – Nucleons, Leptons, Mesons, Baryons, Hyperons, Hadrons, Strange Particles – Classification of Fundamental Forces and Elementary Particles – Basic Conservation Laws – Additional Conservation Laws: Baryonic, Leptonic, Strangeness and Isospin Charges/Quantum Numbers – Gell-Mann-Nishijima Formula – Multiplets – Invariance Under Time Reversal (T) Charge Conjugation (C) and Parity (P) – TCP Theorem – Parity Non-conservation in Weak Interactions – CP Violation –

Eight-Fold Way and Supermultiple – SU(3) Symmetry and quark model – Basic Ideas on the Theories of Weak and Strong Interaction.

**Book for Reference:**

1. Nuclear Physics, an Introduction by S.B. Patel – (Wily –Eastern, New Delhi).
2. Concepts of Nuclear Physics by B.L. Cohen – (Tata McGraw Hill, New Delhi).
3. Introduction to Elementary Particles by D. Griffiths – (Wily International, New York).

<b>Course Code</b>	<b>CORE PRACTICAL – III ADVANCED ELECTRONICS LAB</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213SEC33L</b>		<b>0</b>	<b>0</b>	<b>5</b>	<b>3</b>

**Aim:**

- Verification of characteristics and applications of electronic components and devices.

**(Any 12 from the following)**

1. Logic gates – Universality of NAND/NOR gates using IC's.
2. Verification of Demorgans theorems and Boolean Expressions.
3. Astable and bistable and monostable multivibrator using IC 555.
4. Wein's bridge oscillator using IC 741.
5. Construction of dual regulated power supply.
6. Half and Full wave precision rectifier using IC 741.
7. Study of the characteristics of Load cell.
8. Digital to analog converter – R-2R method and weighted method.
9. Study the function of multiplexer and demultiplexer.
10. Study the function of decoder and encoder.
11. Flip flops.
12. Half adder and Full adder (using only NAND gates).
13. Half subtractor and Full subtractor (using only NAND gates).
14. Digital comparator using XOR and NAND gates.
15. Study of counter using IC 7490 (0 - 9).
16. Analog to digital converters – Born approximation method.
17. Calibration of thermistor.
18. Study of the characteristics of Strain gauge.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-III NON CONVENTIONAL ENERGY PHYSICS	L	T	P	C
19213DSC34A		5	0	0	4

**Aim:**

- To learn about geothermal energy, energy from oceans and hydrogen and its applications.

**UNIT – I: Geothermal Energy**

Geothermal Energy – Nature of geothermal fields – Geothermal sources – Hydrothermal resources – Vapour Dominated systems – Liquid dominated systems – Geopressed resources – Hot dry rock resources – Magma resources – Advantages and disadvantages – applications of geothermal energy.

**UNIT –II: Energy From Oceans**

Ocean thermal electric conversion – Open cycle OTEC system – closed cycle OTEC system – Energy from tides – Principle of tidal power – Components of tidal plants – operation methods of utilization of tidal energy – wave energy conversion by floats – High level reservoir wave machine – The Dolphin type wave power machine – Estimate of energy and power in Tidal system – Advantages and Limitations of Tidal power generation.

**UNIT –III: Hydrogen Energy**

Introduction to Hydrogen energy – Properties of Hydrogen – Hydrogen production – Electrolytic production – tank type electrolyzer – Fossil field methods – Coal gasification for the production of Hydrogen – Coal gasification plants – Solar energy methods – Hydrogen Transportation – Safty rules in handling Hydrogen fuel – Hydrogen storage.

**UNIT – IV: MHD Power**

Magneto hydro dynamic power generation (MHD) – Principles of MHD power generation – MHS systems – open cycle systems – closed cycle systems – Liquid metal system – Advantages of MHD.

**UNIT – V: Energy Conservation**

Economic concept of energy – Principles of energy conservation and energy Audit – Different types of Audit – Co-Generation – types of Co-generation – Heat Recuperators – Uses of heat recuperators – Heat generators.

**Books for Study:**

- Non- Conventional Energy Sources – G.D. Rai, Kannah Publication.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-III	L	T	P	C
19213DSC34B	PHOTONICS DEVICES AND APPLICATIONS	5	0	0	4

**Aim:**

- To learn the basic principles and working of lasers, basic processes and features of nonlinear optical materials and fiber optics.

**UNIT – I: SOLID STATE LASERS**

Solid state crystalline and glass Lasers – Advantages – Construction of the Ruby Laser – Mechanism of Excitation of the Ruby Laser – Neodymium Lasers – Nd-YAG Laser Nd-glass Laser – Alexandrite Laser – Fiber Glass Laser – Solid state Tunable Laser – Titanium Dapphire Laser – Colour center Lasers – DPSSL.

**UNIT – II: LIQUID (DYE) AND LASERS**

Geometry of Dye lasers – Pulsed Dye lasers pumped by Flash lamps – Tunable pulsed lasers pumped by other lasers – Tunable continuous Wave Dye lasers – Mode-locked Ring Dye lasers – Mechanism of Excitation of Mode – locked Ring Dye laser – Helium-neon Laser – Argon Ion Laser – Krypton Ion laser – Metal Vapour lasers – Carbon Dioxide Laser – Gas Dynamic Laser – Nitrogen Laser.

**UNIT – III: CHEMICAL, X-RAY AND FREE ELECTRON LASERS**

Hydrogen chloride laser – Hydrogen fluoride laser – X-ray lasers – Free Electron Lasers (FEL) – Characteristics of semiconductor lasers – Semiconductor diode lasers – Heterojunction semiconductor materials – Double Heterostructure Laser – Quantum – well Lasers – Higher power Semiconductor Diode Lasers – Single Mode Lasers – Multimode Lasers – Surface – Emitting Lasers (Sels).

**UNIT – IV: Industrial Applications Of Lasers (Material Processing)**

High Power Gas Lasers – Material Processing with Lasers – Metals and Lasers Interactions – Materials Processing mechanism – Hole Drilling with Lasers – Cutting Process with Lasers - Laser Welding – The Welding Process – Micro Laser Welding – Deep Penetration Welding (High Power laser Welding) Laser Hardening – Marking with Lasers – Wire Striping With laser – Lasers in Nuclear Science – Isotope Separation – Lasers in Spectroscopy – Lasers in Chemistry – Light Detecting and Ranging (LIDAR).

**UNIT – V: Laser Communication / Holography And Its Applications / Medical Science**

Optical Sources for fiber optical communication – Photo (or photon) Detectors – Operation of Optical Receivers – Essential Characteristics of Laser in Fiber Optic Communication – Types of

Holograms – Intensity Distribution in a Hologram – Fourier Hologram – Thick Hologram – Colour Holograms – Computer Holograms – Holographic Microscopy & Applications – Laser Diagnostics – Photomedicine – Lasers in Ophthalmology – Lasers for General Surgery – Lasers In Dermatology – Cardiology – Lasers In Dermatology – Cardiology – Lasers In Density – Lasers Used in Medicine.

<b>Course Code</b>	<b>GENERAL ELECTIVE COURSE WRITING FOR THE MEDIA</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19211GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Aim:**

- To equip students to enter into the realm of mass media.

**Objectives:**

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluating news.

**UNIT-III**

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

**UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

**References-**

Course Code	Course Title	L	T	P	C
19212GEC	General Elective Course Applicable Mathematical Techniques	4	0	0	3

**Aim:**

- To acquaint with the basic concept of Interpolation.

**Objectives:**

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

**Outcomes:**

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

**UNIT I**

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

**UNIT II**

Assignment Problems

**UNIT III**

Replacement Problems

**UNIT IV**

Decision Analysis

**UNIT V**

Game Theory

**References**

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

<b>Course Code</b>	<b>GENERAL ELECTIVE COURSE-III</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19214GEC</b>	<b>GREEN CHEMISTRY</b>	<b>4</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Objectives:** To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

### **Unit I - Introduction**

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution Pollution prevention.

### **Unit II - Principles**

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

### **Unit III - Bio Catalytic Reactions**

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

### **Unit IV - Green House Effect**

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO<sub>2</sub> - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

### **Unit V - Green Analytical Methods**

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

### **Outcomes:**

- To understand the environmental status and evolution.

- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

**References:**

1. Introduction to Green Chemistry – M.Rayan and M.Tinnesand
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

<b>Course Code</b>	<b>GENERAL ELECTIVE COURSE-III BIOANALYTICAL TECHNIQUES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19215GEC</b>		<b>4</b>	<b>0</b>	<b>0</b>	<b>3</b>

### Unit I

Separation techniques – Solvent extraction – principles and applications of soxhlet extraction and super critical fluid extraction; Distillation – Theory of distillation, method and application of fractional and steam distillation; Techniques of sublimation and its applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hassel balch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

### Unit II

Chromatography – Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC .

### Unit III

Centrifugation – Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges. Radioisotopes – Radioactivity, types, law of radioactivity, decay processes, units of radioactivity; Applications of radioisotopes in biology.

### Unit IV

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

### Unit V

Spectroscopy – Principles and components of instruments and applications of Colorimeter, Spectrophotometer, Fluorescence spectrometry, AAS and Flame photometer. Principles and applications of Raman spectroscopy, IR spectrometry, NMR and ESR.

4. Principles of Instrumental analysis – B.K.Sharma.
5. Instrumental analysis – Chatwall Anand

Course Code	General Elective Course	L	T	P	C
19220GEC	Internet and Web Design	4	0	0	3

### Aim

To equip the students with basic programming skill in Web Designing

### Objective

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

### UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

### UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

### UNIT III

Ordered and unordered lists – Table handling.

### UNIT IV

DHTML and Style Sheet – Frames.

### UNIT V

A web page design project – Forms.

### Outcomes:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

### Reference Book

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	General Elective Course	L	T	P	C
19261GEC	Insurance Services	4	0	0	3

**Aim:**

- To look after the interests of people from uncertainty by providing certainty of compensation.

**Objectives:**

- To learn the fundamental concepts and principles of insurance.
- To explain the nature of different insurance policies, insurance contracts and settlement of claims.

**Out Come:**

- The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

**UNIT – I**

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

**UNIT – II**

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

**UNIT – III**

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

**UNIT – IV**

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

**UNIT – V**

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

**Reference Books:**

Dr.MR.Mishra – Law of Insurance – Central Law Agency Allahabad

Dr.M.M.Verma & R.K.Agarwal – Insurance

Pandy & Ratogi – Insurance

Course Code	General Elective Course	L	T	P	C
19280GEC	Counselling Psychology	4	0	0	3

**Aim:**

- To acquaint with counselling and its process

**Objectives:**

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

**Out Come:**

- Learn counselling and its process

**UNIT I**

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

**UNIT II**

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

**UNIT III**

Approaches to Counselling

Counselling Process

**UNIT IV**

Psychological Testing

Diagnosis

**UNIT V**

Educational Counselling

Family Counselling

Course Code	CORE PAPER – IX	L	T	P	C
19213AEC41	LASER PHYSICS AND NON LINEAR OPTICS	6	1	0	6

**Aim:**

The aim and objective of the course on Laser Physics and Nonlinear Optics is to expose the M.Sc. students to the basics of the challenging research field of Laser Physics and their use in nonlinear optics.

**UNIT I: Lasers-Fundamentals and Types**

Basic Construction and Principle of Lasing-Einstein Relations and Gain Coefficient - Creation of a Population Inversion- Three-Level System - Four-Level System -Threshold Gain Coefficient for Lasing- Laser types-He-Ne Laser-CO<sub>2</sub> Laser- Nd:YAG Laser- Semiconductor Laser.

**UNIT II: Laser Operation**

Optical Resonator-Laser Modes-Axial modes- Transverse modes-Modification in Basic Laser Structure- Basic Principle of Mode Locking- Active Mode Locking -Passive Mode LockingQ-Switching- Pulse Shaping.

**UNIT III: Laser Beam Characteristics:**

Wavelength-Coherence-Mode and Beam Diameter-Polarizations-Introduction to Gaussian Beam width-Divergence-Radius of Curvature-Rayleigh Range-Guoy Phase Shift-3-D Gaussian Beams -ABCD Law for Gaussian Beam-The Complex Radius of CurvatureTensorial ABCD Law.

**UNIT IV:Focusing of Laser Beam**

Diffraction- Limited spot size-M<sup>2</sup> Concept of Beam Quality-Spherical Aberration- Thermal Lensing Effects-Depth of Focus-Tight focusing of laser beam - Angular Spectrum Representation of Optical Near Field-Aplanatic lens-Focusing of Higher-order laser modesRadially Polarized Doughnut mode-Azimuthally Polarized Doughnut mode.

**UNIT V:Non Linear Optics**

Introduction-Nonlinear Optical Media-The Nonlinear Wave Equation-Scattering Theory Born Approximation-Second-order Nonlinear Optics-Second-Harmonic Generation (SHG) and Rectification-The Electro-Optic Effect-Three-Wave Mixing-Frequency and Phase Matching-

**Third Harmonic Generation-Optical Kerr Effect- Self-Focusing- Four-Wave Mixing (FWM) - Optical Phase Conjugation (OPC)- Use of Phase Conjugators in Wave Restoration.**

2. Lasers and Nonlinear Optics -B.B. Laud-2nd Edn. New Age International (P) Ltd., New Delhi, 1991

Course Code	CORE PAPER – IX	L	T	P	C
19213AEC42	NUMERICAL METHODS AND COMPUTATIONAL PHYSICS	6	1	0	6

**Aim:**

The aim and objective of the course on numerical methods and computational physics is to expose the M.Sc. students to the basics of the challenging research field.

**UNIT I: NUMERICAL DIFFERENTIATION AND INTEGRATION**

Approximation of derivatives using interpolation polynomials – Numerical integration using Trapezoidal, Simpson’s 1/3 rule – Romberg’s Method – Two point and three point Gaussian quadrature formulae – Evaluation of double integrals by Trapezoidal and Simpson’s 1/3 rules.

**UNIT II: INTERPOLATION AND APPROXIMATION**

Interpolation with unequal intervals – Lagrange’s interpolation – Newton’s divided difference interpolation – Cubic Splines – Difference operators and relations – Interpolation with equal intervals – Newton’s forward and backward difference formulae.

**UNIT III: SOLUTION OF EQUATIONS, EIGENVALUE AND INITIAL VALUE PROBLEMS**

Fixed point iteration method – Newton Raphson method – Solution of linear system of equations – Gauss elimination method – Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel – Eigenvalues of a matrix by Power method and Jacobi’s method for symmetric matrices. Taylor’s series methods – Euler’s method – Modified Euler’s method – Fourth order Runge – Kutta method for solving first order equations.

**UNIT IV: BASICS OF PYTHON PROGRAMMING**

Need for computer languages, Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion).

Introduction-Python: Interpreter-Interactive and script mode -Values and types, variables, operators, expressions, statements, precedence of operators, Multiple assignments, comments, input function, print function, Formatting numbers and strings, implicit/explicit type conversion.

**UNIT V: PROBLEM SOLVING USING PYTHON PROGRAMMING**

Control statements and strings in python:Conditional (if), alternative (if-else), chained conditional (if-elif-else). Strings-String slices, string methods and operations.

Functions and Files: Introduction, inbuilt functions, user defined functions, passing parameters - Positional arguments, default arguments, keyword arguments. Files -Text files, reading and writing files.

Data structures: Lists-creating lists, list operations, list methods, Sets-creating sets, set operations - Tuples-Tuple assignment - Dictionaries-operations and methods, Nested Dictionaries.

<b>19213DSC43A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To learn the structures, properties, characterization and applications of nanomaterials.

**UNIT – I: NANO POWDERS AND NANO MATERIALS**

Preparation – Plasma arcing chemical vapour deposition – Sol–gel Technique – Silica gels – Hydrolysis – Condensation and Polymerization of monomer to form particles – Zirconia and yttrium gels – Aluminosilicate gels – Forming nanostructured surfaces using the sol – gel process – Trapping by Sol – gel Electrodeposition – Ball millig – Application of nanomaterials – Insulation materials – Machines tools–Phosphors – Batteries – High power magnets – Motors vehicles and aircraft – Medical Implants – Other medical uses.

**UNIT – II: Molecular Nanotechnology Tools**

Atoms by inference Electron microscope – Scanning electron microscope – Modern transmission electron microscopes – Scanning probe microscopy – Atomic force microscope – Scanning tunneling microscope – Nanomanipulator – Nanotweezers – Atom manipulation – Nanodots.

**UNIT – III: THE CARBON AGE AND NANO BIOMATERIALS**

New forms of carbon – Types of nanotubes – Formation of nanotubes – Methods and reactants – Arcing in the presence of cobalt – Laser methods – Chemical vapour deposition method – ballmilling – other methods – Assemblies – purification of carbon nanotubes – The properties of nanotubes – Conductivity – Strength and elasticity – Uses of nanotubes – Electronics – hydrogen storage – Materials – Mechanical machines – Space elevators.

**UNIT-II: Optics, Photonics And Solar Energy**

Properties of light and nanotechnology – Reflectance of light – Transmission of light – Polarization of Radiation – Interaction of light and nanotechnology – Photon trapping and plasmas – Dielectric constant and polarization - Refractive index – nanoholes and photons – Imaging – New low cost energy efficient windows in solar absorbers, base on nanoparticles – Nanometals – Nanotechnology and day night – Solar cells, nanoparticles and nanostructure – Optically use full nanostructured polymers – Polymeric crystals, surface wave guides and control of light paths.

**UNIT – V: NANO ELECTRONICS & FUTURE APPLICATION**

The tools of micro and nanofabrication – Optical lithography – electron beam lithography – Atomic lithography – molecular beam epitaxy – Quantum electronics devices – High electron mobility transistors – Quantum interface transistors – Carbon nanotube transistors Molecular electronics –DNA – Directed assembly and application in electronics – Quantum Information and quantum computers – Nan

machines and nano elasticity – nanoparticle coating – special new effects – Nano electronics and magnetic devices – new computing systems – Optoelectronics devices – Light emitting diodes – Thermionic solar power –Environmental applications.

**Books for Study:**

Mick Wilson, K.K Geroff Smith,Michelle and Bukhard Raguse, Nano technology –Basic science and Emerging technologies, Overseas press 2005.

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE COURSE-IV NON-LINEAR DYNAMICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19213DSC43B</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**Aim:**

- To learn the basic principles and working of linear and nonlinear systems with the applications.

**UNIT – I: Linear And Nonlinear Systems**

Linear and non linear forces – Non linear dynamical systems – Effects of non linearity – Phase space – Liouville theorem – Solution of damped and forced linear oscillator – Resonance phenomenon – Duffin oscillator – Jump phenomenon.

**UNIT – II: Fixed Points And Stability Analysis**

Stable and unstable fixed points – Classification of fixed points in first and second order systems – Limits cycle motion – Bifurcations; Saddle node, Pitchfork, Transcritical and Hopf bifurcations.

**UNIT – III: Bifurcation And Chaos**

Logistic map: Stability of period – 1 and 2 fixed points – Period doubling phenomenon – Onset of chaos – Bifurcation diagram – Different routes to chaos: Period doubling quasiperiodic route and intermittency route – Necessary conditions for chaos.

**UNIT – IV: Fractals**

Self-similarity – Self similarity in Henon attractor – Properties of fractals – Examples of fractals – Fractal dimension – Construction and properties of middle – Third cantor set, Koch curve and sierpinski triangle.

**UNIT – V: Solution And Integrability**

Complete integrability of finite dimensional systems – Painleve analysis to deduct integrability – Linear and non linear waves – Conoidal and solitary waves – John Scott Russel's observation of solitary waves – K–dv equation – Fermi – Pasta Ulam problem – Numerical experiment of Zabusky and Kruskal – Soliton – Lax pair – Inverse scattering transform method for K–dv equation – Other solution equations – Applications.

**Books for Study and Reference:**

1. M. Lakshmanan and S. Rajasekar, Nonlinear Dynamics: Integrability Chaos and Patterns (Springer-verlag, Berlin, 2003).

2. E. Ott. Chaos in Dynamical Systems (Cambridge University Press Cambridge, 1993).
3. H. G. Schuster: Diterministic Chaos (Verlag, Weintein, 1988).
4. H. O. Peiten, P. H. Richter, The Beauty of Fractals (Springer, Berlin, 1986).
5. P. G. Drazin and R. S. Johnson, Solitons: (Cambridge University Press, Cambridge, 1985).
6. M. J. Ablowitz and P. E. Clarkson, solution, non linear Evolution Equation and Inverse Scattering (Cambridge University Press, Cambridge, 1991).

## **Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

### **Research – Led: Learning about current research in the discipline**

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

### **Research – Oriented: Developing research skills and techniques**

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

### **Research – Based: Undertaking research and inquiry**

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

### **Research- Tutored: engaging in research discussions**

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc (Physics) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

<b>Semester</b>	<b>RSB Courses</b>	<b>Credits</b>
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project ( Scaffolded Research)	4
IV	Project Work	12

### **Blueprint for assessment of student's performance in Research Led Seminar Course**

- **Internal Assessment:** **40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination** : **60 Marks**

(Essay type Questions set by the concerned resource persons)

### **Blueprint for assessment of student's performance in Socio Technical Project**

- **Continuous Internal Assessment through Reviews:** **40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

### **Blueprint for assessment of student's performance in Research Methodology Courses**

#### **Continuous Internal Assessment:** **20 Marks**

- Research Tools( Lab) : 10 Marks
- Tutorial: 10 Marks

#### **Model Paper Writing:** **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

**Semester Examination:**

**40 Marks**

**Total:**

**100 Marks**

COURSE STRUCTURE

Course Code	Course Title	L	T	P	C
<b>SEMESTER I</b>					
193PHC11	Research Methodology	2	2	0	4
193PHC12	Advanced Physics	2	2	0	5
193PHC13	Crystal Growth Methods And Characterization Techniques	2	2	0	5
CPE_RPE	Research Publication Ethics	2	2	0	2
	<b>TOTAL</b>				<b>16</b>
<b>SEMESTER II</b>					
	Project				<b>10</b>
	<b>TOTAL</b>				<b>10</b>

## **M Phil- SYLLABUS**

**(For the candidates admitted from the academic year 2020-2021 onwards)**

### **PAPER – I RESEARCH METHODOLOGY (SUB.CODE: 193PHC11)**

**(Common for all Subjects except Languages)**

#### **Unit – I:**

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

#### **Unit – II:**

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

#### **Unit – III:**

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

#### **Unit – IV:**

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Mail (E-mail) – Intranet and Extranet.

#### **Unit – V:**

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

#### **References:**

## **PAPER – II ADVANCED PHYSICS**

**(SUB.CODE: 193PHC12)**

### **Unit–I: Crystal Physics and Physical Properties of Crystals**

Representation of physical quantities by scalars, vectors and tensors – Tensors of second rank- Transformations of components of a second-rank tensor – Representation quadric – Simplification of equations referred to principal axes – Effect of crystal symmetry on crystal properties: Neumann's principle – Magnitude of a property in a given direction – Geometrical properties of the representation quadric – Equilibrium properties represented by second-rank tensor: Electric Polarization: relations between D, E and P in a parallel plate condenser – Stress tensor: homogeneous and inhomogeneous stresses – Strain tensor: homogeneous three-dimensional strain.

### **Unit–II: Crystal Optics and Non-Linear and Electro-Optical Effects in Crystals**

Double refraction: Optical indicatrix – Effect of crystal symmetry on optical indicatrix – Wave surface: Uniaxial and Biaxial crystals – Non-Linear Optics: Harmonic generation – Second Harmonic Generation – Phase matching – Third Harmonic Generation – Optical Mixing: Sum and difference frequencies – Parametric generation of light – Self-focusing of intense light beams – Electro-Optic Effect: Phase retardation – Longitudinal electro-optic modulators: Amplitude modulation – Phase modulation of light – Transverse electro-optic modulators – Electro-optic beam deflection.

### **Unit– III: Nanomaterials and their applications**

Properties of metallic and semiconducting Nanoparticles – various physical and chemical methods of preparation –self assembly and catalysis assisted growth methods - synthesis of carbon nanostructures and their applications –nanostructured ferromagnetism–size and dimensionality effects in nanostructures – biological application of nanomaterials.

### **Unit – IV: Surface analysis techniques**

Atomic Collision and Backscattering Spectrometry: – Energy loss of Light Ions and Backscattering Depth Profiles – Sputter Depth Profile and Secondary Ion Mass Spectroscopy – Channeling: Basics and its application in Thin Film analysis - X-ray Photoelectron Spectroscopy – Electron Microprobe analysis of surface – Nonradiative Transitions and Auger Electron Spectroscopy.

### **Unit – V: Spectroscopic methods**

Spectrophotometer – UV –VIS Near IR, - Basic concepts of FTIR and Raman and its applications to various materials - NMR and ESR and its applications – Thermal analysis (TG/DTA, DSC) of different Materials. X-ray Method The Bragg Law – X- ray Spectroscopy – Diffraction Directions – Diffraction Methods – Powder Method – Particle size Calculation – X ray scattering by electrons, atomic and unit cells.

### **Books for Study for**

1. 'Physical Properties of Crystals: Their Representation by Tensors and Matrices' by J.F. Nye, 1985, Oxford University Press, New York.
2. 'Lasers and Non-Linear Optics' by B.B. Laud, Chapter-13, Wiley Eastern Ltd., 1985,
3. 'Quantum Electronics' by Amnon Yariv, Chapter-14, John Wiley & Sons, Inc., 1975, New York.
4. Introduction to Nanotechnology by C.P Pool Jr. and F.J Owens, John Wiley & Sons
5. Nanostructures & Nanomaterials Synthesis, Properties and Applications by Guozhong Cao ( World Scientific Publishing)
6. Fundamentals of surface and thin film analysis – Leonard C. Feldman and James W. Mayer
7. Basic Principles of Spectroscopy – Raymond Chang, McGraw Hill International book company
8. Elements of x-Ray Diffraction (Second Edition) BD Cullity
9. Fundamentals of Molecular Spectroscopy by Banwell

## **PAPER–III CRYSTAL GROWTH METHODS AND CHARACTERIZATION TECHNIQUES**

**(SUB.CODE: 193PHC13)**

### **Unit I - Thermodynamics of Crystal Growth**

Saturation and super saturation – solubility curve – expression for super saturation–solubility diagram – nucleation – Theories of nucleation – Gibbs Thomson equation for vapour –Modified Thomson's equation for melt – Gibbs Thomson equation for solution – Kinetic of crystal growth– Single and rough faces – Models of surface roughness - KSU theory and BCF theory.

### **Unit II - Growth from solutions**

Low temperature solution growth: Slow cooling process – solvent evaporation process –Temperature difference process – Use of electrolytic process high temperature solution growth: Solvent & solutions - slow cooling methods – temperature difference methods – high pressure method – solvent evaporation method – electrolytic process - liquid phase epitaxial.

### **Unit III - Growth from melt**

Bridgeman and related techniques – crystal pulling – convection in melts – modeling and simulation of bulk crystal growth considering melt growth – czocharalski technique – zone melting technique – skull melting process – verneuil process-Heat exchange method.

### **Unit IV - Other Crystal Growth Techniques**

Physical vapour deposition-chemical vapour deposition – chemical vapour transport –definition – fundamentals – choice of transport reactions – specifications – Transported materials and agents-STP,LTVTP,OTP-Hydrothermal growth: Design aspect of autoclave-electro crystallization-Gel method: principle-types of gels-structure of gels-growth in gels-experimental procedure-biological crystallization.

### **Unit V - Analysis and Characterization of Crystals**

Optical transmission studies (UV) Micro hardness studies-Structural analysis-XRD-Fourier Transform-IR-Spectral analysis-Scanning Electron Microscope (SEM)-different etching techniques.

### **Books for Reference:**

1. Brice J.C, Crystal Growth Processes, John Wiley & sons , New York 1986,
2. Santhanaraghavan P, Ramasamy . P, Crystal Growth – Process and Methods, KRU Publications, Kumbakonam, 2000.
3. Buckley H.E, Crystal Growth, John Wiley & Sons, New York, 1986.
4. Gilman J, The Art of Science of Growing Crystals, John Wiley & Sons, New York, 1956.
5. William Kemp, Organic spectroscopy, 3 rd Edition, , Palgrave, New York, 2004.

## RESEARCH AND PUBLICATION ETHICS

Course Code	Course Title	L	T	P	C
CPE_RPE	Research and publication ethics	-	-	-	2

### UNIT I: PHILOSOPHY AND ETHICS

1. Introduction to philosophy, definition, nature and scope, concept, branches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

### UNIT II: SCIENTIFIC CONDUCT

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

### UNIT III : PUBLICATION ETHICS

1. Publication ethics: definition, introduction and importance.
2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

## PRACTICE

### UNIT IV: OPEN ACCESS PUBLISHING

1. Open access publications and initiatives.
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies.
3. Software tool to identify predatory publications developed by SPPU.
4. Journal finder / journal suggestion tools viz, JANE, Elsevier Journal Folder, Springer Journal Suggester, etc.

### UNIT V : PUBLICATION MISCONDUCT

#### A. Group Discussions

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest.
3. Complaints and appeals: examples and fraud from India and abroad.

**B. Software tools**

Use of plagiarism software like Turnitin, Urkund and other open source software tools.

**UNIT VI: DATABASES AND RESEARCH METRICS**

**A. Databases**

1. Indexing databases.
2. Citation database: Web of Science, Scopus etc.

**B. Research Metrics**

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score.
2. Metrics: h-index, g index, i10 index, altmetrics.

## Mapping of courses to Employability/Entrepreneurship and Skill Development

SCHOOL OF ARTS AND SCIENCE

DEPARTMENT OF BIOCHEMISTRY

B. Sc., Curriculum-Regulation 2019

Course Code	Course Title	L	T	P	C
19111AEC11	Advanced English-I	4	0	0	2

### UNIT – I

Glossary of grammar terms

Figures of speech

### UNIT – II

Foreign words and phrases

British and American Vocabulary

### UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

Skill development

### UNIT – IV

Editing

Proof reading

### UNIT – V

Comparison and contrast

Cause and effect

Course Code	Course Title	L	T	P	C
19111AEC12	English-I	4	0	0	2

**UNIT –I**

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-Aruna Gnanadason

**UNIT – II**

The Merchant of Death

-Nanda Kishore Mishra &amp; John Kennet

She Spoke for all Nature

-Young world ‘The Hindu’

**UNIT –III**

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

**Skill development****UNIT –IV**

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

**UNIT –V**

Oliver Twist

-Charles Dickens

Course Code	Course Title	L	T	P	C
19115AEC13	Biomolecules	6	1	0	5

**Unit I**

Carbohydrates – Definition, Biological significance, D and L designations, classification; Physical and chemical properties of monosaccharides; sugars – reducing and non-reducing sugars; Epimers and Mutarotation Structural elucidation of glucose and fructose; Structure and functions of Maltose, Lactose, Sucrose, Fructans, Starch, Cellulose, Chitin, Glycogen and Heparin. Blood group and bacterial cell wall polysaccharides.

**Unit II**

Amino acids – Protein and non-protein amino acids; Classification of amino acids based on structure, chemical properties and functions; Chemical reactions of amino acids.

Proteins – Peptides, peptide bond, solid phase peptide synthesis; Biological functions and classification; Primary structure of insulin; secondary structures – Helix, sheet and Turns; Tertiary structures of myoglobin; Quaternary structure of hemoglobin; Protein sequencing; structural stability of proteins.

### Unit III

Nucleic acids – Purine and pyrimidine bases; ribose and deoxy ribose sugars; Nucleosides and nucleotides; significances of nucleotides; Nucleic acids – DNA and RNA; DNA – Genetic material, Genome, C-value paradox; Double helical structure of DNA; A, B and Z forms of DNA; Sequencing of DNA by enzymatic method; Types of RNA and their biological roles; Differences between DNA and RNA.

### Unit IV

Lipids – Definition, classification, nomenclature, Properties and biological importance; Fatty acids and essential fatty acids; Structure of triglycerides – classification - Quality analysis of oils; Structures and functions of phospholipids, spingophospho lipids, steroids and prostaglandins. Types of lipoproteins and their significance.

### Unit V

Vitamins – Definition and classification; Natural sources, structures, biological roles and deficiency manifestations of Vitamins A, C, D, E, K and B complexes. Minerals – Macro and micro minerals (Na,K,Ca,Mg,P,Fe,Se,Zn,Cu,Mn) Antibiotics – Definition, types and general properties; Structure and significance of Penicillin and tetracycline.

### Skill development

Course Code	Course Title	L	T	P	C
19115AEC14L	Biomolecules Lab-I	0	0	3	2

#### 1. Qualitative Analysis of Carbohydrates:

- (a) Glucose
- (b) Fructose
- (c) Xylose
- (d) Maltose
- (e) Lactose
- (f) Sucrose.

2. Qualitative Analysis of Protein:
  - (a) Egg Albumin
  - (b) Egg Flakes
  - (c) Casein
3. Colour Reactions for Amino Acids.
4. Qualitative Analysis of Lipids.
5. Preparations:
  - (a) Starch from Potato.
  - (b) Casein from Milk.

## ENTREPRENEURSHIP

Course Code	Course Title	L	T	P	C
19114AEC15	Chemistry - I	5	1	0	4

### UNIT- I

#### **Polar effect:**

Inductive effect

+I and – I groups, relative strength of – foamic , acetic and propionic acids – acetic and chloroacetic acids – ammonia and methyl amine. Resonance – resonating structure of benzene , butadiene and COOH groups – conditions – applications (resonance energy and stability). Acidic & basic properties of phenol & aniline. Hyperconjugation.- consequence of hyperconjugation. Steric effects –Steric accelerated reaction and steric inhibited reaction.

### UNIT –II

#### **Industrial chemistry**

Fuel gases – Watergas, products gas, L.P.G gas, Gobar gas and natural gas. Fertilizers – NPK and mixed fertilizers, micronutrients, and their role in plant life and biofertilizers, soap and detergents an elementary idea about preparation cleaning action of soap detergents.

### UNIT III

**Aromatic compounds :** structure, stability, resonance and aromaticity of benzene. Substitution reactions, Nitration, Halogenation and Alkylation Naphthalene Isolation, Synthesis, properties, and structural elucidation and uses .Organic compounds: Benzoin, Perkin, Cannizaro, Claisen reactions. Chemotherapy: Definition and uses of Antibiotic, Analgesic Antibacteria, Antiviral, Antidiabetic, Antihypertensive, Antiseptic and disinfectant, Antimalarial- Anaesthetics – local and general.

### SKILL DEVELOPMENT

#### UNIT –IV

**Energetic:** Review first law of thermodynamic state and path functions need for the second law Carnot cycle and thermodynamic scale of temperature spontaneous and non spontaneous process and Third law.

#### UNIT – V

**Chemical kinetics:** Order of reactions and their determinations. Activation energy, effect of temperature on reaction rate. Catalysis Types, mechanism of catalytic reactions, industrial applications.

Course Code	Course Title	L	T	P	C
19114AEC16L	Volumetric Analysis Lab	0	0	3	2

1. Strong Acid and Strong Base
2. Weak acid vs Strong base
3. Estimation of ferrous sulphate.
4. Estimation of oxalic acid.
5. Estimation of copper.
6. Estimation of potassium dichromate
7. Estimation of potassium permanganate

### SKILL DEVELOPMENT

#### Skill Based Elective-I MS-WORD

Course Code	Course Title	L	T	P	C
1920SEC01AL	Package Lab-I	0	0	2	1

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.

3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. picture insertion and alignment
  - a. prepare a greeting card
  - b. prepare a handout
7. Create a mark sheet using tables. And find out the total marks.
8. Prepare a business letter for more than one company using mail merge

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19160SEC01B	Soft Skill I	0	0	2	1

## Part- I Effective Communication

### UNIT I Effective communication I

**Oral Communication:** Listening skills -Speaking skills (what to say and how to say it) – Gender neutral Language-Conflict, criticism, anger- Telephone skills.

### UNIT II Effective communication II

**Written Communication:** Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos.

**Nonverbal Communication:** Behavior, Body language and Attitude.

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111SEC01 L	Communicative English Lab-I	0	0	1	1

**UNIT –I**

Noun

Pronoun

Adjective

**UNIT – II**

Verb

Adverb

**UNIT –III**

Conjunction

Preposition

Interjection

**UNIT – IV**

Kinds of Sentences

**UNIT –V**

Patterns of sentences

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
191INDCON S	Indian Constitution	0	0	0	0

**Unit I:**The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

**Unit II:** Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

**Unit III:** Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

**Unit IV:** The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court - functions and position of supreme court and high court

**Unit V:** State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111AEC21	Advanced English-II	4	0	0	2

#### UNIT – I

E-mail

Fax

Memos

#### UNIT – II

Itinerary

Checklist

#### UNIT – III

Invitation

Circular

#### UNIT – IV

Instruction

Recommendations

#### UNIT – V

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111AEC22	English-II	4	0	0	2

#### UNIT – I

Ecology

Gift

The First Meeting

-A.K. Ramanujan

-Alice Walker

-Sujata Bhatt

#### UNIT –II

Fueled

Asleep

Buying and selling

-Marcie Hans

-Ernst Jandl

-Khalil Gibran

#### UNIT –III

The End of living and The Beginning of Survival

My Wood

The Meeting of Races

- Chief Seattle

- E.M.Forster

- Rabindranath Tagore

#### UNIT – IV

The Refugee  
I Have a Dream  
Those People Next Door

-K.A. Abbas  
-Martin Luther king  
-A.G. Gardiner

**UNIT – V**

Marriage is a private Affair  
The Fortune Teller  
Proposal

-Chinua Achebe  
-Karel Capek  
-Anton Chekov

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19115AEC23	Biochemical Techniques	6	1	0	5

Unit I:

Colorimetry: Beer Lambert's Law, Light absorption and its transmittance, Absorption Spectroscopy - Principle, instrumentation and applications of colorimetry and UV-Vis spectrophotometer. Emission Spectroscopy – Spectrofluorimeter - Principle, instrumentation and applications. Flame photometry - principle and applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hasselbalch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

Unit II:

Chromatography techniques: Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC.

Unit III:

Centrifugation: Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges.

Unit IV:

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

### Unit V:

Radio isotopic techniques: Types of radioactive decay, rate of radioactive decay, decay constant, Units of radio activity, measurement of radioactivity based on ionization- GM counter and excitation- Scintillation counter. Autoradiography. Applications of radioisotopes in biology. Hazards of radioactivity.

### EMPLOYABILITY

Course Code	Course Title	L	T	P	C
19115AEC24L	Biochemical Technique Lab-I	0	0	3	2

1. Estimation of Amino Acid (Glycine) by formal titration.
2. Estimation of Ascorbic Acid by using 2, 6- Dichloro phenol indophenols.
3. Determination of Acid Number of edible oil.
4. Estimation of reducing sugar by Benedict's method.
5. Determination of Saponification Number.
6. Estimation of RNA by Orcinol Method.
7. Estimation of DNA by Diphenyl amine method.

### EMPLOYABILITY/ ENTREPRENEURSHIP

Course Code	Course Title	L	T	P	C
19114AEC25	Chemistry –II	5	0	0	5

### UNIT – I

#### Amino acids and proteins

Aminoacids- Classification based on structure and essential and non - essential aminoacids – preparation and properties – peptides – (elementary treatment) proteins – Classification, based on physical properties and functions. Structure of proteins – primary and secondary (elementary treatment)

## UNIT – II

### Coordination chemistry

Nomenclature of mononuclear complexes – Werner sidgwick, and pauling’s theories – Chelation and its industrial importance to EDTA. Biological role of hemoglobin and chlorophyll Metallic bond Electron gas, pauling and band theories. Semiconductors intrinsic, n- type and p-type.

## UNIT –III

### Synthetic polymers:

Teflon, Alkyl and epoxy resins, poly esters – General treatment only. Heterocyclic compounds – Furan, Thiophene, pyrrole and pyridine – preparation and properties of pyridine and pyrrole – Quinoline and isoquinoline.

**Stereoisomerism** – lactic and tartaric acid – racemic mixture and resolution. Geometrical keto – enol tautomerism Meaning of E,Z,R,S,D,L, meso, (+),(-) in stereochemistry.

## UNIT- IV

**Electrochemistry:** Specific and equivalent conductivities – their determination – Oswald’s dilution law, Kohlrausch law.  $P^H$  and Buffer: Importance of  $pH$  and buffers in living systems –  $P^H$  determination by colorimetric and electrometric methods.

## SKILL DEVELOPMENT

## UNIT –V

### Surface chemistry:

Emulsion, gels preparation, properties and applications. Electrophoresis, Chromatography – Column, paper and thin layer chromatography.

Course Code	Course Title	L	T	P	C
19114AEC26L	Organic Analysis Lab	0	0	3	2

A study of elemental analysis of the following compounds:

- Carbohydrates,
- Amides,

- c. Aldehydes,
- d. Ketones,
- e. Acids,
- f. Phenols.

The students may be trained to perform the analysis like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional groups present and record their observations.

#### SKILL DEVELOPMENT

#### Skill Based Elective-II MS-EXCEL

Course Code	Course Title	L	T	P	C
19120SEC02AL	Package Lab-II	0	0	2	1

1. Prepare the addressing methods in excel
2. Describe the type of function
3. Draw a graph by using your own data
4. Prepare an Individual Pay Bill preparation for a employee in an organization.
5. Prepare a Mark list preparation for a student.
6. Prepare a Worksheet preparation for a company.
7. Prepare a Inventory Preparation
8. Prepare a Electricity Bill Preparation

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19160SEC02B	SOFT SKILL - II	0	0	2	1

## Part -II Self Development

### UNIT I: Self -Assessment

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

### UNIT II: Self- Management

Managing Time, Managing Stress, Conflict Management

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111SEC02L	Communicative English Lab-II	0	0	1	1

### UNIT –I

Auxiliaries

### UNIT –II

Modals

### UNIT –III

Tenses-Simple, Perfect

### UNIT –IV

Tenses-Continuous, Perfect continuous

### UNIT –V

Articles

Participle

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111AEC31	Advanced English-III	4	0	0	2

### UNIT –I

The organs of speech

Classification of speech sounds

Vowels and Diphthongs

### UNIT –II

Consonants

Consonant cluster

### UNIT – III

Syllable

Word accent

Intonation

**UNIT – IV**

Idiom

Interpretation of graphics

**UNIT – V**

Slogan writing

Writing advertisement

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19111AEC32	English-III	4	0	0	2

**UNIT – 1**

The Doctor's World

- R.K. Narayan

The Postmaster

- Rabindranath Tagore

Princess September

- E. Somerest Maugham

**UNIT – II**

The Price of Flowers

- Prabhat Kumar Mukhopadhyay

The Open Window

- Saki

The Model Millionaire

- Oscar Wilde

**UNIT – III**

My Brother My Brother

- Norah Burke

Uneasy Home Coming

- Will F. Jenkins

Resignation

- Premchand

**UNIT – IV**

The Referee

- W.H. Andrews & Geoffrey Dreamer

The Case of the Stolen Diamonds

- Farrell Mitchell

**UNIT – V**

The Dear Departed

- Stanley Houghton

The Princess and the Wood Cutter

- Alan Alexander Milne

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19115AEC33	Cell Biology and Genetics	5	0	0	5

## Unit I

An Overview of cells: Origin and evolution of cells. Cell theory, Classification of cells – Prokaryotic and Eukaryotic cells. Comparison of prokaryotic and eukaryotic cells. Cell Membrane – Fluid mosaic model of membrane structure and its composition. Cell cycle.

## Unit II

Cytoplasmic organelles – Golgi bodies – Endoplasmic reticulum – Ribosomes – mitochondria – plastids – Lysosomes – micro bodies - peroxisomes – microfilaments –microtubules – centrosomes – Basal bodies -Cilia and flagella.

## Unit III

Cell growth and division – Nucleus, Nucleolus, chromatin chromosomes – structure of DNA - cell cycle – division – mitosis – meiosis .

## Unit IV

Genetics – Mendel’s laws – Epistasis – Gene interaction - Lethal genes – inheritance of multiple genes - multiple alleles – structure of gene – gene mutation.

## Unit V

Linkage and crossing over – mapping of chromosomes – Human cytogenetics – sex linked inheritance – sex differentiation and determination - Eugenics – Euphenics – population genetics.

### **SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19115AEC34L	Cell Biology and Genetics Lab-I	0	0	3	2

1. Separation of Carbohydrates by Ascending, Decending, Circular & Two Dimensional Paper Chromatography.
2. Separation of Amino acids by TLC method.
3. Separation of Lipids by TLC.
4. Separation of Plant pigments by Column Chromatography.

5. Separation of Serum protein by Paper Electrophoresis.

**EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
19120AEC3 5	Programming in C	5	1	0	5

UNIT I

Evolution and Applications of C – Structure of a C Program – Data Types –Declarations – Operators – Expressions – Type conversions – Built-in functions.

UNIT II

Data Input and Output – Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE-DO, DO-WHILE, FOR, BREAK and CONTINUE.

UNIT III

**Functions:** Defining and accessing functions-passing parameters of functions -Arguments – Recursive functions – Storage classes.

**Arrays:** Defining and processing Arrays – Multi dimensional arrays – passing arrays to functions – Arrays and strings – String functions – String Manipulations.

**SKILL DEVELOPMENT**

UNIT IV

**Pointers:**Pointers Declarations – Operations on pointers – pointers to functions – Pointer and Strings – pointers and arrays – array of pointers - Structures and pointers – unions.

UNIT V

Data files – Opening, Closing, and processing files – Files with structures and unions – Register variables – Bit wise Operations – Macros- Preprocessing

Course Code	Course Title	L	T	P	C
19120AEC36 L	Programming in C lab	0	0	3	2

1. Write a C program to find the roots of Quadratic Equation (all cases).

2. Write a C program to find the Sum of Series (Sine, Cosine,  $e^x$ )
3. Write a C program to reads an integer N and determine whether N is prime or not.
4. Write a C program to Finding factorials, generating Fibnoacci Numbers using recursive functions
5. Write a C program to find the numbers in Ascending and Descending order (use it to find largest and smallest numbers).
6. Write a C program to find the sum of natural numbers using WHILE statement.
7. Write a C program for Sorting of given names in alphabetical order.
8. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication – use functions).
9. Write a C program for String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings – use function pointers).

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19115RMC37	Research Methodology	2	0	0	2

#### UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

#### UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

#### UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

#### UNIT IV: Database Survey

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

#### UNIT V:

#### B. Sc. (Life Sciences)

#### Basic Principles of Laboratory Life Sciences Laboratory

Introduction - Access to Laboratory and Emergency Exits - Basic Biostatistics, Mean, Median, Mode and its Application - Fundamental of Biosafety, Bioethics, **Replication – Advantages and Disadvantages, Standard division, Standard Error, Preparation of Chemicals – Percentage, Molarity and Normality, Ratio Solution, PPM Solution etc. Ethical Issue in Animal Handling, Basic of DMRT, ANOVA etc.**

### SKILL DEVELOPMENT

#### Skill Based Elective-III

#### POWER POINT

Course Code	Course Title	L	T	P	C
19120SEC03AL	Package Lab-III	0	0	2	1

1. Create a slideshow presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slideshow presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create slide show presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degree
  - d. Apply shadow to the object
4. Create a slideshow presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. *Create a slideshow presentation for a shop advertisement to be open shortly*
6. Create a slideshow presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slideshow presentation for a tourists places
8. Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19160SEC03B	SOFT SKILL III	0	0	2	1

## Part -III Interpersonal Relations and Social Responsibilities

### UNIT I: Interpersonal Relations

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

### UNIT II: Ethics and Social Responsibilities

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: Green computing, Social accounting, Auditing, Civic sense.

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C

Clauses

Phrases

### UNIT –II

Degrees of comparison

### UNIT –III

Active and Passive

### UNIT –IV

Communication

Characteristics -Process -Forms - Barriers

### UNIT –V

Punctuation

Forming sentences

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111AEC41	Advanced English-IV	4	0	0	2

### UNIT –I

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

### UNIT – II

Flowchart

Proposals

### UNIT – III

Discourse markers

Review

#### UNIT IV

Grammatical forms

Paraphrasing

#### UNIT –V

Definition

Writing for and against a topic.

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19111AEC42	English-IV	4	0	0	2

#### UNIT –I

How to be a Doctor

-Stephen Leacock

My Visions for India

-A.P.J. Abdul Kalam

Woman, not the weaker sex

-M.K. Gandhi

#### UNIT –II

My Last Duchess

-Robert Browning

The Toys

-Coventry Patmore

I, too

-Langston Hughes

#### UNIT –III

The Best Investment I ever made-A.J.Cronin

The Verger

-W.S Maugham

A Willing Slave

-R.K.Narayan

#### UNIT –IV

Macbeth

As You Like It

#### UNIT –V

Henry IV

Tempest

#### SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
19115AEC43	Human Physiology	5	0	0	4

#### Unit I Digestive system

Anatomy of digestive system, Types of digestion, salivary, gastric and biliary secretions-composition and its physiological role. Intestinal hormones. Movements in GIT. Digestion and absorption of carbohydrate, lipids & proteins. Digestion and absorption in small intestine.

## Unit II Circulation

Respiratory system – Mechanism of respiration - Blood – Composition – Haemopoiesis – functions of cells – Haemoglobin – Blood coagulation – Lymph- composition and function - Heart - Cardiac cycle - ECG

## Unit III Excretory system

Structure of kidney and Nephron, Composition and formation of urine, role of kidney in regulation of acid-base balance. Muscle: Kinds of muscle, structure, muscle proteins – functions – Mechanism of muscle contraction.

## Unit IV Central Nervous system

Central nervous system- General organization. Functional units. Resting and action potential- conduction of nerve impulse. Synaptic transmission. Brainchemical composition, metabolism, metabolic adaptation, neurotransmitters and cAMP. Biochemical aspects of learning and memory. Enkephalins and endorphins.

## Unit V Physiology of reproductive system

General anatomy of the male and female reproductive organs, steps of spermatogenesis, spermatozoan, transportation of sperm, female reproductive process – Maturation of ovum(Oogenesis) and fertilization process. Hormonal regulation of reproduction and pregnancy – Male and female sex hormones

### **EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
19115AEC44L	Biochemical Techniques Lab-II	0	0	3	2

1. Preparation of Buffer varying in their strength and pH value of Acetate, Phosphate, Bicarbonate and Citrate buffers.
2. Determination of pKa value of Amino acids
3. Hematology  
ABO Blood grouping,  
Haemoglobin estimation,  
RBC Count WBC count  
Blood smear preparation,  
ESR,

PCV

**EMPLOYABILITY**

Course Code	Course Title	L	T	P	C
19120AEC4 5	Fundamentals of Computing	6	0	0	5

**UNIT I**

Introduction to Computer – Classification of Digital Computer system – Computer Architecture – Memory Units – Auxiliary Storage Devices – Input and Output devices.

**UNIT II**

Introduction to Computer Software - Operating System – Programming Languages – General Software features and trends.

**UNIT III**

Database System: Introduction – Data processing – Introduction to Data Base Management System - Data base design.

**UNIT IV**

**Internet** -Introduction - hardware and software requirement web browser-email concepts-chatting – Intranet – WWW concepts.

**UNIT V**

Multimedia tools – Virtual Reality – E-Commerce – Data warehousing – Data mining – Geographical Information System – Computer in Business, industry, home, education and training.

**sKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19120AEC46L	WEB DESIGN LAB	0	0	3	2

1. Create a Web page for ABC INFOTECH LTD., with necessary images and marquee.

2. Create Web pages which display the menu card of a hotel. The first page should contain the list of items available. After selection of one item, the corresponding details should be displayed on the next page.
3. Create a Web page which displays the balance sheets for the given list of companies (same as above problem).
4. Create a Web page for XYZ INFOTECH LTD., to display the company profile employee details balance sheet, receive resume, customer service using links.
5. Using frames create web pages for a travel agency
6. Create a Web page using forms for our college students' admission process. (Use list box, push button, radio button, command button, rich text box, text box, etc wherever applicable)
7. Create a Web page which receives suggestions from customers for a software development & consultancy agency using necessary.

### **sKILL DEVELOPMENT**

#### **Skill Based Elective IV MS-ACCESS**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC04AL	Package Lab-IV	0	0	2	1

1. Create a database and a simple table
2. Create a database for sorting the marks scored by the student in the universality exams
3. Create a database for sorting the date of joining by the employee in the organization.
4. Create queries to select records that matches specific condition
5. Create relationships among the different tables
6. Create queries using built-in functions
7. Develop forms to enter data in to the student marks database
8. Develop forms to enter data in to the employee database

### **sKILL DEVELOPMENT**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>

Singular and Plural

Letter writing

**sKILL DEVELOPMENT**

**ENVIRONMENTAL STUDIES  
(for undergraduate students)**

Course Code	Course Title	L	T	P	C
191ENVTSTU	Environmental Studies	2	0	0	2

**1. Nature of Environmental Studies**

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

**2. Natural Resources and Associated Problems.**

- a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
  - b) Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
  - c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
  - d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
  - e) Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
  - f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,
- Role of an individuals in conservation of natural resources.

### 3. Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

- a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
- d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

## SKILL DEVELOPMENT

### 4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot— spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

### 5. Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution.

## SKILL DEVELOPMENT

### 6. Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global wanTling, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

### 7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

### 8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

Course Code	Course Title	L	T	P	C
19115AEC51	Enzymes	5	0	0	4

### Unit I

Enzymes – Definition, Nomenclature, Classification of enzymes based on IUB system, Properties, Enzymes Specificity, Specific activity, Coenzymes – Functions, (NAD,NADH,FAD,FMN,TPP,PLP) Units of enzyme activity, turn over number. Metalloenzymes and metal activated enzymes. Non-protein enzyme-ribozymes and abzymes.

### Unit II

Mechanism of Enzyme action – Active site, Lock and key hypothesis, Koshland's model, Mechanism of enzyme catalysis – Acid base catalysis, covalent catalysis; enzyme regulation - Allosteric enzymes – properties - Feedback regulation;

### Unit III

Enzyme Kinetics: Factors influencing enzyme activity. Derivation of Michaelis – Menten equation, Line weaver – Burk plot, activators,- enzyme inhibition (competitive, Non-Competitive and uncompetitive)- enzyme inhibitors.

#### **Unit IV**

Multienzyme complex – PDH, isoenzymes - lactate dehydrogenase - Immobilized enzymes – principles, methods and applications

#### **Unit V**

Applications of enzymes in industry and therapeutics - Clinical significance of serum enzymes - Enzyme electrodes, enzyme biosensors ,principles, types and their applications - Biochips.

#### **Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
19115AEC52	Bioenergetics and Metabolism	5	0	0	3

#### **Unit I : Approaches to Biochemical Investigations.**

Whole Organism studies – perfusion of isolated organs – Tracer Techniques and mutant studies. Studies of elucidation of metabolic pathways.

Bioenergetics:Free energy concept, standard free energy – loss of thermodynamics - endergonic and exergonic reactions, high and low energy phosphates – energy Transfer in metabolism.

#### **Unit II: Carbohydrate metabolism**

Glycolysis – reactions – energetics – oxidation of pyruvate – TCA cycle – reactions – amphibolic role - energetics – glycogenesis – glycogenolysis - Gluconeogenesis – HMP shunt - metabolic significance. Glucuronic acid cycle.

#### **Unit III: Lipid metabolism**

Lipogenesis – Fatty Acid synthase complex – Oxidation of fatty acids – (CoA,  $\beta$ ) – Role of carnitine – metabolism of Triglycerides and Phospholipids – Ketogenesis – ketolysis – Synthesis and degradation of cholesterol – lipoprotein metabolism.

#### **Unit IV: Protein, nucleic acid and porphyrin metabolims**

Biological value of protein - Nitrogen balance – Deamination – Transamination – Decarboxylation – Urea cycle. Biosynthesis and degradation of purine and pyrimidine nucleotides – *Denovo* and salvage pathway . Biosynthesis and degradation porphyrin and Heme.

### Unit V: Biological oxidation

Biological Oxidation- Enzyme and Coenzymes in Oxidation – reduction reactions – Electron Transport chain – Inhibitors – Oxidative phosphorylation – Chemiosmotic Theory – mechanism – structure of ATP synthase complex - Inhibitors, uncouplers, Ionophores – substrate level phosphorylation.

#### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19115AEC53	Immunology	4	1	0	4

### Unit I

The immune system-Components – Lymphoid Organs, Primary, Secondary, Tertiary – Lymphoid Tissues – Cells of the immune system. Immunity-Innate, Acquired – Active and Passive immunity – phagocytosis – Inflammation.

### Unit II

Antigens-Antigenicity – Immunogenicity – Types of antigens – Haptens – specificity–Blood group antigens – Blood grouping and applications. Immunoglobulins. Structure – Functions – classes of immunoglobulins and functions.Complement system - Complement – classical and alternative pathway – Consequence of activation .

### Unit III

Immune response- B and T cell development Cellular interactions – Antigen Presenting Cell(APC) –Major Histocompatibility complex ( MHC) – cytokines – T Cell Receptor(TCR) – cluster of differentiation – Humoral Immunity (HI) and Cell Mediated Immunity (CMI) – Regulation of immune response – Primary and secondary immune response – Immuno tolerance.

#### Employability/Entrepreneurship/Skill development

### Unit IV

Serological Techniques- Antigen – Antibody reactions -characteristics – Precipitation – types – immunodiffusion – Immunolectrophoresis - Agglutination – Complement Fixation - opsonization – bacteriolysis - Immunofluorescence – RIA and ELISA . Production of antisera – Production of monoclonal and polyclonal antibodies – Hybridoma technology.

### Unit V

Immunity to infection - Autoimmunity – causes – types – hypersensitivity – classification – mechanism – organ transplantation – graft rejection- tissue typing – immunosuppressive drugs.

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

19115AEC54L	Food and Enzyme Analysis Lab	0	0	3	2
-------------	------------------------------	---	---	---	---

1. Moisture Content of Food Materials.
2. Ash Content of Food Materials.
3. Determination of calcium in food.
4. Estimation of Fat Content in Food Materials.
5. Estimation of Nitrogen in Food
6. Estimation of Iron in Food
7. Estimation of Phosphorus in Food
8. Estimation of Vitamin C in Food by Dye method
9. Determination of Alkaline Phosphatase Activity.
  - a. Effect of PH
  - b. Effect of Temperature.
  - c. Specific Activity
  - d. Km (Saturation Method).
10. Determination of Salivary Amylase Activity.
  - a. Effect of PH
  - b. Effect of Temperature.
  - c. Specific Activity
  - d. Km (Saturation Method).

#### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19115AEC55L	Immunology Lab	0	0	3	2

#### EXPERIMENTS

1. Double Immunodiffusion
2. Single Radial Immuno diffusion
3. Rocket Immunoelectrophoresis
4. Direct ELISA
5. Haemeagglutination tests for indentification of human blood groups
6. Detection by viral fever by slide agglutination tests.
7. Dialysis.

### Employability/Entrepreneurship/Skill development

#### Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
19115DSC56A	Pharmaceutical Biochemistry	5	0	0	3

#### Unit I

Pharmacodynamics and kinetics- Drug – Definition, Nomenclature, Classification. Routes of drug administration. Drug Absorption, Drug Distribution. Principles of Drug action , Mechanism of drug action – physical, chemical, enzymes, receptors. Combined effect of drugs. Dose – response relationship. Factors modifying drug action- novel methods of drug administration. Drug excretion – kinetics of elimination.

#### Unit II

Biotransformation – endogenous and exogenous substance – benzpyrene and phenacetin – bilirubin – corticosteroids - Phase I and Phase II reactions - Drug metabolizing enzymes. Cytochrome P450 monooxygenase and flavin monooxygenase – Physiological importants of Xenpbiotic metabolism.

#### Unit III

Chemotherapy – Antibacterial , Antifungal, Antiviral agents. Cholinergic and Anticholinergic drugs. Cardiac glycosides – digitalis – hypolipidemic drugs - statins – Plasma expanders.

#### Unit IV

Adverse Drug Effects – Side effects – secondary effects – Toxic effects – Poisoning – Intolerance – Idiosyncrasy – Drug allergy – Photosensitivity – Drug addiction – Drug abuse – Drug withdrawl reactions – Teratogenicity. Biochemical Mechanism of Drug resistance. Toxicity assessment- acute, subchronic, chronic exposure, determination of ED<sub>50</sub> and LD<sub>50</sub> values.

#### Unit V

Anaesthesia – Stages of Anaesthesia. Anaesthetic classification – Inhalational and Intravenous anaesthetics. Antiepileptic drugs – Phenobarbitone, Phenytoin. Antianxiety drugs. Benzodiazepines. beta-blockers. Antimaniac drugs – Lithium carbonate. Antiseptics and Disinfectants – phenol and related compounds, formaldehyde, ethanol.

**Employability**

Course Code	Course Title	L	T	P	C
19115DSC56B	Basic Biotechnology	5	0	0	3

**Unit I: Fermentation Biotechnology** –Biotechnology – scope and importance, Basic principles of microbial growth, Bioreactor- batch and continuous bioreactor, fermentation culture medium, downstream processing. Fermentation production of penicillin and vitamin B12.

**Unit II: Food and Industrial Biotechnology** – Fermentation production of yoghurt and cheese.Production of single cell protein; spirulina: cultivation and uses. Biofertilizers – blue green algae: cultivation and uses. Production of amylase and protease.

**Unit III: Molecular Biotechnology** - Basic principles of cloning, Introduction of foreign DNA in to host by particle bombardment gun, electroporation and microinjection. Basic Polymerase Chain Reaction (PCR), applications, Micro arrays, the human genome project.

**Unit IV: Animal and Plant Biotechnology** – Elementary details of Animal cell and tissue culture, medium, transfection, targeted gene transfer, transgenic animals.Plant cell and tissue culture, medium, totipotent, pluripotent cells, protoplast culture, artificial seeds, and transgenic plants.

**Employability**

**Unit V: Environmental Biotechnology** – Biological fuel generation- ethanol and methane from biomass. Sewage treatment. Bioremediation: oil spill cleanup, bioleaching, IPR, Biosafety and hazards of environmental engineering.

**SKILL BASED ELECTIVE - V**

**PHOTO SHOP**

19120SEC05AL	Package Lab -V	0	0	2	1
--------------	----------------	---	---	---	---

1. Design a Visiting card.
2. Design an Identity card.
3. Design a letterhead with LOGO.
4. Create an advertisement for Newspaper and Poster creation.
5. Design a calendar with pictures.
6. Design a Magazine.
7. Create a front page for a Magazine
8. Design a CD Cover.

#### Skill development

Course Code	Course Title	L	T	P	C
19160SEC05B	SOFT SKILL V	0	0	2	1

### PART -V Leadership Skills and Body Language

#### UNIT I Leadership Skills

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

#### UNIT II Body language

Handshake: Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head , arms , hands , handshakes , legs and feet, personal space

#### Skill development

Course Code	Course Title	L	T	P	C
19111SEC05L	Communicative English Lab -V	0	0	1	1

#### UNIT –1

Correct the spelling mistakes

Comprehension

**UNIT –II**

Find the odd one out

Picture description

**UNIT –III**

Abbreviations

Note making

**UNIT –IV**

Gender

Dialogue writing

**UNIT –V**

Acronyms

Concord

**Skill development**

**SEMESTER VI**

Course Code	Course Title	L	T	P	C
19115AEC61	Clinical Biochemistry	5	0	0	4

**Unit 1**

Gastric function tests- hyper, hypo and achlorhydria. Liver function tests. Jaundice hemolytic, hepatic and obstructive jaundice. Renal function tests. Biochemical findings in nephritic and nephrotic syndrome. Normal and abnormal constituents of urine.

**Unit 2**

Disorders of carbohydrate metabolism: Sugar level in normal blood maintenance of blood sugar concentration- endocrine influence on carbohydrate metabolism, hypoglycemia, hyperglycemia, glycosuria, renal threshold value, diabetes mellitus classification, complications; Glucose tolerance test (GTT), diabetic coma, diabetic ketoacidosis, glycogen storage diseases, fructosuria, galactosemia and hypoglycemic agents.

**Unit 3**

Disorders of lipid metabolism. Plasma lipoproteins- lipoproteinemias, lipid metabolism in liver and adipose tissue. Fatty liver. Hypo and hypercholesterolemia. Atherosclerosis.

#### **Unit 4**

Disorders of amino acid metabolism. Plasma proteins in health and disease. Disorders of purine, pyrimidine and porphyrin metabolism. Hyperuricemia and gout. Lesch- Nyhan syndrome. Orotic aciduria, porphyrias.

#### **Unit 5**

Disorders of the endocrine system. Disorders of thyroid, pituitary, adrenal medulla, and sex hormones. Disturbances in blood clotting mechanisms- hemophilia and anemia. Complications of Acquired immune deficiency syndrome (AIDS)

#### **Employability/Entrepreneurship/Skill development**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19115SEC62	Molecular Biology	5	0	0	5

#### **Unit I**

DNA – Types, Properties, Structure and Functions. DNA as genetic material – Griffith experiment. Watson and Crick Model of DNA. RNA-, Types, Properties, Structure and Functions.

#### **Unit II**

DNA Replication – conservative, Semiconservative, Dispersive mode of Replication. Enzymes involved in replication. ) X 174 Replication. Eukaryotic genome organization.

#### **Unit III**

RNA synthesis – RNA processing. Genetic code – Wobble hypothesis – Protein synthesis. Post translational modification. Inhibitors of transcription and Translation.

## Unit IV

Operon concept – Lac Operon, Trp Operon, DNA methylation. DNA repair, Mutation - types – Recombination – Transposition – transposable elements..

## Unit V

Cancer – characteristics, Oncogenesis mechanism, proto oncogenes, Antioncogenes – tumor suppressor gene, anti cancer agents,. Recombinant DNA Technology – Cloning vehicles – plasmids – phages – cosmids – yeast – transgenic plants and transgenic animals - Applications of genetic engineering.

### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19115AEC63L	Hematology and Clinical Biochemistry Lab	0	0	3	2

### Hematology Experiment:

1. To determine total platelet count
2. To perform PT
3. To perform APTT
4. To perform thrombin time
5. Determination of haemoglobin by various methods.
6. Determination of Total RBC count.

