- || To recognize current and possible future role of Renewable energy sources.

LIST OF EXPERIMENTS

- 1 Simulation study on Solar PV Energy System.
- 2 Experiment on “VI-Characteristics and Efficiency of 1kWp Solar PV System”.
- 3 Experiment on “Shadowing effect & diode based solution in 1kWp Solar PV System”.
- 4 Experiment on Performance assessment of Grid connected and Standalone 1kWp Solar Power System.
- 5 Simulation study on Wind Energy Generator.
- 6 Experiment on Performance assessment of micro Wind Energy Generator.
- 7 Simulation study on Hybrid (Solar-Wind) Power System.
- 8 Experiment on Performance Assessment of Hybrid (Solar-Wind) Power System.
- 9 Simulation study on Hydel Power.
- 10 Experiment on Performance Assessment of 100W Fuel Cell.
- 11 Simulation study on Intelligent Controllers for Hybrid Systems.

OUTCOMES:

- || Ability to understand and analyze Renewable energy systems.

TOTAL: 60 PERIODS

- || Ability to train the students in Renewable Energy Sources and technologies.
- || Ability to provide adequate inputs on a variety of issues in harnessing Renewable Energy.
- || Ability to simulate the various Renewable energy sources.
- || Ability to recognize current and possible future role of Renewable energy sources.
- || Ability to understand basics of Intelligent Controllers.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:

S.No	Name of the equipments / Components	Quantity Required	Remarks
1.	Personal computers (Intel i3, 80GB, 2GBRAM)	15	-
2.	CRO	9	30MHz
3.	Digital Multimeter	10	Digital
4.	PV panels - 100W, 24V	1	
5.	Battery storage system with charge and discharge control 40Ah	1	
6.	PV Emulator	1	
7.	Micro Wind Energy Generator module	1	

Consumabilitys (Minimum of 5 Nos. each)			
8.	Potentiometer	5	-
9.	Step-down transformer	5	230V/12-0-12V
10	Component data sheets to be provided		

17153CEC -COMPS

0 0 2 2

Electric Circuits and Fields:

Network graph, KCL, KVL, node and mesh analysis, transient response of dc and ac networks; sinusoidal steady-state analysis, resonance, basic filter concepts; ideal current and voltage sources, Thevenin's Norton's and Superposition and Maximum Power Transfer theorems, two-port networks, three phase circuits; Gauss Theorem, electric field and potential due to point, line, plane and spherical charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics; capacitance.

Signals and Systems:

Representation of continuous and discrete-time signals; shifting and scaling operations; linear, time invariant and causal systems; Fourier series representation of continuous periodic signals; sampling theorem; Fourier, Laplace and Z transforms.

Electrical Machines:

Single phase transformer – equivalent circuit, phasor diagram, tests, regulation and efficiency; three phase transformers – connections, parallel operation; auto-transformer; energy conversion principles; DC machines – types, windings, generator characteristics, armature reaction and commutation, starting and speed control of motors; three phase induction motors – principles, types, performance characteristics, starting and speed control; single phase induction motors; synchronous machines – performance, regulation and parallel operation of generators, motor starting, characteristics and applications; servo and stepper motors.

Power Systems:

Basic power generation concepts; transmission line models and performance; cable performance, insulation; corona and radio interference; distribution systems; per-unit quantities; bus impedance and admittance matrices; load flow; voltage control; power factor correction; economic operation; symmetrical components; fault analysis; principles of over-current, differential and distance protection; solid state relays and digital protection; circuit breakers; system stability concepts, swing curves and equal area criterion; HVDC transmission and FACTS concepts.

Control Systems:

Principles of feedback; transfer function; block diagrams; steady-state errors; Routh and Niquist techniques; Bode plots; root loci; lag, lead and lead-lag compensation; state space model; state transition matrix, controllability and observability.

Electrical and Electronic Measurements:

Bridges and potentiometers; PMMC, moving iron, dynamometer and induction type instruments; measurement of voltage, current, power, energy and power factor; instrument transformers; digital voltmeters and multimeters; phase, time and frequency measurement; Q-meters; oscilloscopes; potentiometric recorders; error analysis.

Analog and Digital Electronics:

Characteristics of diodes, BJT, FET; amplifiers – biasing, equivalent circuit and frequency response; oscillators and feedback amplifiers; operational amplifiers – characteristics and applications; simple active filters; VCOs and timers; combinational and sequential logic circuits; multiplexer; Schmitt trigger; multi-vibrators; sample and hold circuits; A/D and D/A converters; 8-bit microprocessor basics, architecture, programming and interfacing.

Power Electronics and Drives:

Semiconductor power diodes, transistors, thyristors, triacs, GTOs, MOSFETs and IGBTs – static characteristics and principles of operation; triggering circuits; phase control rectifiers; bridge converters – fully controlled and half controlled; principles of choppers and inverters; basis concepts of adjustable speed dc and ac drives.

20153E64A

ADVANCED CONTROL SYSTEM**L T P C**
2 2 0 3**OBJECTIVES**

- i. To provide knowledge on design state feedback control and state observer.
- ii. To provide knowledge in phase plane analysis.
- iii. To give basic knowledge in describing function analysis.
- iv. To study the design of optimal controller.
- v. To study the design of optimal estimator including Kalman Filter

UNIT I STATE VARIABLE ANALYSIS**6+6**

Introduction- concepts of state variables and state model-State model for linear continuous time systems, Diagonalisation- solution of state equations- Concepts of controllability and observability.

UNIT II STATE VARIABLE DESIGN**6+6**

Introduction to state model: Effect of state feedback - Pole placement design: Necessary and sufficient condition for arbitrary pole placement, State regulator design Design of state observers- Separation principle- Design of servo systems: State feedback with integral control.

UNIT III SAMPLED DATA ANALYSIS**6+6**

Introduction spectrum analysis of sampling process signal reconstruction difference equations The Z transform function, the inverse Z transform function, response of Linear discrete system, the Z transform analysis of sampled data control systems, response between sampling instants, the Z and S domain relationship. Stability analysis and compensation techniques.

UNIT IV NON LINEAR SYSTEMS**6+6**

Introduction, common physical nonlinearities, The phase plane method: concepts, singular points, stability of non linear systems, construction of phase trajectories system analysis by phase plane method. The describing function method, stability analysis by describing function method, Jump resonance.

UNIT V OPTIMAL CONTROL**6+6**

Introduction: Classical control and optimization, formulation of optimal control problem, Typical optimal control performance measures - Optimal state regulator design: Lyapunov equation, Matrix Riccati equation - LQR steady state optimal control – Application examples.

OUTCOMES:**TOTAL: 60 PERIODS**

- i. Able to design state feedback controller and state observer.
- ii. Able to understand and analyse linear and nonlinear systems using phase plane method.
- iii. Able to understand and analyse nonlinear systems using describing function method.
- iv. Able to understand and design optimal controller.
- v. Able to understand optimal estimator including Kalman Filter.
- vi. Ability to apply advanced control strategies to practical engineering problems.

VISUAL LANGUAGES AND APPLICATIONS

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- 1 To study about the concepts of windows programming models, MFC applications, drawing with the GDI, getting inputs from Mouse and the Keyboard.
- 1 To study the concepts of Menu basics, menu magic and classic controls of the windows programming using VC++.
- 1 To study the concept of Document/View Architecture with single & multiple document interface, toolbars, status bars and File I/O Serialization.
- 1 To study about the integrated development programming event driven programming, variabilitys, constants, procedures and basic ActiveX controls in visual basic.
- 1 To understand the database and the database management system, visual data manager, data bound controls and ADO controls in VB.

UNIT I	FUNDAMENTALS OF WINDOWS AND MFC	9
--------	---------------------------------	---

Messages - Windows programming - SDK style - Hungarian notation and windows data types - SDK programming in perspective. The benefits of C++ and MFC - MFC design philosophy - Document / View architecture - MFC class hierarchy - AFX functions. Application object - Frame window object - Message map. Drawing the lines - Curves - Ellipse - Polygons and other shapes. GDI pens - Brushes - GDI fonts - Deleting GDI objects and deselecting GDI objects. Getting input from the mouse: Client & Non-client - Area mouse messages - Mouse wheel - Cursor. Getting input from the keyboard: Input focus - Keystroke messages - Virtual key codes - Character & dead key messages.

UNIT II	RESOURCES AND CONTROLS	9
---------	------------------------	---

Creating a menu - Loading and displaying a menu - Responding to menu commands - Command ranges - Updating the items in menu, update ranges - Keyboard accelerators. Creating menus programmatically - Modifying menus programmatically - The system menu - Owner draw menus - Cascading menus - Context menus. The C button class - C list box class - C static class - The font view application - C edit class - C combo box class - C scrollbar class. Model dialog boxes - Modeless dialog boxes.

UNIT III	DOCUMENT / VIEW ARCHITECTURE	9
----------	------------------------------	---

The in existence function revisited - Document object - View object - Frame window object - Dynamic object creation. SDI document template - Command routing. Synchronizing multiple views of a document - Mid squares application - Supporting multiple document types - Alternatives to MDI. Splitter Windows: Dynamic splitter window - Static splitter windows. Creating & initializing a toolbar - Controlling the toolbar's visibility - Creating & initializing a status bar - Creating custom status bar panes - Status bar support in appwizard. Opening, closing and creating the files - Reading & Writing - C file derivatives - Serialization basics - Writing serializability classes.

UNIT IV	FUNDAMENTALS OF VISUAL BASIC	9
---------	------------------------------	---

Menu bar - Tool bar - Project explorer - Toolbox - Properties window - Form designer - Form layout - Intermediate window. Designing the user interface: Aligning the controls - Running the application - Visual development and event driven programming.

Variabilitys: Declaration - Types - Converting variability types - User defined data types - Lifetime of a variability. Constants - Arrays - Types of arrays. Procedures: Subroutines - Functions - Calling procedures. Text box controls - List box & Combo box controls - Scroll bar and slider controls - File controls.

UNIT V DATABASE PROGRAMMING WITH VB**9**

Record sets – Data control – Data control properties, methods. Visual data manager: Specifying indices with the visual data manager – Entering data with the visual data manager. Data bound list control – Data bound combo box – Data bound grid control. Mapping databases: Database object – Tablity def object, Query def object. Programming the active database objects – ADO object model – Establishing a connection - Executing SQL statements – Cursor types and locking mechanism – Manipulating the record set object – Simple record editing and updating.

OUTCOMES:

- || Ability to understand and apply computing platform and software for engineering problems
- || Ability to study about the concepts of windows programming models.
- || Ability to study the concepts of Menu basics, menu magic and classic controls.
- || Ability to study the concept of Document/View Architecture with single & multiple document interface.
- || Ability to study about the integrated development programming event driven programming.
- || Ability to understand the database and the database management system.

20153E64C**DESIGN OF ELECTRICAL APPARATUS**

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- || Magnetic circuit parameters and thermal rating of various types of electrical machines.
- || Armature and field systems for D.C. machines.
- || Core, yoke, windings and cooling systems of transformers.
- || Design of stator and rotor of induction machines and synchronous machines.
- || The importance of computer aided design method.

UNIT I DESIGN OF FIELD SYSTEM AND ARMATURE**9**

Major considerations in Electrical Machine Design – Materials for Electrical apparatus – Design of Magnetic circuits – Magnetising current – Flux leakage – Leakage in Armature. Design of lap winding and wave winding.

UNIT II DESIGN OF TRANSFORMERS**9**

Construction - KVA output for single and three phase transformers – Overall dimensions – design of yoke, core and winding for core and shell type transformers – Estimation of No load current – Temperature rise in Transformers – Design of Tank and cooling tubes of Transformers. Computer program: Complete Design of single phase core transformer

UNIT III DESIGN OF DC MACHINES**9**

Construction - Output Equations – Main Dimensions – Choice of specific loadings – Selection of number of poles – Design of Armature – Design of commutator and brushes – design of field Computer program: Design of Armature main dimensions

UNIT IV DESIGN OF INDUCTION MOTORS**9**

Construction - Output equation of Induction motor – Main dimensions – choice of specific loadings – Design of squirrel cage rotor and wound rotor –Magnetic leakage calculations – Operating characteristics : Magnetizing current - Short circuit current – Circle diagram - Computer program: Design of slip-ring rotor

UNIT V DESIGN OF SYNCHRONOUS MACHINES**9**

Output equations – choice of specific loadings – Design of salient pole machines – Short circuit ratio – Armature design – Estimation of air gap length – Design of rotor –Design of damper winding – Determination of full load field MMF – Design of field winding – Design of turbo alternators -Computer program: Design of Stator main dimensions-Brushless DC Machines

OUTCOMES:**TOTAL : 45 PERIODS**

- || Ability to understand basics of design considerations for rotating and static electrical machines
- || Ability to design of field system for its application.
- || Ability to design single and three phase transformer.
- || Ability to design armature and field of DC machines.
- || Ability to design stator and rotor of induction motor.

POWER SYSTEM STABILITY

L	T	P	C
3	0	0	3

OBJECTIVES:

- || To understand the fundamental concepts of stability of power systems and its classification.
- || To expose the students to dynamic behaviour of the power system for small and large disturbances.
- || To understand and enhance the stability of power systems.

UNIT I INTRODUCTION TO STABILITY 9

Fundamental concepts - Stability and energy of a system - Power System Stability: Definition, Causes, Nature and Effects of disturbances, Classification of stability, Modelling of electrical components - Basic assumptions made in stability studies- Modelling of Synchronous machine for stability studies(classical model) - Rotor dynamics and the swing equation.

UNIT II SMALL-SIGNAL STABILITY 9

Basic concepts and definitions – State space representation, Physical Interpretation of small-signal stability, Eigen properties of the state matrix: Eigenvalues and eigenvectors, modal matrices, eigenvalue and stability, mode shape and participation factor. Small-signal stability analysis of a Single-Machine Infinite Bus (SMIB) Configuration with numerical example.

UNIT III TRANSIENT STABILITY 9

Review of numerical integration methods: modified Euler and Fourth Order Runge-Kutta methods, Numerical stability,. Interfacing of Synchronous machine (classical machine) model to the transient stability algorithm (TSA) with partitioned – explicit approaches- Application of TSA to SMIB system.

UNIT IV VOLTAGE STABILITY 9

Factors affecting voltage stability- Classification of Voltage stability-Transmission system characteristics- Generator characteristics- Load characteristics- Characteristics of reactive power compensating Devices- Voltage collapse.

UNIT V ENHANCEMENT OF SMALL-SIGNAL STABILITY AND TRANSIENT STABILITY 9

Power System Stabilizer –. Principle behind transient stability enhancement methods: high-speed fault clearing, regulated shunt compensation, dynamic braking, reactor switching, independent pole-operation of circuit-breakers, single-pole switching, fast- valving, high-speed excitation systems.

TOTAL : 45 PERIODS**OUTCOMES:**

- || Learners will attain knowledge about the stability of power system
- || Learners will have knowledge on small-signal stability, transient stability and voltage stability.
- || Learners will be able to understand the dynamic behaviour of synchronous generator for different disturbances.
- || Learners will be able to understand the various methods to enhance the stability of a power system.

MODERN POWER CONVERTERS

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- Switched mode power supplies
- Matrix Converter
- Soft switched converters

UNIT I SWITCHED MODE POWER SUPPLIES (SMPS) 9

DC Power supplies and Classification; Switched mode dc power supplies - with and without isolation, single and multiple outputs; Closed loop control and regulation; Design examples on converter and closed loop performance.

UNIT II AC-DC CONVERTERS 9

Switched mode AC-DC converters. synchronous rectification - single and three phase topologies - switching techniques - high input power factor . reduced input current harmonic distortion. improved efficiency. with and without input-output isolation. performance indices design examples

UNIT III DC-AC CONVERTERS 9

Multi-level Inversion - concept, classification of multilevel inverters, Principle of operation, main features and analysis of Diode clamped, Flying capacitor and cascaded multilevel inverters; Modulation schemes.

UNIT IV AC-AC CONVERTERS WITH AND WITHOUT DC LINK 9

Matrix converters. Basic topology of matrix converter; Commutation – current path; Modulation techniques - scalar modulation, indirect modulation; Matrix converter as only AC-DC converter; AC-AC converter with DC link - topologies and operation - with and without resonance link - converter with dc link converter; Performance comparison with matrix converter with DC link converters.

UNIT V SOFT-SWITCHING POWER CONVERTERS 9

Soft switching techniques. ZVS, ZCS, quasi resonance operation; Performance comparison hard switched and soft switched converters.AC-DC converter, DC-DC converter, DC-AC converter.; Resonant DC power supplies .

OUTCOMES:**TOTAL : 45 PERIODS**

- Ability to suggest converters for AC-DC conversion and SMPS

TEXT BOOKS:

1. Power Electronics Handbook, M.H.Rashid, Academic press, New york, 2000.
2. Advanced DC/DC Converters, Fang Lin Luo and Fang Lin Luo, CRC Press, NewYork, 2004.

20153E64F**INTELLECTUAL PROPERTY RIGHTS****L T P C
3 0 0 3****OBJECTIVE:**

- || To give an idea about IPR, registration and its enforcement.

UNIT I INTRODUCTION**9**

Introduction to IPRs, Basic concepts and need for Intellectual Property - Patents, Copyrights, Geographical Indications, IPR in India and Abroad – Genesis and Development – the way from WTO to WIPO –TRIPS, Nature of Intellectual Property, Industrial Property, technological Research, Inventions and Innovations – Important examples of IPR.

UNIT II REGISTRATION OF IPRs**10**

Meaning and practical aspects of registration of Copy Rights, Trademarks, Patents, Geographical Indications, Trade Secrets and Industrial Design registration in India and Abroad

UNIT III AGREEMENTS AND LEGISLATIONS**10**

International Treaties and Conventions on IPRs, TRIPS Agreement, PCT Agreement, Patent Act of India, Patent Amendment Act, Design Act, Trademark Act, Geographical Indication Act.

UNIT IV DIGITAL PRODUCTS AND LAW**9**

Digital Innovations and Developments as Knowledge Assets – IP Laws, Cyber Law and Digital Content Protection – Unfair Competition – Meaning and Relationship between Unfair Competition and IP Laws – Case Studies.

UNIT V ENFORCEMENT OF IPRs**7**

Infringement of IPRs, Enforcement Measures, Emerging issues – Case Studies.

TOTAL:45 PERIODS

OUTCOME:

- + | Ability to manage Intellectual Property portfolio to enhance the value of the firm.

TEXT BOOKS

1. V. Scople Vinod, Managing Intellectual Property, Prentice Hall of India pvt Ltd, 2012
2. S. V. Satakar, "Intellectual Property Rights and Copy Rights, Ess Ess Publications, New Delhi, 2002

20153E65A

PRINCIPLES OF ROBOTICS**L T P C**
3 0 0 3**OBJECTIVES:**

- To introduce the functional elements of Robotics
- To impart knowledge on the direct and inverse kinematics
- To introduce the manipulator differential motion and control
- To educate on various path planning techniques
- To introduce the dynamics and control of manipulators

UNIT I BASIC CONCEPTS**9**

Brief history-Types of Robot–Technology-Robot classifications and specifications-Design and control issues- Various manipulators – Sensors - work cell - Programming languages.

UNIT II DIRECT AND INVERSE KINEMATICS**9**

Mathematical representation of Robots - Position and orientation – Homogeneous transformation- Various joints- Representation using the Denavit Hattenberg parameters -Degrees of freedom-Direct kinematics-Inverse kinematics- SCARA robots- Solvability – Solution methods-Closed form solution.

UNIT III MANIPULATOR DIFFERENTIAL MOTION AND STATICS**9**

Linear and angular velocities-Manipulator Jacobian-Prismatic and rotary joints–Inverse -Wrist and arm singularity - Static analysis - Force and moment Balance.

UNIT IV PATH PLANNING**9**

Definition-Joint space technique-Use of p-degree polynomial-Cubic polynomial-Cartesian space technique - Parametric descriptions - Straight line and circular paths - Position and orientation planning.

UNIT V DYNAMICS AND CONTROL**9**

Lagrangian mechanics-2DOF Manipulator-Lagrange Euler formulation-Dynamic model – Manipulator control problem-Linear control schemes-PID control scheme-Force control of robotic manipulator.

TOTAL: 45 PERIOD**OUTCOMES:**

- Ability to understand basic concept of robotics.
- To analyze Instrumentation systems and their applications to various
- To know about the differential motion and statics in robotics
- To know about the various path planning techniques.
- To know about the dynamics and control in robotics industries.

20153E65B**SPECIAL ELECTRICAL MACHINES**

L	T	P	C
3	0	0	3

OBJECTIVES:

To impart knowledge on the following Topics

- Construction, principle of operation, control and performance of stepping motors.
- Construction, principle of operation, control and performance of switched reluctance motors.
- Construction, principle of operation, control and performance of permanent magnet brushless D.C. motors.
- Construction, principle of operation and performance of permanent magnet synchronous motors.
- Construction, principle of operation and performance of other special Machines.

UNIT I STEPPER MOTORS**9**

Constructional features –Principle of operation –Types – Torque predictions – Linear Analysis – Characteristics – Drive circuits – Closed loop control – Concept of lead angle - Applications.

UNIT II SWITCHED RELUCTANCE MOTORS (SRM)**9**

Constructional features –Principle of operation- Torque prediction–Characteristics Steady state performance prediction – Analytical Method – Power controllers – Control of SRM drive- Sensor less operation of SRM – Applications.

UNIT III PERMANENT MAGNET BRUSHLESS D.C. MOTORS**9**

Fundamentals of Permanent Magnets- Types- Principle of operation- Magnetic circuit analysis- EMF and Torque equations- Power Converter Circuits and their controllers - Characteristics and control- Applications.

UNIT IV PERMANENT MAGNET SYNCHRONOUS MOTORS (PMSM)**9**

Constructional features -Principle of operation – EMF and Torque equations - Sine wave motor with practical windings - Phasor diagram - Power controllers – performance characteristics - Digital controllers – Applications.

UNIT V OTHER SPECIAL MACHINES**9**

Constructional features – Principle of operation and Characteristics of Hysteresis motor-Synchronous Reluctance Motor–Linear Induction motor-Repulsion motor- Applications.

TOTAL : 45 PERIODS

OUTCOMES:

- Ability to analyze and design controllers for special Electrical Machines.
- Ability to acquire the knowledge on construction and operation of stepper motor.
- Ability to acquire the knowledge on construction and operation of stepper switched reluctance motors.
- Ability to construction, principle of operation, switched reluctance motors.
- Ability to acquire the knowledge on construction and operation of permanent magnet brushless D.C. motors.
- Ability to acquire the knowledge on construction and operation of permanent magnet synchronous motors.
- Ability to select a special Machine for a particular application.

TEXT BOOKS:

20153E65C

POWER QUALITY

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- Causes & Mitigation techniques of various PQ events.
- Various Active & Passive power filters.

UNIT I INTRODUCTION TO POWER QUALITY**9**

Terms and definitions & Sources – Overloading, under voltage, over voltage - Concepts of transients - Short duration variations such as interruption - Long duration variation such as sustained interruption - Sags and swells - Voltage sag - Voltage swell - Voltage imbalance – Voltage fluctuations - Power frequency variations - International standards of power quality – Computer Business Equipment Manufacturers Associations (CBEMA) curve

UNIT II VOLTAGE SAG AND SWELL**9**

Estimating voltage sag performance - Thevenin's equivalent source - Analysis and calculation of various faulted condition - Estimation of the sag severity - Mitigation of voltage sag, Static transfer switches and fast transfer switches. - Capacitor switching – Lightning - Ferro resonance - Mitigation of voltage swell.

UNIT III HARMONICS**9**

Harmonic sources from commercial and industrial loads - Locating harmonic sources – Power system response characteristics - Harmonics Vs transients. Effect of harmonics – Harmonic distortion - Voltage and current distortions - Harmonic indices - Inter harmonics – Resonance Harmonic distortion evaluation, IEEE and IEC standards.

UNIT IV PASSIVE POWER COMPENSATORS**9**

Principle of Operation of Passive Shunt and Series Compensators, Analysis and Design of Passive Shunt Compensators Simulation and Performance of Passive Power Filters- Limitations of Passive Filters Parallel Resonance of Passive Filters with the Supply System and Its Mitigation. Fundamentals of load compensation – voltage regulation & power factor correction.

UNIT V POWER QUALITY MONITORING & CUSTOM POWER DEVICES**9**

Monitoring considerations - Monitoring and diagnostic techniques for various power quality problems - Quality measurement equipment - Harmonic / spectrum analyzer - Flicker meters Disturbance analyzer - Applications of expert systems for power quality monitoring. Principle & Working of DSTATCOM – DSTATCOM in Voltage control mode, current control mode, DVR Structure – Rectifier supported DVR – DC Capacitor supported DVR -Unified power quality conditioner.

TOTAL : 45 PERIODS**OUTCOMES:**

- Ability to understand various sources, causes and effects of power quality issues, electrical systems and their measures and mitigation.
- Ability to analyze the causes & Mitigation techniques of various PQ events.
- Ability to study about the various Active & Passive power filters.
- Ability to understand the concepts about Voltage and current distortions, harmonics.
- Ability to analyze and design the passive filters.
- Ability to acquire knowledge on compensation techniques.
- Ability to acquire knowledge on DVR.

EHVAC TRANSMISSION

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- EHVAC Transmission lines
- Electrostatic field of AC lines
- Corona in E.H.V. lines

UNIT I INTRODUCTION 9

EHVAC Transmission line trends and preliminary aspect - standard transmission voltages - Estimation at line and ground parameters-Bundle conductors: Properties -Inductance and Capacitance of EHV lines - Positive, negative and zero sequence impedance - Line Parameters for Modes of Propagation.

UNIT II ELECTROSTATIC FIELDS 9

Electrostatic field and voltage gradients - Calculations of electrostatic field of AC lines - Effect of high electrostatic field on biological organisms and human beings - Surface voltage gradients and Maximum gradients of actual transmission lines - Voltage gradients on sub conductor.

UNIT III POWER CONTROL 9

Electrostatic induction in un energized lines - Measurement of field and voltage gradients for three phase single and double circuit lines - Un energized lines. Power Frequency Voltage control and overvoltage in EHV lines: No load voltage - Charging currents at power frequency- Voltage control - Shunt and Series compensation - Static VAR compensation.

UNIT IV CORONA EFFECTS AND RADIO INTERFERENCE 9

Corona in EHV lines - Corona loss formulae-Charge voltage diagram- Attenuation of traveling waves due to Corona - Audio noise due to Corona, its generation, characteristic and limits. Measurements of audio noise radio interference due to Corona - properties of radio noise - Frequency spectrum of RI fields - Measurements of RI and RIV.

UNIT V STEADY STATE AND TRANSIENT LIMITS 9

Design of EHV lines based on steady state and transient limits - EHV capabilities and their characteristics-Introduction six phase transmission - UHV.

TOTAL : 45 PERIODS**OUTCOMES:**

- Ability to understand the principles and types of EHVAC system.
- Ability to analyze the electrostatic field of AC lines
- Ability to study about the compensation.
- Ability to study about the corona in E.H.V. lines
- Ability to understand the EHV capabilities.
- Ability to analyze the steady state and transient limits.

COMMUNICATION ENGINEERING

L T P C

3 0 0 3

OBJECTIVES:

- ✓ To introduce the relevance of this course to the existing technology through demonstrations, case studies, simulations, contributions of scientist, national/international policies with a futuristic vision along with socio-economic impact and issues
- ✓ To study the various analog and digital modulation techniques
- ✓ To study the principles behind information theory and coding
- ✓ To study the various digital communication techniques

UNIT I ANALOG MODULATION**9**

Amplitude Modulation – AM, DSBSC, SSBSC, VSB – PSD, modulators and demodulators – Angle modulation – PM and FM – PSD, modulators and demodulators – Superheterodyne receivers

UNIT II PULSE MODULATION**9**

Low pass sampling theorem – Quantization – PAM – Line coding – PCM, DPCM, DM, and ADPCM And ADM, Channel Vocoder - Time Division Multiplexing, Frequency Division Multiplexing

UNIT III DIGITAL MODULATION AND TRANSMISSION**9**

Phase shift keying – BPSK, DPSK, QPSK – Principles of M-ary signaling M-ary PSK & QAM – Comparison, ISI – Pulse shaping – Duo binary encoding – Cosine filters – Eye pattern, equalizers

UNIT IV INFORMATION THEORY AND CODING**9**

Measure of information – Entropy – Source coding theorem – Shannon–Fano coding, Huffman Coding, LZ Coding – Channel capacity – Shannon–Hartley law – Shannon's limit – Error control codes – Cyclic codes, Syndrome calculation – Convolution Coding, Sequential and Viterbi decoding

UNIT V SPREAD SPECTRUM AND MULTIPLE ACCESS**9**

PN sequences – properties – m-sequence – DSSS – Processing gain, Jamming – FHSS – Synchronisation and tracking – Multiple Access – FDMA, TDMA, CDMA,

OUTCOMES:

At the end of the course, the student should be able to:

- ✓ Ability to comprehend and appreciate the significance and role of this course in the present contemporary world
- ✓ Apply analog and digital communication techniques.
- ✓ Use data and pulse communication techniques.
- ✓ Analyze Source and Error control coding.

20153E75A

DISASTER MANAGEMENT**LT P C****3 0 0 3****OBJECTIVES:**

- || To provide students an exposure to disasters, their significance and types.
- || To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention and risk reduction
- || To gain a preliminary understanding of approaches of Disaster Risk Reduction (DRR)
- || To enhance awareness of institutional processes in the country and
- || To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity

UNIT I INTRODUCTION TO DISASTERS**9**

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Disasters: Types of disasters – Earthquake, Landslide, Flood, Drought, Fire etc - Classification, Causes, Impacts including social, economic, political, environmental, health, psychosocial, etc.- Differential impacts- in terms of caste, class, gender, age, location, disability - Global trends in disasters: urban disasters, pandemics, complex emergencies, Climate change- Dos and Don'ts during various types of Disasters.

UNIT II APPROACHES TO DISASTER RISK REDUCTION (DRR)**9**

Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stake-holders- Institutional Processes and Framework at State and Central Level- State Disaster Management Authority(SDMA)
– Early Warning System – Advisories from Appropriate Agencies.

UNIT III INTER-RELATIONSHIP BETWEEN DISASTERS AND DEVELOPMENT**9**

Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams, embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios in the context of India - Relevance of indigenous knowledge, appropriate technology and local resources.

UNIT IV DISASTER RISK MANAGEMENT IN INDIA**9**

Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, Disaster Management Act and Policy - Other related policies, plans, programmes and legislation – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment.

UNIT V DISASTER MANAGEMENT: APPLICATIONS AND CASE STUDIES AND FIELD WORKS**9**

Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.

TOTAL: 45 PERIODS**OUTCOMES:**

The students will be able to

- || Differentiate the types of disasters, causes and their impact on environment and society
- || Assess vulnerability and various methods of risk reduction measures as well as mitigation.

- || Draw the hazard and vulnerability profile of India, Scenarios in the Indian context, Disaster damage assessment and management.

20153E75B**HUMAN RIGHTS****LT P C
3 0 3****OBJECTIVES :**

- || To sensitize the Engineering students to various aspects of Human Rights.

UNIT I**9**

Human Rights – Meaning, origin and Development. Notion and classification of Rights – Natural, Moral and Legal Rights. Civil and Political Rights, Economic, Social and Cultural Rights; collective / Solidarity Rights.

UNIT II**9**

Evolution of the concept of Human Rights Magna carta – Geneva convention of 1864. Universal Declaration of Human Rights, 1948. Theories of Human Rights.

UNIT III**9**

Theories and perspectives of UN Laws – UN Agencies to monitor and compliance.

UNIT IV**9**

Human Rights in India – Constitutional Provisions / Guarantees.

UNIT V**9**

Human Rights of Disadvantaged People – Women, Children, Displaced persons and Disability persons, including Aged and HIV Infected People. Implementation of Human Rights – National and State Human Rights Commission – Judiciary – Role of NGO's, Media, Educational Institutions, Social Movements.

TOTAL : 45 PERIODS**OUTCOME :**

- || Engineering students will acquire the basic knowledge of human rights.

REFERENCES:

1. Kapoor S.K., "Human Rights under International law and Indian Laws", Central Law Agency, Allahabad, 2014.
2. Chandra U., "Human Rights", Allahabad Law Agency, Allahabad, 2014.

20153E75C

OPERATIONS RESEARCH

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide knowledge and training in using optimization techniques under limited resources for the engineering and business problems.

UNIT I LINEAR MODELS**15**

The phase of an operation research study – Linear programming – Graphical method– Simplex algorithm – Duality formulation – Sensitivity analysis.

UNIT II TRANSPORTATION MODELS AND NETWORK MODELS**8**

Transportation Assignment Models –Traveling Salesman problem-Networks models – Shortest route – Minimal spanning tree – Maximum flow models –Project network – CPM and PERT networks – Critical path scheduling – Sequencing models.

UNIT III INVENTORY MODELS**6**

Inventory models – Economic order quantity models – Quantity discount models – Stochastic inventory models – Multi product models – Inventory control models in practice.

UNIT IV QUEUEING MODELS**6**

Queueing models - Queueing systems and structures – Notation parameter – Single server and multi server models – Poisson input – Exponential service – Constant rate service – Infinite population – Simulation.

UNIT V DECISION MODELS**10**

Decision models – Game theory – Two person zero sum games – Graphical solution- Algebraic solution– Linear Programming solution – Replacement models – Models based on service life – Economic life– Single / Multi variability search technique – Dynamic Programming – Simple Problem.

TOTAL: 45 PERIODS**OUTCOMES:**

- Upon completion of this course, the students can ability to use the optimization techniques for use engineering and Business problems

PROBABILITY AND STATISTICS

L	T	P	C
3	0	0	3

OBJECTIVES :

- || This course aims at providing the required skill to apply the statistical tools in engineering problems.
- || To introduce the basic concepts of probability and random variables.
- || To introduce the basic concepts of two dimensional random variables.
- || To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- || To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

UNIT I PROBABILITY AND RANDOM VARIABLES**12**

Probability – The axioms of probability – Conditional probability – Baye’s theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

UNIT II TWO - DIMENSIONAL RANDOM VARIABLES**12**

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III TESTING OF HYPOTHESIS**12**

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample tests based on Normal distribution for single mean and difference of means -Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) - Goodness of fit.

UNIT IV DESIGN OF EXPERIMENTS**12**

One way and Two way classifications - Completely randomized design – Randomized block design – Latin square design - 2^2 factorial design.

UNIT V STATISTICAL QUALITY CONTROL**12**

Control charts for measurements (X and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits - Acceptance sampling.

TOTAL : 60 PERIODS**OUTCOMES :**

Upon successful completion of the course, students will be able to:

- || Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- || Understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
 - || Apply the concept of testing of hypothesis for small and large samples in real life problems.
- || Apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
- || Have the notion of sampling distributions and statistical techniques used in engineering and management problems.

FIBRE OPTICS AND LASER INSTRUMENTSLTPC
3003**AIM**

:

To contribute to the knowledge of Fibre optics and Laser Instrumentation and its Industrial and Medical Application.

COURSE OBJECTIVES

- || To expose the students to the basic concepts of optical fibres and their properties.
- || To provide adequate knowledge about the Industrial applications of optical fibres.
- || To expose the students to the Laser fundamentals.
- || To provide adequate knowledge about Industrial application of lasers.
- || To provide adequate knowledge about holography and Medical applications of Lasers.

UNIT I OPTICAL FIBRES AND THEIR PROPERTIES**9**

Construction of optical fiber cable: Guiding mechanism in optical fiber and Basic component of optical fiber communication, –Principles of light propagation through a fibre: Total internal reflection, Acceptance angle (θ_a), Numerical aperture and Skew mode, –Different types of fibres and their properties: Single and multimode fibers and Step index and graded index fibers,– fibre characteristics: Mechanical characteristics and Transmission characteristics, – Absorption losses – Scattering losses
– Dispersion – Connectors and splicers –Fibre termination – Optical sources: Light Emitting Diode (LED), – Optical detectors: PIN Diode.

UNIT II INDUSTRIAL APPLICATION OF OPTICAL FIBRES**9**

Fibre optic sensors: Types of fiber optics sensor, Intrinsic sensor- Temperature/ Pressure sensor, Extrinsic sensors, Phase Modulated Fibre Optic Sensor and Displacementsensor (Extrinsic Sensor) – Fibre optic instrumentation system: Measurement of attenuation (by cut back method), Optical domain reflectometers, Fiber Scattering loss Measurement, Fiber Absorption Measurement, Fiber dispersion measurements, End reflection method and Near field scanning techniques – Different types of modulators: Electro-optic modulator (EOM) – Interferometric method of measurement of length – Moire fringes – Measurement of pressure, temperature, current, voltage, liquid level and strain.

UNIT III LASER FUNDAMENTALS**9**

Fundamental characteristics of lasers – Level Lasers: Two-Level Laser, Three Level Laser, Quasi Three and four level lasers – Properties of laser: Monochromaticity, Coherence, Divergence and Directionality and Brightness – Laser modes – Resonator configuration – Q-switching and mode locking – Cavity damping – Types of lasers; – Gas lasers, solid lasers, liquid lasers and semiconductor lasers.

UNIT IV INDUSTRIAL APPLICATION OF LASERS**9**

Laser for measurement of distance, Laser for measurement of length, Laser for measurement of velocity, Laser for measurement of acceleration, Laser for measurement of current, voltage and Laser for measurement of Atmospheric Effect: Types of LIDAR, Construction And Working, and LIDAR Applications – Material processing: Laser instrumentation for material processing, Powder Feeder, Laser Heating, Laser Welding, Laser Melting, Conduction Limited Melting and Key Hole Melting – Laser trimming of material: Process Of Laser Trimming, Types Of Trim, Construction And Working Advantages – Material Removal and vaporization: Process Of Material Removal.

UNIT V HOLOGRAM AND MEDICAL APPLICATIONS**9**

Holography: Basic Principle, Holography vs. photography, Principle Of Hologram Recording, Condition For Recording A Hologram, Reconstructing and viewing the holographic image– Holography for non-destructive testing – Holographic components – Medical applications of lasers, laser-Tissue Interactions Photochemical reactions, Thermalisation, collisional relaxation, Types of Interactions and Selecting an Interaction Mechanism – Laser instruments for surgery, removal of tumors of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

TOTAL : 45 PERIODS**COURSE OUTCOMES (COs):**

1. Understand the principle, transmission, dispersion and attenuation characteristics of optical fibers
2. Apply the gained knowledge on optical fibers for its use as communication medium and as sensor as well which have important applications in production, manufacturing industrial and biomedical applications.
3. Understand laser theory and laser generation system.
4. Students will gain ability to apply laser theory for the selection of lasers for a specific Industrial and medical application.

FLEXIBLE AC TRANSMISSION SYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- || The start-of-art of the power system
- || Performance of power systems with FACTS controllers.
- || FACTS controllers for load flow and dynamic analysis

UNIT I INTRODUCTION**9**

Real and reactive power control in electrical power transmission lines–loads & system compensation–Uncompensated transmission line–shunt and series compensation.

UNIT II STATIC VAR COMPENSATOR (SVC) AND APPLICATIONS**9**

Voltage control by SVC–Advantages of slope in dynamic characteristics–Influence of SVC on system voltage–Design of SVC voltage regulator–TCR-FC-TCR–Modeling of SVC for power flow and fast transient stability– Applications: Enhancement of transient stability – Steady state power transfer –Enhancement of power system damping.

UNIT III THYRISTOR CONTROLLED SERIES CAPACITOR (TCSC) AND APPLICATIONS**9**

Operation of the TCSC–Different modes of operation–Modelling of TCSC, Variability reactance model– Modelling for Power Flow and stability studies. Applications: Improvement of the system stability limit–Enhancement of system damping.

UNIT IV VOLTAGE SOURCE CONVERTER BASED FACTS CONTROLLERS**9**

Static Synchronous Compensator (STATCOM)–Principle of operation–V-I Characteristics. Applications: Steady state power transfer–enhancement of transient stability–prevention of voltage instability. SSSC–operation of SSSC and the control of power flow–modelling of SSSC in load flow and transient stability studies- Dynamic voltage restorer(DVR).

UNIT V ADVANCED FACTS CONTROLLERS**9**

Interline DVR(IDVR) - Unified Power flow controller (UPFC) - Interline power flow controller (IPFC) - Unified Power quality conditioner (UPQC).

TOTAL : 45 PERIODS**OUTCOMES:**

- || Ability to understand, analyze and develop analytical model of FACTS controller for power system application.
- || Ability to understand the concepts about load compensation techniques.
- || Ability to acquire knowledge on facts devices.
- || Ability to understand the start-of-art of the power system
- || Ability to analyze the performance of steady state and transients of facts controllers.
- || Ability to study about advanced FACTS controllers.

SOFT COMPUTING TECHNIQUES

20153E81B

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- || Basics of artificial neural network.
- || Concepts of modelling and control of neural and fuzzy control schemes.
- || Features of hybrid control schemes.

UNIT I	ARTIFICIAL NEURAL NETWORK	9
Review of fundamentals – Biological neuron, artificial neuron, activation function, single layer perceptron – Limitation – Multi layer perceptron – Back Propagation Algorithm (BPA) – Recurrent Neural Network (RNN) – Adaptive Resonance Theory (ART) based network – Radial basis function network – online learning algorithms, BP through time – RTRL algorithms – Reinforcement learning.		

UNIT II	NEURAL NETWORKS FOR MODELING AND CONTROL	9
Modelling of non-linear systems using ANN – Generation of training data – Optimal architecture – Model validation – Control of non-linear systems using ANN – Direct and indirect neuro control schemes – Adaptive neuro controller – Familiarization with neural network toolbox.		

UNIT III	FUZZY SET THEORY	9
Fuzzy set theory – Fuzzy sets – Operation on fuzzy sets – Scalar cardinality, fuzzy cardinality, union and intersection, complement (Yager and Sugeno), equilibrium points, aggregation, projection, composition, cylindrical extension, fuzzy relation – Fuzzy membership functions.		

UNIT IV	FUZZY LOGIC FOR MODELING AND CONTROL	9
Modelling of non-linear systems using fuzzy models – TSK model – Fuzzy logic controller – Fuzzification – Knowledge base – Decision making logic – Defuzzification – Adaptive fuzzy systems – Familiarization with fuzzy logic toolbox.		

UNIT V	HYBRID CONTROL SCHEMES	9
Fuzzification and rule base using ANN – Neuro fuzzy systems – ANFIS – Fuzzy neuron – GA – Optimization of membership function and rule base using Genetic Algorithm – Introduction to other evolutionary optimization techniques, support vector machine – Case study – Familiarization with ANFIS toolbox.		

TOTAL : 45 PERIODS

OUTCOMES:

- | Ability to understand the concepts of ANN, different features of fuzzy logic and their modelling, control aspects and different hybrid control schemes.
- | Ability to understand the basics of artificial neural network.
- | Ability to get knowledge on modelling and control of neural.

- | Ability to get knowledge on modelling and control of fuzzy control schemes.
- | Ability to acquire knowledge on hybrid control schemes.
- | Ability to understand the concepts of Adaptive Resonance Theory

20153E81C

POWER SYSTEMS DYNAMICS

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- || Basics of dynamics and stability problems
- || Modeling of synchronous machines
- || Excitation system and speed-governing controllers.
- || Small signal stability of a single-machine infinite bus system with excitation system and power system stabilizer.
- Transient stability simulation of multi machine power system.

UNIT I INTRODUCTION 9

Basics of system dynamics – numerical techniques – introduction to software packages to study the responses. Concept and importance of power system stability in the operation and design - distinction between transient and dynamic stability - complexity of stability problem in large system – necessity for reduced models - stability of interconnected systems.

UNIT II SYNCHRONOUS MACHINE MODELLING 9

Synchronous machine - flux linkage equations - Park's transformation - per unit conversion - normalizing the equations - equivalent circuit - current space model - flux linkage state space model. Sub-transient and transient inductances - time constants. Simplified models (one axis and constant flux linkage) - steady state equations and phasor diagrams.

UNIT III MACHINE CONTROLLERS 9

Exciter and voltage regulators - function and types of excitation systems - typical excitation system configuration - block diagram and state space representation of IEEE type 1 excitation system - saturation function - stabilizing circuit. Function of speed governing systems - block diagram and state space representation of IEEE mechanical hydraulic governor and electrical hydraulic governors for hydro turbines and steam turbines.

UNIT IV TRANSIENT STABILITY 9

State equation for multi machine system with one axis model and simulation – modelling of multi machine power system with one axis machine model including excitation system and speed governing system and simulation using R-K method of fourth order (Gill's technique) for transient stability analysis - power system stabilizer. For all simulations, the algorithm and flow chart have to be discussed.

UNIT V DYNAMIC STABILITY 9

System response to small disturbances - linear model of the unregulated synchronous machine and its modes of oscillation - regulated synchronous machine - distribution of power impact - linearization of the load equation for the one machine problem – simplified linear model - effect of excitation on dynamic stability - approximate system representation - supplementary stabilizing signals - dynamic performance measure - small signal performance measures.

TOTAL : 45 PERIODS**OUTCOMES:**

- || Ability to understand and analyze power system operation, stability, control and protection.
- || Ability to get knowledge on the basics of dynamics and stability problems
- || Ability to design and modelling of synchronous machines

- || Ability to study about excitation system and speed-governing controllers.
- || Ability to understand the concept of small signal stability of a single-machine infinite bus system with excitation system.
- || Ability to analyze the transient stability simulation.

SMPS AND UPS

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- || Modern power electronic converters and its applications in electric power utility.
- || Resonant converters and UPS

UNIT I DC-DC CONVERTERS 9

Principles of step down and step up converters – Analysis and state space modeling of Buck, Boost, Buck- Boost and Cuk converters.

UNIT II SWITCHED MODE POWER CONVERTERS 9

Analysis and state space modeling of fly back, Forward, Push pull, Luo, Half bridge and full bridge converters- control circuits and PWM techniques.

UNIT III RESONANT CONVERTERS 9

Introduction- classification- basic concepts- Resonant switch- Load Resonant converters- ZVS , Clamped voltage topologies- DC link inverters with Zero Voltage Switching- Series and parallel Resonant inverters- Voltage control.

UNIT IV DC-AC CONVERTERS 9

Single phase and three phase inverters, control using various (sine PWM, SVPWM and PSPWM) techniques, various harmonic elimination techniques- Multilevel inverters- Concepts - Types: Diode clamped- Flying capacitor- Cascaded types- Applications.

UNIT V POWER CONDITIONERS, UPS & FILTERS 9

Introduction- Power line disturbances- Power conditioners –UPS: offline UPS, Online UPS, Applications – Filters: Voltage filters, Series-parallel resonant filters, filter without series capacitors, filter for PWM VSI, current filter, DC filters – Design of inductor and transformer for PE applications – Selection of capacitors.

TOTAL : 45 PERIODS**OUTCOMES:**

- || Ability to analyze the state space model for DC – DC converters
- || Ability to acquire knowledge on switched mode power converters.
- || Ability to understand the importance of Resonant Converters.
- || Ability to analyze the PWM techniques for DC-AC converters
- || Ability to acquire knowledge on modern power electronic converters and its applications in electric power utility.
- || Ability to acquire knowledge on filters and UPS

20153E81E	ELECTRIC ENERGY GENERATION, UTILIZATION CONSERVATION	L	T	P	C
		3	0	0	3

OBJECTIVES:

To impart knowledge on the following Topics

- || To study the generation, conservation of electrical power and energy efficient equipments.
- || To understand the principle, design of illumination systems and energy efficiency lamps.
- || To study the methods of industrial heating and welding.
- || To understand the electric traction systems and their performance.

UNIT I ILLUMINATION 9

Importance of lighting – properties of good lighting scheme – laws of illumination – photometry - types of lamps – lighting calculations – basic design of illumination schemes for residential, commercial, street lighting, factory lighting and flood lighting – LED lighting and energy efficient lamps.

UNIT II REFRIGERATION AND AIR CONDITIONING 9

Refrigeration-Domestic refrigerator and water coolers - Air-Conditioning-Variou types of air-conditioning system and their applications, smart air conditioning units - Energy Efficient motors: Standard motor efficiency, need for efficient motors, Motor life cycle, Direct Savings and payback analysis, efficiency evaluation factor.

UNIT III HEATING AND WELDING 9

Role of electric heating for industrial applications – resistance heating – induction heating – dielectric heating - electric arc furnaces. Brief introduction to electric welding – welding generator, welding transformer and the characteristics.

UNIT IV TRACTION 9

Merits of electric traction – requirements of electric traction system – supply systems – mechanics of train movement – traction motors and control – braking – recent trends in electric traction.

UNIT V DOMESTIC UTILIZATION OF ELECTRICAL ENERGY 9

Domestic utilization of electrical energy – House wiring. Induction based appliances, Online and OFF line UPS, Batteries - Power quality aspects – nonlinear and domestic loads – Earthing – Domestic, Industrial and Substation.

TOTAL : 45 PERIODS**OUTCOMES:**

- To understand the main aspects of generation, utilization and conservation.
- To identify an appropriate method of heating for any particular industrial application.
- To evaluate domestic wiring connection and debug any faults occurred.
- To construct an electric connection for any domestic appliance like refrigerator as well as to design a battery charging circuit for a specific household application.

- To realize the appropriate type of electric supply system as well as to evaluate the performance of a traction unit.
- To understand the main aspects of Traction.

20153E81F**PROFESSIONAL ETHICS IN ENGINEERING****LT P C****3 0 0 3****OBJECTIVES:**

- || To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNIT I HUMAN VALUES**10**

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS**9**

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION**9**

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS**9**

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT V GLOBAL ISSUES**8**

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of Conduct – Corporate Social Responsibility.

TOTAL: 45 PERIODS**OUTCOMES:**

- 1. Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

20153E81G**PRINCIPLES OF MANAGEMENT****L T P C
3 0 0 3****OBJECTIVES:**

- 1. To enable the students to study the evolution of Management, to study the functions and principles of management and to learn the application of the principles in an organization.

UNIT I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS**9**

Definition of Management – Science or Art – Manager Vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations, system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.

UNIT II PLANNING**9**

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.

UNIT III ORGANISING**9**

Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management.

UNIT IV DIRECTING**9**

Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication – communication and IT.

UNIT V CONTROLLING**9**

System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

OUTCOMES:**TOTAL: 45 PERIODS**

- || Upon completion of the course, students will be able to have clear understanding of managerial functions like planning, organizing, staffing, leading & controlling and have some basic knowledge on international aspect of management

TEXT BOOKS:

1. JAF Stoner, Freeman R.E and Daniel R Gilbert “Management”, 6th Edition, Pearson Education, 2004.

20153E82A

ENERGY MANAGEMENT AND AUDITING

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- || To impart concepts behind economic analysis and Load management.
- || Energy management on various electrical equipments and metering.
- || Concept of lighting systems and cogeneration.

UNIT I	INTRODUCTION	9
--------	--------------	---

Basics of Energy – Need for energy management – Energy accounting - Energy monitoring, targeting and reporting - Energy audit process.

UNIT II	ENERGY MANAGEMENT FOR MOTORS AND COGENERATION	9
---------	---	---

Energy management for electric motors – Transformer and reactors - Capacitors and synchronous machines, energy management by cogeneration – Forms of cogeneration – Feasibility of cogeneration – Electrical interconnection.

UNIT III	LIGHTING SYSTEMS	9
----------	------------------	---

Energy management in lighting systems – Task and the working space - Light sources – Ballasts – Lighting controls – Optimizing lighting energy – Power factor and effect of harmonics, lighting and energy standards.

UNIT IV	METERING FOR ENERGY MANAGEMENT	9
---------	--------------------------------	---

Metering for energy management – Units of measure - Utility meters – Demand meters – Paralleling of current transformers – Instrument transformer burdens – Multi tasking solid state meters, metering location vs requirements, metering techniques and practical examples.

UNIT V	ECONOMIC ANALYSIS AND MODELS	9
--------	------------------------------	---

Economic analysis – Economic models - Time value of money - Utility rate structures – Cost of electricity – Loss evaluation, load management – Demand control techniques – Utility monitoring and control system – HVAC and energy management – Economic justification.

TOTAL : 45 PERIODS

OUTCOMES:

- || Ability to understand the basics of Energy audit process.
- || Ability to understand the basics of energy management by cogeneration
- || Ability to acquire knowledge on Energy management in lighting systems
- || Ability to impart concepts behind economic analysis and Load management.
- || Ability to understand the importance of Energy management on various electrical equipment and metering.
- || Ability to acquire knowledge on HVAC.

TEXT BOOKS:

1. Barney L. Capehart, Wayne C. Turner, and William J. Kennedy, Guide to Energy Management, Fifth Edition, The Fairmont Press, Inc., 2006

4. Electricity in buildings good practice guide, McGraw-Hill Education, 2016.
5. National Productivity Council Guide Books

20153E82B**DATA STRUCTURES****LTPC
3003****OBJECTIVES:**

- || To understand the concepts of ADTs
- || To Learn linear data structures – lists, stacks, and queues
- || To understand sorting, searching and hashing algorithms
- || To apply Tree and Graph structures

UNIT I LINEAR DATA STRUCTURES – LIST 9

Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation – singly linked lists- circularly linked lists- doubly-linked lists – applications of lists –Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).

UNIT II LINEAR DATA STRUCTURES – STACKS, QUEUES 9

Stack ADT – Operations - Applications - Evaluating arithmetic expressions- Conversion of Infix to postfix expression - Queue ADT – Operations - Circular Queue – Priority Queue - deQueue – applications of queues.

UNIT III NON LINEAR DATA STRUCTURES – TREES 9

Tree ADT – tree traversals - Binary Tree ADT – expression trees – applications of trees – binary search tree ADT –Threaded Binary Trees- AVL Trees – B-Tree - B+ Tree - Heap – Applications of heap.

UNIT IV NON LINEAR DATA STRUCTURES - GRAPHS 9

Definition – Representation of Graph – Types of graph - Breadth-first traversal - Depth-first traversal – Topological Sort – Bi-connectivity – Cut vertex – Euler circuits – Applications of graphs.

UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES 9

Searching- Linear Search - Binary Search. Sorting - Bubble sort - Selection sort - Insertion sort - Shell sort – Radix sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the student should be able to:

- || Implement abstract data types for linear data structures.
- || Apply the different linear and non-linear data structures to problem solutions.
- || Critically analyze the various sorting algorithms.

TEXT BOOKS:

20153E82C HIGH VOLTAGE DIRECT CURRENT TRANSMISSION L T P C
3 0 0 3

OBJECTIVES: To impart knowledge about the following topics:

- Planning of DC power transmission and comparison with AC power transmission.
- HVDC converters. HVDC
- system control. Harmonics and
- design of filters.
- Power flow in HVDC system under steady state.

UNIT I INTRODUCTION 9

DC Power transmission technology–Comparison of AC and DC transmission–Application of DC transmission–Description of DC transmission system–Planning for HVDC transmission–Modern trends in HVDC technology–DC breakers–Operating problems– HVDC transmission based on VSC –Types and applications of MTDC systems.

UNIT II ANALYSIS OF HVDC CONVERTERS 9

Line commutated converter -Analysis of Graetz circuit with and without overlap -Pulse number– Choice of converter configuration – Converter bridge characteristics– Analysis of a 12 pulse converters– Analysis of VSC topologies and firing schemes.

UNIT III CONVERTER AND HVDC SYSTEM CONTROL 9

Principles of DC link control–Converter control characteristics–System control hierarchy– Firing angle control– Current and extinction angle control–Starting and stopping of DC link –Power control –Higher level controllers –Control of VSC based HVDC link.

UNIT IV REACTIVE POWER AND HARMONICS CONTROL 9

Reactive power requirements in steady state–Sources of reactive power–SVC and STATCOM– Generation of harmonics –Design of AC and DC filters– Active filters.

UNIT V POWER FLOW ANALYSIS IN AC/DC SYSTEMS 9

Per unit system for DC quantities–DC system model –Inclusion of constraints –Power flow analysis –case study

TOTAL : 45 PERIODS

OUTCOMES:

- Ability to understand the principles and types of HVDC system.
- Ability to analyze and understand the concepts of HVDC converters.
- Ability to acquire knowledge on DC link control.
- Ability to understand the concepts of reactive power management, harmonics and

power flow analysis.

- Ability to get knowledge about Planning of DC power transmission and comparison with AC power transmission.
- Ability to understand the importance of power flow in HVDC system under steady state.

TEXT BOOKS:

1. Padiyar,K.R.,“HVDC power transmission system”, New Age International(P)Ltd. NewDelhi, Second Edition,2010.
2. Arrillaga,J.,“High Voltage Direct Current Transmission”, Peter Pregrinus, London,1983.

3. Edward Wilson Kimbark,“ Direct Current Transmission”, Vol.I, Wiley inter science, New York, London, Sydney,1971.

20153E82D MICROCONTROLLER BASED SYSTEM DESIGN L T P C
3 0 0 3

OBJECTIVES: To impart knowledge about the following topics:

- Architecture of PIC microcontroller
- Interrupts and timers
- Peripheral devices for data communication and transfer
- Functional blocks of ARM processor
- Architecture of ARM processors

UNIT I INTRODUCTION TO PIC MICROCONTROLLER 9

Introduction to PIC Microcontroller–PIC 16C6x and PIC16C7x Architecture–IC16cxx– Pipelining - Program Memory considerations – Register File Structure - Instruction Set - Addressing modes – Simple Operations.

UNIT II INTERRUPTS AND TIMER 9

PIC micro controller Interrupts- External Interrupts-Interrupt Programming–Loop time subroutine Timers-Timer Programming– Front panel I/O-Soft Keys– State machines and key switches– Display of Constant and Variability strings.

UNIT III PERIPHERALS AND INTERFACING 9

I²C Bus for Peripherals Chip Access– Bus operation-Bus subroutines– Serial EEPROM— Analog to Digital Converter–UART-Baud rate selection–Data handling circuit–Initialization - LCD and keyboard Interfacing -ADC, DAC, and Sensor Interfacing.

UNIT IV INTRODUCTION TO ARM PROCESSOR 9

Architecture –ARM programmer’s model –ARM Development tools- Memory Hierarchy – ARM Assembly Language Programming–Simple Examples–Architectural Support for

Operating systems.

UNIT V ARM ORGANIZATION 9

3-Stage Pipeline ARM Organization– 5-Stage Pipeline ARM Organization–ARM Instruction Execution- ARM Implementation– ARM Instruction Set– ARM coprocessor interface– Architectural support for High Level Languages – Embedded ARM Applications.

TOTAL : 45 PERIODS

OUTCOMES:

- Ability to understand and apply computing platform and software for engineering problems.
- Ability to understand the concepts of Architecture of PIC microcontroller
- Ability to acquire knowledge on Interrupts and timers.
- Ability to understand the importance of Peripheral devices for data communication.
- Ability to understand the basics of sensor interfacing
- Ability to acquire knowledge in Architecture of ARM processors

TEXT BOOKS:

20153E82E

SMART GRID

L	T	P	C
3	0	0	3

OBJECTIVES: To impart knowledge about the following topics:

- || Smart Grid technologies, different smart meters and advanced metering infrastructure.
- || The power quality management issues in Smart Grid.
- || The high performance computing for Smart Grid applications

UNIT I INTRODUCTION TO SMART GRID 9

Evolution of Electric Grid, Concept, Definitions and Need for Smart Grid, Smart grid drivers, functions, opportunities, challenges and benefits, Difference between conventional & Smart Grid, National and International Initiatives in Smart Grid.

UNIT II SMART GRID TECHNOLOGIES 9

Technology Drivers, Smart energy resources, Smart substations, Substation Automation, Feeder Automation ,Transmission systems: EMS, FACTS and HVDC, Wide area monitoring, Protection and control, Distribution systems: DMS, Volt/VAR control, Fault Detection, Isolation and service restoration, Outage management, High-Efficiency Distribution Transformers, Phase Shifting Transformers, Plugin Hybrid Electric Vehicles(PHEV).

UNIT III SMART METERS AND ADVANCED METERING INFRASTRUCTURE 9

Introduction to Smart Meters, Advanced Metering Infrastructure (AMI) drivers and benefits, AMI protocols, standards and initiatives, AMI needs in the smart grid, Phasor Measurement Unit (PMU), Intelligent Electronic Devices (IED) & their application for monitoring & protection.

UNIT IV POWER QUALITY MANAGEMENT IN SMART GRID 9

Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.

UNIT V HIGH PERFORMANCE COMPUTING FOR SMART GRID APPLICATIONS 9

Local Area Network (LAN), House Area Network (HAN), Wide Area Network (WAN), Broad band over Power line (BPL), IP based Protocols, Basics of Web Service and CLOUD Computing to make Smart Grids smarter, Cyber Security for Smart Grid.

TOTAL : 45 PERIODS**OUTCOMES:**

- || Learners will develop more understanding on the concepts of Smart Grid and its present developments.
- || Learners will study about different Smart Grid technologies.
- || Learners will acquire knowledge about different smart meters and advanced metering infrastructure.
- Learners will have knowledge on power quality management in Smart Grids
- Learners will develop more understanding on LAN, WAN and Cloud Computing for Smart Grid applications.

TEXT BOOKS:

1. Stuart Borlase "Smart Grid: Infrastructure, Technology and Solutions", CRC Press 2012.
2. Janaka Ekanayake, Nick Jenkins, Kithsiri Liyanage, Jianzhong Wu, Akihiko Yokoyama, "Smart Grid: Technology and Applications", Wiley 2012.

20153E82F**BIOMEDICAL INSTRUMENTATION****L T P C
3 0 0 3****OBJECTIVES:**

- || To Introduce Fundamentals of Biomedical Engineering
- || To study the communication mechanics in a biomedical system with few examples
- || To study measurement of certain important electrical and non-electrical parameters

- || To understand the basic principles in imaging techniques
- || To have a basic knowledge in life assisting and therapeutic devices

UNIT I FUNDAMENTALS OF BIOMEDICAL ENGINEERING 9

Cell and its structure – Resting and Action Potential – Nervous system and its fundamentals - Basic components of a biomedical system- Cardiovascular systems- Respiratory systems -Kidney and blood flow - Biomechanics of bone - Biomechanics of soft tissues -Physiological signals and transducers - Transducers – selection criteria – Piezo electric, ultrasonic transducers - Temperature measurements - Fibre optic temperature sensors

UNIT II NON ELECTRICAL PARAMETERS MEASUREMENT AND DIAGNOSTIC PROCEDURES 9

Measurement of blood pressure - Cardiac output - Heart rate - Heart sound - Pulmonary function measurements – spirometer – Photo Plethysmography, Body Plethysmography – Blood Gas analysers, pH of blood –measurement of blood pCO₂, pO₂, finger-tip oxymeter - ESR, GSR measurements.

UNIT III ELECTRICAL PARAMETERS ACQUISITION AND ANALYSIS 9

Electrodes – Limb electrodes –floating electrodes – pregelled disposability electrodes - Micro, needle and surface electrodes – Amplifiers, Preamplifiers, differential amplifiers, chopper amplifiers – Isolation amplifier - ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms - Electrical safety in medical environment, shock hazards – leakage current-Instruments for checking safety parameters of biomedical equipment.

UNIT IV IMAGING MODALITIES AND ANALYSIS 9

Radio graphic and fluoroscopic techniques – Computer tomography – MRI – Ultrasonography – Endoscopy – Thermography –Different types of biotelemetry systems - Retinal Imaging - Imaging application in Biometric systems.

UNIT V LIFE ASSISTING, THERAPEUTIC AND ROBOTIC DEVICES 9

Pacemakers – Defibrillators – Ventilators – Nerve and muscle stimulators – Diathermy – Heart – Lung machine – Audio meters – Dialysers – Lithotripsy - ICU patient monitoring system - Nano Robots - Robotic surgery –Orthopedic prostheses fixation.

TOTAL : 45 PERIODS

OUTCOMES: At the end of the course students will have the

- || Ability to understand the philosophy of the heart, lung, blood circulation and respiration system.
- || Ability to provide latest ideas on devices of non-electrical devices.
- || Ability to gain knowledge on various sensing and measurement devices of electrical origin.
- || Ability to understand the analysis systems of various organ types.
- || Ability to bring out the important and modern methods of imaging techniques and their analysis.
- || Ability to explain the medical assistance/techniques, robotic and therapeutic equipments.

20153E82G

FUNDAMENTALS OF NANOSCIENCE

L T P C

3 0 0 3

OBJECTIVES:

To learn about basis of nanomaterial science, preparation method, types and application

UNIT I INTRODUCTION

8

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering- Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilms- multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

UNIT II GENERAL METHODS OF PREPARATION

9

Bottom-up Synthesis-Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

UNIT III NANOMATERIALS

12

Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications- Nanometal oxides-ZnO, TiO₂, MgO, ZrO₂, NiO, nanoalumina, CaO, AgTiO₂, Ferrites, Nanoclays- functionalization and applications-Quantum wires, Quantum dots-preparation, properties and applications.

UNIT IV CHARACTERIZATION TECHNIQUES

9

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation.

UNIT V APPLICATIONS

7

NanoInfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nanobiotechnology: nanoprobe in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery.

TOTAL : 45 PERIODS

OUTCOMES:

- | | Will familiarize about the science of nanomaterials
- | | Will demonstrate the preparation of nanomaterials
- | | Will develop knowledge in characteristic nanomaterial

17148S11P-TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS

3 1 0 4

(Common to all)

SEMESTER-1

UNIT I FOURIER SERIES

9 + 3hrs

Periodic function-Graph of functions- Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORM

9 + 3hrs

Fourier integral theorem (without proof) – Sine and Cosine transforms – Properties (without Proof) – Transforms of simple functions – Convolution theorem – Parseval's identity – Finite Fourier transform, Sine and Cosine transform.

UNIT III Z -TRANSFORM AND DIFFERENCE EQUATIONS

9 + 3hrs

Z-transform - Elementary properties (without proof) – Inverse Z – transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z –transform- Sampling of signals –an introduction.

UNIT IV PARTIAL DIFFERENTIAL EQUATIONS

9 + 3hrs

Formation of pde –solution of standard type first order equation- Lagrange's linear equation – Linear partial differential equations of second order and higher order with Constant coefficients.

UNIT V BOUNDARY VALUE PROBLEMS

9 + 3hrs

Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

Total no of hrs: 60hrs

17153H12P - CONTROL SYSTEM

3 1 0 4
SEMESTER-1

AIM

To provide sound knowledge in the basic concepts of linear control theory and design of control system.

OBJECTIVES

- i. To understand the methods of representation of systems and getting their transfer function models.
- ii. To provide adequate knowledge in the time response of systems and steady state error analysis.
- iii. To give basic knowledge in obtaining the open loop and closed-loop frequency responses of systems.
- iv. To understand the concept of stability of control system and methods of stability analysis.
- v. To study the three ways of designing compensation for a control system.

UNIT I: INTRODUCTION

12

Open-loop and closed-loop systems, servomechanisms and regulator systems; Transfer function; Block diagram reduction, Signal flow graphs.

UNIT II: MATHEMATICAL MODELS OF PHYSICAL SYSTEMS

12

Mechanical systems - Translational and Rotational systems, Gear trains, Electrical systems, Thermal systems and Fluid systems.
Components of feedback control systems - Potentiometers as error sensing devices, Synch, Servomotors, Stepper motors, Tachogenerators.

UNIT III: STABILITY

12

Concept of Stability, necessary and sufficient conditions of Stability, Closed-loop systems, merits and demerits, Routh-Hurwitz Criterion.
Transient Response: Typical inputs, convolution integral, Time domain specifications, steady state errors.
State equation – Solutions – Realization – Controllability – Observability – Stability
Jury's test.

UNIT IV: FREQUENCY RESPONSE

12

Definition, equivalence between transient response and frequency response, Bode plots. Nyquist Stability Criterion: Development of criterion, gain and phase margins, m- circles and Nichol's chart.

UNIT V: ROOT LOCUS METHOD

12

Rules for sketching of root loci, Root contours.
Synthesis: Lag and Lead networks, proportional, derivative and integral controllers.

MULTI INPUT MULTI OUTPUT (MIMO) SYSTEM:

Models of MIMO system – Matrix representation – Transfer function representation – Poles and Zeros – Decoupling – Introduction to multivariable Nyquist plot and singular values analysis – Model predictive control.

Total = 60

TEXT BOOK:

1. I.J.Nagrath and M.Gopal, 'Control System Engineering', Wiley Eastern Ltd., Reprint 1995.

REFERENCES:

1. M.Gopal, 'Control System Principles and Design', Tata McGraw Hill, 1998.
2. Ogatta, 'Modern Control Engineering', Tata McGraw Hill 1997.

17153H13P - CIRCUIT ANALYSIS AND NETWORKS

3104

AIM

SEMESTER-1

To know about basic analysis and synthesis techniques used in electronics and communications.

OBJECTIVES

- To study about various network theorems and the method of application to analyse a circuit.
- To know the concept of transfer function of a network and the nature of response to external inputs.
- To synthesize a network in different forms from the transfer function.
- To know the concept and design of frequency selective filters.

UNIT-I BASIC CIRCUIT CONCEPTS & SINUSOIDAL ANALYSIS (12hrs)

Linear passive circuit elements, ideal sources (independent and dependent), V-I relationship of circuit elements – Ohm's Law - Kirchoff's Laws – analysis of series and parallel circuits – network reduction: voltage and current division, source transformation, star/delta transformation Concept of phasor and complex Impedance / Admittance – Analysis of simple series and parallel circuits – active power, reactive power, apparent power (volt -ampere), power factor– phasor diagram, impedance triangle and power triangle associated with these circuits – resonance in series and parallel circuits

UNIT-II CIRCUIT ANALYSIS & NETWORK THEOREMS (12hrs)

Formation of matrix equations and analysis by using Mesh-current and Node-voltage methods. Superposition theorem – Thevenin's theorem – Norton's theorem - Maximum power transfer theorem - Reciprocity theorem – Compensation theorem – Substitution theorem - Millman's theorem and Tillage's theorem with applications.

Coupled circuits: self inductance - mutual inductance – coefficient of coupling – dot convention – analysis of simple coupled circuits. Equivalent inductance of the series aiding and opposing, parallel aiding and opposing coupled circuits.

UNIT-III THREE PHASE CIRCUIT AND TRANSIENT ANALYSIS (12hrs)

Three-phase systems – phase sequence - Solution of three-phase balanced circuits (Star & Delta) – Solution of three-phase unbalanced circuits (Star & Delta) - Power measurement and two-wattmeter method.

Forced and free response of RL, RC and RLC circuits with D.C. and sinusoidal excitations.

UNIT-IV TWO PORT NETWORKS (12hrs)

Characterization of two port networks in terms of Z, Y, H and T parameters – networks equivalents – relations between network parameters – Analysis of T, Ladder, Bridged-T and lattice networks – transfer function of terminated two port networks.

UNIT-V NETWORK TOPOLOGY, FILTERS & ATTENUATORS (12hrs)

Network graphs, tree and cut – sets – tie set and cut – set schedules – primitive impedance and admittance matrices

Classification of Filters - filter networks - design of constant K, m-derived and composite filters. Analysis of T, π , lattice, bridged-T, and L type attenuators.

TOTAL 60

TEXT BOOKS:

1. Basic Electrical and Electronics Engineering – Muthu subramaniyam
2. Nageswara rao
3. Umesh sinha
4. Charavarthi

17153H14P- ELECTRONIC CIRCUITS

3 0 0 3
SEMESTER-1

AIM:

To study the characteristics and applications of electronic devices.

OBJECTIVES:

- To acquaint the students with construction, theory and characteristics of the following electronic devices:
- Bipolar transistor, Field Effect transistor, Multivibrators, Power control/regulator devices, Feedback amplifiers and oscillators

UNIT I -RECTIFIER & POWER SUPPLY

12

Half & Full wave rectifier – filters – shunt , inductor, LC section & Ripple factor, P calculation for C, L and LC filters – Voltage regulators – Zener –Series voltage regulator – SMPS.

UNIT II- AMPLIFIERS

12

Amplifiers – Frequency response of RC coupled - Frequency Response of Emitter follower, gain band width product – FET amplifier at low and high frequency cascaded amplifiers.

UNIT III- FEEDBACK AMPLIFIER & OSCILLATORS

12

Four basic types of feedback – effect of feedback on amplifier performance – condition for oscillation – Barkhausen criteria – LC oscillators – Hartley & Colpitts – RC oscillators – Wein bridge, RC phase shift crystal oscillator.

UNIT IV- MULTIVIBRATORS

12

Collector coupled & Emitter coupled Astable multivibrator – Monostable, Bistable multivibrator – triggering methods – Storage delay and calculation of switching time – Schmitt triggering circuits – Speed up capacitor in switching.

UNIT V- POWER AMPLIFIER

12

Classification – class A, B, C & AB – Class B push pull – Class B Complimentary – symmetry – Class S, Power sections classification – Efficiency – Distortion in amplifiers.

L = 45 T = 15 P = 0 TOTAL =60

3. Jacob Millman Cristas C.Halkias, “Integrated Electronics”, Tat Mc Graw Hill, Edition 1991.

AIM**SEMESTER-1**

To expose the students to the concepts of electromechanical energy conversions in D.C. Machines and energy transfer in transformers and to analyze their performance.

OBJECTIVES

- i. To introduce the concept of rotating machines and the principle of electromechanical energy conversion in single and multiple excited systems.
- ii. To understand the generation of D.C. voltages by using different type of generators and study their performance.
- iii. To study the working principles of D.C. motors and their load characteristics, starting and methods of speed control.
- iv. To familiarize with the constructional details of different type of transformers, working principle and their performance.
- v. To estimate the various losses taking place in D.C. machines and transformers and to study the different testing method to arrive at their performance.

UNIT I: BASIC PRINCIPLES OF ROTATING MACHINES**12**

Electrical machine types – Magnetic circuits – Magnetically induced EMF and force – AC operation of magnetic circuits - core losses. Principles of Electromechanical energy conversion: Energy conversion process – Energy in magnetic system – Field energy and mechanical force – Multiply excited magnetic field systems

UNIT II: GENERATORS**12**

Constructional details – emf equation – Methods of excitation – Self and separately excited generators – Characteristics of series, shunt and compound generators – Armature reaction and commutation – Parallel operation of DC shunt and compound generators.

UNIT III: DC MOTORS**12**

Principle of operation – Back emf and torque equation – Characteristics of series, shunt and compound motors – Starting of DC motors – Types of starters – Speed control of DC series and shunt motors.

UNIT IV: TRANSFORMERS**12**

Constructional details of core and shell type transformers – Types of windings – Principle of operation – emf equation – Transformation ratio - Equivalent circuit – Losses – Testing – Efficiency and Voltage regulation .

Transformer on load– Parallel operation of single phase transformers – Auto transformer – Three phase transformers

UNIT V: TESTING OF TRANSFORMERS AND DC MACHINES**12**

Losses and efficiency in DC machines and transformers – Condition for maximum efficiency – Testing of DC machines – Brake test, Swinburne's test, Retardation test and Hopkinson's test – Testing of transformers – Polarity test, load test, open circuit and short circuit tests – All day efficiency.

17148S21P-NUMERICAL METHODS

3 1 0 4
Semester II

UNIT I - SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS

9+3hrs

Solution of equations–Newton Raphson’s method, Regula-falsi methods Solution of linear System of equations by Gaussian elimination and Gauss-Jordon methods- Iterative methods: Gauss Jacobi and Gauss-Seidel methods– Eigenvalue of a matrix by power method.

UNIT II- INTERPOLATION

9+3hrs

Newton’s forward and backward difference formulas – Central difference formula: Bessels and Stirling’s formula - Lagrangian Polynomials – Divided difference method.

UNIT III- NUMERICAL DIFFERENTIATION AND INTEGRATION

9+3hrs

Derivatives from difference tables – Divided differences and finite differences – Numerical integration by trapezoidal and Simpson’s 1/3 and 3/8 rules – Romberg’s method – Double integrals using trapezoidal and Simpson’s rules.

UNIT IV - INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS

9+3hrs

Single step methods: Taylor series method – Euler and modified Euler methods – Fourth order Runge – Kutta method for solving first and second order equations – Multistep methods: Milne’s and Adam’s predictor and corrector methods.

UNIT V - BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS

9+3hrs

Finite difference solution of second order ordinary differential equation – Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations.

Total no of hrs: 60hrs

17150S22P- COMPUTER ARCHITECTURE

3 0 0 3
SEMESTER II

AIM:

To understand the architecture of different processor and its associative units

OBJECTIVES:

To provide a clear understanding of

- Computer arithmetic and logic unit design.
- Control Mechanism and CPU functioning.
- Pipeline architecture and vector processing.
- Input and output organizations and interfacing.
- Various memories and their organization.

UNIT I BASIC STRUCTURE OF COMPUTERS

9

Functional units – Basic operational concepts – Bus structures – Performance and Metrics – Instruction and instruction sequencing – hardware – software interface – addressing modes – instruction set – RISC – CISC – ALU design – fixed point and floating point operation.

UNIT II CONTROL AND CENTRAL PROCESSING UNIT

9

Micro programmed control – Control memory, address sequencing, micro program example, and design of control unit. Central processing unit – general register organization, stack organization, instruction formats, addressing modes, data transfer and manipulation, program control, reduced instruction set computer.

UNIT III COMPUTER ARITHMETIC, PIPELINE AND VECTOR PROCESSING

9

Computer arithmetic – addition and subtraction, multiplication algorithms, division algorithms, floating point arithmetic operations decimal arithmetic unit, decimal arithmetic operations. Pipeline and vector processing – Parallel processing, pipelining, arithmetic pipeline, instruction pipeline, vector processing array processors.

UNIT IV INPUT OUTPUT ORGANIZATION

9

Input output organization : peripheral devices, input output interface, asynchronous data transfer , modes of transfer, priority interrupt, direct memory access, input output interface, serial communication.

UNIT V MEMORY ORGANIZATION

9

Memory organization – memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management hardware.

TOTAL: 45 PERIODS

17153H23P-ELECTRICAL MACHINES-II**3 1 0 4****AIM:**

To expose the students to the concepts of synchronous and asynchronous machines and analyze their performance.

OBJECTIVES:

To impart knowledge on

- i. Construction and performance of salient and non – salient type synchronous generators.
- ii. Principle of operation and performance of synchronous motor.
- iii. Construction, principle of operation and performance of induction machines.
- iv. Starting and speed control of three-phase induction motors.
- v. Construction, principle of operation and performance of single phase induction motors and special machines.

UNIT I: SYNCHRONOUS GENERATOR**12**

Constructional details – Types of rotors – emf equation – Synchronous reactance – Armature reaction – Voltage regulation – e.m.f, m.m.f, z.p.f and A.S.A methods – Synchronizing and parallel operation – Synchronizing torque - Change of excitation and mechanical input – Two reaction theory – Determination of direct and quadrature axis synchronous reactance using slip test – Operating characteristics - Capability curves.

UNIT II: SYNCHRONOUS MOTOR**12**

Principle of operation – Torque equation – Operation on infinite bus bars - V-curves – Power input and power developed equations – Starting methods – Current loci for constant power input, constant excitation and constant power developed.

UNIT III: THREE PHASE INDUCTION MOTOR**12**

Constructional details – Types of rotors – Principle of operation – Slip – Equivalent circuit – Slip-torque characteristics - Condition for maximum torque – Losses and efficiency – Load test - No load and blocked rotor tests - Circle diagram – Separation of no load losses – Double cage rotors

UNIT IV: STARTING AND SPEED CONTROL OF THREE PHASE INDUCTION MOTOR**12**

Need for starting – Types of starters – Stator resistance and reactance, rotor resistance, autotransformer and star-delta starters – Speed control – Change of voltage, torque, number of poles and slip – Cascaded connection – Slip power recovery scheme.

UNIT V: SINGLE PHASE INDUCTION MOTORS AND SPECIAL MACHINE**12**

Constructional details of single phase induction motor – Double revolving field theory and operation – Equivalent circuit – No load and blocked rotor test — Starting methods of single-phase induction motors - Special machines - Shaded pole induction motor, reluctance motor, repulsion motor, hysteresis motor, stepper motor and AC series motor

Total = 60

17153H24P-DIGITAL ELECTRONICS**3 1 0 4****AIM:**

To introduce the fundamentals of Digital Circuits, combinational and sequential circuit.

OBJECTIVES:

- i. To study various number systems and to simplify the mathematical expressions using Boolean functions simple problems.
- ii. To study implementation of combinational circuits
- iii. To study the design of various synchronous and asynchronous circuits.
- iv. To expose the students to various memory devices.

UNIT I NUMBER SYSTEMS**12**

Review of Binary, Octal and Hexa-decimal number systems – Conversions, Binary Arithmetic magnitude form – 1's, 2's complement representation, Codes: -BCD, Excess – 3, Graycode, ASCII codes, Error detecting codes (Hamming code)

UNIT II BOOLEAN ALGEBRA**12**

Boolean Algebra - De Morgan's law – Simplifications of Boolean expression – sum of Products and product of sums – Karnaugh Map – Quince McClusky method of simplification (Including Don't care conditions)

UNIT III Combinational Logic**12**

Design of Logic gates- Design of adder, subtractor, comparators, code converters, encoders, decoders, multiplexers and demultiplexers. Function realization using gates & multiplexers.

UNIT IV Sequential Logic Design**12**

Building blocks of Sequential logic – RS, JK, Master – Slave, D and T flip- flop, Asynchronous and synchronous counters – Binary and BCD counters – shift registers – Design and Implementation of Sequential synchronous circuits

UNIT V Logic Families

12

Memories: ROM, PROM, EPROM, PLA, PLD, FPGA, digital logic families: TTL, ECL, CMOS.

TOTAL = 60Hrs

17153H25P-TRANSMISSION AND DISTRIBUTION

4 0 0 4

Semester II

AIM

To become familiar with the function of different components used in Transmission and Distribution levels of power systems and modeling of these components.

OBJECTIVES

- i. To develop expression for computation of fundamental parameters of lines.
- ii. To categorize the lines into different classes and develop equivalent circuits for these classes.
- iii. To analyze the voltage distribution in insulator strings and cables and methods to improve the same.

UNIT I: INTRODUCTION

12

Structure of electric power system: Various levels such as generation, transmission and distribution; HVDC and EHV AC transmission: comparison of economics of transmission, technical performance and reliability.

Radial and ring-main distributors; interconnections; AC distribution: AC distributor with concentrated load; three-phase, four-wire distribution system; sub-mains; stepped and tapered mains.

UNIT II: TRANSMISSION LINE PARAMETERS

12

Resistance, Inductance and Capacitance of single and three phase transmission lines - Stranded and Bundled conductors -Symmetrical and unsymmetrical spacing - Transposition -Application of self and mutual GMD -Skin and Proximity effect - Inductive interference with neighboring circuits.

UNIT III: MODELLING AND PERFORMANCE OF TRANSMISSION LINES

12

Classification of lines: Short line, medium line and long line; equivalent circuits, attenuation constant, phase constant, surge impedance; transmission efficiency and voltage regulation; real and reactive power flow in lines: Power-angle diagram; surge-impedance loading, loadability limits based on thermal loading, angle and voltage stability considerations; shunt and series compensation; Ferranti effect and corona loss.

UNIT IV: INSULATORS AND CABLES

12

Insulators: Types, voltage distribution in insulator string and grading, improvement of string efficiency. Underground cables: Constructional features of LT and HT cables, capacitance, dielectric stress and grading, thermal characteristics.

UNIT V: DESIGN OF TRANSMISSION LINES

12

Introduction, calculation of sag and tension .Equivalent span length and sag, Effect of ice and wind loading ,Stringing chart, sag template, conductor vibrations and vibrations dampers

#####

17148S31P-PROBABILITY AND STATISTICS

3 1 0 4

(Common to Mech, Civil, EEE)

SEMESTER-III

UNIT I PROBABILITY AND RANDOM VARIABLE

9+3hrs

Axioms of probability - Conditional probability - Total probability - Bayes theorem - Random variable - Probability mass function - Probability density functions - Properties - Moments - Moment generating functions and their properties.

UNIT II TWO DIMENSIONAL RANDOM VARIABLES

9+3hrs

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

UNIT III STANDARD DISTRIBUTIONS

9+3hrs

Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties - Functions of a random variable.

UNIT IV TESTING OF HYPOTHESIS

9+3hrs

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

UNIT V DESIGN OF EXPERIMENTS

9+3hrs

Analysis of variance – One way classification – Complete randomized design - Two – way classification – Randomized block design - Latin square.

Note : Use of approved statistical table permitted in

Total no of hrs: 60hrs

17152S32P- ANALOG INTEGRATED CIRCUITS 3 1 0 4**AIM**

To introduce the concepts for realizing functional building blocks in ICs, fabrications & application of Ics.

OBJECTIVES

- i. To study the IC fabrication procedure.
- ii. To study characteristics; realize circuits; design for signal analysis using Op-amp Ics.
- iii. To study the applications of Op-amp.
- iv. To study internal functional blocks and the applications of special Ics like Timers, PLL circuits, regulator Circuits, ADCs.

UNIT I: IC FABRICATION**9**

IC classification, fundamental of monolithic IC technology, epitaxial growth, masking and etching, diffusion of impurities. Realization of monolithic Ics and packaging.

UNIT II: CHARACTERISTICS OF OPAMP**9**

Ideal OP-AMP characteristics, DC characteristics, AC characteristics, offset voltage and current: voltage series feedback and shunt feedback amplifiers, differential amplifier; frequency response of OP-AMP; Basic applications of op-amp – summer and subtractor – Multiplier and divider- differentiator and integrator.

UNIT III: APPLICATIONS OF OPAMP**9**

Instrumentation amplifier, V/I & I/V converters, comparators, multivibrators, waveform generators, Precision rectifier, clippers, clampers, peak detector, S/H circuit, D/A converter (R-2R ladder and weighted resistor types), A/D converter – Dual slope, successive approximation and flash types.

UNIT IV: ACTIVE FILTERS AND SPECIAL ICs**9**

RC Active filters : low pass – high pass – band pass – band reject – switched capacitor filter – 555 Timer circuit – Functional block, characteristics & applications; 566-voltage controlled oscillator circuit; 565-phase lock loop circuit functioning and applications, Analog multiplier Ics.

UNIT V: APPLICATION ICs**9**

IC voltage regulators – LM317, 723 regulators, switching regulator, MA 7840, LM 380 power amplifier, ICL 8038 function generator IC, isolation amplifiers, opto coupler, opto electronic Ics.

17153H33P- POWER ELECTRONICS**4 0 0 4****AIM:**

To understand the various applications of electronic devices for conversion, control and conditioning of the electrical power.

OBJECTIVES:

- To get an overview of different types of power semiconductor devices and their switching characteristics.
- To understand the operation, characteristics and performance parameters of controlled rectifiers
- To study the operation, switching techniques and basics topologies of DC-DC switching regulators.
- To learn the different modulation techniques of pulse width modulated inverters and to understand harmonic reduction methods.
- To study the operation of AC voltage controller and Matrix converters.

UNIT I- POWER SEMI-CONDUCTOR DEVICES :**12**

Overview of switching devices – Driver and snubber circuit of SCR TRIAC, GTO, IGBT, MOSFET – Computer simulation of PE circuits.

UNIT II-PHASE CONTROLLED CONVERTERS**12**

2 pulse / 3 pulse and 6 pulse converters – Effect of source inductance – performance parameters – Reactive power control of converters – Dual converters.

UNIT III -DC TO DC CONVERTERS**12**

Stepdown and stepup chopper – Forced commutation techniques – Time ratio control and current limit control – Switching mode regulators Buck, Boost, Buck-Boost – concept of resonant switching.

UNIT IV- INVERTERS**12**

Single phase and three phase [120° & 180° mode] inverters – PWM techniques – Sinusoidal PWM, Modified sinusoidal PWM and multiple PWM – Voltage and harmonic control – Series resonant inverter – current source inverter.

UNIT V- AC TO AC CONVERTERS**12**

Single phase AC voltage controllers – Multistage sequence control – single phase and three phase cycloconverters – power factor control – Matrix converters.

17153H34P-MEASUREMENTS AND INSTRUMENTATION

4004

Semester III

AIM

To provide adequate knowledge in electrical instruments and measurements techniques.

OBJECTIVES

To make the student have a clear knowledge of the basic laws governing the operation of the instruments, relevant circuits and their working.

- i. Introduction to general instrument system, error, calibration etc.
- ii. Emphasis is laid on analog and digital techniques used to measure voltage, current, energy and power etc.
- iii. To have an adequate knowledge of comparison methods of measurement.
- iv. Elaborate discussion about storage & display devices.
- v. Exposure to various transducers and data acquisition system.

UNIT I: INTRODUCTION 10

Functional elements of an Instrument -Static and Dynamic characteristics -Errors in measurement -Statistical evaluation of measurement data -Standard and Calibration.

UNIT II: ELECTRICAL AND ELECTRONICS INSTRUMENTS 12

Construction and principle of operation of moving coil, moving Iron, Principle and types analog and digital ammeters and voltmeters -Single and three phase Wattmeter and Energy meter - magnetic measurements - -Instruments for measurement of frequency and phase.

UNIT III: SIGNAL CONDITIONING CIRCUITS 12

Bridge circuits – Differential and Instrumentation amplifiers -Filter circuits - V/f and f/V converters – P/I and I/P converters – S/H Circuit, A/D and D/A converters -Multiplexing and De-multiplexing -Data acquisition systems –Grounding techniques.

UNIT IV: STORAGE AND DISPLAY DEVICES 12

Magnetic disc and Tape Recorders -Digital plotters and printers -CRT displays -Digital CRO – LED, LCD and Dot matrix displays.

UNIT V: TRANSDUCERS 14

Classification of Transducers -Selection of Transducers –Resistive, Capacitive and Inductive Transducers -Piezo electric Transducers -Transducers for measurement of displacement, temperature, level, flows, pressure, velocity, acceleration, torque, speed, viscosity and moisture.

17153L35P- MACHINES LAB

0 0 3 2

Semester III

LIST OF EXPERIMENTS

1. Load test on DC Shunt & DC Series motor
2. O.C.C & Load characteristics of DC Shunt generator
3. Speed control of DC shunt motor (Armature, Field control)
4. Load test on single phase transformer
5. O.C & S.C Test on a single phase transformer
6. Regulation of an alternator by EMF & MMF methods.
7. V curves and inverted V curves of synchronous Motor
8. Load test on three phase squirrel cage Induction motor
9. Speed control of three phase slip ring Induction Motor
10. Load test on single phase Induction Motor.
11. Study of DC & AC Starters

TOTAL: 45

17153H41P- PROTECTION AND SWITCHGEAR

4 0 0 4

AIM

To expose the students to the various faults in power system and learn the various methods of protection scheme.

To understand the current interruption in Power System and study the various switchgears.

OBJECTIVES

- i. Discussion on various earthing practices usage of symmetrical components to estimate fault current and fault MVA.
- ii. Study of Relays & Study of protection scheme, solid state relays.
- iii. To understand instrument transformer and accuracy.
- iv. To understand the method of circuit breaking various arc theories Arcing phenomena – capacitive and inductive breaking.
- v. Types of circuit breakers.

UNIT I: INTRODUCTION

12

Principles and need for protective schemes – nature and causes of faults – types of faults – fault current calculation using symmetrical components – Power system earthing - Zones of protection and essential qualities of protection – Protection scheme.

UNIT II: OPERATING PRINCIPLES AND RELAY CONSTRUCTIONS

12

Need for protection – essential qualities of protective relays – Electromagnetic relays, Induction relays – Over current relays - Directional, Distance, Differential and negative sequence relays. Static relays

UNIT III: APPARATUS PROTECTION

12

Apparatus protection transformer, generator, motor, protection of bus bars, transmission lines – CTs and PTs and their applications in protection schemes.

UNIT IV: THEORY OF CIRCUIT INTERRUPTION

12

Physics of arc phenomena and arc interruption. Restricting voltage & Recovery voltage, rate of rise of recovery voltage, resistance switching, current chopping, and interruption of capacitive current – DC circuit breaking.

UNIT V: CIRCUIT BREAKERS

12

Types of Circuit Breakers – Air blast, Air break, oil SF₆ and Vacuum circuit breakers – comparative merits of different circuit breakers – Testing of circuit breakers

17153H42P-HIGH VOLTAGE DC TRANSMISSION

3 1 0 4

Semester IV

AIM:

To learn the HVDC modelling and control strategy.

OBJECTIVES:

- To study the performance of converters and modeling of DC line with controllers.
- To study about converter harmonics and its mitigation using active and passive filters.

UNIT I- DC POWER TRANSMISSION TECHNOLOGY 9

Introduction-comparison of AC and DC transmission application of DC transmission – Description of DC transmission system planning for HVDC transmission-modern trends In DC transmission.

UNIT II- ANALYSIS OF HVDC CONVERTERS 9

Pulse number, choice of converter configuration-simplified analysis of Graetz circuit converter bridge characteristics – characteristics of a twelve pulse converter-detailed analysis of converters.

UNIT III- CONVERTER AND HVDC SYSTEM CONTROL 9

General principles of DC link control-converter control characteristics-system control Hierarchy-firing angle control-current and extinction angle control-starting and stopping of DC link-power control-higher level controllers-telecommunication requirements.

UNIT IV -HARMONICS AND FILTERS 9

Introduction-generation of harmonics-design of AC filters-DC filters-carrier frequency and RI noise.

UNIT V -SIMULATION OF HVDC SYSTEMS 9

Introduction-system simulation: Philosophy and tools-HVDC system simulation-modeling of HVDC systems for digital dynamic simulation.

TOTAL: 45 PERIODS

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

17153H43P- SOLID STATE DRIVES

3 1 0 4

Semester IV

AIM

To study and understand the operation of electric drives controlled from a power electronic converter and to introduce the design concepts of controllers.

OBJECTIVES

- i. To understand the stable steady-state operation and transient dynamics of a motor-load system.
- ii. To study and analyze the operation of the converter / chopper fed dc drive and to solve simple problems.
- iii. To study and understand the operation of both classical and modern induction motor drives.
- iv. To understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives.
- v. To analyze and design the current and speed controllers for a closed loop solid-state d.c motor drive.

UNIT I DRIVE CHARACTERISTICS

9

Equations governing motor load dynamics - Equilibrium operating point and its steady state stability - Mathematical condition for steady state stability and problems - Multi quadrant dynamics in the speed torque plane - Basics of regenerative braking - Typical load torque characteristics - Acceleration, deceleration, starting and stopping.

UNIT II DC MOTOR DRIVE

9

Steady state analysis of the single and three phase fully controlled converter fed separately excited D.C motor drive: Continuous and discontinuous conduction mode - Chopper fed D.C drive: Time ratio control and current limit control - Operation of four quadrant chopper.

UNIT III STATOR CONTROLLED INDUCTION MOTOR DRIVES

9

Variable terminal voltage control – Variable frequency control – V/f control - AC voltage controllers – Four-quadrant control and closed loop operation - Frequency controlled drives- VSI and CSI fed drives – closed loop control.

UNIT IV ROTOR CONTROLLED INDUCTION MOTOR DRIVES

9

Rotor resistance control – slip power recovery schemes - sub synchronous and super synchronous operations – closed loop control – Braking in induction motors.

UNIT V- SYNCHRONOUS MOTOR DRIVES

9

Wound field cylindrical rotor motor – operation from constant voltage and frequency source – operation from current source – operation from constant frequency – Brushless excitation – Permanent magnet synchronous motor.

Self-controlled Synchronous motor drives – Brushless dc and ac motor drives – CSI with load commutation – Cycloconverter with load commutation.

TOTAL = 45

TEXT BOOKS

4. Sen. P.C., "Thyristor D.C. Drives", John Wiley and Sons, 1981.

AIM

To provide a platform for understanding the basic concepts of linear control theory and its application to practical systems and To train the students in the measurement of displacement, resistance, inductance, torque and angle etc., and to give exposure to AC, DC bridges and transient measurement.

LIST OF EXPERIMENTS

1. Determination of transfer function parameters of a DC servo motor & AC servo motor.
2. Analog simulation of type-0 and type-1 system, closed loop control system.
3. Digital simulation of linear systems & non-linear systems.
4. Design of P, PI and PID controllers,
5. Design of compensators.
6. Stability analysis of linear systems
7. Conduct test to find unknown inductance & capacitance using Maxwell's & Schering's bridges
8. Conduct test to find unknown Resistance using Wheat Stone & Kelvin's bridges.
9. Instrumentation amplifiers,
10. Conduct test to convert A/D signal using successive approximation type.
11. a) Conduct test to convert D/A signal using binary weighted resistor method.
b) Conduct test to convert D/A signal using R-2R Ladder method.
12. Calibration of single-phase energy meter & current transformer.

P = 45 Total = 45

17153H51P-POWER SYSTEM ANALYSIS

3 1 0 4
Semester V

AIM

To become familiar with different aspects of modeling of components and system and different methods of analysis of power system planning and operation.

OBJECTIVES

- i. To model steady-state operation of large-scale power systems and to solve the power flow problems using efficient numerical methods suitable for computer simulation.
- ii. To model and analyse power systems under abnormal (fault) conditions.
- iii. To model and analyse the dynamics of power system for small-signal and large signal disturbances and to design the systems for enhancing stability.

UNIT I- THE POWER SYSTEM AN OVER VIEW AND MODELLING 12

Modern Power System - Basic Components of a power system - Per Phase Analysis
Generator model - Transformer model - line model. The per unit system -Change of base.

UNIT II- POWER FLOW ANALYSIS 12

Introduction - Bus Classification - Bus admittance matrix - Solution of non-linear Algebraic equations - Gauss seidal method - Newton raphson method - Fast decoupled method - Flow charts and comparison of the three methods.

UNIT III-FAULT ANALYSIS-BALANCED FAULT 12

Introduction – Balanced three phase fault – short circuit capacity – systematic fault analysis using bus impedance matrix – algorithm for formation of the bus impedance matrix.

UNIT IV-FAULT ANALYSIS – SYMMETRICAL COMPONENTS AND UNBALANCED FAULT 12

Introduction – Fundamentals of symmetrical components – sequence impedances – sequence networks – single line to ground fault – line fault - Double line to ground fault – Unbalanced fault analysis using bus impedance matrix.

UNIT V-POWER SYSTEM STABILITY 12

Dynamics of a Synchronous machine – Swing equation and Power angle equation – Steady state Stability and Transient state Stability - Equal area criterion – Clearing angle and time- Numerical solution of Swing equation for single machine

Total = 60 Hrs

#####

UNIT I INTRODUCTION TO POWER QUALITY 3

Terms and definitions: Overloading, under voltage, sustained interruption; sags and swells; waveform distortion, Total Harmonic Distortion (THD), Computer Business Equipment Manufacturers Associations (CBEMA) curve.

UNIT II VOLTAGE SAGS AND INTERRUPTIONS 7

Sources of sags and interruptions, estimating voltage sag performance, motor starting sags, estimating the sag severity, mitigation of voltage sags, active series compensators, static transfer switches and fast transfer switches.

UNIT III OVER VOLTAGES 10

Sources of over voltages: Capacitor switching, lightning, ferro resonance; mitigation of voltage swells: Surge arresters, low pass filters, power conditioners – Lightning protection, shielding, line arresters, protection of transformers and cables.

UNIT IV HARMONICS 12

Harmonic distortion: Voltage and current distortion, harmonic indices, harmonic sources from commercial and industrial loads, locating harmonic sources; power system response characteristics, resonance, harmonic distortion evaluation, devices for controlling harmonic distortion, passive filters, active filters, IEEE and IEC standards.

UNIT V POWER QUALITY MONITORING 17

Monitoring considerations: Power line disturbance analyzer, per quality measurement equipment, harmonic/spectrum analyzer, flicker meters, disturbance analyzer, applications of expert system for power quality monitoring.

#####

AIM

To expose the students to the construction, principle of operation and performance of special electrical machines as an extension to the study of basic electrical machines.

OBJECTIVES

To impart knowledge on

- i. Construction, principle of operation and performance of synchronous reluctance motors.
- ii. Construction, principle of operation and performance of stepping motors.
- iii. Construction, principle of operation and performance of switched reluctance motors.
- iv. Construction, principle of operation and performance of permanent magnet brushless D.C. motors.
- v. Construction, principle of operation and performance of permanent magnet synchronous motors.

UNIT I-SYNCHRONOUS RELUCTANCE MOTORS**9**

Constructional features – types – axial and radial air gap motors – operating principle – reluctance – phasor diagram - characteristics – Vernier motor.

UNIT II -STEPPING MOTORS**9**

Constructional features – principle of operation – variable reluctance motor – Hybrid motor – single and Multi stack configurations – theory of torque predictions – linear and non-linear analysis – characteristics – drive circuits.

UNIT III-SWITCHED RELUCTANCE MOTORS**9**

Constructional features – principle of operation – torque prediction – power controllers – Nonlinear analysis – Microprocessor based control - characteristics – computer control.

UNIT IV-PERMANENT MAGNET BRUSHLESS D.C. MOTORS**9**

Principle of operation – types – magnetic circuit analysis – EMF and Torque equations – Power Controllers – Motor characteristics and control.

UNIT V-PERMANENT MAGNET SYNCHRONOUS MOTORS**9**

Principle of operation – EMF and torque equations – reactance – phasor diagram – power controllers - converter - volt-ampere requirements – torque speed characteristics - microprocessor based control.

17153L55P- POWER ELECTRONICS AND DRIVES LAB

Semester V

0 0 3 2

AIM

To study the characteristics of switching devices and its applications in rectifier inverter, chopper and resonant converter.

1. Study Of V-I Characteristics Of An SCR.
2. Study Of V-I Characteristics Of A TRIAC.
3. Study Of Different Trigerring Circuits For Thyristor.
4. Study Of Uni- Junction Transistor (UJT) Trigerring Circuit.
5. Study Of A Firing Circuit Suitable For Single Phase Half Controlled Convertor.
6. Simulation On the Single Phase Ac-Dc Uncontrolled Convertor with & without the source Inductance.
7. Simulation Of A Single Phase Ac To Controlled Dc Convertor with & without the source Inductance.
8. Single Phase Half Controlled Bridge Convertor With Two Thyristors & Two Diodes.
9. Single Phase Fully Controlled Bridge Convertor Using Four Thyristors.
10. Pspice or MATH LAB Simulation Of Dc to Dc Step Down Chopper.
11. Pspice or MATH LAB Simulation Of Single Phase Controller with R-L Load.
12. Pspice or MATH LAB Simulation Of PWM Bridge Invertor Of R-L Load Using MOSFET.

17153H61P- UTILIZATION OF ELECTRICAL ENERGY

3 1 0 4
Semester VI

AIM

To plan and design using basic principles and handbooks
To select equipment, processes and components in different situations.

OBJECTIVES

- i. To ensure that the knowledge acquired is applied in various fields as per his job requirements.
- ii. To orient the subject matter in the proper direction, visits to industrial establishments are recommended in order to familiarize with the new developments in different areas.

UNIT I ELECTRIC LIGHTING

12

Production of light – Definition of terms – Lighting calculations – Types of lamps – Interior and Exterior illumination systems – Lighting schemes – Design of Lighting schemes – Factory lighting – Flood lighting – Energy saving measures.

UNIT II ELECTRIC HEATING

12

Resistance heating – Induction heating – Dielectric heating – Arc furnace – Control equipment, efficiency, and losses – Energy conservation in Arc Furnace Industry.

UNIT III ELECTRIC WELDING

12

Welding equipment – Characteristics of carbon and metallic arc welding – Butt welding – Spot welding – Energy conservation in welding.

UNIT IV ELECTRIC VEHICLE

12

Traction: System of track electrification, train movement and energy consumption (speed time curves, crest speed, average speed and schedule speed) rective effort, factors affecting energy consumption (dead weight, acceleration weight and adhesion weight) starting and braking of traction motors, protective devices

UNIT V ELECTRO CHEMICAL PROCESS

12

Electrolysis – Electroplating – Electro deposition – Extraction of metals – Current, efficiency – Batteries – Types – Charging methods.

Total = 60

UNIT 1	9
Advantages of Static Relays – Generalized Characteristics and Operational Equations of Relays – Steady State and Transient Performance of Signal Driving Elements – Signal Mixing Techniques and Measuring Techniques – CT’s and PT’s in Relaying Schemes – Saturation Effects.	
UNIT 2	9
Static Relay Circuits (Using Analog and Digital IC’s) for Over Current, Inverse Time Characteristics, Differential Relay and Directional Relay.	
UNIT 3	9
Static Relay Circuits for Generator Loss of Field, Under Frequency Distance Relays, Impedance, Reactance, MHO, Reverse Power Relays.	
UNIT 4	9
Static Relay Circuits for Carrier Current Protection – Steady State and Transient Behavior of Static Relays – Testing and Maintenance – Tripping Circuits using Thyristor.	
UNIT 5	9
Microprocessor Based Relays – Hardware and Software for the Measurement of Voltage, Current, Frequency, Phase Angle – Microprocessor Implementation of Over Current Relays – Inverse Time Characteristics – Impedance Relay – Directional Relay – MHO Relay.	

Total=45**Text Books:**

17153H63P- POWER SYSTEM OPERATION AND CONTROL

4 0 0 4
Semester VI

AIM

To become familiar with the preparatory work necessary for meeting the next day's operation and the various control actions to be implemented on the system to meet the minute-to-minute variation of system load.

OBJECTIVES

- i. To get an overview of system operation and control.
- ii. To understand & model power-frequency dynamics and to design power-frequency controller.
- iii. To understand & model reactive power-voltage interaction and different methods of control for maintaining voltage profile against varying system load.

UNIT I INTRODUCTION 12

System load variation: System load characteristics, load curves - daily, weekly and annual, load-duration curve, load factor, diversity factor. Reserve requirements: Installed reserves, spinning reserves, cold reserves, hot reserves. Overview of system operation: Load forecasting, unit commitment, load dispatching. Overview of system control: Governor Control, LFC, EDC, AVR, system voltage control, security control.

UNIT II REAL POWER - FREQUENCY CONTROL 12

Fundamentals of Speed Governing mechanisms and modeling - Speed-Load characteristics-regulation of two Synchronous Machines in parallel - Control areas - LFC of single & Multi areas - Static & Dynamic Analysis of uncontrolled and controlled cases - Tie line with frequency bias control - Steady state instabilities.

UNIT III REACTIVE POWER-VOLTAGE CONTROL 12

Typical excitation system, modeling, static and dynamic analysis, stability compensation; generation and absorption of reactive power: Relation between voltage, power and reactive power at a node; method of voltage control: Injection of reactive power. Tap-changing transformer, numerical problems - System level control using generator voltage magnitude setting, tap setting of OLTC transformer.

UNIT IV UNIT COMMITMENT AND ECONOMIC DISPATCH 12

Statement of Unit Commitment (UC) problem; constraints in UC: spinning reserve, thermal unit constraints, hydro constraints, fuel constraints and other constraints; UC solution methods: Priority-list methods, forward dynamic programming approach, numerical problems only in priority-list method using full-load average production cost. Incremental cost curve, co-ordination equations without loss and with loss, solution by direct method and λ -iteration method. (No derivation of loss coefficients.) Base point and participation factors.

UNIT V COMPUTER CONTROL OF POWER SYSTEMS 12

Energy control centre: Functions – Monitoring, data acquisition and control. System hardware configuration – SCADA and EMS functions: Network topology determination, state estimation, security analysis and control. Various operating states: Normal, alert, emergency, in extremis and restorative. State transition diagram showing various state transitions and control strategies. **Total = 60**

AIM

To simulate analysis and planning cases for a practical power system.

List Of Experiments:

1. Formation of Y-Bus Matrix by Inspection and Singular transformation methods.
2. Load flow solution using Gauss Seidal method
3. Load flow solution using Newton-Raphson method
4. Load flow solution by Fast Decoupled method
5. Symmetrical short circuit analysis
6. Unsymmetrical Fault analysis
7. Solution of swing Equation using modified Euler method
8. Power Electronic Circuits, design and simulation using Pspice
9. Simulation of Electrical drives using MATLAB, PSCAD
10. Control system design using MATLAB

Total = 45

P = 45

17160S71P TOTAL QUALITY MANAGEMENT 3 0 0 3**UNIT – I: BASICS OF TQM 9**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT – II: PRINCIPLES OF TQM 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT – III: QUALITY CONCEPTS 9

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Concept of six sigma.

UNIT – IV: TQM TOOLS 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, FMEA – Stages of FMEA.

UNIT – V: ISO STANDARDS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, ISO 14000 – Concept, Requirements and Benefits.

17153H72P- ELECTRICAL MACHINE DESIGN 3 1 0 4
Semester VII

AIM

To expose the students to the construction, principle of operation and performance of special electrical machines as an extension to the study of basic electrical machines.

OBJECTIVES

To impart knowledge on

- i. Construction, principle of operation and performance of DC machine.
- ii. Construction, operating Characteristics of single and three phase transformer.
- iii. Design and operating characteristics of Induction motors.
- iv Construction, principle of operation, Design of synchronous machines and to have knowledge of machine design in CAD

UNIT I INTRODUCTION 12

Major considerations – Limitations – Electrical Engineering Materials – Space factor – temperature gradient – Heat flow in two dimensions – thermal resistivity of winding – Temperature gradient in conductors placed in slots – Rating of machines – Eddy current losses in conductors – Standard specifications

UNIT II DC MACHINES 12

Constructional details – output equation – main dimensions - choice of specific loadings – choice of number of poles – armature design – design of field poles and field coil – design of commutator and brushes – losses and efficiency calculations.

UNIT III TRANSFORMERS 12

KVA output for single and three phase transformers – Window space factor – Overall dimensions – Operating characteristics – Regulation – No load current – Temperature rise of Transformers – Design of Tank with & without cooling tubes – Thermal rating – Methods of cooling of Transformers.

UNIT IV INDUCTION MOTORS 12

Magnetic leakage calculations – Leakage reactance of polyphase machines- Magnetizing current – Output equation of Induction motor – Main dimensions –Length of air gap- Rules for selecting rotor slots of squirrel cage machines – Design of rotor bars & slots – Design of end rings – Design of wound rotor-Operating characteristics –Short circuit current – circle diagram – Dispersion co-efficient – relation between D & L for best power factor.

UNIT V SYNCHRONOUS MACHINES**12**

Runaway speed – construction – output equations – choice of loadings – Design of salient pole machines – Short circuit ratio – shape of pole face – Armature design – Armature parameters – Estimation of air gap length – Design of rotor – Design of damper winding – Determination of full load field m.m.f – Design of field winding – Design of turbo alternators – Rotor design - Introduction to computer aided design – Program to design main dimensions of Alternators.

17153H73P- POWER PLANT ENGINEERING

4 0 0 4
Semester VII

UNIT I -THERMAL POWER PLANTS 9

Basic thermodynamic cycles – Various components of steam power plant – Layout – Pulverized coal burners – Fluidized bed combustion – Coal handling systems – Ash handling systems – Forced draft and induced draft fans – Boilers – Feed pumps – Super heater – Regenerator – Condenser – Deaerators – Cooling tower

UNIT II - HYDRO ELECTRIC POWER PLANTS 9

Layout – Dams – Selection of water turbines – Types – Pumped storage hydel plants

UNIT III - NUCLEAR POWER PLANTS 9

Principles of nuclear energy – Fission reactions – Nuclear reactor – Nuclear power plants

UNIT IV- GAS AND DIESEL POWER PLANTS 9

Types – Open and closed cycle gas turbine – Work output and thermal efficiency – Methods to improve performance – Reheating, intercoolings, regeneration – Advantage and disadvantages – Diesel engine power plant – Component and layout

UNIT V- NON – CONVENTIONAL POWER GENERATION 9

Solar energy collectors – OTEC – Wind power plants – Tidal power plants and geothermal resources – Fuel cell – MHD power generation – Principle – hermoelectric power generation – Thermionic power generation.

17153E44AP-FIELD THEORY3 1 0 4
Semester-IV**AIM**

To expose the students to the fundamentals of electromagnetic fields and their applications in Electrical Engineering.

OBJECTIVES: To impart knowledge on

- i. Concepts of electrostatics, electrical potential, energy density and their applications.
- ii. Concepts of magneto statics, magnetic flux density, scalar and vector potential and its applications.
- iii. Faraday's laws, induced emf and their applications.
- iv. Concepts of electromagnetic waves and Pointing vector.

UNIT I: INTRODUCTION**12**

Introduction-Coulomb's Law – Electric field intensity – Field due to point and continuous charges – Electric flux density-Gauss's law and application – Electrical potential –potential gradient– Divergence & Divergence theorem- Poisson's and Laplace's equations

UNIT II: STATIC ELECTRI FIELD**12**

Field due to dipoles- dipole moment-current & current density-conductors and dielectric –boundary conditions– Capacitance-Dielectric Dielectric interface- capacitance of a system of conductors- Dielectric constant and dielectric strength- Energy stored in a capacitor- Energy density.

UNIT III: MAGNETOSTATICS**12**

Introduction- Biot-savart Law- Ampere's Circuital Law-Curl- Stoke's theorem-Magnetic flux- – Magnetic flux density (B)- Scalar and vector potential – Force on a moving charge and current elements- force & Torque on closed circuits.

UNIT IV: ELECTROMAGNETIC INDUCTION**12**

Introduction to magnetic materials – Magnetization and permeability- Magnetic Boundary conditions- Magnetic circuits-Potential energy and forces on magnetic materials.- Faraday's laws- Inductance & mutual inductance- Inductance of solenoid, toroid and transmission lines.

UNIT V: ELECTROMAGNETICS**12**

Conduction current and - Displacement current-, Maxwell's equations (differential and integral forms) -Wave propagation in free space, lossy and lossless dielectrics- Power and Poynting vector – Propagation in good conductors- wave polarization.

17152E44BP - FUZZY LOGIC AND ITS APPLICATIONS**3 1 0 4**

Semester-IV

UNIT I -FUZZY LOGIC**7**

Fuzzy sets – Fuzzy operation – Fuzzy arithmetic – Fuzzy relational equations – Fuzzy measure – Fuzzy functions – approximate reasoning – Fuzzy proposition – Fuzzy quantifiers-if-then rules.

UNIT II- FUZZY LOGIC IN CONTROL**8**

Structure of Fuzzy logic controller – Fuzzification models – database – rule base – inference engine – defuzzification modules – Non-Linear fuzzy control – PID like FLC – Sliding mode FLC – Sugeno FLC – adaptive fuzzy control applications – case studies.

UNIT III- NEURAL NETWORKS IN CONTROL**8**

Neural Network for Non-Linear systems – schemes of Neuro control-system identification forward model and inverse model – indirect learning neural network control applications – Case studies.

UNIT IV- MODELING AND CONTROL OF FACTS DEVICES NEURAL AND FUZZY TECHNIQUE**10**

FACTS-concept and general system considerations, types of FACTS devices – special purpose FACTS devices, generalized and multifunctional FACTS devices – General comments on transient stability programs. Neuro – Fuzzy based FACTS controller for improvement of Transient stability systems – GA for Adaptive fuzzy system – case study.

UNIT V- STABILITY STUDIES UNDER MULTIPLE FACTS ENVIRONMENT**12**

Introduction to small signal analysis – simulation and modeling of FACTS controllers for small signal analysis. Comparison between dynamic and transient stability results. Introduction to EMTP – (Electromagnetic Transient programme / Package), Modeling of FACTS controllers for power system studies using EMTP.

17153E44CP - BIOMEDICAL INSTRUMENTATION**4 0 0 4****Semester-IV****AIM**

The course is designed to make the student acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance. The fundamental principles of equipment that are actually in use at the present day are introduced.

OBJECTIVES

- i. To provide an acquaintance of the physiology of the heart, lung, blood circulation and circulation respiration. Methods of different transducers used.
- ii. To introduce the student to the various sensing and measurement devices of electrical origin.
- iii. To provide the latest ideas on devices of non-electrical devices.
- iv. To bring out the important and modern methods of imaging techniques.
- v. To provide latest knowledge of medical assistance / techniques and therapeutic equipments.

UNIT I BASIC PHYSIOLOGY 9

Cells and their structures – Transport of ions through cell membrane – Resting and excited state – Tran membrane potential – Action potential – Bio-electric potential – Nervous system – Physiology of muscles – Heart and blood circulation – Respiratory system – Urinary system.

UNIT II BASIC TRANSDUCER PRINCIPLES AND ELECTRODES**9**

Transducer principles - Active transducers - Passive transducers -Transducer for Bio-medical application -Electrode theory- Bio-potential electrode - Bio - chemical transducer.

UNIT III CARDIOVASCULAR SYSTEM 9

The heart and cardiovascular system – Blood pressure – Characteristics of blood flow – Heart sounds - Electro cardiography – Measurements of blood pressure – Measurement of blood flow and cardiac O/P Plethysmography – Measurements of heart sounds.

UNIT IV X-RAY AND RADIOISOTOPE INSTRUMENTATION 9

X-ray imaging radiography – Fluoroscopy – Image intensifiers – Angiography - Medical use of radioisotopes – Beta radiations – Detectors – Radiation therapy.

UNIT V BIO-TELEMETRY 9

Introduction to biotelemetry – Physiological parameters adaptable to biotelemetry – the components of biotelemetry systems – Implantable units – Applications of telemetry in patient care – Application of computer in Bio-medical instrumentation, Anatomy of Nervous system – Measurement from the nervous system – EEG – EMG.

Total = 45

17153E44DP - MODELING AND SIMULATION OF SOLAR ENERGY SYSTEMS

4 0 0 4

UNIT I: SOLAR RADIATION AND COLLECTORS

9

Solar angles - day length, angle of incidence on tilted surface - Sunpath diagrams - shadow determination - extraterrestrial characteristics - measurement and estimation on horizontal and tilted surfaces - flat plate collector thermal analysis - heat capacity effect - testing methods-evacuated tubular collectors - concentrator collectors – classification - design and performance parameters - tracking systems - compound parabolic concentrators - parabolic trough concentrators - concentrators with point focus - Heliostats – performance of the collectors.

UNIT II: APPLICATIONS OF SOLAR THERMAL TECHNOLOGY

9

Principle of working, types - design and operation of - solar heating and cooling systems - solar water heaters – thermal storage systems – solar still – solar cooker – domestic, community – solar pond – solar drying.

UNIT III: SOLAR PV FUNDAMENTALS

9

Semiconductor – properties - energy levels - basic equations of semiconductor devices physics. Solar cells - p-n junction: homo and hetero junctions - metal-semiconductor interface - dark and illumination characteristics - figure of merits of solar cell – efficiency limits - variation of efficiency with band-gap and temperature - efficiency measurements - high efficiency cells - preparation of metallurgical, electronic and solar grade Silicon - production of single crystal Silicon: Czochralski (CZ) and Float Zone (FZ) method - Design of a complete silicon – GaAs- InP solar cell - high efficiency III-V, II-VI multi junction solar cell; a-Si-H based solar cells-quantum well solar cell -thermophotovoltaics.

UNIT IV: SOLAR PHOTOVOLTAIC SYSTEM DESIGN AND APPLICATIONS

9

Solar cell array system analysis and performance prediction- Shadow analysis: reliability - solar cell array design concepts - PV system design - design process and optimization - detailed array design - storage autonomy - voltage regulation - maximum tracking – use of computers in array design - quick sizing method - array protection and trouble shooting - centralized and decentralized SPV systems - stand alone - hybrid and grid connected system - System installation - operation and maintenances - field experience - PV market analysis and economics of SPV systems.

UNIT V: SOLAR PASSIVE ARCHITECTURE

9

Thermal comfort - heat transmission in buildings- bioclimatic classification – passive heating concepts: direct heat gain - indirect heat gain - isolated gain and sunspaces -

passive cooling concepts: evaporative cooling - radiative cooling - application of wind, water and earth for cooling; shading - paints and cavity walls for cooling - roof radiation traps - earth air-tunnel. – energy efficient landscape design - thermal comfort – concept of solar temperature and its significance - calculation of instantaneous heat gain through building envelope.

17158E54AP ENVIRONMENTAL SCIENCE AND ENGINEERING 4 0 0 4

UNIT I- INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES

10

Definition, scope and importance – need for public awareness – forest resources: use and over-exploitation, deforestation,. Timber extraction, mining, dams-benefits and problems – mineral resources: use and effects on forests and tribal people – water resources: use and over-utilization of surface and exploitation, environmental effects of extracting and using mineral resources, case studies – food resources: world food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – energy resources: growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies – land resources: land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources.

UNIT II-ECOSYSTEMS AND BIODIVERSITY

14

Concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem. Introduction to biodiversity – definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity –endangered and endemic species of India – conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT III -ENVIRONMENTAL POLLUTION

8

Definition – causes, effects and control measures of: (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards — role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides.

UNIT IV-SOCIAL ISSUES AND THE ENVIRONMENT

7

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management

environmental ethics: issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents. environment production act – air (prevention and control of pollution) act – water (prevention and control of pollution) act – wildlife protection act – forest conservation act – issues involved in enforcement of environmental legislation – public awareness

UNIT V-HUMAN POPULATION AND THE ENVIRONMENT 6

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – hiv / aids – women and child welfare – role of information technology in environment and human health – case studies.

17152E54BP -ARTIFICIAL NEURAL NETWORKS

4 0 0 4

UNIT I : INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS 12

Biological neural networks - Pattern analysis tasks: Classification, Regression, Clustering
- Computational models of neurons - Structures of neural networks - Learning principles

UNIT II: LINEAR MODELS FOR REGRESSION AND CLASSIFICATION 12

Polynomial curve fitting - Bayesian curve fitting - Linear basis function models - Bias-variance decomposition - Bayesian linear regression - Least squares for classification - Logistic regression for classification- Bayesian logistic regression for classification

UNIT III: FEEDFORWARD NEURAL NETWORKS 12

Pattern classification using preceptor - Multilayer feed forward neural networks (MLFFNNs) - Pattern classification and regression using MLFFNNs - Error back propagation learning - Fast learning methods: Conjugate gradient method – Auto associative neural networks - Bayesian neural networks

UNIT III: RADIAL BASIS FUNCTION NETWORKS 12

Regularization theory - RBF networks for function approximation - RBF networks for pattern classification

UNIT IV: KERNEL METHODS FOR PATTERN ANALYSIS 12

Statistical learning theory- Support vector machines for pattern classification- Support vector regression for function approximation- Relevance vector machines for classification and regression

UNIT V: SELF-ORGANIZING MAPS 12

Pattern clustering- Topological mapping- Kohonen's self-organizing map

FEEDBACK NEURAL NETWORKS

Pattern storage and retrieval- Hopfield model- Boltzmann machine- Recurrent neural networks

Semester-v

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

UNIT I 9

Need for Modulation, Amplitude Modulation, AM Demodulator, SSB Modulation, Vestigial Sideband Modulation, AM transmitter and Receiver, Noise and bandwidth in AM, Carrier Communication, Basic Principles of Pulsed and CW Radar.

UNIT II 9

Frequency Modulation, FM Demodulator, Phase Modulation, FM transmitter and receiver, Noise and bandwidth in FM, Ground wave, sky wave and space wave propagation, Basic Principles of BW and Colour TV.

UNIT III 9

Sampling theorem, PAM, PWM, PPM, Pulse Code Modulation, Noise in PCM, Delta Modulation, Adaptive Delta modulation, DPCM, M'ary system, FDM and TDM.

UNIT IV 9

Digital Modulation, ASK, FSK, PSK, DPSK, Basic Principles of Optical Communication, Satellite Comm., Mobile Comm.

UNIT V 9

Entropy, Mutual Information, Channel Capacity, Shannon Theorem, Shannon-Hartley Theorem, Shannon-Fano code, Huffman code, Parity Check Code, Hamming's Single Error Correction Code.

TOTAL 45**REFERENCE BOOKS:**

Semester-v

17154E54DP - ROBOTICS**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

UNIT I: INTRODUCTION

9

Robot ,its evaluation; definition and aes of robotics, present application status.

UNIT II: ROBOT ANATOMY

9

configuration, robot motions, work volume. Robot drives, actuators and control; Functions and types of drives and actuators; concept of basic control systems, open loop, close loop, different type of controllers, ON-OFF, proportional, integral, PI, PD, PID.

UNIT III: ROBOT END EFFECTORS:

9

Types of end effecters, mechanical gripper, tools and end effectors. Robot sensors: Transducers and sensors; analog and digital transducers; types of sensors, tachfile sensors, proximity and rough sensors ; miscellaneous sensors; vision systems; use of sensors in robotics.

UIT IV: ROBOT KINEMATICS

9

Position representations; forward and reverse kinematics of three and four degrees of freedom; robot arm; homogeneous transformations and robot kinematics; kinematics equations using homogeneous transformation .

UNIT V: INDUSTRIAL APPLICATION

9

Capabilities of robots; robot applications; materials handling; pick and place operation; palletiging and depalletiging; machine loading and unloading; machine casting; welding;painting,assembly; inspection; maintenance.

BOOKS RECOMMENDED:

- 1.Schilling-Fundamental of robotics; PH
- 2.Yoshikawa- Fundamental of robotics; PH
3. S.R.Deb-Robotics Technology and Flexible Automation
4. Introduction to Robotics, John J Craig; Pearson Education

ELECTIVE III
Semester VI

17160E64AP - PRINCIPLES OF MANAGEMENT 4 0 0 4**OBJECTIVE**

- i. To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- ii. To understand the statistical approach for quality control.
- iii. To create an awareness about the ISO and QS certification process and its need for the industries

UNIT I HISTORICAL DEVELOPMENT

12

Definition of Management – Science or Art – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Types of Business Organisation.

UNIT II PLANNING 12

Nature & Purpose – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies & Planning Premises- Forecasting – Decision-making.

UNIT III ORGANISING 12

Nature and Purpose – Formal and informal organization – Organization Chart – Structure and Process – Departmentation by difference strategies – Line and Staff authority – Benefits and Limitations – De-Centralization and Delegation of Authority – Staffing – Selection Process - Techniques – HRD – Managerial Effectiveness.

UNIT IV DIRECTING 12

Scope – Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques –Job Enrichment – Communication – Process of Communication – Barriers and Breakdown –Effective Communication – Electronic media in Communication.

UNIT V CONTROLLING 12

System and process of Controlling – Requirements for effective control – The Budget as Control Technique – Information Technology in Controlling – Use of computers in handling the information – Productivity – Problems and Management – Control of Overall Performance – Direct and Preventive Control – Reporting – The Global Environment – Globalization and Liberalization – International Management and Global theory of Management.

TOTAL = 60

17160E64BP - PROFESSIONAL ETHICS

4 0 0 4

AIM :

To ensure that the required technical knowledge and skills can be learnt .

OBJECTIVES :

- i. To create an awareness on Engineering Ethics and Human Values.
- ii. To instill Moral and Social Values and Loyalty
- iii. To appreciate the rights of Others

UNIT I HUMAN VALUES 9

Morals, Values and Ethics – Integrity – Work Ethic – Service Learning – Civic Virtue – Respect for Others – Living Peacefully – caring – Sharing – Honesty – Courage – Valuing Time – Co-operation – Commitment – Empathy – Self-Confidence – Character – Spirituality

UNIT II ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' - variety of moral issued - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy – Models of Professional Roles - theories about right action - Self-interest - customs and religion - uses of ethical theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION 9

Engineering as experimentation - engineers as responsible experimenters - codes of ethics - a balanced outlook on law - the challenger case study.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS 9

Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk - the three mile island and chernobyl case studies.
Collegiality and loyalty - respect for authority - collective bargaining - confidentiality - conflicts of interest - occupational crime - professional rights - employee rights - Intellectual Property Rights (IPR) - discrimination.

UNIT V GLOBAL ISSUES 9

Multinational corporations - Environmental ethics - computer ethics - weapons development - engineers as managers-consulting engineers-engineers as expert witnesses and advisors -moral leadership-sample code of Ethics (Specific to a particular Engineering Discipline).

ELECTIVES-III
SEMESTER-VI

17152E64CP INTEGRATED OPTO-ELECTRONIC DEVICES 3 1 0 4

AIM

To learn different types of optical emission, detection, modulation and opto electronic integrated circuits and their applications.

OBJECTIVE

- To know the basics of solid state physics and understand the nature and characteristics of light.
- To understand different methods of luminescence, display devices and laser types and their applications.
- To understand different light modulation techniques and the concepts and applications of optical switching.

UNIT I: ELEMENTS OF LIGHT AND SOLID STATE PHYSICS 9

Wave nature of light, Polarization, Interference, Diffraction, Light Source, review of Quantum Mechanical concept, Review of Solid State Physics, Review of Semiconductor Physics and Semiconductor Junction Device.

UNIT II: DISPLAY DEVICES AND LASERS 9

Introduction, Photo Luminescence, Cathode Luminescence, Electro Luminescence, Injection Luminescence, LED, Plasma Display, Liquid Crystal Displays, Numeric Displays, Laser Emission, Absorption, Radiation, Population Inversion, Optical Feedback, Threshold condition, Laser Modes, Classes of Lasers, Mode Locking, laser applications.

UNIT III: OPTICAL DETECTION DEVICES 9

Photo detector, Thermal detector, Photo Devices, Photo Conductors, Photo diodes, Detector Performance.

UNIT IV OPTOELECTRONIC MODULATOR 9

Introduction, Analog and Digital Modulation, Electro-optic modulators, Magneto Optic Devices, Acoustoptic devices, Optical, Switching and Logic Devices.

UNIT V OPTOELECTRONIC INTEGRATED CIRCUITS 9

Introduction, hybrid and Monolithic Integration, Application of Opto Electronic Integrated circuits, integrated transmitters and Receivers, Guided wave devices.

ELECTIVES-III
SEMESTER-VI

17153E64DP -COMPUTER AIDED DESIGN FOR ELECTRICAL APPARATUS

3 1 0 4

AIM

To introduce the basics of Computer Aided Design technology for the design of Electrical Machines.

OBJECTIVE

At the end of this course the student will be able to

- Learn the importance of computer aided design method.
- Understand the basic electromagnetic field equations and the problem formulation for CAD applications.
- Become familiar with Finite Element Method as applicable for Electrical Engineering.
- Know the organization of a typical CAD package.
- Apply Finite Element Method for the design of different Electrical apparatus.

UNIT I: INTRODUCTION 12

Conventional design procedures – Limitations – Need for field analysis based design – Review of Basic principles of energy conversion – Development of Torque/Force.

UNIT II: MATHEMATICAL FORMULATION OF FIELD PROBLEMS 12

Electromagnetic Field Equations – Magnetic Vector/Scalar potential – Electrical vector /Scalar potential – Stored energy in Electric and Magnetic fields – Capacitance - Inductance- Laplace and Poisson's Equations – Energy functional.

UNIT III: PHILOSOPHY OF FEM 12

Mathematical models – Differential/Integral equations – Finite Difference method – Finite element method – Energy minimization – Variation method- 2D field problems – Discretisation – Shape functions – Stiffness matrix – Solution techniques.

UNIT IV: CAD PACKAGES

12

Elements of a CAD System –Pre-processing – Modeling – Meshing – Material properties- Boundary Conditions – Setting up solution – Post processing.

UNIT V: DESIGN APPLICATIONS

12

Voltage Stress in Insulators – Capacitance calculation - Design of Solenoid Actuator – Inductance and force calculation – Torque calculation in Switched Reluctance Motor.

ELECTIVES-IV
SEMESTER-VII

17153E74AP- POWER SYSTEM TRANSIENTS

3 0 0 3
Semester VII

AIM

To understand generation of switching and lightning transients, their propagation, reflection and refraction on the grid and their impact on the grid equipment.

OBJECTIVES

- i. To study the generation of switching transients and their control using circuit – theoretical concept.
- ii. To study the mechanism of lightning strokes and the production of lightning surges.
- iii. To study the propagation, reflection and refraction of travelling waves.
- iv. To study the impact of voltage transients caused by faults, circuit breaker action, load rejection on integrated power system.

UNIT I INTRODUCTION AND SURVEY 7

Various types of power system transients - effects of transients on power systems.

UNIT II LIGHTNING AND SWITCHING SURGES 17

Electrification of thunder clouds – lightning current surges, parameters – closing and reclosing of lines – load rejection – fault clearing – short line faults – ferro-resonance – temporary over voltages – harmonics.

UNIT III MODELLING OF POWER SYSTEM EQUIPMENT 14

Surge parameters of power systems equipment, equivalent circuit representation, lumped and distributed circuit transients.

UNIT IV COMPUTATION OF TRANSIENT OVERVOLTAGES 14

Computation of transients – traveling wave method, Bewley's lattice diagram – analysis in time and frequency domain, EMTP for transient computation.

UNIT V INSULATION COORDINATION 12

Insulation co-ordination – over voltage protective devices principles of recent co-ordination and design of EHV lines. **Total = 60**

ELECTIVES-IV
SEMESTER-VII

17153E74BP -EHV AC and DC TRANSMISSION SYSTEMS

3 0 0 3

UNIT I TRANSMISSION ENGINEERING 9

Transmission line trends – Standard transmission voltages – Power handling capacity and line losses Cost of transmission lines and equipment – Mechanical consideration – Transmission Engineering principles.

UNIT II LINE PARAMETER 9

Calculation of line and ground parameters - Resistance, capacitance and Inductance calculation – Bundle conductors – modes propagation – Effect of earth.

UNIT III POWER CONTROL 9

Power frequency and voltage control – voltage control – Over voltages – Power circle diagram – Voltage control using shunt and series compensation – Static VAR compensation – Higher Phase order system – FACTs.

UNIT IV EHV AC Transmission 9

Design of EHV lines based in steady state limits and transient over voltages – Design of extra HV cable transmission – XLPE cables – Gas insulated cable – Corona and RIV.

UNIT V HVDC TRANSMISSION 9

HVDC Transmission principles – Comparison of HVAC and HVDC transmission – Economics – types of Converters – HVDC links – HVDC control – Harmonics – Filters – Multi terminal DC System – HVDC cables and HVDC circuit breakers.

Total=45

**ELECTIVES-IV
SEMESTER-VII**

17153E74CP-FIBRE OPTICS AND LASER INSTRUMENTS 3 0 0 3

AIM:

To contribute to the knowledge of Fibre optics and Laser Instrumentation and its Industrial & Medical Application.

OBJECTIVES

- To expose the students to the basic concepts of optical fibres and their properties.
- To provide adequate knowledge about the Industrial applications of optical fibres.
- To expose the students to the Laser fundamentals.
- To provide adequate knowledge about Industrial application of lasers.
- To provide adequate knowledge about holography & Medical applications of Lasers.

1. OPTICAL FIBRES AND THEIR PROPERTIES 12

Principles of light propagation through a fibre - Different types of fibres and their properties, fibre characteristics – Absorption losses – Scattering losses – Dispersion – Connectors & splicers – Fibre termination – Optical sources – Optical detectors.

2. INDUSTRIAL APPLICATION OF OPTICAL FIBRES

9

Fibre optic sensors – Fibre optic instrumentation system – Different types of modulators – Interferometric method of measurement of length – Moire fringes – Measurement of pressure, temperature, current, voltage, liquid level and strain.

3. LASER FUNDAMENTALS

9

Fundamental characteristics of lasers – Three level and four level lasers – Properties of laser – Laser modes – Resonator configuration – Q-switching and mode locking – Cavity damping – Types of lasers – Gas lasers, solid lasers, liquid lasers, semiconductor lasers.

4. INDUSTRIAL APPLICATION OF LASERS

6

Laser for measurement of distance, length, velocity, acceleration, current, voltage and Atmospheric effect – Material processing – Laser heating, welding, melting and trimming of material – Removal and vaporization.

5. HOLOGRAM AND MEDICAL APPLICATIONS

9

Holography – Basic principle - Methods – Helographic interferometry and application, Holography for non-destructive testing – Holographic components – Medical applications of lasers, laser and tissue interactive – Laser instruments for surgery, removal of tumours of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

17153E74DP- ADVANCED CONTROL SYSTEMS

3 0 0 3

AIM

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

To gain knowledge in analysis of non-linear system and digital control of linear system.

OBJECTIVES

- i. To study the description and stability of non-linear system.
- ii. To study the conventional technique of non-linear system analysis.
- iii. To study the analysis discrete time systems using conventional techniques.
- iv. To study the analysis of digital control system using state-space formulation.
- v. To study the formulation and analysis of multi input multi output (MIMO) system.

UNIT I NON-LINEAR SYSTEM – DESCRIPTION & STABILITY

9

Linear vs non-linear – Examples – Incidental and Intentional – Mathematical description - Equilibria and linearisation - Stability – Lyapunov function – Construction of Lyapunov function.

UNIT II PHASE PLANE AND DESCRIBING FUNCTION ANALYSIS

9

Construction of phase trajectory – Isocline method – Direct or numerical integration – Describing function definition – Computation of amplitude and frequency of oscillation.

UNIT III Z-TRANSFORM AND DIGITAL CONTROL SYSTEM

9

Z transfer function – Block diagram – Signal flow graph – Discrete root locus – Bode plot.

UNIT IV STATE-SPACE DESIGN OF DIGITAL CONTROL SYSTEM

9

State equation – Solutions – Realization – Controllability – Observability – Stability Jury's test.

UNIT V MUTLI INPUT MULTI OUTPUT (MIMO) SYSTEM:

9

Models of MIMO system – Matrix representation – Transfer function representation – Poles and Zeros – Decoupling – Introduction to multivariable Nyquist plot and singular values analysis – Model predictive control. **L = 45 Total = 45**

19148S11P-TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS

3 1 0 4

(Common to all)

SEMESTER-1

UNIT I FOURIER SERIES

9 + 3hrs

Periodic function-Graph of functions- Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORM

9 + 3hrs

Fourier integral theorem (without proof) – Sine and Cosine transforms – Properties (without Proof) – Transforms of simple functions – Convolution theorem – Parseval's identity – Finite Fourier transform, Sine and Cosine transform.

UNIT III Z -TRANSFORM AND DIFFERENCE EQUATIONS

9 + 3hrs

Z-transform - Elementary properties (without proof) – Inverse Z – transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z – transform- Sampling of signals –an introduction.

UNIT IV PARTIAL DIFFERENTIAL EQUATIONS

9 + 3hrs

Formation of pde –solution of standard type first order equation- Lagrange's linear equation – Linear partial differential equations of second order and higher order with Constant coefficients.

UNIT V BOUNDARY VALUE PROBLEMS

9 + 3hrs

Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

Total no of hrs: 60hrs

COURSE OUTCOMES

Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.

Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.

Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

TEXT BOOKS

1. Andrews, L.A., and Shivamoggi B.K., “Integral Transforms for Engineers and Applied Mathematicians”, Macmillen , New York ,1988.
2. Grewal, B.S., “Higher Engineering Mathematics”, Thirty Sixth Edition, Khanna Publishers, Delhi, 2001.
3. Kandasamy, P., Thilagavathy, K., and Gunavathy, K., “Engineering Mathematics Volume III”, S. Chand & Company ltd., New Delhi, 1996.

REFERENCE BOOKS

1. Narayanan, S., Manicavachagom Pillay, T.K. and Ramanaiah, G., “Advanced Mathematics for Engineering Students”, Volumes II and III, S. Viswanathan (Printers and Publishers) Pvt. Ltd. Chennai, 2002.
2. Churchill, R.V. and Brown, J.W., “Fourier Series and Boundary Value Problems”, Fourth Edition, McGraw-Hill Book Co., Singapore, 1987.
3. Advanced Modern Engineering mathematics – Glyn James

AIM

To provide sound knowledge in the basic concepts of linear control theory and design of control system.

OBJECTIVES

- i. To understand the methods of representation of systems and getting their transfer function models.
- ii. To provide adequate knowledge in the time response of systems and steady state error analysis.
- iii. To give basic knowledge is obtaining the open loop and closed-loop frequency responses of systems.
- iv. To understand the concept of stability of control system and methods of stability analysis.
- v. To study the three ways of designing compensation for a control system.

UNIT I: INTRODUCTION**12**

Open-loop and closed –loop systems, servomechanisms and regulator systems; Transfer function; Block diagram reduction, Signal flow graphs.

UNIT II: MATHEMATICAL MODELS OF PHYSICAL SYSTEMS**12**

Mechanical systems - Translational and Rotational systems, Gear trains, Electrical systems, Thermal systems and Fluid systems.

Components of feedback control systems - Potentiometers as error sensing devices, Synch, Servomotors, Stepper motors, Tachogenerators.

UNIT III: STABILITY**12**

Concept of Stability, necessary and sufficient conditions of Stability, Closed-loop systems, merits and demerits, Routh-Hurwitz Criterion.

Transient Response: Typical inputs, convolution integral, Time domain specifications, steady state errors.

State equation – Solutions – Realization – Controllability – Observability – Stability
Jury's test.

UNIT IV: FREQUENCY RESPONSE**12**

Definition, equivalence between transient response and frequency response, Bode plots.

Nyquist Stability Criterion: Development of criterion, gain and phase margins, m- circles and Nichol's chart.

UNIT V: ROOT LOCUS METHOD**12**

Rules for sketching of root loci, Root contours.

Synthesis: Lag and Lead networks, proportional, derivative and integral controllers.

MUTLI INPUT MULTI OUTPUT (MIMO) SYSTEM:

Models of MIMO system – Matrix representation – Transfer function representation – Poles and Zeros – Decoupling – Introduction to multivariable Nyquist plot and singular values analysis – Model predictive control.

Total = 60

COURSE OUTCOMES

At the end of the course, the student should have the :

Ability to develop various representations of system based on the knowledge of Mathematics, Science and Engineering fundamentals.

Ability to do time domain and frequency domain analysis of various models of linear system.

Ability to interpret characteristics of the system to develop mathematical model.

Ability to design appropriate compensator for the given specifications.

Ability to come out with solution for complex control problem.

Ability to understand use of PID controller in closed loop system.

TEXT BOOK:

1. I.J.Nagrath and M.Gopal, 'Control System Engineering', Wiley Eastern Ltd., Reprint 1995.

REFERENCES:

2. Ogatta, 'Modern Control Engineering', Tata McGraw Hill 1997.

19153C13P- CIRCUIT ANALYSIS AND NETWORKS

3 1 0 4

AIM

SEMESTER-1

To know about basic analysis and synthesis techniques used in electronics and communications.

OBJECTIVES

- To study about various network theorems and the method of application to analyse a circuit.
- To know the concept of transfer function of a network and the nature of response to external inputs.
- To synthesize a network in different forms from the transfer function.
- To know the concept and design of frequency selective filters.

UNIT-I BASIC CIRCUIT CONCEPTS & SINUSOIDAL ANALYSIS (12hrs)

Linear passive circuit elements, ideal sources (independent and dependent), V-I relationship of circuit elements – Ohm's Law - Kirchoff's Laws – analysis of series and parallel circuits – network reduction: voltage and current division, source transformation, star/delta transformation Concept of phasor and complex Impedance / Admittance – Analysis of simple series and parallel circuits – active power, reactive power, apparent power (volt -ampere), power factor– phasor diagram, impedance triangle and power triangle associated with these circuits – resonance in series and parallel circuits

UNIT-II CIRCUIT ANALYSIS & NETWORK THEOREMS (12hrs)

Formation of matrix equations and analysis by using Mesh-current and Node-voltage methods. Superposition theorem – Thevenin's theorem – Norton's theorem - Maximum power transfer theorem - Reciprocity theorem – Compensation theorem – Substitution theorem - Millman's theorem and Tillage's theorem with applications.

Coupled circuits: self inductance - mutual inductance – coefficient of coupling – dot convention – analysis of simple coupled circuits. Equivalent inductance of the series aiding and opposing, parallel aiding and opposing coupled circuits.

UNIT-III THREE PHASE CIRCUIT AND TRANSIENT ANALYSIS (12hrs)

Three-phase systems – phase sequence - Solution of three-phase balanced circuits (Star & Delta) – Solution of three-phase unbalanced circuits (Star & Delta) - Power measurement and two-wattmeter method.

Forced and free response of RL, RC and RLC circuits with D.C. and sinusoidal excitations.

UNIT-IV TWO PORT NETWORKS (12hrs)

Characterization of two port networks in terms of Z, Y, H and T parameters – networks equivalents – relations between network parameters – Analysis of T, Ladder, Bridged-T and lattice networks – transfer function of terminated two port networks.

UNIT-V NETWORK TOPOLOGY, FILTERS & ATTENUATORS (12hrs)

Network graphs, tree and cut – sets – tie set and cut – set schedules – primitive impedance and admittance matrices- Classification of Filters - filter networks - design of constant K, m-derived and composite filters. Analysis of T, lattice, bridged-T, and L type attenuators.

TOTAL 60

COURSE OUTCOMES

Ability to analyse electrical circuits

Ability to apply circuit theorems

Ability to analyse transients

TEXT BOOKS:

1. Basic Electrical and Electronics Engineering – Muthu subramaniyam
2. Nageswara rao
3. Umesh sinha
4. Charavarthi
1. Sudhakar. A., and Shyammohan, “Circuits and Networks Analysis and Synthesis” Tata McGraw Hill Publishing Co.Ltd. New Delhi, 1994.
2. Roy Choudhury, “Networks and Systems”, New Age International Ltd.

19153C14P - ELECTRONIC CIRCUITS

3 0 0 3
SEMESTER-1

AIM:

To study the characteristics and applications of electronic devices.

OBJECTIVES:

To acquaint the students with construction, theory and characteristics of the following electronic devices:

Bipolar transistor, Field Effect transistor, Multivibrators, Power control/regulator devices, Feedback amplifiers and oscillators

UNIT I -RECTIFIER & POWER SUPPLY 12

Half & Full wave rectifier – filters – shunt , inductor, LC section & Ripple factor, P calculation for C, L and LC filters – Voltage regulators – Zener –Series voltage regulator – SMPS.

UNIT II- AMPLIFIERS 12

Amplifiers – Frequency response of RC coupled - Frequency Response of Emitter follower, gain band width product – FET amplifier at low and high frequency cascaded amplifiers.

UNIT III- FEEDBACK AMPLIFIER & OSCILLATORS 12

Four basic types of feedback – effect of feedback on amplifier performance – condition for oscillation – Barkhausen criteria – LC oscillators – Hartley & Colpitts – RC oscillators – Wein bridge, RC phase shift crystal oscillator.

UNIT IV- MULTIVIBRATORS 12

Collector coupled & Emitter coupled Astable multivibrator – Monostable, Bistable multivibrator – triggering methods – Storage delay and calculation of switching time – Schmitt triggering circuits – Speed up capacitor in switching.

UNIT V- POWER AMPLIFIER 12

Classification – class A, B, C & AB – Class B push pull – Class B Complimentary – symmetry – Class S, Power sections classification – Efficiency – Distortion in amplifiers.

L = 45 T = 15 P = 0 TOTAL =60

COURSE OUTCOMES

Upon Completion of the course, the students will be able to:

Explain the structure and working operation of basic electronic devices.

Able to identify and differentiate both active and passive elements

Analyze the characteristics of different electronic devices such as diodes and transistors

Choose and adapt the required components to construct an amplifier circuit.

Employ the acquired knowledge in design and analysis of oscillators

REFERENCE BOOKS:

1. David.A.Bell, “Solid State Pulse Circuits”, Prentice Hall of India, 4th Edition, 2001.

3. Jacob Millman Cristas C.Halkias, “Integrated Electronics”, Tata McGraw Hill, Edition 1991.

19153C15P- ELECTRICAL MACHINES – I

4 0 0 4

AIM

SEMESTER-1

To expose the students to the concepts of electromechanical energy conversions in D.C. Machines and energy transfer in transformers and to analyze their performance.

OBJECTIVES

- i. To introduce the concept of rotating machines and the principle of electromechanical energy conversion in single and multiple excited systems.
- ii. To understand the generation of D.C. voltages by using different type of generators and study their performance.
- iii. To study the working principles of D.C. motors and their load characteristics, starting and methods of speed control.
- iv. To familiarize with the constructional details of different type of transformers, working principle and their performance.
- v. To estimate the various losses taking place in D.C. machines and transformers and to study the different testing method to arrive at their performance.

UNIT I: BASIC PRINCIPLES OF ROTATING MACHINES

12

Electrical machine types – Magnetic circuits – Magnetically induced EMF and force – AC operation of magnetic circuits - core losses. Principles of Electromechanical energy conversion: Energy conversion process – Energy in magnetic system – Field energy and mechanical force – Multiply excited magnetic field systems

UNIT II: GENERATORS

12

Constructional details – emf equation – Methods of excitation – Self and separately excited generators – Characteristics of series, shunt and compound generators – Armature reaction and commutation – Parallel operation of DC shunt and compound generators.

UNIT III: DC MOTORS

12

Principle of operation – Back emf and torque equation – Characteristics of series, shunt and compound motors – Starting of DC motors – Types of starters – Speed control of DC series and shunt motors.

UNIT IV: TRANSFORMERS

12

Constructional details of core and shell type transformers – Types of windings – Principle of operation – emf equation – Transformation ratio - Equivalent circuit – Losses – Testing – Efficiency and Voltage regulation .

Transformer on load– Parallel operation of single phase transformers – Auto transformer – Three phase transformers

UNIT V: TESTING OF TRANSFORMERS AND DC MACHINES

12

Losses and efficiency in DC machines and transformers – Condition for maximum efficiency – Testing of DC machines – Brake test, Swinburne's test, Retardation test and Hopkinson's test – Testing of transformers – Polarity test, load test, open circuit and short circuit tests – All day efficiency.

TOTAL = 60

COURSE OUTCOMES

Ability to analyze the magnetic-circuits.

Ability to acquire the knowledge in constructional details of transformers. Ability to understand the concepts of electromechanical energy conversion. Ability to acquire the knowledge in working principles of DC Generator.

Ability to acquire the knowledge in working principles of DC Motor

Ability to acquire the knowledge in various losses taking place in D.C. Machines

19148S21P-NUMERICAL METHODS

3 1 0 4
Semester II

UNIT I - SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS

9+3hrs

Solution of equations–Newton Raphson’s method, Regula-falsi methods Solution of linear System of equations by Gaussian elimination and Gauss-Jordon methods- Iterative methods: Gauss Jacobi and Gauss-Seidel methods– Eigenvalue of a matrix by power method.

UNIT II- INTERPOLATION

9+3hrs

Newton’s forward and backward difference formulas – Central difference formula: Bessels and Stirling’s formula - Lagrangian Polynomials – Divided difference method.

UNIT III- NUMERICAL DIFFERENTIATION AND INTEGRATION

9+3hrs

Derivatives from difference tables – Divided differences and finite differences – Numerical integration by trapezoidal and Simpson’s 1/3 and 3/8 rules – Romberg’s method – Double integrals using trapezoidal and Simpson’s rules.

UNIT IV - INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS

9+3hrs

Single step methods: Taylor series method – Euler and modified Euler methods – Fourth order Runge – Kutta method for solving first and second order equations – Multistep methods: Milne’s and Adam’s predictor and corrector methods.

UNIT V - BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS

9+3hrs

Finite difference solution of second order ordinary differential equation – Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations.

Total no of hrs: 60hrs

COURSE OUTCOMES

- Understand the basic concepts and techniques of solving algebraic equations.
- Appreciate the numerical techniques of interpolation and error approximations in various intervals in real life situations.

Apply the numerical techniques of differentiation and integration for engineering problems.

Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.

TEXT BOOKS

1. Gerald, C.F, and Wheatley, P.O, “Applied Numerical Analysis”, Sixth Edition, Pearson Education Asia, New Delhi, 2002.
2. Kandasamy, P., Thilagavathy, K. and Gunavathy, K., “Numerical Methods”, S.Chand Co. Ltd., New Delhi, 2003.

REFERENCES BOOKS

1. Burden, R.L and Faires, T.D., “Numerical Analysis”, Seventh Edition, Thomson Asia Pvt. Ltd., Singapore, 2002.

19153C22P - COMPUTER ARCHITECTURE

3 0 0 3
SEMESTER II

AIM:

To understand the architecture of different processor and its associative units

OBJECTIVES:

To provide a clear understanding of

- Computer arithmetic and logic unit design.
- Control Mechanism and CPU functioning.
- Pipeline architecture and vector processing.
- Input and output organizations and interfacing.
- Various memories and their organization.56

UNIT I BASIC STRUCTURE OF COMPUTERS 9

Functional units – Basic operational concepts – Bus structures – Performance and Metrics – Instruction and instruction sequencing – hardware – software interface – addressing modes – instruction set – RISC – CISC – ALU design – fixed point and floating point operation.

UNIT II CONTROL AND CENTRAL PROCESSING UNIT 9

Micro programmed control – Control memory, address sequencing, micro program example, and design of control unit. Central processing unit – general register organization, stack organization, instruction formats, addressing modes, data transfer and manipulation, program control, reduced instruction set computer.

UNIT III COMPUTER ARITHMETIC, PIPELINE AND VECTOR PROCESSING 9

Computer arithmetic – addition and subtraction, multiplication algorithms, division algorithms, floating point arithmetic operations decimal arithmetic unit, decimal arithmetic operations. Pipeline and vector processing – Parallel processing, pipelining, arithmetic pipeline, instruction pipeline, vector processing array processors.

UNIT IV INPUT OUTPUT ORGANIZATION 9

Input output organization : peripheral devices, input output interface, asynchronous data transfer , modes of transfer, priority interrupt, direct memory access, input output interface, serial communication.

UNIT V MEMORY ORGANIZATION 9

Memory organization – memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management hardware.

TOTAL: 45 PERIODS

COURSE OUTCOMES

Develop Java programs using OOP principles

Develop Java programs with the concepts inheritance and interfaces

Build Java applications using exceptions and I/O streams

Develop Java applications with threads and generics classes
Develop interactive Java programs using swings

TEXT BOOKS:

1. Morris Mano, 'Computer system architecture', 3rd edition, Pearson education 2002
2. Behrooz Parhami, 'Computer Architecture', Oxford University Press, 2005.

REFERENCES:

19153C23P-ELECTRICAL MACHINES-II**3 1 0 4****AIM:**

To expose the students to the concepts of synchronous and asynchronous machines and analyze their performance.

OBJECTIVES:

To impart knowledge on

- i. Construction and performance of salient and non – salient type synchronous generators.
- ii. Principle of operation and performance of synchronous motor.
- iii. Construction, principle of operation and performance of induction machines.
- iv. Starting and speed control of three-phase induction motors.
- v. Construction, principle of operation and performance of single phase induction motors and special machines.

UNIT I: SYNCHRONOUS GENERATOR**12**

Constructional details – Types of rotors – emf equation – Synchronous reactance – Armature reaction – Voltage regulation – e.m.f, m.m.f, z.p.f and A.S.A methods – Synchronizing and parallel operation – Synchronizing torque - Change of excitation and mechanical input – Two reaction theory – Determination of direct and quadrature axis synchronous reactance using slip test – Operating characteristics - Capability curves.

UNIT II: SYNCHRONOUS MOTOR**12**

Principle of operation – Torque equation – Operation on infinite bus bars - V-curves – Power input and power developed equations – Starting methods – Current loci for constant power input, constant excitation and constant power developed.

UNIT III: THREE PHASE INDUCTION MOTOR**12**

Constructional details – Types of rotors – Principle of operation – Slip – Equivalent circuit – Slip-torque characteristics - Condition for maximum torque – Losses and efficiency – Load test - No load and blocked rotor tests - Circle diagram – Separation of no load losses – Double cage rotors

UNIT IV: STARTING AND SPEED CONTROL OF THREE PHASE INDUCTION MOTOR**12**

Need for starting – Types of starters – Stator resistance and reactance, rotor resistance, autotransformer and star-delta starters – Speed control – Change of voltage, torque, number of poles and slip – Cascaded connection – Slip power recovery scheme.

UNIT V: SINGLE PHASE INDUCTION MOTORS AND SPECIAL MACHINE**12**

Constructional details of single phase induction motor – Double revolving field theory and operation – Equivalent circuit – No load and blocked rotor test — Starting methods of single-phase induction motors - Special machines - Shaded pole induction motor, reluctance motor, repulsion motor, hysteresis motor, stepper motor and AC series motor

Total = 60

COURSE OUTCOMES

Ability to understand the construction and working principle of Synchronous Generator

Ability to understand MMF curves and armature windings.

Ability to acquire knowledge on Synchronous motor.

Ability to understand the construction and working principle of Three phase Induction Motor

Ability to understand the construction and working principle of Special Machines

Ability to predetermine the performance characteristics of Synchronous Machines.

TEXT BOOKS

1. D.P. Kothari and I.J. Nagrath, 'Electric Machines', Tata McGraw Hill Publishing Company Ltd, 2002.

2. P.S. Bhimbhra, 'Electrical Machinery', Khanna Publishers, 2003.*REFERENCE BOOKS*

1. A.E. Fitzgerald, Charles Kingsley, Stephen.D.Umans, 'Electric Machinery', Tata McGraw Hill publishing Company Ltd, 2003.

2. J.B. Gupta, 'Theory and Performance of Electrical Machines', S.K.Kataria and Sons, 2002.

3. K. Murugesh Kumar, 'Electric Machines', Vikas publishing house Pvt Ltd, 2002.

4. Sheila.C.Haran, 'Synchronous, Induction and Special Machines', Scitech Publications, 2001.

19153C24P-DIGITAL ELECTRONICS**3 1 0 4****AIM:**

To introduce the fundamentals of Digital Circuits, combinational and sequential circuit.

OBJECTIVES:

- i. To study various number systems and to simplify the mathematical expressions using Boolean functions simple problems.
- ii. To study implementation of combinational circuits
- iii. To study the design of various synchronous and asynchronous circuits.
- iv. To expose the students to various memory devices.

UNIT I NUMBER SYSTEMS**12**

Review of Binary, Octal and Hexa-decimal number systems – Conversions, Binary Arithmetic magnitude form – 1's, 2's complement representation, Codes: -BCD, Excess – 3, Graycode, ASCII codes, Error detecting codes (Hamming code)

UNIT II BOOLEAN ALGEBRA**12**

Boolean Algebra - De Morgan's law – Simplifications of Boolean expression – sum of Products and product of sums – Karnaugh Map – Quince McClusky method of simplification (Including Don't care conditions)

UNIT III Combinational Logic**12**

Design of Logic gates- Design of adder, subtractor, comparators, code converters, encoders, decoders, multiplexers and demultiplexers. Function realization using gates & multiplexers.

UNIT IV Sequential Logic Design**12**

Building blocks of Sequential logic – RS, JK, Master – Slave, D and T flip- flop, Asynchronous and synchronous counters – Binary and BCD counters – shift registers – Design and Implementation of Sequential synchronous circuits

UNIT V Logic Families

12

Memories: ROM, PROM, EPROM, PLA, PLD, FPGA, digital logic families: TTL, ECL, CMOS.

TOTAL = 60Hrs

COURSE OUTCOMES

Ability to design combinational and sequential Circuits.

Ability to simulate using software package.

Ability to study various number systems and simplify the logical expressions using

Boolean functions

Ability to design various synchronous and asynchronous circuits.

Ability to introduce asynchronous sequential circuits and PLDs

Ability to introduce digital simulation for development of application oriented logic circuits.

TEXT BOOK:

1. Albert Paul, Malvino and Donald.P.Leach , “Digital Principles and Applications”, McGraw Hill Publications.
2. Floyd, “Digital Fundamentals”, Universal Book Stall, New Delhi,1993.
3. Moris Mano, “Digital Electronics and Design “, Prentice Hall of India, 2000.

REFERENCE:

1. “Digital Logic & Computer Design”, Prentice Hall of India, 2000.

AIM

To become familiar with the function of different components used in Transmission and Distribution levels of power systems and modeling of these components.

OBJECTIVES

- i. To develop expression for computation of fundamental parameters of lines.
- ii. To categorize the lines into different classes and develop equivalent circuits for these classes.
- iii. To analyze the voltage distribution in insulator strings and cables and methods to improve the same.

UNIT I: INTRODUCTION**12**

Structure of electric power system: Various levels such as generation, transmission and distribution; HVDC and EHV AC transmission: comparison of economics of transmission, technical performance and reliability.

Radial and ring-main distributors; interconnections; AC distribution: AC distributor with concentrated load; three-phase, four-wire distribution system; sub-mains; stepped and tapered mains.

UNITII:TRANSMISSION LINE PARAMETERS**12**

Resistance, Inductance and Capacitance of single and three phase transmission lines - Stranded and Bundled conductors -Symmetrical and unsymmetrical spacing - Transposition -Application of self and mutual GMD -Skin and Proximity effect - Inductive interference with neighboring circuits.

UNIT III: MODELLING AND PERFORMANCE OF TRANSMISSION LINES**12**

Classification of lines: Short line, medium line and long line; equivalent circuits, attenuation constant, phase constant, surge impedance; transmission efficiency and voltage regulation; real and reactive power flow in lines: Power-angle diagram; surge-impedance loading, loadability limits based on thermal loading, angle and voltage stability considerations; shunt and series compensation; Ferranti effect and corona loss.

UNIT IV: INSULATORS AND CABLES**12**

Insulators: Types, voltage distribution in insulator string and grading, improvement of string efficiency. Underground cables: Constructional features of LT and HT cables, capacitance, dielectric stress and grading, thermal characteristics.

UNIT V: DESIGN OF TRANSMISSION LINES**12**

Introduction, calculation of sag and tension .Equivalent span length and sag, Effect of ice and wind loading ,Stringing chart, sag template, conductor vibrations and vibrations dampers

TOTAL =60

COURSE OUTCOMES

To understand the importance and the functioning of transmission line parameters.

To understand the concepts of Lines and Insulators.

To acquire knowledge on the performance of Transmission lines.

To acquire knowledge on Underground Cabilitys

TEXT BOOKS

1. B.R.Gupta, 'Power System Analysis and Design', S.Chand, New Delhi, 2003.

4. 'Tamil Nadu Electricity Board Handbook', 2003.

19148S31CP -PROBABILITY AND STATISTICS

3 1 0 4

(Common to Mech, Civil, EEE)

SEMESTER-III

UNIT I PROBABILITY AND RANDOM VARIABLE

9+3hrs

Axioms of probability - Conditional probability - Total probability - Bayes theorem - Random variable - Probability mass function - Probability density functions - Properties - Moments - Moment generating functions and their properties.

UNIT II TWO DIMENSIONAL RANDOM VARIABLES

9+3hrs

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

UNIT III STANDARD DISTRIBUTIONS

9+3hrs

Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties - Functions of a random variable.

UNIT IV TESTING OF HYPOTHESIS

9+3hrs

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

UNIT V DESIGN OF EXPERIMENTS

9+3hrs

Analysis of variance – One way classification – Complete randomized design - Two – way classification – Randomized block design - Latin square.

Note : Use of approved statistical table permitted in

Total no of hrs: 60hrs

COURSE OUTCOMES

Eigenvalues and eigenvectors, diagonalization of a matrix, Symmetric matrices, Positive definite matrices and similar matrices.

Gradient, divergence and curl of a vector point function and related identities.

Evaluation of line, surface and volume integrals using Gauss, Stokes and Green's theorems and their verification.

Analytic functions, conformal mapping and complex integration.

Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients

TEXT BOOKS

1. Ross. S., “A first Course in Probability”, Fifth Edition, Pearson Education, Delhi 2002. (Chapters 2 to 8)
2. Johnson. R. A., “Miller & Freund’s Probability and Statistics for Engineers”, Sixth Edition, Pearson Education, Delhi, 2000. (Chapters 7, 8, 9, 12)

REFERENCES BOOKS

19153C32P- ANALOG INTEGRATED CIRCUITS 3 1 0 4

AIM

To introduce the concepts for realizing functional building blocks in ICs, fabrications & application of Ics.

OBJECTIVES

- i. To study the IC fabrication procedure.
- ii. To study characteristics; realize circuits; design for signal analysis using Op-amp Ics.
- iii. To study the applications of Op-amp.
- iv. To study internal functional blocks and the applications of special Ics like Timers, PLL circuits, regulator Circuits, ADCs.

UNIT I: IC FABRICATION

9

IC classification, fundamental of monolithic IC technology, epitaxial growth, masking and etching, diffusion of impurities. Realization of monolithic Ics and packaging.

UNIT II: CHARACTERISTICS OF OPAMP

9

Ideal OP-AMP characteristics, DC characteristics, AC characteristics, offset voltage and current: voltage series feedback and shunt feedback amplifiers, differential amplifier; frequency response of OP-AMP; Basic applications of op-amp – summer and subtractor – Multiplier and divider- differentiator and integrator.

UNIT III: APPLICATIONS OF OPAMP

9

Instrumentation amplifier, V/I & I/V converters, comparators, multivibrators, waveform generators, Precision rectifier, clippers, clampers, peak detector, S/H circuit, D/A converter (R-2R ladder and weighted resistor types), A/D converter – Dual slope, successive approximation and flash types.

UNIT IV: ACTIVE FILTERS AND SPECIAL ICs

9

RC Active filters : low pass – high pass – band pass – band reject – switched capacitor filter – 555 Timer circuit – Functional block, characteristics & applications; 566-voltage controlled oscillator circuit; 565-phase lock loop circuit functioning and applications, Analog multiplier Ics.

UNIT V: APPLICATION ICs

9

IC voltage regulators – LM317, 723 regulators, switching regulator, MA 7840, LM 380 power amplifier, ICL 8038 function generator IC, isolation amplifiers, opto coupler, opto electronic Ics.

TOTAL = 45

COURSE OUTCOMES

- Ability to acquire knowledge in IC fabrication procedure
- Ability to analyze the characteristics of Op-Amp
- To understand the importance of Signal analysis using Op-amp based circuits.

Functional blocks and the applications of special ICs like Timers, PLL circuits, regulator Circuits.

To understand and acquire knowledge on the Applications of Op-amp

Ability to understand and analyse, linear integrated circuits their Fabrication and Application.

TEXT BOOKS

3. David A.Bell, 'Op-amp & Linear ICs', Prentice Hall of India, 2nd edition, 1997.

#####

19153C33P - POWER ELECTRONICS**4 0 0 4****AIM:**

To understand the various applications of electronic devices for conversion, control and conditioning of the electrical power.

OBJECTIVES:

- To get an overview of different types of power semiconductor devices and their switching characteristics.
- To understand the operation, characteristics and performance parameters of controlled rectifiers
- To study the operation, switching techniques and basics topologies of DC-DC switching regulators.
- To learn the different modulation techniques of pulse width modulated inverters and to understand harmonic reduction methods.
- To study the operation of AC voltage controller and Matrix converters.

UNIT I- POWER SEMI-CONDUCTOR DEVICES :**12**

Overview of switching devices – Driver and snubber circuit of SCR TRIAC, GTO, IGBT, MOSFET – Computer simulation of PE circuits.

UNIT II-PHASE CONTROLLED CONVERTERS**12**

2 pulse / 3 pulse and 6 pulse converters – Effect of source inductance – performance parameters – Reactive power control of converters – Dual converters.

UNIT III -DC TO DC CONVERTERS**12**

Stepdown and stepup chopper – Forced commutation techniques – Time ratio control and current limit control – Switching mode regulators Buck, Boost, Buck-Boost – concept of resonant switching.

UNIT IV- INVERTERS**12**

Single phase and three phase [120° & 180° mode] inverters – PWM techniques – Sinusoidal PWM, Modified sinusoidal PWM and multiple PWM – Voltage and harmonic control – Series resonant inverter – current source inverter.

UNIT V- AC TO AC CONVERTERS**12**

Single phase AC voltage controllers – Multistage sequence control – single phase and three phase cycloconverters – power factor control – Matrix converters.

L: 45 T: 15 TOTAL: 60 PERIODS**COURSE OUTCOMES**

| Ability to analyse AC-AC and DC-DC and DC-AC converters.

Ability to choose the converters for real time applications.

TEXT BOOKS:

1. Rashid M.H., "Power Electronics Circuits, Devices and Applications", Prentice Hall India, 3rd Edition, New Delhi, 2004.
2. Ned Mohan, T.M.Undeland, W.P.Robbins, "Power Electronics: Converters, applications and design", John wiley and Sons, 3rd Edition, 2006.

REFERENCES:

3. Philip T.Krein, "Elements of Power Electronics" Oxford University Press, 2004 Edition.

19153C34P-MEASUREMENTS AND INSTRUMENTATION

4004

Semester III

AIM

To provide adequate knowledge in electrical instruments and measurements techniques.

OBJECTIVES

To make the student have a clear knowledge of the basic laws governing the operation of the instruments, relevant circuits and their working.

- i. Introduction to general instrument system, error, calibration etc.
- ii. Emphasis is laid on analog and digital techniques used to measure voltage, current, energy and power etc.
- iii. To have an adequate knowledge of comparison methods of measurement.
- iv. Elaborate discussion about storage & display devices.
- v. Exposure to various transducers and data acquisition system.

UNIT I: INTRODUCTION 10

Functional elements of an Instrument -Static and Dynamic characteristics -Errors in measurement -Statistical evaluation of measurement data -Standard and Calibration.

UNIT II: ELECTRICAL AND ELECTRONICS INSTRUMENTS 12

Construction and principle of operation of moving coil, moving Iron, Principle and types analog and digital ammeters and voltmeters -Single and three phase Wattmeter and Energy meter - magnetic measurements - -Instruments for measurement of frequency and phase.

UNIT III: SIGNAL CONDITIONING CIRCUITS 12

Bridge circuits – Differential and Instrumentation amplifiers -Filter circuits - V/f and f/V converters – P/I and I/P converters – S/H Circuit, A/D and D/A converters -Multiplexing and De-multiplexing -Data acquisition systems –Grounding techniques.

UNIT IV: STORAGE AND DISPLAY DEVICES 12

Magnetic disc and Tape Recorders -Digital plotters and printers -CRT displays -Digital CRO – LED, LCD and Dot matrix displays.

UNIT V: TRANSDUCERS 14

Classification of Transducers -Selection of Transducers –Resistive, Capacitive and Inductive Transducers -Piezo electric Transducers -Transducers for measurement of displacement, temperature, level, flows, pressure, velocity, acceleration, torque, speed, viscosity and moisture.

Total = 60

COURSE OUTCOMES

To acquire knowledge on Basic functional elements of instrumentation

To understand the concepts of Fundamentals of electrical and electronic instruments

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

Ability to compare between various measurement techniques

To acquire knowledge on Various storage and display devices

To understand the concepts Various transducers and the data acquisition systems

Ability to model and analyze electrical and electronic Instruments and understand the operational features of display Devices and Data Acquisition System.

+++++++

19153L35P- MACHINES LAB

0 0 3 2

Semester III

LIST OF EXPERIMENTS

1. Load test on DC Shunt & DC Series motor
2. O.C.C & Load characteristics of DC Shunt generator
3. Speed control of DC shunt motor (Armature, Field control)
4. Load test on single phase transformer
5. O.C & S.C Test on a single phase transformer
6. Regulation of an alternator by EMF & MMF methods.
7. V curves and inverted V curves of synchronous Motor
8. Load test on three phase squirrel cage Induction motor
9. Speed control of three phase slip ring Induction Motor
10. Load test on single phase Induction Motor.
11. Study of DC & AC Starters

TOTAL: 45

COURSE OUTCOMES

At the end of the course, the student should have the :

Ability to understand and analyze EMF and MMF methods

Ability to analyze the characteristics of V and Inverted V curves

Ability to understand the importance of Synchronous machines

Ability to understand the importance of Induction Machines

Ability to acquire knowledge on separation of losses

19153C41P- PROTECTION AND SWITCHGEAR**4 0 0 4****AIM**

To expose the students to the various faults in power system and learn the various methods of protection scheme.

To understand the current interruption in Power System and study the various switchgears.

OBJECTIVES

- i. Discussion on various earthing practices usage of symmetrical components to estimate fault current and fault MVA.
- ii. Study of Relays & Study of protection scheme, solid state relays.
- iii. To understand instrument transformer and accuracy.
- iv. To understand the method of circuit breaking various arc theories Arcing phenomena – capacitive and inductive breaking.
- v. Types of circuit breakers.

UNIT I: INTRODUCTION**12**

Principles and need for protective schemes – nature and causes of faults – types of faults – fault current calculation using symmetrical components – Power system earthing - Zones of protection and essential qualities of protection – Protection scheme.

UNIT II: OPERATING PRINCIPLES AND RELAY CONSTRUCTIONS**12**

Need for protection – essential qualities of protective relays – Electromagnetic relays, Induction relays – Over current relays - Directional, Distance, Differential and negative sequence relays. Static relays

UNIT III: APPARATUS PROTECTION**12**

Apparatus protection transformer, generator, motor, protection of bus bars, transmission lines – CTs and PTs and their applications in protection schemes.

UNIT IV: THEORY OF CIRCUIT INTERRUPTION**12**

Physics of arc phenomena and arc interruption. Restricting voltage & Recovery voltage, rate of rise of recovery voltage, resistance switching, current chopping, and interruption of capacitive current – DC circuit breaking.

UNIT V: CIRCUIT BREAKERS**12**

Types of Circuit Breakers – Air blast, Air break, oil SF₆ and Vacuum circuit breakers – comparative merits of different circuit breakers – Testing of circuit breakers

COURSE OUTCOMES

- Ability to understand and analyze Electromagnetic and Static Relays.
- Ability to suggest suitability circuit breaker.
- Ability to find the causes of abnormal operating conditions of the apparatus and system.
- Ability to analyze the characteristics and functions of relays and protection schemes. Ability to study about the apparatus protection, static and numerical relays.
- Ability to acquire knowledge on functioning of circuit breaker.

19153C42P -HIGH VOLTAGE DC TRANSMISSION

3 1 0 4

Semester IV

AIM:

To learn the HVDC modelling and control strategy.

OBJECTIVES:

- To study the performance of converters and modeling of DC line with controllers.
- To study about converter harmonics and its mitigation using active and passive filters.

UNIT I- DC POWER TRANSMISSION TECHNOLOGY

9

Introduction-comparison of AC and DC transmission application of DC transmission – Description of DC transmission system planning for HVDC transmission-modern trends In DC transmission.

UNIT II- ANALYSIS OF HVDC CONVERTERS

9

Pulse number, choice of converter configuration-simplified analysis of Graetz circuit converter bridge characteristics – characteristics of a twelve pulse converter-detailed analysis of converters.

UNIT III- CONVERTER AND HVDC SYSTEM CONTROL

9

General principles of DC link control-converter control characteristics-system control Hierarchy-firing angle control-current and extinction angle control-starting and stopping of DC link-power control-higher level controllers-telecommunication requirements.

UNIT IV -HARMONICS AND FILTERS

9

Introduction-generation of harmonics-design of AC filters-DC filters-carrier frequency and RI noise.

UNIT V -SIMULATION OF HVDC SYSTEMS

9

Introduction-system simulation: Philosophy and tools-HVDC system simulation-modeling of HVDC systems for digital dynamic simulation.

TOTAL: 45 PERIODS

COURSE OUTCOMES

Ability to understand Generation and measurement of high voltage.

Ability to understand High voltage testing.

Ability to understand various types of over voltages in power system. Ability to measure over voltages.

Ability to test power apparatus and insulation coordination

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

19153C43P- SOLID STATE DRIVES

3 1 0 4

Semester IV

AIM

To study and understand the operation of electric drives controlled from a power electronic converter and to introduce the design concepts of controllers.

OBJECTIVES

- i. To understand the stable steady-state operation and transient dynamics of a motor-load system.
- ii. To study and analyze the operation of the converter / chopper fed dc drive and to solve simple problems.
- iii. To study and understand the operation of both classical and modern induction motor drives.
- iv. To understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives.
- v. To analyze and design the current and speed controllers for a closed loop solid-state d.c motor drive.

UNIT I DRIVE CHARACTERISTICS

9

Equations governing motor load dynamics - Equilibrium operating point and its steady state stability - Mathematical condition for steady state stability and problems - Multi quadrant dynamics in the speed torque plane - Basics of regenerative braking - Typical load torque characteristics - Acceleration, deceleration, starting and stopping.

UNIT II DC MOTOR DRIVE

9

Steady state analysis of the single and three phase fully controlled converter fed separately excited D.C motor drive: Continuous and discontinuous conduction mode - Chopper fed D.C drive: Time ratio control and current limit control - Operation of four quadrant chopper.

UNIT III STATOR CONTROLLED INDUCTION MOTOR DRIVES

9

Variable terminal voltage control – Variable frequency control – V/f control - AC voltage controllers – Four-quadrant control and closed loop operation - Frequency controlled drives- VSI and CSI fed drives – closed loop control.

UNIT IV ROTOR CONTROLLED INDUCTION MOTOR DRIVES

9

Rotor resistance control – slip power recovery schemes - sub synchronous and super synchronous operations – closed loop control – Braking in induction motors.

UNIT V- SYNCHRONOUS MOTOR DRIVES

9

Wound field cylindrical rotor motor – operation from constant voltage and frequency source – operation from current source – operation from constant frequency – Brushless excitation – Permanent magnet synchronous motor.

Self-controlled Synchronous motor drives – Brushless dc and ac motor drives – CSI with load commutation – Cycloconverter with load commutation.

TOTAL = 45

COURSE OUTCOMES

Ability to understand and suggest a converter for solid state drive.

Ability to select suitability drive for the given application.

Ability to study about the steady state operation and transient dynamics of a motor load system. Ability to analyze the operation of the converter/chopper fed dc drive.

Ability to analyze the operation and performance of AC motor drives.

Ability to analyze and design the current and speed controllers for a closed loop solid

TEXT BOOKS

1. R. Krishnan, 'Electric Motor & Drives: Modelling, Analysis and Control', Prentice Hall of India, 2001.
2. Bimal K. Bose. 'Modern Power Electronics and AC Drives', Pearson Education, 2002.

REFERENCE BOOKS

1. G.K. Dubey, 'Power Semi-conductor Controlled Drives', Prentice Hall of India, 1989.
2. Vedam Subrahmanyam, "Electric drives concepts and applications", TMH Pub. Co.Ltd., 1994.
3. Murphy, J.M.D and Turnbull.F.G. , "Thyristor control of AC Motors", Pergamon Press, 1988.
4. Sen. P.C., "Thyristor D.C. Drives", John Wiley and Sons, 1981.

AIM

To provide a platform for understanding the basic concepts of linear control theory and its application to practical systems and To train the students in the measurement of displacement, resistance, inductance, torque and angle etc., and to give exposure to AC, DC bridges and transient measurement.

LIST OF EXPERIMENTS

1. Determination of transfer function parameters of a DC servo motor & AC servo motor.
2. Analog simulation of type-0 and type-1 system, closed loop control system.
3. Digital simulation of linear systems & non-linear systems.
4. Design of P, PI and PID controllers,
5. Design of compensators.
6. Stability analysis of linear systems
7. Conduct test to find unknown inductance & capacitance using Maxwell's & Schering's bridges
8. Conduct test to find unknown Resistance using Wheat Stone & Kelvin's bridges.
9. Instrumentation amplifiers,
10. Conduct test to convert A/D signal using successive approximation type.
11. a) Conduct test to convert D/A signal using binary weighted resistor method.
b) Conduct test to convert D/A signal using R-2R Ladder method.
12. Calibration of single-phase energy meter & current transformer.

P = 45 Total = 45**COURSE OUTCOMES**

Ability to understand control theory and apply them to electrical engineering problems. Ability to analyze the various types of converters.

Ability to design compensators

Ability to study the simulation packages.

19153C51P-POWER SYSTEM ANALYSIS

3 1 0 4
Semester V

AIM

To become familiar with different aspects of modeling of components and system and different methods of analysis of power system planning and operation.

OBJECTIVES

- i. To model steady-state operation of large-scale power systems and to solve the power flow problems using efficient numerical methods suitable for computer simulation.
- ii. To model and analyse power systems under abnormal (fault) conditions.
- iii. To model and analyse the dynamics of power system for small-signal and large signal disturbances and to design the systems for enhancing stability.

UNIT I- THE POWER SYSTEM AN OVER VIEW AND MODELLING 12

Modern Power System - Basic Components of a power system - Per Phase Analysis Generator model - Transformer model - line model. The per unit system -Change of base.

UNIT II- POWER FLOW ANALYSIS 12

Introduction - Bus Classification - Bus admittance matrix - Solution of non-linear Algebraic equations - Gauss seidal method - Newton raphson method - Fast decoupled method - Flow charts and comparison of the three methods.

UNIT III-FAULT ANALYSIS-BALANCED FAULT 12

Introduction – Balanced three phase fault – short circuit capacity – systematic fault analysis using bus impedance matrix – algorithm for formation of the bus impedance matrix.

UNIT IV-FAULT ANALYSIS – SYMMETRICAL COMPONENTS AND UNBALANCED FAULT 12

Introduction – Fundamentals of symmetrical components – sequence impedances – sequence networks – single line to ground fault – line fault - Double line to ground fault – Unbalanced fault analysis using bus impedance matrix.

UNIT V-POWER SYSTEM STABILITY 12

Dynamics of a Synchronous machine – Swing equation and Power angle equation – Steady state Stability and Transient state Stability - Equal area criterion – Clearing angle and time- Numerical solution of Swing equation for single machine

Total = 60 Hrs

COURSE OUTCOMES

- Ability to model the power system under steady state operating condition
- Ability to understand and apply iterative techniques for power flow analysis
- Ability to model and carry out short circuit studies on power system
- Ability to model and analyze stability problems in power system

- | Ability to acquire knowledge on Fault analysis.
- | Ability to model and understand various power system components and carry out power flow, short circuit and stability studies

19153C52P - POWER QUALITY

3 1 0 4

Semester V

UNIT I INTRODUCTION TO POWER QUALITY 3

Terms and definitions: Overloading, under voltage, sustained interruption; sags and swells; waveform distortion, Total Harmonic Distortion (THD), Computer Business Equipment Manufacturers Associations (CBEMA) curve.

UNIT II VOLTAGE SAGS AND INTERRUPTIONS 7

Sources of sags and interruptions, estimating voltage sag performance, motor starting sags, estimating the sag severity, mitigation of voltage sags, active series compensators, static transfer switches and fast transfer switches.

UNIT III OVER VOLTAGES 10

Sources of over voltages: Capacitor switching, lightning, ferro resonance; mitigation of voltage swells: Surge arresters, low pass filters, power conditioners – Lightning protection, shielding, line arresters, protection of transformers and cables.

UNIT IV HARMONICS 12

Harmonic distortion: Voltage and current distortion, harmonic indices, harmonic sources from commercial and industrial loads, locating harmonic sources; power system response characteristics, resonance, harmonic distortion evaluation, devices for controlling harmonic distortion, passive filters, active filters, IEEE and IEC standards.

UNIT V POWER QUALITY MONITORING 17

Monitoring considerations: Power line disturbance analyzer, per quality measurement equipment, harmonic/spectrum analyzer, flicker meters, disturbance analyzer, applications of expert system for power quality monitoring.

L=45 Total=45

COURSE OUTCOMES

- Ability to understand and analyze power system operation, stability, control and protection.
- The students able to understand the over voltage protection & analysis tools used for analyzing the transients.
- They are fully trained in designing and evaluating the devices of harmonic distortion.

REFERENCE BOOKS

1. Roger.C.Dugan, Mark.F.McGranaghram, Surya Santoso, H.Wayne Beaty, 'Electrical Power Systems Quality' McGraw Hill, 2003.
2. PSCAD User Manual.

#####

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

AIM

To expose the students to the construction, principle of operation and performance of special electrical machines as an extension to the study of basic electrical machines.

OBJECTIVES

To impart knowledge on

- i. Construction, principle of operation and performance of synchronous reluctance motors.
- ii. Construction, principle of operation and performance of stepping motors.
- iii. Construction, principle of operation and performance of switched reluctance motors.
- iv. Construction, principle of operation and performance of permanent magnet brushless D.C. motors.
- v. Construction, principle of operation and performance of permanent magnet synchronous motors.

UNIT I-SYNCHRONOUS RELUCTANCE MOTORS**9**

Constructional features – types – axial and radial air gap motors – operating principle – reluctance – phasor diagram - characteristics – Vernier motor.

UNIT II -STEPPING MOTORS**9**

Constructional features – principle of operation – variable reluctance motor – Hybrid motor – single and Multi stack configurations – theory of torque predictions – linear and non-linear analysis – characteristics – drive circuits.

UNIT III-SWITCHED RELUCTANCE MOTORS**9**

Constructional features – principle of operation – torque prediction – power controllers – Nonlinear analysis – Microprocessor based control - characteristics – computer control.

UNIT IV-PERMANENT MAGNET BRUSHLESS D.C. MOTORS**9**

Principle of operation – types – magnetic circuit analysis – EMF and Torque equations – Power Controllers – Motor characteristics and control.

UNIT V-PERMANENT MAGNET SYNCHRONOUS MOTORS**9**

Principle of operation – EMF and torque equations – reactance – phasor diagram – power controllers - converter - volt-ampere requirements – torque speed characteristics - microprocessor based control.

L=45 Total=45**COURSE OUTCOMES**

- Ability to analyze and design controllers for special Electrical Machines.
- Ability to acquire the knowledge on construction and operation of stepper motor.
 - Ability to acquire the knowledge on construction and operation of stepper switched reluctance motors.
 - Ability to construction, principle of operation, switched reluctance motors.

- Ability to acquire the knowledge on construction and operation of permanent magnet brushless D.C. motors.
- Ability to acquire the knowledge on construction and operation of permanent magnet synchronous motors.

TEXT BOOKS

1. Miller, T.J.E., 'Brushless Permanent Magnet and Reluctance Motor Drives', Clarendon Press, Oxford, 1989.

19153L55P - POWER ELECTRONICS AND DRIVES LAB

Semester V

0 0 3 2

AIM

To study the characteristics of switching devices and its applications in rectifier inverter, chopper and resonant converter.

1. Study Of V-I Characteristics Of An SCR.
2. Study Of V-I Characteristics Of A TRIAC.
3. Study Of Different Triggerring Circuits For Thyristor.
4. Study Of Uni- Junction Transistor (UJT) Triggerring Circuit.
5. Study Of A Firing Circuit Suitable For Single Phase Half Controlled Convertor.
6. Simulation On the Single Phase Ac-Dc Uncontrolled Convertor with & without the source Inductance.
7. Simulation Of A Single Phase Ac To Controlled Dc Convertor with & without the source Inductance.
8. Single Phase Half Controlled Bridge Convertor With Two Thyristors & Two Diodes.
9. Single Phase Fully Controlled Bridge Convertor Using Four Thyristors.
10. Pspice or MATH LAB Simulation Of Dc to Dc Step Down Chopper.
11. Pspice or MATH LAB Simulation Of Single Phase Controller with R-L Load.
12. Pspice or MATH LAB Simulation Of PWM Bridge Invertor Of R-L Load Using MOSFET.

COURSE OUTCOMES

Ability to practice and understand converter and inverter circuits and apply software for engineering problems.

Ability to analyze about AC to DC converter circuits.

Ability to analyze about DC to AC circuits.

Ability to acquire knowledge on AC to AC converters

Ability to acquire knowledge on simulation software.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

19153C61P- UTILIZATION OF ELECTRICAL ENERGY

3 1 0 4
Semester VI

AIM

To plan and design using basic principles and handbooks
To select equipment, processes and components in different situations.

OBJECTIVES

- i. To ensure that the knowledge acquired is applied in various fields as per his job requirements.
- ii. To orient the subject matter in the proper direction, visits to industrial establishments are recommended in order to familiarize with the new developments in different areas.

UNIT I ELECTRIC LIGHTING 12

Production of light – Definition of terms – Lighting calculations – Types of lamps – Interior and Exterior illumination systems – Lighting schemes – Design of Lighting schemes – Factory lighting – Flood lighting – Energy saving measures.

UNIT II ELECTRIC HEATING 12

Resistance heating – Induction heating – Dielectric heating – Arc furnace – Control equipment, efficiency, and losses – Energy conservation in Arc Furnace Industry.

UNIT III ELECTRIC WELDING 12

Welding equipment – Characteristics of carbon and metallic arc welding – Butt welding – Spot welding – Energy conservation in welding.

UNIT IV ELECTRIC VEHICLE 12

Traction: System of track electrification, train movement and energy consumption (speed time curves, crest speed, average speed and schedule speed) rective effort, factors affecting energy consumption (dead weight, acceleration weight and adhesion weight) starting and braking of traction motors, protective devices

UNIT V ELECTRO CHEMICAL PROCESS 12

Electrolysis – Electroplating – Electro deposition – Extraction of metals – Current, efficiency – Batteries – Types – Charging methods.

Total = 60

COURSE OUTCOMES

To understand the main aspects of generation, utilization and conservation.

To identify an appropriate method of heating for any particular industrial application.

To evaluate domestic wiring connection and debug any faults occurred.

To construct an electric connection for any domestic appliance like refrigerator as well as to design a battery charging circuit for a specific household application.

Text Books:

1. Tripathy,S.C., “Electric Energy Utilization & Conservation” – Tata McGraw Hill Publishing Company.
2. Uppal,S.L., “Electric Power”, Khanna Publishers.
3. Soni,M.L., P.V.Gupta & Bhatnagar , “A course in Electric Power”, Dhanpat Rai & Sons.

Reference Books:

1. Partab,H., “Art & Science Utilization of Electrical Energy” – Dhanpat Rai & Sons.
2. Wadhwa,C.L., “Generation, Utilization & Distribution” - Wilsey Eastern Ltd.
3. Wadha C L - Utilization of Electric Power; New Age International
4. Suryanarayana . N.V., “Utilization of Electric Power” - Wilsey Eastern Ltd.

UNIT 1	9
Advantages of Static Relays – Generalized Characteristics and Operational Equations of Relays – Steady State and Transient Performance of Signal Driving Elements – Signal Mixing Techniques and Measuring Techniques – CT’s and PT’s in Relaying Schemes – Saturation Effects.	
UNIT 2	9
Static Relay Circuits (Using Analog and Digital IC’s) for Over Current, Inverse Time Characteristics, Differential Relay and Directional Relay.	
UNIT 3	9
Static Relay Circuits for Generator Loss of Field, Under Frequency Distance Relays, Impedance, Reactance, MHO, Reverse Power Relays.	
UNIT 4	9
Static Relay Circuits for Carrier Current Protection – Steady State and Transient Behavior of Static Relays – Testing and Maintenance – Tripping Circuits using Thyristor.	
UNIT 5	9
Microprocessor Based Relays – Hardware and Software for the Measurement of Voltage, Current, Frequency, Phase Angle – Microprocessor Implementation of Over Current Relays – Inverse Time Characteristics – Impedance Relay – Directional Relay – MHO Relay.	

Total=45**COURSE OUTCOMES**

- Ability to suggest suitability circuit breaker.
- Ability to find the causes of abnormal operating conditions of the apparatus and system.

Text Books:

1. Badriram and Vishwakarma D.N., Power System Protection and Switchgear, Tata McGraw Hill, New Delhi, 1995.
2. Rao T.S.M., Power System Protection – Static Relays, McGraw Hill, 1979.

Reference Books:

1. Van C.Warrington, “Protection Relays – Their Theory and Practice”, Chapman and Hall.
2. Ravindranath B. and Chander M., “Power System Protection and Switchgear”, Wiley Eastern, 1992.
3. Russel C.Mason, “The Art and Science of Protective relays”.

19153C63P- POWER SYSTEM OPERATION AND CONTROL

4 0 0 4

Semester VI

AIM

To become familiar with the preparatory work necessary for meeting the next day's operation and the various control actions to be implemented on the system to meet the minute-to-minute variation of system load.

OBJECTIVES

- i. To get an overview of system operation and control.
- ii. To understand & model power-frequency dynamics and to design power-frequency controller.
- iii. To understand & model reactive power-voltage interaction and different methods of control for maintaining voltage profile against varying system load.

UNIT I INTRODUCTION 12

System load variation: System load characteristics, load curves - daily, weekly and annual, load-duration curve, load factor, diversity factor. Reserve requirements: Installed reserves, spinning reserves, cold reserves, hot reserves. Overview of system operation: Load forecasting, unit commitment, load dispatching. Overview of system control: Governor Control, LFC, EDC, AVR, system voltage control, security control.

UNIT II REAL POWER - FREQUENCY CONTROL 12

Fundamentals of Speed Governing mechanisms and modeling - Speed-Load characteristics-regulation of two Synchronous Machines in parallel - Control areas - LFC of single & Multi areas - Static & Dynamic Analysis of uncontrolled and controlled cases -Tie line with frequency bias control – Steady state instabilities.

UNIT III REACTIVE POWER-VOLTAGE CONTROL 12

Typical excitation system, modeling, static and dynamic analysis, stability compensation; generation and absorption of reactive power: Relation between voltage, power and reactive power at a node; method of voltage control: Injection of reactive power. Tap-changing transformer, numerical problems - System level control using generator voltage magnitude setting, tap setting of OLTC transformer.

UNIT IV UNIT COMMITMENT AND ECONOMIC DISPATCH 12

Statement of Unit Commitment (UC) problem; constraints in UC: spinning reserve, thermal unit constraints, hydro constraints, fuel constraints and other constraints; UC solution methods: Priority-list methods, forward dynamic programming approach, numerical problems only in priority-list method using full-load average production cost. Incremental cost curve, co-ordination equations without loss and with loss, solution by direct method and λ -iteration method. (No derivation of loss coefficients.) Base point and participation factors.

UNIT V COMPUTER CONTROL OF POWER SYSTEMS 12

Energy control centre: Functions – Monitoring, data acquisition and control. System hardware configuration – SCADA and EMS functions: Network topology determination, state estimation, security analysis and control. Various operating states: Normal, alert, emergency, in extremis and restorative. State transition diagram showing various state transitions and control strategies. **Total = 60**

COURSE OUTCOMES

Ability to understand the day-to-day operation of electric power system.

Ability to analyze the control actions to be implemented on the system to meet the minute- to-minute variation of system demand.

Ability to understand the reactive power-voltage interaction.

TEXT BOOKS

1. Olle. I. Elgerd, 'Electric Energy Systems Theory – An Introduction', Tata McGraw Hill Publishing Company Ltd, New Delhi, Second Edition, 2003.
2. Allen.J.Wood and Bruce F.Wollenberg, 'Power Generation, Operation and Control', John Wiley & Sons, Inc., 2003.
3. P. Kundur, 'Power System Stability & Control', McGraw Hill Publications, USA, 1994.

REFERENCE BOOKS

1. D.P. Kothari and I.J. Nagrath, 'Modern Power System Analysis', Third Edition, Tata McGraw Hill Publishing Company Limited, New Delhi, 2003.
2. L.L. Grigsby, 'The Electric Power Engineering, Hand Book', CRC Press & IEEE Press, 2001.

AIM

To simulate analysis and planning cases for a practical power system.

List Of Experiments:

1. Formation of Y-Bus Matrix by Inspection and Singular transformation methods.
2. Load flow solution using Gauss Seidal method
3. Load flow solution using Newton-Raphson method
4. Load flow solution by Fast Decoupled method
5. Symmetrical short circuit analysis
6. Unsymmetrical Fault analysis
7. Solution of swing Equation using modified Euler method
8. Power Electronic Circuits, design and simulation using Pspice
9. Simulation of Electrical drives using MATLAB, PSCAD
10. Control system design using MATLAB

P = 45 Total = 45

COURSE OUTCOMES

Ability to understand power system planning and operational studies.

Ability to acquire knowledge on Formation of Bus Admittance and Impedance Matrices and Solution of Networks.

Ability to analyze the power flow using GS and NR method

Ability to find Symmetric and Unsymmetrical fault

Semester VII

UNIT – I: BASICS OF TQM**9**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT – II: PRINCIPLES OF TQM**9**

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Continuous Process Improvement – Juran Trilogy, PDCA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT – III: QUALITY CONCEPTS**9**

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Concept of six sigma,

UNIT – IV: TQM TOOLS**9**

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, FMEA – Stages of FMEA.

UNIT – V: ISO STANDARDS**9**

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, ISO 14000 – Concept, Requirements and Benefits.

TOTAL : 45**COURSE OUTCOMES**

Upon completion of the course, students will be able to have clear understanding of managerial functions like planning, organizing, staffing, leading & controlling and have same basic knowledge on international aspect of management

TEXT BOOKS:

1. Dale H. Besterfield, et al., “Total Quality Management”, Pearson Education, Inc. 2003. (Indian reprint 2004). ISBN 81-297-0260-6.
2. Basker, “TOTAL QUALITY MANAGEMENT”, Anuradha Agencies.

REFERENCES:

1. Feigenbaum.A.V. “Total Quality Management”, McGraw Hill, 1991.

2. Oakland.J.S. "Total Quality Management", Butterworth – Heinemann Ltd., Oxford. 1989.
3. Narayana V. and Sreenivasan, N.S. "Quality Management – Concepts and Tasks", New Age International 1996

AIM

To expose the students to the construction, principle of operation and performance of special electrical machines as an extension to the study of basic electrical machines.

OBJECTIVES

To impart knowledge on

- i. Construction, principle of operation and performance of DC machine.
- ii. Construction, operating Characteristics of single and three phase transformer.
- iii. Design and operating characteristics of Induction motors.
- iv. Construction, principle of operation, Design of synchronous machines and to have knowledge of machine design in CAD

UNIT I INTRODUCTION 12

Major considerations – Limitations – Electrical Engineering Materials – Space factor – temperature gradient – Heat flow in two dimensions – thermal resistivity of winding – Temperature gradient in conductors placed in slots – Rating of machines – Eddy current losses in conductors – Standard specifications

UNIT II DC MACHINES 12

Constructional details – output equation – main dimensions - choice of specific loadings – choice of number of poles – armature design – design of field poles and field coil – design of commutator and brushes – losses and efficiency calculations.

UNIT III TRANSFORMERS 12

KVA output for single and three phase transformers – Window space factor – Overall dimensions – Operating characteristics – Regulation – No load current – Temperature rise of Transformers – Design of Tank with & without cooling tubes – Thermal rating – Methods of cooling of Transformers.

UNIT IV INDUCTION MOTORS 12

Magnetic leakage calculations – Leakage reactance of polyphase machines- Magnetizing current – Output equation of Induction motor – Main dimensions –Length of air gap- Rules for selecting rotor slots of squirrel cage machines – Design of rotor bars & slots – Design of end rings – Design of wound rotor-Operating characteristics –Short circuit current – circle diagram – Dispersion co-efficient – relation between D & L for best power factor.

UNIT V SYNCHRONOUS MACHINES 12

Runaway speed – construction – output equations – choice of loadings – Design of salient pole machines – Short circuit ratio – shape of pole face – Armature design – Armature parameters – Estimation of air gap length – Design of rotor –Design of damper winding –

Determination of full load field m.m.f – Design of field winding – Design of turbo alternators – Rotor design - Introduction to computer aided design – Program to design main dimensions of Alternators.

Total = 60

COURSE OUTCOMES

Ability to understand basics of design considerations for rotating and static electrical machines

Ability to design of field system for its application.

Ability to design single and three phase transformer.

Ability to design armature and field of DC machines.

REFERENCE BOOKS:

1. Sawhney, A.K., 'A Course in Electrical Machine Design', Dhanpat Rai & Sons, New Delhi, 1984.

19153C73P- POWER PLANT ENGINEERING

4 0 0 4

Semester VII

UNIT I -THERMAL POWER PLANTS 9

Basic thermodynamic cycles – Various components of steam power plant – Layout – Pulverized coal burners – Fluidized bed combustion – Coal handling systems – Ash handling systems – Forced draft and induced draft fans – Boilers – Feed pumps – Super heater – Regenerator – Condenser – Deaerators – Cooling tower

UNIT II - HYDRO ELECTRIC POWER PLANTS 9

Layout – Dams – Selection of water turbines – Types – Pumped storage hydel plants

UNIT III - NUCLEAR POWER PLANTS 9

Principles of nuclear energy – Fission reactions – Nuclear reactor – Nuclear power plants

UNIT IV- GAS AND DIESEL POWER PLANTS 9

Types – Open and closed cycle gas turbine – Work output and thermal efficiency – Methods to improve performance – Reheating, intercoolings, regeneration – Advantage and disadvantages – Diesel engine power plant – Component and layout

UNIT V- NON – CONVENTIONAL POWER GENERATION 9

Solar energy collectors – OTEC – Wind power plants – Tidal power plants and geothermal resources – Fuel cell – MHD power generation – Principle – thermoelectric power generation – Thermionic power generation.

L: 45 T: 15 Total: 60

COURSE OUTCOMES

- Ability to create awareness about renewable Energy Sources and technologies.
- Ability to get adequate inputs on a variety of issues in harnessing renewable Energy.
- Ability to recognize current and possible future role of renewable energy sources.

TEXT BOOKS

1. Arora and Domkundwar, “A Course in Power Plant Engineering”, Dhanpat Rai.
2. Nag, P.K., “Power Plant Engineering”, 2nd Edition, Tata McGraw Hill, 2003.

3. El-Wakil, M.M., “Power Plant Technology”, Tata McGraw Hill, 198

19153E44AP-FIELD THEORY3 1 0 4
Semester-IV**AIM**

To expose the students to the fundamentals of electromagnetic fields and their applications in Electrical Engineering.

OBJECTIVES: To impart knowledge on

- i. Concepts of electrostatics, electrical potential, energy density and their applications.
- ii. Concepts of magneto statics, magnetic flux density, scalar and vector potential and its applications.
- iii. Faraday's laws, induced emf and their applications.
- iv. Concepts of electromagnetic waves and Pointing vector.

UNIT I: INTRODUCTION**12**

Introduction-Coulomb's Law – Electric field intensity – Field due to point and continuous charges – Electric flux density-Gauss's law and application – Electrical potential –potential gradient– Divergence & Divergence theorem- Poisson's and Laplace's equations

UNIT II: STATIC ELECTRI FIELD**12**

Field due to dipoles- dipole moment-current & current density-conductors and dielectric –boundary conditions– Capacitance-Dielectric Dielectric interface- capacitance of a system of conductors- Dielectric constant and dielectric strength- Energy stored in a capacitor- Energy density.

UNIT III: MAGNETOSTATICS**12**

Introduction- Biot-savart Law- Ampere's Circuital Law-Curl- Stoke's theorem-Magnetic flux- – Magnetic flux density (B)- Scalar and vector potential – Force on a moving charge and current elements- force & Torque on closed circuits.

UNIT IV: ELECTROMAGNETIC INDUCTION**12**

Introduction to magnetic materials – Magnetization and permeability- Magnetic Boundary conditions- Magnetic circuits-Potential energy and forces on magnetic materials.- Faraday's laws- Inductance & mutual inductance- Inductance of solenoid, toroid and transmission lines.

UNIT V: ELECTROMAGNETICS**12**

Conduction current and - Displacement current-, Maxwell's equations (differential and integral forms) -Wave propagation in free space, lossy and lossless dielectrics- Power and Poynting vector – Propagation in good conductors- wave polarization.

TOTAL = 60**COURSE OUTCOMES**

Ability to understand the basic mathematical concepts related to electromagnetic vector fields. Ability to understand the basic concepts about electrostatic fields, electrical potential, energy density and their applications.

□ Ability to acquire the knowledge in magneto static fields, magnetic flux density, vector potential and its applications.

Ability to understand the different methods of emf generation and Maxwell's equations

Ability to understand the basic concepts electromagnetic waves and characterizing parameters Ability to understand and compute Electromagnetic fields and apply them for design and analysis of electrical equipment and systems

19153E44BP- FUZZY LOGIC AND ITS APPLICATIONS**3 1 0 4**

Semester-IV

UNIT I -FUZZY LOGIC**7**

Fuzzy sets – Fuzzy operation – Fuzzy arithmetic – Fuzzy relational equations – Fuzzy measure – Fuzzy functions – approximate reasoning – Fuzzy proposition – Fuzzy quantifiers-if-then rules.

UNIT II- FUZZY LOGIC IN CONTROL**8**

Structure of Fuzzy logic controller – Fuzzification models – database – rule base – inference engine – defuzzification modules – Non-Linear fuzzy control – PID like FLC – Sliding mode FLC – Sugeno FLC – adaptive fuzzy control applications – case studies.

UNIT III- NEURAL NETWORKS IN CONTROL**8**

Neural Network for Non-Linear systems – schemes of Neuro control-system identification forward model and inverse model – indirect learning neural network control applications – Case studies.

UNIT IV- MODELING AND CONTROL OF FACTS DEVICES NEURAL AND FUZZY TECHNIQUE**10**

FACTS-concept and general system considerations, types of FACTS devices – special purpose FACTS devices, generalized and multifunctional FACTS devices – General comments on transient stability programs. Neuro – Fuzzy based FACTS controller for improvement of Transient stability systems – GA for Adaptive fuzzy system – case study.

UNIT V- STABILITY STUDIES UNDER MULTIPLE FACTS ENVIRONMENT**12**

Introduction to small signal analysis – simulation and modeling of FACTS controllers for small signal analysis. Comparison between dynamic and transient stability results. Introduction to EMTP – (Electromagnetic Transient programme / Package), Modeling of FACTS controllers for power system studies using EMTP.

TOTAL=45**COURSE OUTCOMES**

- | Ability to design combinational and sequential Circuits.
- | Ability to simulate using software package.
- | Ability to study various number systems and simplify the logical expressions using Boolean functions
- | Ability to design various synchronous and asynchronous circuits.
- |

Ability to introduce asynchronous sequential circuits and PLDs

Ability to introduce digital simulation for development of application oriented logic circuits.

19153E44CP - BIOMEDICAL INSTRUMENTATION**4 0 0 4****Semester-IV****AIM**

The course is designed to make the student acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance. The fundamental principles of equipment that are actually in use at the present day are introduced.

OBJECTIVES

- i. To provide an acquaintance of the physiology of the heart, lung, blood circulation and circulation respiration. Methods of different transducers used.
- ii. To introduce the student to the various sensing and measurement devices of electrical origin.
- iii. To provide the latest ideas on devices of non-electrical devices.
- iv. To bring out the important and modern methods of imaging techniques.
- v. To provide latest knowledge of medical assistance / techniques and therapeutic equipments.

UNIT I BASIC PHYSIOLOGY 9

Cells and their structures – Transport of ions through cell membrane – Resting and excited state – Tran membrane potential – Action potential – Bio-electric potential – Nervous system – Physiology of muscles – Heart and blood circulation – Respiratory system – Urinary system.

UNIT II BASIC TRANSDUCER PRINCIPLES AND ELECTRODES**9**

Transducer principles - Active transducers - Passive transducers -Transducer for Bio-medical application -Electrode theory- Bio-potential electrode - Bio - chemical transducer.

UNIT III CARDIOVASCULAR SYSTEM 9

The heart and cardiovascular system – Blood pressure – Characteristics of blood flow – Heart sounds - Electro cardiography – Measurements of blood pressure – Measurement of blood flow and cardiac O/P Plethysmography – Measurements of heart sounds.

UNIT IV X-RAY AND RADIOISOTOPE INSTRUMENTATION 9

X-ray imaging radiography – Fluoroscopy – Image intensifiers – Angiography - Medical use of radioisotopes – Beta radiations – Detectors – Radiation therapy.

UNIT V BIO-TELEMETRY 9

Introduction to biotelemetry – Physiological parameters adaptable to biotelemetry – the components of biotelemetry systems – Implantable units – Applications of telemetry in patient care – Application of computer in Bio-medical instrumentation, Anatomy of Nervous system – Measurement from the nervous system – EEG – EMG.

Total = 45

COURSE OUTCOMES

- Ability to understand fundamentals of Bio medical instrumentation.
- To acquire knowledge on Bio-Medical and Non-Electrical parameter measurements.
- To know the various medical imaging equipment.

REFERENCE BOOKS:

1. Lesis Cromwell Fred, J.Werbell and Erich A.Pfrafraffer, Biomedical instrumentation and Measurements – Prentice Hall of India, 1990.
2. M.Arumugam, Bio-medical Instrumentation – Anuradha Agencies Publishers, 1992.
3. Khandpur, Handbook on Biomedical Instrumentation – Tata McGraw Hill Co Ltd., 1989.

**19153E44DP - MODELING AND SIMULATION OF SOLAR ENERGY
SYSTEMS**

4 0 0 4

UNIT I: SOLAR RADIATION AND COLLECTORS

9

Solar angles - day length, angle of incidence on tilted surface - Sunpath diagrams - shadow determination - extraterrestrial characteristics - measurement and estimation on horizontal and tilted surfaces - flat plate collector thermal analysis - heat capacity effect - testing methods-evacuated tubular collectors - concentrator collectors – classification - design and performance parameters - tracking systems - compound parabolic concentrators - parabolic trough concentrators - concentrators with point focus - Heliostats – performance of the collectors.

UNIT I: APPLICATIONS OF SOLAR THERMAL TECHNOLOGY

9

Principle of working, types - design and operation of - solar heating and cooling systems - solar water heaters – thermal storage systems – solar still – solar cooker – domestic, community – solar pond – solar drying.

UNIT III: SOLAR PV FUNDAMENTALS

9

Semiconductor – properties - energy levels - basic equations of semiconductor devices physics. Solar cells - p-n junction: homo and hetero junctions - metal-semiconductor interface - dark and illumination characteristics - figure of merits of solar cell – efficiency limits - variation of efficiency with band-gap and temperature - efficiency measurements - high efficiency cells - preparation of metallurgical, electronic and solar grade Silicon - production of single crystal Silicon: Czochralski (CZ) and Float Zone (FZ) method - Design of a complete silicon – GaAs- InP solar cell - high efficiency III-V, II-VI multi junction solar cell; a-Si-H based solar cells-quantum well solar cell -thermophotovoltaics.

UNIT IV: SOLAR PHOTOVOLTAIC SYSTEM DESIGN AND APPLICATIONS

9

Solar cell array system analysis and performance prediction- Shadow analysis: reliability - solar cell array design concepts - PV system design - design process and optimization - detailed array design - storage autonomy - voltage regulation - maximum tracking – use of computers in array design - quick sizing method - array protection and trouble shooting - centralized and decentralized SPV systems - stand alone - hybrid and grid connected system - System installation - operation and maintenances - field experience - PV market analysis and economics of SPV systems.

UNIT V: SOLAR PASSIVE ARCHITECTURE

9

Thermal comfort - heat transmission in buildings- bioclimatic classification – passive heating concepts: direct heat gain - indirect heat gain - isolated gain and sunspaces - passive cooling concepts: evaporative cooling - radiative cooling - application of wind,

water and earth for cooling; shading - paints and cavity walls for cooling - roof radiation traps - earth air-tunnel. – energy efficient landscape design - thermal comfort – concept of solar temperature and its significance - calculation of instantaneous heat gain through building envelope.

TOTAL: 45

COURSE OUTCOMES

Basic knowledge in Power system planning, operation and modeling of large scale power systems.

Ability to understand the various faults occurring in power system and to solve load flow problems using numerical methods.

Ability to analyze the power system transients and faults and select the rating for protective devices.

19153E44EP NON-CONVENTIONAL ENERGY SYSTEMS AND APPLICATIONS

2024

AIM

To learn about the Renewable energy system and conversion technologies related to various aspects of non-conventional systems.

OBJECTIVES

- to identify suitable utility for the solar and wind energy systems,
- to conduct a site survey for installation of a windmill during Sixth Expedition ,
- to study the structural and foundation aspects for installing a windmill at Maitree station in Schirmacher hills

UNIT-I

9

Introduction to renewable energy various aspects of energy conversion-Principle of renewable energy systems environment and social implications

UNIT-II

9

Solar energy: Solar radiation components- measurements-estimation-solar collectors-solar water heaters- Calculation-Types-analysis-economics-Applications Solar thermal power generation Solar Photovoltaics- energy conversion principle-classifications-equivalent circuit-characteristics-Cell efficiency- Limitations-PV modules-MPPT algorithms

UNIT-III

9

Wind energy: Basics of wind-wind turbines-power and energy from wind turbine-characteristics- types of electric generators for wind power generation. Dynamics matching- performance of wind generators - applications- economics of wind power

UNIT-IV

9

Storage Devices: Super capacitor-SMES- Battery storage-flywheel storage- compressed air storage- Fuel cells-types and applications; MHD generators – backup -System design-industrial and domestic applications.

UNIT-V

9

Bioenergy: Bio fuels-classification-biomass conversion technologies-applications; Ocean Energy: Tidal energy-wave energy-ocean thermal energy conversion systems-applications; - mini, micro and pico hydel power

Total : 45

19153E54AP ENVIRONMENTAL SCIENCE AND ENGINEERING 4 0 0 4

UNIT I- INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES

10

Definition, scope and importance – need for public awareness – forest resources: use and over-exploitation, deforestation,. Timber extraction, mining, dams-benefits and problems – mineral resources: use and effects on forests and tribal people – water resources: use and over-utilization of surface and exploitation, environmental effects of extracting and using mineral resources, case studies – food resources: world food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – energy resources: growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies – land resources: land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources.

UNIT II-ECOSYSTEMS AND BIODIVERSITY

14

Concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem. Introduction to biodiversity – definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity –endangered and endemic species of India – conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT III -ENVIRONMENTAL POLLUTION

8

Definition – causes, effects and control measures of: (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards — role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides.

UNIT IV-SOCIAL ISSUES AND THE ENVIRONMENT

7

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management
environmental ethics: issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents. environment production act – air (prevention and control

of pollution) act – water (prevention and control of pollution) act – wildlife protection act – forest conservation act – issues involved in enforcement of environmental legislation – public awareness

UNIT V-HUMAN POPULATION AND THE ENVIRONMENT 6

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – hiv / aids – women and child welfare – role of information technology in environment and human health – case studies.

TOTAL : 45

COURSE OUTCOMES

- Play a important role in transferring a healthy environment for future generations
- Analyze the impact of engineering solutions in a global and societal context
- Discuss contemporary issues that results in environmental degradation and would attempt to provide solutions to overcome those problems

TEXT BOOKS

1. Gilbert M .Masters, “Introduction to Environmental Engineering and Science”, Pearson Education Pvt., Ltd., Second Edition, ISBN 81-297-0277-0, 2004.

19153E54BP -ARTIFICIAL NEURAL NETWORKS

4 0 0 4

UNIT I : INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS 12

Biological neural networks - Pattern analysis tasks: Classification, Regression, Clustering
- Computational models of neurons - Structures of neural networks - Learning principles

UNIT II: LINEAR MODELS FOR REGRESSION AND CLASSIFICATION 12

Polynomial curve fitting - Bayesian curve fitting - Linear basis function models - Bias-variance decomposition - Bayesian linear regression - Least squares for classification - Logistic regression for classification- Bayesian logistic regression for classification

UNIT III: FEEDFORWARD NEURAL NETWORKS 12

Pattern classification using preceptor - Multilayer feed forward neural networks (MLFFNNs) - Pattern classification and regression using MLFFNNs - Error back propagation learning - Fast learning methods: Conjugate gradient method – Auto associative neural networks - Bayesian neural networks

UNIT III: RADIAL BASIS FUNCTION NETWORKS 12

Regularization theory - RBF networks for function approximation - RBF networks for pattern classification

UNIT IV: KERNEL METHODS FOR PATTERN ANALYSIS 12

Statistical learning theory- Support vector machines for pattern classification- Support vector regression for function approximation- Relevance vector machines for classification and regression

UNIT V: SELF-ORGANIZING MAPS 12

Pattern clustering- Topological mapping- Kohonen's self-organizing map

FEEDBACK NEURAL NETWORKS

Pattern storage and retrieval- Hopfield model- Boltzmann machine- Recurrent neural networks

TOTAL=60

COURSE OUTCOMES

- Analysis of transients using various parametric & non parametric methods.

- Analysis of various control schemes used for controlling applications
- study about the adaptive control systems for various applications & study of issues in it.

Text Books:

1. B.Yegnanarayana, Artificial Neural Networks, Prentice Hall of India, 1999
2. Satish Kumar, Neural Networks – A Classroom Approach, Tata McGraw-Hill, 2003
3. S.Haykin, Neural Networks – A Comprehensive Foundation, Prentice Hall, 1998
4. C.M.Bishop, Pattern Recognition and Machine Learning, Springer, 2006

19153E54CP-COMMUNICATION ENGINEERING 3 1 0 4

UNIT I 9
Need for Modulation, Amplitude Modulation, AM Demodulator, SSB Modulation, Vestigial Sideband Modulation, AM transmitter and Receiver, Noise and bandwidth in AM, Carrier Communication, Basic Principles of Pulsed and CW Radar.

UNIT II 9
Frequency Modulation, FM Demodulator, Phase Modulation, FM transmitter and receiver, Noise and bandwidth in FM, Ground wave, sky wave and space wave propagation, Basic Principles of BW and Colour TV.

UNIT III 9
Sampling theorem, PAM, PWM, PPM, Pulse Code Modulation, Noise in PCM, Delta Modulation, Adaptive Delta modulation, DPCM, M'ary system, FDM and TDM.

UNIT IV 9
Digital Modulation, ASK, FSK, PSK, DPSK, Basic Principles of Optical Communication, Satellite Comm., Mobile Comm.

UNIT V 9
Entropy, Mutual Information, Channel Capacity, Shannon Theorem, Shannon-Hartley Theorem, Shannon-Fano code, Huffman code, Parity Check Code, Hamming's Single Error Correction Code.

TOTAL 45

COURSE OUTCOMES

- The student will know about different analog modulation techniques and also about their transmitter, receivers
- The students will know about the principles behind different digital modulation techniques
- The student will know about different Multiplexing and Spread spectrum techniques.

REFERENCE BOOKS:

1. Electronics Communication System - G.Kennedy
2. Communication System-Analog & Digital - R.P.Singh & S.D.Sapre

19153E54DP- ROBOTICS

3 1 0 4

UNIT I: INTRODUCTION

9

Robot ,its evaluation; definition and aes of robotics, present application status.

UNIT II: ROBOT ANATOMY

9

configuration, robot motions, work volume. Robot drives, actuators and control; Functions and types of drives and actuators; concept of basic control systems, open loop, close loop, different type of controllers, ON-OFF, proportional, integral, PI, PD, PID.

UNIT III: ROBOT END EFFECTORS:

9

Types of end effecters, mechanical gripper, tools and end effectors. Robot sensors: Transducers and sensors; analog and digital transducers; types of sensors, tachfile sensors, proximity and rough sensors ; miscellaneous sensors; vision systems; use of sensors in robotics.

UIT IV: ROBOT KINEMATICS

9

Position representations; forward and reverse kinematics of three and four degrees of freedom; robot arm; homogeneous transformations and robot kinematics; kinematics equations using homogeneous transformation .

UNIT V: INDUSTRIAL APPLICATION

9

Capabilities of robots; robot applications; materials handling; pick and place operation; palletiging and depalletiging; machine loading and unloading; machine casting; welding;painting,assembly; inspection; maintenance.

COURSE OUTCOMES

- Ability to understand and develop MFC windows applications with inputs and drawing features and implement menus using VC++
- Ability to understand document/view architecture and develop classic controls using VC++
- Ability to understand and design event driven programming and activeX controls and manage database using visual basic

BOOKS RECOMMENDED:

- 1.Schilling-Fundamental of robotics; PH
- 2.Yoshikawa- Fundamental of robotics; PH
3. S.R.Deb-Robotics Technology and Flexible Automation
4. Introduction to Robotics, John J Craig; Pearson Education

AIM

To become familiar with the function of different components used in Transmission and Distribution levels of power systems and modeling of these components.

OBJECTIVES

To develop expression for computation of fundamental parameters of Power system analysis.

To categorize the lines into different classes and develop equivalent circuits for these classes.

To analyze the voltage distribution in Architectures and user interface.

UNIT-I**9**

Power system-general concepts-distribution of power, load and energy forecasting-factors in power system loading, Power system analysis-load flow-fault studies-voltage control.

UNIT-II**9**

Optimization of distribution system network cost modeling-economic loading of distribution transformers. Distribution system reliability-reliability assessment techniques

UNIT-III**9**

Consumer services-maximum demand, diversity and load factor-consumer load control for power shortages, Tariffs-costing and pricing –economically efficient tariff structure. Overhead and underground lines-optimum design considerations, Power capacitors-size of capacitor for power factor improvement- HT and LT capacitor installation requirements.

UNIT-IV**9**

Distribution System Design- Electrical Design Aspects of Industrial, Commercial Buildings- Design, estimation and costing of outdoor and indoor Substations, Electrical Safety and Earthing Practices at various voltage levels- Lightning protection.-Regulations and standards.

UNIT-V**9**

Distribution Automation System : Necessity, System Control Hierarchy- Basic Architecture and implementation Strategies for SCADA and DAC systems -Basic Distribution Management System Functions. Communication Systems for Control and Automation- Wireless and wired Communications- SCADA and DAC communication Protocols, Architectures and user interface

Total: 45

19153E64AP- PRINCIPLES OF MANAGEMENT 4 0 0 4

OBJECTIVE

- i. To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- ii. To understand the statistical approach for quality control.
- iii. To create an awareness about the ISO and QS certification process and its need for the industries

UNIT I HISTORICAL DEVELOPMENT 12

Definition of Management – Science or Art – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Types of Business Organisation.

UNIT II PLANNING 12

Nature & Purpose – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies & Planning Premises- Forecasting – Decision-making.

UNIT III ORGANISING 12

Nature and Purpose – Formal and informal organization – Organization Chart – Structure and Process – Departmentation by difference strategies – Line and Staff authority – Benefits and Limitations – De-Centralization and Delegation of Authority – Staffing – Selection Process - Techniques – HRD – Managerial Effectiveness.

UNIT IV DIRECTING 12

Scope – Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques –Job Enrichment – Communication – Process of Communication – Barriers and Breakdown –Effective Communication – Electronic media in Communication.

UNIT V CONTROLLING 12

System and process of Controlling – Requirements for effective control – The Budget as Control Technique – Information Technology in Controlling – Use of computers in handling the information – Productivity – Problems and Management – Control of Overall Performance – Direct and Preventive Control – Reporting – The Global Environment – Globalization and Liberalization – International Management and Global theory of Management.

TOTAL = 60

COURSE OUTCOMES

- Basic Knowledge on management, business, organization culture, environment and planning process.
- Ability to organize business activities, motivational techniques and effective communication.
- Ability to understand the management control and budgetary techniques.

TEXT BOOKS

1. Harold Kooritz & Heinz Weihrich “Essentials of Management”, Tata Mcgraw Hill,1998.
2. Joseph L Massie “Essentials of Management”, Prentice Hall of India, (Pearson) Fourth Edition, 2003.

4. Fraidoon Mazda, “ Engineering Management”, Addison Wesley,-2000.

19153E64BP- PROFESSIONAL ETHICS

4 0 0 4

AIM :

To ensure that the required technical knowledge and skills can be learnt .

OBJECTIVES :

- i. To create an awareness on Engineering Ethics and Human Values.
- ii. To instill Moral and Social Values and Loyalty
- iii. To appreciate the rights of Others

UNIT I HUMAN VALUES

9

Morals, Values and Ethics – Integrity – Work Ethic – Service Learning – Civic Virtue – Respect for Others – Living Peacefully – caring – Sharing – Honesty – Courage – Valuing Time – Co-operation – Commitment – Empathy – Self-Confidence – Character – Spirituality

UNIT II ENGINEERING ETHICS

9

Senses of 'Engineering Ethics' - variety of moral issued - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy – Models of Professional Roles - theories about right action - Self-interest - customs and religion - uses of ethical theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION

9

Engineering as experimentation - engineers as responsible experimenters - codes of ethics - a balanced outlook on law - the challenger case study.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS

9

Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk - the three mile island and chernobyl case studies.
Collegiality and loyalty - respect for authority - collective bargaining - confidentiality - conflicts of interest - occupational crime - professional rights - employee rights - Intellectual Property Rights (IPR) - discrimination.

UNIT V GLOBAL ISSUES

9

Multinational corporations - Environmental ethics - computer ethics - weapons development - engineers as managers-consulting engineers-engineers as expert witnesses and advisors -moral leadership-sample code of Ethics (Specific to a particular Engineering Discipline).

Total = 45

COURSE OUTCOMES

- Understand the ethical theories and concepts
- Understanding an engineer's work in the context of its impact on society
- Understand and analyze the concepts of safety and risk
- Understand the professional responsibilities and rights of Engineers

TEXT BOOKS

1. Mike Martin and Roland Schinzinger, "Ethics in engineering", McGraw Hill, New York 1996.

+++++

19153E64CP INTEGRATED OPTO-ELECTRONIC DEVICES 3 1 0 4

AIM

To learn different types of optical emission, detection, modulation and opto electronic integrated circuits and their applications.

OBJECTIVE

- To know the basics of solid state physics and understand the nature and characteristics of light.
- To understand different methods of luminescence, display devices and laser types and their applications.
- To understand different light modulation techniques and the concepts and applications of optical switching.

UNIT I: ELEMENTS OF LIGHT AND SOLID STATE PHYSICS 9

Wave nature of light, Polarization, Interference, Diffraction, Light Source, review of Quantum Mechanical concept, Review of Solid State Physics, Review of Semiconductor Physics and Semiconductor Junction Device.

UNIT II: DISPLAY DEVICES AND LASERS 9

Introduction, Photo Luminescence, Cathode Luminescence, Electro Luminescence, Injection Luminescence, LED, Plasma Display, Liquid Crystal Displays, Numeric Displays, Laser Emission, Absorption, Radiation, Population Inversion, Optical Feedback, Threshold condition, Laser Modes, Classes of Lasers, Mode Locking, laser applications.

UNIT III: OPTICAL DETECTION DEVICES 9

Photo detector, Thermal detector, Photo Devices, Photo Conductors, Photo diodes, Detector Performance.

UNIT IV OPTOELECTRONIC MODULATOR 9

Introduction, Analog and Digital Modulation, Electro-optic modulators, Magneto Optic Devices, Acoustoptic devices, Optical, Switching and Logic Devices.

UNIT V OPTOELECTRONIC INTEGRATED CIRCUITS 9

Introduction, hybrid and Monolithic Integration, Application of Opto Electronic Integrated circuits, integrated transmitters and Receivers, Guided wave devices.

COURSE OUTCOMES

- Ability to understand and analyze Instrumentation systems and their applications to various industries.
- Ability to know the basic properties of laser and to apply for industry.
- Recognize the importance of laser in medicinal and industry applications.

TEXTBOOK

19153E64DP -COMPUTER AIDED DESIGN OF ELECTRICAL APPARATUS

3 1 0 4

AIM

To introduce the basics of Computer Aided Design technology for the design of Electrical Machines.

OBJECTIVE

At the end of this course the student will be able to

Learn the importance of computer aided design method.

Understand the basic electromagnetic field equations and the problem formulation for CAD applications.

Become familiar with Finite Element Method as applicable for Electrical Engineering.

Know the organization of a typical CAD package.

Apply Finite Element Method for the design of different Electrical apparatus.

UNIT I: INTRODUCTION 12

Conventional design procedures – Limitations – Need for field analysis based design – Review of Basic principles of energy conversion – Development of Torque/Force.

UNIT II: MATHEMATICAL FORMULATION OF FIELD PROBLEMS 12

Electromagnetic Field Equations – Magnetic Vector/Scalar potential – Electrical vector /Scalar potential – Stored energy in Electric and Magnetic fields – Capacitance - Inductance- Laplace and Poisson's Equations – Energy functional.

UNIT III: PHILOSOPHY OF FEM 12

Mathematical models – Differential/Integral equations – Finite Difference method – Finite element method – Energy minimization – Variation method- 2D field problems – Discretisation – Shape functions – Stiffness matrix – Solution techniques.

UNIT IV: CAD PACKAGES 12

Elements of a CAD System –Pre-processing – Modeling – Meshing – Material properties- Boundary Conditions – Setting up solution – Post processing.

UNIT V: DESIGN APPLICATIONS 12

Voltage Stress in Insulators – Capacitance calculation - Design of Solenoid Actuator – Inductance and force calculation – Torque calculation in Switched Reluctance Motor.

COURSE OUTCOMES

The students will obtain the knowledge of basic electric and magnetic materials and design of rotating electrical Machines and Transformers.

The students will be able to overall design the machines and transformers.

The students will gain knowledge about the various types of electrical machines and design of both ac & dc Machines and many application.

19153E64EP ADVANCED DC-AC POWER CONVERSION 2024

AIM

To study advanced DC-AC power conversion technologies

OBJECTIVE

To provide conceptual knowledge in modern power electronic converters and its applications in electric power utility.

UNIT-I TWO-LEVEL VOLTAGE SOURCE INVERTER 9

Introduction - **Sinusoidal PWM** - Modulation Scheme - Harmonic Content – Over-modulation – Third Harmonic Injection PWM - **Space Vector Modulation** - Switching States - Space Vectors - Dwell Time Calculation - Modulation Index - Switching Sequence - Spectrum Analysis - Even-Order Harmonic Elimination - Discontinuous Space Vector Modulation

UNIT-II CASCADED H-BRIDGE (CHB) MULTILEVEL INVERTERS 9

Introduction - **H-Bridge Inverter** - Bipolar Pulse-Width Modulation - Unipolar Pulse-Width Modulation – **Multilevel Inverter Topologies** - CHB Inverter with Equal dc Voltage - H-Bridges with Unequal dc Voltages.

Carrier Based PWM Schemes - Phase-Shifted Multicarrier Modulation - Level-Shifted Multicarrier Modulation - Comparison Between Phase- and Level-Shifted PWM Schemes - Staircase Modulation.

UNIT-III DIODE-CLAMPED MULTILEVEL INVERTERS 9

Introduction - **Three-Level Inverter** - Converter Configuration - Switching State - Commutation - Space Vector Modulation - Stationary Space Vectors - Dwell Time Calculation - Relationship Between V_{ref} Location and Dwell Times - Switching Sequence Design - Inverter Output Waveforms and Harmonic Content - Even-Order Harmonic Elimination - **Neutral-Point Voltage Control** - Causes of Neutral-Point Voltage Deviation – Effect of Motoring and Regenerative Operation - Feedback Control of Neutral-Point Voltage

UNIT-IV 9

Other Space Vector Modulation Algorithms - Discontinuous Space Vector Modulation - SVM Based on Two-level Algorithm **High-Level Diode-Clamped Inverters** - Four- and Five-Level Diode-Clamped Inverters - Carrier-Based PWM – **Other Multilevel Voltage Source Inverters** – **Introduction - NPC/H-Bridge Inverter - Inverter** Topology - Modulation Scheme - Waveforms and Harmonic Content - **Multilevel Flying-Capacitor Inverters** – Inverter Configuration - Modulation Schemes

UNIT-V PWM CURRENT SOURCE INVERTERS 9

Introduction - PWM Current Source Inverter - Trapezoidal Modulation - Selective Harmonic Elimination - **Space Vector Modulation** - Switching States - Space Vectors - Dwell Time Calculation - Switching Sequence - Harmonic Content - SVM Versus TPWM and SHE - **Parallel Current Source Inverters** - Inverter Topology - Space Vector Modulation for Parallel Inverters - Effect of Medium Vectors on dc Currents - dc Current Balance Control - Load-Commutated Inverter (LCI)

19153E74AP - POWER SYSTEM TRANSIENTS

3 0 0 3

Semester VII

AIM

To understand generation of switching and lightning transients, their propagation, reflection and refraction on the grid and their impact on the grid equipment.

OBJECTIVES

- i. To study the generation of switching transients and their control using circuit – theoretical concept.
- ii. To study the mechanism of lightning strokes and the production of lightning surges.
- iii. To study the propagation, reflection and refraction of travelling waves.
- iv. To study the impact of voltage transients caused by faults, circuit breaker action, load rejection on integrated power system.

UNIT I INTRODUCTION AND SURVEY 7

Various types of power system transients - effects of transients on power systems.

UNIT II LIGHTNING AND SWITCHING SURGES 19

Electrification of thunder clouds – lightning current surges, parameters – closing and reclosing of lines – load rejection – fault clearing – short line faults – ferro-resonance – temporary over voltages – harmonics.

UNIT III MODELLING OF POWER SYSTEM EQUIPMENT 14

Surge parameters of power systems equipment, equivalent circuit representation, lumped and distributed circuit transients.

UNIT IV COMPUTATION OF TRANSIENT OVERVOLTAGES 14

Computation of transients – traveling wave method, Bewley's lattice diagram – analysis in time and frequency domain, EMTP for transient computation.

UNIT V INSULATION COORDINATION 12

Insulation co-ordination – over voltage protective devices principles of recent co-ordination and design of EHV lines. **Total = 60**

COURSE OUTCOMES

- Ability to understand and analyze power system transients and types of switching transients.
- To get knowledge about lightning transients and high voltage transient behavior travelling on line.
- To get knowledge about transients in integrated power systems.

TEXT BOOKS

1. Allan Greenwood, 'Electrical Transients in Power Systems', Wiley Inter science, New York, 2nd edition 1991.
2. R.D Begamudre, 'Extra High Voltage AC Transmission Engineering', Wiley Eastern Limited, 1986.

REFERENCES

19153E74BP -EHV AC and DC TRANSMISSION SYSTEMS

3 0 0 3

UNIT I	TRANSMISSION ENGINEERING	9
Transmission line trends – Standard transmission voltages – Power handling capacity and line losses Cost of transmission lines and equipment – Mechanical consideration – Transmission Engineering principles.		
UNIT II	LINE PARAMETER	9
Calculation of line and ground parameters - Resistance, capacitance and Inductance calculation – Bundle conductors – modes propagation – Effect of earth.		
UNIT III	POWER CONTROL	9
Power frequency and voltage control – voltage control – Over voltages – Power circle diagram – Voltage control using shunt and series compensation – Static VAR compensation – Higher Phase order system – FACTS.		
UNIT IV	EHV AC Transmission	9
Design of EHV lines based in steady state limits and transient over voltages – Design of extra HV cable transmission – XLPE cables – Gas insulated cable – Corona and RIV.		
UNIT V	HVDC TRANSMISSION	9
HVDC Transmission principles – Comparison of HVAC and HVDC transmission – Economics – types of Converters – HVDC links – HVDC control – Harmonics – Filters – Multi terminal DC System – HVDC cables and HVDC circuit breakers.		
		Total=45

COURSE OUTCOMES

- Basic knowledge of HVDC Transmission, its components, types and applications
- Ability to analyze and design the Converter circuits, System Control Techniques
- Ability to design filters for harmonic control and perform power flow analysis using Per unit system for DC Quantities.