### Clinical Biochemistry experiment:

1. Estimation of Glucose by Ortho Toluidine Method
2. Estimation of Cholesterol by Zak's Method
3. Estimation of Protein by Biuret Method
4. Estimation of Iron by Dipyrityl Method
5. Estimation of Urea by DAM Method
6. Estimation of Uric Acid by Caraway's Method
7. Estimation of Calcium by Clark and Collip Method
8. Estimation of Bilirubin by Malloy and Evelyn Method

### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19115SEC64L	Molecular biology Lab	0	0	3	2

#### EXPERIMENTS:

1. Estimation of DNA by Diphenylamine method
2. Estimation of RNA by Orcinol method
3. Isolation of DNA from bacterial, plant and animal cells
4. Separation of DNA by Agarose gelelectrophoresis
5. Isolation of Plasmid DNA from E.coli
6. Estimation of DNA and purity determination by UV absorption method.

Employability/Entrepreneurship/Skill development

Course code	Course Title	L	T	P	C
19115DSC65A	Biochemistry of Plants and Microbes	5	0	0	3

#### Unit I

Photosynthesis: Photosynthetic pigments and photosynthetic apparatus. Light Reaction, Hill Reaction. Emerson effect. Dark Reaction – CO<sub>2</sub> fixation in C<sub>3</sub>,C<sub>4</sub>, CAM Plants. Factors affecting photosynthesis and photorespiration. Plant growth regulators – growth hormones - growth inhibitors.

#### Unit II

Nitrogen Fixation – Symbiotic & Non Symbiotic enzymes - Nitrogenase, Nitrate assimilation, nitrate and nitrite reductase. Mineral Nutrients.

#### Unit III

Bacteria: Morphology – Ultra structure. Bacterial growth curve. Factors affecting growth. Blue Green Algae – Morphology – Algae – Biological Importance. Fungi :Classification, Cultivation and morphology of yeast and moulds. Life cycle of Yeast.

#### Unit IV

Food Microbiology : Food spoilage, Food Preservation. Fermented foods, Infected food and human illness – botulism, clostridium welchi poisoning, staphylococcus poisoning. Salmonella infection.

## Unit V

Water Microbiology: Purification of drinking water. Test for purity of Water, water borne diseases. Air borne Diseases. Antimicrobial agents. Viruses: Structure and replication of Viruses infecting bacteria, plants and animals.

### Employability

Course Code	Course Title	L	T	P	C
19115DSC65B	Hospital Management	4	0	0	4

## HOSPITAL MANAGEMENT

**Unit I: Introduction to Hospital management:** Eligibility and personal skills required for Hospital management. Job opportunities in Hospital management. Important hospital management Institutes in India and around the World.

**Unit II: Hospital management system:** Benefits and Modules of Hospital management systems. Interfacing of analyzer. Pathology lab management. Radiology, Blood Bank, Pharmacology, management softwares.

**Unit III: Health Care Services:** Health and Hospitals Services, Classification and Characteristics of Service Organizations, , Healthcare Revolution, Dimensions of Health, Indicators of Health- Composition of Health Sector, Types of Care, Pyramidal Structure of Health Services, Hospitals, Types of Hospitals and Role of Hospital in Healthcare.

**Unit IV: Health care Facilities:** Functioning of modern hospitals & changing need of patients Hospitality in Hospital Care, Invasive and non-invasive diagnostic facilities in modern hospital Care offered in Specialty and Super specialty Hospitals.

**Unit V: Health and Management:** Current Issues in Healthcare Accreditation-Telemedicine-Health Tourism-Health Insurance and Managed Care-Disaster Management-Hospital Wastes Management.

### Employability

Course Code	Course Title	L	T	P	C
191ENOC-	Open Elective - Journalism	4	0	0	2

**Aim :**

- To acquaint with the basic knowledge of journalism so that it may enthrust the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

**UNIT- II**

News – Definition, Kinds, Elements, Sources

**UNIT- III**

Reporters, Qualities, types

Skill development

**UNIT- IV**

The Editor and the Sub Editor-qualities, types, editorial department,

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

**References:-**

- Journalism -Susan
- Professional Journalism - John Hogenberg
- News Writing and Reporting - M.James Neal (Surjeet Publication)
- Professional Journalism -M.V Komath
- The Journalist’s Handbook -M.V Komath

Course code	Course Title	L	T	P	C
191MAOE C-	Open Elective Development of Mathematics Skills	4	0	0	2

**Aim:**

- To understand the concepts from the five branches of mathematics

## Course Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

## Course Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

### Unit I

Simple interest and compound interest

### Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

### Unit III

Set theory – Series

### Unit IV

Matrices – Determinants

### Unit V

Assignment problems

## SKILL DEVELOPMENT

### References

P.A.Navanitham, Business Mathematics & Statistics

Kanti Swarup, P.K.Gupta and Manmohan, "Operations Research"

Course Code	Course Title	L	T	P	C
191PHOEC	Open Elective- Instrumentation	4	0	0	2

### Aim:

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

### Course Objectives:

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

#### **Course Outcomes:**

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.
- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

#### **UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

#### **UNIT – II: Electronic Instruments – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

#### **UNIT – III: Electronic Instruments – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

#### **Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

#### **Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

#### **SKILL DEVELOPMENT**

#### **Books for Study**

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

#### **Books for Reference:**

A Course In Electrical And Electronic Measurements and Instrumentation – A.K.

Sawhney – Dhanpat Rai and Sons – 1990.

Electronic Measurements And Instrumentation – Oliver Cage – McGraw Hill –1975.

Course Code	Course Title	L	T	P	C
191CEOEC-	Open Elective-Food and Adulteration	4	0	0	2

**Aim:**

- To introduce students to food safety and standardization act and quality control of foods.

**Course Objectives:**

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and the role of consumers.

**Course Outcomes:**

- The students will have knowledge about different processing and preservation methods and principles involved.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agents, sweeteners, humectants and anti -caking agents, coloring and flavoring substances.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk.

Health hazards and risks.

**SKILL DEVELOPMENT**

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	Course Title	L	T	P	C
191CSOEC	Open Elective- E-Learning	4	0	0	2

## **COURSE OBJECTIVES**

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

## **COURSE OUTCOMES**

- Develop e – learning applications on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

## **UNIT I INTRODUCTION**

Introduction – Training and Learning, Understanding elearning, components and models of e- learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

## **UNIT II CONCEPTS and DESIGN**

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

## **UNIT III APPLICATIONS**

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

## **UNIT IV COURSE MANAGEMENT**

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

## **UNIT V ENHANCEMENT**

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

## **SKILL DEVELOPMENT**

### **REFERENCE BOOKS:**

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.
2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.
4. Moodle 2.0 First Look, Mary Cooch, 2010.

Course Code	Course Title	L	T	P	C
191CAOEC	Open Elective -Web Technology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Course Objective:**

- To understand and practice markup languages
- To learn Style Sheet and Frames

**Course Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**SKILL DEVELOPMENT**

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
191CMOEC	Open Elective-Banking service	4	0	0	2

**Aim:**

- To provide the bank is a financial institution which is involved in borrowing and lending money.

**Course Objective:**

- To provide lending money to firms, customers and home buyers.
- To provide keep money for customers
- To offer financial advice and related financial services, such as insurance.

**Course Outcome:**

- To help to gather knowledge on banking and financial system in India
- To provide knowledge about commercial banks and its products
- To create awareness about modern banking services like e-banking-banking and internet banking, ATM System
- To introduce recent trends in banking system
- To make the student understand the basic concept of banking and financial institutions and expose various types of risk based by banks

**UNIT – I**

**Commercial Banking – An Overview:** Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

**UNIT – II**

**E-banking –An Overview:** Meaning-Service-E-banking and Financial Services –Benefits- Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking- Services

**UNIT – III**

**Mobile Banking and Telephone Banking –An Overview:** Meaning-Features- Registration- Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers

**SKILL DEVELOPMENT****Unit – IV**

**ATM and Electronic Money:** Concept of ATM-Features-Functions-Strategic importance of ATM- Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

## Unit-V

**EFT System and INFINET:** Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

### References Books

1. Banking theory law and Practice
2. Banking Theory law and practice -Santhanam
3. Banking Awareness - N.K.Gupta
4. Management of Banking and financial Services-Padmalatha Suresh,Justin paul .

## Mapping of courses to Employability/Entrepreneurship and Skill Development

SCHOOL OF ARTS AND SCIENCE

DEPARTMENT OF BIOCHEMISTRY

M. Sc., Curriculum-Regulation 2019

Course Code	Course Title	L	T	P	C
19215SEC11	Biomolecules	6	1	0	5

## UNIT-I

Carbohydrates-Structure, properties, stability and biomedical importance of monosaccharides; significance of sugar derivatives-sugar acids, Deoxy sugars, Amino sugars, Sulphate derivatives, Phosphate derivatives, and Glycosides; Structural features of reducing and non-reducing sugars; Structures and significance of Fructans, Xylans, Galactans, Starch, Cellulose, Glycogen, Chitin, Heparin, Hyaluronic acid and Chondroitin-4-sulphate; Blood group and bacterial cell wall polysaccharides, Glycosylated proteins and glycoproteins.

## UNIT-II

Lipids-Structure and properties of fatty acids and glycerol. Structure and function of triglycerides, phospholipids, sphingolipids, cholesterol, Ergosterol, Bile acids, Cerebrosides, Gangliosides, prostaglandins, Thromboxanes and leukotrienes; structure and significance of lipid bilayer, micelles and liposomes, chemistry and functions of lipoproteins.

## UNIT-III

Proteins-Amino Acids-Classification, acid-base properties, and stereochemistry Non-protein amino acids and their biological roles; peptides- peptide bond, solid phase peptide synthesis, Ramachandran plot. proteins- classification and biological functions; protein structural orders; structures- super secondary structures- protein sequencing - N and C terminal analysis. protein folding - Folding and unfolding; protein disulfide isomerase and molecular chaperones; Implications of protein folding to medicinal chemistry.

## UNIT-IV

Nucleic acids - structure and chemistry of purines, pyrimidines and nucleotides; Double helical structure of DNA; stability of DNA - sugar puckering, base stacking and ionic interactions; Types of RNA and their biological significance.

## UNIT-V

Terpens - classification - isoprene rule - isolation - structural formula of Geraniol, nerol, menthoil and terpenol. Alkaloids - general methods of isolation - structural formula of cocaine, papin, nicotine-applications. Vitamin- classification - occurrence- biological importance of fat soluble and water soluble vitamins. Minerals - macro and micro nutrients -examples.

## Employability

Course Code	Course Title	L	T	P	C
19215SEC12	Biochemical and instrumental Analysis	6	1	0	5

### UNIT - I

Electrochemical techniques - General principles and electrochemical reactions, pH measurements, Standard hydrogen electrode, oxygen electrode, metallic indicator and membrane indicator electrodes, Biosensors and biochips – Principles, methods and applications. Radioisotopes - Law of radioactivity and decay processors, Detection methods - Scintillation counter and autoradiography; Applications of radioisotopes in biology.

### UNIT - II

Chromatography - Principles, materials, packing, instruments, optimization of column performance and application of Affinity chromatography, Immunoaffinity chromatography, size-exclusion chromatography, Ion-exchange chromatography, RPHPLC, HPLC, GLC, GSC, Super critical fluid chromatography and chromatofocussing. Centrifugation - Typing of centrifuges; Principles and application of differential, density gradient and analytical ultracentrifuges.

### UNIT - III

Electrophoresis – Principles- theories – Factors affecting electrophoretic mobility; Agar gel electrophoresis, PAGE, SDS-PAGE, Capillary electrophoresis, Isoelectric focussing electrophoresis and Pulse Field gel electrophoresis.

### UNIT – IV

Spectroscopy – Principles, Instrumentation, application and limitations of UV-Visible spectrometry, Fluorescence spectrometry, Raman Spectroscopy, IR Spectroscopy, AAS, ORD, CD, ESI – and MALADI- Mass Spectrometry, Basic concepts and applications of ESR, NMR, X-Ray crystallography and laser techniques.

### UNIT – V

PCR – general principles; Types of PCR – Single sided PCR, Reverse PCR, RT-PCR and RACE-PCR; Applications of PCR in general and clinical diagnosis; ELISA – DAS-ELISA, DAC-ELISA and PAC-ELISA; Use of molecular probes in analyzing RFLP, DNA fingerprinting and DNA footprinting; Hybridization techniques; Chromosomes walking, Blotting techniques – Southern, Northern and Western blotting.

### Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19215SEC13	Enzymology	6	1	0	4

#### UNIT-I

Enzymes- Introduction to enzymes, purification, localization, extraction of enzymes, properties, Nomenclature and IUB classification of enzymes, specificity of enzymes, units of enzyme activity, assay of enzymes-principal, turnover number-Coenzymes- Active site - investigation of active site structure, formation of ES complex.

#### UNIT-II

Enzyme inhibition and kinetics- Michaelis- Menten plot, linear transformation, line weaver- Burk plot, Eadie - Hofstee plot equations, Factors affecting enzyme action. Irreversible and reversible competitive, non competitive, uncompetitive inhibition. Pre steady state kinetics, Kinetics of Allosteric enzymes, sequential bisubstrate mechanism. Ping-Pong reactions ,End product inhibition and substrate inhibition- K<sub>cat</sub>

#### UNIT-III

Enzyme regulation:General mechanism of enzyme regulation,allosteric regulation, feedback inhibition and feed forward stimulation, Enzyme repression, induction and degradation, control of enzymatic activity by products and substrates.

#### UNIT-IV

Mechanism of enzyme catalysis- Acid base catalysis, covalent catalysis,Mechanism of action of lysozyme, carboxypeptidase-A, chymotrypsin, DNA polymerase, RNAase and serine

proteases. Isoenzyme forms and multi functional enzymes- FAS system, PDH. Metal dependent and metalloenzymes.

## UNIT-V

Enzyme technology- immobilization of enzymes- methods- properties and applications- abzymes- ribozymes- artificial enzymes- DNA enzymes- enzyme engineering - Enzymes in Pharmaceutical industry, Leather industry, detergent industry and Food industry- Research, theraoeutic and clinical diagnosis.

Employability

Course Code	Course Title	L	T	P	C
19215SEC14L	Biochemical Techniques Lab - I	0	0	4	2

## EXPERIMENTS:

1. Estimation of proteins, DNA, RNA and Carbohydrates by Colorimetric methods.
2. Determination of Concentration and extinction co-efficient of proteins spectrophotometer.
3. Analyzing the Quality of Oils – acid number, Saponification number and Iodine number.
4. Estimation of ascorbic acid and calcium from natural sources.
5. Estimation of Sodium, Potassium and Phosphorus in body fluids by flame photometry.
6. Separation of amino acids and lipids by Thin layer chromatography.
7. SDS- PAGE of proteins.
8. Separation of proteins by Size –exclusion chromatography.

## Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19215DSC15A	Biostatistics	5	0	0	4

## UNIT – I

Research – definition, importance and types – Literature survey – journals – types, abstracting and indexing journals – Internet and its applications-eMail – Web browsing – selection of topics

– research schedule – sample collection – techniques – data collection – interpretation of data - art of scientific writing – presenting a scientific seminar.

## **UNIT – II**

Probability:- Definition – Addition theorem – Multiplication Theorem (Statement only) – Conditional Probability – Independent events – Simple Problems.

## **UNIT – III**

Measure of Averages – Mean, Median and mode, Use of these measures in biological studies, Measures of Dispersion for biological characters – Quartile Deviation, Mean Deviation and Standard deviation and coefficient of variation, Measures of skewness and Kurtosis, Correlation and Regression – Rank Correlation – Regression equations, Simple problems based on biochemical data.

## **UNIT – IV**

Basic concepts of sampling – Simple random sample, stratified sample and systematic sampling, Sample statistics, Sampling distribution and standard error, Tests of significance based large samples, Test for mean, difference of mean, proportions and equality of proportion.

## **UNIT – V**

Small sample tests – Student ‘t’ test for mean, difference of two means, test for correlation and regression coefficients, Chi-square test for goodness of an independence of attributes, F test for equality of variances.

## **Employability**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19215DSC15B	Immunology	5	0	0	4

## **UNIT-I**

### **Infection**

Types – Factors influencing infection – endotoxins and exotoxins – pathogenicity and virulence – sources of infection agents – carriers – portals of entry.

### **Immunity**

Innate – Acquired – Active and Passive Immunity – phagocytosis – Inflammation.

### **Immune system**

Components – Lymphoid organs, Primary, Secondary, Tertiary – Lymphoid Tissues – Cells of the immune system.

## **UNIT-II**

### **Antigens**

Antigenicity – Immunogenicity – Types of antigens – Haptens – specificity – Blood group antigens – Blood grouping.

### **Immunoglobulins**

Isolation – structure and function – Antibodies – classes of immunoglobulins – Biosynthesis and antibody diversity.

### **Complement**

Complement – chemical and alternate pathway – Consequence of activation – Anaphylotoxins.

## **UNIT-III**

### **Immune response**

B and T cell development Cellular interaction – APC – MHC – cytokines – TCR – cluster of differentiation – HI and CMI – Regulation of immune response – Primary and secondary immune response – Immune tolerance - Immune suppression.

## **UNIT-IV**

### **Immunological Techniques**

Antigen – Antibody reaction – Precipitation – Agglutination – CTI – Torsion neutralization – Immunodiffusion – Immunofluorescence – Immune adherence – Immunoelectrophoresis – EIA – ELISA – RIA – Immunohematology – Hybridoma Technology – Merits and Demerits – Production of Vaccines and their uses.

Production of antisera – Fractionation of leukocytes – Identification of lymphocytes and their subsets – Experimental animal models – Inbred strains – SCID Mice , Nude mice – mice cell culture system.

## **UNIT-V**

**Immunodeficiency disorders** – Cancer and AIDS – Immunity to bacteria and viruses – Autoimmunity – Hypersensitivity – classification. Organ Transplantation – Graft rejection – mechanism – Tissue typing – immuno supporting drugs – Immunotherapy.

Employability

Course Code	Course Title	L	T	P	C
19215SEC21	Cellular Biochemistry	5	1	0	5

## UNIT I

### Cell & cell cycle

Cell structures- plant and animal cell structures, Types of tissues- Epithelium – Organization and its types. Bones, Cartilage structure. Extracellular matrix- ECM components, Collagen, Elastin, Fibrillin, Fibronectin, Laminin, Proteoglycans.

## UNIT II

**Biomembrane-** Membrane assembly- Unit membrane concept, physical, Physiological functions and properties. Different forms of plasma membrane- gap junction, tight junction, Plasmadesmata, desmosomes- Active, passive transport system- Endocytosis, Exocytosis.

## UNIT III

**Cell division-** mitosis-meiosis- significance. Cell cycle-phases and regulation-checkpoints in cell cycle- programmed cell death-Apoptosis- Necrosis-Autolysis.

## UNIT IV

**Signal Transduction-**types of signaling-receptors- signaling pathways-second messengers- cyclic nucleotides- lipids- calcium ions- crosstalk signaling pathways.

## UNIT V

**Cancer biology**-morphology and characteristics of cancer cells- Benign and malignant tumors- tumor markers- agents causing cancer- mechanism of carcinogenesis- Oncogenes and proto oncogenes- tumor suppressor genes- p53-Telomerase-anti cancer agents

Employability/Skill development

Course Code	Course Title	L	T	P	C
19215SEC22	Metabolism and Regulation	5	1	0	5

## UNIT -I

### BIOENERGETICS

Thermodynamics-Free energy-energy Transfer-energy Compounds -ATP-Enzymes involved in redox reactions. Electron transport chain -Inhibitors- Oxidative Phosphorylation - Chemiosmotic Theory-Inhibitors -uncouplers-Ionophores-Regulation-substrate level Phosphorylation. Electron transport system -Mitochondrial and Microsomal system -Shuttle Mechanism -Malate and glycerol phosphate shuttle.

## UNIT -II

### CARBOHYDRATE METABOLISM

Glycogen metabolism -Glycogen storage diseases -Regulation -Glycolysis -control - Oxidative decarboxylation -PDH complex -energetics -TCA cycle -regulation -energetics.

Gluconeogenesis -Glucogenic substrates -Cori cycle and Glucose alanine cycle-regulation -HMP shunt and metabolic significance-Glucuronic acid cycle-Blood glucose homeostasis.

## UNIT-III

### LIPID METABOLISM

Adipose Tissue-Lipogenesis -FA Synthase complex -Regulation -Oxidation of fatty acids - alpha,beta,omega-carnitine shuttle-Metabolism of Triglycerides-Phospholipids and glycolipids- Regulation. Ketogenesis-Ketolysis-Metabolism of cholesterol-Bile acids -lipoprotein metabolism.

## UNIT-IV

### NITROGEN METABOLISM

Nitrogen balance -Oxidative and NonOxidative deamination -Transamination - And Deamination -decarboxylation -Biogenic amines -Ureogenesis and regulation. Essential and nonessential amino acids - Ketogenic and glucogenic amino acids - Anabolism and catabolism of individual amino acids - disorders of amino acid metabolism. Biosynthesis of purine and pyrimidines -*Denovo* and salvage pathway - Catabolism of purines and pyrimidines - disorders of nucleic acid metabolism.

## UNIT-V

### METABOLIC INTEGRATION AND REGULATION

Role of hormones -Insulin - Role of organs - Liver, Brain, Kidney, Muscle and Adipose tissue - Metabolic interrelationship in well-fed state, fasting state, Obesity, starvation, Diabetes Mellitus, Exercise, injury, stress and pregnancy and lactation.

Employability/Skill development

Course Code	Course Title	L	T	P	C
19215SEC23	<b>Neuro Biochemistry</b>	5	0	0	4

## UNIT I

### NERVOUS SYSTEM

Structure and function of the brain. Central Nervous System, Peripheral and Autonomic Nervous system. Cells of Nervous System – Neurons, Astrocytes, Glial cells, Oligodendrocytes and Schwann cells. Chemical composition of brain – utilization and uptake of glucose and amino acids, Blood – Brain barrier.

## UNIT II

### NEUROTRANSMISSION

Membrane potentials, Resting potential – Depolarization, repolarization and hyperpolarization, Action potential. Mechanism of axonal neurotransmission. Membrane channels – Types of channels, ion gated, voltage gated, chemically gated, mechanically gated and responsive to intracellular messengers. DISEASES OF NERVOUS SYSTEM Molecular basis of Parkinson's disease, Alzheimer's disease, Schizophrenia, Myasthenia gravis and Multiple sclerosis.

### **UNIT III**

#### **NEUROTRANSMITTERS**

Synthesis, storage, release, uptake, degradation and action of neurotransmitters. Acetylcholine, GABA, Serotonin, Dopamine, Glutamate, Aspartate, Nitrous oxide, etc. Neuropeptides. Synaptic transmission – Cholinergic receptors – Nicotinic and Muscarinic receptors, Agonists and Antagonists – their mode of action and effects. Adrenergic receptors, serpentine receptors and intracellular signaling. Fast and slow receptors. Exocytosis of neurotransmitter – Role of synapsins, synaptogamins, SNAP, SNARE and other proteins in docking, exocytosis and recycling of vesicles.

Employability/Skill development

### **UNIT IV**

#### **LEARNING AND MEMORY**

Mechanism of short term memory and Long Term Potentiation. NMDA and AMPA glutamate receptors. Retrograde messengers in synaptic transmission. Role of CAM kinase II, Calcium, protein kinases, cAMP, NO, Calpain and other proteins in memory and learning process. Synaptic plasticity INTERACTION OF DRUGS WITH CNS Mechanism of action of anesthetics, analgesics, hallucinogens, depressants, stimulants and toxins on the nervous system. Addiction and drugs of abuse.

### **UNIT IV**

#### **BIOCHEMISTRY OF VISION AND MUSCLE CONTRACTION:**

Rod and cone cells, visual cycle, mechanism and regulation of vision, color vision. Thick and thin filaments, interaction of actin and myosin muscle contraction, role of calcium and regulation of muscle contraction. Smooth muscle contraction and its regulation

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

19215SEC24L	Enzymology Lab- II	0	0	4	2
-------------	--------------------	---	---	---	---

### EXPERIMENTS:

1. Determination of enzyme activity and specific activity of Salivary amylase, Lipase, Catalase, Lactate dehydrogenase and Glucose -6-phosphate dehydrogenase.
2. The progress curve of acid phosphatase and amylase – catalyzed reactions.
3. Effect of PH and Temperature on enzyme activity of urease and alkaline phosphatase.
4. Determination of activation energy and Km value of any two enzymes.
5. Effect of activation and inhibitors on activity of any one enzyme.
6. Estimation of free energy of any two enzymes.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19215DSC25A	Endocrinology	5	0	0	4

### UNIT: I

Hormones in general - definition – types of secretions – nature – classification synthesis and their role – Feedback control with specific examples Hormones action Proteins and Steroids – Cell Signaling in hormone action.

### UNIT: II

Hypothalamo hypophysial axis - Hormones of hypothalamus and their role Structure of pituitary - Secretions - Physiology role -Pathophysiology Current status of pituitary as a master gland.

### UNIT: III

Thyroid - Parathyroid - structure - hormones – synthesis – storage – releases- carrier proteins (eg. TBA and TBG) – Physiology role – Pathophysiology

#### UNIT: IV

Adrenal and Gonadal Hormones – Steroid biosynthesis – maintenance of cyclicity.  
Physiological role – Pathophysiology – Steroids in metabolism

#### UNIT: V

Gastrointestinal hormones – pancreas as an endocrine organ – secretions- functions – physiological role and pathophysiology other endocrine organs in vertebrate Insect and crustacean hormones – their role in growth and metamorphosis.

#### Employability/Skill development

Course Code	Course Title	L	T	P	C
19215DSC25B	Clinical nutrition and dietetics	5	0	0	4

#### UNIT I

Definition of nutrition, over nutrition and undernutrition and malnutrition. signs of good and poor nutrition – relation of good nutrition to health. Nutritional deficiency disease – anaemia, protein. Calorie malnutrition, vitamin-A deficiency. Aetiology, symptoms, prevention and treatment. Role of dietary fibre in health and disease.

#### UNIT II

Energy- definition of calorie and joule. Energy value of foods – bomb calorimeter. Direct and indirect calorimeter. Basal metabolism, definition, methods of determining basal metabolism rate (BMR), factors influencing BMR – calculation of total energy requirement. Factors affecting total energy requirement, food sources.

#### UNIT III

Purpose and principles of therapeutic diets, hospital diets- etiology and dietary modifications.

(a) Obesity, etiology treatment.

(b) Underweight – definition, etiology, treatment.

(c)Diet in febrile conditions- typhoid, tuberculosis.

(d)Diebetes mellitus -definition,predisposing factors, factors that maintain blood glucose level, symptoms,diagnosis, biochemical changes in the metabolism of carbohydrates, fats, protein,food exchange list and treatment.

#### UNIT IV

(a)Diet in disease of gastrointestinal tract, peptic ulcer and duodenal ulcer, acute and chronic diarrhea, constipation.

(b)Diet in disease liver-cirrhosis and hepatitis

(c)Diet in disease of cardiovascular system- atherosclerosis and hypertension.

(d)Diet in disease of kidney and urinary tract- acute and chronic nephritis and nephritic syndrome.

#### Employability/Skill development

#### UNIT V

(a)Assessing the food nutritional problems in the community methods available for the assessment of the nutritional status of an individual and the community. Assessment methods- nutritional anthropometry- biochemical tests-diet surveys.

(b) Measures to overcome malnutrition. Role of nutrition education and nutrition intervention programmes. Role of ICMR, ICAR, CFTRI, ICDS,- nutritious noon meal programme, contribution of international organizations- WHO, UNICEF, FAO.

Course Code	Course Title	L	T	P	C
19215DSC25C	Bioinformatics	5	0	0	4

#### UNIT-I

Bioinformatics - Definition, the history and scope of Bioinformatics; Bioinformatics as a tool; Role of computers in Biology; The CPU and operating systems - computer networks - the

internet, modem, the world wide web, search engines; FTP,HTML, URL and IP address; Virtual Library; search the biochemical information on SWISS - PROT, NCBI and MEDLINE.

## UNIT-II

Software in Bioinformatics - C, C++, bioperl,Biopython and oracle. The Bioinformatics workstation, Unix system - Files, directories, Functions and application of Unix system.

## UNIT-III

Data base - Types, database management systems and data base security; biological data bases - sequence databases for proteins and nucleic acids; searching sequence data bases; structural data base - PDB; Motif data bases; Genome data bases; Miscellaneous data bases, Data submission and data retrieval with Entrez.

## UNIT-IV

Definition and concepts on homology, analogy, orthology and paralogy; sequence similarity searches - FASTA, BLAST, DBGET, SRS, Enterz. Theory and data bases of pair wise and multiple sequence alignments; BLOSUM matriees; phylogenetics - phylogenetic trees; sequence annotation, Markov models for data base similarity searches.

## Employability/Skill development

## UNIT-V

Protein secondary structure predictions - Chow - Fasman, JPRED, AGADIR; Quandex; protein tertiary structure prediction - comparative modelling, fold Recognition and Ab initio prediction; Visualization of protein structures - RASMOL; Drug discovery - combinatorial chemistry and docking;

DNA microarrays - Methodology, types and applications - Goals of human genome project- structural and functional genome - Agroinformatics - Medical informatics - Metabolomics - E-cell.

Course Code	Course Title	L	T	P	C
19215RMC26	Research Methodology	3	0	0	2

## **UNIT I:**

Selection of problem-stages in the execution of research: choosing a topic to publish- preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal ; standard of research journals – Impact factor.

## **UNIT II:**

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

## **UNIT III:**

Coparision of means, chisquard test, student test (ANOVA ‘’portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

## **UNIT IV:**

Chromatography – principle, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, Isoelectric focusing, pulsed field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

## **UNIT V:**

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radiochemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

Employability/Entrepreneurship/Skill development

Code	Course Title	L	T	P	C
19215SEC31	Molecular Biology	6	1	0	6

## UNIT-I

Structure and functions of DNA, Eukaryotic genome organization .DNA replication . DNA damage and repair . Gene arrangements . Recombination

## UNIT-II

Prokaryotic and Eukaryotic RNA polymerases – structures and function Mechanism of prokaryotic and eukaryotic transcription. Regulation of gene expression-In prokaryotes- Operon concept ,Attenuation and termination . In Eukaryotes – hormonal (steroid hormone receptors) Phosphorylation (STAT proteins). Activation of transcription elongation by HIV Tat protein .

Post transcriptional processing in prokaryotes and eukaryotes , Ribozymes, Antisense RNA.

## UNIT –III

Genetic code- Translation in bacteria and eukaryotes. Translational control in bacteria and eukaryotes .Regulation of protein synthesis. Inhibitors of protein synthesis . Co and post translational modifications. Protein targeting membrane and organelles. Protein degradation – Protein folding

## UNIT –IV

Levels of Gene expression. Principle of gene regulation , Cis acting elements and trans acting factors . Upregulation ,Down regulation, Induction ,Repression ,Global and narrow domain mechanisms. Comparison of gene regulation strategies in prokaryotes and eukaryotes. Epigenetic gene regulation by DNA methylation. Transposable elements .

## UNIT –V

Mutation and mutagenesis – chemical and UV mutagenesis-types –Ames test-Bacterial genetic system – Transformation –Conjugation- Transduction. Development genetics – Overview. Drosophila development maternal effect gene ;zygotic genes .

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19215SEC32	Clinical Biochemistry	6	1	0	6

### UNIT-I

Disorder of blood –Sickle cell disease - hereditary methemoglobinemia-Thalassemiias-Porphyrrias- Agranulocytosis, Thrombocytopenia, aplastic-hemolytic, Anemia, Hematuria, disorders of clotting mechanism.

### UNIT –II

Inborn errors of metabolism – PKU – Tyrosinosis - Alkaptonuria – maple syrup urine disease – homocystinuria – histidinuria – albinism – parkinson’s diseases – Diseases involving lysine and ornithine – Folic acid deficiency – Clinical problems related to glutathione. Disorders of purine metabolism – lesch nyhan syndrome, immune deficiency diseasaes , gout. Diabetes mellitus – lactic acidosis – G-6-PD deficiency- mucopolysaccharides – galactosemia – glycogen storage diseases

### UNIT: III

Apolipoproteinuria and genetic abnormalities in lipid energy Transport – Lipid storage diseasaes – Fatty liver – causes– types and features – Atherosclerosis – Hypertension. Cerebrospinal fluid – protein concentration and gold curve – glucose and protein level in CSF under pathological condition.

### UNIT: IV

Liver function test, metabolism of bilirubin, differential diagnosis of jaundice, hepatitis, cirrhosis and hepatic coma. Gastric analysis – acidity curves – stimulation tests- insulin and pentagastrin, peptic ulcer- gastritis and zollinger ellilson syndrome – gallstones

### UNIT: V

Biochemical changes in pregnancy – menstrual cycle- hormonal changes – placental hormones – parturition - lactation – prenatal and postnatal diagnosis. Amniotic Fluid – origin , composition and analysis of amniotic acid.

Employability/Skill development

Course Code	Course Title	L	T	P	C
19215SEC33L	Clinical Biochemistry Lab	0	0	5	3

### EXPERIMENTS:

1. Urine qualitative Analysis- normal and abnormal constituents.
2. Blood- ESR, TC/DC, blood grouping, hemoglobin.
3. Quantitative analysis of blood- sugar, urea, uric acid, creatinine, TG, Cholesterol, HDL, phospholipids, calcium, iron, inorganic phosphorus, protein (biuret method), bilirubin, chloride.
4. Assay of serum enzyme- SGOT, SGPT, Acid phosphatase and alkaline phosphatase, amylase.

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19215DSC34A	Genetics and Genetic Engineering	5	0	0	4

### UNIT- I

Overview of genetics; relation between genes and traits; mendelian genetics –three postulates- dihybrid cross-test cross-punnett square-trihybrid cross-pedigree analysis-linkage-complete and incomplete linkage- crossing over-four crossing over-recombination frequencies-gene mapping in eukaryotes.

Sex determination – sex chromosomes- klinefelter and turner's syndrome- sex differentiation in humans- dosage compensation- barr bodies-sex linked epigenetic inheritance-gene mutations.

Eugenics- gene interactions- pleiotropism.

### UNIT – II

Population genetics- gene frequency-gene pool- hardy Weinberg equilibrium- allele frequencies- factors influencing – human cytogenetics.

Evolutionary genetics- origin of species- genetic drift-polymorphism- natural selection-genetic code- genetic death- genetic homeostasis.

### UNIT-III

Genetic engineering- overview-Analyzing DNA sequences- Maxam and Gilbert method,chain- termination method and semi –automated method; southern and northern blotting – methods,merits and limitations ;polymerase chain reactions-basic principles ,types,special features and applications cutting and joining DNA molecules- nomenclature, target sites and applications;site- directed mutagenesis- cassette mutagenesis, primer extension and PCR- based mutagenesis.

#### UNIT- IV

Gene cloning- general strategies- cloning vehicles- plasmids, bacteriophages, cosmids, plasmids and YAC; shuttle and broad host range vectors; recombinant DNA and methods for introducing rDNA into host cells; screening: expression of cloned DNA; cloning in e-coli, bacillus subtilis and saccharomyces cerevisiae- merits and limitations; gene transfer into plants through Ti plasmids; transferring gene into animal cells- eggs and emryos.

#### UNIT-V

Transgenic plants- insect and herbicide resistant plants; transfer of Nif genes; transgenic animals- animal bioreactors, molecular farming and breeding strategies; genetic engineering in the production of insulin, somatostatin, vaccines and antibodies; gene therapy- types, methods and prevention of diseases; Manipulation of reproduction in animals.

Employability/Skill development

Course Code	Course Title	L	T	P	C
19215DSC34B	Pharmaceutical Biotechnology	5	0	0	4

**Unit-I:** Definition and scope – potential and achievements – Fermentation technology and industrial microbiology Fermentation as a biochemical process, bioconversion and biotransformation.

**Unit-II:** Fermented construction and working, downstream processing, fermentation monitoring, in-situ recovery of fermentation products, proof of efficacy of biotech products. General application of fermentation in the manufacturing of antibiotics (Penicillin, streptomycin, tetracycline) dextran, vitamin (Vit.B2 and Vit.B12).

**Unit-III:** Microbial enzymes, microbial limit tests and assays (antibodies, Vitamin, amino acids etc.). standards of water used in fermentation, pharmaceutical and cosmetic industry.

**Unit-IV:** Preparation and characteristics of immunologicals – Preparation and standardization of vaccines , sera, allergenic extracts, diagnostics, biologicals. Introduction to veterinary vaccines, immunomodulating substances, lymphokines, preparation of monoclonal antibodies, applications of monoclonal antibodies.

**Unit-V:** Biotechnology derived products (therapeutic proteins) Examples of biotechnology derived therapeutic products of human Insulin, Interferon, somatostatin and somatotropin.

Employability/Skill development

Course Code	Course Title	L	T	P	C
19215SEC41	Molecular Basis of diseases	6	0	0	6

**UNIT I:**

Overview of infectious diseases, infectious agents - Bacteria, Viruses, protozoa and fungi, pathogenicity and virulence; Facultative / obligate intracellular pathogens.

**UNIT II:**

Emerging and re-emerging infectious diseases and pathogens including X-MDR M. tuberculosis, MRSA, SARS virus, Bird flu, prions, AIDS, Dengue Hemorrhagic Fever, and Chlamydiae, opportunistic fungal pathogens.

**UNIT III:**

Viral diseases, epidemiology, signs and symptoms, causative agent, history, infection and pathogenesis, Detection, Drugs and inhibitors, Vaccines, molecular mechanisms for AIDS, hepatitis, influenza, dengue, polio, herpes.

**UNIT IV:**

Bacterial disease, epidemiology, signs and symptoms, causative agent, history, infection and pathogenicity, Diagnostics, Therapeutics and vaccines. Drug resistance, mechanisms, Multidrug efflux pumps, extended spectrum  $\beta$ -lactamases (ESBL) and implications on public health, molecular mechanisms for Tuberculosis, Typhoid, Cholera.

Employability/Skill development

## UNIT V:

Parasitic diseases epidemiology, signs and symptoms, causative agents, history, Vectors, life cycle, Host parasite interactions, Diagnostics, Drugs and Inhibitors, Resistance, Vaccine development, molecular mechanisms for Malaria.

Course Code	Course Title	L	T	P	C
19215SEC42	Environmental Biochemistry	6	1	0	6

## UNIT I

Definition, scope and importance. Concept of an ecosystem. Structure and functions of the ecosystem. Producers, consumers and decomposers. Energy flows in an ecosystem. Ecological succession. Food chains, food webs and ecological pyramids Introduction, types, characteristic features, structure and function of the following ecosystem. Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (Pond, streams, lakes, rivers, oceans, estuaries.)

## UNIT II

Causes, effects and control measure of, Air pollution, Water pollution ,Soil pollution, Noise pollution, Thermal Pollution, Bioleaching,

## UNIT III

Introduction – Definition, genetic, species and ecosystem diversity. Value of Biodiversity : Consumptive use, Productive uses social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. Hotspots of biodiversity, Threats to biodiversity Endangered and endemic species of India Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

## UNIT IV

Enzymes: Immobilization of enzymes, enzymes engineering ,isolation and culturing of microorganisms, production of enzymes ,fermentation ,antibiotics, use of microbes to treat sewage water and industrial effluents and mining.

## Employability/Skill development

## UNIT V

Pollution Control: Cleaner technologies, reducing environment impact of industrial effluents, chemical pesticides, herbicides and fertilizers. Renewable source of energy through waste materials; biogas, energy crops, cellulose current levels of biodiversity and gene banks.

Course Code	Course Title	L	T	P	C
19215SEC43L	Molecular and Environmental Biochemistry lab	0	0	5	3

### EXPERIMENTS:

1. Isolation & Purification of genomic DNA from bacteria
2. Isolation & Purification of plasmid DNA
3. Agarose gel electrophoresis of chromosomal & plasmid DNA
4. Restriction Digestion of chromosomal & plasmid DNA
5. Isolation of DNA fragment from agarose gel
6. Western blotting (Demonstration only).
7. Animal tissue culture (demonstration only).
8. Determination of BOD and COD form contaminated water
9. Bacterial examination of drinking water by MPN techniques

Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19215DSC44A	Medical Biotechnology	5	0	0	4

### Unit I:

Classification of genetic diseases: Chromosomal disorders – Numerical disorders e.g. trisomies & monosomies, Structural disorders e.g deletions, duplications, translocations & inversions, Chromosomal instability syndromes. Gene controlled diseases – Autosomal and X-linked disorders, Mitochondrial disorders.

## **Unit II:**

Molecular basis of human diseases: - Pathogenic mutations Gain of function mutations: Oncogenes, Huntingtons Disease, Pittsburg variant of alpha 1 antitrypsin. Loss of function - Tumour Suppressor. Genomic. Dynamic Mutations - Fragile- X syndrome, Myotonic dystrophy. Mitochondrial diseases

## **Unit III:**

Gene therapy: Ex-vivo, In vivo, In situ gene therapy, Strategies of gene therapy: gene augmentation Vectors used in gene therapy Biological vectors – retrovirus, adenoviruses, Herpes Synthetic vectors– liposomes, receptor mediated gene transfer. Gene therapy trials – Familial Hypercholesterolemia, ADA, AIDS, Cystic Fibrosis, Solid tumors.

## **Unit IV:**

Nucleic acid based Therapy: Gene silencing technology, siRNA, Aptamers, antisense oligodeoxynucleotides (AS-ODN), Ribozymes, Peptide Nucleic Acids, Clinical management and Metabolic syndrome: – PKU, Familial Hypercholesterolemia, Rickets, ADA, Congenital hypothyroidism.

Employability/Skill development

## **UNIT V:**

Recombinant & Immunotherapy; Clinical applications of recombinant technology; Erythropoietin; Insulin analogs and its role in diabetes; Recombinant human growth hormone; Streptokinase and urokinase in thrombosis; Recombinant coagulation factors, Monoclonal antibodies and their role in cancer; Role of recombinant interferons; Immunostimulants; Immunosuppressors in organ transplants; Role of cytokine therapy in cancers;

## **REFERENCE**

Course Code	Course Title	L	T	P	C
19215DSC44A	Applied Microbial Biochemistry	5	0	0	4

**Unit-I:** Microbiological techniques

Culture techniques: Isolation of microbes from various sources, serial dilution techniques, pure culture techniques, anaerobic culture methods – chemical and physical methods. Culture preservation techniques. Nutritional requirements: - different kinds of media, composition of media-carbon sources, nitrogen sources, vitamin and growth factors, mineral, inducers, precursors and inhibitors. Sterilization methods.

**Unit-II:** Sources of energy

Energy from inorganic compounds - ET in chemolithotrophs, production of reducing power in chemolithotrophs; Energy from visible radiation – photosynthesis in eukaryotes, blue-green algae, bacteria. Bioenergy: Renewable and non-renewable energy sources - Green technology - Biofuels, biogas, bioethanol.

**Employability/Skill development**

**Unit III-** Microbial metabolism-

overview. Photosynthesis in microbes. Role of chlorophylls, carotenoids and phycobilins, Calvin cycle. Chemolithotrophy; Hydrogen– iron– nitrite oxidising bacteria; nitrate and sulfate reduction; methanogenesis and acetogenesis, fermentations– diversity, syntrophy-role of anoxic decompositions. Nitrogen metabolism, nitrogen fixation, hydrocarbon transformation.

**Unit-IV:** Medical microbiology

Infectious Diseases process – Diagnosis – Process of sample collection, transport and examinations of the specimens. Antibioqram. Bacteriology: Morphology, cultural characteristics, pathogenicity and laboratory diagnosis of Gram positive organisms -

Staphylococcus aureus, Mycoplasma; Gram negative organisms: E. coli. Infections, antimicrobial agents for textiles, international standards for the assessment of antimicrobial activity of textiles.

**Unit-V:** Microbial products in pharmaceutical and agriculture industry:

Production, harvest, recovery and uses– Enzymes, Antibiotics (Penicillins, Tetracycline), vitamins (B2, B12), Aminoacids (lysine, glutamic acid).

Employability/Skill development

**PRIST**  
DEEMED TO BE

THANJAVUR – 613 403 - TAMILNADU

# **SCHOOL OF ARTS AND SCIENCE**

## **DEPARTMENT OF BIOTECHNOLOGY**

### **B.Sc. BIOTECHNOLOGY CURRICULUM**

#### **REGULATION 2019**

**SCHOOL OF ARTS AND SCIENCE**

**DEPARTMENT OF BIOTECHNOLOGY**

**B.Sc., CURRICULUM - REGULATION-2019**

**B.Sc., Graduate Attributes**

- Research, inquiry and analytical thinking abilities.
- Capability and motivation for intellectual development.
- Ethical, social and professional understanding.
- Communication in intra and inter disciplinary
- Teamwork, collaborative and management skills in scientific research
- Information literacy in respective discipline

**B.Sc., Program Educational Objectives PEO**

- PEO 1: To obtain detailed information about the fundamentals of Biotechnology, allied subjects and life skills.
- PEO 2: To provide information about the molecular methods which involved in cellular processes of living systems such as microbes to higher order organisms for applied aspects. To address the emerging need for skilled scientific manpower with research ethics involving organisms.
- PEO 3: To impart the basics and current molecular tools in the areas of Molecular Diagnostics, Fermentation Technology, Plant, Animal & Environmental Biotechnology are included to train the students for man power development and also sensitize them to scope for research. The practical subjects will provide information about the careers in the industry and applied research where biological system is employed.
- PEO 4 : To make the graduates of Biotechnology to learn and to adopt in a competitive world of technology update and contribute to all forms of life
- PEO5- To enable them to execute a research objective through experimentation

**B.Sc., Programme Specific Outcome (PSO)**

- **PSO1**-Graduates will exhibit contemporary knowledge in Biotechnology and students will be eligible for doing jobs in pharmaceutical and biotechnological Industry.
- **PSO2**-An expert in biotechnology and allied fields (medical, microbial,

agricultural, environmental, plant and animal) for utilizing the practical skill to address biotechnological challenges.

- **PSO3-** Graduates will be able to work individually as well as in team to survive in multidisciplinary environment.
- **PSO4-** If students will engage themselves in the process of effective learning, it will give opportunities to utilize acquired knowledge for the catering the needs of science and technology as well as for the betterment of human mankind.
- **PSO5-** Graduates will be able to understand the potentials, and impact of biotechnological innovations on environment and their implementation for finding sustainable solution to issues pertaining to environment, health sector, agriculture, etc.

### **B.sc., Program Outcome PO**

- **PO1-** Understand the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life
- **PO2-** Understanding and better knowledge of the causes, types and control methods for environmental pollution by the students.
- **PO3-** The student will be able to discuss the mechanisms associated with gene expression system in prokaryotes and eukaryotes.
- **PO4-** Developed various communication skills such as reading, listening, speaking etc.,
- **PO5-** Acquired the skills in handling scientific instruments, planning and performing in laboratory experiments
- **PO6-** Ethics: Convey and practice social, environmental and biological ethics.
- **PO7-** To get knowledge about research tools and learn to do review literature. Ability to carry out independent literature survey corresponding to the specific publications type and assess basic research tool

SEMESTER - 1

Semester	Subject Code	Title of the Course
1	19110AEC11	<b>இக்கால</b> <b>இலக்கியம்,செய்யுள்,சிறுகதை,இலக்கணம்,இல</b> <b>க்கிய வரலாறுமனப்பாடப்பகுதி</b>

முதல் பருவம் - தாள் - 1

அலகு - I

**பாரதியார் தேசபக்திப் பாடல்கள்**

- கதந்திரப் பெருமை
- கதந்திரப் பயிர்
- கதந்திர தேவியின் துதி
- தொண்டு செய்யும் அடிமை

**பாரதிதாசன்**

- விரத்தாய்

அலகு -II

**சுதா** - நல்ல திர்ப்பு

**கண்ணதாசன்** - கத்தல் துணியின் கதை

**பட்டுக்கோட்டை கல்பாணசுத்தரம்** - நண்டு செய்த தொண்டு - காலம் சரியில்லே

**மு.மேத்தா** - வாழையடி வாழை

**வாலி** - தாய்

அலகு - III

**சிறுகதை** - இளவேளிற் குழிப்புகள் - திருவையாறு பாலகுமார்

அலகு - IV

**இலக்கணம்**

**எழுத்து**

மனப்பாடப்பகுதி

அலகு - V

இலக்கிய வரலாறு

சிறுகதை, புதினம், நாடகம், உரைநடை, கவிதை,புதுக்கவிதை

Course Code	Course Title	L	T	P	C
19111AEC11	Advanced English-I	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

**Outcome:**

- Develop vocabulary
- Read and comprehend literature

**UNIT – I**

Glossary of grammar terms

Figures of speech

**UNIT – II**

Foreign words and phrases

British and American Vocabulary

**UNIT – III**

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

**UNIT – IV**

Editing

Proof reading

**UNIT – V**

Comparison and contrast

Cause and effect

**SKILL DEVELOPMENT**

English Work Book-I&II	-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
19111AEC12	English-I	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

**Outcome:**

- Read and comprehend literature

**UNIT –I**

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

**UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

**UNIT –III**

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

**UNIT –IV**

Enterprise -Nissim Ezekiel

Love poem for a wife -A. K Ramanujam

**UNIT –V**

Oliver Twist -Charles Dickens

**SKILL DEVELOPMENT**

**References: -**

The Art of Reading/ Experiencing Poetry.

-S.Murugesan and Dr.K.Chellappan  
Emerald Publishers

Course Code	Course Title	L	T	P	C
19117AEC13	Fundamentals of Biological system	6	1	0	5

**Aim:**

- To study the diversity of life, the interactions of the environment, to study problems, and to propose solutions to those problems.

**Objectives:**

- (Science: psychology) Perceptible to the external senses.
- (Science: ophthalmology) The lens or system of lenses in a microscope (or telescope) that is nearest to the object under examination

**Outcomes:**

- Understand the physical, chemical, and mathematical basis of biology
- Appreciate the different scales of biological systems
- To understand the Basics in life sciences, evolution and organization of life, living non-living things
- To understand the basics of biomolecules, carbohydrates, proteins, lipids and Nucleic acids

**UNIT – I**

Basics in life science: definition of Biology- evolution and organization of life- living and non-living things- prokaryotes and eukaryotes- basis of classification of microbes, plants and animals up to order with 2 examples and salient features- nomenclature.

**SKILL DEVELOPMENT**

**UNIT II**

Inorganic perspective of life: atoms molecules, chemical reactions and concept of equilibrium, colligative properties of solution, laws of thermodynamics, bonding, water and its significance, pH maintenance- acids and bases.

**UNIT III**

Introduction to biomolecules: carbohydrates, proteins, lipids and Nucleic acids- classification- general properties- functions

#### **UNIT IV**

Cellular organization of life: cell theory- cell organization-cell organelles- plant and animal cell- tissue organization- cell size and its constraints- movement in and out of the cell

#### **UNIT V**

Biology of environment: biotic and abiotic factors- influence of environmental factors on life- major biogeo cycles-carbon, nitrogen, oxygen cycles- ecosystems- food web- food chain and pyramids.

#### **REFERENCE**

1. Biology 2<sup>nd</sup> edition, George H. Fried and George J. Hademenos, Tata MacGraw Hill Publishers.

Course Code	Course Title	L	T	P	C
19117AEC14L	Fundamentals of Biological system Lab	0	0	3	3

**Aim:**

- To understanding the biological natural theory, characters and futures of some biological techniques

**Objectives:**

- The foundation of biology as it exists today is based on five basic principles. They are the cell theory, gene theory, evolution, homeostasis, and laws of thermodynamics.  
Cell Theory

**Outcomes:**

- The learners will acquire knowledge on the structure and functions relationship of Biological system and as well their roll in various biological process
- To know the cellular organization of life, cell theory- cell organization-cell organelles- plant and animal cell
- To understanding the basic fundamentals of Biological System

**EX:**

- Microscopic techniques- types
- Observation of prokaryotic and eukaryotic cells
- Living cell / temporary/ permanent preparations histochemical techniques
- Staining procedure *in vivo* and *in vitro*, living and non-living
- Different types of cells and tissues
- Taxonomical identification of any 2 plants
- Species diversity studies- any 2 methods
- Study of representative animals for each group
- Plankton analysis

**SKILL DEVELOPMENT**

**REFERENCE:**

1. Experimental procedures in Life Sciences, S.Rajan and R. Selvi Christy, 2010, Anjanaa book house.

Course Code	Course Title	L	T	P	C
19115AEC15	Biological Chemistry	5	0	0	5

**Aim:**

- To understanding on the underlying principles of Biomolecules

**Objectives:**

- This course is designed to provide clear understanding on the underlying principles of structures and functions of biomolecules to the students of the subjects.

**Outcomes:**

- The learners will acquire knowledge on the structure and functions relationship of proteins nucleic acid carbohydrates and as well their roll in various biological process
- They study the influence and role of structure in reactivity of biomolecules
- Through this course the students are exposed to importance of biological macromolecules

**UNIT I**

Carbohydrates: definition- classification- monosaccharide – structure, function and biological significance- disaccharides- polysaccharides- types and biological importance- carbohydrate metabolism- glycolysis- TCA cycle- HMP shunt- glycogenesis- glycogenolysis- oxidative phosphorylation.

**UNIT II**

Amino acids and proteins: amino acid classification- essential and non-essential amino acids- structure and properties- proteins- definition- classification- functions- protein metabolism- deamination – decarboxylation- transamination of amino acids- urea cycle.

**UNIT III**

Lipids: classification- physical and chemical properties- saturated and unsaturated fatty acids- structure of cell membrane- fluid mosaic model- lipid metabolism- beta oxidation- biosynthesis of saturated fatty acids.

**SKILL DEVELOPMENT**

#### **UNIT IV**

Nucleic acids: Nucleoside, Nucleotide, DNA- Base composition, double helical structure, RNA - Types.

#### **UNIT V**

Vitamins, minerals and hormones: classification – occurrence- deficiency symptoms- biochemical functions.

#### **REFERENCES**

- Biochemistry by Jain, 2005. Chand Publications.
- Biochemistry by Voet and Voet.
- Biochemistry by L.Stryer

Course Code	Course Title	L	T	P	C
19115AEC16L	Biological Chemistry Lab	0	0	3	3

**Aim:**

- To understanding the molecular orbital theory, preparation and properties of inorganic compounds.

**Objectives:**

- Theory of covalent bond, polar effects and stereochemistry of organic compounds.
- About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.

**Outcomes:**

- Students will use current biochemical and molecular techniques to plan and carry out experiments.
- Biochemistry Majors will gain proficiency in basic laboratory techniques in both chemistry and biology, and be able to apply the scientific method to the processes of experimentation and hypothesis testing
- At the end of the course, the students have a thorough understanding on the role of biomolecules and their functions

**EX:**

- Preparation of buffers
- Preparation of solutions of various dilutions.
- Estimation of carbohydrates.
- Estimation of proteins.
- Estimation of lipids.
- Qualitative analysis of carbohydrates
- Qualitative analysis of amino acids.
- Separation of amino acids by TLC method.
- Estimation of pH

**SKILL DEVELOPMENT**

**REFERENCES:**

- Biochemical methods II Edition Sadasivam, A. and Manickam, A. New age international P ltd. Publishers.

**Skill Based Elective-I  
MS-WORD**

Course Code	Course Title	L	T	P	C
19120SEC01AL	Package Lab-I	0	0	2	1

**OUTCOME:**

- Recognize when to use each of the Microsoft Office programs to create professional and academic documents
- Use Microsoft Office programs to create personal, academic and business documents following current professional and/or industry standards.
- Apply skills and concepts for basic use of computer hardware, software, networks, and the Internet in the workplace and in future coursework as identified by the internationally accepted Internet and Computing Core (IC3) standards.

**EX:**

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. picture insertion and alignment
  - a. prepare a greeting card
  - b. prepare a handout
7. Create a mark sheet using tables. And find out the total marks.
8. Prepare a business letter for more than one company using mail merge

Course Code	Course Title	L	T	P	C
19160SEC01B	Soft Skill I	0	0	2	1

**Outcome:**

- Make effective communication

**Part- I Effective Communication**

**UNIT I Effective communication I**

**Oral Communication:** Listening skills -Speaking skills (what to say and how to say it) – Gender neutral Language-Conflict, criticism, anger- Telephone skills.

**UNIT II Effective communication II**

**Written Communication:** Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos  
**Nonverbal Communication:** Behavior, Body language and Attitude.

Course Code	Course Title	L	T	P	C
19111SEC01L	Communicative English lab –I	0	0	1	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To know English grammar and all the concomitant linguistic items
- To be aware of basic concepts related to the study of communication
- To understand the types of sentences and its patterns

**Outcome:**

- Understand grammar
- Enrich vocabulary
- Understand the process of communication
- Develop listening skill

**UNIT –I**

Noun

Pronoun

Adjective

**UNIT – II**

Verb

Adverb

**UNIT –III**

Conjunction

Preposition

Interjection

**UNIT – IV**

Kinds of Sentences

**UNIT –V**

Patterns of sentences

A Practical English Grammar  
English Grammar

-A.J Thomson and A.V.Martinet  
-Wren and Martin

Course Code	Course Title	L	T	P	C
191INDCONS	Indian Constitution	1	0	0	1

**Objectives:**

1. To make the students understand about the democratic rule and parliamentary administration
2. To appreciate the salient features of the Indian constitution
3. To know the fundamental rights and constitutional remedies
4. To make familiar with powers and positions of the union executive, union parliament and the Supreme Court

To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

**Outcome:**

- Democratic values and citizenship Training are gained
- Awareness on Fundamental Rights are established
- Learn the functions of union and State Governments
- Learn the power and functions of the Judiciary
- Appreciate of Democratic Parliamentary Rule

**Unit I:** The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

**Unit II:** Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties.

**Unit III:** Directive principles of state policy

Socialistic principles-Gandhi a principles-liberal and general principles -differences between fundamental rights and directive principles

**Unit IV:** The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification \_method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah. the supreme court -high court - functions and position of supreme court and high court

**Unit V:** State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

## SEMESTER – II

Semester	Subject Code	Title of the Course
II	19110AEC21	செய்யுள் - பக்தி இலக்கியம், சிற்றிலக்கியம், இலக்கணம், இலக்கிய வரலாறு மனப்பாடப்பகுதி

### அலகு-I

திருஞானசம்பந்தர் தேவாரம் - இடரினும் தளரினும் - பதிகம்  
திருநாவுக்கரசர் தேவாரம் - அன்னம் பாலிக்கும் தில்லை - பதிகம்  
திருவாசகம் - கோயிற் திருப்பதிகம்  
திருமத்திரம் - 25, 85, 139, 238, 250, 252, 270, 724, 2104, 2716  
திருஅருட்பா - தெய்வமணி மாலை 1,8,9

### அலகு-II

நம்மாழ்வார் - 1 பாசரம்- திருவாய்மொழி - எம்பெருமானுக்கு ஆட்படுதல் இன்பமே  
பெரியாழ்வார் - 1 பாசரம் - திருப்பல்லாண்டு - தாலப்பருவம்  
நாச்சியார் திருமொழி - 10 பாடல்கள்- ஆறாம் திருமொழி

### அலகு-III

சிற்றிலக்கியம் ,  
முக்கூடற்பள்ளு - வளமை, செழுமை  
மதுரை மீனாட்சியம்மை பிள்ளைத்தமிழ்- தாலப்பருவம்-ஐந்துபாடல்கள்

### அலகு-IV

இலக்கணம் - சொல்  
மனப்பாடப்பகுதி

### அலகு-V

இலக்கிய வரலாறு  
சைவ, வைணவ இலக்கியங்கள்  
சிற்றிலக்கியம்.பள்ளு  
பிள்ளைத்தமிழ்  
பரவி

Course Code	Course Title	L	T	P	C
19111AEC21	Advanced English-II	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

**Outcome:**

- Develop Technological skill.
- Able to write in a variety of formats
- Read biographies and develop personality

**UNIT –I**

E-mail

Fax

Memos

**UNIT – II**

Itinerary

Checklist

**UNIT – III**

Invitation

Circular

**UNIT – IV**

Instruction

Recommendations

**UNIT – V**

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

**References:**

-Maruthi Publishers

English Work Book-I&II

-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
19111AEC22	English-II	4	0	0	2

**Aim:**

- To acquaint learners with different trends of writing

**Objective:**

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

**Outcome:**

- Appreciate different forms of literature
- Acquire language skills through literature
- Broadens the horizon of knowledge

**UNIT – I**

Ecology

-A.K. Ramanujan

Gift

-Alice Walker

The First Meeting

-Sujata Bhatt

**UNIT –II**

Fueled

-Marcie Hans

Asleep

-Ernst Jandl

Buying and selling

-Khalil Gibran

**UNIT –III**

The End of living and The Beginning of Survival

- Chief Seattle

My Wood

- E.M.Forster

The Meeting of Races

- Rabindranath Tagore

**UNIT – IV**

The Refugee

-K.A. Abbas

I Have a Dream

-Martin Luther king

Those People Next Door

-A.G. Gardiner

**UNIT – V**

Marriage is a private Affair

-Chinua Achebe

The Fortune Teller

-Karel Capek

Proposal

-Anton Chekov

Gathered Wisdom

-GowriSivaraman EmeraldPublishers

Course Code	Course Title	L	T	P	C
19117AEC23	Cell biology and genetics	6	1	0	6

**Aim:**

- Students will understand the cellular components underlying mitotic cell division.

**Objectives:**

- Students will understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles
- Students will understand how these cellular components are used to generate and utilize energy in cells

**Outcomes:**

- This paper will enable the students to learn the basics and lay strong foundation in understanding the composition of cells, how cells work is fundamental to living systems.
- The course outcome is to train the students in understanding genetics and relate modern DNA technology for disease diagnostics and therapy
- Students will be taught Mendelian genetics, their principles and gene interaction.
- This gives them a strong foundation on the basic unit of life.

**UNIT I**

Genetics- History, genetics in society and biology, fundamental concept of genetics-

Mendelian genetics: Monohybrid cross, dihybridcross, testcross, backcross

Sex – linked chromosomes, genetic Vs environmental effect-multiple alleles. Deviations from Mendelian genetic principles.

**UNIT II**

Prokaryotic and eukaryotic chromosomes-organization and structure-transposable elements, cellular reproduction in prokaryotic and eukaryotic cells-significance-cell cycle-linkage, mechanism of crossing over- genetic variability

**UNIT III**

Gene concept: modern concept of gene- DNA as a genetic material- Watson and Crick model of DNA- DNA replication- repair- telomeres' – linkage-recombination-gene mapping-DNA senescence

## **SKILL DEVELOPMENT**

### **UNIT IV**

Prokaryotic and eukaryotic transcription and translation-RNA and its types-genetic code.  
Control of Gene expression: operon concept- lac and trp operon.

### **UNIT V**

Gene mutation and chromosome variations-genetic disorders- in borne errors of metabolism, banding techniques, chromosomal aberrations.

Cell junctions and the extracellular matrix-cell-cell junctions-the extracellular matrix cancer and oncogenes

### **REFERENCES**

;

Course Code	Course Title	L	T	P	C
19117AEC24L	Cell biology and genetics Lab	0	0	3	2

**Aim:**

- To enable students to learn the basics of prokaryotic and eukaryotic cells

**Objectives:**

- To develop practical biological skills such as staining, sterilization, dialysis etc.
- To prepare students for subsequent biological courses that require an understanding of the physiology of organisms such as cell division, enzyme activity etc.

**Outcomes:**

- Able to isolate the DNA, identify and distinguish different blood cells, to solve simple genetic problems and analyze Human karyotype
- The course teaches the students about genes at molecular level
- They learn about DNA, RNA and their replication, mutations, DNA repair mechanism

**EX:**

- Mitosis in onion root
- Meiosis in flower bud
- Normal human karyotyping
- preparation of polytene chromosome
- Isolation of chloroplast from spinach leaves
- Isolation of protoplast
- Life cycle of Drosophila
- Culturing techniques and handling of flies

1. Experimental procedures in Life Sciences, S.Rajan and R. Selvi Christy, 2010, Anjanaa book house.

Course Code	Course Title	L	T	P	C
19116AEC25	Microbiology	5	0	0	5

**Aim:**

- Students will understand the cellular components underlying microbial cell division.

**Objectives:**

- To impart knowledge on classification of microbes, function and biochemical reaction going on inside the microbial cell.

**Outcomes:**

- This fundamental paper discusses the importance of microorganisms
- The course throws light on types of microorganisms in and around humans
- At the end of the course, the student has understanding on the metabolism and mechanism of microbial life

**Unit I**

(12 Hrs)

Overview of history of Microbiology - Biogenesis and abiogenesis Contributions of Redi, Spallanzani, Needham, Pasteur, Tyndal, Joseph Lister, Koch [Germ Theory], Edward Jenner and Fleming [Penicillin], Scope of Microbiology. Classification of Microbes - Nutritional types [Definition and examples]. Classification on the basis of oxygen requirement.

**Unit II**

(12 Hrs)

Ultrastructure and characteristics of bacteria, fungi, algae, and protozoans. Microbes in Extreme Environment – thermophilic, methanogenic and halophilic. Archaea - live in extreme conditions like cold, and space. Beneficial aspects of microorganisms.

**Unit III**

(12 Hrs)

Pathogenic Microorganisms – List of common bacterial, fungal and viral diseases of human beings [Name of the disease, causative pathogen, parts affected]. Concept of Sterilization - Definition of sterilization, dry and moist heat, pasteurization, tyndalization; radiation, ultrasonication, filtration. Physical and Chemical methods of sterilization; disinfection sanitization, antisepsis sterilants and fumigation.

**Unit IV** (12 Hrs)

Stains and staining techniques – Definition of auxochrome, chromophores, dyes, Classification of stains, Theories of staining, Mechanism of gram staining, acid fast staining, negative staining, capsule staining, flagella staining, endospore staining. Fungal staining.

**SKILL DEVELOPMENT**

**Unit V** (12 Hrs)

Basic concepts of Virology - General characteristics of viruses, differences between bacteria and viruses. Classification of viruses. Ultrastructure of TMV and Bacteriophage.