Reference Books:

1. Rakosh Das Begamudre, 'Extra HVDC Transmission Engineering', Wiley Eastern Ltd, 1990.
2. Padiyar K.R., 'HVDC Power Transmission systems', Wiley Eastern Ltd, 1993.

4. Arrilaga J., 'HVDC transmission', Peter Perengrinus Ltd, London, 1983.

19153E74CP - FIBRE OPTICS AND LASER INSTRUMENTS

3 0 0

3

AIM:

To contribute to the knowledge of Fibre optics and Laser Instrumentation and its Industrial & Medical Application.

OBJECTIVES

- i. To expose the students to the basic concepts of optical fibres and their properties.
- ii. To provide adequate knowledge about the Industrial applications of optical fibres.
- iii. To expose the students to the Laser fundamentals.
- iv. To provide adequate knowledge about Industrial application of lasers.
- v. To provide adequate knowledge about holography & Medical applications of Lasers.

1. OPTICAL FIBRES AND THEIR PROPERTIES 12

Principles of light propagation through a fibre - Different types of fibres and their properties, fibre characteristics – Absorption losses – Scattering losses – Dispersion – Connectors & splicers – Fibre termination – Optical sources – Optical detectors.

2. INDUSTRIAL APPLICATION OF OPTICAL FIBRES 9

Fibre optic sensors – Fibre optic instrumentation system – Different types of modulators – Interferometric method of measurement of length – Moire fringes – Measurement of pressure, temperature, current, voltage, liquid level and strain.

3. LASER FUNDAMENTALS 9

Fundamental characteristics of lasers – Three level and four level lasers – Properties of laser – Laser modes – Resonator configuration – Q-switching and mode locking – Cavity damping – Types of lasers – Gas lasers, solid lasers, liquid lasers, semiconductor lasers.

4. INDUSTRIAL APPLICATION OF LASERS 6

Laser for measurement of distance, length, velocity, acceleration, current, voltage and Atmospheric effect – Material processing – Laser heating, welding, melting and trimming of material – Removal and vaporization.

5. HOLOGRAM AND MEDICAL APPLICATIONS 9

Holography – Basic principle - Methods – Helographic interferometry and application, Holography for non-destructive testing – Holographic components – Medical applications of lasers, laser and tissue interactive – Laser instruments for surgery, removal of tumours of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

L= 45 Total = 45

COURSE OUTCOMES

- Ability to understand and analyze Instrumentation systems and their applications to various industries.
- Ability to know the basic properties of laser and to apply for industry.
- Recognize the importance of laser in medicinal and industry applications.

 6. Mr. Gupta, 'Fiber Optics Communication', Prentice Hall of India, 2004.
-

19153E74DP - ADVANCED CONTROL SYSTEMS**3 0 0 3****AIM**

To gain knowledge in analysis of non-linear system and digital control of linear system.

OBJECTIVES

- i. To study the description and stability of non-linear system.
- ii. To study the conventional technique of non-linear system analysis.
- iii. To study the analysis discrete time systems using conventional techniques.
- iv. To study the analysis of digital control system using state-space formulation.
- v. To study the formulation and analysis of multi input multi output (MIMO) system.

UNIT I NON-LINEAR SYSTEM – DESCRIPTION & STABILITY**9**

Linear vs non-linear – Examples – Incidental and Intentional – Mathematical description - Equilibria and linearisation - Stability – Lyapunov function – Construction of Lyapunov function.

UNIT II PHASE PLANE AND DESCRIBING FUNCTION ANALYSIS**9**

Construction of phase trajectory – Isocline method – Direct or numerical integration – Describing function definition – Computation of amplitude and frequency of oscillation.

UNIT III Z-TRANSFORM AND DIGITAL CONTROL SYSTEM**9**

Z transfer function – Block diagram – Signal flow graph – Discrete root locus – Bode plot.

UNIT IV STATE-SPACE DESIGN OF DIGITAL CONTROL SYSTEM**9**

State equation – Solutions – Realization – Controllability – Observability – Stability Jury's test.

UNIT V MUTLI INPUT MULTI OUTPUT (MIMO) SYSTEM:**9**

Models of MIMO system – Matrix representation – Transfer function representation – Poles and Zeros – Decoupling – Introduction to multivariable Nyquist plot and singular values analysis – Model predictive control. **L = 45 Total = 45**

COURSE OUTCOMES

- Develop mathematical models and understand the mathematical relationships between
- the sensitivity functions and how they govern the fundamentals in control systems.
- Design and fine tune PID controllers and understand the roles of P, I and D in feedback control and develop state-space models
- Advanced filters design for various control applications with proper error estimation techniques.

19153E74EP SWITCHED MODE POWER SUPPLIES 2 0 2 4

AIM

To study low power SMPS and UPS technologies

OBJECTIVE

To provide conceptual knowledge in modern power electronic converters and its applications in electric power utility.

UNIT-I Introduction 9

Linear regulator Vs. Switching regulator – Topologies of SMPS – isolated and non isolated topologies – Buck – Boost – Buck boost – Cuk – Polarity inverting topologies – Push pull and forward converters half bridge and full bridge – Fly back converters Voltage fed and current fed topologies. EMI issues.

UNIT-II Design Concepts 9

Magnetic Circuits and design – Transformer design - core selection – winding wire selection – temperature rise calculations - Inductor design. Core loss – copper loss – skin effect - proximity effect. Power semiconductor selection and its drive circuit design – snubber circuits. Closing the feedback loop – Control design – stability considerations

UNIT-III Control Modes 9

Voltage Mode Control of SMPS.. Transfer Function and Frequency response of Error Amp. Transconductance Error Amps. PWM Control ICs (SG 3525, TL 494, MC34060 etc.) Current Mode Control and its advantages. Current Mode Vs Voltage Mode. Current Mode PWM Control IC(eg. UC3842).

UNIT-IV Applications of SMPS 9

Active front end – power factor correction – High frequency power source for fluorescent lamps - power supplies for portable electronic gadgets.

UNIT-V Resonant converters 9

Principle of operation – modes of operation – quasi resonant operation- advantages.

Total : 45

19153P75P Project Work

- The student will use their ability to design electrical, electronic systems and signals through modeling, simulation, experimentation, interpretation and analysis to build, test, and debug prototype circuits and systems and analyze results using the principles of design to solve open-ended engineering problems.
- The students will be able to take professional decisions based on the impact of socio-economic issues by their self-confidence, a high degree of personal integrity, and the belief that they can each make a difference by developing persuasive communication skills in a variety of media by engaging them in team-based activities, and by strengthening their interpersonal skills. This will lead to develop the leadership qualities by making the students to identify their personal values and demonstrate the practice of ethical leadership.
- The students will be able to appreciate the importance of optimization, commercialization, and innovation as the desired features of the designed system

DEAN ACADEMICS

VICE CHANCELLOR

SYLLABUS

**19248S11D - APPLIED MATHEMATICS FOR ELECTRICAL & ELECTRONICS
ENGINEERING**

3 1 0 4

1. ADVANCED MATRIX THEORY 9

Matrix norms – Jordan canonical form – Generalized eigenvectors – Singular value decomposition – Pseudo inverse – Least square approximations.

2. RANDOM PROCESSES 9

Random variable, discrete, continuous types - Binomial, Poisson, normal and exponential distributions density & distribution Functions- Moments Moment Generating Functions – Notion of stochastic processes - Auto-correlation – Cross correlation .

3. LINEAR PROGRAMMING 9

Basic concepts – Graphical and Simplex methods –Transportation problem – Assignment problem.

4. DYNAMIC PROGRAMMING 9

Elements of the dynamic programming model – optimality principle – Examples of dynamic programming models and their solutions.

5. INTEGRAL TRANSFORMS 9

Finite Fourier transform - Fourier series - Finite sine Transform - Cosine transform - finite Hankel transform - definition, Transform of df/dx where p is a root of $J_n(p) = 0$, Transform of

$$\frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx}, \text{ and Transform of } \frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx} - \frac{n^2f}{x^2}$$

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

1. PHYSICAL SYSTEMS AND STATE ASSIGNMENT 9

Systems - electrical - mechanical - hydraulic - pneumatic - thermal systems - modelling of some typical systems like D.C. Machines - inverted pendulum.

2. STATE SPACE ANALYSIS 9

Realisation of state models - non-uniqueness - minimal realisation - balanced realisation - solution of state equations - state transition matrix and its properties - free and forced responses - properties - controllability and observability - stabilisability and detectability - Kalman decomposition.

3. MIMO SYSTEMS - FREQUENCY DOMAIN DESCRIPTIONS 9

Properties of transfer functions - impulse response matrices - poles and zeros of transfer function matrices - critical frequencies - resonance - steady state and dynamic response - bandwidth - Nyquist plots - singular value analysis.

4. NON-LINEAR SYSTEMS 9

Types of non-linearity - typical examples - equivalent linearization - phase plane analysis - limit cycles - describing functions - analysis using describing functions - jump resonance.

5. STABILITY 9

Stability concepts - equilibrium points - BIBO and asymptotic stability - direct method of Liapunov - application to non-linear problems - frequency domain stability criteria - Popov's method and its extensions.

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

19272H13 - POWER SYSTEM MODELLING AND ANALYSIS**3 1 0 4****1. SOLUTION TECHNIQUE****9**

Sparse Matrix techniques for large scale power systems: Optimal ordering schemes for preserving sparsity. Flexible packed storage scheme for storing matrix as compact arrays – Factorization by Bifactorization and Gauss elimination methods; Repeat solution using Left and Right factors and L and U matrices.

2. POWER FLOW ANALYSIS**9**

Power flow equation in real and polar forms; Review of Newton's method for solution; Adjustment of P-V buses; Review of Fast Decoupled Power Flow method; Sensitivity factors for P-V bus adjustment; Net Interchange power control in Multi-area power flow analysis: ATC, Assessment of Available Transfer Capability (ATC) using Repeated Power Flow method; Continuation Power Flow method.

3. OPTIMAL POWER FLOW**9**

Problem statement; Solution of Optimal Power Flow (OPF) – The gradient method, Newton's method, Linear Sensitivity Analysis; LP methods – With real power variables only – LP method with AC power flow variables and detailed cost functions; Security constrained Optimal Power Flow; Interior point algorithm; Bus Incremental costs.

4. SHORT CIRCUIT ANALYSIS**9**

Fault calculations using sequence networks for different types of faults. Bus impedance matrix (ZBUS) construction using Building Algorithm for lines with mutual coupling; Simple numerical problems. Computer method for fault analysis using ZBUS and sequence components. Derivation of equations for bus voltages, fault current and line currents, both in sequence and phase domain using Thevenin's equivalent and ZBUS matrix for different faults.

5. TRANSIENT STABILITY ANALYSIS**9**

Introduction, Numerical Integration Methods: Euler and Fourth Order Runge-Kutta methods, Algorithm for simulation of SMIB and multi-machine system with classical synchronous machine model; Factors influencing transient stability, Numerical stability and implicit Integration methods.

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

19272H14 - ECONOMIC OPERATIONS OF POWER SYSTEMS-I**3 1 0 4****1. INTRODUCTION****9**

Planning and operational problems of power systems – review of economic dispatch and calculation using B matrix loss formula – use of participation factors in on line economic dispatch.

2. OPTIMAL POWER FLOW PROBLEM**9**

Real and reactive power control variables – operation and security constraints and their limits – general OPF problem with different objective functions – formulation – cost loss minimization using Dommel and Tinney's method and SLP – development of model and algorithm – MVAR planning – optimal sitting and sizing of capacitors using SLR method – interchange evaluation using SLP.

3. HYDRO THERMAL SCHEDULING**9**

Problems definition and mathematical model of long and short term problems – discretization – dynamic and incremental dynamic programming – methods of local variation – hydro thermal system with pumped hydro units – solution by local variation treating pumped hydro unit for load management and spinning reserve.

4. UNIT COMMITMENT**9**

Constraints in unit commitment – solution by priority list method – dynamic programming method – backward and forward – restricted search range.

5. MAINTENANCE SCHEDULING**9**

Factors considered in maintenance scheduling for generating units – turbines – boilers – introduction to maintenance scheduling using mathematical programming.

19253E16B - HIGH VOLTAGE DIRECT CURRENT TRANSMISSION SYSTEM**3 1 0 4****1. DC POWER TRANSMISSION TECHNOLOGY 9**

Introduction – comparison of Ac and DC transmission _ application of DC transmission – description of DC transmission system system – planning for HVDC transmission – modern trends in DC transmission.

2. ANALYSIS OF HVDC CONVERTERS 9

Pulse number – choice of converter configuration simplified analysis of Graetz circuit converter converter bridge characteristics – characteristics of a twelve pulse converter – detailed analysis of converters.

3. CONVERTER AND HVDC SYSTEM CONTROL 9

General principles of DC link control – converter control characteristics – systems control hierarchy – firing angle control – current and extinction angle control – starting and stopping of DC link – power control – higher level controllers – telecommunication requirements.

4. HARMONICS AND FILTERS 9

Introduction – generation of harmonics – design of AC filters – DC filters – carrier frequency and RI noise.

5. SIMULATION OF HVDC SYSTEMS 9

Introduction – system simulation: Philosophy and tools- HVDC system simulation – modeling of HVDC systems for digital dynamic simulation.

EXPERIMENTS

1. Formation of Y bus, Z bus, line parameters and modeling of transmission lines.
2. Power flow analysis: Gauss – Seidel Method.
3. Power flow analysis: Newton Raphson method.
4. Plain Decoupled and Fast Decoupled methods.
5. Contingency analysis – single and multiple symmetrical and unsymmetrical faults.

P=3 C=3

19272H21 - EHV POWER TRANSMISSION

3 1 0 4

1. INTRODUCTION

9

Standard transmission voltages – different configurations of EHV and UHV lines – average values of line parameters – power handling capacity and line loss – costs of transmission lines and equipment – mechanical considerations in line performance.

2. CALCULATION OF LINE PARAMETERS

9

Calculation of resistance, inductance and capacitance for multi-conductor lines – calculation of sequence inductances and capacitances – line parameters for different modes of propagation – resistance and inductance of ground return, numerical example involving a typical 400/220kV line using line constant program.

3. VOLTAGE GRADIENTS OF CONDUCTORS

9

Charge-potential relations for multi-conductor lines – surface voltage gradient on conductors – gradient factors and their use – distribution of voltage gradient on sub conductors of bundle - voltage gradients on conductors in the presence of ground wires on towers.

4. CORONA EFFECTS

9

Power losses and audible losses: I R loss and corona loss - audible noise generation and characteristics - limits for audible noise - Day-Night equivalent noise level- radio interference: corona pulse generation and properties - limits for radio interference fields

5. ELECTROSTATIC FIELD OF EHV LINES

9

Effect of EHV line on heavy vehicles - calculation of electrostatic field of AC lines- effect of high field on humans, animals, and plants - measurement of electrostatic fields - electrostatic Induction in unenergised circuit of a D/C line - induced voltages in insulated ground wires - electromagnetic interference

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

19272H22 - ECONOMIC OPERATIONS OF POWER SYSTEMS-II**3 1 0 4****1. AUTOMATIC GENERATION CONTROL****9**

Plant and system level control problem – ALFC of single area system modeling state and transient response – EDC control loop – ALFC of multi area system – modeling – static and transient response of two area system development of state variable model – two area system – AGC system design Kalman's method.

2. AUTOMATIC VOLTAGE CONTROL**9**

Modeling of AVR loop – components – dynamic and static analysis – stability compensation – system level voltage control using OLTC, capacitor and generator voltages – expert system application for system voltage control.

3. SECURITY CONTROL CONCEPT**9**

System operating states by security control functions – monitoring evaluation of system state by contingency analysis – corrective controls (preventive, emergency and restorative) – islanding scheme.

4. STATE ESTIMATION**9**

Least square estimation – basic solution – sequential form of solution – static state estimation of power system by different algorithms – tracking state estimation of power system-computation consideration – external equivalency. Treatment of bad data and on line load flow analysis.

5. COMPUTER CONTROL OF POWER SYSTEM**9**

Energy control center – various levels – national – regional and state level SCADA system – computer configuration – functions, monitoring, data acquisition and controls – EMS system – software in EMS system. Expert system applications for power system operation.

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

19272H23 - POWER SYSTEM PROTECTION

3 1 0 4

1. INTRODUCTION 9

General philosophy – Review of conventional equipment protection schemes – state of the art: Numerical relays

2. DISTANCE PROTECTION 9

Transmission line protection – fault clearing times – relaying quantities during swings – evaluation of distance relay performance during swings – prevention of tripping during transient conditions – automatic line reclosing – generator out of step protection – simulation of distance relays during transients.

3. GENERATOR PROTECTION 9

Out – of – step, loss of excitation. System response to severe upsets – nature of system response to severe upsets – frequency actuated schemes for load shedding and islanding.

4. INTRODUCTION TO COMPUTER RELAYING 9

Development of computer relaying – historical background – Expected benefits of computer relaying – computer relay architecture – A/D converter – Anti aliasing filters – substation computer hierarchy.

5. DIGITAL TRANSMISSION LINE RELAYING 9

Introduction – source of error – relaying as parameter estimation – beyond parameter estimation – symmetrical component distance relay – protection of series compensated lines. Digital protection of transformers, machines and buses.

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

LIST OF EXPERIMENTS:

1. Small signal stability analysis: SMIB and Multi machine configuration.
2. Transients stability analysis of Multi – machine configuration.
3. Load Frequency control: single area, multi area control.
4. Economic load dispatch with losses
5. Unit commitment by dynamic programming & priority list method

P=3 C=3

19272H31 - ELECTRICAL TRANSIENTS IN POWER SYSTEMS**3 1 0 4****1. TRAVELLING WAVES ON TRANSMISSION LINE 9**

Lumped and Distributed Parameters – Wave Equation – Reflection, Refraction, Behavior of Travelling waves at the line terminations – Lattice Diagrams – Attenuation and Distortion – Multi-conductor system and Velocity wave.

2. COMPUTATION OF POWER SYSTEM TRANSIENTS 9

Principle of digital computation – Matrix method of solution, Modal analysis, Z transforms, Computation using EMTP – Simulation of switches and non-linear elements.

3. LIGHTNING, SWITCHING AND TEMPORARY OVERVOLTAGES 9

Lightning: Physical phenomena of lightning – Interaction between lightning and power system – Factors contributing to line design – Switching: Short line or kilometric fault – Energizing transients - closing and re-closing of lines - line dropping, load rejection - Voltage induced by fault – Very Fast Transient Overvoltage (VFTO)

4. BEHAVIOUR OF WINDING UNDER TRANSIENT CONDITION 9

Initial and Final voltage distribution - Winding oscillation - traveling wave solution - Behavior of the transformer core under surge condition – Rotating machine – Surge in generator and motor

5. INSULATION CO-ORDINATION 9

Principle of insulation co-ordination in Air Insulated substation (AIS) and Gas Insulated Substation (GIS), insulation level, statistical approach, co-ordination between insulation and protection level – overvoltage protective devices – lightning arresters, substation earthing.

19272E16A – ANALYSIS AND DESIGN OF POWER CONVERTERS L T P C**3 0 0 3****OBJECTIVES:**

- To determine the operation and characteristics of controlled rectifiers.
- To apply switching techniques and basic topologies of DC-DC switching regulators.
- To introduce the design of power converter components.
- To provide an in depth knowledge about resonant converters.
- To comprehend the concepts of AC-AC power converters and their applications.

UNIT I SINGLE PHASE & THREE PHASE CONVERTERS 9

Principle of phase controlled converter operation – single-phase full converter and semi-converter (RL, RLE load)- single phase dual converter – Three phase operation full converter and semi-converter (R, RL, RLE load) – reactive power – power factor improvement techniques – PWM rectifiers.

UNIT II DC-DC CONVERTERS 9

Limitations of linear power supplies, switched mode power conversion, Non-isolated DC-DC converters: operation and analysis of Buck, Boost, Buck-Boost, Cuk & SEPIC – under continuous and discontinuous operation – Isolated converters: basic operation of Flyback, Forward and Push-pull topologies.

UNIT III DESIGN OF POWER CONVERTER COMPONENTS 9

Introduction to magnetic materials- hard and soft magnetic materials – types of cores, copper windings – Design of transformer – Inductor design equations – Examples of inductor design for buck/flyback converter – selection of output filter capacitors – selection of ratings for devices – input filter design.

UNIT IV RESONANT DC-DC CONVERTERS 9

Switching loss, hard switching, and basic principles of soft switching- classification of resonant converters- load resonant converters – series and parallel – resonant switch converters – operation and analysis of ZVS, ZCS converters comparison of ZCS/ZVS-Introduction to ZVT/ZCT PWM converters.

UNIT V AC-AC CONVERTERS 9

Principle of on-off and phase angle control – single phase ac voltage controller – analysis with R & RL load – Three phase ac voltage controller – principle of operation of cyclo converter – single phase and three phase cyclo converters – Introduction to matrix converters.

TOTAL : 45 PERIODS**OUTCOMES:**

At the end of the course the student will be able to:

- Analyze various single phase and three phase power converters
- Select and design dc-dc converter topologies for a broad range of power conversion applications.
- Develop improved power converters for any stringent application requirements.
- Design ac-ac converters for variable frequency applications.

19272E16B - MODELLING AND ANALYSIS OF ELECTRICAL MACHINES**3 1 0 4****UNIT I PRINCIPLES OF ELECTROMAGNETIC ENERGY CONVERSION**

General expression of stored magnetic energy - co-energy and force/torque - example using single and doubly excited system.

UNIT II BASIC CONCEPTS OF ROTATING MACHINES

Calculation of air gap M.M.F. - per phase machine inductance using physical machine data - voltage and torque equation of D.C. machine - three phase symmetrical induction machine and salient pole synchronous machines in phase variable form.

UNIT III INTRODUCTION TO REFERENCE FRAME THEORY

Static and rotating reference frames - transformation relationships - examples using static symmetrical three phase R, R-L, R-L-M and R-L-C circuits - application of reference frame theory to three phase symmetrical induction and synchronous machines - dynamic direct and quadrature axis model in arbitrarily rotating reference frames - voltage and torque equations - derivation of steady state phasor relationship from dynamic model - generalized theory of rotating electrical machine and Kron's primitive machine.

UNIT IV DETERMINATION OF SYNCHRONOUS MACHINE DYNAMIC EQUIVALENT CIRCUIT PARAMETERS

Standard and derived machine time constants - frequency response test - analysis and dynamic modeling of two phase asymmetrical induction machine and single phase induction machine.

UNIT V SPECIAL MACHINES

Permanent magnet synchronous machine - surface permanent magnet (square and sinusoidal back E.M.F. type) and interior permanent magnet machines - construction and operating principle - dynamic modeling and self controlled operation - analysis of switch reluctance motors.

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

TEXT BOOKS

1. Charles Kingsley, A.E. Fitzgerald Jr. and Stephen D. Umans, 'Electric Machinery', Tata McGraw-Hill, Fifth Edition, 1992.
2. R. Krishnan, 'Electric Motor & Drives: Modelling, Analysis and Control', Prentice Hall of India, 2001.

REFERENCES

1. C.V. Jones, 'The Unified Theory of Electrical Machines', Butterworth, 1967.
2. T.J.E. Miller, 'Brushless Permanent Magnet and Reluctance Motor Drives' Clarendon Press, 1989.

OBJECTIVES:

- To perform transient stability analysis using unified algorithm.
- To impart knowledge on sub-synchronous resonance and oscillations
- To analyze voltage stability problem in power system.
- To familiarize the methods of transient stability enhancement

UNIT I TRANSIENT STABILITY ANALYSIS**9**

Review of numerical integration methods: Euler and Fourth Order Runge-Kutta methods, Numerical stability and implicit methods, Interfacing of Synchronous machine (variable voltage) model to the transient stability algorithm (TSA) with partitioned – explicit and implicit approaches – Interfacing SVC with TSA-methods to enhance transient stability

UNIT II UNIFIED ALGORITHM FOR DYNAMIC ANALYSIS OF POWER SYSTEMS**9**

Need for unified algorithm- numerical integration algorithmic steps-truncation error-variable step size – handling the discontinuities- numerical stability- application of the algorithm for transient. Mid-term and long-term stability simulations

UNIT III SUBSYNCHRONOUS RESONANCE (SSR) AND OSCILLATIONS**9**

Subsynchronous Resonance (SSR) – Types of SSR - Characteristics of series –Compensated transmission systems –Modeling of turbine-generator-transmission network- Self-excitation due to induction generator effect – Torsional interaction resulting in SSR – Methods of analyzing SSR – Numerical examples illustrating instability of subsynchronous oscillations – time-domain simulation of subsynchronous resonance – EMTD with detailed synchronous machine model- Turbine Generator Torsional Characteristics: Shaft system model – Examples of torsional characteristics – Torsional Interaction with Power System Controls: Interaction with generator excitation controls – Interaction with speed governors – Interaction with nearby DC converters

UNIT IV TRANSMISSION, GENERATION AND LOAD ASPECTS OF VOLTAGE STABILITY ANALYSIS**9**

Review of transmission aspects – Generation Aspects: Review of synchronous machine theory – Voltage and frequency controllers – Limiting devices affecting voltage stability – Voltage-reactive power characteristics of synchronous generators – Capability curves – Effect of machine limitation on deliverable power – Load Aspects – Voltage dependence of loads – Load restoration dynamics – Induction motors – Load tap changers – Thermostatic load recovery – General aggregate load models.

UNIT V ENHANCEMENT OF TRANSIENT STABILITY AND COUNTER MEASURES FOR SUB SYNCHRONOUS RESONANCE**9**

Principle behind transient stability enhancement methods: high-speed fault clearing, reduction of transmission system reactance, regulated shunt compensation, dynamic braking, reactor switching, independent pole-operation of circuit-breakers, single-pole switching, fast-valving, high-speed excitation systems; NGH damper scheme.

TOTAL : 45 PERIODS

OUTCOMES:

- Learners will be able to understand the various schemes available in Transformer protection
- Learners will have knowledge on Over current protection.
- Learners will attain knowledge about Distance and Carrier protection in transmission lines.
- Learners will understand the concepts of Busbar protection.
- Learners will attain basic knowledge on numerical protection techniques

- To provide in-depth knowledge on design criteria of Air Insulated Substation (AIS) and Gas Insulated Substation (GIS).
- To study the substation insulation co-ordination and protection scheme.
- To study the source and effect of fast transients in AIS and GIS.

UNIT I INTRODUCTION TO AIS AND GIS 9

Introduction – characteristics – comparison of Air Insulated Substation (AIS) and Gas Insulated Substation (GIS) – main features of substations, Environmental considerations, Planning and installation- GIB / GIL

UNIT II MAJOR EQUIPMENT AND LAYOUT OF AIS AND GIS 9

Major equipment – design features – equipment specification, types of electrical stresses, mechanical aspects of substation design- substation switching schemes- single feeder circuits; single or main bus and sectionalized single bus- double main bus-main and transfer bus- main, reserve and transfer bus- breaker-and-a- half scheme-ring bus

UNIT III INSULATION COORDINATION OF AIS AND GIS 9

Introduction – stress at the equipment – insulation strength and its selection – standard BILs – Application of simplified method – Comparison with IEEE and IEC guides.

UNIT IV GROUNDING AND SHIELDING 9

Definitions – soil resistivity measurement – ground fault currents – ground conductor – design of substation grounding system – shielding of substations – Shielding by wires and masts.

UNIT V FAST TRANSIENTS PHENOMENON IN AIS AND GIS 9

Introduction – Disconnecter switching in relation to very fast transients – origin of VFTO – propagation and mechanism of VFTO – VFTO characteristics – Effects of VFTO.

TOTAL: 45 PERIODS

OUTCOMES:

- Ability to apply Awareness towards substation equipment and their arrangements.
- Ability to design the substation for present requirement with proper insulation coordination and protection against fast transients.

SMART GRID

LTPC

3003

OBJECTIVES:

- ☐ To Study about Smart Grid technologies, different smart meters and advanced metering infrastructure.
- ☐ To familiarize the power quality management issues in Smart Grid.
- ☐ To familiarize the high performance computing for Smart Grid applications

UNIT I INTRODUCTION TO SMART GRID**9**

Evolution of Electric Grid, Concept, Definitions and Need for Smart Grid, Smart grid drivers, functions, opportunities, challenges and benefits, Difference between conventional & Smart Grid, National and International Initiatives in Smart Grid.

UNIT II SMART GRID TECHNOLOGIES**9**

Technology Drivers, Smart energy resources, Smart substations, Substation Automation, Feeder Automation, Transmission systems: EMS, FACTS and HVDC, Wide area monitoring, Protection and control, Distribution systems: DMS, Volt/Var control, Fault Detection, Isolation and service restoration, Outage management, High-Efficiency Distribution Transformers, Phase Shifting Transformers, Plug in Hybrid Electric Vehicles (PHEV).

UNIT III SMART METERS AND ADVANCED METERING INFRASTRUCTURE**9**

Introduction to Smart Meters, Advanced Metering infrastructure (AMI) drivers and benefits, AMI protocols, standards and initiatives, AMI needs in the smart grid, Phasor Measurement Unit (PMU), Intelligent Electronic Devices (IED) & their application for monitoring & protection.

UNIT IV POWER QUALITY MANAGEMENT IN SMART GRID**9**

Power Quality & EMC in Smart Grid, Power Quality issues of Grid connected Renewable Energy Sources, Power Quality Conditioners for Smart Grid, Web based Power Quality monitoring, Power Quality Audit.

APPLICATIONS

Local Area Network (LAN), House Area Network (HAN), Wide Area Network (WAN), Broadband over Power line (BPL), IP based Protocols, Basics of Web Service and CLOUD Computing to make Smart Grids smarter, Cyber Security for Smart Grid.

TOTAL : 45 PERIODS

OUTCOMES:

- Learners will develop more understanding on the concepts of Smart Grid and its present developments.
- Learners will study about different Smart Grid technologies.
- Learners will acquire knowledge about different smart meters and advanced metering infrastructure.
- Learners will have knowledge on power quality management in Smart Grids
- Learners will develop more understanding on LAN, WAN and Cloud Computing for Smart Grid application

OBJECTIVES:

- To Study about solar modules and PV system design and their applications
- To Deal with grid connected PV systems
- To Discuss about different energy storage systems

UNIT I INTRODUCTION**9**

Characteristics of sunlight – semiconductors and P-N junctions – behavior of solar cells – cell properties – PV cell interconnection

UNIT II STAND ALONE PV SYSTEM**9**

Solar modules – storage systems – power conditioning and regulation - MPPT- protection – stand alone PV systems design – sizing

UNIT III GRID CONNECTED PV SYSTEMS**9**

PV systems in buildings – design issues for central power stations – safety – Economic aspect – Efficiency and performance - International PV programs

UNIT IV ENERGY STORAGE SYSTEMS**9**

Impact of intermittent generation – Battery energy storage – solar thermal energy storage – pumped hydroelectric energy storage

UNIT V APPLICATIONS**9**

Water pumping – battery chargers – solar car – direct-drive applications –Space – Telecommunications.

TOTAL : 45 PERIODS**OUTCOMES:**

- Students will develop more understanding on solar energy storage systems
- Students will develop basic knowledge on standalone PV system
- Students will understand the issues in grid connected PV systems
- Students will study about the modeling of different energy storage systems and their performances
- Students will attain more on different applications of solar energy

19272E24C

POWER SYSTEM RELIABILITY

L T P C

OBJECTIVES:

3 0 0 3

- To introduces the objectives of Load forecasting.
- To study the fundamentals of Generation system, transmission system and Distribution system reliability analysis
- To illustrate the basic concepts of Expansion planning

UNIT I

LOAD FORECASTING

9

Objectives of forecasting - Load growth patterns and their importance in planning - Load forecasting Based on discounted multiple regression technique-Weather sensitive load forecasting-Determination of annual forecasting-Use of AI in load forecasting.

UNIT II

GENERATION SYSTEM RELIABILITY ANALYSIS

9

Probabilistic generation and load models- Determination of LOLP and expected value of demand not served –Determination of reliability of ISO and interconnected generation systems

UNIT III

TRANSMISSION SYSTEM RELIABILITY ANALYSIS

9

Deterministic contingency analysis-probabilistic load flow-Fuzzy load flow probabilistic transmission system reliability analysis-Determination of reliability indices like LOLP and expected value of demand not served

UNIT IV

EXPANSION PLANNING

9

Basic concepts on expansion planning-procedure followed for integrate transmission system planning, current practice in India-Capacitor placer problem in transmission system and radial distributions system.

UNIT V

DISTRIBUTION SYSTEM PLANNING OVERVIEW

9

Introduction, sub transmission lines and distribution substations-Design primary and secondary systems-distribution system protection and coordination of protective devices.

TOTAL: 45 PERIODS

OUTCOMES:

- Students will develop the ability to learn about load forecasting.
- Students will learn about reliability analysis of ISO and interconnected systems.
- Students will understand the concepts of Contingency analysis and Probabilistic Load flow Analysis
- Students will be able to understand the concepts of Expansion planning
- Students will have knowledge on the fundamental concepts of the Distribution system planning

REFERENCES

- 4 T. Gonen, "Electrical Power Distribution Engineering", McGraw Hill Book Company 1986.
- 5 B.R. Gupta, "Generation of Electrical Energy", S.Chand Publications 1983.

OBJECTIVES:

- To illustrate the concept of distributed generation
- To analyze the impact of grid integration.
- To study concept of Microgrid and its configuration

UNIT I INTRODUCTION 9

Conventional power generation: advantages and disadvantages, Energy crises, Non-conventional energy (NCE) resources: review of Solar PV, Wind Energy systems, Fuel Cells, micro-turbines, biomass, and tidal sources.

UNIT II DISTRIBUTED GENERATIONS (DG) 9

Concept of distributed generations, topologies, selection of sources, regulatory standards/framework, Standards for interconnecting Distributed resources to electric power systems: IEEE 1547. DG installation classes, security issues in DG implementations. Energy storage elements: Batteries, ultra-capacitors, flywheels. Captive power plants

UNIT III IMPACT OF GRID INTEGRATION 9

Requirements for grid interconnection, limits on operational parameters,: voltage, frequency, THD, response to grid abnormal operating conditions, islanding issues. Impact of grid integration with NCE sources on existing power system: reliability, stability and power quality issues.

UNIT IV BASICS OF A MICROGRID 9

Concept and definition of microgrid, microgrid drivers and benefits, review of sources of microgrids, typical structure and configuration of a microgrid, AC and DC microgrids, Power Electronics interfaces in DC and AC microgrids

UNIT V CONTROL AND OPERATION OF MICROGRID 9

Modes of operation and control of microgrid: grid connected and islanded mode, Active and reactive power control, protection issues, anti-islanding schemes: passive, active and communication based techniques, microgrid communication infrastructure, Power quality issues in microgrids, regulatory standards, Microgrid economics, Introduction to smart microgrids.

TOTAL : 45 PERIODS**OUTCOMES:**

- Learners will attain knowledge on the various schemes of conventional and nonconventional power generation.

- Learners will have knowledge on the topologies and energy sources of distributed generation.
- Learners will learn about the requirements for grid interconnection and its impact with NCE sources
- Learners will understand the fundamental concept of Microgrid.

19272E25A - WIND ENERGY CONVERSION SYSTEMS**3 1 0 4****UNIT-I INTRODUCTION:****9**

History of wind Electric generation - Darrieus wind - Horizontal and vertical axis-Wind turbine - other modern developments - Future possibilities.

UNIT-II WIND RESOURCE AND ITS POTENTIAL FOR ELECTRIC POWER**GENERATION:****9**

Power Extracted By A Wind Driven Machine - Nature and occurrence of wind characteristics and power production - variation of mean wind speed with time.

UNIT-III WIND POWER SITES AND WIND MEASUREMENTS:**9**

Average wind speed and other factors affecting choice of the site - Effect of wind direction - Measurement of wind velocity - Personal estimation without instruments- anemometers - Measurement of wind direction.

UNIT-IV WIND TURBINES WITH ASYNCHRONOUS GENERATORS AND**CONTROL ASPECTS:****9**

Asynchronous systems - Ac Generators - Self excitation of Induction Generator - Single Phase operation of Induction Generator - Permanent magnet Generators - Basic control aspects - fixed speed ratio control scheme - fixed vs variable speed operation of WECS.

UNIT-V GENERATION OF ELECTRICITY**9**

Active and reactive power - P and Q transfer in power systems - Power converters - Characteristics of Generators - Variable Speed options - Economics.

L = 45 T = 15 P = 0 C = 4**REFERENCES:**

19272E25B - AI TECHNIQUES TO POWER SYSTEMS**3 1 0 4****1. INTRODUCTION TO NEURAL NETWORKS****9**

Basics of ANN - perceptron - delta learning rule - back propagation algorithm - multilayer feed forward network - memory models - bi-directional associative memory - Hopfield network.

2. APPLICATIONS TO POWER SYSTEM PROBLEMS**9**

Application of neural networks to load forecasting - contingency analysis - VAR control - economic load dispatch.

3. INTRODUCTION TO FUZZY LOGIC**9**

Crispness - vagueness - fuzziness - uncertainty - fuzzy set theory fuzzy sets - fuzzy set operations - fuzzy measures - fuzzy relations - fuzzy function - structure of fuzzy logic controller – fuzzification models - data base - rule base - inference engine defuzzification module.

4. APPLICATIONS TO POWER SYSTEMS**9**

Decision making in power system control through fuzzy set theory - use of fuzzy set models of LP in power systems scheduling problems - fuzzy logic based power system stabilizer.

5. GENETIC ALGORITHM AND ITS APPLICATIONS TO POWER SYSTEMS**9**

Introduction - simple genetic algorithm - reproduction - crossover - mutation – advanced operators in genetic search - applications to voltage control and stability studies.

OBJECTIVES:**3 0 0 3**

- To provide knowledge about the distribution system electrical characteristics
- To gain knowledge about planning and designing of distribution system
- To analyze power quality in distribution system
- To analyze the power flow in balanced and unbalanced system

UNIT I**INTRODUCTION****9**

Distribution System-Distribution Feeder Electrical Characteristics-Nature of Loads : Individual Customer Load, Distribution Transformer Loading and Feeder Load -Approximate Method of Analysis: Voltage Drop, Line Impedance, "K" Factors, Uniformly Distributed Loads and Lumping Loads in Geometric Configurations.

UNIT II**DISTRIBUTION SYSTEM PLANNING****9**

Factors effecting planning, present techniques, planning models(Short term planning, long term planning and dynamic planning), planning in the future, future nature of distribution planning, Role of computer in Distribution planning. Load forecast, Load characteristics and Load models.

UNIT III**DISTRIBUTION SYSTEM LINE MODEL****9**

Exact Line Segment Model-Modified Line Model- Approximate Line Segment Model-Modified "Ladder" Iterative Technique-General Matrices for Parallel Lines.

UNIT IV**VOLTAGE REGULATION****9**

Standard Voltage Ratings-Two-Winding Transformer Theory-Two-Winding Autotransformer-Step-Voltage Regulators: Single-Phase Step-Voltage Regulators-Three-Phase Step-Voltage Regulators- Application of capacitors in Distribution system.

UNIT V**DISTRIBUTION FEEDER ANALYSIS****9**

Power-Flow Analysis- Ladder Iterative Technique -Unbalanced Three-Phase Distribution Feeder- Modified Ladder Iterative Technique- Load Allocation- Short-Circuit Studies.

TOTAL: 45 PERIODS**OUTCOMES:**

- Ability to apply the concepts of planning and design of distribution system for utility systems
- Ability to implement the concepts of volatage control in distribution system.
- Ability to analyze the power flow in balanced and unbalanced system

19272E25D ENERGY MANAGEMENT AND AUDITING L T P C

OBJECTIVES:

3 0 0 3

- To study the concepts behind economic analysis and Load management.
- To emphasize the energy management on various electrical equipments and metering.
- To illustrate the concept of lighting systems and cogeneration.

UNIT I INTRODUCTION 9

Need for energy management - energy basics- designing and starting an energy management program – energy accounting -energy monitoring, targeting and reporting-energy audit process.

UNIT II ENERGY COST AND LOAD MANAGEMENT 9

Important concepts in an economic analysis - Economic models-Time value of money-Utility rate structures- cost of electricity-Loss evaluation- Load management: Demand control techniques-Utility monitoring and control system-HVAC and energy management-Economic justification.

UNIT III ENERGY MANAGEMENT FOR MOTORS, SYSTEMS, AND ELECTRICAL EQUIPMENT 9

Systems and equipment- Electric motors-Transformers and reactors-Capacitors and synchronous machines.

UNIT IV METERING FOR ENERGY MANAGEMENT 9

Relationships between parameters-Units of measure-Typical cost factors- Utility meters - Timing of meter disc for kilowatt measurement - Demand meters - Paralleling of current transformers - Instrument transformer burdens-Multitasking solid-state meters - Metering location vs. requirements- Metering techniques and practical examples.

UNIT V LIGHTING SYSTEMS & COGENERATION 9

Concept of lighting systems - The task and the working space -Light sources - Ballasts - Luminaries - Lighting controls-Optimizing lighting energy - Power factor and effect of harmonics on power quality - Cost analysis techniques-Lighting and energy standards Cogeneration: Forms of cogeneration - feasibility of cogeneration- Electrical interconnection.

TOTAL : 45 PERIODS

OUTCOMES:

- Students will develop the ability to learn about the need for energy management and auditing process
- Learners will learn about basic concepts of economic analysis and load management.
- Students will understand the energy management on various electrical equipments.
- Students will have knowledge on the concepts of metering and factors influencing cost function

- Students will be able to learn about the concept of lighting systems, light sources and various forms of cogeneration

19272E32A - POWER ELECTRONICS APPLICATIONS IN POWER SYSTEMS**3 1 0 4****UNIT: I STATIC COMPENSATOR CONTROL****9**

Theory of load compensation - voltage regulation and power factor correction - phase balance and PF correction of unsymmetrical loads - Property of static compensator - Thyristor controlled rectifier (TCR) - Thyristor Controlled Capacitor (TSC) -Saturable core reactor - Control Strategies.

UNIT: II HARMONIC CONTROL AND POWER FACTOR IMPROVEMENT **9**

Input power factor for different types of converters - power factor improvement using Load and forced commutated converters.

UNIT: III VOLTAGE CONTROL USING STATIC TAP-CHANGERS **9**

Conventional tap changing methods, static tap changers using Thyristor, different schemes - comparison.

UNIT: IV STATIC EXCITATION CONTROL **9**

Solid state excitation of synchronous generators - Different schemes - Genex excitation systems.

UNIT: V UNINTERRUPTABLE POWER SUPPLY SYSTEM **9**

Parallel, Redundant and non-redundant UPS - Ups using resonant power converters - Switch mode power supplies.

1. SYNCHRONOUS MACHINE MODELLING**9**

Schematic Diagram, Physical Description: armature and field structure, machines with multiple pole pairs, mmf waveforms, direct and quadrature axes, Mathematical Description of a Synchronous Machine: Basic equations of a synchronous machine: stator circuit equations, stator self, stator mutual and stator to rotor mutual inductances, dq0 Transformation: flux linkage and voltage equations for stator and rotor in dq0 coordinates, electrical power and torque, physical interpretation of dq0 transformation, Per Unit Representations: L_{ad} -reciprocal per unit system and that from power-invariant form of Park's transformation; Equivalent Circuits for direct and quadrature axes, Steady-state Analysis: Voltage, current and flux-linkage relationships, Phasor representation, Rotor angle, Steady-state equivalent circuit, Computation of steady-state values, Equations of Motion: Swing Equation, calculation of inertia constant, Representation in system studies, Synchronous Machine Representation in Stability Studies: Simplifications for large-scale studies : Neglect of stator $p\Psi$ terms and speed variations, Simplified model with amortisseurs neglected: two-axis model with amortisseur windings neglected, classical model.

2. MODELLING OF EXCITATION AND SPEED GOVERNING SYSTEMS**9**

Excitation System Requirements; Elements of an Excitation System; Types of Excitation System; Control and protective functions; IEEE (1992) block diagram for simulation of excitation systems. Turbine and Governing System Modelling: Functional Block Diagram of Power Generation and Control, Schematic of a hydroelectric plant, classical transfer function of a hydraulic turbine (no derivation), special characteristic of hydraulic turbine, electrical analogue of hydraulic turbine, Governor for Hydraulic Turbine: Requirement for a transient droop, Block diagram of governor with transient droop compensation, Steam turbine modelling: Single reheat tandem compounded type only and IEEE block diagram for dynamic simulation; generic speed-governing system model for normal speed/load control function.

3. SMALL-SIGNAL STABILITY ANALYSIS WITHOUT CONTROLLERS**9**

Classification of Stability, Basic Concepts and Definitions: Rotor angle stability, The Stability Phenomena. Fundamental Concepts of Stability of Dynamic Systems: State-space representation, stability of dynamic system, Linearisation, Eigen properties of the state matrix: Eigen values and eigenvectors, modal matrices, eigen value and stability, mode shape and participation factor. Single-Machine Infinite Bus (SMIB) Configuration: Classical Machine Model stability analysis with numerical example, Effects of Field Circuit Dynamics: synchronous machine, network and linearised system equations, block diagram representation with K-constants; expression for K-constants (no derivation), effect of field flux variation on system stability: analysis with numerical example,

4. SMALL-SIGNAL STABILITY ANALYSIS WITH CONTROLLERS**9**

Effects Of Excitation System: Equations with definitions of appropriate K-constants and simple thyristor excitation system and AVR, block diagram with the excitation system, analysis of effect of AVR on synchronizing and damping components using a numerical example, Power System Stabiliser: Block diagram with AVR and PSS, Illustration of principle of PSS application with numerical example, Block diagram of PSS with description, system state matrix including PSS, analysis of stability with numerical a example. Multi-Machine Configuration: Equations in a common reference frame, equations in individual machine rotor coordinates, illustration of formation of system state matrix for a two-machine system with classical models for synchronous machines, illustration of stability analysis using a numerical example. Principle behind small-signal stability improvement methods: delta-omega and delta P-omega stabilizers.

Power System Stabilizer – Stabilizer based on shaft speed signal (delta omega) – Delta –P-Omega stabilizer-Frequency-based stabilizers – Digital Stabilizer – Excitation control design – Exciter gain – Phase lead compensation – Stabilizing signal washout stabilizer gain – Stabilizer limits

OBJECTIVES:

- To understand the concept of electrical vehicles and its operations
- To understand the need for energy storage in hybrid vehicles
- To provide knowledge about various possible energy storage technologies that can be used in electric vehicles

UNIT I ELECTRIC VEHICLES AND VEHICLE MECHANICS 9

Electric Vehicles (EV), Hybrid Electric Vehicles (HEV), Engine ratings, Comparisons of EV with internal combustion Engine vehicles, Fundamentals of vehicle mechanics

UNIT II ARCHITECTURE OF EV's AND POWER TRAIN COMPONENTS 9

Architecture of EV's and HEV's – Plug-n Hybrid Electric Vehicles (PHEV)- Power train components and sizing, Gears, Clutches, Transmission and Brakes

UNIT III CONTROL OF DC AND AC DRIVES 9

DC/DC chopper based four quadrant operations of DC drives – Inverter based V/f Operation (motoring and braking) of induction motor drive system – Induction motor and permanent motor based vector control operation – Switched reluctance motor (SRM) drives

UNIT IV BATTERY ENERGY STORAGE SYSTEM 9

Battery Basics, Different types, Battery Parameters, Battery modeling, Traction Batteries

UNIT V ALTERNATIVE ENERGY STORAGE SYSTEMS 9

Fuel cell – Characteristics- Types – hydrogen Storage Systems and Fuel cell EV – Ultra capacitors

TOTAL : 45 PERIODS

OUTCOMES:

- Learners will understand the operation of Electric vehicles and various energy storage technologies for electrical vehicles

REFERENCES

- 1 Iqbal Hussain, “**Electric and Hybrid Vehicles: Design Fundamentals, Second Edition**” CRC Press, Taylor & Francis Group, Second Edition (2011).
- 2 Ali Emadi, Mehrdad Ehsani, John M.Miller, “**Vehicular Electric Power Systems**”, Special Indian Edition, Marcel dekker, Inc 2010.

OBJECTIVES:

- To provide fundamental knowledge on electromagnetic interference and electromagnetic compatibility.
- To study the important techniques to control EMI and EMC.
- To expose the knowledge on testing techniques as per Indian and international standards in EMI measurement.

UNIT I INTRODUCTION**9**

Definitions of EMI/EMC -Sources of EMI- Intersystems and Intrasystem- Conducted and radiated interference- Characteristics - Designing for electromagnetic compatibility (EMC)- EMC regulation typical noise path- EMI predictions and modeling, Cross talk - Methods of eliminating interferences.

UNIT II GROUNDING AND CABLING**9**

Cabling- types of cables, mechanism of EMI emission / coupling in cables -capacitive coupling inductive coupling- shielding to prevent magnetic radiation- shield transfer impedance, Grounding - safety grounds - signal grounds- single point and multipoint ground systems hybrid grounds- functional ground layout -grounding of cable shields- -guard shields- isolation, neutralizing transformers, shield grounding at high frequencies, digital grounding- Earth measurement Methods

UNIT III BALANCING, FILTERING AND SHIELDING**9**

Power supply decoupling- decoupling filters-amplifier filtering -high frequency filtering- EMI filters characteristics of LPF, HPF, BPF, BEF and power line filter design -Choice of capacitors, inductors, transformers and resistors, EMC design components -shielding - near and far fields shielding effectiveness - absorption and reflection loss- magnetic materials as a shield, shield discontinuities, slots and holes, seams and joints, conductive gaskets-windows and coatings - grounding of shields

UNIT IV EMI IN ELEMENTS AND CIRCUITS**9**

Electromagnetic emissions, noise from relays and switches, non- linearities in circuits, passive inter modulation, transients in power supply lines, EMI from power electronic equipment, EMI as combination of radiation and conduction

UNIT V ELECTROSTATIC DISCHARGE, STANDARDS AND TESTING TECHNIQUES**9**

Static Generation- human body model- static discharges- ESD versus EMC, ESD protection in equipment's- standards - FCC requirements - EMI measurements - Open area test site measurements and precautions- Radiated and conducted interference measurements, Control requirements and testing methods

TOTAL: 45 PERIODS**OUTCOMES:**

- Recognize the sources of Conducted and radiated EMI in Power Electronic Converters and consumer appliances and suggest remedial measures to mitigate the problems
- Assess the insertion loss and design EMI filters to reduce the loss
- Design EMI filters, common-mode chokes and RC-snubber circuits measures to keep the interference within tolerable limits

ELECTIVES – V (semester-III)**19272E33A - POWER CONDITIONING****3 1 0 4****1. INTRODUCTION****9**

Introduction – Characterization of Electric Power Quality: Transients, short duration and long duration voltage variations, Voltage imbalance, waveform distortion, Voltage fluctuations, Power frequency variation, Power acceptability curves – power quality problems: poor load power factor, Non linear and unbalanced loads, DC offset in loads, Notching in load voltage, Disturbance in supply voltage – Power quality standards.

2. NON-LINEAR LOADS**9**

Single phase static and rotating AC/DC converters, Three phase static AC/DC converters, Battery chargers, Arc furnaces, Fluorescent lighting, pulse modulated devices, Adjustable speed drives.

3. MEASUREMENT AND ANALYSIS METHODS**9**

Voltage, Current, Power and Energy measurements, power factor measurements and definitions, event recorders, Measurement Error – Analysis: Analysis in the periodic steady state, Time domain methods, Frequency domain methods: Laplace’ s, Fourier and Hartley transform – The Walsh Transform – Wavelet Transform.

4. ANALYSIS AND CONVENTIONAL MITIGATION METHODS**9**

Analysis of power outages, Analysis of unbalance: Symmetrical components of phasor quantities, Instantaneous symmetrical components, Instantaneous real and reactive powers, Analysis of distortion: On–line extraction of fundamental sequence components from measured samples – Harmonic indices – Analysis of voltage sag: Detorit Edison sag score, Voltage sag energy, Voltage Sag Lost Energy Index (VSLEI)- Analysis of voltage flicker, Reduced duration and customer impact of outages, Classical load balancing problem: Open loop balancing, Closed loop balancing, current balancing, Harmonic reduction, Voltage sag reduction.

5. POWER QUALITY IMPROVEMENT**9**

Utility-Customer interface –Harmonic filters: passive, Active and hybrid filters – Custom power devices: Network reconfiguring Devices, Load compensation using DSTATCOM, Voltage regulation using DSTATCOM, protecting sensitive loads using DVR, UPQC –control strategies: P- Q theory, Synchronous detection method – Custom power park –Status of application of custom power devices

ELECTIVES – V (semester-III)**19272E33B – POWER SYSTEM RESTRUCTURING AND DEREGULATION****3 1 0 4****1. FUNDAMENTALS AND ARCHITECTURE OF POWERMARKETS 9**

Deregulation of Electric utilities: Introduction-Unbundling-Wheeling- Reform motivations- Fundamentals of Deregulated Markets – Types (Future, Day-ahead and Spot) – Participating in Markets (Consumer and Producer Perspective) – bilateral markets – pool markets. Independent System Operator (ISO)-components-types of ISO - role of ISO - Lessons and Operating Experiences of Deregulated Electricity Markets in various Countries (UK, Australia, Europe, US, Asia).

2. TECHNICAL CHALLENGES 9

Total Transfer Capability – Limitations - Margins – Available transfer capability (ATC) – Procedure - Methods to compute ATC – Static and Dynamic ATC – Effect of contingency analysis – Case Study. Concept of Congestion Management – Bid, Zonal and Node Congestion Principles – Inter and Intra zonal congestion – Generation Rescheduling - Transmission congestion contracts – Case Study.

3. TRANSMISSION NETWORKS AND SYSTEM SECURITY SERVICES 9

Transmission expansion in the New Environment – Introduction – Role of transmission planning – Physical Transmission Rights – Limitations – Flow gate - Financial Transmission Rights – Losses – Managing Transmission Risks – Hedging – Investment. Ancillary Services – Introduction – Describing Needs – Compulsory and Demand-side provision – Buying and Selling Ancillary Services – Standards.

4. MARKET PRICING 9

Transmission pricing in open access system – Introduction – Spot Pricing – Uniform Pricing – Zonal Pricing – Locational Marginal Pricing – Congestion Pricing – Ramping and Opportunity Costs. Embedded cost based transmission pricing methods (Postage stamp, Contract path and MW-mile) – Incremental cost based transmission pricing methods (Short run marginal cost, Long run marginal cost) - Pricing of Losses on Lines and Nodes.

5. INDIAN POWER MARKET 9

Current Scenario – Regions – Restructuring Choices – Statewise Operating Strategies – Salient features of Indian Electricity Act 2003 – Transmission System Operator – Regulatory and Policy development in Indian power Sector – Opportunities for IPP and Capacity Power Producer. Availability based tariff – Necessity – Working Mechanism – Beneficiaries – Day Scheduling Process – Deviation from Schedule – Unscheduled Interchange Rate – System Marginal Rate – Trading Surplus Generation – Applications.

19272E33C	CONTROL SYSTEM DESIGN FOR POWER ELECTRONICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To explore conceptual bridges between the fields of Control Systems and Power Electronics
- To Study Control theories and techniques relevant to the design of feedback controllers in Power Electronics.

UNIT I MODELLING OF DC-TO-DC POWER CONVERTERS 9

Modelling of Buck Converter , Boost Converter ,Buck- Boost Converter, Cuk Converter ,Sepic Converter, Zeta Converter, Quadratic Buck Converter ,Double Buck-Boost Converter, Boost-Boost Converter General Mathematical Model for Power Electronics Devices.

UNIT II SLIDING MODE CONTROLLER DESIGN 9

Variable Structure Systems. Single Switch Regulated Systems Sliding Surfaces, Accessibility of the Sliding Surface Sliding Mode Control Implementation of Boost Converter ,Buck-Boost Converter, Cuk Converter ,Sepic Converter, Zeta Converter, Quadratic Buck Converter ,Double Buck-Boost Converter, Boost-Boost Converter.

UNIT III APPROXIMATE LINEARIZATION CONTROLLER DESIGN 9

Linear Feedback Control, Pole Placement by Full State Feedback , Pole Placement Based on Observer Design ,Reduced Order Observers , Generalized Proportional Integral Controllers, Passivity Based Control , Sliding Mode Control Implementation of Buck Converter , Boost Converter ,Buck-Boost Converter.

UNIT IV NONLINEAR CONTROLLER DESIGN 9

Feedback Linearization Isidori's Canonical Form, Input-Output Feedback Linearization, State Feedback Linearization, Passivity Based Control , Full Order Observers , Reduced Order Observers.

UNIT V PREDICTIVE CONTROL OF POWER CONVERTERS 9

Basic Concepts, Theory, and Methods, Application of Predictive Control in Power Electronics, AC-DC-AC Converter System, Faults and Diagnosis Systems in Power Converters.

TOTAL:45 PERIODS**OUTCOMES:**

- Ability to understand an overview on modern linear and nonlinear control strategies for power electronics devices
- Ability to model modern power electronic converters for industrial applications
- Ability to design appropriate controllers for modern power electronics devices.

19272E33D

ADVANCED DIGITAL SIGNAL PROCESSING

LT P C 3003

COURSE OBJECTIVES

- To expose the students to the fundamentals of digital signal processing in frequency domain & its application
- To teach the fundamentals of digital signal processing in time-frequency domain & its application
- To compare Architectures & features of Programmable DSP processors & develop logical functions of DSP processors
- To discuss on Application development with commercial family of DSP processors
- To involve Discussions/ Practice/Exercise onto revising & familiarizing the concepts acquired over the 5 Units of the subject for improved employability skills

UNIT I FUNDAMENTALS OF DSP 12

Frequency interpretation, sampling theorem, aliasing, discrete-time systems, constant-coefficient difference equation. Digital filters: FIR filter design – rectangular, Hamming, Hanning windowing technique. IIR filter design – Butterworth filter, bilinear transformation method, frequency transformation. Fundamentals of multirate processing – decimation and interpolation.

UNIT II TRANSFORMS AND PROPERTIES 9

Discrete Fourier transform (DFT): - properties, Fast Fourier transform (FFT), DIT-FFT, and DIF-FFT. Wavelet transforms: Introduction, wavelet coefficients – orthonormal wavelets and their relationship to filter banks, multi-resolution analysis, and Haar and Daubechies wavelet.

UNIT III ADAPTIVE FILTERS 9

Wiener filters – an introduction. Adaptive filters: Fundamentals of adaptive filters, FIR adaptive filter – steepest descent algorithm, LMS algorithm, NLMS, applications – channel equalization. Adaptive recursive filters – exponentially weighted RLS algorithm.

UNIT IV ARCHITECTURE OF COMMERCIAL DIGITAL SIGNAL PROCESSORS 9

Introduction to commercial digital signal processors, Categorization of DSP processor – Fixed point and floating point, Architecture and instruction set of the TI TMS 320 C54xx and TMS 320 C6xxx DSP processors, On-chip and On-board peripherals – memory (Cache, Flash, SDRAM), codec, multichannel buffered I/O serial ports (McBSPs), interrupts, direct memory access (DMA), timers and general purpose I/Os.

UNIT V INTERFACING I/O PERIPHERALS FOR DSP BASED APPLICATIONS 6

Introduction, External Bus Interfacing Signals, Memory Interface, I/O Interface, Programmed I/O, Interrupts, Design of Filter, FFT Algorithm, Application for Serial Interfacing, DSP based Power Meter, Position control, CODEC Interface.

TOTAL : 45 PERIODS

Skill Development

Employability

Entrepreneurship

Note: Discussions / Exercise / practice on signal analysis, transforms, filter design concepts with simulation tools such as Matlab / Labview / CC studio will help the student understand signal processing concepts and DSP processors.

Overview of TMS320C54xx and TMS320C67xx /other DSP Starter Kits, Introduction to code composer studio (CCS), Board support library, Chip support library and Runtime support library, Generating basic signals, Digital filter design, Spectrum analysis, Adaptive filters, Speech and Audio processing applications.

OUTCOMES : After the completion of this course the student will be able to:

- Students will learn the essential advanced topics in DSP that are necessary for successful Postgraduate level research.
- Students will have the ability to solve various types of practical problems in DSP
- Comprehend the DFTs and FFTs, design and Analyze the digital filters, comprehend the Finite word length effects in Fixed point DSP Systems.
- The conceptual aspects of Signal processing Transforms are introduced.
- The comparison on commercial available DSP Processors helps to understand system design through processor interface.
- Improved Employability and **entrepreneurship** capacity due to knowledge up gradation on recent trends in embedded systems design.

19272E34A - SOFTWARE FOR CONTROL SYSTEM DESIGN

3 1 0 4

1. INTRODUCTION TO DESIGN AND CLASSICAL PID CONTROL

Systems performance and specifications –Proportional, Integral and Derivative Controllers – Structure – Empirical tuning- Zeigler Nichols-Cohen Coon – Root Locus method – Open loop inversion— Tuning using ISE, IAE and other performance indices.

2. COMPENSATOR DESIGN

Design of lag, lead, lead-lag compensators – Design using bode plots – Polar plots – Nichols charts – root locus and Routh Hurwitz criterion.

3. MATLAB

Introduction – function description – Data types – Tool boxes – Graphical Displays – Programs for solution of state equations – Controller design – Limitations.-simulink-Introduction – Graphical user interface – Starting – Selection of objects – Blocks – Lines - simulation – Application programs – Limitations.

4. MAPLE

Introduction – symbolic programming – Programming constructs – Data structure computation with formulae – Procedures – Numerical Programming.

5. MATLAB

Programs using MATLAB software

19272E34C SOFT COMPUTING TECHNIQUES**L T P C****OBJECTIVES:****3 0 0 3**

- To expose the concepts of feed forward neural networks.
- To provide adequate knowledge about feed back neural networks.
- To teach about the concept of fuzziness involved in various systems.
- To expose the ideas about genetic algorithm
- To provide adequate knowledge about of FLC and NN toolbox

UNIT I INTRODUCTION AND ARTIFICIAL NEURAL NETWORKS 9

Introduction to intelligent systems- Soft computing techniques- Conventional Computing versus Swarm Computing - Classification of meta-heuristic techniques - Properties of Swarm intelligent Systems - Application domain - Discrete and continuous problems - Single objective and multi-objective problems -Neuron-Nerve structure and synapse- Artificial Neuron and its model- activation functions- Neural network architecture- single layer and multilayer feed forward networks- Mc Culloch Pitts neuron model- perceptron model- Adaline and Madaline- multilayer perception model- back propagation learning methods- effect of learning rule coefficient -back propagation algorithm- factors affecting back propagation training-applications.

UNIT II ARTIFICIAL NEURAL NETWORKS AND ASSOCIATIVE MEMORY 9

Counter propagation network- architecture- functioning & characteristics of counter Propagation network- Hopfield/ Recurrent network configuration - stability constraints associative memory and characteristics- limitations and applications- Hopfield v/s Boltzman machine- Adaptive Resonance Theory- Architecture- classifications- Implementation and training - Associative Memory.

UNIT III FUZZY LOGIC SYSTEM 9

Introduction to crisp sets and fuzzy sets- basic fuzzy set operation and approximate reasoning. Introduction to fuzzy logic modeling and control- Fuzzification inferencing and defuzzification-Fuzzy knowledge and rule bases-Fuzzy modeling and control schemes for nonlinear systems. Self organizing fuzzy logic control- Fuzzy logic control for nonlinear time delay system.

UNIT IV GENETIC ALGORITHM 9

Evolutionary programs - Genetic algorithms, genetic programming and evolutionary programming - Genetic Algorithm versus Conventional Optimization Techniques - Genetic representations and selection mechanisms; Genetic operators- different types of crossover and mutation operators - Optimization problems using GA-discrete and continuous - Single objective and multi-objective problems - Procedures in evolutionary programming.

Skill Development**Employability****Entrepreneurship**

UNIT V**HYBRID CONTROL SCHEMES****9**

Fuzzification and rule base using ANN–Neuro fuzzy systems-ANFIS – Fuzzy Neuron - Optimization of membership function and rule base using Genetic Algorithm – Introduction to Support Vector Machine - Evolutionary Programming-Particle Swarm Optimization - Case study – Familiarization of NN, FLC and ANFIS Tool Box.

TOTAL : 45 PERIODS**OUTCOMES:**

- Will be able to know the basic ANN architectures, algorithms and their limitations.
- Also will be able to know the different operations on the fuzzy sets.
- Will be capable of developing ANN based models and control schemes for non-linear system.
- Will get expertise in the use of different ANN structures and online training algorithm.
- Will be knowledgeable to use Fuzzy logic for modeling and control of non-linear systems.
- Will be competent to use hybrid control schemes and P.S.O and support vector Regressive.

OBJECTIVES:

RESTRUCTURED POWER SYSTEM

LTPC
3003

- To introduce the restructuring of power industry and market models.
- To impart knowledge on fundamental concepts of congestion management.
- To analyze the concepts of locational marginal pricing and financial transmission rights.
- To illustrate about various power sectors in India

UNIT I INTRODUCTION TO RESTRUCTURING OF POWER INDUSTRY 9

Introduction: Deregulation of power industry, Restructuring process, Issues involved in deregulation, Deregulation of various power systems – Fundamentals of Economics: Consumer behavior, Supplier behavior, Market equilibrium, Short and long run costs, Various costs of production – Market models: Market models based on Contractual arrangements, Comparison of various market models, Electricity vis – a – vis other commodities, Market architecture, Case study.

UNIT II TRANSMISSION CONGESTION MANAGEMENT 9

Introduction: Definition of Congestion, reasons for transfer capability limitation, Importance of congestion management, Features of congestion management – Classification of congestion management methods – Calculation of ATC - Non – market methods – Market methods – Nodal pricing – Inter zonal and Intra zonal congestion management – Price area congestion management – Capacity alleviation method.

UNIT III LOCATIONAL MARGINAL PRICES AND FINANCIAL TRANSMISSION RIGHTS 9

Mathematical preliminaries: - Locational marginal pricing- Lossless DCOPF model for LMP calculation – Loss compensated DCOPF model for LMP calculation – ACOPF model for LMP calculation – Financial Transmission rights – Risk hedging functionality -Simultaneous feasibility test and revenue adequacy – FTR issuance process: FTR auction, FTR allocation – Treatment of revenue shortfall – Secondary trading of FTRs – Flow gate rights – FTR and market power - FTR and merchant transmission investment.

UNIT IV ANCILLARY SERVICE MANAGEMENT AND PRICING OF TRANSMISSION NETWORK 9

Introduction of ancillary services – Types of Ancillary services – Classification of Ancillary services – Load generation balancing related services – Voltage control and reactive power support devices – Black start capability service - How to obtain ancillary service –Co-optimization of energy and reserve services - Transmission pricing – Principles – Classification – Rolled in transmission pricing methods – Marginal transmission pricing paradigm – Composite pricing paradigm – Merits and demerits of different paradigm.

Skill Development

Employability

Entrepreneurship

UNIT V REFORMS IN INDIAN POWER SECTOR

9

Introduction – Framework of Indian power sector – Reform initiatives - Availability based tariff – Electricity act 2003 – Open access issues – Power exchange – Reforms in the near future

TOTAL : 45 PERIODS

OUTCOMES:

- Learners will have knowledge on restructuring of power industry
- Learners will understand basics of congestion management
- Learners will attain knowledge about locational margin prices and financial transmission rights
- Learners will understand the significance ancillary services and pricing of transmission network
- Learners will have knowledge on the various power sectors in India

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level 1: Prescribed Research
- Level 2: Bounded Research
- Level 3: Scaffolded Research
- Level 4: Self actuated Research
- Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Tech Power system curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project (Scaffolded Research)	4
IV	Project Work	12

Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:** **40 Marks**
 - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
 - Seminar Review Presentation : 10 Marks
 - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Design/Socio Technical Project

- **Continuous Internal Assessment through Reviews:** **40 Marks**
 - Review I : 10 Marks
 - Review II : 10 Marks
 - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

Blueprint for assessment of student's performance in Research Methodology Courses

- **Continuous Internal Assessment:** **20 Marks**
 - Research Tools(Lab) : 10 Marks
 - Tutorial: 10 Marks
- **Model Paper Writing:** **40 Marks**
 - Abstract: 5 Marks
 - Introduction: 10 Marks
 - Discussion: 10 Marks
 - Review of Literature: 5 Marks
 - Presentation: 10 Marks
- **Semester Examination:** **40 Marks**
- **Total:** **100 Marks**

SYLLABUS

**17248S11D - APPLIED MATHEMATICS FOR ELECTRICAL & ELECTRONICS
ENGINEERING 3 1 0 4**

1. **ADVANCED MATRIX THEORY** **9**
Matrix norms – Jordan canonical form – Generalized eigenvectors – Singular value decomposition – Pseudo inverse – Least square approximations.
2. **RANDOM PROCESSES** **9**
Random variable, discrete, continuous types - Binomial, Poisson, normal and exponential distributions density & distribution Functions- Moments Moment Generating Functions – Notion of stochastic processes - Auto-correlation – Cross correlation .
3. **LINEAR PROGRAMMING** **9**
Basic concepts – Graphical and Simplex methods –Transportation problem – Assignment problem.
4. **DYNAMIC PROGRAMMING** **9**
Elements of the dynamic programming model – optimality principle – Examples of dynamic programming models and their solutions.
5. **INTEGRAL TRANSFORMS** **9**
Finite Fourier transform - Fourier series - Finite sine Transform - Cosine transform - finite Hankel transform - definition, Transform of df/dx where p is a root of $J_n(p) = 0$, Transform of

$$\frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx}, \text{ and Transform of } \frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx} - \frac{n^2f}{x^2}$$

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

17272H12 - SYSTEM THEORY**3 1 0 4****1. PHYSICAL SYSTEMS AND STATE ASSIGNMENT 9**

Systems - electrical - mechanical - hydraulic - pneumatic - thermal systems - modelling of some typical systems like D.C. Machines - inverted pendulum.

2. STATE SPACE ANALYSIS 9

Realisation of state models - non-uniqueness - minimal realisation - balanced realisation - solution of state equations - state transition matrix and its properties - free and forced responses - properties - controllability and observability - stabilisability and detectability - Kalman decomposition.

3. MIMO SYSTEMS - FREQUENCY DOMAIN DESCRIPTIONS 9

Properties of transfer functions - impulse response matrices - poles and zeros of transfer function matrices - critical frequencies - resonance - steady state and dynamic response - bandwidth - Nyquist plots - singular value analysis.

4. NON-LINEAR SYSTEMS 9

Types of non-linearity - typical examples - equivalent linearization - phase plane analysis - limit cycles - describing functions - analysis using describing functions - jump resonance.

5. STABILITY 9

Stability concepts - equilibrium points - BIBO and asymptotic stability - direct method of Liapunov - application to non-linear problems - frequency domain stability criteria - Popov's method and its extensions.

17272H13 - POWER SYSTEM MODELLING AND ANALYSIS**3 1 0 4****1. SOLUTION TECHNIQUE****9**

Sparse Matrix techniques for large scale power systems: Optimal ordering schemes for preserving sparsity. Flexible packed storage scheme for storing matrix as compact arrays – Factorization by Bifactorization and Gauss elimination methods; Repeat solution using Left and Right factors and L and U matrices.

2. POWER FLOW ANALYSIS**9**

Power flow equation in real and polar forms; Review of Newton's method for solution; Adjustment of P-V buses; Review of Fast Decoupled Power Flow method; Sensitivity factors for P-V bus adjustment; Net Interchange power control in Multi-area power flow analysis: ATC, Assessment of Available Transfer Capability (ATC) using Repeated Power Flow method; Continuation Power Flow method.

3. OPTIMAL POWER FLOW**9**

Problem statement; Solution of Optimal Power Flow (OPF) – The gradient method, Newton's method, Linear Sensitivity Analysis; LP methods – With real power variables only – LP method with AC power flow variables and detailed cost functions; Security constrained Optimal Power Flow; Interior point algorithm; Bus Incremental costs.

4. SHORT CIRCUIT ANALYSIS**9**

Fault calculations using sequence networks for different types of faults. Bus impedance matrix (ZBUS) construction using Building Algorithm for lines with mutual coupling; Simple numerical problems. Computer method for fault analysis using ZBUS and sequence components. Derivation of equations for bus voltages, fault current and line currents, both in sequence and phase domain using Thevenin's equivalent and ZBUS matrix for different faults.

5. TRANSIENT STABILITY ANALYSIS**9**

Introduction, Numerical Integration Methods: Euler and Fourth Order Runge-Kutta methods, Algorithm for simulation of SMIB and multi-machine system with classical synchronous machine model; Factors influencing transient stability, Numerical stability and implicit Integration methods.

SEMESTER - I**17272H14 - ECONOMIC OPERATIONS OF POWER SYSTEMS-I****3 1 0 4****1. INTRODUCTION****9**

Planning and operational problems of power systems – review of economic dispatch and calculation using B matrix loss formula – use of participation factors in on line economic dispatch.

2. OPTIMAL POWER FLOW PROBLEM**9**

Real and reactive power control variables – operation and security constraints and their limits – general OPF problem with different objective functions – formulation – cost loss minimization using Dommel and Tinney’s method and SLP – development of model and algorithm – MVAR planning – optimal sitting and sizing of capacitors using SLR method – interchange evaluation using SLP.

3. HYDRO THERMAL SCHEDULING**9**

Problems definition and mathematical model of long and short term problems – discretization – dynamic and incremental dynamic programming – methods of local variation – hydro thermal system with pumped hydro units – solution by local variation treating pumped hydro unit for load management and spinning reserve.

4. UNIT COMMITMENT**9**

Constraints in unit commitment – solution by priority list method – dynamic programming method – backward and forward – restricted search range.

5. MAINTENANCE SCHEDULING**9**

Factors considered in maintenance scheduling for generating units – turbines – boilers – introduction to maintenance scheduling using mathematical programming.

17272H15- HIGH VOLTAGE DIRECT CURRENT TRANSMISSION SYSTEM**3 1 0 4**

- 1. DC POWER TRANSMISSION TECHNOLOGY** **9**
Introduction – comparison of Ac and DC transmission _ application of DC transmission – description of DC transmission system system – planning for HVDC transmission – modern trends in DC transmission.
- 2. ANALYSIS OF HVDC CONVERTERS** **9**
Pulse number – choice of converter configuration simplified analysis of Graetz circuit converter converter bridge characteristics – characteristics of a twelve pulse converter – detailed analysis of converters.
- 3. CONVERTER AND HVDC SYSTEM CONTROL** **9**
General principles of DC link control – converter control characteristics – systems control hierarchy – firing angle control – current and extinction angle control – starting and stopping of DC link – power control – higher level controllers – telecommunication requirements.
- 4. HARMONICS AND FILTERS** **9**
Introduction – generation of harmonics – design of AC filters – DC filters – carrier frequency and RI noise.
- 5. SIMULATION OF HVDC SYSTEMS** **9**
Introduction – system simulation: Philosophy and tools- HVDC system simulation – modeling of HVDC systems for digital dynamic simulation.

17272L17- POWER SYSTEM SIMULATION LABORATORY – I 0 0 3 3

EXPERIMENTS

1. Formation of Y bus, Z bus, line parameters and modeling of transmission lines.
2. Power flow analysis: Gauss – Seidel Method.
3. Power flow analysis: Newton Raphson method.
4. Plain Decoupled and Fast Decoupled methods.
5. Contingency analysis – single and multiple symmetrical and unsymmetrical faults.

P=3 C=3

17272H21 - EHV POWER TRANSMISSION**3 1 0 4****1. INTRODUCTION****9**

Standard transmission voltages – different configurations of EHV and UHV lines – average values of line parameters – power handling capacity and line loss – costs of transmission lines and equipment – mechanical considerations in line performance.

2. CALCULATION OF LINE PARAMETERS**9**

Calculation of resistance, inductance and capacitance for multi-conductor lines – calculation of sequence inductances and capacitances – line parameters for different modes of propagation – resistance and inductance of ground return, numerical example involving a typical 400/220kV line using line constant program.

3. VOLTAGE GRADIENTS OF CONDUCTORS**9**

Charge-potential relations for multi-conductor lines – surface voltage gradient on conductors – gradient factors and their use – distribution of voltage gradient on sub conductors of bundle - voltage gradients on conductors in the presence of ground wires on towers.

4. CORONA EFFECTS**9**

Power losses and audible losses: I R loss and corona loss - audible noise generation and characteristics - limits for audible noise - Day-Night equivalent noise level- radio interference: corona pulse generation and properties - limits for radio interference fields

5. ELECTROSTATIC FIELD OF EHV LINES**9**

Effect of EHV line on heavy vehicles - calculation of electrostatic field of AC lines- effect of high field on humans, animals, and plants - measurement of electrostatic fields - electrostatic Induction in unenergised circuit of a D/C line - induced voltages in insulated ground wires - electromagnetic interference

17272H22 - ECONOMIC OPERATIONS OF POWER SYSTEMS-II**3 1 0 4****1. AUTOMATIC GENERATION CONTROL****9**

Plant and system level control problem – ALFC of single area system modeling state and transient response – EDC control loop – ALFC of multi area system – modeling – static and transient response of two area system development of state variable model – two area system – AGC system design Kalman's method.

2. AUTOMATIC VOLTAGE CONTROL**9**

Modeling of AVR loop – components – dynamic and static analysis – stability compensation – system level voltage control using OLTC, capacitor and generator voltages – expert system application for system voltage control.

3. SECURITY CONTROL CONCEPT**9**

System operating states by security control functions – monitoring evaluation of system state by contingency analysis – corrective controls (preventive, emergency and restorative) – islanding scheme.

4. STATE ESTIMATION**9**

Least square estimation – basic solution – sequential form of solution – static state estimation of power system by different algorithms – tracking state estimation of power system- computation consideration – external equivalency. Treatment of bad data and on line load flow analysis.

5. COMPUTER CONTROL OF POWER SYSTEM**9**

Energy control center – various levels – national – regional and state level SCADA system – computer configuration – functions, monitoring, data acquisition and controls – EMS system – software in EMS system. Expert system applications for power system operation.

17272H23 - POWER SYSTEM PROTECTION**3 1 0 4****1. INTRODUCTION****9**

General philosophy – Review of conventional equipment protection schemes – state of the art: Numerical relays

2. DISTANCE PROTECTION**9**

Transmission line protection – fault clearing times – relaying quantities during swings – evaluation of distance relay performance during swings – prevention of tripping during transient conditions – automatic line reclosing – generator out of step protection – simulation of distance relays during transients.

3. GENERATOR PROTECTION**9**

Out – of – step, loss of excitation. System response to severe upsets – nature of system response to severe upsets – frequency actuated schemes for load shedding and islanding.

4. INTRODUCTION TO COMPUTER RELAYING**9**

Development of computer relaying – historical background – Expected benefits of computer relaying – computer relay architecture – A/D converter – Anti aliasing filters – substation computer hierarchy.

5. DIGITAL TRANSMISSION LINE RELAYING**9**

Introduction – source of error – relaying as parameter estimation – beyond parameter estimation – symmetrical component distance relay – protection of series compensated lines. Digital protection of transformers, machines and buses.

SEMESTER - II

17272L26- POWER SYSTEM SIMULATION LAB – II

0 0 3 3

LIST OF EXPERIMENTS:

1. **Small signal stability analysis: SMIB and Multi machine configuration.**
2. **Transients stability analysis of Multi – machine configuration.**
3. **Load Frequency control: single area, multi area control.**
4. Economic load dispatch with losses
5. Unit commitment by dynamic programming & priority list method

P=3 C=3

17272H31 - ELECTRICAL TRANSIENTS IN POWER SYSTEMS**3 1 0 4****1. TRAVELLING WAVES ON TRANSMISSION LINE 9**

Lumped and Distributed Parameters – Wave Equation – Reflection, Refraction, Behavior of Travelling waves at the line terminations – Lattice Diagrams – Attenuation and Distortion – Multi-conductor system and Velocity wave.

2. COMPUTATION OF POWER SYSTEM TRANSIENTS 9

Principle of digital computation – Matrix method of solution, Modal analysis, Z transforms, Computation using EMTP – Simulation of switches and non-linear elements.

3. LIGHTNING, SWITCHING AND TEMPORARY OVERVOLTAGES 9

Lightning: Physical phenomena of lightning – Interaction between lightning and power system – Factors contributing to line design – Switching: Short line or kilometric fault – Energizing transients - closing and re-closing of lines - line dropping, load rejection - Voltage induced by fault – Very Fast Transient Overvoltage (VFTO)

4. BEHAVIOUR OF WINDING UNDER TRANSIENT CONDITION 9

Initial and Final voltage distribution - Winding oscillation - traveling wave solution - Behavior of the transformer core under surge condition – Rotating machine – Surge in generator and motor

5. INSULATION CO-ORDINATION 9

Principle of insulation co-ordination in Air Insulated substation (AIS) and Gas Insulated Substation (GIS), insulation level, statistical approach, co-ordination between insulation and protection level –overvoltage protective devices – lightning arresters, substation earthing.

ELECTIVE- I (semester-I)**17272E16A - ANALYSIS OF INVERTERS****3 1 0 4****UNIT- I- SINGLE PHASE INVERTERS****9**

Introduction to self commutated switches: MOSFET and IGBT - Principle of operation of half and full bridge inverters – Performance parameters – Voltage control of single phase inverters using various PWM techniques – various harmonic elimination techniques – forced commutated Thyristor inverters.

UNIT-II- THREE PHASE VOLTAGE SOURCE INVERTERS**9**

180 degree and 120 degree conduction mode inverters with star and delta connected loads – voltage control of three phase inverters: single, multi pulse, sinusoidal, space vector modulation techniques.

UNIT-III- CURRENT SOURCE INVERTERS**9**

Operation of six-step thyristor inverter – inverter operation modes – load – commutated inverters – Auto sequential current source inverter (ASCI) – current pulsations – comparison of current source inverter and voltage source inverters

UNIT-IV- MULTILEVEL INVERTERS**9**

Multilevel concept – diode clamped – flying capacitor – cascade type multilevel inverters - Comparison of multilevel inverters - application of multilevel inverters

UNIT-V- RESONANT INVERTERS**9**

Series and parallel resonant inverters - voltage control of resonant inverters – Class E resonant inverter – resonant DC – link inverters.

17272E16B - MODELLING AND ANALYSIS OF ELECTRICAL MACHINES

3 1 0 4

UNIT I PRINCIPLES OF ELECTROMAGNETIC ENERGY CONVERSION

General expression of stored magnetic energy - co-energy and force/torque - example using single and doubly excited system.

UNIT II BASIC CONCEPTS OF ROTATING MACHINES

Calculation of air gap M.M.F. - per phase machine inductance using physical machine data - voltage and torque equation of D.C. machine - three phase symmetrical induction machine and salient pole synchronous machines in phase variable form.

UNIT III INTRODUCTION TO REFERENCE FRAME THEORY

Static and rotating reference frames - transformation relationships - examples using static symmetrical three phase R, R-L, R-L-M and R-L-C circuits - application of reference frame theory to three phase symmetrical induction and synchronous machines - dynamic direct and quadrature axis model in arbitrarily rotating reference frames - voltage and torque equations - derivation of steady state phasor relationship from dynamic model - generalized theory of rotating electrical machine and Kron's primitive machine.

UNIT IV DETERMINATION OF SYNCHRONOUS MACHINE DYNAMIC EQUIVALENT CIRCUIT PARAMETERS

Standard and derived machine time constants - frequency response test - analysis and dynamic modeling of two phase asymmetrical induction machine and single phase induction machine.

UNIT V SPECIAL MACHINES

Permanent magnet synchronous machine - surface permanent magnet (square and sinusoidal back E.M.F. type) and interior permanent magnet machines - construction and operating principle - dynamic modeling and self controlled operation - analysis of switch reluctance motors.

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

17272E24B - POWER SYSTEM PLANNING AND RELIABILITY**3 1 0 4****1. LOAD FORECASTING****9**

Objectives of forecasting - Load growth patterns and their importance in planning – Load forecasting Based on discounted multiple regression technique-Weather sensitive load forecasting-Determination of annual forecasting-Use of AI in load forecasting.

2. GENERATION SYSTEM RELIABILITY ANALYSIS**9**

Probabilistic generation and load models- Determination of LOLP and expected value of demand not served –Determination of reliability of iso and interconnected generation systems.

3. TRANSMISSION SYSTEM RELIABILITY ANALYSIS**9**

Deterministic contingency analysis-probabilistic load flow-Fuzzy load flow probabilistic transmission system reliability analysis-Determination of reliability indices like LOLP and expected value of demand not served.

4. EXPANSION PLANNING**9**

Basic concepts on expansion planning-procedure followed for integrate transmission system planning, current practice in India-Capacitor placer problem in transmission system and radial distributions system.

5. DISTRIBUTION SYSTEM PLANNING OVERVIEW**9**

Introduction, sub transmission lines and distribution substations-Design primary and secondary systems-distribution system protection and coordination of protective devices.

17272E25A - WIND ENERGY CONVERSION SYSTEMS**3 1 0 4****UNIT-I INTRODUCTION:****9**

History of wind Electric generation - Darrieus wind - Horizontal and vertical axis-Wind turbine - other modern developments - Future possibilities.

UNIT-II WIND RESOURCE AND ITS POTENTIAL FOR ELECTRIC POWER**GENERATION:****9**

Power Extracted By A Wind Driven Machine - Nature and occurrence of wind characteristics and power production - variation of mean wind speed with time.

UNIT-III WIND POWER SITES AND WIND MEASUREMENTS:**9**

Average wind speed and other factors affecting choice of the site - Effect of wind direction - Measurement of wind velocity - Personal estimation without instruments-anemometers - Measurement of wind direction.

UNIT-IV WIND TURBINES WITH ASYNCHRONOUS GENERATORS AND**CONTROL ASPECTS:****9**

Asynchronous systems - Ac Generators - Self excitation of Induction Generator - Single Phase operation of Induction Generator - Permanent magnet Generators - Basic control aspects - fixed speed ratio control scheme - fixed vs variable speed operation of WECS.

UNIT-V GENERATION OF ELECTRICITY**9**

Active and reactive power - P and Q transfer in power systems - Power converters - Characteristics of Generators - Variable Speed options - Economics.

17272E25B - AI TECHNIQUES TO POWER SYSTEMS

3 1 0 4

- 1. INTRODUCTION TO NEURAL NETWORKS** **9**
Basics of ANN - perceptron - delta learning rule - back propagation algorithm - multilayer feed forward network - memory models - bi-directional associative memory - Hopfield network.
- 2. APPLICATIONS TO POWER SYSTEM PROBLEMS** **9**
Application of neural networks to load forecasting - contingency analysis - VAR control - economic load dispatch.
- 3. INTRODUCTION TO FUZZY LOGIC** **9**
Crispness - vagueness - fuzziness - uncertainty - fuzzy set theory fuzzy sets - fuzzy set operations - fuzzy measures - fuzzy relations - fuzzy function - structure of fuzzy logic controller – fuzzification models - data base - rule base - inference engine defuzzification module.
- 4. APPLICATIONS TO POWER SYSTEMS** **9**
Decision making in power system control through fuzzy set theory - use of fuzzy set models of LP in power systems scheduling problems - fuzzy logic based power system stabilizer.
- 5. GENETIC ALGORITHM AND ITS APPLICATIONS TO POWER SYSTEMS** **9**
Introduction - simple genetic algorithm - reproduction - crossover - mutation – advanced operators in genetic search - applications to voltage control and stability studies.

ELECTIVES – IV (semester-III)**17272E32B- POWER SYSTEM DYNAMICS****3 1 0 4****1. SYNCHRONOUS MACHINE MODELLING****9**

Schematic Diagram, Physical Description: armature and field structure, machines with multiple pole pairs, mmf waveforms, direct and quadrature axes, Mathematical Description of a Synchronous Machine: Basic equations of a synchronous machine: stator circuit equations, stator self, stator mutual and stator to rotor mutual inductances, dq0 Transformation: flux linkage and voltage equations for stator and rotor in dq0 coordinates, electrical power and torque, physical interpretation of dq0 transformation, Per Unit Representations: L_{ad} -reciprocal per unit system and that from power-invariant form of Park's transformation; Equivalent Circuits for direct and quadrature axes, Steady-state Analysis: Voltage, current and flux-linkage relationships, Phasor representation, Rotor angle, Steady-state equivalent circuit, Computation of steady-state values, Equations of Motion: Swing Equation, calculation of inertia constant, Representation in system studies, Synchronous Machine Representation in Stability Studies: Simplifications for large-scale studies : Neglect of stator $p\Psi$ terms and speed variations, Simplified model with amortisseurs neglected: two-axis model with amortisseur windings neglected, classical model.

2. MODELLING OF EXCITATION AND SPEED GOVERNING SYSTEMS**9**

Excitation System Requirements; Elements of an Excitation System; Types of Excitation System; Control and protective functions; IEEE (1992) block diagram for simulation of excitation systems. Turbine and Governing System Modelling: Functional Block Diagram of Power Generation and Control, Schematic of a hydroelectric plant, classical transfer function of a hydraulic turbine (no derivation), special characteristic of hydraulic turbine, electrical analogue of hydraulic turbine, Governor for Hydraulic Turbine: Requirement for a transient droop, Block diagram of governor with transient droop compensation, Steam turbine modelling: Single reheat tandem compounded type only and IEEE block diagram for dynamic simulation; generic speed-governing system model for normal speed/load control function.

3. SMALL-SIGNAL STABILITY ANALYSIS WITHOUT CONTROLLERS**9**

Classification of Stability, Basic Concepts and Definitions: Rotor angle stability, The Stability Phenomena. Fundamental Concepts of Stability of Dynamic Systems: State-space representation, stability of dynamic system, Linearisation, Eigen properties of the state matrix: Eigen values and eigenvectors, modal matrices, eigen value and stability, mode shape and participation factor. Single-Machine Infinite Bus (SMIB) Configuration: Classical Machine Model stability analysis with numerical example, Effects of Field Circuit Dynamics: synchronous machine, network and linearised system equations, block diagram representation with K-constants; expression for K-constants (no derivation), effect of field flux variation on system stability: analysis with numerical example,

4. SMALL-SIGNAL STABILITY ANALYSIS WITH CONTROLLERS 9

Effects Of Excitation System: Equations with definitions of appropriate K-constants and simple thyristor excitation system and AVR, block diagram with the excitation system, analysis of effect of AVR on synchronizing and damping components using a numerical example, Power System Stabiliser: Block diagram with AVR and PSS, Illustration of principle of PSS application with numerical example, Block diagram of PSS with description, system state matrix including PSS, analysis of stability with numerical a example. Multi-Machine Configuration: Equations in a common reference frame, equations in individual machine rotor coordinates, illustration of formation of system state matrix for a two-machine system with classical models for synchronous machines, illustration of stability analysis using a numerical example. Principle behind small-signal stability improvement methods: delta-omega and delta P-omega stabilizers.

5. ENHANCEMENT OF SMALL SIGNAL STABILITY 9

Power System Stabilizer – Stabilizer based on shaft speed signal (delta omega) – Delta –P-Omega stabilizer-Frequency-based stabilizers – Digital Stabilizer – Excitation control design – Exciter gain – Phase lead compensation – Stabilizing signal washout stabilizer gain – Stabilizer limits

ELECTIVES – V (semester-III)

17272E33B – POWER SYSTEM RESTRUCTURING AND DEREGULATION

3 1 0 4

1. FUNDAMENTALS AND ARCHITECTURE OF POWER MARKETS 9

Deregulation of Electric utilities: Introduction- Unbundling- Wheeling- Reform motivations- Fundamentals of Deregulated Markets – Types (Future, Day-ahead and Spot) – Participating in Markets (Consumer and Producer Perspective) – bilateral markets – pool markets. Independent System Operator (ISO)-components-types of ISO - role of ISO - Lessons and Operating Experiences of Deregulated Electricity Markets in various Countries (UK, Australia, Europe, US, Asia).

2. TECHNICAL CHALLENGES 9

Total Transfer Capability – Limitations - Margins – Available transfer capability (ATC) – Procedure - Methods to compute ATC – Static and Dynamic ATC – Effect of contingency analysis – Case Study. Concept of Congestion Management – Bid, Zonal and Node Congestion Principles – Inter and Intra zonal congestion – Generation Rescheduling - Transmission congestion contracts – Case Study.

3. TRANSMISSION NETWORKS AND SYSTEM SECURITY SERVICES 9

Transmission expansion in the New Environment – Introduction – Role of transmission planning – Physical Transmission Rights – Limitations – Flow gate - Financial Transmission Rights – Losses – Managing Transmission Risks – Hedging – Investment. Ancillary Services – Introduction – Describing Needs – Compulsory and Demand-side provision – Buying and Selling Ancillary Services – Standards.

4. MARKET PRICING 9

Transmission pricing in open access system – Introduction – Spot Pricing – Uniform Pricing – Zonal Pricing – Locational Marginal Pricing – Congestion Pricing – Ramping and Opportunity Costs. Embedded cost based transmission pricing methods (Postage stamp, Contract path and MW-mile) – Incremental cost based transmission pricing methods (Short run marginal cost, Long run marginal cost) - Pricing of Losses on Lines and Nodes.

5. INDIAN POWER MARKET 9

Current Scenario – Regions – Restructuring Choices – Statewise Operating Strategies – Salient features of Indian Electricity Act 2003 – Transmission System Operator – Regulatory and Policy development in Indian power Sector – Opportunities for IPP and Capacity Power Producer. Availability based tariff – Necessity – Working Mechanism –

Beneficiaries – Day Scheduling Process – Deviation from Schedule – Unscheduled Interchange Rate – System Marginal Rate – Trading Surplus Generation – Applications.

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate

programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Tech Power system curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project (Scaffolded Research)	4
IV	Project Work	12

Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:**

40 Marks

- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
- Seminar Review Presentation : 10 Marks
- Literature Survey : 10 Marks

- **Semester Examination : 60 Marks**

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Design/Socio Technical Project

- **Continuous Internal Assessment through Reviews: 40 Marks**
 - Review I : 10 Marks
 - Review II : 10 Marks
 - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report: 40 Marks**
- **Viva- Voce Examination: 20 Marks**
- **Total: 100 Marks**

Blueprint for assessment of student's performance in Research Methodology Courses

- **Continuous Internal Assessment: 20 Marks**
 - Research Tools(Lab) : 10 Marks
 - Tutorial: 10 Marks

- **Model Paper Writing: 40 Marks**
 - Abstract: 5 Marks
 - Introduction: 10 Marks
 - Discussion: 10 Marks
 - Review of Literature: 5 Marks
 - Presentation: 10 Marks

- **Semester Examination: 40 Marks**
- **Total: 100 Marks**

SYLLABUS

**17248S11DP -APPLIED MATHEMATICS FOR ELECTRICAL & ELECTRONICS
ENGINEERING**

3 1 0 4

1. **ADVANCED MATRIX THEORY** **9**
Matrix norms – Jordan canonical form – Generalized eigenvectors – Singular value decomposition – Pseudo inverse – Least square approximations.
2. **RANDOM PROCESSES** **9**
Random variable, discrete, continuous types - Binomial, Poisson, normal and exponential distributions density & distribution Functions- Moments Moment Generating Functions – Notion of stochastic processes - Auto-correlation – Cross correlation .
3. **LINEAR PROGRAMMING** **9**
Basic concepts – Graphical and Simplex methods –Transportation problem – Assignment problem.
4. **DYNAMIC PROGRAMMING** **9**
Elements of the dynamic programming model – optimality principle – Examples of dynamic programming models and their solutions.
5. **INTEGRAL TRANSFORMS** **9**
Finite Fourier transform - Fourier series - Finite sine Transform - Cosine transform - finite Hankel transform - definition, Transform of $\frac{df}{dx}$ where p is a root of $J_n(p) = 0$, Transform of

$$\frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx}, \text{ and Transform of } \frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx} - \frac{n^2f}{x^2}$$

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

SEMESTER – I**17272H12P - SYSTEM THEORY****3 1 0 4****1. PHYSICAL SYSTEMS AND STATE ASSIGNMENT 9**

Systems - electrical - mechanical - hydraulic - pneumatic - thermal systems - modelling of some typical systems like D.C. Machines - inverted pendulum.

2. STATE SPACE ANALYSIS 9

Realisation of state models - non-uniqueness - minimal realisation - balanced realisation - solution of state equations - state transition matrix and its properties - free and forced responses - properties - controllability and observability - stabilisability and detectability - Kalman decomposition.

3. MIMO SYSTEMS - FREQUENCY DOMAIN DESCRIPTIONS 9

Properties of transfer functions - impulse response matrices - poles and zeros of transfer function matrices - critical frequencies - resonance - steady state and dynamic response - bandwidth - Nyquist plots - singular value analysis.

4. NON-LINEAR SYSTEMS 9

Types of non-linearity - typical examples - equivalent linearization - phase plane analysis - limit cycles - describing functions - analysis using describing functions - jump resonance.

5. STABILITY 9

Stability concepts - equilibrium points - BIBO and asymptotic stability - direct method of Liapunov - application to non-linear problems - frequency domain stability criteria - Popov's method and its extensions.

17272H13P - POWER SYSTEM MODELLING AND ANALYSIS**3 1 0 4****1. SOLUTION TECHNIQUE****9**

Sparse Matrix techniques for large scale power systems: Optimal ordering schemes for preserving sparsity. Flexible packed storage scheme for storing matrix as compact arrays – Factorization by Bifactorization and Gauss elimination methods; Repeat solution using Left and Right factors and L and U matrices.

2. POWER FLOW ANALYSIS**9**

Power flow equation in real and polar forms; Review of Newton's method for solution; Adjustment of P-V buses; Review of Fast Decoupled Power Flow method; Sensitivity factors for P-V bus adjustment; Net Interchange power control in Multi-area power flow analysis: ATC, Assessment of Available Transfer Capability (ATC) using Repeated Power Flow method; Continuation Power Flow method.

3. OPTIMAL POWER FLOW**9**

Problem statement; Solution of Optimal Power Flow (OPF) – The gradient method, Newton's method, Linear Sensitivity Analysis; LP methods – With real power variables only – LP method with AC power flow variables and detailed cost functions; Security constrained Optimal Power Flow; Interior point algorithm; Bus Incremental costs.

4. SHORT CIRCUIT ANALYSIS**9**

Fault calculations using sequence networks for different types of faults. Bus impedance matrix (ZBUS) construction using Building Algorithm for lines with mutual coupling; Simple numerical problems. Computer method for fault analysis using ZBUS and sequence components. Derivation of equations for bus voltages, fault current and line currents, both in sequence and phase domain using Thevenin's equivalent and ZBUS matrix for different faults.

5. TRANSIENT STABILITY ANALYSIS**9**

Introduction, Numerical Integration Methods: Euler and Fourth Order Runge-Kutta methods, Algorithm for simulation of SMIB and multi-machine system with classical synchronous machine model; Factors influencing transient stability, Numerical stability and implicit Integration methods.

SEMESTER – I

17272L14P- POWER SYSTEM SIMULATION LAB – I

0 0 3 3

EXPERIMENTS

1. Formation of Y bus, Z bus, line parameters and modeling of transmission lines.
2. Power flow analysis: Gauss – Seidel Method.
3. Power flow analysis: Newton Raphson method.
4. Plain Decoupled and Fast Decoupled methods.
5. Contingency analysis – single and multiple symmetrical and unsymmetrical faults.

P=3 C=3

SEMESTER -II

17272H21P - EHV POWER TRANSMISSION**3 1 0 4****1. INTRODUCTION 9**

Standard transmission voltages – different configurations of EHV and UHV lines – average values of line parameters – power handling capacity and line loss – costs of transmission lines and equipment – mechanical considerations in line performance.

2. CALCULATION OF LINE PARAMETERS 9

Calculation of resistance, inductance and capacitance for multi-conductor lines – calculation of sequence inductances and capacitances – line parameters for different modes of propagation – resistance and inductance of ground return, numerical example involving a typical 400/220kV line using line constant program.

3. VOLTAGE GRADIENTS OF CONDUCTORS 9

Charge-potential relations for multi-conductor lines – surface voltage gradient on conductors – gradient factors and their use – distribution of voltage gradient on sub conductors of bundle - voltage gradients on conductors in the presence of ground wires on towers.

4. CORONA EFFECTS 9

Power losses and audible losses: I R loss and corona loss - audible noise generation and characteristics - limits for audible noise - Day-Night equivalent noise level- radio interference: corona pulse generation and properties - limits for radio interference fields

5. ELECTROSTATIC FIELD OF EHV LINES 9

Effect of EHV line on heavy vehicles - calculation of electrostatic field of AC lines- effect of high field on humans, animals, and plants - measurement of electrostatic fields - electrostatic Induction in unenergised circuit of a D/C line - induced voltages in insulated ground wires - electromagnetic interference

SEMESTER – II**17272H22P - POWER SYSTEM PROTECTION****3 1 0 4****1. INTRODUCTION****9**

General philosophy – Review of conventional equipment protection schemes – state of the art: Numerical relays

2. DISTANCE PROTECTION**9**

Transmission line protection – fault clearing times – relaying quantities during swings – evaluation of distance relay performance during swings – prevention of tripping during transient conditions – automatic line reclosing – generator out of step protection – simulation of distance relays during transients.

3. GENERATOR PROTECTION**9**

Out – of – step, loss of excitation. System response to severe upsets – nature of system response to severe upsets – frequency actuated schemes for load shedding and islanding.

4. INTRODUCTION TO COMPUTER RELAYING**9**

Development of computer relaying – historical background – Expected benefits of computer relaying – computer relay architecture – A/D converter – Anti aliasing filters – substation computer hierarchy.

5. DIGITAL TRANSMISSION LINE RELAYING**9**

Introduction – source of error – relaying as parameter estimation – beyond parameter estimation – symmetrical component distance relay – protection of series compensated lines. Digital protection of transformers, machines and buses.

 $L = 45 \quad T = 15 \quad P = 0 \quad C = 4$ **REFERENCES**

17272H31P - ECONOMIC OPERATIONS OF POWER SYSTEMS-I**3 1 0 4****1. INTRODUCTION 9**

Planning and operational problems of power systems – review of economic dispatch and calculation using B matrix loss formula – use of participation factors in on line economic dispatch.

2. OPTIMAL POWER FLOW PROBLEM 9

Real and reactive power control variables – operation and security constraints and their limits – general OPF problem with different objective functions – formulation – cost loss minimization using Dommel and Tinney's method and SLP – development of model and algorithm – MVAR planning – optimal siting and sizing of capacitors using SLR method – interchange evaluation using SLP.

3. HYDRO THERMAL SCHEDULING 9

Problems definition and mathematical model of long and short term problems – discretization – dynamic and incremental dynamic programming – methods of local variation – hydro thermal system with pumped hydro units – solution by local variation treating pumped hydro unit for load management and spinning reserve.

4. UNIT COMMITMENT 9

Constraints in unit commitment – solution by priority list method – dynamic programming method – backward and forward – restricted search range.

5. MAINTENANCE SCHEDULING 9

Factors considered in maintenance scheduling for generating units – turbines – boilers – introduction to maintenance scheduling using mathematical programming.

 $L = 45 \quad T = 15 \quad P = 0 \quad C = 4$ **REFERENCES**

17272H32P- HIGH VOLTAGE DIRECT CURRENT TRANSMISSION SYSTEM**3 1 0 4****1. DC POWER TRANSMISSION TECHNOLOGY 9**

Introduction – comparison of Ac and DC transmission _ application of DC transmission – description of DC transmission system system – planning for HVDC transmission – modern trends in DC transmission.

2. ANALYSIS OF HVDC CONVERTERS 9

Pulse number – choice of converter configuration simplified analysis of Graetz circuit converter converter bridge characteristics – characteristics of a twelve pulse converter – detailed analysis of converters.

3. CONVERTER AND HVDC SYSTEM CONTROL 9

General principles of DC link control – converter control characteristics – systems control hierarchy – firing angle control – current and extinction angle control – starting and stopping of DC link – power control – higher level controllers – telecommunication requirements.

4. HARMONICS AND FILTERS 9

Introduction – generation of harmonics – design of AC filters – DC filters – carrier frequency and RI noise.

5. SIMULATION OF HVDC SYSTEMS 9

Introduction – system simulation: Philosophy and tools- HVDC system simulation – modeling of HVDC systems for digital dynamic simulation.

17272L34P- POWER SYSTEM SIMULATION LAB – II 0 0 3 3

LIST OF EXPERIMENTS:

1. Small signal stability analysis: SMIB and Multi machine configuration.
2. Transients stability analysis of Multi – machine configuration.
3. Load Frequency control: single area, multi area control.
4. Economic load dispatch with losses
5. Unit commitment by dynamic programming & priority list method

P=3 C=3

17272H41P - ECONOMIC OPERATIONS OF POWER SYSTEMS-II 3 1 0 4**1. AUTOMATIC GENERATION CONTROL 9**

Plant and system level control problem – ALFC of single area system modeling state and transient response – EDC control loop – ALFC of multi area system – modeling – static and transient response of two area system development of state variable model – two area system – AGC system design Kalman's method.

2. AUTOMATIC VOLTAGE CONTROL 9

Modeling of AVR loop – components – dynamic and static analysis – stability compensation – system level voltage control using OLTC, capacitor and generator voltages – expert system application for system voltage control.

3. SECURITY CONTROL CONCEPT 9

System operating states by security control functions – monitoring evaluation of system state by contingency analysis – corrective controls (preventive, emergency and restorative) – islanding scheme.

4. STATE ESTIMATION 9

Least square estimation – basic solution – sequential form of solution – static state estimation of power system by different algorithms – tracking state estimation of power system- computation consideration – external equivalency. Treatment of bad data and on line load flow analysis.

5. COMPUTER CONTROL OF POWER SYSTEM 9

Energy control center – various levels – national – regional and state level SCADA system – computer configuration – functions, monitoring, data acquisition and controls – EMS system – software in EMS system. Expert system applications for power system operation.

L = 45 T = 15 P = 0 C = 4

17272H42P - ELECTRICAL TRANSIENTS IN POWER SYSTEMS**3 1 0 4****1. TRAVELLING WAVES ON TRANSMISSION LINE 9**

Lumped and Distributed Parameters – Wave Equation – Reflection, Refraction, Behavior of Travelling waves at the line terminations – Lattice Diagrams – Attenuation and Distortion – Multi-conductor system and Velocity wave.

2. COMPUTATION OF POWER SYSTEM TRANSIENTS 9

Principle of digital computation – Matrix method of solution, Modal analysis, Z transforms, Computation using EMTP – Simulation of switches and non-linear elements.

3. LIGHTNING, SWITCHING AND TEMPORARY OVERVOLTAGES 9

Lightning: Physical phenomena of lightning – Interaction between lightning and power system – Factors contributing to line design – Switching: Short line or kilometric fault – Energizing transients - closing and re-closing of lines - line dropping, load rejection - Voltage induced by fault – Very Fast Transient Overvoltage (VFTO)

4. BEHAVIOUR OF WINDING UNDER TRANSIENT CONDITION 9

Initial and Final voltage distribution - Winding oscillation - traveling wave solution - Behavior of the transformer core under surge condition – Rotating machine – Surge in generator and motor

5. INSULATION CO-ORDINATION 9

Principle of insulation co-ordination in Air Insulated substation (AIS) and Gas Insulated Substation (GIS), insulation level, statistical approach, co-ordination between insulation and protection level – overvoltage protective devices – lightning arresters, substation earthing.

17272E23BP - POWER SYSTEM PLANNING AND RELIABILITY

3 1 0 4

1. LOAD FORECASTING 9

Objectives of forecasting - Load growth patterns and their importance in planning – Load forecasting Based on discounted multiple regression technique-Weather sensitive load forecasting-Determination of annual forecasting-Use of AI in load forecasting.

2. GENERATION SYSTEM RELIABILITY ANALYSIS 9

Probabilistic generation and load models- Determination of LOLP and expected value of demand not served –Determination of reliability of iso and interconnected generation systems.

3. TRANSMISSION SYSTEM RELIABILITY ANALYSIS 9

Deterministic contingency analysis-probabilistic load flow-Fuzzy load flow probabilistic transmission system reliability analysis-Determination of reliability indices like LOLP and expected value of demand not served.

4. EXPANSION PLANNING 9

Basic concepts on expansion planning-procedure followed for integrate transmission system planning, current practice in India-Capacitor placer problem in transmission system and radial distributions system.

5. DISTRIBUTION SYSTEM PLANNING OVERVIEW 9

Introduction, sub transmission lines and distribution substations-Design primary and secondary systems-distribution system protection and coordination of protective devices.

ELECTIVE- II (semester-III)**17272E33AP- ANALYSIS OF INVERTERS****3 1 0 4****UNIT- I- SINGLE PHASE INVERTERS****9**

Introduction to self commutated switches: MOSFET and IGBT - Principle of operation of half and full bridge inverters – Performance parameters – Voltage control of single phase inverters using various PWM techniques – various harmonic elimination techniques – forced commutated Thyristor inverters.

UNIT-II- THREE PHASE VOLTAGE SOURCE INVERTERS**9**

180 degree and 120 degree conduction mode inverters with star and delta connected loads – voltage control of three phase inverters: single, multi pulse, sinusoidal, space vector modulation techniques.

UNIT-III- CURRENT SOURCE INVERTERS**9**

Operation of six-step thyristor inverter – inverter operation modes – load – commutated inverters – Auto sequential current source inverter (ASCI) – current pulsations – comparison of current source inverter and voltage source inverters

UNIT-IV- MULTILEVEL INVERTERS**9**

Multilevel concept – diode clamped – flying capacitor – cascade type multilevel inverters - Comparison of multilevel inverters - application of multilevel inverters

UNIT-V- RESONANT INVERTERS**9**

Series and parallel resonant inverters - voltage control of resonant inverters – Class E resonant inverter – resonant DC – link inverters.

17272E33BP - MODELLING AND ANALYSIS OF ELECTRICAL MACHINES

3 1 0 4

UNIT I PRINCIPLES OF ELECTROMAGNETIC ENERGY CONVERSION

General expression of stored magnetic energy - co-energy and force/torque - example using single and doubly excited system.

UNIT II BASIC CONCEPTS OF ROTATING MACHINES

Calculation of air gap M.M.F. - per phase machine inductance using physical machine data - voltage and torque equation of D.C. machine - three phase symmetrical induction machine and salient pole synchronous machines in phase variable form.

UNIT III INTRODUCTION TO REFERENCE FRAME THEORY

Static and rotating reference frames - transformation relationships - examples using static symmetrical three phase R, R-L, R-L-M and R-L-C circuits - application of reference frame theory to three phase symmetrical induction and synchronous machines - dynamic direct and quadrature axis model in arbitrarily rotating reference frames - voltage and torque equations - derivation of steady state phasor relationship from dynamic model - generalized theory of rotating electrical machine and Kron's primitive machine.

UNIT IV DETERMINATION OF SYNCHRONOUS MACHINE DYNAMIC EQUIVALENT CIRCUIT PARAMETERS

Standard and derived machine time constants - frequency response test - analysis and dynamic modeling of two phase asymmetrical induction machine and single phase induction machine.

UNIT V SPECIAL MACHINES

Permanent magnet synchronous machine - surface permanent magnet (square and sinusoidal back E.M.F. type) and interior permanent magnet machines - construction and operating principle - dynamic modeling and self controlled operation - analysis of switch reluctance motors.

$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$

ELECTIVES – III (semester-IV)

17272E43AP - WIND ENERGY CONVERSION SYSTEMS

3 1 0 4

UNIT-I INTRODUCTION:

9

History of wind Electric generation - Darrieus wind - Horizontal and vertical axis-Wind turbine - other modern developments - Future possibilities.

UNIT-II WIND RESOURCE AND ITS POTENTIAL FOR ELECTRIC POWER

GENERATION:

9

Power Extracted By A Wind Driven Machine - Nature and occurrence of wind characteristics and power production - variation of mean wind speed with time.

UNIT-III WIND POWER SITES AND WIND MEASUREMENTS:

9

Average wind speed and other factors affecting choice of the site - Effect of wind direction - Measurement of wind velocity - Personal estimation without instruments-anemometers - Measurement of wind direction.

UNIT-IV WIND TURBINES WITH ASYNCHRONOUS GENERATORS AND

CONTROL ASPECTS:

9

Asynchronous systems - Ac Generators - Self excitation of Induction Generator - Single Phase operation of Induction Generator - Permanent magnet Generators - Basic control aspects - fixed speed ratio control scheme - fixed vs variable speed operation of WECS.

UNIT-V GENERATION OF ELECTRICITY

9

Active and reactive power - P and Q transfer in power systems - Power converters - Characteristics of Generators - Variable Speed options - Economics.

L = 45 T = 15 P = 0 C =4

17272E43BP - AI TECHNIQUES TO POWER SYSTEMS

3 1 0 4

1. INTRODUCTION TO NEURAL NETWORKS 9

Basics of ANN - perceptron - delta learning rule - back propagation algorithm - multilayer feed forward network - memory models - bi-directional associative memory - Hopfield network.

2. APPLICATIONS TO POWER SYSTEM PROBLEMS 9

Application of neural networks to load forecasting - contingency analysis - VAR control - economic load dispatch.

3. INTRODUCTION TO FUZZY LOGIC 9

Crispness - vagueness - fuzziness - uncertainty - fuzzy set theory fuzzy sets - fuzzy set operations - fuzzy measures - fuzzy relations - fuzzy function - structure of fuzzy logic controller – fuzzification models - data base - rule base - inference engine defuzzification module.

4. APPLICATIONS TO POWER SYSTEMS 9

Decision making in power system control through fuzzy set theory - use of fuzzy set models of LP in power systems scheduling problems - fuzzy logic based power system stabilizer.

5. GENETIC ALGORITHM AND ITS APPLICATIONS TO POWER SYSTEMS

9

Introduction - simple genetic algorithm - reproduction - crossover - mutation – advanced operators in genetic search - applications to voltage control and stability studies.

L = 45 T = 15 P = 0 C = 4

ELECTIVES – IV (semester-V)**17272E51AP - POWER ELECTRONICS APPLICATIONS IN POWER SYSTEMS****3 1 0 4****UNIT: I STATIC COMPENSATOR CONTROL 9**

Theory of load compensation - voltage regulation and power factor correction - phase balance and PF correction of unsymmetrical loads - Property of static compensator - Thyristor controlled rectifier (TCR) - Thyristor Controlled Capacitor (TSC) - Saturable core reactor - Control Strategies.

UNIT: II HARMONIC CONTROL AND POWER FACTOR IMPROVEMENT 9

Input power factor for different types of converters - power factor improvement using Load and forced commutated converters.

UNIT: III VOLTAGE CONTROL USING STATIC TAP-CHANGERS 9

Conventional tap changing methods, static tap changers using Thyristor, different schemes - comparison.

UNIT: IV STATIC EXCITATION CONTROL 9

Solid state excitation of synchronous generators - Different schemes - Generec excitation systems.

UNIT: V UNINTERRUPTABLE POWER SUPPLY SYSTEM 9

Parallel, Redundant and non- redundant UPS - Ups using resonant power converters - Switch mode power supplies.

ELECTIVES – IV (semester-V)**17272E51BP - POWER SYSTEM DYNAMICS 3 1 0 4****1. SYNCHRONOUS MACHINE MODELLING 9**

Schematic Diagram, Physical Description: armature and field structure, machines with multiple pole pairs, mmf waveforms, direct and quadrature axes, Mathematical Description of a Synchronous Machine: Basic equations of a synchronous machine: stator circuit equations, stator self, stator mutual and stator to rotor mutual inductances, dq0 Transformation: flux linkage and voltage equations for stator and rotor in dq0 coordinates, electrical power and torque, physical interpretation of dq0 transformation, Per Unit Representations: L_{ad} -reciprocal per unit system and that from power-invariant form of Park's transformation; Equivalent Circuits for direct and quadrature axes, Steady-state Analysis: Voltage, current and flux-linkage relationships, Phasor representation, Rotor angle, Steady-state equivalent circuit, Computation of steady-state values, Equations of Motion: Swing Equation, calculation of inertia constant, Representation in system studies, Synchronous Machine Representation in Stability Studies: Simplifications for large-scale studies : Neglect of stator $p\Psi$ terms and speed variations, Simplified model with amortisseurs neglected: two-axis model with amortisseur windings neglected, classical model.