**REFERENCE:**

- Microbiology M.J.Pelczar E.C.S.Chan and N.R.Crick. 2007.Mc Graw Hill

Course Code	Course Title	L	T	P	C
19116AEC26L	Microbiology lab	0	0	3	3

**Aim:**

- To enable students to learn the basics of microbial cells

**Objectives:**

- Genetic laboratory course to introduce the students to learn about prokaryotic and eukaryotic genetic system using modern techniques.

**Outcomes:**

- Develop basic skill in aseptic techniques
- Understand various accessories for microbiology practical's
- Perform various staining techniques
- Cultivate bacteria with different cultivation technique

**EX**

- Microscopic techniques.
- Sterilization methods - Moist heat (Autoclave)& Dry heat (Hot air oven).
- Preparation of media (Liquid and Solid) & (Selective and Differential media) for growth of various microorganisms.
- Culturing and Purification of various microorganisms – Pour, Spread and Streak method.
- Staining of microorganisms – Bacteria (Gram staining, Endospore, capsule, Flagella and cell wall staining), Fungi (Lacto phenol Cotton Blue method)
- Growth curve, measurement of bacterial population by turbidometry
- Assay of antibiotics production and demonstration of antibiotic resistance.

**SKILL DEVELOPMENT**

**REFERENCES:**

- Experiments in Microbiology, Plant Pathology, Tissue Culture and Mushroom Production technology. K.R.Aneja. 2001. New age international (P) Ltd Publishers.

**Skill Based Elective-II  
MS-EXCEL**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC02AL	Package Lab-II	0	0	2	1

**Outcome:**

- Indicate the names and functions of the Excel interface components.
- Enter and edit data
- Format data and cells.
- Construct formulas, including the use of built-in functions, and relative and absolute references.
- Create and modify charts
- Preview and print worksheets.

**Ex**

1. Prepare the addressing methods in excel
2. Describe the type of function
3. Draw a graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark list preparation for a student.
6. Prepare a Worksheet preparation for a company.
7. Prepare an Inventory Preparation
8. Prepare an Electricity Bill Preparation

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19160SEC02B	SOFT SKILL II	0	0	2	1

### Part -II Self Development

#### Outcome:

Build self-development

#### UNIT I: Self -Assessment

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self-appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

#### UNIT II: Self- Management

Managing Time, Managing Stress, Conflict Management

Course Code	Course Title	L	T	P	C
19111SEC02L	Communicative English lab -II	0	0	2	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To learn about the auxiliary and the models
- To understand the different tenses and use it in sentences
- To know where to use and where not to use the articles
- To familiarize with the participle

**Outcome:**

- Learn grammar
- Use a variety of reading strategies
- Enhance the skill of making grammatically correct sentences.
- Achieve one's goal by following the ancestral path

**UNIT –I**

Auxiliaries

**UNIT –II**

Modals

**UNIT –III**

Tenses-Simple, Perfect

**UNIT –IV**

Tenses-Continuous, Perfect continuous

**UNIT –V**

Articles

Participle

**SEMESTER – III**

Semester	Subject Code	Title of the Course
III	<b>19110AEC31</b>	<b>செய்யுள் - காப்பியங்கள்,இலக்கணம்,இலக்கிய வரலாறு,மனப்பாடப்பகுதி</b>

**அலகு-I**

சிலப்பதிகாரம்- வழக்குரை காதை  
மணிமேகலை - ஆதிரை பிச்சையிட்ட காதை  
சீவகசிந்தாமணி - நாட்டுவளம் 10 பாடல்கள்

**அலகு-II**

பெரியபுராணம்- மெய்ப்பொருள் நாயனார் புராணம்  
கம்பராமாயணம் -வாலி வதைபடலம்

**அலகு-III**

சீறாட்புராணம் - கரம் பொருத்து படலம்  
இயேசுகாவியம் - மலைப்பொழிவு

**அலகு-IV**

இலக்கணம்- யாப்பு இலக்கணம்  
மனப்பாடப்பகுதி

**அலகு-V**

இலக்கிய வரலாறு  
காப்பியங்கள்  
ஐஞ்சிறுகாப்பியங்கள்  
புராணங்கள், இதிகாசங்கள்

Course Code	Course Title	L	T	P	C	Marks
19111AEC31	Advanced English-III	4	0	0	2	100

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

**Outcome:**

- Understand phonetics.
- Develop writing skill
- Able to develop creative writing

**UNIT –I**

The organs of speech

Classification of speech sounds

Vowels and Diphthongs

**UNIT –II**

Consonants

Consonant cluster

**UNIT – III**

Syllable

Word accent

Intonation

**UNIT – IV**

Idiom

Interpretation of graphics

**UNIT – V**

Slogan writing

Writing advertisement

**References:**

A text book of Phonetics for Indian Students -T.B. Balasubramaniyan

Course Code	Course Title	L	T	P	C
19111AEC32	English-III	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

**Outcome:**

- Enable to appreciate different types of prose
- Develop the conversational skills through one-act plays
- Enhance the skill of making grammatically correct sentences.

**UNIT – 1**

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

**UNIT – II**

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

**UNIT –III**

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

**UNIT –IV**

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

**UNIT – V**

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

**References:-**

Nine Short Stories	-Steuart H.King Blackie Books
One-Act plays of Today	-T.Prabhakar Emerald Publishers

Course Code	Course Title	L	T	P	C
19117AEC33	Plant physiology	5	0	0	5

**Aim:**

- Understand the interaction between the environment and plant growth and development

**Objective:**

- understand the relationship between structure and function as it relates to plant macromolecules, cells, and tissues
- Gain an appreciation of the metabolic and physiological processes unique to plants

**Outcome:**

- Impart an insight into the various plant water relations
- learning about the mineral nutrition in plants
- Understand the mechanism of various metabolic processes in plants
- Understand the respiration in higher plants with particular emphasis on aerobic and anaerobic respiration.

**UNIT – I**

Properties of water, Water potential, Osmotic potential and stomatal physiology. Uptake, transport and translocation of water, ions through cells, xylem and phloem. Transpiration and anti-transpirants. Solute transport, Ascent of sap.

**UNIT-II**

Mineral nutrition – deficiency symptoms, mineral salt absorption mechanism, Ion exchange theory and cytochrome-pump hypothesis, factors affecting salt absorption

**UNIT-III**

Principles of light absorption, energy transfer and electron transfer; CO<sub>2</sub> fixation - C<sub>3</sub>, C<sub>4</sub> and CAM pathway, Mechanism of Photosynthesis. Respiration: Glycolysis, TCA cycle Electron transport system and Photorespiration. Bioluminescence.

#### **UNIT-IV**

Application of Auxins, Gibberellins, Ethylene and Abscisic acid in agriculture. Biological Nitrogen fixation, Nitrogen cycle, nif gene. Structure and function of Phytochrome, Photoperiodism and Biological clocks.

#### **SKILL DEVELOPMENT**

#### **UNIT-V**

Stress physiology-definition and types, Physiological responses to biotic and abiotic stresses, Mechanism of resistance to biotic stress and tolerance to abiotic stress.

Course Code	Course Title	L	T	P	C
19117AEC34L	Plant physiology Lab	0	0	3	3

**Aim:**

- Student identify and assess viability of cells by microscopic examination.

**Objectives:**

- Identify the problems associated with growing, storing and identifying a wide range of different cell types.
- Analyze data using appropriate techniques.

**Outcomes:**

- Equip students with skills and techniques related to plant physiology so that they can design their own experiments
- Learn about the movement of sap and absorption of water in plant body.
- Understand the plant movements

**EX:**

- To demonstrate the ascent of sap takes place by xylem (Ringing experiment)
- To demonstrate the phenomenon of Transpiration
- To find out Transpiration and Absorption ratio (T/A)
- To measure the rate of transpiration by using Ganong's potometer
- To demonstrate the oxygen is liberated in the process of photosynthesis
- To demonstrate the CO<sub>2</sub> and light is essential for photosynthesis (Moll's half leaf experiment)

**SKILL DEVELOPMENT**

**REFERENCES:**

- L. Taiz and E. Zeiger. 2007. *Plant Physiology*. 4th ed. Sinauer Associates, Inc

Course Code	Course Title	L	T	P	C
19117AEC35	Immunology	4	0	0	4

**Aim:**

- To learn the immune system and reaction

**Objectives:**

- To expose the students with the immune system of human body

**Outcomes:**

- The students may understand the immune system, its components and various techniques used in bio manipulation.
- This course gives an overview on the immune system including organs, cells and receptors
- The students learn about molecular basis of antigen recognition, hypersensitivity reaction, antigen-antibody reactions
- The course develops in the student an appreciation for principles of immunology and its applications in treating human diseases

**Unit I**

Introduction, Lymphocytes, their origin and differentiation, antigens, their structure and classification, complement and their biological functions, types of immune responses, anatomy of immune response.

**Unit II**

B-Lymphocytes and their activation, structure and function of immunoglobulin, immunoglobulin classes and subclasses, genetic control of antibody production, mono-clonal antibodies and diagnosis, idiotypic and antibodies, major histocompatibility complex.

**Unit III**

Thymus derived Lymphocytes (T Cells) their classification antigen presenting cells (APC), macrophages, Langerhans cells, their origin and function, mechanisms of phagocytosis, identification of cell types of immune system, immunosuppression.

#### **Unit IV**

Hypersensitivity reactions, mechanisms of T cell activation, cytokines and their role in immune response macrophage activation and granuloma formation.

#### **Unit V**

Graft rejection, evidence and mechanisms of graft rejection, prevention of graft rejection, immunosuppressive drugs, HLA and disease, mechanisms of immunity to tumor antigens.

### **EMPLOYABILITY**

#### **REFERENCES:**

- Immunology by I.J. Kubey .1991 Freseman and company.
- Essential immunology Ivan Roitt, 1994. Blackwell Scientific publisher, Oxford.

Course Code	Course Title	L	T	P	C
19117AEC36L	Immunology Lab	0	0	3	3

**Aim:**

- To enable students to learn the basics of immunological techniques

**Objectives:**

- To impart knowledge on the immune system and characterization of immune aspects

**Outcomes:**

- Identify the structure, function, and characteristics of immunoglobulins.
- Explain the principles of and perform serological tests.
- It's a paper which accomplishes the learning of techniques involved in understanding the immunological aspects of physiology and biological samples

**EX:**

1. To determine total platelet count
2. To perform PT
3. To perform APTT
4. To perform thrombin time
5. Determination of hemoglobin by various methods.
6. Determination of Total RBC count.

**EMPLOYABILITY**

**REFERENCES:**

1. Experimental procedures in Life Sciences, S.Rajan and R. Selvi Christy, 2010, Anjanaa book house.
2. Biochemical methods II Edition Sadasivam, A. and Manickam, A. New age International P ltd. Publishers.

Course Code	Course Title	L	T	P	C
19117RMC37	Research Methodology	3	0	0	3

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

**OUTCOME:**

- Understanding research questions and tools
- Experience in scientific writings
- Practice in various aspects of scientific publications
- Inculcation of research ethics

**PREREQUISITES:**

Basic computer literacy & skills for working in window-environment

**UNIT I: Introduction to Research Methodology**

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

**UNIT II: Research Methods**

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

**UNIT III: Literature Survey**

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

**UNIT IV: Database Survey**

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

**UNIT V:**

**Basic Principles of Laboratory life science laboratory**

Introduction - Access to Laboratory and Emergency Exits – Basic biostatistics, mean, median, mode and its application – fundamental of biosafety, bioethics, replication – advantages and disadvantages, standard division, standard error, preparation of chemicals – percentage, molarity and normality, ratio solution, PPM solution etc. ethical issue in animal handling, basic of DMRT, ANOVA etc.

### Skill Based Elective-III

Course Code	Course Title	L	T	P	C
19120SEC03AL	Package Lab-III	0	0	2	1

#### Outcome:

- Identify the names and functions of the PowerPoint interface.
- Create, edit, save, and print presentations
- Format presentations
- Add a graphic to a presentation.
- Create and manipulate simple slide shows with outlines and notes.
- Create slide presentations that include text, graphics, animation, and transitions

#### EX:

1. Create a slide show presentation for a seminar (choose your own topics)
  - a. Enter the text in the outline view
  - b. Create Non-bulleted and bulleted text
2. Create a slide show presentation for a science exhibition
  - a. Create Non-bulleted and bulleted text
  - b. Apply appropriate text attributes
3. Create slide show presentation for an invitation
  - a. Insert an object from a bitmap file
  - b. Apply appropriate text attributes
  - c. Rotate the object to 45 degrees
  - d. Apply shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all students
  - a. Use bar chart (x-axis: semester; y-axis: % of marks)
  - b. Use different presentation template and different transition effect for each slide
  - c. Use different text attributes in each slide
5. *Create a slide show presentation for a shop advertisement to be open shortly*
6. Create a slide show presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for a tourist's places
8. Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

Course Code	Course Title	L	T	P	C
19160SEC03B	SOFT SKILL III	0	0	2	1

### Part -III Interpersonal Relations and Social Responsibilities

**Outcome:**

- Learn interpersonal relations and social responsibilities.

**UNIT I: Interpersonal Relations**

Nature of groups and teams, Team effectiveness, Group discussions and decision making, Emotional Intelligence (EI) and Emotional Quotients (EQ), and its effect on team, Cross Cultural Aspects, Inter dependence, Peer Reviews.

**UNIT II: Ethics and Social Responsibilities**

Personal professional and corporate ethics, Ethical dilemma, Corporate social responsibilities: green computing, social accounting, Auditing, Civic sense.

Course Code	Course Title	L	T	P	C
19111SEC03L	Communicative English lab -III	0	0	2	1

**Aim:**

- To acquaint with the basic grammar

**Objective:**

- To familiarize with the clauses and phrases
- To learn the different degrees of comparison
- To change a sentence from active to passive and vice versa
- To know where to use punctuations
- To frame sentences
- To know the features, process, forms and barriers of communication

**Outcome:**

- Learn grammar
- Enhance their fluency in English
- Develop speaking and writing skills
- Develop individual perspectives that demonstrate critical thinking skills

**UNIT –I**

Clauses

Phrases

**UNIT –II**

Degrees of comparison

**UNIT –III**

Active and Passive

**UNIT –IV**

Communication

Characteristics -Process -Forms - Barriers

**UNIT –V**

Punctuation

Forming sentences

பத்துப்பாட்டு  
அறஇலக்கியங்கள்

Course Code	Course Title	L	T	P	C
19111AEC41	Advanced English-IV	4	0	0	2

**Aim:**

- To improve the knowledge of English

**Objective:**

- To familiarize with the objectives and types of interviews
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

**Outcome:**

- Develop writing skill.
- Comprehend and describe poems
- Learn interviewing skills

**UNIT – I**

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

**UNIT – II**

Flowchart

Proposals

**UNIT – III**

Discourse markers

Review

**UNIT IV**

Grammatical forms

Paraphrasing

**UNIT – V**

Definition

Writing for and against a topic.

**SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19111AEC42	English-IV	4	0	0	2

**Aim:**

- To acquaint students with learning English through literature

**Objective:**

- To introduce learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

**Outcome:**

- Improve their ability to read and understand them
- Know the genius of Shakespeare
- Express in writing their views.

**UNIT –I**

How to be a Doctor -Stephen Leacock

My Visions for India -A.P.J. Abdul Kalam

Woman, not the weaker sex -M.K. Gandhi

**UNIT –II**

My Last Duchess -Robert Browning

The Toys -Coventry Patmore

I, too -Langston Hughes

**UNIT –III**

The Best Investment I ever made-A.J.Cronin

The Verger -W.S Maugham

A Willing Slave -R.K.Narayan

**UNIT –IV**

Macbeth

As You Like It

**UNIT –V**

Henry IV

Tempest

**SKILL DEVELOPMENT**

English for Enrichment -Devaraj Emerald Publishers

Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Course Code	Course Title	L	T	P	C
19117AEC43	Animal physiology	6	0	0	6

**Aim:**

- To be able to read, interpret and discuss scientific journal articles in physiology.

**Objectives:**

- To provide advanced undergraduate and introductory graduate students with a comprehensive overview of animal physiology from molecular, cellular and whole animal systems approaches.
- To critically evaluate clinical and research case problems relating to endocrinology and cell biology.

**Outcomes:**

- Understand the physiological processes that regulate body functions and the regulation of an organ system from the molecular all the way to the whole animal level
- understanding the more complicated structures and processes in mammals and humans
- It's a paper which accomplishes the learning of techniques involved in understanding the immunological aspects of physiology and biological samples.
- To know the importance of phagocytosis and natural killer cells in innate body defense.

**UNIT I**

Respiration: Availability of oxygen- respiratory organs in animals- properties and functions of respiratory pigments- regulation of respiration

**UNIT II**

Circulation: types of hearts- composition and functions of blood- cardiac rhythm- cardiac output- ECG- blood pressure- electrical activity and properties of heart- regulation of cardiovascular function.

### **UNIT III**

Coordination (neuromuscular and neuroendocrine): Nerve impulse conduction- ultrastructure of muscle – theories of muscle contraction

### **UNIT IV**

Excretion: structure and functions of different excretory organs in animals- mechanism of urine formation in man

### **EMPLOYABILITY/ENTREPRENEURSHIP/SKILL DEVELOPMENT**

### **UNIT V**

Homeostasis: Significance- mechanism of osmo-ion regulation in fresh water, estuarine and marine fishes.

### **REFERENCES:**

- Human Physiology, Stuart Fox, 11<sup>th</sup> ed., McGraw Hill
- Linda Costanzo's "Physiology- Board Review Series (5<sup>th</sup> Ed.)" Lippincott Williams & Wilkins.

Course Code	Course Title	L	T	P	C
19117AEC44L	Animal physiology Lab	0	0	3	3

**Aim:**

- To develop further practical biological skills introduced in 1A Physiology of Organisms

**Objective:**

- To provide a course of study in mammalian, principally human, systems physiology, building on knowledge of basic physiological principles established in the Part IA Physiology of Organisms course

**Outcome:**

- Have an enhanced knowledge and appreciation of mammalian physiology
- Understand the functions of important physiological systems including the cardiorespiratory, renal, reproductive and metabolic systems
- It trains the students with essentiality of molecules, cells, tissues and organs involved in the defense mechanism

**EX:**

1. Microscopy
2. WBC count
3. Differential leucocyte count by Leishman's staining
4. Estimation of Hemoglobin by Sahli's acid haematin method
5. Determination of Packed cell volume (PCV)
6. Determination of Erythrocyte sedimentation rate (ESR)
7. Determination of Coagulation time & bleeding time
8. Determination of blood group
9. Determination of Blood Pressure by Sphygmomanometer

**EMPLOYABILITY/ENTREPRENEURSHIP/SKILL DEVELOPMENT**

**REFERENCES**

G.K.Pal & P. Pal. 2006. Textbook of Practical Physiology. 2nd Edn. Orient Blackswan.

Course Code	Course Title	L	T	P	C
19117AEC45	Bioinformatics and Biostatistics	6	0	0	6

**Aim:**

- Know the theory behind fundamental bioinformatics analysis methods.
- Be familiar with widely used bioinformatics databases.

**Objective:**

- The course is aimed at introducing the students to the field of Bioinformatics and enable them understand the concepts of statistics in biology.

**Outcome:**

- Know the applications and limitations of different bioinformatics and statistical methods.
- Be able to perform and interpret bioinformatics and statistical analyses with real molecular biology data.
- Be able to describe statistical methods and probability distributions relevant for molecular biology data.

**UNIT I**

Introduction to bioinformatics- scope and applications- characteristics of hardware and software- types of computers- computer network- sending and receiving email- searching biological articles in net.

**UNIT II**

Uses of databases in biology- sequence databases- structural databases- tools for analysis- BLAST, FASTA, CLUSTAL W. Database organizations- NCBI, EMBL, DDBJ

**UNIT III**

Sequence analysis of proteins/ nucleic acids- structural comparisons- molecular modeling

**UNIT IV**

Applications of statistics in biology- measures of central tendency- mean, median and mode- measures of dispersion- standard deviation and standard error.

## **UNIT V**

Test of significance- student's t test, chi square test. Correlation and its types.

Course Code	Course Title	L	T	P	C
19117AEC46L	Bioinformatics and Biostatistics Lab	0	0	3	3

**Aim:**

- To enable students to learn the basics of Bioinformatics and Biostatistics techniques

**Objective:**

- To impart practical exposure upon Bioinformatics tools and databases.

**Outcome:**

- This laboratory course will prepare the students for various applications of bioinformatics in life science research.
- The student will be able to apply basic principles of biology, computer science and mathematics to address complex biological problems
- This course imparts the knowledge of basic statistical methods to solve problems

**EX:**

- Study of Internet resources- databases NCBI, EMBL, DDBJ
- Sequence analysis using BLAST
- Multiple Sequence alignment using CLUSTAL W
- Primer designing
- Mean, median and mode in biological samples- leaves
- Correlation analysis- length- weight relationship in fishes

**ENTREPRENEURSHIP**

**Skill Based Elective IV  
MS-ACCESS**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19120SEC04AL	Package Lab-IV	0	0	2	1

**Outcome:**

- Examine database concepts and explore the Microsoft Office Access environment.
- Design a simple database.
- Build a new database with related tables.
- Manage the data in a table
- Query a database using different methods.
- Design a form.
- Generate a report.
- Import and export data.

**EX:**

1. Create a database and a simple table
2. Create a database for sorting the marks scored by the student in the universality exams
3. Create a database for sorting the date of joining by the employee in the organization.
4. Create queries to select records that matches specific condition
5. Create relationships among the different tables
6. Create queries using built-in functions
7. Develop forms to enter data in to the student marks database
8. Develop forms to enter data in to the employee database

Course Code	Course Title	L	T	P	C
19160SEC04B	SOFT SKILL IV	0	0	2	1

### **PART -IV Etiquette and Interviewing Skills**

**Outcome:**

- Develop etiquette and interviewing skills.

#### **UNIT I Corporate**

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

#### **UNIT II Interviewing Skills**

Researching the job-Researching the company -Questions to research the company- Informational Interviews-Behavioral interviewing- Types of interviews (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

Course Code	Course Title	L	T	P	C
19111SCE04L	Communicative English lab -IV	0	0	1	1

**Aim:**

- To develop communicative skills

**Objective:**

- To use gerund and make sentences
- To change sentences from direct to indirect and vice versa
- To understand the listening skill
- To enhance reading skill
- To familiarize with the singular and plural forms
- To describe a picture

**Outcome:**

- Learn grammar
- Enable to express their views in conversation
- Develop soft skills
- Enhance presentation skills

**UNIT -I**

Gerund

Infinitive

**UNIT -II**

Direct and Indirect

**UNIT -III**

Listening -types-features of a good listener-active and passive listening-effective listening

**UNIT -IV**

Reading-purpose-technique-types-reading rates-reading & interpretation

**UNIT -V**

Singular and Plural

Letter writing

# ENVIRONMENTAL STUDIES

(For under graduate students)

Course Code	Course Title	L	T	P	C
191ENVTSTU	Environmental Studies	1	0	0	1

## Aim:

- To motivate for participation in environment protection and improvement.

## Objectives:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

## Outcomes:

- Learn about environmental pollution.
- Familiarize with the social issues and the environment

## 1. Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

## 2. Natural Resources and Associated Problems.

- a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
- b) Water resources: Use and over — utilization of surface and ground water, floods, drought, conflicts over water, dam's benefits and problems.
- c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
- e) Energy resources: Growing energy needs, renewable and none — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

Role of an individuals in conservation of natural resources.

### **3. Ecosystems**

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,

d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

### **4. Biodiversity and its conservation**

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot— spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

### **5. Environmental Pollution**

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

### **6. Social Issues and the Environment**

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, and watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global wanTling, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

### **7. Environmental Protection**

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

## 8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

## **SEMESTER V**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
19117AEC51	Developmental biology	5	0	0	5

### **Aim:**

- Developmental biology studies the genetic control of cell growth, differentiation and "morphogenesis," which is the process that gives rise to tissues, organs and anatomy.

### **Objectives:**

- Understand the significance of nature using scientific methods.
- Understand the origin and evolution of biotic community

### **Outcomes:**

- Be able to list the types of characteristics that make an organism ideal for the study of developmental biology
- Be familiar with the events that led up to and comprise the process of fertilization.
- Be able to compare and contrast the process of gastrulation in the various model organisms discussed

### **UNIT-I:**

A brief historical account, microsporangium and male gametophyte-structure and development; incompatibility-types, mechanism and methods to overcome incompatibility. Megasporogenesis, development of female gametophyte (3 types).

### **UNIT-II:**

Organization and ultra-structure of mature embryo sac, nutrition. Fertilization - germination of pollen, path of pollen tube; Endosperm – types and function; embryogenesis-development of a typical monocot and dicot embryo, polyembryony

### **UNIT III**

Germ cell: structure of sperm and egg (human) - types of eggs- egg membranes- egg organization- role of pituitary and other related endocrines in gametogenesis

### **UNIT IV**

Fertilization: mechanics- physiology- theories and development- experimental work in fertilization- biochemical changes during fertilization.

## **UNIT-V**

Cleavage and gastrulation: General principles- outlines of physiology- comparative account in frog, chick and man- embryonic adaptations

### **EMPLOYABILITY/ENTREPRENEURSHIP/SKILL DEVELOPMENT**

#### **REFERENCES:**

Balinsky- Text book of embryology

Nelson- comparative vertebrate embryology

Berril- Developmental Biology

Course Code	Course Title	L	T	P	C
19117SEC52	Cell and tissue culture	5	0	0	5

**Aim:**

- To develop and standardize protocols for the in vitro propagation from ex vitro explants

**Objectives:**

- To optimize the culture conditions for rapid propagation to increase the biomass production
- Optimization of medium and culture conditions for the enhancement of active principle production by different approaches

**Outcomes:**

- Fundamentals of plant tissue culture. Plant regeneration and organogenesis. Embryogenesis. Organ, anther and pollen culture. Ovary, ovule and embryo culture. Callus suspension culture.
- Protoplast, isolation, culture and fusion.
- Production of hybrids and cybrids.

**UNIT I**

History of plant cell, tissue and organ culture- laboratory organization- aseptic techniques- nutritional requirement

**UNIT II**

Culture media- types of culture- solid- liquid- stationary- agitated- batch culture. Organogenesis- callus induction- rhizogenesis- induction of multiple shoots

**UNIT III**

Micro propagation- mass production of plantlet's- hardening and mist chamber- transplantation to field- techniques for maintaining plantlets in the field- somatic embryogenesis-protoplast isolation and culture.

#### **UNIT IV**

Principle of animal cell and tissue culture- advantages and disadvantages of culture methods- types of cells- primary and established cell lines- kinetics of cell growth-applications of animal tissue culture

#### **UNIT V**

Techniques of animal cell and tissue culture: Sources of cells- techniques of cell culture- cell culture media- culture procedure- preparation of animal materials- slide and coverslip culture- double cover slip culture- flask culture- test tube culture-measurement of cell death.

#### **EMPLOYABILITY/ENTREPRENEURSHIP/SKILL DEVELOPMENT**

#### **REFERENCES:**

- Plant tissue culture by Kalyan Kumar
- Animal Biotechnology by Ranga

Course Code	Course Title	L	T	P	C
19117AEC53	Enzyme and enzyme technology	4	1	0	3

**Aim:**

**Objectives:**

- To enable the students to understand in detail about the fundamentals of enzymes and their functions.

**Outcomes:**

- The course will provide an overview of the key enzymes currently used in large scale industrial processes
- This course includes the isolation, purification and characterization of enzymes and their applications
- Discover the current and future trends of applying enzyme technology for the commercialization purpose of biotechnological products.

**UNIT I:**

General Properties of enzymes, Enzymes nomenclature and classification. Isolation, purification, and methods of assay of enzymes. Coenzymes and co-factors.

**UNIT II:**

Unit of activity, specific activity of enzyme – the active site, lock and key hypothesis – induced fit hypothesis and Strain or transition state stabilization. Mechanism of reaction catalyzed by chymotrypsin.

**UNIT III:**

General mechanism of enzyme regulation; Feedback inhibition and feed forward stimulation; Enzyme repression, induction and degradation; Control of enzymatic activity by products and substrates; Reversible and irreversible covalent modifications of enzymes.

**UNIT IV:**

Kinetics of enzyme – single substrate enzyme – Michaelis – Menton equation; Significance  $V_{max}$  and  $K_m$  value. Kinetics of Multi-substrate enzymes catalyzed reaction. Introduction to enzyme engineering and its applications. Allosteric enzymes and their significance.

### **Unit V:**

Clinical and Industrial application of enzymes. Immobilization of enzymes and their applications. Ribozyme and their applications. Enzyme as biosensors.

### **REFERENCES:**

- Mahler and Cordes (1986) Biological Chemistry
- Nicholes C. Price and Lewis Stevens. Fundamentals of Enzymology: OxfordUniv. Press.

Course Code	Course Title	L	T	P	C
19117AEC54L	Developmental biology, tissue culture lab	0	0	3	3

**Aim:**

- Identify and describe the structural features of plants.
- Explain the mechanisms which lead to cell determination.

**Objectives:**

- Discuss the basic processes of plant metabolism, transport, nutrition, growth, and reproduction.
- Describe the evolutionary conservation of developmental mechanisms.

**Outcomes:**

- Demonstrate a basic understanding of developmental terms and mechanisms.
- Utilize laboratory techniques to design and carry-out experimental studies.
- Conservation of endangered plant species
- Molecular, pharmacological and biochemical investigations of different aspects of plant growth and development such as in vitro flowering.

**EX:**

- Preparation of sperm smear
- Morphometric of sperm and ovum
- Study of egg types, cleavage, blastula, gastrula stages of frog
- Isolation of protoplast
- Protoplast viability test
- Preparation of media
- Demonstration of surface sterilization of explant
- Callus culture
- Primary cell culture and maintenance of cell lines

**REFERENCES:**

Plant tissue culture manual, K. Linsey, 2007, Eastern book corporation.

Culture of Animal cells: a manual of basic techniques, R. Ian Freshney, 2000 Wiley-Liss Inc.

Course Code	Course Title	L	T	P	C
19117AEC55L	Enzyme and enzyme technology lab	0	0	3	3

**Aim:**

- To learn the enzyme character and enzyme reaction

**Objectives:**

- To make students familiar with principles of enzyme activity, analysis of enzyme on the immune system

**Outcomes:**

- Distinguish the fundamentals of enzyme properties, nomenclatures, characteristics and mechanisms
- Apply biochemical calculation for enzyme kinetics
- Compare methods for production, purification, characterization and immobilization of enzymes
- Discuss various application of enzymes that can benefit human life

**EX:**

1. Microbial cell growth kinetics
2. Kinetic study of amylase
3. Immobilization of cells and enzymes by calcium alginate method
4. Estimation of enzyme (amylase)
5. Enzyme production and extraction-Lipase, protease and cellulose

**REFERENCES:**

## Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
19117DSC56A	rDNA Technology	5	0	0	4

### Aim:

- To improve the analytical and desirable manipulation skill for recombinant DNA technology

### Objectives:

- The main objective of the paper is to expose students in using the current tools for rDNA technology and their applications.

### Outcomes:

- Utilize the knowledge on creation of a genomic library
- explain the significance of model organisms in recombinant DNA technology
- This course teaches rDNA technology techniques and their application in the field of genetic engineering They learn about plasmids, vectors and gain knowledge on the construction of c-DNA libraries

### UNIT I

Gene cloning: principle and strategies- vectors- general characters-types- replication- plasmids- phage vectors- cosmids- plant and animal vectors-Restriction endonucleases and ligases.

### UNIT II

Gene Transfer methods-transformation-artificial methods of gene transfer- physical, chemical and biological methods- electroporation, biolistic, microinjection – liposome mediated gene transfer.

### UNIT III

Genetic transformation of prokaryotes- introduction of DNA into living cell- identification of recombinations- introduction of phage DNA into bacterial cells

Cloning vectors for higher plants and animals- cloning DNA sequence that encode eukaryotic proteins.

### UNIT IV

Construction of genomic DNA libraries and c-DNA library-probes-types and construction- screening a library-labelling of probes-applications of probe. Cloning in E.coli and yeast.

Concept of PCR-applications-PCRvariants- analysis of amplified product-c-DNAs, gene synthesis by PCR

## **UNIT V**

Applications of rDNA technology in medicine, agriculture and industry. Safety aspects of rDNA technology. production of protein from cloned genes, production of recombinant protein by eukaryotic cells- animal and plant cell.

### **REFERENCES:**

1. Biotechnology by U. Satyanarayana
2. Principles of gene manipulation by Old and primrose, Blackwell Scientific Publications
3. Molecular biotechnology: principles and applications of recombinant DNA. by Bernard R. glick, jack J. pasternak, and Cheryl L. patten. 4<sup>th</sup> edn. 2010. ASM press,
4. Gene cloning & DNA analysis- an introduction by T.A. brown, 7<sup>th</sup> edition, 2010. John Wiley Sons, ltd.

Course Code	Course Title	L	T	P	C
19117DSC56B	Molecular Biology	5	0	0	4

**Aim:**

- Apply problem-solving skills to biological problems and issues.

**Objectives:**

- To outline the microorganisms and their applications and thereby producing various products of industrial- and commercial uses.

**Outcomes:**

- Understand and apply the principles and techniques of molecular biology which prepares students for further education and/or employment in teaching, basic research, or the health professions
- Explain the concept of recombination, linkage mapping and elucidate the gene transfer mechanisms in prokaryotes and eukaryotes
- Know the terms and terminologies related to molecular biology and microbial

**UNIT I:**

DNA as the genetic material – RNA as a genetic material – genetic code.

**UNIT II:**

Organization and function of prokaryotic and eukaryotic genetic material, replication of DNA and RNA.

**UNIT III:**

DNA damage – mechanism of repair – excision repair, recombination repair, promoter, operator, terminator and attenuator.

**UNIT IV:**

Organization of chromosomes, specialized chromosomes, chromosome abnormalities, population genetics, gametic cell genetics, crossing over, Epistasis chromosome mapping, gene linkage, three point cross, tetrad analysis.

**UNIT V:**

Discovery of types and structure of plasmids natural and artificial plasmid transfer and their applications. Insertion sequence in prokaryotes. Transposable elements – discovery and characterization.

**REFERENCES:**

**Skill Based Elective V**  
**PHOTO SHOP**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>	<b>Marks</b>
<b>19120SEC05AL</b>	<b>Package Lab-V</b>	<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>	<b>100</b>

**Outcome:**

- work with the Photoshop workspace
- navigate images
- resize and crop images
- make and work with selections
- create new layers and perform other basic layer functions
- transform images

**EX:**

1. Design a Visiting card.
2. Design a Identity card.
3. Design a letter pad with LOGO.
4. Create an advertisement for Newspaper and Poster creation.
5. Design a calendar with pictures.
6. Design a Magazine.
7. Create a front page for a Magazine
8. Design a CD Cover.

Course Code	Course Title	L	T	P	C
19160SEC05B	SOFT SKILL V	0	0	2	1

### **PART -V Leadership Skills and Body Language**

**Outcome:**

- Develop leadership skills and body language

**UNIT I                    Leadership Skills**

**Leaders:** their skills, roles, and responsibilities. Vision, Empowering and delegation, motivating others, organizational skills, team building, decision making, giving support, Vision, Mission, Coaching, Mentoring and counseling, Appraisals and feedback, conflict, Power and Politic, Organizing and conducting meetings, Public Speaking

**UNIT II                    Body language**

**Handshake:** Type of Handshake - Posture- Universal Facial Gestures- Eye Contact- Nervous Ticks-reading and analyzing body language, Body language signals and meanings -eyes, mouth, head, arms, hands, handshakes, legs and feet, personal space

Course Code	Course Title	L	T	P	C
19111SEC05L	Communicative English lab -V	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To develop vocabulary
- To comprehend meaning from context
- To involve in a dialogue
- To note the important points from the text.
- To write a letter
- To understand the subject verb agreement
- To teach the different genders

**Outcome:**

- Develop corporate skills.
- Handle their day to day affairs well with their knowledge of language skills.
- Get a job

**UNIT –I**

Correct the spelling mistakes

Comprehension

**UNIT –II**

Find the odd one out

Picture description

**UNIT –III**

Abbreviations

Note making

**UNIT –IV**

Gender

Dialogue writing

**UNIT –V**

Acronyms

Concord

## SEMESTER VI

Course Code	Course Title	L	T	P	C
19117AEC61	Plant and animal biotechnology	4	0	0	5

### Aim:

- Activities of Animal biotechnology
- Activities of plant biotechnology

### Objective:

- Definitions and scope of Animal biotechnology
- Use the Big Data technology to assist basic and translational research in plants.

### Outcomes:

- This course teaches organization and expression of plant and animal genome and
- plant and animal tissue culture
- Students learn about transgenic animal, their application in pharmaceutical industry, cloning and its importance.
- This course prepares the students in appreciating the its benefits and applications in biotechnological, pharmaceutical, medical and agricultural field

### UNIT – I

Plant genome organization - Nucleus, Chloroplast genome and Mitochondrial genome, cytoplasmic male sterility. Regulation of gene expression in plant development. Plant-microbes-associated insect vectors and disease.

### UNIT – II

Agrobacterium and crown gall tumor, Ti and Ri plasmids, T-DNA, binary vectors, 35S and other promoters, use of reporter genes and marker genes, gene transfer methods in plants. Direct and indirect DNA transfer. Manipulation of genes regulatory sequences in plants.

### UNIT - III

Genetic engineering in plants. Pest transformation technique, pest and disease resistant plants. Benefits and transgenic technology, application of plant biotechnology for improved crop quality and productivity. Genetically engineered microorganisms- genetically modified crops.

#### **UNIT – IV**

Genetic engineering in animals: transformation of animal cells- vectors for animal cells-gene therapy-DNA fingerprinting in forensic science. In vitro fertilization and embryo transfer-transgenic animal production- xenograft.

#### **UNIT –V**

Applications of biotechnology techniques- animal models, upstream and downstream process technology, molecular biotechnology for diagnostics techniques in identification and characterization-current scenario of molecular diagnosis in various disease. Animal health and welfare

#### **REFERENCES:**

- Animal cell biotechnology by Hansjorg hauser, roland wagner (eds) 2015. Walter de gruyter gmbh, berlin

Course Code	Course Title	L	T	P	C
19117SEC62	Applied biotechnology	4	0	0	4

**Aim:**

- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.

**Objectives:**

- The applied biotechnology major provides students with the scientific background and laboratory experience necessary for employment in the biotechnology

**Outcomes:**

- Evaluate and describe systems of product research, development, and production
- Analyze the potential for commercialization for innovations within the biotechnology industry
- The students will gain the basic knowledge of aquaculture and      Students will solve a variety of problems using creative thinking skills and analytical skills in the lab.

**UNIT-I**

Sericulture: History and origin of sericulture in India; Silk worms, rearing, controlling factors, harvesting techniques; Host plant varieties, distribution, cultivation techniques. Silk reeling; Natural enemies of mulberry garden and silk worms; By-products of sericulture.

**UNIT – II**

Vermiculture: Compost development, Quantification and characterization of solid waste, factors responsible for composting. Earthworm- rearing of earthworm, role of earthworms in vermicompost, vermisppecies, earthworms and microorganisms- vermicomposting- methods and steps, nutrition enrichment- applications of vermiculture.

**UNIT –III**

Mushroom cultivation: Mushroom culture. Historical background; Present status of Mushroom culture in India. Cultivation methods – infrastructure substrates; Preparation of spawns; Formulation and preparation of composts; Spawn running and cropping; Control of

pathogens and pests. Cultivation of *Volvariella* sp, *Pleurotus* sp and *Agaricus bisporus*.  
Nutritional values, Recipes from Mushroom.

#### **UNIT – IV**

Aquaculture: Definition- extensive, intensive and semi-intensive practices- preparation and management of ponds- estimation of live feed organisms- natural and artificial feeds- nutritional ecology- spawning and breeding- cultural techniques.

#### **UNIT – V**

Apiculture: Species of honey bees- life history- bee colony, castes, developmental significance of social life- natural colonies and their yield. Honey extraction- uses of honey and bee wax

#### **REFERENCES:**

- Beekeeping in India by Sardar Singh (I.C.M.A.R)

Course Code	Course Title	L	T	P	C
19117SEC63L	Plant, animal and applied biotechnology lab	5	0	0	3

**Aim:**

- Students are able to understand History, scope, principle, merits and demerits of animal and plant tissue culture.

**Objectives:**

- Laboratory facilities and culture media for animal tissue culture.
- Isolation and identification of *Xanthomonas citri*, *Rhizobium* sp, *Azotobactor*

**Outcomes:**

- The students should have knowledge on biotechnological analysis and the utilization of these knowledge about procedures and utilization of such knowledge to combine biotechnological methods to obtain analytical results
- The students will develop fundamental knowledge in Plant Molecular Biotechnology and its application in laboratory and industry settings.
- Describe mechanisms of plant pollination and differentiate between haploid and diploid cells and their role in sexual reproduction

**EX:**

1. Shoot induction from callus
2. Root induction from explant
3. Monoclonal antibody production.
4. Purification of Immunoglobulin's.
5. Sericulture preparation
6. Spawn preparation
7. Mushroom cultivation
8. Preparation of vermibeds
9. Collection and Identification of earthworm
10. Isolation of microorganism from vermicompost

## **REFERENCES:**

- Handbook of practical sericulture. Ullal and Narashma, CSIR Bulletins on Sericulture.

Course Code	Course Title	L	T	P	C
19117AEC64L	Environmental biotechnology Lab	0	0	3	3

**Aim:**

- s

tudents are able to understand basic environmental Waste Treatment process

**Objectives:**

- Domestic waste water treatment, Classification of Waste water treatment
- Biodegradation-Concept, Biodegradation of hydrocarbon, Measurement of biodegradation

**Outcomes:**

- To present an overview of important environmental biotechnologies involved in treatment of pollutants and resource recovery
- The students will be able to demonstrate the use of environmental science principle in solving various environmental problems
- Describe the most commonly applied disinfection methods, and the steps typically involved in drinking water treatment process

**EX:**

- Isolation of airborne bio particles
- Estimation of total solids in effluent sample
- Soil analysis- pH, Chloride, Calcium, Magnesium, Phosphorous and Nitrate
- Portability of water
- Determination of BOD& COD

**REFERENCE:**

- Experiments in Microbiology, Plant Pathology, Tissue Culture and Mushroom production technology. K.R.Aneja. 2001. New age international (P) Ltd publishers.
- Experimental procedures in Life Sciences, S.Rajan and R. Selvi Christy, 2010, Anjanaa book house.

Course Code	Course Title	L	T	P	C
19117DSC65A	Environmental Biotechnology	4	0	0	4

**Aim:**

- students are able to understand

**Objectives:**

- Bioremediation – Characterization site for bioremediation, Types of bioremediations
- Biodegradation-Assimilation, Detoxification, Biotransformation, Factor Affecting

**Outcomes:**

- Biofuels: Advantages, Energy from biomass, Biogas, Bio hydrogen, Biosafety  
• Toxicity  
Bio magnification, Threshold Dose, Factor Affecting Toxicity.
- Students will gain about environmental pollutions, preventive measures.
- Explain the microbial processes and growth requirements underlying the activated sludge process, nitrification, denitrification, enhanced phosphorus removal, and anaerobic digestion

**UNIT: I**

Environment: Basic Concepts; Environmental Pollution; Types of Pollution; Measurement of Pollution; Environmental Management. Water Pollution and Its Control: Water as a Resource; Water Bodies; Need for Water Management; Sources of Water Pollution; Measurement of Water Pollution

**UNIT: II:**

Sewage/Waste water treatment - collection, Primary treatment, and Secondary treatment – Aerobic process: Activated sludge, Oxidation ditches, Trickling filters, towers, rotating discs, rotating drums, oxidation ponds. Anaerobic processes: Anaerobic digestion, Anaerobic filters, Tertiary treatment. Waste water treatment for some industries - dairy, distillery, tannery, sugar, antibiotic industries.

**UNIT: III**

Bio pesticides and biofertilizers; their role in pest and nutrient Management; Worm culture

Solid Wastes: Sources and Management; Composition; Methane Production; Food, Feed and Fuel from Biomass

#### **UNIT: IV**

Degradation of Xenobiotic Compounds in Environment: Decay Behavior and Derivative Plasmids; Hydrocarbons; Substituted Hydrocarbons; Oil Pollution; Surfactants; Bioremediation of Contaminated Soils

#### **UNIT – V**

Global environmental problems: Ozone depletion, Greenhouse effect and acid rain, their impact and biotechnological approaches for management. Environmental protection agencies

2. Environmental Biotechnology - Bruce E.Rittmann and Perry L.McCarty.2001.  
McGraw Hill Publisher

Course Code	Course Title	L	T	P	C
19117DSC65B	Environmental Management	4	0	0	4

**Aim:**

- To motivate for participation in environment protection and improvement.

**Objectives:**

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

**Outcomes:**

- The students in the course are exposed to the diversity, function, ecological adaptation of microorganisms within the environment
- This course gives the importance of microbial life to key ecosystem process and teaches the role of biotechnology to address environmental issues

**UNIT-I**

Water pollution – sources & types of water pollution – physical, chemical & biological – effect of water pollution. Drinking water quality standards waste water treatment – primary, secondary, tertiary-water pollution prevention & control act – 1974.

**UNIT-II**

Air pollution –structure and composition of atmosphere – classification, sources & effects of air pollution – Acid rain –greenhouse effect – global warming – Ozone depletion.

**UNIT-III**

Prevention and control of air pollution particulate control – settling chamber, scrubber, bag filter, cyclones electrostatic precipitators. Gaseous emission control methods. Air pollution prevention and control Act 1981.

**UNIT-IV**

Soil Pollution – soil pollutants – types – sources, effects & Control. Noise Pollution – sources effects & Control.

**UNIT-V**

Government Agencies & Programs – The Tiwari committee – creation of NCEPC,  
Department of Environment & Forest – Function of State Pollution Control Board.

Course Code	Course Title	L	T	P	C
19111OEC	Open Elective - Journalism	4	0	0	2

**Aim:**

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

**Objective:**

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

**Outcome:**

- Become a journalist

**UNIT- I**

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

**UNIT- II**

News – Definition, Kinds, Elements, Sources

**UNIT- III**

Reporters, Qualities, types

**UNIT- IV**

The Editor and the Sub Editor-qualities, types, editorial department,

**UNIT –V**

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

**References: -**

Course code	Course Title	L	T	P	C
19112OEC	Open Elective: Development of Mathematics Skills	4	0	0	2

**Aim:**

- To understand the concepts from the five branches of mathematics

**Objectives**

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

**Outcomes**

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

**Unit I**

Simple interest and compound interest

**Unit II**

Sinking fund – discounting – trade discount – quantity discount – cash discount

**Unit III**

Set theory – Series

**Unit IV**

Matrices – Determinants

**Unit V**

Assignment problems

**References**

Kanti Swarup, P.K.Gupta and Manmohan, "Operations Research"

Course Code	Course Title	L	T	P	C
19113GEC	Open Elective- Instrumentation	4	0	0	2

**Aim:**

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

**Objectives:**

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

**Outcomes:**

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behavior of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.
- Be able to apply Fourier and Laplace transforms to analyses the behavior and stability of complex systems.

**UNIT – I: Introduction**

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges: AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

**UNIT – II: Electronic Instruments – I**

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using Rectifiers – Electronic MultiMate – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

### **UNIT – III: Electronic Instruments – II**

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

### **Unit IV – Recording Devices**

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

### **Unit V – CRO**

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

### **Books for Study**

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

### **Books for Reference:**

1. A Course in Electrical and Electronic Measurements and Instrumentation – A.K. Sawhmey – Dhanpat Rai and Sons – 1990.
2. Electronic Measurements and Instrumentation – Oliver Cage – McGraw Hill –1975.

Course Code	Course Title	L	T	P	C
19114OEC	Open Elective-Food and Adulteration	4	0	0	2

**Aim:**

- To introduce students to food safety and standardization act and quality control of foods.

**Objectives:**

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislator aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

**Outcomes:**

- The students will have knowledge about different processing and preservation methods and principals involved.

**Unit-I Introduction to Food Chemistry**

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

**Unit- II Food Pigments**

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavonoids.

**Unit – III Food Preservation**

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization- Sterilization- Canning- Freezing- Refrigeration.

**Unit – IV Food Additives**

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti -caking agents, coloring and flavoring substance.

**Unit-V Food Adulteration**

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices, Grains, Coffee, Tea, Oil fats, Food colors and Milk. Health hazards and risks.

**References:**

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	Course Title	L	T	P	C
19120OEC	Open Elective -Web Technology	4	0	0	2

**Aim:**

- To equip the students with basic programming skill in Web Designing

**Objective:**

- To understand and practice markup languages
- To learn Style Sheet and Frames

**Outcomes:**

- Explore markup languages features and create interactive web pages using them
- Learn and design Client-side validation using scripting languages

**UNIT I**

Introduction to the Internet – Internet Technologies – Internet browsers.

**UNIT II**

Introduction to HTML – Head and body sections – Designing the body section.

**UNIT III**

Ordered and unordered lists – Table handling.

**UNIT IV**

DHTML and Style Sheet – Frames.

**UNIT V**

A web page design project – Forms.

**Text Book**

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

**Reference Book**

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
19122OEC	Open Elective-E-Commerce and its Application	4	0	0	2

**Aim:**

- To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

**Objectives:**

- To be aware of all aspects of communication and information exchange in Electronic Commerce, including:
  - Navigation, brokerage, advertising and catalogue exchange in pre-sales activities.
  - Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
  - Secure exchange of documents, content and value in open trading protocols.
  - Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

**Outcomes:**

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

**UNIT-I:**

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO- Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal

Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

**UNIT-II:**

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script - XML

**UNIT- III:**

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behavior model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

**UNIT-IV:**

E-Security: Information system security-security on the Internet-E-Business risk Management Issues-Information security environment in India.

**UNIT-V**

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet banking-History's lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stock trading: The high-speed alternative.

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition

Course Code	Course Title	L	T	P	C
19161OEC	Open Elective – Indirect Taxes	4	0	0	2

**Aim:**

- To acquaint with the knowledge of indirect taxes

**Objectives:**

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

**Outcome**

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

**UNIT – I**

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

**UNIT – II**

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small-scale Industries – Excise and Exports.

**UNIT – III**

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

**UNIT – IV**

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

**UNIT Value Added Tax (VAT)**

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

**Reference Books:**

- Income Tax Law and Practice -N.Hariharan.  
Business Taxation – T.S.Reddy/Hari Prasad Reddy.

**SKILL BASED ELECTIVE- VI  
FLASH**

Course Code	Course Title	L	T	P	C
19120SEC06AL	Package Lab-VI	0	0	2	1

**Outcome:**

- Learn to create animated graphics and sound and interactivity.
- Can develop Website
- CD based presentations

**EX:**

1. Drawing and painting original art in flash.
2. Creating simple objects using flash.
3. Creating a frame-by-frame animation technique.
4. Develop a program for animation with motion Twenning.
5. Develop a program for animation with shape Twenning.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animations techniques movie clip and graphic symbols

Course Code	Course Title	L	T	P	C
19160SEC06B	SOFT SKILL VI	0	0	2	1

**PART -VI Life Skills and Other Skills**

**Outcome:**

- Develop life skills and other skills

**UNIT I Life Skills**

**Life Skills** - Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. -Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket. - Occupational Safety, First-aid

**UNIT II  
Other Skills**

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self-learning, Complex problem solving and creativity.

Course Code	Course Title	L	T	P	C
19111SEC06L	Communicative English Lab - VI	0	0	2	1

**Aim:**

- To develop communicative skills

**Objective:**

- To extract the main ideas from a text
- To understand the meaning of text
- To expand an idea
- To shorten a text
- To develop vocabulary
- To enhance writing skills
- To write simple, compound and complex sentences

**Outcome:**

- Apply study skills
- Widen creative thinking
- Be a good team worker
- Make them proficient in English

**UNIT -I**

Jumbled words

Paragraph writing

**UNIT -II**

Prefix and suffix

Precise writing

**UNIT -III**

Eponyms

Summarizing

**UNIT -IV**

Compound words

Simple, Compound and Complex

**UNIT -V**

Homophones

Essay writing

<b>Course Code</b>	<b>GENERAL MICROBIOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217AEC11</b>		6	1	0	5

**AIM:**

- This paper provides the knowledge about different types of microorganisms and their identification techniques in modern biology and there by the usefulness of the techniques in research and commercial purposes.

**OBJECTIVES:**

- In order to make the students to understand the identification of microorganisms using advanced microbiological methods and applications of microorganisms.

**OUTCOMES:**

- Students can gain the idea of how to identify the microorganisms based on the modern polyphonic approach.

**Unit I**

Definition and historical account of microbiology. Diversified microbial world-Classification of microbes based on Whittaker's five kingdom system of classification. Structure of Algae, Bacteria, Fungi and Virus.

**Unit II**

Nutritional requirements and growth cycles of the above mentioned groups. Media for growth: Types, preparation, methods of sterilization. Isolation and enumeration of microorganisms in soil, water and air. Isolation of microorganisms from contaminated food. Techniques of pure culture, maintenance and preservation; staining: stains and dyes, types of staining; General techniques involved in Virology and Protozoology.

**Unit III**

Microbial physiology: Factors influencing the growth of microbes-classification based on the temperature, pH, nutrition, symbiotic associations, commonsals, saprophytes, etc., Microbiology of fermented foods-dairy products, meat and fish, alcoholic beverages-beer, wine etc., Food spoilage and preservation process. Microbes as source of food. Application of microbes in

industries production of antibiotics, amino acids, organic acids, bioconversion process, microbial insecticides.

#### **Unit IV**

Biochemistry of Metabolism: Carbohydrates and energy metabolism – fermentation or glycolysis, TCA cycle and oxidative phosphorylation, ammonia metabolism. Biosynthesis of glutamate. Purine and pyrimidine biosynthesis. Synthesis of DNA and RNA. Biosynthesis of cell wall – Peptidoglycans and Teichoic acid.

#### **Unit V**

Microbes as components of the environment –nutrient cycles – C, N, S, H, O, Mn, K, Mg, Cl and phosphorus cycles, Degradation of industrial wastes, petroleum hydrocarbons, pesticides, bio fouling and corrosion. Bacterial photosynthesis, symbiotic and non-symbiotic nitrogen fixation, antimicrobial agents – structure of antibiotics, antibacterial and antiviral (function & mechanism of action)

<b>Course Code</b>	<b>Molecular genetics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217AEC12</b>		6	1	0	5

**AIM:**

- This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

**OBJECTIVE:**

- The major objective of the paper is to envisage thorough knowledge in genetics and genome organizations in organisms.

**OUTCOME:**

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

**Unit I**

Gene as the unit of mutation and recombination. Identification of DNA as the genetic material. Mutations: Molecular nature, mutagenesis by nitrous acid, hydroxylamine, alkylating agents, intercalators and UV, origin of spontaneous mutations and control, parasexual process in bacteria, transformation, transduction and conjugal gene transfer the phenomena, mechanisms and applications. Fine structure genetic analysis with examples.

**Unit II**

Recombinations – Control, models and mechanisms. Gene as the unit of expression. Gene – cistron relationship in prokaryotes and eukaryotes. Colinearity of gene and polypeptide. Elucidation of the genetic code. Wobble base pairing. Suppression of nonsense, missense and frameshift mutations. Regulation of gene expression in prokaryotes and eukaryotes. The operon concept – positive and negative control, attenuation control. Control sequences, promoter, operator, terminator and attenuator, DNA methylation and epigenetic regulation.

### **Unit III**

DNA damage and repair DNA damage by UV, alkylating agents, cross linkers. Mechanisms of repair – photo activation, excision repair, recombination repair. The SOS and adoptive responses and their regulation, heat shock response.

### **Unit IV**

Extrachromosomal heredity, Biology of plasmids – discovery, types and structure of RTF, col-factors and Ti. Replication and partitioning. Incompatibility and copy number control. Natural and artificial plasmid transfer and their applications. Transposable genetic elements: discovery, early experiments of McClintock in maize. Insertion sequences in prokaryotes. Complex transposons – Tn 10, Tn 5, Tn 9 and Tn 3 as examples. Mechanisms control, consequences and applications of transposition by simple and complex elements. Retro elements.

### **Unit V**

Genetics of Eukaryotes: Gene linkage and chromosome mapping, crossing over, three point cross, tetrad analysis. Complementation. Organization of chromosomes, specialized chromosomes. Chromosome abnormalities, quantitative inheritance, population genetics. Developmental genetics using Drosophila as model system. Somatic cell genetics.

### **SKILL DEVELOPMENT**

<b>Course Code</b>	<b>BIOCHEMISTRY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217AEC13</b>		6	1	0	4

**AIM:**

- This paper presents the study of identification and quantitative determination of the substances, studies of their structure, determining how they are synthesized metabolized and degraded in organisms, and elucidating their role in the operation of the organism.

**OBJECTIVE:**

- On the successful completion of the course the students will get an overall understanding of structure of atoms, molecules and chemical bonds, enzyme kinetics, bio polymers and metabolic reactions in a living system.

**OUTCOME:**

- This paper in biochemistry has been designed to provide the student with a firm foundation in the biochemical aspects of cellular functions which forms a base for their future research.

**Unit I**

Principles of Bioenergetics. Glycolysis and carbolic of hexoses the citric acid cycle. Oxidation of fatty acids. Oxidation of amino acids. Oxidative phosphorylation. Glyoxylate cycle, TCA cycle, Krebs cycle, Pentose Phosphate pathway. Nitrogen cycle. .

**Unit II**

Carbohydrate – types, structure and functions of carbohydrates, biosynthesis, lipid biosynthesis, C2, C3, C4 cycles. Biosynthesis of fatty acids and triacyl glycerol. Secondary metabolites – occurrence, classification and functions of phenolic, terpenes, flavonoids, alkaloids, saponins, glycosides. Applications of secondary metabolites in food, dairy, agricultural, cosmetics and pharmaceutical Industries.

**Unit III**

Biosynthesis of amino acids, nucleotides and related molecules. Classification of proteins based on functions and solubility, types of proteins structure and functions. Chemical synthesis of peptides and oligosaccharides. A general account of secondary metabolic pathway.

## **Unit IV**

Integration and hormonal regulation of mammalian metabolism. Biological membrane and transport. Enzymes classification, mechanism, factors affecting enzyme action Vitamins and minerals.

## **Unit V**

Lipids classification, importance, fatty acids, essential non-essential fatty acids. Prostaglandins, leukotrienes, thromboxanes, interferons and interleukins. Antibiotics, cytoskeletal organization, ribozymes.

## **SKILL DEVELOPMENT**

AIM: This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

**OBJECTIVE:**

- The major objective of the paper is to envisage thorough knowledge in genetics and genome organizations in organisms.

**OUTCOME:**

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

1. Culture media preparation liquid and solid media.

2. Selective differential media

3. Methods of sterilization and testing of sterility

4. Enumeration of bacteria, fungi and actinomycetes from soil

5. Pure culture techniques – Pour, spread and looping methods

6. Maintenance and preservation of cultures

7. Staining of Bacteria – gram, spore and AFB, Fungal wet mount – LPB

8. Motility test – hanging drop and soft agar inoculation

9. Water quality test – MPN

10. Effect of different parameters on bacterial growth kinetics (Substrate, pH, Temperature)

11. Single colony – isolation and checking for genetic markers, measurements of Growth rate one step growth curve using T7 phage.

12. Induced mutagenesis and isolation of antibiotic resistant and auxotrophic mutants

Enrichment methods for auxotrophic and antibiotic resistant mutants.

13. Genetic mapping by p1 transduction, genetic mapping of conjugation and Transformation.

14. Transposon mutagenesis of chromosomal DNA, Transposon mutagenesis of Plasmid DNA

15. Experiments with gene fusion.

Course Code	DISCIPLINE SPECIFIC ELECTIVE I	L	T	P	C
19217DSC15A	Immunology	5	0	0	4

**AIM:**

- Understanding the immune system, antigen antibody reactions, applications of immunological techniques, humoral and cell mediated immunity, hypersensitivity reactions and hybridoma technology.

**OBJECTIVE:**

- To expose the students with various immune systems of human body.

**OUTCOME:**

- This course will provide the student insights into the various aspects of Immunology such as classical immunology, clinical immunology, Immunotherapy and diagnostic immunology.

**Unit I**

Molecular cells & organs of Immune system, Historical perspective, Innate Immunity:-Skin, Mucosal Surface, Physiological barrier, Inflammation, Adaptive Immunity, Molecules of innate & Acquired immune system:- Complement, Interferon, other molecules Cells of Innate & Acquired Immune system. Organs of the immune system:-Primary Lymphoid organs, Secondary Lymphoid organs, Lymphatic etc.

**Unit II**

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity, Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, autoantigens. Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

**Unit III**

Mechanism of Immune response, Generation of Immunological diversity, Antigen recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & lymphoid system

## **Unit IV**

MHC & Transplantation Immunology - MHC: - General organization, MHC molecules & genes, Cell recognition of self & nonself, MHC restriction, Tolerance:- Central Peripheral & acquired tolerance. HLA typing methods using serological and molecular techniques.

### **SKILL DEVELOPMENT**

## **Unit V**

The Immune system in Health & Disease, AIDS & other Immuno deficiencies, Autoimmunity & autoimmune diseases. Hypersensitivity, Vaccines:- Principle & types of vaccines, Recent advances in vaccination, Monoclonal & Recombinant antibodies. Immunological techniques: RIA, ELISA, Immunocytochemistry, Immunoblotting, Fluorescence antibody techniques.

<b>Course Code</b>	<b>DISCIPLINE SPECIFIC ELECTIVE BIOSAFETY AND BIODIVERSITY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217DSC15B</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**AIM:**

- This course has been designed to provide the student insights into these invaluable areas of biotechnology, which play a crucial role in determining its future use and applications.

**OBJECTIVE:**

- Students get an idea about the advantages and disadvantages of biotechnological applications, ethical implications, and intellectual property rights.

**OUTCOME:**

- To study the diversity of plants and animal life in a particular habitat, ethical issues and potential of biotechnology for the benefit of man kind

**Unit 1:**

Introduction and historical background. Introduction to biological safety cabinets, primary containment for biohazards, biosafety levels, biosafety levels of specific microorganisms, recommended biosafety levels for infectious agents and infected animals. Biosafety guidelines by Government of India. Definition of GMOs and LMOs.

**Unit 2:**

Environmental release of GMOs, risk assessment; risk management and communication. Overview of national regulations and relevant international agreements including Cartagena protocol.

**UNIT 3:**

Biodiversity – Concept and Definition Scope and Constraints of Biodiversity Science, Composition and Scales of Biodiversity: Genetic Diversity, Species/ Organismal Diversity, Ecological/ Ecosystem Diversity, Landscape/ Pattern Diversity, Agrobiodiversity, Biocultural Diversity and Urban Biodiversity.

**UNIT 4:**

Values of biodiversity Instrumental/Utilitarian value and their categories, Direct use value; Indirect/ Non-consumptive use value, Introduction to Ecological Economics; Monetizing the

value of Biodiversity; Intrinsic Value; Ethical and aesthetic values, Anthropocentrism, Biocentrism, Ecocentrism and Religions; Intellectual Value; Deep Ecology.

#### **UNIT 5 :**

Threats to biodiversity Habitat Destruction, Fragmentation, Transformation, Degradation and Loss: Causes, Patterns and consequences on the Biodiversity of Major Land and Aquatic Systems Invasive Species' pathways, biological impacts on terrestrial and aquatic systems. Extinction: Types of Extinctions, Processes responsible for Species Extinction, Current and Future Extinction Rates, IUCN Threatened Categories, Sixth Extinction/Biological Crisis.

<b>19217AEC21</b>		<b>5</b>	<b>1</b>	<b>0</b>	<b>5</b>

**AIM:**

- This paper provides a thorough knowledge about structure and function of cells, cellular energetics, protein trafficking, bio molecules and cellular development.

**OBJECTIVE:**

- Understanding the structural and functional aspects of the cell provides the student with a strong foundation in the molecular mechanisms underlying cellular function.

**OUTCOME:**

- Students after completion of this paper will be exceptionally well prepared to pursue careers in cellular and sub cellular biological research, biomedical research, or medicine or allied health fields.

**UNIT-I:**

**Cell architecture:** Structure of cells – structure of prokaryotic and eukaryotic cells; Surface appendages – Cilia and Flagella, Capsules, Pili, Fimbriae and slime layers; Cell walls – Algae, fungi, bacteria ; Membranes of Gram positive, Gram negative bacteria and acid fast bacteria; protoplast, spheroplast and endospores; Transport across membrane – active and passive transport, transport channels and pumps, transport across nuclear membrane; Neurotransmission, neuromuscular junction.

**UNIT-II:**

**Cellular constituents:** Cytoskeleton and structural components – Microfilaments, Intermediate filaments, Microtubules; Mitochondria – structure, biogenesis; Chloroplast – structure, biogenesis; Endoplasmic reticulum and Golgi complex – structure, function, vesicular transport and import into cell organelles; Structure and function of ribosomes, mesosomes, lysosomes, peroxysomes.

### **UNIT-III:**

**Nucleus:** Nucleus structure – structural organization, nucleosome, supranucleosomal structures, specialized chromosomes, polytene and lamp brush chromosomes and chromosome banding; Nucleic acid structure: DNA and RNA.

### **UNIT-IV:**

**Cell cycle:** Mechanism of cell division – Mitosis, meiosis and genetic recombination; regulation of cell cycle – factors and genes regulating cell cycle (Cyclins, CDK and CDKI). Biochemistry and molecular biology of Cancer – malignant growth, tumor suppressor genes (p53, RB) and oncogenes (Ras), chemical carcinogenesis, hormonal imbalances.

### **UNIT-V:**

**Cellular development:** Extracellular matrix – cell to cell and cell-matrix adhesion, cell junctions; Cellular systematic – components of systematic, receptors (cell surface – GPCR, RTK, TGF- $\beta$ , Hedgehog, Wnt, Notch-Delta, NF-Kb, ion channels; intracellular – NO, Nuclear receptor), secondary messengers, effectors ; cell differentiation; gametogenesis and fertilization; development of Drosophila and Arabidopsis – spatial and temporal regulation of gene expression.

<b>19217AEC22</b>		<b>5</b>	<b>1</b>	<b>0</b>	<b>5</b>

**AIM:**

- Biology is fast becoming an interdisciplinary science. There is accumulation of large amount of information in different areas of biology - on genome sequences of many organisms, genetic and biochemical interaction networks, cell interactions during development, and organism response to environmental stimuli, along with molecular understanding of diseases. This has led to the emerging need for a holistic description of the working of biological systems at different scales.

**OBJECTIVES:**

- To gain an appreciation for the field of systems biology. To understand and learn the technical details of several current experiments or technologies used in the field of systems biology. To understand some of the larger questions and issues with systems biology and large-scale data collection and analysis.

**OUTCOMES:**

- This paper has been designed to give the students comprehensive training in the emerging and exciting upcoming field of Systems Biology, which will help students to get career in both industry/R&D.

**UNIT-1**

Physics and biology: scope and methods of biophysics. Levels of molecular organization. Association of macromolecules, lipids in biological membranes. Protein in biological membranes. Molecular mechanics and dynamics.

**UNIT-II**

Understanding structures of proteins at different levels.- primary, secondary, tertiary and quaternary: conformational analysis and forces. Understanding structures of nucleic acids at different levels- primary, secondary, tertiary and quaternary: conformational analysis of interactions- polysaccharides

### **UNIT-III**

Introduction to Bio informatics-scope and application characteristics of hardware and software. Types of computer, Bio- chips, and computer network sending and receiving e-mail. Internet browsing- searching biological articles information in internet.

### **EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

### **UNIT-IV**

Computer applications in biology- uses of databases in biology- analysis of proteins and nucleic acid sequence- molecular modeling- introduction to data processing- files- data collection- preparation-editing- backup- file recovery-procedure-sorting-searching and merging.

### **UNIT-V**

Biomolecules- carbohydrate, protein, lipids and nucleic acids, protein conformation-prediction of protein structure-fold recognition, comparative modeling (homology)-basic principles of X-ray diffraction studies, NMR, Mass spectroscopy in identifying protein information.

<b>Course Code</b>	<b>INDUSTRIAL BIOTECHNOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217AEC23</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

- AIM: To understand the, environmental pollution and remediation using Biotechnology and its control.

#### **OBJECTIVE:**

- Students will get an idea about the hazards to our environment, solutions to protect it and for sustainable development.

#### **OUTCOMES:**

- This course is important in the era of industrialization leading to environmental hazards and hence will help students to take up a career in tackling industrial pollution and also to take up the research in areas like development of biological systems for remediation of contaminated environments (land, air, water), and for environment-friendly processes such as green manufacturing technologies and sustainable development.

#### **UNIT-I**

Industrial microbiology an introduction- modern fermentation process and biochemical engineering- isolation, screening and strain improvement of microorganisms.

#### **UNIT-II**

Media design and sterilization for fermentation processes- media requirements for fermentation processes- examples of simple and complex media. Design and usage of commercial media for industrial fermentations- batch and continuous fermentations system- sterilization system of liquid media and air.

#### **UNIT-III**

Basic principles of bioprocess-media formulation- fermentation equipment and its use- type of fermenter (Batch and continuous fermenter) and its application. Tray, CSTR, BCF, HFMB, RBC and inner and outer loop.

#### **UNIT-IV**

Traditional industrial process – anaerobic process ethanol, lactic acid, acetone- butanol production) - aerobic process (citric acid baker's yeast penicillin production).

#### **EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

#### **UNIT-V**

Medical application of bioprocess engineering- commercial tissue culture process- gene therapy using viral vectors- models of viral infections- mass production of retrovirus. Advanced biological waste water treatment applications

**OBJECTIVE:**

Understanding the structural and functional aspects of the cell provides the student with a strong foundation in the molecular mechanisms underlying cellular function.

**OUTCOME:**

Students after completion of this paper will be exceptionally well prepared to pursue careers in cellular and sub cellular biological research, biomedical research, or medicine or allied health fields

- Living cells preparation by histochemical techniques
- Microtomy
- Squash preparation of onion root tip
- Production of enzyme (amylase)
- Immobilization of cells and enzymes by calcium alginate method
- Effect of different parameters on bacterial growth kinetics (pH, temperature)
- Production of organic acid
- Immunocytochemical analysis for specific cellular constituents
- Cytochemical study of cells/ cell types using specific dyes reagents
- Estimation of protein and carbohydrates
- Alcoholic fermentation of fruit juice by yeast (*Saccharomyces cerevisiae*)
- Separation of amino acid by paper chromatograph.

<b>Course Code</b>	<b>ENDOCRINOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217DSC25A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**AIM:**

This is a comprehensive study of the endocrine system which will allow the student to integrate and better understand the functions of the other systems of the body. The relationship of the nervous system to the endocrine system is explored in the context of signaling within a multicellular organism.

**OBJECTIVE:**

To have a basic understanding of the endocrine system.

**OUTCOMES:**

To know the pathophysiological significance of the system with special reference to humans.

**UNIT-I**

Hormones in general- definition- types of secretions- nature-classification, synthesis and their role- feedback control with specific examples hormone action proteins and steroids- cell signaling in hormone action

**UNIT-II**

Hypothalamus hypo physical axis – hormones of hypothalamus and their role structure of pituitary –secretions-physiological role- pathophysiology current status of pituitary as a master gland.

**UNIT-III**

Thyroid- parathyroid – structure- hormones- synthesis-storage-release-carrier proteins (eb. TBA&TBG)-physiological role-pathophysiology.

**ENTREPRENEURSHIP**

**UNIT-IV**

Adrenal and gonadal hormones- steroid biosynthesis- maintenance of cyclicity physiological role- pathophysiology- steroids in metabolism

## **UNIT-V**

Gastro intestinal hormones-pancreas as an endocrine organ- secretions- functions-physiological role and pathophysiology other endocrine organs in vertebrates insect and crustacean hormones-their role in growth and metamorphosis

### **REFERENCE:**

- Text book of endocrinology-Williams
- Physiological review of biochemistry-harper and others

Course Code	DISCIPLINE SPECIFIC ELECTIVE II	L	T	P	C
19217DSC25B	BIOETHICS AND IPR	5	0	0	4

**AIM:**

- To acquire specialized knowledge of law and practice relating to Insurance.

**OBJECTIVE:**

- The aim of this paper is to introduce the basic concepts of Intellectual property laws to the students for first time and familiarize them with the kind of rights, remedies and licensing regime associated with each kind of intellectual property so that students can have a basic understanding of Intellectual Property laws.

**OUTCOME:**

- To get registration in our country and foreign countries of their invention, designs and thesis or theory written by the students during their project work and for this they must have knowledge of patents, copy right, trademarks, designs and information Technology Act. Further teacher will have to demonstrate with products and ask the student to identify the different types of IPR'

**Unit 1: Overview of Intellectual Property**

Introduction and the need for intellectual property right (IPR) - Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design, Geographical Indication, Plant Varieties and Layout Design – Genetic Resources and Traditional Knowledge – Trade Secret - IPR in India : Genesis and development – IPR in abroad - Major International Instruments concerning Intellectual Property Rights: Paris Convention, 1883, the Berne Convention, 1886, the Universal Copyright Convention, 1952, the WIPO Convention, 1967, the Patent Co-operation Treaty, 1970, the TRIPS Agreement, 1994

**Unit2: Patents**

Patents - Elements of Patentability: Novelty , Non Obviousness (Inventive Steps), Industrial Application - Non - Patentable Subject Matter - Registration Procedure, Rights and Duties of Patentee, Assignment and license , Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties - Patent office and Appellate Board

### **Unit 3: Copyrights**

Nature of Copyright - Subject matter of copyright: original literary, dramatic, musical, artistic works; cinematograph films and sound recordings - Registration Procedure, Term of protection, Ownership of copyright, Assignment and license of copyright - Infringement, Remedies & Penalties – Related Rights - Distinction between related rights and copyrights

### **Unit 4: Trademarks**

Concept of Trademarks - Different kinds of marks (brand names, logos, signatures, symbols, well known marks, certification marks and service marks) - Non Registrable Trademarks - Registration of Trademarks - Rights of holder and assignment and licensing of marks - Infringement, Remedies & Penalties - Trademarks registry and appellate board

### **Unit 5: Other forms of IP**

**Design:** meaning and concept of novel and original - Procedure for registration, effect of registration and term of protection

**Geographical Indication (GI):** Geographical indication: meaning, and difference between GI and trademarks - Procedure for registration, effect of registration and term of protection Plant Variety Protection

**Plant variety protection:** meaning and benefit sharing and farmers' rights – Procedure for registration, effect of registration and term of protection Layout Design Protection

**Layout Design protection:** meaning – Procedure for registration, effect of registration and term of protection

## **EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

### **.Reference book:**

<b>Course Code</b>	<b>RESEARCH METHODOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217RMC26</b>		<b>3</b>	<b>0</b>	<b>0</b>	<b>2</b>

**AIM:**

- This course introduces and discusses approaches, strategies, and data collection methods relating to research in social sciences. Students will consider how to select the appropriate methodology for use in a study to be performed.

**OBJECTIVE:**

- This course aims to guide Master One students at the Section of English in the University of Biskra towards achieving competence and proficiency in the theory of and practice to research. This fundamental objective can be realized through helping these students to develop the subject of their research, encourage the formation of higher level of trained intellectual ability, critical analysis, rigor, and independence of thought, foster individual judgment, and skill in the application of research theory and methods, and develop skills required in writing research proposals, reports, and dissertation

**OUTCOME:**

- To culminate this final stage, students will learn to write a comprehensive research proposal that may be conducted in the future.

**Unit I –Research**

Selection of problem-stages in the execution of research: choosing a topic to publication-preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal; standard of research journals – Impact factor.

**Unit II: Statistical method**

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

**EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

### **Unit III**

Comparison of means, chi-square test, student test (ANOVA ‘partitioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANOVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Brief introduction to pie and histograms. Use of LCD.

### **UNIT IV:**

Chromatography – principle, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, isoelectric focusing, pulsed field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

### **UNIT V:**

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

<b>19217AEC31</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>6</b>

**AIM:**

- To study prokaryotic and eukaryotic genomes, general methods of genome sequencing techniques, genome analysis and annotations, genome mapping techniques and applications of genomics.

**OBJECTIVE:**

- Explain the aspects of genome organization, analysis and applications.
- Provide the details of prokaryotic and eukaryotic genome.

**OUTCOME:**

- Acquire the aspects of Gene Contig and Shotgun method.
- Know the features of the Genome Mapping databases.

**UNIT -I INTRODUCTION:** Genome structure and anatomy of prokaryotic and eukaryotic genome – Nuclear genomes – Organelle genomes – Repetitive DNA sequence – Transposable elements– Pseudo genes – Genome databases – organisms-specific databases.

**UNIT -II GENOME SEQUENCING DNA sequencing techniques:** Maxam Gilbert method – Sanger’s method – Pyro sequencing – Whole genome sequencing – Gene Contig and Shotgun method – Human genome project.

**UNIT -III GENOME ANALYSIS AND ANNOTATION:** Searching and locating Genes – Programs and databases – Determining function of genes – Gene Prediction – Methods of gene prediction – Software’s and tools.

**UNIT -IV GENOME MAPPING:** Mapping databases – Types of mapping – Genetic mapping: DNA markers – RFLP, SSLP, RH maps, SNP – Linkage analysis – Physical mapping: Restriction mapping – FISH – STS mapping

**UNIT -V APPLICATIONS OF GENOMICS DNA: microarray and its applications – Medical applications: Development of Antibiotics – Vaccines – Drug discovery – Human genetics diseases: Identification – Gene Diagnosis and Gene therapy– Genomics in Plant Biology.**

### **SKILL DEVELOPMENT**

#### **MATERIALS FOR STUDY AND REFERENCE:**

- Brown T.A., Genomes 3 (3rd Edn.), Garland Science Publishing, New York, 2007.
- Brown T.A., Gene Cloning and DNA Analysis – An Introduction (6th Edn.), A John Wiley & Sons, Ltd., Publications, UK, 2010.
- Jeremy W. Dale and Malcolm von Schantz, From Genes to Genomes – Concepts and Applications of DNA Technology, John Wiley & Sons, Ltd., Publications, UK, 2002.
- Richard J. Reece, Analysis of Genes and Genomes, John Wiley & Sons, Ltd., Publications, UK, 2004.

<b>Course Code</b>	<b>PROTEOMICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217AEC32</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>6</b>

**AIM:**

- To understand the proteins encoded by the genes with respect to structure, function, protein – protein interactions, techniques for separation and analysis, database and applications.

**OBJECTIVE:**

- Give a detailed description on protein sequencing.
- Provide an overview of proteome databases.

**OUTCOME:**

- Gain knowledge on phylogenetic profiles
- Describe the features of Yeast two-hybrid system.

**UNIT -I INTRODUCTION:** Proteomics introduction – Protein sequencing – Protein Digestion Techniques – Mass Spectrometers for Protein and Peptide Analysis – Protein Identification by Peptide Mass Fingerprinting – Software Tools for Peptide Mass Fingerprinting: Finding the Matches – Peptide Sequence Analysis and Protein Identification with Tandem Mass Spectrometry

**UNIT -II PROTEOME DATABASES:** Proteome databases – Comparative proteomics methods – 2D gel databases – Protein interaction data bases – Metabolic pathway databases – resources for interaction prediction – network and pathway visualization tools – Protein network analysis

**UNIT -III PROTEOMICS TOOLS :** 2D gel electrophoresis and Mass spectra – Protein identification from 2D gel, mass spectra and sequence data – Protein property prediction – bulk, active sites, modification sites, interactive sites, location, localization, stability, shape, domains properties, secondary and tertiary structures – Protein identification programs – Muscot – PeptIdent – Protein prospector – GFS

**UNIT- IV FUNCTIONAL PROTEOMICS** Functional proteomics – protein phenotypes – Protein-Protein Interaction Mapping: Experimental – Yeast two-hybrid system – phage display – protein fragment complementation assays – Computational approach

## SKILL DEVELOPMENT

UNIT -IV APPLICATION OF PROTEOMICS: Applications of Proteomics – Protein Expression Profiling – Identifying Protein – Protein Interactions and Protein Complexes – Mapping Protein Modifications – Protein Arrays and Protein Chips – Application of proteomics to medicine, toxicology and pharmaceuticals

UNIT -V Current Contours: (For Continuous Internal Assessment only) Computational *Proteomics* and. Metabolomics- Sequence comparison. – Genome sequencing. – *Proteomics*. – Phylogeny. – Gene expression - Enzymology

<b>19217SEC33L</b>		<b>0</b>	<b>0</b>	<b>5</b>	<b>3</b>

**AIM:**

- The study of animal cells has helped us gain an insight not only in the structure and function of cells and tissues but also in different physiological, biochemical and immunological processes

**OBJECTIVE:**

- The major objective is to provide a world-class training experience for these students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.

**OUTCOME:**

This paper will help students interested in careers as laboratory, research or animal care technicians in the fields of veterinary and human health or biotechnology.

- Isolation of DNA from bacteria, fungus, animal tissues.
- Bacterial gene expression.
- Restriction mapping.
- PCR techniques.
- DNA finger printing PFLP,RAPD.
- Human Genome -Wellcome Trust Genome Browser
- FlyBase - A Database of Drosophila Genes & Genomes.
- Tandem repeats finder- A program to analyze DNA sequences
- Peptide Cutter - Predicts potential cleavage sites cleaved by proteases or chemicals in a given protein sequence.
- PSORT - Program for the prediction of protein localization sites in c
- PROSITE - Protein Domain, Family & Functional Site Prediction

<b>19217DSC34A</b>		<b>5</b>	<b>0</b>	<b>0</b>	<b>4</b>

**AIM:**

- One of major applications of Nano science is in biotechnology field.

**OBJECTIVE:**

- Nanotechnology attracts students from various disciplines, a single course which starts by sensitizing students from a varied background about the biological/biotechnological basics and culminates into modern day applications of Nano science in biotechnology

**OUTCOME:**

- This course will act as a bridge between students from non-biology course at all levels

**Unit- I**

Basic biology principles and practice of micro fabrication techniques, Atomic force microscopy, biological production of metal Nano particles, macro molecular assemblies.

**Unit-II**

Application in Biomedical and biological research, Nano particles, viruses as Nano- particles, Nano chemicals and application., tumour targeting and other diagnostic application.

**Unit-III**

Developing drug delivery tools through Nano biotechnology, Nano particle based immobilization assays, quantum dots technology and its application.

**Unit-IV**

Synthesis and characterization of different classes of biomedical polymers their uses in pharmaceutical, cardiovascular ophthalmologic orthopaedic areas.

**EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

## **Unit-V**

Biosensors and Nano biotechnology principles used in construction of microelectronic devices sensors and macro mechanical structures. And their functioning, immunonanotechnology.

- Nanobiotechnology of biomimetic membranes, martin, donald (edt), springer verlag publishers.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-III	L	T	P	C
19217DSC34B	Environmental biotechnology	5	0	0	4

**AIM:**

- To understand the energy sources, environmental pollution and remediation using biotechnology and its control.

**OBJECTIVE:**

- Students will get an idea about the hazards to our environment, solutions to protect and for sustainable development.

**OUTCOME:**

- This course is important in the era of industrialization leading to environmental hazards and hence will help students to take up a career in tackling industrial pollution and also who is willing to take up the research in areas like development of biological systems for remediation of contaminated environments (land, air, water), and for environment-friendly processes such as green manufacturing technologies and sustainable development

**Unit I**

Introduction, Importance and Scope of Environment Biotechnology. Renewable and Non-Renewable Resources of Energy. Conventional fuels and their impact on Environment – Firewood, Animal wastes, Coal, Petroleum and Animal oils.

**Unit II**

Modern fuels and their impact on environment – Methanogenic Bacteria, Biogas Production, Microbial Hydrogen Production, Conversion of Sugar to Alcohol, Gasohol. Effect of Green Revolution and Industrial Revolution on Environment.

**Unit III**

Waste Water Pollution (Sewage) Treatment Process - Septic tank, Mechanical and Biological Treatment, Trickling Filters, Activated Sludge Process, Oxidation Ponds, Anaerobic Sludge Digestion. Solid Waste Disposal- Sanitary Landfills, Composting, Vermicompost

#### **Unit IV**

Biofertilizers- Definition, Distinguished Features of bio fertilizers and Organic Manures. Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil, Algal and fungal biofertilizers (VAM).

#### **Unit V**

Bioleaching- Ore Leaching and Role of Microbes in Mines ( copper, and Uranium). Environmental significance of Genetically modified microbes, plants and animals. Bio-assessment of environmental quality.

### **EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19211OEC	Open Elective -Writing for the Media	4	0	0	2

**Aim:**

- To equip students to enter the realm of mass media.

**Objectives:**

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

**Outcome:**

- Understand the intricacies of mass media

**UNIT-I**

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

**UNIT-II**

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop-Filters- Human interest stories- Recognizing and evaluating news.

**UNIT-III**

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

**UNIT-IV**

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

**UNIT-V**

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

**References-**

Course Code	Course Title	L	T	P	C
19212OEC	Open Elective – Applicable Mathematical Techniques	4	0	0	2

**Aim:**

- To acquaint with the basic concept of Interpolation.

**Objectives:**

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

**Outcomes:**

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

**UNIT I**

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

**UNIT II**

Assignment Problems

**UNIT III**

Replacement Problems

**UNIT IV**

Decision Analysis

**UNIT V**

Game Theory

**References**

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman  
Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Course Code	Course Title	L	T	P	C
19213OEC	Open elective Biomedical Instrumentation	4	0	0	2

**Aim:**

- To understand the concepts and application of electronic Instrumentation in the Medical field.

**Objective:**

- Interpret technical aspects of medicine
- Solve Engineering Problems related to medical field
- Understand medical diagnosis and therapy

**Outcomes:**

- To familiarize students with various medical equipments and their technical aspects
- To introduce students to the measurements involved in some medical equipment.
- Ability to understand diagnosis and therapy related equipments
- Understanding the problem and ability to identify the necessity of an equipment to a specific problem

**UNIT – I: Bio Electric Signals and Electrodes**

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

**UNIT – II: Recording System and Recorders**

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

**UNIT – III: Measurement and Analysis Techniques**

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

**UNIT – IV: Magnetic Resonance and Ultrasonic Imaging Systems**

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

**UNIT – V: Advanced Bio Medical Systems**

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical stimulation.

**Books for Study**

2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

**Book for Reference**

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
19214OEC	Open Elective-Green Chemistry	4	0	0	2

**Aim:**

- To reduce the soil and water pollution in environment.

**Objectives:**

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

**Outcomes:**

- To understand the environmental status and evolution.
- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

**Unit I - Introduction**

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

**Unit II - Principles**

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

**Unit III - Bio Catalytic Reactions**

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalysis synthesis of industrial chemicals by bacterial constructs - Future Trends.

**Unit IV - Green House Effect**

Greenhouse effect and Global Warming – Introduction - How the greenhouse effect is produced - Major sources of greenhouse gases - Emissions of CO<sub>2</sub> - Impact of greenhouse effect on global climate - Control and remedial measures of greenhouse effect - Global warming a serious threat - Important points.

**Unit V - Green Analytical Methods**

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green Nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

**References:**

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	Course Title	L	T	P	C
19220OEC	Open Elective-M- Marketing	4	0	0	2

**Aim:**

- To provide the conceptual and technological developments in the field of internet and web designing with the emphasis on comprehensive knowledge of internet.

**Objectives:**

- To understand the web designing and web development with the knowledge of internet.
- To learn the overview of the design of HTML & Scripting Languages.
- To learn the use of website and internet design and development.

**Outcomes:**

- Acquire knowledge about functionalities of Internet
- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

**UNIT I**

Internet, Growth of Internet, Owners of the Internet, Anatomy of Internet, ARPANET and Internet history of the World Wide Web, basic Internet Terminology, Net etiquette. Internet Applications – Commerce on the Internet, Governance on the Internet, Impact of Internet on Society – Crime on/through the Internet. Connectivity types: level one, level two and level three connectivity, Setting up a connection: hardware requirement, selection of a modem, software requirement, modem configuration, Internet accounts by ISP: Telephone line options, Protocol options, Service options, Telephone line options – Dialup connections through the telephone system, dedicated connections through the telephone system, ISDN, Protocol options – Shell, SLIP, PPP, Service options – E-mail, WWW, News Firewall

**UNIT II**

Network definition, Common terminologies: LAN, WAN, Node, Host, Workstation, bandwidth, Interoperability, Network administrator, network security, Network Components: Servers, Clients, Communication Media, Types of network: Peer to Peer, Clients Server, Addressing in Internet: DNS, Domain Name and their organization, understanding the Internet Protocol Address. Network topologies: Bust, star and ring, Ethernet, FDDI, ATM and Intranet.

**UNIT III**

Email Networks and Servers, Email protocols –SMTP, POP3, IMAp4, MIME6, Structure of an Email – Email Address, Email Header, Body and Attachments, Email Clients: Netscape mail Clients, Outlook Express, Web based E-mail. Email encryption- Address Book, Signature File.

**UNIT IV**

HTML page structure, HTML Text, HTML links, HTML document tables, HTML Frames, HTML Images, multimedia - ASP, VB Script, JAVA Script, JAVA and Front Page, Flash

## **UNIT V**

Overview, SGML, Web hosting, HTML. CGL, Documents Interchange Standards, Components of Web Publishing, Document management, Web Page Design Consideration and Principles, Search and Meta Search Engines, WWW, Browser, HTTP, Publishing Tools Overview of Internet Security, Firewalls, Internet Security, Management Concepts and Information Privacy and Copyright Issues, basics of asymmetric cryptograms.

Course Code	Course Title	L	T	P	C
19261OEC	Open Elective-Insurance Services	4	0	0	2

**Aim:**

- To look after the interests of people from uncertainty by providing certainty of compensation.

**Objectives:**

- To learn the fundamental concepts and principles of insurance.
- To explain the nature of different insurance policies, insurance contracts and settlement of claims.

**Outcome:**

- The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

**UNIT – I**

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

**UNIT – II**

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

**UNIT – III**

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

**UNIT – IV**

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

**UNIT – V**

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

**Reference Books:**

Course Code	Course Title	L	T	P	C
19280OEC	Open Elective-Counselling Psychology	4	0	0	2

**Aim:**

- To acquaint with counselling and its process

**Objectives:**

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

**Outcome:**

- Learn counselling and its process

**UNIT I**

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

**UNIT II**

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

**UNIT III**

Approaches to Counselling

Counselling Process

**UNIT IV**

Psychological Testing

Diagnosis

**UNIT V**

Educational Counselling

Family Counselling

<b>Course Code</b>	<b>FOOD TECHNOLOGY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>19217AEC41</b>		<b>6</b>	<b>1</b>	<b>0</b>	<b>6</b>

- Aim: This course aims to help the students to understand the various properties of food and the factors that make it vulnerable for spoilage

#### **Objectives:**

- This course is designed to understand the chemical nature and associated microbes of food and to understand the principles of food processing, preservation and manufacture.

#### **Outcomes:**

- To understand the basic food safety issues in the food market
- To develop and evaluate quality of new food products using objective and subjective methodologies.
- To understand the basic concepts in food chemistry and food analysis

#### **Unit I**

Basics of Food Technology Food chemistry: constituents of food - contribution to texture, flavour and organoleptic properties of food. Food additives - intentional and nonintentional and their functions. Enzymes in food processing.

#### **Unit II**

Microbiology of Food Sources and activity of microorganisms associated with food. Food fermentation & food chemicals. Food borne diseases - infections and intoxications. Food spoilage - causes.

#### **Unit III**

Food Processing Raw material characteristics; cleaning, sorting and grading of foods; physical conversion operations - mixing, emulsification, extraction, filtration, centrifugation, membrane separation, crystallization, heat processing.

#### **Unit IV**

Food Preservation Use of high temperatures - sterilization, pasteurization, blanching, canning - concept, procedure & application; Low temperature storage - freezing curve characteristics. Factors affecting quality of frozen foods. Irradiation preservation of foods.

## **Unit V**

Manufacture of Food Products Bread and baked foods. Dairy products - milk processing, cheese, butter, ice-cream. Vegetable and fruit products. Edible oils and fats. Meat, poultry and fish products. Confectionery, beverages.

### **EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19217AEC42	BIOINSTRUMENTATION	6	1	0	6

**Aim:**

- The students searching for Biomedical Instrumentation Courses and Training Programs found the following related articles

**Objectives:**

- This course will give an understanding about the working principles, construction and applications of the instruments often used in the studies related to various disciplines of Biological Sciences.

**Outcomes:**

- Check for analytical functions and find the analytical function and study.
- Learn the measurement systems, errors of measurement,
- Demonstrate basic knowledge of Bio techniques

**Unit I**

Basic Instrumentation (Theory & Demo) Principles, operation protocol & applications of the following instruments: Weighing balance, pH meter, Polarography, Radioactivity, ECG, FTIR.

**Unit II**

Microscopy (Hands on) Observation of different microbes. Light – Bright & Dark field; Phase contrast, Inverted Phase contrast; Fluorescent, Electron – TEM & SEM; Confocal

**Unit III**

Spectroscopy (Theory & Demo) Colorimeter, Spectrometer, UV visible spectrometer, X – ray spectrometer, ELISA reader, Atomic absorption spectrometer, Flame photometer, Flourimeter & Spectro flourimeter.

**Unit IV**

Separation Techniques (Theory & Demo) Centrifugation - Principle, operation, types & applications. Chromatography - Principle, operation & applications - Paper – ascending, descending & Circular, TLC, HPTLC, GC, HPLC, Column Chromatography, Ion Exchange & Affinity Chromatography, LC – MS.

**Unit V**

Electrophoresis (Theory & Demo) Native & denatured - zone, iso-electrofocusing & isotachopheresis, 1D & 2D. PCR, MoldiTof

**Reference Books:**

Course Code	Course Title	L	T	P	C
19217SEC43L	FOOD TECHNOLOGY AND BIO INSTRUMENTATION LAB	0	0	5	3

**Aim:**

- To understand the principle and application of Bioinstrumentation and food technology

**Objectives:**

- By doing this course the students will get hand on exposure & understand the chemical nature and associated microbes of food and the principles of food processing, preservation and manufacture. And the techniques used in understanding the biological process

**Outcomes:**

- Ability to apply principles of food engineering in industry.
- Understand, identify and analyze a problem related to food industry and ability to find an appropriate solution for the same.

1. Test for sensitivity of microorganisms.
2. Downstream processes of enzymes – dialysis.
3. Ion exchange chromatography – drying – cellulose column chromatography.
4. Immobilization of yeast cell by alginate beads
5. Bioassay techniques for antibiotics.
6. Large scale production of organic acids, large scale production of solvents using fermenter (Demo)
7. Visit to Distillery unit; alcohol production and pharmacological industries. Pasteur Institute (Field visit).
8. Isolation & identification microbes from spoiled food.
9. Production of yogurt, butter.
10. Antibiotic production by different strains of microbes (Theory).
11. Calculate BMI
12. Handling of Colorimeter and Spectrophotometer
13. Estimation of RNA by orcinol method.
14. Estimation of DNA by Diphenylamine method.
15. Paper chromatography for separations and detections of simple sugars and amino acids.
16. Separation of plant pigments by column chromatography.
17. Thin layer chromatography of amino acids.

**EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

**Reference book:**

Course Code	Course Title	L	T	P	C
19217 DSC44A	GENE THERAPY UTILIZATION PHARMACOLOGY	5	0	0	4

**Aim:**

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

**Objective:**

- This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

**Outcomes:**

- understand some of the types of disease that might be treatable by gene therapy
- understand the basic principles of genetic manipulation
- Understand how genetics may be used in the design of drugs..

**UNIT I: History of genetics**

Gene as the unit of mutation and recombination. Identification of DNA as the genetic material. Mutations: Molecular nature, mutagenesis by nitrous acid, hydroxylamine, alkylating agents, intercalators and UV, origin of spontaneous mutations and control, parasexual process in bacteria, transformation, transduction and conjugal gene transfer the phenomena, mechanisms and applications. Fine structure genetic analysis with examples.

**UNIT II: Genetic mapping**

Haplotype, Physical and Cytogenetic mapping, SNP, RFLP, TRE, PCR-OLA, SSCP, RAPD

**UNIT III: Identifying human disease genes**

General gene therapy strategies, Targeted killing of specific cells, Targeted mutation correction, Targeted inhibition of gene expression. Gene replacement therapy by viral vectors: Oncovirus, Lenti virus, Adenovirus, Adeno associated virus, Herpes Simplex virus, Naked DNA or direct injection or particle bombardment-gene gun, Liposome mediated DNA transfer, Receptor mediated endocytosis, Repair of mutations in situ through the cellular DNA repair machinery, Antisense induced exon splicing, In-utero fetal gene therapy

#### **UNIT IV: Gene blocking therapies**

Gene Knockouts, Gene disruption-p53, prion diseases, immunological, short RNA, Gene therapy for non-inheritable diseases, stem cell therapy, somatic cell gene therapy and germ line gene therapy

#### **UNIT V: Gene therapy: problem, solutions and future prospects**

Controversial issues in medical genetics

In vitro fertilization, Prenatal sex determination, Surrogate therapy, Genetic counseling, Germline gene therapy, ELSI, NBAC, IPR, Patenting, Human transgene

#### **SKILL DEVELOPMENT**

Course Code	Course Title	L	T	P	C
19217 DSC44B	PLANT CONSERVATION & DISASTER MANAGEMENT	5	0	0	4

**Aim:**

- Understanding foundations of hazards, disasters and associated natural/social phenomena.

**Objective:**

- To maintain essential ecological processes and life supporting systems.
- To preserve the diversity of species or the range of genetic material found in the worlds organisms.
- The course focuses on the reasons responsible for disaster, its impact on the environment and society. To impart the knowledge on the measures and steps to minimise or overcome the burden on the ecosystem.

**Outcomes:**

- To make sustainable utilization of species and ecosystems.
- Familiarity with disaster management theory (cycle, phases) Knowledge about existing global frameworks and existing agreements (e.g. Sendai)

**UNIT I: Plant Diversity**

Biodiversity – Concept and Definition Scope and Constraints of Biodiversity Science, Composition and Scales of Biodiversity: Genetic Diversity, Species/ Organismal Diversity, Ecological/ Ecosystem Diversity, Landscape/ Pattern Diversity, Agrobiodiversity, Biocultural Diversity and Urban Biodiversity.

**UNIT II: Conservation challenges in the twenty first century**

Urbanisation; Creating knowledge society, Conflict management and decision making, Management of introduced species. 18 Evaluation of priorities for conservation of habitats and species Selection criteria for protection of species – species quality, IUCN Guidelines for Red List categories and criteria (version 7.0), Red List of Indian Flora and Fauna, Selection criteria for protection of habitats – hotspots, Conservation

**UNIT III : Introduction to Disasters**

Natural Disasters –Educative – Trends in Climatology, Meteorology and Hydrology. Seismic Activities. Changes in Coastal Zone, Coastal Erosion, Beach Protection. Coastal Erosion due to Natural and Manmade Structures.

#### **UNIT IV : Types of Disasters – Natural**

Disasters – Nature and characteristics of Cyclones – Tornadoes – Avalanches – Flood –Drought – Volcanic – Earthquakes – Fire – Landslides – Causes and effects - Impact on Environment- Forecasting and Warning System – Disaster Profile of India. Manmade disasters: Nuclear, chemical, fire explosion, accidents, bioweapons. Deforestation, monoculture, Building construction.

#### **UNIT V : Disaster Management**

Disaster Management Cycle- Predisaster Planning -Training of Disaster – Prone Areas – Prioritization – Regulations – Protection Measures during Disaster and Post Disaster. Relief Camp Organization — Disaster Training – Role of Information and Communication Technology, GPS, Remote Sensing and Geographic Information System in Disaster Management.

#### **EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT**

**PROGRAM HANDBOOK**

**B.TECH (CIVIL ENGINEERING-PART  
TIME)**

**[REGULATION 2019]**

**[for candidates admitted to B.Tech CE program from June 2019 onwards]**

## Program Educational Objectives

PEO1 To produce graduates who have developed the skills required to design Civil Engineering systems and facilities, including the graduate's abilities to formulate problems, to think creatively, to synthesize information, and to work collaboratively in teams.

PEO2 To produce graduates who are trained thoroughly in methods of analysis, including the mathematical and computational skills appropriate for Civil Engineers to use when problem solving.

PEO3 To produce graduates who are prepared for life-long learning and successful careers as Civil Engineers & also taught to use current, experimental and data analysis techniques for Civil Engineering applications.

### PROGRAMME OUTCOMES:

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **The engineer and society:** An ability to develop the professional status using the broad education to understand the potential impact of Engineering solutions in various geographical settings including societal and environmental contexts.
6. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
7. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
8. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
9. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

10. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
11. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## SEMESTER – I

### 19148S11P    TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS

**L T P C**  
**3 1 0 4**

#### AIM & OBJECTIVES

The course objective is to develop the skills of the students in the areas of boundary value problems and transform techniques. This will be necessary for their effective studies in a large number of engineering subjects like heat conduction, communication systems, electro-optics and electromagnetic theory. The course will also serve as a prerequisite for post graduate and specialized studies and research.

#### **UNIT-1      PARTIAL DIFFERENTIAL EQUATIONS      9**

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange’s linear equation – Linear partial differential equations of second and higher order with constant coefficients.

#### **UNIT-II      FOURIER SERIES      9**

Dirichlet’s conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval’s identify – Harmonic Analysis.

#### **UNIT-III      BOUNDARY VALUE PROBLEMS      9**

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

#### **UNIT-IV      FOURIER TRANSFORM      9**

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval’s identity.

#### **UNIT-V      Z -TRANSFORM AND DIFFERENCE EQUATIONS      9**

Z-transform - Elementary properties – Inverse Z – transform – Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

**L: 45 T: 15**

**Total: 60 Periods**

**UNIT I STRESS STRAIN AND DEFORMATION OF SOLIDS, STATES OF STRESS 9**

Rigid bodies and deformable solids – Stability – Strength – Stiffness – Tension, Compression and shear stresses – Strain – Elasticity – Hooke's law – Limit of proportionately, modulus of elasticity – stress-strain curve – lateral strain – temperature stresses – deformation of simple and compound bars – shear modulus – bulk modulus – relationship between elastic constants – biaxial state of stress – stress at a point – stress on inclined plane – principal stresses and principal planes – Mohr's circle of stresses.

**UNIT II ANALYSIS OF PLANE TRUSS, THIN CYLINDERS / SHELLS 9**

Stability and equilibrium of plane frames – Types of trusses – Analysis of forces in truss members – Method of joints – Method of sections – Method of tension coefficients – Thin cylinders and shells – Under internal pressure – Deformation of thin cylinders and shells.

**UNIT III TRANSVERSE LOADING ON BEAMS 9**

Beams statically determinate and indeterminate beams – Types of supports – Simple and fixed, types of loads – Concentrated – Uniformly distributed – Varying distributed load – Combination of above loading – Relationship between bending moment and shear force – Bending moment and shear force diagram for simply supported, cantilever and over hanging beams – Theory of simple bending – Analysis of stresses – Load carrying capacity of beams – Proportioning of sections

**UNIT IV DEFLECTION OF BEAMS AND SHEAR STRESSES 9**

Deflection of beams – Double integration method – Macaulay's method – Slope and deflection using moment area method – Conjugate Beam method – Variation of shear stress – Shear stress distribution in rectangular – Various sections.

**UNIT V TORSION AND SPRINGS 9**

Stresses and deformation in circular (solid and hollow shafts) – Stepped shafts – Shafts fixed at both ends – Leaf springs – Stresses in helical springs – Deflection of springs.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

**UNIT I DEFINITIONS AND FLUID PROPERTIES 10**

Definitions – Fluid and fluid mechanics – Dimensions and units – Fluid properties – Continuum Concept of system and control volume.

**UNIT II FLUID STATICS and KINEMATICS 10**

Pascal's Law and Hydrostatic equation – Forces on plane and curved surfaces – Buoyancy – Meta centre – Pressure measurement – Fluid mass under relative equilibrium Fluid Kinematics – Stream, streak and path lines – Classification of flows – Continuity equation (one, two and three dimensional forms) – Stream and potential functions – flow nets – Velocity measurement (Pitot tube, current meter, Hot wire and hot film anemometer, float technique, Laser Doppler velocimetry)

**UNIT III FLUID DYNAMICS 10**

Euler and Bernoulli's equations – Application of Bernoulli's equation – Discharge measurement – Laminar flows through pipes and between plates – Hagen Poiseuille equation – Turbulent flow – Darcy-Weisbach formula – Moody diagram – Momentum Principle.

**UNIT IV BOUNDARY LAYER AND FLOW THROUGH PIPES 10**

Definition of boundary layer – Thickness and classification – Displacement and momentum thickness – Development of laminar and turbulent flows in circular pipes – Major and minor losses of flow in pipes – Pipes in series and in parallel – Pipe network

**UNIT V SIMILITUDE AND MODEL STUDY 10**

Dimensional Analysis – Rayleigh's method – Buckingham's Pi-theorem – Similitude and models – Scale effect and distorted models.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

<b>UNIT I INTRODUCTION</b>	<b>8</b>
Definition – Principles – Classification –Chain Surveying– Ranging and chaining – Reciprocal ranging –Prismatic compass – Surveyor’s compass – Bearing – Systems and conversions – Localattraction – Magnetic declination – Dip – Traversing – Plotting – Adjustment of errors – Plane table instruments and accessories – Merits and demerits – Methods – Radiation – Intersection – Resection – Traversing.	
<b>UNIT II LEVELLING &amp; THEODOLITE SURVEYING</b>	<b>12</b>
Level line – Horizontal line – Levels and staves – Spirit level – Sensitiveness – Bench marks – Temporary and permanent adjustments – Fly and check leveling-- Theodolite surveying- Vernier and microptic – Description and uses — Horizontal angles – Vertical angles – Heights and distances – Traversing – Closing error and distribution .	
<b>UNIT III TACHEOMETRIC SURVEYING</b>	<b>6</b>
Tachometric systems – Tangential, stadia and subtense methods – Stadia systems – Horizontal and inclined sights – Vertical and normal staffing – Fixed and movable hairs – Stadia constants – Anallactic lens – Subtense bar.	
<b>UNIT IV CONTROL SURVEYING &amp; ASTRONOMICAL SURVEYING</b>	<b>9</b>
Triangulation –Signals – Base line – Instruments and accessories- Trigonometric leveling – Single and reciprocal observations - Astronomical surveying - Celestial sphere – Astronomical terms and definitions – Motion of sun and stars – Apparent altitude and corrections – Celestial co-ordinate systems – Different time systems – Nautical almanac – Star constellations – calculations for azimuth of a line.	
<b>UNIT V ENGINEERING SURVEYS</b>	<b>10</b>
Curve ranging – Horizontal and vertical curves – Simple curves – Setting with chain and tapes tangential angles by theodolite – Double theodolite – Basic concept of Compound and reverse curves – Transition curves .

**UNIT I INTRODUCTION 12**

Irrigation – Need and mode of irrigation – Merits and demerits of irrigation – Crop and crop seasons – consumptive use of water – Duty – Factors affecting duty – Irrigation efficiencies – Planning and Development of irrigation projects.

**UNIT II IRRIGATION METHODS 10**

Canal irrigation – Lift irrigation – Tank irrigation – Flooding methods – Merits and demerits – Sprinkler irrigation – Drip irrigation.

**UNIT III DIVERSION AND IMPOUNDING STRUCTURES 14**

Weirs – elementary profile of a weir – weirs on pervious foundations – Types of impounding structures - Tanks, Sluices and Weirs – Gravity dams – Earth dams – Arch dams – Spillways – Factors affecting location and type of dams – Forces on a dam – Hydraulic design of dams.

**UNIT IV CANAL IRRIGATION 14**

Alignment of canals – Classification of canals – Canal drops – Hydraulic design of drops – Cross drainage works – Hydraulic design of cross drainage works – Canal Head works – Canal regulators – River Training works.

**UNIT V IRRIGATION WATER MANAGEMENT 10**

Need for leveling ion of water use – Minimising irrigation water losses – On farm development works – Percolation ponds – Participatory irrigation management – Water users associations – Changing paradigms in water management – Performance evaluation.

## SEMESTER II

19148S21P

NUMERICAL METHODS

L T P C  
3 1 0 4

### **UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 9**

Linear interpolation methods (method of false position) – Newton’s method – Statement of fixed point theorem – Fixed point iteration:  $x=g(x)$  method – Solution of linear system by Gaussian elimination and Gauss-Jordan methods - Iterative methods: Gauss Jacobi and Gauss-Seidel methods - Inverse of a matrix by Gauss Jordan method – Eigen value of a matrix by power method.

### **UNIT II INTERPOLATION AND APPROXIMATION 9**

Lagrangian Polynomials – Divided differences – Interpolating with a cubic spline – Newton’s forward and backward difference formulas.

### **UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 9**

Derivatives from difference tables – Divided differences and finite differences – Numerical integration by trapezoidal and Simpson’s 1/3 and 3/8 rules – Romberg’s method – Two and Three point Gaussian quadrature formulas – Double integrals using trapezoidal and Simpsons’s rules.

### **UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 9**

Single step methods: Taylor series method – Euler and modified Euler methods – Fourth order Runge – Kutta method for solving first and second order equations – Multistep methods: Milne’s and Adam’s predictor and corrector methods.

### **UNIT V BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 9**

Finite difference solution of second order ordinary differential equation – Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations.

**L: 45 T: 15**

**Total: 60 Periods**

#### **TEXT BOOKS**

1. C.F. Gerald and P.O. Wheatley, ‘Applied Numerical Analysis’, Sixth Edition, Pearson Education Asia, New Delhi, 2002.

**UNIT I ENERGY PRINCIPLES****9**

Strain energy and strain energy density – Strain energy in traction, shear in flexure and torsion – Castigliano's theorems – Principle of virtual work – Application of energy theorems for computing deflections in beams and trusses – Maxwell's reciprocal theorems.

**UNIT II INDETERMINATE BEAMS****9**

Propped cantilever and fixed beams-fixed end moments and reactions for concentrated load (central, non central), uniformly distributed load, triangular load (maximum at centre and maximum at end) – Theorem of three moments – Analysis of continuous beams – shear force and bending moment diagrams for continuous beams – Slope deflections in continuous beams (qualitative study only)..

**UNIT III COLUMNS****9**

Eccentrically loaded short columns – Middle third rule – Core section – Columns of unsymmetrical sections – (angle channel sections) – Euler's theory of long columns – critical loads for prismatic columns with different end conditions – Rankine-Gordon formula for eccentrically loaded columns – Thick cylinders – Compound cylinders.

**UNIT IV STATE OF STRESS IN THREE DIMENSIONS****9**

Spherical and deviatoric components of stress tensor – Determination of principal stresses and principal planes – Volumetric strain – Dilatation and distortion – Theories of failure – Principal stress dilatation – Principal strain – Shear stress – Strain energy and distortion energy theories – Application in analysis of stress, load carrying capacity and design of members – Residual stresses.

**UNIT V ADVANCED TOPICS IN BENDING OF BEAMS****9**

Unsymmetrical bending of beams of symmetrical and unsymmetrical sections – Curved beams – Winkler Bach formula – Stress concentration – Shear flow – Center.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

<b>UNIT I</b>	<b>OPEN CHANNEL FLOW</b>	<b>8</b>
	Open channel flow – Types and regimes of flow – Velocity distribution in open channel – Wide open channel – Specific energy – Critical flow and its computation.	
<b>UNIT II</b>	<b>UNIFORM FLOW</b>	<b>8</b>
	Uniform flow – Velocity measurement – Manning’s and Chezy’s formula – Determination of roughness coefficients – Determination of normal depth and velocity – Most economical sections – Non-erodible channels	
<b>UNIT III</b>	<b>VARIED FLOW</b>	<b>10</b>
	Dynamic equations of gradually varied flow – Assumptions – Characteristics of flow profiles – Draw down and back water curves – Profile determination – Graphical integration, direct step and standard step method – Flow through transitions - Hydraulic jump – Types – Energy dissipation – Surges – Surge channel transitions.	
<b>UNIT IV</b>	<b>TURBINES</b>	<b>10</b>
	Turbines - draft tube and cavitations – Application of momentum principle – Impact of jets on plane and curved plates - turbines - classification - radial flow turbines - axial flow turbines – Impulse and Reaction.	
<b>UNIT V</b>	<b>PUMPS</b>	<b>9</b>
	Centrifugal pump - minimum speed to start the pump – multistage Pumps – Jet and submersible pumps - Positive displacement pumps - reciprocating pump - negative slip - flow separation conditions - air vessels -indicator diagram and its variation - savings in work done - rotary pumps.

**UNIT 1 CONCRETE MAKING MATERIALS 9**

Aggregates classification-IS Specifications-Properties-Grading-Methods of combining aggregates-Specified gradings-Testing of aggregates-Cement-Grade of cement-Chemical composition-Testing of concrete-Hydration of cement-Structure of hydrated cement-Special cements-Water chemical admixtures-Mineral admixture.

**UNIT II CONCRETE 9**

Properties of fresh concrete-Hardened concrete-Strength-Elastic properties-Creep and shrinkage-Variability of concrete strength.

**UNIT III MIX DESIGN 9**

Principles of concrete mix design-Methods of concrete mix design-Testing of concrete.

**UNIT IV SPECIAL CONCRETE 9**

Light weight concrete-Fly ash concrete-Fibre reinforced concrete-Polymer concrete-Super plasticized concrete-Epoxy resins and screeds for rehabilitation-Properties and applications-High performance concrete.

**UNIT V CONCRETING METHODS 9**

Process of manufacturing of concrete-Methods of transportation, placing and curing-Extreme weather concreting-Special concreting methods-Vacuum dewatering-Underwater concrete-Special form work

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

**UNIT I SOIL INTER RELATIONS****8**

Nature of Soil – Problems with soil – Phase relation – Sieve analysis – Sedimentation analysis – Atterberg limits – Classification for engineering purposes – BIS Classification system – Soil compaction – Factors affecting compaction – Field compaction methods and monitoring.

**UNIT II SOIL WATER AND WATER FLOW****8**

Soil water – Various forms – Influence of clay minerals – Capillary rise – Suction – Effective stress concepts in soil – Total, neutral and effective stress distribution in soil – Permeability – Darcy's law – Permeability measurement in the laboratory – Quick sand condition – Seepage – Laplace equation – Introduction to flow nets – Properties and uses – Application to simple problems.

**UNIT III STRESS DISTRIBUTION, COMPRESSIBILITY AND SETTLEMENT****10**

Stress distribution in soil media – Boussinesque formula – Stress due to line load and Circular and rectangular loaded area – Approximate methods – Use of influence charts – Westergaard equation for point load – Components of settlement – Immediate and consolidation settlement – Terzaghi's one dimensional consolidation theory – Governing differential equation – Laboratory consolidation test – Field consolidation curve – NC and OC clays – Problems on final and time rate of consolidation.

**UNIT IV SHEAR STRENGTH****9**

Shear strength of cohesive and cohesionless soils – Mohr – Coulomb failure theory – Saturated soil and unsaturated soil (basics only) – Strength parameters – Measurement of shear strength, direct shear, triaxial compression, unconfined compressive strength and vane shear tests – Types of shear tests based on drainage and their applicability – Drained and undrained behaviour of clay and sand – Stress path for conventional triaxial test.

**UNIT V SLOPE STABILITY****10**

Slope failure mechanisms – Modes – Infinite slopes – Finite slopes – Total and effective stress analysis – Stability analysis for purely cohesive and  $c-\phi$  soils – Method of slices – Modified Bishop's method – Friction circle method – Stability number – Problems – Slope protection measures.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

## SEMESTER III

19148S31CP

PROBABILITY AND STATISTICS

L T P C  
3 1 0 4

### AIM & OBJECTIVE:

At the end of this course students can learn about the axioms of random variable, two dimensional random variables, standard distributions and testing of hypothesis.

### UNIT I PROBABILITY AND RANDOM VARIABLE 9

Axioms of probability - Conditional probability - Total probability - Bayes theorem – Random variable - Probability mass function - Probability density functions - Properties- Moments - Moment generating functions and their properties.

### UNIT II TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

### UNIT III STANDARD DISTRIBUTIONS 9

Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties - Functions of a random variable.

### UNIT IV TESTING OF HYPOTHESIS 9

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

### UNIT V DESIGN OF EXPERIMENTS 9

Analysis of variance – One way classification – CRD - Two – way classification – RBD - Latin square.

*Note : Use of approved statistical table permitted in the examination.*

L: 45 T: 15

Total: 60 Periods

### TEXT BOOKS

1. Ross. S., “A first Course in Probability”, Fifth Edition, Pearson Education, Delhi 2002. (Chapters 2 to 8)
2. Johnson. R. A., “Miller & Freund’s Probability and Statistics for Engineers”, Sixth Edition, Pearson Education, Delhi, 2000. (Chapters 7, 8, 9, 12)

### REFERENCES

3. Gupta, S.C, and Kapur, J.N., “Fundamentals of Mathematical Statistics”, Sultan Chand, Ninth Edition, New Delhi, 1996.

**UNIT I METHODS OF DESIGN OF CONCRETE STRUCTURES 12**

Concept of elastic method, ultimate load method and limit state method – Advantages of limit state method over other methods – Design codes and specification – Limit state philosophy as detailed in IS code – Design of flexural members and slabs by working stress method

**UNIT II LIMIT STATE DESIGN FOR FLEXURE 12**

Analysis and design of one way and two way rectangular slabs subjected to uniformly distributed load for various boundary conditions and corner effects – Analysis and design of singly and doubly reinforced rectangular and flanged beams.

**UNIT III LIMIT STATE DESIGN FOR BOND, ANCHORAGE SHEAR AND TORSION 12**

Behaviour of RC members in bond and anchorage – Design requirements as per current code – Behaviour of RC beams in shear and torsion – Design of RC members for combined bending shear and torsion.

**UNIT IV LIMIT STATE DESIGN OF COLUMNS 12**

Types of columns – Braced and unbraced columns – Design of short column for axial, uniaxial and biaxial bending – Design of long columns.

**UNIT V LIMIT STATE DESIGN OF FOOTING AND DETAILING 12**

Design of wall footing – Design of axially and eccentrically loaded rectangular footing – Design of combined rectangular footing for two columns only

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Varghese, P.C., “Limit State Design of Reinforced Concrete”, Prentice Hall of India, Pvt. Ltd., 2007.
2. Krishna Raju, N., “Design of Reinforced Concrete Structures”, CBS Publishers and Distributors, 2003.

**UNIT I DEFLECTION OF DETERMINATE STRUCTURES 9**

Principles of virtual work for deflections – Deflections of pin-jointed plane frames and rigid plane frames – Willot diagram – Mohr's correction.

**UNIT II MOVING LOADS AND INFLUENCE LINES 9  
(DETERMINATE AND INDETERMINATE STRUCTURES)**

Influence lines for reactions in statically determinate structures – Influence lines for members forces in pin-jointed frames – Influence lines for shear force and bending moment in beam sections – Calculation of critical stress resultants due to concentrated and distributed moving loads – Muller Breslau's principle – Influence lines for continuous beams and single storey rigid frames – Indirect model analysis for influence lines of indeterminate structures – Beggs deformer.

**UNIT III ARCHES 9**

Arches as structural forms – Examples of arch structures – Types of arches – Analysis of three hinged, two hinged and fixed arches, parabolic and circular arches – Settlement and temperature effects.

**UNIT IV SLOPE DEFLECTION METHOD 9**

Continuous beams – Settlement rigid frames (without sway) – Principles of symmetry and anti symmetry.

**UNIT V MOMENT DISTRIBUTION METHOD 9**

Analysis of continuous beams – Settlement – Plane rigid frames with and without sway – Naylor's simplification.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Vaidyanadhan, R. and Perumal, P., "Comprehensive Structural Analysis – Vol. 1 and Vol. 2", Laxmi Publications, 2003.
2. Harrison H.B., "Structural Analysis and Design", Part I and II Pergamon Press, 1990.

2. Negi, L.S. and Jangid, R.S., "Structural Analysis", 6th Edition, Tata McGraw-Hill Publications, 2003.

**UNIT I STONES – BRICKS – CONCRETE BLOCKS 18**

Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacture of clay bricks – Tests on bricks – Compressive Strength – Water Absorption – Efflorescence – Bricks for special use – Refractory bricks – Cement and Concrete hollow blocks – Light weight concrete blocks – Code Practices.

**UNIT II LIME – CEMENT – AGGREGATES – MORTAR 18**

Lime – Preparation of lime mortar – Cement. Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar – Hydration - Compressive strength – Tensile strength – Soundness and consistency – Setting time – Aggregates – Natural stone aggregates – Industrial byproducts – Crushing strength – Impact strength – Flakiness – Abrasion Resistance – Grading – Sand – Bulking – Code Practices.

**UNIT III SUB STRUCTURE CONSTRUCTION 13**

Techniques of Box jacking – Pipe Jacking – under water construction of diaphragm walls and basement – Tunneling techniques – Piling techniques – Driving well and caisson – Sinking cofferdam – Cable anchoring and grouting – Driving diaphragm walls – Sheet piles – Shoring for deep cutting – Large reservoir construction with membranes and Earth system – Well points – Dewatering and stand by plant equipment for underground open excavation.

**UNIT IV SUPER STRUCTURE CONSTRUCTION 12**

Launching girders – Bridge decks – Off shore platforms – Special forms for shells – Techniques for heavy decks – In-situ pre-stressing in high rise structures – Material handling – Erecting light weight components on tall structures – Support structure for heavy equipment and conveyors – Erection of articulated structures – Braced domes and space decks.

**UNIT V CONSTRUCTION EQUIPMENTS 10**

Selection of equipment for earth work – Earth moving operations – Types of earthwork equipment – Tractors – Motor graders – Scrapers – Front end loaders – Earth movers – Equipment for foundation and pile driving. Equipment for compaction – Batching and mixing and concreting – Equipment for material handling and erection of structures – Equipment for dredging, trenching, tunneling.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

**OBJECTIVE**

At the end of this course, the student acquires the capacity to test the soil to assess its Engineering and Index properties.

**LIST OF EXPERIMENTS**

1. Grain size distributions – Sieve analysis
2. Grains size distribution – Hydrometer analysis
3. Specific gravity of soil grains
4. Relative density of sands
5. Atterberg limits test
6. Determination of moisture – Density relationship using standard Proctor test.
7. Permeability determination (constant head and falling head methods)
8. Determination of shear strength parameters.
  - i) Direct shear test on cohesion less soil
  - ii) Unconfined compression test on cohesive soil
  - iii) Triaxial compression test
9. One dimensional consolidation test (determination of coefficient of consolidation Only)
10. Field density test (Core cutter and sand replacement methods)

**TOTAL: 45 PERIODS**

**LIST OF EQUIPMENTS**  
(for a batch of 30 students)

Sl.No	Equipments	Qty
1.	Electrical Oven	1 No
2.	Direct Shear test apparatus	1 No
3.	Liquid limit Apparatus	2 Nos
4.	Sieve Shaker	1 No
5.	Sieves (Fine and Coarse Aggregates)	1 Set in each
6.	Soil Permeability Apparatus	1 No
7.	Standard Proctor compaction mould and hammer	1 No
8.	Soil Hydrometer	1 No
9.	Core Cutter	1 No
10.	CBR Apparatus	1 No
11.	Consolidation Apparatus	1 No
12.	Pycnometer	3 Nos
13.	Hydrometer jar	1 No
14.	Triaxial setup	1 No
15.	Compression Proving Ring	3 Nos
16.	Direct Shear test apparatus	1 No
19.	Liquid Limit Apparatus	2 No

## SEMESTER IV

### 19155C41P DESIGN OF REINFORCED CONCRETE STRUCTURES-II

L T P C  
3 1 0 4

#### UNIT I RETAINING WALLS 12

Design of cantilever and counter fort retaining walls.

#### UNIT II WATER TANKS 12

Underground rectangular tanks – Domes – Overhead tanks.

#### UNIT III SELECTED TOPICS 12

Design of staircases (ordinary and doglegged) – Design of flat slabs – Design of reinforced concrete walls .

#### UNIT IV YIELD LINE THEORY 12

Application of virtual work method – Square, rectangular, circular and triangular slabs.

#### UNIT V BRICK MASONRY 12

Introduction, classification of walls – Lateral supports and stability – Effective height of wall and columns – Effective length of walls, design loads, load dispersion, permissible stresses and design of axially and eccentrically loaded brick walls.

L: 45 T: 15

Total: 60 Periods

#### TEXT BOOKS

1. Krishna Raju, N., “Design of RC Structures”, CBS Publishers and Distributors, 1998.
2. Dayaratnam, P., “Brick and Reinforced Brick Structures”, Oxford and IBH Publishing House, 1997.

3. Varghese, P.C., “Limit State Design of Reinforced Concrete Structures”, 2<sup>nd</sup> Edition, Prentice-Hall of India Pvt. Ltd., 2002.

**UNIT I FLEXIBILITY METHOD FOR INDETERMINATE FRAMES 9**

Equilibrium and compatibility – Determinate Vs Indeterminate structures – Indeterminacy – Primary structure – Compatibility conditions – Analysis of indeterminate pin-jointed plane frames, continuous beams, rigid jointed plane frames (with redundancy restricted to two).

**UNIT II MATRIX STIFFNESS METHOD 9**

Element and global stiffness matrices – Analysis of continuous beams – Co-ordinate transformations – Rotation matrix – Transformations of stiffness matrices, load vectors and displacements vectors – Analysis of pin-jointed plane frames and rigid frames.

**UNIT III FINITE ELEMENT METHOD 9**

Introduction – Discretisation of a structure – Displacement functions – Truss element – Beam element – Plane stress and plane strain Triangular elements

**UNIT IV PLASTIC ANALYSIS OF STRUCTURES 9**

Statically indeterminate axial problems – Beams in pure bending – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – Plastic analysis of indeterminate beams and frames – Upper and lower bound theorems.

**UNIT V SPACE AND CABLE STRUCTURES 9**

Analysis of Space trusses using method of tension coefficients – Beams curved in plan Suspension cables – Cables with two and three hinged stiffening girders.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

**UNIT I WATER SUPPLY SYSTEMS – SOURCE & CONVEYANCE 6**

Objectives – Population forecasting – Design period – Water demand characteristics – Sources of water – Source selection – Water quality parameters & significance – Standards – Intake structures – Conveyance – Hydraulics – Laying, jointing & testing of pipes – Pump selection – appurtenances

**UNIT II DESIGN PRINCIPLES OF WATER TREATMENT 10**

Objectives – Selection of unit operations and processes – Principles of flocculation, sedimentation, filtration, disinfection – Design principles of flash mixer, flocculator, clarifiers, filters – Disinfection devices – Softening – Demineralisation – Aeration – Iron removal – Defluoridation – Operation and Maintenance aspects - Residue Management

**DISTRIBUTION**

Requirements – Components – Service reservoir design – Analysis of distribution network – Hardy Cross method – Equivalent Pipe method – computer application – Leak detection

**UNIT III SEWERAGE SYSTEM : COLLECTION & TRANSMISSION 10**

Sources of wastewater – Quantity of sanitary sewage – Storm run off estimation – Wastewater characteristics and significance – Effluent disposal standover – Design of sewers – Computer applications – Laying, jointing and testing of sewers – Sewer appurtenances – Pump selection

**UNIT IV SEWAGE TREATMENT & DESIGN PRINCIPLES 10**

Objectives – Selection of unit operation and process – Design principles of primary and secondary treatment, screen chamber, grit chamber, primary sedimentation tanks, activated sludge process – Aeration tank & oxidation ditch – Trickling filter - Stabilisation ponds – Septic tanks with soak pits – Sludge: treatment and disposal – Biogas recovery – Sewage farming

**UNIT V DISPOSAL OF SEWAGE 9**

Disposal on land – Disposal into water bodies – Oxygen sag curve – Streeter Phelp's model – Wastewater reclamation techniques

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

## SEMESTER V

19155C51P

DESIGN OF STEEL STRUCTURES

L T P C

3 1 0 4

### UNIT I INTRODUCTION 12

Properties of steel – Structural steel sections – Limit State Design Concepts – Loads on Structures – Metal joining methods using rivets, welding, bolting – Design of bolted, riveted and welded joints – Eccentric connections - Efficiency of joints – High Tension bolts

### UNIT II TENSION MEMBERS 8

Types of sections – Net area – Net effective sections for angles and Tee in tension – Design of connections in tension members – Use of lug angles – Design of tension splice – Concept of shear lag

### UNIT III COMPRESSION MEMBERS 16

Types of compression members – Theory of columns – Basis of current codal provision for compression member design – Slenderness ratio – Design of single section and compound section compression members – Design of lacing and battening type columns – Design of column bases – Gusseted base

### UNIT IV BEAMS 12

Design of laterally supported and unsupported beams – Built up beams – Beams subjected to biaxial bending – Design of plate girders riveted and welded – Intermediate and bearing stiffeners – Web splices – Design of beam columns

### UNIT V ROOF TRUSSES AND INDUSTRIAL STRUCTURES 12

Roof trusses – Roof and side coverings – Design loads, design of purlin and elements of truss end bearing – Design of gantry girder

L: 45 T: 15

Total: 60 Periods

#### TEXT BOOKS

1. Dayaratnam, P., “Design of Steel Structures”, Second edition, S. Chand & Company, 2003.
2. Ramachandra, S. and Virendra Gehlot, “Design of Steel Structures – Vol. I & II”, Standard Publication, New Delhi, 2007

#### REFERENCES

3. Negi L.S.. Design of Steel Structures, Tata McGraw Hill Publishing Pvt Ltd, New Delhi, 2007.
4. IS 800-2007 Indian Standard - General Construction in Steel – code of practice (3<sup>rd</sup> Revision).

**UNIT I SITE INVESTIGATION AND SELECTION OF FOUNDATION 9**

Scope and objectives – Methods of exploration-auguring and boring – Water boring and rotatory drilling – Depth of boring – Spacing of bore hole - Sampling – Representative and undisturbed sampling – sampling techniques – Split spoon sampler, Thin tube sampler, Stationary piston sampler – Bore log report – Penetration tests (SPT and SCPT) – Data interpretation (Strength parameters and Liquefaction potential) – Selection of foundation based on soil condition.

**UNIT II SHALLOW FOUNDATION 9**

Introduction – Location and depth of foundation – codal provisions – bearing capacity of shallow foundation on homogeneous deposits – Terzaghi's formula and BIS formula – factors affecting bearing capacity – problems - Bearing Capacity from insitu tests (SPT, SCPT and plate load) – Allowable bearing pressure, Settlement – Components of settlement – Determination of settlement of foundations on granular and clay deposits – Allowable settlements – Codal provision – Methods of minimising settlement, differential settlement.

**UNIT III FOOTINGS AND RAFTS 9**

Types of foundation – Contact pressure distribution below footings & raft - Isolated and combined footings – types – proportioning - mat foundation – types – use - proportioning – floating foundation.

**UNIT IV PILES 9**

Types of piles and their function – Factors influencing the selection of pile – Carrying capacity of single pile in granular and cohesive soil - Static formula - dynamic formulae (Engineering news and Hiley's) – Capacity from insitu tests (SPT and SCPT) – Negative skin friction – uplift capacity – Group capacity by different methods (Feld's rule, Converse Labarra formula and block failure criterion) – Settlement of pile groups – Interpretation of pile load test – Forces on pile caps – under reamed piles – Capacity under compression and uplift.

**UNIT V RETAINING WALLS 9**

Plastic equilibrium in soils – active and passive states – Rankine's theory – cohesionless and cohesive soil - Coloumb's wedge theory – condition for critical failure plane - Earth pressure on retaining walls of simple configurations – Graphical methods (Rebhann and Culmann) - pressure on the wall due to line load – Stability of retaining walls.