2. MODELLING OF EXCITATION AND SPEED GOVERNING SYSTEMS 9

Excitation System Requirements; Elements of an Excitation System; Types of Excitation System; Control and protective functions; IEEE (1992) block diagram for simulation of excitation systems. Turbine and Governing System Modelling: Functional Block Diagram of Power Generation and Control, Schematic of a hydroelectric plant, classical transfer function of a hydraulic turbine (no derivation), special characteristic of hydraulic turbine, electrical analogue of hydraulic turbine, Governor for Hydraulic Turbine: Requirement for a transient droop, Block diagram of governor with transient droop compensation, Steam turbine modelling: Single reheat tandem compounded type only and IEEE block diagram for dynamic simulation; generic speed-governing system model for normal speed/load control function.

3. SMALL-SIGNAL STABILITY ANALYSIS WITHOUT CONTROLLERS 9

Classification of Stability, Basic Concepts and Definitions: Rotor angle stability, The Stability Phenomena. Fundamental Concepts of Stability of Dynamic Systems: State-space representation, stability of dynamic system, Linearisation, Eigen properties of the state matrix: Eigen values and eigenvectors, modal matrices, eigen value and stability, mode shape and participation factor. Single-Machine Infinite Bus (SMIB) Configuration: Classical Machine Model stability analysis with numerical example, Effects of Field Circuit Dynamics: synchronous machine, network and linearised system equations, block diagram representation with K-constants; expression for K-constants (no derivation), effect of field flux variation on system stability: analysis with numerical example,

4. SMALL-SIGNAL STABILITY ANALYSIS WITH CONTROLLERS 9

Effects Of Excitation System: Equations with definitions of appropriate K-constants and simple thyristor excitation system and AVR, block diagram with the excitation system, analysis of effect of AVR on synchronizing and damping components using a numerical example, Power System Stabiliser: Block diagram with AVR and PSS, Illustration of principle of PSS application with numerical example, Block diagram of PSS with description, system state matrix including PSS, analysis of stability with numerical a example. Multi-Machine Configuration: Equations in a common reference frame, equations in individual machine rotor coordinates, illustration of formation of system state matrix for a two-machine system with classical models for synchronous machines, illustration of stability analysis using a numerical example. Principle behind small-signal stability improvement methods: delta-omega and delta P-omega stabilizers.

5. ENHANCEMENT OF SMALL SIGNAL STABILITY 9

Power System Stabilizer – Stabilizer based on shaft speed signal (delta omega) – Delta –P-Omega stabilizer-Frequency-based stabilizers – Digital Stabilizer – Excitation control design – Exciter gain – Phase lead compensation – Stabilizing signal washout stabilizer gain – Stabilizer limits

ELECTIVES – V (semester-V)**17272E52AP - POWER CONDITIONING****3 1 0 4****1. INTRODUCTION****9**

Introduction – Characterization of Electric Power Quality: Transients, short duration and long duration voltage variations, Voltage imbalance, waveform distortion, Voltage fluctuations, Power frequency variation, Power acceptability curves – power quality problems: poor load power factor, Non linear and unbalanced loads, DC offset in loads, Notching in load voltage, Disturbance in supply voltage – Power quality standards.

2. NON-LINEAR LOADS**9**

Single phase static and rotating AC/DC converters, Three phase static AC/DC converters, Battery chargers, Arc furnaces, Fluorescent lighting, pulse modulated devices, Adjustable speed drives.

3. MEASUREMENT AND ANALYSIS METHODS**9**

Voltage, Current, Power and Energy measurements, power factor measurements and definitions, event recorders, Measurement Error – Analysis: Analysis in the periodic steady state, Time domain methods, Frequency domain methods: Laplace's, Fourier and Hartley transform – The Walsh Transform – Wavelet Transform.

4. ANALYSIS AND CONVENTIONAL MITIGATION METHODS**9**

Analysis of power outages, Analysis of unbalance: Symmetrical components of phasor quantities, Instantaneous symmetrical components, Instantaneous real and reactive powers, Analysis of distortion: On-line extraction of fundamental sequence components from measured samples – Harmonic indices – Analysis of voltage sag: Detorit Edison sag score, Voltage sag energy, Voltage Sag Lost Energy Index (VSLEI)- Analysis of voltage flicker, Reduced duration and customer impact of outages, Classical load balancing problem: Open loop balancing, Closed loop balancing, current balancing, Harmonic reduction, Voltage sag reduction.

5. POWER QUALITY IMPROVEMENT**9**

Utility-Customer interface –Harmonic filters: passive, Active and hybrid filters – Custom power devices: Network reconfiguring Devices, Load compensation using DSTATCOM, Voltage regulation using DSTATCOM, protecting sensitive loads using DVR, UPQC –control strategies: P- Q theory, Synchronous detection method – Custom power park –Status of application of custom power devices

17272E52BP – POWER SYSTEM RESTRUCTURING AND DEREGULATION

3 1 0 4

1. FUNDAMENTALS AND ARCHITECTURE OF POWERMARKETS 9

Deregulation of Electric utilities: Introduction-Unbundling-Wheeling- Reform motivations- Fundamentals of Deregulated Markets – Types (Future, Day-ahead and Spot) – Participating in Markets (Consumer and Producer Perspective) – bilateral markets – pool markets. Independent System Operator (ISO)-components-types of ISO - role of ISO - Lessons and Operating Experiences of Deregulated Electricity Markets in various Countries (UK, Australia, Europe, US, Asia).

2. TECHNICAL CHALLENGES 9

Total Transfer Capability – Limitations - Margins – Available transfer capability (ATC) – Procedure - Methods to compute ATC – Static and Dynamic ATC – Effect of contingency analysis – Case Study. Concept of Congestion Management – Bid, Zonal and Node Congestion Principles – Inter and Intra zonal congestion – Generation Rescheduling - Transmission congestion contracts – Case Study.

3. TRANSMISSION NETWORKS AND SYSTEM SECURITY SERVICES 9

Transmission expansion in the New Environment – Introduction – Role of transmission planning – Physical Transmission Rights – Limitations – Flow gate - Financial Transmission Rights – Losses – Managing Transmission Risks – Hedging – Investment. Ancillary Services – Introduction – Describing Needs – Compulsory and Demand-side provision – Buying and Selling Ancillary Services – Standards.

4. MARKET PRICING 9

Transmission pricing in open access system – Introduction – Spot Pricing – Uniform Pricing – Zonal Pricing – Locational Marginal Pricing – Congestion Pricing – Ramping and Opportunity Costs. Embedded cost based transmission pricing methods (Postage stamp, Contract path and MW-mile) – Incremental cost based transmission pricing methods (Short run marginal cost, Long run marginal cost) - Pricing of Losses on Lines and Nodes.

5. INDIAN POWER MARKET 9

Current Scenario – Regions – Restructuring Choices – Statewise Operating Strategies – Salient features of Indian Electricity Act 2003 – Transmission System Operator – Regulatory and Policy development in Indian power Sector – Opportunities for IPP and Capacity Power Producer. Availability based tariff – Necessity – Working Mechanism – Beneficiaries – Day Scheduling Process – Deviation from Schedule – Unscheduled

Interchange Rate – System Marginal Rate – Trading Surplus Generation – Applications.

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Tech Power system curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project (Scaffolded Research)	4
IV	Project Work	12

Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:**

40 Marks

- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
- Seminar Review Presentation : 10 Marks

● Literature Survey : 10 Marks

● Semester Examination : 60 Marks

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Design/Socio Technical Project

- Continuous Internal Assessment through Reviews: 40 Marks
 - Review I : 10 Marks
 - Review II : 10 Marks
 - Review III : 20 Marks
- Evaluation of Socio Technical Practicum Final Report: 40 Marks
- Viva- Voce Examination: 20 Marks
- Total: 100 Marks

Blueprint for assessment of student's performance in Research Methodology Courses

- Continuous Internal Assessment: 20 Marks
 - Research Tools(Lab) : 10 Marks
 - Tutorial: 10 Marks
- Model Paper Writing: 40 Marks
 - Abstract: 5 Marks
 - Introduction: 10 Marks
 - Discussion: 10 Marks
 - Review of Literature: 5 Marks
 - Presentation: 10 Marks
- Semester Examination: 40 Marks
- Total: 100 Marks

SYLLABUS

19248S11DP -APPLIED MATHEMATICS FOR ELECTRICAL & ELECTRONICS ENGINEERING

3 1 0 4

1. ADVANCED MATRIX THEORY 9

Matrix norms – Jordan canonical form – Generalized eigenvectors – Singular value decomposition – Pseudo inverse – Least square approximations.

2. RANDOM PROCESSES 9

Random variable, discrete, continuous types - Binomial, Poisson, normal and exponential distributions density & distribution Functions- Moments Moment Generating Functions – Notion of stochastic processes - Auto-correlation – Cross correlation .

3. LINEAR PROGRAMMING 9

Basic concepts – Graphical and Simplex methods –Transportation problem –Assignment problem.

4. DYNAMIC PROGRAMMING 9

Elements of the dynamic programming model – optimality principle – Examples of dynamic programming models and their solutions.

5. INTEGRAL TRANSFORMS 9

Finite Fourier transform - Fourier series - Finite sine Transform - Cosine transform - finite Hankel transform - definition, Transform of df/dx where p is a root of $J_n(p) = 0$, Transform of

$$\frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx}, \text{ and Transform of } \frac{d^2f}{dx^2} + \frac{1}{x} \frac{df}{dx} - \frac{n^2f}{x^2}$$

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

SEMESTER – I**19272C12P - SYSTEM THEORY****3 1 0 4****1. PHYSICAL SYSTEMS AND STATE ASSIGNMENT****9**

Systems - electrical - mechanical - hydraulic - pneumatic - thermal systems - modelling of some typical systems like D.C. Machines - inverted pendulum.

2. STATE SPACE ANALYSIS**9**

Realisation of state models - non-uniqueness - minimal realisation - balanced realisation - solution of state equations - state transition matrix and its properties - free and forced responses - properties - controllability and observability - stabilisability and detectability - Kalman decomposition.

3. MIMO SYSTEMS - FREQUENCY DOMAIN DESCRIPTIONS**9**

Properties of transfer functions - impulse response matrices - poles and zeros of transfer function matrices - critical frequencies - resonance - steady state and dynamic response - bandwidth - Nyquist plots - singular value analysis.

4. NON-LINEAR SYSTEMS**9**

Types of non-linearity - typical examples - equivalent linearization - phase plane analysis - limit cycles - describing functions - analysis using describing functions - jump resonance.

5. STABILITY**9**

Stability concepts - equilibrium points - BIBO and asymptotic stability - direct method of Liapunov - application to non-linear problems - frequency domain stability criteria - Popov's method and its extensions.

19272C13P - POWER SYSTEM MODELLING AND ANALYSIS**3 1 0 4****1. SOLUTION TECHNIQUE****9**

Sparse Matrix techniques for large scale power systems: Optimal ordering schemes for preserving sparsity. Flexible packed storage scheme for storing matrix as compact arrays – Factorization by Bifactorization and Gauss elimination methods; Repeat solution using Left and Right factors and L and U matrices.

2. POWER FLOW ANALYSIS**9**

Power flow equation in real and polar forms; Review of Newton's method for solution; Adjustment of P-V buses; Review of Fast Decoupled Power Flow method; Sensitivity factors for P-V bus adjustment; Net Interchange power control in Multi-area power flow analysis: ATC, Assessment of Available Transfer Capability (ATC) using Repeated Power Flow method; Continuation Power Flow method.

3. OPTIMAL POWER FLOW**9**

Problem statement; Solution of Optimal Power Flow (OPF) – The gradient method, Newton's method, Linear Sensitivity Analysis; LP methods – With real power variables only – LP method with AC power flow variables and detailed cost functions; Security constrained Optimal Power Flow; Interior point algorithm; Bus Incremental costs.

4. SHORT CIRCUIT ANALYSIS**9**

Fault calculations using sequence networks for different types of faults. Bus impedance matrix (ZBUS) construction using Building Algorithm for lines with mutual coupling; Simple numerical problems. Computer method for fault analysis using ZBUS and sequence components. Derivation of equations for bus voltages, fault current and line currents, both in sequence and phase domain using Thevenin's equivalent and ZBUS matrix for different faults.

5. TRANSIENT STABILITY ANALYSIS**9**

Introduction, Numerical Integration Methods: Euler and Fourth Order Runge-Kutta methods, Algorithm for simulation of SMIB and multi-machine system with classical synchronous machine model; Factors influencing transient stability, Numerical stability and implicit Integration methods.

 $L = 45 \quad T = 15 \quad P = 0 \quad C = 4$ **REFERENCES:**

SEMESTER – I

19272L14P- POWER SYSTEM SIMULATION LAB – I

0 0 3 3

EXPERIMENTS

1. Formation of Y bus, Z bus, line parameters and modeling of transmission lines.
2. Power flow analysis: Gauss – Seidel Method.
3. Power flow analysis: Newton Raphson method.
4. Plain Decoupled and Fast Decoupled methods.
5. Contingency analysis – single and multiple symmetrical and unsymmetrical faults.

P=3 C=3

SEMESTER -II**19272C21P - EHV POWER TRANSMISSION****3 1 0 4****1. INTRODUCTION 9**

Standard transmission voltages – different configurations of EHV and UHV lines – average values of line parameters – power handling capacity and line loss – costs of transmission lines and equipment – mechanical considerations in line performance.

2. CALCULATION OF LINE PARAMETERS 9

Calculation of resistance, inductance and capacitance for multi-conductor lines – calculation of sequence inductances and capacitances – line parameters for different modes of propagation – resistance and inductance of ground return, numerical example involving a typical 400/220kV line using line constant program.

3. VOLTAGE GRADIENTS OF CONDUCTORS 9

Charge-potential relations for multi-conductor lines – surface voltage gradient on conductors – gradient factors and their use – distribution of voltage gradient on sub conductors of bundle - voltage gradients on conductors in the presence of ground wires on towers.

4. CORONA EFFECTS 9

Power losses and audible losses: I R loss and corona loss - audible noise generation and characteristics - limits for audible noise - Day-Night equivalent noise level- radio interference: corona pulse generation and properties - limits for radio interference fields

5. ELECTROSTATIC FIELD OF EHV LINES 9

Effect of EHV line on heavy vehicles - calculation of electrostatic field of AC lines- effect of high field on humans, animals, and plants - measurement of electrostatic fields - electrostatic Induction in unenergised circuit of a D/C line - induced voltages in insulated ground wires - electromagnetic interference

SEMESTER – II**19272C22P - POWER SYSTEM PROTECTION****3 1 0 4****1. INTRODUCTION****9**

General philosophy – Review of conventional equipment protection schemes – state of the art: Numerical relays

2. DISTANCE PROTECTION**9**

Transmission line protection – fault clearing times – relaying quantities during swings – evaluation of distance relay performance during swings – prevention of tripping during transient conditions – automatic line reclosing – generator out of step protection – simulation of distance relays during transients.

3. GENERATOR PROTECTION**9**

Out – of – step, loss of excitation. System response to severe upsets – nature of system response to severe upsets – frequency actuated schemes for load shedding and islanding.

4. INTRODUCTION TO COMPUTER RELAYING**9**

Development of computer relaying – historical background – Expected benefits of computer relaying – computer relay architecture – A/D converter – Anti aliasing filters – substation computer hierarchy.

5. DIGITAL TRANSMISSION LINE RELAYING**9**

Introduction – source of error – relaying as parameter estimation – beyond parameter estimation – symmetrical component distance relay – protection of series compensated lines. Digital protection of transformers, machines and buses.

19272C31P - ECONOMIC OPERATIONS OF POWER SYSTEMS-I**3 1 0 4****1. INTRODUCTION 9**

Planning and operational problems of power systems – review of economic dispatch and calculation using B matrix loss formula – use of participation factors in on line economic dispatch.

2. OPTIMAL POWER FLOW PROBLEM 9

Real and reactive power control variables – operation and security constraints and their limits – general OPF problem with different objective functions – formulation – cost loss minimization using Dommel and Tinney’s method and SLP – development of model and algorithm – MVAR planning – optimal siting and sizing of capacitors using SLR method – interchange evaluation using SLP.

3. HYDRO THERMAL SCHEDULING 9

Problems definition and mathematical model of long and short term problems – discretization – dynamic and incremental dynamic programming – methods of local variation – hydro thermal system with pumped hydro units – solution by local variation treating pumped hydro unit for load management and spinning reserve.

4. UNIT COMMITMENT 9

Constraints in unit commitment – solution by priority list method – dynamic programming method – backward and forward – restricted search range.

5. MAINTENANCE SCHEDULING 9

Factors considered in maintenance scheduling for generating units – turbines – boilers – introduction to maintenance scheduling using mathematical programming.

19272C32P- HIGH VOLTAGE DIRECT CURRENT TRANSMISSION SYSTEM**3 1 0 4****1. DC POWER TRANSMISSION TECHNOLOGY 9**

Introduction – comparison of Ac and DC transmission _ application of DC transmission – description of DC transmission system system – planning for HVDC transmission – modern trends in DC transmission.

2. ANALYSIS OF HVDC CONVERTERS 9

Pulse number – choice of converter configuration simplified analysis of Graetz circuit converter converter bridge characteristics – characteristics of a twelve pulse converter – detailed analysis of converters.

3. CONVERTER AND HVDC SYSTEM CONTROL 9

General principles of DC link control – converter control characteristics – systems control hierarchy – firing angle control – current and extinction angle control – starting and stopping of DC link – power control – higher level controllers – telecommunication requirements.

4. HARMONICS AND FILTERS 9

Introduction – generation of harmonics – design of AC filters – DC filters – carrier frequency and RI noise.

5. SIMULATION OF HVDC SYSTEMS 9

Introduction – system simulation: Philosophy and tools- HVDC system simulation – modeling of HVDC systems for digital dynamic simulation.

19272L34P- POWER SYSTEM SIMULATION LAB – II 0 0 3 3

LIST OF EXPERIMENTS:

1. Small signal stability analysis: SMIB and Multi machine configuration.
2. Transients stability analysis of Multi – machine configuration.
3. Load Frequency control: single area, multi area control.
4. Economic load dispatch with losses
5. Unit commitment by dynamic programming & priority list method

P=3 C=3

19272C41P - ECONOMIC OPERATIONS OF POWER SYSTEMS-II 3 1 0 4**1. AUTOMATIC GENERATION CONTROL 9**

Plant and system level control problem – ALFC of single area system modeling state and transient response – EDC control loop – ALFC of multi area system – modeling – static and transient response of two area system development of state variable model – two area system – AGC system design Kalman's method.

2. AUTOMATIC VOLTAGE CONTROL 9

Modeling of AVR loop – components – dynamic and static analysis – stability compensation – system level voltage control using OLTC, capacitor and generator voltages – expert system application for system voltage control.

3. SECURITY CONTROL CONCEPT 9

System operating states by security control functions – monitoring evaluation of system state by contingency analysis – corrective controls (preventive, emergency and restorative) – islanding scheme.

4. STATE ESTIMATION 9

Least square estimation – basic solution – sequential form of solution – static state estimation of power system by different algorithms – tracking state estimation of power system- computation consideration – external equivalency. Treatment of bad data and on line load flow analysis.

5. COMPUTER CONTROL OF POWER SYSTEM 9

Energy control center – various levels – national – regional and state level SCADA system – computer configuration – functions, monitoring, data acquisition and controls – EMS system – software in EMS system. Expert system applications for power system operation.

19272C42P - ELECTRICAL TRANSIENTS IN POWER SYSTEMS**3 1 0 4**

- 1. TRAVELLING WAVES ON TRANSMISSION LINE 9**
Lumped and Distributed Parameters – Wave Equation – Reflection, Refraction, Behavior of Travelling waves at the line terminations – Lattice Diagrams – Attenuation and Distortion – Multi-conductor system and Velocity wave.
- 2. COMPUTATION OF POWER SYSTEM TRANSIENTS 9**
Principle of digital computation – Matrix method of solution, Modal analysis, Z transforms, Computation using EMTP – Simulation of switches and non-linear elements.
- 3. LIGHTNING, SWITCHING AND TEMPORARY OVERVOLTAGES 9**
Lightning: Physical phenomena of lightning – Interaction between lightning and power system – Factors contributing to line design – Switching: Short line or kilometric fault – Energizing transients - closing and re-closing of lines - line dropping, load rejection - Voltage induced by fault – Very Fast Transient Overvoltage (VFTO)
- 4. BEHAVIOUR OF WINDING UNDER TRANSIENT CONDITION 9**
Initial and Final voltage distribution - Winding oscillation - traveling wave solution - Behavior of the transformer core under surge condition – Rotating machine – Surge in generator and motor
- 5. INSULATION CO-ORDINATION 9**
Principle of insulation co-ordination in Air Insulated substation (AIS) and Gas Insulated Substation (GIS), insulation level, statistical approach, co-ordination between insulation and protection level –overvoltage protective devices – lightning arresters, substation earthing.

ELECTIVES – I (semester-II)**19272E23BP - POWER SYSTEM PLANNING AND RELIABILITY****3 1 0 4****1. LOAD FORECASTING****9**

Objectives of forecasting - Load growth patterns and their importance in planning – Load forecasting Based on discounted multiple regression technique-Weather sensitive load forecasting-Determination of annual forecasting-Use of AI in load forecasting.

2. GENERATION SYSTEM RELIABILITY ANALYSIS**9**

Probabilistic generation and load models- Determination of LOLP and expected value of demand not served –Determination of reliability of iso and interconnected generation systems.

3. TRANSMISSION SYSTEM RELIABILITY ANALYSIS**9**

Deterministic contingency analysis-probabilistic load flow-Fuzzy load flow probabilistic transmission system reliability analysis-Determination of reliability indices like LOLP and expected value of demand not served.

4. EXPANSION PLANNING**9**

Basic concepts on expansion planning-procedure followed for integrate transmission system planning, current practice in India-Capacitor placer problem in transmission system and radial distributions system.

5. DISTRIBUTION SYSTEM PLANNING OVERVIEW**9**

Introduction, sub transmission lines and distribution substations-Design primary and secondary systems-distribution system protection and coordination of protective devices.

ELECTIVE- II (semester-III)**19272E33AP- ANALYSIS OF INVERTERS****3 1 0 4****UNIT- I- SINGLE PHASE INVERTERS 9**

Introduction to self commutated switches: MOSFET and IGBT - Principle of operation of half and full bridge inverters – Performance parameters – Voltage control of single phase inverters using various PWM techniques – various harmonic elimination techniques – forced commutated Thyristor inverters.

UNIT-II- THREE PHASE VOLTAGE SOURCE INVERTERS 9

180 degree and 120 degree conduction mode inverters with star and delta connected loads – voltage control of three phase inverters: single, multi pulse, sinusoidal, space vector modulation techniques.

UNIT-III- CURRENT SOURCE INVERTERS 9

Operation of six-step thyristor inverter – inverter operation modes – load – commutated inverters – Auto sequential current source inverter (ASCI) – current pulsations – comparison of current source inverter and voltage source inverters

UNIT-IV- MULTILEVEL INVERTERS 9

Multilevel concept – diode clamped – flying capacitor – cascade type multilevel inverters - Comparison of multilevel inverters - application of multilevel inverters

UNIT-V- RESONANT INVERTERS 9

Series and parallel resonant inverters - voltage control of resonant inverters – Class E resonant inverter – resonant DC – link inverters.

19272E33BP - MODELLING AND ANALYSIS OF ELECTRICAL MACHINES

3 1 0 4

UNIT I PRINCIPLES OF ELECTROMAGNETIC ENERGY CONVERSION

General expression of stored magnetic energy - co-energy and force/torque - example using single and doubly excited system.

UNIT II BASIC CONCEPTS OF ROTATING MACHINES

Calculation of air gap M.M.F. - per phase machine inductance using physical machine data - voltage and torque equation of D.C. machine - three phase symmetrical induction machine and salient pole synchronous machines in phase variable form.

UNIT III INTRODUCTION TO REFERENCE FRAME THEORY

Static and rotating reference frames - transformation relationships - examples using static symmetrical three phase R, R-L, R-L-M and R-L-C circuits - application of reference frame theory to three phase symmetrical induction and synchronous machines - dynamic direct and quadrature axis model in arbitrarily rotating reference frames - voltage and torque equations - derivation of steady state phasor relationship from dynamic model - generalized theory of rotating electrical machine and Kron's primitive machine.

UNIT IV DETERMINATION OF SYNCHRONOUS MACHINE DYNAMIC EQUIVALENT CIRCUIT PARAMETERS

Standard and derived machine time constants - frequency response test - analysis and dynamic modeling of two phase asymmetrical induction machine and single phase induction machine.

UNIT V SPECIAL MACHINES

Permanent magnet synchronous machine - surface permanent magnet (square and sinusoidal back E.M.F. type) and interior permanent magnet machines - construction and operating principle - dynamic modeling and self controlled operation - analysis of switch reluctance motors.

$$L = 45 \quad T = 15 \quad P = 0 \quad C = 4$$

19272E43AP - WIND ENERGY CONVERSION SYSTEMS

3 1 0 4

UNIT-I INTRODUCTION: 9

History of wind Electric generation - Darrieus wind - Horizontal and vertical axis-Wind turbine - other modern developments - Future possibilities.

UNIT-II WIND RESOURCE AND ITS POTENTIAL FOR ELECTRIC POWER

GENERATION: 9

Power Extracted By A Wind Driven Machine - Nature and occurrence of wind characteristics and power production - variation of mean wind speed with time.

UNIT-III WIND POWER SITES AND WIND MEASUREMENTS: 9

Average wind speed and other factors affecting choice of the site - Effect of wind direction - Measurement of wind velocity - Personal estimation without instruments-anemometers - Measurement of wind direction.

UNIT-IV WIND TURBINES WITH ASYNCHRONOUS GENERATORS AND

CONTROL ASPECTS: 9

Asynchronous systems - Ac Generators - Self excitation of Induction Generator - Single Phase operation of Induction Generator - Permanent magnet Generators - Basic control aspects - fixed speed ratio control scheme - fixed vs variable speed operation of WECS.

UNIT-V GENERATION OF ELECTRICITY 9

Active and reactive power - P and Q transfer in power systems - Power converters - Characteristics of Generators - Variable Speed options - Economics.

L = 45 T = 15 P = 0 C =4

19272E43BP - AI TECHNIQUES TO POWER SYSTEMS

3 1 0 4

1. INTRODUCTION TO NEURAL NETWORKS 9

Basics of ANN - perceptron - delta learning rule - back propagation algorithm - multilayer feed forward network - memory models - bi-directional associative memory - Hopfield network.

2. APPLICATIONS TO POWER SYSTEM PROBLEMS 9

Application of neural networks to load forecasting - contingency analysis - VAR control - economic load dispatch.

3. INTRODUCTION TO FUZZY LOGIC 9

Crispness - vagueness - fuzziness - uncertainty - fuzzy set theory fuzzy sets - fuzzy set operations - fuzzy measures - fuzzy relations - fuzzy function - structure of fuzzy logic controller – fuzzification models - data base - rule base - inference engine defuzzification module.

4. APPLICATIONS TO POWER SYSTEMS 9

Decision making in power system control through fuzzy set theory - use of fuzzy set models of LP in power systems scheduling problems - fuzzy logic based power system stabilizer.

5. GENETIC ALGORITHM AND ITS APPLICATIONS TO POWER SYSTEMS

9

Introduction - simple genetic algorithm - reproduction - crossover - mutation – advanced operators in genetic search - applications to voltage control and stability studies.

ELECTIVES – IV (semester-V)**19272E51BP - POWER SYSTEM DYNAMICS 3 1 0 4****1. SYNCHRONOUS MACHINE MODELLING 9**

Schematic Diagram, Physical Description: armature and field structure, machines with multiple pole pairs, mmf waveforms, direct and quadrature axes, Mathematical Description of a Synchronous Machine: Basic equations of a synchronous machine: stator circuit equations, stator self, stator mutual and stator to rotor mutual inductances, dq0 Transformation: flux linkage and voltage equations for stator and rotor in dq0 coordinates, electrical power and torque, physical interpretation of dq0 transformation, Per Unit Representations: L_{ad} -reciprocal per unit system and that from power-invariant form of Park's transformation; Equivalent Circuits for direct and quadrature axes, Steady-state Analysis: Voltage, current and flux-linkage relationships, Phasor representation, Rotor angle, Steady-state equivalent circuit, Computation of steady-state values, Equations of Motion: Swing Equation, calculation of inertia constant, Representation in system studies, Synchronous Machine Representation in Stability Studies: Simplifications for large-scale studies : Neglect of stator $p\Psi$ terms and speed variations, Simplified model with amortisseurs neglected: two-axis model with amortisseur windings neglected, classical model.

2. MODELLING OF EXCITATION AND SPEED GOVERNING SYSTEMS 9

Excitation System Requirements; Elements of an Excitation System; Types of Excitation System; Control and protective functions; IEEE (1992) block diagram for simulation of excitation systems. Turbine and Governing System Modelling: Functional Block Diagram of Power Generation and Control, Schematic of a hydroelectric plant, classical transfer function of a hydraulic turbine (no derivation), special characteristic of hydraulic turbine, electrical analogue of hydraulic turbine, Governor for Hydraulic Turbine: Requirement for a transient droop, Block diagram of governor with transient droop compensation, Steam turbine modelling: Single reheat tandem compounded type only and IEEE block diagram for dynamic simulation; generic speed-governing system model for normal speed/load control function.

3. SMALL-SIGNAL STABILITY ANALYSIS WITHOUT CONTROLLERS 9

Classification of Stability, Basic Concepts and Definitions: Rotor angle stability, The Stability Phenomena. Fundamental Concepts of Stability of Dynamic Systems: State-space representation, stability of dynamic system, Linearisation, Eigen properties of the state matrix: Eigen values and eigenvectors, modal matrices, eigen value and stability, mode shape and participation factor. Single-Machine Infinite Bus (SMIB) Configuration: Classical Machine Model stability analysis with numerical example, Effects of Field Circuit Dynamics: synchronous machine, network and linearised system equations, block diagram representation with K-constants; expression for K-constants (no derivation), effect of field flux variation on system stability: analysis with numerical example,

4. SMALL-SIGNAL STABILITY ANALYSIS WITH CONTROLLERS 9

Effects Of Excitation System: Equations with definitions of appropriate K-constants and simple thyristor excitation system and AVR, block diagram with the excitation system, analysis of effect of AVR on synchronizing and damping components using a numerical example, Power System Stabiliser: Block diagram with AVR and PSS, Illustration of principle of PSS application with numerical example, Block diagram of PSS with description, system state matrix including PSS, analysis of stability with numerical a example. Multi-Machine Configuration: Equations in a common reference frame, equations in individual machine rotor coordinates, illustration of formation of system state matrix for a two-machine system with classical models for synchronous machines, illustration of stability analysis using a numerical example. Principle behind small-signal stability improvement methods: delta-omega and delta P-omega stabilizers.

5. ENHANCEMENT OF SMALL SIGNAL STABILITY 9

Power System Stabilizer – Stabilizer based on shaft speed signal (delta omega) – Delta –P-Omega stabilizer-Frequency-based stabilizers – Digital Stabilizer – Excitation control design – Exciter gain – Phase lead compensation – Stabilizing signal washout stabilizer gain – Stabilizer limits

L = 45 T = 15 P = 0 C =4

ELECTIVES – V (semester-V)**19272E52AP - POWER CONDITIONING****3 1 0 4****1. INTRODUCTION****9**

Introduction – Characterization of Electric Power Quality: Transients, short duration and long duration voltage variations, Voltage imbalance, waveform distortion, Voltage fluctuations, Power frequency variation, Power acceptability curves – power quality problems: poor load power factor, Non linear and unbalanced loads, DC offset in loads, Notching in load voltage, Disturbance in supply voltage – Power quality standards.

2. NON-LINEAR LOADS**9**

Single phase static and rotating AC/DC converters, Three phase static AC/DC converters, Battery chargers, Arc furnaces, Fluorescent lighting, pulse modulated devices, Adjustable speed drives.

3. MEASUREMENT AND ANALYSIS METHODS**9**

Voltage, Current, Power and Energy measurements, power factor measurements and definitions, event recorders, Measurement Error – Analysis: Analysis in the periodic steady state, Time domain methods, Frequency domain methods: Laplace's, Fourier and Hartley transform – The Walsh Transform – Wavelet Transform.

4. ANALYSIS AND CONVENTIONAL MITIGATION METHODS**9**

Analysis of power outages, Analysis of unbalance: Symmetrical components of phasor quantities, Instantaneous symmetrical components, Instantaneous real and reactive powers, Analysis of distortion: On-line extraction of fundamental sequence components from measured samples – Harmonic indices – Analysis of voltage sag: Detorit Edison sag score, Voltage sag energy, Voltage Sag Lost Energy Index (VSLEI)- Analysis of voltage flicker, Reduced duration and customer impact of outages, Classical load balancing problem: Open loop balancing, Closed loop balancing, current balancing, Harmonic reduction, Voltage sag reduction.

5. POWER QUALITY IMPROVEMENT**9**

Utility-Customer interface –Harmonic filters: passive, Active and hybrid filters – Custom power devices: Network reconfiguring Devices, Load compensation using DSTATCOM, Voltage regulation using DSTATCOM, protecting sensitive loads using DVR, UPQC –control strategies: P- Q theory, Synchronous detection method – Custom power park –Status of application of custom power devices

ELECTIVES – V (semester-V)

19272E52BP – POWER SYSTEM RESTRUCTURING AND DEREGULATION

3 1 0 4

1. FUNDAMENTALS AND ARCHITECTURE OF POWERMARKETS 9

Deregulation of Electric utilities: Introduction-Unbundling-Wheeling- Reform motivations- Fundamentals of Deregulated Markets – Types (Future, Day-ahead and Spot) – Participating in Markets (Consumer and Producer Perspective) – bilateral markets – pool markets. Independent System Operator (ISO)-components-types of ISO - role of ISO - Lessons and Operating Experiences of Deregulated Electricity Markets in various Countries (UK, Australia, Europe, US, Asia).

2. TECHNICAL CHALLENGES 9

Total Transfer Capability – Limitations - Margins – Available transfer capability (ATC) – Procedure - Methods to compute ATC – Static and Dynamic ATC – Effect of contingency analysis – Case Study. Concept of Congestion Management – Bid, Zonal and Node Congestion Principles – Inter and Intra zonal congestion – Generation Rescheduling - Transmission congestion contracts – Case Study.

3. TRANSMISSION NETWORKS AND SYSTEM SECURITY SERVICES 9

Transmission expansion in the New Environment – Introduction – Role of transmission planning – Physical Transmission Rights – Limitations – Flow gate - Financial Transmission Rights – Losses – Managing Transmission Risks – Hedging – Investment. Ancillary Services – Introduction – Describing Needs – Compulsory and Demand-side provision – Buying and Selling Ancillary Services – Standards.

4. MARKET PRICING 9

Transmission pricing in open access system – Introduction – Spot Pricing – Uniform Pricing – Zonal Pricing – Locational Marginal Pricing – Congestion Pricing – Ramping and Opportunity Costs. Embedded cost based transmission pricing methods (Postage stamp, Contract path and MW-mile) – Incremental cost based transmission pricing methods (Short run marginal cost, Long run marginal cost) - Pricing of Losses on Lines and Nodes.

5. INDIAN POWER MARKET 9

Current Scenario – Regions – Restructuring Choices – Statewise Operating Strategies – Salient features of Indian Electricity Act 2003 – Transmission System Operator – Regulatory and Policy development in Indian power Sector – Opportunities for IPP and Capacity Power Producer. Availability based tariff – Necessity – Working Mechanism – Beneficiaries – Day Scheduling Process – Deviation from Schedule – Unscheduled

Interchange Rate – System Marginal Rate – Trading Surplus Generation – Applications.

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Tech Power system curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project (Scaffolded Research)	4
IV	Project Work	12

Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:**

40 Marks

- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
- Seminar Review Presentation : 10 Marks

● Literature Survey : 10 Marks

● **Semester Examination** : **60 Marks**

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Design/Socio Technical Project

- **Continuous Internal Assessment through Reviews:** **40 Marks**
 - Review I : 10 Marks
 - Review II : 10 Marks
 - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report:** **40 Marks**
- **Viva- Voce Examination:** **20 Marks**
- **Total:** **100 Marks**

Blueprint for assessment of student's performance in Research Methodology Courses

- **Continuous Internal Assessment:** **20 Marks**
 - Research Tools(Lab) : 10 Marks
 - Tutorial: 10 Marks
- **Model Paper Writing:** **40 Marks**
 - Abstract: 5 Marks
 - Introduction: 10 Marks
 - Discussion: 10 Marks
 - Review of Literature: 5 Marks
 - Presentation: 10 Marks
- **Semester Examination:** **40 Marks**
- **Total:** **100 Marks**

TOTAL CREDITS-197**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

OBJECTIVES:

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them to listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of general kind by developing their reading skills

UNIT I SHARING INFORMATION RELATED TO ONE SELF/FAMILY & FRIENDS 12

Reading-short comprehension passages, practice in skimming-scanning and predicting-Writing-completing sentences-- developing hints. Listening-short texts-short formal and informal conversations.Speaking-introducing oneself-exchanging personal information-Language development-Wh-Questions-asking and answering-yes or no questions-parts of speech. Vocabulary development--prefixes-suffixes-articles.-count/uncount nouns.

UNIT II GENERAL READING AND FREE WRITING 12

Reading - comprehension-pre-reading-post reading- comprehension questions (multiple choice questions and /or short questions/ open-ended questions)-inductive reading- short narratives and descriptions from newspapers including dialogues and conversations (also used as short listening texts)-register-Writing-paragraph writing-topics sentence-main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures -Listening-telephonic conversations.Speaking-sharing information of a person of a kind—greeting-taking leave-Language development-prepositions, conjunctions Vocabulary development-guessing meanings of words in context.

UNIT III GRAMMAR AND LANGUAGE DEVELOPMENT 12

Reading- short texts and longer passages (close reading) Writing- understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences Listening – listening to long texts and filling up the table-product description-narratives from different sources.Speaking-asking about routine actions and expressing opinions. Language development- degrees of comparison- pronouns- direct vs indirect questions-Vocabulary development – single word substitutes- adverbs.

UNIT IV READING AND LANGUAGE DEVELOPMENT 12

Reading-comprehension-reading long texts-reading different types of texts-magazines Writing-letter writing, informal or personal letters-e-mails-conventions of personal email- Listening- listening to dialogues or conversations and completing exercises based on them.Speaking-speaking about oneself-speaking about one's friend-Language development- Tenses-simple present-simple past- present continuous and past continuous-Vocabulary development- synonyms-antonyms- phrasal verbs

UNIT V EXTENDED WRITING 12

Reading-long texts-close reading-Writing-brainstorming-writing short essays-developing an outline-identifying main and subordinate ideas- dialogue writing-Listening – listening to talks- conversations- Speaking –participating in conversations-short group conversations-Language development-modal verbs-present/past perfect tense - Vocabulary development-collocations- fixed and semi-fixed expressions.

TOTAL: 60 PERIODS

OUTCOMES:

AT THE END OF THE COURSE, LEARNERS WILL BE ABLE TO:

- Read articles of a general kind in magazines and newspapers.
- Participate effectively in informal conversations; introduce themselves and their friends and express opinions in English.
- Comprehend conversations and short talks delivered in English
- Write short essays of a general kind and personal letters and emails in English

20148S12**ENGINEERING MATHEMATICS -I****L T P C****5 1 0 4****OBJECTIVES:**

The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus. The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modelling the engineering problems mathematically and obtaining solutions. This is a foundation course which mainly deals with topics such as single variable and multivariable calculus and plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I DIFFERENTIAL CALCULUS 12

Representation of functions - Limit of a function - Continuity - Derivatives - Differentiation rules - Maxima and Minima of functions of one variable.

UNIT II FUNCTIONS OF SEVERAL VARIABLES 12

Partial differentiation - Homogeneous functions and Euler's theorem - Total derivative - Change of variables - Jacobians - Partial differentiation of implicit functions - Taylor's series for functions of two variables - Maxima and minima of functions of two variables - Lagrange's method of undetermined multipliers.

UNIT III INTEGRAL CALCULUS 12

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

UNIT IV MULTIPLE INTEGRALS 12

Double integrals - Change of order of integration - Double integrals in polar coordinates - Area enclosed by plane curves - Triple integrals - Volume of solids - Change of variables in double and triple integrals.

UNIT V DIFFERENTIAL EQUATION 12

Higher order linear differential equations with constant coefficients - Method of variation of parameters - Homogeneous equation of Euler's and Legendre's type - System of simultaneous linear differential equations with constant coefficients - Method of undetermined coefficients.

TOTAL: 60 PERIODS**OUTCOMES:**

After completing this course, students should demonstrate competency in the following skills:

- Use both the limit definition and rules of differentiation to differentiate functions.
- Apply differentiation to solve maxima and minima problems.
- Evaluate integrals both by using Riemann sums and by using the Fundamental Theorem of Calculus.
- Apply integration to compute multiple integrals, area, volume, integrals in polar coordinates, in addition to change of order and change of variables.
- Evaluate integrals using techniques of integration, such as substitution, partial fractions and integration by parts.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

- Determine convergence/divergence of improper integrals and evaluate convergent improper integrals. Apply various techniques in solving differential equations.

20149S13

ENGINEERING PHYSICS

L T P C
5 1 0 4

OBJECTIVES:

- To enhance the fundamental knowledge in Physics and its applications relevant to various streams of Engineering and Technology.

UNIT I PROPERTIES OF MATTER

12

Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations– twisting couple - torsion pendulum: theory and experiment- bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment - I-shaped girders - stress due to bending in beams.

UNIT II WAVES AND FIBER OPTICS

12

Oscillatory motion – forced and damped oscillations: differential equation and its solution – plane progressive waves – wave equation. Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Semiconductor lasers: homo junction and hetero junction – Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers - fibre optic sensors: pressure and displacement.

UNIT III THERMAL PHYSICS

12

Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation– heat conduction in solids–thermal conductivity-Forbe's and Lee's disc method: theory and experiment - conduction through compound media (series and parallel) – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar water heaters.

UNIT IV QUANTUM PHYSICS

12

Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance– Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – tunnelling (qualitative) - scanning tunnelling microscope.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances - coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures - crystal imperfections: point defects, line defects – Burger vectors, stacking faults – role of imperfections in plastic deformation - growth of single crystals: solution and melt growth techniques.

TOTAL: 60 PERIODS**OUTCOMES:****Upon completion of this course,**

- The students will gain knowledge on the basics of properties of matter and its applications,
- The students will acquire knowledge on the concepts of waves and optical devices and their applications in fibre optics,
- The students will have adequate knowledge on the concepts of thermal properties of materials and their applications in expansion joints and heat exchangers,
- The students will get knowledge on advanced physics concepts of quantum theory and its applications in tunneling microscopes, and
- The students will understand the basics of crystals, their structures and different crystal growth techniques.

TEXTBOOKS:

1. Bhattacharya, D.K. & Poonam, T. —Engineering Physics. Oxford University Press, 2015.
2. Gaur, R.K. & Gupta, S.L. —Engineering Physics. Dhanpat Rai Publishers, 2012.
3. Pandey, B.K. & Chaturvedi, S. —Engineering Physics. Cengage Learning India, 2012.

REFERENCES:

1. Halliday, D., Resnick, R. & Walker, J. —Principles of Physics. Wiley, 2015.
2. Serway, R.A. & Jewett, J.W. —Physics for Scientists and Engineers. Cengage Learning, 2010.
3. Tipler, P.A. & Mosca, G. —Physics for Scientists and Engineers with Modern Physics. W.H. Freeman, 2007.

OBJECTIVES:

- To make the students conversant with boiler feed water requirements, related problems and water treatment techniques.
- To develop an understanding of the basic concepts of phase rule and its application to single and two component systems and appreciate the purpose and significance of alloys.
- Preparation, properties and applications of engineering materials.
- Types of fuels, calorific value calculations, manufacture of solid, liquid and gaseous fuels.
- Principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuel cells.

UNIT I WATER AND ITS TREATMENT 9

Hardness of water – types – expression of hardness – units – estimation of hardness of water by EDTA – numerical problems – boiler troubles (scale and sludge) – treatment of boiler feed water – Internal treatment (phosphate, colloidal, sodium aluminate and calgon conditioning) external treatment – Ion exchange process, zeolite process – desalination of brackish water - Reverse Osmosis.

UNIT II SURFACE CHEMISTRY AND CATALYSIS 9

Adsorption: Types of adsorption – adsorption of gases on solids – adsorption of solute from solutions – adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – contact theory – kinetics of surface reactions, unimolecular reactions, Langmuir - applications of adsorption on pollution abatement. Catalysis: Catalyst – types of catalysis – criteria – autocatalysis – catalytic poisoning and catalytic promoters - acid base catalysis – applications (catalytic converter) – enzyme catalysis – Michaelis – Menten equation.

UNIT III ALLOYS AND PHASE RULE 9

Alloys: Introduction- Definition- properties of alloys- significance of alloying, functions and effect of alloying elements- Nichrome and stainless steel (18/8) – heat treatment of steel. Phase rule: Introduction, definition of terms with examples, one component system - water system - reduced phase rule - thermal analysis and cooling curves - two component systems - lead-silver system - Pattinson process.

UNIT IV FUELS AND COMBUSTION 9

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufacture of metallurgical coke (Otto Hoffmann method) - petroleum - manufacture of synthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas - compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel. Combustion of fuels: Introduction - calorific value - higher and lower calorific values- theoretical calculation of calorific value - ignition temperature - spontaneous ignition temperature - explosive range - flue gas analysis (ORSAT Method).

UNIT V ENERGY SOURCES AND STORAGE DEVICES 9

Nuclear fission - controlled nuclear fission - nuclear fusion - differences between nuclear fission and fusion - nuclear chain reactions - nuclear energy - light water nuclear power plant - breeder reactor - solar energy conversion - solar cells - wind energy. Batteries, fuel cells and supercapacitors: Types of batteries – primary battery (dry cell) secondary battery (lead acid battery, lithium-ion-battery) fuel cells – H₂-O₂ fuel cell.

TOTAL: 45 PERIODS

OUTCOMES:

- The knowledge gained on engineering materials, fuels, energy sources and water treatment techniques will facilitate better understanding of engineering processes and applications for further learning.

20150S16	PROBLEMSOLVINGANDPYTHONPROGRAMMING	L	T	P	C
		5	1	0	4

OBJECTIVES:

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures — lists, tuples, dictionaries.
- To do input/output with files in Python.

UNIT I ALGORITHMIC PROBLEMSOLVING 9

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudocode, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

UNIT VI FILES, MODULES, PACKAGES

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

TOTAL: 45 PERIODS**OUTCOMES:****Upon completion of the course, students will be able to**

- Develop algorithmic solutions to simple computational problems
- Read, write, execute by hand simple Python programs.
- Structure simple Python programs for solving problems.
- Decompose a Python program into functions.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data from/to files in Python Programs.

3. Timothy A. Budd, — Exploring Python, Mc-Graw Hill Education (India) Private Ltd., 2015.
4. Kenneth A. Lambert, — Fundamentals of Python: First Programs, CENGAGE Learning, 2012.
5. Charles Dierbach, — Introduction to Computer Science using Python: A Computational Problem-Solving Focus, Wiley India Edition, 2013.
6. Paul Gries, Jennifer Campbell and Jason Montojo, — Practical Programming: An Introduction to Computer Science using Python 3, Second edition, Pragmatic Programmers, LLC, 2013.

OBJECTIVES:

- To develop in students, graphics skills for communication of concepts, ideas and design of Engineering products.
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination) 1 Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREE HAND SKETCHING 7+12

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and FreeHand sketching: Visualization principles – Representation of Three Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACE 6+12

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS 5+12

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.

UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES 5+12

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 6+12

Principles of isometric projection – isometric scale–Isometric projections of simple solids and truncated solids-Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions -Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method .

TOTAL: 90 PERIODS**OUTCOMES:**

On successful completion of this course, the student will be able to:

- Familiarize with the fundamentals and standards of Engineering graphics
- Perform freehand sketching of basic geometrical constructions and multiple views of objects.
- Project orthographic projections of lines and plane surfaces.
- Draw projections and solids and development of surfaces.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

- Visualize and project isometric and perspective sections of simple solids.

4. IS 11669–1986 & SP 46–2003: Dimensioning of Technical Drawings.
5. IS 15021 (Parts 1 to 4)–2001: Technical drawings–Projection Methods. Special points applicable to

University Examination on Engineering Graphics:

1. There will be five questions, each of either or type covering all units of the syllabus.
 2. All questions will carry equal marks of 20 each making a total of 100.
 3. The answer paper shall consist of drawings sheets of A3 size only.
- The students will be permitted to use appropriate scale to fit solution within A3 size.
4. The examination will be conducted in appropriate sessions on the same day

LABORATORY

LP T C

0 0 3 2

OBJECTIVES:

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data from/to files in Python.

LIST OF PROGRAMS:

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton's method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Program that takes command line arguments (word count)
11. Find the most frequent words in a text read from a file
12. Simulate elliptical orbits in Pygame
13. Simulate bouncing ball using Pygame

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux

TOTAL: 60 PERIODS

OUTCOMES:

Upon completion of the course, students will be able to:

- Write, test, and debug simple Python programs.
- Implement Python programs with conditionals and loops.
- Develop Python programs step-wise by defining functions and calling them.
- Use Python lists, tuples, dictionaries for representing compound data.
- Read and write data from/to files in Python.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OBJECTIVES:

- To introduce different experiments to test basic understanding of physics concepts applied in optics, thermal physics, properties of matter and liquids.

LIST OF EXPERIMENTS: PHYSICS LABORATORY (Any 5 Experiments)

- Determination of rigidity modulus – Torsion pendulum
- Determination of Young's modulus by non-uniform bending method
- (a) Determination of wavelength, and particle size using Laser (b) Determination of acceptance angle in an optical fiber.
- Determination of thermal conductivity of a bad conductor – Lee's Disc method.
- Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer
- Determination of wavelength of mercury spectrum – spectrometer grating
- Determination of band gap of semiconductor
- Determination of thickness of a thin wire – Air wedge method

TOTAL: 30 PERIODS**OUTCOMES:**

Upon completion of the course, the students will be able to:

- Apply principles of elasticity, optics and thermal properties for engineering applications.

CHEMISTRY LABORATORY: (Any seven experiments to be conducted)**OBJECTIVES:**

- To make the student to acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
- To acquaint the students with the determination of molecular weight of a polymer by viscometry.

LIST OF EXPERIMENTS

- Estimation of HCl using Na_2CO_3 as primary standard and Determination of alkalinity in water sample.
- Determination of total, temporary & permanent hardness of water by EDTA method.
- Determination of DO content of water sample by Winkler's method.
- Determination of chloride content of water sample by argentometric method.
- Estimation of copper content of the given solution by Iodometry.
- Determination of strength of given hydrochloric acid using pH meter.
- Determination of strength of acids in a mixture of acids using conductivity meter.
- Estimation of iron content of the given solution using potentiometer.
- Estimation of iron content of the water sample using spectrophotometer (1,10-Phenanthroline/thiocyanate method).
- Estimation of sodium and potassium present in water using flame photometer.
- Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.
- Pseudo first order kinetics- ester hydrolysis.
- Corrosion experiment- weight loss method.
- Determination of CMC.
- Phase change in a solid.
- Conductometric titration of strong acid vs strong base.

OUTCOMES:

- The students will be outfitted with hands-on knowledge in the quantitative chemical analysis of water quality related parameters.

TEXTBOOK:

- Vogel's Textbook of Quantitative Chemical Analysis (8th edition, 2014).

OBJECTIVES:

- The Course prepares second semester engineering and Technology students to:
- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT I INTRODUCTION TECHNICAL ENGLISH 12

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- Speaking – Asking for and giving directions- Reading – reading short technical texts from journals- newspapers- Writing- purpose statements – extended definitions – issue- writing instructions
– checklists-recommendations-Vocabulary Development- technical vocabulary
Language Development – subject verb agreement - compound words.

UNIT II READING AND STUDY SKILLS 12

Listening- Listening to longer technical talks and completing exercises based on them- Speaking – describing a process- Reading – reading longer technical texts- identifying the various transitions in a text- paragraphing- Writing- interpreting charts, graphs- Vocabulary Development- vocabulary used in formal letters/emails and reports Language Development- impersonal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING AND GRAMMAR 12

Listening- Listening to classroom lectures/talks on engineering/technology- Speaking – introduction to technical presentations- Reading – longer texts both general and technical, practice in speed reading; Writing- Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.
Language Development- embedded sentences

UNIT IV REPORT WRITING 12

Listening- Listening to documentaries and making notes. Speaking – mechanics of presentations- Reading – reading for detailed comprehension- Writing- email etiquette- job application – cover letter – Résumé preparation (via email and hard copy)- analytical essays and issue based essays- Vocabulary Development- findings suitable synonyms- paraphrasing-. Language Development- clauses- if conditionals.

UNIT V GROUP DISCUSSION AND JOB APPLICATIONS 12

Listening- TED/Ink talks; Speaking – participating in a group discussion - Reading – reading and understanding technical articles Writing – Writing reports- minutes of a meeting- accident and survey- Vocabulary Development- verbal analogies Language Development- reported speech.

TOTAL: 60 PERIODS**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

OUTCOMES:

Learners should be able to:

- Read technical texts and write area-specific text effortlessly.
- Listen and comprehend lectures and talks in their area of specialisation successfully.
- Speak appropriately and effectively in varied formal and informal contexts.
- Write reports and winning job applications.

TEXTBOOKS:

1. Board of Editors. Fluency in English A Coursebook for Engineering and Technology. Orient Blackswan, Hyderabad: 2016

5. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges. Cengage Learning, USA: 2007

Students can be asked to read Tagore, Chetan Bhagat and for supplementary reading.

OBJECTIVES:

- This course is designed to cover topics such as Matrix Algebra, Vector Calculus, Complex Analysis and Laplace Transform. Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering. Vector calculus can be widely used for modelling the various laws of physics. The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines.

UNIT I MATRICES 12

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem –

Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

UNIT II VECTOR CALCULUS 12

Gradient and directional derivative – Divergence and curl – Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral – Area of a curved surface – Volume integral – Green's, Gauss divergence and Stoke's theorems – Verification and application in evaluating line, surface and volume integrals.

UNIT III ANALYTIC FUNCTIONS 12

Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates – Properties – Harmonic conjugates – Construction of analytic function – Conformal mapping – Mapping by functions $w = z + c, cz, 1/z, z^2$ – Bilinear transformation.

UNIT IV COMPLEX INTEGRATION 12

Line integral – Cauchy's integral theorem – Cauchy's integral formula – Taylor's and Laurent's series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour.

UNIT V LAPLACE TRANSFORMS 12

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulse function – Basic properties – Shifting theorems – Transforms of derivatives and integrals – Initial and final value theorems – Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear second order ordinary differential equations with constant coefficients.

TOTAL: 60**PERIODS OUTCOMES: Learners should be able to:**

- After successfully completing the course, the student will have a good understanding of the following topics and their applications:
- Eigenvalues and eigenvectors, diagonalization of a matrix, Symmetric matrices, Positive definite matrices and similar matrices.
- Gradient, divergence and curl of a vector point function and related identities.
- Evaluation of line, surface and volume integrals using Gauss, Stokes and Green's

- Analytic functions, conformal mapping and complex integration.
- Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.

OBJECTIVES:

- To understand the essential principles of Physics of semiconductor device and Electron transport properties. Become proficient in magnetic and optical properties of materials and Nano-electronic devices.

UNIT I ELECTRICAL PROPERTIES OF MATERIALS 12

Classical free electron theory - Expression for electrical conductivity - Thermal conductivity, expression - Wiedemann-Franz law - Success and failures - electrons in metals - Particle in a three dimensional box - degenerate states - Fermi-Dirac statistics - Density of energy states - Electron in periodic potential - Energy bands in solids - tight binding approximation - Electron effective mass - concept of hole

UNIT II SEMICONDUCTOR PHYSICS 12

Intrinsic Semiconductors - Energy band diagram - direct and indirect bandgap semiconductors - Carrier concentration in intrinsic semiconductors - extrinsic semiconductors - Carrier concentration in N-type & P-type semiconductors - Variation of carrier concentration with temperature - variation of Fermi level with temperature and impurity concentration - Carrier transport in Semiconductor: random motion, drift, mobility and diffusion - Hall effect and devices - Ohmic contacts - Schottky diode.

UNIT III MAGNETIC PROPERTIES OF MATERIALS 12

Magnetic dipole moment - atomic magnetic moments - magnetic permeability and susceptibility - Magnetic material classification: diamagnetism - paramagnetism - ferromagnetism - antiferromagnetism - ferrimagnetism - Ferromagnetism: origin and exchange interaction - saturation magnetization and Curie temperature - Domain Theory - M versus H behaviour - Hard and soft magnetic materials - examples and uses - Magnetic principle in computer data storage - Magnetic hard disc (GMR sensor).

UNIT IV OPTICAL PROPERTIES OF MATERIALS 12

Classification of optical materials - carrier generation and recombination processes - Absorption emission and scattering of light in metals, insulators and semiconductors (concepts only) - photo current in a P-N diode - solar cell - LED - Organic LED - Laser diodes - Optical data storage techniques.

UNIT V NANODEVICES 12

Electron density in bulk material - Size dependence of Fermi energy - Quantum confinement - Quantum structures - Density of states in quantum well, quantum wire and quantum dot structure - Band gap of nanomaterials - Tunneling: single electron phenomena and single electron transistor - Quantum dot laser. Conductivity of metallic nanowires - Ballistic transport - Quantum resistance and conductance - Carbon nanotubes: Properties and applications.

TOTAL: 60 PERIODS

OUTCOMES:

Learners should be able to:

- Gain knowledge on classical and quantum electron theories, and energy band structure,
- Acquire knowledge on basics of semiconductor physics and its applications in various devices,
- Get knowledge on magnetic properties of materials and their applications in data storage,
- Have the necessary understanding on the functioning of optical materials for optoelectronics,
- Understand the basics of quantum structures and their applications in carbon electronics..

TEXTBOOKS:

1. Jasprit Singh, — Semiconductor Devices: Basic Principles, Wiley 2012.
2. Kasap, S.O. — Principles of Electronic Materials and Devices, McGraw-Hill Education, 2007.
3. Kittel, C. — Introduction to Solid State Physics, Wiley, 2005.

REFERENCES:

2. Hanson, G.W. — Fundamentals of Nanoelectronics, Pearson Education, 2009.
3. Rogers, B., Adams, J. & Pennathur, S. — Nanotechnology: Understanding Small Systems, CRC Press, 2014.

**20153S25A BASIC ELECTRICAL, ELECTRONICS AND
MEASUREMENT ENGINEERING**

OBJECTIVES:

- To understand the fundamentals of electronic circuit constructions
- To learn the fundamental laws, theorems of electrical circuits and also to analyze them
- To study the basic principles of electrical machines and their performance
- To study the different energy sources, protective devices and their field applications
- To understand the principles and operation of measuring instruments and transducers

UNIT I ELECTRICAL CIRCUITS ANALYSIS 12

Ohms Law, Kirchhoff's Law-Instantaneous power- series and parallel circuit analysis with resistive, capacitive and inductive network- nodal analysis, mesh analysis-network theorems- Thevenin theorem, Norton theorem, maximum power transfer theorem and superposition theorem, three phase supply-Instantaneous, Reactive and apparent power-star delta conversion.

UNIT II ELECTRICAL MACHINES 12

DC and AC ROTATING MACHINES: Types, Construction, principle, Emf and torque equation, application Speed Control- Basics of Stepper Motor- Brushless DC motors- Transformers- Introduction- types and construction, working principle of Ideal transformer- Emf equation- All day efficiency calculation.

UNIT III UTILIZATION OF ELECTRICAL POWER 12

Renewable energy sources- wind and solar panels. Illumination by lamps- Sodium Vapour, Mercury vapour, Fluorescent tube. Domestic refrigerator and air conditioner- Electric circuit, construction and working principle. Batteries- NiCd, Pb Acid and Li ion- Charge and Discharge Characteristics, Protection- need for earthing, fuses and circuit breakers. Energy Tariff calculation for domestic loads.

UNIT IV ELECTRONIC CIRCUITS 12

PN Junction- V-I Characteristics of Diode, zener diode, Transistor configurations- amplifiers. Op amps- Amplifiers, oscillator, rectifiers, differentiator, integrator, ADC, DAC. Multi vibrator using 555 Timer IC . Voltage regulator IC using LM 723, LM 317.

UNIT V ELECTRICAL MEASUREMENT 12

Characteristic of measurement- errors in measurement, torque in indicating instruments- moving coil and moving iron meters, Energy meter and watt meter. Transducers- classification- thermo electric, RTD, Strain gauge, LVDT, LDR and piezoelectric. Oscilloscope- CRO.

TOTAL: 60 PERIODS

OUTCOMES:

Learners should be able to:

- Discuss the essentials of electric circuits and analysis.
- Discuss the basic operation of electric machines and transformers
- Introduction of renewable sources and common domestic loads.
- Introduction to measurement and metering for electric circuits.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

TEXTBOOKS:

1. D.P.Kothari and I.J.Nagarath, Basic Electrical and Electronics Engineering, McGraw Hill, 2016, Third Edition.
2. M.S.Sukhija and T.K.Nagsarkar, Basic Electrical and Electronic Engineering, Oxford, 2016.

5. Mittle, Mittal, Basic Electrical Engineering, 2nd Edition, Tata McGraw-Hill Edition, 2016.
6. C.L.Wadhwa, — Generation, Distribution and Utilisation of Electrical Energy, New Age international pvt.ltd., 2003.

OBJECTIVES:

- To study the nature and facts about environment.
- To find and implement scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organisms and environment.
- To appreciate the importance of environment by assessing its impact on the human world.
- To envision the surrounding environment, its functions and its value.
- To study the dynamic processes and understand the features of the earth's interior and surface.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.

12

UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY

Definition, scope and importance of environment – need for public awareness – concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threat to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hillslopes, etc.

UNIT II ENVIRONMENTAL POLLUTION 12
 Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural

UNIT III ENVIRONMENTAL POLLUTION

12

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams- benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, waterlogging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources, case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources –

Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT 12

From unsustainable to sustainable development – urban problems related to energy – water conservation, rainwater harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization – environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and Control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation – central and state pollution control boards – Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT 12

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL: 60 PERIODS

OUTCOMES:

Learners should be able to:

- Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental protection. One will obtain knowledge on the following after completing the course.
- Public awareness of environmental issues is at infant stage.
- Ignorance and incomplete knowledge has led to misconceptions.
- Development and improvement in std. of living has led to serious environmental disasters.

TEXTBOOKS:

1. Benny Joseph, _Environmental Science and Engineering_, Tata McGraw-Hill, New Delhi, 2006.
2. Gilbert M. Masters, _Introduction to Environmental Engineering and Science_, 2nd edition, Pearson Education, 2004.

REFERENCES:

4. G. Tyler Miller and Scott E. Spoolman, — Environmental Science I, Cengage Learning India PVT, LTD, Delhi, 2014.

OBJECTIVES

- To develop C Programs using basic programming constructs
- To develop C programs using arrays and strings
- To develop applications in C using functions, pointers and structures
- To do input/output and file handling in C

UNIT I BASICS OF C PROGRAMMING 12

Introduction to programming paradigms - Structure of C program- C programming: Data Types - Storage classes - Constants - Enumeration Constants - Keywords - Operators: Precedence and Associativity-Expressions-Input/Output statements, Assignment statements-Decision making statements - Switch statement - Looping statements - Pre-processor directives -Compilation process

UNIT II ARRAYS AND STRINGS 9+3

Introduction to Arrays: Declaration, Initialization - One dimensional array - Example Program: Computing Mean, Median and Mode - Two dimensional arrays - Example Program: Matrix Operations (Addition, Scaling, Determinant and Transpose) - String operations: length, compare, concatenate, copy - Selection sort, linear and binary search

UNIT III FUNCTIONS AND POINTERS 9+3

Introduction to functions: Function prototype, function definition, function call, Built-in functions (string functions, math functions) - Recursion - Example Program: Computation of Sine series, Scientific calculator using built-in functions, Binary Search using recursive functions - Pointers - Pointer operators - Pointer arithmetic - Arrays and pointers - Array of pointers - Example Program: Sorting of names - Parameter passing: Pass by value, Pass by reference - Example Program: Swapping of two numbers and changing the value of a variable using pass by reference

UNIT IV STRUCTURES 9+3

Structure - Nested structures - Pointer and Structures - Array of structures - Example Program using structures and pointers - Self-referential structures - Dynamic memory allocation - Singly linked list - typedef

UNIT V FILE PROCESSING 9+3

Files - Types of file processing: Sequential access, Random access - Sequential access file - Example Program: Finding average of numbers stored in sequential access file - Random access file - Example Program: Transaction processing using random access files - Commandline arguments

TOTAL: 60**PERIODS OUTCOMES:**

Learners should be able to:

- Develop simple applications in C using basic constructs
- Design and implement applications using arrays and strings
- Develop and implement applications in C using functions and pointers.
- Develop applications in C using structures.
- Design applications using sequential and random access file processing.

5. Byron S. Gottfried, "Schaum's Outline of Theory and Problems of Programming with C", McGraw-Hill Education, 1996.

OBJECTIVES:

- To provide exposure to the students with hands-on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

GROUP A (CIVIL & MECHANICAL)**CIVIL ENGINEERING PRACTICE**

13

BUILDINGS:

(a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

PLUMBING WORKS:

(a) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.

(b) Study of pipe connections requirements for pumps and turbines.

(c) Preparation of plumbing lines sketches for water supply and sewerage works.

(d) Hands-on-exercise:

Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.

(e) Demonstration of plumbing requirements of high-rise buildings.

CARPENTRY USING POWER TOOL ONLY:

(a) Study of the joints in roofs, doors, windows and furniture.

(b) Hands-on-exercise:

Woodwork, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE

18

WELDING:

(a) Preparation of butt joints, lap joints and T-joints by Shielded metal arc welding.

(b) Gas welding practice

BASIC MACHINING:

(a) Simple Turning and Tap turning

(b) Drilling Practice

SHEET METAL WORK:

(a) Forming & Bending:

(b) Model making –

Trays and funnels. (c)

Different type of joints.

MACHINE ASSEMBLY PRACTICE:

(a) Study of centrifugal pump

(b) Study of air conditioner

DEMONSTRATION:

(a) Smithy operations, upsetting, swaging, setting down and bending. Example – Exercise – Production of hexagonal headed bolt.

(b) Foundry operations like mould preparation for gear

and step cone pulley. (c) Fitting – Exercises –

Preparation of square fitting and V – fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)

III ELECTRICAL ENGINEERING PRACTICE 13

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
2. Fluorescent lamp wiring.
3. Staircase wiring
4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.
5. Measurement of energy using single phase energy meter.
6. Measurement of resistance to earth of an electrical equipment.

IV ELECTRONICS ENGINEERING PRACTICE 16

1. Study of Electronic components and equipments – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.
2. Study of logic gates AND, OR, EX-OR and NOT.
3. Generation of Clock Signal.
4. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
5. Measurement of ripple factor of HWR and FWR.

TOTAL: 60 PERIODS OUTCO

MES:

On successful completion of this course, the student will be able to:

- Fabricate carpentry components and pipe connections including plumbing works.
Use welding equipments to join the structures.
- Carry out the basic machining operations
- Make the models using sheet metal works
- Illustrate on centrifugal pump, Air conditioner, operations of smithy, foundry and fittings
- Carry out basic home electrical works and appliances
- Measure the electrical quantities
- Elaborate on the components, gates, soldering practices.

CIVIL

1. Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings.	15 Sets.
2. Carpentry vice (fitted to workbench)	15 Nos.
3. Standard wood working tools	15 Sets.
4. Models of industrial trusses, door joints, furniture joints	5 each
5. Power Tools: (a) Rotary Hammer	2 Nos (b)
Demolition Hammer	2 Nos (c)
Circular Saw	2 Nos (d) Planer
	2 Nos (e) Hand
Drilling Machine	2 Nos (f) Jigsaw
	2 Nos

MECHANICAL

1. Arc welding transformer with cables and holders	5 Nos.
2. Welding booth with exhaust facility	5 Nos.
3. Welding accessories like welding shield, chipping hammer, wire brush, etc.	5 Sets.
4. Oxygen and acetylene gas cylinders, blow pipe and other welding outfit.	2 Nos.
5. Centre lathe	2 Nos.
6. Hearth furnace, anvil and smithy tools	2 Sets.
7. Moulding table, foundry tools	2 Sets.
8. Power Tool: Angle Grinder	2 Nos
9. Study-purpose items: centrifugal pump, air-conditioner	One each.

ELECTRICAL

1. Assorted electrical components for house wiring	15 Sets
2. Electrical measuring instruments	10 Sets
3. Study purpose items: Iron box, fan and regulator, emergency lamp 1 each	
4. Megger (250V/500V)	1 No.
5. Power Tools: (a) Range Finder	2 Nos
(b) Digital Live-wire detector	2 Nos

ELECTRONICS

1. Soldering guns	10 Nos.
2. Assorted electronic components for making circuits	50 Nos.
3. Small PCBs	10 Nos.
4. Multimeters	10 Nos.
5. Study purpose items: Telephone, FM radio, low-voltage power supply	

OBJECTIVES:

- To develop programs in C using basic constructs.
- To develop applications in C using strings, pointers, functions, structures.
- To develop applications in C using file processing.

LIST OF EXPERIMENTS:

1. Programs using I/O statements and expressions.

2. Programs using decision-making constructs.

3. Write a program to find whether the given year is leap year or Not? (Hint: not every century year is a leap. For example 1700, 1800 and 1900 is not a leap year)

4. Design a calculator to perform the operations, namely, addition, subtraction, multiplication, division and square of a number.

5. Check whether a given number is Armstrong number or not?

6. Given a set of numbers like <10,36,54,89,12,27>, find sum of weights based on the following conditions.

- 5 if it is a perfect cube.
- 4 if it is a multiple of 4 and divisible by 6.
- 3 if it is a prime number.

Sort the numbers based on the weight in the increasing order as shown below <10, its weight>, <36, its weight> <89, its weight>

7. Populate an array with height of persons and find how many persons are above the average height.

8. Populate a two-dimensional array with height and weight of persons and compute the Body Mass Index of the individuals.

9. Given a string — a\$bcd./fg| find its reverse without changing the position of special characters.

(Example input: a@gh%;j and output: j@hg%;a)

10. Convert the given decimal number into binary, octal and hexadecimal numbers using user defined functions.

11. From a given paragraph perform the following using built-in functions:

- Find the total number of words.
- Capitalize the first word of each sentence.
- Replace a given word with another word.

12. Solve towers of Hanoi using recursion.

13. Sort the list of numbers using pass by reference.

14. Generate salary slip of employees using structures and pointers.

15. Compute internal marks of students for five different subjects using structures and functions.

16. Insert, update, delete and append telephone details of an individual or a company into a telephone directory using random access file.

17. Count the number of account holders whose balance is less than the minimum balance using sequential access file.

Miniproject

18. Create a—Railway reservations system with the following modules

- Booking
- Availability checking
- Cancellation
- Prepare chart

TOTAL:60PERIODS

OUTCOMES:

Upon completion of the course, the students will be able to:

- Develop C programs for simple applications making use of basic constructs, arrays and strings.
- Develop C programs involving functions, recursion, pointers, and structures.

OBJECTIVES:

- To extend student's logical and mathematical maturity and ability to deal with abstraction.
- To introduce most of the basic terminologies used in computer science courses application of ideas to solve practical problems.
- To understand the basic concepts of combinatorics and graph theory
- To familiarize the applications of algebraic structures.
- To understand the concepts and significance of lattices and boolean algebra which are widely used in computer science and engineering.

UNIT I LOGIC AND PROOFS

12

Propositional logic – Propositional equivalences – Predicates and quantifiers – Nested quantifiers – Rules of inference – Introduction to proofs – Proof methods and strategy.

UNIT II COMBINATORICS

12

Mathematical induction – Strong induction and well ordering – The basics of counting – The pigeonhole principle – Permutations and combinations – Recurrence relations – Solving linear recurrence relations – Generating functions – Inclusion and exclusion principle and its applications

UNIT III GRAPHS

12

Graphs and graph models – Graph terminology and special types of graphs – Matrix representation of graphs and graph isomorphism – Connectivity – Euler and Hamilton paths.

UNIT IV ALGEBRAIC STRUCTURES

12

Algebraic systems – Semigroups and monoids – Groups – Subgroups – Homomorphism's – Normal subgroup and cosets – Lagrange's theorem – Definitions and examples of Rings and Fields.

UNIT V LATTICES AND BOOLEAN ALGEBRA

12

Partial ordering – Posets – Lattices as posets – Properties of lattices – Lattices as algebraic systems – Sub lattices – Direct product and homomorphism – Some special lattices – Boolean algebra.

TOTAL: 60 PERIODS**OUTCOMES:****At the end of the course, students would:**

- Have knowledge of the concepts needed to test the logic of a program.
- Have an understanding in identifying structures on many levels.
- Be aware of a class of functions which transform a finite set into another finite set which relates to input and output functions in computer science.
- Be aware of the counting principles.
- Be exposed to concepts and properties of algebraic structures such as groups, rings and fields.

TEXT BOOKS:

1. Rosen, K.H., "Discrete Mathematics and its Applications", 7th Edition, Tata McGraw Hill Pub. Co. Ltd., New Delhi, Special Indian Edition, 2011.
2. Tremblay, J.P. and Manohar, R., "Discrete Mathematical Structures with Application to Computer Science", Tata McGraw Hill Pub. Co. Ltd, New Delhi, 30th Reprint, 2011.

REFERENCES:

2. Lipschutz, S. and Mark Lipson., "Discrete Mathematics", Schaum's Outlines, Tata McGraw Hill Pub. Co. Ltd., New Delhi, 3rd Edition, 2010.

OBJECTIVES:

- To design digital circuits using simplified Boolean functions
- To analyze and design combinational circuits
- To analyze and design synchronous and asynchronous sequential circuits
- To understand Programmable Logic Devices
- To write HDL code for combinational and sequential circuits

UNIT I BOOLEAN ALGEBRA AND LOGIC GATES 12

Number Systems - Arithmetic Operations - Binary Codes- Boolean Algebra and Logic Gates- Theorems and Properties of Boolean Algebra- Boolean Functions- Canonical and Standard Forms- Simplification of Boolean Functions using Karnaugh Map- Logic Gates – NAND and NOR Implementations.

UNIT II COMBINATIONAL LOGIC 12

Combinational Circuits – Analysis and Design Procedures- Binary Adder- Subtractor- Decimal Adder - Binary Multiplier- Magnitude Comparator - Decoders – Encoders– Multiplexers - Introduction to HDL – HDL Models of Combinational circuits.

UNIT III SYNCHRONOUS SEQUENTIAL LOGIC 12

Sequential Circuits- Storage Elements: Latches, Flip-Flops- Analysis of Clocked Sequential Circuits - State Reduction and Assignment - Design Procedure - Registers and Counters- HDL Models of Sequential Circuits.

UNIT IV ASYNCHRONOUS SEQUENTIAL LOGIC 12

Analysis and Design of Asynchronous Sequential Circuits – Reduction of State and Flow Tables – Race-free State Assignment – Hazards.

UNIT V MEMORY AND PROGRAMMABLE LOGIC 12

RAM – Memory Decoding – Error Detection and Correction- ROM- Programmable Logic Array – Programmable Array Logic – Sequential Programmable Devices.

TOTAL: 60 PERIODS

OUTCOMES:

On Completion of the course, the student should be able to:

- Simplify Boolean functions using KMap
- Design and Analyze Combinational and Sequential Circuits
- Implement designs using Programmable Logic Devices
- Write HDL code for combinational and Sequential Circuits

TEXT BOOKS:

1. M. Morris R. Mano, Michael D. Ciletti, —Digital Design: With an Introduction to the Verilog HDL, VHDL, and System Verilog, 6th Edition, Pearson Education, 2017.

20150C33	DATASTRUCTURES	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the concepts of ADTs
- To learn linear data structures – lists, stacks, and queues
- To understand sorting, searching and hashing algorithms
- To apply Tree and Graph structures

UNIT I LINEAR DATA STRUCTURES – LIST 9

Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation singly linked lists – circularly linked lists – doubly-linked lists – applications of lists – Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).

UNIT II LINEAR DATA STRUCTURES – STACKS, QUEUES 9

Stack ADT – Operations – Applications – Evaluating arithmetic expressions – Conversion of Infix to postfix expression – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue – applications of queues.

UNIT III NONLINEAR DATA STRUCTURES – TREES 9

Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT – Threaded Binary Trees – AVL Trees – B-Tree – B+ Tree – Heap – Applications of heap.

UNIT IV NONLINEAR DATA STRUCTURES – GRAPHS 9

Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal – Topological Sort – Bi-connectivity – Cut vertex – Euler circuits – Applications of graphs.

UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES 9

Searching – Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shell sort – Radix sort. Hashing – Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Implement abstract data types for linear data structures.
- Apply the different linear and non-linear data structures to problem solutions.
- Critically analyze the various sorting algorithms.

TEXTBOOKS:

1. Mark Allen Weiss, — Data Structures and Algorithm Analysis in C++, 2nd Edition, Pearson Education, 1997.
2. Reema Thareja, — Data Structures Using C++, Second Edition, Oxford University Press, 2011

REFERENCES:

2. Aho, Hopcroft and Ullman, — Data Structures and Algorithms, Pearson Education, 1983.
3. Stephen G. Kochan, — Programming in C++, 3rd edition, Pearson Education.
4. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, — Fundamentals of Data Structures in C++, Second Edition, University Press, 2008

OBJECTIVES:

- To understand Object Oriented Programming concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a Java application with threads and generic classes
- To design and build simple Graphical User Interfaces

UNIT I INTRODUCTION TO OOP AND JAVA FUNDAMENTALS**10**

Object Oriented Programming - Abstraction – objects and classes - Encapsulation- Inheritance - Polymorphism- OOP in Java – Characteristics of Java – The Java Environment - Java Source File - Structure – Compilation. Fundamental Programming Structures in Java – Defining classes in Java – constructors, methods -access specifiers - static members -Comments, Data Types, Variables, Operators, Control Flow, Arrays , Packages - JavaDoc comments.

UNIT II INHERITANCE AND INTERFACES**9**

Inheritance – Superclasses- sub classes –Protected members–constructors in subclasses- the Object class – abstract classes and methods- final methods and classes – Interfaces – defining an interface, implementing interface, differences between classes and interfaces and extending interfaces - Object cloning -inner classes, Array Lists - Strings

UNIT III EXCEPTION HANDLING AND I/O**9**

Exceptions - exception hierarchy - throwing and catching exceptions – built-in exceptions, creating own exceptions, StackTraceElements. Input/ Output Basics – Streams – Byte streams and Character streams – Reading and Writing Console – Reading and Writing Files

UNIT IV MULTITHREADING AND GENERIC PROGRAMMING**8**

Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizing threads, Inter-thread communication, daemon threads, thread groups. Generic Programming – Generic classes – generic methods – Bounded Types – Restrictions and Limitations.

UNIT V EVENT DRIVEN PROGRAMMING**9**

Graphics programming-Frame–Components-working with 2D shapes-Using color, fonts, and images -Basics of event handling-event handlers-adaptor classes-actions-mouse events-AWT event hierarchy - Introduction to Swing– layout management -Swing Components –Text Fields , Text Areas –Buttons- Check Boxes – Radio Buttons – Lists- choices- Scrollbars – Windows –Menus – Dialog Boxes.

TOTAL: 45 PERIODS**OUTCOMES:****Upon completion of the course, students will be able to:**

- Develop Java programs using OOP principles
- Develop Java programs with the concepts in inheritance and interfaces
- Build Java applications using exceptions and I/O streams
- Develop Java applications with threads and generic classes
- Develop interactive Java programs using swings

TEXTBOOKS:

1. Herbert Schildt, —Java The complete reference, 8th Edition, McGraw Hill Education, 2011.
2. Cay S. Horstmann, Gary Cornell, —Core Java Volume – Fundamentals, 9th Edition, Prentice Hall, 2013.

REFERENCES:

2. Steven Holzner, —Java 2 Blackbook, Dreamtech press, 2011.
3. Timothy Budd, —Understanding Object-oriented programming with Java, Updated Edition, Pearson Education, 2000.

OBJECTIVES:

- To introduce the relevance of this course to the existing technology through demonstrations, case studies, simulations, contributions of scientist, national/international policies with a futuristic vision along with socio-economic impact and issues
- To study the various analog and digital modulation techniques
- To study the principles behind information theory and coding
- To study the various digital communication techniques

UNIT I ANALOG MODULATION 9

Amplitude Modulation – AM, DSBSC, SSBSC, VSB – PSD, modulators and demodulators – Angle modulation – PM and FM – PSD, modulators and demodulators – Superheterodyne receivers

UNIT II PULSE MODULATION 9

Lowpass sampling theorem – Quantization – PAM – Line coding – PCM, DPCM, DM, and ADPCM And ADM, Channel Vocoder - Time Division Multiplexing, Frequency Division Multiplexing

UNIT III DIGITAL MODULATION AND TRANSMISSION 9

Phase shift keying – BPSK, DPSK, QPSK – Principles of M-ary signaling M-ary PSK & QAM – Comparison, ISI – Pulse shaping – Duo binary encoding – Cosine filters – Eye pattern, equalizers

UNIT IV INFORMATION THEORY AND CODING 9

Measure of information – Entropy – Source coding theorem – Shannon – Fan coding, Huffman Coding, LZ Coding – Channel capacity – Shannon-Hartley law – Shannon's limit – Error control codes – Cyclic codes, Syndrome calculation – Convolution Coding, Sequential and Viterbi decoding

UNIT V SPREAD SPECTRUM AND MULTIPLE ACCESS 9

PN sequences – properties – m-sequence – DSSS – Processing gain, Jamming – FHSS – Synchronisation and tracking – Multiple Access – FDMA, TDMA, CDMA,

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Ability to comprehend and appreciate the significance and role of this course in the present contemporary world
- Apply analog and digital communication techniques.
- Use data and pulse communication techniques.
- Analyze Source and Error control coding.

TEXTBOOKS:

1. H Taub, DL Schilling, GS Saha, — Principles of Communication Systems | 3/e, TMH 2007
2. S.S. Haykin — Digital Communications | John Wiley 2005

REFERENCES:

1. B.P. Lathi, — Modern Digital and Analog Communication Systems |, 3rd edition, Oxford University Press, 2007
2. HPHsu, Schaum Outline Series — Analog and Digital Communications | TMH 2006
3. B. Sklar, Digital Communications Fundamentals and Applications | 2/e Pearson Education 2007.

OBJECTIVES:

- To implement linear and non-linear data structures
- To understand the different operations of search trees
- To implement graph traversal algorithms
- To get familiarized to sorting and searching algorithms

- Array implementation of Stack and Queue ADTs
- Array implementation of List ADT
- Linked list implementation of List, Stack and Queue ADTs
- Applications of List, Stack and Queue ADTs
- Implementation of Binary Trees and operations of Binary Trees
- Implementation of Binary Search Trees
- Implementation of AVL Trees
- Implementation of Heaps using Priority Queues.
- Graph representation and Traversal algorithms
- Applications of Graphs
- Implementation of searching and sorting algorithms
- Hashing – any two collision techniques

TOTAL:60PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Write functions to implement linear and non-linear data structure operations
- -linear data structure operations for solving a given problem
- -linear data structure operations for a given problem
- Apply appropriate hash functions that result in a collision free scenario for data storage and retrieval

OBJECTIVES:

- To build software development skills using java programming for real-world applications.
- To understand and apply the concepts of classes, packages, interfaces, arraylist, exception handling and file processing.
- To develop applications using generic programming and event handling

LIST OF EXPERIMENTS

1. Develop a Java application to generate Electricity bill. Create a class with the following members: Consumer no., consumer name, previous month reading, current month reading, type of EBconnection (i.e domestic or commercial). Compute the bill amount using the following tariff.

If the type of the EBconnection is domestic, calculate the amount to be paid as follows:

- First 100 units -Rs. 1 per unit
- 101-200 units -Rs. 2.50 per unit
- 201-500 units -Rs. 4 per unit
- >501 units -Rs. 6 per unit

If the type of the EBconnection is commercial, calculate the amount to be paid as follows:

- First 100 units -Rs. 2 per unit
- 101-200 units -Rs. 4.50 per unit
- 201-500 units -Rs. 6 per unit
- >501 units -Rs. 7 per unit

2. Develop a java application to implement currency converter (Dollar to INR, EURO to INR, Yen to INR and vice versa), distance converter (meter to KM, miles to KM and vice versa), time converter (hours to minutes, seconds and vice versa) using packages.

3. Develop a java application with Employee class with Emp_name, Emp_id, Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, Assistant Professor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.

4. Design a Java interface for ADT Stack. Implement this interface using array. Provide necessary exception handling in both the implementations.

5. Write a program to perform string operations using ArrayList. Write functions for the following

- a. Append-add at end
- b. Insert-add at particular index
- c. Search
- d. List all string starts with given letter

6. Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named print Area(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.

7. Write a Java program to implement user defined exception handling.

8. Write a Java program that reads a file name from the user, displays information about whether the file exists, whether the file is readable, or writable, the type of file and the length of the file in bytes.

9. Write a java program that implements a multi-threaded application that has three threads. First thread generates a random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.
10. Write a java program to find the maximum value from the given type of elements using a generic function.
11. Design a calculator using event-driven programming paradigm of Java with the following options.
 - a) Decimal manipulations
 - b) Scientific manipulations
12. Develop a mini project for any application using Java concepts.

TOTAL: 60 PERIODS

OUTCOMES:

Upon completion of the course, the students will be able to

- Develop and implement Java programs for simple applications that make use of classes, packages and interfaces.
- Develop and implement Java programs with arraylist, exception handling and multithreading.
- Design applications using file processing, generic programming and event handling.

OBJECTIVES:

- To understand the various basic logic gates
- To design and implement the various combinational circuits
- To design and implement combinational circuits using MSI devices.
- To design and implement sequential circuits
- To understand and code with HDL programming

LIST OF EXPERIMENTS

1. Verification of Boolean Theorems using basic gates.
2. Design and implementation of combinational circuits using basic gates for arbitrary functions, code converters.
3. Design and implement Half/Full Adder and Subtractor.
4. Design and implement combinational circuits using MSI devices:
 - a. 4-bit binary adder/subtractor
 - b. Parity generator/checker
 - c. Magnitude Comparator
 - d. Application using multiplexers
5. Design and implement shift-registers.
6. Design and implement synchronous counters.
7. Design and implement asynchronous counters.
8. Coding combinational circuits using HDL.
9. Coding sequential circuits using HDL.
10. Design and implementation of a simple digital system (Mini Project).

TOTAL: 60 PERIODS**OUTCOMES:****Upon completion of the course, the students will be able to:**

- Implement simplified combinational circuits using basic logic gates
- Implement combinational circuits using MSI devices
- Implement sequential circuits like registers and counters
- Simulate combinational and sequential circuits using HDL

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:**LABORATORY REQUIREMENT FOR A BATCH OF 30 STUDENTS HARDWARE:**

1. Digital trainer kits - 30
2. Digital ICs required for the experiments in sufficient numbers

SOFTWARE:

1. HDL simulator.

20150L39 INTERPERSONAL SKILLS/LISTENING & SPEAKING

L T P C

0 0 2 1

OBJECTIVES:**The Course will enable learner to:**

- Equip students with the English language skills required for the successful undertaking of academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage in specific academic speaking activities.
- improve general and academic listening skills
- Make effective presentations.

UNIT I

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation - pronunciation basics taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances.

UNIT II

Listen to a process information- give information, as part of a simple explanation - conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics.

UNIT III

Lexical chunking for accuracy and fluency- factors influence fluency, deliver a five-minute informal talk - greet - respond to greetings- describe health and symptoms- invite and offer- accept- decline - take leave - listen for and follow the gist- listen for detail

UNIT IV

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizing academic readings and lectures conversational speech listening to and participating in conversations - persuade.

UNIT V

Formal and informal talk - listen to follow and respond to explanations, directions and instructions in academic and business contexts - strategies for presentations and interactive communication - group/pair presentations - negotiate disagreement in group work.

TOTAL: 30 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Listen and respond appropriately.
- Participate in group discussions
- Make effective presentations
- Participate confidently and appropriately in conversations both formal and informal

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

20148C41A	PROBABILITY AND QUEUEING THEORY	L	T	P	C
		4	0	0	4

OBJECTIVES:

- To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in IT fields.
- To understand the concept of queueing models and apply in engineering.
- To understand the significance of advanced queueing models.
- To provide the required mathematical support in real life problems and develop probabilistic models which can be used in several areas of science and engineering.

12

UNIT I PROBABILITY AND RANDOM VARIABLES

Probability – Axioms of probability – Conditional probability – Baye’s theorem - Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

UNIT II TWO-DIMENSIONAL RANDOM VARIABLES **12**

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III RANDOM PROCESSES **12**

Classification – Stationary process – Markov process – Poisson process – Discrete parameter Markov chain – Chapman Kolmogorov equations – Limiting distributions.

UNIT IV QUEUEING MODELS **12**

Markovian queues – Birth and death processes – Single and multiple server queueing models – Little’s formula - Queues with finite waiting rooms – Queues with impatient customers : Balking and reneging.

UNIT V ADVANCED QUEUEING MODELS **12**

Finite source models - M/G/1 queue – Pollaczek Khinchin formula - M/D/1 and M/EK/1 as special cases – Series queues – Open Jackson networks.

TOTAL: 60 PERIODS

OUTCOMES:

Upon successful completion of the course, students should be able to:

- Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- Understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- Apply the concept of random processes in engineering disciplines.
- Acquire skills in analyzing queueing models.
- Understand and characterize phenomenon which evolve with respect to time in a

4. Yates, R.D. and Goodman, D.J., "Probability and Stochastic Processes", 2nd Edition, Wiley India Pvt. Ltd., Bangalore, 2012.

OBJECTIVES:

- To learn the basic structure and operations of a computer.
- To learn the arithmetic and logic unit and implementation of fixed-point and floating point arithmetic unit.
- To learn the basics of pipelined execution.
- To understand parallelism and multi-core processors.
- To understand the memory hierarchies, cache memories and virtual memories.
- To learn the different ways of communication with I/O devices.

9

UNIT I BASIC STRUCTURE OF A COMPUTER SYSTEM

Functional Units – Basic Operational Concepts – Performance – Instructions: Language of the Computer – Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.

UNIT II ARITHMETIC FOR COMPUTERS

9

Addition and Subtraction – Multiplication – Division – Floating Point Representation – Floating Point Operations – Subword Parallelism

UNIT III PROCESSOR AND CONTROL UNIT

9

A Basic MIPS implementation – Building a Datapath – Control Implementation Scheme – Pipelining – Pipelined datapath and control – Handling Data Hazards & Control Hazards – Exceptions.

UNIT IV PARALLELISM

9

Parallel processing challenges – Flynn's classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures – Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors – Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

UNIT V MEMORY & I/O SYSTEMS

9

Memory Hierarchy - memory technologies – cache memory – measuring and improving cache performance – virtual memory, TLB's – Accessing I/O Devices – Interrupts – Direct Memory Access – Bus structure – Bus operation – Arbitration – Interface circuits - USB.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Understand the basic structure of computers, operations and instructions.
- Design arithmetic and logic unit.
- Understand pipelined execution and design control unit.
- Understand parallel processing architectures.
- Understand the various memory systems and I/O communication.

DATABASEMANAGEMENTSYSTEMS

L T P C

3 0 0 3

OBJECTIVES:

- To learn the fundamentals of data models and to represent a database system using ER diagrams.
- To study SQL and relational database design.
- To understand the internal storage structures using different file and indexing techniques which will help in physical DB design.
- To understand the fundamental concepts of transaction processing- concurrency control techniques and recovery procedures.
- To have an introductory knowledge about the Storage and Query processing Techniques

UNIT I RELATIONAL DATABASES 9

Purpose of Database System – Views of data – Data Models – Database System Architecture – Introduction to relational databases– Relational Model – Keys – Relational Algebra – SQL fundamentals– Advanced SQL features – Embedded SQL– Dynamic SQL

UNIT II DATABASE DESIGN 9

Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping – Functional Dependencies – Non-loss Decomposition – First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form

UNIT III TRANSACTIONS 9

Transaction Concepts – ACID Properties – Schedules – Serializability – Concurrency Control – Need for Concurrency – Locking Protocols– Two Phase Locking – Deadlock – Transaction Recovery– Save Points – Isolation Levels – SQL Facilities for Concurrency and Recovery.

UNIT IV IMPLEMENTATION TECHNIQUES 9

RAID – File Organization – Organization of Records in Files – Indexing and Hashing – Ordered Indices – B+ tree Index Files – B tree Index Files – Static Hashing – Dynamic Hashing – Query Processing Overview – Algorithms for SELECT and JOIN operations – Query optimization using Heuristics and Cost Estimation.

UNIT V ADVANCED TOPICS 9

Distributed Databases: Architecture, Data Storage, Transaction Processing – Object-based Databases: Object Database Concepts, Object-Relational features, ODMG Object Model, ODL, OQL - XML Databases: XML Hierarchical Model, DTD, XML Schema, XQuery – Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

- Classify the modern and futuristic database applications based on size and complexity
- Map ER model to Relational model to perform database design effectively
- Write queries using normalization criteria and optimize queries
- Compare and contrast various indexing strategies in different database systems
- Appraise how advanced databases differ from traditional databases.

TEXTBOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, — Database System Concepts, Sixth Edition, Tata McGraw Hill, 2011.
2. Ramez Elmasri, Shamkant B. Navathe, — Fundamentals of Database Systems, Sixth Edition, Pearson Education, 2011.

REFERENCES:

2. Raghu Ramakrishnan, — Database Management Systems, Fourth Edition, McGraw-Hill College Publications, 2015.
3. G.K. Gupta, "Database Management Systems", Tata McGraw Hill, 2011.

OBJECTIVES:

- To understand and apply the algorithm analysis techniques.
- To critically analyze the efficiency of alternative algorithmic solutions for the same problem.
- To understand differential algorithm design techniques.
- To understand the limitations of Algorithmic power.

UNIT I INTRODUCTION 9

Notion of an Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types – Fundamentals of the Analysis of Algorithmic Efficiency – Asymptotic Notations and their properties. Analysis Framework – Empirical analysis - Mathematical analysis for Recursive and Non-recursive algorithms - Visualization

UNIT II BRUTE FORCE AND DIVIDE-AND-CONQUER 9

Brute Force – Computing an – String Matching - Closest-Pair and Convex-Hull Problems - Exhaustive Search - Travelling Salesman Problem - Knapsack Problem - Assignment problem. Divide and Conquer Methodology – Binary Search – Merge sort – Quick sort – Heap Sort - Multiplication of Large Integers – Closest-Pair and Convex - Hull Problems.

UNIT III DYNAMIC PROGRAMMING AND GREEDY TECHNIQUE 9

Dynamic programming – Principle of optimality - Coin changing problem, Computing a Binomial Coefficient – Floyd's algorithm – Multi stage graph - Optimal Binary Search Trees – Knapsack Problem and Memory functions. Greedy Technique – Container loading problem - Prim's algorithm and Kruskal's Algorithm – 0/1 Knapsack problem, Optimal Merge pattern - Huffman Trees.

UNIT IV ITERATIVE IMPROVEMENT 9

The Simplex Method - The Maximum-Flow Problem – Maximum Matching in Bipartite Graphs, Stable marriage Problem.

UNIT V COPING WITH THE LIMITATIONS OF ALGORITHM POWER 9

Lower - Bound Arguments - P, NP NP- Complete and NP Hard Problems. Backtracking – n-Queen problem - Hamiltonian Circuit Problem – Subset Sum Problem. Branch and Bound – LIFO Search and FIFO search - Assignment problem – Knapsack Problem – Travelling Salesman Problem - Approximation Algorithms for NP-Hard Problems – Travelling Salesman problem – Knapsack problem.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Design algorithms for various computing problems.
- Analyze the time and space complexity of algorithms.
- Critically analyze the differential algorithm design techniques for a given problem.
- Modify existing algorithms to improve efficiency.

5. <http://nptel.ac.in/>

OBJECTIVES:

- To understand the basic concepts and functions of operating systems.
- To understand Processes and Threads
- To analyze Scheduling algorithms.
- To understand the concept of Deadlocks.
- To analyze various memory management schemes.
- To understand I/O management and File systems.
- To be familiar with the basics of Linux system and Mobile OS like iOS and Android.

UNIT I OPERATING SYSTEM OVERVIEW

9

Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.- Computer System Organization Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.

UNIT II PROCESS MANAGEMENT

9

Processes - Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication; CPU Scheduling - Scheduling criteria, Scheduling algorithms, Multiple-processor scheduling, Real time scheduling; Threads- Overview, Multithreading models, Threading issues; Process Synchronization - The critical-section problem, Synchronization hardware, Mutex locks, Semaphores, Classic problems of synchronization, Critical regions, Monitors; Deadlock - System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.

UNIT III STORAGE MANAGEMENT

9

Main Memory - Background, Swapping, Contiguous Memory Allocation, Paging, Segmentation, Segmentation with paging, 32 and 64 bit architecture Examples; Virtual Memory - Background, Demand Paging, Page Replacement, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.

UNIT IV FILE SYSTEMS AND I/O SYSTEMS

9

Mass Storage system - Overview of Mass Storage Structure, Disk Structure, Disk Scheduling and Management, swap space management; File-System Interface - File concept, Access methods, Directory Structure, Directory organization, File system mounting, File Sharing and Protection; File System Implementation- File System Structure, Directory implementation, Allocation Methods, Free Space Management, Efficiency and Performance, Recovery; I/O Systems - I/O Hardware, Application I/O interface, Kernel I/O subsystem, Streams, Performance.

UNIT V CASE STUDY

9

Linux System - Design Principles, Kernel Modules, Process Management, Scheduling, Memory Management, Input-Output Management, File System, Inter-process Communication; Mobile OS - iOS and Android - Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, File System.

TOTAL: 45 PERIODS**SKILL DEVELOPMENT****EMPLOYABILITY****ENTREPRENEURSHIP**

OUTCOMES:

At the end of the course, the students should be able to:

- Analyze various scheduling algorithms.
- Understand deadlock, prevention and avoidance algorithms.
- Compare and contrast various memory management schemes.
- Understand the functionality of file systems.
- Perform administrative tasks on Linux Servers.
- Compare iOS and Android Operating Systems.

OBJECTIVES:

- Tounderstandthephasesinasoftwareproject
- TounderstandfundamentalconceptsofrequirementsengineeringandAnalysisModeling.
- Tounderstandthevarioussoftwaredesignmethodologies
- Tolearnvarioustestingandmaintenancemeasures

UNITISoftwarePROCESSANDAGILEDEVELOPMENT 9

Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models– Introduction to Agility-Agile process-Extreme programming-XP Process.

UNITIIRequirementsANALYSISANDSPECIFICATION 9

Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document – Requirement Engineering Process: Feasibility Studies, Requirements elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets- Data Dictionary.

UNITIIISoftwareDESIGN 9

Design process – Design Concepts-Design Model– Design Heuristic – Architectural Design – Architectural styles, Architectural Design, Architectural Mapping using Data Flow- User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components.

UNITIVTestingANDMAINTENANCE 9

Software testing fundamentals-Internal and external views of Testing-white box testing -basis path testing- control structure testing-black box testing- Regression Testing– Unit Testing– Integration Testing – Validation Testing –System Testing And Debugging –Software Implementation Techniques: Coding practices-Refactoring-Maintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering.

UNITVProjectMANAGEMENT 9

Software Project Management: Estimation– LOC, FP Based Estimation, Make/Buy Decision COCOMO I & II Model – Project Scheduling – Scheduling, Earned Value Analysis Planning – Project Plan, Planning Process, RFP Risk Management – Identification, Projection -Risk Management-Risk Identification-RMMM Plan-CASE TOOLS

TOTAL:45PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Identify the key activities in managing a software project.
- Compare different process models.
- Concepts of requirements engineering and Analysis Modeling.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

- Apply systematic procedure for software design and deployment.

- Compare and contrast the various testing and maintenance.
- Manage project schedule, estimate project cost and effort required.

TOTAL:60PERIODS**OUTCOMES:****Uponcompletionofthecourse,thestudentwillbeableto:**

- Usetypicaldatadefinitionsandmanipulationcommands.
- DesignapplicationstotestNestedandJoinQueries
- ImplementsimpleapplicationsthatuseViews
- ImplementapplicationsthatrequireaFront-endTool
- CriticallyanalyzetheuseofTables,Views,FunctionsandProcedures

OBJECTIVES:

- To learn Unix commands and shell programming
- To implement various CPU Scheduling Algorithms
- To implement Process Creation and Inter Process Communication.
- To implement Deadlock Avoidance and Deadlock Detection Algorithms
- To implement Page Replacement Algorithms
- To implement File Organization and File Allocation Strategies.

LIST OF EXPERIMENTS

1. Basics of UNIX commands
2. Write programs using the following system calls of UNIX operating system: fork, exec, getpid, exit, wait, close, stat, opendir, readdir
3. Write C program to simulate UNIX commands like cp, ls, grep, etc.
4. Shell Programming
5. Write C program to implement the various CPU Scheduling Algorithms
6. Implementation of Semaphores
7. Implementation of Shared memory and IPC
8. Banker's Algorithm for Deadlock Avoidance
9. Implementation of Deadlock Detection Algorithm
10. Write C program to implement Threading & Synchronization Applications
11. Implementation of the following Memory Allocation Methods for fixed partition
 - a) First Fit
 - b) Worst Fit
 - c) Best Fit
12. Implementation of Paging Technique of Memory Management
13. Implementation of the following Page Replacement Algorithms
 - a) FIFO
 - b) LRU
 - c) LFU
14. Implementation of the various File Organization Techniques
15. Implementation of the following File Allocation Strategies
 - a) Sequential
 - b) Indexed
 - c) Linked

TOTAL: 60 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Compare the performance of various CPU Scheduling Algorithms
- Implement Deadlock avoidance and Detection Algorithms
- Implement Semaphores
- Create processes and implement IPC
- Analyze the performance of the various Page Replacement Algorithms
- Implement File Organization and File Allocation Strategies

OBJECTIVES:

- Strengthen the reading skills of students of engineering.
- Enhance their writing skills with specific reference to technical writing.
- Develop students' critical thinking skills.
- Provide more opportunities to develop their project and proposal writing skills.

UNIT I

Reading - Strategies for effective reading-Use glosses and footnotes to aid reading comprehension-Read and recognize different text types-Predicting content using photos and title **Writing**-Plan before writing-Develop a paragraph: topic sentence, supporting sentences, concluding sentence –Write a descriptive paragraph

UNIT II

Reading-Read for details-Use of graphic organizers to review and aid comprehension **Writing**-State reasons and examples to support ideas in writing- Write a paragraph with reasons and examples- Write an opinion paragraph

UNIT III

Reading- Understanding pronoun reference and use of connectors in a passage- speed reading techniques- **Writing**- Elements of a good essay-Types of essays- descriptive-narrative- issue-based-argumentative-analytical.

UNIT IV

Reading- Genre and Organization of Ideas- **Writing**-Email writing-visumes – Job application-project writing-writing convincing proposals.

UNIT V

Reading-Critical reading and thinking-understanding how the text positions the reader-identify **Writing**-Statement of Purpose- letter of recommendation- Vision statement

TOTAL: 30 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Write different types of essays.
- Write winning job applications.
- Read and evaluate texts critically.
- Display critical thinking in various professional contexts.

TEXTBOOKS:

1. Gramer F. Margot and Colin S. Ward **Reading and Writing (Level 3)** Oxford University Press: Oxford, 2011
2. Debra Daise, Charl Norloff, and Paul Carne **Reading and Writing (Level 4)** Oxford University Press: Oxford, 2011

REFERENCES:

1. Davis, Jason and Rhonda L. Iss. **Effective Academic Writing (Level 3)** Oxford University Press: Oxford, 2006
2. E. Suresh Kumar and et al. **Enriching Speaking and Writing Skills. Second Edition.** Orient Blackswan: Hyderabad, 2012
3. Withrow, Jeans and et al. **Inspired to Write. Readings and Tasks to develop writing skills.** Cambridge University Press: Cambridge, 2004
4. Goatly, Andrew. **Critical Reading and Writing.** Routledge: United States of America, 2000

5. Petelin, Roslyn and Marsh Durham. The Professional Writing Guide: Knowing Well and Knowing Why. Business & Professional Publishing: Australia, 2000

OBJECTIVES:

- To introduce the basic notions of groups, rings, fields which will then be used to solve related problems.
- To introduce and apply the concepts of rings, finite fields and polynomials.
- To understand the basic concepts in number theory
- To examine the key questions in the Theory of Numbers.
- To give an integrated approach to number theory and abstract algebra, and provide a firm basis for further reading and study in the subject.

UNIT I GROUPS AND RINGS 12

Groups : Definition - Properties - Homomorphism - Isomorphism - Cyclic groups - Cosets - Lagrange's theorem. Rings: Definition-Subrings-Integral domain -Field-Integer modulo n- Ring homomorphism.

UNIT II FINITE FIELDS AND POLYNOMIALS 9

Rings - Polynomial rings - Irreducible polynomials over finite fields - Factorization of polynomials over finite fields.

UNIT III DIVISIBILITY THEORY AND CANONICAL DECOMPOSITIONS 9

Division algorithm - Base-b representations - Number patterns - Prime and composite numbers - GCD - Euclidean algorithm - Fundamental theorem of arithmetic - LCM.

UNIT IV DIOPHANTINE EQUATIONS AND CONGRUENCES 9

Linear Diophantine equations - Congruence's - Linear Congruence's - Applications: Divisibility tests - Modular exponentiation - Chinese remainder theorem - 2×2 linear systems.

UNIT V CLASSICAL THEOREMS AND MULTIPLICATIVE FUNCTIONS 9

Wilson's theorem - Fermat's little theorem - Euler's theorem - Euler's Phi functions - Tau and Sigma functions.

TOTAL: 60 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Apply the basic notions of groups, rings, fields which will then be used to solve related problems.
- Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- Demonstrate accurate and efficient use of advanced algebraic techniques.
- Demonstrate their mastery by solving non-trivial problems related to the concepts, and by proving simple theorems about the, statements proven by the text.
- Apply integrated approach to number theory and abstract algebra, and provide a firm basis for further reading and study in the subject.

TEXTBOOKS:

1. Grimaldi, R. Pand Ramana, B. V., "Discrete and Combinatorial Mathematics", Pearson Education, 5th Edition, New Delhi, 2007.
2. Koshy, T., —Elementary Number Theory with Applications, Elsevier Publications, New Delhi, 2002.

REFERENCES:

1. Lidl, R. and Pitz, G., "Applied Abstract Algebra", Springer Verlag, New Delhi, 2nd Edition, 2006.

3. San Ling and Chaoping Xing, —Coding Theory— A first Course, Cambridge Publications, Cambridge, 2004.

OBJECTIVES:

- To understand the protocol layering and physical level communication.
- To analyze the performance of a network.
- To understand the various components required to build different networks.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer.

UNIT I INTRODUCTION AND PHYSICAL LAYER

9

Networks – Network Types – Protocol Layering – TCP/IP Protocol Suite – OSI Model – Physical Layer: Performance – Transmission media – Switching – Circuit-switched Networks – Packet Switching.

UNIT II DATA-LINK LAYER & MEDIA ACCESS

9

Introduction – Link-Layer Addressing – DLC Services – Data-Link Layer Protocols – HDLC – PPP – Media Access Control – Wired LANs: Ethernet – Wireless LANs – Introduction – IEEE 802.11, Bluetooth – Connecting Devices.

UNIT III NETWORK LAYER

9

Network Layer Services – Packet Switching – Performance – IPv4 Addresses – Forwarding of IP Packets – Network Layer Protocols: IP, ICMPv4 – Unicast Routing Algorithms – Protocols – Multicasting Basics – IPv6 Addressing – IPv6 Protocol.

UNIT IV TRANSPORT LAYER

9

Introduction – Transport Layer Protocols – Services – Port Numbers – User Datagram Protocol – Transmission Control Protocol – SCTP.

UNIT V APPLICATION LAYER

9

WWW and HTTP – FTP – Email – Telnet – SSH – DNS – SNMP.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Understand the basic layers and its functions in computer networks.
- Evaluate the performance of a network.
- Understand the basics of how data flows from one node to another.
- Analyze and design routing algorithms.
- Design protocols for various functions in the network.
- Understand the working of various application layer protocols.

TEXT BOOKS:

1. Behrouz A. Forouzan, Data Communications and Networking, Fifth Edition TMH, 2013.

REFERENCES:

1. Larry L. Peterson, Bruce S. Davie, Computer Networks: A Systems Approach, Fifth Edition, Morgan Kaufmann Publishers Inc., 2012.
2. William Stallings, Data and Computer Communications, Tenth Edition, Pearson Education, 2013.
3. Nader F. Mir, Computer and Communication Networks, Second Edition, Prentice Hall, 2014.
4. Ying-Dar Lin, Ren-Hung Hwang and Fred Baker, Computer Networks: An Open Source Approach, McGraw Hill Publisher, 2011.
5. James F. Kurose, Keith W. Ross, Computer Networking, A Top-Down Approach Featuring the Internet, Sixth Edition, Pearson Education, 2013.

OBJECTIVES:

- To understand the Architecture of 8086 microprocessor.
- To learn the design aspects of I/O and Memory Interfacing circuits.
- To interface microprocessors with supporting chips.
- To study the Architecture of 8051 microcontroller.
- To design a microcontroller based system.

UNIT I THE 8086 MICROPROCESSOR

9

Introduction to 8086 – Microprocessor architecture – Addressing modes – Instruction set and assembler directives – Assembly language programming – Modular Programming – Linking and Relocation – Stacks – Procedures – Macros – Interrupts and interrupt service routines – Byte and String Manipulation.

UNIT II 8086 SYSTEM BUS STRUCTURE

9

8086 signals – Basic configurations – System bus timing – System design using 8086 – I/O programming – Introduction to Multiprogramming – System Bus Structure – Multiprocessor configurations – Coprocessor, Closely coupled and loosely Coupled configurations – Introduction to advanced processors.

UNIT III I/O INTERFACING

9

Memory Interfacing and I/O interfacing – Parallel communication interface – Serial communication interface – D/A and A/D Interface – Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications Case studies: Traffic Light control, LED display, LCD display, Keyboard display interface and Alarm Controller.

UNIT IV MICROCONTROLLER

9

Architecture of 8051 – Special Function Registers (SFRs) – I/O Pins Ports and Circuits – Instruction set – Addressing modes – Assembly language programming.

UNIT V INTERFACING MICROCONTROLLER

9

Programming 8051 Timers – Serial Port Programming – Interrupts Programming – LCD & Keyboard Interfacing – ADC, DAC & Sensor Interfacing – External Memory Interface – Stepper Motor and Waveform generation – Comparison of Microprocessor, Microcontroller, PIC and ARM processors

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Understand and execute programs based on 8086 microprocessor.
- Design Memory Interfacing circuits.
- Design and interface I/O circuits.
- Design and implement 8051 microcontroller based systems.

TEXTBOOKS:

1. Yu-Cheng Liu, Glenn A. Gibson, — Microcomputer Systems: The 8086/8088 Family – Architecture, Programming and Design I, Second Edition, Prentice Hall of India, 2007. (UNIT I- III)
2. Mohamed Ali Mazidi, Janice Gillispie Mazidi, Rolin McKinlay, — The 8051 Microcontroller and Embedded Systems: Using Assembly and C, Second Edition, Pearson Education, 2011. (UNIT IV-V)

REFERENCES:

2. A. K. Ray, K. M. Bhurchandi, — Advanced Microprocessors and Peripherals — 3rd edition, Tata Mc Graw Hill, 2012

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

OBJECTIVES:

- To understand the language hierarchy
- To construct automata for any given pattern and find its equivalent regular expressions
- To design a context free grammar for any given language
- To understand Turing machines and their capability
- To understand undecidable problems and NP class problems.

UNIT I AUTOMATA FUNDAMENTALS

9

Introduction to formal proof – Additional forms of Proof – Inductive Proofs – Finite Automata – Deterministic Finite Automata – Non-deterministic Finite Automata – Finite Automata with Epsilon Transitions

UNIT II REGULAR EXPRESSIONS AND LANGUAGES

9

Regular Expressions – FA and Regular Expressions – Proving Languages not to be regular – Closure Properties of Regular Languages – Equivalence and Minimization of Automata.

UNIT III CONTEXT FREE GRAMMAR AND LANGUAGES

9

CFG – Parse Trees – Ambiguity in Grammars and Languages – Definition of the Pushdown Automata – Languages of a Pushdown Automata – Equivalence of Pushdown Automata and CFG, Deterministic Pushdown Automata.

UNIT IV PROPERTIES OF CONTEXT FREE LANGUAGES

9

Normal Forms for CFG – Pumping Lemma for CFL – Closure Properties of CFL – Turing Machines – Programming Techniques for TM.

UNIT V UNDECIDABILITY

9

Non Recursive Enumerable (RE) Language – Undecidable Problem with RE – Undecidable Problems about TM – Post's Correspondence Problem, The Class P and NP.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Construct automata, regular expression for any pattern.
- Write Context free grammar for any construct.
- Design Turing machines for any language.
- Propose computation solutions using Turing machines.
- Derive whether a problem is decidable or not.

TEXT BOOKS:

1. J.E.Hopcroft, R.Motwani and J.DUllman, — Introduction to Automata Theory, Languages and Computations, Second Edition, Pearson Education, 2003.

REFERENCES:

1. H.R.Lewis and C.H.Papadimitriou, — Elements of the theory of Computation, Second Edition, PHI, 2003.
2. J.Martin, — Introduction to Languages and the Theory of Computation, Third Edition, TMH, 2003.
3. Micheal Sipser, — Introduction of the Theory and Computation, Thomson Brokecole, 1997

OBJECTIVES:

- To understand the fundamentals of object modeling
- To understand and differentiate Unified Process from other approaches.
- To design with static UML diagrams
- To design with the UML dynamic and implementation diagrams.
- To improve the software design with design patterns.
- To test the software against its requirements specification

UNIT I UNIFIED PROCESS AND USE CASE DIAGRAMS

9

Introduction to OOAD with OO Basics - Unified Process - UML diagrams - Use Case - Case study - the Next Gen POS system, Inception - Use case Modelling - Relating Use cases - include, extend and generalization - When to use Use-cases

UNIT II STATIC UML DIAGRAMS

9

Class Diagram - Elaboration - Domain Model - Finding conceptual classes and description classes - Associations - Attributes - Domain model refinement - Finding conceptual class Hierarchies - Aggregation and Composition - Relationship between sequence diagrams and use cases - When to use Class Diagrams.

UNIT III DYNAMIC AND IMPLEMENTATION UML DIAGRAMS

9

Dynamic Diagrams - UML interaction diagrams - System sequenced diagram - Collaboration diagram - When to use Communication Diagrams - State machine diagram and Modelling - When to use State Diagrams - Activity diagram - When to use activity diagrams

UNIT IV DESIGN PATTERNS

9

GRASP: Designing objects with responsibilities - Creator - Information expert - Low Coupling - High Cohesion - Controller. Design Patterns - creational - factory method - structural - Bridge - Adapter - behavioural - Strategy - observer - Applying GoF design patterns - Mapping design to code.

UNIT V TESTING

9

Object Oriented Methodologies - Software Quality Assurance - Impact of object orientation on Testing - Develop Test Cases and Test Plans

TOTAL: 45 PERIODS**OUTCOMES: At the end of the course, the students should be able to:**

- Express software design with UML diagrams
- Design software applications using OO concepts
- Identify various scenarios based on software requirements
- Transform UML based software design into pattern based design using design patterns
- Understand the various testing methodologies for OO software

TEXTBOOKS:

1. Craig Larman, - Applying UML and Patterns: An Introduction to Object-Oriented Analysis and Design and Iterative Development, Third Edition, Pearson Education, 2005.