<b>UNIT I</b>	<b>INTRODUCTION</b>	<b>7</b>
Types of industries and industrial pollution – Characteristics of industrial wastes – Population equivalent – Bioassay studies – effects of industrial effluents on streams, sewer, land, sewage treatment plants and human health – Environmental legislations related to prevention and control of industrial effluents and hazardous wastes		
<b>UNIT II</b>	<b>CLEANER PRODUCTION</b>	<b>8</b>
Waste management Approach – Waste Audit – Volume and strength reduction – Material and process modifications – Recycle, reuse and byproduct recovery – Applications.		
<b>UNIT III</b>	<b>POLLUTION FROM MAJOR INDUSTRIES</b>	<b>10</b>
Sources, Characteristics, waste treatment flow sheets for selected industries such as Textiles, Tanneries, Pharmaceuticals, Electroplating industries, Dairy, Sugar, Paper, distilleries, Steel plants, Refineries, fertilizer, thermal power plants – Wastewater reclamation concepts		
<b>UNIT IV</b>	<b>TREATMENT TECHNOLOGIES</b>	<b>12</b>
Equalisation – Neutralisation – Removal of suspended and dissolved organic solids - Chemical oxidation – Adsorption - Removal of dissolved inorganics – Combined treatment of industrial and municipal wastes – Residue management – Dewatering - Disposal		
<b>UNIT V</b>	<b>HAZARDOUS WASTE MANAGEMENT</b>	<b>8</b>
Hazardous wastes - Physico chemical treatment – solidification – incineration – Secured land fills

**19155L55P COMPUTER AIDED BUILDING DRAWING LABORATORY I****L T P C  
0 0 3 2****AIM & OBJECTIVE:**

At the end of this course the student should be able to draft on computer building drawings (Plan, elevation and sectional views) in accordance with development and control rules satisfying orientation and functional requirements for the following:

1. Buildings with load bearing walls (Flat and pitched roof) –Including details of doors and windows	15
2. RCC framed structures	15
3. Industrial buildings – North light roof structures – Trusses	15
4. Perspective view of one and two storey buildings	15

**TOTAL: 60 PERIODS****TEXT BOOKS**

## SEMESTER VI

19155C61P

ESTIMATION AND COST EVALUATION

L T P C  
3 1 0 4

### UNIT I ESTIMATE OF BUILDINGS 11

Load bearing and framed structures – Calculation of quantities of brick work, RCC, PCC, Plastering, white washing, colour washing and painting / varnishing for shops, rooms, residential building with flat and pitched roof – Various types of arches – Calculation of brick work and RCC works in arches – Estimate of joineries for panelled and glazed doors, windows, ventilators, handrails etc.

### UNIT II ESTIMATE OF OTHER STRUCTURES 10

Estimating of septic tank, soak pit – sanitary and water supply installations – water supply pipe line – sewer line – tube well – open well – estimate of bituminous and cement concrete roads – estimate of retaining walls – culverts – estimating of irrigation works – aqueduct, syphon, fall.

### UNIT III SPECIFICATION AND TENDERS 8

Data – Schedule of rates – Analysis of rates – Specifications – sources – Detailed and general specifications – Tenders – Contracts – Types of contracts – Arbitration and legal requirements.

### UNIT IV VALUATION 8

Necessity – Basics of value engineering – Capitalised value – Depreciation – Escalation – Value of building – Calculation of Standard rent – Mortgage – Lease.

### UNIT V REPORT PREPARATION 8

Principles for report preparation – report on estimate of residential building – Culvert – Roads – Water supply and sanitary installations – Tube wells – Open wells.

**L: 45 T: 15**

**Total: 60 Periods**

### TEXT BOOKS

1. Dutta, B.N., “Estimating and Costing in Civil Engineering”, UBS Publishers & Distributors Pvt. Ltd., 2003
2. Kohli, D.D and Kohli, R.C., “A Text Book of Estimating and Costing (Civil)”, S.Chand & Company Ltd., 2004

### REFERENCE

1. PWD Data Book.

**UNIT I FUNDAMENTALS OF GROUND WATER 9**

Introduction – Characteristic of Ground water – Distribution of water - ground water column – Permeability - Darcy's Law - Laboratory permeability test - Types of aquifers - Hydrogeological Cycle–waterlevelfluctuations.

**UNIT II HYDRAULICS OF FLOW 9**

Storage coefficient - Specific field - Heterogeneity and Anisotropy -Transmissivity - Governing equations of ground water flow - Steady state flow - Dupuit Forch heimer assumptions - Velocity potential-Flownets

**UNIT III ESTIMATION OF PARAMETERS 9**

Transmissivity and Storativity – Pumping test - Unsteady state flow - Thiess method - Jacob method - Image well theory – Effect of partial penetrations of wells - Collectors wells.

**UNIT IV GROUND WATER DEVELOPMENT 9**

Infiltration gallery - Conjunctive use - Artificial recharge -Safe yield -Yield test – Geophysical methods–Selectionofpumps.

**UNIT V WATER QUALITY 9**

Ground water chemistry - Origin, movement and quality - Water quality standards - Saltwater intrusion –Environmental concern.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

1. Raghunath H.M., “Ground Water Hydrology”, Wiley Eastern Ltd., 2000.
2. Todd D.K., “Ground Water Hydrology”, John Wiley and Sons, 2000.

**REFERENCES**

1. C Walton, “Ground Water Resource Evaluation”, McGraw-Hill Publications

**UNIT I THE OWNERS' PERSPECTIVE 9**

Introduction - Project Life Cycle - Types of Construction - Selection of Professional Services - Construction Contractors - Financing of Constructed Facilities - Legal and Regulatory Requirements - Changing Environment of the Construction Industry - Role of Project Managers

**UNIT II ORGANIZING FOR PROJECT MANAGEMENT 9**

Project Management – modern trends - Strategic Planning - Effects of Project Risks on Organization - Organization of Project Participants - Traditional Designer-Constructor Sequence – Professional Construction Management - Owner-Builder Operation - Turnkey Operation - Leadership and Motivation for the Project Team

**UNIT III DESIGN AND CONSTRUCTION PROCESS 9**

Design and Construction as an Integrated System - Innovation and Technological Feasibility - Innovation and Economic Feasibility - Design Methodology - Functional Design - Construction Site Environment

**UNIT IV LABOUR, MATERIAL AND EQUIPMENT UTILIZATION 9**

Historical Perspective - Labour Productivity - Factors Affecting Job-Site Productivity – Labour Relations in Construction - Problems in Collective Bargaining - Materials Management – Material Procurement and Delivery - Inventory Control - Tradeoffs of Costs in Materials Management. - Construction Equipment - Choice of Equipment and Standard Production Rates – Construction Processes Queues and Resource Bottlenecks

**UNIT V COST ESTIMATION 9**

Costs Associated with Constructed Facilities - Approaches to Cost Estimation - Type of Construction Cost Estimates - Effects of Scale on Construction Cost - Unit Cost Method of Estimation - Methods for Allocation of Joint Costs - Historical Cost Data - Cost Indices - Applications of Cost Indices to Estimating - Estimate Based on Engineer's List of Quantities - Estimation of Operating Costs

**L: 45 T: 15****Total: 60 Periods****REFERENCES**

**OBJECTIVE:**

To learn the principles and procedures of testing Concrete and Highway materials

**LIST OF EXPERIMENTS**

**I. TESTS ON CEMENT 6**

1. Test for fineness
2. Test for setting times including normal consistency test
3. Mortar cube preparation and testing

**II. TESTS ON AGGREGATES 9**

1. Soundness And Water Absorption
2. Sieve analysis test - Grade Curves
3. Crushing Value - Test
4. Test on Aggregates - Los Angeles Abrasive Testing Machine

**III. TESTS ON HARDENED & FRESH CONCRETE 15**

1. Slump cone test
2. Compaction factor
3. Vee bee test.
4. Cube compression test
5. Tension test of concrete - cylinder split test
6. Flexural test on concrete specimen

**III. TESTS ON BITUMEN 15**

1. Penetration
2. Softening Point
3. Viscosity

**Total: 45**

**LIST OF EQUIPMENTS**

(for a batch of 30 students)

SL.NO	DESCRIPTION OF EQUIPMENTS	QUANTITY
1.	Concrete Mixer	-1No
2.	Slump cone	-3 Nos
3.	Vibrator	-1 No
4.	Trovels and planers	-1 set
5.	UTM – 400 KN capacity	-1 No
6.	Aggregate impact testing machine	-1 No
7.	90 micron sieve	– 2 Nos.
8.	Vicat's Apparatus	– 2 Nos.
9.	70.6 mm x 70.6 mm cube moulds	– 6 Nos.
10.	IS:406-1962 specification sieve	– 2 Nos.
11.	Cylindrical plunger	– 2 Nos.
12.	150 mm x 150 mm cube moulds	– 6 Nos.
13.	Cylindrical mould-150 mm dia and 300 mm height	– 6 Nos.
14.	Steel prism mould (100 mm x 100 mmx500 mm)	– 6 Nos.
10.	Vee-bee consistometer	– 2 Nos.
11.	Compaction factor Apparatus	– 2 Nos.

## SEMESTER VII

19160S71P

TOTAL QUALITY MANAGEMENT

L T P C  
3 1 0 4

### AIM & OBJECTIVE:

- i) To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- ii) To understand the statistical approach for quality control.
- iii) To create an awareness about the ISO and QS certification process and its need for the industries.

### UNIT – I BASICS OF TQM 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

### UNIT – II PRINCIPLES OF TQM 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

### UNIT – III QUALITY CONCEPTS 9

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Concept of six sigma

### UNIT – IV TQM TOOLS 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, FMEA – Stages of FMEA.

### UNIT – V: ISO STANDARDS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, ISO 14000 – Concept, Requirements and Benefits.

L: 45 T: 15

Total: 60 Periods

### TEXT BOOKS:

1. Dale H. Besterfield, et al., “Total Quality Management”, Pearson Education, Inc. 2003. (Indian reprint 2004). ISBN 81-297-0260-6.
2. Basker, “TOTAL QUALITY MANAGEMENT”, Anuradha Agencies.

3. Narayana V. and Sreenivasan, N.S. “Quality Management – Concepts and Tasks”, New Age International 1996

**UNIT I INTRODUCTION TO HOUSING 9**

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

**UNIT II HOUSING PROGRAMMES 9**

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

**UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9**

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (DesignProblems)

**UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9**

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

**UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9**

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

L: 45 T: 15

Total: 60 Periods

**TEXT BOOKS**

1. Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 1999.
2. Francis Cherunilam and Odeyar D Heggade, Housing in India, Himalaya Publishing House, Bombay, 1997.

**UNIT I MAINTENANCE AND REPAIR STRATEGIES 9**

Maintenance, repair and rehabilitation, Facets of Maintenance, importance of Maintenance various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration

**UNIT II SERVICEABILITY AND DURABILITY OF CONCRETE 11**

Quality assurance for concrete construction concrete properties- strength, permeability, thermal properties and cracking. - Effects due to climate, temperature, chemicals, corrosion – design and construction errors - Effects of cover thickness and cracking

**UNIT III MATERIALS FOR REPAIR 9**

Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete.

**UNIT IV TECHNIQUES FOR REPAIR AND DEMOLITION 8**

Rust eliminators and polymers coating for rebars during repair, foamed concrete, mortar and drypack, vacuum concrete, Guniting and Shotcrete, Epoxy injection, Mortar repair for cracks, shoring and underpinning. Methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings and cathodic protection. Engineered demolition techniques for dilapidated structures-case studies

**UNIT V REPAIRS, REHABILITATION AND RETROFITTING OF STRUCTURES 8**

Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering corrosion, wear, fire, leakage and marine exposure.

## LIST OF ELECTIVES

### SEMESTER IV

#### HARD CORE ELECTIVE I

19155E44AP

HYDROLOGY

L T P C  
3 1 0 4

#### **UNIT I PRECIPITATION 9**

Hydrologic cycle – Types of precipitation – Forms of precipitation – Measurement of Rainfall – Spatial measurement methods – Temporal measurement methods – Frequency analysis of point rainfall – Intensity, duration, frequency relationship – Probable maximum precipitation.

#### **UNIT II ABSTRACTION FROM PRECIPITATION 9**

Losses from precipitation – Evaporation process – Reservoir evaporation – Infiltration process – Infiltration capacity – Measurement of infiltration – Infiltration indices – Effective rainfall.

#### **UNIT III HYDROGRAPHS 9**

Factors affecting Hydrograph – Baseflow separation – Unit hydrograph – Derivation of unit hydrograph – S curve hydrograph – Unit hydrograph of different deviations - Synthetic Unit Hydrograph

#### **UNIT IV FLOODS AND FLOOD ROUTING 9**

Flood frequency studies – Recurrence interval – Gumbel's method – Flood routing – Reservoir flood routing – Muskingum's Channel Routing – Flood control

#### **UNIT V GROUND WATER HYDROLOGY 9**

Types of aquifers – Darcy's law – Dupuit's assumptions – Confined Aquifer – Unconfined Aquifer – Recuperation test – Transmissibility – Specific capacity – Pumping test – Steady flow analysis only.

L: 45 T: 15

Total: 60 Periods

#### **TEXT BOOKS**

1. Subramanya, K., "Engineering Hydrology", Tata McGraw-Hill Publishing Co., Ltd., 2000
2. Raghunath, H.M., "Hydrology", Wiley Eastern Ltd., 2000

#### **REFERENCES**

1. Chow, V.T. and Maidment, "Hydrology for Engineers", McGraw-Hill Inc., Ltd., 2000
2. Singh, V.P., "Hydrology", McGraw-Hill Inc., Ltd., 2000.

**AIM & OBJECTIVE:**

The student is exposed to the different phases in Water Resources viz planning, collection of relevant data on water resources and also on National Water Policy. Reservoir planning, management and economic analysis aspects are covered in detail.

<b>UNIT I</b>	<b>GENERAL</b>	<b>9</b>
Water resources survey – Water resources of India and Tamilnadu – Description of water resources planning – Economics of water resources planning, physical and socio economic data – National Water Policy – Collection of meteorological and hydrological data for water resources development.		
<b>UNIT II</b>	<b>INETWORK DESIGN</b>	<b>9</b>
Hydrologic measurements – Analysis of hydrologic data – Hydrologic station network – Station network design – Statistical techniques in network design.		
<b>UNIT III</b>	<b>WATER RESOURCE NEEDS</b>	<b>9</b>
Consumptive and non-consumptive water use - Estimation of water requirements for irrigation, for drinking and navigation - Water characteristics and quality – Scope and aims of master plan - Concept of basin as a unit for development - Water budget and development plan.		
<b>UNIT IV</b>	<b>RESERVOIR PLANNING AND MANAGEMENT</b>	<b>9</b>
Reservoir - Single and multipurpose – Multi objective - Fixation of Storage capacity -Strategies for reservoir operation - Sedimentation of reservoirs - Design flood-levees and flood walls – Channel improvement.		
<b>UNIT V</b>	<b>ECONOMIC ANALYSIS</b>	<b>9</b>
Estimation of cost and Evaluation of Benefits - Discount rate - Discounting factors - Discounting techniques – Computer Applications.		

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

1. Linsley R.K. and Franzini J.B, “Water Resources Engineering”, McGraw-Hill Inc, 2000.
2. Douglas J.L. and Lee R.R., “Economics of Water Resources Planning”, Tata McGraw-Hill Inc. 2000.
3. Duggal, K.N. and Soni, J.P., “Elements of Water Resources Engineering”, New Age International Publishers

**REFERENCES**

2. Goodman Alvin S., “Principles of Water Resources Planning”, Prentice-Hall, 1984.
3. Maass et al. Design of Water Resources Systems, Macmillan, 1968.

**AIM & OBJECTIVE:**

At the end of this course the students can expand his knowledge on site selection of sub structure and super structure, types , components of flooring and roofing and details about stair case.

**UNIT I PRELIMINARY INVESTIGATION 9**  
Principles of planning – Planning regulations and bye-laws-site works and setting out – Excavations and timbering – Sub soil drainage – Electricity lighting on building sites – Winter building – Preparation of layout – Site plan – Orientation of buildings.

**UNIT II SITE SELECTION AND SUB STRUCTURES 9**  
Site selection – Types of building as per NBC – Types of foundations – Shallow – Deep foundations – Machine foundation

**UNIT III SUPER STRUCTURE 9**  
Stone and brick masonry – Composite masonry – Load bearing walls – Cavity walls – Partition walls – Reinforced brick masonry.

**UNIT IV FLOORING AND ROOFING 9**  
Ground floors – Components – Types – Suspended flooring – Upper floors – Types – Methods of laying – Type of roofs – Types of pitched roof – Shell roofs – Folded plate roofs – Constructional practices – Roof covering details.

**UNIT V STAIRCASE AND SERVICES 9**  
Requirement of a good staircase – Type of staircase calculation for geometry – Ramps – Escalators lifts – Types – Handling capacity.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Arora, S.P. and Bindra, S.P., “Building construction Planning Techniques and Methods of Construction”, Dhanpat Rai and Sons, 1997.
2. Punmia, B.C., Ashok Kumar Jain and Arun Kumar Jain, “Building Construction”, Laxmi Publications Pvt., Ltd., 1997.

2. National Building Code of India, Parts III, IV, VII and IX 1983.

**AIM & OBJECTIVE:**

This course covers the principles of contract laws and regulations. Students can acquire knowledge on bidding and accepting, Tamil Nadu transparency in tenders act, appointment, conditions, powers and duties of arbitrator and legal requirements such as tax laws and labour regulations.

**UNIT I CONSTRUCTION CONTRACTS 10**

Indian Contracts Act – Elements of Contracts – Types of Contracts – Features – Suitability – Design of Contract Documents – International Contract Document – Standard Contract Document – Law of Torts

**UNIT II TENDERS 10**

Prequalification – Bidding – Accepting – Evaluation of Tender from Technical, Contractual and Commercial Points of View – Contract Formation and Interpretation – Potential Contractual Problems – World Bank Procedures and Guidelines – Tamilnadu Transparency in Tenders Act.

**UNIT III ARBITRATION 5**

Comparison of Actions and Laws – Agreements – Subject Matter – Violations – Appointment of Arbitrators – Conditions of Arbitration – Powers and Duties of Arbitrator – Rules of Evidence – Enforcement of Award – Costs

**UNIT IV LEGAL REQUIREMENTS 10**

Insurance and Bonding – Laws Governing Sale, Purchase and Use of Urban and Rural Land – Land Revenue Codes – Tax Laws – Income Tax, Sales Tax, Excise and Custom Duties and their Influence on Construction Costs – Legal Requirements for Planning – Property Law – Agency Law – Local Government Laws for Approval – Statutory Regulations

**UNIT V LABOUR REGULATIONS 10**

Social Security – Welfare Legislation – Laws relating to Wages, Bonus and Industrial Disputes, Labour Administration – Insurance and Safety Regulations – Workmen’s Compensation Act – Indian Factory Act – Tamilnadu Factory Act – Child Labour Act - Other Labour Laws

## SEMESTER V

### HARD CORE ELECTIVE II

19155E54AP

COMPUTER AIDED ANALYSIS AND DESIGN

L T P C

3 1 0 4

#### AIM & OBJECTIVE:

This course covers the principles, applications of computer in Civil Engineering systems.

#### UNIT I INTRODUCTION

Elements of Computer Aided Design and its advantages over conventional design. Hardware required for CAD works.

#### UNIT II BASIC PRINCIPLES

Principles of software design, concept of modular programming, debugging and testing.

#### UNIT III APPLICATIONS

Computer applications in analysis and design of Civil Engineering systems.

#### UNIT IV SOFTWARE PACKAGES

Use of software packages in the area of Structural, Geotechnical, and Environmental fields.

#### UNIT V NEURAL NETWORKS

Expert system, their development and applications, Introduction to Neural Networks.

**Total: 45 Periods**

#### REFERENCE:

1. Computer Aided Design – S. Rajiv, Narosa Publication
2. A.I. and Expert System – Robert L. Lertner & / Lane E. Drang, McGraw Hill
3. “Neural Computing: Wasserman, Vonnostrand.

**OBJECTIVE**

This course imparts the students knowledge of planning, design, construction and maintenance of railway tracks. The students acquire proficiency in the application of modern techniques such as GIS, GPS and remote sensing in Railway Engineering. The student develops skills on airport planning and design with the prime focus on runway and taxiway geometrics. Students become conversant with the definition, purpose, location and materials of coastal structures such as piers, breakwaters, wharves, jetties, quays and spring fenders. The students acquire knowledge on site investigation for location and planning of harbours.

**UNIT I HIGHWAY PLANNING AND ALIGNMENT 9**

History of road construction – Highway development in India – Jayakar committee Recommendations and realisations – Twenty year road development plans – Concepts of on-going highways development programmes at national level – Institutions for highway development at national level – India road congress – Highway research board, national highway authority of India – Ministry of Road Transport and Highway (MORTH) Central road research institute – Requirements of ideal alignment – Factors controlling highway alignment engineering surveys for alignment – Conventional methods and modern methods (Remote sensing, GIS and GPS techniques) – Classification and cross section of urban and rural roads – Highway cross sectional elements – Right of way, carriage way, camber, kerbs, shoulders and footpaths (IRC Standards) – Cross sections of different class of roads – Principles of highway financing.

**UNIT II GEOMETRIC DESIGN OF HIGHWAYS 9**

Design of horizontal alignment – Horizontal curves super elevation – Widening of pavements on horizontal curves and transition curves design of vertical alignments – Rolling, limiting, exceptional and minimum gradients, summit and valley curves – Sight distances – Factors affecting sight distances – PIEV theory, stopping sight distance (SSD) – Overtaking sight distance – Sight distance at intersections – Intermediate sight distance and illumination sight distance [Derivations and problems in SSD and OSD] – Geometric design of hill roads [IRC Standards Only].

**UNIT III FLEXIBLE AND RIGID PAVEMENTS 9**

Rigid and flexible pavements – Components and their functions – Design principles of flexible and rigid pavements – Factors affecting the design of pavements – ESWL, climate, sub-grade soil and traffic – Design practice for flexible pavements (CBR method, IRC Method and Recommendations – Problems) – Design practice for rigid pavements – IRC Recommendations (concept only).

**UNIT IV RAILWAY PLANNING AND DESIGN 12**

Role of Indian Railways in National Development – Railways for Urban Transportation – LRT & MRTS. - Engineering Surveys for Track Alignment – Obligatory points - Conventional and Modern methods (Remote Sensing, GIS & GPS, EDM and other equipments) - Permanent Way, its Components and their Functions: Rails - Types of Rails, Rail Fastenings, Concept of Gauges, Coning of Wheels, Creeps and kinks -Sleepers – Functions, Materials, Density – Functions, Materials, Ballastless Tracks - Geometric Design of Railway Tracks – Gradients and Grade Compensation, Super-Elevation, Widening of Gauges in Curves, Transition Curves, Horizontal and Vertical Curves.

**UNIT V RAILWAY TRACK CONSTRUCTION, MAINTENANCE AND OPERATION 12**  
Points and Crossings - Design of Turnouts, Working Principle - Signalling, Interlocking and Track Circuiting  
- Construction & Maintenance – Conventional, Modern methods and Materials, Track Drainage - Track  
Modernisation– Automated maintenance and upgrading, Re-laying of Track, Lay outs of Railway Stations  
and Yards, Rolling Stock, Tractive Power, Track Resistance, Level Crossings.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Saxena Subhash C and Satyapal Arora, A Course in Railway Engineering, Dhanpat Rai and Sons, Delhi, 1998.
2. Khanna, K. and Justo, C.E.G., “Highway Engineering”, Khanna Publishers, 2001.

**REFERENCES**

1. Rangwala, Railway Engineering, Charotar Publishing House, 1995.
2. Rangwala, Airport Engineering, Charotar Publishing House, 1996.
3. Oza.H.P. and Oza.G.H., “A course in Docks & Harbour Engineering”. Charotar Publishing Co.1976
4. J.S. Mundrey, “A course in Railway Track Engineering”. Tata McGraw Hill, 2000

**OBJECTIVE**

At the end of this course the student shall be able to understand about geological formations, classification and morphology of rocks, and the importance of the study of geology for civil engineers with regard to founding structures like dams, bridges, buildings, etc. The student shall also be able to appreciate the importance of geological formation in causing earthquakes and land slides.

**UNIT I GENERAL GEOLOGY****9**

Geology in Civil Engineering – Branches of geology – Earth Structures and composition – Elementary knowledge on continental drift and plate technologies – Earth processes – Weathering – Work of rivers, wind and sea and their engineering importance – Earthquake belts in India – Groundwater – Mode of occurrence – Prospecting – importance in civil engineering

**UNIT II MINERALOGY****9**

Elementary knowledge on symmetry elements of important crystallographic systems – Physical properties of minerals – Study of the following rock forming minerals – Quartz family – Feldspar family – Augite, hornblende, biotite, muscovite, calcite, garnet – properties – behaviour and engineering significance of clay minerals – Fundamentals of process of formation of ore minerals – Coal and petroleum – Their origin and occurrence in India.

**UNIT III PETROLOGY****9**

Classification of rocks – Distinction between igneous, sedimentary and metamorphic rocks – Description occurrence, engineering properties and distribution of following rocks – Igneous rocks – Granite, syenite, diorite, gabbro, pegmatite, dolerite and basalt sedimentary rocks sandstone – Limestone, shale congl, conglomerate and breccia. Metamorphic rocks – Quartzite, marble, slate, phyllite, gneiss and schist.

**UNIT IV STRUCTURAL GEOLOGY AND GEOPHYSICAL METHOD****9**

Attitude of beds – Outcrops – Introduction to geological maps Study of structures – Folds, faults and joints – Their bearing on engineering construction – Seismic and electrical methods for civil engineering investigations.

**UNIT V GEOLOGICAL INVESTIGATIONS IN CIVIL ENGINEERING****9**

Remote sensing techniques – Study of air photos and satellite images – Interpretation for civil Engineering projects – Geological conditions necessary for construction of dams - Tunnels – Buildings – Road cuttings – Land slides – Causes and preventions – Sea erosion and coastal protection.

**L: 45 T: 15****Total: 60 Periods****TEXT BOOKS**

1. Parbin Singh, "Engineering and General Geology", Katson Publication House, 1987
2. Krynine and Judd, "Engineering Geology and Geotechniques", McGraw-Hill Book Company, 1990

**REFERENCES**

1. Legeet, "Geology and Engineering", McGraw-Hill Book Company 1998
2. Blyth, "Geology for Engineers", ELBS, 1995.

**UNIT I HIGHWAY PLANNING AND ALIGNMENT 9**

Tresaguet and Macadam's method of Road Construction, Highway Development in India - Jayakar Committee Recommendations and Realisations, Twenty-year Road Development Plans, Concepts of On-going Highway Development Programmes at National Level, Institutions for Highway Development at National level - Indian Roads Congress, Highway Research Board, National Highway Authority of India, Ministry of Road Transport and Highways (MORTH) and Central Road Research Institute.

Requirements of Ideal Alignment, Factors Controlling Highway Alignment Engineering Surveys for Alignment - Conventional Methods and Modern Methods (Remote Sensing, GIS and GPS techniques) Classification and Cross Section of Urban and Rural Roads (IRC), Highway Cross Sectional Elements – Right of Way, Carriage Way, Camber, Kerbs, Shoulders and Footpaths [IRC Standards], Cross sections of different Class of Roads.

**UNIT II GEOMETRIC DESIGN OF HIGHWAYS 9**

Design of Horizontal Alignments – Super elevation, Widening of Pavements on Horizontal Curves and Transition Curves [Derivation of Formulae and Problems] Design of Vertical Alignments – Rolling, Limiting, Exceptional and Minimum Gradients, Summit and Valley Curves Sight Distances - Factors affecting Sight Distances, PIEV theory, Stopping Sight Distance (SSD), Overtaking Sight Distance (OSD), Sight Distance at Intersections, Intermediate Sight Distance and Illumination Sight Distance

**UNIT III DESIGN OF RIGID AND FLEXIBLE PAVEMENTS 9**

Rigid and Flexible Pavements- Components and their Functions, Design Principles of Flexible and Rigid Pavements, Factors affecting the Design of Pavements - ESWL, Climate, Sub-grade Soil and Traffic. Design Practice for Flexible Pavements [CBR method, IRC Method and Recommendations- Problems]. Design Practice for Rigid Pavements – Joints

**UNIT IV HIGHWAY MATERIALS AND CONSTRUCTION PRACTICE 9**

Desirable Properties and Testing of Highway Materials: - (Tests have to be demonstrated in Highway Engineering Laboratory) Soil – California Bearing Ratio Test, Field Density Test. Aggregate - Crushing, Abrasion, Impact Tests, Water absorption, Flakiness and Elongation indices and Stone polishing value test. Bitumen - Penetration, Ductility, Viscosity, Binder content and Softening point Tests. Construction Practice - Water Bound Macadam Road, Bituminous Road and Cement Concrete Road [as per IRC and MORTH specifications] Highway Drainage [IRC Recommendations]

**UNIT V HIGHWAY MAINTENANCE 9**

Types of defects in Flexible pavements – Surface defects, Cracks, Deformation, Disintegration – Symptoms, Causes and Treatments. Types of Pavement, Failures in Rigid Pavements – Scaling, Shrinkage, Warping, Structural Cracks Spalling of Joints and Mud Pumping – and Special Repairs. Pavement Evaluation – Pavement Surface Conditions and Structural Evaluation, Evaluation of pavement Failure and strengthening - Overlay design by Benkelman Beam Method [Procedure only], Principles of Highway Financing

## SEMESTER VI

### HARD CORE ELECTIVE III

19155E64AP

REMOTE SENSING AND GIS

L T P C  
3 1 0 4

#### **UNIT I EMR AND ITS INTERACTION WITH ATMOSPHERE AND EARTH MATERIAL**

9

Definition of remote sensing and its components – Electromagnetic spectrum – Wavelength regions important for remote sensing – Wave theory, particle theory, stefan – Boltzman and Wein’s displacement law atmospheric scattering, absorption – Atmospheric windows – Spectral signature concepts – Typical spectral reflective characteristics of water, vegetation, soil.

#### **UNIT II PLATFORMS AND SENSORS**

9

Types of platforms – Orbit types, sun synchronous and geosynchronous – Passive and active sensors – Resolution concepts – Payload description of important earth resources and meteorological satellites – Airborne and space borne TIR and microwave sensors – Types of data products.

#### **UNIT III IMAGE INTERPRETATION AND ANALYSIS**

9

Types of image interpretation – Visual interpretation keys – Basic elements of image interpretation – Digital image processing – Pre-processing – Image enhancement techniques – Multispectral image classification – Supervised and unsupervised.

#### **UNIT IV GEOGRAPHIC INFORMATION SYSTEM**

9

Introduction – Maps – Definitions – Map projections – Types of projections – Map analysis – GIS definition – Basic components of GIS – Standard GIS soft wares – Data type – Spatial and non spatial (attribute data) – Measurement scales – Data Base Management Systems (DBMS).

#### **UNIT V DATA-ENTRY, STORAGE AND ANALYSIS**

9

Data models: vector and raster – Data compression – Data input by digitization and scanning – Attribute data analysis and integrated data analysis – Modeling in GIS – Highway alignment studies – Land information system.

**L: 45 T: 15**

**Total: 60 Periods**

#### **TEXT BOOKS**

**AIM & OBJECTIVE:**

This course imparts the students' knowledge of planning, design, construction and maintenance of railway tracks. The students acquire proficiency in the application of modern techniques such as GIS, GPS and remote sensing in Railway Engineering.

**UNIT I INTRODUCTION 9**  
Role of Indian railways in national development – Permanent way its components and their functions – Types of rails – Rail fastenings – Sleepers – Ballasts – Ballast less tracks.

**UNIT II TRACK ALIGNMENT 9**  
Engineering surveys for track alignment – Obligatory points – Conventional methods – Modern methods – EDM – Remote sensing – GIS – GPS – Track in cutting – Track on embankments.

**UNIT III GEOMETRIC DESIGN OF TRACKS 9**  
Gradients – Grade compensation – Super-elevation – Widening of gauges in curves – Transition curves – Vertical curves.

**UNIT IV TRACK CONSTRUCTION 9**  
Points and crossings – Turnouts – Signalling – Interlocking and track circuiting – Construction – Conventional and modern methods – Materials used.

**UNIT V MAINTENANCE AND OPERATION 9**  
Track drainage – Track modernization – Automated maintenance and upgrading – Lay outs of railway stations and yards – Rolling stock – Tractive power – Track resistance – Level crossings.

**TOTAL: 45 PERIODS**

**TEXT BOOK**

1. Saxena Subhash, C. and Satyapal Arora, A., "Course in Railway Engineering", Dhanpat Rai and Sons, 2003.
2. Agarwal, M.M ,and Chandra.S., "Railway Engineering", Oxford University Press,2008.

**REFERENCES**

1. Rangwala, "Railway Engineering", Charotar Publishing House, 2007.
2. Gupta, B.L. and Amit Gupta, , "Railway Engineering", Standard Publishers Distributors,2005

**AIM & OBJECTIVE:**

The student develops skills on airport planning and design with the prime focus on runway and taxiway geometrics. Students become conversant with the definition, purpose, location and materials of coastal structures such as piers, breakwaters, wharves, jetties, quays and spring fenders. The students acquire knowledge on site investigation for location and planning of harbours.

**UNIT I AIRPORT PLANNING AND DESIGN 8**  
Components of airports – Airport planning – Runway design – Orientation – Wind rose diagram – Taxiway design – Separation distances – Design speed – Drainage.

**UNIT II AIRPORT AND LAYOUTS 10**  
Airport zoning – Clearance over highways and railways – Airport layouts – Apron – Hangars – Terminal buildings – Airports buildings – Passenger flow – Passenger facilities.

**UNIT III AIR TRAFFIC CONTROL 8**  
Visual aids – Runway and taxiway markings – Wind direction indicators – Runway and taxiway lightings – Air traffic control network – Helipads – Service equipments.

**UNIT IV DOCKS AND HARBOURS 10**  
Definition of terms – Harbours – Ports – Docks – Tides – Waves – Littoral drift – Sounding, satellite ports – Classification of harbors – Site selection and investigation – Dry and wet docks – Light houses – Mooring accessories.

**UNIT V COASTAL STRUCTURES 9**  
Piers – Sliways – Breakwaters – Wharves – Jetties – Quays – Spring fenders – Coastal shipping – Inland water transport – Container transportation – Pipe ways – Rope ways.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Khanna, S.K., Arora, M.G. and Jain, S.S., "Airport Planning and Design", Namchand and Brother, 1999.
2. Bindra, S.P., "A course in Docks and Harbour Engineering", Dhanpat Rai and Sons, 1993.

**REFERENCES**

1. Seetha Raman, S., "Docks and Harbour Engineering", Umesh Publications, 1992.
2. Ranga Wala, S., "Airport Engineering", Chasotar Publishing House, 1996.
3. Vazirani and Chandolas, S.P., "Transportation Engineering", Khanna Publications, 1991.

**OBJECTIVE**

At the end of the course the student will possess knowledge about Electronic surveying

**UNIT I FUNDAMENTALS**

7

Methods of measuring distance, historical development, basic principles of EDM, classifications, applications and comparison with conventional surveying.

**UNIT II BASIC ELECTRONICS**

8

Fundamentals of electronics, resonant circuits, semiconductors, Lasers, Cathode ray tube, photo multiplier tube, transducers, oscillators, frequency mixing, modulation and demodulation, Kerrcell modulator, measurement of phase difference, reflectors and power sources.

**UNIT III PROPAGATION OF ELECTROMAGNETIC WAVES**

11

Definition, classification, applications, propagation properties, wave propagation at lower and higher frequencies. Refractive index, factors affecting, computation of group refractive index for light and near infrared waves at standard conditions and ambient conditions, reference refractive index, first velocity correction, computation of refractive index for microwaves, measurement of atmospheric parameters, mean refractive index, real time application of first velocity correction, second velocity correction and total atmospheric correction.

**UNIT IV ELECTROMAGNETIC DISTANCE MEASURING SYSTEM**

11

Electro-optical system, measuring principle, working principle, sources of error, infrared EDM instruments, Laser EDM instruments and total station. Microwave system, measuring principle, working principle, sources of error, microwave EDM instruments, comparison with Electrooptical system, care and maintenance of EDM instruments, Modern Positioning Systems. EDM traversing, trilateration and base line measurement using EDM.

**UNIT V FIELD STUDIES**

8

Study of different EDM instruments and Total Station. EDM traversing, trilateration and base line measurement using EDM.

**L: 45 T: 15**

**Total: 60 Periods**

**SEMESTER VII  
HARD CORE ELECTIVE IV  
AIR POLLUTION MANAGEMENT**

19155E74AP

**L T P C  
3 1 0 4**

**AIM & OBJECTIVE:**

This subject covers the sources, characteristics and effects of air and noise pollution and the methods of controlling the same. The student is expected to know about source inventory and control mechanism.

**UNIT I SOURCES AND EFFECTS OF AIR POLLUTANTS 9**

Classification of air pollutants – Particulates and gaseous pollutants – Sources of air pollution – Source inventory – Effects of air pollution on human beings, materials, vegetation, animals – global warming-ozone layer depletion, Sampling and Analysis – Basic Principles of Sampling – Source and ambient sampling – Analysis of pollutants – Principles.

**UNIT II DISPERSION OF POLLUTANTS 9**

Elements of atmosphere – Meteorological factors – Wind roses – Lapse rate - Atmospheric stability and turbulence – Plume rise – Dispersion of pollutants – Dispersion models – Applications.

**UNIT III AIR POLLUTION CONTROL 15**

Concepts of control – Principles and design of control measures – Particulates control by gravitational, centrifugal, filtration, scrubbing, electrostatic precipitation – Selection criteria for equipment - gaseous pollutant control by adsorption, absorption, condensation, combustion – Pollution control for specific major industries.

**UNIT IV AIR QUALITY MANAGEMENT 7**

Air quality standards – Air quality monitoring – Preventive measures - Air pollution control efforts – Zoning – Town planning regulation of new industries – Legislation and enforcement – Environmental Impact Assessment and Air quality

**UNIT V NOISE POLLUTION 5**

Sources of noise pollution – Effects – Assessment - Standards – Control methods – Prevention

**Total: 45 Periods**

**TEXT BOOKS**

1. Anjaneyulu, D., “Air Pollution and Control Technologies”, Allied Publishers, Mumbai, 2002.
2. Rao, C.S. Environmental Pollution Control Engineering, Wiley Eastern Ltd., New Delhi, 1996.

3. Garg, S.K., “Environmental Engineering Vol. II”, Khanna Publishers, New Delhi

**AIM & OBJECTIVE:**

At the end of this course the student shall be able to appreciate modular construction, industrialised construction and shall be able to design some of the prefabricated elements and also have the knowledge of the construction methods using these elements.

**UNIT I INTRODUCTION 9**

Need for prefabrication – Principles – Materials – Modular coordination – Standardization – Systems – Production – Transportation – Erection.

**UNIT II PREFABRICATED COMPONENTS 9**

Behaviour of structural components – Large panel constructions – Construction of roof and floor slabs – Wall panels – Columns – Shear walls

**UNIT III DESIGN PRINCIPLES 9**

Disuniting of structures- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation.

**UNIT IV JOINT IN STRUCTURAL MEMBERS 9**

Joints for different structural connections – Dimensions and detailing – Design of expansion joints

**UNIT V DESIGN FOR ABNORMAL LOADS 9**

Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

**TOTAL: 45 PERIODS****TEXT BOOKS**

1. CBRI, Building materials and components, India, 1990
2. Gerostiza C.Z., Hendrikson C. and Rehat D.R., Knowledge based process planning for construction and manufacturing, Academic Press Inc., 1994

2. Structural design manual, Precast concrete connection details, Society for the studies in the use of precast concrete, Netherland Betor Verlag, 1978.

**AIM & OBJECTIVE:**

At the end of this course the student shall be able to choose appropriate bridge structure and design it for given site conditions.

**UNIT I INTRODUCTION 9**  
Design of through type steel highway bridges for IRC loading - Design of stringers, cross girders and main girders - Design of deck type steel highway bridges for IRC loading – Design of main girders

**UNIT II STEEL BRIDGES 9**  
Design of pratt type truss girder highway bridges - Design of top chord, bottom chord, web members - Effect of repeated loading - Design of plate girder railway bridges for railway loading - Wind effects - Design of web and flange plates - Vertical and horizontal stiffeners.

**UNIT III REINFORCED CONCRETE SLAB BRIDGES 9**  
Design of solid slab bridges for IRC loading - Design of kerb - Design of tee beam bridges - Design of panel and cantilever for IRC loading

**UNIT IV REINFORCED CONCRETE GIRDER BRIDGES 9**  
Design of tee beam - Courbon's theory - Pigeaud's curves - Design of balanced cantilever bridges - Deck slab - Main girder - Design of cantilever - Design of articulation.

**UNIT V PRESTRESSED CONCRETE BRIDGES 9**  
Design of prestressed concrete bridges - Preliminary dimensions - Flexural and torsional parameters - Courbon's theory - Distribution coefficient by exact analysis - Design of girder section - Maximum and minimum prestressing forces - Eccentricity - Live load and dead load shear forces - cable zone in girder –Check for stresses at various sections - Check for diagonal tension - Diaphragms - End block - Short term and long term deflections.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

1. Johnson Victor D., “Essentials of Bridge Engineering”, Oxford and IBH Publishing Co., New Delhi, 1990.
2. Rajagopalan, N. Bridge Superstructure, Alpha Science International, 2006

**REFERENCES**

1. Phatak D.R., “Bridge Engineering”, Satya Prakashan, New Delhi, 1990.
2. Ponnuswamy S., “Bridge Engineering”, Tata McGraw-Hill, New Delhi, 1996.

**UNIT I INTRODUCTION – THEORY AND BEHAVIOUR 9**

Basic concepts – Advantages – Materials required – Systems and methods of prestressing– Analysis of sections – Stress concept – Strength concept – Load balancing concept – Effect of loading on the tensile stresses in tendons – Effect of tendon profile on deflections – Factors influencing deflections – Calculation of deflections – Short term and long term deflections – Losses of prestress – Estimation of crack width.

**UNIT II DESIGN 9**

Flexural strength – Simplified procedures as per codes – Strain compatibility method – Basic concepts in selection of cross section for bending – Stress distribution in end block – Design of anchorage zone reinforcement – Limit state design criteria – Partial prestressing – Applications.

**UNIT III CIRCULAR PRESTRESSING 9**

Design of prestressed concrete tanks – Poles and sleepers.

**UNIT IV COMPOSITE CONSTRUCTION 9**

Analysis for stresses – Estimate for deflections – Flexural and shear strength of composite members.

**UNIT V PRE-STRESSED CONCRETE BRIDGES 9**

General aspects – Pretensioned prestressed bridge decks – Post tensioned prestressed bridge decks – Principles of design only.

**L: 45 T: 15**

**Total: 60 Periods**

**TEXT BOOKS**

**[REGULATION 2019]**

[for candidates admitted to B.Tech (Civil Engineering) program from June 2019 onwards]

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

## Program Educational Objectives

PEO1 To produce graduates who have developed the skills required to design Civil Engineering systems and facilities, including the graduate's abilities to formulate problems, to think creatively, to synthesize information, and to work collaboratively in teams.

PEO2 To produce graduates who are trained thoroughly in methods of analysis, including the mathematical and computational skills appropriate for Civil Engineers to use when problem solving.

PEO3 To produce graduates who are prepared for life-long learning and successful careers as Civil Engineers & also taught to use current, experimental and data analysis techniques for Civil Engineering applications.

PEO4 Contribute towards technological development through academic research and industrial practices.

PEO5 Practice their profession with good communication, leadership, ethics and social responsibility.

## PROGRAMME OUTCOMES:

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **The engineer and society:** An ability to develop the professional status using the broad education to understand the potential impact of Engineering solutions in various geographical settings including societal and environmental contexts.
6. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
7. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
8. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

9. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
10. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
11. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVES:**

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills

**UNIT I SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS 12**

**Reading-** short comprehension passages, practice in skimming-scanning and predicting-**Writing-** completing sentences- - developing hints. **Listening-** short texts- short formal and informal conversations. **Speaking-** introducing oneself - exchanging personal information-**Language development-** What Questions- asking and answering-yes or no questions- parts of speech. **Vocabulary development-** prefixes- suffixes- articles.- count/ uncount nouns.

**UNIT II GENERAL READING AND FREE WRITING 12**

**Reading** - comprehension-pre-reading-post reading- comprehension questions (multiple choice questions and /or short questions/ open-ended questions)-inductive reading- short narratives and descriptions from newspapers including dialogues and conversations (also used as short Listening texts)- register- **Writing** – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –**Listening-**telephonic conversations. **Speaking**– sharing information of a personal kind—greeting – taking leave- **Language development** – prepositions, conjunctions **Vocabulary development-**guessing meanings of words in context.

**UNIT III GRAMMAR AND LANGUAGE DEVELOPMENT 12**

**Reading-** short texts and longer passages (close reading) **Writing-** understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences **Listening** –listening to longer texts and filling up the table- product description- narratives from different sources. **Speaking-** asking about routine actions and expressing opinions. **Language development-** degrees of comparison- pronouns- direct vs indirect questions- **Vocabulary development** – single word substitutes- adverbs.

**UNIT IV READING AND LANGUAGE DEVELOPMENT 12**

**Reading-** comprehension-reading longer texts- reading different types of texts- magazines **Writing-** letter writing, informal or personal letters-e-mails-conventions of personal email-**Listening-** listening to dialogues or conversations and completing exercises based on them. **Speaking-** speaking about oneself- speaking about one's friend- **Language development-**Tenses- simple present-simple past- present continuous and past continuous- **Vocabulary development-** synonyms-antonyms- phrasal verbs

**UNIT V EXTENDED WRITING 12**

**Reading-** longer texts- close reading-**Writing-** brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing-**Listening** – listening to talks- conversations- **Speaking**– participating in conversations- short group conversations-**Language development-**modal verbs- present/ past perfect tense – **Vocabulary development-**collocations- fixed and semi-fixed expressions

**OUTCOMES: At the end of the course, learners will be able to:**

- Read articles of a general kind in magazines and newspapers.
- Participate effectively in informal conversations; introduce themselves and their friends and express opinions in English.
- Comprehend conversations and short talks delivered in English
- Write short essays of a general kind and personal letters and emails in English.

**OBJECTIVES :**

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus. The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modelling the engineering problems mathematically and obtaining solutions. This is a foundation course which mainly deals with topics such as single variable and multivariable calculus and plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

**UNIT I      DIFFERENTIAL CALCULUS      12**

Representation of functions - Limit of a function - Continuity - Derivatives - Differentiation rules - Maxima and Minima of functions of one variable.

**UNIT II      FUNCTIONS OF SEVERAL VARIABLES      12**

Partial differentiation – Homogeneous functions and Euler’s theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor’s series for functions of two variables – Maxima and minima of functions of two variables – Lagrange’s method of undetermined multipliers.

**UNIT III      INTEGRAL CALCULUS      12**

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

**UNIT IV      MULTIPLE INTEGRALS      12**

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variables in double and triple integrals.

**UNIT V      DIFFERENTIAL EQUATIONS      12**

Higher order linear differential equations with constant coefficients - Method of variation of parameters – Homogenous equation of Euler’s and Legendre’s type – System of simultaneous linear differential equations with constant coefficients - Method of undetermined coefficients.

**TOTAL : 60 PERIODS**

**OUTCOMES :**

After completing this course, students should demonstrate competency in the following skills:

- Use both the limit definition and rules of differentiation to differentiate functions.
- Apply differentiation to solve maxima and minima problems.
- Evaluate integrals both by using Riemann sums and by using the Fundamental Theorem of Calculus.
- Apply integration to compute multiple integrals, area, volume, integrals in polar coordinates, in addition to change of order and change of variables.
- Evaluate integrals using techniques of integration, such as substitution, partial fractions and integration by parts.
- Determine convergence/divergence of improper integrals and evaluate convergent improper integrals.
- Apply various techniques in solving differential equations.

5. Weir, M.D and Joel Hass, "Thomas Calculus", 12<sup>th</sup> Edition, Pearson India, 2016.

**OBJECTIVES:**

- To enhance the fundamental knowledge in Physics and its applications relevant to various streams of Engineering and Technology.

**UNIT I PROPERTIES OF MATTER 9**

Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment - I-shaped girders - stress due to bending in beams.

**UNIT II WAVES AND FIBER OPTICS 9**

Oscillatory motion – forced and damped oscillations: differential equation and its solution – plane progressive waves – wave equation. Lasers : population of energy levels, Einstein’s A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Semiconductor lasers: homojunction and heterojunction – Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers - fibre optic sensors: pressure and displacement.

**UNIT III THERMAL PHYSICS 9**

Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conduction in solids – thermal conductivity - Forbe’s and Lee’s disc method: theory and experiment - conduction through compound media (series and parallel) – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar water heaters.

**UNIT IV QUANTUM PHYSICS 9**

Black body radiation – Planck’s theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger’s wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – tunnelling (qualitative) - scanning tunnelling microscope.

**UNIT V CRYSTAL PHYSICS 9**

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances - coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures - crystal imperfections: point defects, line defects – Burger vectors, stacking faults – role of imperfections in plastic deformation - growth of single crystals: solution and melt growth techniques.

**TOTAL :45 PERIODS****OUTCOMES:**

Upon completion of this course,

- the students will gain knowledge on the basics of properties of matter and its applications,
- the students will acquire knowledge on the concepts of waves and optical devices and their applications in fibre optics,
- the students will have adequate knowledge on the concepts of thermal properties of materials and their applications in expansion joints and heat exchangers,
- the students will get knowledge on advanced physics concepts of quantum theory and its applications in tunneling microscopes, and
- the students will understand the basics of crystals, their structures and different crystal growth techniques.

ENGINEERING CHEMISTRY

L T P C  
3 0 0 3

**OBJECTIVES:**

- To make the students conversant with boiler feed water requirements, related problems and water treatment techniques.
- To develop an understanding of the basic concepts of phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys.
- Preparation, properties and applications of engineering materials.
- Types of fuels, calorific value calculations, manufacture of solid, liquid and gaseous fuels.
- Principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuel cells.

**UNIT I WATER AND ITS TREATMENT 9**

Hardness of water – types – expression of hardness – units – estimation of hardness of water by EDTA – numerical problems – boiler troubles (scale and sludge) – treatment of boiler feed water – Internal treatment (phosphate, colloidal, sodium aluminate and calgon conditioning) external treatment – Ion exchange process, zeolite process – desalination of brackish water - Reverse Osmosis.

**UNIT II SURFACE CHEMISTRY AND CATALYSIS 9**

Adsorption: Types of adsorption – adsorption of gases on solids – adsorption of solute from solutions – adsorption isotherms – Freundlich’s adsorption isotherm – Langmuir’s adsorption isotherm – contact theory – kinetics of surface reactions, unimolecular reactions, Langmuir - applications of adsorption on pollution abatement. Catalysis: Catalyst – types of catalysis – criteria – autocatalysis – catalytic poisoning and catalytic promoters - acid base catalysis – applications (catalytic convertor) – enzyme catalysis– Michaelis– Menten equation.

**UNIT III ALLOYS AND PHASE RULE 9**

Alloys: Introduction- Definition- properties of alloys- significance of alloying, functions and effect of alloying elements- Nichrome and stainless steel (18/8) – heat treatment of steel. Phase rule: Introduction, definition of terms with examples, one component system -water system - reduced phase rule - thermal analysis and cooling curves - two component systems - lead-silver system - Pattinson process.

**UNIT IV FUELS AND COMBUSTION 9**

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufacture of metallurgical coke (Otto Hoffmann method) - petroleum - manufacture of synthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas - compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel. Combustion of fuels: Introduction - calorific value - higher and lower calorific values- theoretical calculation of calorific value - ignition temperature - spontaneous ignition temperature - explosive range - flue gas analysis (ORSAT Method).

**UNIT V ENERGY SOURCES AND STORAGE DEVICES 9**

Nuclear fission - controlled nuclear fission - nuclear fusion - differences between nuclear fission and fusion - nuclear chain reactions - nuclear energy - light water nuclear power plant - breeder reactor - solar energy conversion - solar cells - wind energy. Batteries, fuel cells and supercapacitors: Types of batteries – primary battery (dry cell) secondary battery (lead acid battery, lithium-ion-battery) fuel cells – H<sub>2</sub>-O<sub>2</sub> fuel cell.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

- The knowledge gained on engineering materials, fuels, energy sources and water treatment techniques will facilitate better understanding of engineering processes and applications for further learning.

**TEXT BOOKS:**

- S. S. Dara and S. S. Umare, "A Textbook of Engineering Chemistry", S. Chand & Company LTD, New Delhi, 2015

**19154S15****ENGINEERING GRAPHICS**

<b>L</b>	<b>T</b>	<b>PC</b>
<b>2</b>	<b>0</b>	<b>4 4</b>

**OBJECTIVES:**

- To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
- To expose them to existing national standards related to technical drawings.

**CONCEPTS AND CONVENTIONS (Not for Examination)**

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

**UNIT I PLANE CURVES AND FREEHAND SKETCHING 7+12**

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects

**UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACE 6+12**

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

**UNIT III PROJECTION OF SOLIDS 5+12**

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.

**UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES 5+12**

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.

**UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 6+12**

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method .

**TOTAL: 90 PERIODS****OUTCOMES:**

On successful completion of this course, the student will be able to

- familiarize with the fundamentals and standards of Engineering graphics
- perform freehand sketching of basic geometrical constructions and multiple views of objects.
- project orthographic projections of lines and plane surfaces.
- draw projections and solids and development of surfaces.
- visualize and to project isometric and perspective sections of simple solids.

5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods.

**Special points applicable to University Examinations on Engineering Graphics:**

1. There will be five questions, each of either or type covering all units of the syllabus.
2. All questions will carry equal marks of 20 each making a total of 100.
3. The answer paper shall consist of drawing sheets of A3 size only. The students will be permitted to use appropriate scale to fit solution within A3 size.
4. The examination will be conducted in appropriate sessions on the same day

**OBJECTIVES:**

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures — lists, tuples, dictionaries.
- To do input/output with files in Python.

**UNIT I ALGORITHMIC PROBLEM SOLVING 9**

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

**UNIT II DATA, EXPRESSIONS, STATEMENTS 9**

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

**UNIT III CONTROL FLOW, FUNCTIONS 9**

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

**UNIT IV LISTS, TUPLES, DICTIONARIES 9**

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

**UNIT V FILES, MODULES, PACKAGES 9**

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

**TOTAL : 45 PERIODS****OUTCOMES:**

**Upon completion of the course, students will be able to**

- Develop algorithmic solutions to simple computational problems
- Read, write, execute by hand simple Python programs.
- Structure simple Python programs for solving problems.
- Decompose a Python program into functions.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data from/to files in Python Programs.

**TEXT BOOKS:**

1. Allen B. Downey, ``Think Python: How to Think Like a Computer Scientist'', 2<sup>nd</sup> edition, Updated for Python 3, Shroff/O'Reilly Publishers, 2016 (<http://greenteapress.com/wp/think-python/>)

6. Timothy A. Budd, "Exploring Python", Mc-Graw Hill Education (India) Private Ltd., 2015.

**OBJECTIVES:**

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data **from/to files in Python.**

**LIST OF PROGRAMS**

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton's method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Programs that take command line arguments (word count)
11. Find the most frequent words in a text read from a file
12. Simulate elliptical orbits in Pygame
13. Simulate bouncing ball using Pygame

**PLATFORM NEEDED**

Python 3 interpreter for Windows/Linux

**TOTAL : 60 PERIODS**

**OUTCOMES:**

**Upon completion of the course, students will be able to**

- Write, test, and debug simple Python programs.
- Implement Python programs with conditionals and loops.
- Develop Python programs step-wise by defining functions and calling them.
- Use Python lists, tuples, dictionaries for representing compound data.
- Read and write data from/to files in Python.

**OBJECTIVES:**

- To introduce different experiments to test basic understanding of physics concepts applied in optics, thermal physics, properties of matter and liquids.

**LIST OF EXPERIMENTS: PHYSICS LABORATORY (Any 5 Experiments)**

1. Determination of rigidity modulus – Torsion pendulum
2. Determination of Young's modulus by non-uniform bending method
3. (a) Determination of wavelength, and particle size using Laser  
(b) Determination of acceptance angle in an optical fiber.
4. Determination of thermal conductivity of a bad conductor – Lee's Disc method.
5. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer
7. Determination of wavelength of mercury spectrum – spectrometer grating  
Determination of band gap of a semiconductor
8. Determination of thickness of a thin wire – Air wedge method

**TOTAL: 30 PERIODS****OUTCOMES:**

Upon completion of the course, the students will be able to

- apply principles of elasticity, optics and thermal properties for engineering applications.

**CHEMISTRY LABORATORY: (Any seven experiments to be conducted)****OBJECTIVES:**

- To make the student to acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
  - To acquaint the students with the determination of molecular weight of a polymer by viscometry.
1. Estimation of HCl using Na<sub>2</sub>CO<sub>3</sub> as primary standard and Determination of alkalinity in water sample.
  2. Determination of total, temporary & permanent hardness of water by EDTA method.
  3. Determination of DO content of water sample by Winkler's method.
  4. Determination of chloride content of water sample by argentometric method.
  5. Estimation of copper content of the given solution by Iodometry.
  6. Determination of strength of given hydrochloric acid using pH meter.
  7. Determination of strength of acids in a mixture of acids using conductivity meter.
  8. Estimation of iron content of the given solution using potentiometer.
  9. Estimation of iron content of the water sample using spectrophotometer (1, 10-Phenanthroline / thiocyanate method).
  10. Estimation of sodium and potassium present in water using flame photometer.
  11. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.
  12. Pseudo first order kinetics-ester hydrolysis.
  13. Corrosion experiment-weight loss method.
  14. Determination of CMC.
  15. Phase change in a solid.
  16. Conductometric titration of strong acid vs strong base.

**TOTAL: 30 PERIODS****OUTCOMES:**

- The students will be outfitted with hands-on knowledge in the quantitative chemical analysis of water quality related parameters.

**TEXTBOOKS:**

1. Vogel's Textbook of Quantitative Chemical Analysis (8<sup>TH</sup> edition, 2014)

**OBJECTIVES:**

The Course prepares second semester engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialisation.

**UNIT I INTRODUCTION TECHNICAL ENGLISH 12**

**Listening-** Listening to talks mostly of a scientific/technical nature and completing information-gap exercises-  
**Speaking** – Asking for and giving directions- **Reading** – reading short technical texts from journals- newspapers-  
**Writing-** purpose statements – extended definitions – issue- writing instructions – checklists-recommendations-  
**Vocabulary Development-** technical vocabulary **Language Development** –subject verb agreement - compound words.

**UNIT II READING AND STUDY SKILLS 12**

**Listening-** Listening to longer technical talks and completing exercises based on them-**Speaking** – describing a process-**Reading** – reading longer technical texts- identifying the various transitions in a text- paragraphing- **Writing-** interpreting charts, graphs- **Vocabulary Development** - vocabulary used in formal letters/emails and reports **Language Development-** impersonal passive voice, numerical adjectives.

**UNIT III TECHNICAL WRITING AND GRAMMAR 12**

**Listening-** Listening to classroom lectures/ talks on engineering/technology -**Speaking** –introduction to technical presentations- **Reading** – longer texts both general and technical, practice in speed reading; **Writing-** Describing a process, use of sequence words- **Vocabulary Development-** sequence words- Misspelled words. **Language Development-** embedded sentences.

**UNIT IV REPORT WRITING 12**

**Listening-** Listening to documentaries and making notes. **Speaking** –mechanics of presentations- **Reading** – reading for detailed comprehension- **Writing-** email etiquette- job application – cover letter –Résumé preparation( via email and hard copy)- analytical essays and issue based essays--**Vocabulary Development-** finding suitable synonyms- paraphrasing-. **Language Development-** clauses- if conditionals.

**UNIT V GROUP DISCUSSION AND JOB APPLICATIONS 12**

**Listening-** TED/Ink talks; **Speaking** –participating in a group discussion -**Reading**–reading and understanding technical articles **Writing**– Writing reports- minutes of a meeting- accident and survey-**Vocabulary Development-** verbal analogies **Language Development-** reported speech.

**TOTAL :60 PERIODS**

**OUTCOMES:**

At the end of the course learners will be able to:

- Read technical texts and write area- specific texts effortlessly.
- Listen and comprehend lectures and talks in their area of specialisation successfully.
- Speak appropriately and effectively in varied formal and informal contexts.
- Write reports and winning job applications.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

5. Raman, Meenakshi and Sharma, Sangeetha- **Technical Communication Principles and Practice**. Oxford University Press: New Delhi, 2014.

**OBJECTIVES :**

- This course is designed to cover topics such as Matrix Algebra, Vector Calculus, Complex Analysis and Laplace Transform. Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering. Vector calculus can be widely used for modelling the various laws of physics. The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines.

**UNIT I MATRICES****12**

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

**UNIT II VECTOR CALCULUS****12**

Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Area of a curved surface - Volume integral - Green's, Gauss divergence and Stoke's theorems – Verification and application in evaluating line, surface and volume integrals.

**UNIT III ANALYTIC FUNCTIONS****12**

Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates - Properties – Harmonic conjugates – Construction of analytic function – Conformal mapping – Mapping by functions  $w = z + c$ ,  $c\bar{z}$ ,  $1/z$ ,  $z^2$  - Bilinear transformation.

**UNIT IV COMPLEX INTEGRATION****12**

Line integral - Cauchy's integral theorem – Cauchy's integral formula – Taylor's and Laurent's series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour.

**UNIT V LAPLACE TRANSFORMS****12**

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulse function – Basic properties – Shifting theorems -Transforms of derivatives and integrals – Initial and final value theorems – Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear second order ordinary differential equations with constant coefficients.

**TOTAL: 60 PERIODS****OUTCOMES :**

After successfully completing the course, the student will have a good understanding of the following topics and their applications:

- Eigenvalues and eigenvectors, diagonalization of a matrix, Symmetric matrices, Positive definite matrices and similar matrices.
- Gradient, divergence and curl of a vector point function and related identities.
- Evaluation of line, surface and volume integrals using Gauss, Stokes and Green's theorems and their verification.
- Analytic functions, conformal mapping and complex integration.
- Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To introduce the principles of thermal, acoustics, optics and new materials for civil engineering applications.

**UNIT I THERMAL PERFORMANCE OF BUILDINGS 9**

Heat transfer through fenestrations, thermal insulation and its benefits - heat gain and heat loss estimation - factors affecting the thermal performance of buildings, thermal measurements, thermal comfort, indices of thermal comfort, climate and design of solar radiation, shading devices central heating. Principles of natural ventilation - ventilation measurements, design for natural ventilation - Window types and packaged air conditioners - chilled water plant - fan coil systems - water piping - cooling load - Air conditioning systems for different types of buildings - Protection against fire to be caused by A. C. Systems.

**UNIT II ACOUSTICS 9**

Classification of sound- decibel- Weber–Fechner law – Sabine’s formula- derivation using growth and decay method – Absorption Coefficient and its determination –factors affecting acoustics of buildings and their remedies. Methods of sound absorptions - absorbing materials - noise and its measurements, sound insulation and its measurements, impact of noise in multi-storeyed buildings.

**UNIT III LIGHTING DESIGNS 9**

Radiation quantities – spectral quantities – relationship between luminescence and radiant quantities – hemispherical reflectance and transmittance – photometry: cosines law, inverse square law. Vision – photopic, mesopic, scotopic visions. Colour – luminous efficiency function - Visual field glare, colour - day light calculations - day light design of windows, measurement of day-light and use of models and artificial skies, principles of artificial lighting, supplementary artificial lighting.

**UNIT IV NEW ENGINEERING MATERIALS 9**

Composites - definition and classification - Fibre reinforced plastics (FRP) and fiber reinforced metals (FRM) - Metallic glasses - Shape memory alloys - Ceramics - Classification - Crystalline - Non Crystalline - Bonded ceramics, Manufacturing methods - Slip casting - Isostatic pressing - Gas pressure bonding - Properties - thermal, mechanical, electrical and chemical ceramic fibres - ferroelectric and ferromagnetic ceramics - High Aluminium ceramics.

**UNIT V HAZARDS 9**

Seismology and Seismic waves - Earth quake ground motion - Basic concepts and estimation techniques - site effects - Probabilistic and deterministic Seismic hazard analysis - Cyclone and flood hazards - Fire hazards and fire protection, fire-proofing of materials, fire safety regulations and firefighting equipment - Prevention and safety measures.

**OUTCOMES:**

Upon completion of this course,

- the students will have knowledge on the thermal performance of buildings,
- the students will acquire knowledge on the acoustic properties of buildings,
- the students will get knowledge on various lighting designs for buildings,
- the students will gain knowledge on the properties and performance of engineering materials, and
- the students will understand the hazards of buildings.

2. Reiter, L. “Earthquake hazard analysis - Issues and insights”, Columbia University Press, 1991.
3. Shearer, P.M. “Introduction to Seismology”, Cambridge University Press, 1999.

**OBJECTIVES:**

- To study the nature and facts about environment.
- To finding and implementing scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To study the dynamic processes and understand the features of the earth's interior and surface.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.

**UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY****14**

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hill slopes, etc.

**UNIT II ENVIRONMENTAL POLLUTION****8**

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

**UNIT III NATURAL RESOURCES****10**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

**UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT****7**

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

**UNIT V HUMAN POPULATION AND THE ENVIRONMENT****6**

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**TOTAL: 45 PERIODS**

**OUTCOMES:**

- Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental Protection. One will obtain knowledge on the following after completing the course.
- Public awareness of environmental is at infant stage.
- Ignorance and incomplete knowledge has lead to misconceptions
- Development and improvement in std. of living has lead to serious environmental disasters

**TEXTBOOKS:**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVES:**

- To explain the basic theorems used in Electrical circuits and the different components and function of electrical machines.
- To explain the fundamentals of semiconductor and applications.
- To explain the principles of digital electronics
- To impart knowledge of communication.

**UNIT I ELECTRICAL CIRCUITS & MEASUREMENTS 9**

Fundamental laws of electric circuits– Steady State Solution of DC Circuits – Introduction to AC Circuits – Sinusoidal steady state analysis– Power and Power factor – Single Phase and Three Phase Balanced Circuits. Classification of instruments – Operating Principles of indicating Instruments

**UNIT II ELECTRICAL MACHINES 9**

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

**UNIT III SEMICONDUCTOR DEVICES AND APPLICATIONS 9**

Introduction - Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier.

**UNIT IV DIGITAL ELECTRONICS 9**

Binary Number System – Boolean Algebra theorems– Digital circuits - Introduction to sequential Circuits– Flip-Flops – Registers and Counters – A/D and D/A Conversion – digital processing architecture.

**UNIT V FUNDAMENTALS OF COMMUNICATION ENGINEERING 9**

Introduction – Elements of Communication Systems– Modulation and Demodulation: Principles of Amplitude and Frequency Modulations. Digital Communication - Communication Systems: Radio, Antenna, TV, Fax, ISDN, Microwave, Satellite and Optical Fibre (Block Diagram Approach only).

**TOTAL: 45 PERIODS****OUTCOMES:**

- ability to identify the electrical components and explain the characteristics of electrical machines.
- ability to identify electronics components and understand the characteristics

**TEXT BOOKS:**

1. D P Kothari and I.J Nagarath, "Electrical Machines "Basic Electrical and Electronics Engineering", McGraw Hill Education(India) Private Limited, Third Reprint ,2016

6. Nagsarkar T K and Sukhija M S, "Basics of Electrical Engineering", Oxford press 2005.

**OBJECTIVES:**

- To develop capacity to predict the effect of force and motion in the course of carrying out the design functions of engineering.

**UNIT I STATICS OF PARTICLES 9+6**

Introduction – Units and Dimensions – Laws of Mechanics – Lami’s theorem, Parallelogram and triangular Law of forces – Vectorial representation of forces – Vector operations of forces - additions, subtraction, dot product, cross product – Coplanar Forces – rectangular components – Equilibrium of a particle – Forces in space – Equilibrium of a particle in space – Equivalent systems of forces – Principle of transmissibility .

**UNIT II EQUILIBRIUM OF RIGID BODIES 9+6**

Free body diagram – Types of supports –Action and reaction forces –stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon’s theorem – Single equivalent force -Equilibrium of Rigid bodies in two dimensions – Equilibrium of Rigid bodies in three dimensions

**UNIT III PROPERTIES OF SURFACES AND SOLIDS 9+6**

Centroids and centre of mass – Centroids of lines and areas - Rectangular, circular, triangular areas by integration – T section, I section, - Angle section, Hollow section by using standard formula –Theorems of Pappus - Area moments of inertia of plane areas – Rectangular, circular, triangular areas by integration – T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Principal moments of inertia of plane areas – Principal axes of inertia-Mass moment of inertia –mass moment of inertia for prismatic, cylindrical and spherical solids from first principle – Relation to area moments of inertia.

**UNIT IV DYNAMICS OF PARTICLES 9+6**

Displacements, Velocity and acceleration, their relationship – Relative motion – Curvilinear motion Newton’s laws of motion – Work Energy Equation– Impulse and Momentum – Impact of elastic bodies.

**UNIT V FRICTION AND RIGID BODY DYNAMICS 9+6**

Friction force – Laws of sliding friction – equilibrium analysis of simple systems with sliding friction –wedge friction-. Rolling resistance -Translation and Rotation of Rigid Bodies – Velocity and acceleration – General Plane motion of simple rigid bodies such as cylinder, disc/wheel and sphere.

**TOTAL : (45+30)=75 PERIODS****OUTCOMES:**

On successful completion of this course, the student will be able to

- illustrate the vectorial and scalar representation of forces and moments
- analyse the rigid body in equilibrium
- evaluate the properties of surfaces and solids
- calculate dynamic forces exerted in rigid body
- determine the friction and the effects by the laws of friction

**OBJECTIVES:**

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

**GROUP A (CIVIL & MECHANICAL)****I CIVIL ENGINEERING PRACTICE****14****Buildings:**

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

(a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.

(b) Study of pipe connections requirements for pumps and turbines.

(c) Preparation of plumbing line sketches for water supply and sewage works.

(d) Hands-on-exercise:

Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.

(e) Demonstration of plumbing requirements of high-rise buildings.

**Carpentry using Power Tools only:**

(a) Study of the joints in roofs, doors, windows and furniture.

(b) Hands-on-exercise:

Wood work, joints by sawing, planing and cutting.

**II MECHANICAL ENGINEERING PRACTICE****18****Welding:**

(a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.

(b) Gas welding practice

**Basic Machining:**

(a) Simple Turning and Taper turning

(b) Drilling Practice

**Sheet Metal Work:**

(a) Forming & Bending.

(b) Model making – Trays and funnels.

(c) Different type of joints.

(d) Study of centrifugal pump

(e) Study of air conditioner

(f) Smithy operations, upsetting, swaging, setting down and bending. Example – Exercise – Production of hexagonal headed bolt.

(g) Foundry operations like mould preparation for gear and step cone pulley.

(h) Fitting – Exercises – Preparation of square fitting and V – fitting models.

**GROUP B (ELECTRICAL & ELECTRONICS)****III ELECTRICAL ENGINEERING PRACTICE****12****13**

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.

2. Fluorescent lamp wiring.

3. Stair case wiring

4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.

5. Measurement of energy using single phase energy meter.

6. Measurement of resistance to earth of an electrical equipment.

**IV ELECTRONICS ENGINEERING PRACTICE****16**

1. Study of Electronic components and equipments – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.

2. Study of logic gates AND, OR, EX-OR and NOT.

3. Generation of Clock Signal.

4. Soldering practice – Components Devices and Circuits – Using general purpose PCB.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

## 5. Measurement of ripple factor of HWR and FWR.

**TOTAL: 60 PERIODS**

### OUTCOMES:

On successful completion of this course, the student will be able to

- fabricate carpentry components and pipe connections including plumbing works.
- use welding equipments to join the structures.
- Carry out the basic machining operations
- Make the models using sheet metal works
- Illustrate on centrifugal pump, Air conditioner, operations of smithy, foundry and fittings
- Carry out basic home electrical works and appliances
- Measure the electrical quantities
- Elaborate on the components, gates, soldering practices.

### LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:

#### CIVIL

1. Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings. 15 Sets.
2. Carpentry vice (fitted to work bench) 15 Nos.
3. Standard woodworking tools 15 Sets.
4. Models of industrial trusses, door joints, furniture joints 5 each
5. Power Tools:
  - (a) Rotary Hammer 2 Nos
  - (b) Demolition Hammer 2 Nos
  - (c) Circular Saw 2 Nos
  - (d) Planer 2 Nos
  - (e) Hand Drilling Machine 2 Nos
  - (f) Jigsaw 2 Nos

#### MECHANICAL

1. Arc welding transformer with cables and holders 5 Nos.
2. Welding booth with exhaust facility 5 Nos.
3. Welding accessories like welding shield, chipping hammer, wire brush, etc. 5 Sets.
4. Oxygen and acetylene gas cylinders, blow pipe and other welding outfit. 2 Nos.
5. Centre lathe 2 Nos.
6. Hearth furnace, anvil and smithy tools 2 Sets.
7. Moulding table, foundry tools 2 Sets.
8. Power Tool: Angle Grinder 2 Nos
9. Study-purpose items: centrifugal pump, air-conditioner One each.

#### ELECTRICAL

1. Assorted electrical components for house wiring 15 Sets
2. Electrical measuring instruments 10 Sets
3. Study purpose items: Iron box, fan and regulator, emergency lamp 1 each
4. Megger (250V/500V) 1 No.
5. Power Tools: (a) Range Finder 2 Nos  
Nos
- (b) Digital Live-wire detector 2

#### ELECTRONICS

1. Soldering guns 10 Nos.
2. Assorted electronic components for making circuits 50 Nos.
3. Small PCBs 10 Nos.
4. Multimeters 10 Nos.
5. Study purpose items: Telephone, FM radio, low-voltage power supply

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVES:**

- To introduce the students to draft the plan, elevation and sectional views of buildings in accordance with development and control rules satisfying orientation and functional requirements as per National Building Code.

**LIST OF EXPERIMENTS**

1. Principles of planning, orientation and complete joinery details (Paneled and Glazed Doors and Windows)
2. Buildings with load bearing walls
3. Buildings with sloping roof
4. R.C.C. framed structures.
5. Industrial buildings – North light roof structures

**TOTAL: 60 PERIODS****OUTCOMES:**

- The students will be able to draft the plan, elevation and sectional views of the buildings, industrial structures, and framed buildings using computer softwares.

**TEXTBOOKS:**

1. Sikka V.B., A Course in Civil Engineering Drawing, 4<sup>th</sup> Edition, S.K.Kataria and Sons, 2015.
2. George Omura, Mastering in Autocad 2005 and Autocad LT 2005– BPB Publications, 2008

**REFERENCES:**

3. Shah.M.G., Kale. C.M. and Patki.S.Y., Building Drawing with an Integrated Approach to Built Environment, Tata McGraw Hill Publishers Limited, 2007.
4. Verma.B.P., Civil Engineering Drawing and House Planning, Khanna Publishers, 2010.

**OBJECTIVES :**

- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.

**UNIT I PARTIAL DIFFERENTIAL EQUATIONS 12**

Formation of partial differential equations – Singular integrals - Solutions of standard types of first order partial differential equations - Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.

**UNIT II FOURIER SERIES 12**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis.

**UNIT III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12**

Classification of PDE – Method of separation of variables - Fourier Series Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heat conduction.

**UNIT IV FOURIER TRANSFORMS 12**

Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

**UNIT V Z - TRANSFORMS AND DIFFERENCE EQUATIONS 12**

Z-transforms - Elementary properties – Inverse Z-transform (using partial fraction and residues) – Initial and final value theorems - Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

**TOTAL: 60 PERIODS****OUTCOMES :**

Upon successful completion of the course, students should be able to:

- Understand how to solve the given standard partial differential equations.
- Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
- Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
- Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

19155C32

**STRENGTH OF MATERIALS I**

**L T P C**  
**3 2 0 4**

**OBJECTIVES:**

- To learn the fundamental concepts of Stress, Strain and deformation of solids.
- To know the mechanism of load transfer in beams, the induced stress resultants and deformations.
- To understand the effect of torsion on shafts and springs.
- To analyze plane and space trusses

**UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 12**

Simple Stresses and strains – Elastic constants - Relationship between elastic constants – Stress Strain Diagram – Ultimate Stress – Yield Stress – Deformation of axially loaded member - Composite Bars - Thermal Stresses – State of Stress in two dimensions – Stresses on inclined planes – Principal Stresses and Principal Planes – Maximum shear stress - Mohr's circle method.

**UNIT II TRANSFER OF LOADS AND STRESSES IN BEAMS 12**

Types of loads, supports, beams – concept of shearing force and bending moment - Relationship between intensity of load, Shear Force and Bending moment - Shear Force and Bending Moment Diagrams for Cantilever, simply supported and overhanging beams with concentrated load, uniformly distributed load, uniformly varying load and concentrated moment. Theory of Simple Bending – Stress Distribution due to bending moment and shearing force - Flitched Beams - Leaf Springs.

**UNIT III DEFLECTION OF BEAMS 12**

Elastic curve – Governing differential equation - Double integration method - Macaulay's method - Area moment method - conjugate beam method for computation of slope and deflection of determinant beams.

**UNIT IV TORSION 12**

Theory of Torsion – Stresses and Deformations in Solid and Hollow Circular Shafts – combined bending moment and torsion of shafts - Power transmitted to shaft – Shaft in series and parallel – Closed and Open Coiled helical springs – springs in series and parallel – Design of buffer springs.

**UNIT V ANALYSIS OF TRUSSES 12**

Determinate and indeterminate trusses - Analysis of pin jointed plane determinate trusses by method of joints, method of sections and tension coefficient – Analysis of Space trusses by tension coefficient method.

**TOTAL :60 PERIODS**

**OUTCOMES:**

Students will be able to

- Understand the concepts of stress and strain, principal stresses and principal planes.
- Determine Shear force and bending moment in beams and understand concept of theory of simple bending.
- Calculate the deflection of beams by different methods and selection of method for determining slope or deflection.
- Apply basic equation of torsion in design of circular shafts and helical springs, .
- Analyze the pin jointed plane and space trusses

6. Gambhir. M.L., "Fundamentals of Solid Mechanics", PHI Learning Private Limited., New Delhi, 2009.

**OBJECTIVE:**

- To understand the basic properties of the fluid, fluid kinematics, fluid dynamics and to analyze and appreciate the complexities involved in solving the fluid flow problems.

**UNIT I FLUID PROPERTIES AND FLUID STATICS 12**

Fluid – definition, distinction between solid and fluid - Units and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapour pressure, capillarity and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures - pressure measurements by manometers-forces on planes – centre of pressure – buoyancy and floatation.

**UNIT II FLUID KINEMATICS AND DYNAMICS 12**

Fluid Kinematics – Classification and types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- stream line-streak line-path line- stream function - velocity potential function - flow net. Fluid dynamics - equations of motion -Euler's equation along a streamline - Bernoulli's equation – applications - venturi meter, orifice meter and Pitot tube- linear momentum equation and its application to pipe bend.

**UNIT III DIMENSIONAL ANALYSIS AND MODEL STUDIES 12**

Fundamental dimensions - dimensional homogeneity - Rayleigh's method and Buckingham Pi-theorem - dimensionless parameters - similitudes and model studies - distorted models.

**UNIT IV FLOW THROUGH PIPES 12**

Reynold's experiment - laminar flow through circular pipe (Hagen poiseuille's) - hydraulic and energy gradient – flow through pipes - Darcy - Weisbach's equation - pipe roughness -friction factor-Moody's diagram- major and minor losses of flow in pipes - pipes in series and in parallel.

**UNIT V BOUNDARY LAYER 12**

Boundary layer – definition- boundary layer on a flat plate – laminar and turbulent boundary layer-displacement, energy and momentum thickness – Momentum integral equation-Boundary layer separation and control – drag on flat plate.

**TOTAL: 60 PERIODS****OUTCOMES:**

At the end of the course students will be able to

- Get a basic knowledge of fluids in static, kinematic and dynamic equilibrium.
- Understand and solve the problems related to equation of motion.
- Gain knowledge about dimensional and model analysis.
- Learn types of flow and losses of flow in pipes.
- Understand and solve the boundary layer problems.

**OBJECTIVES :**

- To introduce the rudiments of plane surveying and geodetic principles to Civil Engineers.
- To learn the various methods of plane and geodetic surveying to solve the real world Civil Engineering problems.
- To introduce the concepts of Control Surveying
- To introduce the basics of Astronomical Surveying

**UNIT I FUNDAMENTALS OF CONVENTIONAL SURVEYING AND LEVELLING 12**

Classifications and basic principles of surveying - Equipment and accessories for ranging and chaining - Methods of ranging - Compass - Types of Compass - Basic Principles- Bearing – Types - True Bearing - Magnetic Bearing - Levelling- Principles and theory of Levelling – Datum- - Bench Marks – Temporary and Permanent Adjustments- Methods of Levelling- Booking – Reduction - Sources of errors in Levelling - Curvature and refraction.

**UNITII THEODOLITE AND TACHEOMETRIC SURVEYING 12**

Horizontal and vertical angle measurements - Temporary and permanent adjustments - Heights and distances - Tacheometer - Stadia Constants - Analytic Lens -Tangential and Stadia Tacheometry surveying - Contour – Contouring – Characteristics of contours – Methods of contouring – Tacheometric contouring - Contour gradient – Uses of contour plan and map

**UNIT III CONTROL SURVEYING AND ADJUSTMENT 12**

Horizontal and vertical control – Methods – specifications – triangulation- baseline – satellite stations – reduction to centre- trigonometrical levelling – single and reciprocal observations – traversing – Gale’s table. - Errors Sources- precautions and corrections – classification of errors –true and most probable values - weighed observations – method of equal shifts – principle of least squares - normal equation – correlates- level nets- adjustment of simple triangulation networks.

**UNIT IV ADVANCED TOPICS IN SURVEYING 12**

Hydrographic Surveying – Tides – MSL – Sounding methods – Three point problem – Strength of fix – astronomical Surveying – Field observations and determination of Azimuth by altitude and hour and methods- Astronomical terms and definitions-coordinate systems-different time systems-Nautical corrections-Field observations and determination altitude and hour angle method

**UNIT V MODERN SURVEYING**

Total Station : Advantages - Fundamental quantities measured- Parts and a principle On board calculations - Field procedure - Errors and good station GPS Surveying : Different segments – space control configuration-signal structure - Orbit determination and representation. Selective availability- Task of control segment –processing – traversing and triangulation.

**TOTAL : 45 PERIODS****OUTCOMES :**

At the end of the course the student will be able to understand

- The use of various surveying instruments and mapping
- Measuring Horizontal angle and vertical angle using different instruments
- Methods of Leveling and setting Levels with different instruments
- Concepts of astronomical surveying and methods to determine time, longitude, latitude and azimuth
- Concept and principle of modern surveying.

CONSTRUCTION MATERIALS

L T P C

3 2 0 4

**OBJECTIVE:**

- To introduce students to various materials commonly used in civil engineering construction and their properties.

**UNIT I STONES – BRICKS – CONCRETE BLOCKS 9**

Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacturing of clay bricks – Tests on bricks – Compressive Strength – Water Absorption – Efflorescence – Bricks for special use – Refractory bricks – Concrete blocks – Lightweight concrete blocks.

**UNIT II LIME – CEMENT – AGGREGATES – MORTAR 9**

Lime – Preparation of lime mortar – Cement – Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar – Hydration – Compressive strength – Tensile strength – Fineness– Soundness and consistency – Setting time – fine aggregates – river sand – crushed stone sand – properties – coarse Aggregates – Crushing strength – Impact strength – Flakiness Index – Elongation Index – Abrasion Resistance – Grading

**UNIT III CONCRETE 9**

Concrete – Ingredients – Manufacturing Process – Batching plants –mixing – transporting – placing – compaction of concrete –curing and finishing – Ready mix Concrete – Mix specification.

**UNIT IV TIMBER AND OTHER MATERIALS 9**

Timber – Market forms – Industrial timber– Plywood – Veneer – Thermocol – Panels of laminates – Steel – Aluminum and Other Metallic Materials – Composition – Aluminium composite panel – Market forms – Mechanical treatment – Paints – Varnishes – Distempers – Bitumens.

**UNIT V MODERN MATERIALS 9**

Glass – Ceramics – Sealants for joints – Fibre glass reinforced plastic – Clay products –Refractories –Composite materials – Types – Applications of laminar composites – Fibre textiles– Geomembranes and Geotextiles for earth reinforcement.

**TOTAL: 60 PERIODS**

**OUTCOMES:**

On completion of this course the students will be able to

- Compare the properties of most common and advanced building materials.
- understand the typical and potential applications of lime, cement and aggregates
- know the production of concrete and also the method of placing and making of concrete elements.
- understand the applications of timbers and other materials
- Understand the importance of modern material for construction.

7. IS 10262-2009: Indian Standard Concrete Mix Proportioning –Guidelines, 2009

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- At the end of this course the students will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and to apply this knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor.

**UNIT I PHYSICAL GEOLOGY 9**

Geology in civil engineering – branches of geology – structure of earth and its composition weathering of rocks – scale of weathering – soils - landforms and processes associated with river, wind, groundwater and sea – relevance to civil engineering. Plate tectonics – Earth quakes – Seismic zones in India.

**UNIT II MINEROLOGY 9**

Physical properties of minerals – Quartz group, Feldspar group, Pyroxene - hypersthene and augite, Amphibole – hornblende, Mica – muscovite and biotite, Calcite, Gypsum and Clay minerals.

**UNIT III PETROLOGY 9**

Classification of rocks, distinction between Igneous, Sedimentary and Metamorphic rocks. Engineering properties of rocks. Description, occurrence, engineering properties, distribution and uses of Granite, Dolerite, Basalt, Sandstone, Limestone, Laterite, Shale, Quartzite, Marble, Slate, Gneiss and Schist.

**UNIT IV STRUCTURAL GEOLOGY AND GEOPHYSICAL METHODS 9**

Geological maps – attitude of beds, study of structures – folds, faults and joints – relevance to civil engineering. Geophysical methods – Seismic and electrical methods for subsurface investigations.

**UNIT V APPLICATION OF GEOLOGICAL INVESTIGATIONS 9**

Remote sensing for civil engineering applications; Geological conditions necessary for design and construction of Dams, Reservoirs, Tunnels, and Road cuttings - Hydrogeological investigations and mining - Coastal protection structures. Investigation of Landslides, causes and mitigation.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students completing this course

- Will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and the action of various geological agencies.
- Will get basics knowledge on properties of minerals.
- Gain knowledge about types of rocks, their distribution and uses.
- Will understand the methods of study on geological structure.
- Will understand the application of geological investigation in projects such as dams, tunnels, bridges, roads, airport and harbor

3. Dobrin, M.B "An introduction to geophysical prospecting", McGraw Hill, New Delhi, 1988.

**OBJECTIVE:**

- To facilitate the understanding of the behavior of construction materials.

**I. TEST ON FINE AGGREGATES**

12

1. Grading of fine aggregates
2. Test for specific gravity and test for bulk density
3. Compacted and loose bulk density of fine aggregate

**II. TEST ON COARSE AGGREGATE**

12

1. Determination of impact value of coarse aggregate
2. Determination of elongation index
3. Determination of flakiness index
4. Determination of aggregate crushing value of coarse aggregate

**III. TEST ON CONCRETE**

12

1. Test for Slump
2. Test for Compaction factor
3. Test for Compressive strength - Cube & Cylinder
4. Test for Flexural strength

**IV. TEST ON BRICKS AND BLOCKS**

12

1. Test for compressive strength of bricks and blocks
2. Test for Water absorption of bricks and blocks
3. Determination of Efflorescence of bricks
4. Test on tiles

**TOTAL: 60 PERIODS****OUTCOME:**

- The students will have the required knowledge in the area of testing of construction materials and components of construction elements experimentally.

**REFERENCES:**

1. Construction Materials Laboratory Manual, Anna University, Chennai-600 025.
2. IS 4031 (Part 1) – 1996 – Indian Standard Method for determination of fineness by dry sieving.
3. IS 2386 (Part 1 to Part 6) – 1963 – Indian Standard methods for test for aggregate for concrete
4. IS 383 – 1970 Indian Standard specification for coarse and fine aggregates from natural sources for concrete.

**OBJECTIVE :**

- At the end of the course the student will possess knowledge about Survey field techniques

**LIST OF EXPERIMENTS:****Chain Survey 12**

1. Study of chains and its accessories, Aligning, Ranging, Chaining and Marking Perpendicular offset
2. Setting out works – Foundation marking using tapes single Room and Double Room

**Compass Survey 12**

3. Compass Traversing – Measuring Bearings & arriving included angles

**Levelling - Study of levels and levelling staff**

4. Fly levelling using Dumpy level & Tilting level
5. Check levelling

**Theodolite - Study of Theodolite 12**

6. Measurements of horizontal angles by reiteration and repetition and vertical angles
7. Determination of elevation of an object using single plane method when base is accessible/inaccessible.

**Tacheometry – Tangential system – Stadia system 12**

8. Determination of Tacheometric Constants
9. Heights and distances by stadia Tacheometry
10. Heights and distances by Tangential Tacheometry

**Total Station - Study of Total Station, Measuring Horizontal and vertical angles 12**

12. Traverse using Total station and Area of Traverse
13. Determination of distance and difference in elevation between two inaccessible points using Total station

**TOTAL: 60 PERIODS****OUTCOME:**

- Students completing this course would have acquired practical knowledge on handling basic survey instruments including Theodolite, Tacheometry, Total Station and GPS and have adequate knowledge to carryout Triangulation and Astronomical surveying including general field marking for various engineering projects and Location of site etc.

**LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS**

<b>Sl.No.</b>	<b>Description of Equipment</b>	<b>Quantity</b>
1.	Total Station	3 Nos
2.	Theodolites	Atleast 1 for every 5 students
3.	Dumpy level / Filling level	Atleast 1 for every 5 students
4.	Pocket stereoscope	1
5.	Ranging rods	1 for a set of 5 students
6.	Levelling staff	
7.	Cross staff	
8.	Chains	
9.	Tapes	
10.	Arrows	
11.	Prismatic Compass	10 nos
12.	Surveyor Compass	2 nos
13.	Survey grade or Hand held GPS	3 nos

**OBJECTIVES:**

The Course will enable learners to:

- Equip students with the English language skills required for the successful undertaking of academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage in specific academic speaking activities.
- improve general and academic listening skills
- Make effective presentations.

**UNIT I****6**

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation - pronunciation basics taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances.

**UNIT II****6**

Listen to a process information- give information, as part of a simple explanation - conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics.

**UNIT III****6**

Lexical chunking for accuracy and fluency- factors influence fluency, deliver a five-minute informal talk - greet - respond to greetings - describe health and symptoms - invite and offer - accept - decline - take leave - listen for and follow the gist- listen for detail

**UNIT IV****6**

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizing academic readings and lectures conversational speech listening to and participating in conversations - persuade.

**UNIT V****6**

Formal and informal talk - listen to follow and respond to explanations, directions and instructions in academic and business contexts - strategies for presentations and interactive communication - group/pair presentations - negotiate disagreement in group work.

**TOTAL : 30 PERIODS****OUTCOMES:**

At the end of the course Learners will be able to:

- Listen and respond appropriately.
- Participate in group discussions
- Make effective presentations
- Participate confidently and appropriately in conversations both formal and informal

**TEXTBOOKS:**

**NUMERICAL METHODS**

**L T P C**  
**4 0 0 4**

**19148S41C**  
**OBJECTIVES :**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the numerical techniques of interpolation in various intervals in real life situations.
- To acquaint the student with understanding of numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquaint the knowledge of various techniques and methods of solving ordinary differential equations.
- To understand the knowledge of various techniques and methods of solving various types of partial differential equations.

**UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 12**  
 Solution of algebraic and transcendental equations - Fixed point iteration method – Newton Raphson method - Solution of linear system of equations - Gauss elimination method – Pivoting - Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel - Eigenvalues of a matrix by power method and Jacobi's method for symmetric matrices.

**UNIT II INTERPOLATION AND APPROXIMATION 12**  
 Interpolation with unequal intervals - Lagrange's interpolation – Newton's divided difference interpolation- Cubic Splines - Difference operators and relations Interpolation intervals-with equal - Newton's forward and backward difference formulae.

**UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 12**  
 Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson's 1/3 rule – Romberg's Method - Two point and three point Gaussian quadrature formulae – Evaluation of double integrals by Trapezoidal and Simpson's 1/3 rule – Romberg's Method - Two point and three point simpson's 1/3 rule

**UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 12**  
 Single step methods - Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge - Kutta method for solving first order equations - Multi step methods - Milne's and Adams - Bash forth predictor corrector methods for solving first order equations.

**UNIT V BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 12**  
 Finite difference methods for solving second order two - point linear boundary value problems - Finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain – One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods – One dimensional wave equation by explicit method.

**TOTAL: 60 PERIODS**

**OUTCOMES :**

Upon successful completion of the course, students should be able to:

- Understand the basic concepts and techniques of solving algebraic and transcendental equations.
- Appreciate the numerical techniques of interpolation and error approximations in various intervals in real life situations.
- Apply the numerical techniques of differentiation and integration for engineering problems.
- Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.
- Solve the partial and ordinary differential equations with initial and boundary conditions by using certain techniques with engineering applications.

**OBJECTIVE:**

- The main objective of this course is to make the student aware of the various construction techniques, practices and the equipment needed for different types of construction activities. At the end of this course the student shall have a reasonable knowledge about the various construction procedures for sub to super structure and also the equipment needed for construction of various types of structures from foundation to super structure.

**UNIT I CONSTRUCTION TECHNIQUES 9**

Structural systems - Load Bearing Structure - Framed Structure - Load transfer mechanism – floor system - Development of construction techniques - High rise Building Technology - Seismic effect - Environmental impact of materials – responsible sourcing - Eco Building (Green Building) - Material used - Construction methods - Natural Buildings - Passive buildings - Intelligent(Smart) buildings - Meaning - Building automation - Energy efficient buildings for various zones-Case studies of residential, office buildings and other buildings in each zones.

**UNIT II CONSTRUCTION PRACTICES 9**

Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork - masonry – stone masonry – Bond in masonry - concrete hollow block masonry – flooring – damp proof courses – construction joints – movement and expansion joints – pre cast pavements – Building foundations – basements – temporary shed – centering and shuttering – slip forms – scaffoldings – de-shuttering forms – Fabrication and erection of steel trusses – frames – braced domes – laying brick – weather and water proof – roof finishes – acoustic and fire protection.

**UNIT III SUB STRUCTURE CONSTRUCTION 9**

Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques - well and caisson - sinking cofferdam - cable anchoring and grouting - driving diaphragm walls, sheet piles - shoring for deep cutting - well points -Dewatering and stand by Plant equipment for underground open excavation.

**UNIT IV SUPER STRUCTURE CONSTRUCTION 9**

Launching girders, bridge decks, off shore platforms – special forms for shells - techniques for heavy decks – in-situ pre-stressing in high rise structures, Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors - Erection of articulated structures, braced domes and space decks.

**UNIT V CONSTRUCTION EQUIPMENT 9**

Selection of equipment for earth work - earth moving operations - types of earthwork equipment - tractors, motor graders, scrapers, front end loaders, earth movers – Equipment for foundation and pile driving. Equipment for compaction, batching, mixing and concreting - Equipment for material handling and erection of structures – types of cranes - Equipment for dredging, trenching, tunneling.

**TOTAL: 60 PERIODS****OUTCOMES:**

On successful completion of this course, students will be able to:

- know the different construction techniques and structural systems
- Understand various techniques and practices on masonry construction, flooring, and roofing.
- Plan the requirements for substructure construction.
- Know the methods and techniques involved in the construction of various types of super structures
- Select, maintain and operate hand and power tools and equipment used in the building construction sites.

3. Deodhar, S.V. "Construction Equipment and Job Planning", Khanna Publishers, New Delhi, 2012.
4. Mahesh Varma, "Construction Equipment and its Planning and Application", Metropolitan Book Company, New Delhi, 1983.

**OBJECTIVES:**

- To know the method of finding slope and deflection of beams and trusses using energy theorems and to know the concept of analysing indeterminate beam
- To estimate the load carrying capacity of columns, stresses due to unsymmetrical bending and various theories for failure of material.

**UNIT I ENERGY PRINCIPLES 12**

Strain energy and strain energy density – strain energy due to axial load (gradual, sudden and impact loadings), shear, flexure and torsion – Castigliano's theorems – Maxwell's reciprocal theorem - Principle of virtual work – unit load method - Application of energy theorems for computing deflections in determinate beams, plane frames and plane trusses – lack of fit and temperature effects - Williot Mohr's Diagram.

**UNIT II INDETERMINATE BEAMS 12**

Concept of Analysis - Propped cantilever and fixed beams - fixed end moments and reactions – sinking and rotation of supports - Theorem of three moments – analysis of continuous beams – shear force and bending moment diagrams.

**UNIT III COLUMNS AND CYLINDERS 12**

Euler's column theory – critical load for prismatic columns with different end conditions – Effective length – limitations - Rankine-Gordon formula - Eccentrically loaded columns – middle third rule - core of a section – Thin cylindrical and spherical shells – stresses and change in dimensions - Thick cylinders – Compound cylinders – shrinking on stresses.

**UNIT IV STATE OF STRESS IN THREE DIMENSIONS 12**

Stress tensor at a point – Stress invariants - Determination of principal stresses and principal planes - Volumetric strain. Theories of failure: Maximum Principal stress theory – Maximum Principal strain theory – Maximum shear stress theory – Total Strain energy theory – Maximum distortion energy theory – Application problems.

**UNIT V ADVANCED TOPICS 12**

Unsymmetrical bending of beams of symmetrical and unsymmetrical sections – Shear Centre - curved beams – Winkler Bach formula – stresses in hooks.

**TOTAL: 60 PERIODS****OUTCOMES:**

Students will be able to

- Determine the strain energy and compute the deflection of determinate beams, frames and trusses using energy principles.
- Analyze propped cantilever, fixed beams and continuous beams using theorem of three moment equation for external loadings and support settlements.
- find the load carrying capacity of columns and stresses induced in columns and cylinders
- Determine principal stresses and planes for an element in three dimensional state of stress and study various theories of failure
- Determine the stresses due to Unsymmetrical bending of beams, locate the shear center, and find the stresses in curved beams.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines. At the completion of the course, the student should be able to relate the theory and practice of problems in hydraulic engineering.

**UNIT I UNIFORM FLOW 12**  
Definition and differences between pipe flow and open channel flow - Types of Flow - Properties of open channel - Velocity distribution in open channel - Steady uniform flow: Chezy equation, Manning equation - Best hydraulic sections for uniform flow – Wide open channel - Specific energy and specific force – Critical flow .

**UNIT II GRADUALLY VARIED FLOW 12**  
Dynamic equations of gradually varied flows – Types of flow profiles - Classifications: Computation by Direct step method and Standard step method – Control section – Break in Grade – Computation.

**UNIT III RAPIDLY VARIED FLOW 12**  
Application of the momentum equation for RVF - Hydraulic jumps - Types - Energy dissipation – Celerity – Rapidly varied unsteady flows (positive and negative surges)

**UNIT IV TURBINES 12**  
Impact of Jet on flat, curved plates, Stationary and Moving –Classification of Turbines – Pelton wheel – Francis turbine – Kaplan turbine - Specific speed – Characteristic Curves of Turbines-Draft tube and cavitation.

**UNIT V PUMPS 12**  
Classification of Pumps - Centrifugal pumps – Work done - Minimum speed to start the pump - NPSH - Multistage pumps – Characteristics curve - Reciprocating pumps - Negative slip - Indicator diagrams and its variations – Air vessels - Savings in work done.

**TOTAL : 45 PERIODS**

**OUTCOMES:**

On completion of this course the students will be able to

- Apply their knowledge of fluid mechanics in addressing problems in open channels.
- Able to identify a effective section for flow in different cross sections.
- To solve problems in uniform, gradually and rapidly varied flows in steady state conditions.
- Understand the principles, working and application of turbines.
- Understand the principles, working and application of pumps.

**OBJECTIVE:**

- To impart knowledge to the students on the properties of materials for concrete by suitable tests, mix design for concrete and special concretes.

**UNIT I      CONSTITUENT MATERIALS      9**

Cement - Different types - Chemical composition and Properties – Hydration of cement - Tests on cement - IS Specifications - Aggregates – Classification - Mechanical properties and tests as per BIS - Grading requirements – Water - Quality of water for use in concrete.

**UNIT II      CHEMICAL AND MINERAL ADMIXTURES      9**

Accelerators – Retarders - Plasticizers - Super plasticizers - Water proofers - Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaoline - Effects on concrete properties.

**UNIT III      PROPORTIONING OF CONCRETE MIX      9**

Principles of Mix Proportioning - Properties of concrete related to Mix Design - Physical properties of materials required for Mix Design - Design Mix and Nominal Mix - BIS Method of Mix Design - Mix Design Examples

**UNIT IV      FRESH AND HARDENED PROPERTIES OF CONCRETE      9**

Workability - Tests for workability of concrete - Segregation and Bleeding - Determination of strength Properties of Hardened concrete - Compressive strength – split tensile strength - Flexural strength - Stress-strain curve for concrete - Modulus of elasticity – durability of concrete – water absorption – permeability – corrosion test – acid resistance.

**UNIT V      SPECIAL CONCRETES      9**

Light weight concretes - foam concrete- self compacting concrete – vacuum concrete - High strength concrete - Fibre reinforced concrete – Ferrocement - Ready mix concrete – SIFCON - Shotcrete – Polymer concrete - High performance concrete - Geopolymer Concrete.

**TOTAL: 60 PERIODS****OUTCOMES:**

Students will be able to understand

- The various requirements of cement, aggregates and water for making concrete
- The effect of admixtures on properties of concrete
- The concept and procedure of mix design as per IS method
- The properties of concrete at fresh and hardened state
- The importance and application of special concretes.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To impart knowledge to classify the soil based on index properties and to assess their engineering properties based on the classification. To familiarize the students about the fundamental concepts of compaction, flow through soil, stress transformation, stress distribution, consolidation and shear strength of soils. To impart knowledge of design of both finite and infinite slopes.

**UNIT I SOIL CLASSIFICATION AND COMPACTION 9**

History – formation and types of soil – composition - Index properties – clay mineralogy structural arrangement of grains – description – Classification – BIS – US – phase relationship – Compaction – theory – laboratory and field technology – field Compaction method – factors influencing compaction.

**UNIT II EFFECTIVE STRESS AND PERMEABILITY 9**

Soil - water – Static pressure in water - Effective stress concepts in soils – Capillary phenomena— Permeability – Darcy’s law – Determination of Permeability – Laboratory Determination (Constant head and falling head methods) and field measurement pumping out in unconfined and confined aquifer – Factors influencing permeability of soils – Seepage - Two dimensional flow – Laplace’s equation – Introduction to flow nets – Simple problems Sheet pile and weir.

**UNIT III STRESS DISTRIBUTION AND SETTLEMENT 9**

Stress distribution in homogeneous and isotropic medium – Boussines of theory – (Point load, Line load and udl) Use of Newmarks influence chart –Components of settlement – Immediate and consolidation settlement – Factors influencing settlement – Terzaghi’s one dimensional consolidation theory – Computation of rate of settlement. –  $\sqrt{t}$  and  $\log t$  methods.  $e$ - $\log p$  relationship consolidation settlement N-C clays – O.C clays – Computation.

**UNIT IV SHEAR STRENGTH 9**

Shear strength of cohesive and cohesion less soils – Mohr-Coulomb failure theory – shear strength - Direct shear, Triaxial compression, UCC and Vane shear tests – Pore pressure parameters – Factors influences shear strength of soil.

**UNIT V SLOPE STABILITY 9**

Infinite slopes and finite slopes — Friction circle method – Use of stability number –Guidelines for location of critical slope surface in cohesive and  $c - \phi$  soil – Slope protection measures.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- classify the soil and assess the engineering properties, based on index properties.
- Understand the stress concepts in soils
- Understand and identify the settlement in soils.
- Determine the shear strength of soil
- Analyze both finite and infinite slopes.

**OBJECTIVE:**

- To expose the students to the testing of different materials under the action of various forces and determination of their characteristics experimentally.

**LIST OF EXPERIMENTS**

1. Tension test on steel rod
2. Compression test on wood
3. Double shear test on metal
4. Torsion test on mild steel rod
5. Impact test on metal specimen (Izod and Charpy)
6. Hardness test on metals (Rockwell and Brinell Hardness Tests)
7. Deflection test on metal beam
8. Compression test on helical spring
9. Deflection test on carriage spring

**TOTAL: 60 PERIODS****OUTCOME:**

- The students will have the required knowledge in the area of testing of materials and components of structural elements experimentally.

**REFERENCES:**

1. Strength of Materials Laboratory Manual, Anna University, Chennai - 600 025.
2. IS 1786-2008 (Fourth Revision, Reaffirmed 2013), 'High strength deformed bars and wires for concrete reinforcement – Specification', 2008.

**LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS**

Sl. No.	Description of Equipment	Quantity
1.	UTM of minimum 400 kN capacity	1
2.	Torsion testing machine	1
3.	Izod impact testing machine	1
4.	Hardness testing machine Rockwell Vicker's } (any 2) Brinell }	1 each
5.	Beam deflection test apparatus	1
6.	Extensometer	1
7.	Compressometer	1
8.	Dial gauges	Few
9.	Le Chatelier's apparatus	2
10.	Vicat's apparatus	2
11.	Mortar cube moulds	10

**OBJECTIVE:**

- Students should be able to verify the principles studied in theory by performing the experiments in lab.

**LIST OF EXPERIMENTS****A. Flow Measurement**

1. Calibration of Rotameter
2. Calibration of Venturimeter / Orificemeter
3. Bernoulli's Experiment

**B. Losses in Pipes**

4. Determination of friction factor in pipes
5. Determination of minor losses

**C. Pumps**

6. Characteristics of Centrifugal pumps
7. Characteristics of Gear pump
8. Characteristics of Submersible pump
9. Characteristics of Reciprocating pump

**D. Turbines**

10. Characteristics of Pelton wheel turbine
11. Characteristics of Francis turbine/Kaplan turbine

**E. Determination of Metacentric height**

12. Determination of Metacentric height of floating bodies

**TOTAL: 60 PERIODS****OUTCOMES:**

- The students will be able to measure flow in pipes and determine frictional losses.
- The students will be able to develop characteristics of pumps and turbines.

**REFERENCES:**

1. Sarbjit Singh. "Experiments in Fluid Mechanics", Prentice Hall of India Pvt. Ltd, Learning Private Limited, Delhi, 2009.

**LIST OF EQUIPMENTS**

1. One set up of Rotometer
2. One set up of Venturimeter/Orifice meter
3. One Bernoulli's Experiment set up
4. One set up of Centrifugal Pump
5. One set up of Gear Pump
6. One set up of Submersible pump
7. One set up of Reciprocating Pump
8. One set up of Pelton Wheel turbine

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

9. One set up of Francis turbines/one set of kaplon turbine
10. One set up of equipment for determination of Metacentric height of floating bodies
11. One set up for determination of friction factor in pipes
12. One set up for determination of minor losses.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVES:**

- Strengthen the reading skills of students of engineering.
- Enhance their writing skills with specific reference to technical writing.
- Develop students' critical thinking skills.
- Provide more opportunities to develop their project and proposal writing skills.

**UNIT I**

Reading - Strategies for effective reading-Use glosses and footnotes to aid reading comprehension- Read and recognize different text types-Predicting content using photos and title Writing-Plan before writing- Develop a paragraph: topic sentence, supporting sentences, concluding sentence –Write a descriptive paragraph.

**UNIT II**

Reading-Read for details-Use of graphic organizers to review and aid comprehension Writing-State reasons and examples to support ideas in writing- Write a paragraph with reasons and examples- Write an opinion paragraph

**UNIT III**

Reading- Understanding pronoun reference and use of connectors in a passage- speed reading techniques- Writing- Elements of a good essay-Types of essays- descriptive-narrative- issue-based-argumentative-analytical.

**UNIT IV**

Reading- Genre and Organization of Ideas- Writing- Email writing- visumes – Job application-project writing-writing convincing proposals.

**UNIT V**

Reading- Critical reading and thinking- understanding how the text positions the reader- identify Writing- Statement of Purpose- letter of recommendation- Vision statement

**TOTAL: 30 PERIODS****OUTCOMES:**

At the end of the course Learners will be able to:

- Write different types of essays.
- Write winning job applications.
- Read and evaluate texts critically.
- Display critical thinking in various professional contexts.

**TEXT BOOKS:**

1. Gramer F. Margot and Colin S. Ward Reading and Writing (Level 3) Oxford University Press: Oxford, 2011

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- To introduce the different types of philosophies related to design of basic structural elements such as slab, beam, column and footing which form part of any structural system with reference to Indian standard code of practice.

**UNIT I INTRODUCTION 9+6**

Objective of structural design-Steps in RCC Structural Design Process- Type of Loads on Structures and Load combinations- Code of practices and Specifications - Concept of Working Stress Method, Ultimate Load Design and Limit State Design Methods for RCC –Properties of Concrete and Reinforcing Steel - Analysis and Design of Singly reinforced Rectangular beams by working stress method - Limit State philosophy as detailed in IS code - Advantages of Limit State Method over other methods - Analysis and design of singly and doubly reinforced rectangular beams by Limit State Method.

**UNIT II DESIGN OF BEAMS 9+6**

Analysis and design of Flanged beams for – Use of design aids for Flexure - Behaviour of RC members in Shear, Bond and Anchorage - Design requirements as per current code - Behaviour of rectangular RC beams in shear and torsion - Design of RC members for combined Bending, Shear and Torsion.

**UNIT III DESIGN OF SLABS AND STAIRCASE 9+6**

Analysis and design of cantilever, one way simply supported and continuous slabs and supporting beams-Two way slab- Design of simply supported and continuous slabs using IS code coefficients- Types of Staircases – Design of dog-legged Staircase.

**UNIT IV DESIGN OF COLUMNS 9+6**

Types of columns –Axially Loaded columns – Design of short Rectangula Square and circular columns – Design of Slender columns- Design for Uniaxial and Biaxial bending using Column Curves

**UNIT V DESIGN OF FOOTINGS 9+6**

Concepts of Proportioning footings and foundations based on soil properties-Design of wall footing – Design of axially and eccentrically loaded Square, Rectangular pad and sloped footings – Design of Combined Rectangular footing for two columns only.

**TOTAL: 75 PERIODS****OUTCOMES:**

Students will be able to

- Understand the various design methodologies for the design of RC elements.
- Know the analysis and design of flanged beams by limit state method and sign of beams for shear, bond and torsion.
- design the various types of slabs and staircase by limit state method.
- Design columns for axial, uniaxial and biaxial eccentric loadings.
- Design of footing by limit state method.

8. Shah V L Karve S R., "Limit State Theory and Design of Reinforced Concrete", Structures Publications, Pune, 2013

**OBJECTIVE:**

- To introduce the students to basic theory and concepts of classical methods of structural analysis

**UNIT I STRAIN ENERGY METHOD 9**

Determination of Static and Kinematic Indeterminacies – Analysis of continuous beams, plane frames and indeterminate plane trusses by strain energy method (up to two degree of redundancy).

**UNIT II SLOPE DEFLECTION METHOD 9**

Slope deflection equations – Equilibrium conditions - Analysis of continuous beams and rigid frames – Rigid frames with inclined members - Support settlements- symmetric frames with symmetric and skew-symmetric loadings.

**UNIT III MOMENT DISTRIBUTION METHOD 9**

Stiffness and carry over factors – Distribution and carryover of moments - Analysis of continuous Beams- Plane rigid frames with and without sway – Support settlement - symmetric frames with symmetric and skew-symmetric loadings.

**UNIT IV FLEXIBILITY METHOD 9**

Primary structures - Compatibility conditions – Formation flexibility matrices - Analysis of indeterminate pin- jointed plane frames, continuous beams and rigid jointed plane frames by direct flexibility approach.

**UNIT V STIFFNESS METHOD 9**

Restrained structure –Formation of stiffness matrices - equilibrium condition - Analysis of Continuous Beams, Pin-jointed plane frames and rigid frames by direct stiffness method.

**TOTAL: 60 PERIODS****OUTCOMES:**

Students will be able to

- Analyze continuous beams, pin-jointed indeterminate plane frames and rigid plane frames by strain energy method
- Analyze the continuous beams and rigid frames by slope deflection method.
- Understand the concept of moment distribution and analysis of continuous beams and rigid frames with and without sway.
- Analyze the indeterminate pin jointed plane frames continuous beams and rigid frames using matrix flexibility method.
- Understand the concept of matrix stiffness method and analysis of continuous beams, pin jointed trusses and rigid plane frames.

**WATER SUPPLY ENGINEERING**

**L T P C**

**3 0 0 3**

**OBJECTIVE:**

- To equip the students with the principles and design of water treatment units and distribution system.

**UNIT I SOURCES OF WATER 12**

Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater – Impounding Reservoir – Development and selection of source – Source Water quality – Characterization – Significance – Drinking Water quality standards.

**UNIT II CONVEYANCE FROM THE SOURCE 12**

Water supply – intake structures – Functions; Pipes and conduits for water – Pipe materials – Hydraulics of flow in pipes – Transmission main design – Laying, jointing and testing of pipes – appurtenances – Types and capacity of pumps – Selection of pumps and pipe materials.

**UNIT III WATER TREATMENT 12**

Objectives – Unit operations and processes – Principles, functions, and design of water treatment plant units, aerators of flash mixers, Coagulation and flocculation – Clarifloccuator-Plate and tube settlers - Pulsator clarifier - sand filters - Disinfection - Residue Management – Construction, Operation and Maintenance aspects.

**UNIT IV ADVANCED WATER TREATMENT 12**

Water softening – Desalination- R.O. Plant – demineralization – Adsorption - Ion exchange – Membrane Systems – RO Reject Management - Iron and Manganese removal - Defluoridation - Construction and Operation & Maintenance aspects – Recent advances - MBR process

**UNIT V WATER DISTRIBUTION AND SUPPLY 12**

Requirements of water distribution – Components – Selection of pipe material – Service reservoirs – Functions – Network design – Economics – Analysis of distribution networks – Computer applications – Appurtenances – Leak detection. Principles of design of water supply in buildings – House service connection – Fixtures and fittings, systems of plumbing and types of plumbing.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

The students completing the course will have

- an insight into the structure of drinking water supply systems, including water transport, treatment and distribution
- the knowledge in various unit operations and processes in water treatment
- an ability to design the various functional units in water treatment
- an understanding of water quality criteria and standards, and their relation to public health
- the ability to design and evaluate water supply project alternatives on basis of chosen criteria.

**TEXTBOOKS:**

of India, New Delhi, 1999.

2. Syed R. Qasim and Edward M. Motley Guang Zhu, Water Works Engineering Planning, Design and Operation, Prentice Hall of India Learning Private Limited, New Delhi, 2009.

**OBJECTIVE:**

- To impart knowledge to plan and execute a detail site investigation programme, to select geotechnical design parameters and type of foundations. Also to familiarize the students for the geotechnical design of different type of foundations and retaining walls.

**UNIT I SITE INVESTIGATION AND SELECTION OF FOUNDATION 9**

Scope and objectives – Methods of exploration – Auguring and boring – Wash boring and rotary drilling – Depth and spacing of bore holes – Soil samples – Representative and undisturbed – Sampling methods – Split spoon sampler, Thin wall sampler, Stationary piston sampler – Penetration tests (SPT and SCPT) – Data interpretation - Strength parameters - Bore log report and Selection of foundation.

**UNIT II SHALLOW FOUNDATION 9** Location and depth of foundation – Codal provisions – Bearing capacity of shallow foundation on homogeneous deposits – Terzaghi's formula and BIS formula – Factors affecting bearing capacity – Bearing capacity from in-situ tests (SPT, SCPT and plate load) – Allowable bearing pressure – Seismic considerations in bearing capacity evaluation. Determination of Settlement of foundations on granular and clay deposits – Total and differential settlement – Allowable settlements – Codal provision – Methods of minimizing total and differential settlements.

**UNIT III FOOTINGS AND RAFTS 9**

Types of Isolated footing, Combined footing, Mat foundation – Contact pressure and settlement distribution – Proportioning of foundations for conventional rigid behaviour – Minimum thickness for rigid behaviour – Applications – Compensated foundation – Codal provision

**UNIT IV PILE FOUNDATION 9**

Types of piles and their functions – Factors influencing the selection of pile – Carrying capacity of single pile in granular and cohesive soil – Static formula – Dynamic formulae (Engineering news and Hileys) – Capacity from insitu tests (SPT and SCPT) – Negative skin friction – Uplift capacity-Group capacity by different methods (Feld's rule, Converse – Labarra formula and block failure criterion) – Settlement of pile groups – Interpretation of pile load test (routine test only), Under reamed piles – Capacity under compression and uplift – Cohesive – expansive – non expansive – Cohesionless soils – Codal provisions.

**UNIT V RETAINING WALLS 9**

Plastic equilibrium in soils – Active and passive states – Rankine's theory – Cohesionless and cohesive soil – Coulomb's wedge theory – Condition for critical failure plane – Earth pressure on retaining walls of simple configurations – Culmann's Graphical method – Pressure on the wall due to line load – Stability analysis of retaining walls – Codal provisions.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- Understand the site investigation, methods and sampling.
- Get knowledge on bearing capacity and testing methods.
- Design shallow footings.
- Determine the load carrying capacity, settlement of pile foundation.
- Determine the earth pressure on retaining walls and analysis for stability.

17. IS Code 14458 (Part 3) : 1998 “Retaining Wall for Hill Area – Guidelines, Construction Of Dry Stone Walls” , Bureau of Indian Standards, New Delhi.

**OBJECTIVE:**

- To develop skills to test the soils for their index and engineering properties and to characterise the soil based on their properties.

**EXERCISES:****1. DETERMINATION OF INDEX PROPERTIES** **20**

- a. Specific gravity of soil solids
- b. Grain size distribution – Sieve analysis
- c. Grain size distribution - Hydrometer analysis
- d. Liquid limit and Plastic limit tests
- e. Shrinkage limit and Differential free swell tests

**2. DETERMINATION OF INSITU DENSITY AND COMPACTION CHARACTERISTICS** **12**

- a. Field density Test ( Sand replacement method and core cutter method)
- b. Determination of moisture – density relationship using standard Proctor compaction test.
- c. Determination of relative density (Demonstration only)

**3. DETERMINATION OF ENGINEERING PROPERTIES** **28**

- a. Permeability determination (constant head and falling head methods)
- b. One dimensional consolidation test (Determination of Co-efficient of consolidation only)
- c. Direct shear test in cohesionless soil
- d. Unconfined compression test in cohesive soil
- e. Laboratory vane shear test in cohesive soil
- f. Tri-axial compression test in cohesionless soil (Demonstration only)
- g. California Bearing Ratio Test

**TOTAL: 60 PERIODS****OUTCOME:**

- Students are able to conduct tests to determine both the index and engineering properties of soils and to characterize the soil based on their properties.

**WATER AND WASTE WATER ANALYSIS LABORATORY**

**L T P C**

**0 0 4 2**

**COURSE OBJECTIVES:**

- To analyse the physical, chemical and biological characteristics of water and wastewater
- To quantify the dosage requirement for coagulation process
- To study the growth of micro-organism and its quantification
- To quantify the sludge

**Course Content:**

1. Physical, Chemical and biological characteristics of water and wastewater
2. Jar test
3. Chlorine demand and residual test
4. Growth of micro-organism

**COURSE OUTCOME:**

On the completion of the course, the students will be able to:

- Quantify the pollutant concentration in water and wastewater
- Suggest the type of treatment required and amount of dosage required for the treatment
- Examine the conditions for the growth of micro-organisms

**TOTAL: 60 PERIODS**

**List of Experiments:**

1. Determination of pH, Turbidity and conductivity
2. Determination of Hardness
3. Determination of Alkalinity and Acidity
4. Determination of Chlorides
5. Determination of Phosphates and Sulphates
6. Determination of iron and fluoride
7. Determination of Optimum Coagulant dosage
8. Determination of residual chlorine and available chlorine in bleaching powder
9. Determination of Oil, and Grease
10. Determination of suspended, settleable, volatile and fixed solids
11. Determination Dissolved Oxygen and BOD for the given sample
12. Determination of COD for given sample
13. Determination of SVI of Biological sludge and microscopic examination
14. Determination of MPN index of given water sample

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

The objective of the survey camp is to enable the students to get practical training in the field work. Groups of not more than six members in a group will carry out each exercise in survey camp. The camp must involve work on a large area of not less than 40 acres outside the campus (Survey camp should not be conducted inside the campus). At the end of the camp, each student shall have mapped and contoured the area. The camp record shall include all original field observations, calculations and plots.

Two weeks Survey Camp will be conducted during summer vacation in the following activities:

1. Traverse - using Total station

2. Contouring

(i). Radial tachometric contouring - Radial Line at Every 45 Degree and Length not less than 60 Meter on each Radial Line

(ii). Block Level/ By squares of size at least 100 Meter x 100 Meter atleast 20 Meter interval

(III). L.S & C.S - Road and canal alignment for a Length of not less than 1 Kilo Meter atleast L.S at Every 30M and C.S at every 90 M

3. Offset of Buildings and Plotting the Location

4. Sun observation to determine azimuth (guidelines to be given to the students)

5. Use of GPS to determine latitude and longitude and locate the survey camp location

6. Traversing using GPS

7. Curve setting by deflection angle

Apart from above students may be given survey exercises in other area also based on site condition to give good exposure on survey.

**AIM:**

To create a basic appreciation towards research process and awareness of various research publication

**OBJECTIVES:**

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to standard laboratory precautions and best practices for experimental work
- To provide orientation for basic mathematical computation useful in basic research

**OUTCOME:**

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

**PREREQUISITES:**

Basic mathematical and experimental skills and exposure to window-based computer operation system.

**UNIT I** **9**

Introduction to Research – Definition, Objectives, Motivation and purpose – types of research – Pure and applied, survey, case study experimental, exploratory – Research Design – Steps in selection and formulation of research problem - Steps in research – Criteria of Good Research, Problems Encountered by Researchers in India.

**UNIT II** **9**

Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem - Research design - Needs and features of good design - Different research design - Basic principles of experimental designs. Development of a research plan, Formulation of Hypothesis – Sampling techniques – Sampling error and sample size. Literature types- compendia and tables of information, Reviews, General treatises, Monographs.

**UNIT III** **9**

Methods of data collection – Primary and secondary data – observation – interview – Questionnaire – Tools for questionnaire; surveying & literature survey, spreadsheets, Technical writing, Construction of tools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, Practical Exercises. Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection.

**UNIT IV** **9****SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis-  
Uncertainty, accuracy and precision- Mean value; standard deviation; error on the mean-Using a spreadsheet  
for data analysis- Graphs and graph plotting-Least squares methods – descriptive statistics – elements of  
processing through computer- packages for analysis (Excel).

#### **UNIT V**

**9**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and  
Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals  
and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of  
literature, result, conclusions, Concepts of Bibliography and references, Technical Presentation.

**TOTAL: 45 PERIODS**

**OBJECTIVE:**

- To introduce the students to limit state design of structural steel members subjected to compressive, tensile and bending loads, including connections. Design of structural systems such as roof trusses, gantry girders as per provisions of current code (IS 800 - 2007) of practice for working stress and Limit state Method.

**UNIT I INTRODUCTION AND ALLOWABLE STRESS DESIGN 9**

Structural steel types – Mechanical Properties of structural steel- Indian structural steel products-Steps involved in the Design Process -Steel Structural systems and their Elements- -Type of Loads on Structures and Load combinations- Code of practices, Loading standards and Specifications - Concept of Allowable Stress Method, and Limit State Design Methods for Steel structures-Relative advantages and Limitations-Strengths and Serviceability Limit states.

Allowable stresses as per IS 800 section 11 -Concepts of Allowable stress design for bending and Shear – Check for Elastic deflection-Calculation of moment carrying capacity –Design of Laterally supported Solid Hot Rolled section beams-Allowable stress design of Angle Tension and Compression Members and estimation of axial load carrying capacity.

**UNIT II CONNECTIONS IN STEEL STRUCTURES 9**

Type of Fasteners- Bolts Pins and welds- Types of simple bolted and welded connections Relative advantages and Limitations-Modes of failure-the concept of Shear lag-efficiency of joints- Axially loaded bolted connections for Plates and Angle Members using bearing type bolts –Prying forces and Hanger connection– Design of Slip critical connections with High strength Friction Grip bolts.-Design of joints for combined shear and Tension- Eccentrically Loaded Bolted Bracket Connections- Welds-symbols and specifications- Effective area of welds-Fillet and but Welded connections-Axially Loaded connections for Plate and angle truss members and Eccentrically Loaded bracket connections.

**UNIT III TENSION MEMBERS 9**

Tension Members - Types of Tension members and sections –Behaviour of Tension Members-modes of failure-Slenderness ratio- Net area – Net effective sections for Plates ,Angles and Tee in tension –Concepts of Shear Lag- Design of plate and angle tension members-design of built up tension Members-Connections in tension members – Use of lug angles – Design of tension splice.

**UNIT IV COMPRESSION MEMBERS 9**

Types of compression members and sections–Behaviour and types of failures-Short and slender columns-Current code provisions for compression members- Effective Length, Slenderness ratio –Column formula and column curves- Design of single section and compound Angles-Axially Loaded solid section Columns-Design of Built up Laced and Battened type columns – Design of column bases – Plate and Gusseted bases for Axially loaded columns- Splices for columns.

**UNIT V DESIGN OF FLEXURAL MEMBERS 9**

Types of steel Beam sections- Behaviour of Beams in flexure- Codal Provisions – Classification of cross sections- Flexural Strength and Lateral stability of Beams –Shear Strength-Web Buckling, Crippling and deflection of Beams- Design of laterally supported Beams- Design of solid rolled section Beams- Design of Plated beams with cover plates - Design Strength of Laterally unsupported Beams – Design of laterally unsupported rolled section Beams- Purlin in Roof Trusses-Design of Channel and I section Purlins.

**TOTAL: 45 PERIODS****OUTCOMES:**

Students will be able to

- Understand the concepts of various design philosophies
- Design common bolted and welded connections for steel structures
- Design tension members and understand the effect of shear lag.
- Understand the design concept of axially loaded columns and column base connections.
- Understand specific problems related to the design of laterally restrained and unrestrained steel

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

beams.

7. SP 6(1) Hand book on structural Steel Sections

**OBJECTIVES :**

- To learn the method of drawing influence lines and its uses in various applications like beams and plane trusses.
- To analyse the arches, suspension bridges and space trusses.
- Also to learn Plastic analysis of beams and rigid frames.

**UNIT I INFLUENCE LINES FOR DETERMINATE BEAMS 12**

Influence lines for reactions in statically determinate beams – Influence lines for shear force and bending moment – Calculation of critical stress resultants due to concentrated and distributed moving loads – absolute maximum bending moment - influence lines for member forces in pin jointed plane frames.

**UNIT II INFLUENCE LINES FOR INDETERMINATE BEAMS 12**

Muller Breslau's principle– Influence line for Shearing force, Bending Moment and support reaction components of propped cantilever, continuous beams (Redundancy restricted to one), and fixed beams.

**UNIT III ARCHES 12**

Arches - Types of arches – Analysis of three hinged, two hinged and fixed arches - Parabolic and circular arches – Settlement and temperature effects.

**UNIT IV CABLES AND SUSPENSION BRIDGES 12**

Equilibrium of cable – length of cable - anchorage of suspension cables – stiffening girders- cables with three hinged stiffening girders – Influence lines for three hinged stiffening girders.

**UNIT V PLASTIC ANALYSIS 12**

Plastic theory – statistical indeterminate structures-plastic moment of resistance-plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – collapse load - Static and kinematic methods – Upper and lower bound theorems - Plastic analysis of indeterminate beams and frames.

**TOTAL: 60 PERIODS****OUTCOMES:**

Students will be able to

- Draw influence lines for statically determinate structures and calculate critical stress resultants.
- Understand Muller Breslau principle and draw the influence lines for statically indeterminate beams.
- Analyse of three hinged, two hinged and fixed arches.
- Analyse the suspension bridges with stiffening girders
- Understand the concept of Plastic analysis and the method of analyzing beams and rigid frames.

**OBJECTIVE:**

- The student is exposed to different phases in irrigation practices and Planning and management of irrigation. Further they will be imparted required knowledge on Irrigation storage and distribution canal system and Irrigation management.

**UNIT I CROP WATER REQUIREMENT 9**

Need and classification of irrigation- historical development and merits and demerits of irrigation-types of crops-crop season-duty, delta and base period- consumptive use of crops- estimation of Evapotranspiration using experimental and theoretical methods

**UNIT II IRRIGATION METHODS 9**

Tank irrigation – Well irrigation – Irrigation methods: Surface and Sub-Surface and Micro Irrigation – design of drip and sprinkler irrigation – ridge and furrow irrigation-Irrigation scheduling – Water distribution system- Irrigation efficiencies.

**UNIT III DIVERSION AND IMPOUNDING STRUCTURES 9**

Types of Impounding structures - Gravity dam – Forces on a dam -Design of Gravity dams; Earth dams, Arch dams- Diversion Head works - Weirs and Barrages-

**UNIT IV CANAL IRRIGATION 9**

Canal regulations – direct sluice - Canal drop – Cross drainage works-Canal outlets – Design of prismatic canal-canal alignments-Canal lining - Kennedy’s and Lacey’s Regime theory-Design of unlined canal

**UNIT V WATER MANAGEMENT IN IRRIGATION 9**

Modernization techniques- Rehabilitation – Optimization of water use-Minimizing water losses- On farm development works-Participatory irrigation management- Water resources associations-Changing paradigms in water management-Performance evaluation-Economic aspects of irrigation

**TOTAL :45 PERIODS****OUTCOMES:**

Students will be able to

- Have knowledge and skills on crop water requirements.
- Understand the methods and management of irrigation.
- Gain knowledge on types of Impounding structures
- Understand methods of irrigation including canal irrigation.
- Get knowledge on water management on optimization of water use.

**19155C64**

**HIGHWAY ENGINEERING**

**L T P C**  
**3 2 0 4**

**OBJECTIVE:**

- To give an overview about the highway engineering with respect to, planning, design, construction and maintenance of highways as per IRC standards, specifications and methods.

**UNIT I HIGHWAY PLANNING AND ALIGNMENT 9**

Significance of highway planning – Modal limitations towards sustainability - History of road development in India – factors influencing highway alignment – Soil suitability analysis - Road ecology - Engineering surveys for alignment, objectives, conventional and modern methods - Classification of highways – Locations and functions – Typical cross sections of Urban and Rural roads

**UNIT II GEOMETRIC DESIGN OF HIGHWAYS 9**

Cross sectional elements - Sight distances – Horizontal curves, Super elevation, transition curves, widening at curves – Vertical curves - Gradients, Special consideration for hill roads - Hairpin bends – Lateral and vertical clearance at underpasses.

**UNIT III DESIGN OF FLEXIBLE AND RIGID PAVEMENTS 9**

Pavement components and their role - Design principles -Design practice for flexible and rigid Pavements (IRC methods only) – Embankments- Problems in Flexible pavement design.

**UNIT IV HIGHWAY CONSTRUCTION MATERIALS AND PRACTICE 9**

Highway construction materials, properties, testing methods – CBR Test for subgrade - tests on aggregate & bitumen – Test on Bituminous mixes-Construction practice including modern materials and methods, Bituminous and Concrete road construction, Polymer modified bitumen, Recycling, Different materials – Glass, Fiber, Plastic, Geo-Textiles, Geo-Membrane (problem not included) – Quality control measures - Highway drainage — Construction machineries.