20150L57

MICROPROCESSORS AND MICROCONTROLLER LABORATORY

L	T	P	C
0	0	3	2

OBJECTIVES:

- To introduce ALP concepts, features and coding methods
- Write ALP for arithmetic and logical operations in 8086 and 8051
- Differentiate Serial and Parallel Interface
- Interface different I/Os with Microprocessors
- Be familiar with MASM

LIST OF EXPERIMENTS

8086 Programs using kits and MASM

1. Basic arithmetic and Logical operations
2. Move a data block without overlap
3. Code conversion, decimal arithmetic and Matrix operations
4. Floating point operations, string manipulations, sorting and searching
5. Password checking, Print RAM size and system date
6. Counters and Time Delay

Peripherals and Interfacing Experiments

7. Traffic light controller
8. Stepper motor control
9. Digital clock
10. Keyboard and Display
11. Printer status
12. Serial interface and Parallel interface
13. A/D and D/A interface and Waveform Generation

8051 Experiments using kits and MASM

14. Basic arithmetic and Logical operations
15. Square and Cube program, Find 2's complement of a number
16. Unpacked BCD to ASCII

TOTAL: 60 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Write ALP programmes for fixed and Floating Point and Arithmetic operations
- Interface different I/Os with processor
- Generate waveforms using Microprocessors
- Execute Programs in 8051
- Explain the difference between simulator and Emulator

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OBJECTIVES:

- To capture the requirements specification for an intended software system
- To draw the UML diagrams for the given specification
- To map the design properly to code
- To test the software system thoroughly for all scenarios
- To improve the design by applying appropriate design patterns.

LIST OF EXPERIMENTS

Draw standard UML diagrams using an UML modeling tool for a given case study and map design to code and implement a 3 layered architecture. Test the developed code and validate whether the SRS is satisfied.

1. Identify a software system that needs to be developed.
2. Document the Software Requirements Specification (SRS) for the identified system.
3. Identify use cases and develop the Use Case model.
4. Identify the conceptual classes and develop a Domain Model and also derive a Class Diagram from that.
5. Using the identified scenarios, find the interaction between objects and represent them using UML Sequence and Collaboration Diagrams.
6. Draw relevant State Chart and Activity Diagrams for the same system.
7. Implement the system as per the detailed design.
8. Test the software system for all the scenarios identified as per the use case diagram.
9. Improve the reusability and maintainability of the software system by applying appropriate design patterns.
10. Implement the modified system and test it for various scenarios.

SUGGESTED DOMAINS FOR MINI-PROJECT:

1. Passport automation system.
2. Book bank.
3. Exam registration.
4. Stock maintenance system.
5. Online course reservations system.
6. Airline/Railway reservations system.
7. Software personnel management system.
8. Credit card processing.
9. e-book management system.
10. Recruitment system.
11. Foreign trading system.
12. Conference management system.
13. BPO management system.
14. Library management system.
15. Student information system.

TOTAL: 60 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Upon completion of this course, the students will be able to:
- Perform OO analysis and design for a given problem specification.
- Identify and map basic software requirements in UML mapping.
- Improve the software quality using design patterns and to explain the rationale behind applying specific design patterns.
- Test the compliance of the software with the SRS.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

OBJECTIVES:

- To learn and use network commands.
- To learn socket programming.
- To implement and analyze various network protocols.
- To learn and use simulation tools.
- To use simulation tools to analyze the performance of various network protocols.

LIST OF EXPERIMENTS

1. Learn to use commands like tcpdump, netstat, ifconfig, nslookup and traceroute. Capture ping and traceroute PDUs using a network protocol analyzer and examine.
2. Write a HTTP web client program to download a webpage using TCP sockets.
3. Applications using TCP sockets like:
 - a. Echo client and echo server
 - b. Chat
 - c. File Transfer
4. Simulation of DNS using UDP sockets.
5. Write codes simulating ARP/RARP protocols.
6. Study of Network simulator (NS) and Simulation of Congestion Control Algorithms using NS.
7. Study of TCP/UDP performance using Simulation tool.
8. Simulation of Distance Vector/Link State Routing algorithm.
9. Performance evaluation of Routing protocols using Simulation tool.
10. Simulation of error correction code (like CRC).

TOTAL: 60 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Implement various protocols using TCP and UDP
- Compare the performance of different transport layer protocols.
- Use simulation tools to analyze the performance of various network protocols.
- Analyze various routing algorithms.
- Implement error correction codes.

OBJECTIVES:

3

To create a basic appreciation towards research process and awareness of various research publication

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to standard laboratory precautions and best practices for experimental work
- To provide orientation for basic mathematical computation useful in basic research

UNIT I

9

Introduction to Research – Definition, Objectives, Motivation and purpose – types of research – Pure and applied, survey, case study experimental, exploratory – Research Design – Steps in selection and formulation of research problem – Steps in research – Criteria of Good Research, Problems Encountered by Researchers in India.

UNIT II

9

Research Problem: Definition of research problem, selecting the problem – Necessity of defining the problem – Techniques involved in defining the problem – Research design – Needs and features of good design – Different research design – Basic principles of experimental designs. Development of a research plan, Formulation of Hypothesis – Sampling techniques – Sampling error and sample size. Literature types – compendia and tables of information, Reviews, General treatises, Monographs.

UNIT III

9

Methods of data collection – Primary and secondary data – observation – interview – Questionnaire – Tools for questionnaire; surveying & literature survey, spreadsheets, Technical writing, Construction of tools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, Practical Exercises. Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection.

UNIT IV

9

Processing and analysis of data – editing – coding – transcription – tabulation – outline of statistical analysis – Uncertainty, accuracy and precision – Mean value; standard deviation; error on the mean – Using a spreadsheet for data analysis – Graphs and graph plotting – Least squares methods – descriptive statistics – elements of processing through computer – packages for analysis (Excel)

UNIT V

9

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure – writing research abstract – introduction, review of literature, result, conclusions, Concepts of Bibliography and references, Technical Presentation.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

TEXTBOOKS:

I.C.R.Kothari,ResearchMethodology,NewAgeInternationalPublishers,NewDelhi,2004.

REFERENCES:

5. ArchibaldFrapp,JonFrapp,MichaelFrapp;Just-in-TimeMathforEngineers,ElsevierScience&Technology Books, 2003.

OBJECTIVES:

- To understand different Internet Technologies
- To learn java-specific web services architecture To design a context free grammar for any given language

UNIT I WEBSITE BASICS, HTML5, CSS3, WEB 2.0 9

Web Essentials: Clients, Servers and Communication – The Internet – Basic Internet protocols – World wide web – HTTP Request Message – HTTP Response Message – Web Clients – Web Servers – HTML5 – Tables – Lists – Image – HTML5 control elements – Semantic elements – Drag and Drop – Audio – Video controls – CSS3 – Inline, embedded and external style sheets – Rule cascading – Inheritance – Backgrounds – Border Images – Colors – Shadows – Text – Transformations – Transitions – Animations

UNIT II CLIENT SIDE PROGRAMMING 9

JavaScript: An introduction to JavaScript – JavaScript DOM Model – Date and Objects, – Regular Expressions – Exception Handling – Validation – Built-in objects – Event Handling – DHTML with JavaScript – JSON introduction – Syntax – Function Files – Http Request – SQL

UNIT III SERVER SIDE PROGRAMMING 9

Servlets: Java Servlet Architecture – Servlet Life Cycle – Form GET and POST actions – Session Handling – Understanding Cookies – Installing and Configuring Apache Tomcat Web Server – DATABASE CONNECTIVITY: JDBC perspectives, JDBC program example - JSP: Understanding Java Server Pages – JSP Standard Tag Library (JSTL) – Creating HTML forms by embedding JSP code

UNIT IV PHP and XML 9

An introduction to PHP: PHP- Using PHP- Variables- Program control- Built-in functions- Form Validation- Regular Expressions - File handling – Cookies - Connecting to Database. XML: Basic XML – Document Type Definition – XML Schema DOM and Presenting XML, XML Parsers and Validation, XSL and XSLT Transformation, News Feed (RSS and ATOM)

UNIT V INTRODUCTION TO AJAX and WEBSERVICES 9

AJAX: Ajax Client Server Architecture – XMLHttpRequest Object – Callback Methods: Web Services: services (WSDL) – Consuming a web service, Database Driven web service from an application – SOAP

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Construct a basic website using HTML and Cascading Style Sheets
- Build dynamic web page with validation using JavaScript objects and by applying different event handling mechanisms.
- Develop server side programs using Servlets and JSP

- ConstructsimplewebpagesinPHPandto represent datainXMLformat.
- UseAJAXandwebservicestodevelopinteractivewebapplicationsDerivewhetheraproblem is decidable or not.

5. UttamK.Roy,—WebTechnologiesI,OxfordUniversityPress,2011.

OBJECTIVES:

- To understand the various characteristics of Intelligent agents
- To learn the different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To understand the different ways of designing software agents
- To know about the various applications of AI

UNIT I INTRODUCTION

9

Introduction – Definition – Future of Artificial Intelligence – Characteristics of Intelligent Agents – Typical Intelligent Agents – Problem Solving Approach to Typical AI problems.

UNIT II PROBLEM SOLVING METHODS

9

Problem solving Methods - Search Strategies- Uninformed - Informed - Heuristics - Local Search Algorithms and Optimization Problems - Searching with Partial Observations - Constraint Satisfaction Problems – Constraint Propagation - Backtracking Search - Game Playing - Optimal Decisions in Games - Alpha - Beta Pruning - Stochastic Games

UNIT III KNOWLEDGE REPRESENTATION

9

First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining - Backward Chaining – Resolution – Knowledge Representation - Ontological Engineering - Categories and Objects – Events - Mental Events and Mental Objects - Reasoning Systems for Categories - Reasoning with Default Information

UNIT IV SOFTWARE AGENTS

9

Architecture for Intelligent Agents – Agent communication – Negotiation and Bargaining – Argumentation among Agents – Trust and Reputation in Multi-agent systems.

UNIT V APPLICATIONS

AI applications – Language Models – Information Retrieval - Information Extraction – Natural Language Processing - Machine Translation – Speech Recognition – Robot – Hardware – Perception – Planning – Moving.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Use appropriate search algorithms for any AI problem
- Represent a problem using first order and predicate logic
- Provide the apt agent strategy to solve a given problem
- Design software agents to solve a problem
- Design applications for NLP that use Artificial Intelligence.

OBJECTIVES:

- To understand the basic concepts of mobile computing.
- To learn the basics of mobile telecommunication system.
- To be familiar with the network layer protocols and Ad-Hoc networks.
- To know the basis of transport and application layer protocols.
- To gain knowledge about different mobile platforms and application development.

UNIT I INTRODUCTION 9

Introduction to Mobile Computing – Applications of Mobile Computing- Generations of Mobile Communication Technologies- Multiplexing – Spread spectrum -MAC Protocols – SDMA- TDMA- FDMA- CDMA.

UNIT II MOBILE TELECOMMUNICATIONS SYSTEM 9

Introduction to Cellular Systems- GSM – Services & Architecture – Protocols – Connection Establishment – Frequency Allocation – Routing – Mobility Management – Security – GPRS- UMTS – Architecture – Handover – Security.

UNIT III MOBILE NETWORK LAYER 9

Mobile IP – DHCP – AdHoc– Proactive protocol-DSDV, Reactive Routing Protocols – DSR, AODV Hybrid routing –ZRP, Multicast Routing-ODMRP, Vehicular Ad Hoc networks(VANET)–MANETVs VANET – Security.

UNIT IV MOBILE TRANSPORT AND APPLICATION LAYER 9

Mobile TCP–WAP–Architecture–WDP–WTLS–WTP–WSP–WAE–WTA Architecture– WML

UNIT V MOBILE PLATFORMS AND APPLICATIONS 9

Mobile Device Operating Systems– Special Constraints & Requirements–Commercial Mobile Operating Systems – Software Development Kit: iOS, Android, BlackBerry, Windows Phone –MCommerce – Structure – Pros & Cons – Mobile Payment System – Security Issues

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Explain the basics of mobile telecommunication systems
- Illustrate the generations of telecommunication systems in wireless networks
- Determine the functionality of MAC, network layer and identify a routing protocol for a given Ad hoc network
- Explain the functionality of Transport and Application layers
- Develop a mobile application using android/blackberry/ios/Windows SDK

TEXTBOOKS:

8. AppleDeveloper:<https://developer.apple.com/>
9. WindowsPhoneDevCenter:<http://developer.windowsphone.com>
10. BlackBerryDeveloper:<http://developer.blackberry.com>

OBJECTIVES:

- To learn the various phases of compiler.
- To learn the various parsing techniques.
- To understand intermediate code generation and run-time environment.
- To learn to implement front-end of the compiler.
- To learn to implement code generator.

UNIT I INTRODUCTION TO COMPILERS

9

Structure of a compiler – Lexical Analysis – Role of Lexical Analyzer – Input Buffering – Specification of Tokens – Recognition of Tokens – Lex – Finite Automata – Regular Expressions to Automata – Minimizing DFA.

UNIT II SYNTAX ANALYSIS

9

Role of Parser – Grammars – Error Handling – Context-free grammars – Writing a grammar – Top Down Parsing - General Strategies Recursive Descent Parser Predictive Parser-LL(1) Parser-Shift Reduce Parser-LR Parser-LR(0) Item Construction of SLR Parsing Table- Introduction to LALR Parser - Error Handling and Recovery in Syntax Analyzer-YACC..

UNIT III INTERMEDIATE CODE GENERATION

9

Syntax Directed Definitions, Evaluation Orders for Syntax Directed Definitions, Intermediate Languages: Syntax Tree, Three Address Code, Types and Declarations, Translation of Expressions, Type Checking.

UNIT IV RUN-TIME ENVIRONMENT AND CODE GENERATION

9

Storage Organization, Stack Allocation Space, Access to Non-local Data on the Stack, Heap Management - Issues in Code Generation - Design of a simple Code Generator.

9

UNIT V CODE OPTIMIZATION

Principal Sources of Optimization – Peep-hole optimization – DAG – Optimization of Basic Blocks – Global Data Flow Analysis - Efficient Data Flow Algorithm.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Understand the different phases of compiler.
- Design a lexical analyzer for a sample language.
- Apply different parsing algorithms to develop the parsers for a given grammar.
- Understand syntax-directed translation and run-time environment.
- Learn to implement code optimization techniques and a simple code generator.
- Design and implement a scanner and a parser using LEX and YACC tools.

TEXTBOOKS:

1. J.Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman, Compilers: Principles, Techniques and Tools, Second Edition, Pearson Education, 2009.

3. Keith D Cooper and Linda Torczon, Engineering a Compiler, Morgan Kaufmann Publishers Elsevier Science, 2004.
4. V. Raghavan, Principles of Compiler Design, Tata McGraw Hill Education Publishers, 2010.
5. Allen I. Holub, Compiler Design in C, Prentice-Hall Software Series, 1993.

OBJECTIVES:

- To understand the foundations of distributed systems.
- To learn issues related to clock synchronization and the need for global state in distributed systems.
- To learn distributed mutual exclusion and deadlock detection algorithms.
- To understand the significance of agreement, fault tolerance and recovery protocols in Distributed Systems.
- To learn the characteristics of peer-to-peer and distributed shared memory systems.

UNIT I INTRODUCTION

9

Introduction: Definition – Relation to computer system components – Motivation – Relation to parallel systems – Message-passing systems versus shared memory systems – Primitives for distributed communication – Synchronous versus asynchronous executions – Design issues and challenges. A model of distributed computations: A distributed program – A model of distributed executions – Models of communication networks – Global state – Cuts – Past and future cones of an event – Models of process communications. Logical Time: A framework for a system of logical clocks – Scalar time – Vector time – Physical clock synchronization: NTP.

UNIT II MESSAGE ORDERING & SNAPSHOTS

9

Message ordering and group communication: Message ordering paradigms – Asynchronous execution with synchronous communication – Synchronous program order on an asynchronous system – Group communication – Causal order (CO) – Total order. Global state and snapshot recording algorithms: Introduction – System model and definitions – Snapshot algorithms for FIFO channels.

9

UNIT III DISTRIBUTED MUTEX & DEADLOCK

Distributed mutual exclusion algorithms: Introduction – Preliminaries – Lamport's algorithm – Ricart-Agrawal algorithm – Maekawa's algorithm – Suzuki-Kasami's broadcast algorithm. Deadlock detection in distributed systems: Introduction – System model – Preliminaries – Models of deadlocks – Knapp's classification – Algorithms for the single resource model, the AND model and the OR model.

9

UNIT IV RECOVERY & CONSENSUS

Checkpointing and rollback recovery: Introduction – Background and definitions – Issues in failure recovery – Checkpoint-based recovery – Log-based rollback recovery – Coordinated checkpointing algorithm – Algorithm for asynchronous checkpointing and recovery. Consensus and agreement algorithms: Problem definition – Overview of results – Agreement in a failure – free system – Agreement in synchronous systems with failures.

UNIT V P2P & DISTRIBUTED SHARED MEMORY

9

Peer-to-peer computing and overlay graphs: Introduction – Data indexing and overlays – Chord – Content addressable networks – Tapestry. Distributed shared memory: Abstraction and advantages – Memory consistency models – Shared memory Mutual Exclusion.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Elucidate the foundations and issues of distributed systems
- Understand the various synchronization issues and global state for distributed systems.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

- Understand the Mutual Exclusion and Deadlock detection algorithms in distributed systems
- Describe the agreement protocols and fault tolerance mechanisms in distributed systems.
 - Describe the features of peer-to-peer and distributed shared memory systems.

TEXTBOOKS:

1. Kshemkalyani, Ajay D., and Mukesh Singhal. Distributed computing: principles, algorithms, and systems. Cambridge University Press, 2011.
2. George Coulouris, Jean Dollimore and Tim Kindberg, — Distributed Systems Concepts and Design, Fifth Edition, Pearson Education, 2012.

REFERENCES:

1. Pradeep K Sinha, "Distributed Operating Systems: Concepts and Design", Prentice Hall of India, 2007.
2. Mukesh Singhal and Niranjana G. Shivaratri. Advanced concepts in operating systems. McGraw-Hill, Inc., 1994.
3. Tanenbaum A. S., Van Steen M., — Distributed Systems: Principles and Paradigms, Pearson Education, 2007.
4. Liu M. L., — Distributed Computing, Principles and Applications, Pearson Education, 2004.
5. Nancy A Lynch, — Distributed Algorithms, Morgan Kaufman Publishers, USA, 2003.

OBJECTIVES:

- To be familiar with Web page design using HTML/XML and stylesheets
- To be exposed to creation of user interfaces using Java frames and applets.
- To learn to create dynamic web pages using server side scripting.
- To learn to write Client Server applications.
- To be familiar with the PHP programming.
- To be exposed to creating applications with AJAX

LIST OF EXPERIMENTS

1. Create a web page with the following using HTML
 - a. To embed a map in a web page
 - b. To fix the hotspots in that map
 - c. Show all the related information when the hotspots are clicked.
2. Create a web page with the following.
 - a. Cascading stylesheets.
 - b. Embedded stylesheets.
 - c. Inline stylesheets. Use our college information for the web pages.
3. Validate the Registration, user login, user profile and payment by credit card pages using JavaScript.
4. Write programs in Java using Servlets:
 - i. To invoke servlets from HTML forms
 - ii. Session tracking using hidden form fields and Session tracking for a hit count
5. Write programs in Java to create three-tier applications using servlets for conducting on-line examination for displaying student marklist. Assume that student information is available in a database which has been stored in a database server.
6. Install TOMCAT webserver. Convert the static web pages of programs into dynamic web pages using servlets (or JSP) and cookies. Hint: Users information (user id, password, credit card number) would be stored in web.xml. Each user should have a separate Shopping Cart.
7. Redo the previous task using JSP by converting the static web pages into dynamic web pages. Create a database with user information and books information. The books catalogues should be dynamically loaded from the database.
8. Create and save an XML document at the server, which contains 10 users information.
 5. Write a Program, which takes user Id as an input and returns the User details by taking the user information from the XML document
 6. i. Validate the form using PHP regular expression. ii. PHP stores a form data into database.
 7. Write a web service for finding what people think by asking 500 people's opinion for any consumer product.

TOTAL: 60 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Construct Web pages using HTML/XML and stylesheets.
- Build dynamic web pages with validation using JavaScript objects and by applying different event handling mechanisms.
- Develop dynamic web pages using server side scripting.
- Use PHP programming to develop web applications.
- Construct web applications using AJAX and web services.

20150L68

**MOBILE APPLICATION DEVELOPMENT
LABORATORY**

L	T	P	C
0	0	3	2

OBJECTIVES:

- To understand the components and structure of mobile application development frameworks for Android and windows OS based mobiles.
- To understand how to work with various mobile application development frameworks.
- To learn the basic and important design concepts and issues of development of mobile applications.
- To understand the capabilities and limitations of mobile devices.

LIST OF EXPERIMENTS

1. Develop an application that uses GUI components, Font and Colours
2. Develop an application that uses Layout Managers and event listeners.
3. Write an application that draws basic graphical primitives on the screen.
4. Develop an application that makes use of databases.
5. Develop an application that makes use of Notification Manager
6. Implement an application that uses Multi-threading
7. Develop an application that uses GPS location information
8. Implement an application that writes data to the SD card.
9. Implement an application that creates an alert upon receiving a message
10. Write a mobile application that makes use of RSS feed
11. Develop a mobile application to send an email.
12. Develop a Mobile application for simple needs (Mini Project)

TOTAL: 60 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Develop mobile applications using GUI and Layouts.
- Develop mobile applications using Event Listener.
- Develop mobile applications using Databases.
- Develop mobile applications using RSS Feed, Internal/External Storage, SMS, Multi-threading and GPS.
- Analyze and discover own mobile app for simple needs.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

20150LPC	PROFESSIONAL COMMUNICATION	L	T	P	C
		3	1	0	4

OBJECTIVES:

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

UNIT I 9

Introduction to Soft Skills--Hard skills & soft skills-employability and career Skills—Grooming as a professional with values—Time Management—General awareness of Current Affairs

UNIT II 9

Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice— presenting the visuals effectively – 5 minute presentations

UNIT III 9

Introduction to Group Discussion—Participating in group discussions—understanding group dynamics -brainstorming the topic—questioning and clarifying—GD strategies-activities to improve GD skills

UNIT IV 9

Interview etiquette–dress code–body language–attending job interviews–telephone/skype interview- one to one interview & panel interview – FAQs related to job interviews

UNIT V 9

Recognizing differences between groups and teams- managing time-managing stress-networking professionally- respecting social protocols-understanding career management-developing a long-term career plan-making career changes

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Make effective presentations
- participate confidently in Group Discussions.
- Attend job interviews and be successful in them.
- Develop adequate Soft Skills required for the workplace

RECOMMENDED SOFTWARE

1. JGlobe arena
2. Win English.

5. S. Hariharan et al. Soft Skills. MJ Publishers: Chennai, 2010.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OBJECTIVES:

- To enable the students to study the evolution of Management, to study the functions and principles of management and to learn the application of the principles in an organization.

UNIT I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS**9**

Definition of Management – Science or Art – Manager Vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations, system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.

UNIT II PLANNING**9**

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.

UNIT III ORGANISING**9**

Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management, Career planning and management

UNIT IV DIRECTING**9**

Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication communication and IT.

9**UNIT V CONTROLLING**

System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Upon completion of the course, students will be able to have clear understanding of managerial functions like planning, organizing, staffing, leading & controlling and have same basic knowledge on international aspect of management

TEXTBOOKS:

1. Stephen P. Robbins & Mary Coulter, — Management, Prentice Hall (India) Pvt. Ltd., 10th Edition, 2009.
2. J. A. F. Stoner, Freeman R. E. and Daniel R. Gilbert — Management, Pearson Education, 6th Edition, 2004.

REFERENCES:

1. Stephen A. Robbins & David A. Decenzo & Mary Coulter, — Fundamentals of Management, Pearson Education, 7th Edition, 2011.
2. Robert Kreitner & Mamata Mohapatra, — Management, Biztantra, 2008.
3. Harold Koontz & Heinz Weihrich — Essentials of Management, Tata McGraw Hill, 1998.
4. Tripathy P. C. & Reddy P. N., — Principles of Management, Tata McGraw Hill, 1999

OBJECTIVES:

- To understand Cryptography Theories, Algorithms and Systems.
- To understand necessary Approaches and Techniques to build protection mechanisms in order to secure computer networks.

UNIT I INTRODUCTION 9

Security trends - Legal, Ethical and Professional Aspects of Security, Need for Security at Multiple levels, Security Policies - Model of network security - Security attacks, services and mechanisms - OS security architecture - Classical encryption techniques: substitution techniques, transposition techniques, steganography - Foundations of modern cryptography: perfect security - information theory - product cryptosystem - cryptanalysis.

UNIT II SYMMETRIC KEY CRYPTOGRAPHY 9

MATHEMATICS OF SYMMETRIC KEY CRYPTOGRAPHY: Algebraic structures - Modular arithmetic - Euclid's algorithm - Congruence and matrices - Groups, Rings, Fields - Finite fields - SYMMETRIC KEY CIPHERS: DES - Block cipher Principles of DES - Strength of DES - Differential and linear cryptanalysis - Block cipher design principles - Block cipher mode of operation - Evaluation criteria for AES - Advanced Encryption Standard - RC4 - Key distribution.

UNIT III PUBLIC KEY CRYPTOGRAPHY 9

MATHEMATICS OF ASYMMETRIC KEY CRYPTOGRAPHY: Primes - Primality Testing - Factorization - Euler's totient function, Fermat's and Euler's Theorem - Chinese Remainder Theorem - Exponentiation and logarithm - ASYMMETRIC KEY CIPHERS: RSA cryptosystem - Key distribution - Key management - Diffie-Hellman key exchange - ElGamal cryptosystem - Elliptic curve arithmetic - Elliptic curve cryptography.

UNIT IV MESSAGE AUTHENTICATION AND INTEGRITY 9

Authentication requirement - Authentication function - MAC - Hash function - Security of hash function and MAC - SHA - Digital signature and authentication protocols - DSS - Entity Authentication: Biometrics, Passwords, Challenge Response protocols - Authentication applications - Kerberos, X.509

UNIT V SECURITY PRACTICE AND SYSTEM SECURITY 9

Electronic Mail security - PGP, S/MIME - IP security - Web Security - SYSTEM SECURITY: Intruders - Malicious software - viruses - Firewalls.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Understand the fundamentals of network security, security architecture, threats and vulnerabilities
- Apply the different cryptographic operations of symmetric cryptographic algorithms
- Apply the different cryptographic operations of public key cryptography
- Apply the various Authentication schemes to simulated different applications.
- Understand various Security practices and System security standards

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

TEXTBOOKS:

1. William Stallings, Cryptography and Network Security: Principles and Practice, PHI 3rd Edition, 2006.

REFERENCES:

1. CK Shyamala, N Harini and Dr. TR Padmanabhan: Cryptography and Network Security, Wiley India Pvt. Ltd

2. Behrouz A. Forouzan, Cryptography and Network Security, Tata McGraw Hill 2007

3. Charlie Kaufman, Radia Perlman, and Mike Speciner, Network Security: PRIVATE Communication in a PUBLIC World, Prentice Hall, ISBN 0-13-046019-2

OBJECTIVES:

- To understand the concept of cloud computing.
- To appreciate the evolution of cloud from the existing technologies.
- To have knowledge on the various issues in cloud computing.
- To be familiar with the lead players in cloud.
- To appreciate the emergence of cloud as the next generation computing paradigm.

UNIT I INTRODUCTION

9

Introduction to Cloud Computing – Definition of Cloud – Evolution of Cloud Computing – Underlying Principles of Parallel and Distributed Computing – Cloud Characteristics – Elasticity in Cloud – On-demand Provisioning.

UNIT II CLOUD ENABLING TECHNOLOGIES

9

Service Oriented Architecture – REST and Systems of Systems – Web Services – Publish-Subscribe Model – Basics of Virtualization – Types of Virtualization – Implementation Levels of Virtualization – Virtualization Structures – Tools and Mechanisms – Virtualization of CPU – Memory – I/O Devices – Virtualization Support and Disaster Recovery.

UNIT III CLOUD ARCHITECTURE, SERVICES AND STORAGE

9

Layered Cloud Architecture Design – NIST Cloud Computing Reference Architecture – Public, Private and Hybrid Clouds – IaaS – PaaS – SaaS – Architectural Design Challenges – Cloud Storage – Storage-as-a-Service – Advantages of Cloud Storage – Cloud Storage Providers – S3.

UNIT IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD

9

Inter Cloud Resource Management – Resource Provisioning and Resource Provisioning Methods – Global Exchange of Cloud Resources – Security Overview – Cloud Security Challenges – Software-as-a-Service Security – Security Governance – Virtual Machine Security – IAM – Security Standards.

UNIT V CLOUD TECHNOLOGIES AND ADVANCEMENTS

9

Hadoop – MapReduce – Virtual Box – Google App Engine – Programming Environment for Google App Engine – Open Stack – Federation in the Cloud – Four Levels of Federation – Federated Services and Applications – Future of Federation.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
- Learn the key enabling technologies that help in the development of cloud.
- Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.
- Explain the core issues of cloud computing such as resource management and security.
- Be able to install and use current cloud technologies.
- Evaluate and choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.

TEXTBOOKS:

- 1 KaiHwang, GeoffreyC.Fox, JackG.Dongarra, "DistributedandCloudComputing, FromParallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
2. Rittinghouse, JohnW., and JamesF.Ransome, —CloudComputing: Implementation, Management and Security, CRC Press, 2017.

3. GeorgeReese, "CloudApplicationArchitectures: BuildingApplicationsandInfrastructureintheCloud: Transactional Systems for EC2 and Beyond (Theory in Practice)", O'Reilly, 2009.

OBJECTIVES:

- To develop web applications in cloud
- To learn the design and development process involved in creating a cloud based application
- To learn to implement and use parallel programming using Hadoop

LIST OF EXPERIMENTS

1. Install Virtualbox/VMware Workstation with different flavours of linux or windows OS on top of windows 7 or 8.
2. Install a C compiler in the virtual machine created using virtualbox and execute Simple Programs
3. Install Google App Engine. Create hello world app and others simple web applications using python/ java.
4. Use GAE launcher to launch the web applications.
5. Simulate a cloud scenario using CloudSim and run a scheduling algorithm that is not present in CloudSim.
6. Find a procedure to transfer the files from one virtual machine to another virtual machine.
7. Find a procedure to launch virtual machine using trystack (Online Openstack Demo Version)
8. Install Hadoop single node cluster and run simple applications like wordcount.

TOTAL: 60 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Configure various virtualization tools such as VirtualBox, VMware workstation.
- Design and deploy a web application in a PaaS environment.
- Learn how to simulate a cloud environment to implement news schedulers.
- Install and use a generic cloud environment that can be used as a private cloud.
- Manipulate large datasets in a parallel environment.

OBJECTIVES:

- To learn different cipher techniques
- To implement the algorithms DES, RSA, MD5, SHA-1
- To use network security tools and vulnerability assessment tools

LIST OF EXPERIMENTS

1. Perform encryption, decryption using the following substitution techniques
(i) Caesar cipher, (ii) playfair cipher, (iii) Hill Cipher, (iv) Vigenere cipher
2. Perform encryption and decryption using following transposition techniques
(i) Rail fence, (ii) row & Column Transformation
3. Apply DES algorithm for practical applications.
4. Apply AES algorithm for practical applications.
5. Implement RSA algorithm using HTML and JavaScript
6. Implement the Diffie-Hellman Key Exchange algorithm for a given problem.
7. Calculate the message digest of a text using the SHA-1 algorithm.
8. Implement the SIGNATURE SCHEME-Digital Signature Standard.
9. Demonstrate intrusion detection system (IDS) using any tool e.g. Snort or any others/w.
10. Automated Attack and Penetration Tools Exploring N-Stalker, a Vulnerability Assessment Tool
11. Defeating Malware
i) Building Trojan, ii) Rootkit Hunter

TOTAL: 60 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Develop code for classical Encryption Techniques to solve the problems.
- Build crypto systems by applying symmetric and public key encryption algorithms.
- Construct code for authentication algorithms.
- Develop a signature scheme using Digital signature standard.
- Demonstrate the network security system using open source tools

-LIST OF ELECTIVES-

20150E66A	DATA WAREHOUSING AND DATA MINING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand data warehouse concepts, architecture, business analysis and tools
- To understand data pre-processing and data visualization techniques
- To study algorithms for finding hidden and interesting patterns in data
- To understand and apply various classification and clustering techniques using tools.

UNIT I DATA WAREHOUSING, BUSINESS ANALYSIS AND ON-LINE ANALYTICAL PROCESSING (OLAP) **9**

Basic Concepts - Data Warehousing Components – Building a Data Warehouse – Database Architectures for Parallel Processing – Parallel DBMS Vendors - Multidimensional Data Model – Data Warehouse Schemas for Decision Support, Concept Hierarchies - Characteristics of OLAP Systems – Typical OLAP Operations, OLAP and OLTP.

UNIT II DATA MINING – INTRODUCTION **9**

Introduction to Data Mining Systems – Knowledge Discovery Process – Data Mining Techniques – Issues – applications - Data Objects and attribute types, Statistical description of data, Data Preprocessing – Cleaning, Integration, Reduction, Transformation and discretization, Data Visualization, Data similarity and dissimilarity measures.

UNIT III DATA MINING – FREQUENT PATTERN ANALYSIS **9**

Mining Frequent Patterns, Associations and Correlations – Mining Methods - Pattern Evaluation Method – Pattern Mining in Multilevel, Multi Dimensional Space – Constraint Based Frequent Pattern Mining, Classification using Frequent Patterns

UNIT IV CLASSIFICATION AND CLUSTERING **9**

Decision Tree Induction - Bayesian Classification – Rule Based Classification – Classification by Back Propagation – Support Vector Machines – Lazy Learners – Model Evaluation and Selection - Techniques to improve Classification Accuracy.

Clustering Techniques – Cluster analysis - Partitioning Methods - Hierarchical Methods – Density Based Methods - Grid Based Methods – Evaluation of clustering – Clustering high dimensional data - Clustering with constraints, Outlier analysis - outlier detection methods.

UNIT V WEKA TOOL **9**

Datasets – Introduction, Iris plants database, Breast cancer database, Auto imports database - Introduction to WEKA, The Explorer – Getting started, Exploring the explorer, Learning algorithms, Clustering algorithms, Association – rule learners.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Design a Data warehouse system and perform business analysis with OLAP tools.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

- Applies suitable pre-processing and visualization techniques for data analysis

- Apply frequent pattern and association rule mining techniques for data analysis
- Apply appropriate classification and clustering techniques for data analysis

TEXTBOOKS:

1. Jiawei Han and Micheline Kamber, — Data Mining Concepts and Techniques, Third Edition, Elsevier, 2012.

REFERENCES:

1. Alex Berson and Stephen J. Smith, — Data Warehousing, Data Mining & OLAP, Tata McGraw – Hill Edition, 35th Reprint 2016.
2. K.P. Soman, Shyam Diwakar and V. Ajay, — Insight into Data Mining Theory and Practice, Eastern Economy Edition, Prentice Hall of India, 2006.
3. Ian H. Witten and Eibe Frank, — Data Mining: Practical Machine Learning Tools and Techniques, Elsevier, Second Edition.

OBJECTIVES:

- To learn the criteria for test cases.
- To learn the design of test cases.
- To understand test management and test automation techniques.
- To apply test metrics and measurements.

UNIT I INTRODUCTION

9

Testing as an Engineering Activity – Testing as a Process – Testing Maturity Model- Testing axioms – Basic definitions – Software Testing Principles – The Tester's Role in a Software Development Organization – Origins of Defects – Cost of defects – Defect Classes – The Defect Repository and Test Design – Defect Examples- Developer/Tester Support of Developing a Defect Repository.

UNIT II TEST CASE DESIGN STRATEGIES

9

Test case Design Strategies – Using Black Box Approach to Test Case Design – Boundary Value Analysis – Equivalence Class Partitioning – State based testing – Cause-effect graphing – Compatibility testing – user documentation testing – domain testing – Random Testing – Requirements based testing – Using White Box Approach to Test design – Test Adequacy Criteria – static testing vs. structural testing – code functional testing – Coverage and Control Flow Graphs – Covering Code Logic – Paths – code complexity testing – Additional White box testing approaches – Evaluating Test Adequacy Criteria.

UNIT III LEVELS OF TESTING

9

The need for Levels of Testing – Unit Test – Unit Test Planning – Designing the Unit Tests – The Test Harness – Running the Unit tests and Recording results – Integration tests – Designing Integration Tests – Integration Test Planning – Scenario testing – Defect bash elimination System Testing – Acceptance testing – Performance testing – Regression Testing – Internationalization testing – Ad-hoc testing – Alpha, Beta Tests – Testing OO systems – Usability and Accessibility testing – Configuration testing – Compatibility testing – Testing the documentation – Website testing.

UNIT IV TEST MANAGEMENT

9

People and organizational issues in testing – Organization structures for testing teams – testing services – Test Planning – Test Plan Components – Test Plan Attachments – Locating Test Items – test management – test process – Reporting Test Results – Introducing the test specialist – Skills needed by a test specialist – Building a Testing Group- The Structure of Testing Group- .The Technical Training Program.

UNIT V TEST AUTOMATION

9

Software test automation – skills needed for automation – scope of automation – design and architecture for automation – requirements for a test tool – challenges in automation – Test metrics and measurements – project, progress and productivity metrics.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Design test cases suitable for software development for different domains.
- Identify suitable tests to be carried out.
- Prepare test planning based on the document.
- Document test plans and test cases designed.
- Use automatic testing tools.
- Develop and validate a test plan.

TEXTBOOKS:

1. Srinivasan Desikan and Gopalaswamy Ramesh, — Software Testing - Principles and Practices, Pearson Education, 2006.
2. Ron Patton, — Software Testing, Second Edition, Sams Publishing, Pearson Education, 2007. AU Library.com

REFERENCES:

4. Aditya P. Mathur, — Foundations of Software Testing - Fundamental Algorithms and Techniques, Dorling Kindersley (India) Pvt. Ltd., Pearson Education, 2008.

OBJECTIVES:

- To learn the architecture and programming of ARM processor.
- To become familiar with the embedded computing platform design and analysis.
- To get thorough knowledge in interfacing concepts
- To design an embedded system and to develop programs.

UNIT I INTRODUCTION TO EMBEDDED COMPUTING AND ARM**9****PROCESSORS**

Complex systems and micro processors – Embedded system design process – Design example: Model train controller- Instruction sets preliminaries - ARM Processor – CPU: programming input and output- supervisor mode, exceptions and traps – Co-processors- Memory system mechanisms – CPU performance- CPU power consumption..

UNIT II EMBEDDED COMPUTING PLATFORM DESIGN**9**

The CPU Bus- Memory devices and systems – Designing with computing platforms – consumer electronics architecture – platform-level performance analysis – Components for embedded programs – Model of programs – Assembly, linking and loading – compilation techniques – Program level performance analysis – Software performance optimization – Program level energy and power analysis and optimization – Analysis and optimization of program size – Program validation and testing.

UNIT III SENSOR INTERFACING WITH ARDUINO**9**

Basics of hardware design and functions of basic passive components – sensors and actuators – Arduino code – library file for sensor interfacing – construction of basic applications

UNIT IV EMBEDDED FIRMWARE**9**

Reset Circuit, Brown-out Protection Circuit – Oscillator Unit – Real Time Clock – Watchdog Timer – Embedded Firmware Design Approaches and Development Languages.

UNIT V EMBEDDED C PROGRAMMING**9**

Introduction – Creating ‘hardware delays’ using Timer0 and Timer1 – Reading switches – Adding structure to the code – Generating a minimum and maximum delay – Example: Creating a portable hardware delay – Timeout mechanisms – Creating loop timeouts – Testing loop timeouts – hardware timeouts – Testing a hardware timeout

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Describe the architecture and programming of ARM processor.
- Explain the concepts of embedded systems
- Understand the Concepts of peripherals and interfacing of sensors.
- Capable of using the system design techniques to develop firmware
- Illustrate the code for constructing a system

5. David E. Simon, —An Embedded Software Primer, Pearson Education, 2000.

OBJECTIVES:

- To understand fundamentals of graph theory.
- To study proof techniques related to various concepts in graphs.
- To explore modern applications of graph theory.

UNIT I **9**

Introduction-Graph Terminologies-Types of Graphs-Sub Graph-Multi Graph-Regular Graph-Isomorphism - Isomorphic Graphs -Sub-graph - Euler graph - Hamiltonian Graph - Related Theorems.

UNIT II **9**

Trees -Properties- Distance and Centres - Types - Rooted Tree-- Tree Enumeration- Labeled Tree - Unlabeled Tree -Spanning Tree -Fundamental Circuits-Cut Sets-Properties-Fundamental Circuit and Cut-set-Connectivity- Separability-Related Theorems.

UNIT III **9**

Network Flows - Planar Graph - Representation - Detection - Dual Graph- Geometric and Combinatorial Dual -Related Theorems - Digraph - Properties - Euler Digraph.

9

UNIT IV

Matrix Representation -Adjacency matrix- Incidence matrix- Circuit matrix - Cut-set matrix - Path Matrix- Properties - Related Theorems - Correlations. Graph Coloring - Chromatic Polynomial-Chromatic Partitioning -Matching- Covering - Related Theorems.

UNIT V **9**

Graph Algorithms-Connectedness and Components-Spanning Tree-Fundamental Circuits-Cut Vertices-Directed Circuits- Shortest Path - Applications overview.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Understand the basic concepts of graphs, and different types of graphs
- Understand the properties, theorems and be able to prove theorems.
- Apply suitable graph model and algorithm for solving applications.

TEXTBOOKS:

1. Narsingh Deo, "Graph Theory with Application to Engineering and Computer Science", Prentice-Hall of India Pvt.Ltd, 2003.
2. L.R.Foulds, "Graph Theory Applications", Springer, 2016.

REFERENCES:

1. Bondy, J.A. and Murty, U.S.R., "Graph Theory with Applications", North Holland Publication, 2008.
2. West, D.B.,—Introduction to Graph Theory, Pearson Education, 2011.
3. John Clark, Derek Allan Holton,—A First Look at Graph Theory, World Scientific Publishing Company, 1991.
4. Diestel, R, "Graph Theory", Springer, 3rd Edition, 2006.

5. Kenneth H. Rosen, "Discrete Mathematics and Its Applications", McGraw Hill, 2007.

OBJECTIVES:

- To understand the basics of discrete time signals, systems and their classifications.
- To analyze the discrete time signals in both time and frequency domain.
- To design low pass digital IIR filters according to predefined specifications based on analog filter theory and analog-to-digital filter transformation.
- To design Linear phase digital FIR filters using Fourier method, window technique
- To realize the concept and usage of DSP in various engineering fields.

UNIT I DISCRETE TIME SIGNALS AND SYSTEMS 9

Introduction to DSP – Basic elements of DSP– Sampling of Continuous time signals– Representation, Operation and Classification of Discrete Time Signal– Classification of Discrete Time Systems– Discrete Convolution: Linear and Circular– Correlation

UNIT II ANALYSIS OF LTIDISCRETE TIME SIGNALS AND SYSTEMS 9

Analysis of LTIDiscrete Time Systems using DFT– Properties of DFT– Inverse DFT– Analysis of LTIDiscrete Time Systems using FFT Algorithms– Inverse DFT using FFT Algorithm.

UNIT III INFINITE IMPULSE RESPONSE FILTERS 9

Frequency response of Analog and Digital IIR filters– Realization of IIR filter– Design of analog low pass filter– Analog to Digital filter Transformation using Bilinear Transformation and Impulse Invariant method– Design of digital IIR filters (LPF, HPF, BPF, and BRF) using various transformation techniques.

UNIT IV FINITE IMPULSE RESPONSE FILTERS 9

Linear Phase FIR filter– Phase delay– Group delay– Realization of FIR filter– Design of Causal and Non-causal FIR filters (LPF, HPF, BPF and BRF) using Window method (Rectangular, Hamming window, Hanning window)– Frequency Sampling Technique.

UNIT V APPLICATIONS OF DSP 9

Multirate Signal Processing: Decimation, Interpolation, Spectrum of the sampled signal– Processing of Audio and Radar signal.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Perform mathematical operations on signals.
- Understand the sampling theorem and perform sampling on continuous-time signals to get discrete time signal by applying advanced knowledge of the sampling theory.
- Transform the time domain signal into frequency domain signal and vice-versa.
- Apply the relevant theoretical knowledge to design the digital IIR/FIR filters for the given analog specifications.

TEXTBOOKS:

1. John G. Proakis & Dimitris G. Manolakis, — Digital Signal Processing— Principles, Algorithms & Applications, Fourth Edition, Pearson Education / Prentice Hall, 2007.

REFERENCES:

1. Richard G. Lyons, — Understanding Digital Signal Processing, Second Edition, Pearson Education.

2. A.V.Oppenheim,R.W.SchaferandJ.R.Buck,—Discrete-TimeSignalProcessingI,8thIndianReprint, Pearson, 2004.
3. EmmanuelC.Ifeakor,&Barrie.W.Jervis,—DigitalSignalProcessingI,SecondEdition,PearsonEducation / Prentice Hall, 2002.
4. WilliamD.Stanley,—DigitalSignalProcessingI,SecondEdition,RestonPublications.

OBJECTIVES:

- To know the fundamental concepts of big data and analytics.
- To explore tools and practices for working with big data
- To learn about stream computing.
- To know about the research that requires the integration of large amounts of data

UNIT I INTRODUCTION TO BIG DATA

9

Evolution of Big data - Best Practices for Big data Analytics - Big data characteristics – Validating - The Promotion of the Value of Big Data - Big Data Use Cases- Characteristics of Big Data Applications - Perception and Quantification of Value - Understanding Big Data Storage - A General Overview of High-Performance Architecture - HDFS - MapReduce and YARN - Map Reduce Programming Model

9

UNIT II CLUSTERING AND CLASSIFICATION

Advanced Analytical Theory and Methods: Overview of Clustering - K-means - Use Cases - Overview of the Method - Determining the Number of Clusters - Diagnostics - Reasons to Choose and Cautions - Classification: Decision Trees - Overview of a Decision Tree - The General Algorithm - Decision Tree Algorithms - Evaluating a Decision Tree - Decision Trees in R - Naïve Bayes - Bayes' Theorem - Naïve Bayes Classifier.

UNIT III ASSOCIATION AND RECOMMENDATION SYSTEM

9

Advanced Analytical Theory and Methods: Association Rules - Overview - Apriori Algorithm - Evaluation of Candidate Rules - Applications of Association Rules - Finding Association & finding similarity - Recommendation System: Collaborative Recommendation - Content Based Recommendation - Knowledge Based Recommendation - Hybrid Recommendation Approaches.

UNIT IV STREAM MEMORY

9

Introduction to Streams Concepts - Stream Data Model and Architecture - Stream Computing, Sampling Data in a Stream - Filtering Streams - Counting Distinct Elements in a Stream - Estimating moments - Counting oneness in a Window - Decaying Window - Realtime Analytics Platform (RTAP) applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions. Using Graph Analytics for Big Data: Graph Analytics

UNIT V NOSQL DATA MANAGEMENT FOR BIG DATA AND VISUALIZATION

9

NoSQL Databases : Schema-less Models: Increasing Flexibility for Data Manipulation - Key Value Stores - Document Stores - Tabular Stores - Object Data Stores - Graph Databases - Hive - Sharding - Hbase - Analyzing big data with twitter - Big data for E-Commerce - Big data for blogs - Review of Basic Data Analytic Methods using R.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Work with big data tools and its analysis techniques
- Analyze data by utilizing clustering and classification algorithms
- Learn and apply different mining algorithms and recommendation systems for large data
- Perform analytics on data streams
- Learn NoSQL databases and management.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

TEXTBOOKS:

Anand Rajaraman and Jeffrey David Ullman, "Mining of Massive Datasets", Cambridge University Press, 2012.

2. David Loshin, "Big Data Analytics: From Strategic Planning to Enterprise Integration with Tools, Techniques, NoSQL, and Graph", Morgan Kaufmann/Elsevier Publishers, 2013.

REFERENCES:

EMCEducation Services, "Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data", Wiley publishers, 2015.

3. Dietmar Jannach and Markus Zanker, "Recommender Systems: An Introduction", Cambridge University Press, 2010.

4. Kim H. Pries and Robert Dunnigan, "Big Data Analytics: A Practical Guide for Managers" CRC Press, 2015.

5. Jimmy Lin and Chris Dyer, "Data-Intensive Text Processing with MapReduce", Synthesis Lectures on Human Language Technologies, Vol. 3, No. 1, Pages 1-177, Morgan Claypool publishers, 2010.

OBJECTIVES:

- To understand the need for machine learning for various problems solving
- To study the various supervised, semi-supervised and unsupervised learning algorithms in machine learning
- To understand the latest trends in machine learning
- To design appropriate machine learning algorithms for problems solving

UNIT I INTRODUCTION 9

Introduction-Graph Terminologies-Types of Graphs-Sub Graph-Multi Graph-Regular Graph-Isomorphism - Isomorphic Graphs -Sub-graph - Euler graph - Hamiltonian Graph - Related Theorems.

UNIT II NEURAL NETWORKS AND GENETICAL ALGORITHMS 9

Trees -Properties- Distance and Centres - Types - Rooted Tree-- Tree Enumeration - Labelled Tree - Unlabelled Tree -Spanning Tree -Fundamental Circuits-Cut Sets-Properties-Fundamental Circuit and Cut-set-Connectivity -Separability - Related Theorems.

UNIT III BAYESIAN AND COMPUTATIONAL LEARNING 9

Network Flows - Planar Graph - Representation - Detection - Dual Graph - Geometric and Combinatorial Dual -Related Theorems - Digraph - Properties - Euler Digraph.

UNIT IV INSTANT BASED LEARNING 9

Matrix Representation -Adjacency matrix- Incidence matrix- Circuit matrix - Cut-set matrix - Path Matrix- Properties - Related Theorems - Correlations. Graph Coloring - Chromatic Polynomial - Chromatic Partitioning -Matching- Covering - Related Theorems.

UNIT V ADVANCED LEARNING 9

Graph Algorithms-Connectedness and Components-Spanning Tree-Fundamental Circuits-Cut Vertices- Directed Circuits- Shortest Path - Applications overview.

TOTAL:45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Differentiate between supervised, unsupervised, semi-supervised machine learning approaches
- Discuss the decision tree algorithm and identify and overcome the problem of overfitting
- Discuss and apply the backpropagation algorithm and genetic algorithm to various problems
- Apply the Bayesian concept to machine learning
- Analyse and suggest appropriate machine learning approaches for various types of problems

TEXTBOOKS:

1. Tom M. Mitchell, —Machine Learning, McGraw-Hill Education (India) Private Limited, 2013.

REFERENCES:

1. Ethem Alpaydin, —Introduction to Machine Learning (Adaptive Computation and Machine Learning), The MIT Press 2004.
2. Stephen Marsland, —Machine Learning: An Algorithmic Perspective, CRC Press, 2009.

OBJECTIVES:

- TounderstandtheSoftwareProjectPlanningandEvaluationtechniques.
- Toplanandmanageprojectsateachstageofthesoftwaredevelopment lifecycle(SDLC).
- Tolearnabouttheactivityplanningandriskmanagementprinciples.
- Tomanagesoftwareprojectsandcontrolsoftwaredeliverables.
- Todevelopskillstomanagethevariousphasesinvolvedinproject managementandpeoplemanagement.
- Todeliversuccessfulsoftwareprojectsthat supportorganization'sstrategicgoals.

UNIT I PROJECT EVALUATION AND PROJECT PLANNING 9

Importance of Software Project Management – Activities – Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning.

UNIT II PROJECT LIFECYCLE AND EFFORT ESTIMATION 9

Software process and Process Models – Choice of Process models - Rapid Application development – Agile methods – Dynamic System Development Method – Extreme Programming – Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points - COCOMO II - a Parametric Productivity Model.

UNIT III ACTIVITY PLANNING AND RISK MANAGEMENT 9

Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Formulating Network Model – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Risk Planning – Risk Management – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical paths – Cost schedules.

UNIT IV PROJECT MANAGEMENT AND CONTROL 9

Framework for Management and control – Collection of data – Visualizing progress – Cost monitoring – Earned Value Analysis – Prioritizing Monitoring – Project tracking – Change control – Software Configuration Management – Managing contracts – Contract Management.

UNIT V STAFFING IN SOFTWARE PROJECTS 9

Managing people – Organizational behavior – Best methods of staff selection – Motivation – The Oldham – Hackman job characteristic model – Stress – Health and Safety – Ethical and Professional concerns – Working in teams – Decision making – Organizational structures – Dispersed and Virtual teams – Communications genres – Communication plans – Leadership.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Understand Project Management principles while developing software.
- Gain extensive knowledge about the basic project management concepts, framework and the process models.
- Obtain adequate knowledge about software process models and software effort estimation techniques.

- Estimate the risks involved in various project activities.

- Define the checkpoints, project reporting structure, project progress and tracking mechanisms using project management principles.
- Learn staff selection process and the issues related to people management

TEXTBOOKS:

1. Bob Hughes, Mike Cotterell and Rajib Mall: Software Project Management – Fifth Edition, Tata McGraw Hill, New Delhi, 2012.

REFERENCES:

1. Robert K. Wysocki—Effective Software Project Management—Wiley Publication, 2011.
2. Walker Royce:—Software Project Management—Addison-Wesley, 1998.
3. Gopalaswamy Ramesh,—Managing Global Software Projects—McGraw Hill Education
(India), Fourteenth Reprint 2013.

OBJECTIVES:

- To understand Smart Objects and IoT Architectures
- To learn about various IOT-related protocols
- To build simple IoT Systems using Arduino and Raspberry Pi
- To understand data analytics and cloud in the context of IoT
- To develop IoT infrastructure for popular applications

UNIT I FUNDAMENTALS OF IoT 9

Evolution of Internet of Things - Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) and Alternative IoT models – Simplified IoT Architecture and Core IoT Functional Stack – Fog, Edge and Cloud in IoT – Functional blocks of an IoT ecosystem – Sensors, Actuators, Smart Objects and Connecting Smart Objects

UNIT II IOT PROTOCOLS 9

IoT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and LoRaWAN – Network Layer: IP versions, Constrained Nodes and Constrained Networks – Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks – Application Transport Methods: Supervisory Control and Data Acquisition – Application Layer Protocols: CoAP and MQTT

UNIT III DESIGN AND DEVELOPMENT 9

Design Methodology - Embedded computing logic - Microcontroller, System on Chips - IoT system building blocks - Arduino - Board details, IDE programming - Raspberry Pi - Interfaces and Raspberry Pi with Python Programming.

UNIT IV DATA ANALYTICS AND SUPPORTING SERVICES 9

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest – Role of Machine Learning – NoSQL Databases – Hadoop Ecosystem – Apache Kafka, Apache Spark – Edge Streaming Analytics and Network Analytics – Xively Cloud for IoT, Python Web Application Framework – Django – AWS for IoT – System Management with NETCONF-YANG

UNIT V CASE STUDIES/INDUSTRIAL APPLICATIONS 9

Cisco IoT system - IBM Watson IoT platform – Manufacturing - Converged Plant wide Ethernet Model (CPwE) – Power Utility Industry – Grid Blocks Reference Model - Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Explain the concept of IoT
- Analyze various protocols for IoT
- Design a PoC of an IoT system using Raspberry Pi/Arduino
- Apply data analytics and use cloud offerings related to IoT
- Analyze applications of IoT in real-time scenarios

OBJECTIVES:

- TolearnfundamentalsofXML
- ToprovideanoverviewofServiceOrientedArchitectureandWebservicesandtheir importance
- Tolearnwebservicesstandardsandtechnologies
- Tolearnserviceorientedanalysisanddesignfor developingSOAbasedapplications

UNIT I XML 9

XML document structure – Well-formed and valid documents – DTD–XMLSchema – ParsingXMLusing DOM, SAX – XPath - XML Transformation and XSL – Xquery

UNIT II SERVICEORIENTEDARCHITECTURE(SOA)BASICS 9

Characteristics ofSOA, BenefitsofSOA, ComparingSOAwithClient-Server andDistributedarchitectures --- Principles of Service Orientation – Service layers

UNIT III WEBSERVICES(W S)ANDSTANDARDS 8

WebServices Platform–Servicedescriptions –WSDL–MessagingwithSOAP –Servicediscovery–UDDI – Service-Level Interaction Patterns – Orchestration and Choreography

UNIT IV WEBSERVICESEXTENSIONS 8

WS-Addressing - WS-ReliableMessaging - WS-Policy – WS-Coordination – WS-Transactions-WS-Security - Examples

UNIT V SERVICEORIENTEDANALYSISANDDESIGN 11

SOAdeliverystrategies–Serviceorientedanalysis–ServiceModelling–Serviceorienteddesign–Standards and composition guidelines -- Service design – Business process design – CaseStudy

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse,thestudentsshouldbeableto:

- UnderstandXMLtechnologies
- Understandserviceorientation,benefitsofSOA
- UnderstandwebservicesandWSstandards
- Usewebservicesextensionstodevelopsolutions
- Understandandapplyservicemodelling,serviceorientedanalysisanddesignforapplicationdevelopment

20150E76A MULTI-CORE ARCHITECTURES AND PROGRAMMING

L T P C

3 0 0 3

OBJECTIVES:

- To understand the need for multi-core processors, and their architecture.
- To understand the challenges in parallel and multi-threaded programming.
- To learn about the various parallel programming paradigms,
- To develop multi-core programs and design parallel solutions

UNIT I MULTI-CORE PROCESSORS 9

Single core to Multi-core architectures – SIMD and MIMD systems – Interconnection networks - Symmetric and Distributed Shared Memory Architectures – Cache coherence - Performance Issues – Parallel program design.

UNIT II PARALLEL PROGRAM CHALLENGES 9

Performance – Scalability – Synchronization and data sharing – Data races – Synchronization primitives (mutexes, locks, semaphores, barriers) – deadlocks and livelocks – communication between threads (condition variables, signals, message queues and pipes).

UNIT III SHARED MEMORY PROGRAMMING WITH OpenMP 9

OpenMP Execution Model – Memory Model – OpenMP Directives – Work-sharing Constructs - Library functions – Handling Data and Functional Parallelism – Handling Loops - Performance Considerations.

UNIT IV DISTRIBUTED MEMORY PROGRAMMING WITH MPI 9

MPI program execution – MPI constructs – libraries – MPI send and receive – Point-to-point and Collective communication – MPI derived data types – Performance evaluation

UNIT V PARALLEL PROGRAM DEVELOPMENT 9

Case studies - n-Body solvers – Tree Search – OpenMP and MPI implementations and Comparison.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Describe multi-core architectures and identify their characteristics and challenges.
- Identify the issues in programming Parallel Processors.
- Write programs using OpenMP and MPI.
- Design parallel programming solutions to common problems.
- Compare and contrast programming for serial processors and parallel processors.

TEXTBOOKS:

1. Peter S. Pacheco, — An Introduction to Parallel Programming, Morgan-Kaufman/Elsevier, 2011.
2. Darryl Gove, — Multicore Application Programming for Windows, Linux, and Oracle Solaris, Pearson, 2011 (unit 2)

REFERENCES:

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

20150E76B	HUMANCOMPUTERINTERACTION	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn the foundations of Human Computer Interaction.
- To become familiar with the design technologies for individuals and persons with disabilities.
- To be aware of mobile HCI.
- To learn the guidelines for user interface.

UNIT I FOUNDATIONSOFHCI 9

The Human: I/O channels– Memory – Reasoning and problem solving; The Computer: Devices–Memory – processing and networks; Interaction: Models – frameworks – Ergonomics – styles – elements – interactivity- Paradigms. - Case Studies

UNIT II DESIGN&SOFTWAREPROCESS 9

IoT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and LoRaWAN – Network Layer: IP versions, Constrained Nodes and Constrained Networks–Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks–Application Transport Methods: Supervisory Control and Data Acquisition –Application Layer Protocols: CoAP and MQTT

UNIT III MODELSANDTHEORIES 9

Design Methodology - Embedded computing logic - Microcontroller, System on Chips - IoT system building blocks - Arduino - Board details, IDE programming - Raspberry Pi - Interfaces and Raspberry Pi with Python Programming.

UNIT IV MOBILE HCI 9

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest– Role of Machine Learning– NoSQL Databases – Hadoop Ecosystem – Apache Kafka, Apache Spark – Edge Streaming Analytics and Network Analytics– Xively Cloud for IoT, Python Web Application Framework – Django –AWS for IoT – System Management with NETCONF-YANG

UNIT V WEBINTERFACEDESIGN 9

Cisco IoT system - IBM Watson IoT platform – Manufacturing - Converged Plantwide Ethernet Model (CPwE) – Power Utility Industry – GridBlocks Reference Model - Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control

TOTAL:45PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Design effective dialog for HCI
- Design effective HCI for individuals and persons with disabilities.
- Explain the HCI implications for designing multimedia/e-commerce/e-learning Websites.
- Develop meaningful user interface.

TEXTBOOKS:

1. Alan Dix, Janet Finlay, Gregory A. Bowerd, Russell Beale, —Human Computer Interaction I, 3rd Edition, Pearson Education, 2004 (UNIT I, II & III)
2. Brian Fling, —Mobile Design and Development I, First Edition, O’Reilly Media Inc., 2009 (UNIT –IV)
3. Bill Scott and Theresa Neil, —Designing Web Interfaces I, First Edition, O’Reilly, 2009. (UNIT -V)

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

20150E76C	C#AND.NETPROGRAMMING	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To learn basic programming in C# and the object-oriented programming concepts.
- To update and enhance skills in writing Windows applications, ADO.NET and ASP.NET.
- To study the advanced concepts in data connectivity, WPF, WCF and WWF with C# and .NET 4.5
- To implement mobile applications using .Net compact framework
- To understand the working of base class libraries, their operations and manipulation of data using XML.

UNIT I C# LANGUAGE BASICS 9

.Net Architecture - Core C# - Variables - Data Types - Flow control - Objects and Types - Classes and Structs - Inheritance - Generics - Arrays and Tuples - Operators and Casts - Indexers

UNIT II IOT PROTOCOLS 9

Delegates - Lambdas - Lambda Expressions - Events - Event Publisher - Event Listener - Strings and Regular Expressions - Generics - Collections - Memory Management and Pointers - Errors and Exceptions - Reflection

UNIT III DESIGN AND DEVELOPMENT 9

Diagnostics - Tasks, Threads and Synchronization - .Net Security - Localization - Manipulating XML - SAX and DOM - Manipulating files and the Registry - Transactions - ADO.NET - Peer-to-Peer Networking - P2P - Building P2P Applications - Windows Presentation Foundation (WPF).

UNIT IV DATA ANALYTICS AND SUPPORTING SERVICES 9

Window based applications - Core ASP.NET - ASP.NET Web forms - Windows Communication Foundation (WCF) - Introduction to Web Services - .Net Remoting - Windows Service - Windows Workflow Foundation (WWF) - Activities - Workflows

UNIT V CASE STUDIES/INDUSTRIAL APPLICATIONS 9

Assemblies - Shared assemblies - Custom Hosting with CLR Objects - App domains - Core XAML - Bubbling and Tunneling Events - Reading and Writing XAML - .Net Compact Framework - Compact Edition Data Stores - Errors, Testing and Debugging - Optimizing performance - Packaging and Deployment - Networking and Mobile Devices

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Write various applications using C# Language in the .NET Framework.
- Develop distributed applications using .NET Framework.
- Create mobile applications using .NET compact Framework.

TEXTBOOKS:

1. Christian Nagel, Bille Vjen, Jay Glynn, Karli Watson, Morgan Skinner. — Professional C# 2012 and .NET 4.5!, Wiley, 2012
2. Harsh Bhasin. — Programming in C#, Oxford University Press, 2014.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

3. AndyWigley,DanielMoth,PeterFoot,—MobileDevelopmentHandbook!,MicrosoftPress,2011.

OBJECTIVES:

- To learn about the issues and challenges in the design of wireless adhoc networks.
- To understand the working of MAC and Routing Protocols for adhoc and sensor networks
- To learn about the Transport Layer protocols and their QoS for adhoc and sensor networks.
- To understand various security issues in adhoc and sensor networks and the corresponding solution

UNIT I MAC & ROUTING IN ADHOC NETWORKS 9

Introduction – Issues and challenges in adhoc networks – MAC Layer Protocols for wireless adhoc networks – Contention-Based MAC protocols – MAC Protocols Using Directional Antennas – Multiple-Channel MAC Protocols – Power-Aware MAC Protocols – Routing in Adhoc Networks – Design Issues – Proactive, Reactive and Hybrid Routing Protocols

UNIT II TRANSPORT & QOS IN ADHOC NETWORKS 9

TCP’s challenges and Design Issues in Ad Hoc Networks – Transport protocols for ad hoc networks – Issues and Challenges in providing QoS – MAC Layer QoS solutions – Network Layer QoS solutions – QoS Model

UNIT III MAC & ROUTING IN WIRELESS SENSOR NETWORKS 9

Introduction – Applications – Challenges – Sensor network architecture – MAC Protocols for wireless sensor networks – Low duty cycle protocols and wakeup concepts – Contention- Based protocols – Schedule-Based protocols – IEEE 802.15.4 Zigbee – Topology Control – Routing Protocols

UNIT IV TRANSPORT & QOS IN WIRELESS SENSOR NETWORKS 9

Data-Centric and Contention-Based Networking – Transport Layer and QoS in Wireless Sensor Networks – Congestion Control in network processing – Operating systems for wireless sensor networks – Examples

UNIT V SECURITY IN ADHOC AND SENSOR NETWORKS 9

Security Attacks – Key Distribution and Management – Intrusion Detection – Software based Anti-tamper techniques – Water marking techniques – Defense against routing attacks - Secure Ad hoc routing protocols – Broadcast authentication WSN protocols – TESLA – Biba – Sensor Network Security Protocols – SPINS

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Identify different issues in wireless adhoc and sensor networks
- To analyze protocols developed for adhoc and sensor networks
- To identify and understand security issues in adhoc and sensor networks.

TEXTBOOKS:

1. C.SivaRamMurthyandB.S.Manoj,—AdHocWirelessNetworks—Architecturesand2Protocolsl, Pearson Education, 2006.

3. Waltenegus Dargie, Christian Poellabauer, —Fundamentals of Wireless SensorNetworks Theory and Practicel, John Wiley and Sons, 2010.
4. Xiang-YangLi,“Wireless AdHocandSensor Networks:Theory andApplicationsl, 1227thedition, Cambridge university Press,2008.

OBJECTIVES:

- To learn the modeling and design of databases.
- To acquire knowledge on parallel and distributed databases and their applications.
- To study the usage and applications of Object Oriented and Intelligent databases.
- To understand the usage of advanced data models.
- To learn emerging databases such as XML, Cloud and Big Data.
- To acquire inquisitive attitude towards research topics in databases.

UNIT I PARALLEL AND DISTRIBUTED DATABASES 9

Database System Architectures: Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Design of Parallel Systems- Distributed Database Concepts - Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Case Studies

UNIT II OBJECT AND OBJECT RELATIONAL DATABASES 9

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL – Object Relational and Extended – Relational Systems: Object Relational features in SQL/Oracle – Case Studies.

UNIT III INTELLIGENT DATABASES 9

Active Databases: Syntax and Semantics (Starburst, Oracle, DB2) – Taxonomy – Applications – Design Principles for Active Rules – Temporal Databases: Overview of Temporal Databases – TSQ2 – Deductive Databases: Logic of Query Languages – Datalog – Recursive Rules – Syntax and Semantics of Datalog Languages – Implementation of Rules and Recursion – Recursive Queries in SQL – Spatial Databases – Spatial Data Types – Spatial Relationships – Spatial Data Structures – Spatial Access Methods – Spatial DB Implementation.

UNIT IV ADVANCED DATA MODELS 9

Mobile Databases: Location and Handoff Management – Effect of Mobility on Data Management – Location Dependent Data Distribution – Mobile Transaction Models – Concurrency Control – Transaction Commit Protocols – Multimedia Databases – Information Retrieval – Data Warehousing – Data Mining – Text Mining

UNIT V EMERGING TECHNOLOGIES 9

XML Databases: XML-Related Technologies – XML Schema – XML Query Languages – Storing XML in Databases – XML and SQL – Native XML Databases – Web Databases – Geographic Information Systems – Biological Data Management – Cloud Based Databases: Data Storage Systems on the Cloud – Cloud Storage Architectures – Cloud Data Models – Query Languages – Introduction to Big Data – Storage – Analysis

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- To develop in depth understanding of relational databases and skills to optimize database performance in practice.
- To understand and critique one each type of databases.
- To design faster algorithms in solving practical database problems.
- To implement intelligent databases and various data models.

TEXTBOOKS:

1. Ramez Elmasri, Shamkant B. Navathe, — Fundamentals of Database Systems, Sixth Edition Pearson, 2011.
2. Thomas Cannolly and Carolyn Begg, — Database Systems, A Practical Approach to Design, Implementation and Management, Fourth Edition, Pearson Education, 2008.

REFERENCES:

1. Henry F. Korth, Abraham Silberschatz, S. Sudharshan, — Database System Concepts, Sixth Edition, McGraw Hill, 2011.
2. C. J. Date, A. Kannan, S. Swamynathan, — An Introduction to Database Systems, Eighth Edition, Pearson Education, 2006.
3. Carlo Zaniolo, Stefano Ceri, Christos Faloutsos, Richard T. Snodgrass, V. S. Subrahmanian, Roberto Zicari, — Advanced Database Systems, Morgan Kaufmann publishers, 2006.

OBJECTIVES:

- To become familiar with digital image fundamentals
- To get exposed to simple image enhancement techniques in Spatial and Frequency domain.
- To learn concepts of degradation function and restoration techniques.
- To study the image segmentation and representation techniques.
- To become familiar with image compression and recognition methods.

UNIT I DIGITAL IMAGE FUNDAMENTALS 9

Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels - Color image fundamentals - RGB, HSI models, Two-dimensional mathematical preliminaries, 2D transforms - DFT, DCT

UNIT II IMAGE ENHANCEMENT 9

Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering– Smoothing and Sharpening Spatial Filtering, Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain filters– Ideal, Butterworth and Gaussian filters, Homomorphic filtering, Color image enhancement.

UNIT III IMAGE RESTORATION 9

Image Restoration -degradation model, Properties, Noise models– Mean Filters– Order Statistics– Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering

UNIT IV IMAGE SEGMENTATION 9

Edge detection, Edge linking via Hough transform – Thresholding - Region based segmentation – Region growing – Region splitting and merging – Morphological processing- erosion and dilation, Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed segmentation algorithm.

UNIT V IMAGE COMPRESSION AND RECOGNITION 9

Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEG standard, MPEG. Boundary representation, Boundary description, Fourier Descriptor, Regional Descriptors – Topological feature, Texture-Patterns and Pattern classes - Recognition based on matching.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Know and understand the basics and fundamentals of digital image processing, such as digitization, sampling, quantization, and 2D-transforms.
- Operate images using the techniques of smoothing, sharpening and enhancement.
- Understand the restoration concepts and filtering techniques.
- Learn the basics of segmentation, feature extraction, compression and recognition methods for color models.

SOCIAL NETWORK ANALYSIS

20150E81B

L T P C
3 0 0 3

- To understand the concept of semantic web and related applications.
- To learn knowledge representation using ontology.
- To understand human behaviour in social web and related communities.
- To learn visualization of social networks.

UNIT I INTRODUCTION 9

Introduction to Semantic Web: Limitations of current Web - Development of Semantic Web - Emergence of the Social Web - Social Network analysis: Development of Social Network Analysis - Key concepts and measures in network analysis - Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities - Web-based networks - Applications of Social Network Analysis.

UNIT II MODELLING, AGGREGATING AND KNOWLEDGE REPRESENTATION 9

Ontology and their role in the Semantic Web: Ontology-based knowledge Representation - Ontology languages for the Semantic Web: Resource Description Framework - Web Ontology Language - Modelling and aggregating social network data: State-of-the-art in network data representation - Ontological representation of social individuals - Ontological representation of social relationships - Aggregating and reasoning with social network data - Advanced representations.

UNIT III EXTRACTION AND MINING COMMUNITIES IN WEB SOCIAL NETWORKS 9

Extracting evolution of Web Community from a Series of Web Archive - Detecting communities in social networks - Definition of community - Evaluating communities - Methods for community detection and mining - Applications of community mining algorithms - Tools for detecting communities social network infrastructures and communities - Decentralized online social networks - Multi-Relational characterization of dynamic social network communities.

UNIT IV PREDICTING HUMAN BEHAVIOUR AND PRIVACY ISSUES 9

Understanding and predicting human behaviour for social communities - User data management - Inference and Distribution - Enabling new human experiences - Reality mining - Context Awareness - Privacy in online social networks - Trust in online environment - Trust models based on subjective logic - Trust network analysis - Trust transitivity analysis - Combining trust and reputation - Trust derivation based on trust comparisons - Attack spectrum and countermeasures.

UNIT V VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS 9

Graph theory - Centrality - Clustering - Node-Edge Diagrams - Matrix representation - Visualizing online social networks, Visualizing social networks with matrix-based representations - Matrix and Node-Link Diagrams - Hybrid representations - Applications - Cover networks - Community welfare - Collaboration networks - Co-Citation networks.

TOTAL: 45 PERIODS

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OUTCOMES:

At the end of the course, the students should be able to:

- Develop semantic web related applications.
- Represent knowledge using ontology
- Predict human behaviour in social web and related communities.
- Visualize social networks

TEXTBOOKS:

1. Peter Mika, — Social Networks and the Semantic Web, First Edition, Springer 2007.
2. Borko Furht, — Handbook of Social Network Technologies and Applications, 1st Edition, Springer, 2010.

REFERENCES:

3. Max Chevalier, Christine Julien and Chantal Soulé-Dupuy, — Collaborative and Social Information Retrieval and Access: Techniques for Improved User Modelling, IGI Global Snippet, 2009.
4. John G. Breslin, Alexander Passant and Stefan Decker, — The Social Semantic Web, Springer, 2009.

OBJECTIVES:

- To understand the basics of Information Security
- To know the legal, ethical and professional issues in Information Security
- To know the aspects of risk management
- To become aware of various standards in this area
- To know the technological aspects of Information Security

UNIT I INTRODUCTION

9

History, What is Information Security?, Critical Characteristics of Information, NIST ISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II SECURITY INVESTIGATION

9

Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues - An Overview of Computer Security - Access Control Matrix, Policy - Security policies, Confidentiality policies, Integrity policies and Hybrid policies

UNIT III SECURITY ANALYSIS

9

Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk - Systems: Access Control Mechanisms, Information Flow and Confinement Problem

UNIT IV LOGICAL DESIGN

9

Blueprint for Security, Information Security Policy, Standards and Practices, ISO 17799/BS7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V PHYSICAL DESIGN

9

Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Discuss the basics of information security
- Illustrate the legal, ethical and professional issues in information security
- Demonstrate the aspects of risk management
- Become aware of various standards in the Information Security System
- Design and implementation of Security Techniques

TEXTBOOKS:

1. Michael E Whitman and Herbert J Mattord, — Principles of Information Security, Vikas Publishing House, New Delhi, 2003

REFERENCES:

1. Micki Krause, Harold F. Tipton, — Handbook of Information Security Management, Vol 1-3 CRC Press LLC, 2004.
2. Stuart McClure, Joel Scrambray, George Kurtz, — Hacking Exposed, Tata McGraw-Hill, 2003
3. Matt Bishop, — Computer Security Art and Science, Pearson/PHI, 2002.

OBJECTIVES:

- To learn computer forensics
- To become familiar with forensic tools
- To learn to analyze and validate forensic data.

UNIT I INTRODUCTION TO COMPUTER FORENSICS 9

Introduction to Traditional Computer Crime. Traditional problems associated with Computer Crime. Introduction to Identity Theft & Identity Fraud. Types of CF techniques - Incident and incident response methodology - Forensic duplication and investigation. Preparation for IR: Creating response toolkit and IR team. - Forensics Technology and Systems - Understanding Computer Investigation – Data Acquisition.

UNIT II EVIDENCE COLLECTION AND FORENSIC TOOLS 9

Processing Crime and Incident Scenes – Working with Windows and DOS Systems. Current Computer Forensics Tools: Software/ Hardware Tools

UNIT III ANALYSIS AND VALIDATION 9

Validating Forensics Data – Data Hiding Techniques – Performing Remote Acquisition – Network Forensics – Email Investigations – Cell Phone and Mobile Devices Forensics

UNIT IV ETHICAL HACKING 9

Introduction to Ethical Hacking - Footprinting and Reconnaissance - Scanning Networks - Enumeration - System Hacking - Malware Threats - Sniffing.

UNIT V ETHICAL HACKING IN WEB 9

Social Engineering - Denial of Service - Session Hijacking - Hacking Web servers – Hacking Web Applications – SQL Injection - Hacking Wireless Networks - Hacking Mobile Platforms.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Understand the basics of computer forensics
- Apply a number of different computer forensic tools to a given scenario
- Analyze and validate forensic data
- Identify the vulnerabilities in a given network infrastructure
- Implement real-world hacking techniques to test system security.

TEXTBOOKS:

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

OBJECTIVES:

- To learn the basic concepts of Soft Computing
- To become familiar with various techniques like neural networks, genetic algorithms and fuzzy systems.
- To apply soft computing techniques to solve problems.

UNIT I INTRODUCTION TO SOFT COMPUTING 9

Introduction-Artificial Intelligence-Artificial Neural Networks-Fuzzy Systems-Genetic Algorithm and Evolutionary Programming-Swarm Intelligent Systems-Classification of ANNs-McCulloch and Pitts Neuron Model-Learning Rules: Hebbian and Delta- Perceptron Network-Adaline Network-Madaline Network.

UNIT II ARTIFICIAL NEURAL NETWORKS 9

Backpropagation Neural Networks-Kohonen Neural Network-Learning Vector Quantization-Hamming Neural Network-Hopfield Neural Network-Bi-directional Associative Memory-Adaptive Resonance Theory Neural Networks-Support Vector Machines - Spike Neuron Models.

UNIT III FUZZY SYSTEMS 9

Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets - Classical Relations and Fuzzy Relations - Membership Functions -Defuzzification - Fuzzy Arithmetic and Fuzzy Measures - Fuzzy Rule Base and Approximate Reasoning - Introduction to Fuzzy Decision Making.

UNIT IV GENETICALGORITHMS 9

Basic Concepts-Working Principles-Encoding-Fitness Function-Reproduction-Inheritance Operators-Cross Over-Inversion and Deletion-Mutation Operator- Bit-wise Operators-Convergence of Genetic Algorithm.

UNIT V HYBRID SYSTEMS 9

Hybrid Systems -Neural Networks, Fuzzy Logic and Genetic -GA Based Weight Determination- LR-Type Fuzzy Numbers-Fuzzy Neuron-Fuzzy BP Architecture-Learning in Fuzzy BP- Inference by Fuzzy BP - Fuzzy Art Map: A Brief Introduction - Soft Computing Tools - GA in Fuzzy Logic Controller Design - Fuzzy Logic Controller

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Apply suitable soft computing techniques for various applications.
- Integrate various soft computing techniques for complex problems.

TEXTBOOKS:

1. N.P.Padhy,S.P.Simon,"SoftComputingwithMATLABProgramming",OxfordUniversity Press, 2015.

OBJECTIVES:

- TounderstandthebasicsofInformationRetrieval.
- Tounderstandmachinelearningtechniquesfortextclassificationandclustering.
- Tounderstandvarioussearchenginesystemoperations.
- Tolearndifferenttechniquesofrecommendersystem.

UNITI INTRODUCTION 9

Information Retrieval – Early Developments – The IR Problem – The User_s Task – Information versusDataRetrieval - The IR System – The Software Architecture of the IR System – The Retrieval andRanking Processes- The Web – The e-Publishing Era – How the web changed Search – PracticalIssuesonthe Web– How PeopleSearch–SearchInterfaces Today – Visualization in Search Interfaces.

UNITII MODELINGANDRETRIEVAL EVALUATION 9

BasicIRModels-BooleanModel-TF-IDF(TermFrequency/InverseDocumentFrequency)Weighting - Vector Model – Probabilistic Model – Latent Semantic Indexing Model – Neural NetworkModel – Retrieval Evaluation – Retrieval Metrics – Precision and Recall – Reference Collection – User-basedEvaluation– RelevanceFeedbackandQueryExpansion–Explicit Relevance Feedback.

UNITIII TEXTCLASSIFICATIONANDCLUSTERING 9

A Characterization of Text Classification – Unsupervised Algorithms: Clustering – Naïve TextClassification – Supervised Algorithms – Decision Tree – k-NN Classifier – SVM Classifier – FeatureSelection or Dimensionality Reduction –Evaluationmetrics – Accuracy and Error – Organizing theclasses – Indexing and Searching – Inverted Indexes – Sequential Searching–Multi-dimensionalIndexing.

UNITIV WEBRETRIEVALANDWEBCRAWLING 9

TheWeb – Search Engine Architectures – Cluster based Architecture – Distributed Architectures– SearchEngineRanking–LinkbasedRanking–SimpleRankingFunctions – LearningtoRank– Evaluations --SearchEngineRanking– SearchEngineUser Interaction–Browsing– ApplicationsofaWebCrawler – Taxonomy – Architecture and Implementation – Scheduling Algorithms – Evaluation.

UNITV RECOMMENDERSYSTEM 9

Recommender Systems Functions – Data and Knowledge Sources – RecommendationTechniques–BasicsofContent-basedRecommenderSystems– HighLevelArchitecture–Advantagesand Drawbacksof Content-based Filtering– Collaborative Filtering –Matrixfactorization models – Neighborhood models..

2. Stefan Buettcher, Charles L. A. Clarke and Gordon V. Cormack, —Information Retrieval: Implementing and Evaluating Search Engines, The MIT Press, 2010.

OBJECTIVES:

- To learn the fundamentals of natural language processing
- To understand the use of CFG and PCFG in NLP
- To understand the role of semantics of sentences and pragmatics
- To apply the NLP techniques to IR applications

UNIT I INTRODUCTION 9

Origins and challenges of NLP – Language Modeling: Grammar-based LM, Statistical LM – Regular Expressions, Finite-State Automata – English Morphology, Transducers for lexicon and rules, Tokenization, Detecting and Correcting Spelling Errors, Minimum Edit Distance

UNIT II WORD LEVEL ANALYSIS 9

Unsmoothed N-grams, Evaluating N-grams, Smoothing, Interpolation and Backoff – Word Classes, Part-of-Speech Tagging, Rule-based, Stochastic and Transformation-based tagging, Issues in PoS tagging – Hidden Markov and Maximum Entropy models.

UNIT III SYNTACTIC ANALYSIS 9

Context-Free Grammars, Grammar rules for English, Treebanks, Normal Forms for grammar – Dependency Grammar – Syntactic Parsing, Ambiguity, Dynamic Programming parsing – Shallow parsing – Probabilistic CFG, Probabilistic CYK, Probabilistic Lexicalized CFGs - Feature structures, Unification of feature structures.

UNIT IV SEMANTICS AND PRAGMATICS 10

Requirements for representation, First-Order Logic, Description Logics – Syntax-Driven Semantic analysis, Semantic attachments – Word Senses, Relations between Senses, Thematic Roles, selectional restrictions – Word Sense Disambiguation, WSD using Supervised, Dictionary & Thesaurus, Bootstrapping methods – Word Similarity using Thesaurus and Distributional methods.

UNIT V DISCOURSE ANALYSIS AND LEXICAL RESOURCES 8

Discourse segmentation, Coherence – Reference Phenomena, Anaphora Resolution using Hobbs and Centering Algorithm – Coreference Resolution – Resources: Porter Stemmer, Lemmatizer, Penn Treebank, Brill's Tagger, WordNet, PropBank, FrameNet, Brown Corpus, British National Corpus (BNC)

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- To tag a given text with basic language features
- To design an innovative application using NLP components
- To implement a rule-based system to tackle morphology/syntax of a language
- To design a tag set to be used for statistical processing for real-time applications
- To compare and contrast the use of different statistical approaches for different types of NLP applications.

TEXTBOOKS:

1. Daniel Jurafsky, James H. Martin—Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech, Pearson Publication, 2014.

4. Tanveer Siddiqui, U.S. Tiwary,—Natural Language Processing and Information Retrieval, Oxford University Press, 2008.

OBJECTIVES:

- To understand different parallel architectures and models of computation.
- To introduce the various classes of parallel algorithms.
- To study parallel algorithms for basic problems.

UNIT I INTRODUCTION 9

Need for Parallel Processing - Data and Temporal Parallelism - Models of Computation - RAM and PRAM Model – Shared Memory and Message Passing Models- Processor Organisations - PRAM Algorithm – Analysis of PRAM Algorithms- Parallel Programming Languages.

UNIT II PRAM ALGORITHMS 9

Parallel Algorithms for Reduction – Prefix Sum – List Ranking – Preorder Tree Traversal – Searching – Sorting – Merging Two Sorted Lists – Matrix Multiplication - Graph Coloring - Graph Searching.

UNIT III SIMD ALGORITHMS-I 9

2D Mesh SIMD Model - Parallel Algorithms for Reduction - Prefix Computation - Selection - Odd-Even Merge Sorting - Matrix Multiplication.

UNIT IV SIMD ALGORITHMS-II 9

Hypercube SIMD Model - Parallel Algorithms for Selection- Odd-Even Merge Sort- Bitonic Sort- Matrix Multiplication Shuffle Exchange SIMD Model - Parallel Algorithms for Reduction - Bitonic Merge Sort - Matrix Multiplication - Minimum Cost Spanning Tree

UNIT V MIMD ALGORITHMS 9

UMA Multiprocessor Model - Parallel Summing on Multiprocessor - Matrix Multiplication on Multiprocessors and Multicomputer - Parallel Quick Sort - Mapping Data to Processors.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Develop parallel algorithms for standard problems and applications.
- Analyse efficiency of different parallel algorithms.

TEXT BOOKS:

1. Michael J. Quinn, "Parallel Computing: Theory & Practice", Tata McGraw Hill Edition, Second edition, 2017.
2. Ellis Horowitz, Sartaj Sahni and Sanguthevar Rajasekaran, "Fundamentals of Computer Algorithms", University press, Second edition, 2011.

3. S. G. Akl, "The Design and Analysis of Parallel Algorithms", PHI, 1989.

OBJECTIVES:

- To understand the fundamentals of the speech processing
- Explore the various speech models
- Gather knowledge about the phonetics and pronunciation processing
- Perform wavelet analysis of speech
- To understand the concepts of speech recognition

UNIT I INTRODUCTION 9

Introduction-knowledge in speech and language processing-ambiguity-models and algorithms-language - thought - understanding - regular expression and automata - words & transducers – N grams

9

UNIT II SPEECH MODELLING

Word classes and part of speech tagging – hidden markov model – computing likelihood: the forward algorithm – training hidden markov model – maximum entropy model – transformation- based tagging – evaluation and error analysis – issues in part of speech tagging – noisy channel model for spelling.

UNIT III SPEECH PRONUNCIATION AND SIGNAL PROCESSING 9

Phonetics- speech sounds and phonetic transcription- articulatory phonetics- phonological categories and pronunciation variation - acoustic phonetics and signals- phonetic resources-articulatory and gestural phonology

UNIT IV SPEECH IDENTIFICATION 9

Speech synthesis-text normalization-phonetic analysis-prosodic analysis–diphonewaveform synthesis - unit selection waveform synthesis - evaluation

UNIT V SPEECH RECOGNITION 9

Automatic speech recognition - architecture - applying hidden markov model - feature extraction: mfcc vectors - computing acoustic likelihoods - search and decoding - embedded training - multipass decoding:n-best lists and lattices- a* (_stack) decoding - context-dependent acoustic models: triphones - discriminative training - speech recognition by humans.

TOTAL:45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Create new algorithms with speech processing
- Derive new speech models
- Perform various language phonetic analysis
- Create a new speech identification system
- Generate a new speech recognition system

TEXTBOOKS:

1. Daniel Jurafsky and James H. Martin, — Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition], Person education, 2013.

4. Ikrami Eldirawy, Wesam Ashour, — Visual Speech Recognition, Wiley publications, 2011

OBJECTIVE:

- To learn about basis of nanomaterials science, preparation method, types and application

UNIT I INTRODUCTION

8

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering- Classifications of nanostructured materials- nano particles- quantum dots, nanowires- ultra-thin films- multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

UNIT II GENERAL METHODS OF PREPARATION

9

Bottom-up Synthesis- Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMB.

UNIT III NANOMATERIALS

12

Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis (arc- growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications- Nanometal oxides- ZnO, TiO₂, MgO, ZrO₂, NiO, nanoalumina, CaO, AgTiO₂, Ferrites, Nanoclays- functionalization and applications- Quantum wires, Quantum dots- preparation, properties and applications.

UNIT IV CHARACTERIZATION TECHNIQUES

9

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS- Nanoindentation.

UNIT V APPLICATIONS

7

Nano Info Tech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nanobiotechnology: nanoprobe in medical diagnostics and biotechnology, Nanomedicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sun barrier products - In Photostat, printing, solar cell, battery.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Familiarize about the science of nanomaterials
- Demonstrate the preparation of nanomaterials
- Develop knowledge in characteristic nanomaterial

TEXTBOOKS:

- A.S. Edelstein and R.C. Cammearata, eds., — Nanomaterials: Synthesis, Properties and Applications, Institute of Physics Publishing, Bristol and Philadelphia, 1996.

CLOUDCOMPUTING

L T P C

3 0 0 3

OBJECTIVES:

- To learn about the concept of cloud and utility computing.
- To have knowledge on the various issues in cloud computing.
- To be familiar with the lead players in cloud.
- To appreciate the emergence of cloud as the next generation computing paradigm.

UNIT I INTRODUCTION TO CLOUD COMPUTING 9

Introduction to Cloud Computing – Roots of Cloud Computing – Desired Features of Cloud Computing – Challenges and Risks – Benefits and Disadvantages of Cloud Computing.

UNIT II VIRTUALIZATION 9

Introduction to Virtualization Technology – Load Balancing and Virtualization – Understanding Hypervisor – Seven Layers of Virtualization – Types of Virtualization – Server, Desktop, Application Virtualization.

UNIT III CLOUD ARCHITECTURE, SERVICES AND STORAGE 9

NIST Cloud Computing Reference Architecture – Public, Private and Hybrid Clouds – IaaS – PaaS – SaaS – Architectural Design Challenges – Cloud Storage.

UNIT IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD 9

Inter Cloud Resource Management – Resource Provisioning Methods – Security Overview – Cloud Security Challenges – Data Security – Application Security – Virtual Machine Security.

UNIT V CASE STUDIES 9

Google App Engine (GAE) – GAE Architecture – Functional Modules of GAE – Amazon Web Services (AWS) – GAE Applications – Cloud Software Environments – Eucalyptus – Open Nebula – Open Stack.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
- Learn the key and enabling technologies that help in the development of cloud.
- Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.
- Explain the core issues of cloud computing such as resource management and security.
- Be able to install and use current cloud technologies.
- Choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.

TEXTBOOKS:

1. Buyya R., Broberg J., Goscinski A., "Cloud Computing: Principles and Paradigm", First Edition, John Wiley & Sons, 2011.
2. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
3. Rittinghouse, John W., and James F. Ransome, "Cloud Computing: Implementation, Management, And Security", CRC Press, 2017.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OBJECTIVES:

- To learn the fundamentals of data models
- To learn conceptual modeling using ER diagrams.
- To study SQL queries and database programming
- To learn proper designing of relational database.
- To understand database security concepts
- To understand Information retrieval techniques

UNIT I DBMS AND CONCEPTUAL DATA MODELING 9

Purpose of Database System – Data independence - Data Models – Database System Architecture – Conceptual Data modeling: ER models - Enhanced-ER Model. Introduction to relational databases – Relational Model – Keys – ER-to-Relational Mapping. Modeling of a library management system.

UNIT II DATABASE QUERYING 11

Relational Algebra– SQL: fundamentals – DDL – Specifying integrity constraints-DML – Basic retrieval queries in SQL - Complex SQL retrieval queries – nested queries – correlated queries – joins -aggregate functions. Creating a table, populating data, adding integrity constraints, querying tables with simple and complex queries.

UNIT III DATABASE PROGRAMMING 9

Database programming with function calls, stored procedures - views – triggers. Embedded SQL. ODBC connectivity with front end tools. Implementation using ODBC/JDBC and SQL/PSM, implementing functions, views, and triggers in MySQL / Oracle.

UNIT IV NORMALIZATION AND BRAKE SYSTEMS 9

Functional Dependencies – Design guidelines – Normal Forms: first, second, third – Boyce/Codd Normal Form – Normalization algorithms. Design of a banking database system / university database system.

UNIT V ALTERNATIVE ENERGY SOURCES 9

Database security issues – Discretionary access control – role based access – Encryption and public key infrastructures – challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- understand relational data model, evolve conceptual model of a given problem, its mapping to relational model and Normalization
- query the relational database and write programs with database connectivity
- understand the concepts of database security and information retrieval systems

TEXT BOOKS:

1. Ramez Elmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Sixth Edition, Pearson, 2011.
 2. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata McGraw Hill, 2011

REFERENCES:

1. C.J. Date, A. Kannan, S. Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006.
 2. Raghu Ramakrishnan, — Database Management Systems II, Fourth Edition, McGraw-Hill College

OBJECTIVES:

- To study about the different biopotential and its propagation
- To understand the different types of electrodes and its placement for various recording
- To study the design of bio amplifier for various physiological recording -physiological parameters.
- To familiarize the different biochemical measurements.

UNIT I BIOPOTENTIAL GENERATION AND ELECTRODE TYPES 9

Origin of biopotential and its propagation. Types of electrodes - surface, needle and microelectrodes and their equivalent circuits. Recording problems - measurement with two electrodes

UNIT II BIOSIGNAL CHARACTERISTICS AND ELECTRODE CONFIGURATIONS 9

Biosignals characteristics - frequency and amplitude ranges. ECG - Einthoven "triangle", standard 12 lead system. EEG - 10-20 electrode system, unipolar, bipolar and average mode. EMG - unipolar and bipolar mode.

UNIT III SIGNAL CONDITIONING CIRCUITS 9

Need for bio-amplifier - differential bio-amplifier, Impedance matching circuit, isolation amplifiers, Power line interference, Right leg driven ECG amplifier, Band pass filtering

UNIT IV MEASUREMENT OF NON-ELECTRICAL PARAMETERS 10

Temperature, respiration rate and pulse rate measurements. Blood Pressure: indirect methods - Auscultatory method, direct methods: electronic manometer, Systolic, diastolic pressure, Blood flow and cardiac output measurement: Indicator dilution, and dye dilution method, ultrasound blood flow measurement.

UNIT V BIO-CHEMICAL MEASUREMENT 8

Blood gas analyzers and Non-Invasive monitoring, colorimeter, Sodium Potassium Analyser, spectrophotometer, blood cell counter, auto analyzer (simplified schematic description).

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- To Learn the different biopotential and its propagation.
- CO2: To get familiarized with the different electrode placement for various physiological recording
- CO3: Students will be able to design bio amplifier for various physiological recording
- CO4: Students will understand various techniques of non-electrical physiological measurements
- CO5: Understand the different biochemical measurements

3. Joseph J. Carrand John M. Brown, "Introduction to Biomedical Equipment Technology", Pearson Education, 2004.

OBJECTIVES:

- To understand the concepts of measurement technology.
- To learn the various sensors used to measure various physical parameters.
- To learn the fundamentals of signal conditioning, data acquisition and communications systems used in mechatronics system development.

UNIT I INTRODUCTION

9

Basics of Measurement – Classification of errors – Error analysis – Static and dynamic characteristics of transducers – Performance measures of sensors – Classification of sensors – Sensor calibration techniques – Sensor Output Signal Types.

UNIT II MOTION, PROXIMITY AND RANGING SENSORS

9

Motion Sensors – Potentiometers, Resolver, Encoders – Optical, Magnetic, Inductive, Capacitive, LVDT – RVDT – Synchro – Microsyn, Accelerometer, – GPS, Bluetooth, Range Sensors – RF beacons, Ultrasonic Ranging, Reflective beacons, Laser Range Sensor (LIDAR).

UNIT III FORCE, MAGNETIC AND HEADING SENSORS

9

Strain Gage, Load Cell, Magnetic Sensors – types, principle, requirement and advantages: Magneto resistive – Hall Effect – Current sensor Heading Sensors – Compass, Gyroscope, Inclometers

9

UNIT IV OPTICAL, PRESSURE AND TEMPERATURE SENSORS

Photo conductive cell, photo voltaic, Photo resistive, LDR – Fiber optic sensors – Pressure – Diaphragm, Bellows, Piezoelectric – Tactile sensors, Temperature – IC, Thermistor, RTD, Thermocouple. Acoustic Sensors – flow and level measurement, Radiation Sensors - Smart Sensors - Film sensor, MEMS & Nano Sensors, LASER sensors.

9

UNIT V ALTERNATIVE ENERGY SOURCES

Amplification – Filtering – Sample and Hold circuits – Data Acquisition: Single channel and multichannel data acquisition – Data logging - applications - Automobile, Aerospace, Home appliances, Manufacturing, Environmental monitoring.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- CO1.** Expertise in various calibration techniques and signal types for sensors.
- CO2.** Apply the various sensors in the Automotive and Mechatronics applications
- CO3.** Study the basic principles of various smart sensors.
- CO4.** Implement the DAQ systems with different sensors for real time applications

TEXTBOOKS:

1. Ernest O Doebelin, "Measurement Systems – Applications and Design", Tata McGraw-Hill, 2009.
2. Sawney A K and Puneet Sawney, "A Course in Mechanical Measurements and Instrumentation and Control", 12th edition, Dhanpat Rai & Co, New Delhi, 2013.

3. Richard Zurawski, "Industrial Communication Technology Handbook" 2nd edition, CRC Press, 2015.

OBJECTIVES:

- To elucidate on advantages of nanotechnology based applications in each industry
- To provide instances of contemporary industrial applications of nanotechnology
- To provide an overview of future technological advancements and increasing role of nanotechnology in each industry

UNIT I NANO ELECTRONICS 9

Advantages of nano electrical and electronic devices – Electronic circuit chips – Lasers - Micro and Nano Electromechanical systems – Sensors, Actuators, Optical switches, - Data memory – Lighting and Displays – Batteries - Fuel cells and Photo-voltaic cells – Electric double layer capacitors – Lead-free solder – Nanoparticle coatings for electrical products.

UNIT II BIONANOTECHNOLOGY 9

Nanoparticles in bone substitutes and dentistry – Implants and Prosthesis – Nanorobotics in Surgery – Nanosensors in Diagnosis – Neuro-electronic Interfaces – Therapeutic applications.

UNIT III TRANSMISSION SYSTEMS 9

Nanocatalysts – Smart materials – Heterogeneous nanostructures and composites – Nanostructures for Molecular recognition (Quantum dots, Nanorods, Nanotubes) – Molecular Encapsulation and its applications – Nanoporous zeolites – Self-assembled Nanoreactors.

UNIT IV SUSPENSION AND BRAKE SYSTEMS 9

Nanotechnology in Agriculture - Precision farming, Smart delivery system – Insecticides using nanotechnology – Potential of nano-fertilizers - Nanotechnology in Food industry

UNIT V ALTERNATIVE ENERGY SOURCES 9

Nanofibre production - Electrospinning – Controlling morphologies of nanofibers – Tissue engineering application – Polymer nanofibers - Nylon-6 nanocomposites from polymerization - Nano-filled polypropylene fibers - Nano finishing in textiles (UV resistant, antibacterial, hydrophilic, self-cleaning, flame retardant finishes) – Modern textiles Cosmetics – Formulation of Gels, Shampoos, Hair conditioners

OBJECTIVES:

Understand and analyse the energy data of industries

- Carry out energy accounting and balancing
- Conduct energy audit and suggest methodologies for energy savings and
- Utilise the available resources in optimal ways

UNIT I INTRODUCTION 9

Energy - Power – Past & Present scenario of World; National Energy consumption Data – Environmental aspects associated with energy utilization – Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Instruments for energy auditing.

UNIT II ELECTRICAL SYSTEMS 9

Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors, Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope of Encon in Illumination.

UNIT III THERMAL SYSTEMS 9

Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and energy conservation measures. Steam: Distribution & Usage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories

UNIT IV ENERGY CONSERVATION IN MAJOR UTILITIES 9

Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems – Cooling Towers – D.G. sets

UNIT V ECONOMICS 9

Energy Economics – Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing – ESCO concept

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- To analyse the energy data of industries.
- Can carry out energy accounting and balancing
- Can suggest methodologies for energy savings

TEXTBOOKS:

Energy Manager Training Manual (4 Volumes) available at www.energymanagertraining.com, a website administered by Bureau of Energy Efficiency (BEE), a statutory body under Ministry of Power, Government of India, 2004.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

OBJECTIVES:

- To get exposure on solar radiation and its environmental impact to power.
- To know about the various collectors used for storing solar energy.
- To know about the various applications in solar energy.
- To learn about the wind energy and biomass and its economic aspects.
- To know about geothermal energy with other energy sources.

UNIT I PRINCIPLES OF SOLAR RADIATION 10

Role and potential of new and renewable source, the solar energy option, Environmental impact of solar power, physics of the sun, the solar constant, extraterrestrial and terrestrial solar radiation, solar radiation on tilted surface, instruments for measuring solar radiation and sun shine, solar radiation data.

UNIT II SOLAR ENERGY COLLECTION 8

Flat plate and concentrating collectors, classification of concentrating collectors, orientation and thermal analysis, advanced collectors.

UNIT III SOLAR ENERGY STORAGE AND APPLICATIONS 7

Different methods, Sensible, latent heat and stratified storage, solar ponds. Solar Applications- solar heating/cooling technique, solar distillation and drying, photovoltaic energy conversion.

UNIT IV WIND ENERGY 10

Sources and potentials, horizontal and vertical axis windmills, performance characteristics, Betz criteria. BIO-MASS: Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, I.C. Engine operation and economic aspects.

UNIT V GEOTHERMAL ENERGY 9

Resources, types of wells, methods of harnessing the energy, potential in India. OCEAN ENERGY: OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques, mini-hydel power plants, and their economics. DIRECT ENERGY CONVERSION: Need for DEC, Carnot cycle, limitations, principles of DEC.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Understanding the physics of solar radiation.
- Ability to classify the solar energy collectors and methodologies of storing solar energy.
- Knowledge in applying solar energy in a useful way.
- Knowledge in wind energy and biomass with its economic aspects.
- Knowledge in capturing and applying other forms of energy sources like wind, biogas and geothermal energies.

TEXTBOOKS:

1. Rai G.D., "Non-Conventional Energy Sources", Khanna Publishers, 2011
2. Twidell & Wier, "Renewable Energy Resources", CRC Press (Taylor & Francis), 2011

REFERENCES:

2. Ramesh R & Kumar K.U., "Renewable Energy Technologies", Narosa Publishing House, 2004
3. Mittal K.M., "Non-Conventional Energy Systems", Wheeler Publishing Co. Ltd, New Delhi, 2003
4. Kothari D.P., Singhal, K.C., "Renewable energy sources and emerging technologies", P.H.I, New

OBJECTIVES:

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

UNIT I AUTOMOTIVE ENGINE AUXILIARY SYSTEMS 9

Automotive engines-External combustion engines-Internal combustion engines -classification of engines-SI Engines- CI Engines- two stroke engines -four stroke engines- construction and working principles - IC engine components-functions and materials -valvetiming-port timing diagram-Injection system-Unit injector system- Rotary distributor type - Electronically controlled injection system for SI engines-CI engines-Ignition system-Electronic ignition system - Transistorized ignition system, capacitive discharge ignition system.

UNIT II VEHICLE FRAMES AND STEERING SYSTEM 9

Vehicle construction and different chassis layouts-classifications of chassis-types of frames-frameless chassis construction-articulated vehicles- vehicle body- Vehicle aerodynamics-various resistances and its effects -steering system-conventional-sophisticated vehicle- and types of steering gear box-Power Steering- Steering geometry-condition for true rolling motion-Ackermann's-Devi's steering system types of stub axle-Types of rear axles.

UNIT III TRANSMISSION SYSTEMS 9

Clutch-types and construction, gear boxes -manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints -Hotchkiss Drive and Torque Tube Drive- rear axle-Differential-wheels and tyres.

UNIT IV SUSPENSION AND BRAKE SYSTEMS 9

Suspension Systems-conventional Suspension Systems -independent Suspension Systems -leaf spring-coil spring -taper-lite -eligo,s spring Types of brakes -Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control. Derive the equation of Forces acting while applying a brakes on plain surface - inclined road-gradient .

UNIT V ALTERNATIVE ENERGY SOURCES 9

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles-Engine modifications required-Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell. Turbo chargers -Engine emission control by three way catalytic converter system. Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.

TOTAL:45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Upon completion of this course, the students will be able to identify the different components in automobile engineering.
- Have clear understanding on different auxiliary and transmission systems usual.

TEXTBOOKS:

1. Ganesan V. "Internal Combustion Engines", Third Edition, Tata McGraw-Hill, 2007.
2. Jain K. K. and Asthana R. B, "Automobile Engineering" Tata McGraw Hill Publishers, New Delhi, 2002.
3. Kirpal Singh, "Automobile Engineering", Vol 1 & 2, Seventh Edition, Standard Publishers, New Delhi, 1997.

REFERENCES:

3. Martin W, Stockel and Martin T Stockle, "Automotive Mechanics Fundamentals," The Goodheart – Will Cox Company Inc, USA, 1978.
4. Newton, Steeds and Garet, "Motor Vehicles", Butterworth Publishers, 1989.

OBJECTIVES:

- To impart knowledge on the principle and design of control of Indoor/particulate/gaseous air pollutant and its emerging trends.

UNIT I INTRODUCTION 7

Structure and composition of Atmosphere – Definition, Scope and Scales of Air Pollution – Sources and classification of air pollutants and their effect on human health, vegetation, animals, property, aesthetic value and visibility- Ambient Air Quality and Emission standards.

UNIT II METEOROLOGY 6

Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Atmospheric Diffusion Theories – Dispersion models, Plume rise.

UNIT III CONTROL OF PARTICULATE CONTAMINANTS 11

Factors affecting Selection of Control Equipment – Gas Particle Interaction – Working principle- Gravity Separators, Centrifugal separators Fabric filters, Particulate Scrubbers, Electrostatic Precipitators.

UNIT IV CONTROL OF GASEOUS CONTAMINANTS 11

Factors affecting Selection of Control Equipment – Working principle- absorption, Adsorption, condensation, Incineration, Bio filters – Process control and Monitoring.

UNIT V INDOOR AIR QUALITY MANAGEMENT 10

Sources, types and control of indoor air pollutants, sick building syndrome and Building related illness- Sources and Effects of Noise Pollution – Measurement – Standards – Control and Preventive measures.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course, the students should be able to:

- Basic concepts of air quality management
- Ability to identify, formulate and solve air and noise pollution problems
- Ability to design stacks and particulate air pollution control devices to meet applicable
- Ability to select control equipments.
- Ability to ensure quality, control and preventive measures.

5. C. S. Rao, “Environmental Pollution Control Engineering”, New Age International (P) Limited Publishers, 2006.

OBJECTIVES:

-
- To introduce the fundamentals and components of Geographic Information System
- □ To provide details of spatial data structures and input, management and output processes.
-

UNIT I FUNDAMENTALS OF GIS

9

Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attributed data- types of attributes – scales/levels of measurements.

UNIT II SPATIAL DATA MODELS

9

Database Structures – Relational, Object Oriented – ER diagram - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures- Raster vs Vector Models- TIN and GRID data models - OGC standards - Data Quality.

UNIT III DATA INPUT AND TOPOLOGY

9

Scanner - Raster Data Input – Raster Data File Formats – Vector Data Input – Digitiser – Topology - Adjacency, connectivity and containment – Topological Consistency rules – Attribute Data linking – ODBC – GPS - Concept GPS based mapping.

UNIT IV DATA ANALYSIS

9

Vector Data Analysis tools - Data Analysis tools - Network Analysis - Digital Elevation models - 3D data collection and utilisation.

UNIT V APPLICATIONS

9

GIS Applicant - Natural Resource Management - Engineering - Navigation - Vehicle tracking and fleet management - Marketing and Business applications - Case studies.

TOTAL: 45 PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Have basic idea about the fundamentals of GIS.
- Understand the types of data models.
- Get knowledge about data input and topology.
- Gain knowledge on data quality and standards.
- Understand data management functions and data output

INTRODUCTION TO C PROGRAMMING

LT	P	C
3	0	3

OBJECTIVES

- To develop C programs using basic programming constructs
- To develop C programs using arrays and strings
- To develop applications in C using functions and structures

UNIT I INTRODUCTION

9

Structure of C program – Basics: Data Types – Constants – Variables – Keywords – Operators: Precedence and Associativity - Expressions - Input/Output statements, Assignment statements – Decision-making statements - Switch statement - Looping statements – Pre-processor directives - Compilation process – Exercise Programs: Check whether the required amount can be withdrawn based on the available amount – Menu-driven program to find the area of different shapes – Find the sum of even numbers
Text Book: Reema Thareja (Chapters 2,3)

UNIT II ARRAYS

9

Introduction to Arrays – One-dimensional arrays: Declaration – Initialization – Accessing elements – Operations: Traversal, Insertion, Deletion, Searching - Two-dimensional arrays: Declaration – Initialization – Accessing elements – Operations: Read – Print – Sum – Transpose – Exercise Programs: Print the number of positive and negative values present in the array – Sort the numbers using bubble sort – Find whether the given matrix is diagonal or not.
Text Book: Reema Thareja (Chapters 5)

UNIT III STRINGS

9

Introduction to Strings - Reading and writing a string - String operations (without using built-in string functions): Length – Compare – Concatenate – Copy – Reverse – Substring – Insertion – Indexing – Deletion – Replacement – Array of strings – Introduction to Pointers – Pointer operators – Pointer arithmetic - Exercise programs: To find the frequency of a character in a string - To find the number of vowels, consonants and white spaces in a given text - Sorting the names.
Text Book: Reema Thareja (Chapters 6 & 7)

UNIT IV FUNCTIONS

9

Introduction to Functions – Types: User-defined and built-in functions - Function prototype - Function definition - Function call - Parameter passing: Pass by value - Pass by reference - Built-in functions (string functions) – Recursive functions – Exercise programs: Calculate the total amount of power consumed by 'n' devices (passing an array to a function) – Menu-driven program to count the numbers which are divisible by 3, 5 and by both (passing an array to a function) – Replace the punctuations from a given sentence by the space character (passing an array to a function)
Text Book: Reema Thareja (Chapters 4)

UNIT V STRUCTURES

9

Introduction to structures – Declaration – Initialization – Accessing the members – Nested Structures – Array of Structures – Structures and functions – Passing an entire structure – Exercise programs: Compute the age of a person using structure and functions (passing a structure to a function) – Compute the number of days an employee came late to the office by considering his arrival time for 30 days (Use array of structures and functions)
Text Book: Reema Thareja (Chapters 8)

TOTAL: 45 PERIODS

OUTCOMES

Upon completion of this course, the students will be able to

- Develop simple applications using basic constructs
- Develop applications using arrays and strings
- Develop applications using functions and structures

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

TEXTBOOK

1. Reema Thareja, "Programming in C", Oxford University Press, Second Edition, 2016

REFERENCES:

1. Kernighan, B. W. and Ritchie, D. M., "The C Programming Language", Second Edition, Pearson Education, 2006
2. Paul Deitel and Harvey Deitel, "C How to Program", Seventh Edition, Pearson Publication
3. Juneja, B. L. and Anita Seth, "Programming in C", CENGAGE Learning India Pvt. Ltd., 2011

OBJECTIVES:

- To understand the various algorithm design and analysis techniques
- To learn linear data structures – lists, stacks, and queues
- To learn different sorting and searching algorithms
- To understand Tree and Graph data structures

UNIT I ALGORITHM ANALYSIS, LIST ADT**11**

Algorithms: Notation - analysis – running time calculations. Abstract Data Types (ADTs): List ADT – array-based implementation – linked list implementation – singly linked lists- applications of lists: Polynomial Manipulation. Implementation of List ADT using an array and using a linked list in C.

UNIT II STACKS AND QUEUES**7**

Stack ADT - Applications - Evaluating arithmetic expressions - Conversion of Infix to Postfix - Recursion. Queue ADT - Priority Queue - applications of queues. Implementation of Stack ADT and palindrome checking using C. Implementation of Queue operations using arrays in C.

UNIT III SEARCHING AND SORTING ALGORITHMS**10**

Divide and conquer methodology - Searching: Linear Search - Binary Search. Sorting: Insertion sort – Merge sort – Quick sort – Heap sort. Analysis of searching and sorting techniques. Implementation of linear search, binary search, insertion sort, merge sort and quick sort algorithms in C.

UNIT IV TREES**9**

Tree ADT – tree traversals - Binary Tree ADT – expression trees – binary search tree ADT – applications of trees. Heap – applications of heap. Implementation of Binary search tree and its operations, tree traversal methods, finding height of the tree using C. Implementation of heap and heap sorting using arrays in C.

UNIT V GRAPHS**8**

Definition – Representation of Graph – Breadth-first traversal - Depth-first traversal – Dynamic programming Technique – Warshall's and Floyd's algorithm – Greedy method - Dijkstra's algorithm – applications of graphs. Implementation of graph, graph traversal methods, finding shortest path using Dijkstra's algorithm in C

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of this course, the students should be able to:

- Implement linear data structures and solve problems using them
- Implement and apply trees and graphs to solve problems.
- Implement the various searching and sorting algorithms.

TEXTBOOKS:

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", 2nd Edition, Pearson Education, 1997.
2. Brian W. Kernighan and Dennis M. Ritchie, "The C Programming Language", 2nd Edition, Pearson Education, 1988.

REFERENCES:

1. Aho, Hopcroft and Ullman, "Data Structures and Algorithms", Pearson Education, 1983.
2. S. Sridhar, "Design and Analysis of Algorithms", First Edition, Oxford University Press, 2014
3. Byron Gottfried, Jitender Chhabra, "Programming with C" (Schaum's Outlines Series), McGraw Hill Higher Ed., III Edition, 2010
4. Yashvant Kanetkar, "Data Structures Through C", BPB publications, II edition, 2003

OBJECTIVES:

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End Effectors and Sensors
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics.

UNIT I FUNDAMENTALS OF ROBOT**6**

Robot - Definition - Robot Anatomy - Co ordinate Systems, Work Envelope Types and Classification- Specifications- Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots- Different Applications.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS**9**

Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION**12**

Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors, binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Servoing and Navigation.

UNIT IV ROBOT KINEMATICS AND ROBOT PROGRAMMING**13**

Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS**5**

RGV, AGV; Implementation of Robots in Industries- Various Steps; Safety Considerations for Robot Operations- Economic Analysis of Robots.

TOTAL: 45 PERIODS OUTCOME:

- Upon completion of this course, the students can be able to apply the basic engineering knowledge for the design of robotics

TEXT BOOKS: 1. Klatner R.D., Chmielewski T.A and Negin M., "Robotic Engineering- An Integrated Approach", Prentice Hall, 2003. 2. Groover M.P., "Industrial Robotics - Technology Programming and Applications", McGraw Hill, 2001.

OBJECTIVES:**The students should be made to:**

- Introduce the concept of diodes, Bipolar Junction Transistors and FET
- Study the various model parameters of Transistors
- Learn the concept of special semiconductor devices, Power & Display devices
- Impart the knowledge of various configurations, characteristics and applications.

UNIT I SEMICONDUCTOR DIODE**9**

PN junction diode, Current equations, Energy Band diagram, Diffusion and drift current densities, forward and reverse bias characteristics, Transition and Diffusion Capacitances, Switching Characteristics, Breakdown in PN Junction Diodes.

UNIT II BIPOLAR JUNCTION TRANSISTORS**9**

NPN -PNP -Operations-Early effect-Current equations- Input and Output characteristics of CE, CB, CC - Hybrid - π model - h-parameter model, Ebers-Moll Model- Gummel Poon model, Multi Emitter Transistor.

UNIT III FIELD EFFECT TRANSISTORS**9**

JFETs – Drain and Transfer characteristics,-Current equations-Pinch off voltage and its significance- MOSFET- Characteristics- Threshold voltage -Channel length modulation, DMOSFET, E-MOSFET- Characteristics-Comparison of MOSFET with JFET.

UNIT IV SPECIAL SEMICONDUCTOR DEVICES**9**

Metal-Semiconductor Junction - MESFET, FINFET, PINFET, CNTFET, DUAL GATE MOSFET, Point Contact Diode, p-i-n Diode, Avalanche Photodiode, Schottky barrier diode Zener diode-Varactor diode –Tunnel diode- Gallium Arsenide device, LASER diode, LDR.

UNIT V POWER DEVICES AND DISPLAY DEVICES**9**

UJT, Thyristor -SCR, Diac, Triac, Power BJT-Power MOSFET-DMOS-VMOS. LED, LCD, Opto Coupler, Solar cell, CCD.