**UNIT V EVALUATION AND MAINTENANCE OF PAVEMENTS 9**

Pavement distress in flexible and rigid pavements – Types of maintenance – Pavement Management Systems - Pavement evaluation, roughness, present serviceability index, skid resistance, structural evaluation, evaluation by deflection measurements – Strengthening of pavements –Highway Project formulation.

**TOTAL: 60 PERIODS**

**OUTCOMES:**

Students will be able to

- Get knowledge on planning and aligning of highway.
- Geometric design of highways
- Design flexible and rigid pavements.
- Gain knowledge on Highway construction materials, properties, testing methods
- Understand the concept of pavement management system, evaluation of distress and maintenance of pavements.

**OBJECTIVE:**

- The objectives of this course is to help students develop the ability to apply basic understanding of physical, chemical, and biological phenomena for successful design, operation and maintenance of sewage treatment plants.

**UNIT I PLANNING AND DESIGN OF SEWERAGE SYSTEM 9**

Characteristics and composition of sewage - population equivalent -Sanitary sewage flow estimation – Sewer materials – Hydraulics of flow in sanitary sewers – Sewer design – Storm drainage-Storm runoff estimation – sewer appurtenances – corrosion in sewers – prevention and control – sewage pumping-drainage in buildings-plumbing systems for drainage - Rain Water ting.

**UNIT II PRIMARY TREATMENT OF SEWAGE 9**

Objectives – Unit Operations and Processes – Selection of treatment processes – Onsite sanitation - Septic tank- Grey water harvesting – Primary treatment – Principles, functions and design of sewage treatment units - screens - grit chamber-primary sedimentation tanks – Construction, Operation and Maintenance aspects.

**UNIT III SECONDARY TREATMENT OF SEWAGE 9**

Objectives – Selection of Treatment Methods – Principles, Functions, - Activated Sludge Process and Extended aeration systems -Trickling filters– Sequencing Batch Reactor(SBR) – Membrane Bioreactor - UASB – Waste Stabilization Ponds – - Other treatment methods -Reclamation and Reuse of sewage - Recent Advances in Sewage Treatment – Construction, Operation and Maintenance aspects.

**UNIT IV DISPOSAL OF SEWAGE 9**

Standards for– Disposal - Methods – dilution – Mass balance principle - Self purification of river- Oxygen sag curve – deoxygenation and reaeration - Streeter–Phelps model - Land disposal – Sewage farming – sodium hazards - Soil dispersion system.

**UNIT V SLUDGE TREATMENT AND DISPOSAL 9**

Objectives - Sludge characterization – Thickening - Design of gravity thickener- Sludge digestion– Standard rate and High rate digester design- Biogas recovery – Sludge Conditioning and Dewatering – Sludge drying beds- ultimate residue disposal – recent advances.

**TOTAL: 45 PERIODS****OUTCOMES:**

The students completing the course will have

- An ability to estimate sewage generation and design sewer system including sewage pumping stations
- The required understanding on the characteristics and composition of sewage, self-purification of streams
- An ability to perform basic design of the unit operations and processes that are used in sewage treatment
- Gain knowledge on standard methods for disposal of sewage.
- Gain knowledge on sludge treatment and disposal.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE :**

- To learn the principles and procedures of testing of highway materials

**EXERCISES :****I TEST ON AGGREGATES**

- a) Specific Gravity
- b) Los Angeles Abrasion Test
- c) Water Absorption of Aggregates

**II TEST ON BITUMEN**

- a) Specific Gravity of Bitumen
- b) Penetration Test
- c) Viscosity Test
- d) Softening Point Test
- e) Ductility Test

**III TESTS ON BITUMINOUS MIXES**

- a) Stripping Test
- b) Determination of Binder Content
- c) Marshall Stability and Flow Values

**IV DEMONSTRATION OF ANY ONE FIELD TESTING EQUIPMENT LIKE SKID RESISTANCE TESTER/ BENKELMAN BEAM ETC****TOTAL: 60 PERIODS****OUTCOME:**

- Student knows the techniques to characterize various pavement materials through relevant tests.

**LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS**

Sl.No	Description of Equipment	Quantity
1.	Concrete cube moulds	6
2.	Concrete cylinder moulds	3
3.	Concrete Prism moulds	3
4.	Sieves	1 set
5.	Concrete Mixer	1
6.	Slump cone	3
7.	Flow table	1
8.	Vibrator	1
9.	Trowels and planers	1 set
10.	UTM – 400 kN capacity	1
11.	Vee Bee Consistometer	1
12.	Aggregate impact testing machine	1
13.	CBR Apparatus	1
14.	Blains Apparatus	1
15.	Los - Angeles abrasion testing machine	1
16.	Marshall Stability Apparatus	1

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- At the end of the semester, the student shall conceive, design and draw the irrigation and environmental engineering structures in detail showing the plan, elevation and Sections.

**PART A: IRRIGATION ENGINEERING**

**1. TANK COMPONENTS** 9 Fundamentals of design - Tank surplus weir – Tank sluice with tower head - Drawings showing foundation details, plan and elevation

**2. IMPOUNDING STRUCTURES** 6  
Design principles - Earth dam – Profile of Gravity Dam

**3. CROSS DRAINAGE WORKS** 6  
General design principles - Aqueducts – Syphon aqueduct (Type III) – Canal drop (Notch Type) – Drawing showing plan, elevation and foundation details.

**4. CANAL REGULATION STRUCTURES** 9  
General Principles - Direct Sluice - Canal regulator - Drawing showing detailed plan, elevation and foundation details.

**PART B: ENVIRONMENTAL ENGINEERING**

**1. WATER SUPPLY AND TREATMENT** 15  
Design and Drawing of flash mixer, flocculator, clarifier – Rapid sand filter – Service reservoirs – Pumping station – House service connection for water supply and drainage.

**4. SEWAGE TREATMENT & DISPOSAL** 15  
Design and Drawing of screen chamber - Grit channel - Primary clarifier - Activated sludge process – Aeration tank – Trickling filter – Sludge digester – Sludge drying beds – Septic tanks and disposal arrangements.

**TOTAL: 60 PERIODS**

**OUTCOME:**

- The students after completing this course will be able to design and draw various units of Municipal water treatment plants and sewage treatment plants.

**TEXTBOOKS:**

ESTIMATION, COSTING AND VALUATION ENGINEERING

L T P C  
4 0 0 4

**OBJECTIVE:**

- The students will acquire knowledge in estimation, tender practices, contract procedures, and valuation and will be able to prepare estimates, call for tenders and execute works.

**UNIT I QUANTITY ESTIMATION 9**

Philosophy – Purpose – Methods of estimation – Types of estimates – Approximate estimates – Detailed estimate – Estimation of quantities for buildings, bituminous and cement concrete roads, septic tank, soak pit, retaining walls – culverts (additional practice in class room using computer softwares)

**UNIT II RATE ANALYSIS AND COSTING 9**

Standard Data – Observed Data – Schedule of rates – Market rates – Standard Data for Man Hours and Machineries for common civil works – Rate Analysis for all Building works, canals, and Roads– Cost Estimates (additional practice in class room using Computer softwares) - (Analysis of rates for the item of work asked, the data regarding labour, rates of material and rates of labour to be given in the Examination Question Paper)

**UNIT III SPECIFICATIONS, REPORTS AND TENDERS 9**

Specifications – Detailed and general specifications – Constructions – Sources – Types of specifications – Principles for report preparation – report on estimate of residential building – Culvert – Roads – TTT Act 2000 – Tender notices – types – tender procedures – Drafting model tenders , E-tendering-Digital signature certificates- Encrypting -Decrypting – Reverse auctions.

**UNIT IV CONTRACTS 9**

Contract – Types of contracts – Formation of contract – Contract conditions – Contract for labour, material, design, construction – Drafting of contract documents based on IBRD / MORTH Standard bidding documents – Construction contracts – Contract problems – Arbitration and legal requirements.

**UNIT V VALUATION 9**

Definitions – Various types of valuations – Valuation methods - Necessity – Capitalised value – Depreciation – Escalation – Valuation of land – Buildings – Calculation of Standard rent – Mortgage – Lease

**TOTAL: 60 PERIODS**

**OUTCOMES:**

The student will be able to

- Estimate the quantities for buildings,
- Rate Analysis for all Building works, canals, and Roads and Cost Estimate.
- Understand types of specifications, principles for report preparation, tender notices types.
- Gain knowledge on types of contracts
- Evaluate valuation for building and land.

19155C72

**RAILWAYS, AIRPORTS, DOCKS AND HARBOUR ENGINEERING**

**L T P C**  
**3 2 0 4**

**OBJECTIVE:**

- To introduce the students about Railways planning, design, construction and maintenance and planning design principles of airport and harbour

**UNIT I RAILWAY PLANNING AND CONSTRUCTION 10**

Elements of permanent way – Rails, Sleepers, Ballast, rail fixtures and fastenings, Selection of gauges - Track Stress, coning of wheels, creep in rails, defects in rails – Route alignment surveys, conventional and modern methods--Geometric design of railway, gradient, super elevation, widening of gauge on curves- Level Crossings. .

**UNIT II RAILWAY CONSTRUCTION AND MAINTENANCE 8**

Earthwork – Stabilization of track on poor soil - Track drainage – Calculation of Materials required for track laying - Construction and maintenance of tracks – Railway Station and yards and passenger amenities- Signalling

**UNIT III AIRPORT PLANNING 7**

Air transport characteristics - airport classification – ICAO - airport planning: Site selection typical Airport Layouts, Case Studies, parking and Circulation Area

**UNIT IV AIRPORT DESIGN 10**

Runway Design: Orientation, Wind Rose Diagram, Problems on basic and Actual Length, Geometric Design – Elements of Taxiway Design – Airport Zones – Passenger Facilities and Services – Runway and Taxiway Markings.

**UNIT V HARBOUR ENGINEERING 10**

Definition of Basic Terms: Harbour, Port, Satellite Port, Docks, Waves and Tides – Planning and Design of Harbours: Harbour Layout and Terminal Facilities – Coastal Structures: Piers, Break waters, Wharves, Jetties, Quays, Spring Fenders, Dolphins and Floating Landing Stage – Inland Water Transport – Wave action on Coastal Structures and Coastal Protection Works – Coastal Regulation Zone, 2011

**TOTAL: 60 PERIODS**

**OUTCOMES:**

Students who successfully complete this course will be able to:

- Understand the methods of route alignment and design elements in Railway Planning and Constructions.
- Understand the Construction techniques and Maintenance of Track laying and Railway stations.
- Gain an insight on the planning and site selection of Airport Planning and design.
- Analyze and design the elements for orientation of runways and passenger facility systems.
- Understand the various features in Harbours and Ports, their construction, coastal protection works and coastal Regulations to be adopted.

STRUCTURAL DESIGN AND DRAWING

L T P C

3 2 0 4

**OBJECTIVE:**

- This course aims at providing students with a solid background on the principles of structural engineering design. Students will be acquire the knowledge of liquid retaining structures, bridges components, retaining wall and industrial structures.

**UNIT I RETAINING WALLS 9+6**

Reinforced concrete Cantilever and Counter fort Retaining Walls–Horizontal Backfill with Surcharge–Design of Shear Key–Design and Drawing.

**UNIT II FLAT SLAB and BRIDGES 9+6**

Design of Flat Slabs with and without drops by Direct Design Method of IS code- Design and Drawing - IRC Specifications and Loading – RC Solid Slab Bridge – Steel Foot-over Bridge-design and drawing.

**UNIT III LIQUID STORAGE STRUCTURES 9+6**

RCC Water Tanks - On ground, Elevated Circular, underground Rectangular Tanks– Hemispherical Bottomed Steel Water Tank —Design and Drawing

**UNIT IV INDUSTRIAL STRUCTURES 9+6**

Structural steel Framing - Steel Roof Trusses – Roofing Elements – Beam columns – Codal provisions - Design and Drawing.

**UNIT V GIRDERS AND CONNECTIONS 9+6** Plate Girders – Behaviour of Components-Deign of Welded Plate Girder-Design of Industrial Gantry Girders – Design of Eccentric Shear and Moment Resisting connections.

**TOTAL: 75 PERIODS**

**Design and Drawing Exercises for practical component Part A**

**- RCC Structures**

1. Rectangular Column and Footing
2. Combined footing with Two columns
3. RCC one way &Two way Slab and beam system
4. Cantilever Retaining wall
5. RCC T beam bridge deck
6. Underground Rectangular Water Tank
7. Elevated circular water Tank

**Part B- Steel Structures**

1. Built up column, column base and Foundation
2. Simple Steel Roof Trusses
3. Industrial building Elements
4. Plate Girder (welded)
5. Framed Connections and Detailing
6. Gantry girder
7. Steel water Tank

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

STRUCTURAL DESIGN AND DRAWING	Theory Examination		Practicals	
	Question paper Pattern	Marks to awarded	Question paper Pattern	Marks to awarded
This paper is a theory cum practical course weightage for theory 80% and for practical 20%	Five Either/Or type questions 5 x20 = 100 marks : covering all the five units Total Duration of Examination will be 3 hours  Each Question include  Design - 12 Marks  Free hand Drawing (Not to scale) - 8 marks	Theoretical component Marks will carry 80% weightage. End Semester Examination will be conducted by COE	2 Questions, one from Part A - RCC Structures & one from Part B- Steel Structures	Practical component Marks will carry 20% weightage. Practical Examination will be conducted by the respective institution as internal mode.

#### OUTCOMES:

At the end of the course the student will be able to

- Design and draw reinforced concrete Cantilever and Counterfort Retaining Walls
- Design and draw flat slab as per code provisions
- Design and draw reinforced concrete and steel bridges
- Design and draw reinforced concrete and steel water tanks
- Design and detail the various steel trusses and cantry girders

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

19155L76

**CREATIVE AND INNOVATIVE PROJECT**  
(Activity Based - Subject Related)

**L T P C**  
**0 0 4 2**

**OBJECTIVE:**

- To use the knowledge acquired in Civil Engineering to do a mini project, which allows the students to come up with designs, fabrication or algorithms and programs expressing their ideas in a novel way.

**TOTAL: 60 PERIODS**

**STRATEGY**

To identify a topic of interest in consultation with Faculty/Supervisor. Review the literature and gather information pertaining to the chosen topic. State the objectives and develop a methodology to achieve the objectives. Carryout the design / fabrication or develop computer code. Demonstrate the novelty of the project through the results and outputs.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

19155L77

**INDUSTRIAL TRAINING**  
(4 Weeks During VI Semester – Summer)

**L T P C**  
**0 0 0 2**

**OBJECTIVE:**

- To train the students in field work so as to have a firsthand knowledge of practical problems in carrying out engineering tasks. To develop skills in facing and solving the field problems.

**STRATEGY:**

The students individually undertake training in reputed civil engineering companies for the specified duration. At the end of the training, a report on the work done will be prepared and presented. The students will be evaluated through a viva-voce examination by a team of internal staff.

**OUTCOMES:**

At the end of the course the student will be able to understand

- The intricacies of implementation textbook knowledge into practice
- The concepts of developments and implementation of new techniques

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

19155PW83

**PROJECT WORK**

**L T P C**  
**0 0 30 15**

**OBJECTIVE:**

- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

**STRATEGY:**

The student works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction. The student will be evaluated based on the report and the viva voce examination by a team of examiners including one external examiner.

**TOTAL: 300 PERIODS**

**OUTCOME:**

- On Completion of the project work students will be in a position to take up any challenging practical problems and find solution by formulating proper methodology.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- To introduce the students to the cadastral survey Methods and its applications in generation of Land information system.

**UNIT I INTRODUCTION 9**

History of cadastral survey - Types of survey - Tax - Real Property – Legal cadastre -Graphical and Numerical Cadastre, Legal Characteristics of Records, Torrens System.

**UNIT II CADASTRAL SURVEY METHODS 9**

Steps in survey of a village - Instruments used for cadastral survey & mapping - Orthogonal, Polar survey methods - Boundary survey - Rectangulation - Calculation of area of Land- GPS and Total Station in Cadastral survey.

**UNIT III PHOTOGRAMMETRIC METHODS 9**

Photogrammetry for cadastral surveying and mapping - Orthophoto map – Quality control measures - Organisation of cadastral offices – international scenario.

**UNIT IV CADASTRAL MAPPING AND LIS 9**

Cadastral map reproduction - Map projection for cadastral maps – Conventional symbols - map - reproduction processes - Automated cadastral map, Management of Digital Cadastral. Creation of Land Information System. Integrating LIS –Land administration.

**UNIT V MAINTENANCE AND MEASUREMENTS 9**

Cadastral survey maintenance - Resurveys - Measurement of sub-division - Measurement of obstructed lines - Survey of urban areas - Control requirement for Urban survey use of Satellite Imagery in boundary fixing.

**TOTAL: 45 PERIODS****OUTCOMES:**

On completion of this course students will be able to

- Gain knowledge about cadastre survey.
- Understand the methods of cadastral survey.
- Get the knowledge about photogrammetric methods.
- Understand Land Record System and computational procedure for modernization of the same.
- The students will be in position to understand the Government procedure in Land Record Management.

**TEXTBOOKS:**

1. Paul. R Wolf., Bon A. DeWitt, Elements of Photogrammetry with Application in GIS McGraw Hill International Book Co., 4th Edition, 2014
2. R.Subramanian, Surveying and Levelling, Oxford University Press, Second Edition, 2012.

**REFERENCES:**

1. Karl Kraus, Photogrammetry: Geometry from Images and Laser Scans, Walter de Gruyter GmbH & Co. 2nd Edition, 2007.

3. James, M. Anderson and Edward N. Mikhail, Introduction to Surveying, McGraw Hill Book Co, 1985.

**OBJECTIVES :**

- To introduce the fundamentals and components of Geographic Information System
- To provide details of spatial data structures and input, management and output processes.

**UNIT I FUNDAMENTALS OF GIS 9**

Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attribute data- types of attributes – scales/ levels of measurements.

**UNIT II SPATIAL DATA MODELS 9**

Database Structures – Relational, Object Oriented – Entities – ER diagram - data models - conceptual, logical and physical models - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector Models- TIN and GRID data models.

**UNIT III DATA INPUT AND TOPOLOGY 9**

Scanner - Raster Data Input – Raster Data File Formats – Georeferencing – Vector Data Input –Digitiser – Datum Projection and reprojection -Coordinate Transformation – Topology - Adjacency, connectivity and containment – Topological Consistency – Non topological file formats - Attribute Data linking – Linking External Databases – GPS Data Integration

**UNIT IV DATA QUALITY AND STANDARDS 9**

Data quality - Basic aspects - completeness, logical consistency, positional accuracy, temporal accuracy, thematic accuracy and lineage – Metadata – GIS Standards –Interoperability - OGC - Spatial Data Infrastructure

**UNIT V DATA MANAGEMENT AND OUTPUT 9**

Import/Export – Data Management functions- Raster to Vector and Vector to Raster Conversion - Data Output - Map Compilation – Chart/Graphs – Multimedia – Enterprise Vs. Desktop GIS-distributed GIS.

**TOTAL: 45 PERIODS****OUTCOMES:**

This course equips the student to

- Have basic idea about the fundamentals of GIS.
- Understand the types of data models.
- Get knowledge about data input and topology.
- Gain knowledge on data quality and standards.
- Understand data management functions and data output

**TEXT BOOKS:**

1. Kang - Tsung Chang, Introduction to Geographic Information Systems, McGraw Hill Publishing, 2nd Edition, 2011.
2. Ian Heywood, Sarah Cornelius, Steve Carver, Srinivasa Raju, “An Introduction Geographical Information Systems, Pearson Education, 2nd Edition,2007.

**REFERENCE:**

1. Lo.C.P., Albert K.W. Yeung, Concepts and Techniques of Geographic Information Systems, Prentice-Hall India Publishers, 2006

**OBJECTIVE:**

- To solve the Civil Engineering problems with the help of Geoinformatics technique.

**UNIT I      LAND RESOURCE MANAGEMENT      6**

Total Station and GPS Surveys – Topographic and Bathymetric Surveys – Cadastral Information – Soil and Land Use Surveys - Land Information System (LIS) – Real Estate Information System

**UNIT II      STRUCTURAL STUDIES      6**

Deformation studies of deflection - Dam deformation - structural movement - Pavement yield - shifting sand-bank and shoreline – Landslide Risk Analysis

**UNIT III      SOIL CONSERVATION AND MANAGEMENT      9**

Soil survey interpretation and mapping - impact of agricultural and industrial activity on soil properties - soil erosion - factors influencing soil erosion - soil contamination using Hyper spectral Remote Sensing - mining pollution- EMR responses with contaminated soil - modeling soil characteristics using satellite data - soil degradation assessment using Remote Sensing and GIS - Land reclamation studies

**UNIT IV      URBAN AND TRANSPORTATION MANAGEMENT      12**

Monitoring Urban Growth through Remote Sensing - Geo-demographic Analysis – Property Market Analysis Urban Renewal - traffic analysis - accident analysis - site suitability analysis for transport infrastructure –transportation databases: creation and maintenance - Vehicle routing – Highway maintenance system-Intelligent Transportation System.

**UNIT V      WATER RESOURCES PLANNING AND MANAGEMENT      12**

Location of storage/diversion works – capacity curve generation – sediment yield - modelling of catchments – Delineation of watershed - Watershed modelling for sustainable development - Rainfall – Runoff modelling –LiDAR Mapping for Urban area –Water quality mapping and monitoring – Flood Risk Zoning - Flood damage assessment – Flood Modelling - Assessment of droughts and mitigation

**TOTAL: 45 PERIODS**

**OUTCOMES:**

On completion of this course students will be able to

- Get knowledge about the land resource management.
- Study structural deformation and movement.
- Model soil characteristics, soil degradation assessment and management.
- Monitor urban growth and management of transport infrastructure.
- Model catchments and management of water resources.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- Students will be exposed to various problems associated with soil deposits and methods to evaluate them. The different techniques will be taught to them to improve the characteristics of difficult soils as well as design techniques required to implement various ground improvement methods.

**UNIT I PROBLEMATIC SOIL AND IMPROVEMENT TECHNIQUES 8**

Role of ground improvement in foundation engineering – Methods of ground improvement – Geotechnical problems in alluvial, lateritic and black cotton soils – Selection of suitable ground improvement techniques based on soil conditions.

**UNIT II DEWATERING 10**

Dewatering Techniques - Well points – Vacuum and electroosmotic methods – Seepage analysis for two dimensional flow for fully and partially penetrated slots in homogeneous deposits – Design for simple cases.

**UNIT III INSITU TREATMENT OF COHESIONLESS AND COHESIVE SOILS 10**

Insitu densification of cohesionless soils – Shallow as deep compaction – Dynamic compaction - Vibroflotation, Sand compaction piles and deep compaction. Consolidation of cohesionless soils - Preloading with sand drains, and fabric drains, Stabilization of soft clay ground using stone columns and Lime piles-Installation techniques – Simple design - Relative merits of above methods and their limitations.

**UNIT IV EARTH REINFORCEMENT 9**

Concept of reinforcement – Types of reinforcement material – Reinforced earth wall – Mechanism – Simple design - Applications of reinforced earth; Functions of Geotextiles in filtration, drainage, separation, road works and containment applications.

**UNIT V GROUTING TECHNIQUES 8**

Types of grouts – Grouting equipments and machinery – Injection methods – Grout monitoring – Stabilization with cement, lime and chemicals – Stabilization of expansive soil.

**TOTAL: 45 PERIODS****OUTCOMES:**

At the end of the course the student will be able to

- Gain knowledge on methods and selection of ground improvement techniques.
- Understand dewatering techniques and design for simple cases.
- Get knowledge on insitu treatment of cohesionless and cohesive soils.
- Understand the concept of earth reinforcement and design of reinforced earth.
- Get to know types of grouts and grouting technique.

Column), Bureau of Indian Standards, New Delhi.

**19155E66B INTRODUCTION TO SOIL DYNAMICS AND MACHINE FOUNDATIONS**

**L T P C**  
**3 0 0 3**

**OBJECTIVE:**

- To understand the basics of soil dynamics – dynamic behaviour of soils – effects of dynamic loads and the various design methods.

**UNIT I THEORY OF VIBRATION 9**

Introduction – Nature dynamic loads – Vibrations of single degree freedom system – Free vibrations of spring – mass systems – Forced vibrations – Viscous damping - Transmissibility – Principles of vibration measuring instruments – Effect of Transient and Pulsating loads.

**UNIT II WAVE PROPAGATION 9**

Elastic waves in rods of infinite length – Longitudinal and Torsional – Effect of end conditions – Longitudinal and torsional vibrations of rods of finite length – Wave Propagation in infinite, homogeneous isotropic and elastic medium - Wave propagation in elastic half space – Typical values of compress wave and shear wave velocity – Wave propagation due to Machine foundation– Surface wave – Typical values – Particle movements and velocity.

**UNIT III DYNAMIC PROPERTIES OF SOILS 9**

Dynamic stress – Strain characteristics – Principles of measuring dynamic properties – Laboratory Techniques – Field tests – Factors affecting dynamic properties – Typical values – Dynamic bearing capacity – Dynamic earth pressure.

**UNIT IV FOUNDATION FOR DIFFERENT TYPES OF MACHINES 9**

Types of machines and foundation – General requirements – Modes of vibration of a rigid foundation – Method of analysis – Linear elastic weightless spring method – Elastic half space method – Analog Method – Design of block foundation – Special consideration for rotary, Impact type of machines – Codal Provisions.

**UNIT V INFLUENCE OF VIBRATION AND REMEDIATION 9**

Mechanism of Liquefaction – Influencing factors – Evaluation of Liquefaction potential based on SPT-Force Isolation – Motion Isolation – Use of spring and damping materials – Vibration control of existing machine foundation – Screening of vibration – Open trenches – Pile Barriers – Salient construction aspects of machine Foundations.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

At the end of the course the student will be able to

- Understand the theory and measurement of vibration.
  - Understand the concept of wave propagation in infinite medium and due to machine foundation.
  - Get knowledge on dynamic properties of soils and laboratory and field testing.
  - Design of foundation for different types of machines
  - Understand liquefaction, motion isolation and vibration control.

ROCK ENGINEERING

L T P C  
3 0 0 3

**OBJECTIVE:**

- To impart knowledge on fundamentals of rock mechanics and its application in solving simple problems associated with rock slopes and underground openings. Student gains the knowledge on the mechanics of rock and its applications in underground structures and rock slope stability analysis.

**UNIT I CLASSIFICATION AND INDEX PROPERTIES OF ROCKS 6**  
Geological classification – Index properties of rock systems – Classification of rock masses for engineering purpose – Rock Mass Rating and Q System.

**UNIT II ROCK STRENGTH AND FAILURE CRITERIA 12**  
Modes of rock failure – Strength of rock – Laboratory measurement of shear, tensile and compressive strength. Stress - strain behaviour of rock under Hydrostatic compression and deviatoric loading – Mohr –Coulomb failure criteria and Hock and Brown empirical criteria

**UNIT III INITIAL STRESSES AND THEIR MEASUREMENTS 10**  
Estimation of initial stresses in rocks – influence of joints and their orientation in distribution of stresses – measurements of in-situ stresses – Hydraulic fracturing – Flat jack method – Over coring method

**UNIT IV APPLICATION OF ROCK MECHANICS IN ENGINEERING 10**  
Simple engineering application – Underground openings – Rock slopes – Foundations and mining subsidence.

**UNIT V ROCK STABILISATION 7**  
Introduction – Rock support and Rock reinforcement – Principles – Support reaction curves – Shotcreting.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

At the end of the course the student will be able to

- Classify the rocks, study the index properties of rock systems.
- Understand the modes of rock failure, stress-strain characteristics, failure criteria.
- Estimate the stresses in rocks.
- Apply rock mechanics in engineering.
- Get knowledge on rock stabilization.

**TEXTBOOKS:**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- To enable students to have the knowledge on planning process and to introduce to the students about the regulations and laws related to Urban Planning.

**UNIT I BASIC ISSUES 8**  
Definition of Human settlement, Urban area, Town, City, Urbanisation, Suburbanisation, Urban sprawl, Peri - urban areas, Central Business District (CBD), Classification of urban areas – Trend of Urbanisation at International, National, Regional and State level.

**UNIT II PLANNING PROCESS 8**  
Principles of Planning – Types and Level of Plan, Stages in Planning Process – Goals, Objectives, delineation of Planning Areas, Surveys and Questionnaire Design.

**UNIT III DEVELOPMENT PLANS, PLAN FORMULATION AND EVALUATION 10**  
Scope and Content of Regional Plan, Master Plan, Detailed Development Plan, Development Control Rules, Transfer of Development Rights , Special Economic Zones- Development of small town and smart cities-case studies

**UNIT IV PLANNING AND DESIGN OF URBAN DEVELOPMENT PROJECTS 9**  
Site Analysis, Layout Design, Planning Standards, Project Formulation – Evaluation, Plan Constraints and Implementation, Financing of Urban Development Projects.

**UNIT V LEGISLATION, DEVELOPMENT AND MANAGEMENT OF URBAN SYSTEM 10**  
Town and Country Planning Act, Land Acquisition and Resettlement Act etc., Urban Planning Standards and Regulations, Involvement of Public, Private, NGO, CBO and Beneficiaries.

**TOTAL : 45 PERIODS****OUTCOMES:**

The students completing the course will have the ability to

- Describe basic issues in urban planning
- Formulate plans for urban and rural development and
- Plan and analyse socio economic aspects of urban and rural planning
- Design of urban development projects.
- Manage urban development projects.

**TEXTBOOKS:**

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To give an overview of Traffic engineering, traffic regulation, management and traffic safety with integrated approach in traffic planning as well.

**UNIT I TRAFFIC PLANNING AND CHARACTERISTICS 12**

Road Characteristics – Road user characteristics – PIEV theory – Vehicle – Performance characteristics – Fundamentals of Traffic Flow – Urban Traffic problems in India – Integrated planning of town ,country ,regional and all urban infrastructure – Towards Sustainable approach. – land use & transport and modal integration.

**UNIT II TRAFFIC SURVEYS 12**

Traffic Surveys – Speed, journey time and delay surveys – Vehicles Volume Survey including nonmotorized transports – Methods and interpretation – Origin Destination Survey – Methods and presentation – Parking Survey – Accident analyses -Methods, interpretation and presentation – Statistical applications in traffic studies and traffic forecasting – Level of service – Concept, applications and significance.

**UNIT III TRAFFIC DESIGN AND VISUAL AIDS 12**

Intersection Design - channelization, Rotary intersection design – Signal design – Coordination of signals – Grade separation - Traffic signs including VMS and road markings – Significant roles of traffic control personnel - Networking pedestrian facilities & cycle tracks.

**UNIT IV TRAFFIC SAFETY AND ENVIRONMENT 12**

Road accidents – Causes, effect, prevention, and cost – Street lighting – Traffic and environment hazards – Air and Noise Pollution, causes, abatement measures – Promotion and integration of public transportation – Promotion of non-motorized transport.

**UNIT V TRAFFIC MANAGEMENT 12**

Area Traffic Management System - Traffic System Management (TSM) with IRC standards –Traffic Regulatory Measures-Travel Demand Management (TDM) – Direct and indirect methods –Congestion and parking pricing – All segregation methods- Coordination among different agencies – Intelligent Transport System for traffic management, enforcement and education.

**TOTAL: 60 PERIODS****OUTCOMES:**

On completing this course, the Students will be able to

- Analyse traffic problems and plan for traffic systems various uses
- Design Channels, Intersections, signals and parking arrangements
- Develop Traffic management Systems.

**TEXTBOOKS:**

1. Kadiyali.L.R. "Traffic Engineering and Transport Planning", Khanna Publishers, Delhi, 2013
2. Indian Roads Congress (IRC) Specifications: Guidelines and Special Publications on Traffic Planning and Management.

**19155E75F**

**DESIGN OF PRESTRESSED CONCRETE STRUCTURES**

**L T P C  
4 0 0 4**

**OBJECTIVES:**

- To introduce the need for prestressing in a structure
- To explain the methods, types and advantages of prestressing to the students.
- To make the students to design a prestressed concrete structural elements and systems
- To introduce the students the effect of prestressing in the flexural and shear behaviour of structural elements.

**UNIT I INTRODUCTION – THEORY AND BEHAVIOUR 12**

Basic concepts – Advantages and disadvantages – Materials required – Systems and methods of prestressing – Analysis of sections – Stress concept – Strength concept – Load balancing concept – Effect of loading on the tensile stresses in tendons – Effect of tendon profile on deflections – Factors influencing deflections – Calculation of deflections – Short term and long term deflections - Losses of prestress – Estimation of crack width.

**UNIT II DESIGN FOR FLEXURE AND SHEAR 12**

Basic assumptions of flexural design – Permissible stresses in steel and concrete as per I.S.1343 Code – Different Types of sections - Design of sections of Type I and Type II post-tensioned and pre tensioned beams – Check for flexural capacity based on I.S. 1343 Code – Influence of Layout of cables in post-tensioned beams – Location of wires in pre-tensioned beams – Design for shear based on I.S. 1343 Code.

**UNIT III DEFLECTION AND DESIGN OF ANCHORAGE ZONE 12**

Factors influencing deflections – Short term deflections of uncracked members – Prediction of long term deflections due to creep and shrinkage – Check for serviceability limit states. Determination of anchorage zone stresses in post-tensioned beams – design of anchorage zone reinforcement – Check for transfer bond length in pre-tensioned beams.

**UNIT IV COMPOSITE BEAMS AND CONTINUOUS BEAM 12**

Analysis and design of composite beams – Methods of achieving continuity in continuous beams – Analysis for secondary moments – Concordant cable and linear transformation – Calculation of stresses – Principles of design.

**UNIT V TENSION AND COMPRESSION MEMBERS 12**

Role of prestressing in members subjected to Tensile forces and compressive forces - Design of tension and compression members – Tanks, pipes and poles – Partial prestressing – Definition, methods of achieving partial prestressing, merits and demerits of partial prestressing.

**TOTAL: 60 PERIODS**

**OUTCOMES:**

On successful completion of this course, students will be able to:

- Understand the behaviour of prestressed concrete members and able to analyze the prestressed concrete beams.
- Design the prestressed concrete members for flexure and shear as per the relevant design code (IS 1343).
- Analyze for deflection of prestressed concrete members and design the anchorage zone.
- Analyze and design of composite beams and continuous beams.
- Design of prestressed concrete structures - sleepers, Tanks, pipes and poles.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

SKILL DEVELOPMENT

  4. IS1343:1980, Code of Practice for Prestressed Concrete, Bureau of Indian Standards, New Delhi, 2012
  5. IS 3370- Part 4 (2008) Indian standard Code of practice for concrete structures for the storage of liquid- Design tables, code of practice, bureau of Indian standards, new Delhi.

**OBJECTIVE:**

- To make the students to learn about planning of construction projects, scheduling procedures and techniques, cost and quality control projects and use of project information as decision making tool.

**UNIT I CONSTRUCTION PLANNING 12**

Basic concepts in the development of construction plans-Choice of Technology and Construction method-Defining Work Tasks- Work breakdown structure- Definition- Precedence relationships among activities-Estimating Activity Durations-Estimating Resource Requirements for work activities-coding systems.

**UNIT II SCHEDULING PROCEDURES AND TECHNIQUES 12**

Relevance of construction schedules-Bar charts - The critical path method-Calculations for critical path scheduling-Activity float and schedules-Presenting project schedules-Critical path scheduling for Activity-on-node and with leads, Lags and Windows-Calculations for scheduling with leads,lags and windows-Resource oriented scheduling-Scheduling with resource constraints and precedences -Use of Advanced Scheduling Techniques-Scheduling with uncertain durations-Crashing and time/cost tradeoffs -Improving the Scheduling process – Introduction to application software.

**UNIT III COST CONTROL MONITORING AND ACCOUNTING 12**

The cost control problem-The project budget-Forecasting for Activity cost control - financial accounting systems and cost accounts-Control of project cash flows-Schedule control-Schedule and Budget updates-Relating cost and schedule information.

**UNIT IV QUALITY CONTROL AND SAFETY DURING CONSTRUCTION 12**

Quality and safety Concerns in Construction-Organizing for Quality and Safety-Work and Material Specifications-Total Quality control-Quality control by statistical methods -Statistical Quality control with Sampling by Attributes-Statistical Quality control by Sampling and Variables-Safety.

**UNIT V ORGANIZATION AND USE OF PROJECT INFORMATION 12**

Types of project information-Accuracy and Use of Information-Computerized organization and use of Information - Organizing information in databases-relational model of Data bases-Other conceptual Models of Databases-Centralized database Management systems-Databases and application programs-Information transfer and Flow.

**TOTAL: 60 PERIODS****OUTCOMES:**

The students completing the course will have ability to

- Understand basic concepts of construction planing.
- Schedule the construction activities.
- Forecast and control the cost in a construction.
- Understand the quality control and safety during construction.
- Organize information in Centralized database Management systems.

**TEXTBOOKS:**

1. Chitkara, K.K. “Construction Project Management Planning”, Scheduling and Control, Tata McGraw Hill Publishing Co., New Delhi, 2009

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To make the students conversant with the types, sources, generation, storage, collection, transport, processing and disposal of municipal solid waste.

**UNIT I SOURCES AND CHARACTERISTICS 12**

Sources and types of municipal solid wastes- Public health and environmental impacts of improper disposal of solid wastes- sampling and characterization of wastes - factors affecting waste generation rate and characteristics - Elements of integrated solid waste management – Requirements and salient features of Solid waste management rules (2016) — Role of public and NGO"s- Public Private participation – Elements of Municipal Solid Waste Management Plan.

**UNIT II SOURCE REDUCTION , WASTE STORAGE AND RECYCLING 12**

Waste Management Hierarchy - Reduction, Reuse and Recycling - source reduction of waste – On-site storage methods – Effect of storage, materials used for containers – segregation of solid wastes – Public health and economic aspects of open storage – case studies under Indian conditions – Recycling of Plastics and Construction/Demolition wastes.

**UNIT III COLLECTION AND TRANSFER OF WASTES 12**

Methods of Residential and commercial waste collection – Collection vehicles – Manpower – Collection routes – Analysis of waste collection systems; Transfer stations –location, operation and maintenance; options under Indian conditions – Field problems- solving.

**UNIT IV PROCESSING OF WASTES 12**

Objectives of waste processing – Physical Processing techniques and Equipment; Resource recovery from solid waste composting and biomethanation; Thermal processing options – case studies under Indian conditions.

**UNIT V WASTE DISPOSAL 12**

Land disposal of solid waste- Sanitary landfills – site selection, design and operation of sanitary landfills – Landfill liners – Management of leachate and landfill gas- Landfill bioreactor – Dumpsite Rehabilitation

**TOTAL: 60 PERIODS****OUTCOMES:**

The students completing the course will demonstrate

- understanding of the nature and characteristics of municipal solid wastes and the regulatory requirements regarding municipal solid waste management.
- Reduction, reuse and recycling of waste.
- ability to plan and design systems for storage, collection, transport, processing and disposal of municipal solid waste.
- knowledge on the issues on solid waste management from an integrated and holistic perspective, as well as in the local and international context.
- Design and operation of sanitary landfill.

**TEXTBOOKS:**

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- The main purpose of coastal engineering is to protect harbors and improve navigation.
- The students to the diverse topics as wave mechanics, wave climate, shoreline protection methods and laboratory investigations using model studies.

**UNIT I INTRODUCTION TO COASTAL ENGINEERING 9**

Indian Scenario - Classification of Harbours. Introduction - wind and waves - Sea and Swell - Introduction to small amplitude wave theory - use of wave tables- Mechanics of water waves - Linear (Airy) wave theory, Introduction to Tsunami

**UNIT II WAVE PROPERTIES AND ANALYSIS 9**

Behaviour of waves in shallow waters, Introduction to non-linear waves and their properties - Waves in shallow waters - Wave Refraction, Diffraction and Shoaling -Hindcast wave generation models, wave shoaling; wave refraction; wave breaking; wave diffraction random and 3D waves-Short term wave analysis - wave spectra and its utilities - Long term wave analysis- Statistics analysis of grouped wave data.

**UNIT III COASTAL SEDIMENT TRANSPORT 9**

Dynamic beach profile; cross-shore transport; along shore transport (Littoral transport), sediment movement

**UNIT IV COASTAL DEFENSE 9**

Field measurement; models, groins, sea walls, offshore breakwaters, artificial nourishment - planning of coast protection works - Design of shore defense structures

**UNIT V MODELING IN COASTAL ENGINEERING 9**

Physical modeling in Coastal Engineering - Limitations and advantages - Role of physical modeling in coastal engineering - Numerical modeling - Modeling aspects - limitations - Tsunami mitigation measures –

**TOTAL: 45 PERIODS**

**OUTCOMES:**

The students will be able to

- Understand coastal engineering aspects of harbors methods to improve navigation
- Understand the wave properties and analysis of wave.
- Understand the concepts of sediment transport.
- Design of shore defense structures.
- Gain knowledge in modeling in coastal engineering.

**OBJECTIVES:**

- To introduce the students to the interdisciplinary analysis of water and conceptual design of intervention strategies.
- To develop a knowledge-base on capacity building on IWRM.

**UNIT I IWRM FRAMEWORK 9**

Definition-objective-principles-evaluation of IWRM- IWRM relevance in water resources management- paradigm shift: process and prospective outcomes

**UNIT II CONTEXTUALIZING 9**

UN formulations - SDG goals - IWRM in Global, Regional and Local Institutional transformation - Bureaucratic reforms - Inclusive development

**UNIT III EMERGING ISSUES IN WATER MANAGEMENT 9**

Emerging Issues — Drinking water management in the context of climate change - IWRM and irrigation - Flood – Drought – Pollution – Linkages between water, health and poverty

**UNIT IV IWRM AND WATER RESOURCES DEVELOPMENT IN INDIA 9**

Rural Development - Ecological sustainability- -Watershed development and conservation - Ecosystem regeneration – Wastewater reuse - Sustainable livelihood - Food security

**UNIT V ASPECTS OF INTEGRATED DEVELOPMENT 9**

Capacity building - Conceptual framework of IWRM – Problems and policy issues - Solutions for effective integrated water management - Case studies

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Understand objectives, principles and evolution of integrated water resources management.
- Have an idea of contextualizing IWRM
- Gain knowledge in emerging issues in water management, flood, drought, pollution and poverty.
- Understand the water resources development in India and wastewater reuse.
- Gain knowledge on integrated development of water management.

**TEXTBOOKS:**

1. Mollinga P. *et al.* “Integrated Water Resources Management”, Water in South Asia Volume I, Sage Publications, 2006.

3. Dalte, S.J.C., “Soil Conservation and Land Management”, International Book Distribution, India, 1986.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVES:**

- To introduce the student to the principles of Groundwater governing Equations and Characteristics of different aquifers,
- To understand the techniques of development and management of groundwater.

**UNIT I HYDROGEOLOGICAL PARAMETERS 9**

Introduction – Water bearing Properties of Rock – Type of aquifers - Aquifer properties – permeability, specific yield, transmissivity and storage coefficient – Methods of Estimation – GEC norms - Steady state flow - Darcy's Law - Groundwater Velocity – Dupuit Forchheimer assumption – Steady Radial Flow into a Well

**UNIT II WELL HYDRAULICS 9**

Unsteady state flow - Theis method - Jacob method – Chow's method – Law of Times – Theis Recovery – Bailer method – Slug method - tests - Image well theory – Partial penetrations of wells – Well losses – Specific Capacity and Safe yield - Collector well and Infiltration gallery

**UNIT III GROUNDWATER MANAGEMENT 9**

Need for Management Model – Database for Groundwater Management – Groundwater balance study – Introduction to Mathematical model – Model Conceptualization – Initial and Boundary Condition – Calibration – Validation – Future Prediction – Sensitivity Analysis – Uncertainty – Development of a model

**UNIT IV GROUNDWATER QUALITY 9**

Ground water chemistry - Origin, movement and quality - Water quality standards – Drinking water – Industrial water – Irrigation water - Ground water Pollution and legislation - Environmental Regulatory requirements.

**UNIT V GROUNDWATER CONSERVATION 9**

Artificial recharge techniques – Reclaimed wastewater recharge – Soil aquifer treatment (SAT) – Aquifer Storage and Recovery (ASR) Seawater Intrusion and Remediation – Ground water Basin management and Conjunctive use – Protection zone delineation, Contamination source inventory and remediation schemes

**TOTAL: 45 PERIODS****OUTCOMES:**

The students will be able to

- Understand aquifer properties and its dynamics
- Get an exposure towards well design and practical problems
- Develop a model for groundwater management.
- Students will be able to understand the importance of artificial recharge and groundwater quality concepts
- Gain knowledge on conservation of groundwater.

**TEXTBOOKS:**

1. Raghunath H.M., "Ground Water Hydrology", New Age International (P) Limited, New Delhi, 2010.
2. Todd D.K., "Ground Water Hydrology", John Wiley and Sons, New York, 2000.

**REFERENCES:**

1. Fitts R Charles, "Groundwater Science". Elsevier, Academic Press, 2002.
2. Ramakrishnan, S, Ground Water, K.J. Graph arts, Chennai, 1998.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To introduce the student to the concept of hydrological aspects of water availability and requirements and should be able to quantify, control and regulate the water resources.

**UNIT I      PRECIPITATION AND ABSTRACTIONS      10**

Hydrological cycle- Meteorological measurements – Requirements, types and forms of precipitation - Rain gauges-Spatial analysis of rainfall data using Thiessen and Isohyetal methods-Interception - Evaporation, Horton's equation, pan evaporation measurements and evaporation suppression - Infiltration-Horton's equation - double ring infiltrometer, infiltration indices.

**UNIT II      RUNOFF      8**

Watershed, catchment and basin - Catchment characteristics - factors affecting runoff - Run off estimation using empirical - Strange's table and SCS methods – Stage discharge relationships-flow measurements-Hydrograph – Unit Hydrograph – IUH

**UNIT III      FLOOD AND DROUGHT      9**

Natural Disasters-Flood Estimation- Frequency analysis- Flood control- Definitions of droughts-Meteorological, hydrological and agricultural droughts- IMD method-NDVI analysis- Drought Prone Area Programme (DPAP)

**UNIT IV      RESERVOIRS      8**

Classification of reservoirs, General principles of design, site selection, spillways, elevation – area - capacity - storage estimation, sedimentation - life of reservoirs – rule curve

**UNIT V      GROUNDWATER AND MANAGEMENT      10**

Origin- Classification and types - properties of aquifers- governing equations – steady and unsteady flow - artificial recharge - RWH in rural and urban areas

**TOTAL: 45 PERIODS****OUTCOMES:**

The students completing the course will have

- an understanding of the key drivers on water resources, hydrological processes and their integrated behaviour in catchments,
- ability to construct and apply a range of hydrological models to surface water and groundwater problems including Hydrograph, Flood/Drought management, artificial recharge
- ability to conduct Spatial analysis of rainfall data and design water storage reservoirs
- Understand the concept and methods of ground water management.

**TEXTBOOKS:**

1. Subramanya .K. "Engineering Hydrology"- Tata McGraw Hill, 2010
2. Jayarami Reddy .P. "Hydrology", Tata McGraw Hill, 2008.
3. Linsley, R.K. and Franzini, J.B. "Water Resources Engineering", McGraw Hill International Book Company, 1995.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To acquire the knowledge on Quality of concrete, durability aspects, causes of deterioration, assessment of distressed structures, repairing of structures and demolition procedures.

**UNIT I MAINTENANCE AND REPAIR STRATEGIES 9**

Maintenance, Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance, Various aspects of Inspection, Assessment procedure for evaluating damaged structure, causes of deterioration.

**UNIT II STRENGTH AND DURABILITY OF CONCRETE 9**

Quality assurance for concrete–Strength, Durability- Cracks, different types, causes–Effects due to climate, temperature, Sustained elevated temperature, Corrosion

**UNIT III SPECIAL CONCRETES 9**

Polymer concrete, Sulphur infiltrated concrete, Fibre reinforced concrete, High strength concrete, High performance concrete, Vacuum concrete, Self compacting concrete, Geopolymer concrete, Reactive powder concrete, Concrete made with industrial wastes.

**UNIT IV TECHNIQUES FOR REPAIR AND PROTECTION METHODS 9**

Non-destructive Testing Techniques, Load Test for Stability-Epoxy injection, Shoring, Underpinning, Corrosion protection techniques–Corrosion inhibitors, Corrosion resistant steels, Coatings to reinforcement, cathodic protection.

**UNIT V REPAIR, REHABILITATION AND RETROFITTING OF STRUCTURES 9**

Strengthening of Structural elements, Repair of structures distressed due to corrosion, fire, leakage, earthquake-Transportation of Structures from one place to other –Structural Health Monitoring-demolition techniques-Engineered demolition methods-Case studies

**TOTAL: 45 PERIODS**

**OUTCOMES:**

Students will be able to understand

- the importance of maintenance and assessment method of distressed structures.
- the strength and durability properties ,their effects due to climate and temperature.
- recent development in concrete
- the techniques for repair and protection methods
- repair, rehabilitation and retrofitting of structures and demolition methods.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**OBJECTIVE:**

- To understand the behaviour of dynamic loading. Study the effect of earthquake loading on the behaviour of structures. Understand the codal provisions to design the structures as earthquake resistant.

**UNIT I SINGLE DEGREE OF FREEDOM SYSTEM 9**

Definition of degree of freedom – Idealization of structure as Single Degree of Freedom (SDOF) system – Formulation of equation of motion for various SDOF system – D’ Alemberts Principles – Effect of damping – Free and forced vibration of damped and undamped structures – Response to harmonic forces and periodic forces.

**UNIT II MULTI DEGREE OF FREEDOM SYSTEM 9**

Formulation of equation of motion for multidegree of freedom (MDOF) system – Evaluation of natural frequencies and modes – Eigen values and Eigen vectors – Response to free and forced vibration of undamped and damped MDOF systems – Modal superposition methods.

**UNIT III INTRODUCTION TO EARTHQUAKE ENGINEERING 9**

Elements of Engineering Seismology – Definitions, Introduction to Seismic hazard, Earthquake phenomenon – Seismotectonics – Seismic Instrumentation – Characteristics of Strong Earthquake motion – Estimation of Earthquake Parameters.

**UNIT IV EARTHQUAKE EFFECTS ON STRUCTURES 9**

Effect of earthquake on different types of structures – Behaviour of RCC, Steel and prestressed Concrete Structures under earthquake loading – Pinching Effect – Bouchinger Effects – Evaluation of Earthquake forces – IS Code 1893: 2002 – Response Spectra – Lessons learnt from past earthquakes.

**UNIT V CONCEPTS OF EARTHQUAKE RESISTANT DESIGN 9**

Causes of damage – Planning considerations/Architectural concept (IS 4326–1993) – Guidelines for Earthquake resistant design – Earthquake resistant design of masonry buildings – Design consideration – Guidelines – Earthquake resistant design of R.C.C. buildings – Lateral load analysis – Design and detailing (IS 13920:1993).

**TOTAL: 45 PERIODS****OUTCOMES:**

- Student will develop knowledge in the simulation and mathematical model development.
- Students will be trained to identify, formulate and solve complicated problem.
- Students will be able to understand the role of natural calamity in the damage of structures.
- Students will be able to develop the skill to analyse data and to apply the same in the practical problems.
- Students will be able to apply the developed methodologies for the safe and stable design of structures.

**OBJECTIVE:**

- To impart knowledge to students on modular construction, industrialised construction and design of prefabricated elements and construction methods.

**UNIT I INTRODUCTION 9**

Need for prefabrication – Principles of prefabrication – Modular coordination – Standardization – Materials – Systems – Production – Transportation – Erection.

**UNIT II PREFABRICATED COMPONENTS 9**

Behaviour and types of structural components – Large panel systems- roof and floor slabs- Walls panels - Beams - Columns - Shear walls

**UNIT III DESIGN PRINCIPLES 9**

Design philosophy- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation - Demountable precast concrete systems.

**UNIT IV JOINTS AND CONNECTIONS IN STRUCTURAL MEMBERS 9**

Types of Joints – based on action of forces - compression joints - shear joints - tension joints - based on function - construction, contraction, expansion. Design of expansion joints - Dimensions and detailing - Types of sealants - Types of structural connections - Beam to Column - Column to Column - Beam to Beam - Column to foundation.

**UNIT V DESIGN FOR ABNORMAL LOADS 9**

Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

**TOTAL: 45 PERIODS****OUTCOMES:**

- The student will have good knowledge about design principles, layout of factory and stages of loading in precast construction.
- Acquire knowledge about panel systems, slabs, connections used in precast construction and they will be in a position to design the elements.
- Acquire knowledge about types of floor systems, stairs and roofs used in precast construction.
- Acquire knowledge about types of walls used in precast construction, sealants, design of joints.
- Acquire knowledge about components in industrial building.

**TEXTBOOKS:**

1. Bruggeling A.S. G and Huyghe G.F. "Prefabrication with Concrete", A.A. Balkema Publishers, USA, 1991.
2. Lewitt, M. "Precast Concrete- Materials, Manufacture, Properties And Usage", Applied Science Publishers, London And New Jersey, 1982.
3. Bachmann, H. and Steinle, A. "Precast Concrete Structures", Ernst & Sohn, Berlin, 2011.

3. "Structural design manual", Precast concrete connection details, Society for the studies in the use of precast concrete, Netherland Betor Verlag, 2009.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**OBJECTIVE:**

- To make the student to know about various bridge structures, selection of appropriate bridge structures and its design for given site conditions.

**UNIT I INTRODUCTION 9**

History of bridges - Components of a bridge - Classification of road bridges - Selection of site and initial decision process - Survey and alignment; Geotechnical investigations and interpretations. River Bridge: Selection of Bridge site and planning - Collection of bridge design data - Hydrological calculation

Road Bridges - IRC codes - Standard Loading for Bridge Design - Influence lines for statically determinate and indeterminate structures - Transverse distribution of Live loads among deck longitudinal - Load combinations for different working state and limit state designs

Railway Bridges: Loadings for Railway Bridges; Railroad data. Pre-design considerations - Railroad vs. Highway bridges.

**UNIT II SUPERSTRUCTURES 9**

Bridge decks – Structural forms and behaviour – Choices of superstructure types – Behaviour and modeling of bridge decks – Simple beam model – Plate model – Grillage method – Finite Element method - Different types of superstructure (RCC and PSC); Longitudinal Analysis of Bridge.-Transverse Analysis of Bridge - Temperature Analysis - Distortional Analysis - Effects of Differential settlement of supports - Reinforced earth structures.

**UNIT III DESIGN OF STEEL BRIDGES 9**

Design of Truss Bridges – Design of Plate girder bridges.

**UNIT IV DESIGN OF RC AND PSC BRIDGES 9**

Design of slab bridges – T beam bridges – PSC bridges

**UNIT V SUBSTRUCTURE, BEARINGS AND EXPANSION JOINTS, PARAPETS AND RAILINGS 9**

Substructure - Pier; Abutment - Wing walls- Importance of Soil-Structure Interaction - Types of foundations - Open foundation- Pile foundation- Well foundation- Simply supported bridge-Continuous Bridge - Bearings and Expansion Joints - Different types of bridge bearings and expansion joints - Parapets and Railings for Highway Bridges

**TOTAL: 45 PERIODS****OUTCOMES:**

On successful completion of this course, students will be able to:

- Identify loads on bridges and selection of type of bridge for the site condition
- Analyze the super structure by various methods.
- Design the trussed bridge and plate girder bridges
- Design reinforced concrete slab and T beam bridges and prestressed concrete bridges
- Decide the appropriate sub structural systems , bearings and expansion joints for the bridges.

## SEMESTER I

19248S11E

ADVANCED ENGINEERING MATHEMATICS

L T P C  
3 1 0 4

### AIM & OBJECTIVES:

The course aim to develop the skills of the students in the areas of boundary value problems and transform techniques. The course will also serve as a prerequisite for post Graduate and specialized studies and research.

Be capable of mathematically formulating certain practical problems in terms of partial differential equations, solve them and physically interpret the results.

Have learnt the basics of Z – transform in its applicability to discretely varying functions, gained the skill to formulate certain problems in terms of differences equations.

### UNIT I LAPLACE TRANSFORM 12

Laplace transform methods for one-dimensional wave equation – Displacement in a long string – longitudinal vibration of an elastic bar – Laplace equation – properties of harmonic functions.

### UNITII FOURIERTRANSFORM 12

Fourier transforms methods for one – dimensional heat conduction problems in infinite and semi infinite rod – Fourier transform methods for Laplace equation.

### UNITIII PROBABILITY & DISTRIBUTION 12

Probability – definition and introduction – random variable – probability density functions – study of standard distributions: Binomial, Poisson, normal exponential and Weibull distributions – Applications – Baye’s theorem.

### UNITIV TESTING OF HYPOTHESIS 12

Testing of Hypothesis – Parametric test – Small samples – Test related proportion, Means, Standard deviation – Test based on chi-square, Goodness of fit and test of independence.

### UNITV THEORY OF ESTIMATION 12

Principles of least squares – Multiple and partial correlation and regression – Estimation of parameters – Method of moments.

**TOTAL: 60 PERIODS**

### REFERENCE BOOKS:

1. Sankar Rao.K., Introduction to partial differential equations, Pnentile Hall of India, New Delhi – 1995.
2. Sneddon.I.N., Elements of partial differential equations, MC Graw Hill, 1996
3. Engineering Statistics, Bowher and Liberman
4. Gupta.S.C. & Kappor, V.K. Fundamentals of Mathematical Statistics, Sultan Chand & Sons, Reprint 1999.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENUEURSHIP

Objective:

- To understand the elements of quality planning and the implication
- To become aware of objectives and advantage of quality assurance
- To be exposed to means of quality control
- To study the relationship between quality control and assurance

**UNIT-I****9**

Construction Organisation and Quality Planning: Types of organizations - Inspection, control and enforcement - Quality Management Systems and method - Responsibilities and authorities in quality assurance and quality control - Architects, engineers, contractors, and special consultants, Quality circle.

**UNIT-II****9**

Quality policy, Objectives and methods in Construction Industry - Consumers satisfaction, Ergonomics - Time of Completion - Statistical tolerance - Taguchi's concept of quality - Codes and Standards - Document - Contract and construction programming - Inspection procedures - Processes and products - Total QA I QC programme and cost implication.

**UNIT-III****9**

Quality Assurance: Objectives - Regularity agent, owner, design, contract and construction oriented objectives, methods - Techniques and needs of QA/QC - Different aspects of quality - Appraisals, Factors influencing construction quality - Critical, major failure aspects and failure mode analysis, -Stability methods and tools, optimum design - Reliability testing, reliability coefficient and reliability prediction.

**UNIT-IV****9**

Quality Control: Total Quality Control- Quality Control by statistical methods — Sampling by attributes and by variables - Selection of new materials - Influence of drawings, detailing, specification,

**UNIT-V****9**

standardization - Bid preparation - Construction activity, environmental safety, social and environmental factors - Natural causes and speed of construction - Life cycle costing -Value engineering and value analysis.

**TOTAL: 45 PERIODS****Books for the References:**

1. O'Brian, James J. "Construction Inspection Handbook - Quality Assurance and Quality Control", Van Nostrand, New York, 1989.
2. Tenah, Kwaku A. and Guevara, Jose M., "Fundamentals of Construction Management and Organization", Reston Publishing Co., Inc., Virginia, 1985.
3. Oglesby, Clarkson H. "Productivity Improvement in Construction", McGraw-Hill, New Delhi, 1989.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**AIM and OBJECTIVES:**

Emphasis is placed on static problems with linear material and small deformation. Many basic 2-D problems (such as plane strain and plane stress) and 3-D problems.

**UNIT I ANALYSIS OF STRESS AND STRAIN 12**

Analysis of stress and strain, stress strain relationship. Generalized Hook's law. Plane stress and plane strain.

**UNIT II DEFORMATION 12**

Basic concepts of deformation of deformable bodies - Transformations of stresses and strains in Cartesian and polar co-ordinates - Equilibrium equations in two and three dimensions in Cartesian co-ordinates.

**UNIT III TORSION 12**

Torsion of non-circular section - methods of analysis - membrane analogy - torsion of thin rectangular section and hollow thin walled sections.

**UNIT IV THEORY OF ENERGY 12**

Energy methods – Energy principles and theorem.

**UNIT V INTRODUCTION TO PROBLEMS IN PLASTICITY 12**

Physical assumption - criteria of yielding, yield surface, Flow rule (plastic stress strain relationship). Elastic plastic problems of beams in bending - plastic torsion.

**TOTAL: 60 PERIODS**

4. Mendelson, A., (2002), Plasticity: Theory & Applications, Mac Millan & Co., NewYork.
5. Sadhu Singh, (2004), Theory of Plasticity, Dhanpat Rai sons Private Limited, New Delhi.

**AIM and OBJECTIVES:**

This course covers the methods for analyzing the stresses and deflections developed in any given type of structures when it is subjected to an arbitrary dynamic loading.

**UNIT I PRINCIPLES OF DYNAMICS 12**

Formulation of equations of motion by different methods, single degree freedom systems, free and forced response, effect of damping.

**UNIT II MULTIDEGREE OF FREEDOM SYSTEMS 12**

Formulation of structure property matrices, Eigen values problems, Modes shapes and ortho normality of modes, Approximate methods of extraction of eigen values.

**UNIT III DYNAMIC RESPONSE OF MDOF SYSTEMS 12**

Mode superposition techniques, Numerical integration procedures.

**UNIT IV CONTINUOUS SYSTEMS 12**

Modeling - free and forced vibration of bars and beams.

**UNIT V APPLICATIONS 12**

Idealisation of structures to mathematical models, examples of wind, earthquake and impact

**TOTAL: 60 PERIODS**

**REFERENCES:**

## 19255H15 MAINTENANCE & REHABILITATION OF STRUCTURES

L T P C

3 1 0 4

### AIM and OBJECTIVES:

Introduction to the governmental quality assurance regulations for public works. Application of quality control concepts, statistical experimental design principles to the construction process to minimize project costs and improve quality.

### UNIT I INTRODUCTION 12

Definitions: Maintenance, repair and rehabilitation, Facets of and importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration-testing techniques.

### UNIT II METEOROLOGICAL EFFECTS 12

Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion protection

### UNIT III QUALITY CONTROL 12

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking.

### UNIT IV MATERIALS AND TECHNIQUES FOR REPAIR 12

Special concretes and mortar, concrete chemicals, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fiber reinforced concrete. Rust eliminators and polymers coating for rebar during repair foamed concrete, mortar and dry pack, vacuum concrete, Guniting and Shot Crete Epoxy injection, Mortar repair for cracks, shoring and underpinning.

### UNIT V DEMOLITION 12

Engineering demolition of structures – case studies

**TOTAL: 60 PERIODS**

19255L17

**CORE PRACTICAL -I**

**COMPUTER PROGRAMMING LAB- AUTO CAD**

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using AutoCAD.

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop civil engineering drawing using Auto CAD.

**UNIT I**

Introduction AutoCad – Definition of various commands used in AutoCAD

**UNIT II**

Simple Exercises using AutoCad commands – Produce drawing using AutoCad and output of all the drawings are taken print out in A4 sheet using Inkjet / Laser Printer or Plotter and produced in file form as regard.

**UNIT III**

Section of semicircular Arch, Section of a lean – to – roof and section of spread footing foundation

**UNIT IV**

Plan, section and elevation of a prayer hall, school building and residential building (R.C.C. Roof)

**UNIT V**

Preparation of approval drawing to be submitted to corporation or municipality showing required details in one such as site plan, ground floor plan, section and elevation, key plan, septic tank plan, rain water harvesting pit with all details and title block detail.

**TOTAL: 45 PERIODS**

**REFERENCES**

1. Building drawing – Shah, Tata McGraw-Hill
2. Building planning & Drawing – Dr. N. Kumaraswamy, A. Kameswara Rao, Charotar Publishing.
3. Shah, Kale and Patki, Building Drawing, Tata McGraw-Hill.

## SEMESTER II

19255H21

MANAGEMENT INFORMATION SYSTEM

L T P C

3 0 0 3

Objective:

- To bring about an exposure to information systems in a formal manner
- To study the development of information systems
- To study the means of applying information systems models to project management
- To introduce system audit and to study its features

### UNIT-I 12

System Development: Information Systems - Establishing the Framework - Business Models - Evolution of Information Systems. Modern Information System - System Development Life Cycle - Structured Methodologies - Designing Computer Based Methods, Procedures, Control - Designing Structured Programs.

### UNIT-II 12

Information Systems: Integrated Construction Management Information System - Project Management Information System - Functional Areas, Finance, Marketing, Production, Personnel .

### UNIT-III 12

Levels, DSS, EIS, ES - Comparison, Concepts and Knowledge Representation - Managing International Information System.

### UNIT-IV 12

Implementation and Control: Control - Testing Security - Coding Techniques - Defection of Error - Validating - Cost Engineering qualities - Design, Production, Service, Software specification.

### UNIT-V 12

Software Metrics, Software quality assurance - Systems Methodology - Objectives - Time and Logic, Knowledge and Human Dimension - Software life cycle models - Verification and Validation.

**TOTAL: 45 PERIODS**

#### Books for the References:

1. Laudon, Kenneth C and Laudon, Jane Price. "Management Information Systems: Organisation and Technology", Prentice Hall of India, New Delhi, 1996.
2. Elam, Jo.yce J. "Case Series for Management Information Systems, Simon and Schuster", Custom Publishing, 1996.
3. Sprague, Ralph H and Watson, Huger J. "Decision Support for Managers", Prentice Hall, New Jersey, 1996

**AIM and OBJECTIVES:**

The finite element method is the most powerful structural analysis tool for the Civil Engineers. The basic formulation and programming technique are introduced. According to the same procedures, the different elements such as truss, beam, plate and shell are easily formulated.