TOTAL: 45 PERIODS**OUTCOMES:****After this course, the students should be able to:**

- Analyze the characteristics of semiconductor diodes.
- Analyze and solve problems of Transistor circuits using model parameters.
- Identify and characterize diodes and various types of transistors.
- Analyze the characteristics of special semiconductor devices.
- Analyze the characteristics of Power and Display devices.

TEXTBOOKS:

5. David A. Bell, "Electronic Devices and Circuits", 5th Edition, Oxford University Press, 2008.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

OBJECTIVES:

- To introduce electric circuits and its analysis
- To impart knowledge on solving circuit equations using network theorems
- To introduce the phenomenon of resonance in coupled circuits.
- To introduce Phasor diagrams and analysis of three phase circuits

UNIT I BASIC CIRCUITS ANALYSIS 9

Resistive elements-Ohm's Law Resistors in series and parallel circuits –Kirchoffs laws–Mesh current and node voltage - methods of analysis.

UNIT II NETWORK REDUCTION AND THEOREMS FOR DC CIRCUITS 9

Network reduction: voltage and current division, source transformation–star-delta conversion. Thevenin and Norton Theorems– Superposition Theorem– Maximum power transfer theorem– Reciprocity Theorem–Millman's theorem.

UNIT III AC CIRCUITS 9

Introduction to AC circuits, inductance reactance, capacitive reactance, Phasor diagrams, real power, reactive power, apparent power, power factor, R-L R-C , RLC networks, Network reduction: voltage and current division, source transformation –mesh and node analysis, Thevenin and Norton Theorems – Superposition Theorem – Maximum power transfer theorem – Reciprocity Theorem – Millman's theorem.

UNIT IV THREE PHASE CIRCUITS 9

A.C.circuits–Average and RMS value-Phasor Diagram–Power, Power Factor and Energy.-Analysis of three phase 3-wire and 4-wire circuits with star and delta connected loads, balanced & unbalanced–phasor diagram of voltages and currents – power measurement in three phase circuits.

UNIT V RESONANCE AND COUPLED CIRCUITS 9

Series and parallel resonance–their frequency response–Quality factor and Bandwidth-Self and mutual inductance– Coefficient of coupling – Tuned circuits – Single tuned circuits.

TOTAL: 45 PERIODS**OUTCOMES:**

- Ability to introduce electric circuits and its analysis
- Ability to impart knowledge on solving circuit equations using network theorems
- Ability to introduce the phenomenon of resonance in coupled circuits.
- Ability to introduce Phasor diagrams and analysis of three phase circuits

6. Richard C. Dorf and James A. Svoboda, "Introduction to Electric Circuits", 7th Edition, John Wiley & Sons, Inc. 2015.

OBJECTIVES:**To Provide knowledge**

- About the stand alone and grid connected renewable energy systems.
- Design of power converters for renewable energy applications.
- Wind electrical generators and solar energy systems.
- Power converters used for renewable energy systems.

UNIT I INTRODUCTION

9

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.

UNIT II ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION

9

Reference theory fundamentals - principle of operation and analysis: IG and PMSG

UNIT III POWER CONVERTERS

9

Solar: Block diagram of solar photo voltaic system - Principle of operation: line commutated converters (inversion mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing Wind: Three phase AC voltage controllers

UNIT IV ANALYSIS OF WIND AND PV SYSTEMS

9

Stand alone operation of fixed and variable speed wind energy conversion systems and solar system - Grid connection Issues - Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system

UNIT V HYBRID RENEWABLE ENERGY SYSTEMS

9

Need for Hybrid Systems - Range and type of Hybrid systems - Case studies of Wind-PV Maximum Power Point Tracking (MPPT).

TOTAL: 45 PERIODS**OUTCOMES:**

- Ability to understand and analyze power system operation, stability, control and protection.
- Ability to handle the engineering aspects of electrical energy generation and utilization.
- Ability to understand the stand alone and grid connected renewable energy systems.
- Ability to design power converters for renewable energy applications.
- Ability to acquire knowledge on wind electrical generators and solar energy systems.
- Ability to design power converters used for hybrid renewable energy systems.

INDUSTRIALSAFETY

LTPC

3003

OBJECTIVES:

To impart knowledge on safety engineering fundamentals and safety management practices.

UNIT I INTRODUCTION

9

Evolution of modern safety concepts – Fire prevention – Mechanical hazards – Boilers, Pressure vessels, Electrical Exposure.

UNIT II CHEMICAL HAZARDS

9

Chemical exposure – Toxic materials – Ionizing Radiation and Non-ionizing Radiation – Industrial Hygiene – Industrial Toxicology.

UNIT III ENVIRONMENTAL CONTROL

9

Industrial Health Hazards – Environmental Control – Industrial Noise – Noise measuring instruments, Control of Noise, Vibration, - Personal Protection.

UNIT IV HAZARD ANALYSIS

9

System Safety Analysis – Techniques – Fault Tree Analysis (FTA), Failure Modes and Effects Analysis (FMEA), HAZOP analysis and Risk Assessment

UNIT V SAFETY REGULATIONS

9

Explosions – Disaster management – catastrophe control, hazard control, Safety education and training – Factories Act, Safety regulations Product safety – case studies

TOTAL: 45 PERIODS

OUTCOMES:

- Students must be able to identify and prevent chemical, environmental, mechanical, fire hazard through analysis and apply proper safety techniques on safety engineering and management

TEXTBOOK:

1. John V. Grimaldi, "Safety Management", AITB Publishers, 2003.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OBJECTIVE:

To understand the various destructive and non-destructive testing methods of materials and its industrial applications.

UNIT I INTRODUCTION TO MATERIAL TESTING 9

Overview of materials, Classification of material testing, Purpose of testing, Selection of material, Development of testing, Testing organizations and its committee, Testing standards, Result Analysis, Advantages of testing.

UNIT II MECHANICAL TESTING 9

Introduction to mechanical testing, Hardness test (Vickers, Brinell, Rockwell), Tensile test, Impact test (Izod, Charpy) - Principles, Techniques, Methods, Advantages and Limitations, Applications. Bend test, Shear test, Creep and Fatigue test - Principles, Techniques, Methods, Advantages and Limitations, Applications.

UNIT III NONDESTRUCTIVE TESTING 9

Visual inspection, Liquid penetrant test, Magnetic particle test, Thermography test – Principles, Techniques, Advantages and Limitations, Applications. Radiographic test, Eddy current test, Ultrasonic test, Acoustic emission - Principles, Techniques, Methods, Advantages and Limitations, Applications.

UNIT IV MATERIAL CHARACTERIZATION TESTING 9

Macroscopic and Microscopic observations, Optical and Electron microscopy (SEM and TEM) Principles, Types, Advantages and Limitations, Applications. Diffraction techniques, Spectroscopic Techniques, Electrical and Magnetic Techniques - Principles, Types, Advantages and Limitations, Applications.

UNIT V OTHER TESTING 9

Thermal Testing: Differential scanning calorimetry, Differential thermal analysis. Thermo-mechanical and Dynamic mechanical analysis: Principles, Advantages, Applications. Chemical Testing: X-Ray Fluorescence, Elemental Analysis by Inductively Coupled Plasma-Optical Emission Spectroscopy and Plasma-Mass Spectrometry.

TOTAL: 45 PERIODS**OUTCOMES:**

- Identify suitable testing technique to inspect industrial component
- Ability to use the different technique and know its applications and limitations

UNIT I ENVIRONMENTAL IMPLICATIONS OF BUILDINGS 9

Energy use, carbon emissions, water use, waste disposal; Building materials: sources, methods of production and environmental Implications. Embodied Energy in Building Materials: Transportation Energy for Building Materials; Maintenance Energy for Buildings.

UNIT II IMPLICATIONS OF BUILDING TECHNOLOGIES EMBODIED ENERGY OF BUILDINGS 9

Framed Construction, Masonry Construction. Resources for Building Materials, Alternative concepts. Recycling of Industrial and Buildings Wastes. Biomass Resources for buildings.

UNIT III COMFORTS IN BUILDING 9

Thermal Comfort in Buildings - Issues; Heat Transfer Characteristic of Building Materials and Building Techniques. Incidence of Solar Heat on Buildings - Implications of Geographical Locations.

UNIT IV UTILITY OF SOLAR ENERGY IN BUILDINGS 9

Utility of Solar energy in buildings concepts of Solar Passive Cooling and Heating of Buildings. Low Energy Cooling. Case studies of Solar Passive Cooled and Heated Buildings.

UNIT V GREEN COMPOSITES FOR BUILDINGS 9

Concepts of Green Composites. Water Utilisation in Buildings, Low Energy Approaches to Water Management. Management of Solid Wastes. Management of Sullage Water and Sewage. Urban Environment and Green Buildings. Green Cover and Built Environment.

TOTAL: 45**PERIODS TEXTBOOKS:**

3. Fundamentals of Integrated Design for Sustainable Building By Marian Keeler, Bill Burke

OBJECTIVES

- To make the student conversant with the water treatment methods including adsorption and oxidation process.
- To provide basic understandings about the requirements of water, its preliminary treatment.

UNIT I WATER QUALITY AND PRELIMINARY TREATMENT

9

Water Quality-physical- chemical and biological parameters of water- water quality requirement - potable water standards -wastewater effluent standards-water quality indices. Water purification systems in natural systems- physical processes-chemical processes and biological processes- primary, secondary and tertiary treatment- Unit operations-unit processes. Mixing, clarification - sedimentation; Types; aeration and gas transfer – coagulation and flocculation, coagulation processes - stability of colloids - destabilization of colloids- transport of colloidal particles, clariflocculation.

UNIT II INDUSTRIAL WATER TREATMENT

9

Filtration – size and shape characteristics of filtering media– sand filters hydraulics of filtration – design considerations – radial, upflow, high rate and multimedia filters, pressure filter. Water softening – lime soda, zeolite and demineralization processes – industrial water treatment for boilers.

UNIT III CONVENTIONAL TREATMENT METHODS

9

Taste and odour control – adsorption – activated carbon treatment – removal of color – iron and manganese removal – aeration, oxidation, ion exchange and other methods – effects of fluorides – fluoridation and defluoridation – desalination - corrosion prevention and control – factors influencing corrosion – Langelier index – corrosion control measures.

UNIT IV WASTEWATER TREATMENT

9

Wastewater treatment – pre and primary treatment – equalization neutralization – screening and grid removal – sedimentation – oil separation gas stripping of volatile organics– biological oxidation – lagoons and stabilization basins – aerated lagoons – activated sludge process – trickling filtration – anaerobic decomposition.

UNIT V ADSORPTION AND OXIDATION PROCESSES

9

Chemical process– adsorption– theory of adsorption– ion exchange process– chemical oxidation– advanced oxidation process – sludge handling and disposal – miscellaneous treatment processes.

TOTAL: 45 PERIODS**OUTCOMES**

- Will have knowledge about adsorption and oxidation process.
- Will gain idea about various methods available for water treatment.
- Will appreciate the necessity of water and acquire knowledge of preliminary treatment.

***Research Integrated Curriculum**

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching-research relations, the following framework has been developed and widely adopted to help individual staff member, course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research–Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research–Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research–Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research-Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level 1:

Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self-actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Tech.[CSE] curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
IV	Research Led Seminar	1
V	Research Methodology	3
VI	Participation in Bounded Research	2
VII	Design Project/Socio Technical Project (Scaffolded Research)	4
VIII	Project Work	10

Blueprint for assessment of student's performance in Research Led Seminar Course

● **Internal Assessment:** **40 Marks**

- Seminar Report (UG)/Concept Note (PG) : 5X4=20 Marks
- Seminar Review Presentation : 10 Marks
- Literature Survey : 10 Marks

● **Semester Examination :** **60 Marks**

(Essay type Questions set by the concerned resource persons)

DEPARTMENT OF
COMPUTERSCIENCE&ENGINEERING

PROGRAMHANDBOOK

B.TECH-CSE(PART-TIME)

[REGULATION2022]

[forcandidatesadmittedtoB.TechCSEprogramfromJune2022onwards]

PROGRAM EDUCATIONAL OBJECTIVES

The program objectives, address our mission of graduating students with solid foundation in computer science and engineering and to engage in activities that improve the welfare of society within a few years after their graduation. Based on the mission and vision, Program Educational Objectives are listed below:

- I. Graduating students to practice fundamentals of computer science engineering and apply their problem solving skills to analyze and solve engineering problems to meet the emerging needs of software industry.
- II. To encourage graduates to pursue advanced education, research and development, and other creative efforts in science and technology.
- III. Graduating students to achieve professional status due to their mastery of Computer Science theory and practice, exposure to emerging hardware technologies.
- IV. To endorse graduates with communication, and interpersonal skills to enable them to work in teams effectively in multidisciplinary field and in their professional careers.
- V. To impart the students to engage in lifelong learning and continuing professional development to use their understanding of the impact of technology on society for the benefit of humankind.

PROGRAM OUTCOMES

Program outcomes are the knowledge, skills, and behavior that students acquire during the time of graduation through the program objectives. Students should be in possession of:

- a) An ability to apply mathematical, algorithmic principles, and computing techniques in the modeling and design of computer-based systems.
- b) An ability to apply software engineering techniques to design, implement and test a software system, and to evaluate and compare the efficiencies of alternative solutions.
- c) Knowledge to identify and solve the open end problems to meet the requirements in computing industry.
- d) Understanding of network technologies to evolve and deploy network.
- e) An ability to choose best web technologies for solving web client/server problem and to create web pages with dynamic effects.
- f) An ability to work in multidisciplinary projects.
- g) Verbal skills to interact with customers, colleagues, and managers, and possess written communication skills to describe ideas, document processes, and results.
- h) An ability to engage in life-long learning to remain current in their profession and be leaders in technological society.
- i) The broad education necessary to understand the impact of computing in a global, economic, societal context and in all endeavors.
- j) Fundamental knowledge in digital circuits, communications systems and computer hardware.
- k) An ability to map computing ideas into working physical systems with the help of computing technologies for the benefit of society.

22148S11P-TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS

AIM:

To develop the skills for the students in the areas of Transforms and Partial Differential Equations. This will be necessary for their effective studies in a large number of engineering subjects like heat conduction, communication systems, electro-optics and electromagnetic theory.

The course will also serve as a prerequisite for specialized studies and research.

OBJECTIVES:

- Solve simple second order differential equations;
- Be able to calculate Fourier series;
- Prove the Orthogonality of Eigen functions of boundary value problems;
- Be able to classify second order partial differential equations and choose the appropriate boundary conditions;
- Apply the method of separation of variables to standard PDEs;
- Understand the wide applications of differential equation;
- Use Laplace transform to solve simple linear differential equations.

UNIT I FOURIER SERIES 9+3hrs

Periodic function-Graph of functions- Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORM 9+3hrs

Fourier integral theorem (without proof) – Sine and Cosine transforms – Properties (without Proof) – Transforms of simple functions – Convolution theorem – Parseval's identity – Finite Fourier transform, Sine and Cosine transform.

UNIT III Z-TRANSFORM AND DIFFERENCE EQUATIONS 9+3hrs

Z-transform - Elementary properties (without proof) – Inverse Z – transform – Convolution theorem - Formation of difference equations – Solution of difference equations using Z – transform - Sampling of signals – an introduction.

UNIT IV PARTIAL DIFFERENTIAL EQUATIONS 9+3hrs

Formation of PDE – solution of standard type first order equation - Lagrange's line equation – Linear partial differential equations of second order and higher order with Constant coefficients.

UNIT V BOUNDARY VALUE PROBLEMS 9+3hrs

Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

TOTAL: 60hrs

CSE/Sem I

22152S12P-DIGITAL SYSTEMS

AIM:

To learn the fundamental concepts that are useful for designing digital systems or circuits.

OBJECTIVES:

- To introduce number systems and codes
- To introduce basic postulates of Boolean algebra and show the correlation between Boolean expressions
- To introduce the methods for simplifying Boolean expressions
- To outline the formal procedures for the analysis and design of combinational circuits and sequential circuits
- To introduce the concept of memory devices.

UNIT I BOOLEAN ALGEBRA AND LOGIC GATES 9+3

Binary, Octal, Decimal, Hexadecimal-Number base conversions – complements – signed Binary numbers. Binary Arithmetic- Binary codes -Boolean postulates and laws –De-Morgan's Theorem-Principle of Duality- Boolean expression – Boolean function- Minimization of Boolean expressions–Karnaugh map Minimization .

LOGIC GATES: AND, OR, NOT, NAND, NOR, Exclusive – OR and Exclusive – NOR- Implementations of Logic Functions using gates, NAND –NOR implementations

UNIT II. COMBINATIONAL CIRCUITS 9+3

Adders-Subtractors – Serial adder/ Subtractor - Parallel adder/ Subtractor-Carry look ahead adder- Multiplexer/ De multiplexer- Implementation using MUX- encoder / decoder – parity checker – code converters

UNIT III SEQUENTIAL CIRCUIT 9+3

Flip flops SR, JK, T, D and Master slave- Characteristic table and equation - Application table - Edge triggering - Level triggering - Realization of one flip flop using other flip flops - Asynchronous / Ripple counters - Synchronous counters - Modulo - n counter - Classification of sequential circuits - Introduction to shift registers

UNIT IV ASYNCHRONOUS SEQUENTIAL CIRCUITS 9+3

Introduction to asynchronous sequential circuits - primitive state / flow table -
Minimization of primitive state table - state assignment - Excitation table - Excitation map - cycles - Races - Hazards: Static - Dynamic - Essential - Hazards elimination.

UNIT V MEMORY DEVICES 9+3

Classification of memories - RAM organization - Write/Read operation - Memory cycle - Timing wave forms - memory decoding - memory expansion - Static RAM Cell - Bipolar RAM cell - MOSFET RAM cell - Dynamic RAM cell - ROM organization - PROM - EPROM - EEPROM - EAPROM - Programmable Logic Devices - Implementation using ROM - Field Programmable Gate Arrays (FPGA)

TOTAL: 60hrs

22150H13P-DATA STRUCTURES AND ALGORITHMS**AIM:**

To emphasize, the practical application of techniques for analyzing the performance of algorithms and to know fundamentals of data structures.

OBJECTIVES:

- To learn the systematic way of solving problems
- To understand the different methods of organizing large amounts of data
- To efficiently implement solutions for specific problems
- To gain knowledge of various sorting techniques.
- To efficiently implement the different data structures

UNIT-I PROBLEMSOLVING 9+3

Problemsolving-Top-Down Design-Implementation- Verification-Efficiency-Analysis - Sample Algorithms

UNIT II LISTS, STACKS AND QUEUES 9+3

Abstract Data Type (ADT) – The List ADT – The Stack ADT – Queue as ADT

UNIT III TREES 9+3

Binary trees: Operations on binary trees - Applications of binary trees - Binary tree representation - Node representation of binary trees - Implicit array representation of binary tree

UNIT-IV SORTING & SEARCHING 9+3

Preliminaries – Insertion Sort – Heapsort – Mergesort – Quicksort – Bubblesort
Basic Search Techniques – Linear Search – Indexed Sequential Search, Binary Search – Tree Searching – Inserting into a Binary searching tree – Deleting from a Binary Search tree

UNIT-V GRAPHS 9+3

Definitions – Shortest-Path Algorithms – Dijkstra's Algorithm – Minimum Spanning Tree – Prim's Algorithm - Depth first traversal - Application of depth first traversal - Breadth first traversal - Application of BFS.

CSE/Sem I

22150H14P-COMPUTER ARCHITECTURE AND ORGANIZATION

AIM:

To understand the basic structure and organization of digital computer.

OBJECTIVES:

- To have a thorough understanding of operation of a digital computer.
- To list the operation of the arithmetic unit.
- To study in detail the different types of control and the concept of pipelining.
- To understand the hierarchy of memories.
- To study the different ways of communicating with I/O devices and standard I/O interfaces.

UNIT I BASIC STRUCTURE OF COMPUTERS 10+3

Functional units - Basic operational concepts - Bus structures - Software performance - Memory locations and addresses - Memory operations - Instruction and instruction sequencing - Addressing modes - Assembly language

UNIT II ARITHMETIC UNIT 8+3

Addition and subtraction of signed numbers - Design of fast adders - Multiplication of positive numbers - Signed operand multiplication and fast multiplication - Integer division

UNIT III BASIC PROCESSING UNIT 9+3

Fundamental concepts - Execution of a complete instruction - Multiple bus organization - Hardwired control - Microprogrammed control - Pipelining - Basic concepts - Data hazards - Instruction hazards - Superscalar operation.

UNIT IV MEMORY SYSTEM 9+3

Basic concepts - Semiconductor RAMs - ROMs - Speed - size and cost - Cache memories - Performance consideration - Virtual memory - Memory Management requirements - Secondary storage.

UNIT V I/O ORGANIZATION 9+3

Accessing I/O devices - Interrupts - Direct Memory Access - Buses - Interface circuits - Standard I/O Interfaces (PCI, SCSI, USB)

TOTAL: 60hrs

TEXTBOOK:

1. Carl Hamacher, Zvonko Vranesic and Safwat Zaky, 5th Edition "Computer Organization", McGraw-Hill, 2002

22150H15P-PROBLEMSOLVING AND PYTHON PROGRAMMING

AIM:

To introduce the students about object oriented programming and design.

OBJECTIVES:

On completion of the class, a student should be able:

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures – lists, tuples, dictionaries.
- To do input/output with files in Python

UNIT I ALGORITHMIC PROBLEMSOLVING 9

Algorithms building blocks of algorithms (statements, state, control flow, functions), notation (pseudocode, flowchart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in an arranged list, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA, EXPRESSIONS, STATEMENTS 9

Python Interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices,

immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum of array of numbers, linear search, binary search.

UNIT V LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters;
Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing-
list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

UNIT VI FILES, MODULES, PACKAGES 9

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

TOTAL: 45 PERIODS

Text Book: Balagurusamy E, "Object Oriented Programming with C++", 3/E, TMG, 2006.

Reference:

1. Hubbard, "Programming with C++", 2/e, Schaum Outline Series, TMH, 2006.
2. Bjarne Stroustrup, "The C++ Programming Language", Addison Wesley Publications, Second Edition, 1991.
3. Sarang Proonachandra, "Object Oriented Programming with C++", PHI, 2006.
4. Jagadev AK, Rath AM, and Dehuri S, "Object Oriented Programming Using C++", PHI, 2007.

22148S21P-NUMERICALMETHODS

AIM:

Students will develop problem solving skills, with Numerical and Statistical Methods, which can be implemented in I.T. field.

OBJECTIVES:

- Demonstrate knowledge and understanding of numerical methods to solve ordinary differential equations
- Demonstrate knowledge and understanding of numerical methods to solve simple partial differential equations
- Introduce to students numerical methods and scientific computation techniques for dealing with important computational problems

UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 9+3hrs

Solution of equations – Newton Raphson's method, Regula-falsi methods Solution of linear System of equations by Gaussian elimination and Gauss-Jordan methods- Iterative methods: Gauss Jacobi and Gauss-Seidel methods – Eigenvalue of a matrix by power method.

UNIT II INTERPOLATION 9+3hrs

Newton's forward and backward difference formulas – Central difference formula: Bessel's and Stirling's formula - Lagrangian Polynomials – Divided difference method.

UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 9+3hrs

Derivatives from difference tables – Divided differences and finite differences – Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg's method – Double integrals using trapezoidal and Simpson's rules.

UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS

9+3hrs

Single step methods: Taylor series method – Euler and modified Euler methods – Fourth order Runge-Kutta method for solving first and second order equations – Multistep methods: Milne's and Adam's predictor and corrector methods

UNIT V BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 9+3hrs

Finite difference solution of second order ordinary differential equation – Finite difference solution of one dimensional heat equation by explicit and implicit methods – One dimensional wave equation and two dimensional Laplace and Poisson equations.

TOTAL: 60hrs

CSE/SemII

22150H2P-MICROPROCESSORSANDINTERFACING

AIM:

To have an in-depth knowledge of the architecture and programming of 8-bit and 16-bit Microprocessors, Microcontrollers and to study how to interface various peripheral devices with them.

OBJECTIVES:

- To study the architecture and Instruction set of 8085 and 8086
- To develop assembly language programs in 8085 and 8086
- To design and understand multiprocessor configurations
- To study different peripheral devices and their interfacing to 8085/8086.
- To study the architecture and programming of 8051 microcontroller.

UNIT I 8085 CPU 9+3

8085 Architecture – Instruction set – Addressing modes – Timing diagrams – Interrupts – Memory interfacing – Interfacing, I/O devices

UNIT II PERIPHERALS INTERFACING 9+3

Interfacing Serial I/O (8251) – parallel I/O (8255) – Keyboard and Display controller 8279 Interrupt Controller – DMA controller - Bus: RS232C-RS485

UNIT III 8086 CPU 9+3

Intel 8086 Internal Architecture – 8086 Addressing modes - Instruction set - 8086 – Interrupts.

UNIT IV 8086 SYSTEM DESIGN 9+3

8086 signals and timing – MIN/MAX mode of operation – Addressing memory and I/O – System design using 8086

UNIT V 8085 APPLICATIONS 9+3

Stepper motor control – DC motor control – Traffic light control – LCD Controller – Square wave generation – Introduction to microcontroller. - 8051 Architecture.

TOTAL:60Hrs.

22150H23P-DATABASEMANAGEMENTSYSTEMS

AIM:

To know the methodologies in database technology and an introduction to the current trends in this field.

OBJECTIVES:

- To learn the fundamentals of data models.
- To understand the internal storage structures using different file and indexing techniques.
- To know the fundamental concepts of transaction processing- concurrency control techniques and recovery procedure.
- To understand the basic concepts of the emerging trends in the area of distributed DB- and OODB.

UNIT I INTRODUCTION AND CONCEPTUAL MODELING 9+ 3

Introduction to File and Database systems- Database system structure- Data Models- Introduction to Network and Hierarchical Models – ER model- Relational Model- Relational Algebra and Calculus.

UNIT II RELATIONAL MODEL 9+ 3

SQL – Data definition- Queries in SQL- Updates- Views – Integrity and Security – Relational Database design – Functional dependences and Normalization for Relational Databases (up to BCNF).

UNIT III DATA STORAGE AND QUERY PROCESSING 9+ 3

Primary file organization- Secondary storage Devices- Operations on Files- Heap File- Sorted Files- Hashing Techniques – Index Structure for files – Different types of Indexes- B-Tree - Query Processing.

UNIT IV TRANSACTION MANAGEMENT 9+ 3

Transaction Processing – Introduction- Need for Concurrency control- Schedule and Recoverability- Serializability and Schedules – Concurrency Control – Types of Locks- Two Phases locking- Deadlock- Time stamp based concurrency control – Recovery Techniques – Concepts- Immediate Update- Deferred Update - Shadow Paging.

UNIT V CURRENT TRENDS 9+ 3

Object Oriented Databases – Need for Complex Data types- OO data Model- Nested relations- Complex Types- Inheritance Reference Types - Distributed databases- Homogenous and Heterogeneous- Distributed data Storage.

TOTAL: 60Hrs.

CSE/SemII

22150H24P-DESIGNANDANALYSISOFALGORITHMS

AIM:

Thiscourseaimstointroducetheclassicandcomplexalgorithmsinvariousdomains,and techniques for designing and analyzing the efficient algorithms.

OBJECTIVES:

- Toprovethecorrectnessandanalyzetherunningtimeofthebasicalgorithms
- Toapplythealgorithmsanddesigntechniquesetosolveproblems.
- Toanalyzethecomplexitiesofvariousproblemsindifferentdomains.

UNITI BASICCONCEPTSOFALGORITHMS 8+ 3

Introduction – Notion of Algorithm – Fundamentals of Algorithmic Solving – Important Problemtypes – Fundamentals of the Analysis Framework – Asymptotic Notations and Basic Efficiency Classes.

UNITII MATHEMATICAL ASPECTS AND ANALYSIS OF ALGORITHMS 8+3

Mathematical Analysis of Non-recursive Algorithm – Mathematical Analysis of Recursive Algorithm – Example: Fibonacci Numbers – Empirical Analysis of Algorithms – Algorithm Visualization.

UNITIII ANALYSIS OF SORTING AND SEARCHING ALGORITHMS 10+3

Brute Force – Bubble Sort – Sequential Search and Brute-force string matching – Divide and conquer – Merge sort – Quick Sort – Binary Search – Binary tree- Decrease and Conquer – Insertion Sort – Depth first Search and Breadth First Search.

UNITIV ALGORITHMIC TECHNIQUES 10+ 3

Transform and conquer – Presorting – Balanced Search trees – AVL Trees – Heaps and Heap sort – Dynamic Programming – Warshall’s and Floyd’s Algorithm – Optimal Binary Search trees – Greedy Techniques – Prim’s Algorithm – Kruskal’s Algorithm – Dijkstra’s Algorithm – Huffman trees.

UNITV ALGORITHM DESIGN METHODS 9+ 3

Backtracking – n-Queen’s Problem – Hamiltonian Circuit problem – Subset-Sum problem – Branch and bound – Assignment problem – Knapsack problem – Traveling salesman problem.

TOTAL: 60 Hrs.

TEXTBOOKS:

1. Anany Levitin, “Introduction to the Design and Analysis of Algorithms”, Pearson Education Asia, 2003.

22150H22P-PROGRAMMING IN C

OBJECTIVES:

To develop C Programs using basic programming constructs

- To develop C Programs using arrays and strings
- To develop applications in C using functions, pointers and structures
- To do input/output and file handling in C

UNIT I BASICS OF C PROGRAMMING 12

Introduction to programming paradigms – Structure of C program – C programming: Data Types – Storage classes – Constants – Enumeration Constants – Keywords – Operators: Precedence and Associativity – Expressions – Input/output statements, Assignment statements – Decision making statements – Switch statement – Looping statements – Pre-processor directives – Compilation process

UNIT II ARRAYS AND STRINGS 9+3

Introduction to Arrays: Declaration, Initialization – One dimensional array – Example Program: Computing Mean, Median and Mode – Two dimensional arrays – Example Program: Matrix Operations (Addition, ~~1,302~~ing, Determinant and

Transpose)-String operations: length, compare, concatenate, copy- Selection sort, linear and binary search

UNIT III FUNCTIONS AND POINTERS 9+3

Introduction of functions: Function prototype, function definition, function call, Built-in functions (string functions, math functions)- Recursion- Example Program: Computation of Sine series, Scientific calculator using built-in functions, Binary Search using recursive functions- Pointers- Pointer operators- Pointer arithmetic- Arrays and pointers- Array of pointers- Example Program: Sorting of names- Parameter passing: Pass by value, Pass by reference Example Program: Swapping of two numbers and changing the value of a variable using pass by reference

UNIT IV STRUCTURES 9+3

Structure- Nested structures- Pointer and Structures- Array of structures- Example Program using structures and pointers- Self-referential structures- Dynamic memory allocation- Singly linked list- type def

UNIT V FILE PROCESSING 9+3

Files- Types of file processing: Sequential access, Random access- Sequential access file- Example Program: Finding average of numbers stored in sequential access file- Random access file- Example Program: Transaction processing using random access files - Command line arguments

TOTAL: 60 PERIODS

OUTCOMES:

Learners should be able to:

- Develop simple applications in C using basic constructs
- Design and implement applications using arrays and strings
- Develop and implement applications in C using functions and pointers.
- Develop applications in C using structures.
- Design applications using sequential and random access file processing.

CSE/Sem III

22148S31P-DISCRETE MATHEMATICS

AIM:

This course will develop the intuition for discrete mathematics reasoning involving numbers and sets.

OBJECTIVES:

On completing the course, students should be able to

- Write a clear statement of a problem as a theorem in mathematical notation;
- Prove and disprove assertions using a variety of techniques.
- Understand the logic of Propositional and predicate formulas and their relationship to informal reasoning, truth tables, validity.
- Understand the Proving of propositional and predicate formulas in a structured way.
- Know the basic set theory. Relations, graphs, and orders

UNIT I PROPOSITIONAL CALCULUS 10+ 3hrs

Propositions – Logical connectives – Compound propositions – Conditional and bi-conditional propositions – Truth tables – Tautologies and contradictions – Contrapositive – Logical equivalences and implications – DeMorgan's Laws - Normal forms – Principal conjunctive and disjunctive normal forms – Rules of inference – Arguments - Validity of arguments.

UNITII PREDICATECALCULUS 9+3hrs

Predicates – Statement function – Variables – Free and bound variables – Quantifiers – Universe of discourse – Logical equivalences and implications for quantified statements – Theory of inference – The rules of universal specification and generalization – Validity of arguments.

UNITIII SETTHEORY 10+3hrs

Basic concepts – Notations – Subset – Algebra of sets – The power set – Ordered pairs and Cartesian product – Relations on sets – Types of relations and their properties – Relational matrix and the graph of a relation – Partitions – Equivalence relations – Partial ordering – Poset – Hasse diagram – Lattices and their properties – sublattices – Boolean algebra – Homomorphism.

UNITIV FUNCTIONS 7+3hrs

Definitions of functions – Classification of functions – Type of functions – Examples – Composition of functions – Inverse functions – Binary and n-ary operations – Characteristic function of a set – Hashing functions – Recursive functions – Permutation functions.

UNITV GROUPS 9+3hrs

Algebraic systems – Definitions – Examples – Properties – Semigroups – Monoids – Homomorphism – Sub semigroups and Submonoids – Cosets and Lagrange's theorem – Codes and group codes – Basic notions of error correction – Error recovery in group codes.

22150H32P-OPERATINGSYSTEM

AIM:

To understand the functions of an operating system.

OBJECTIVES:

- To have an overview of different types of operating systems.
- To know the components of an operating system.
- To have a knowledge of process management and storage management.
- To know the concepts of I/O and file systems.
- To know the concepts of Distributed Operating System

UNIT I 9

Introduction-Mainframe systems – Desktop Systems – Multiprocessor Systems – Distributed Systems – Clustered Systems – Real Time Systems – Handheld Systems - Hardware Protection - System Components – Operating System Services – System Calls – System Programs - Process Concept – Process Scheduling – Operations on Processes – Cooperating Processes – Inter-process Communication.

UNIT II 9

Threads – Overview – Threading issues - CPU Scheduling – Basic Concepts – Scheduling Criteria – Scheduling Algorithms – Multiple-Processor Scheduling – Real Time Scheduling - The Critical-Section Problem – Synchronization Hardware – Semaphores – Classic problems of Synchronization – Critical regions – Monitors.

UNIT III 9

System Model – Deadlock Characterization – Methods for handling Deadlocks - Deadlock Prevention – Deadlock avoidance – Deadlock detection – Recovery from Deadlocks - Storage Management – Swapping – Contiguous Memory allocation – Paging – Segmentation – Segmentation with Paging.

UNIT IV 9

Virtual Memory – Demand Paging – Process creation – Page Replacement – Allocation of frames – Thrashing - File Concept – Access Methods – Directory Structure – File System Mounting – File Sharing-Protection

File System Structure – File System Implementation – Directory Implementation – Allocation Methods – Free-space Management. Kernel/I/O Subsystems- Disk Structure– Disk Scheduling– Disk Management – Swap-Space Management. Case Study: The Linux System, Windows

CSE/Sem III

22150H33P-ARTIFICIALINTELLIGENCE

AIM:

To create general understanding of major concepts and approaches in knowledge representation, planning, learning, robotics and other AI areas.

OBJECTIVES:

- To study various complex problems solving AI tools like Search and optimization
- To facilitate of logic, Probabilistic methods for uncertain reasoning, Classifiers and statistical learning methods, Neural networks, Control theory & Languages.
- To develop programming skills for AI applications.
- To provide exposure to logic programming with practical topics.

UNIT I INTRODUCTION 8+ 3

Intelligent Agents – Agents and environments – Good behavior – The nature of environments – structure of agents - Problem Solving - problem solving agents – example problems – searching for solutions – uniformed search strategies - avoiding repeated states – searching with partial information.

UNIT II SEARCHING TECHNIQUES 10+ 3

Informed search and exploration – Informed search strategies – heuristic function – local search algorithms and optimistic problems – local search in continuous spaces – online search agents and unknown environments - Structure of problems - Adversarial Search.

UNIT III KNOWLEDGE REPRESENTATION 10+ 3

First order logic – representation revisited – Syntax and semantics for first order logic – Using first order logic – Knowledge engineering in first order logic - Inference in First order logic – prepositional versus first order logic – unification and lifting – forward chaining – backward chaining - Resolution - Knowledge representation - Ontological Engineering - Categories and objects – Actions - Simulation and events - Mental events and mental objects.

UNIT IV LEARNING 9+ 3

Learning from observations - forms of learning - Inductive learning - Learning decision Trees - Ensemble learning - Knowledge in learning – Logical formulation of learning – Explanation based learning – Learning using relevant information – Inductive logic programming - Statistical learning methods - Learning with complete data - Learning with hidden variable .

UNIT V APPLICATIONS 8+ 3

Communication – Communication as action – Formal grammar for a fragment of English – Syntactic analysis – Augmented grammars – Semantic interpretation – Ambiguity and disambiguation – Discourse understanding – Grammar induction .

22150H34P-COMPUTER NETWORKS

AIM:

To introduce the concepts, terminologies and technologies used in modern days data communication and computer networking.

OBJECTIVES:

- To understand the concepts of data communications.
- To study the functions of different layers.
- To introduce IEEE standard employed in computer networking.
- To make the students to get familiarized with different protocols and network components.

UNIT I DATA COMMUNICATIONS 9

Components – Direction of Data flow – networks – Components and Categories – types of Connections – Topologies – Protocols and Standards – ISO/OSI model – Transmission Media – Coaxial Cable – Fiber Optics – Line Coding – Modems – RS232 Interfacing sequences.

UNIT II DATA LINK LAYER 9

Error – detection and correction – Parity – LRC – CRC – Hamming code – flow Control and Error control - stop and wait – go back-N ARQ – selective repeat ARQ- sliding window – HDLC.-LAN-Ethernet IEEE802.3-IEEE802.4-IEEE802.5-IEEE802.11 – FDDI-SONET – Bridges.

UNIT III NETWORK LAYER 9

Internet works – Packet Switching and Datagram approach – IP addressing methods – Subnetting – Routing – Distance Vector Routing – Link State Routing – Routers.

UNIT IV TRANSPORT LAYER 9

Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Quality of services (QoS) – Integrated Services.

UNIT V APPLICATION LAYER 9

Domain Name Space (DNS) – SMTP – FTP – HTTP – WWW – Security – Cryptography.

CSE/Sem III

22150L35P-OPERATING SYSTEMS AND NETWORKING LAB

LIST OF EXERCISE:

OPERATING SYSTEMS:

(Implement the following on LINUX platform. Use C for high level language implementation)

1. Shell programming
 - command syntax
 - write simple functions
 - basic tests
2. Shell programming
 - loops
 - patterns
 - expansions
 - substitutions
3. Write programs using the following system calls of UNIX operating system: fork, exec, getpid, exit, wait, close, stat, opendir, readdir
4. Write programs using the I/O system calls of UNIX operating system (open, read, write, etc)
5. Write C programs to simulate UNIX commands like ls, grep, etc.
6. Implement some memory management schemes

NETWORKING:

1. Simulation of ARP/RARP.
2. Write a program that takes a binary file as input and performs bit stuffing and CRC computation.
3. Simulation of Sliding-Window protocol.
4. Develop a Client-Server application for chat.
5. Develop a Client that contacts a given DNS Server to resolve a given hostname.
6. Write a Client to download a file from a HTTP Server.

22150H41P-SOFTWAREENGINEERINGFUNDAMENTALS**AIM:-**

To makethestudentsunderstandthemethodologiesinpreparingasoftware.

OBJECTIVES:

- Toknowthegenericmodelstostructurethesoftwaredevelopmentprocess.
- Tounderstanddifferentnotionofcomplexityatboththemoduleandsystemlevel.
- Tobeawareofsomewidelyknown design methods.
- Tounderstandtheroleandcontentsof testingactivitiesindifferentlifecyclephases.

UNITI SOFTWAREPROCESS 9

Introduction–S/WEngineeringParadigm– lifecyclemodels (water fall,incremental,spiral, WINWINspiral, evolutionary, prototyping, object oriented) - system engineering – computer based system –verification – validation – life cycle process – development process –system engineering hierarchy.

UNITII SOFTWARE REQUIREMENTS 9

Functionalandnon-functional- user –system–requirement engineeringprocess –feasibilitystudies – requirements – elicitation – validation and management – software prototyping – prototyping in thesoftwareprocess –rapidprototypingtechniques –user interfaceprototyping-S/Wdocument. Analysis and modeling – data, functional and behavioral models – structured analysis and data dictionary.

UNITIII DESIGNCONCEPTSANDPRINCIPLES 9

Design process and concepts – modular design – design heuristic – design model and document.Architectural design – software architecture – data design – architectural design – transform andtransaction mapping– user interfacedesign–user interfacedesignprinciples. Realtiesystems- Realtime software design – system design – real time executives – data acquisition system - monitoringand control system. SCM – Need for SCM – Version control – Introduction to SCM process –Software configuration items.

UNITIV TESTING 9

Taxonomy of softwaretesting – levels – test activities – types of s/wtest – black box testing – testingboundary conditions – structural testing – test coverage criteria based on data flow mechanisms –regression testing – testing in the large. S/W testing strategies – strategic approach and issues - unittesting – integration testing – validation testing – systemtesting and debugging.

UNITV SOFTWAREPROJECTMANAGEMENT 9

Measures and measurements – S/W complexity and science measure – size measure – data and logicstructure measure – information flow measure. Software cost estimation – function point models –COCOMO model- Delphimethod.- Defining a Task Network – Scheduling – Earned Value Analysis–Error Tracking - Software changes – program evolution dynamics – software maintenance – Architectural evolution. Taxonomy of CASE tools.

CSE/SemIV

22150H42P-INTERNET PROGRAMMING

OBJECTIVES:

- To understand different Internet Technologies.
- To learn java-specific web services architecture to design a context-free grammar for any given language.

UNIT I WEBSITE BASICS, HTML5, CSS3, WEB 2.0 9

Web Essentials: Clients, Servers and Communication – The Internet – Basic Internet

protocols – World wide web – HTTP Request Message – HTTP Response Message – Web Clients – Web Servers – HTML5 – Tables – Lists – Image – HTML5 control elements – Semantic elements – Drag and Drop – Audio – Video controls - CSS3 – Inline, embedded and external style sheets – Rule cascading – Inheritance – Backgrounds – Border Images – Colors – Shadows – Text – Transformations – Transitions – Animations.

UNIT II CLIENT SIDE PROGRAMMING 9

Java Script: An introduction to JavaScript – JavaScript DOM Model – Date and Objects – Regular Expressions – Exception Handling – Validation – Built-in objects – Event Handling – DHTML with JavaScript – JSON introduction – Syntax – Function Files – Http Request – SQL

UNIT III SERVER SIDE PROGRAMMING 9

Servlets: Java Servlet Architecture – Servlet Life Cycle – Form GET and POST actions – Session Handling – Understanding Cookies – Installing and Configuring Apache Tomcat Web Server – DATABASE CONNECTIVITY: JDBC perspectives, JDBC program example – JSP: Understanding Java Server Pages – JSP Standard Tag Library (JSTL) – Creating HTML forms by embedding JSP code.

UNIT IV PHP and XML 9

An introduction to PHP: PHP – Using PHP – Variables – Program control – Built-in functions – Form Validation – Regular Expressions – File handling – Cookies – Connecting to Database. XML: Basic XML – Document Type Definition – XML Schema DOM and Presenting XML, XML Parsers and Validation, XSL and XSLT Transformation, News Feed (RSS and ATOM).

UNIT V INTRODUCTION TO AJAX and WEBSERVICES

9

AJAX: Ajax Client Server Architecture-XMLHttpRequest Object- Callback Methods: Web Services: Introduction- Java web services Basics – Creating, Publishing, Testing and Describing a Web services (WSDL)-Consuming a web service, Database Driven web service from an application –SOAP

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Construct a basic website using HTML and Cascading Style Sheets.
- Build a dynamic webpage with validation using JavaScript objects and by applying different event handling mechanisms.
- Develop server-side programs using Servlets and JSP.
- Construct simple web pages in PHP and to represent data in XML format.
- Use AJAX and web services to develop interactive web applications.
- Derive whether a problem is decidable or not.

TEXTBOOKS:

22150H43P-C#AND.NETFRAMEWORK**AIM:**

The goal of this course is to provide students with the knowledge and skills they need to develop C# applications for the Microsoft .NET Platform.

OBJECTIVES:

- An ability to understand C# program structure, language syntax, and implementation details.
- An ability to develop application using C# on .NET framework.

UNIT I INTRODUCTION TO C# 8+3

Introducing C#, Understanding .NET, Overview of C#, Literals, Variables, Data Types, Operators, Expressions, Branching, Looping, Methods, Arrays, Strings, Structures, Enumerations.

UNIT II OBJECT ORIENTED ASPECTS OF C# 9+3

Classes, Objects, Inheritance, Polymorphism, Interfaces, Operator Overloading, Delegates, Events, Errors and Exceptions.

UNIT III APPLICATION DEVELOPMENT ON .NET 8+3

Building Windows Applications, Accessing Data with ADO.NET.

UNIT IV WEB BASED APPLICATION DEVELOPMENT ON .NET 8+3

Programming Web Applications with Web Forms, Programming Web Services.

UNIT V THE CLR AND THE .NET FRAMEWORK**12+3**

Assemblies, Versioning, Attributes, Reflection, Viewing Meta Data, Type Discovery, Reflecting on a Type, Marshaling, Remoting, Understanding Server Object Types, Specifying a Server with an Interface, Building a Server, Building the Client, Using Single Call, Threads.

TOTAL:60hrs**TEXTBOOKS:**

1. E. Balagurusamy, "Programming in C#", Tata McGraw-Hill, 2004. (Unit I, II)
2. J. Liberty, "Programming C#", 2nd ed., O'Reilly, 2002. (Unit III, IV, V)

REFERENCES:

1. Herbert Schildt, "The Complete Reference: C#", Tata McGraw-Hill, 2004.
2. Robinson et al., "Professional C#", 2nd ed., Wrox Press, 2002.
3. Andrew Troelsen, "C# and the .NET Platform", A! Press, 2003.
4. S. Thamarai Selvi, R. Murugesan, "A Textbook on C#", Pearson Education, 2003.

22150L45P-INTERNETPROGRAMMINGLAB

1. Write programs in Java to demonstrate the use of following components: Text fields, buttons, Scrollbar, Choice, List and Check box
2. Write Java program to demonstrate the use of various Layouts like FlowLayout, BorderLayout, GridLayout, GridBagLayout and CardLayout
3. Write programs in Java to create applets incorporating the following features:
4. Create a color palette with matrix of buttons
 - i) Set background and foreground of the control text area by selecting a color from color palette.
 - ii) In order to select foreground or background use check box control as radio buttons
 - iii) To set background images
5. Write programs in Java to do the following:
 - i) Set the URL of another server
 - ii) Download the homepage of the server
 - iii) Display the contents of home page with date, content type, and Expiration date, Last modified and length of the homepage
6. Write programs in Java using sockets to implement the following:
 - i) HTTP request
 - ii) FTP
 - iii) SMTP
 - iv) POP3
7. Write a program in Java for creating simple chat application with datagram sockets and datagram packets.
8. Create a webpage with the following using HTML
 - i) To embed a map in a webpage
 - ii) To fix the hotspots in that map
 - iii) Show all the related information when the hotspots are clicked.
9. Create a webpage with the following:
 - i) Cascading style sheets
 - ii) Embedded style sheets
 - iii) In-line style sheets
 - iv) Use our college information for the webpages

22150H51P-OBJECTORIENTEDANALYSISANDDESIGN**AIM:**

Study and learn the analysis techniques and methodologies.

OBJECTIVES:

- To study the concepts of modeling in object oriented context.
- To learn about the Object Constraint Language.
- To study the Use cases, Interaction Diagrams, Class Diagrams and System Sequence Diagrams.
- To study implementation related issues.
- To study and learn how to apply advanced techniques including Architectural Analysis and Design Patterns.

UNIT I INTRODUCTION 8

An Overview of Object Oriented Systems Development - Object Basics - Object Oriented Systems Development Life Cycle.

UNIT II OBJECTORIENTEDMETHODOLOGIES 12

Rumbaugh Methodology - Booch Methodology - Jacobson Methodology - Patterns - Frameworks - Unified Approach - Unified Modeling Language - Use case - class diagram - Interactive Diagram - Package Diagram - Collaboration Diagram - State Diagram - Activity Diagram.

UNIT III OBJECTORIENTEDANALYSIS 9

Identifying use cases - Object Analysis - Classification - Identifying Object relationships - Attributes and Methods.

UNIT IV OBJECTORIENTEDEDESIGN 8

Design axioms - Designing Classes - Access Layer - Object Storage - Object Interoperability.

UNIT V SOFTWAREQUALITYANDUSABILITY 8

Designing Interface Objects - Software Quality Assurance - System Usability - Measuring User Satisfaction

TOTAL:45hrs

TEXTBOOKS:

1. Ali Bahrami, "Object Oriented Systems Development", Tata McGraw-Hill, 1999 (Unit I, III, IV, V).
2. Martin Fowler, "UML Distilled", Second Edition, PHI/Pearson Education, 2002. (UNIT II)

REFERENCES:

1. Stephen R. Schach, "Introduction to Object Oriented Analysis and Design", Tata McGraw-Hill, 2003.
2. James Rumbaugh, Ivar Jacobson, Grady Booch "The Unified Modeling Language Reference Manual", Addison Wesley, 1999.
3. Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado, "UML Toolkit", OMG Press Wiley Publishing Inc., 2004.

22150H52P-SOFTWARE QUALITY MANAGEMENT

AIM:-

To introduce an integrated approach to software development incorporating quality management methodologies.

OBJECTIVES:

- Software quality models.
- Quality measurement and metrics.
- Quality plan, implementation and documentation.
- Quality tools including CASE tools.
- Quality control and reliability of quality process.
- Quality management system models.
- Complexity metrics and Customer Satisfaction.
- International quality standards – ISO, CMM.

UNIT I INTRODUCTION TO SOFTWARE QUALITY 9+3

Software Quality – Hierarchical model of Boehm and McCall – Quality measurement – Metrics measurement and analysis – Gilb's approach – GQM Model

UNIT II SOFTWARE QUALITY ASSURANCE 9+3

Quality tasks – SQA plan – Teams – Characteristics – Implementation – Documentation – Reviews and Audits

UNIT III QUALITY CONTROL AND RELIABILITY 9+3

Tools for Quality – Ishikawa's basic tools – CASE tools – Defect prevention and removal – Reliability models – Rayleigh model – Reliability growth models for quality assessment

UNIT IV QUALITY MANAGEMENT SYSTEM 9+3

Elements of QMS – Rayleigh model framework – Reliability Growth models for QMS – Complexity metrics and models – Customer satisfaction analysis

UNIT V QUALITY STANDARDS 9+3

Need for standards – ISO 9000 Series – ISO 9000-3 for software development – CMM and CMMI – Six Sigma concepts.

TOTAL: 60hrs

TEXTBOOKS:

1. Allan C. Gillies, "Software Quality: Theory and Management", Thomson Learning, 2003. (UI : Ch 1-4; UV: Ch 7-8)
2. Stephen H. Kan, "Metrics and Models in Software Quality Engineering", Pearson Education (Singapore) Pte Ltd., 2002. (UI : Ch 3-4; UIII : Ch 5-8 ; UIV: Ch 9-11)

3. Mary Beth Chrissis, Mike Konrad and Sandy Shrum, "CMMI", Pearson Education (Singapore) Pte Ltd, 2003.
4. ISO 9000-3 "Notes for the application of the ISO 9001 Standard to software development".

CSE/Sem V

22150H53P-GRAPHICSANDMULTIMEDIA

AIM:

Provide an opportunity for students to represent, design and implement two dimensional and three dimensional objects and introducing different media used in multimedia systems.

OBJECTIVES:

- Explain two and three dimensional concepts and their applications.
- Identify all techniques related to modern graphics programming concepts.
- Identify the media used in multimedia systems and to assess their relative advantages and disadvantages relative to both user and system points of view.
- Explain the interaction problems introduced by multimedia (e.g., compression and synchronization).

UNIT I OUTPUT PRIMITIVES 9+3

Introduction-Line-Curve and Ellipse Drawing Algorithms-Attributes-Two-Dimensional Geometric Transformations – Two-Dimensional Clipping and Viewing

UNIT II THREE-DIMENSIONAL CONCEPTS 9+3

Three-Dimensional Object Representations-Three-Dimensional Geometric and Modeling Transformations – Three-Dimensional Viewing – Color models – Animation.

UNIT III MULTIMEDIA SYSTEMS DESIGN 9+3

An Introduction- Multimedia applications – Multimedia System Architecture-Evolving technologies for Multimedia – Defining objects for Multimedia systems – Multimedia Data interface standards – Multimedia Databases.

UNIT IV MULTIMEDIA FILE HANDLING 9+3

Compression & Decompression – Data & File Format standards – Multimedia I/O technologies - Digital voice and audio – Video image and animation – Full motion video – Storage and retrieval Technologies.

UNIT V HYPERMEDIA 9+3

Multimedia Authoring & User Interface – Hypermedia messaging - Mobile Messaging – Hypermedia message component – Creating Hypermedia message – Integrated multimedia message standards – Integrated Document management – Distributed Multimedia Systems.

TOTAL: 60hrs

TEXTBOOKS:

1. Donald Hearn and M. Pauline Baker, "Computer Graphics C Version", Pearson Education, 2003. (UNIT I : Chapters 1 to 6; UNIT 2: Chapter 9 – 12, 15, 16)
2. Prabat Kandleigh and Kiran Thakrar, "Multimedia Systems and Design", PHI, 2003. (U

NIT 3 to 5)

22150L55P-SOFTWARE DEVELOPMENT LAB

IMPLEMENTATION OF PROJECT USING SOFTWARE ENGINEERING TECHNIQUES:

1. PROJECT PLANNING
2. SOFTWARE REQUIREMENT ANALYSIS
3. DATA MODELLING & IMPLEMENTATION
4. SOFTWARE TESTING
5. SOFTWARE DEBUGGING

LIST OF EXPERIMENTS

Develop the following software using software Engineering methodology:

1. Online Railway reservations system
2. Simulator software for parallel processing operation
3. Payroll processing application
4. Inventory system
5. Simulator software for compiler operation
6. Automating the Banking process
7. Software for game
8. Library management system
9. Text editor
10. Create a dictionary
11. Telephone directory
12. Create an E-Book of your choice.

CSE/Sem VI

22150S61P-CRYPTOGRAPHY AND NETWORK SECURITY

OBJECTIVES:

- To understand Cryptography Theories, Algorithms and Systems.
- To understand necessary Approaches and Techniques to build protection mechanisms in order to secure computer networks..

UNIT I INTRODUCTION

Security trends - Legal, Ethical and Professional Aspects of Security, Need for Security at Multiple levels, Security Policies - Model of network security - Security attacks, services and mechanisms - OSI security architecture - Classical encryption techniques: substitution techniques, transposition techniques, steganography - Foundation of modern cryptography: perfect security - information theory - product cryptosystem - cryptanalysis.

UNIT II SYMMETRIC KEY CRYPTOGRAPHY 9

MATHEMATICS OF SYMMETRIC KEY CRYPTOGRAPHY: Algebraic structures - Modular arithmetic - Euclid's algorithm - Congruence and matrices - Groups, Rings, Fields - Finite fields - **SYMMETRIC KEY CIPHERS:** DES – Block cipher Principles of DES – Strength of DES – Differential and linear cryptanalysis - Block cipher design principles – Block cipher mode of operation – Evaluation criteria for AES – Advanced Encryption Standard - RC4 – Key distribution.

UNIT III PUBLIC KEY CRYPTOGRAPHY 9

MATHEMATICS OF ASYMMETRIC KEY CRYPTOGRAPHY: Primes – Primality Testing – Factorization – Euler's totient function, Fermat's and Euler's Theorem - Chinese Remainder Theorem – Exponentiation and logarithm - **ASYMMETRIC KEY CIPHERS:** RSA cryptosystem – Key distribution – Key management – Diffie-Hellman key exchange - ElGamal cryptosystem – Elliptic curve arithmetic - Elliptic curve cryptography.

UNIT IV MESSAGE AUTHENTICATION AND INTEGRITY 9

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC – SHA – Digital signature and authentication protocols – DSS - Entity Authentication: Biometrics, Passwords, Challenge Response protocols - Authentication applications - Kerberos, X.509

UNIT V SECURITY PRACTICE AND SYSTEM SECURITY 9

Electronic Mail security – PGP, S/MIME – IP security – Web Security - **SYSTEM SECURITY:** Intruders – Malicious software – viruses – Firewalls.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Understand the fundamentals of network security, security architecture, threats and vulnerabilities
- Apply the different cryptographic operations of symmetric cryptographic algorithms
- Apply the different cryptographic operations of public key cryptography
- Apply the various Authentication schemes to simulate different applications.
- Understand various Security practices and System security standards

TEXTBOOKS:

CommunicationinaPUBLIC World, PrenticeHall, ISBN0-13-046019-2

22150H62P-ADVANCED JAV A PROGRAMMING**AIM:**

To explore, advanced Java language features and packages.

OBJECTIVES:

- Use Java to implement OOAD.
- to have in-depth knowledge about Object serialization, reflection, RMI, Swing, JAR files.
- an ability to write Servlets and Java Server Pages.
- Gain an in-depth understanding of database programming in Java using JDBC.
- Learn Java's security model and how to do security programming in Java.

UNIT I JAV A FUNDAMENTALS 9+3

Java I/O streaming – filter and pipe streams – Byte Code interpretation -reflection– Dynamic Reflexive Classes – Threading – Java Native Interfaces- Swing.

UNIT II NETWORK PROGRAMMING IN JAV A 9+3

Sockets – secure sockets – custom sockets – UDP datagrams – multicast sockets – URL classes – Reading Data from the server – writing data – configuring the connection – Reading the header – telnet application – Java Messaging services

UNIT III APPLICATIONS IN DISTRIBUTED ENVIRONMENT 9+3

Remote method Invocation – activation models – RMI custom sockets – Object Serialization – RMI – IIOP implementation – CORBA – IDL technology – Naming Services – CORBA programming Models - JAR file creation

UNIT IV MULTI-TIER APPLICATION DEVELOPMENT 9+3

Server side programming – servlets – Java Server Pages - Applet to Applet communication – applet to Servlet communication - JDBC – Using BLOB and CLOB objects – storing Multimedia data into databases – Multimedia streaming applications – Java Media Framework.

UNIT V ENTERPRISE APPLICATIONS 9+3

Server Side Component Architecture – Introduction to J2EE – Session Beans – Entity Beans – Persistent Entity Beans – Transactions.

TOTAL: 60hrs

TEXTBOOKS:

UNITIINTRODUCTION

9

Testing as an Engineering Activity – Role of Process in Software Quality – Testing as aProcess –Basic Definitions – Software Testing Principles – The Tester’s Role in aSoftware DevelopmentOrganization – Origins of Defects – Defect Classes –TheDefectRepositoryandTest Design – DefectExamples – Developer/Tester Support for Developing a Defect Repository.

UNITITESTCASEDESIGN

9

Introduction to Testing Design Strategies – The Smarter Tester – Test Case DesignStrategies – UsingBlack Box Approach to Test CaseDesign RandomTesting –Requirements based testing – positiveandnegative testing — Boundary ValueAnalysis – decision tables - Equivalence Class Partitioning state-based testing– causeeffect graphing – error guessing - compatibility testing – user documentationtesting –domain testing Using White–Box Approach to Test design – Test Adequacy Criteria –statictesting vs. structural testing – codefunctional testing - Coverageand Control FlowGraphs – CoveringCode Logic – Paths – Their Role in White–box Based Test Design –code complexity testing –Evaluating Test Adequacy Criteria.

UNITIIILEVELSOFTESTING

9

TheNeed for Levels of Testing – Unit Test – Unit Test Planning –Designingthe Unit Tests, TheTestHarness – Running the Unit tests and Recording results – Integration tests – Designing IntegrationTests – Integration Test Planning – scenario testing –defect bash elimination -System Testing – typesof systemtesting - Acceptancetesting –performancetesting - Regression Testing–internationalizationtesting – ad-hoc testing -Alpha – Beta Tests – testing OO systems – usability and accessibility testing

People and organizational issues in testing – organization structures for testing teams – testing services

- Test Planning – Test Plan Components – Test Plan Attachments – role of three groups in Test Planning and Policy Development – Introducing the test specialist – Skills needed by a test specialist – Building a Testing Group

UNIT V CONTROLLING AND MONITORING

Software test automation – skills needed for automation – scope of automation – design and architecture for automation – requirements for a test tool – challenges in automation – Test metrics and measurements – project, progress and productivity metrics – Status Meetings – Reports and Control Issues – Criteria for Test Completion – SCM – Types of reviews – Developing a review program – Components of Review Plans – Reporting Review Results. – evaluating software quality – defect prevention – testing maturity model

CSE/Sem VI**22150L65P-JAVA PROGRAMMING LAB****LIST OF PRACTICALS****AIM:**

To learn and practice the basics of JAVA language

OBJECTIVES:

1. To learn & practice the Object Oriented concepts like inheritance, Overloading etc.
2. To learn & practice Interfaces and Packages
3. To learn & practice Java applet programming

JAVABASICS

1. Programs illustrating various data types in Java
2. Programs illustrating class, objects and methods
3. Programs for addition and multiplication of Matrices

4. Programs illustrating Overloading in Java
5. Programs illustrating the implementation of Various forms of Inheritance (Single, Hierarchical, Multilevel)
6. Programs illustrating Overriding methods in Java
7. Programs illustrating Exception Handling
8. Programs to manipulate strings

JAVA INTERFACES, PACKAGES and THREADS

9. Programs illustrating Interfaces in Java
10. Programs to create Packages in Java
11. Programs illustrating Threads in Java

JAVA APPLETS

12. Programs to write applet to draw the various shapes
13. Programs to manipulate labels, lists, text fields and panels

CSE/Sem VII

22150S71P-TOTAL QUALITY MANAGEMENT

AIM:

Learning various TQM techniques to tackle and analyze problems in improving quality with particular reference to their own working environment.

OBJECTIVE:

- Develop the ability to adopt new techniques and synthesize new knowledge.
- Analyze basic operational and research data using TQM techniques in a systematic way.
- Cooperate efficiently and effectively in a team to apply TQM techniques and tools for accomplishing pre-determined goals.
- Identify opportunities for improvement in the business, service, administrative and manufacturing environments of applying the methodology such as Six Sigma, Kaizen, and other appropriate tools to achieve breakthrough improvements in these processes.

UNIT I FUNDAMENTALS 9

Definition of quality – Dimensions of quality – Quality planning – Quality costs – Analysis techniques for quality costs – Basic concepts of total quality management – Historical review – Principles of TQM – Leadership – Concepts – Role of senior management – Quality council – Quality statements – Strategic planning – Deming philosophy – Barriers to TQM implementation.

UNIT II TQM PRINCIPLES 9

Customer Satisfaction – Customer Perception of Quality – Customer Complaints – Service Quality – Customer Retention – Employee Involvement – Motivation – Empowerment – Teams – Recognition and Reward – Performance Appraisal – Benefits – Continuous Process Improvement – Juran Trilogy
 – PDCA Cycle – 5S – Kaizen – Supplier Partnership – Partnering – Sourcing – Supplier Selection
 – Supplier Rating – Relationship Development – Performance Measures – Basic Concepts – Strategy
 – Performance Measure.

UNIT III STATISTICAL PROCESS CONTROL (SPC) 9

The Seven Tools of Quality – Statistical Fundamentals – Measures of Central Tendency and dispersion – Population and Sample – Normal Curve – Control Charts for Variables and Attributes – Process Capability – Concept of Six Sigma – New Seven Management Tools.

Benchmarking – Reasons to Benchmark – Benchmarking Process – Quality Function Deployment(QFD)
– House of Quality – QFD Process – Benefits – Taguchi Quality Loss Function – Total
Productive Maintenance (TPM) – Concept – Improvement Needs – FMEA – Stages of FMEA.

UNIT V QUALITY SYSTEMS

9

Need for ISO 9000 and Other Quality Systems – ISO 9000:2000 Quality System – Elements –
Implementation of Quality System – Documentation – Quality Auditing – TS 16949 – ISO 14000 –
Concept – Requirements and Benefits.

Total: 45 hrs

22150H72P-GRID AND CLOUD COMPUTING

OBJECTIVES:

The students should be made to:

- Understand how Grid computing helps in solving large scale scientific problems.
- Gain knowledge on the concept of virtualization that is fundamental to cloud computing.
- Learn how to program the grid and the cloud.
- Understand the security issues in the grid and the cloud environment.

UNIT I INTRODUCTION 9

Evolution of Distributed computing: Scalable computing over the Internet – Technologies for network based systems – clusters of cooperative computers – Grid computing Infrastructures – cloud computing - service oriented architecture – Introduction to Grid Architecture and standards – Elements of Grid – Overview of Grid Architecture.

UNIT II GRID SERVICES 9

Introduction to Open Grid Services Architecture (OGSA) – Motivation – Functionality Requirements – Practical & Detailed view of OGSA/OGSI – Data intensive grid service models – OGSA services.

UNIT III VIRTUALIZATION 9

Cloud deployment models: public, private, hybrid, community – Categories of cloud computing: Everything as a service: Infrastructure, platform, software - Pros and Cons of cloud computing – Implementation levels of virtualization – virtualization structure – virtualization of CPU, Memory and I/O devices – virtual clusters and Resource Management – Virtualization for data center automation.

UNITIV PROGRAMMINGMODEL 9

Opensourcegridmiddlewarepackages–GlobusToolkit(GT4)Architecture,Configuration–
Usage ofGlobus – Maincomponents and Programming model- Introductionto Hadoop
Framework–
Mapreduce,Inputsplitting,mapandreducefunctions,specifyinginputandoutputparameters,
configuringandrunningajob– DesignofHadoopfilesystem,HDFSconcepts, command line
and java interface, dataflow ofFile read & File write.

UNITV SECURITY 9

TrustmodelsforGridsecurityenvironment–AuthenticationandAuthorizationmethods–
Gridsecurityinfrastructure–CloudInfrastructuresecurity:network,hostandapplicationlevel–
aspects ofdata security, provider data and its security, Identityand access management
architecture, IAM practices inthe cloud, SaaS, PaaS, IaaS availability inthe cloud, Key
privacy issues in the cloud.

TOTAL:45PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Apply techniques to solve large scale scientific problems.
- Apply the concept of virtualization.
- Use the grid and cloud toolkits.
- Apply these security models in the grid and the cloud environment.

22150H73P-MIDDLEWARETECHNOLOGIES

AIM:

Students are able to gain in-depth knowledge popular middleware platforms.

OBJECTIVES:

Students can able to

- Understand that middleware is an intermediary software layer between the application and the operating system, which encapsulates the heterogeneity of the underlying communication network, operating system or hardware platform.
- Acquire the knowledge of integrating these systems by using middleware technologies.

UNIT I CLIENT/SERVER CONCEPTS 9+3

Client server – File server – Database server – Group server – Object server – Web server – Middleware – General middleware – Service specific middleware – Client/Server building blocks – RPC – Messaging – Peer-to-Peer.

UNIT II EJB ARCHITECTURE 9+3

EJB – EJB Architecture – Overview of EJB software architecture – View of EJB – Conversation – Building and deploying EJB – Roles in EJB.

UNIT III EJB APPLICATIONS 9+3

EJB session beans – EJB entity beans – EJB clients – EJB deployment – Building an application with EJB.

UNIT IV CORBA 9+3

CORBA – Distributed systems – Purpose – Exploring CORBA alternatives – Architecture overview – CORBA and networking model – CORBA object model – IDL – ORB – Building an application with CORBA.

UNITVCOM**9+3**

COM – Data types – Interfaces – Proxy and stub – Marshalling – Implementing server / client – Interface pointers – object creation – Invocation – Destruction – Comparison COM and CORBA – Introduction to .NET – Overview of .NET architecture – Marshalling – Remoting.

TOTAL:60hrs**TEXTBOOKS:**

CSE/SemIV/Electives**SEMESTER-IV(ELECTIVEI)****22150E44AP-THEORY OF COMPUTATION****AIM:**

To introduce basic computation models and the necessary mathematical techniques to express computer science problems as mathematical statements and to formulate proofs

OBJECTIVES:

- To focus on the study of abstract models of computation.
- To assess via formal reasoning what could be achieved through computing when they are using it to solve problems in science and engineering.
- To introduce fundamental questions about problems, such as whether they can or not be computed, and if they can, how efficiently.

UNIT I**AUTOMATA****9+3**

Introduction to formal proof – Additional forms of proof – Inductive proofs – Finite Automata (FA) – Deterministic Finite Automata (DFA) – Non-deterministic Finite Automata (NFA) – Finite Automata with Epsilon transitions.

UNIT II**REGULAR EXPRESSIONS AND LANGUAGES****9+3**

Regular Expression – FA and Regular Expressions – Proving languages not to be regular – Closure properties of regular languages – Equivalence and minimization of Automata.

UNIT III**CONTEXT-FREE GRAMMAR AND LANGUAGES****9+3**

Context-Free Grammar (CFG) – Parse Trees – Ambiguity in grammars and languages – Definition of the Pushdown Automata – Languages of a Pushdown Automata – Equivalence of Pushdown Automata and CFG, Deterministic Pushdown Automata.

UNITIV PROPERTIESOFCONTEXT-FREELANGUAGES 9+3

Normal forms for CFG – Pumping Lemma for CFL – Closure Properties of CFL – Turing Machines – Programming Techniques for TM.

UNITV UNDECIDABILITY 9+3

A language that is not Recursively Enumerable (RE) – An undecidable problem that is RE – Undecidable problems about Turing Machine – Post's Correspondence Problem- The classes P and NP.

TOTAL:60hrs

22150E44BP-DATA WAREHOUSING AND DATA MINING

OBJECTIVES:

- To understand data warehouse concepts, architecture, business analysis and tools
- To understand data pre-processing and data visualization techniques
- To study algorithms for finding hidden and interesting patterns in data
- To understand and apply various classification and clustering techniques using tools.

UNIT I DATA WAREHOUSING, BUSINESS ANALYSIS AND ON-LINE

9 ANALYTICAL PROCESSING (OLAP)

Basic Concepts-Data Warehousing Components–Building a Data Warehouse–Database Architectures for Parallel Processing–Parallel DBMS Vendors-Multidimensional Data Model–Data Warehouse Schemas for Decision Support, Concept Hierarchies - Characteristics of OLAP Systems–Typical OLAP Operations, OLAP and OLTP.

UNIT II DATA MINING–INTRODUCTION 9

Introduction to Data Mining Systems–Knowledge Discovery Process–Data Mining Techniques–Issues – applications- Data Objects and attribute types, Statistical description of data, Data Preprocessing–Cleaning, Integration, Reduction, Transformation and discretization, Data Visualization, Data similarity and dissimilarity measures.

UNIT III DATA MINING-FREQUENT PATTERN ANALYSIS 9

Mining Frequent Patterns, Associations and Correlations–Mining Methods–Pattern Evaluation Method–Pattern Mining in Multilevel, Multi Dimensional Space–Constraint Based Frequent Pattern Mining, Classification using Frequent Patterns

UNIT IV CLASSIFICATION AND CLUSTERING 9

Decision Tree Induction - Bayesian Classification – Rule Based Classification–Classification by Back Propagation–Support Vector Machines–Lazy Learners–Model Evaluation and Selection-Techniques to improve Classification Accuracy.

Clustering Techniques–Cluster analysis-Partitioning Methods-Hierarchical Methods–Density Based Methods-Grid Based Methods–Evaluation of clustering–Clustering high dimensional data-Clustering with constraints, Outlier analysis-outlier detection methods.

UNIT V WEKA TOOL 9

Datasets–Introduction, Iris plants database, Breast cancer database, Auto imports database-Introduction to WEKA, The Explorer–Getting started, Exploring the explorer, Learning algorithms, Clustering algorithms, Association–rule learners.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Design a Data warehouse system and perform business analysis with OLAP tools.
- Apply suitable pre-processing and visualization techniques for data analysis
- Apply frequent pattern and association rule mining techniques for data analysis
- Apply appropriate classification and clustering techniques for data analysis

22150E44CP-PROFESSIONALETHICSINENGINEERING

OBJECTIVES:

- To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNIT I HUMAN VALUES 10

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS 9

Senses of ‘Engineering Ethics’ – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg’s theory – Gilligan’s theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION 9

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS 8

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk – Respect for Authority – Collective Bargaining – Confidentiality – Conflict of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT V GLOBAL ISSUES

Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of Conduct – Corporate Social Responsibility.

TOTAL: 45 PERIODS

OUTCOMES:**At the end of the course, the students should be able to:**

- To apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

CSE/Sem IV/Electives

22150E44DP-ADVANCED DATABASES**AIM:**

To have strong knowledge on Database Management Systems, Database technologies, an application-oriented, system-oriented approach towards database design.

OBJECTIVES:

- Be able to design high-quality relational databases and database applications.
- Have developed skills in advanced visual & conceptual modeling and database design.
- Be able to translate complex conceptual data models into logical and physical database designs.
- Have developed an appreciation of emerging database trends as they apply to semi-structured data, the internet, and object-oriented databases.

UNIT I DISTRIBUTED DATABASES 9+3

Distributed DBMS Concepts and Design – Introduction – Functions and Architecture of DDBMS – Distributed Relational Database Design – Transparency in DDBMS – Distributed Transaction Management – Concurrency control – Deadlock Management – Database recovery – The X/Open Distributed Transaction Processing Model – Replication servers – Distributed Query Optimisation - Distribution and Replication in Oracle.

UNIT II OBJECT ORIENTED DATABASES 9+3

Object Oriented Databases – Introduction – Weakness of RDBMS – Object Oriented Concepts Storing Objects in Relational Databases – Next Generation Database Systems – Object Oriented Data models – OODBMS Perspectives – Persistence – Issues in OODBMS – Object Oriented Database Management System Manifesto – Advantages and Disadvantages of OODBMS – Object Oriented Database Design – OODBMS Standards and Systems – Object Management Group – Object Database Standard ODMG – Object Relational DBMS – Postgres-Comparison of ORDBMS and OODBMS.

UNIT III WEB DATABASES 9+3

Web Technology And DBMS – Introduction – The Web – The Web as a Database Application Platform – Scripting languages – Common Gateway Interface – HTTP Cookies – Extending the Web Server – Java – Microsoft's Web Solution Platform – Oracle Internet Platform – Semi structured Data and XML – XML Related Technologies – XML Query Languages

UNIT IV INTELLIGENT DATABASES 9+3

Enhanced Data Models For Advanced Applications – Active Database Concepts And Triggers – Temporal Database Concepts – Deductive databases – Knowledge Databases.

UNIT V CURRENT TRENDS 9+3

Mobile Database – Geographic Information Systems – Genome Data Management – Multimedia Database – Parallel Database – Spatial Databases - Database administration – Data Warehousing and Data Mining.

TOTAL: 60hrs

SEMESTER -V(ELECTIVEII)
22150E54AP-ADHOCANDSENSORNETWORKS

OBJECTIVES:

The students should be made to:

- Understand the design issues in ad hoc and sensor networks.
- Learn the different types of MAC protocols.
- Be familiar with different types of ad hoc routing protocols.
- Be exposed to the TCP issues in ad hoc networks.
- Learn the architecture and protocols of wireless sensor networks.

UNIT I INTRODUCTION 9

Fundamentals of Wireless Communication Technology – The Electromagnetic Spectrum – Radio propagation Mechanisms – Characteristics of the Wireless Channel – mobile ad hoc networks (MANETs) and wireless sensor networks (WSNs) : concepts and architectures.
Application of Ad Hoc and Sensor networks. Design Challenges in Ad hoc and Sensor Networks.

UNIT II MAC PROTOCOLS FOR AD HOC WIRELESS NETWORKS 9

Issues in designing a MAC Protocol - Classification of MAC Protocols - Contention based protocols - Contention based protocols with Reservation Mechanisms - Contention based protocols with Scheduling Mechanisms – Multi channel MAC - IEEE 802.11

UNIT III ROUTING PROTOCOLS AND TRANSPORT LAYER IN AD HOC WIRELESS NETWORKS 9

Issues in designing a routing and Transport Layer protocol for Ad hoc networks - proactive routing, reactive routing (on-demand), hybrid routing - Classification of Transport Layer solutions - TCP over Ad hoc wireless Networks.

UNIT IV WIRELESS SENSOR NETWORKS (WSNs) AND MAC PROTOCOLS 9

Single node architecture: hardware and software components of a sensor node - WSN Network architecture: typical network architectures - data relaying and aggregation strategies - MAC layer protocols: self-organizing, Hybrid TDMA/FDMA and CSMA based MAC - IEEE 802.15.4.

UNIT V WSN ROUTING, LOCALIZATION & QOS 9

Issues in WSN routing – OLSR - Localization – Indoor and Sensor Network Localization - absolute and relative localization, triangulation - QOS in WSN - Energy Efficient Design - Synchronization - Transport Layer issues

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of the course, the students should be able to:

- Explain the concepts, network architectures and applications of ad hoc and wireless sensor networks
- Analyze the protocol design issues of ad hoc and sensor networks
- Design routing protocols for ad hoc and wireless sensor networks with respect to some protocol design issues
- Evaluate the QoS related performance measurements of ad hoc and sensor networks

22150E54BP-PRINCIPLES OF COMPILER DESIGN

AIM:

To understand the design and implementation of a simple compiler.

OBJECTIVES:

- To understand the functions of the various phases of a compiler.
- To learn the overview of the design of lexical analyzer and parser.
- To study the design of the other phases in detail.
- To learn the use of compiler construction tools.

UNIT I INTRODUCTION TO COMPILING 9+3

Compilers – Analysis of the source program – Phases of a compiler – Cousins of the Compiler – Grouping of Phases – Compiler construction tools – Lexical Analysis – Role of Lexical Analyzer – Input Buffering – Specification of Tokens.

UNIT II SYNTAX ANALYSIS 9+3

Role of the parser – Writing Grammars – Context-Free Grammars – Top Down parsing – Recursive Descent Parsing – Predictive Parsing – Bottom-up parsing – Shift Reduce Parsing – Operator Precedent Parsing – LR Parsers – SLR Parser – Canonical LR Parser – LALR Parser.

UNIT III INTERMEDIATE CODE GENERATION 9+3

Intermediate languages – Declarations – Assignment Statements – Boolean Expressions – Case Statements – Back patching – Procedure calls.

UNIT IV CODE GENERATION**9+3**

Issues in the design of code generator – The target machine – Runtime Storage management – Basic Blocks and Flow Graphs – Next-use Information – A simple Code generator – DAG representation of Basic Blocks – Peephole Optimization.

UNIT V CODE OPTIMIZATION AND RUNTIME ENVIRONMENTS 9+3

Introduction – Principal Sources of Optimization – Optimization of basic Blocks – Introduction to Global Data Flow Analysis – Runtime Environments – Source Language issues – Storage Organization – Storage Allocation strategies – Access to non-local names – Parameter Passing.

TOTAL: 60hrs**TEXTBOOK:**

22150E54CP- DISTRIBUTED SYSTEMS**AIM:**

This course discusses the fundamental aspects on design of distributed systems, and the principles underlying them with an emphasis on fault tolerance and security.

OBJECTIVES:

- To understand distributed computing system models and introduction to distributed databases.
- To have an in-depth knowledge of distributed algorithms.
- To understand asynchronous shared memory model, mutual exclusion, resource allocation, consensus, asynchronous network model, basic asynchronous network algorithms, shared memory Vs networks and introduction to parallel distributed processing.
- To understand the various security algorithms in distributed environment.

UNIT I INTRODUCTION 9+3

Introduction to Distributed systems-examples of distributed systems, challenges-architectural models-fundamental models - Introduction to interprocess communications-external data representation and marshalling- client server communication-group communication – Case study: IPC in UNIX

UNIT II DISTRIBUTED OBJECTS AND FILE SYSTEM 9+3

Introduction-Communication between distributed objects-Remote procedure call-Events and notifications-Java RMI case Study-Introduction to DFS-File service architecture-Sun network filesystem-Introduction to Name Services-Name services and DNS-Directory and directory services

UNIT III DISTRIBUTED OPERATING SYSTEMS SUPPORT 11+3

The operating system layer – Protection - Process and threads - Communication and invocation - Operating system architecture - Introduction to time and global states - Clocks, Events and Process states - Synchronizing physical clocks - Logical time and logical clocks - Global states - Distributed debugging – Distributed mutual exclusion.

UNIT IV TRANSACTION AND CONCURRENCY CONTROL – DISTRIBUTED TRANSACTIONS 8+3

Transactions – Nested transaction – Locks - Optimistic concurrency control - Timestamp ordering - Comparison of methods for concurrency control - Introduction to distributed transactions - Flat and nested distributed transactions - Atomic commit protocols - Concurrency control in distributed transactions - Distributed deadlocks - Transaction recovery

UNIT – V SECURITY AND REPLICATION 8+3

Overview of security techniques - Cryptographic algorithms – Digital signatures - Cryptography pragmatics – Replication-System model and group communications – Fault tolerant services – Highly available services – Transactions with replicated data

TOTAL: 60hrs

TEXTBOOK:

1. George Coulouris, Jean Dollimore, Tim Kindberg “Distributed Systems Concepts and Design” Third Edition – 2002- Pearson Education Asia.

REFERENCES:

2. Mukesh Singhal, Ohio State University, Columbus “Advanced Concepts In Operating Systems” McGraw-Hill Series in Computer Science, 1994.

22150E54DP-MOBILE COMPUTING**AIM:**

The aim of the course is to make student to be familiar with the basics concept of Mobile Communication and mobile devices .Focus will be on cellular mobile system units and different aspects of cellular communication.

OBJECTIVES:

- To present necessary concepts for Mobile Communication.
- Understanding different mobile devices and system.
- Understanding the Cellular System design.
- Study Co-channel and Non Co-channel Interference.
- Understanding channel assignment and handoff.
- Study Digital Cellular System.

UNIT I WIRELESS COMMUNICATION FUNDAMENTALS 9+3

Introduction – Wireless transmission – Frequencies for radio transmission – Signals – Antennas – Signal Propagation – Multiplexing – Modulations – Spread spectrum – MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks.

UNIT II TELECOMMUNICATION NETWORKS 11+3

Telecommunications systems – GSM – GPRS – DECT – UMTS – IMT-2000 – Satellite Networks – Basics – Parameters and Configurations – Capacity Allocation – FAMA and DAMA – Broadcast Systems – DAB – DVB.

UNIT III WIRELESS LAN 9+3

Wireless LAN – IEEE 802.11 – Architecture – services – MAC – Physical layer – IEEE 802.11a – 802.11b standards – HIPERLAN – Blue Tooth.

UNIT IV MOBILE NETWORK LAYER 9+3

Mobile IP – Dynamic Host Configuration Protocol – Routing – DSDV – DSR – Alternative Metrics.

UNIT V TRANSPORT AND APPLICATION LAYERS 7+3

Traditional TCP – Classical TCP improvements – WAP, WAP 2.0.

Total: 60hrs**TEXTBOOKS:**

CSE/SemVI/Electives

SEMESTER-
VI(ELECTIVEI
II)

22160E64AP-PRINCIPLESOFMANAGEMENT

AIM:

To understand the basic principles of management.

OBJECTIVES:

Knowledge on the principles of management is essential for all kinds of people in all kinds of organizations. After studying this course, students will be able to have a clear understanding of the managerial functions like planning, organizing, staffing, leading and controlling. Students will also gain some basic knowledge on international aspect of management.

UNIT I HISTORICAL DEVELOPMENT 9

Definition of Management – Science or Art – Management and Administration – Development of Management Thought – contribution of Taylor and Fayol – Functions of Management – Types of Business Organization.

UNIT II PLANNING 9

Nature & Purpose – Steps involved in planning – Objective – Setting Objectives – Process of Managing by Objectives – Strategies, Policies & Planning premise – Forecasting – Decision-making.

UNIT III ORGANISING 9

Nature and purpose – Formal and informal organization – Organization Chart – Structure and Process – Departmentation by difference strategies – Line and Staff authority – Benefits and Limitations – Selection Process – Techniques – HRD – Managerial Effectiveness.

UNIT IV DIRECTING 9

Scope – Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment – Communication – Process of Communication – Barriers and Breakdown – Effective Communication – Electronic media in Communication.

UNIT V CONTROLLING 9

System and process of Controlling – Requirements for effective control – The Budget as Control Technique – Information Technology in Controlling – Use of computers in handling the information – Productivity – Problems and Management – Control of overall Performance

22150E64BP-UNIXINTERNALS**AIM:**

This course focuses on bending the learning curve for those system programmers who need to cast free software kernels.

OBJECTIVES:

- An ability to understand design and implementation of a multi-programmable operating system.
- A good understanding of the fundamentals of a monolithic kernel.
- A basic-to-intermediate experience in kernel and driver/module programming.

UNIT I 9

General Review of the System-History-System structure-User Perspective-Operating System Services-Assumptions About Hardware. Introduction to the Kernel-Architecture-System Concepts-Data Structures- System Administration.

UNIT II 9

The Buffer Cache-Headers-Buffer Pool-Buffer Retrieval-Reading and Writing Disk Blocks-Advantages and Disadvantages. Internal Representation of Files-Inodes-Structure-Directories-PathName to Inode- Super Block-Inode Assignment-Allocation of Disk Blocks -Other File Types.

UNIT III 9

System Calls for the File System-Open-Read-Write-Lseek-Close-Create-Special files Creation-Change Directory and Change Root-Change Owner and Change Mode- Stat-Fstat-Pipes-Dup-Mount-Unmount-Link-Unlink-File System Abstraction-Maintenance.

UNIT IV 9

The System Representation of Processes-States-Transitions-System Memory-Context of a Process-Saving the Context-Manipulation of a Process Address Space-Sleep-Process Control-signals-Process Termination-Awaiting-Invoking other Programs-The Shell-System Boot and the INIT Process.

UNIT V 9

Memory Management Policies-Swapping-Demand Paging-a Hybrid System-I/O Subsystem-Driver Interfaces-Disk Drivers-Terminal Drivers.

TOTAL:45hrs**TEXTBOOK:**

22150E64CP-GRAPH THEORY AND APPLICATIONS

OBJECTIVES:

- To understand fundamentals of graph theory.
- To study proof techniques related to various concepts in graphs.
- To explore modern applications of graph theory.

UNIT I **9**

Introduction - Graph Terminologies - Types of Graphs - Sub Graph- Multi Graph - Regular Graph - Isomorphism - Isomorphic Graphs - Sub-graph - Euler graph - Hamiltonian Graph - Related Theorems.

UNIT II **9**

Trees - Properties - Distance and Centres - Types - Rooted Tree - Tree Enumeration - Labeled Tree - Unlabeled Tree - Spanning Tree - Fundamental Circuits - Cut Sets - Properties - Fundamental Circuit and Cut-set - Connectivity - Separability - Related Theorems.

UNIT III **9**

Network Flows - Planar Graph - Representation - Detection - Dual Graph - Geometric and Combinatorial Dual - Related Theorems - Digraph - Properties - Euler Digraph.

UNIT IV **9**

Matrix Representation - Adjacency matrix - Incidence matrix - Circuit matrix - Cut-set matrix - Path Matrix - Properties - Related Theorems - Correlations. Graph Coloring - Chromatic Polynomial - Chromatic Partitioning - Matching - Covering - Related Theorems.

UNIT V **9**

Graph Algorithms - Connectedness and Components - Spanning Tree - Fundamental Circuits - Cut Vertices - Directed Circuits - Shortest Path - Applications overview.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Understand the basic concepts of graphs, and different types of graphs
- Understand the properties, theorems and be able to prove theorems.
- Apply suitable graph model and algorithm for solving applications.

22150E64CP-GRAPHTHEORYANDAPPLICATIONS**OBJECTIVES:**

- To understand fundamentals of graph theory.
- To study proof techniques related to various concepts in graphs.
- To explore modern applications of graph theory.

UNIT I 9

Introduction - Graph Terminologies - Types of Graphs - Sub Graph- Multi Graph - Regular Graph - Isomorphism - Isomorphic Graphs - Sub-graph - Euler graph - Hamiltonian Graph -Related Theorems.

UNIT II 9

Trees -Properties- Distance and Centres - Types -Rooted Tree--Tree Enumeration- Labeled Tree - Unlabeled Tree -Spanning Tree - Fundamental Circuits-Cut Sets -Properties- Fundamental Circuit and Cut-set-Connectivity-Separability-Related Theorems.

UNIT III 9

Network Flows-Planar Graph-Representation-Detection-Dual Graph- Geometric and Combinatorial Dual- Related Theorems - Digraph - Properties - Euler Digraph.

UNIT IV 9

Matrix Representation-Adjacency matrix-Incidence matrix-Circuit matrix-Cut-set matrix - Path Matrix-Properties-Related Theorems-Correlations.Graph Coloring- Chromatic Polynomial- Chromatic Partitioning - Matching - Covering - Related Theorems.

UNIT V 9

Graph Algorithms- Connectedness and Components- Spanning Tree- Fundamental Circuits- Cut Vertices- Directed Circuits- Shortest Path - Applications overview.

TOTAL:45PERIODS**OUTCOMES:****At the end of the course, the students should be able to:**

- Understand the basic concepts of graphs, and different types of graphs
- Understand the properties, theorems and be able to prove theorems.
- Apply suitable graph model and algorithm for solving applications.

CSE/Sem VI/Electives

22150E64DP-PROGRAMMING PARADIGMS

AIM:

Develop a greater understanding of the issues involved in programming language design and implementation

OBJECTIVES:

- Develop an in-depth understanding of functional, logic, and object-oriented programming paradigms.
- Implement several programs in languages other than the one emphasized in the core curriculum (Java/C++).
- Understand design/implementation issues involved with variable allocation and binding, control flow, types, subroutines, parameter passing.
- Develop an understanding of the compilation process.

UNIT I OBJECT-ORIENTED PROGRAMMING – FUNDAMENTALS 9

Review of OOP - Objects and classes in Java – defining classes – methods - access specifiers – static members – constructors – finalize method – Arrays – Strings – Packages – JavaDoc comments

UNIT II OBJECT-ORIENTED PROGRAMMING – INHERITANCE 9

Inheritance – class hierarchy – polymorphism – dynamic binding – final keyword – abstract classes – the Object class – Reflection – interfaces – object cloning – inner classes – proxies

UNIT III EVENT-DRIVEN PROGRAMMING 9

Graphics programming – Frame – Components – working with 2D shapes – Using color, fonts, and images – Basics of event handling – event handlers – adapter classes – actions – mouse events – AWT event hierarchy – introduction to Swing – Model-View- Controller design pattern – buttons – layout management – Swing Components

UNITIV GENERICPROGRAMMING 9

Motivationfor genericprogramming–genericclasses –generic methods–genericcodeandvirtual machine–inheritanceandgenerics –reflectionandgenerics –exceptions–exceptionhierarchy–throwing and catching exceptions – StackTrace Elements - assertions – logging

UNITV CONCURRENTPROGRAMMING 9

Multi-threadedprogramming–interruptingthreads–threadstates–threadproperties–thread synchronization–thread-safeCollections–Executors–synchronizers–threadsandevent-drivenprogramming.

CSE/SemVII/Electives

SEMESTER-VII(ELECTIVEVI)

22150E73AP-HIGHSPEEDNETWORKS

AIM:

Thiscourseprovidesintroductiontoemerginghighspeednetworktechnologiesandfacilitates thestudentsidentifywherethenewtechnologycanbeusedtoenhanceperformanceofbusinessnetworks.

OBJECTIVES:

- Goodunderstandingofpacket-switchednetworkingconceptsandprinciplesofoperation.
- GoodunderstandingofInternetprotocolsandarchitectures(e.g.,IPprotocolstack).
- Solidfoundationincomputeroperatingsystemsfundamentals.
- Abilitytoperformindependentresearch,analyzefindingsinhighspeednetworks.

UNITI HIGHSPEEDNETWORKS 9

FrameRelayNetworks –Asynchronoustransfer mode– ATMProtocolArchitecture,ATMlogicalConnection,ATMCell–ATMServiceCategories– AAL.HighSpeedLAN’s:FastEthernet, GigabitEthernet, Fibre Channel – Wireless LAN’s: applications, requirements – Architecture of 802.11

UNIT II CONGESTION AND TRAFFIC MANAGEMENT 8

Queuing Analysis- Queuing Models – Single Server Queues – Effects of Congestion – Congestion Control – Traffic Management – Congestion Control in Packet Switching Networks – Frame Relay Congestion Control.

UNIT III TCP AND ATM CONGESTION CONTROL 12

TCP Flow control – TCP Congestion Control – Retransmission – Timer Management – Exponential RTO backoff – Karn's Algorithm – Window management – Performance of TCP over ATM. Traffic and Congestion control in ATM – Requirements – Attributes – Traffic Management Framework, Traffic Control – ABR traffic Management – ABR rate control, RM cell formats, ABR Capacity allocations – GFR traffic management.

UNIT IV INTEGRATED AND DIFFERENTIATED SERVICES 8

Integrated Services Architecture – Approach, Components, Services – Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ – Random Early Detection, Differentiated Services

UNIT V PROTOCOLS FOR QoS SUPPORT 8

RSVP – Goals & Characteristics, Data Flow, RSVP Operations, Protocol Mechanisms – Multiprotocol Label Switching – Operations, Label Stacking, Protocol details – RTP – Protocol Architecture, Data Transfer Protocol, RTCP.

TOTAL: 45hrs

22150E73BP-INFORMATION RETRIEVAL TECHNIQUES

OBJECTIVES:

- To understand the basics of Information Retrieval.
- To understand machine learning techniques for text classification and clustering.
- To understand various search engine system operations.
- To learn different techniques of recommender system.

UNIT I INTRODUCTION 9

Information Retrieval – Early Developments – The IR Problem – The User's Task – Information versus Data Retrieval - The IR System – The Software Architecture of the IR System – The Retrieval and Ranking Processes - The Web – The e-Publishing Era – How the web changed Search – Practical Issues on the Web – How People Search – Search Interfaces Today – Visualization in Search Interfaces.

UNIT II MODELING AND RETRIEVAL EVALUATION 9

Basic IR Models - Boolean Model - TF-IDF (Term Frequency/Inverse Document Frequency) Weighting - Vector Model – Probabilistic Model – Latent Semantic Indexing Model – Neural Network Model – Retrieval Evaluation – Retrieval Metrics – Precision and Recall – Reference Collection – User-based Evaluation – Relevance Feedback and Query Expansion – Explicit Relevance Feedback.

UNIT III TEXT CLASSIFICATION AND CLUSTERING 9

A Characterization of Text Classification – Unsupervised Algorithms: Clustering – Naïve Text Classification – Supervised Algorithms – Decision Tree – k-NN Classifier – SVM Classifier – Feature Selection or Dimensionality Reduction – Evaluation metrics – Accuracy and Error – Organizing the classes – Indexing and Searching – Inverted Indexes – Sequential Searching – Multi-dimensional Indexing.

UNIT IV WEB RETRIEVAL AND WEB CRAWLING 9

The Web – Search Engine Architectures – Cluster based Architecture – Distributed Architectures – Search Engine Ranking – Link based Ranking – Simple Ranking Functions – Learning to Rank – Evaluations – Search Engine Ranking – Search Engine User Interaction – Browsing – Applications of a Web Crawler – Taxonomy – Architecture and Implementation – Scheduling Algorithms – Evaluation.

UNIT V RECOMMENDER SYSTEM 9

Recommender Systems Functions – Data and Knowledge Sources – Recommendation Techniques – Basics of Content-based Recommender Systems – High Level Architecture – Advantages and Drawbacks of Content-based Filtering – Collaborative Filtering – Matrix factorization models – Neighborhood models.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

- Use an open source search engine framework and explore its capabilities
- Apply appropriate method of classification or clustering.
- Design and implement innovative features in a search engine.
- Design and implement a recommender system.

22150E73CP-SOFTWAREPROJECTMANAGEMENT

AIM:

Software Project Management provides insight to the importance of careful project management

OBJECTIVES:

- Understand Project planning and management
- Identify Client management and project definition
- Understand testing based approach to development
- Team management and ongoing schedule tracking

UNIT1 SOFTWAREMANAGEMENT

9

Conventional Software Management - The Waterfall Model - Conventional Software Management Performance. Evolution of Software Economics - Pragmatic Software Cost Estimation. Reducing Software Product Size - Languages - Object-Oriented Methods and Visual Modeling - Reuse. Improving Software Processes - Team Effectiveness - Automation through Software Environments - Achieving Required Quality. Modern Software Management - Transitioning to an Iterative Process

UNIT2 SOFTWAREMANAGEMENTPROCESSFRAMEWORK

9

Life-Cycle Phases - Engineering and Production Stages - Inception Phase - Elaboration Phase - Construction Phase - Transition Phase. Artifacts of the Process - Artifact Sets - Management Set - Engineering Sets - Artifact Evolution over the Life Cycle - Test Artifacts - Management Artifacts - Engineering Artifacts - Pragmatic Artifacts. Model-Based Software Architectures - Management Perspective - Technical Perspective. Workflows of the Process - Software Process Workflows - Iteration Workflows - Checkpoints of the Process.

UNIT3 SOFTWAREMANAGEMENTDISCIPLINES

9

Iterative Process Planning - Work Breakdown Structures - Conventional WBS Issues - Planning Guidelines - Cost and Schedule Estimating Process - Iteration Planning Process. Project Organizations and Responsibilities - Line-of-Business Organizations - Project Organizations - Evolution of Organizations. Process Automation - Tools: Automation Building Blocks - Project Environment - Round-Trip Engineering - Change Management. Project Control and Process Instrumentation - Seven Core Metrics - Management Indicators - Quality Indicators - Pragmatic Software Metrics - Metrics Automation

UNIT4 PROJECTPROFILES 9

Continuous Integration - Early Risk Resolution - Evolutionary Requirements - Teamworkamong Stakeholders - Top 10 Software Management Principles - Software Management BestPractices - Next-Generation Software Economics - Next-Generation Cost Models - ModernSoftware Economics -ModernProcessTransitions

UNIT5PROJECTEXECUTIONANDCLOSURE 9

Review Process – Planning - Overview and Preparation - Group Review Meeting - Reworkand Follow-up–Guidelines forReviews inProjects - AnalysisandControlGuidelines – CaseStudies. Project Monitoring and Control – ProjectTracking - Activities Tracking - DefectTracking - Issues Tracking - Status Reports - Milestone Analysis. DefectAnalysis andPrevention - Process Monitoring and Audit. Project Closure – Analysis - Analysis Report

22150E73DP-CYBERFORENSICS

OBJECTIVES:

- Tolearncomputerforensics
- Tobecomefamiliarwithforensicstools
- Tolearntoanalyzeandvalidateforensicsdata.

UNITI INTRODUCTIONTOCOMPUTERFORENSICS 9

Introduction to Traditional Computer Crime, Traditional problems associated with ComputerCrime. IntroductiontoIdentityTheft &IdentityFraud.TypesofCFtechniques -Incident andincident response methodology - Forensic duplication and investigation. Preparation for IR:Creating response tool kit and IR team. - Forensics TechnologyandSystems- UnderstandingComputer Investigation – Data Acquisition

UNITII EVIDENCECOLLECTIONANDFORENSICSTOOLS 9

Processing Crime and Incident Scenes – Working with Windows and DOSSystems.Current Computer Forensics Tools: Software/ Hardware Tools.

UNITIII ANALYSISANDVALIDATION 9

ValidatingForensicsData–DataHidingTechniques–PerformingRemoteAcquisition–
NetworkForensics – EmailInvestigations – CellPhone and Mobile Devices Forensics

UNITIV ETHICAL HACKING 9

IntroductiontoEthicalHacking-FootprintingandReconnaissance-ScanningNetworks-
Enumeration - System Hacking - Malware Threats - Sniffing

UNITV ETHICALHACKINGINWEB 9

SocialEngineering-DenialofService-SessionHijacking-HackingWebservers–Hacking
WebApplications–SQLInjection-HackingWirelessNetworks-HackingMobilePlatforms.

22248S11A-HIGHER MATHEMATICS

LTPC3
104

AIM

To extend student's mathematical maturity and ability to deal with abstraction and to introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems.

OBJECTIVES

At the end of the course, students would

- Have knowledge of the concepts needed to test the logic of a program.
- Have gained knowledge which has application in expert system, in database and a basic for the prolog language.
- Have an understanding in identifying patterns on many levels.
- Be aware of a class of functions which transform a finite set into another finite set which relates to input output functions in computer science.
- Be exposed to concepts and properties of algebraic structures such as semigroups, monoids and groups.

UNIT I SETS, RELATIONS AND FUNCTIONS 9

Basic Concepts – Relationships between sets-Operations on sets-Principles of inclusion and exclusion – Minterms and Maxterms of a set – Relations partial ordering relation-Equivalence relation-Binary relations-Cyclic order relation – $a \equiv b \pmod{m}$ relations: Partitions sets – Hasse diagram- functions: Properties- Composition - inverse function

UNIT II LOGIC 9

Propositional logic – Logical connectivity's-Truth table-Normal forms(Connective and disjunctive)-Predicate logic-Universal and existential quantifiers induction.

UNIT III COMBINATORICS 9

Basic of counting-counting arguments-Pigeonhole principle- Permutations and combinations- Recursion and Recurrence relations - Generating functions.

UNIT IV MODELLING COMPUTATION AND LANGUAGES 9

Finite state machines-Deterministic and Non-Deterministic finite state machines-Turing Machines-Formal Languages-Classes of Grammars-Type_0 – Context Sensitive-Context-Free-Regular Grammars-Ambiguity.

UNIT V LATTICE AND BOOLEAN ALGEBRA 9

Partial order relation, poset-lattices, Hasse diagram-Boolean Algebra

Total No of periods: 45

22250H12-MODERN OPERATING SYSTEM

LTPC4
004

AIM:

To have a thorough knowledge of processes, scheduling concepts, memory management, I/O and file systems, multimedia operating system and recent operating systems.

OBJECTIVES:

- To have an overview of different types of operating systems.
- To know the components of an operating system.
- To have a thorough knowledge of process management.
- To have a thorough knowledge of storage management.
- To know the concepts of I/O and file systems.
- To know the concepts of multimedia operating systems.

UNIT I

9

Introduction – computer hardware review – operating system zoo - Operating System Concepts - System Calls - Operating System Structure -. Process And Threads : Processes – Threads - Interprocess Communication - Scheduling.

Unit II

9

Memory Management Memory Abstraction: Address Spaces, No Memory Abstraction - Virtual Memory - Page Replacement Algorithms - Modeling Page Replacement Algorithms - Design Issues For Paging Systems – Segmentation. File Systems: File Directories File System Implementation

Unit III

9

Deadlocks - Introduction To Deadlocks - The Ostrich Algorithm - Deadlock Detection And Recovery - Deadlock Avoidance - Deadlock Prevention - Other Issues – Input/output Principles of I/O Hardware – Principles of I/O Software – I/O Software Layers – Disks – Clocks – Thin Clients.

Unit IV

9

Multiple processor systems - multiprocessors - multicomputers - virtualization - distributed systems - multimedia operating systems . Multimedia files - video compression audiocompression – multimedia scheduling - disk scheduling for multimedia.

Unit V

9

Case Study – LINUX, WINDOWS VISTA, SYMBIAN OS

Total: 45hrs

TEXTBOOK:

3. Charles Crowley, "Operating systems: A Design Oriented Approach", Tata McGraw Hill, 1999.

22250H13-MACHINELEARNINGTECHNIQUES

L T PC4004

AIM:

The main objective of this paper is to make the student to know the need of Machine Learning Techniques.

OBJECTIVES:

To introduce students to the basic concepts and techniques of Machine Learning.
To have a thorough understanding of the Supervised and Unsupervised learning techniques
To study the various probability based learning techniques
To understand graphical models of machine learning algorithms

UNIT I INTRODUCTION	9
Learning – Types of Machine Learning – Supervised Learning – The Brain and the Neuron – Design a Learning System – Perspectives and Issues in Machine Learning – Concept Learning Task – Concept Learning as Search – Finding a Maximally Specific Hypothesis – Version Spaces and the Candidate Elimination Algorithm – Linear Discriminants – Perceptron – Linear Separability – Linear Regression.	
UNIT II LINEAR MODELS	9
Multi-layer Perceptron – Going Forwards – Going Backwards: Back Propagation Error – Multi-layer Perceptron in Practice – Examples of using the MLP – Overview – Deriving Back-Propagation – Radial Basis Functions and Splines – Concepts – RBF Network – Curse of Dimensionality – Interpolations and Basis Functions – Support Vector Machines.	
UNIT III TREE AND PROBABILISTIC MODELS	9
Learning with Trees – Decision Trees – Constructing Decision Trees – Classification and Regression Trees – Ensemble Learning – Boosting – Bagging – Different ways to Combine Classifiers – Probability and Learning – Data into Probabilities – Basic Statistics – Gaussian Mixture Models – Nearest Neighbor Methods – Unsupervised Learning – Kmeans Algorithms – Vector Quantization – Self Organizing Feature Map	
UNIT IV DIMENSIONALITY REDUCTION AND EVOLUTIONARY MODELS	9
Dimensionality Reduction – Linear Discriminant Analysis – Principal Component Analysis – Factor Analysis – Independent Component Analysis – Locally Linear Embedding – Isomap – Least Squares Optimization – Evolutionary Learning – Genetic Algorithms – Genetic Offspring: – Genetic Operators – Using Genetic Algorithms – Reinforcement Learning – Overview – Getting Lost Example – Markov Decision Process	
UNIT V GRAPHICAL MODELS	9
Markov Chain Monte Carlo Methods – Sampling – Proposal Distribution – Markov Chain Monte Carlo – Graphical Models – Bayesian Networks – Markov Random Fields – Hidden Markov Models – Tracking Methods	

Total: 45hrs

22250H14–ADHOCANDSENSORNETWORK

LTPC4
004

AIM:

To understand the current and emerging applications of the ad hoc sensor networks.

OBJECTIVE:

To understand

- A broad overview of the state of wireless and ad hoc networking.
- The overview of the physical, networking and architectural issues of ad hoc networks.
- The technologies that will enable the next generation of ad hoc networks and the proliferation of ubiquitous computing.
- The sensor networks and the unique set of design challenges that they introduce.

UNIT I AD-HOC MAC 9

Introduction – Issues in Ad-Hoc Wireless Networks. MAC Protocols – Issues, Classification of MAC protocols, Multichannel MAC & Power control MAC protocol.

UNIT II AD-HOC NETWORK ROUTING & TCP 9

Issues – Classification of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc – Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.

UNIT III WSN-MAC 9

Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

UNIT IV WSN ROUTING, LOCALIZATION & QoS 9

Issues in WSN routing – OLSR, AODV. Localization – Indoor and Sensor Network Localization. QoS in WSN.

UNIT V MESH NETWORKS 9

Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

Total: 45 hrs

22250H15-ADVANCED DATA STRUCTURES AND ALGORITHMS

LTPC3
104

AIM:

To make the learner understand the Analysis of algorithms and Data Structures.

OBJECTIVES:

To Understand

- The Different Heap Structures, Search Structures and Multimedia Structures.
- The various coding scheduling and algorithms.
- The various multimedia structures.

UNIT I FUNDAMENTALS: 9+3

Mathematical Induction - Asymptotic Notations - Properties of Big-oh Notation - Conditional Asymptotic Notation - Algorithm Analysis - Amortized Analysis - NP-Completeness - NP-Hard - Recurrence Equations - Solving Recurrence Equations - Memory Representation of Multi-dimensional Arrays - Time-Space Tradeoff.

UNIT II HEAP STRUCTURES: 9+3

Min/Max Heaps - Deaps - Leftist Heaps - Binomial Heaps - Fibonacci Heaps - Skew Heaps - Lazy-Binomial Heaps.

UNIT III SEARCH STRUCTURE: 9+3

Binary Search Trees - AVL Trees - Red-Black trees - Multi-way Search Trees - B-Trees - Splay Trees - Tries.

UNIT IV MULTIMEDIA STRUCTURES: 9+3

Segment Trees - k-d Trees - Point Quad Trees - MX-Quad Trees - R-Trees - TV-Trees.

UNIT V ALGORITHMS: 9+3

Huffman Coding - Convex Hull - Topological Sort - Tree Vertex Splitting - Activity Networks - Flow Shop Scheduling - Counting Binary Trees - Introduction to Randomized Algorithms.

Total: 60hrs

1. Creation of HTML pages with frames, links, tables and other tags.
2. Usage of internal and external CSS along with HTML pages.
3. Client side Programming
 - i. Javascript for displaying date and comparing two dates.
 - ii. Form Validation including text field, radio buttons, checkboxes, list box and other controls.
4. Usage of ASP/JSP objects response, Request, Application, Session, Server, ADO etc.
 - i. Writing online applications such as shopping, railway/air/bus ticket reservations system with set of ASP/JSP pages.
 - ii. Using sessions and cookies as part of the web application.
5. Writing Servlet Program using HTTP Servlet.
6. Any online application with database access.
7. Creation of XML document for a specific domain.
8. Writing DTD or XML schema for the domain specific XML document.
9. Parsing an XML document using DOM and SAX Parsers.
10. Sample web application development in the open source environment.

22250H21-MIDDLEWARETECHNOLOGIES

LTPC3
104

AIM:

The aim of the course is to teach the role of middleware in the distributed environment and its common services.

OBJECTIVES:

- To study the set of services that a middleware system constitutes of.
- To understand how middleware facilitates the development of distributed applications in heterogeneous environments.
- To study how it helps to incorporate application portability, distributed application component interoperability and integration.
- To learn the object oriented middleware basics through the example of the following CORBA objects.
- To understand the basics of Webservices that is the most often-used middleware technique.

UNIT- I 9+3

Introduction : What is a distributed system- Client server Architecture- Multi-tier Architecture- Middleware - Classification of middleware- Event based middleware- Object based Middleware - Message based middleware and its Principal functions- Introduction to concepts of database middleware.

UNIT- II 9+3

RPC & message Passing middleware- Introduction to procedure calls- Principles of RPC Architecture- Structure of Communication - Java RMI

UNIT- III 9+3

Other middleware: Introduction to EJB- Introduction to JDBC & ODBC **Interface Definition Language:** Introduction to specification - IDL Identifiers- Attributes type correction - Classes- Arrays- Documentation - Any type- Modules - Interfaces- Exception handling - pre Compiler Directives - OO Design using IDL.

UNIT- IV 9+3

CORBA: CORBA 2 Standard- Standard Object model- CORBA Architecture- CORBA Client and Object Implementation- Interface & Implementation repository- CORBA Services- Key Issues- Naming Services - Relationships- Event Services- life Cycle services- Object Query Services- properties Services- Time Services- CORBA facilities & CORBA Domains.

UNIT -V 9+3

COM: Classes- Objects- Query Interface- Dynamic Composition- Apartments- In process Activation - Server Lifetime- Server Lifetime- COM Security- Access Control- Token management- Introduction to DCOM.

Total: 60hrs

22250H22-OBJECTORIENTEDSOFTWAREENGINEERING

AIM:

To learn the advanced software engineering principles and methodologies for effective software development.

OBJECTIVES:

- To learn about software prototyping, analysis and design.
- To learn UML and its usage.
- Case studies to apply the principles.

UNIT-1 INTRODUCTION 8

Software Engineering Paradigms - Software Development process models - Project & Process - Project management – Process & Project metrics - Object Oriented concepts & Principles.

UNIT-2 PLANNING&SCHEDULING 9

Software prototyping - Software project planning – Scope – Resources - Software Estimation - Empirical Estimation Models-Planning-Risk Management - Software Project Scheduling – Object Oriented Estimation & Scheduling.

UNIT-3 ANALYSIS&DESIGN 12

Analysis Modeling - Data Modeling - Functional Modeling & Information Flow-Behavioral Modeling-Structured Analysis - Object Oriented Analysis - Domain Analysis-Object oriented Analysis process - Object Relationship Model - Object Behaviour Model. Design Concepts & Principles - Design Process - Design Concepts - Modular Design – Design Effective Modularity- Introduction to Software Architecture - Data Design – Transform Mapping – Transaction Mapping – OOD - Design System design process- Object design process -Design Patterns.

UNIT-4 IMPLEMENTATION&TESTING 8

Top-Down, Bottom-Up, object oriented product Implementation & Integration. Software testing methods-White Box, Basis Path-Control Structure –Black Box-Unit Testing- Integration testing- Validation & System testing. Testing OOA & OOD models-Object oriented testing strategies.

UNIT- 5 MAINTENANCE 8

Maintenance process-System documentation-program evolution dynamics-Maintenance costs-Maintainability measurement – Case Studies The laboratory shall include development of systems applying the Software Engineering principles and methods for specific applications.

Total:45 hrs

22250H23-INTERNETOFTHINGS

LTPC4
004

AIM:

To introduce the student to various IOT techniques.

OBJECTIVES:

- To understand the fundamentals of Internet of Things
- To learn about the basics of IOT protocols
- To build a small low cost embedded system using Raspberry Pi.

UNIT I INTRODUCTION TO IoT 9

Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - Domain Specific IoTs - IoT and M2M - IoT System Management with NETCONF-YANG-IoT Platforms Design Methodology

UNIT II IoT ARCHITECTURE 9

M2M high – level ETSI architecture- IETF architecture for IoT- OGC architecture- IoT Reference model- Domain model- information model- functional model- communication model- IoT Reference architecture To apply the concept to Internet of Things, in the real world scenario.

UNIT III IoT PROTOCOLS 9

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BAC Net Protocol – Modbus – Zigbee Architecture – Network layer – 6LoWPAN – CoAP – Security

UNIT IV BUILDING IoT WITH RASPBERRY PI & ARDUINO 9

Building IOT with RASPBERRY PI-IoT Systems - Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device - Building blocks - Raspberry Pi-Board - Linux on Raspberry Pi – Raspberry Pi Interfaces – Programming Raspberry Pi with Python- Other IoT Platforms- Arduino.

UNIT V CASE STUDIES AND REAL-WORLD APPLICATIONS 9

Real world design constraints- Applications- Asset management, Industrial automation, smart grid, Commercial building automation, Smart cities- participatory sensing- Data Analytics for IoT – Software & Management Tools for IoT Cloud Storage Models & Communication APIs – Cloud for IoT- Amazon Web Services for IoT.

22250L26-.NETTECHNOLOGIESLAB

Develop the following in ASP.NET or VB.NET.

1. Query text box and Displaying records
2. Display records by using database
3. Data list link control
4. Data binding using dropdown list control
5. Data grid paging

Develop the following in C#.NET.

1. Demonstrate UseOfVirtual and override keyword in C# with a simple program.
2. Write a program in C# to implement Stack operations.
3. Write a program to demonstrate Operator overloading.
4. Demonstrate arrays of interface types with a C# program.
5. Write a program in C# to build a class which implements an interface which already exists.

22250H31-SOFTWAREPROJECTMANAGEMENT

AIM:

SoftwareProjectManagementprovides insighttotheimportanceofcarefulproject management

OBJECTIVES:

- UnderstandProject planningandmanagement.
- IdentifyClientmanagementandprojectdefinition.
- Understandtestingbasedapproachto development.
- Teammanagementandongoingscheduletracking.

UNITI FUNDAMENTALS 9

ConventionalSoftwareManagement–EvolutionofSoftwareEconomics–ImprovingSoftwareEconomics – Conventional versus Modern Software Project Management.

UNITII SOFTWAREMANAGEMENTPROCESSFRAMEWORK 9

LifecyclePhases–ArtifactsoftheProcess–ModelBasedSoftware Architectures–WorkflowsoftheProcess – Checkpoints of the Process.

UNITIII SOFTWAREMANAGEMENTDISCIPLINES 9

IterativeProcessPlanning –OrganizationandResponsibilities–ProcessAutomation–ProcessControland Process Instrumentation – Tailoring the Process.

UNITIV MANAGEDANDOPTIMIZEDPROCESS 9

DataGatheringand Analysis–PrinciplesofDataGathering–DataGatheringProcess–SoftwareMeasures – Data Analysis – Managing Software Quality – Defect Prevention.

UNITV CASESTUDIES 9

COCOMOCostEstimationModel–ChangeMetrics–CCPDS–R.

Total:45hrs

SEMESTER-I-ELECTIVE-I22250E16A-MULTIMEDIASYSTEMS

AIM:

To impart knowledge on Multimedia system and design.

OBJECTIVES:

- To study the graphic techniques and algorithms.
- To study the multimedia concepts and various I/O technologies

UNIT I Introduction 9

Line-Curve and Ellipse Drawing Algorithms – Attributes – Two-Dimensional Geometric Transformations – Two-Dimensional Clipping and Viewing.

UNIT II Three-Dimensional Concepts 9

Three-Dimensional Object Representations – Three-Dimensional Geometric and Modeling Transformations – Three-Dimensional Viewing – Color models – Animation.

UNIT III Multimedia Systems Design 9

An Introduction – Multimedia applications – Multimedia System Architecture – Evolving technologies for Multimedia – Defining objects for Multimedia systems – Multimedia Data interface standards – Multimedia Databases.

UNIT IV Multimedia File Handling 9

Compression & Decompression – Data & File Format standards – Multimedia I/O technologies – Digital voice and audio – Video image and animation – Full motion video – Storage and retrieval Technologies.

UNIT V Hypermedia 9

Multimedia Authoring & User Interface – Hypermedia messaging - Mobile Messaging – Hypermedia message component – Creating Hypermedia message – Integrated multimedia message standards – Integrated Document management – Distributed Multimedia Systems.

Total: 45 Hours

22250E16B-WEBENGINEERING

AIM:

OBJECTIVES:

- Understand the characteristics of web applications
- Learn to Model web applications
- Be aware of Systematic design methods
- Be familiar with the testing techniques for web applications

UNIT I INTRODUCTION TO WEB ENGINEERING 9

Motivation, Categories of Web Applications, Characteristics of Web Applications, Requirements of Engineering in Web Applications- Web Engineering- Components of Web Engineering- Web Engineering Process- Communication- Planning.

UNIT II WEB APPLICATION ARCHITECTURES & MODELLING 9

Introduction- Categorizing Architectures- Specifics of Web Application Architectures, Components of a Generic Web Application Architecture- Layered Architectures, 2-Layer Architectures, N-Layer Architectures- Data-aspect Architectures, Database-centric Architectures- Architectures for Web Document Management- Architectures for Multimedia Data- Modeling Specifics in Web Engineering, Levels, Aspects, Phases Customization, Modeling Requirements, Hypertext Modeling, Hypertext Structure Modeling Concepts, Access Modeling Concepts, Relation to Content Modeling, Presentation Modeling, Relation to Hypertext Modeling, Customization Modeling, Modelling Framework- Modeling languages- Analysis Modeling for Web Apps- The Content Model- The Interaction Model- Configuration Model.

UNIT III WEB APPLICATION DESIGN 9

Design for Web Apps- Goals- Design Process- Interactive Design- Principles and Guidelines- Workflow- Preliminaries- Design Steps- Usability- Issues- Information Design- Information Architecture- structuring- Accessing Information- Navigation Design- Functional Design- Web App Functionality- Design Process- Functional Architecture- Detailed Functional Design.

UNIT IV TESTING WEB APPLICATIONS 9

Introduction- Fundamentals- Test Specifics in Web Engineering- Test Approaches- Conventional Approaches, Agile Approaches- Testing concepts- Testing Process- Test Scheme- Test Methods and Techniques- Link Testing- Browser Testing- Usability Testing- Load, Stress, and Continuous Testing, Testing Security, Test-driven Development, Content Testing- User Interface testing- Usability Testing- Compatibility Testing- Component Level Testing- Navigation Testing- Configuration testing- Security and Performance Testing- Test Automation.

UNIT V PROMOTING WEB APPLICATIONS AND WEB PROJECT MANAGEMENT 9

Introduction- challenges in launching the web Application- Promoting Web Application- Content Management- Usage Analysis- Web Project Management- Challenges in Web Project Management- Managing Web Team- Managing the Development Process of

aWeb Application- Risk, Developing a Schedule, Managing
Quality, Managing Change,

Tracking the Project. Introduction to nodeJS- websockets.

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of this course, the students should be able to:

- Explain the characteristics of web applications.
- Model web applications.
- Design web applications.
- Test web applications.

REFERENCES:

22250E16C-SOFTWARE METRICS

AIM:

To understand software quality metrics.

OBJECTIVES:

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

UNIT I MEASUREMENTS THEORY

9

-Measurements In Software Engineering- Scope Of Software Metrics- Measurements Theory- Goal Based Framework – Software Measurement Validation.

UNIT II DATA COLLECTION AND ANALYSIS

9

Empirical Investigation- Planning Experiments- Software Metrics Data Collection- Analysis Methods- Statistical Methods.

UNIT III PRODUCT METRICS

9

Measurement Of Internet Product Attributes- Size And Structure - External Product Attributes- Measurement Of Quality.

UNIT IV QUALITY METRICS

9

Software Quality Metrics- Product Quality- Process Quality- Metrics For Software Maintenance- Case Studies Of Metrics Program - Motorola - Hp And IBM.

UNIT V MANAGEMENT METRICS

9

Quality Management Models- Rayleigh Model- Problem Tracking Report (PTR) Model- Reliability Growth Model - Model Evaluation - Orthogonal Classification.

TOTAL=45

SEMESTER-II- ELECTIVE-II

22250E24A-ADVANCED DISTRIBUTED COMPUTING

AIM:

This course discusses the depth concepts of distributed computing and its features.

OBJECTIVES:

Understanding the concepts of

- processing distributed systems, operating system issues.
- learn about distributed transaction
- study about the distributed databases.

UNIT-I INTRODUCTION 9

Characterization of Distributed Systems - Examples - Resource Sharing and the Web - Challenges - System Models - Architectural and Fundamental Models - Networking and Internetworking - Types of Networks - Network Principles - Internet Protocols - Case Studies: Ethernet, WiFi.

UNIT-II PROCESSES AND DISTRIBUTED OBJECTS 9

Interprocess Communication - The API for the Internet Protocols - External Data Representation and Marshalling - Client-Server Communication - Group Communication - Case Study: Interprocess communication in UNIX - Distributed Objects and Remote Invocation - Communication Between Distributed Objects - Remote Procedure Call - Events and Notifications - Case Study: Java RMI.

UNIT-III OPERATING SYSTEM ISSUES 9

The OS Layer - Protection - Processes and Threads - Communication and Invocation - OS Architecture - Security - Overview - Cryptographic Algorithms - Digital Signatures - Cryptography Pragmatics - Case Studies Kerberos, 802.11 WiFi - Distributed File Systems - File Service Architecture - Sun Network File System - Distributed Debugging - Distributed Mutual Exclusion - Elections - Multicast Communication Related Problems.

UNIT-IV DISTRIBUTED TRANSACTION PROCESSING 9

Transactions - Nested Transactions - Locks - Optimistic Concurrency Control - Timestamp Ordering - Comparison - Flat and Nested Distributed Transactions - Atomic Commit Protocols - Concurrency Control in Distributed Transactions - Transaction Recovery - Overview of Replication And Distributed Multimedia Systems.

UNIT-V DISTRIBUTED DATABASES 9

Features of Distributed versus Centralized Databases - Principles of Distributed Databases - Level of Distribution - Transparency - Reference Architecture for Distributed Databases - Types of Data Fragmentation - Integrity Constraints in Distributed Databases.

Total: 45hrs

22250E24B-DATA WAREHOUSING & DATA MINING

AIM:

To serve the students with an emphasis on the design aspects of Data Mining and Data Warehousing

OBJECTIVES:

- To introduce the concept of data mining with in detail coverage of basic tasks, metrics, issues, and implication. Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of data warehousing with special emphasis on architecture and design.

UNIT-I INTRODUCTION 9

Introduction: Fundamentals of data mining, Data Mining Functionalities, Classification of Data Mining systems, Major issues in Data Mining, Data Warehousing and Business Analysis: - Data warehousing Components – Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools – Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

UNIT-II DATA MINING AND ASSOCIATION RULE MINING 9

Data Mining: - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.
Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint-Based Association Mining.

UNIT-III CLASSIFICATION AND PREDICTION 9

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Selection.

UNIT IV CLUSTER ANALYSIS 9

Cluster Analysis: - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering High- Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

UNIT V MINING OTHER DATA 9

Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web.

22250E24C-INFORMATIONRETRIEVALTECHNIQUES

LTPC4
004

OBJECTIVES:

- To understand the basics of information retrieval with pertinence modeling, query operations and indexing
- To get an understanding of machine learning techniques for text classification and clustering
- To understand the various applications of information retrieval giving emphasis to multimedia IR, web search
- To understand the concepts of digital libraries

UNIT I INTRODUCTION: MOTIVATION 9

Basic Concepts – Practical Issues - Retrieval Process – Architecture - Boolean Retrieval – Retrieval Evaluation – Open Source IR Systems – History of Web Search – Web Characteristics – The impact of the web on IR – IR Versus Web Search – Components of a Search engine

UNIT II MODELING 9

Taxonomy and Characterization of IR Models – Boolean Model – Vector Model - Term Weighting – Scoring and Ranking – Language Models – Set Theoretic Models - Probabilistic Models – Algebraic Models – Structured Text Retrieval Models – Models for Browsing

UNIT III INDEXING 9

Static and Dynamic Inverted Indices – Index Construction and Index Compression. Searching – Sequential Searching and Pattern Matching. Query Operations – Query Languages – Query Processing – Relevance Feedback and Query Expansion – Automatic Local and Global Analysis – Measuring Effectiveness and Efficiency

UNIT IV CLASSIFICATION AND CLUSTERING 9

Text Classification and Naïve Bayes – Vector Space Classification – Support vector machines and Machine learning on documents. Flat Clustering – Hierarchical Clustering – Matrix decompositions and latent semantic indexing – Fusion and Metalearning

UNIT V SEARCHING THE WEB 9

Searching the Web – Structure of the Web – IR and web search – Static and Dynamic Ranking – Web Crawling and Indexing – Link Analysis - XML Retrieval Multimedia IR: Models and Languages – Indexing and Searching Parallel and Distributed IR – Digital Libraries

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of this course, the students should be able to:

- Build an Information Retrieval system using the available tools.
- Identify and design the various components of an Information Retrieval system.
- Apply machine learning techniques to text classification and clustering which is used for efficient Information Retrieval.
- Design an efficient search engine and analyze the Web content structure.

22250E25A-SERVICEORIENTEDARCHITECTURE

AIM:

To familiarize the students with the concepts of service oriented architectures. (SOA).

OBJECTIVES:

- Understand SOA, service orientation and web services
- Analyzing and designing business based on SOA principles.
- Learning the concept of XML.

UNIT I

9

Software Architecture – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models.

UNIT II

9

Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder objectives – benefits of SPA – Cost Savings

UNIT III

9

SOA implementation and Governance – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software as a service – SOA technologies – proof-of-concept – process orchestration – SOA best practices

UNIT IV

9

Metadata management – XML security – XML signature – XML Encryption – SAML – XACML – XKMS – WS Security – Security in web service framework – advanced messaging

UNIT V

9

Transaction processing – paradigm – protocols and coordination – transaction specifications – SOA in mobile – research issues

Total: 45hrs

22250E25B-HIGHSPEED NETWORKS

AIM:

To study the various performance and analysis issues involved in high-speed data transmission.

OBJECTIVES:

Be able to

- Describe and interpret the basics of high-speed networking technologies.
- Apply the concepts learnt in this course to optimize and troubleshoot high-speed networks.
- Demonstrate the knowledge of network planning and optimization.

UNIT-1 :HIGHSPEED NETWORKS

9

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell-ATM Service Categories-AAL. High Speed LANs: Fast Ethernet, Gigabit Ethernet, Fiber Channel - Wireless LANs: applications, requirements - Architecture of 802.11

UNIT-2: CONGESTION AND TRAFFIC MANAGEMENT

9

Queuing Analysis- Queuing Models- Single Server Queues - Effects of Congestion- Congestion Control- Traffic Management- Congestion Control in Packet Switching Networks- Frame Relay Congestion Control.

UNIT-3 :TCP AND ATM CONGESTION CONTROL

9

TCP Flow control- TCP Congestion Control- Retransmission - Timer Management - Exponential RTO backoff- KARN's Algorithm - Window management - Performance of TCP over ATM. Traffic and Congestion control in ATM- Requirements- Attributes- Traffic Management Framework, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations- GFR traffic management.

UNIT-4: INTEGRATED AND DIFFERENTIATED SERVICES

9

Integrated Services Architecture- Approach, Components, Services- Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ - Random Early Detection, Differentiated Services

UNIT-5: PROTOCOLS FOR QoS SUPPORT

9

RSVP- Goals & Characteristics, Data Flow, RSVP Operations, Protocol Mechanisms- Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol Architecture, Data Transfer Protocol, RTCP.

Total: 45hrs

22250E25C-LANGUAGETECHNOLOGIES

LTPC4
004

OBJECTIVES:

- To learn the fundamentals of natural language processing
- To appreciate the use of CFG and PCFG in NLP
- To understand the role of semantics and pragmatics

UNIT I INTRODUCTION 9

Words-Regular Expressions and Automata- Words and Transducers-N-grams-Part-of-Speech-Tagging-Hidden Markov and Maximum Entropy Models.

UNIT II SPEECH 9

Speech-Phonetics-Speech Synthesis-Automatic Speech Recognition-Speech Recognition:-Advanced Topics-Computational Phonology.

UNIT III SYNTAX 9

Formal Grammar of English-Syntactic Parsing-Statistical Parsing-Features and Unification-Language and Complexity.

UNIT IV SEMANTICS AND PRAGMATICS 9

The Representation of Meaning-Computational Semantics-Lexical Semantics-Computational Lexical Semantics –Computational Discourse.

UNIT V APPLICATIONS 9

Information Extraction- Question Answering and Summarization- Dialogue and Conversational Agents-Machine Translation.

TOTAL:45 PERIODS

OUTCOMES:

Upon completion of this course, the students should be able to:

- To tag given text with basic Language features
- To design an innovative application using NLP components
- To implement a rule based system to tackle morphology/syntax of a language
- To design a tag set to be used for statistical processing for real-time applications
- To compare and contrast use of different statistical approaches for different types of NLP applications.

22250E32A-CLOUD COMPUTING

AIM:

To acquire basic knowledge on cloud computing and its applications

OBJECTIVES:

- Identify cloud computing models, characteristics, and technologies.
- Get knowledge about the different architectures in cloud.
- Identify the information about service management and cloud securities.

UNIT-I

9

Overview of Computing Paradigm- Recent trends in Computing - Evolution of cloud computing - Introduction to Cloud Computing - Cloud Computing (NIST Model)- Properties, Characteristics & Disadvantages - Cloud computing vs. Cluster computing vs. Grid computing - Role of Open Standards

UNIT-II

9

Cloud Computing Architecture- Cloud computing stack - Service Models (XaaS)- Infrastructure as a Service (IaaS) - Platform as a Service (PaaS) - Software as a Service (SaaS)- Deployment Models

UNIT-III

9

Infrastructure as a Service (IaaS)- Introduction to IaaS- Resource Virtualization - Examples. Platform as a Service (PaaS) - Introduction to PaaS - Cloud Platform and Management - Examples - Software as a Service (SaaS) - Introduction to SaaS

UNIT-IV

9

Service Management in Cloud Computing - Service Level Agreements (SLAs)- Identity & Access Management - Access Control - Trust, Reputation, Risk - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations.

UNIT-V

9

Cloud Security- Infrastructure Security- Network level security- Host level security- Application level security - Data security and Storage - Data privacy and security Issues, Jurisdictional issues raised by Data location - Case Study on Open Source & Commercial Clouds - Eucalyptus - Microsoft Azure - Amazon EC2.

Total: 45hrs

22250E32B-SPEECH PROCESSING AND SYNTHESIS

AIM:

To study about the Speech Processing and Synthesis

OBJECTIVES

To understand the mathematical foundations needed for speech processing

To understand the basic concepts and algorithms of speech processing and synthesis

To familiarize the students with the various speech signal representation, coding and recognition techniques

To appreciate the use of speech processing in current technologies and to expose the students to real-world applications of speech processing

UNIT I FUNDAMENTALS OF SPEECH PROCESSING 9

Introduction–Spoken Language Structure–Phonetics and Phonology–Syllables and Words–Syntax and Semantics–Probability, Statistics and Information Theory–Probability Theory–Estimation Theory–Significance Testing–Information Theory.

UNIT II SPEECH SIGNAL REPRESENTATIONS AND CODING 9

Overview of Digital Signal Processing–Speech Signal Representations–Shorttime Fourier Analysis–Acoustic Model of Speech Production–Linear Predictive Coding–Cepstral Processing–Formant Frequencies–The Role of Pitch–Speech Coding–LPC Coder.

UNIT III SPEECH RECOGNITION 9

Hidden Markov Models – Definition – Continuous and Discontinuous HMMs – Practical Issues–Limitations. Acoustic Modeling–Variability in the Speech Signal–Extracting Features–Phonetic Modeling–Adaptive Techniques–Confidence Measures–Other Techniques.

UNIT IV TEXT ANALYSIS 9

Lexicon – Document Structure Detection – Text Normalization – Linguistic Analysis – Homograph Disambiguation–Morphological Analysis–Letter-to-sound Conversion–Prosody–Generationschematic–Speaking Style–Symbolic Prosody–Duration Assignment–Pitch Generation

UNIT V SPEECH SYNTHESIS 9

Attributes–Formant Speech Synthesis–Concatenative Speech Synthesis–Prosodic Modification of Speech–Source-filter Models for Prosody Modification–Evaluation of TTS Systems.

TOTAL: 45 PERIODS

REFERENCES:

1. Joseph Mariani, —Language and Speech Processing, Wiley, 2009.
2. Lawrence Rabiner and Biing-Hwang Juang, —Fundamentals of Speech Recognition, Prentice Hall Signal Processing Series, 1993.

4. Thomas F. Quatieri, —Discrete-Time Speech Signal Processing, Pearson Education, 2002.

22250E32C-SOFTCOMPUTING

AIM:

To understand the concepts of Artificial Intelligence, ANN, Genetic Algorithms and Fuzzy systems and its applications.

OBJECTIVES:

- To introduce the ideas of Neural networks, fuzzy logic and use of heuristics based on human experience.
- To have general understanding of soft computing methodologies, including artificial neural networks, fuzzy sets, fuzzy logic, fuzzy clustering techniques and genetic algorithms;
- To Design and development of certain scientific and commercial application using computational neural network models, fuzzy models, fuzzy clustering applications and genetic algorithms in specified applications.

UNIT-I FUZZY SET THEORY

10

Introduction to Neuro-Fuzzy and Soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set-Theoretic Operations – Member Function Formulation and Parameterization – Fuzzy Rules and Fuzzy Reasoning – Extension Principle and Fuzzy Relations – Fuzzy If Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT-II OPTIMIZATION

8

Derivative based Optimization – Descent Methods – The Method of Steepest Descent – Classical Newton's Method – Step Size Determination – Derivative Free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT-III NEURAL NETWORKS

10

Supervised Learning Neural Networks – Perceptrons – Adaline – Backpropagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self-Organizing Networks – Learning Vector Quantization – Hebbian Learning.

UNIT-IV NEUROFUZZY MODELING

9

Adaptive Neuro-Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – Learning Methods that Cross fertilize ANFIS and RBFN – Coactive Neuro Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT-V APPLICATION OF COMPUTATIONAL INTELLIGENCE

8

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total: 45hrs

TEXTBOOK:

4. R.Bernaert,P.SimpsonandR.Dobbins,“ComputationalIntelligencePCTools”,APP
rofessional, Boston, 1996.

AIM:

To prepare the student to understand, develop, and manage more advanced database applications.

OBJECTIVES:

Be able to

Know the operations of parallel and distributed databases.

Understand the structures and standards of object relational databases.

Get familiar with the concepts of XML, Mobile and Multimedia Databases.

UNIT-I PARALLEL AND DISTRIBUTED DATABASES 9

Database System Architectures: Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems – Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts – Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture – Case Studies.

UNIT-II OBJECT AND OBJECT RELATIONAL DATABASES 9

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL – OQL – Object Relational and Extended – Relational Systems : Object Relational features in SQL/Oracle – Case Studies.

UNIT-III XML DATABASES 9

XML Databases: XML Data Model – DTD - XML Schema - XML Querying – Web Databases – JDBC – Information Retrieval – Data Warehousing – Data Mining

UNIT-IV MOBILE DATABASES 9

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols - Mobile Database Recovery Schemes.

UNIT-V MULTIMEDIA DATABASES 9

Multidimensional Data Structures – Image Databases – Text/Document Databases – Video Databases – Audio Databases – Multimedia Database Design.

22250E33B-RECONFIGURABLE COMPUTING

AIM:

To understand about the Reconfigurable Computing.

OBJECTIVES:

- To understand the need for reconfigurable computing
- To expose the student to various device architectures
- To examine the various reconfigurable computing systems
- To understand the different types of compute models for programming reconfigurable architectures
- To expose the student to HDL programming and familiarize with the development environment
- To expose the student to the various placement and routing protocols
- To develop applications with FPGAs

UNIT I DEVICE ARCHITECTURE 9

General Purpose Computing Vs Reconfigurable Computing – Simple Programmable Logic Devices – Complex Programmable Logic Devices – FPGAs – Device Architecture – Case Studies.

UNIT II RECONFIGURABLE COMPUTING ARCHITECTURES AND SYSTEMS 9

Reconfigurable Processing Fabric Architectures – RPF Integration into Traditional Computing Systems – Reconfigurable Computing Systems – Case Studies – Reconfiguration Management.

UNIT III PROGRAMMING RECONFIGURABLE SYSTEMS 9

Compute Models – Programming FPGA Applications in HDL – Compiling C for Spatial Computing – Operating System Support for Reconfigurable Computing.

UNIT IV MAPPING DESIGN TO RECONFIGURABLE PLATFORMS 9

The Design Flow – Technology Mapping – FPGA Placement and Routing – Configuration Bitstream Generation – Case Studies with Appropriate Tools.

UNIT V APPLICATION DEVELOPMENT WITH FPGAS 9

Case Studies of FPGA Applications – System on a Programmable Chip (SoPC) Designs.

TOTAL: 45 PERIODS

22250E33C-GREENCOMPUTING

AIM:

To Understand Green Technology and to implement Green computing practices to efficiently use the computers and its resources.

OBJECTIVES:

- Understanding scientific and social environment.
- Minimizing energy consumption from the IT estate.
- Purchasing green energy and using green suppliers.
- Reducing the paper and other consumables used.
- Minimizing equipment disposal requirements.

UNIT-I 9
Origins, Regulations and industry initiatives - Government, Industry.

UNIT-II 9
Approaches to green computing - Product longevity, Algorithmic efficiency.

UNIT-III 9
Resource allocation, Virtualization.

UNIT-IV 9
Terminal servers, Power management, Operating systems support, Power supply, Storage, Video card, Display.

UNIT-V 9
Web, Temporal and Spatial Data Mining, Materials recycling, Telecommuting, Middleware support for green computing, Tools for monitoring, HPC computing, Green Mobile, embedded computing and networking, Management Frameworks Standards and metrics for computing green

Total: 45hrs

3. The Greening of IT - How Companies Can Make a Difference for the Environment by John Lamb.

22250E34A-SOFTWAREQUALITYASSURANCE

AIM:

To develop the ability to analyze and estimate the quality of the software.

OBJECTIVES:

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software.
- To understand the Software Quality software standards.

UNIT I

9

Introduction to software quality - challenges – objectives – quality factors – components of SQA – contract review – development and quality plans – SQA components in project life cycle – SQA defect removal policies – Reviews

UNIT II

9

Basics of software testing – test generation from requirements – finite state models – combinatorial designs – test selection, minimization and prioritization for regression testing – test adequacy, assessment and enhancement

UNIT III

9

Testing strategies – white box and black box approach – integration testing – system and acceptance testing – performance testing – regression testing – internationalization testing – ad hoc testing – website testing – usability testing – accessibility testing Test plan – management – execution and reporting – software test automation – automated testing tools

UNIT IV

9

Hierarchical models of software quality – software quality metrics – function points – Software product quality – software maintenance quality – effect of case tools – software quality infrastructure – procedures – certifications – configuration management – documentation control.

UNIT V

9

Project progress control – costs – quality management standards – project process standards – management and its role in SQA – SQA unit

Total=45hrs

19250E34B-Bio-Informatics

AIM:

To impart knowledge on basic techniques of Bioinformatics.

OBJECTIVES:

- Build a solid foundation and acquire the vocabulary you need to supervise or to communicate with others who use these tools.
- To have ability to design drugs.
- To understand Evolutionary Trees and Phylogeny.
- Learn the key methods and tools used in bioinformatics.

UNIT I FUNDAMENTALS 7

The Central Dogma – Killer Application – Parallel Universes – Watson’s Definition – Top Down Vs Bottom Up Approach – Information Flow – Conversance – Communications.

UNIT II DATABASE AND NETWORKS 9

Definition – Data Management – Data Life Cycle – Database Technology – Interfaces – Implementation – Networks Communication Models – Transmission Technology – Protocols – Bandwidth – Topology – Contents – Security – Ownership – Implementation.

UNIT III SEARCH ENGINES AND DATA VISUALIZATION 10

Search Process – Technologies – Searching and Information Theory – Computational Methods – Knowledge Management – Sequence Visualizations – Structure Visualizations – User Interfaces – Animation Vs Simulation.

UNIT IV STATISTICS – DATA MINING AND PATTERN MATCHING 11

Statistical Concepts – Micro Arrays – Imperfect Data – Basics – Quantifying – Randomness – Data Analysis – Tools Selection – Alignment – Clustering – Classification – Data Mining Methods – Technology – Infrastructure Pattern Recognition – Discovery – Machine Learning – Text Mining – Pattern Matching Fundamentals – Dot Matrix Analysis – Substitution Matrix – Dynamic Programming – Word Method – Bayesian Method – Multiple Sequence Alignment Tools.

UNIT V MODELING SIMULATION AND COLLABORATIONS 8

Drug Discovery Fundamentals – Protein Structure – System Biology Tools – Collaboration and Communication – Standards – Issues – Case Study.

Total: 45hrs

22250E34C-WIRELESSAPPLICATIONPROTOCOLS

AIM:

To introduce the advanced element in the field of wireless communication.

OBJECTIVE:

- Be able to discuss current and emerging technology in Wireless technology.
- Understand fundamental trends of technological evolution of Wireless technology.
- Have hands-on knowledge in developing simple and comprehensive WAP contents.
- Be able to create simple Wireless applications.

UNIT-I: 9

Wireless Concepts-Technologies-An Overview of WAP-WAP Application Environment -WAP Gateways - WAP Gateway Services and Security.

UNIT-II: 9

WAP Components-Specification-Standard Execution Environment -Agent Characters-

Main Protocols - WTP/WSP/WDP(UDP/WMP Transport and WTLS Protocol)

UNIT- III: 9

WAP Design and Development -The Development Tools-WML Language- WML Script Language

UNIT-IV: 9

Implementing an Enterprise WAP Strategy, Wireless transmission-Spread spectrum-MAC-SDMA - FDMA - TDMA - CDMA - Cellular Wireless Networks.

UNIT-V: 9

Application Area of WAP: Wireless Operator's Interrelated Services-Mailbox Management-

Searching the Phone Directory - Managing Personal Information.

Total:45hrs

TEXTBOOKS:

RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the students; both have their justification in the common pursuit of knowledge.

Integrating research skills or Inquiry based learning becomes apparent to meet the changing needs of learners and their teachers, professional practice and society. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital.

Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability these are some of the terms that mark out the world of the twenty-first century.

Teaching and research is correlated when they are co-related suggests that one way of achieving this is to 'exploit further the link between teaching and research in the design of curricula.

Growing out of the research on Teaching- Research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions to analyze their curricula and consider ways of strengthening students understanding through research.

The Curriculum can be:

Research–Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research–Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research–Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research-Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

- Level1:PrescribedResearch
- Level2:BoundedResearch
- Level3:ScaffoldedResearch
- Level4:SelfactuatedResearch
- Level5:OpenResearch

Taking into consideration the above mentioned facts in respect of integrating research into the B.Tech. (CSE) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSBCourses	Credits
I	ResearchLedSeminar	1
II	ResearchMethodology	3
II	Participation inBoundedResearch	2
III	DesignProject/ SocioTechnicalProject (Scaffolded Research)	4
IV	ProjectWork	12

22248S11AP-HIGHER MATHEMATICS

LTPC3
104

AIM

To extend student's mathematical maturity and ability to deal with abstraction and to introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems.

OBJECTIVES

At the end of the course, students would

- Have knowledge of the concepts needed to test the logic of a program.
- Have gained knowledge which has application in expert system, in database and basic for the prolog language.
- Have an understanding in identifying patterns on many levels.
- Be aware of a class of functions which transform a finite set into another finite set which relates to input output functions in computer science.
- Be exposed to concepts and properties of algebraic structures such as semigroups, monoids and groups.

UNIT I SETS, RELATIONS AND FUNCTIONS

9

Basic Concepts – Relationships between sets-Operations on sets-Principles of inclusion and exclusion – Min terms and Max terms of a set – Relations partial ordering relation-Equivalence relation-Binary relations-Cyclic order relation – $a \equiv b \pmod{m}$ relations: Partitions sets – Hasse diagram- functions: Properties- Composition - inverse function

UNIT II LOGIC

9

Propositional logic – Logical connectivity's-Truth table-Normal forms(Connective and disjunctive)-Predicate logic-Universal and existential quantifiers induction.

UNIT III COMBINATORICS

9

Basic of counting- counting arguments -Pigeonhole principle -Permutations and combinations - Recursion and Recurrence relations - Generating functions.

UNIT IV MODELLING COMPUTATION AND LANGUAGES

9

Finite state machines-Deterministic and Non-Deterministic finite state machines-Turing Machines-Formal Languages-Classes of Grammars-Type_0 – Context Sensitive-Context-Free-Regular Grammars-Ambiguity.

UNIT V LATTICE AND BOOLEAN ALGEBRA

9

Partial order relation, poset-lattices, Hasse diagram-Boolean Algebra

Total No of periods: 45

CSE/Semester-I

22250H12P-ADHOC&SENSORNETWORKS

LTPC

AIM:

To understand the current and emerging applications of the ad hoc sensor networks.

OBJECTIVE:

To understand

- A broad overview of the state of wireless and ad hoc networking.
- The overview of the physical, networking and architectural issues of ad hoc networks.
- The technologies that will enable the next generation of ad hoc networks and the proliferation of ubiquitous computing.
- The sensor networks and the unique set of design challenges that they introduce.

UNIT I AD-HOC MAC

9

Introduction – Issues in Ad-Hoc Wireless Networks. MAC Protocols – Issues, Classification of MAC protocols, Multichannel MAC & Power control MAC protocol.

UNIT II AD-HOC NETWORK ROUTING & TCP

9

Issues – Classification of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc – Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.

UNIT III WSN-MAC

9

Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

UNIT IV WSN ROUTING, LOCALIZATION & QoS

9

Issues in WSN routing – OLSR, AODV. Localization – Indoor and Sensor Network Localization. QoS in WSN.

UNIT V MESH NETWORKS

9

Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

22250H13P-ADVANCED DATA STRUCTURES

LTPC3
104

AIM:

To make the learner understand the Analysis of algorithms and Data Structures.

OBJECTIVES:

To Understand

- The Different Heap Structures, Search Structures and Multimedia Structures.
- The various coding scheduling and algorithms.
- The various multimedia structures.

UNIT I FUNDAMENTALS: 9+3

Mathematical Induction - Asymptotic Notations - Properties of Big-oh Notation - Conditional Asymptotic Notation - Algorithm Analysis - Amortized Analysis - NP-Completeness - NP-Hard - Recurrence Equations - Solving Recurrence Equations - Memory Representation of Multi-dimensional Arrays - Time-Space Tradeoff.

UNIT II HEAP STRUCTURES: 9+3

Min/Max heaps - Deaps - Leftist Heaps - Binomial Heaps - Fibonacci Heaps - Skew Heaps - Lazy-Binomial Heaps.

UNIT III SEARCH STRUCTURE: 9+3

Binary Search Trees - AVL Trees - Red-Black trees - Multi-way Search Trees - B-Trees - Splay Trees - Tries.

UNIT IV MULTIMEDIA STRUCTURES: 9+3

Segment Trees - k-d Trees - Point Quad Trees - MX-Quad Trees - R-Trees - TV-Trees.

UNIT V ALGORITHMS: 9+3

Huffman Coding - Convex Hull - Topological Sort - Tree Vertex Splitting - Activity Networks - Flow Shop Scheduling - Counting Binary Trees - Introduction to Randomized Algorithms.

Total: 60hrs

4. V.S. Subramanian, Principles of Multimedia Database systems, Morgan Kaufman, 1998

1. Creation of HTML pages with frames, links, tables and other tags.
2. Usage of internal and external CSS along with HTML pages.
3. Client side Programming
 - i. Javascript for displaying date and comparing two dates.
 - ii. Form Validation including text field, radio buttons, checkboxes, list box and other controls.
4. Usage of ASP/JSP objects response, Request, Application, Session, Server, ADO etc.
 - i. Writing online applications such as shopping, railway/air/bus ticket reservations system with set of ASP/JSP pages.
 - ii. Using sessions and cookies as part of the web application.
5. Writing Servlet Program using HTTP Servlet.
6. Any online application with database access.
7. Creation of XML document for a specific domain.
8. Writing DTD or XML schema for the domain specific XML document.
9. Parsing an XML document using DOM and SAX Parsers.
10. Sample web application development in the open source environment.

22250H21P-MIDDLEWARETECHNOLOGIES

LTPC3
104

AIM:

Theaimofthecourse istoteachthe roleofmiddleware inthe distributedenvironment anditscommons services.

OBJECTIVES:

- Tostudythesetofservices thatamiddlewaresystemconstitutesof.
- Tounderstandhowmiddlewarefacilitatesthedevelopmentofdistributedapplicationsinheterogeneous environments.
- Tostudyhowwithhelptoincorporateapplicationportability,distributedapplicationcomponent interoperability and integration.
- TolearntheobjectorientedmiddlewarebasicsthroughtheexampleofthefollowingCORBA objects.
- TounderstandthebasicsofWebservices thatisthemostoften-used middleware technique.

UNIT- I

9+3

Introduction : What isa distributed system- Client server Architecture – Multi-tierArchitecture-Middleware - Classificationofmiddleware- Event based middleware-Object based Middleware - Message based middleware and its Principal functions- Introduction to concepts of databasemiddleware.

UNIT- II

9+3

RPC&messagePassingmiddleware-Introductiontoprocedurecalls-PrinciplesofRPCArchitecture-Structure of Communication - Java RMI

UNIT- III

9+3

Other middleware: Introduction to EJB- Introduction to JDBC &ODBC **Interface DefinitionLanguage:** Introduction to specification - IDL Identifiers-Attributes type correction - Classes-Arrays- Documentation -Any type-Modules -Interfaces- Exceptionhandling -pre CompilerDirectives -OO Design using IDL.

UNIT -V

9+3

COM: Classes- Objects-Query Interface-Dynamic Composition-Apartments-In processActivation -Server Lifetime-Server Lifetime-COM Security-Access Control-Tokenmanagement- Introduction to DCOM.

Total:60hrs

22250H22P-INTERNETOFTHINGS

LTPC4
004

AIM:

To introduce the student to various IOT techniques.

OBJECTIVES:

- To understand the fundamentals of Internet of Things
- To learn about the basics of IOT protocols
- To build a small low cost embedded system using Raspberry Pi.
- To apply the concept of Internet of Things in the real world scenario.

UNIT I INTRODUCTION TO IoT

Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - Domain Specific Iots - IoT and M2M - IoT System Management with NETCONF-YANG-IoT Platforms Design Methodology

UNIT II IoT ARCHITECTURE

M2M high-level IETSI architecture-IETF architecture for IoT-OGC architecture-IoT reference model-Domain model-information model-functional model-communication model- IoT reference architecture

UNIT III IoT PROTOCOLS

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus–Zigbee Architecture–Network layer–6LoWPAN-CoAP-Security

UNIT IV BUILDING IoT WITH RASPBERRY PI & ARDUINO

Building IOT with RASPBERRY PI-IoT Systems - Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device -Building blocks -Raspberry Pi -Board - Linux on Raspberry Pi -Raspberry Pi Interfaces -Programming Raspberry Pi with Python- Other IoT Platforms- Arduino

UNIT V CASE STUDIES AND REAL-WORLD APPLICATIONS

Real world design constraints-Applications- Asset management, Industrial automation, smart grid, Commercial building automation, Smart cities- participatory sensing-Data Analytics for IoT –Software & Management Tools for IoT Cloud Storage Models & Communication APIs– Cloud for IoT-Amazon Web Services for IoT

Develop the following in ASP.NET or VB.NET.

1. Query text box and displaying records
2. Display records by using database
3. Data list link control
4. Data binding using dropdown list control
5. Data grid paging

Develop the following in C#.NET.

1. Demonstrate UseOfVirtual and override keyword in C# with a simple program.
2. Write a program in C# to implement Stack operations.
3. Write a program to demonstrate Operator overloading.
4. Demonstrate array of interface types with a C# program.
5. Write a program in C# to build a class which implements an interface which already exists.

22250H31P-MODERN OPERATING SYSTEM

LTPC4
004

AIM:

To have a thorough knowledge of processes, scheduling concepts, memory management, I/O and file systems, multimedia operating system and recent operating systems.

OBJECTIVES:

- To have an overview of different types of operating systems.
- To know the components of an operating system.
- To have a thorough knowledge of process management.
- To have a thorough knowledge of storage management.
- To know the concepts of I/O and file systems.
- To know the concepts of multimedia operating systems.

UNIT I

9

Introduction – computer hardware review – operating system zoo - Operating System Concepts - System Calls - Operating System Structure -.Process And Threads : Processes – Threads - Interprocess Communication - Scheduling.

Unit II

9

Memory Management Memory Abstraction: Address Spaces, No Memory Abstraction - Virtual Memory - Page Replacement Algorithms - Modeling Page Replacement Algorithms - Design Issues For Paging Systems – Segmentation. File Systems: File Directories File System Implementation

Unit III

9

Deadlocks - Introduction To Deadlocks - The Ostrich Algorithm - Deadlock Detection And Recovery - Deadlock Avoidance - Deadlock Prevention - Other Issues – Input/output Principles of I/O Hardware – Principles of I/O Software – I/O Software Layers – Disks – Clocks – Thin Clients.

Unit IV

9

Multiple processor systems - multiprocessors - multicomputers - virtualization - distributed systems - multimedia operating systems . Multimedia files - video compression audiocompression – multimedia scheduling - disk scheduling for multimedia.

Unit V

9

Case Study – LINUX, WINDOWS VISTA, SYMBIAN OS

Total: 45hrs

TEXTBOOK:

1. Andrew S. Tanenbaum, “Modern Operating Systems“, Pearson Education, 3rd Edition, 2009

REFERENCEBOOKS:

22250E32P-MACHINELEARNINGTECHNIQUES

AIM:

The main objective of this paper is to make the students to know the need of Machine Learning Techniques.

OBJECTIVES:

- To introduce students to the basic concepts and techniques of Machine Learning.
- To have a thorough understanding of the Supervised and Unsupervised learning techniques To study the various probability based learning techniques
- To understand graphical models of machine learning algorithms

UNIT I INTRODUCTION 9
Learning – Types of Machine Learning – Supervised Learning – The Brain and the Neuron – Design a Learning System – Perspectives and Issues in Machine Learning – Linear Separability – Linear Regression.

UNIT II LINEAR MODELS 9
Multi-layer Perceptron – Going Forwards – Going Backwards: Back Propagation Error – Multi-layer Perceptron in Practice – Examples of using the MLP – Overview – Deriving Back-Propagation – Radial Basis Functions and Splines – Concepts – RBF Network – Curse of Dimensionality – Interpolations and Basis Functions – Support Vector Machines.

UNIT III TREE AND PROBABILISTIC MODELS 9
Learning with Trees – Decision Trees – Constructing Decision Trees – Classification and Regression Trees – Ensemble Learning – Boosting – Bagging – Different ways to Combine Classifiers – Probability and Learning – Data into Probabilities – Basic Statistics – Gaussian Mixture Models – Nearest Neighbor Methods – Unsupervised Learning – K means Algorithms – Vector Quantization – Self Organizing Feature Map

UNIT IV DIMENSIONALITY REDUCTION AND EVOLUTIONARY MODELS 9
Dimensionality Reduction – Linear Discriminant Analysis – Principal Component Analysis – Factor Analysis – Independent Component Analysis – Locally Linear Embedding – Isomap – Least Squares Optimization – Evolutionary Learning – Genetic algorithms – Genetic Offspring: - Genetic Operators – Using Genetic Algorithms – Reinforcement Learning – Overview – Getting Lost Example – Markov Decision Process

UNIT V GRAPHICAL MODELS 9
Markov Chain Monte Carlo Methods – Sampling – Proposal Distribution – Markov Chain Monte Carlo – Graphical Models – Bayesian Networks – Markov Random Fields – Hidden Markov Models – Tracking Methods

Total: 45 hrs

22250H41P-OBJECTORIENTEDSOFTWAREENGINEERING

LTPC40

04

AIM:

To learn the advanced software engineering principles and methodologies for Effective software development.

OBJECTIVES:

- To learn about software prototyping, analysis and design.
- To learn UML and its usage.
- Case studies to apply the principles.

UNIT-1 INTRODUCTION 8

Software Engineering Paradigms-Software Development process models-Project & Process-Project management – Process & Project metrics - Object Oriented concepts & Principles.

UNIT-2 PLANNING&SCHEDULING 9

Software prototyping - Software project planning – Scope – Resources - Software Estimation - Empirical Estimation Models-Planning-Risk Management - Software Project Scheduling – Object Oriented Estimation & Scheduling.

UNIT-4 IMPLEMENTATION&TESTING 8

Top-Down, Bottom-Up, object oriented product Implementation & Integration. Software testing methods-White Box, Basis Path-Control Structure –Black Box-Unit Testing-Integration testing-Validation & System testing. Testing OOA & OOD models-Object oriented testing strategies.

UNIT- 5 MAINTENANCE 8

Maintenance process-System documentation-program evolution dynamics-Maintenance costs-Maintainability measurement – Case Studies The laboratory shall include development of systems applying the Software Engineering principles and methods for specific applications.

22250CRM-RESEARCHMETHODOLOGY

AIM

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

OUTCOME:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

UNIT I

Introduction to Research—Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem- Necessity of defining the problem- Techniques involved in defining the problem- Basic principles of experimental designs- Descriptive and experimental design—different types of experimental design – Validity of findings—internal and external validity—Variables in Research—Measurement and Scaling—Different scales. Ethics & Misconduct in research, Plagiarism,

UNIT II

Formulation of Hypothesis—Sampling techniques—Sampling error and sample size- Methods of data collection—Primary and secondary data—observation—Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data— editing – coding – transcription – tabulation – outline of statistical analysis.

UNIT III

Data Analysis using Excel- Tabulation of Data in excel (Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs (Pivot Table & Charts), Time Value of Money, Measure of

central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t-test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

UNIT IV

Various research methods- Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics - R programming in Statistics- open source software

UNIT V

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references

SEMESTER -I - ELECTIVE -I22250E23AP - ADVANCED DISTRIBUTED COMPUTING

LTPC4
004

AIM:

This course discusses the depth concepts of distributed computing and its features.

OBJECTIVES:

Understanding the concept of

- processing distributed systems, operating system issues
- learn about distributed transaction
- study about the distributed databases.

UNIT-I INTRODUCTION 9

Characterization of Distributed Systems - Examples - Resource Sharing and the Web - Challenges - System Models - Architectural and Fundamental Models - Networking and Internetworking - Types of Networks - Network Principles - Internet Protocols - Case Studies: Ethernet, WiFi.

UNIT-II PROCESSES AND DISTRIBUTED OBJECTS 9

Interprocess Communication - The API for the Internet Protocols - External Data Representation and Marshalling - Client-Server Communication - Group Communication - Case Study: Interprocess communication in UNIX - Distributed Objects and Remote Invocation - Communication Between Distributed Objects - Remote Procedure Call - Events and Notifications - Case Study: Java RMI.

UNIT-III OPERATING SYSTEM ISSUES 9

The OS Layer - Protection - Processes and Threads - Communication and Invocation - OS Architecture - Security - Overview - Cryptographic Algorithms - Digital Signatures - Cryptography Pragmatics - Case Studies Kerberos, 802.11 WiFi- Distributed File Systems- File Service Architecture - Sun Network File System - Distributed Debugging - Distributed Mutual Exclusion - Elections - Multicast Communication Related Problems.

UNIT-IV DISTRIBUTED TRANSACTION PROCESSING 9

Transactions - Nested Transactions - Locks - Optimistic Concurrency Control - Timestamp Ordering - Comparison - Flat and Nested Distributed Transactions - Atomic Commit Protocols - Concurrency Control in Distributed Transactions - Transaction Recovery - Overview of Replication And Distributed Multimedia Systems.

UNIT-V DISTRIBUTED DATABASES 9

Features of Distributed versus Centralized Databases - Principles of Distributed Databases - Levels of Distribution Transparency - Reference Architecture for Distributed Databases - Types of Data Fragmentation - Integrity Constraints in Distributed Databases.

Total: 45hrs

22250E23BP-DATA WAREHOUSING & DATA MINING

LTPC4004

AIM:

To serve the students with an emphasis on the design aspect of Data Mining and Data Warehousing.

OBJECTIVES:

- To introduce the concept of data mining with in detail coverage of basic tasks, metrics, issues, and implication. Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of data warehousing with special emphasis on architecture and design.

UNIT-I INTRODUCTION 9

Introduction: Fundamentals of data mining, Data Mining Functionalities, Classification of Data Mining systems, Major issues in Data Mining, Data Warehousing and Business Analysis: - Data warehousing Components – Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools – Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

UNIT-II DATA MINING AND ASSOCIATION RULE MINING 9

Data Mining: - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.

Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint-Based Association Mining.

UNIT-III CLASSIFICATION AND PREDICTION 9

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

UNIT IV CLUSTER ANALYSIS 9

Cluster Analysis: - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering High- Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

REFERENCES:

5. Pang-Ning Tan, Michael Steinbach and Vipin Kumar “Introduction to Data Mining”, Pearson Education, 2007.

AIM:

To give out the students with an importance on the various aspects of artificial neural networks.

OBJECTIVES:

- To introduce the concepts of artificial neural networks such as biological neural networks, clustering and structures
- To study the linear models for regression, classification, kernel methods and feedforward neural networks

UNIT-I Introduction to artificial neural networks 9

Biological neural networks - Pattern analysis tasks: Classification, Regression, Clustering - Computational model of neurons - Structures of neural networks - Learning principles.

UNIT-II Linear models for regression and classification 9

Polynomial curve fitting - Bayesian curve fitting - Linear basis function models - Bias - variance decomposition - Bayesian linear regression - Least squares for classification - Logistic regression for classification - Bayesian logistic regression for classification

UNIT-III Feedforward neural networks 9

Pattern classification using perception - Multilayer feed forward neural networks (MLFFNNs) - Pattern classification and regression using MLFFNNs - Error back propagation learning - Fast learning methods: Conjugate gradient method - Auto associative neural networks - Bayesian neural networks.

UNIT-IV Kernel methods for pattern analysis 9

Statistical learning theory - Support vector machines for pattern classification - Support vector regression for function approximation - Relevance vector machines for classification and regression - **Self-organizing maps:** Pattern clustering - Topological mapping - Kohonen's self-organizing map.

UNIT-V Feedback neural networks 9

Pattern storage and retrieval - Hopfield model - Boltzmann machine - Recurrent neural networks.

Total: 45 hrs**TEXTBOOKS:**

2. Satish Kumar, Neural Networks - A Classroom Approach, Tata McGraw-Hill, 2003
3. S. Haykin, Neural Networks - A Comprehensive Foundation, Prentice Hall, 1998

SEMESTER -III -ELECTIVE-

II22250E33AP-MULTIMEDIASYSTEMS

LTPC4
004

AIM:

To impart knowledge on Multimedia system and design.

OBJECTIVES:

- To study the graphic techniques and algorithms.
- To study the multimedia concepts and various I/O technologies

UNIT I Introduction 9

Line-Curve and Ellipse Drawing Algorithms – Attributes – Two-Dimensional Geometric Transformations – Two-Dimensional Clipping and Viewing.

UNIT II Three-Dimensional Concepts 9

Three-Dimensional Object Representations – Three-Dimensional Geometric and Modeling Transformations – Three-Dimensional Viewing – Color models – Animation.

UNIT III Multimedia Systems Design 9

An Introduction – Multimedia applications – Multimedia System Architecture – Evolving technologies for Multimedia – Defining objects for Multimedia systems – Multimedia Data interface standards – Multimedia Databases.

UNIT IV Multimedia File Handling 9

Compression & Decompression – Data & File Format standards – Multimedia I/O technologies - Digital voice and audio – Video image and animation – Full motion video – Storage and retrieval Technologies.

UNIT V Hypermedia 9

Multimedia Authoring & User Interface – Hypermedia messaging - Mobile Messaging – Hypermedia message component – Creating Hypermedia message – Integrated multimedia message standards – Integrated Document management – Distributed Multimedia Systems.

Total: 45 Hours

22250E33BP-GENETICALGORITHMS

LTPC4
004

AIM:

To make the students learn the fundamentals of Genetic Algorithms and search technique used in computing.

OBJECTIVES:

1. Understand and be able to apply fundamental GA theory.
2. be able to implement or modify simple genetic algorithms.
3. be able to apply GA to problems in the student's field.
4. to find exact or approximate solutions to optimization and search problems.

UNIT-I

9

Introduction : A brief history of evolutionary computation, Elements of Genetic Algorithms, A simple genetic algorithm, Applications of genetic algorithms. Genetic Algorithms in Scientific models - Evolving computer programs, data analysis & prediction, evolving neural networks, modeling interaction between learning & evolution, modeling sexual selection, measuring evolutionary activity.

UNIT-II

9

Theoretical Foundation of genetic algorithm : Schemas & Two-Armed and k-armed problem, royal roads, exact mathematical models of simple genetic algorithms, Statistical-Mechanics Approaches.

UNIT-III

9

Computer Implementation of Genetic Algorithm: Data structures, Reproduction, crossover & mutation, mapping objective functions to fitness form, fitness scaling, coding, a multiparameter, mapped, fixed point coding, discretization and constraints.

UNIT-IV

9

Some applications of genetic algorithms : The risk of genetic algorithms, De Jong & function optimization, Improvement in basic techniques, current application of genetic algorithms

UNIT-V

9

Advanced operators & techniques in genetic search: Dominance, duplicity, & abeyance, inversion & other reordering operators, other micro operators, Niche & speciation, multiobjective optimization, knowledge based techniques, genetic algorithms & parallel processors.

Total: 45hrs

22250E33CP-SOFTWAREMETRICS

LTPC4
004

AIM:

To understand software quality metrics.

OBJECTIVES:

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

UNIT I MEASUREMENTS THEORY 9

- Measurements In Software Engineering - Scope Of Software Metrics - Measurements Theory - Goal Based Framework – Software Measurement Validation.

UNIT II DATA COLLECTION AND ANALYSIS 9

Empirical Investigation - Planning Experiments - Software Metrics Data Collection - Analysis Methods – Statistical Methods.

UNIT III PRODUCT METRICS 9

Measurement Of Internet Product Attributes - Size And Structure - External Product Attributes - Measurement Of Quality.

UNIT IV QUALITY METRICS 9

Software Quality Metrics - Product Quality - Process Quality - Metrics For Software Maintenance - Case Studies Of Metrics Program - Motorola - Hp And IBM.

UNIT V MANAGEMENT METRICS 9
Quality Management Models - Rayleigh Model - Problem Tracking Report (PTR) Model - Reliability Growth Model - Model Evaluation - Orthogonal Classification.

SEMESTER-IV-ELECTIVE-III

22250E43AP-SERVICEORIENTEDARCHITECTURE

AIM:

To familiarize the students with the concepts of service oriented architectures. (SOA)

OBJECTIVES:

- Understand SOA, service orientation and web services
- Analyzing and designing business based on SOA principles.
- Learning the concepts of XML.

UNIT I

9

Software Architecture – Types of IT Architecture – SOA – Evolution – Key components – perspective of SOA – Enterprise-wide SOA – Architecture – Enterprise Applications – Solution Architecture for enterprise application – Software platforms for enterprise Applications – Patterns for SOA – SOA programming models.

UNIT II

9

Service-oriented Analysis and Design – Design of Activity, Data, Client and business process services – Technologies of SOA – SOAP – WSDL – JAX – WS – XML WS for .NET – Service integration with ESB – Scenario – Business case for SOA – stakeholder objectives – benefits of SPA – Cost Savings

UNIT III

9

SOA implementation and Governance – strategy – SOA development – SOA governance – trends in SOA – event-driven architecture – software as a service – SOA technologies – proof-of-concept – process orchestration – SOA best practices

UNIT IV

9

Transaction processing – paradigm – protocols and coordination – transactions specifications – SOA in mobile – research issues

Total: 45 hrs

REFERENCES:

2. Eric Newcomer, Greg Lomow, "Understanding SOA with Web Services", Pearson Education.
3. Mark O'Neill, et al., "Web Services Security", Tata McGraw-Hill Edition, 2003.

AIM:

To study the various performance and analysis issues involved in high-speed data transmission.

OBJECTIVES:

Be able to

- Describe and interpret the basics of high-speed networking technologies.
- Apply the concepts learnt in this course to optimize and troubleshoot high-speed network.
- Demonstrate the knowledge of network planning and optimization

UNIT-1:HIGHSPEED NETWORKS**9**

Frame Relay Networks-Asynchronous transfer mode- ATM Protocol Architecture, ATM Logical Connection, ATM Cell- ATM Service Categories- AAL. High Speed LANs: Fast Ethernet, Gigabit Ethernet, Fiber Channel - Wireless LANs: applications, requirements - Architecture of 802.11

UNIT- 2: CONGESTION AND TRAFFIC MANAGEMENT**9**

Queuing Analysis-Queuing Models-Single Server Queues-Effect of Congestion- Congestion Control- Traffic Management - Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

UNIT-3:TCP AND ATM CONGESTION CONTROL**9**

TCP Flow control- TCP Congestion Control- Retransmission- Timer Management - Exponential RTT backoff- KARN's Algorithm- Window management - Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes- Traffic Management Framework, Traffic Control- ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

UNIT- 4: INTEGRATED AND DIFFERENTIATED SERVICES**9**

Integrated Services Architecture- Approach, Components, Services- Queuing Discipline, FQ, PS, BRfq, GPS, WFQ - Random Early Detection, Differentiated Services

UNIT-5: PROTOCOLS FOR QoS SUPPORT**9**

RSVP - Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching- Operations, Label Stacking, Protocol details- RTP- Protocol Architecture, Data Transfer Protocol, RTCP.

Total: 45 hrs**TEXTBOOK:**

22250E43CP- EMBEDDED SYSTEMS LTPC4004

AIM:

To give sufficient background for embedded systems design.

OBJECTIVES:

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To explain programming concepts and embedded programming in C and C++.
- To explain real-time operating systems, inter-task communication and an exemplary case of MUCOS – IRTOS.

UNIT-I INTRODUCTION TO EMBEDDED SYSTEMS 9

Definition and Classification – Overview of Processors and hardware units in an embedded system – Software embedded into the system – Exemplary Embedded Systems – Embedded Systems on a Chip (SoC) and the use of VLSI designed circuits

UNIT-II DEVICES AND BUSES FOR DEVICES NETWORK 9

I/O Devices - Device I/O Types and Examples – Synchronous - Iso-synchronous and Asynchronous Communications from Serial Devices - Examples of Internal Serial-Communication Devices - UART and HDLC - Parallel Port Devices - Sophisticated interfacing features in Devices/Ports- Timer and Counting Devices - ‘12C’, ‘USB’, ‘CAN’ and advanced I/O Serial high speed buses- ISA, PCI, PCI-X, cPCI and advanced buses.

UNIT-III EMBEDDED PROGRAMMING 9

Programming in assembly language (ALP) vs. High Level Language - C Program Elements, Macros and functions - Use of Pointers - NULL Pointers - Use of Function Calls – Multiple function calls in a Cyclic Order in the Main Function Pointers – Function Queues and Interrupt Service Routines Queues Pointers – Concepts of EMBEDDED PROGRAMMING in C++ - Object Oriented Programming – Embedded Programming in C++, ‘C’ Program compilers – Cross compiler – Optimization of memory codes.

UNIT-IV REAL TIME OPERATING SYSTEMS – PART-1 9

OS Services – Interrupt Routines Handling, Task scheduling models - Handling of task scheduling and latency and deadlines as performance metrics - Inter Process Communication And Synchronisation – Shared data problem– Use of Semaphore(s) – Priority Inversion Problem and Deadlock Situations – Inter Process Communications using Signals – Semaphore Flag or mutex as Resource key – Message Queues – Mailboxes – Pipes – Virtual (Logical) Sockets – RPCs.

UNIT-V REAL TIME OPERATING SYSTEMS – PART-2 9

Study of RTOS, VxWorks - Basic Features - Task Management Library at the System - LibraryHeader File - VxWorks System Functions and System Tasks - Inter Process (Task)Communication Functions - Case Study of Coding for Sending Application Layer Byte Streamson a TCP/IP Network Using RTOS Vxworks

SEMESTER-V-ELECTIVE-IV

22250E51AP-CLOUD COMPUTING

LTPC4004

AIM

To acquire basic knowledge on cloud computing and its applications.

OBJECTIVES:

- Identify cloud computing models, characteristics, and technologies.
- Get knowledge about the different architectures in cloud.
- Identify the information about service management and cloud securities.

UNIT-I

9

Overview of Computing Paradigm- Recent trends in Computing - Evolution of cloud computing - Introduction to Cloud Computing - Cloud Computing (NIST Model)- Properties, Characteristics & Disadvantages - Cloud computing vs. Cluster computing vs. Grid computing - Role of Open Standards

UNIT-II

9

Cloud Computing Architecture - Cloud computing stack - Service Models (XaaS) - Infrastructure as a Service (IaaS) - Platform as a Service (PaaS) - Software as a Service (SaaS)- Deployment Models

UNIT-III

9

Infrastructure as a Service (IaaS) - Introduction to IaaS- Resource Virtualization - Examples. Platform as a Service (PaaS) - Introduction to PaaS - Cloud Platform and Management - Examples - Software as a Service (SaaS)- Introduction to SaaS

UNIT-IV

9

Service Management in Cloud Computing - Service Level Agreements (SLAs)- Identity & Access Management - Access Control - Trust, Reputation, Risk - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations - Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations.

UNIT-V

9

Cloud Security - Infrastructure Security - Network level security - Host level security - Application level security - Data security and Storage - Data privacy and security Issues, Jurisdictional issues raised by Data location - Case Study on Open Source & Commercial Clouds - Eucalyptus - Microsoft Azure - Amazon EC2

Total: 45hrs

4. Cloud Security: A Comprehensive Guide to Secure Cloud Computing, Ronald L. Krutz, Russell Dean Vines, Wiley-India, 2010

22250E51BP-SPEECH PROCESSING AND SYNTHESIS LTPC4004

AIM

To study about the Speech Processing and Synthesis

OBJECTIVES

- To understand the mathematical foundations needed for speech processing
- To understand the basic concepts and algorithms of speech processing and synthesis
- To familiarize the students with the various speech signal representation, coding and recognition techniques
- To appreciate the use of speech processing in current technologies and to expose the students to real-world applications of speech processing

UNIT I FUNDAMENTALS OF SPEECH PROCESSING 9

Introduction – Spoken Language Structure – Phonetics and Phonology – Syllables and Words – Syntax and Semantics – Probability, Statistics and Information Theory – Probability Theory – Estimation Theory – Significance Testing – Information Theory.

UNIT II SPEECH SIGNAL REPRESENTATIONS AND CODING 9

Overview of Digital Signal Processing – Speech Signal Representations – Short time Fourier Analysis – Acoustic Model of Speech Production – Linear Predictive Coding – Cepstral Processing – Formant Frequencies – The Role of Pitch – Speech Coding – LPC Coder.

UNIT III SPEECH RECOGNITION 9

Hidden Markov Models – Definition – Continuous and Discontinuous HMMs – Practical Issues – Limitations. Acoustic Modeling – Variability in the Speech Signal – Extracting Features – Phonetic Modeling – Adaptive Techniques – Confidence Measures – Other Techniques.

UNIT IV TEXT ANALYSIS 9

Lexicon – Document Structure Detection – Text Normalization – Linguistic Analysis – Homograph Disambiguation – Morphological Analysis – Letter-to-sound Conversion – Prosody – Generation Schematic – Speaking Style – Symbolic Prosody – Duration Assignment – Pitch Generation

UNIT V SPEECH SYNTHESIS 9

Attributes – Formant Speech Synthesis – Concatenative Speech Synthesis – Prosodic Modification of Speech – Source-filter Models for Prosody Modification – Evaluation of TTS Systems.

TOTAL: 45 PERIODS

5. Xuedong Huang, Alex Acero, Hsiao-Wuen Hon, — Spoken Language Processing – A Guide to Theory, Algorithm and System Development, Prentice Hall PTR, 2001.

AIM:

To understand the concepts of Artificial Intelligence, ANN, Genetic Algorithms and Fuzzy systems and its applications.

OBJECTIVES:

- To introduce the ideas of Neural networks, fuzzy logic and use of heuristics based on human experience.
- To have a general understanding of soft computing methodologies, including artificial neural networks, fuzzy sets, fuzzy logic, fuzzy clustering techniques and genetic algorithms;
- To design and development of certain scientific and commercial applications using computational neural network models, fuzzy models, fuzzy clustering applications and genetic algorithms in specified applications.

UNIT-I FUZZY SET THEORY**10**

Introduction to Neuro – Fuzzy and Soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set – Theoretic Operations – Member Function Formulation and Parameterization – Fuzzy Rules and Fuzzy Reasoning – Extension Principle and Fuzzy Relations – Fuzzy If Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT-II OPTIMIZATION**8**

Derivative based Optimization – Descent Methods – The Method of Steepest Descent – Classical Newton's Method – Step Size Determination – Derivative Free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT-III NEURAL NETWORKS**10**

Supervised Learning Neural Networks – Perceptrons – Adaline – Backpropagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

UNIT-IV NEURO FUZZY MODELING**9**

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – Learning Methods that Cross fertilize ANFIS and RBFN – Coactive Neuro Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT-V APPLICATION OF COMPUTATIONAL INTELLIGENCE**8**

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

Total: 45 hrs

SEMESTER-V-ELECTIVE-V

22250E52AP-ADVANCED DATABASE TECHNOLOGY

LTPC4
004

AIM:

To prepare the student to understand, develop, and manage more advanced database applications.

OBJECTIVES:

Be able to

- Know the operations of parallel and distributed databases.
- Understand the structures and standards of object relational databases.
- Get familiar with the concepts of XML, Mobile and Multimedia Databases.

UNIT-I PARALLEL AND DISTRIBUTED DATABASES 9

Database System Architectures: Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts - Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture-Case Studies.

UNIT-II OBJECT AND OBJECT RELATIONAL DATABASES 9

Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL – OQL – Object Relational and Extended – Relational Systems: Object Relational features in SQL/Oracle – Case Studies.

UNIT-III XML DATABASES 9

XML Databases: XML Data Model – DTD – XML Schema – XML Querying – Web Databases – JDBC – Information Retrieval – Data Warehousing – Data Mining

UNIT-IV MOBILE DATABASES 9

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols - Mobile Database Recovery Schemes.

UNIT-V MULTIMEDIA DATABASES 9

Multidimensional Data Structures – Image Databases – Text/Document Databases - Video Databases – Audio Databases – Multimedia Database Design.

Total=45hrs

22250E52BP-RECONFIGURABLE COMPUTING

LTPC4
004

AIM:

To understand about the Reconfigurable Computing.

OBJECTIVES:

- To understand the need for reconfigurable computing
- To expose the student to various device architectures
- To examine the various reconfigurable computing systems
- To understand the different types of compute models for programming reconfigurable architectures
- To expose the student to HDL programming and familiarize with the development environment
- To expose the student to the various placement and routing protocols
- To develop applications with FPGAs

UNIT I DEVICE ARCHITECTURE 9

General Purpose Computing Vs Reconfigurable Computing –
Simple Programmable Logic Devices – Complex Programmable Logic Devices – FPGAs –
Device Architecture – Case Studies.

UNIT II RECONFIGURABLE COMPUTING ARCHITECTURES AND SYSTEMS 9

Reconfigurable Processing Fabric Architectures – RPF Integration into Traditional Computing Systems –
Reconfigurable Computing Systems – Case Studies – Reconfiguration Management.

UNIT III PROGRAMMING RECONFIGURABLE SYSTEMS 9

Compute Models – Programming FPGA Applications in HDL –
Compiling C for Spatial Computing
– Operating System Support for Reconfigurable Computing.

UNIT IV MAPPING DESIGN TO RECONFIGURABLE PLATFORMS 9

The Design Flow – Technology Mapping – FPGA Placement and Routing –
Configuration Bitstream Generation – Case Studies with Appropriate Tools.

UNIT V APPLICATION DEVELOPMENT WITH FPGAS 9

Case Studies of FPGA Applications – System on a Programmable Chip (SoPC) Designs.

TOTAL: 45 PERIODS

5. Scott Hauck and Andre Dehon (Eds.), — Reconfigurable Computing— The Theory and Practice of FPGA-Based Computation, Elsevier/Morgan Kaufmann, 2008.

AIM:

To Understand Green Technology and to implement Green computing practices to efficiently use the computers and its resources.

OBJECTIVES:

- Understanding scientific and social environment.
- Minimizing energy consumption from the IT estate.
- Purchasing green energy and using green suppliers.
- Reducing the paper and other consumables used.
- Minimizing equipment disposal requirements.

UNIT-I **9**

Origins, Regulations and industry initiatives - Government, Industry.

UNIT-II **9**

Approaches to green computing - Product longevity, Algorithmic efficiency.

UNIT-III **9**

Resource allocation, Virtualization.

UNIT-IV **9**

Terminal servers, Power management, Operating systems support, Power supply, Storage, Videocard, Display.

UNIT-V **9**

Web, Temporal and Spatial Data Mining, Materials recycling, Telecommuting, Middleware support for green computing, Tools for monitoring, HPC computing, Green Mobile, embedded computing and networking, Management Frameworks, Standards and metrics for computing green

Total: 45hrs

3. The Greening of IT-How Companies Can Make a Difference for the Environment by John Lamb.

SEMESTER-V-ELECTIVE-VI

22250E53AP-SOFTWAREQUALITYASSURANCE

LTPC4
004

AIM:

To develop the ability to analyze and estimate the quality of the software.

OBJECTIVES:

- To introduce an integrated approach to software development incorporating quality management methodologies.
- To study about the quality improvements in software
- To understand the Software Quality software standards

UNIT I

9

Introduction to software quality - challenges – objectives – quality factors – components of SQA – contract review – development and quality plans – SQA components in project life cycle – SQA defect removal policies – Reviews

UNIT II

9

Basics of software testing – test generation from requirements – finite state models – combinatorial designs - test selection, minimization and prioritization for regression testing – test adequacy, assessment and enhancement

UNIT III

9

Testing strategies – white box and black box approach – integration testing – system and acceptance testing – performance testing – regression testing – internationalization testing – ad hoc testing – website testing – usability testing – accessibility testing Test plan – management – execution and reporting – software test automation – automated testing tools

UNIT IV

9

Hierarchical models of software quality – software quality metrics – function points – Software product quality – software maintenance quality – effect of case tools – software quality infrastructure – procedures – certifications – configuration management – documentation control

UNIT V

9

Project progress control – costs – quality management standards – project process standards – management and its role in SQA – SQA unit

Total=45hrs

22250E53BP-BIO-INFORMATICS LTPC4004

AIM:

To impart knowledge on basic techniques of Bioinformatics.

OBJECTIVES:

- Build a solid foundation and acquire the vocabulary you need to supervise or to communicate with others who use these tools.
- To have ability to design drugs.
- To understand Evolutionary Trees and Phylogeny.
- Learn the key methods and tools used in bioinformatics.

UNIT I FUNDAMENTALS 7

The Central Dogma – Killer Application – Parallel Universes – Watson’s Definition – Top Down Vs Bottom Up Approach – Information Flow – Conversance – Communications.

UNIT II DATABASE AND NETWORKS 9

Definition – Data Management – Data Life Cycle – Database Technology – Interfaces – Implementation – Networks Communication Models – Transmission Technology – Protocols – Bandwidth – Topology – Contents – Security – Ownership – Implementation.

UNIT III SEARCH ENGINES AND DATA VISUALIZATION 10

Search Process – Technologies – Searching and Information Theory – Computational Methods – Knowledge Management – Sequence Visualizations – Structure Visualizations – User Interfaces – Animation Vs Simulation.

UNIT IV STATISTICS – DATA MINING AND PATTERN MATCHING 11

Statistical Concepts – Micro Arrays – Imperfect Data – Basics – Quantifying – Randomness – Data Analysis – Tools Selection – Alignment – Clustering – Classification – Data Mining Methods – Technology – Infrastructure Pattern Recognition – Discovery – Machine Learning – Text Mining – Pattern Matching Fundamentals – Dot Matrix Analysis – Substitution Matrix – Dynamic Programming – Word Method – Bayesian Method – Multiple Sequence Alignment Tools.

UNIT V MODELING SIMULATION AND COLLABORATION 8

Drug Discovery Fundamentals – Protein Structure – System Biology Tools – Collaboration and Communication – Standards – Issues – Case Study.

Total: 45hrs

22250E53CP-WIRELESSAPPLICATIONPROTOCOLS

LTPC4
004

AIM

To introduce the advanced element in the field of wireless communication.

OBJECTIVE:

- Be able to discuss current and emerging technology in Wireless technology.
- Understand fundamental trends of technological evolution of Wireless technology.
- Have hands-on knowledge in developing simple and comprehensive WAP contents.
- Be able to create simple Wireless applications.

UNIT-I: 9

Wireless Concepts - Technologies - An Overview of WAP - WAP Application Environment - WAP Gateways - WAP Gateway Services and Security.

UNIT-II: 9

WAP Components - Specification - Standard Execution Environment - Agent Characters - Main Protocols - WTP/WSP/WDP (UDP/WEMP Transportation and WTLS Protocol).

UNIT-III: 9

WAP Design and Development - The Development Tools - WML Language - WML Script Language.

UNIT-IV: 9

Implementing an Enterprise WAP Strategy, Wireless transmission - Spread spectrum - MAC - SDMA - FDMA - TDMA - CDMA - Cellular Wireless Networks.

UNIT-V: 9

Application Area of WAP: Wireless Operator's Interrelated Services - Mailbox Management - Searching the Phone Directory - Managing Personal Information.

Total: 45hrs

B.COM PROGRAMME

2020 REGULATION

Commerce is a professional course among the various arts subjects. Commerce is instrumental in bringing about changes in all aspects of the society. It promotes growth and development. The changes in the economic policies of the country and the computer application in business offer variety of opportunities for innovative and creative people to carry out their career with new vigor and enthusiasm.

In the present scenario the market based system has gradually expanded across the world securing a strong position in the market overcoming all borders and barriers.

The rapid changes in the field of economics, information technology, politics and also in the organizational structure and the increased complexities of the business world poses series of problems to the modern commerce student. At this backdrop the new syllabus is designed for the B.Com Programme of the **PRIST UNIVERSITY**

- பிரிஸ்ட் நிகர்நிலைப் பல்கலைக்கழகம்- வல்லம் தஞ்சாவூர்

தமிழ்

முதல் பருவம்

முதலாம் ஆண்டு -(BBA , BA, B.COM, CS ,Bsc)

இக்கால இலக்கியம் - செய்யுள், சிறுகதை , நாடகம், இலக்கிய வரலாறு

அலகு : 1.செய்யுள் :

1. தாயுமானவ சுவாமிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள்
 2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
 3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
 4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
 5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள் - தமிழ் இனிமை , தமிழ் உணர்வு
- அலகு : 2. செய்யுள்:
6. நாமக்கல் கவிஞர் - தமிழ் தேன், தமிழ் வளர்ச்சி சபதம் செய்வோம் , 40 அடிகள்
 7. ந.பிச்சமூர்த்தி - வழித்துணை - கவிதை கருடன் , 42 அடிகள்
 - 8.கூதா - தேன்மழை, கல்பை , 22 அடிகள்
 9. கண்ணதாசன் - இலக்கியம் , ஒரு பாணையின் கதை , 54 அடிகள்
 10. அப்துல் ரகுமான் - சொந்த சிறகுகள், குப்பையை கிளறும் சிறகுகள், 80 அடிகள்
- அலகு : 3. சிறுகதை :
11. க.சமுத்திரம் - வேரில் பழுத்த பலா
- அலகு : 4. நாடகம் :
12. கு. வெ. பாலசுப்பிரமணியன் , கௌதம புத்தர் (உரைநடை நாடகம்)
- அலகு : 5. இலக்கிய வரலாறு
13. சிறுகதை , புதினம், நாடகம் உரைநடை , கவிதை , புதுக்கவிதை

M

COURSECODE	COURSE TITLE	L	T	P	C
20161SEC13	Basic Accounting	4	1	0	4

AIM

To develop conceptual understanding of the fundamentals of basic accounting system in a business.

OBJECTIVES

- I. To process transactions and other events through a bookkeeping mechanism to prepare final accounts.
- II. To impart skills in basic accounting for various kinds of business transactions.
- III. To generate basic data for business information.

UNIT-I

Self Study Unit: Introduction – Accounting Concepts and Conventions Book Keeping and Accounting – Accounting Cycle – Objectives and Advantages of Accounting – Journal – Books of Accounts – Format of Journal – Rules of Journalizing.

UNIT-II

Journalizing – Ledger – Subsidiary Books – Trail balance – Rectification of Errors.

UNIT-III

Bills of Exchange – Selfbalancing – Single Entry System.

UNIT-IV

Final accounts of trading and – Non Trading Concerns.

UNIT-V

Depreciation – Methods Fixed – Diminishing Annuity – Depreciation Fund – Provisions and Reserves – Fire Claims.

Employability**OUTCOME**

- Understanding the fundamental of financial accounting
- Develop the modern market economy
- Prepare the different kinds of financial statement
- Acquire conceptual knowledge of basics of accounting
- Identify and analyze the reasons for the difference between cash book and pass book balances
- Develop the skill of recording financial transactions and preparation of reports in accordance with GAAP

REFERENCE BOOKS

1. R.L.Gupta and V.K.Gupta – Financial Accounting – Sultan Chand & Sons.
2. S.P.Jain and K.L.Narang – Principles of Accounting – Kalyan Publications.
3. Reddy and Murthy – Financial Accounting – Murgham Publications.
4. Dr.Radha – Financial Accounting – Prasana Publications

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161SEC14	Business Environment	3	1	0	3

AIM

To study about the different types of environments which influence a business.

OBJECTIVES

- I. To learn the social responsibility of a business.
- II. To study about the basic aspects of a business.
- III. To highlight the economic and other environments of a business.

UNIT-I

Introduction of Business Environment – Nature and Scope of Business – Characteristics of Business – Objectives of Business – Social Responsibilities of Business – Economic Environment – Social and Cultural Environment.

UNIT-II

Political and Legal Environment – Constitutional Environment in India – Legal Environment – Technological Environment – Socio-Cultural Environment.

UNIT-III

Economic Environment; - Economic Systems – Economics systems – Economic Planning – Economic Policies – Business Cycle – Control of Business – Characteristics of Inflation – Control of inflation

UNIT-IV

Financial Environment and Financial System – What is a Financial System – Importance and Role of Banks in the Economy – Functions of Commercial Banks.

Employability**UNIT-V**

Environment Analysis and Managerial Development – Techniques of Environmental Analysis – SWOT Analysis – Training and Development of Professional Managers – Management by Objectives – Methods – Advantages of Management Training – Limitations of MBO

OUTCOME

- Discuss the supply and demand theory and its impact on insurance
- Outline how an entity operates in the business environment
- Explain the legal framework that regulates the insurance industry
- Understand the relationship between environment and business; Applying the environmental analysis techniques in practice
- Understand Economic, Socio-Cultural and Technological Environment
- Know state policies, Economic legislations and Economic reforms laid by the government

REFERENCE BOOKS

1. Dr.S.Sankaran – Business Environment
2. Dr.C.B.Gupta – Business Environment

COURSECODE	COURSE TITLE	L	T	P	C
20161AEC15	Marketing	3	0	0	3

AIM

To learn the role of marketing in the modern Society.

OBJECTIVES

- I. To understand the concept of marketing in the new millennium.
- II. To study the marketing mix by element wise.
- III. To grasp the techniques of Marketing Research.

UNIT-I

Self Study Unit: Introduction of Marketing – Definition – Classification of Marketing – Importance of Marketing – Evolution of Marketing Concepts – Marketing Functions – Marketing Mix.

UNIT-II

Market segmentation – Bases – Benefits – Product Policy – Product Planning and Development – Product Life Cycle – Product Mix.

- Introduction: What is love? Forms of love for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love. Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
- Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Case studies

Unit II

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)
- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
- Learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit III

- Introduction: What is non-violence? Its need. Love, compassion, empathy, sympathy for others as prerequisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non-violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Case studies

Unit IV

- Introduction: What is righteousness?
- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit V

- Introduction: What is peace? Its need, relation with harmony and balance
- Individuals and organisations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Case studies

Unit VI

- Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with 1889 cases of service from history, literature

SEMESTER II
COMMUNICATIONSKILLS

CourseCode	CourseTitle	L	T	P	C
201ACLSCOS	CommunicationSkills	-	-	-	2

Aim:

CourseObjectives:

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

CourseOutcome:

By the end of this program, participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barrier to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

- Techniques of effective reading
- Gathering ideas and information from a given text
 - i. Identify the main claim of the text

- ii. Identify the purpose of the text
 - iii. Identify the context of the text
 - iv. Identify the concepts mentioned
- Evaluating these ideas and information
 - i. Identify the arguments employed in the text
 - ii. Identify the theories employed or assumed in the text
- Interpret the text
 - i. To understand what a text says
 - ii. To understand what a text does
 - iii. To understand what a text means

Unit IV

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalizations and oversimplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
 - i. Well-knit logical sequence
 - ii. Narrative sequence
 - iii. Category groupings
- Different modes of Writing-
 - i. E-mails
 - ii. Proposal writing for Higher Studies
 - iii. Recording the proceedings of meetings
 - iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in the workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office
 - iii. Excel
 - iv. Powerpoint

Unit VI

- Introduction to social media websites
- Advantages of social media
- Ethics and etiquettes of social media
- How to use Google search better
- Effective ways of using Social Media
- Introduction to Marketing

Unit VII

- Meaning of non-verbal communication
- Introduction to modes of non-verbal communication
- Breaking the misbeliefs
- Open and Closed Body language

- EyeContactandFacialExpression
- HandGestures
- Do'sandDon'ts
- Learningfromexperts
- Activities-BasedLearning

SEMESTER-III**PRISTUNIVERSITY, THANJAVUR**

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161RMC37	Research Methodology	2	0	0	2

AIM

To create a basic appreciation towards research process and awareness of various research publications.

OBJECTIVES

- I. To understand the steps in research process and the suitable methods.
- II. To identify various research communications and their salient features.
- III. To carry out basic literature survey using the common data-bases.

PREREQUISITES:

Basic computer skills for working in window-environment & Conceptual knowledge on basic matrices.

UNIT-I

Research in Management : An Introduction – Definition, meaning and nature – Scope and objects of Research. Types of Research.

UNIT-II

Research Design – Defining Research Problem and Formulation of Hypothesis – Experimental Designs – Sampling and types of sampling.

UNIT-III

Research Process – Steps in the process of Research, Data Collection and Measurement: Sources of Secondary data – Methods of Primary data collection – Questionnaire Construction.
Skill development

UNIT-IV

Data presentation and Analysis – Data Processing – Methods of Statistical analysis and interpretation of Data – Testing of Hypothesis and theory of inference – Correlation and Regression analysis.

UNIT-V

Report writing and Presentation – Steps in Report writing – Types of reports – Formats of Reports – Presentation of a Report.

OUTCOME:

- Able to carry out independent literature survey corresponding to the specific publication type and assess basic literary research tools.
- Familiarize participants with basic of research and the research process.

- Enable the participants in conducting research work and formulating research synopsis and report.
- Develop understanding on various kinds of research, objectives of doing research, research process, research designs and sampling.
- Have basic knowledge on qualitative research techniques
- Have adequate knowledge on measurement & scaling techniques as well as the quantitative data analysis
- Have basic awareness of data analysis and hypothesis testing procedures

B.COM

COURSECODE	COURSETITLE	L	T	P	C
20161SEC52	FinancialManagement	3	1	1	4

AIM

To focus on the analytical approach to financial decisions.

OBJECTIVES

- I. To know the basic financial management concepts.
- II. To study the important development in Indian capital Market and its impact on the corporate financial management.

UNIT-I

Introduction – Finance and related disciplines – Scope of financial management – Objectives of financial management – Financial Decisions – Organization of finance function.

UNIT-II

Cost of capital – Cost of debt – Cost of Preference shares – cost of equity – Cost of retained earnings – Weighted average cost of capital.

UNIT-III

Introduction – Capital structure – Determinants – Theories net income approach – net operating income approach – M.M. Approach – Traditional approach.

Skill development

UNIT- IV

Leverages meaning and Types – Significance – Operating leverage – Financial and combined leverage.

UNIT-V

Dividend policy – factors influencing dividend policy – Theories – Relationship with value of firms – Stock dividend – Stock splits.

OUTCOME

- Use business finance terms and concepts when communicating.
- Demonstrate a basic understanding of financial management.
- Provide introduction to Financial Management
- Create an awareness about capital structure and theories of capital structure
- Make them understand the cost of capital in wide aspects
- Provide knowledge about dividend policies and various dividend models.
- Enable them to understand working capital management

REFERENCE BOOKS

1. Kulkarani – Financial management
2. S.N. Maheswari – Financial management
3. R.K. Sharma – Financial management
4. Prasanna Chandra – Fundamentals of Financial management
5. R. Ramachandran, R. Srinivasan – Financial management

PRISTUNIVERSITY, THANJAVUR

B.COM

COURSECODE	COURSETITLE	L	T	P	C
20161SEC53	FinancialServices	3	1	1	4

AIM

To analyze the various financial institutions and their services.

OBJECTIVES

- I. To gain knowledge on financial services.
- II. To understand importance of various services including banking, insurance, mutual funds.

UNIT-I

Structure of Indian Financial System – Financial assets – Financial intermediaries – Financial market – Money market – capital market.

UNIT-II

Merchant banking – Definition – Objectives – Functions – Management of New Issues – Indian experience – SEBI Guidelines.

UNIT-III

Mutual funds: Meaning – Types – Functions – Institutions involved – UTI, LIC, and Commercial banks – Entry of Private sector – Growth of mutual funds in India – SEBI Guidelines.

UNIT-IV

Lease Financing : The concept – Types – Merits and demerits of leasing – Hire purchase – Meaning – Lease Vs Hire purchases – Problems & Prospects of Hire Purchase in India.

Employability

UNIT-V

Factoring : The concept – factoring mechanism – Factoring in India – Forfeiting – Definition – Factoring Vs Forfeiting – Venture capital – Credit rating – Benefits – Rating symbols – Rating agencies in India.

OUTCOME

- Forecast a firm's future financing requirements
- Design an optimal capital structure.
- Give an idea about fundamentals of financial services and players in financial sectors
- Create an awareness about merchant banking, issue management, capital markets and role of SEBI
- Provide knowledge about leasing and hire purchase concepts
- Make them understand about different types of insurance and IRDA Act.

REFERENCE BOOKS

1. Gordon, Natarajan – Financial Market and Services.
2. Dr. S. Gurusamy – Financial services and Market.
3. Kuccho S.C. – Financial Management
4. Pandey I.M. – Financial Management.

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161SEC54	Computer Application in Business	3	1	1	4

AIM:

To apply the computer techniques for the various business activities.

OBJECTIVES:

- I. To study the fundamental of the computers.
- II. To understand data processing techniques, concepts of programming languages.

UNIT-I

Introduction to Computer – Generation of computer – Characteristic of computer – Area of Applications – Components of Computer.

UNIT-II

Objectives of windows – introduction to logging of desktop and task bar – Creation of file and folder – window explorer – find option – shortcut – brief case running applications – customization.

UNIT-III

Word – Objectives – introduction to word – creating word – document – creating business letters – formatting documents – word count – thesaurus – Mail merge – Excel – Objectives – Introduction to Spreadsheet – creating worksheet – Editing work sheet – charts – applications of financial and statistical functions – Shorting data – filtering data.
Skill development

UNIT-IV

Tally – introduction – objectives – fundamentals of computerized accounting – principal of accounting – Computerized accounting vs. Manual accounting – Tally advances – introduction to inventory.

UNIT- V

Introduction to E- Commerce – scope – issues and impact of E- Commerce classification of E- Commerce applications and benefit of E-Commerce – Advantages & Disadvantages of E-commerce – technology and framework of E-Commerce – E-Payment – EFT-Banking applications.

OUTCOME:

- Study the development of computers and their components in each stage.
- Develop an idea of software, programming language and operating system.
- Study the concept of developing database and its maintenance using computers in business Concern
- Analyze the importance of management information system and networking in a business.
- Be aware and perform various activities using computers in day to day life.

REFERENCE BOOKS

1. Computer Applications in Business – K Mohan Kumar and Dr. S. Rajkumar – The MCGraw Hill Publication.
2. Computer Applications in Business with Tally ERP9 – By S.V.P. Rizwan Ahmed – Margham Publication.
3. Srinivasa Vallabhan – Computer Applications in Business.
4. K. Mohan Kumar and Dr. S. Rajkumar – Computer Application in Business.
5. Deva Publication – Computerized Accounting under Tally.

PRISTUNIVERSITY, THANJAVUR

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161DSC55A	Elective Paper-I-A-Stock Exchange Practice	3	0	1	2

AIM:

This course aims at giving a comprehensive understanding on the stock market operations in terms of its structure, trading, settlement procedures, processes and related components and the regulations, emerging challenges in the Indian Stock market.

OBJECTIVES

- I. To provide an introduction to the financial markets and to analyze the role of financial markets for the broader macro.
- II. The course will help them in building career in stock market/broking houses.
- III. To help them to understand the practical aspects of primary and secondary market operations.

UNIT-I

Capital Markets in India - An overview of Indian Securities Market, Meaning, Functions, Intermediaries, Role of Primary Market – Methods of floatation of capital – Problems of New Issues Market – Investor protection in primary market – Recent trends in primary market – SEBI measures for primary market

UNIT-II

Stock exchanges and its Functions : Meaning, Nature, Functions of Secondary Market – Organization and Regulatory framework for stock exchanges in India – SEBI: functions and measures for secondary market – Overview of major stock exchanges in India –

UNIT- III

Trading, settlement and Surveillance System In Stock Exchanges : Different trading systems – BSE - BOLTS system – Different types of settlements – Pay-in and Pay-out – Bad Delivery – Short delivery – Auction – NSE – NEAT system options – Market types, Order types and books

UNIT-IV

Meaning, Purpose, and Construction in developing index – Methods (Weighted Aggregate Value method, Weighted Average of Price Relatives method, Free-Float method) – Stock market indices in India – BSE Sensex- Scrip selection criteria

Skill development

UNIT-V

OUTCOMES:

- Understand the trading mechanism in stock exchange.
- Understand the trading pattern in BSE and NSE.
- Get knowledge on the Demat Trading.
- Discuss on the SEBI guidelines and other regulations relating to Demat Trading.
- Get through the certification examinations conducted by BSE and NSE, and
- Start stock trading concern and become a successful Financial Entrepreneur.
- Pedagogical Methods Adopted: Flipped Learning, Blended Learning, Experiential Learning,
- Participative Learning, Case Study Method and Problem Based Learning

Text Book:

1. Punithavathy Pandian, “Security Analysis and Portfolio Management”, Vikas Publishing House Pvt. Ltd.
2. 2. Prasanna Chandra, “Investment Analysis and Portfolio management”, Tata McGraw Hill, 3rd Edn., 2008
3. V. A. Avadhani, Investment and Securities Market in India, Himalaya Publishing House.
4. Sanjeev Agarwal, A Guide to Indian Capital Market, Bharat Publishers.

COURSECODE	COURSE TITLE	L	T	P	C
20161DSC55B	Elective Paper-II-B-Co-operative Law and Practice	3	0	1	2

AIM:

To make the students gain expert knowledge in co-operative law and Practices.

OBJECTIVES:

- (i) To learn the important concepts in co-operative law.
- (ii) To understand all the important legal aspects of co-operative management

from the incorporation stage to the winding up stage.

Unit-I

Registration – Change of Liability – By – Laws – Amendment of by – Laws – Power of the Registrar to direct Amendment of by – laws – Divisions – Amalgamation – Power of Registrar in Amalgamation – Conversion – Transfer of Assets and Liabilities among Registered Societies.

Unit-II

Qualification and Disqualification for Membership – Duties and rights of Members – Management of registered Societies – Constitution of Representative – General Body – Constitution of Board – Disqualification for Membership of a Board – Election of Office bearers of the Board – Removal of Member of the Board.

Unit-III

Duties and Privileges of Registered Societies, Charges of societies – Deduction from Salary etc Property and Funds of Registered societies – Investment of Funds – Disposal of Net profits.

Unit-IV

Execution of Decrees, Decisions, Awards and Orders – Procedure for Attachment and Sale of Immovable Properties – Appeal, Review and Revision – Offences – Penalties

Unit-V

Audit, Inquiry, Inspection, Surcharge and supervision – Settlement of Disputes – Mode of Service and Summons – Winding up – Powers of Liquidator – Power of Registrar under the Co-operative Societies Act 1983.

Skill development**OUTCOMES:**

- Know about the company law in India.
- Understand the use of the memorandum of association and article of association in a company, they also learn from this course
- Develop Professionals in the field of Co-operation, Co-operative law and Management.
- Promote qualified, Skilled and professional manpower to manage the affairs of the Cooperative Institutions.
- Enhance the Knowledge base of the in-service Personnel on the subject Co-operation, Co-operative law and Co-operative Management.
- Enable the in-service personnel to develop skills on Co-

8. Identifycareeropportunitiesinconsiderationoftheirownpotentialandaspirations
9. Usethenecessarycomponentsrequiredtoprepareforacareerinanidentifiedoccupation (asacasestudy).

UnitI:ResumeSkills

ResumeSkills:PreparationandPresentation

- Introductionofresumeanditsimportance
- Differencebetween aCV,ResumeandBiodata
- Essentialcomponentsofagoodresume

ii. Resumeskills:commonerrors

- Commonerrorspeoplegenerallymakeinpreparingtheirresume
- Prepareagoodresumeofother/hisconsidering allessentialcomponents

UnitII:InterviewSkills

i. InterviewSkills:PreparationandPresentation

- Meaningandtypesofinterview(F2F,telephonic,video,etc.)
- DressCode,BackgroundResearch,Do'sandDon'ts
- Situation,Task,ApproachandResponse(STARApproach)forfacingan interview
- Interviewprocedure(opening,listeningskills,closure,etc.)

- Important questions generally asked in a job interview (open and closed ended questions)

ii. Interview Skills: Simulation

- Observation of exemplary interviews
- Comment critically on simulated interviews

iii. Interview Skills: Common Errors

- Discuss the common errors generally candidates make in interview
- Demonstrate an ideal interview

Unit III: Group Discussion Skills

Meaning and methods of Group Discussion

- Procedure of Group Discussion
- Group Discussion-Simulation
- Group Discussion-Common Errors

Unit IV: Exploring Career Opportunities

Knowing yourself – personal characteristics

- Knowledge about the world of work, requirements of jobs including self-employment.
- Sources of career information
- Preparing for a career based on their potentials and availability of opportunities

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161SEC61	Management Accounting	3	1	2	5

AIM

To emphasize the importance of accounting information for managerial decision making and solving problems.

OBJECTIVES

- i. To gain expert knowledge of the techniques of managerial accounting.
- ii. To know the application of various financial tools for making managerial decisions.
- iii. To apply techniques of costing for business decisions.

UNIT-I

Definition of management accounting – Nature, scope, objectives, Functions of management accounting – Management Accounting and Financial Accounting Management Accounting and Cost Accounting – Advantages & Limitations of Management Accounting.

UNIT-II

Financial Statement Analysis – Comparative statement – Common size statement – Trend percentages – Ratio Analysis.

UNIT-III

Fund Flow Analysis and Cash Flow Analysis.

UNIT-IV

Marginal costing and Break – Even analysis – Budget and budgetary controls – Classification of budgets.

UNIT-V

Standard costing and variance analysis, Capital budgeting – Importance – Techniques of Capital budgeting.

Employability

OUTCOME

- Prepare analysis of various special decisions, using relevant costing and benefits
- More effective planning and control systems
- The student's thought and knowledge on management Accounting
- Help to give proper idea on financial statement analysis in practical point of view
- Introduce the concept of fund flow and cash flow statement
- Provide knowledge about budget control keeping in mind the scope of the concept
- Develop the know-how and concept of marginal costing with practical problems

1. ShashiK.Gupta&R.K.Sharma–ManagementAccounting
2. S.N.Maheswari–ManagementAccounting
3. R.RamachandranandR.Srinivasan–ManagementAccounting
4. HingoraniandRamanathan– ManagementAccounting

THANJAVURB.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20161SEC62	EntrepreneurshipandSmallBusinessManagement	3	1	1	4

AIM:

To know the role of entrepreneurs and small businesses in the economic development of the country.

OBJECTIVES:

- I. To study the environment for entrepreneurship development.
- II. To identify suitable business opportunities for small businesses.
- III. To prepare project report and appraise project implementation.

UNIT-I

Concept of Entrepreneurship – Definitions – Types of Entrepreneurship – Functions – Characteristics – Role of Entrepreneurs in the Economic Development – Factors affecting entrepreneurial growth.

UNIT –II

Entrepreneurial Development Programmes – Self-Employment schemes – Objectives of EDP – Women entrepreneurs – Phases of EDP – Govt. Policies on entrepreneurial development – Small Entrepreneurs development.

UNIT – III

Steps Involved in Establishing a small business – generation of Project ideas – Project identification – Selection of a product – Project formulation – assessment of project feasibility study.

UNIT –IV

Legal formalities; Registration and licensing of small scale industrial unit Benefits – Stages of Registration – Procedures for Registration – Deregistration – Filing of Entrepreneur Memorandum – Licensing for SSI sector.

UNIT-V

Issues in small business marketing – small entrepreneurs in International Business – Accounting for small business – office organization for small business – sickness in small industries.

Employability

OUTCOME:

- Understand the systematic process to select the business ideas.
- Write a business plan
- Develop students about Entrepreneurship development
- Create an awareness on various Entrepreneurship Development Programme
- Enable them to understand project formulation
- Familiarize the students with EDP schemes

REFERENCE BOOKS:

1. P. Saranavel – Entrepreneurial Development.
2. Dr. C.B. Gupta – Entrepreneurship & Small Business Management.
3. Dr. S.S. Khanka – Entrepreneurship & Small Business Management.

4. Dr.Radha-EntrepreneurialDevelopment.

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161SEC63	Auditing	3	1	1	4

AIM

To study and report about the state of affairs of business in the Organization.

OBJECTIVES

- I. To trace errors and frauds in business.
- II. To analyze the available evidences of all receipts and payments.
- III. To protect the interest of stakeholder and outsiders.

UNIT-I

Auditing–Definition–Objectives–Types of Audit–Advantages–Qualities of a professional auditor–Investigation Vs Auditing.

UNIT-II

Internal Check–Objectives, Principles, Advantages–Internal Checks system and Auditor–Internal Control–Internal Audit.

UNIT-III

Vouching–Objectives, Importance, -
Vouching of Cash Transactions, Trading Transactions and Impersonal Ledger.
Employability

UNIT-IV

Verification and valuation of assets and Liabilities–Cash–Investments–Advances, Land and Building, Plant and Machinery, Furniture, Stock, Capital, Creditors, Bills payable.

UNIT-V

Company Audit–
Provision in the Companies Act relating to auditor's qualifications, appointment, removal, Rights, duties and liabilities, (Civil and Criminal).

OUTCOME

- Articulate knowledge of fundamental audit concepts
- Apply critical thinking skills and solve auditing Problems.
- Apply and demonstrate the accounting knowledge and skills in Auditing.
- Explain how analytical procedures are used as an audit tool.
- Illustrate effective internal controls

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161DSC64A	Elective paper-I-A-Income Tax Law and Practice	3	0	2	3

AIM:

To understand the basic elements of Income Tax theory, Law and Practice.

OBJECTIVES:

- I. To learn the basic concepts in Income Tax Law
- II. To identify the various sources of income.
- III. To know tax exemptions and deductions.

UNIT-I

Basic Concepts – Definitions – Assesses – Person, income, assessment year, previous year, basis of charge: Determination of Residential Status – Incomes exempt from tax under Sections 10, 11, 12, 13 and 13A.

UNIT-II

Salary: Definition – Salary under section 17 – allowances, perquisites, profit in lieu of salary – deductions under section 16 – computation of salary income.

UNIT-III

House property: Definition, exempted incomes from house property – Annual value – determination of annual value – Let out – Self occupied – Deductions – computation of property income.

Skill development

UNIT-IV

Profits and Gains of business or profession – definition – charging provisions – deductions – computation of business and professional income

UNIT-V

Capital Gains: Basis of charge – Cost of acquisition, cost of improvement – exempted capital gain – computation of capital gain – Income from other sources – Chargeability – deductions – Computation of Income under other sources.

OUTCOMES:

- File IT Return on individual basis
- Compute the total Income and Define tax complications and structure.
- In order to familiarize the different know-how and heads of income with its components
- It helps to build an idea about income from house property as a concept
- It gives more idea about the income from business or profession

PRISTUNIVERSITY, THANJAVUR

B.COM

COURSECODE	COURSE TITLE	L	T	P	C
20161DSC64B	Elective paper – II-B-Co-operation Theory	3	0	2	3

AIM:

To understand the basic principles of co-operation and their application to the various co-operative organization.

OBJECTIVES:

- I. To study the functioning of various co-operative organizations.
- II. To analyze the impact of co-operative credit on agriculture.

UNIT-I

Principles of Co-operation – Meaning – Rochdale Principles – Reformulation of Co-operative Principles – Committee on Co-operative Principles 1937 and 1966 – Application of Co-operative Principles in Practice – Evolution of Co-operative Principles

UNIT-II

Co-operation and other forms of economic organization: Co-operation and Capitalism – Communism and Socialism – Co-operation as a balancing sector – Co-operative as a system, a sector & a movement – Characteristics of Co-operative economy – Benefits of Co-operation, Economic, Social, Educational and Political.

UNIT-III

History of Co-operative Movement in India – Co-operative Credit Societies Act 1904–1912 – Multi Unit Co-operative Societies Act 1957 – Recent trends in Co-operative act – Producer companies
Employability

UNIT-IV

Co-operative credit movement in India – Primary Agricultural co-operative bank central co-operative Banks – State co-operative Banks – co-operative Agricultural and Rural development Bank – State Co-operative Agricultural and Rural Development Bank

UNIT-V

Co-operative Marketing – Service Co-operatives – Non Credit Societies – Co-operative Urban Banks – Employees Credit Society – Consumer Co-operatives – Housing Co-operatives – Dairy Co-operatives

OUTCOMES:

- More on-task behavior Greater Social support
- Develop Professionals in the field of Co-operation, Co-operative law and Management.
- Promote qualified, Skilled and professional manpower to manage the affairs of the Cooperative Institutions.
- Enhance the Knowledge base of the in-service Personnel on the subject Co-operation, Co-operative law and Co-operative Management.
- Enable the in-service personnel to develop skills on Co-operative Management Techniques

REFERENCE BOOKS

1. B.S.Mathur-Co-operation Theory
2. Hajeela-Principles of Co-operation
3. Rangasamy-Co-operation

Open Elective- Journalism

COURSE CODE	COURSE TITLE	L	T	P	C
201ENOEC	Open Elective - Journalism	4	0	0	2

Aim:

- To acquaint with the basic knowledge of journalism

Objective:

- To instil in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub-editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist
- Explore the different kinds of news

UNIT-I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

UNIT-II

News – Definition, Kinds, Elements, Sources

UNIT- III

Reporters

UNIT-IV

The Editor and the Sub-editor

UNIT-V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

Open Elective: Development of Mathematical Skills

COURSECODE	COURSE TITLE	L	T	P	C
201MAOEC	Open Elective : Development Of Mathematical Skills	4	0	0	2

Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make decisions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III Set theory –

Series **Unit IV**

Matrices – Determinants

Unit V

Assignment problems

References

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kantiswarup, P.K.Gupta and Manmohan, "Operations Research"
 - Learning outcomes
 - By the end of this course, you should be able to
 - know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
 - use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts

- Select and apply general rules correctly to solve problems including those in real-life contexts.

PRISTUNIVERSITY, THANJAVURB.CO

M

Open Elective: Instrumentation

COURSE CODE	COURSE TITLE	L	T	P	C
201PHOEC	Open Elective: Instrumentation	4	0	0	2

Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

- To build the strong foundation in physics of students needed for the field of Instrumentation.
- To prepare student to apply reasoning informed by the contextual knowledge to practice.
- To provide opportunity for student to work as part of team on multi-disciplinary projects.

UNIT-I: INTRODUCTION

Potentiometer-

calibration of voltmeter and ammeter, measurement of resistance, Principles of network theorems-

Thevenin's and Norton's theorem - Bridges:

AC bridges - Maxwell, Owen, Schering and de Sauty's bridges - Wien bridges.

UNIT-II: ELECTRONIC INSTRUMENTS-I

Basic characteristics of instruments - resolution - sensitivity -

Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter - resistance meter -

Amplified D.C. meter -

Chopper stabilized amplifier - A.C. Voltmeter using

rectifiers - Electronic multimeter - Differential voltmeter - Digital voltmeters -

Component measuring instruments (quantitative studies)

UNIT-III: ELECTRONIC INSTRUMENTS-II

Signal conditioning systems - DC and AC carrier systems - Instrumentation amplifiers -

Vibrating capacitor amplifier - Analog to digital data and sampling - A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV - Recording Devices

Recorders necessity - Recording requirements - Analog recorders - Graphic recorders - strip chart recorders -

Galvanometer types recorders - Null type recorders.

Unit V - CRO

CRO - Construction and action - Beam transit time and frequency limitations -

Measurement of potential, current, resistance, phase and frequency - Special purpose oscilloscopes -

Sampling storage oscilloscope.

Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

Learning Outcomes:

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – Dhanpat Rai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver C. Sage – McGraw Hill – 1975.

PRISTUNIVERSITY, THANJAVURB.CO
M

COURSECODE	COURSE TITLE	L	T	P	C
201MBOEC	Open Elective: Wildlife Conservation	4	0	0	2

Aim:

To enable the students understand the need of conservation of wildlife in India.

Objectives:

- Maintenance of rare species in protected areas such as national parks, sanctuaries etc., Establishment of specific biosphere reserves for endangered plants and animals.
- Protection of wildlife through legislations such as banning hunting etc.,
- Imposing specific restrictions on export of endangered plants and animals or their products.

Course Outcome:

- Protection of natural habitats of organisms through controlled exploitation.
- Educating the public about the need to protect the environment
- Long range goal for preserve the wildlife for welfare of future generations
- Conservation and Maintenance of endangered plants in wildlife

Unit I:

Wildlife Management: Basic concepts and principles- Wildlife management before and after implementation of Wild Life (Protection) Act, 1972 – IUCN – CITES – NBA – IBA –

Evaluation of Wildlife habitat: Define habitat – Forest habitat types - basic survey techniques of habitats – Vegetative analyses – Point centered quadrat, Quadrat, strip transect – Habitat manipulation: Food, Water, shade, impact and removal of invasive alien species.

Unit II:

Introduction to conservation biology, the origin of conservation biology, ethical and economical values of conservation biology, definition of biodiversity, types of biodiversity, threats to biodiversity. Scopes and importance of conservation methods – *In-situ* and *Ex-situ* conservation approaches of Indian animals. Captive breeding (Lion-tailed macaque, white tiger and vultures) and reintroduction (Tiger, rhinoceros, gaur).

Unit III:

Biodiversity: Definition and importance - Biodiversity hotspots in India: Western Ghats, Eastern Himalayas. Mega diversity nations – an introduction. Landscape approach and people participation in biodiversity conservation.

UnitIV:

Role of Government and Non-Government organizations in conservation.– **Government** - Wildlife Institute of India, Ministry of Environment and Forests (MoEF), National Biodiversity Authority (NBA), Zoological Survey of India (ZSI), Botanical Survey of India (BSI), Salim Ali Centre for Ornithology and Natural History (SACON), Centre for Ecological Sciences (CES). **NGOs**.– Bombay Natural History Society (BNHS), World Wide Fund for Nature (WWF), Wildlife Trust of India (WTI), Nilgiri Wildlife and Environment Association (NWEA), Wildlife Conservation Society (WCS).

UnitV:

Conservation Biology Tools– Biological Parks, Zoological Parks, Forest Research Institute, Agricultural Research Institutions, Gene Pools, Cryopreservation Centres, Interpretation Centres and role of Field Biologists.

COURSECODE	COURSE TITLE	L	T	P	C
201CAOEC	Open Elective –E-Learning	4	0	0	2

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop e-learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION**Introduction–**

Training and Learning, Understanding learning, components and models of e-learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, -Applications of e-learning.

UNIT II CONCEPTS AND DESIGN

E-Learning Strategy, the essential elements of learning strategy, Quality assurance in learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self-managed learning.

UNIT III APPLICATIONS

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

COURSECODE	COURSE TITLE	L	T	P	C
201CSOEC	Open Elective-WebTechnology	4	0	0	2

AIM

To equip the students with basic programming skill in Web Technology.

OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice markup languages
- To learn Style Sheet and Frames

UNIT I

Introduction to the Internet: networking-internet-email-
Internet Technologies: modem internet addressing.

UNIT II

Internet browsers: Internet Explorer-Netscape navigator- Introduction to HTML: Html document- anchor tag-
hyperlink.

UNIT III

Head and body sections: Header section-titles-links-colorful webpage- sample html document-
Designing the body section: paragraph-tab setting.

UNIT IV

Ordered and unordered lists: list-unordered list-heading in a list-order list- nested list.

UNIT V

Table handling: tables-table creation in html cell spanning multiple rows and columns-coloring
cells-sample tables-frames frame set definition-nested frames set.

OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them

- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design frontend web page and connect to the backend databases.

REFERENCE BOOKS

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

COURSECODE	COURSE TITLE	L	T	P	C
201TERP9	TALLY ERP 9	-	-	-	3

AIM

To develop the knowledge regarding the concepts of financial accounting in students that is used for learning maintain accounts.

OBJECTIVES

To impart practical knowledge in TALLY and ensures that finance for the company is always in order and is correct at all given points of time.

UNIT – I

TALLY – Introduction to Tally Prime –Difference between Tally Prime and Tally ERP 9 – New Features in Tally Prime

UNIT – II

Company Creation – Chart of Accounts

UNIT – III

Inventory Master and Inventory Vouchers in Tally

UNIT – IV

Payroll Master in Tally

UNIT –V

Reports in Tally

OUTCOME

Students are able to get placements in different offices as well as companies in Accounts departments.

REFERENCE BOOKS

1. Learn Tally Prime – Gaurav Agarwal

RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research –Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research–Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research–Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and/or inquiry mode (i.e. the students become producers of knowledge not just consumers).

The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level 1: P

described Research

Level 2: Bounded

Research Level 3: Scaffold

Research Level 4: Self-actuated R

esearch

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Com curriculum, the following Research Skill Based Courses are introduced in the B.Com curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

Blueprint for assessment of student's performance in Research Led Seminar Course

● **Internal Assessment:** **40**
Marks

- Seminar Report (UG)/Concept Note (PG) : 5X4=20 Marks

B.COM COMPUTER APPLICATION
PROGRAMME
Regulation 2020

Commerce is a professional course among the various arts subjects. Commerce is instrumental in bringing about changes in all aspects of the society. It promotes growth and development. The changes in the economic policies of the country and the computer application in business offer variety of opportunities for innovative and creative people to carry out their career with new vigor and enthusiasm.

In the present scenario the market based system has gradually expanded across the world securing a strong position in the market overcoming all borders and barriers.

The rapid changes in the field of economics, information technology, politics and also in the organizational structure and the increased complexities of the business world poses series of problems to the modern commerce student. At this backdrop the new syllabus is designed for the B.Com Computer Applications Programme of the **PRIST UNIVERSITY**

- பிரிஸ்ட் நிகர்நிலைப் பல்கலைக்கழகம்- வல்லம் தஞ்சாவூர்

தமிழ்

முதல் பருவம்

முதலாம் ஆண்டு - (BBA , BA , B.COM, CS ,Bsc)

இக்கால இலக்கியம் - செய்யுள், சிறுகதை , நாடகம், இலக்கிய வரலாறு

அலகு : 1.செய்யுள் :

1. தாயுமானவ சுவாமிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள்
2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள் - தமிழ் இனிமை , தமிழ் உணர்வு

அலகு : 2. செய்யுள்:

6. நாமக்கல் கவிஞர் - தமிழ் தேன், தமிழ் வளர்ச்சி சபதம் செய்வோம் , 40 அடிகள்
7. ந.பிச்சமுர்த்தி - வழித்துணை - கவிதை கருடன் , 42 அடிகள்
- 8.கரதா - தேன்மழை, கலப்பை , 22 அடிகள்
9. கண்ணதாசன் - இலக்கியம் , ஒரு பாணையின் கதை , 54 அடிகள்
10. அப்துல் ரகுமான் - சொந்த சிறுகுகள், குப்பையை கிளறும் சிறுகுகள், 80 அடிகள்

அலகு : 3. சிறுகதை :

11. க.சமுத்திரம் - வேரில் பழுத்த பலா

அலகு : 4. நாடகம் :

12. கு. வெ. பாலசுப்பிரமணியன் , கௌதம புத்தர் (உரைநடை நாடகம்)

அலகு : 5. இலக்கிய வரலாறு

13. சிறுகதை , புதினம், நாடகம் உரைநடை , கவிதை , புதுக்கவிதை

Aim:

- i. To acquaint with learning English through literature

Objective:

- ii. To improve English delightfully through simple poems, essays
- iii. To throw light on fiction
- iv. To read and comprehend literature

Outcome:

- v. Read and comprehend literature
- vi. Appreciate the different types of poetry and prose

UNIT – I

Because I could not stop for Death -Emily

Dickinson Stopping by Woodson a Snowy Evening -Robert

Frost UNIT – II

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K.Ramanujam

UNIT – III

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

UNIT – IV

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

UNIT – V

Oliver Twist -Charles Dickens

PRIST UNIVERSITY, THANJAVUR
B.COM-CA

COURSE CODE	COURSE TITLE	L	T	P	C
20198SEC13	Financial Accounting	4	1	0	4

AIM:

- This programme is designed to provide high quality education in theoretical and practical knowledge and skill in various aspects of accounting

OBJECTIVE: you should be able to

- Define accounting and trace the origin and growth of accounting.
- Explain the nature and objectives of accounting.
- Discuss the branches, role and limitations of accounts

UNIT-I

Definition of 'account' — the nature, Objects and utility of accounting in Industrial and Business enterprises — Books for accounts — Accounting concepts and postulates.

UNIT-II

The theory of double entry — bookkeeping — Journal — Subsidiary books — Ledger Trail Balance.

UNIT-III

Statement of accounts — Manufacturing account — Trading account — Profit and Loss account.

UNIT-IV

The Balance sheet and various forms it may take. Capital and revenue — income and expenditure account — Receipts and payments. Depreciation, reasons and provisions.

UNIT-V

Consignment- meaning, features of consignment transaction, distinction between consignment and sale, joint venture, meaning, features, difference 'between joint venture and partnership, joint venture and consignment.

Employability

OUTCOME:

- Understanding the fundamental of financial accounting
- Develop the modern market economy
- prepare the different kinds of financial statement
- Acquire conceptual knowledge of basics of accounting
- Identify and analyze the reasons for the difference between cash book and pass book balances
- Develop the skill of recording financial transactions and preparation of reports in accordance with GAAP
- The course helped the students the principles and objectives of basic Financial accounting.

Text Book Reference:

1. Advanced Accounting — S. P. Jain and K.L. Narang — Kalayani Publisher.
2. Principles of Accounting — Finney H.A. Miller H.E., PHL Auditing — Tandon

PRIST UNIVERSITY, THANJAVUR
B.COM-CA

COURSE CODE	COURSE TITLE	L	T	P	C
20198SEC14	Business Management	3	1	0	3

AIM

- One can apply functional and foundational concepts to think critically and solve business problems.

OBJECTIVES: Students will learn

- To enable business managers to get the concept of how to manage business venture effectively and efficiently.
- Enhance the skills of managers and in this changing business environment.
- To equip managers, employees and potential employees with the knowledge, skills and attitude that they need for effective business management.

UNIT-I

Business Management — Nature — Functions — Management
Vs Administration — Science or Art — Contribution by Taylor and Henry Fayol & Peter Drucker

UNIT-II

Planning — Process — Kinds of Planning — Objectives — Strategies, Policies, Procedure, Methods and rule — Forecasting and Planning — Advantages & Limitations - Management by Objectives.

UNIT-III

Organizing — Process — Features — Elements — Structure — Different Forms — Principles of Organization — Departmentation, Delegation and Decentralization
Employability

UNIT-IV

Staffing — Process - Manpower planning — Recruitment — Selection — Training and development

UNIT-V

Directing and Co-ordination: Principles — Elements — Controlling — Steps.

OUTCOME:

- Apply conceptual learning skills in today's business environment.
- Analyze financial performance of an organization.
- Evaluate organizational decisions with consideration of the political, legal and ethical aspects of business.
- Understand relationship between environment and business; Applying the environmental analysis techniques in practice
- Assess strengths, weaknesses, opportunities and threats of the business environment.
- Know state policies, Economic legislations and Economic reforms laid by the government

Reference Books

1. L.M.Prasad -Principles of Management
2. Dinker Pagare -Business Organization and Management
1976

PRIST UNIVERSITY, THANJAVUR

COURSECODE	COURSE TITLE	L	T	P	C
20198AEC15	Information Technology	3	1	0	4

AIM

- To provide opportunity for the study of modern methods of information processing and its applications

OBJECTIVES

- Show an awareness of what the major computer components are and how they act as a system
- appreciate that computers need instructions to operate and acquire simple programming skills

UNIT-I:

Information Concepts and Processing: Concepts of data, data type, information, need for information evolution of information processing.

UNIT- 2:

Elements of computer processing systems: Classification of computers, Hardware CPU, storage devices and media, Software systems and applications.

UNIT-3:

Programming languages, Machine language, assembly language, high-level language, Fourth generation language, compilers, interpreters.

UNIT-4:

General Concept of OOPS (Object oriented programming) Operating Systems: Concept and function of Operating system.

UNITE-5:

Batch processing, Multiprogramming, Realtime, timesharing, distributed system.

Skill development

OUTCOME:

- Perform end user support including identifying and implementing solutions to user requests.
- Analyze technical requirements to determine resource requirements and the impact the solution will have on an organization.
- Design, plan, budget and propose an IT project for an identified need within a specific scope.
- Install technical hardware and software including network, database and security components.
- Perform routine maintenance to maintain the currency of an operating system, network, database and security needs.
- Identify and resolve technical problems using trouble-shooting and research techniques.
- Analyze and select application and operating system settings to create an optimal user environment.

PRIST UNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198AEC16	OperatingSystem	3	0	3	2

AIM:

- Provide proficiency skill of operating system to the target students

OBJECTIVES

- To learn the fundamentals of Operating Systems.
- To learn the mechanisms of OS to handle processes and threads and their communication
- To learn the mechanisms involved in memory management in contemporary OS

UNIT- I

Evolution of Operating Systems — Types of Operating Systems — Different views of OS — Design and implementation of Operating Systems — I/O Programming concepts — Interrupt structure and Processing.

UNIT-II

Memory management: Single contiguous allocation — Partitioned Allocation — Relocatable Partitioned Allocation — Paged and Demand Pages Memory Management — Segment Memory Management — Segmented and Demand Paged Memory Management — Swapping and Overlay Techniques.

UNIT- III

Processor management: Job Scheduling — Process Scheduling — Functions and Policies — Evaluation of Round Robin Multiprogramming performance — Process synchronization — Race condition — Synchronization Mechanism — Deadly Embrace Prevention and Detect and Recover Methods.