**UNIT I INTRODUCTION: 12**  
Differential equilibrium equations - strain displacement relation - linear constitutive relation - special cases. Principle of stationary potential energy - application to finite element methods. Some numerical techniques in finite element Analysis

**UNIT II ANALYSIS OF PLATE BENDING; 12**  
Two Dimensional problems - Plane Stress, Plain Strain and Axisymmetric Problems - Triangular and beam element -. Analysis of plate bending - Basic theory of plate bending-displacement functions - plate bending Elements.

**UNIT III MODELS AND FUNCTION OF ELEMENT: 12**  
Displacement models - convergence requirements. Natural coordinate systems – Shape function. Interpolation function. Linear and quadratic elements - Lagrange & Serendipity elements.

**UNIT IV ANALYSIS OF NONLINEAR AND VIBRATION PROBLEMS: 12**  
Strain displacement matrix - Material and Geometric Nonlinearity - Methods of Treatment -Dynamic condensation-Eigen value extraction

**UNIT V ASSEMBLAGE OF ELEMENT: 12**  
Assemblage of elements – Direct stiffness method. Special characteristics of stiffness matrix - Boundary condition & reaction - Gauss elimination –Basic steps in Finite element analysis.

**TOTAL: 60 PERIODS**

**REFERENCE**

19255H23

ADVANCED CONCRETE STRUCTURAL DESIGN L T P C

3 1 0 4

**AIM and OBJECTIVES:**

To impart knowledge about the performance of concrete as structural material and the behavior, elastic and inelastic, of reinforced – concrete members and structures, designing structures safely, economically and efficiently.

**UNIT I INTRODUCTION 12**

The nature of concrete- Behaviour of concrete - stress-strain relationships of concrete, - stress-strain relationships of reinforcing steel- Failure criteria for concrete (crack width calculation is must).

**UNIT II REVIEW OF OVERALL DESIGN 12**

Limit state analysis and design of beams in flexure - Behavior of reinforced concrete members in bending - Plastic hinge – Rotation capacity – Factors affecting rotation capacity of a section – Plastic moment – Moment curvature relationship – Redistribution of moments.

**UNIT III STRUCTURAL DESIGN 12**

Limit state design of deep beams. Design of Flat Slabs using BIS 456. Design of slender columns subjected to combined bending moment and axial force using SP 16 .

**UNIT IV SHEAR WALL 12**

Analysis and design of shear wall framed buildings.

**UNIT V DUCTILITY 12**

Detailing for ductility - fire resistance of buildings - field control of concrete

**TOTAL: 60 PERIODS**

**REFERENCE**

- 1.Krishnaraju, (1998), Advanced Concrete Design, CBS Publishers and distributors, Delhi.
2. Varghese P.C, Design of Reinforced Concrete Structures, Prentice hall of India.
3. Krishnamurthy, K.T, Gharpure S.C. and A.B. Kulkarni – Limit design of reinforced concrete structures, Khanna Publishers, 1985.

- 5.Jain and Jaikrishna, (2002), Plain and reinforced concrete, Vol. II, Nemi Chand Bros., Roorkee.
- 6.Durham, (2003), Advanced Concrete Design, Oxford Publishing private Limited.

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

**OUTCOME:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

**UNIT I 9**

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

**UNIT II 9**

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

**UNIT III 9**

Data Analysis using Excel- Tabulation of Data in excel ( Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

**UNIT IV 9**

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software.

## UNIT V

9

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references.

**TOTAL: 45 PERIODS**

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using FEA - ANSYS

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop Civil Engineering drawing using FEA – ANSYS

**LIST OF EXPERIMENTS**

1. Calculate the displacement and the member forces / reaction for the given simple truss with concentrated loads.
2. Calculate the displacement and the member forces / reaction for the given Stepped shaft subjected to temperature change.
3. Calculate the displacement and the member forces / reaction for the given beam with concentrated and distributed loads.
4. Find the natural frequencies and mode shapes of a given cantilever beam.
5. Find the maximum normal stress and stress concentration factor for the given plate with hole.

## SEMESTER III

19255H31

ADVANCED STEEL STRUCTURES

L T P C

3 1 0 4

### AIM and OBJECTIVES:

Introduction to steel structure, tensioned member, compressed member, beam, design of beam and column, bolt jointing, welding jointing and other joint design.

#### **UNIT I COMPRESSION MEMBERS 12**

Design of compression members – Axially – Uni axial and biaxial bending.

#### **UNIT II PLASTIC ANALYSIS 12**

Plastic Analysis of Structures – Introduction - Shape factors – Mechanisms - Plastic hinge - Analysis of beams and portal frames - Design of continuous beams.

#### **UNIT III LIGHT WEIGHT STEEL STRUCTURES 12**

Design of Light Gauge Steel Structures - Types of cross sections - Local buckling and lateral buckling - Design of compression and tension members – Beams - Deflection of beams.

#### **UNIT IV LIMIT STATE DESIGN 12**

Limit state design of Steel Structures – Plastic section – Section classification – Partial safety factor.

#### **UNIT V DESIGN OF JOINTS AND CONNECTIONS 12**

Design of joints and connections – Riveted – Bolted – Welded – Semi rigid connection.

**TOTAL: 60 PERIODS**

**HIGH RISE STRUCTURES**

**L T P C**  
**3 1 0 4**

**AIM and OBJECTIVES:**

This course covers the design criteria and loading pattern on high rise structures, behavior of structural systems and stability, design and analysis of tall buildings.

**UNIT I DESIGN CRITERIA 12**

Design philosophy, Loading, Sequential loading and materials - high performance Concrete - Fiber reinforced Concrete - Light weight Concrete - Design mixes.

**UNIT II LOADING AND MOVEMENT 12**

Gravity Loading: Dead and live load, methods of live load reduction, Impact, gravity loading, construction load. Wind loading: Static and dynamic approach, Analytical and wind tunnel experimental method. Earthquake loading: Equivalent lateral force, modal analysis, combinations of loading working stress design, Limit state design, plastic design.

**UNIT III BEHAVIOUR OF VARIOUS STRUCTURAL SYSTEMS 12**

Factors affecting growth, Height and Structural form. High rise behavior, Rigid frames, braced frames, In filled frames, shear walls, coupled shear walls, wall-frames, tubular, cores, outrigger - braced and hybrid mega system.

**UNIT IV ANALYSIS AND DESIGN 12**

Modeling for approximate analysis, Accurate analysis and reduction techniques, Analysis of building as total structural system considering overall integrity and major subsystem interaction, Analysis for member forces, drift and twist, computerized general three dimensional analysis. Structural elements: Sectional shapes, properties and resisting capacity, design, deflection, cracking, pre stressing, shear flow. Design for differential movement, creep and shrinkage effects, temperature effects and fire resistance

**UNIT V STABILITY OF TALL BUILDINGS 12**

Overall buckling analysis of frames, wall-frames, Approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first-order and P-Delta analysis, Translational, Torsional instability, out of plum effects, stiffness of member in stability, effect of foundation rotation

**TOTAL: 60 PERIODS**

**19255E16C**

**COMPUTER AIDED STRUCTURAL DESIGN**

**L T P C**

**3 1 0 4**

**AIM:**

To learn design and preparation of structural drawing of concrete and steel structures (STADD-PRO).

**OBJECTIVES:**

At the end of the course the students acquires hands on experiences in design and Preparation of structural drawing for concrete and steel structures normally encountered in Civil Engineering practice.

**UNIT I COMPUTER GRAPHICS**

**12**

Graphic primitives - Transformations - Basics of 2-D drafting - Modeling of curves and surfaces - Solid modeling Graphic standards - Drafting software packages and usage.

**UNIT II STRUCTURAL ANALYSIS**

**12**

Computer methods of structural analysis - Finite Element programming - Analysis through application packages.

**UNIT III STRUCTURAL DESIGN**

**12**

Computer aided design of steel and RC Structural elements - Detailed drawing - Bill of materials.

**UNIT IV OPTIMIZATION**

**12**

Linear programming - Simplex algorithm - Post-optimality analysis - Project scheduling - CPM and PERT applications Genetic algorithm and applications.

**UNIT V ARTIFICIAL INTELLIGENCE**

**12**

Introduction - Heuristic search - knowledge based expert systems - Architecture and applications of KBES - Expert system shells - Principles of neural network.

## SEMESTER II

### HARD CORE ELECTIVES-II

**19255E24A**                      **FAILURE ANALYSIS OF STRUCTURES**                      **L T P C**  
**3 1 0 4**

#### **AIM and OBJECTIVES:**

This course introduces about the failure of structures, buckling failure of columns, deterioration of wood and miscellaneous failures.

#### **UNIT I INTRODUCTION** **12**

Causes of failure – Types of failure – durability of materials – various durability tests on materials.

#### **UNIT II STRUCTURAL FAILURE** **12**

Structural failure –material and load effects – environment effect - Non-structural and structural repairs

#### **UNIT III BUCKLING FAILURE ON COLUMNS** **12**

Buckling of columns with various end conditions - Elastically supported columns- non prismatic columns - Built-up columns - Inelastic buckling, Experimental study of column behavior, Empirical column formulae.

#### **UNIT IV DETERIORATION OF WOOD** **12**

Defects on wood – improper seasoning and defects – improving of surface of wood.

#### **UNIT V MISCELLANEOUS FAILURES** **12**

Pin-jointed And rigid jointed frames – concrete walls - arches – reinforced concrete beams and frames – repair of concrete bridge and water retaining structures.

**TOTAL: 60 PERIODS**

#### **REFERENCES**

**ADVANCED CONCRETE TECHNOLOGY**

**L T P C**  
**3 0 0 3**

**AIM and OBJECTVES:**

To learn the Performance of concrete as structural material and advanced technologies used in construction by using concrete.

**UNIT I INTRODUCTION TO CONCRETE 12**  
Materials - Concrete materials - Reinforcements and admixtures.

**UNIT II MIX DESIGN 12**  
Mix Design – Specifications - Design of concrete mixes by IS code method – ACI method - Road Note No:4 method – High strength concrete.

**UNIT III BEHAVIOUR OF CONCRETE 12**  
Behaviour of Concrete - Modern trends in concrete manufacture and placement techniques - Theological behaviour of fresh concrete and hardened concrete - Resistance to static and dynamic loads.

**UNIT IV TESTING 12**  
Testing of Concrete - Non-destructive testing and quality control – Durability - Corrosion protection and fire resistant.

**UNIT V SPECIAL CONCRETE 12**  
Special Concrete - Pre-cast concrete - Light weight concrete - Under water concrete -Pumped concrete - Polymer concrete - Composites and fibre reinforced concrete.

### HARD CORE ELECTIVE III

**19255E25A**                      **OPTIMIZATION IN STRUCTURAL DESIGN**                      **L T P C**  
**3 1 0 4**

#### **AIM and OBJECTIVES:**

The structural analysis is formulated through the principle of optimization. Both the manual calculation and application of the computer are introduced for the analysis of truss and frame structures using optimization techniques.

**UNIT I INTRODUCTION** **12**  
Basic concepts of minimum weight, minimum cost design, Objective function, constraints and classical methods.

**UNIT II OPTIMIZATION TECHNIQUES** **12**  
Linear programming, Integer Programming, Quadratic Programming.

**UNIT III ALGORITHMS** **12**  
Dynamic Programming and Geometric Programming methods for Optimal design of structural elements.

**UNIT IV COMPUTER SEARCH METHODS** **12**  
Linear Programming methods for plastic design of frames, Computer search methods for univariate and multivariate Minimization.

**UNIT V OPTIMIZATION BY STRUCTURAL THEOREMS** **12**  
Maxwell, Mitchell and Heyman's Theorems for trusses and frames, fully stresses design with deflection constraints, optimality criterion methods.

**TOTAL: 60 PERIODS**

#### **REFERENCES**

1. Spunt, Optimum Structural Design, Civil Engineering and Engineering Mechanics Services, Prentice-Hall, New Jersey 1971.
2. S.S.Rao, Optimization Theory and Applications, Wiley Eastern Limited, New Delhi, 1977.

4. Richard Bronson, Operation Research, Schaum's Outline Series, McGraw Hill Book Co, Singapore, 1983.

**AIM and OBJECTIVES:**

This course deals about the requirements, planning and construction techniques of an industry. And also deals with modes of communication and transport to be used in an industrial structures.

**UNIT I REQUIREMENTS OF AN INDUSTRY 12**

General - Specific requirements for industries like textile, sugar, cement, chemical, etc - Site layout and external facilities.

**UNIT II PLANNING 12**

Planning of Building Work – Standards - Structural materials including plastics – Polymers - Fibre glass - Pressed card boards, etc - Multi-storey buildings - Steel skeletal structures - Reinforced concrete frames – Workshops - Ware houses - Single storey buildings - Sheds in steel and reinforced concrete - North-lights - Single span spherical and other special constructions - Cooling towers and chimneys - Bunkers and silos' prefabrication - Construction.

**UNIT III CONSTRUCTION TECHNIQUES 12**

Construction Techniques - Expansion joints - Machine foundations - Other foundations - Water proofing - Roofs and roofing - Roof drainage - Floors and flooring joists - Curtain walling - Outer wall facing - Sound and shock proof mountings - Use of modern hoisting and other construction equipments.

**UNIT IV COMMUNICATION AND TRANSPORT 12**

Circulation - Communication and Transport - Fixed points ( central cores) – Staircases -Grid floor sections - Lifts refuse disposals - Utilization of waste materials – Cranes - Continuous conveyors - Mobile cranes – Transporters – Doors - Sliding gates.

**UNIT V FUNCTIONAL REQUIREMENTS 12**

Functional Requirements – Lighting: Natural lighting - Protection from the sun - skylights - window cleaning installations -Services: Layout – wiring – fixtures - cable and pipe bridges - electrical installations - lighting substation - Effluent. Ventilation and fire protection: Ventilation - Air-conditioning - Fire escapes and chutes - Fire alarms - Extinguishers and hydrants.

**TOTAL: 60 PERIODS**

2. Glover, (1997), Structural Pre cast Concrete, Tata McGraw Hill.

19255E25C

ELEMENTS OF EARTHQUAKE ENGINEERING

L T P C

3 1 0 4

**AIM and OBJECTIVES:**

This course covers the theory and applications related to Earthquake Engineering. The broad subjects discussed in this course include earthquake response of linearly elastic and inelastic buildings, structural dynamics in building codes.

**UNIT I ELEMENTS AND FEATURES**

**12**

Elements of Seismology - Definitions of magnitude – Intensity - Epicentre etc - General features of tectonics of seismic regions - Seismographs.

**UNIT II THEORY OF VIBRATIONS**

**12**

Theory of Vibrations - Free vibrations of single degree - Two degree and multiple degree freedom systems - Computations of dynamic response to time dependent forces - Vibrations isolation – Vibration absorbers - Brief introduction to instruments - Accelerograms.

**UNIT III PRINCIPLES OF EARTHQUAKE DESIGN**

**12**

Principles of earthquake resistant design - Response spectrum theory - Application of response spectrum theory to seismic design of structures. Capacity - Design Principles - Design criteria for strength - Stiffness and ductility.

**UNIT IV EARTHQUAKE ANALYSIS**

**12**

Earthquake Analysis and Design - Characteristics of earthquake – Earthquake response of structures – Concept of earthquake resistance design – Code provisions for design of building – IS 1893 and IS 4326 – Energy absorption capacity.

**UNIT V COMPUTER APPLICATION**

**12**

Seismic analysis and design of a multi storied building using Computer.

**TOTAL: 60 PERIODS**

**REFERENCE**

- 1.Pauley & Priestly, (1992), Seismic design of reinforced concrete and masonry buildings, John Wiley & Sons.
- 2.Stratta.J.L, (1998), Manual of Seismic Design, Prentice-Hall India Pvt Ltd.

**SEMESTER III  
HARD CORE ELECTIVE IV**

**19255E32A**

**EXPERIMENTAL STRESS ANALYSIS**

**L T P C  
3 1 0 4**

**AIM and OBJECTIVES:**

At the end of the semester students can learn about the strain gauges, strain rosetters, model analysis, calibration of photo elastic materials.

**UNIT I STRAIN GAUGES 12**  
Strain Gauges - Mechanical and optical strain gauges – Description and operation – Electrical resistance- Inductance and capacitance gauges – Detailed treatment on resistant gauges – Measurement of static and dynamic strains – Strain rosettes – Effect of transverse strains – Use of strain recorders and load cells.

**UNIT II MODEL ANALYSIS 12**  
Model Analysis - Structural similitude – Use of models – Structural and dimensional analysis – Buckingham Pi Theorem – Muller Breslau's principle for indirect model analysis – Use of Begg's and Eney's deformeters – Moment indicators – Design of models for direct and indirect analysis.

**UNIT III CALIBRATION 12**  
Two dimensional photo elasticity - Stress optic law – Introduction to polariscope – Plane and circular polariscope – Compensators and model materials – Material and model fringe value – Calibration of photo elastic materials – Isochromatic and isoclinic fringes – Time edge effects.

**UNIT IV PHOTO ELASTICITY 12**  
Three dimensional photo elasticity - Introduction – Stress freezing techniques – Stress separation techniques – Scattered light photo elasticity – Reflection polariscope.

**UNIT V MISCELLANEOUS METHODS 12**  
Brittle coating method – Birefringence techniques – Moire fringe method – Non-destructive testing – Ultrasonic pulse velocity technique – Rebound hammer method – X-ray method – Gamma-ray method.

**TOTAL: 60 PERIODS**

19255E32B

**SOIL STRUCTURE INTERACTION**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

This course deals with the soil- foundation interaction, analysis of beams and finite plates, elastic analysis of pile, load deflection for laterally loaded pile.

**UNIT I SOIL-FOUNDATION INTERACTION 12**

Introduction to soil-Foundation interaction problems, soil behaviour, Foundation behavior, Interface behavior, Scope of soil foundation interaction analysis, soil response models, Winkler, Elastic continuum, two parameter elastic models, Elastic plastic behavior, Time dependent behavior

**UNIT II BEAM ON ELASTIC FOUNDATION- SOIL MODELS 12**

Infinite beam, two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness

**UNIT III PLATE ON ELASTIC MEDIUM 12**

Infinite plate, Winkler, Two parameters, isotropic elastic medium, Thin and thick plates, Analysis of finite plates, rectangular and circular plates, Numerical analysis of finite plates, simple solutions

**UNIT IV ELASTIC ANALYSIS OF PILE 12**

Elastic analysis of single pile, Theoretical solutions for settlement and load distributions, analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap.

**UNIT V LATERALLY LOADED PILE 12**

Load deflection prediction for laterally loaded piles, Sub grade reaction and elastic analysis, Interaction analysis, Pile raft system, Solutions through influence charts

**TOTAL: 60 PERIODS**

19255E32C

**ASEISMIC DESIGN OF STRUCTURES**

**L T P C**  
**3 1 0 4**

**AIMS &OBJECTIVES:**

This course deals about seismology, seismic design concepts, codal provisions and detailing of frames.

**UNIT I INTRODUCTION** **12**  
Elements of Engineering Seismology - Theory of Vibration - Response Spectrum.

**UNIT II HISTORICAL** **12**  
Indian Seismicity - Earthquake History - Behaviour of Structures in the past Earthquakes.

**UNIT III DESIGN CONCEPTS** **12**  
Seismic Design Concepts - Cyclic load behaviour of RC, Steel and Prestressed Concrete elements – Design spectrum - Principles of capacity design.

**UNIT IV CODAL PROVISIONS** **12**  
Provisions of Seismic Code (IS 1893) - Building systems frames, shear walls, Braced Frames, Combinations - Torsion.

**UNIT V DESIGN AND DETAILING** **12**  
Performance of Regular Buildings 3 D Computer Analysis of Building Systems (Theory Only) - Design and Detailing of frames - Shear walls and Frame walls.

**TOTAL: 60 PERIODS**

**References:**

19255E33A

**HARD CORE ELECTIVE V  
PREFABRICATED STRUCTURES**

**L T P C  
3 1 0 4**

**AIMS & OBJECTIVES:**

This course explains about design principles of Prefabricated Structures, components, application of prefabricated structures. Students can learn the usage of prefabricated structures in wall panels, industrial buildings and shell roofs.

**UNIT I DESIGN PRINCIPLES 12**

General Civil Engineering requirements- IS Code specifications. Modular co-ordination, standardization- Disuniting of Prefabricates, production, transportation, and erection-Safety factors, material properties, Deflection control.

**UNIT II REINFORCED CONCRETE 12**

Prefabricated structures - Long wall and cross-wall large panel buildings- One way and two way prefabricated slabs- Framed buildings with partial and curtain walls- Connections – Beam to column and column to column

**UNIT III FLOORS, STAIRS AND ROOFS 12**

Types of floor slabs, analysis and design example of cored and panel - Staircase slab design, types of roof slabs and insulation requirements- Description of joints, their behavior and reinforcement requirements- Ultimate strength calculations in shear and flexure

**UNIT IV WALL 12**

Types of wall panels, Blocks and large panels, Curtain- Partition and load bearing walls, load transfer from floor to wall panels- Design Curves, types of wall joints, their Behaviour and design -Leak prevention, joint sealants, sandwich wall panels

**UNIT V INDUSTRIAL BUILDINGS AND SHELL ROOFS 12**

Components of single-storey industrial sheds with crane gantry systems- R.C. Roof Trusses, Roof Panels, corbels and columns- Cylindrical, Folded plate and hyper-prefabricated shells- Erection and jointing, joint design, hand book based design

**TOTAL: 60 PERIODS**

19255E33B

**DISASTER RESISTANT STRUCTURES**

**L T P C**

**3 1 0 4**

**AIMS & OBJECTIVES:**

This course deals the philosophy of the design of disaster resistant structures such as dams , bridges and emphasize about the rehabilitation , retrofitting and damage assessment of structures.

**UNIT I BEHAVIOUR OF LIFE-LINE STRUCTURES 12**

Philosophy for design to resist earthquake, cyclone and flood - National and International codes of practice - By-Law of urban and semi-urban areas - Traditional and modern structures.

**UNIT II COMMUNITY STRUCTURES 12**

Response of dams, bridges, buildings - Strengthening measures - Safety analysis and rating – Reliability assessment.

**UNIT III REHABILITATION AND RETROFITTING 12**

Testing and evaluation - Classification of structures for safety point of view - methods of strengthening for different disasters - qualification test.

**UNIT IV DETAILING OF STRUCTURES AND COMPONENTS 12**

Use of modern materials and their impact on disaster reduction - Use of modern analysis, design and construction techniques optimization for performance.

**UNIT V DAMAGE ASSESSMENT OF STRUCTURES 12**

Damage surveys - Maintenance and modifications to improve hazard resistance - Different types of foundation and its impact on safety - Ground improvement techniques.

**TOTAL: 60 PERIODS**

**TEXT BOOKS:**

1. V.Moskvin , et.al Concrete and Reinforced Concrete - Deterioration and Protection - Mir Publishers - Moscow 1980.

19255E33C

NONLINEAR ANALYSIS OF STRUCTURES

L T P C

3 1 0 4

**AIMS & OBJECTIVES:**

This course deals about the non-linearities, non-linear equations and non linear static analysis of plates, columns, trusses and frames.

**UNIT I TYPES OF NONLINEARITIES 12**

Geometric Nonlinearity, Material Nonlinearity, Nonlinear Governing Equation for Beams: Moment-curvature Nonlinearity, Geometric Nonlinearity Due to Stretching, Material Nonlinearity, Geometrically Nonlinear Beam Problems - Moment-Curvature Nonlinearity- Cantilever Beam, Centrally Loaded beam with two supports, Cantilever Beam subjected to TipLoad

**UNIT II NONLINEAR EQUATIONS OF PLATES 12**

Nonlinear Static Analysis of Plates - Geometric and Material Nonlinearities, Governing Stress Function Approach, Displacement Equations Approach.

**UNIT III NONLINEAR STATIC ANALYSIS OF PLATES 12**

Boundary Conditions and method of solution, Large Deflection of Rectangular Plates.

**UNIT IV NONLINEAR ANALYSIS OF COLUMNS 12**

Post buckling of cantilever column, large deflection of column with both ends hinged

**UNIT V NONLINEAR ANALYSIS OF TRUSSES AND FRAMES 12**

Nonlinear Analysis of Trusses and Nonlinear Elastic Analysis of Frames - Derivation of non linear stiffness matrix, Matrix displacement method for nonlinear analysis of structures, nonlinear analysis of plane frames.

**TOTAL: 60 PERIODS**

**REFERENCE:**

1. M.Sathyamoorthy, 'Nonlinear Analysis of Structures', CRC Press, New York

## HARD CORE ELECTIVE VI

19255E34A

OFFSHORE STRUCTURES

L T P C

3 1 0 4

### AIMS & OBJECTIVES:

This course includes the details of wave theories, forces in offshore structures and design and analysis of offshore structures .

#### UNIT I WAVE THEORIES 12

Wave generation process, small and finite amplitude wave theories.

#### UNIT II FORCES OF OFFSHORE STRUCTURES 12

Wind forces, wave forces on vertical, inclined cylinders, structures - current forces and use of Morison equation.

#### UNIT III OFFSHORE SOIL AND STRUCTURE MODELING 12

Different types of offshore structures, foundation modeling, and structural modeling.

#### UNIT IV ANALYSIS OF OFFSHORE STRUCTURES 12

Static method of analysis, foundation analysis and dynamics of offshore structures.

#### UNIT V DESIGN OF OFFSHORE STRUCTURES 12

Design of platforms, helipads, Jacket tower and mooring cables and pipe lines.

**TOTAL: 60 PERIODS**

19255E34B

**STABILITY OF STRUCTURES**

**L T P C**

**3 1 0 4**

**AIMS & OBJECTIVES:**

This course deals with the concept and characteristics of stability problems and behavior of torsional buckling and lateral buckling in beams and columns.

**UNIT I INTRODUCTION 12**

Concept of stability approaches to stability analysis, characteristics of stability problems.

**UNIT II COLUMNS 12**

Buckling of columns with various end conditions, imperfect columns, elastically supported columns, non prismatic columns, Built-up columns, Inelastic buckling, Experimental study of column behavior, Empirical column formulae. Buckling of bars on elastic foundations, large deflection of buckled bars.

**UNIT III BEAMS – COLUMNS 12**

Beam-column theory, Application to buckling of frames.

**UNIT IV TORSIONAL BUCKLING 12**

Combined torsional and flexural buckling.

**UNIT V LATERAL BUCKLING 12**

Lateral buckling of beams, pure bending of simply supported beam and cantilever, numerical solutions.

**TOTAL: 60 PERIODS**

**REFERENCES BOOKS:**

**AIMS & OBJECTIVES:**

This course introduces the properties of materials, strength and elastic behavior of composite lamina and design of composite structures.

**UNIT I INTRODUCTION TO MODERN MATERIALS 12**

Fiber-Reinforced Polymer Composite (FRPC) Materials: Definition, Historical development, applications. Fibers and Matrix, types and their properties. Manufacturing process and methods for composites. Types and classification of composite materials, properties, advantages over conventional materials. Piezoelectric Materials: History, crystal structure, applications. Shape Memory Alloys (SMA), Functionally Graded Materials (FGM): definition and applications.

**UNIT II ENGINEERING PROPERTIES OF MODERN MATERIALS 12**

FRPC Composite Lamina: Micromechanics approach, methods. Longitudinal and transverse elastic properties of composite lamina, in-plane shear modulus for continuous fibers. Stress-strain relationship, compliance and stiffness matrices for generally anisotropic, specially orthotropic material, transversely isotropic material, orthotropic, isotropic materials, Plane stress condition for thin lamina, transformation of stress and elastic properties. Three dimensional transformations. Piezoelectric Materials: Piezoelectric coefficients, electric displacements, piezoelectric strain matrix for Quartz, Lead Zirconate-titanate, Polyvinylidene fluoride. Stiffness matrix for Functionally Graded Materials.

**UNIT III STRENGTH OF COMPOSITE LAMINA 12**

Introduction. Failure theories, Maximum stress theory, Maximum strain theory, Energy based interaction theory (Tsai-Hill), Interactive tensor polynomial theory (Tsai-Wu), Failure mode based theory (Hasin-Rotem). Computation of lamina strength by Tsai-Wu theory for plane stress condition. Comparison of various failure theories.

**UNIT IV ELASTIC BEHAVIOUR OF COMPOSITE LAMINATES 12**

Basic assumptions, Laminate configurations, Strain displacement relationship, Stress-strain relationship, Force and moment resultants, Laminate compliances and stiffness matrices, Transformation of matrices. Load deformation relationship for symmetric laminates, symmetric cross-ply, symmetric angle-ply, balanced, antisymmetric cross-ply and angle ply, orthotropic, quasi-isotropic laminates.

**UNIT V HYGROTHERMAL EXPANSION AND DESIGN OF COMPOSITE STRUCTURE 12**

Coefficients of thermal and moisture expansion of various unidirectional lamina, load deformation relationship, residual stresses for cross ply symmetric laminates. Design methodology, design of pressure vessel for various laminate configurations.

3	19255E53CP	Mechanics Of Composite Materials	3	1	0	4

**AIM & OBJECTIVES:**

The course aim to develop the skills of the students in the areas of boundary value problems and transform techniques. The course will also serve as a prerequisite for post Graduate and specialized studies and research.

Be capable of mathematically formulating certain practical problems in terms of partial differential equations, solve them and physically interpret the results.

Have learnt the basics of Z – transform in its applicability to discretely varying functions, gained the skill to formulate certain problems in terms of differences equations.

**UNIT I LAPLACE TRANSFORM 12**

Laplace transform methods for one-dimensional wave equation – Displacement in a long string – longitudinal vibration of an elastic bar – Laplace equation – properties of harmonic functions.

**UNIT II FOURIER TRANSFORM 12**

Fourier transforms methods for one – dimensional heat conduction problems in infinite and semi infinite rod – Fourier transform methods for Laplace equation.

**UNIT III PROBABILITY & DISTRIBUTION 12**

Probability – definition and introduction – random variable – probability density functions – study of standard distributions: Binomial, Poisson, normal exponential and Weibull distributions – Applications – Baye’s theorem.

**UNIT IV TESTING OF HYPOTHESIS 12**

Testing of Hypothesis – Parametric test – Small samples – Test related proportion, Means, Standard deviation – Test based on chi-square, Goodness of fit and test of independence.

**UNIT V THEORY OF ESTIMATION 12**

Principles of least squares – Multiple and partial correlation and regression – Estimation of parameters – Method of moments.

**TOTAL: 60 PERIODS**

**REFERENCE BOOKS:**

1. Sankar Rao.K., Introduction to partial differential equations, Pnentile Hall of India, New Delhi – 1995.

**19255C12P QUALITY CONTROL AND ASSURANCE IN CONSTRUCTION L T P C**  
**3 1 0 4**

**OBJECTIVE:**

- To understand the elements of quality planning and the implication
- To become aware of objectives and advantage of quality assurance
- To be exposed to means of quality control
- To study the relationship between quality control and assurance

**UNIT-I** **12**  
Construction Organisation and Quality Planning: Types of organizations - Inspection, control and enforcement - Quality Management Systems and method - Responsibilities and authorities in quality assurance and quality control - Architects, engineers, contractors, and special consultants, Quality circle.

**UNIT-II** **12**  
Quality policy, Objectives and methods in Construction Industry - Consumers satisfaction, Ergonomics - Time of Completion - Statistical tolerance - Taguchi's concept of quality - Codes and Standards - Document - Contract and construction programming - Inspection procedures - Processes and products - Total QA I QC programme and cost implication.

**UNIT-III** **12**  
Quality Assurance: Objectives - Regularity agent, owner, design, contract and construction oriented objectives, methods - Techniques and needs of QA/QC - Different aspects of quality - Appraisals, Factors influencing construction quality - Critical, major failure aspects and failure mode analysis, -Stability methods and tools, optimum design - Reliability testing, reliability coefficient and reliability prediction.

**UNIT-IV** **12**  
Quality Control: Total Quality Control- Quality Control by statistical methods — Sampling by attributes and by variables - Selection of new materials - Influence of drawings, detailing, specification,

**UNIT-V** **12**  
Standardization - Bid preparation - Construction activity, environmental safety, social and environmental factors - Natural causes and speed of construction - Life cycle costing -Value engineering and value analysis.

**TOTAL: 45 PERIODS**

19255C13P

**THEORY OF PLASTICITY AND ELASTICITY**

**L T P C**  
**3 1 0 4**

**AIM & OBJECTIVES:**

Emphasis is placed on static problems with linear material and small deformation. Many basic 2-D problems (such as plane strain and plane stress) and 3-D problems.

**UNIT I ANALYSIS OF STRESS AND STRAIN 12**

Analysis of stress and strain, stress strain relationship. Generalized Hook's law. Plane stress and plane strain.

**UNIT II DEFORMATION 12**

Basic concepts of deformation of deformable bodies - Transformations of stresses and strains in Cartesian and polar co-ordinates - Equilibrium equations in two and three dimensions in Cartesian co-ordinates.

**UNIT III TORSION 12**

Torsion of non-circular section - methods of analysis - membrane analogy - torsion of thin rectangular section and hollow thin walled sections.

**UNIT IV THEORY OF ENERGY 12**

Energy methods – Energy principles and theorem.

**UNIT V INTRODUCTION TO PROBLEMS IN PLASTICITY 12**

Physical assumption - criteria of yielding, yield surface, Flow rule (plastic stress strain relationship). Elastic plastic problems of beams in bending - plastic torsion.

**TOTAL: 60 PERIODS**

**CORE PRACTICAL -I**  
**COMPUTER PROGRAMMING LAB- AUTO CAD**

**L T P C**  
**0 0 3 3**

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using AutoCAD.

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop civil engineering drawing using Auto CAD.

**UNIT I**

Introduction AutoCad – Definition of various commands used in AutoCAD

**UNIT II**

Simple Exercises using AutoCad commands – Produce drawing using AutoCad and output of all the drawings are taken print out in A4 sheet using Inkjet / Laser Printer or Plotter and produced in file form as regard.

**UNIT III**

Section of semicircular Arch, Section of a lean – to – roof and section of spread footing foundation

**UNIT IV**

Plan, section and elevation of a prayer hall, school building and residential building (R.C.C. Roof)

**UNIT V**

Preparation of approval drawing to be submitted to corporation or municipality showing required details in one such as site plan, ground floor plan, section and elevation, key plan, septic tank plan, rain water harvesting pit with all details and title block detail.

**TOTAL: 45 PERIODS**

MANAGEMENT INFORMATION SYSTEM

L T P C

3 1 0 4

Objective:

- To bring about an exposure to information systems in a formal manner
- To study the development of information systems
- To study the means of applying information systems models to project management
- To introduce system audit and to study its features

### UNIT-I

12

System Development: Information Systems - Establishing the Framework - Business Models - Evolution of Information Systems. Modern Information System - System Development Life Cycle - Structured Methodologies - Designing Computer Based Methods, Procedures, Control - Designing Structured Programs.

### UNIT-II

12

Information Systems: Integrated Construction Management Information System – Project Management Information System - Functional Areas, Finance, Marketing, Production, Personnel .

### UNIT-III

12

Levels, DSS, EIS, ES - Comparison, Concepts and Knowledge Representation –Managing International Information System.

### UNIT-IV

12

Implementation and Control: Control - Testing Security - Coding Techniques - Defection of Error -Validating - Cost Engineering qualities - Design, Production, Service, Software specification.

### UNIT-V

12

Software Metrics, Software quality assurance - Systems Methodology - Objectives - Time and Logic, Knowledge and Human Dimension - Software life cycle models - Verification and Validation.

**TOTAL: 60 PERIODS**

### Books for the References:

FINITE ELEMENT ANALYSIS

L T P C

3 1 0 4

**AIM & OBJECTIVES:**

The finite element method is the most powerful structural analysis tool for the Civil Engineers. The basic formulation and programming technique are introduced. According to the same procedures, the different elements such as truss, beam, plate and shell are easily formulated.

**UNIT I INTRODUCTION: 12**  
Differential equilibrium equations - strain displacement relation - linear constitutive relation - special cases. Principle of stationary potential energy - application to finite element methods. Some numerical techniques in finite element Analysis

**UNIT II ANALYSIS OF PLATE BENDING; 12**  
Two Dimensional problems - Plane Stress, Plain Strain and Axisymmetric Problems - Triangular and beam element -. Analysis of plate bending - Basic theory of plate bending-displacement functions - plate bending Elements.

**UNIT III MODELS AND FUNCTION OF ELEMENT: 12**  
Displacement models - convergence requirements. Natural coordinate systems – Shape function. Interpolation function. Linear and quadratic elements - Lagrange & Serendipity elements.

**UNIT IV ANALYSIS OF NONLINEAR AND VIBRATION PROBLEMS: 12**  
Strain displacement matrix - Material and Geometric Nonlinearity - Methods of Treatment -Dynamic condensation-Eigen value extraction

**UNIT V ASSEMBLAGE OF ELEMENT: 12**  
Assemblage of elements – Direct stiffness method. Special characteristics of stiffness matrix - Boundary condition & reaction - Gauss elimination –Basic steps in Finite element analysis.

**TOTAL: 60 PERIODS**

**REFERENCE**

1. Krishnamoorthy, C.S, Finite Element Analysis Theory & Programming, McGraw- Hill
2. Desai C.S and Abel, J.F., Introduction to the finite element Method, Affiliated East west Press Pvt. Ltd. New Delhi 1997.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**19255L24P**

**SOFTWARE LAB**

**L T P C**  
**0 0 3 3**

**AIM:**

To impart knowledge to analyze solve, design and Civil Engineering drawings using FEA - ANSYS

**OBJECTIVES:**

- To learn the basic concepts of computing.
- To know the methodology of problem solving.
- To develop Civil Engineering drawing using FEA – ANSYS

**LIST OF EXPERIMENTS**

1. Calculate the displacement and the member forces / reaction for the given simple truss with concentrated loads.
2. Calculate the displacement and the member forces / reaction for the given Stepped shaft subjected to temperature change.
3. Calculate the displacement and the member forces / reaction for the given beam with concentrated and distributed loads.
4. Find the natural frequencies and mode shapes of a given cantilever beam.
5. Find the maximum normal stress and stress concentration factor for the given plate with hole.

RESEARCH METHODOLOGY

L T P C  
3 0 0 3

**AIM:**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

**OBJECTIVES:**

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

**OUTCOME:**

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

**PREREQUISITES:**

Research Methodology course in UG level or equivalent knowledge.

**UNIT I**

9

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

**UNIT II**

9

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

**UNIT III**

9

Data Analysis using Excel- Tabulation of Data in excel ( Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

**UNIT IV**

9

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

## UNIT V

9

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references.

**SEMESTER III  
STRUCTURAL DYNAMICS**

**L T P C  
3 1 0 4**

**AIM & OBJECTIVES:**

This course covers the methods for analyzing the stresses and deflections developed in any given type of structures when it is subjected to an arbitrary dynamic loading.

**UNIT I PRINCIPLES OF DYNAMICS 12**

Formulation of equations of motion by different methods, single degree freedom systems, free and forced response, effect of damping.

**UNIT II MULTIDEGREE OF FREEDOM SYSTEMS 12**

Formulation of structure property matrices, Eigen values problems, Modes shapes and orthogonality of modes, Approximate methods of extraction of eigen values.

**UNIT III DYNAMIC RESPONSE OF MDOF SYSTEMS 12**

Mode superposition techniques, Numerical integration procedures.

**UNIT IV CONTINUOUS SYSTEMS 12**

Modeling - free and forced vibration of bars and beams.

**UNIT V APPLICATIONS 12**

Idealisation of structures to mathematical models, examples of wind, earthquake and impact

**TOTAL: 60 PERIODS**

**19255C32P MAINTENANCE & REHABILITATION OF STRUCTURES L T P C**  
**3 1 0 4**

**AIM and OBJECTIVES:**

Introduction to the governmental quality assurance regulations for public works. Application of quality control concepts, statistical experimental design principles to the construction process to minimize project costs and improve quality.

**UNIT I INTRODUCTION 12**

Definitions: Maintenance, repair and rehabilitation, Facets of and importance of Maintenance Preventive measures on various aspects Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration-testing techniques.

**UNIT II METEOROLOGICAL EFFECTS 12**

Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion protection

**UNIT III QUALITY CONTROL 12**

Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking.

**UNIT IV MATERIALS AND TECHNIQUES FOR REPAIR 12**

Special concretes and mortar, concrete chemicals, Expansive cement, polymer concrete, sulphur infiltrated concrete, Ferro cement, Fiber reinforced concrete. Rust eliminators and polymers coating for rebar during repair foamed concrete, mortar and dry pack, vacuum concrete, Guniting and Shot Crete Epoxy injection, Mortar repair for cracks, shoring and underpinning.

**UNIT V DEMOLITION 12**

Engineering demolition of structures – case studies

**19255C42P**

**ADVANCED STEEL STRUCTURES**

**L T P C**  
**3 1 0 4**

**AIM & OBJECTIVES:**

Introduction to steel structure, tensioned member, compressed member, beam, design of beam and column, bolt jointing, welding jointing and other joint design.

**UNIT I COMPRESSION MEMBERS 12**  
Design of compression members – Axially – Uni axial and biaxial bending.

**UNIT II PLASTIC ANALYSIS 12**  
Plastic Analysis of Structures – Introduction - Shape factors – Mechanisms - Plastic hinge - Analysis of beams and portal frames - Design of continuous beams.

**UNIT III LIGHT WEIGHT STEEL STRUCTURES 12**  
Design of Light Gauge Steel Structures - Types of cross sections - Local buckling and lateral buckling - Design of compression and tension members – Beams - Deflection of beams.

**UNIT IV LIMIT STATE DESIGN 12**  
Limit state design of Steel Structures – Plastic section – Section classification – Partial safety factor.

**UNIT V DESIGN OF JOINTS AND CONNECTIONS 12**  
Design of joints and connections – Riveted – Bolted – Welded – Semi rigid connection.

FAILURE ANALYSIS OF STRUCTURES

L T P C

3 1 0 4

### AIM & OBJECTIVES:

This course introduces about the failure of structures, buckling failure of columns, deterioration of wood and miscellaneous failures.

#### UNIT I INTRODUCTION 12

Causes of failure – Types of failure – durability of materials – various durability tests on materials.

#### UNIT II STRUCTURAL FAILURE 12

Structural failure – material and load effects – environment effect - Non-structural and structural repairs

#### UNIT III BUCKLING FAILURE ON COLUMNS 12

Buckling of columns with various end conditions - Elastically supported columns- non prismatic columns - Built-up columns - Inelastic buckling, Experimental study of column behavior, Empirical column formulae.

#### UNIT IV DETERIORATION OF WOOD 12

Defects on wood – improper seasoning and defects – improving of surface of wood.

#### UNIT V MISCELLANEOUS FAILURES 12

Pin-jointed And rigid jointed frames – concrete walls - arches – reinforced concrete beams and frames – repair of concrete bridge and water retaining structures.

**ADVANCED CONCRETE TECHNOLOGY**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

To learn the Performance of concrete as structural material and advanced technologies used in construction by using concrete.

**UNIT I INTRODUCTION TO CONCRETE 12**

Materials - Concrete materials - Reinforcements and admixtures.

**UNIT II MIX DESIGN 12**

Mix Design – Specifications - Design of concrete mixes by IS code method – ACI method - Road Note No:4 method – High strength concrete.

**UNIT III BEHAVIOUR OF CONCRETE 12**

Behavior of Concrete - Modern trends in concrete manufacture and placement techniques - Theological behavior of fresh concrete and hardened concrete - Resistance to static and dynamic loads.

**UNIT IV TESTING 12**

Testing of Concrete - Non-destructive testing and quality control – Durability - Corrosion protection and fire resistant.

**UNIT V SPECIAL CONCRETE 12**

Special Concrete - Pre-cast concrete - Light weight concrete - Under water concrete -Pumped concrete - Polymer concrete - Composites and fibre reinforced concrete.

## ELECTIVE- II

**19255E33AP**

**PRESTRESSED CONCRETE DESIGN**

**L T P C**

**3 1 0 4**

**AIM & OBJECTIVES:**

This course introduces students to the fundamental principles of pre-stressed concrete behavior and design, So that they can act effectively to optimize existing forms of construction and apply fundamental concepts with confidence in unusual and challenging situations.

**UNIT I INTRODUCTION**

**12**

Difference between reinforced and pre-stressed concrete – Principles of pre-stressing – Methods and systems of pre-stressing – Principles of electro thermal pre-stressing and chemical pre-stressing – Classification of pre-stressed concrete structures – Materials – High strength concrete and High strength steel – Stress-strain diagram - Losses in pre- stress.

**UNIT II LIMIT STATE DESIGN**

**12**

Design of prismatic pre-stressed concrete members for bending at working loads –Check for ultimate load stage (Limit State Design).

**UNIT III BEHAVIOR OF BEAMS**

**12**

Simple cable profiles – Calculation of deflections – Design of beams for shear and torsion at working and ultimate loads. Design of Anchorage zone by Guyon’s method – Concept of Magnel’s method – IS 1343 recommendations.

**UNIT IV COMPOSITE BEAMS**

**12**

Composite pre-stressed concrete beams – Design procedure – Calculation of stresses at important stages both for propped and un propped constructions – Shrinkage stresses.

**UNIT V BEHAVIOR OF CONTINUOUS BEAMS**

**12**

Statically indeterminate structures – Concept of concordant cable and linear transformations – Sketching of pressure lines for continuous beams – Circular pre stressing.

**19255E33BP**

**HIGH RISE STRUCTURES**

**L T P C**  
**3 1 0 4**

**AIM & OBJECTIVES:**

This course covers the design criteria and loading pattern on high rise structures, behavior of structural systems and stability, design and analysis of tall buildings.

**UNIT I DESIGN CRITERIA 12**

Design philosophy, Loading, Sequential loading and materials - high performance Concrete - Fiber reinforced Concrete - Light weight Concrete - Design mixes.

**UNIT II LOADING AND MOVEMENT 12**

Gravity Loading: Dead and live load, methods of live load reduction, Impact, gravity loading, construction load. Wind loading: Static and dynamic approach, Analytical and wind tunnel experimental method. Earthquake loading: Equivalent lateral force, modal analysis, combinations of loading working stress design, Limit state design, plastic design.

**UNIT III BEHAVIOUR OF VARIOUS STRUCTURAL SYSTEMS 12**

Factors affecting growth, Height and Structural form. High rise behavior, Rigid frames, braced frames, In filled frames, shear walls, coupled shear walls, wall-frames, tubular, cores, outrigger - braced and hybrid mega system.

**UNIT IV ANALYSIS AND DESIGN 12**

Modeling for approximate analysis, Accurate analysis and reduction techniques, Analysis of building as total structural system considering overall integrity and major subsystem interaction, Analysis for member forces, drift and twist, computerized general three dimensional analysis. Structural elements: Sectional shapes, properties and resisting capacity, design, deflection, cracking, pre stressing, shear flow. Design for differential movement, creep and shrinkage effects, temperature effects and fire resistance

**UNIT V STABILITY OF TALL BUILDINGS 12**

Overall buckling analysis of frames, wall-frames, Approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first-order and P-Delta analysis, Translational, Torsional instability, out of plum effects, stiffness of member in stability, effect of foundation rotation

**TOTAL: 60 PERIODS**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**COMPUTER AIDED STRUCTURAL DESIGN**

**L T P C**

**3 1 0 4**

### AIM:

To learn design and preparation of structural drawing of concrete and steel structures (STADD-PRO).

### OBJECTIVES:

At the end of the course the students acquires hands on experiences in design and Preparation of structural drawing for concrete and steel structures normally encountered in Civil Engineering practice.

### UNIT I COMPUTER GRAPHICS

**12**

Graphic primitives - Transformations - Basics of 2-D drafting - Modeling of curves and surfaces - Solid modeling Graphic standards - Drafting software packages and usage.

### UNIT II STRUCTURAL ANALYSIS

**12**

Computer methods of structural analysis - Finite Element programming - Analysis through application packages.

### UNIT III STRUCTURAL DESIGN

**12**

Computer aided design of steel and RC Structural elements - Detailed drawing - Bill of materials.

### UNIT IV OPTIMIZATION

**12**

Linear programming - Simplex algorithm - Post-optimality analysis - Project scheduling - CPM and PERT applications Genetic algorithm and applications.

### UNIT V ARTIFICIAL INTELLIGENCE

**12**

Introduction - Heuristic search - knowledge based expert systems - Architecture and applications of KBES - Expert system shells - Principles of neural network.

**TOTAL: 60 PERIODS**

<b>19255E43AP</b>	<b>OPTIMIZATION IN STRUCTURAL DESIGN</b>	<b>L T P C</b>
		<b>3 1 0 4</b>

#### AIM & OBJECTIVES:

The structural analysis is formulated through the principle of optimization. Both the manual calculation and application of the computer are introduced for the analysis of truss and frame structures using optimization techniques.

<b>UNIT I INTRODUCTION</b>	<b>12</b>
Basic concepts of minimum weight, minimum cost design, Objective function, constraints and classical methods.	

<b>UNIT II OPTIMIZATION TECHNIQUES</b>	<b>12</b>
Linear programming, Integer Programming, Quadratic Programming.	

<b>UNIT III ALGORITHMS</b>	<b>12</b>
Dynamic Programming and Geometric Programming methods for Optimal design of structural elements.	

<b>UNIT IV COMPUTER SEARCH METHODS</b>	<b>12</b>
Linear Programming methods for plastic design of frames, Computer search methods for univariate and multivariate Minimization.	

<b>UNIT V OPTIMIZATION BY STRUCTURAL THEOREMS</b>	<b>12</b>
Maxwell, Mitchell and Heyman's Theorems for trusses and frames, fully stresses design with deflection constraints, optimality criterion methods.

**DESIGN OF INDUSTRIAL STRUCTURES**

**L T P C**  
**3 1 0 4**

**AIM & OBJECTIVES:**

This course deals about the requirements, planning and construction techniques of an industry. And also deals with modes of communication and transport to be used in an industrial structures.

**UNIT I REQUIREMENTS OF AN INDUSTRY 12**

General - Specific requirements for industries like textile, sugar, cement, chemical, etc - Site layout and external facilities.

**UNIT II PLANNING 12**

Planning of Building Work – Standards - Structural materials including plastics – Polymers - Fibre glass - Pressed card boards, etc - Multi-storey buildings - Steel skeletal structures - Reinforced concrete frames – Workshops - Ware houses - Single storey buildings - Sheds in steel and reinforced concrete - North-lights - Single span spherical and other special constructions - Cooling towers and chimneys - Bunkers and silos' prefabrication - Construction.

**UNIT III CONSTRUCTION TECHNIQUES 12**

Construction Techniques - Expansion joints - Machine foundations - Other foundations - Water proofing - Roofs and roofing - Roof drainage - Floors and flooring joists - Curtain walling - Outer wall facing - Sound and shock proof mountings - Use of modern hoisting and other construction equipments.

**UNIT IV COMMUNICATION AND TRANSPORT 12**

Circulation - Communication and Transport - Fixed points ( central cores) – Staircases -Grid floor sections - Lifts refuse disposals - Utilization of waste materials – Cranes - Continuous conveyors - Mobile cranes – Transporters – Doors - Sliding gates.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**UNIT V FUNCTIONAL REQUIREMENTS****12**

Functional Requirements – Lighting: Natural lighting - Protection from the sun - skylights - window cleaning installations -Services: Layout – wiring – fixtures - cable and pipe bridges - electrical installations - lighting substation - Effluent. Ventilation and fire protection: Ventilation - Air-conditioning - Fire escapes and chutes - Fire alarms - Extinguishers and hydrants.

**19255E43CP****ELEMENTS OF EARTHQUAKE ENGINEERING****L T P C****3 1 0 4****AIM & OBJECTIVES:**

This course covers the theory and applications related to Earthquake Engineering. The broad subjects discussed in this course include earthquake response of linearly elastic and inelastic buildings, structural dynamics in building codes.

**UNIT I ELEMENTS AND FEATURES****12**

Elements of Seismology - Definitions of magnitude – Intensity - Epicentre etc - General features of tectonics of seismic regions - Seismographs.

**UNIT II THEORY OF VIBRATIONS****12**

Theory of Vibrations - Free vibrations of single degree - Two degree and multiple degree freedom systems - Computations of dynamic response to time dependent forces - Vibrations isolation – Vibration absorbers - Brief introduction to instruments - Accelerograms.

**UNIT III PRINCIPLES OF EARTHQUAKE DESIGN****12**

Principles of earthquake resistant design - Response spectrum theory - Application of response spectrum theory to seismic design of structures. Capacity - Design Principles - Design criteria for strength - Stiffness and ductility.

**UNIT IV EARTHQUAKE ANALYSIS****12**

Earthquake Analysis and Design - Characteristics of earthquake – Earthquake response of structures – Concept of earthquake resistance design – Code provisions for design of building – IS 1893 and IS 4326 – Energy absorption capacity.

**UNIT V COMPUTER APPLICATION****12**

Seismic analysis and design of a multi storied building using Computer.

**TOTAL: 60 PERIODS****SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

### ELECTIVE- IV

19255E51AP

EXPERIMENTAL STRESS ANALYSIS

L T P C

3 1 0 4

#### AIM & OBJECTIVES:

At the end of the semester students can learn about the strain gauges, strain rosetters, model analysis, calibration of photo elastic materials.

#### UNIT I STRAIN GAUGES

12

Strain Gauges - Mechanical and optical strain gauges – Description and operation – Electrical resistance- Inductance and capacitance gauges – Detailed treatment on resistant gauges – Measurement of static and dynamic strains – Strain rosettes – Effect of transverse strains – Use of strain recorders and load cells.

#### UNIT II MODEL ANALYSIS

12

Model Analysis - Structural similitude – Use of models – Structural and dimensional analysis – Buckingham Pi Theorem – Muller Breslau's principle for indirect model analysis – Use of Begg's and Eney's deformeters – Moment indicators – Design of models for direct and indirect analysis.

#### UNIT III CALIBRATION

12

Two dimensional photo elasticity - Stress optic law – Introduction to polariscope – Plane and circular polariscope – Compensators and model materials – Material and model fringe value – Calibration of photo elastic materials – Isochromatic and isoclinic fringes – Time edge effects.

#### UNIT IV PHOTO ELASTICITY

12

Three dimensional photo elasticity - Introduction – Stress freezing techniques – Stress separation techniques – Scattered light photo elasticity – Reflection polariscope.

#### UNIT V MISCELLANEOUS METHODS

12

Brittle coating method – Birefringence techniques – Moire fringe method – Non-destructive testing – Ultrasonic pulse velocity technique – Rebound hammer method – X-ray

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

method – Gamma-ray method.

**SOIL STRUCTURE INTERACTION**

**L T P C**  
**3 1 0 4**

**AIM & OBJECTIVES:**

This course deals with the soil- foundation interaction, analysis of beams and finite plates, elastic analysis of pile, load deflection for laterally loaded pile.

**UNIT I SOIL-FOUNDATION INTERACTION 12**

Introduction to soil-Foundation interaction problems, soil behaviour, Foundation behavior, Interface behavior, Scope of soil foundation interaction analysis, soil response models, Winkler, Elastic continuum, two parameter elastic models, Elastic plastic behavior, Time dependent behavior

**UNIT II BEAM ON ELASTIC FOUNDATION- SOIL MODELS 12**

Infinite beam, two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness

**UNIT III PLATE ON ELASTIC MEDIUM 12**

Infinite plate, Winkler, Two parameters, isotropic elastic medium, Thin and thick plates, Analysis of finite plates, rectangular and circular plates, Numerical analysis of finite plates, simple solutions

**UNIT IV ELASTIC ANALYSIS OF PILE 12**

Elastic analysis of single pile, Theoretical solutions for settlement and load distributions, analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap.

**UNIT V LATERALLY LOADED PILE 12**

Load deflection prediction for laterally loaded piles, Sub grade reaction and elastic analysis, Interaction analysis, Pile raft system, Solutions through influence charts

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**19255E51CP**

**ASEISMIC DESIGN OF STRUCTURES**

**L T P C**

**3 1 0 4**

**AIMS &OBJECTIVES:**

This course deals about seismology, seismic design concepts, codal provisions and detailing of frames.

**UNIT I INTRODUCTION**

**12**

Elements of Engineering Seismology - Theory of Vibration - Response Spectrum.

**UNIT II HISTORICAL**

**12**

Indian Seismicity - Earthquake History - Behaviour of Structures in the past Earthquakes.

**UNIT III DESIGN CONCEPTS**

**12**

Seismic Design Concepts - Cyclic load behaviour of RC, Steel and Prestressed Concrete elements – Design spectrum - Principles of capacity design.

**UNIT IV CODAL PROVISIONS**

**12**

Provisions of Seismic Code (IS 1893) - Building systems frames, shear walls, Braced Frames, Combinations - Torsion.

**UNIT V DESIGN AND DETAILING**

**12**

Performance of Regular Buildings 3 D Computer Analysis of Building Systems (Theory Only) - Design and Detailing of frames - Shear walls and Frame walls.

**TOTAL: 60 PERIODS**

**References:**

<b>19255E52AP</b>	<b>ELECTIVE V PREFABRICATED STRUCTURES</b>	<b>L T P C 3 1 0 4</b>
-------------------	--	----------------------------

**AIMS & OBJECTIVES:**

This course explains about design principles of Prefabricated Structures, components, application of prefabricated structures. Students can learn the usage of prefabricated structures in wall panels, industrial buildings and shell roofs.

**UNIT I DESIGN PRINCIPLES 12**  
 General Civil Engineering requirements- IS Code specifications. Modular co-ordination, standardization- Disuniting of Prefabricates, production, transportation, and erection-Safety factors, material properties, Deflection control.

**UNIT II REINFORCED CONCRETE 12**  
 Prefabricated structures - Long wall and cross-wall large panel buildings- One way and two way prefabricated slabs- Framed buildings with partial and curtain walls- Connections – Beam to column and column to column

**UNIT III FLOORS, STAIRS AND ROOFS 12**  
 Types of floor slabs, analysis and design example of cored and panel - Staircase slab design, types of roof slabs and insulation requirements- Description of joints, their behavior and reinforcement requirements- Ultimate strength calculations in shear and flexure

**UNIT IV WALL 12**  
 Types of wall panels, Blocks and large panels, Curtain- Partition and load bearing walls, load transfer from floor to wall panels- Design Curves, types of wall joints, their Behaviour and design

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

-Leak prevention, joint sealants, sandwich wall panels

## **UNIT V INDUSTRIAL BUILDINGS AND SHELL ROOFS**

**12**

Components of single-storey industrial sheds with crane gantry systems- R.C. Roof Trusses, Roof Panels, corbels and columns- Cylindrical, Folded plate and hyper-prefabricated shells-Erection and jointing, joint design, hand book based design

**TOTAL: 60 PERIODS**

**DISASTER RESISTANT STRUCTURES**

**L T P C**

**3 1 0 4**

### **AIMS & OBJECTIVES:**

This course deals the philosophy of the design of disaster resistant structures such as dams, bridges and emphasize about the rehabilitation, retrofitting and damage assessment of structures.

## **UNIT I BEHAVIOUR OF LIFE-LINE STRUCTURES**

**12**

Philosophy for design to resist earthquake, cyclone and flood - National and International codes of practice - By-Law of urban and semi-urban areas - Traditional and modern structures.

## **UNIT II COMMUNITY STRUCTURES**

**12**

Response of dams, bridges, buildings - Strengthening measures - Safety analysis and rating – Reliability assessment.

## **UNIT III REHABILITATION AND RETROFITTING**

**12**

Testing and evaluation - Classification of structures for safety point of view - methods of strengthening for different disasters - qualification test.

## **UNIT IV DETAILING OF STRUCTURES AND COMPONENTS**

**12**

Use of modern materials and their impact on disaster reduction - Use of modern analysis, design and construction techniques optimization for performance.

## **UNIT V DAMAGE ASSESSMENT OF STRUCTURES**

**12**

Damage surveys - Maintenance and modifications to improve hazard resistance - Different types of foundation and its impact on safety - Ground improvement techniques.

**TOTAL: 60 PERIODS**

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**19255E52CP****NONLINEAR ANALYSIS OF STRUCTURES****L T P C  
3 1 0 4****AIMS & OBJECTIVES:**

This course deals about the non –linearities, non-linear equations and non linear static analysis of plates, columns, trusses and frames.

**UNIT I TYPES OF NONLINEARITIES 12**

Geometric Nonlinearity, Material Nonlinearity, Nonlinear Governing Equation for Beams: Moment-curvature Nonlinearity, Geometric Nonlinearity Due to Stretching, Material Nonlinearity, Geometrically Nonlinear Beam Problems - Moment-Curvature Nonlinearity- Cantilever Beam, Centrally Loaded beam with two supports, Cantilever Beam subjected to TipLoad

**UNIT II NONLINEAR EQUATIONS OF PLATES 12**

Nonlinear Static Analysis of Plates - Geometric and Material Nonlinearities, Governing Stress Function Approach, Displacement Equations Approach

**UNIT III NONLINEAR STATIC ANALYSIS OF PLATES 12**

Boundary Conditions and method of solution, Large Deflection of Rectangular Plates.

**UNIT IV NONLINEAR ANALYSIS OF COLUMNS 12**

Post buckling of cantilever column, large deflection of column with both ends hinged

**UNIT V NONLINEAR ANALYSIS OF TRUSSES AND FRAMES 12**

Nonlinear Analysis of Trusses and Nonlinear Elastic Analysis of Frames - Derivation of non linear stiffness matrix, Matrix displacement method for nonlinear analysis of structures, nonlinear

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

analysis of plane frames.

**19255E53AP**

**OFFSHORE STRUCTURES**

**L T P C**  
**3 1 0 4**

**AIMS & OBJECTIVES:**

This course includes the details of wave theories, forces in offshore structures and design and analysis of offshore structures .

**UNIT I WAVE THEORIES 12**

Wave generation process, small and finite amplitude wave theories.

**UNIT II FORCES OF OFFSHORE STRUCTURES 12**

Wind forces, wave forces on vertical, inclined cylinders, structures - current forces and use of Morison equation.

**UNIT III OFFSHORE SOIL AND STRUCTURE MODELING 12**

Different types of offshore structures, foundation modeling, and structural modeling.

**UNIT IV ANALYSIS OF OFFSHORE STRUCTURES 12**

Static method of analysis, foundation analysis and dynamics of offshore structures.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

**UNIT V DESIGN OF OFFSHORE STRUCTURES****12**

Design of platforms, helipads, Jacket tower and mooring cables and pipe lines.

**19255E53BP****STABILITY OF STRUCTURES****L T P C****3 1 0 4****AIMS & OBJECTIVES:**

This course deals with the concept and characteristics of stability problems and behavior of torsional buckling and lateral buckling in beams and columns.

**UNIT I INTRODUCTION****12**

Concept of stability approaches to stability analysis, characteristics of stability problems.

**UNIT II COLUMNS****12**

Buckling of columns with various end conditions, imperfect columns, elastically supported columns, non prismatic columns, Built-up columns, Inelastic buckling, Experimental study of column behavior, Empirical column formulae. Buckling of bars on elastic foundations, large deflection of buckled bars.

**UNIT III BEAMS – COLUMNS****12**

Beam-column theory, Application to buckling of frames.

**UNIT IV TORSIONAL BUCKLING****12**

Combined torsional and flexural buckling.

**UNIT V LATERAL BUCKLING****12**

Lateral buckling of beams, pure bending of simply supported beam and cantilever, numerical solutions.

**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

**19255E53CP**

**MECHANICS OF COMPOSITE MATERIALS**

**L T P C**

**3 1 0 4**

**AIMS & OBJECTIVES:**

This course introduces the properties of materials, strength and elastic behavior of composite lamina and design of composite structures.

**UNIT I INTRODUCTION TO MODERN MATERIALS 12**

Fiber-Reinforced Polymer Composite (FRPC) Materials: Definition, Historical development, applications. Fibers and Matrix, types and their properties. Manufacturing process and methods for composites. Types and classification of composite materials, properties, advantages over conventional materials. Piezoelectric Materials: History, crystal structure, applications. Shape Memory Alloys (SMA), Functionally Graded Materials (FGM): definition and applications.

**UNIT II ENGINEERING PROPERTIES OF MODERN MATERIALS 12**

FRPC Composite Lamina: Micromechanics approach, methods. Longitudinal and transverse elastic properties of composite lamina, in-plane shear modulus for continuous fibers. Stress-strain relationship, compliance and stiffness matrices for generally anisotropic, specially orthotropic material, transversely isotropic material, orthotropic, isotropic materials, Plane stress condition for thin lamina, transformation of stress and elastic properties. Three dimensional transformations. Piezoelectric Materials: Piezoelectric coefficients, electric displacements, piezoelectric strain matrix for Quartz, Lead Zirconate-titanate, Polyvinylidene fluoride. Stiffness matrix for Functionally Garded materials.

**SKILL DEVELOPMENT**

**EMPLOYABILITY**

**ENTREPRENEURSHIP**

### **UNIT III STRENGTH OF COMPOSITE LAMINA 12**

Introduction. Failure theories, Maximum stress theory, Maximum strain theory, Energy based interaction theory (Tsai-Hill), Interactive tensor polynomial theory (Tsai-Wu), Failure mode based theory (Hasin-Rotem). Computation of lamina strength by Tsai-Wu theory for plane stress condition. Comparison of various failure theories.

### **UNIT IV ELASTIC BEHAVIOUR OF COMPOSITE LAMINATES 12**

Basic assumptions, Laminate configurations, Strain displacement relationship, Stress-strain relationship, Force and moment resultants, Laminate compliances and stiffness matrices, Transformation of matrices. Load deformation relationship for symmetric laminates, symmetric cross-ply, symmetric angle-ply, balanced, antisymmetric cross-ply and angle ply, orthotropic, quasi-isotropic laminates.

### **UNIT V HYGROTHERMAL EXPANSION AND DESIGN OF COMPOSITE STRUCTURE 12**

Coefficients of thermal and moisture expansion of various unidirectional lamina, load deformation relationship, residual stresses for cross ply symmetric laminates. Design methodology, design of pressure vessel for various laminate configurations.