Skill development

UNIT- IV

Device management: Techniques for device management — Device Characteristics — I/O Traffic controller, I/O scheduler, I/O device handler — Virtual Devices Spooling

UNIT-V

File management: Simple file system, General Model of a file system, Physical and Logical file system. Case studies: DOS, UNIX/LINUX Operating systems

OUTCOMES:

- Describe and explain the fundamental components of a computer operating system. [ABET(a), (i),(j),(k)] Assessment: Students will take midterm exams, final exams, and homework
- Describe and explain the fundamental components of a computer operating system. [ABET(a), (i),(j),(k)] Assessment: Students will take midterm exams, final exams, and homework.
- Define, restate, discuss, and explain the policies for scheduling, deadlocks, memory management, synchronization, system calls, and file systems. [ABET(a),(i),(j),(k)] Assessment: Students will take midterm exams, final exams, and homework.
- Describe and extrapolate the interactions among the various components of computing systems.
- [ABET(a),(i),(j),(k)] Assessment: Students will take midterm exams, final exams, and homework

CourseCode	CourseTitle	L	T	P	C
201ACLSICN	IndianConstitution	-	-	-	2

CourseObjectives:

- To makethe students understand about the democratic rule and parliamentary administration
- To appreciate the salient features of the Indian constitution
- To know the fundamental rights and constitutional remedies
- To make familiar with powers and positions of the union executive, union parliament and the supreme court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Course outcome:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution-socialism–secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion-cultural and educational rights-right to constitutional remedies-fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

Skill development

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification _method of election of president and vice president -prime minister -Rajya Sabha -Lok Sabha .the supreme court -high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

CourseCode	CourseTitle	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Aim:

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

Course Objectives:

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realize one's potentials.

Course Outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practiced human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realize their potential as human beings and conduct themselves properly in the ways of the world.

Unit I

- Introduction: What is love? Forms of love for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who
- are remembered in history for practicing compassion and love. Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn/gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
- Sharing learner's individual and/or
- group experience(s) Simulated Situations
- Case studies

Unit II

- Introduction: What is truth? Universal truth, truth has value, truth has fact (veracity, sincerity, honesty among others)
- Individuals who are remembered in history for practicing this
- value Narratives and anecdotes from history, literature including local folklore
- e
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?

- Learners' individual and/or group experience(s) in simulated situations
- Casestudies

Unit III

- Introduction: What is non-violence? Its need. Love, compassion, empathy, sympathy for others as pre-requisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non-violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Case studies

Unit IV

- Introduction: What is righteousness?
- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit V

- Introduction: What is peace? Its need, relation with harmony and balance
- Individuals and organisations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Case studies

Unit VI

- Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature including local folklore
- Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s) regarding service
- Simulated situations
- Case studies

Unit VII

- Introduction: What is renunciation? Renunciation and sacrifice. Self-restraint and ways of overcoming greed. Renunciation with attachment and true renunciation

- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.
- Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

SEMESTERII

CourseCode	CourseTitle	L	T	P	C
20110AEC21	Tamil-II	4	0	0	2

- பிரிஸ்ட் நிகர்நிலைப் பல்கலைக்கழகம் வல்லம் தஞ்சாவூர்
பாட குறியீடு :

தமிழ்

இரண்டாம் பருவம்

முதலாம் ஆண்டு - (BA, Bsc, B.COM, BBA)

செய்யுள், சக்தி இலக்கியம், சிற்றிலக்கியம், இலக்கிய வரலாறு

அலகு : 1. செய்யுள்:

1. திருஞானசம்பந்தர் தேவாரம் - கோளறு பதிகம்
2. திருநாவுக்கரசர் தேவாரம் - தனிக் குறுந்தொகை
3. சுந்தரர் தேவாரம் - திருநொடித் தான் மலை
4. மாணிக்கவாசகர் - திருவாசகம் - தருப்பொன் ஊசல்

அலகு : 2. செய்யுள்:

5. குலசேகராழ்வார் - பெருமாள் திருமொழி
6. நம்மாழ்வார் திருவாய் மொழி - இரண்டாம் பத்து - உலகிற்கு உபதேசம்
7. ஆண்டாள் - நாச்சியார் திருமொழி - திருமணக்கனவை உரைத்தல்
8. திருமங்கை ஆழ்வார் - சிறிய திருமடல்

அலகு : 3. செய்யுள்:

9. தினமலர் - மூன்றாம் திருமுறை
10. குமரகுருபரர் - மீனாட்சியம்மைப் பிள்ளை - தமிழ் வருகைப் பருவம்
11. திரிசூடராசப்ப கவிராயர் - குற்றால குறவஞ்சி - குறத்தி நாட்டு வளங் கூறுதல்
12. வீரமாமுனிவர் - திருக்காவ லூர்க் கலம்பகம்

அலகு : 4. புதினம்

13. கு.வெ. பாலசுப்ரமணியன் - காளவாய்

அலகு : 5. இலக்கிய வரலாறு

14. சைவ வைணவ இலக்கியங்கள், சிற்றிலக்கியங்கள், (பள்ளு - பிள்ளைத்தமிழ், - பரணி)

TextBook

Author	Titleofthe book	Edition / Year	Publisher
MeenakshiRaman & Sangeetha Sharma	TechnicalCom munication	2011	OxfordUniversityPress
Rajendra Pal &J.S.Korlahalli	Business Communication	2015	Sultan

CourseCode	CourseTitle	L	T	P	C
20111AEC22	English-II	4	0	0	2

Aim:

- To acquaint learners with different trends of writing

Objective:

- To acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

Outcome:

- Appreciate different forms of literature
- Acquire language skills through literature
- Broaden the horizon of knowledge

UNIT – I

Ecology - A.K.Ramanujan

Gift - Alice Walker

The First Meeting - Sujata Bhatt

UNIT – II

Fueled - Marcie Hans

Asleep - Ernst Jandl

Buying and selling - Khalil Gibran

UNIT – III

The End of living and The Beginning of Survival -

Chief Seattle My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

UNIT – IV

The Refugee - K.A. Abbas

I Have a Dream - Martin Luther King

Those People Next Door - A.G. Gardiner

UNIT – V

Marriage is a private Affair - Chinua Achebe

The Fortune Teller - Karel Capek

Proposal - Anton Chekov

Textbook:

Gowri Sivaraman	Gathered Wisdom	Reprint 2010	Emerald Publishers

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198SEC23	BusinessAccounting	5	1	0	4

AIM:

- To learn the accounting mechanism this is necessary for Business Accounting.

OBJECTIVES

- I. To ascertain the Profit of Branches & Departments.
- II. To learn Hire Purchase and Royalties Accounting.
- III. To practice Partnership Accounting.

UNIT-I

Final Accounts of a Sole Trader – Adjustments.

UNIT-II

Departmental accounts – Hire purchase accounts – Royalty accounts.

UNIT-III

Average due Date – Sale or Return – Bills of Exchange

UNIT-IV

Depreciation – Methods – Fixed – Diminishing – Annuity – Depreciation Fund – Provision and Reserves.

UNIT-V

Partnership Fundamentals – Partnership – Final Accounts
Employability

OUTCOMES:

- familiarize the concept of Branch account and its system
- understand the Scope of departmental accounting
- Appreciate the need for negotiable instruments and procedure of accounting for bills honoured and dishonoured
- Differentiate Trade bills from Accommodation Bills
- Understand the concept of Consignment and learn the accounting treatment of the various aspects of consignment
- Distinguish Joint Venture and Partnership and to learn the methods of maintaining records under Joint Venture
- Understand the meaning and features of Non-Profit Organizations
- Learn to prepare Receipts & Payment Account, Income & Expenditure Account and Balance Sheet for Non-Profit Organizations

Reference Books:

1. Jain, S.P. and K.L. Narang. Financial Accounting. Kalyani Publishers, New Delhi.
2. S.N. Maheshwari, Financial Accounting, Vikas Publication, New Delhi. T.S, Grewal, Introduction to Accounting, S. Chand and Co., New Delhi
3. Accounting for Managers – J. Made Gowda – Himalaya Publishing House
4. Financial Accounting Reddy and Murthy

PRIST UNIVERSITY, THANJAVUR
B.COM-CA

COURSE CODE	COURSE TITLE	L	T	P	C
20198SEC24	Business Law	4	1	0	4

AIM

- Developing proficiency skill of Business law

OBJECTIVE

1. Undertake and promote research on Business laws & attract students of the highest caliber to the Law School's programs and
2. Provide opportunities for their involvement in Business law research projects.

Unit I

Nature and Sources of law — Law of contracts — Essentials of valid contract —

Classification of contracts

Unit—II

Offer and acceptance — consideration -- capacity to contract — Free consent Legality of

object

Unit—III

Performance of contracts — Discharge of contract — Remedies for breach of contract — Quasi contracts

Unit—IV

Contracts of agency — Different classes 'of agents — creation of agency — Rights and duties of an agent -- scope of agents authority — Liability of principles to third parties — Personal liability of agent — Bailment and pledge.

Unit— V

Contract of Indemnity and guarantee — Rights of Indemnity holder — Rights of surety — Nature and extent of surety's liabilities

Employability

OUTCOME:

- Explain the concepts in business laws with respect to foreign trade
- Apply the global business laws to current business environment
- Demonstrate an understanding of the Legal Environment of Business.
- Communicate effectively using standard business and legal terminology.
- Demonstrate recognition of the requirements of the contract agreement
- Identify contract remedies
- understand the various provisions of Company Law

Reference Books:

1. N.D. Kapoor — Elements of commercial law.
2. MLC. Shukla — Mercantile law.
3. P.P.S. Gogna — A Text book of Business Law.
4. S.N. Maheswari — Mercantile law. 1990

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198AEC25	Programming in C	4	1	0	3

AIM

- This course is aimed at advancing concepts of programming and software code organization within the framework of structural and procedural programming paradigms.

OBJECTIVE

- Students will be able to develop logics which will help them to create programs, applications in C
- Also by learning the basic programming constructs they can easily switch over to any other language in

UNIT-I

Evolution and Applications of C — Structure of a C Program — Data Types — Declarations — Operators — Expressions — Type conversions — Built-in functions.-

UNIT-II

Data Input and Output — Control statements: if, else-if, goto, switch, while-do, do-while, for, break & continue.

UNIT-III

Functions: Defining and accessing functions-passing parameters of functions- Arguments - Recursive functions — Storage classes, Arrays: Defining and processing Arrays + Multi dimensional arrays — passing arrays to functions ~ Arrays and strings — String functions — String Manipulations.

UNIT-IV

Pointers: Pointers Declarations — Operations on pointers — pointers to functions — Pointer and Strings — pointers and arrays — array of pointers Structures: Structures and pointers — unions.

UNIT-V

Data files - Opening, Closing, and processing files — Files with structures and unions — Register variables — Bitwise Operations-Macros-Preprocessing.
Skill development

OUTCOMES:

- Understanding a functional hierarchical code organization.
- Ability to define and manage data structures based on problem subject domain.
- Understanding a concept of object thinking within the framework of functional model.
- Understanding a concept of functional hierarchical code organization.
- Understand operators, expressions and preprocessors.
- Understand arrays, its declaration and uses.

Book for Reference:

- “Programming with C” — Byron S. Gottfried — Schaum’s outline series — Tata McGraw-Hill publications.
- Letus C “~Yeswantkanetkar—BPB Publications.
- “Programming in C” ~E. Balagurusamy—Tata McGraw-Hill Publications

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198AEC26L	Programming in C Lab	0	0	3	2

AIM

- Focusing on discussing how to write a program of moderate complexity by using C language.

OBJECTIVE

1. Ability to work with textual information, characters and strings.
2. Understanding a concept of object thinking within the framework of functional model
 1. Solution of a Quadratic Equation (all cases)
 2. Sum of Series (Sine, Cosine, e)
 3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
 4. Sorting of names in Alphabetical order.
 5. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication - use functions).
 6. String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings — use function pointers).
 7. Creation and processing of Sequential files for Mark list preparation (Use Structures for Record Description)
 8. Develop an Invoice application
 9. Payroll preparation
 10. EB bill preparation

OUTCOME:

- Develop their programming skills.
- Declaration of variables and constants
- Be familiar with programming environment with C Program structure.
- Ability to work with textual information, characters and strings
- Understanding a defensive programming concept. Ability to handle possible errors during program execution
- Understanding a functional hierarchical code organization. Ability to define and manage data structures based on problem subject domain.

SEMESTER II
COMMUNICATIONS SKILLS

Course Code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Course Objectives:

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome:

By the end of this program, participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barriers to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

- Techniques of effective reading
- Gathering ideas and information from a given text
 - i. Identify the main claim of the text
 - ii. Identify the purpose of the text
 - iii. Identify the context of the text
 - iv. Identify the concepts mentioned
- Evaluating these ideas and information
 - i. Identify the arguments employed in the text
 - ii. Identify the theories employed or assumed in the text
- Interpret the text
 - i. To understand what a text says
 - ii. To understand what a text does
 - iii. To understand what a text means

Unit IV

- Clearly state the claims

- Avoid ambiguity, vagueness, unwanted generalizations and oversimplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
 - i. Well-knit logical sequence
 - ii. Narrative sequence
 - i. Category groupings
- Different modes of Writing-
 - i. E-mails
 - ii. Proposal writing for Higher Studies
 - i. Recording the proceedings of meetings
 - iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in the workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office
 - i. Excel
 - iv. Powerpoint

Unit VI

- Introduction to social media websites
- Advantages of social media
- Ethics and etiquettes of social media
- How to use Google search better
- Effective ways of using Social Media
- Introduction to I Marketing

Unit VII

- Meaning of non-verbal communication
- Introduction to modes of non-verbal communication
- Breaking the misbeliefs
- Open and Closed Body language
- Eye Contact and Facial Expression
- Hand Gestures
- Do's and Don'ts
- Learning from experts
- Activities-Based Learning

20111AEC32	English-III	4	0	0	2

Aim:

- To acquaint with learning English through literature

Course Objective:

- To sensitize language use through prescribed text
- To develop the conversational skills through one act plays

Course Outcome:

- Appreciate different types of prose
- Develop the conversational skills through one act plays
- Enhance the skill of making grammatically correct sentences.

UNIT – I

The Doctor's World - R.K. Narayan

The Postmaster - Rabindranath Tagore

Princess September - E. Somerest Maugham

UNIT – II

The Price of Flowers - Prabhat Kumar Mukhopadhyay

The Open Window - Saki

The Model Millionaire - Oscar Wilde

UNIT – III

My Brother My Brother - Norah Burke

Uneasy Home Coming - Will F. Jenkins

Resignation - Premchand

UNIT – IV

The Referee -

W.H. Andrews & Geoffrey Dreamer The Case of the Stolen Diamonds -

Farrell Mitchell

UNIT – V

The Dear Departed -

Stanley Houghton The Princess and the Wood Cutter -

Alan Alexander Milne **Textbook:**

Author	Title of the book	Edition/ Year	Publisher
Steuart H. King	Nine Short Stories	Reprint 2001	Blackie Books

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
20198SEC33	CostAccounting	3	1	2	4

AIM

- To ascertain the costs of products manufactured or services rendered and exercising control over the expenditure.

OBJECTIVES

- To know the cost of each process and each element.
- To serve management in the execution of policies according to the situations.

UNIT – I

Cost accounting definitions – Functions, Importance, Advantages and Limitations – Relationship between cost and Financial Accounting – Installation of costing system – Cost Unit and Cost Centre – Elements of Cost – Cost sheet – Tender and quotation.

UNIT – II

Materials cost control – Material Purchases – Storage of Material – Various levels of Stock – Pricing of Materials Issues.

UNIT – III

Labour Cost Control – Piece and Time Rates – Incentive Plans – Labour turnover – Idle time – Overheads – Allocation – Apportionment – Re Apportionment and Absorption.

UNIT -IV

Process Costing (Excluding Inter Process, Equivalent Production – By product – Joint product) and Operating Costing.

UNIT -V

Contract Costing – Reconciliation of Cost and Financial Accounting.

Employability**OUTCOME:**

- Understand various costing systems and management systems
- Analyze and provide recommendations to improve the operations of organizations
- Imbibe conceptual knowledge of cost accounting.
- Understand the significance of cost accounting in the modern economic environment
- Select the costs according to their impact on business
- Apply cost accounting methods to evaluate and project business performance

REFERENCE BOOKS

- Palekhar & Pattan Shetty – Costing.

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198AEC35	Programming in C++	2	1	0	3

AIM:

- Implement several programs in languages other than the one emphasized in the core curriculum (Java/C++)

OBJECTIVES:

- To understand how C++ improves C with object-oriented features.
- To learn how to write inline functions for efficiency and

performance.

UNIT-I

Object oriented programming: Software evolution - OOP Paradigm- concepts, benefits, Object oriented languages and applications.

UNIT-II

Introduction to the basic concepts of C++ language - Tokens, keywords, identifiers, data type, variables, manipulators- expression and control structures - functions: main function - function prototyping - call by reference function overloading - friend and inline functions.

UNIT-III

Classes and objects- constructors and destructors - operator overloading- type conversions.

UNIT-IV

Inheritance - single inheritance - multiple inheritances - hierarchical, hybrid inheritance - polymorphism- pointers- virtual functions- console I/O operations.

UNIT-V

Files - Classes for file stream operations - opening, closing and processing files - end of file detection - file pointers - updating a file - error handling during file operations - command line arguments - templates - exception handling.

Skill development

OUTCOMES:

- To know the proper lines of C++, Encapsulation, Inheritance and Polymorphism.
- To explain the various data types, operations and functions of C++.
- To know the concept of constructors and destructors.
- To explain the concept of inheritances, types of inheritance and polymorphism, virtual Functions.
- To explain the types of streams, format and format of input and output operations.
- To Know the procedural and object oriented paradigm with concepts of streams, classes, functions, data and objects.

REFERENCE BOOKS:

1. "Object oriented programming with C++". E. Balagurusamy, Tata McGraw Hill publishing Ltd., New Delhi, 1995.

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSETITLE	L	T	P	C
20198AEC 36L	Programming in C++ lab	0	0	3	2

AIM:

- Use C++ to demonstrate practical experience in developing object-oriented solutions

OBJECTIVES:

- Analyse a problem description and design and build object-oriented software using good coding practices and techniques
 - design and implement programs using C++
1. Write C++ program using a class to represent a bank account with data members- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.
 2. Design an abstract base class "Shapes" and derive three classes "Rectangle", "Circle" and "Triangle". Develop polymorphic functions "Circumference" and "Compute-Area" to calculate the circumference and area of these objects and display it. Develop a main program to create each of these and apply these polymorphic functions.
 3. Write C++ programs for implementing inheritance.
 4. Write a C++ program to illustrate inline functions.
 5. Write a C++ program using friend operator function.
 6. Write a C++ program to illustrate virtual base class, virtual function and abstract class.
 7. Write a program which reads a text from a file and then display the following information.
 8. Number of Lines
 9. Number of words.
 10. Number of characters.
 11. Strings should be left-justified and numbers should be right-justified in a suitable field width.
 12. Write a C++ program to implement file concept: Create a file and store some text, display the content of the file with line numbers.
 13. File Processing: Marks sheet preparation.
 14. File Processing: Inventory preparation.

OUTCOME:

- To know the proper lines of C++, Encapsulation, Inheritance and Polymorphism.
- To explain the various data types, operations and functions of C++.
- To know the concept of constructors and destructors.
- To explain the concept of inheritances, types of inheritance and polymorphism, virtual Functions.
- To explain the types of streams, format and format of input and output operations.
- To know the procedural and object oriented paradigm with concepts of streams, classes, unions, data and objects.

**PRIST UNIVERSITY,
THANJAVURB.COM-
CA**

COURSECODE	COURSE TITLE	L	T	P	C
20198RMC37	Research Methodology	2	0	0	2

AIM

- To create a basic appreciation towards research process and awareness of various research publications.

OBJECTIVES

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features.
- To carry out basic literature survey using the common data-bases.

PREREQUISITES:

Basic computer skills for working in window-environment & Conceptual knowledge on basic matrices.

UNIT – I

Research in Management: An Introduction – Definition, meaning and nature – Scope and objects of Research. Types of Research.

UNIT – II

Research Design – Defining Research Problem and Formulation Of Hypothesis – Experimental Designs – Sampling and types of sampling.

UNIT – III

Research Process – Steps in the process of Research, Data Collection and Measurement: Sources of Secondary data – Methods of Primary data collection – Questionnaire Construction. **UNIT – IV**

Data presentation and Analysis – Data Processing – Methods of Statistical analysis and interpretation of Data – Testing of Hypothesis and theory of inference – Correlation and Regression analysis.

UNIT – V

Report writing and Presentation – Steps in Report writing – Types of reports – Formats of Reports – Presentation of a Report. Skill development

OUTCOME:

- Able to carry out independent literature survey corresponding to the specific publication type and assess basic literary research tools.
- Familiarize participants with basic of research and the research process.
- Enable the participants in conducting research work and formulating research synopsis and report.
- Develop understanding on various kinds of research, objectives of doing research, research processes, research designs and sampling.
- Have basic knowledge on qualitative research techniques
- Have adequate knowledge on measurement & scaling techniques as well as the quantitative data analysis

SEMESTER III
COMMUNICATIONSKILLS

CourseCode	CourseTitle	L	T	P	C
201ACLSOAN	OFFICEAUTOMATION	-	-	-	2

Aim:

CourseObjectives:

To provide an in-depth training in the use of office automation, internet and internet tools. The course also helps the candidates to get acquainted with IT.

CourseOutcomes:

After completion of the course, students would be able to documents, spreadsheets, make small presentations and would be acquainted with the internet.

UNIT I

Knowing the basics of Computers

UNIT II

Word Processing (MS Word)

UNIT III

Spread Sheet (MS Excel)

UNIT IV

Presentation (MS Power Point)

UNIT V

Communicating with Internet

Skill Development

SEMESTER-IV

CourseCode	CourseTitle	L	T	P	C
20110AEC41	Tamil-IV	4	0	0	2

• மின்னல் நிகழ்வினை பக்கவரைச்சுழுவம் வகைமை ,சுத்தொழி
 பாட குறியீடு : 20110AET41

தமிழ்
 நான்காம் பருவம்
 முதலாம் ஆண்டு (BA , BSC , B.COM , BBA)
 செயல்புள் , சங்க இலக்கியம் , அறு இலக்கியம் , செம்மொழி , இலக்கிய வரலாறு

அலகு . 1 : பண்டைய இலக்கியம் - நற்றிணை;

- 1 . நெய்தல் - தோழி கூற்று - பாடல் எண் . 11
- 2 . குறிஞ்சி - தலைவி கூற்று - பாடல் எண் . 64
- 3 . முல்லை - தலைவன் கூற்று - பாடல் எண் . 142
- 4 . பாலை - நற்றாய் கூற்று - பாடல் எண் . 29
- 5 . மருதம் - தலைவி கூற்று - பாடல் எண் . 70

குறுந்தொகை

- 1 . குறிஞ்சி - தோழி கூற்று - பாடல் எண் . 1
- 2 . முல்லை - செவிலித்தாய் கூற்று - பாடல் எண் . 167
- 3 . மருதம் - தலைவி கூற்று - பாடல் எண் . 181
- 4 . நெய்தல் - தலைவி கூற்று - பாடல் எண் . 290
- 5 . பாலை - தலைவன் கூற்று - பாடல் எண் . 347

ஐங்குறுநூறு

- 1 . மருதம் - சன்வன் பத்து - முதல் இரண்டு பாடல்கள்
- 2 . நெய்தல் - தோழிக்கு அரைக்க பத்து - முதல் இரண்டு பாடல்கள்
- 3 . குறிஞ்சி - குன்றக் குறவன் பத்து - முதல் இரண்டு பாடல்கள்
- 4 . பாலை - இளவேனிற பத்து - முதல் இரண்டு பாடல்கள்
- 5 . முல்லை - பாசறைப் பத்து - முதல் இரண்டு பாடல்கள்

அலகு . 2 : கலிந்தொகை

- 1 . பாலை - பாடல் எண் . 2
- 2 . குறிஞ்சி - பாடல் எண் . 37

அகநானூறு

- 1 . பாலை - பாடல் எண் . 5
- 2 . மருதம் - பாடல் எண் . 6

புறநானூறு

பாடல் எண் : 6 , 121 , 41 , 153 , 172 191 , 223 , 246 , 284 , 358 .

பதிற்றுப்பத்து

இரண்டாம் பத்து பாடல் எண் . 4 (நிலம் நாள் வளி விசம்பு)

அலகு . 3 ;

- 1 . பட்டினப்பாலை - முதல் 105 வரிகள்
- 2 . திருக்குறள் - 1.மருந்து 2.அகச்சமுடைமை 3.அழவு

அலகு . 4 : செம்மொழி வரலாறு ;

(மொழி - விளக்கம் , மொழிக்குடும்பங்கள் , உலகச் செம்மொழிகள் , இந்தியச் செம்மொழிகள் , செம்மொழித் தகுதிகள் , வரையறைகள் , வாழும் தமிழ் செம்மொழி , தொன்மை , தமிழின் சிறப்புகள் , தமிழ் செம்மொழி நூல்கள்)

அலகு . 5 : இலக்கிய வரலாறு

சங்க இலக்கியங்கள் , பதினெண்குழக்கணக்கு நூல்கள் .

CourseCode	CourseTitle	L	T	P	C
20111AEC41	AdvancedEnglish-IV	4	0	0	2

Aim:

- ToimprovetheknowledgeofEnglish

Objective:

- Tofamiliarizewiththeobjectivesandtypesofinterview
- Toknowthetypesofquestionsand answeringtechniques
- Topreparereviewsandproposals
- Tolearnthegrammatical forms
- Tounderstand themeaningof apoemandwritethecontent
- Towriteforand againstatopic
- Todrawaflowchart
- Towritedefinitions

Outcome:

- Developwritingskill
- Comprehendanddescribepoems
- Learninterviewingskills

UNIT -I

Interviews

Objectives,types,tensuccessfactors,tenfailurefactors-Planningandpreparation-Presentation-Typeof questions- Answeringtechniques.

UNIT - II

Flowchart,Proposals

UNIT - III

Discoursemarkers,Review

UNITIV

Grammaticalforms,Paraphrasing

UNIT -V

Definition,Writingforand againstatopic.

REFERENCEBOOKS:

Author	Titleofthe book	Edition/ Year	Publisher
RajendraPal& J.SKorlahalli	Essentials of Business Communication	2015	SultanChand &Sons
Meenakshi Raman & SangeethaSharma	TechnicalCommunication	2011	Oxford University Press
Wren&Martin	English Grammar & Composition	2009	S.Chand

CourseCode	CourseTitle	L	T	P	C
20111AEC42	English-IV	4	0	0	2

Aim:

- To learn English through literature

Course Objective:

- To explore learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

Course Outcome:

- Improve their ability to read and understand them
- Know the genius of Shakespeare
- Express one's views in writing

UNIT -I

My Last Duchess - Robert Browning

The Toys - Coventry Patmore

I, too - Langston Hughes

UNIT -II

How to be a Doctor - Stephen Leacock

My Visions for India - A.P.J. Abdul

Kalam Woman, not the weaker sex - M.K. Gandhi

UNIT -III

The Best Investment I ever made -

A.J. Cronin The Verger - W.S. Maugham

A Willing Slave - R.K. Narayan

UNIT -IV

Macbeth, As You Like It

UNIT -V

Henry IV, Tempest

Textbook:

Author	Title of the book	Edition/ Year	Publisher
Devaraj	English for Enrichment	2012	Emerald Publishers
Board of Editors	Selected Scenes from Shakespeare Book I & II	2012	Emerald Publishers

**PRIST UNIVERSITY,
THANJAVURB.COM-
CA**

CourseCode	CourseTitle	L	T	P	C
20198SEC43	Auditing	3	1	1	3

AIM:

- To define the aim of your clinical audit project consider what it is that you hope to achieve

OBJECTIVES:

- The students will enable the system of internal check.
- Checking arithmetical accuracy of books of accounts, verifying posting, casting, balancing etc.

Unit-I

Auditing—Definition— Objectives—Types of Audit—Advantages —Qualities of a Professional auditor— Investigation Vs Auditing

Unit-II

Internal Check—Objectives, Principles, Advantages—Internal check system and Auditor— Internal Control—Internal Audit

Unit— III

Vouching—Objectives, Importance, - Vouching of Cash Transactions, Trading Transactions and Impersonal ledger.

Unit-IV

Verification and valuation of Assets and Liabilities—Cash— Investments Advances, Land and Building, Plant and Machinery, Furniture, Stock, Capital, Creditors, Bills Payable

Unit— V

Company Audit— Provision in the companies Act relating to auditor's qualifications, appointment, removal, Rights, duties and liabilities, (Civil and Criminal)

OUTCOMES:

- Articulate knowledge of fundamental audit concepts
- Apply critical thinking skills and solve auditing Problems.
- Apply and demonstrate the accounting knowledge and skills in Auditing.
- Explain how analytical procedures are used as an audit tool.
- Illustrate effective internal controls
- Apply ethical standards to issues in auditing

Reference Books

- B.N.Tandon— 'A Practical] Hand Book of Auditing'
- Dinkar Pagare— 'Principles and Practice of Auditing'
- R.G.Saxena— 'Principles and Practice of Auditing'
- Rupram Gupta— Auditing.

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

CourseCode	CourseTitle	L	T	P	C
20198SEC44	BusinessStatistics	3	1	2	4

AIM:

- Provide a foundation and motivation for exposure to statistical ideas subsequent to the course.

OBJECTIVE:

- Motivate students and instill an intrinsic interest in statistical thinking.
- Instill the belief that Statistics is important for scientific research.

UNIT-I

Meaning and scope of statistics, uses of statistics in business, statistical Data—primary and Secondary Data—classification of Data—Frequency distribution— Graphs and Diagrams.

UNIT- II

Measures of central tendency—arithmetic Mean, Mode, Median, geometric Mean and Harmonic Mean—Merits and Demerits of various Measures of Central Tendency

UNIT -III

Measures of dispersion —Range—Mean deviation, Standard deviation-Quartile Deviation

Co-Efficient of Variation—Difference between Mean Deviation and Standard Deviation- Different methods of Measuring Dispersion.

UNIT-IV

Correlation—Types of Correlation—Methods of Correlation—Co-Efficient of Correlation—Regression- Difference between correlation and regression—regression Equations.

UNIT-V

Time series — Secular trend — Graphic, Semi Average, Moving Average and Least Square Method- Index numbers—Cost of living index Numbers—index numbers of wholesale prices— Methods of Construction of index numbers.

Employability**OUTCOMES:**

- Critically evaluate the underlying assumptions of analysis tools
- Solve a range of problems using the techniques covered
- Conduct basic statistical analysis of data.
- Understand basic statistical concepts such as statistical collection, statistical series, tabular and graphical representation of data
- Calculate measures of central tendency, dispersion and asymmetry, correlation and regression analysis
- Choose a statistical method for solving practical problems

References:

1. Gupta S.P.-statistics methods.
2. Elhance D.N,-Fundamentals of statistics

5. Navaneetham- Business statistics

PRISTUNIVERSITY, THANJAVURB.CO
MCA

CourseCode	CourseTitle	L	T	P	C
20198AEC45	VisualBasicProgramming	3	0	0	4

AIM: Students must know about the Core programming of visual basic. Students will understand.

OBJECTIVE:

The ability of the system to adjust to the changing requirement of user.

The ability of the system to be able to withstand long periods of time operation by the user

UNIT I

Introduction to Visual Basic—Integrated Development Environment (IDE) features—VB editor—customizing the IDE — anatomy of a form working with form properties — setting form's properties — introducing form events and form methods.

UNIT II

Variables in Visual Basic: Declaring variables — Data types — Null values, Error value — empty value — the scope of a variable — Module level variables — Constants — Creating your own constants — Scope of a constant — Converting data types — arrays — Declaring arrays — Fixed size arrays - Dynamic arrays — Preserve keywords — ReDim. Writing Code in Visual Basic - The anatomy of a procedure — Subroutine and Functions—Language constructs-For...Next, The While loop, Select case. End select, Exit statement, with structure.

UNIT III

Selecting and Using controls—Introduction to standard controls-command buttons—Textboxes—labels —option buttons—Checkboxes-frame controls—Listboxes-Comboboxes—Image objects—Pictureboxes -Timer- Scroll Bars-File System Controls(Drive, Dirlist, FileListboxes).

UNIT IV

Introduction to Built-in ActiveX control—Toolbar—The Treeview control—The ListView control—the ImageList control—Command Dialog Control—statusbar Control—Rich text box control—Menu editor.

UNIT V

DDE properties — DDE Methods — OLE properties — Active control Creation and Usage and ActiveX DLL creation and usage — Database access — Data Control — Field control — Data grid record set using SQL to manipulate data— Open Data Base Connectivity.

OUTCOMES:

- Distinguish and compose events and methods.
- Distinguish and compose events and methods.
- Recognize and arrange control structures.
- Understand development of applications.
- Identify sources for research and further develop a strategy for research using standard and electronic research tools C
- This course will be helped the students understanding on database operations

SEMESTER-IV

CourseCode	CourseTitle	L	T	P	C
20198AEC46L	VisualBasicProgrammingLab	0	0	3	2

AIM:

It gives practical knowledge to the students on visual Basic Programming

OBJECTIVE:

1. To know the process of visual program design and development.
2. To understand the term event-driven programming.
3. To acquire the concepts of objects, properties, and methods.

1. Simple exercises using standard controls.

2. Write a program to design a calendar of any year.

3. Write a program to expand and shrink an object—while program is running.

4. Write a code to design and implement a scientific calculator.

5. Write a program to create an animation by using move method and timer Object.

6. Write a program for preparing students mark list.

7. Write a program to populate the label entities using data bound control.

8. Write a program to expand and shrink Objects using timer control and move method

OUTCOME:

- Understand an overview of computers and computer programming.
- Understand Visual Basic applications.
- Understand how to perform operations and store results.
- Understand the concept of data-driven program execution flow control in Visual Basic programming

CourseCode	CourseTitle	L	T	P	C
201ENSTU47	EnvironmentalStudies	0	0	0	2

UNIT-I

The Multidisciplinary Nature of Environmental Studies – Definition, Scope and Importance – Need for Publicawareness-naturalResources:RenewableandNon–RenewableResources- ForestResources–WaterResources-MineralResources-FoodResources –EnergyResources– LandResources.

UNIT-II

Ecosystems- Concept of an ecosystem – Structure and function of an ecosystem – Producers, consumers anddecomposers – Energy flow in the ecosystem – Ecological succession- Food chains, food webs and ecological pyramids –Typesofecosystem–Forestecosystem– Greenlandecosystem– Desertecosystem–Aquaticecosystems.

UNIT-III

Biodiversity and its Conservation – Definition- Genetic, Species and ecosystem diversity – Bio geographicalclassification of India – Values of biodiversity – Biodiversity at global, National and local levels – India as a mega –diversity nation –Hot-spotsof biodiversity- Threats tobiodiversity –Endangeredandendemicspecies of India– Conversationofbiodiversity.

UNIT-IV

Environmental Pollution – Definition – Air Pollution – Water pollution –Soil Pollution- Marine Pollution- NoisePollution –Thermal Pollution – Nuclear hazards –Solid waste Management –Role of an individual in prevention ofpollution–Disastermanagement.

UNIT-V

Social Issues and the Environment – From Unsustainable to Sustainable development- Urban problems related toenergy –Water conservation, rain water harvesting, watershed management- Environmental Ethics – Climate changegreenhouse effect and global warming – Ozone depletion –Waste land reclamation –Consumerism and waste products –Environmental Legislation –Issues involved in enforcement of environmental legislation – Public awareness-Humanpopulationandtheenvironment.

Employability

OUTCOME:

- Mastercoreconceptsandmethodsfromecologicalandphysicalsciencesandtheirapplicationinenvironmentalproblem solving.
- Master core concepts and methods from economic, political, and social analysis as they pertain to the design andevaluationofenvironmentalpoliciesandinstitutions.
- Appreciatetheethical,cross-cultural,andhistoricalcontextofenvironmentalissuesandthelinksbetweenhumanand natural systems.
- Understandthetransnationalcharacterofenvironmentalproblemsandways,addressingthem,includinginterac tionsacrosslocalto global scales.
- Applysystemsconceptsand methodologiestoanalyzeandunderstandinteractionsbetweensocialandenvironmentalprocesses.
- Reflectcriticallyabouttheirrolesandidentitiesascitizens, consumersandenvironmental actorsinacomplex,interconnectedworld.
- Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oralcommunicationneededtoconducthigh-levelworkasinterdisciplinyscholarsand/orpractitioners.

‘ENVIRONMENTALSTUDIES’,K.Kumarasamy,A.AlagappaMoses,M.vasanthi

SEMESTER IV

CourseCode	CourseTitle	L	T	P	C
201ACLSLMS	Leadership and Management Skills	-	-	-	2

Aim:

The aim of the course is to cultivate and nurture the innate leadership skills of the youth so that they may transform these challenges into opportunities and become torchbearers of the future by developing creative solutions.

Course Objective:

The Module is designed to:

- Help students to develop essential skills to influence and motivate others
- Inculcate emotional and social intelligence, and integrative thinking for effective leadership
- Create and maintain an effective and motivated team to work for the society
- Nurture a creative and entrepreneurial mindset
- Make students understand the personal values and apply ethical principles in professional and social contexts.

Course Outcomes:

Upon completion of the course, students will be able to:

1. Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
2. Learn and demonstrate a set of practical skills such as time management, self management, handling conflicts, team leadership, etc.
3. Understand the basics of entrepreneurship and develop business plans
4. Apply the design thinking approach to leadership
5. Appreciate the importance of ethics and moral values for making of a balanced personality.

UNIT I- Leadership Skills

a. Understanding Leadership and its Importance

- What is leadership?
- Why Leadership required?
- Whom do you consider as an ideal leader?

b. Traits and Model of Leadership

- Are leaders born or made?
- Key characteristics of an effective leader
- Leadership styles
- Perspectives of different leaders

c. Basic Leadership Skills

- Motivation
- Teamwork
- Negotiation

- Networking

UNITII-ManagerialSkills

a. BasicManagerialSkills

- Planningforeffectivemanagement
- Howtoorganiseteams?
- Recruitingandretainingtalent
- Delegationoftasks
- Learntocoordinate
- Conflictmanagement

b. SelfManagementSkills

- Understandingselfconcept
- Developingself-awareness
- Self-examination
- Self-regulation

UNITIII-EntrepreneurialSkills

a. BasicsofEntrepreneurship

- Meaningofentrepreneurship
- Classificationandtypesofentrepreneurship
- Traitsandcompetenciesofentrepreneur

b. CreatingBusinessPlan

- Problemidentificationandideageneration
- Ideavalidation
- Pitchmaking

UNITIV-InnovativeLeadershipandDesignThinking

a. InnovativeLeadership

- Conceptofemotionalandsocialintelligence
- Synthesisofhumanand artificialintelligence
- Whydoes culturematter fortoday'sgloballeaders

b. DesignThinking

- Whatisdesignthinking?
- Keyelements of designthinking:
 - Discovery
 - Interpretation
 - Ideation
 - Experimentation
 - Evolution
- Howtotransformchallengesintoopportunities?
- Howto develophuman-centricsolutions forcreating socialgood?

UNITV-EthicsandIntegrity

a. LearningthroughBiographies

- Whatmakesanindividualgreat?
- Understandingthepersonaofaleader forderivingholisticinspiration
- Drawinginsightsforleadership
- Howleaderssailthroughdifficultsituations?

b. EthicsandConduct

- Importanceofethics
- Ethicaldecisionmaking
- Personalandprofessionalmoralcodesofconduct
- Creatingaharmoniouslife

B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198SEC52	BusinessEconomics	3	1	1	4

AIM:

- Students will learn how markets and other governance structures organize core economic activities.

OBJECTIVE:

- Identify and explain economic concepts and theories related to the behavior of economic agents, markets, industry and firm structures, legal institutions, social norms, and government policies.
- Integrate theoretical knowledge with quantitative and qualitative evidence in order to explain past economic events and to formulate predictions on future ones.

Unit-I

Definition—Methods of Economics —Meaning of Business Economics —Objectives of Business Economics —Nature of Business Economics—Economic Laws—Micro—Macro Economics.

Unit—II

Demand Analysis—Demand Schedule—Law of Demand—Demand Curves—Elasticity of Demand—Indifference Curves.

Unit—III

Production Function—Factors of Production—Laws of Return—Cost of Production—curve—Scale of Production—Isoquant curve—Economies of Large scale production.

Unit-IV

Cost concepts-Different costs-Long and short run cost curves—Relationship between costs—Breakeven analysis

Unit-V

Market Structure—Firm—Equilibrium Firm and Industry—Optimum Firm—Pricing—Pricing under Perfect competition—Monopoly— Duopoly- Oligopoly

Employability**OUTCOME:**

- Apply the concept of opportunity cost.
- Understand the concepts of cost, nature of production and its relationship to Business operations.
- Apply Economic theories to business decision
- Use the theoretical concept of demand and supply analysis in practice
- Understand the cost concepts, theories of profit and business cycles
- Use different demand forecasting techniques and apply different pricing techniques in business
- Understand the importance of Fiscal policy

Reference Books:

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
2019SEC53	Financial Management	3	1	1	4

AIM:

Optimum funds utilization. Once the funds are procured, they should be utilized in maximum possible way at least cost.

OBJECTIVE:

- To ensure regular and adequate supply of funds to the concern.
- To ensure adequate return to the shareholders which will depend upon the earning capacity, market price of the share, expectations of the shareholders

Unit — I

Introduction—Finance and related disciplines—Scope of financial management—Objectives of financial management—Financial Decisions - Organization of finance function

Unit-II

Cost of capital—cost of debt—cost of preference shares—cost of equity—cost of retained earnings—weighted average cost of capital.

Unit-III

Introduction—Capital structure—Determinants-Theories~Net income approach—Net operating income approach—M.M. Approach—Traditional approach

skill development

Unit—IV

Leverage—Meaning and types—Significance—Operating leverage—Financial leverage-Combined leverage

Unit— V

Dividend policy—Factors influencing dividend policy—Theories-Relationship with value of firms—Stock dividend—Stock splits

OUTCOME:

- Use business finance terms and concepts when communicating.
- Demonstrate basic understanding of financial management.
- Provide introduction to Financial Management
- Create an awareness about capital structure and theories of capital structure
- Make them understand the cost of capital in wide aspects
- Provide knowledge about dividend policies and various dividend models.
- Enable them to understand working capital management

Reference Books

1. Kulkarni-Financial Management
2. S.N.Maheswari -Financial Management
3. R.K.Sharma-Financial Management

PRISTUNIVERSITY, THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198SEC54	SoftwareEngineering	3	1	1	4

AIM:

- To produce programmer equipped with an understanding of fundamental computational concepts underlying most programming languages

OBJECTIVE: Students to know about:

- Techniques for solving problems
- Basic computational concepts and elementary data structures
- The edit-compile-link-run cycle from a user point of view

UNIT I

Introduction — definition-size factors- quality and productivity factors- managerial issues. Planning - software project — introduction — defining the problem - developing a strategy - planning the development process-planning an organizational structure.

UNIT II

Software cost estimation — cost factors — cost estimation techniques — staffing — level estimation — estimating software maintenance costs. Software requirements definition — software requirements specification techniques — languages and processors for requirements.

UNIT III

Software design — fundamental design concepts — modules and modulation criteria — design notations — design techniques — detail design considerations — real time and distributed system design — test plans — milestones walk-throughs and inspections — design guidelines.

UNIT-IV

Implementation issues — structured coding techniques — coding style — standards and guidelines — documentation guidelines — data abstraction — exception handling — concurrency mechanisms.

UNIT V**Entrepreneurship**

Verification and validation techniques — quality assurance — walk-through and inspections — static analysis — symbolic execution — unit testing and debugging — system testing — formal verification. Software maintenance — enhancing maintainability during development — managerial aspects — configuration management — source code metrics.

OUTCOMES:

- To identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- To apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- An ability to communicate effectively with a range of audiences
- Analyze the importance of management information system and networking in a business.
- Be aware and perform various activities using computers in day-to-day life.

Text Book

Software Engineering Concepts — Richard Fairly TMH

Reference Book: 1. "Software Engineering" - Roger S. Pressman, 5th edition 2001.

COURSE CODE	COURSE TITLE	L	T	P	C
20198DSC55A	Elective-IA-Management Information System	3	0	1	2

AIMS:

The overall aim of this course is to provide students with an understanding of how to use and manage information systems in order to revitalize business processes, improve business decision making, and gain competitive advantage.

OBJECTIVES:

- To describe the role of information technology and decision support systems in business and record the current issues with those of the firm to solve business problems.
- To introduce the fundamental principles of computer-based information systems analysis and design and develop an understanding of the principles and techniques used.
- To enable students to understand the various knowledge representation methods and different expert system structures as strategic weapons to counter the threats to business and make business more competitive.
- To enable the students to use information to assess the impact of the Internet and Internet technology on electronic commerce and electronic business and understand the specific threats and vulnerabilities of computer systems.
- To provide the theoretical models used in database management systems to answer business questions.

UNIT I

The meaning and use of MIS, System View of Business, Process of MIS, Development of MIS within the organization, Management Process, Information Needs, System Approach in Planning, Organizing and Controlling MIS.

UNIT II

Planning, Implementation and Controlling of Management Information System.

UNIT III

Fundamentals of Data Processing, Computer Operation of Manual Information System, Components of Computer Systems, Flow Chart, Conversion of Manual to Computer Based Systems, Computer Systems Software, Application Software, Telecommunication Modem

UNIT IV

Managerial Decision Making, characteristics and components of Decision Support System.

UNIT V

System Design: System design consideration, input/output design, forms design, file organization and database, data management, file design, program design, control and security.

OUTCOME:

- Relate the basic concepts and technologies used in the field of management information systems;
- Compare the processes of developing and implementing information systems.
- Outline the role of the ethical, social, and security issues of information systems.
- Translate the role of information systems in organizations, the strategic management processes, with the implications for the management.
- Apply the understanding of how various information systems like DBMS work together to accomplish the information objectives of an organization.

COURSECODE	COURSE TITLE	L	T	P	C
20198DSC55B	Elective-IB-StockMarket Price	3	0	1	2

AIM:

The aim of the course is to provide practical exposure to the students on the functioning of the stock market and on the stock market practices like trading mechanism, clearing and settlement, demat trading.

OBJECTIVES

- I. To provide an introduction to the financial markets and to analyze the role of financial markets for the broader macro.
- II. The course will help them in building a career in stock market/broking houses.
- III. To help them to understand the practical aspects of primary and secondary market operations.

UNIT I

Trading Mechanism in Stock Exchanges: Introduction- Market Types- Market Phases- Invoking an Inquiry Screen- Order Management- Trade Management- Auction- Limited Physical Market- Retail Debt Market- Internet Broking- Wireless Application Protocol. Legal framework of Securities Market: SEBI Guidelines Relating to the Functioning of Stock Exchanges and Intermediaries; SEBI and Investor Protection; Securities Contract Regulation Act and Listing of Securities; Regulations and Guidelines for FIIs.

UNIT II

Clearing and Settlement Process: Introduction- Transaction cycle- Settlement Process- Settlement Agencies- Risks in Settlement- Settlement Cycle- Securities Settlement- Funds Settlement- Shortages Handling- Risk Containment Measures- International Securities Identification Number- Clearing Software- Reports- File Transfer Protocol.

UNIT III

Trading pattern in BSE and NSE: Security Market Indicators- Need and Importance; BSE Sensex, NSE, NIFTY and other Index Numbers.

UNIT IV

Demat Trading: Meaning and Significance; Role of Depositories and Custodian of Securities in Demat Trading; SEBI Guidelines and other Regulations relating to Demat Trading; Procedure of Demat Trading- Introduction to Online- Trading.

UNIT V

Derivatives Trading: Approving for derivative trading, Derivatives market at NSE, Trading mechanism, membership criteria, Turn over, Clearing and settlement, Risk Management system.

OUTCOMES:

- Understand the trading mechanism in stock exchange.
- Understand the trading pattern in BSE and NSE.
- Get knowledge on the Demat Trading.
- Discuss on the SEBI guidelines and other regulations relating to Demat Trading.
- Get through the certification examinations conducted by BSE and NSE, and
- Start stock trading concern and become a successful Financial Entrepreneur.

- Pedagogical Methods Adopted: Flipped Learning, Blended Learning, Experiential Learning,
- Participative Learning, Case Study Method and Problem Based Learning

SEMESTER V
COMMUNICATIONS SKILLS

Course Code	Course Title	L	T	P	C
201ACLSPSL	Professional Skills	-	-	-	2

Course Objectives:

The Objectives of the course are to help students/candidates:

1. Acquire career skills and fully pursue to partake in a successful career path
2. Prepare a good resume, prepare for interviews and group discussions
3. Explore desired career opportunities in the employment market in consideration of an individual's SWOT.

Course Outcomes:

At the end of this course, the students will be able to:

1. Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax
2. Participate in a simulated interview
3. Actively participate in group discussions towards gainful employment
4. Capture self-interview simulation video regarding the job role concerned
5. Enlist the common errors generally made by candidates in an interview
6. Perform appropriately and effectively in group discussions
7. Explore sources (online/offline) of career opportunities
8. Identify career opportunities in consideration of their own potential and aspirations
9. Use the necessary components required to prepare for a career in an identified occupation (as a case study).

Unit I: Resume Skills

Resume Skills: Preparation and Presentation

- Introduction of resume and its importance
- Difference between a CV, Resume and Biodata
- Essential components of a good resume

ii. Resume skills: common errors

- Common errors people generally make in preparing their resume
- Prepare a good resume of her/his considering all essential components

Unit II: Interview Skills

i. Interview Skills: Preparation and Presentation

- Meaning and types of interview (F2F, telephonic, video, etc.)
- Dress Code, Background Research, Do's and Don'ts
- Situation, Task, Approach and Response (STAR Approach) for facing an interview
- Interview procedure (opening, listening skills, closure, etc.)
- Important questions generally asked in a job interview (open and closed ended questions)

ii. Interview Skills: Simulation

- Observation of exemplary interviews

- Commentcriticallyonsimulatedinterviews

iii. *InterviewSkills:CommonErrors*

- Discussthecommonerrorsgenerallycandidatesmakeininterview
- Demonstrateanidealinterview

UnitIII:GroupDiscussionSkills

MeaningandmethodsofGroupDiscussion

- ProcedureofGroupDiscussion
- GroupDiscussion-Simulation
- GroupDiscussion-CommonErrors

Unit IV:ExploringCareer

OpportunitiesKnowingyourself–

personalcharacteristics

- Knowledgeaboutthe worldofwork,requirementssofjobsincludingself-employment.
- Sourcesofcareerinformation
- Preparingfor acareer based ontheirpotentials and availabilityofopportunities

Skill/Employability

PRISTUNIVERSITY, THANJAVUR
B.COM– CA

COURSECODE	COURSE TITLE	L	T	P	C
20198SEC61	Management Accounting	3	1	2	5

AIM

- To emphasize the importance of accounting information for managerial decision making and solving problems.

OBJECTIVES

- vii. To gain expert knowledge of the techniques of managerial accounting.
- viii. To know the application of various financial tools for making managerial decisions.
- ix. To apply techniques of costing for business decisions.

Unit-I

Definition of Management accounting—
 Nature, scope, objectives, Functions of management accounting—
 Management Accounting and Financial Accounting Management Accounting and Cost Accounting —
 Advantages & Limitations of Management Accounting

Unit-II

Financial Statement Analysis-Comparative statement—Common Size statement—Trend percentages —
 Ratio Analysis.

Unit-III

Fund Flow Analysis and Cash Flow Analysis

Unit-IV

Marginal costing and Break—Even analysis—Budget and budgetary controls—Classification of budgets

Unit— V

Standard costing and variance analysis, Capital budgeting-Importance—Techniques of capital budgeting

skill development

OUTCOMES:

- Prepare analysis of various special decisions, using relevant costing and benefits
- More effective planning and control systems
- The students thought and knowledge on management Accounting
- Help to give proper idea on financial statement analysis in practical point of view
- Introduce the concept of fund flow and cash flow statement
- Provide knowledge about budget control keeping in mind the scope of the concept
- Develop the know-how and concept of marginal costing with practical problems

1. ShashiK.Gupta&R.K.Sharma -Management Accounting
2. S:N.Maheswari-ManagementAccounting
3. R.Ramachandran andR.Srinivasan —ManagementAccounting
4. HingoraniandRamanathan —ManagementAccounting

COURSECODE	COURSE TITLE	L	T	P	C
20198SEC62	Income Tax Law and Practice	3	1	1	5

AIM:

To understand the basic elements of income tax theory, law and practice.

OBJECTIVES:

- I. To learn the basic concepts in income tax law
- II. To identify the various sources of income
- III. To know tax exemption and deductions.

Unit—I

Basic Concepts — Definitions — Assesses — Person, income, assessment year, previous year, basis of charge: Determination of Residential Status — Income exempt from tax

Unit-II

Salary: Definition — Salary under section 17 — allowances, perquisites, profit in lieu of salary — deductions under section 16 — computation of salary income.

Unit—III

House property: Definition, exempted incomes from house property — Annual value — determination of annual value — Let out — Self occupied — Deductions — computation of property income.

Unit—IV

Profits and Gains of business or profession — definition — charging provisions — deductions — computation of business and professional income

Unit— V

Capital Gains: Basis of charge — Cost of acquisition, cost of improvement — exempted capital gain — computation of capital gain — Income from other sources — Chargeability — deductions — Computation of Income under other sources.

OUTCOMES:

- File IT Return on individual basis
- Compute the total Income and define tax complications and structure.
- In order to familiarize the different know-how and heads of income with its components
- It helps to build an idea about income from house property as a concept
- It gives more idea about the income from business or profession
- Make the students familiarize with the concept of depreciation and its provisions

Reference Books:

1. Gaur and Narang - Income Tax Law and Practice

2. Jayakumar and Dr. Hariharan - Income Tax Law and Practice
3. Rajavelu — Income Tax Law & Practice
4. Bagawathi Prasad — Income Tax

B.COM– CA

COURSECODE	COURSE TITLE	L	T	P	C
20198SEC63	Database Management Systems	3	1	1	4

AIM

The primary goal of a **DBMS** is to provide an environment that is both convenient and efficient to use in retrieving and storing database information.

OBJECTIVES

- I. To understand what a database is, about different types of databases, and why they are valuable assets for decision making.
- II. To appreciate the importance of database design.
- III. How and why modern databases evolved from files and file systems.

UNIT-I:

Concepts of DBMS, advantages, various views of data, data independence, schema and Sub-schema, data models, database languages, database administration & Users.

UNIT-II:

Data dictionary, overall system architecture, E-R models, mapping constraints, Keys: Primary, Candidate, Super Key, Foreign Key.

UNIT-III:

Access Concepts & terms: database tables, relational database, record, fields controls & objects, queries and dynasets.

UNIT-IV:

Forms, reports, properties, wizards, macros, Access requirements, starting & quitting access, the access workspace & tool views.

UNIT-V:

Creating database & tables with & without wizard, field name, data types and properties, adding & deleting fields in fields.

OUTCOME:

- Understand database concepts and structures and query language
- Understand the ER model and relational model
- Understand Functional Dependency and Functional Decomposition.
- Apply various Normalization techniques
- Understand query processing and techniques involved in query optimization.
- Understand the principles of storage structure and recovery management.
- Understand database concept and structures and query language.

References:

2. Complete Reference Access 2002-Virginia Anderson(TMH)
3. Database-Management System—Silberchatz, Korth

PRISTUNIVERSITY, THANJAVUR

B.COM- CA

COURSECODE	COURSE TITLE	L	T	P	C
20198DSC64A	Elective- IA-E-Commerce	3	0	2	2

AIM:

To reach out to a larger audience since Internet access is becoming a mainstream.

OBJECTIVES

- I. This course provides an introduction to information systems for business and management.
- II. It is designed to familiarize students with organizational and managerial foundations of systems, the technical foundation for understanding information systems

Unit I:

E-Commerce and E-Business – Introduction – technological Advancements – E-commerce defined – E-commerce

Unit II:

Business Models for E-Commerce –
E-Business Models Based on the relationship of Transaction parties – B2c – Business to Business – Customer to Customer – Consumer to – Business

Unit III:

E-Marketing – Traditional Marketing – Meeting the needs of Website visitors –
E-Marketing value chain – Maintain website – Online Marketing

UNIT IV

e-Payment Systems: Main Concerns in Internet Banking – Digital Payment Requirements –
– Properties of Electronic Cash – Cheque Payment Systems on the Internet – Risk and Payment Systems –
Designing payment Systems – Online Financial Services in India – Online Stock Trading.

UNIT V

Information systems for Mobile Commerce: What is Mobile Commerce? – Wireless Applications –
Cellular Network – Wireless Spectrum – Technologies for Mobile Commerce – Wireless Technologies –
Different Generations in Wireless Communication

OUTCOMES:

- Demonstrate an understanding of the foundations and importance of E-commerce
- Analyze the impact of E-commerce on business models and strategy
- Describe the infrastructure for E-commerce
- Discuss legal issues and privacy in E-Commerce
- Assess electronic payment systems

SEMESTER-VI
PRISTUNIVERSITY,THANJAVUR
B.COM-CA

COURSECODE	COURSE TITLE	L	T	P	C
20198DSC64B	Elective–IB–WebDesigning	3	0	1	2

Objectives:

This Subject is useful for Making own Webpage and how to host own website on internet. Along with that Students will also learn about the protocols involved in internet technology.

UNIT I

Introduction to WWW : Protocols and programs, secure connections, application and development tools, the web browser, What is server, choices, setting up UNIX and Linux web servers, Logging users, dynamic IP Web Design: Website design principles, planning the site and navigation,

UNIT II

Introduction to HTML : The development process, Html tags and simple HTML forms, web site structure Introduction to XHTML: XML, Move to XHTML, Metatags, Character entities, frames and framesets, inside browser.

UNIT III

Style sheets : Need for CSS, introduction to CSS, basic syntax and structure, using CSS, background images, colors and properties, manipulating texts, using fonts, borders and boxes, margins, padding lists, positioning using CSS, CSS2. Javascript : Client side scripting, What is Javascript, How to develop Javascript, simple Javascript, variables, functions, conditions, loops and repetition

UNIT IV

XML : Introduction to XML, uses of XML, simple XML, XML key components, DTD and Schemas, Well formed, using XML with application. XML, XSL and XSLT. Introduction to XSL, XML transformed simple example, XSL elements, transforming with XSLT.

UNIT V

PHP : Starting to script on server side, Arrays, function and forms, advance PHP Databases : Basic command with PHP examples, Connection to server, creating database, selecting a database, listing database, listing table names creating a table, inserting data, altering tables, queries, deleting

database, deleting data and tables, PHP myadmin and database bugs.

LearningOutcome:

After Studying that subject students would have capability to make own web site and host their ownweb site on internet. Also students would have enough knowledge about what are the technologiesusedin internet.

ReferenceBooks:

SEMESTER VI

Course Code	Course Title	L	T	P	C
201ACLSCET	Community Engagement	-	-	-	1

Aim:

Course Objectives:

- To develop an appreciation of rural culture, life-style and wisdom among students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

Course Outcomes:

After completing this course, students will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and the bonds of mutuality with the local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

UNIT I-Appreciation of Rural Society

Rural life style, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of "soul of India lies in villages" (Gandhi), rural infrastructure.

UNIT II-Understanding rural economy & livelihood

Agriculture, farming, land ownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets

UNIT III Rural Institutions

Traditional rural organisations, Self-help Groups, Panchayati Raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration

UNIT IV Rural Development Programmes

History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swachh Bharat, PM Awaas Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

Open Elective: Development of Mathematical Skills

COURSE CODE	COURSE TITLE	L	T	P	C
201MAOEC	Open Elective: Development of Mathematical Skills	4	0	0	2

Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III Set theory –

Series **Unit IV**

Matrices – Determinants

Unit V

Assignment problems

References

1. P.A. Navanitham, Business Mathematics & Statistics
2. Kantiswarup, P.K. Gupta and Manmohan, "Operations Research"

- Learning outcomes
- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

PRISTUNIVERSITY, THANJAVURB.CO
M
Open Elective: Instrumentation

COURSE CODE	COURSE TITLE	L	T	P	C
201PHOEC	Open Elective: Instrumentation	4	0	0	2

Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

- To build the strong foundation in physics of students needed for the field of Instrumentation.
- To prepare student to apply reasoning informed by the contextual knowledge to practice.
- To provide opportunity for students to work as part of teams on multi-disciplinary projects.

UNIT –I: INTRODUCTION

Potentiometer- calibration of voltmeter and ammeter, measurement of resistance, Principles of network theorems- Thevenin's and Norton's theorem- Bridges : AC bridges- Maxwell, Owen, Schering and De Sauty's bridges- Wien bridges.

UNIT –II: ELECTRONIC INSTRUMENTS –I

Basic characteristics of instruments- resolution- sensitivity- Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter- resistance meter- Amplified D.C. meter- Chopper stabilized amplifier - A.C. Voltmeter using rectifiers- Electronic multimeter- Differential voltmeter- Digital voltmeters- Component measuring instruments (quantitative studies)

UNIT –III: ELECTRONIC INSTRUMENTS –II

Signal conditioning systems- DC and AC carrier systems - Instrumentation amplifiers- Vibrating capacitor amplifier- Analog to digital data and sampling- A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity- Recording requirements- Analog recorders- Graphic recorders- strip chart recorders - Galvanometer types recorders- Null type recorders.

Unit V – CRO

CRO- Construction and action- Beam transit time and frequency limitations- Measurement of potential, current, resistance, phase and frequency- Special purpose oscilloscopes- Sampling storage oscilloscope.

Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick –

Learning Outcomes:

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K.Sawhney–Dhanpat Rai and Sons– 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

PRISTUNIVERSITY, THANJAVURB.COM

COURSECODE	COURSE TITLE	L	T	P	C
201MBOEC	Open Elective: Wild Life Conservation	4	0	0	2

Aim:

To enable the students understand the need of conservation of wildlife in India.

Objectives:

- Maintenance of rare species in protected areas such as national parks, sanctuaries etc., Establishment of specific biosphere reserves for endangered plants and animals.
- Protection of wildlife through legislations such as banning hunting etc.,
- Imposing specific restrictions on export of endangered plants and animals or their products.

Course Outcome:

- Protection of natural habitats of organisms through controlled exploitation.
- Educating the public about the need to protect the environment
- Long range goal for preserve the wildlife for welfare of future generations
- Conservation and Maintenance of endangered plants in wildlife

Unit I:

Wildlife Management: Basic concepts and principles- Wildlife management before and after implementation of Wild Life (Protection) Act, 1972 – IUCN – CITES – NBA – IBA –

Evaluation of Wildlife habitat: Define habitat – Forest habitat types - basic survey techniques of habitats – Vegetative analyses – Point centered quadrat, Quadrat, strip transect – Habitat manipulation: Food, Water, shade, impact and removal of invasive alien species.

Unit II:

Introduction to conservation biology, the origin of conservation biology, ethical and economical values of conservation biology, definition of biodiversity, types of biodiversity, threats to biodiversity. Scopes and importance of conservation methods – *In-situ* and *Ex-situ* conservation approaches of Indian animals. Captive breeding (Lion-tailed macaque, white tiger and vultures) and reintroduction (Tiger, rhinoceros, gaur).

Unit III:

Biodiversity: Definition and importance - Biodiversity hotspots in India: Western Ghats, Eastern Himalayas. Mega diversity nations – an introduction. Landscape approach and people participation in biodiversity conservation.

Unit IV:

Role of Government and Non-Government organizations in conservation. – **Government** - Wildlife Institute of India, Ministry of Environment and Forests (MoEF), National Biodiversity

Authority (NBA), Zoological Survey of India (ZSI), Botanical Survey of India (BSI), Salim Ali Centre for Ornithology and Natural History (SACON), Centre for Ecological Sciences (CES). NGOs – Bombay Natural History Society (BNHS), World Wide Fund for Nature (WWF), Wildlife Trust of India (WTI), Nilgiri Wildlife and Environment Association (NWEA), Wildlife Conservation Society (WCS).

Unit V:

Conservation Biology Tools - Biological Parks, Zoological Parks, Forest Research Institute, Agricultural Research Institutions, Gene Pools, Cryopreservation Centres, Interpretation Centres and role of Field Biologists.

References:

1. Anon, 1992. Conservation of biological diversity. Text and annexure – WWF-India.

COURSECODE	COURSE TITLE	L	T	P	C
201CAOEC	Open Elective–E- Learning	4	0	0	2

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop –learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding e-learning, components and models of e- learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, -Applications of E-learning.

UNIT II CONCEPTS AND DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assurance-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self-managed learning.

UNIT III APPLICATIONS

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

REFERENCE BOOKS:

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.
2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.

COURSECODE	COURSE TITLE	L	T	P	C
201CSOEC	Open Elective-Web Technology	4	0	0	2

AIM

To equip the students with basic programming skill in Web Technology.

OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice markup languages
- To learn Style Sheet and Frames

UNIT I

Introduction to the Internet: networking-internet-email-

Internet Technologies: modem internet addressing.

UNIT II

Internet browsers: Internet Explorer-Netscape navigator-

Introduction to HTML: Html document- anchor tag-hyperlink.

UNIT III

Head and body sections: Header section-titles-links-colorful webpage-

sample html document - Designing the body section: paragraph - tab setting.

UNIT IV

Ordered and unordered lists: list-unordered list-heading in a list-order list-nested list.

UNIT V

Table handling: tables-table creation in html cell spanning multiple rows and columns-

coloring cells-sample tables-frames frameset definition-nested frames set.

OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design frontend webpage and connect to the backend databases.

REFERENCE BOOKS

1. World Wide Web design with HTML- C.Xavier - Tata McGraw-Hill-2000.
2. Principles of web design-Joel Sklar-Vikas publishing house 2001.

COURSECODE	COURSE TITLE	L	T	P	C
201TERP9	TALLY ERP 9	-	-	-	3

AIM

To develop the knowledge regarding the concepts of financial accounting in students that is used for learning to maintain accounts.

OBJECTIVES

To impart practical knowledge in TALLY and ensures that finance for the company is always in order and is correct at all given points of time.

UNIT – I

TALLY – Introduction to Tally Prime –Difference between Tally Prime and Tally ERP 9 – New Features in Tally Prime

UNIT – II

Company Creation – Chart of Accounts

UNIT – III

Inventory Master and Inventory Vouchers in Tally

UNIT – IV

Payroll Master in Tally

UNIT –V

Reports in Tally

OUTCOME

Students are able to get placements in different offices as well as companies in Accounts departments.

REFERENCE BOOKS

1. Learn Tally Prime – Gaurav Agarwal

**PRIST UNIVERSITY,
THANJAVURB.COM-CA**

RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professional of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyze their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research –Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research–Oriented: Developing research skills and techniques

Here the focus is on developing student’s knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research–Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and inquiry mode (i.e. the students become producers of knowledge not just consumers).

The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as, Level

1: Prescribed Research

Level 2: Bounded

Research Level 3: Scaffold

Research Level 4: Self-actuated R

research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Com curriculum, the following Research Skill Based Courses are introduced in the B.Com curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	3
V	Participation in Bounded Research	2
VI	Project Work	4

Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment:** **40 Marks**
 - Seminar Report (UG)/Concept Note (PG) : 5 X 4 = 20 Marks
 - Seminar Review Presentation : 10 Marks
 - Literature Survey : 10 Marks
- **Semester Examination :** **60 Marks**

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Research Methodology

Courses Continuous Internal Assessment: **20 Marks**

- Research Tools (Lab): 10 Marks
- Tutorial: 10 Marks

Model Paper Writing: **40 Marks**

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

Semester Examination: **40 Marks**

Total: **100 Marks**

M.COM PROGRAMME

Regulation 2020

Commerce is a professional course among the various arts subjects. Commerce is instrumental in bringing about changes in all aspects of the society. It promotes growth and development. The changes in the economic policies of the country and the computer application in business offer variety of opportunities for innovative and creative people to carry out their career with new vigor and enthusiasm.

In the present scenario the market based system has gradually expanded across the world securing a strong position in the market overcoming all borders and barriers.

The rapid changes in the field of economics, information technology, politics and also in the organizational structure and the increased complexities of the business world poses series of problems to the modern commerce student. At this backdrop the new syllabus is designed for the M.Com Programme of the **PRIST UNIVERSITY**

SCHOOL OF COMMERCE AND BUSINESS MANAGEMENT

**DEPARTMENT OF
COMMERCE**

M.Com,- REGULATION 2020

DISCIPLINE SPECIFIC ELECTIVE COURSES

SEMESTER	COURSE TITLE
I	Strategic Management Organizational Behaviour
II	Corporate Legal Framework Retail Management
III	Indian Financial System International Marketing
IV	Customer Relationship Management International Financial Management

Open Electives

Semester	Open Elective Courses
III	a) Writing for the media b) Applicable Mathematics Techniques c) Bio-medical Instrumentation d) Green Chemistry e) Herbal Medicine f) M-Marketing

OUTCOMES:

- PO1-To acquaint a student with conventional as well as contemporary areas in the discipline of Commerce.
- PO2-To enable a student well versed in national as well as international trends.
- PO3-To enable the students for conducting business, accounting and auditing practices, role of regulatory bodies in corporate and financial sectors nature of various financial instruments.
- PO4-To provide in-depth understanding of all core areas specifically Advanced Accounting, International Accounting, Management, Security Market Operations and Business Environment, Research Methodology and Tax planning.

- PO5-Serve as a human resource needed for industry, consultancy, education, service, research, public administration, insurance and management.
- PO6-Understand financial and marketing both local and international issues and responsibilities of a business organization.

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261SEC11	Marketing Research and Consumer Behavior	6	0	0	4

AIM

- To plan for Marketing Research and to predict the behaviour of a consumer at the marketplace.

OBJECTIVES

- I. To ascertain Marketing Research aids and their impacts.
- II. To plan for a new product pricing, marketing policy and strategy.
- III. To identify the different types of consumers and their behaviour.

UNIT-I

Introduction: Marketing research – An Introduction – Problem, discovery and formulation – Marketing research process- Scientific method – Research design – experimental design.

UNIT-II

Data Collection and Data analysis: primary data – secondary data collection – Survey method and its administration – Questionnaire design- Attitude measurement and scaling techniques - observation method- Sampling concepts – Selecting a sample – processing of collected data Tabulation of data – Data analysis and interpretation- Presentation of Research project

UNIT-III

Product Research – Advertising Research- Motivation Research- Sales control Research- Ethical issues in Marketing Research – Future of marketing Research.

UNIT-IV

Consumer Behaviour: Introduction of Consumer Behaviour – Consumer Research – Family – Women Consumers – Rural Consumers – Special Area Consumers market segmentation- Consumers needs and Motivation – Consumer Personality – Consumer Perception- the process of learning Consumer Behaviour.

Employability

UNIT-V

The nature of consumer attitudes – Models of consumer behavior – Group dynamics and consumer reference groups – Communication, Advertising and Consumer buying behavior – the family and life style marketing – Culture, Social class and consumer behavior – Consumer protection – Consumer profiling – Digital marketing

OUTCOME

- This specialization lays the necessary groundwork for an overall successful marketing strategy
- Knowledge required to understand the state of your product before approaching the market strategy
- Interpret development of marketing research
- Identify the major influences in Consumer Behaviour
- Theory of Consumer behaviour and relates it to the practice of marketing.
- Demonstrate how knowledge of consumer behaviour can be applied to marketing.

REFERENCE BOOKS

1. Marketing Research – Dr.D.D.Sharma
2. Consumer Behaviour-Dr.S.L.Gupta
3. Marketing Research and Consumer Behavior – M.S.Raju
4. Marketing Research and Consumer Behavior- Dr.Dominique Xardel
5. Consumer Behaviour – Sumitra Pal

THANJAVURM.COM**

COURSECODE	COURSETITLE	L	T	P	C
20261SEC12	HumanResourceManagement	6	0	0	4

AIM

To consider the implications of diversity for the development and synthesis of specific Human Resource Policy area.

OBJECTIVES

- I. To identify the objectives of recruiting and selecting a diverse workforce as an important organizational goal.
- II. To adopt suitable performance appraisal methods, promotion policies etc.

UNIT-I

Meaning – Nature and scope, characteristics – Functions – Objectives of organization of Human Resource department – HRM- Revaluation and Development of HRM – Role Qualification and qualities of H.R. Manager – HRM- Human Resource Planning.

UNIT-II

Recruitment – Sources and Techniques of Recruitment- Selection , Placement and Induction – Interviews – Training – Principal Methods- Steps- Evaluation of Training Performance.

UNIT-III

Human Resource Development (HRD) – Management Development programmes – performance Appraisal – Counseling – Managerial Appraisal.

UNIT-IV

Promotion – Transfer – demotion and discipline – Compensation – Career Planning – Career Development – Absenteeism – Managing change – Resistance and Approaches to Organization change.

UNIT-V

Job Evaluation – Advantages and Problems of job evaluation – Wages and Salary Administration – Bonus – Fringe Benefits – Motivation and Motivation theories – Leadership – Morale – Communication – Job Satisfaction.

Employability

OUTCOME

- Contribute to the development, implementation, and evaluation of employee recruitment, selection, and retention plans and processes
- Develop, implement, and evaluate employee orientation, training, and development programs.
- Understanding of the basic concepts, functions and processes of HRM
- Develop a selection and interviewing program
- Know formalize, Design and evaluate various Recruitment and Placement policies.
- Use methods of collecting job analysis information.

REFERENCE BOOKS

1. K.Davies – Personnel and Human Resource Management.
2. L.M.Prasad, C.B.Memoria – Human Resource Management.
3. P.Subbarao – Essential of Human Management and Industrial relations.
4. C.S.Venkataraman and B.K.Subtava – Personnel Management and Human Resources.
5. Dr.L.M.Prasad – Human Resource Management.

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261SEC13	ServicesMarketing	5	0	0	4

AIM

To focus the Organizations offering social services including health centers communication organizations, educational institutions

OBJECTIVES

- I. To study the total quality management in maintaining and improving the quality of services.
- II. To know the tourism and other service marketing activities.

UNIT-I

Introduction – Reasons for growth in services sector – Role of services in an economy – distinction between goods and services – Classification of services – Marketing Management process for Service marketing.

UNIT-II

Development of service marketing mix – Components in the mix – People – Process – Physical evidence in managing demand and supply.

UNIT-III

Managing service quality – Dimensions and measurement of service quality – gap analysis – Total Quality Management – Guidelines for managing service competition – Globalization of services – Challenges to global service marketers – Typical international services Barriers to international marketing services.

UNIT-IV

Marketing of Insurance Services – Users – Benefits – Formation of marketing mix for insurance products – Tourism – Marketing mix for tourism, Hotel – Market segmentation for hotels – Marketing mix for hotels.

UNIT-V

Hospitals: Marketing of Health care- Types of Hospitals- Marketing mix for health care, Personal care: Marketing mix for personal care, Education marketing-Literacy – The concept- Marketing mix for adult, elementary, secondary and higher education.

Employability**OUTCOME**

- Focuses on services, service design, and service innovation, with the aim of developing empathy for customers and understanding the customer experience
- Strategies that support broader marketing decisions.
- Develop an understanding of the role of relationship marketing and customer service
- Demonstrate knowledge of the extended marketing mix for services.
- Exhibit the capability to work effectively within a team environment.
- Develop and justify marketing planning and Control Systems.

REFERENCE BOOKS

1. S.M.Jha – Services Marketing
2. Vasanthi Venugopal – Services Marketing
3. B. Balaji – Services Marketing Furthermore Management
4. Valarie A Zeithaml – Services Marketing
5. Dwayne D. Gremler – Services Marketing
6. Mary Jo Bitner – Services Marketing
7. Ajay Pandit – Services Marketing

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261SEC14	Advanced Cost Management	6	1	0	4

AIM

To provide information to cost management to serve as a guide for making decisions for a better future of the business.

OBJECTIVES

- I. To use costing data for making decisions.
- II. To learn modern cost management concepts.

UNIT-I

Self-Study Unit: Cost concepts in decision making – Relevant cost – Differential cost – Incremental cost and opportunity cost – Objectives of a costing – System – Implementation of Costing system – Essentials of good costing system.

UNIT-II

Marginal costing – Distinction between Marginal Costing and Absorption Costing – Break Even Analysis – Cost – Volume – Profit analysis – Various decisions – making problems.

UNIT-III

Costing of Service Sector – Cost units – Transport Costing – Operating Cost of Cinema Houses – Hotel Operating Costing.

Employability

UNIT-IV

Standard Costing and Variance analysis.

UNIT-V

Budgetary Control – Flexible Budgets – Performance Budget – Zero based Budget.

OUTCOME

- Study of decision making and performance evaluation techniques in management accounting
- Understand decision making and performance evaluation techniques in management accounting.
- In modern competitive business environment, suitable business decision making is very crucial
- Identify relevant information for decision making purposes in order to produce financial analyses for a range of decisions such as product-mix, pricing, outsourcing and special orders.
- Use standard costs to prepare budgets for planning and control purposes.
- Understand the principles of standard costing.

REFERENCE BOOKS

1. A. Murthy & S. Gurusamy – Cost Accounting
2. Charles T. Horgrew and Geoge Foster – Cost Accounting a Managerial Emphasis

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSETITLE	L	T	P	C
20261DSC15A	Elective-I-AstrategicManagement	5	0	0	4

AIM

To understand the importance of strategic management in modern business.

OBJECTIVES

- I. To consider corporate strategy formulation at the business level to have competitive advantages.
- II. To study situational and SWOT analysis.
- III. To focus on strategy formulation and evaluation.

UNIT-I

Business Policy and strategic management – Conceptualization – Features of Strategy – Strategy and Tactics- Corporate, Business and Functional level of Strategy.

UNIT-II

Environmental Scanning of Analysis-Features-Methods of Environmental analysis and Forecasting- External and Internal Environment – SWOT analysis.

UNIT-III

Corporate Appraisal-Process – Methods And Techniques used – Internal analysis- Comparative analysis – Corporate Capability.

UNIT-IV

Corporate Strategy formulation-Implementation-Expansion through Integration – Vertical Integration- Diversification - Mergers - Takeovers – Acquisition – Joint venture- Divestment Strategy – Liquidation Strategy.

UNIT-V

Strategy Evaluation and Control- Strategic Control – Types – Differences Between Strategic and operational control - Evaluation for Strategic and Operational Control.

Employability

OUTCOME

- The course helped the student to gain knowledge in corporate strategy formulation and SWOT analysis.
- Understand the basic concepts and principles of strategic management and analyse the internal and external environment of business
- Develop and prepare organizational strategies that will be effective for the current business environment
- Devise strategic approaches to managing a business successfully in a global context.
- Integrate and apply knowledge gained in basic courses to the formulation and implementation of strategy from holistic and multi-functional perspectives.

REFERENCE BOOKS

1. Micheal Proter-Competitive Strategy, Competitive advantage.

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSETITLE	L	T	P	C
20261DSC15B	Elective-I-BOrganizationalBehaviour	5	0	0	4

AIM

To learn about the Individual and Group behaviour in an Organization.

OBJECTIVES

- I. To study the approaches and characteristics of Organizational Behaviour.
- II. To know the Leadership Styles and Leadership Theory.
- III. To highlight the importance of Motivation in an Organization.

UNIT-I

Introduction: Concept and meaning of OB – Nature of OB – Role of OB – Approaches to OB – Characteristics of OB.

UNIT-II

Individual Behavior – Perception – Personality – Meaning and Definition of perception – Nature of Perception – Importance of Perception – Perception Process – Stages in the Development of Personality – Nature of Personality – Group Dynamics – Types of Groups.

UNIT-III

Leadership – Meaning and Definitions – Nature and Characteristics of Leadership – Leadership Styles (or) Types of Leadership – Functions – Importance of Leadership – Successful Leadership – Leadership Theory.

UNIT-IV

Authority – Elements and Characteristics – Types of Authority – Nature of Accountability – Delegation of Authority – Elements of Delegation – Principles of Delegation – Types of Delegation – Importance of Delegation.

UNIT-V

Motivation – Meaning and Definition of motivation – Nature – Types – Importance of Motivation – Theories of Motivation – Features of Theory Z – Motivational Techniques – Limitations of MBO – Implementation of MBO – Job Enrichment.

Employability**OUTCOME**

- Examine the differences and similarities between leadership, power, and management
- Impact that a company's structure and design can have on its organizational behavior
- Impact of culture on organizational behavior
- Analyze management issues as related to organizational behavior
- Examine challenges of effective organizational communication
- Evaluate ethical issues as related to organizational behavior

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261SEC21	Quantitative Techniques For Decisions Making	5	1	0	4

AIM

To understand Quantitative tools and their applications in business problems.

OBJECTIVES

- I. To make the student to learn the various techniques of statistics used in business for taking decisions
- II. To study theory of probability, testing of hypothesis and linear Programming

UNIT-I

Meaning of Quantitative Techniques – Role of Quantitative Techniques – Advantages and limitations of quantitative Techniques correlation analysis – Simple – partial and multiple, Regression analysis – Timeseries..

UNIT-II

Probability – Elements of probability – Theorems of probability – Theoretical distributions – Binomial – Poisson – Normal distribution.

UNIT-III

Definition of Hypothesis – Types of Hypothesis – Type I Error – Type II Error – t test – F test – ANOVA – Chi-Square test.

skill development

UNIT-IV

Transportation problem – Initial Basic feasible solutions by North West Corner rule Minimization method – Maximization method – Vogel's approximation method – Optimization test by Modi method – Assignment methods.

UNIT-V

Linear programming – Basic Concepts and notation – Linear programming formulation – Solution through graphic methods, Simplex Method (Simple problem)

OUTCOME

- Employ basic statistical methods to decision making
- Understand how to apply basic models and theories in business
- Solve management problems effectively
- Use software tools to model decision problems.
- Clearly identify another unstructured business problem and its components
- Employ effective techniques for addressing the major challenges presented
- Provide a solution to the decision process

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSETITLE	L	T	P	C
20261SEC22	Total QualityManagement	5	0	0	4

AIM:

Continualimprovementofbusinessoperations.Itstrivestoensureallassociatedemployeeswork towardthecommongoalsofimprovingproductorservicequality,aswellasimprovingtheprocedureshatareinpla cefor production.

OBJECTIVES

1. TounderstandtheconceptofQuality
2. TounderstandtheImplicationofQualityonBusiness
3. ToImplement QualityImplementationPrograms
4. TohaveexposuretochallengesinQualityImprovementPrograms

UNIT-I

Total Quality Management (TQM): Elements – TQM in global perspective – Global bench marking – Business process reengineering – Global standards – ISO 9000 series – Environmental QS 14000- Qualitymanual–BarrierstoTQM.

UNIT-II

Total Quality Management and Leadership: Implementing TQM – Market choices – Meeting customerrequirements – Maintaining competitive advantage – Core competence and strategic alliances for ensuringquality –Qualityreview,recognitionandreward– Qualityawards:JapaneseDemingAward,USMalcolmBaldrigeNationalQualityAward&IndianGoldenPeacoc kNationalQualityAward.

UNIT-III

Quality Management Tools for Business Applications: Principles and Applications of Quality FunctionDevelopment – Failure Mode and Effect Analysis – Taguchi Techniques – Seven old QC Tools – SevenNew Management Tools – Statistical Quality Control Techniques (only Theory and no Problems) –MistakeProofing–Benchmarking –8DMethodology

skill development

UNIT-IV

Quality Imperatives for Business Improvement: Dimensions of Quality - Reliability Prediction Analysis – Total Productive Maintenance – Costs of Quality – Business Process Reengineering – Process CapabilityAnalysis–QualityAssuranceandISO9000Certification–ISO9001:2000.40

OUTCOMES:

- Given a product or a service type, the student manager will be able to enumerate and justify the dimension of product quality or service quality for the same
- Given the quality gurus (Deming/Juran/Taguchi/Crosby), the student manager will be able to justify their philosophies/contributions in Quality Management.
- Given a quality problem/ failure mode, the student manager will be able to identify causes and subcauses of the effect/problem draw and justify Ishikawa Diagram.
- For a given type of organization, the student manager will be able to enlist and justify the four levels of benchmarking and/or enlist and brief seven step benchmarking model
- The student manager will be able to differentiate between common and special cause of variation and/ or differentiate between attributes and variables and/ or construct and write formulae for control charts for variables and attributes.
- Critically appraise the organisational, communication and teamwork requirements for effective quality management

REFERENCE BOOKS:

SEMESTER-II**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261SEC23	Advanced Management Accounting	5	1	0	4

AIM

To enable the management to perform its managerial functions more effectively and efficiently.

OBJECTIVES

- I. To gain expert knowledge in respect of management accounting.
- II. To have sufficient information for taking vital managerial decisions.
- III. To help the management in planning, coordination, communicating and controlling.

UNIT-I

Nature and scope of Management Accounting- Objectives and Functions- Distinction between Financial Accounting and Management Accounting – Tools and Techniques of Management Accounting

-Merits/Uses of Management Accounting – Limitations – Functions of Management Accounting.

UNIT-II

Financial Statement Analysis – Ratio analysis – Revenue Statement and Financial Statement analysis – Preparation of Fund flow statement and Cash flow statement.

UNIT-III

Working Capital management: Meaning and Importance and Advantages- Factors determining the working capital requirement – Estimates of working capital requirement – Financing of working capital – New trends in Financing of working capital by Bank.

Employability

UNIT-IV

Marginal costing and differential cost analysis – Managerial applications of Marginal costing – Decisions involving alternative choices.

UNIT-V

Capital budgeting – Importance of capital budgeting- Factors influencing capital expenditure decisions – Different methods of Capital budgeting.

OUTCOME

- Activity based approaches to management and cost analysis
- Analysis of common costs in manufacturing and service industry
- Techniques for profit improvement, cost reduction, and value analysis
- Throughput accounting
- Target costing; cost ascertainment and pricing of products and services
- Pricing Decisions
- Budgets and Budgetary Control
- Evolution of standards, continuous improvement; keeping standards meaningful and relevant; variance analysis

REFERENCE BOOKS

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261SEC24	Security Analysis and Portfolio Management	5	1	0	5

AIM

It aims at providing an in-depth knowledge of the theory and practice of portfolio management. Important theories, techniques, regulations and certain advancements in theory of investment will be covered with an aim of helping the participants make sound investment decisions in the context of portfolio investment.

OBJECTIVES

- I. Understand the various alternatives available for investment.
- II. Learn to measure risk and return. Find the relationship between risk and return. Value the equities and bonds.
- III. Gain knowledge of the various strategies followed by investment practitioners.

UNIT-I

Investment – Meaning- Nature and Scope – objectives – Speculation – Gambling – investment process – Financial System in India – Risk & Return – Measurement of Risk & Return - Nature-scope-Elements of Investment-Approaches to investment analysis- Securities-types-Features.

UNIT II

Investment alternatives and strategies: Financial investment - Non financial investment - Inbound and outbound investments – Sources of Investment Information - valuation of fixed income securities and variable income securities (excluding Derivatives).

UNIT III

Fundamental Analysis: Economic – Industry and company analysis – Sources of information for Analysis

Employability

UNIT IV

Technical Analysis – Types of charts – Dow Theory, Elliott wave theory, Odd-lot Theory, Breadth of Market, Relative Strength Analysis – Moving Average analysis - Efficient Market Hypothesis.

UNIT V
Portfolio analysis & Management: Portfolio risk and return – Diversification - Markowitz model – Sharp model: Single index model – CAPM – Arbitrage pricing theory.

OUTCOME

- Explored to different avenues of investment.
- Equipped with the knowledge of security analysis.
- Apply the concept of portfolio management for the better investment.
- Invest in less risk and more return securities.
- The course helped the students to develop an understanding of the changing domestic and global investment scenario in general and Indian capital market in particular with reference to availability of various financial products and operations of stock exchanges

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSETITLE	L	T	P	C
21261DSC25A	Elective-II–A-CorporateLegalFrameWork	5	0	0	4

AIM

To understand the fundamental principles of legal and regulatory framework of corporate business.

OBJECTIVES

- I. To familiarize the students to understand the provisions of corporate laws.
- II. To study the problems involving issues in corporate laws.
- III. To know the implications of other relevant laws in the corporate management.

UNIT-I

Company; Definition – kinds of companies – Lifting of corporate veil – Pre- Incorporation – Memorandum of Association – Incorporation of a company – Legal Position of a Promoters.

UNIT-II

Membership of companies – Definition – Meeting of the Board of Directors – Kinds of meeting – Quorum – powers of the Chairman – Duties of the chairman – Minutes of meeting.

UNIT-III

Environmental legislation - legal and regulatory frame work – Procedures for obtaining various Environment clearances – functions of Environment Tribunal – Environment Authority – Environment Audit.

UNIT-IV

Consumer Protection Act - Genesis of the law – Objects of consumer protection – Definition – Rights of consumer protection Act- Nature and Scope of Remedies – Indemnity and Guarantee – Bailment and pledge.

UNIT-V

Insurance Act, 1938 – Insurance Regulatory & Development Act, 1999 – Insurance sector Reforms – IRDA (Investment) Regulations 2000 – IRDA Guidelines for Insurance Brokers Securities and Exchange Board of India SEBI Act, 1992 – SEBI Guidelines.

OUTCOME

- The students are now familiarized with the principles of legal and regulatory framework of corporate business.
- In this **course** an attempt is made to introduce the students to certain important **legal aspects of business**.
- The **course** is divided into four modules dealing with formation of contract, breach of contract and its remedies; competition; formation of companies and its management; and dispute resolution.

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261DSC25B	Elective-II-B-Retail Management	5	0	0	4

AIM:

To familiarize students with the decisions involved in running a retail firm and the concepts and principles for making those decisions.

OBJECTIVES

1. To familiarize students with the decisions involved in running a retail firm and the concepts and principles for making those decisions.
2. To introduce the Scope and significance of Retail industry, Trends and Challenges.
3. To comprehend knowledge on all areas of Retail business operations.

UNIT I:

Introduction to Retailing: Concept of retailing, Functions of retailing, Terms & Definition, Retail formats and types, Retailing Channels, Retail Industry in India, Importance of retailing, changing trends in retailing.

UNIT II:

Understanding the Retail Consumer:

Retail consumer behavior, Factors influencing the Retail consumer, Customer decision making process, Types of decision making, Market research for understanding retail consumer

UNIT III:

Retail Market Segmentation and Strategies: Market Segmentation and its benefits, Kinds of markets, Definition of Retail strategy, Strategy for effective market segmentation, Strategies for penetration of new markets, Growth strategies, Retail value chain.

Employability

UNIT IV:

Retail Location Selection: Importance of Retail locations, Types of retail locations, Factors determining the location decision, Steps involved in choosing retail locations, Measurement of success of location

UNIT V:

Merchandise Management: Meaning of Merchandising, Factors influencing Merchandising, Functions of Merchandising Manager, Merchandise planning, Merchandise buying, Analyzing Merchandise performance

OUTCOMES:

- The role that retailing plays in the distribution component of the marketing mix
- Understanding of the concept of social responsibility and the role it plays in retailing
- Aware of the moral and ethical dilemmas that face the retailing industry in today's business environment
- Development and understanding of implementing a retail strategy.
- Understanding of the increased use of technology in the field of retailing
- Identify key roles within retail businesses

REFERENCE BOOKS:

1. Retail Management, Michael Levy & Barton A Weitz, Tata McGraw Hill
2. Retailing Management, Gibson C Vedamani, Jaico Publishing House, Mumbai
3. Retail Strategies - understanding why we shop, Jim, Jaico Publishing House, Mumbai
4. Retail Management, Dunne Lusch,

SEMESTER-II**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261RMC26	Research Methodology	4	0	0	3

AIM

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES

- I. To understand the approaches towards and consumers in good research.
- II. To identify various statistical tools used in research methodology
- III. To appreciate and compose the manuscript for publication

UNIT-I

INTRODUCTION: Research – Importance and its types – research approaches – process – problem formulation – development of Hypothesis – Research design – Determining the sample design – Collecting data – Analysis of data – Identifying research problem.

UNIT-II

MEASUREMENT AND ITS TECHNIQUES : Measurement in research and its problems – meaning of scaling – Tests of sound measurement – Types of scaling – Techniques of measurements – Attitude scales – Summed rating scale – Equal appearing Interview scale – Cumulative scale – Ratingscale – Scale constructing Techniques – Time series analysis – Projection Techniques.

UNIT-III

DATA COLLECTION AND HYPOTHESIS: Classification of data – Sources of data – Collection of primary and secondary data – Questionnaire method – Guidelines for Questionnaire design – Interview technique – Observation Techniques – Processing of Data – Editing – Coding – Tabulation – Interpretation of data – Formulation of Hypothesis – Test of Hypothesis.

UNIT-IV

STATISTICAL TECHNIQUES: Statistical Techniques – Quantitative and qualitative techniques – Measures of central Tendency – Arithmetic mean, Median and Mode – Standard deviation – Karl Pearson's coefficient of correlation – Regression – Chi Square test – Conditions for applying chi-square test – ANOVA – Spearman's Rank Correlation.

UNIT-V

INTERPRETATION AND REPORT WRITING : Interpretation – Techniques of Interpretation – Significance of Report Writing – Different steps in Writing report – Layout of research report – types – oral presentation – mechanics of writing a research report – precautions for writing research reports – Role of computers in Research.

Employability

OUTCOME

- Demonstrate knowledge of research processes (reading, evaluating, and developing)
- Perform literature reviews using print and online databases
- Identify, explain, compare, and prepare the key elements of a research proposal/report
- Select and define appropriate research problem and parameters
- Prepare a project proposal (to undertake a project)
- Understand some basic concepts of research and its methodologies

REFERENCE BOOKS

1. Business Research Methods – Dr. T.N. Srivastava and Mrs. Shailaja Rego
2. Business Research Methods – Alan Bryman and Emmabell
3. Research Methodology – R. Panneer Selvam
4. Research Methods Indian – Donald H. MCBurney and Theresa

20261SEC31	Project Planning and Control	5	1	0	5

AIM

To understand the issues relating to project management and control.

OBJECTIVES

- I. To know the infrastructure for projects and project financing.
- II. To conduct project appraisal.
- III. To understand the purposes of a project report.
- IV. To highlight the role of the exiting project administrative setup

V. **UNIT-I**
Meaning and Definition of project – project management – an overview – The project Identification – Formulation of projects – project planning – stages of Life cycle of a project – system approach of a project.

UNIT-II
Pre feasibility and post conception studies – project feasibility studies and considerations – Detailed project Report as submitted to the financial Institutions.

UNIT-III
Project appraisal – various methods of appraising a project, Financial appraisal – Technical appraisal – socioeconomic appraisal – Managerial appraisal.

UNIT-IV
Project financing – sources and patterns of finance – public sector financing – Role of Tax planning in project.

UNIT-V
Project cost estimation and control – Role of the cost accountant in project management – Role and Leadership of the project managers – Structure and Team Building of project organization – Best practices.

skill development

OUTCOME

- Understand the How Subcontract Administration and Control is practiced in the Industry.
- Understand the contract management, Project Procurement, Service level Agreements and productivity
- Apply the risk management plan and analyse the role of stakeholders.

- Analyse the learning and understand techniques for Project planning, scheduling and Execution Control.
- Understand the conceptual clarity about project organization
- Understand project characteristics and various stages of a project

REFERENCE BOOKS

1. Dr. P.C. K. Rao – project management and control. – Sultan Chand & Sons
2. B.M. Patel – project management – Vikas
3. Rajdeep Roy – Entrepreneurship

COURSECODE	COURSETITLE	L	T	P	C
20261SEC32	AdvancedCorporateAccounting	5	2	0	5

AIM

To gain comprehensive understanding of all aspects relating to Advanced corporate accounting.

OBJECTIVES

- I. To know the importance of Human Resources accounting, inflation accounting and Government accounting in corporate businesses.
- II. To learn the holding, banking and Insurance companies accounting in new formats.
- III. To practice public utilities accounting.

UNIT-I

Self study unit: Human Resource Accounting – Inflation Accounting – Government Accounting.

UNIT-II

Holding companies accounting – consolidated Balance sheet of holding companies

UNIT-III

Bank Accounts (New Format) – profit and Loss account – Balance sheet as per the Guidelines of RBI – classification of advances - Provision for advances.

Employability**UNIT-IV**

Insurance companies Accounts – New Format - Life Insurance Revenue accounts with schedule surplus and valuation balance sheet – Fire and Marine Revenue accounts with schedules.

UNIT-V

Double Account system (or) Accounts of Electricity companies and public utilities.

OUTCOME

- Critically analyse both holder and newer MA methods and their effects in organisations
- Knowledge and understanding about MA issues, including its problems and difficulties
- Part in the design and use of the management accounting system in organisations

- Updated concerning the more recent development in MA and the emergence of new methods
- More advanced level compared to the basic knowledge acquired on the Bachelor level
- Exposure to the company final accounts

REFERENCE BOOKS

1. T.S.Reddy & Dr. A.Murthy. Corporate Accounting
2. S.P.Jain & K.L.Narang–Advanced Accounting.
3. R.Ramachandran and R.Srinivasan–Corporate Accounting.
4. M.C.Shukla and T.S.Grewal–Advanced Accounts.
5. S.P.Iyengar–Advanced Accountancy Vol.–II.

SEMESTER-III

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261SEC33	BrandManagement	5	2	0	5

AIM:

The aim of branding a product or service is the same everywhere in the world. ...

OBJECTIVE:

- I. Create identification and brand awareness.
- II. Guarantee a certain level of quality, quantity, and satisfaction of a product or service.
- III. Help in the promotion of the product.

UNIT I

Brand- concept – Evolution, perspectives, anatomy, types of brand names, brand name associations, Brands Vs Products, Advantages of Brands to consumers & firms. Brand elements:

Components & choosing brand elements, Branding challenges & opportunities.

UNIT II

Brand positioning – Basic concepts – alternatives – risks – Brands & consumers – Strategies for positioning the brand for competitive advantage – Point of parity – Point of difference –

Buying decision perspectives on consumer behaviour, Building a strong brand – Method & implications.

UNIT III

Brand Image, image dimensions, brand associations & image, Brand identity – perspectives, levels, and prisms. Managing Brand image – stages – functional, symbolic & experiential brands. Brand Equity – Sources of Equity. Brand Equity models, Brand audits. Brand Loyalty & cult brands.

UNIT IV

Leveraging Brands – Brand extensions, extendibility, merits & demerits, Line extensions, linetrap – Co-branding & Licensing Brands. Reinforcing and Revitalisation of Brands – need, methods, Brand Architecture – product, line, range, umbrella & source endorsed brands. Brand Portfolio Management.

UNIT V

Brand valuation – Methods of valuation, implications for buying & selling brands. Applications – Branding industrial products, services and Retailers – Building Brands online. Indianisation of Foreign brands & taking Indian brands global – Issues & Challenges.

Employability

OUTCOMES:

- I. Understand key principles of **branding**.
- II. Explain **branding** concepts and ideas in their own words.
- III. Understand and conduct the measurement of **brand equity** and **brand performance**.
- IV. Practically develop a **brand**, including positioning and communication.

SEMESTER-III**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261DSC34A	Elective-III–A-IndianFinancialSystem	5	0	0	4

AIM

To familiarize with the overall functioning of Indian Financial system.

OBJECTIVES

- I. To gain knowledge on financial and capital market
- II. To understand the importance of primary and secondary markets of shares and securities
- III. To know the functioning of various financial institutions in India

UNIT-I

Indian Financial System – Financial Markets participants and instruments – Money market – Commercial banks – Call money markets – Treasury Bill Market – commercial Bills market and Bill Rediscounting scheme (BRs) – Certificate of Deposits (CDs) and Commercial papers (Cps)

UNIT-II

New issues markets – Function and issue mechanism – New issue markets – Operations – Reforms and investor Protection

UNIT-III

Stock Exchange – Operations – Reforms in secondary market and investor protection – over the counter exchange of India – Depositories

UNIT-IV

Export Import Bank of India – Unit Trust of India – Mutual funds in India – Insurance companies – venture capital funds in India – Seed Capital

UNIT-V

National Housing Bank – National Bank for Agriculture and Rural development – Non – Banking companies – Factoring companies – Securitization and Assets Reconstruction companies.

skill development

OUTCOME

- Knowledge, understanding and skills in the area of international financial relations and tools for its implementation
- Knowledge and understanding of characteristics, activities, principles and specifics of international financial relations

- Ability to summarize and critically evaluate results obtained by researchers in the field of international financial relations
- Ability to analyze and use various sources of information and data in the field and make assessment
- Use methods in the field of international finance in practice
- Economic essence and currency classifications: the concept of currency and its basic classification; characteristics of currencies.

REFERENCE BOOKS

1. P.N. Varshney & D.K. Mittal – Sultan Chand & Sons, Indian Financial System
2. H.R. Machiraju – Indian Financial System
3. Gordon, Natrajan – Financial Market & Services
4. Dr. S. Gurusamy – Financial Services & Market
5. B. Santhanam – Financial Services.

**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261DSC34B	Elective -III-B-InternationalMarketing	5	0	0	4

AIM

It deals With Why, When, What, Where, and How of global Marketing?

OBJECTIVES

- I. To know all data developments and policies for International marketing.
- II. To study the role of global marketing mix.
- III. To identify global marketing issues.

UNIT-I

Framework of International Marketing – Basis of International Trade – Recent Trends in world Trade – Foreign Trade and economic growth – Trends in India's foreign Trade – Institutions Infrastructure for Export promotion in India – Indian Trade policy – Export Assistance.

UNIT-II

Identifying Foreign Markets – Product planning for export – Pricing for exports market entry and overseas distribution system – distribution Logistics for exports promoting products internationally – Overseas market Research – Marketing plan for export.

UNIT-III

New Techniques in International marketing Terms of payments and export finance – Management of risks in International marketing – Global marketing of services – Multinational and their role in International marketing state Trading in India.

UNIT-IV

Legal Dimensions of International Marketing – Export Documents and procedure – Outward FDI flow India and Indian multinationals.

UNIT-V

Issues relating to Globalization – Major Drivers – Status and implications of Globalization – Globalization and Indian economy – Global financial Institutions and Indian economy.

Employability**OUTCOME**

- Have developed an understanding of major issues related to **international marketing**
- Have developed skills in researching and analyzing trends in **global** markets and in modern **marketing** practice

- Be able to assess an organization's ability to enter and compete in **international** markets.
- The course helped the students to learn the importance of International Marketing and the role of exporting assisting Institutions.
- An overview of social, political, legal, technological, economic, behavioral, ethical, and **international** aspects of **marketing**

REFERENCE BOOKS

1. Dr.R.L. Varshney and B. Bhattacharya – International Marketing Management.
2. P. Subbo Rao – International Business.
3. Rathor B.S. and Rathor J.S. – Export Marketing.
4. Balagopal T.A.S. – Export Marketing.
5. Francis Cherunilam – International Trade and Export Management
6. Dr.D.C.Kappor – Export Management

**PRIST UNIVERSITY,
THANJAVURM.COM**

CourseCode	CourseTitle	L	T	P	C
20211OEC	OpenElective-WritingfortheMedia	4	0	0	2

Aim:

- To equip students to enter into the realm of mass media.

Objective:

- To comprehend the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

Outcome:

- Understand the intricacies of mass media
- Learn to write for the media

UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news- Scoop- Filters- Human interest stories- Recognizing and evaluation news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters- Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media- Inverted pyramid style- Feature style- TV/Broadcast, New style writing
TV/Radio Documentaries- Writing Advertisements- Practical

CourseCode		L	T	P	C
20213OEC	BIOMEDICALINSTRUMENTATION	4	0	0	2

Aim:

- To understand the concepts and application of electronic instrumentation in the medical field.

Objective:

- Understanding basic principles and phenomena in the area of medical diagnostic instrumentation,
- Theoretical and practical preparation enabling students to maintain medical instrumentation

UNIT-I: BIOELECTRIC SIGNALS AND ELECTRODES

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

UNIT-II: RECORDING SYSTEM AND RECORDERS

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

UNIT-III: MEASUREMENT AND ANALYSIS TECHNIQUES

Electro cardiography – measurements of Blood pressure- measurements of Bloodflow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials–Placement of electrodes–Recording setup –Analysis of EEG.

UNIT-IV:MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS

Principles of NMR Imaging system–Image reconstruction Techniques–Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultrasound– Physics of ultrasonic waves–medical ultrasound–basic pulse–echo apparatus, A –Scan – echocardiograph (M mode).

UNIT-V:ADVANCED BIOMEDICAL SYSTEMS

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers– Pacing system Analyzer – Defibrillator– Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy–microwave and ultrasonic therapy–pain relief through electrical simulation.

OUTCOMES:

- Define basic medical terms and physical values that can be handled by medical instrumentation,
- Describe methods and implementation of electrical and nonelectrical medical parameters diagnostic,
- demonstrate measuring of basic medical parameters,
- Calculate basic parameters of the equipment for using in electrodiagnostic and electrotherapy,
- Apply safety standards and select disposal method and procedures for electrical diagnostic equipment.

Books for Study

1. R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi, (2003). (Unit I, II, IV & V)
2. Leslie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Biomedical instrumentation and measurements, PHI, New Delhi. (Unit-III)

Book for Reference

1. M. Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000)

PRIST UNIVERSITY,
THANJAVURM.COM

CourseCode	CourseTitle	L	T	P	C
20214OEC	OpenElective- GREENCHEMISTRY	4	0	0	2

Objectives:

To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Unit I -Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness-Dilution is the solution to pollution-Pollution prevention.

Unit II -Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting so much attention - Why should chemists pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III-BioCatalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Biotransformations-Production of Bulk and fine chemicals by microbial fermentation-Antibiotics – Vitamins - Biocatalysis-synthesis of industrial chemicals by bacterial constructs-Future Trends.

Unit IV -GreenHouse Effect

Greenhouse effect and Global Warming – Introduction-How the greenhouse effect is produced - Major sources of greenhouse gases-Emission of CO₂-Impact of greenhouse effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

Outcomes:

- To understand the environmental status and evolution.
- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

References:

1. Introduction to Green Chemistry - M. Rayan and M. Tinnesand
2. New Trends in Green Chemistry - V.K. Ahluw

SEMESTER-III**PRIST UNIVERSITY,
THANJAVURM.COM**

CourseCode	CourseTitle	L	T	P	C
20217OEC	OpenElective–HerbalMedicine	4	0	0	2

Aim:

- Be able to advise and educate effectively to create a comprehensive wellness plan incorporating herbal, dietary and lifestyle recommendations integrating self-awareness and lessons of nature

Objective

- Possess knowledge of traditional herbal systems as well as an understanding of the principles and practice of modern Western herbalism
- Demonstrate the ability to critically analyze herbal research and contribute to the current body of herbal literature
- Know how to integrate knowledge of raw materials, formulation, and herbal pharmacy for product development purposes
- Know how to effectively educate individuals and groups about herbs
- Be able to demonstrate basic skills in herb identification, harvesting, and preparation
- Be able to address potential safety concerns including herb-drug interactions

Outcomes

- Accurately gather information regarding past and current health status while differentiating between phenomena and the client's interpretation of phenomena
- Synthesize the above information to create a comprehensive assessment of health inputs and processes
- Work with clients to develop individualized goals and a plan for health and wellness

Unit I

Tribal medicine – methods of disease diagnosis and treatment – Plants in folk religion – *Aegle marmelos*, *Ficus benghalensis*, *Curcuma domestica*, *Cyanodactylon* and *Sesamum indicum*.

Unit II

Traditional knowledge and utility of some medicinal plants in Tamilnadu – Solanum trilobatum, Cardiospermum halicacabum, Vitex negundo, Adathoda vasica, Azadirachta indica, Gloriosasuperba, Ecliptaalba, Aristolochia indica and Phyllanthus fraternus.

Unit III

Plants in day today life – Ocimum sanctum, Centella asiatica, Cassia auriculata, Aloe vera. Nutritive and medicinal value of some fruits (Guava, Sapota, Orange, Mango, Banana, Lemon, Pomegranate) and vegetables – Greens (Moringa, Solanum nigrum, Cabbage).

Unit IV

Allergens – types – sources – active principles – Chemical nature – Cell modifiers – Lectins – mutagens, teratogens – Allergic reactions with known examples.

Unit V

Cardiovascular diseases – blood pressure – cardiac drugs of plant origins – alkaloids, anticoagulants – basic mechanism of action. Pulmonary/respiratory disorders – asthma – bronchitis – common cold – allergy – from plants.

SEMESTER-III

**PRIST UNIVERSITY,
THANJAVURM.COM**

CourseCode	CourseTitle	L	T	P	C
20222OEC	OpenElective–M-Marketing	4	0	0	2

OBJECTIVES

- Understand Mobile Business strategies.
- To understand Mobile marketing tools and techniques.
- To know Mobile technologies.

UNIT I Introduction

Mobile Marketing Campaign, Fortune 500 and Mobile Marketing, consumers engagement with mobile, Terminologies.

UNIT II Businesses Vs mobile marketing

classic mistakes in mobile marketing, laying foundation for successful mobile marketing campaign, understanding technology behind mobile marketing – Android, iOS, Windows Phone.

UNIT III

Strategic thinking about Mobile marketing campaign, Mobile Marketing Tools – setting up mobile website for different firms, using SMS, MMS and apps to drive customers to business and other ways to attract customers.

UNIT IV Location Based Marketing

LBS, NFC, Bluetooth and LBA, 2D codes, Tablet, Other Mobile Applications, Business Firms connecting to customers using Mobile – case study, Mobile Marketing for B2B companies, Mobile E-commerce to Drive Revenue.

UNIT V Mobile Payments

Present and Future Mobile Technology, Mobile Application Development.

OUTCOMES

- Upon Completion of the course, the students should be able to:
- Analyze various mobile marketing strategies.
- Market Mobile based Applications.
- Apply various tools in mobile marketing.

REFERENCE BOOKS:

1. Go Mobile: Location Based Marketing, Apps, Mobile Optimized Ad Campaigns, 2D codes and other Mobile Strategies to Grow your Business, Jeanne Hopkins, Jamie Turner, John Wiley & Sons Inc., 2012.
2. M-Commerce, Paul Skeldon, Crimson Publishing, 2012.
3. M-Commerce Technologies, Services and Business Models, Norman Sadeh, Wiley 2002.
4. Mobile Commerce, Opportunities, Applications and Technologies of Wireless Business, Paul Mary, Tom Jell, Cambridge U

SEMESTER-IV**PRIST UNIVERSITY,
THANJAVURM.COM**

COURSECODE	COURSETITLE	L	T	P	C
20261SEC41	IncomeTaxLawandTaxPlanning	5	1	0	5

AIM

To gain knowledge of the basic principles underlying the substantive provisions of the Income Tax Law and their applications.

OBJECTIVES

- I. To compute Income of an Individual under various Heads of Income.
- II. To learn the provisions relating to Tax exemptions and Tax deductions.
- III. To gain knowledge on Tax Planning.

UNIT-I

Direct and Indirect Taxes in India –Charge of Income Tax –Computation of total income and tax Liability – Income as per Sec 2 (24) –Assessment year – Previous year – Residential Status and Incidence of Tax –Basis of charge- Exemptions Income under Sec 10, 11, 12, 13 and 13A.

UNIT-II

Income under the Head Salaries –Definition of the Head ‘Salaries’ – Features of salary- Receipts included under Salaries –Different forms of Salaries –Computation of Taxable salaries – Allowances –Different types- Perquisites – Different types – Valuation of perks Different types of Provident Funds –Tax Planning –Deductions under Sec 80C.

UNIT-III

Income under the Head House Property – charge on Annual Value –Exempted Incomes of House Property- Computation of Income from House Property – Let out House- Annual Value-Gross Annual Value- Gross Annual Value of self occupied house property- Deductions allowed– Tax Planning – Interest on Housing Loan maximum limit.

skill development

UNIT-IV

Incomes under the Head Profits and Gains of Business or Profession –Meaning of Business and Profession –Business Income and Professional Income- Computation of Profits and Gains of business or Professions–Admissible and Inadmissible deductions –Exemptions for Tax Planning.

UNIT-V

Income under Capital Gains – Capital Assets- Exempted Assets-Transfer of Assets- Short term and Long term Capital Gains-Application of Cost Inflation Index–Exempted Capital Gains-Taxable

**Capital Gains-Tax Planning in Capital Gaining–Income from Other Sources–
Taxable Income from Other Sources-General Income and Specific Income-causal Income–Deductions–
Tax Planning.**

OUTCOME

- File ITR return on individual basis
- Compute the total Income and define tax complications and structure.
- In order to familiarize the different know-how and heads of income with its components
- It helps to build an idea about income from house property as a concept
- Make the students familiarize with the concept of depreciation and its provisions
- It gives more idea about the income from business or profession

REFERENCE BOOKS

COURSECODE	COURSETITLE	L	T	P	C
20261SEC43	Co-operationinIndiaandAbroad	6	0	0	5

AIM

To understand the basic principles of co-operation and their applications in India and Abroad.

OBJECTIVES

- I. To study the functioning of various co-operative organizations in India.
- II. To gain knowledge about co-operative movement in foreign countries.

UNIT-I

Meaning and Definitions of Co-operation – reformulated principles of ICA- Co-operative as a Via – Media between capitalism and Communism – Evolution of Co-operative thought – Co-operative thought of Raiffeisen, Robert Owen- Rochdale Pioneers.

UNIT-II

Evolution of Co-operative movement in India – Pre-independence – Post independence – Co-operation during five year plans. Co-operative Agricultural Credit – Short term credit structure – Primary Agricultural Co-operative banks – Central Co-operative Banks – State Co-operative Bank.

UNIT-III

Long – term credit structure – Working of Primary and State Co-operative Agricultural and Rural Development Bank – NABARD and NCDC- Non-Agricultural credit – Urban Banks – Employees credit societies – Housing Co-operatives.

UNIT-IV

Objects – working and problems of marketing co-operatives- Consumer Co-operatives, Industrial Co-operatives- Co-operative farming and milk- Co-operatives – State aid and Co-operative education and training – State Co-operative Union and National Co-operative Union..

UNIT-V

Co-operative Movement in Foreign Countries: England, Germany, Denmark and Japan, Impact of Globalization on Co-operatives.

skill development

OUTCOME

- Know about the company law in the Abroad.
- Understand the use of the memorandum of association and article of association in a company, they also learn from this course
- Develop Professionals in the field of Co-operation, Co-operative law and Management.
- Promote qualified, Skilled and professional manpower to manage the affairs of the Cooperative Institutions.
- Enhance the Knowledge base of the in-service Personnel on the subject Co-operation, Co-operative law and Co-operative Management.
- Enable the in-service personnel to develop skills on Co-operative Management Techniques

REFERENCE BOOKS

THANJAVURM.COM**

COURSECODE	COURSE TITLE	L	T	P	C
20261DSC44A	Elective-IV–A-CustomerRelationshipManagement	5	0	0	4

AIM:

The **aims** of our **Customer Relationship Management training course** are to teach you how

OBJECTIVES:

- I. To facilitate the student to understand the process of CRM, implementation of CRM strategies and customization of services.
- II. To understand your role in achieving good **customer relationship management** with a **customer** and/or stakeholders....
- III. To understand the skills to communicate with and influence **customers** & stakeholders.

UNIT I

Introduction and Significance-CRM Emerging Concepts; Need for CRM; CRM Applications; CRM Decisions; The Myth of Customer Satisfaction; CRM Model; Understanding Principles of Customer

Relationship; Relationship Building Strategies; Building Customer Relationship Management by Customer Retention; Stages of Retention; Sequences in Retention Process; Understanding Strategies to Prevent Defection and Recover Customers.

UNIT II

CRM Process: Introduction and Objectives - an Insight into CRM and e-CRM/ online CRM; The CRM cycle - Assessment Phase; Planning Phase; The Executive Phase; Modules in CRM, 4C's of CRM Process;

CRM Process for Marketing Organization; CRM Affiliation in Retailing Sector; Key CRM features.

UNIT III

CRM Architecture: IT Tools in CRM; Data Warehousing - Integrating Data from different phases with Data Warehousing Technology; Data Mining: - Learning from Information Using Data Mining Technology

like OLAP etc.; Understanding of Data Mining Process; Use of Modelling Tools; Benefits of CRM Architecture in Sales & Productivity; Relationship Marketing and Customer Care, CRM Over Internet.

Employability

UNIT IV

CRM Implementation: Choosing the right CRM Solution; Framework for Implementing CRM: a Step-by-Step Process; Five Phases of CRM Projects

UNIT V

Development of Customizations; Beta Test and Data Import; Train and Retain; Roll out and System Hand-off; Support, System Optimization and Follow-up; Client/Server CRM Model; Use of CRM in Call Centers using Computer Telephony Integration (CTI); CTI Functionality; Integration of CRM with ERP System. Case Studies

OUTCOMES:

- Critically review and interpret the theoretical aspects of CRM across the main areas of sales, services and marketing;
- Exhibit creative and technical practical professional skills and justify the strategy adopted with reference to specified briefs.
- To round out our discussion of marketing information and research, we need to add one more important tool to the mix: customer relationship management (CRM) systems.
- These increasingly prevalent systems are the center piece in how many organizations make sense of and manage marketing data about current and prospective customers.
- A basic understanding of CRM systems can help you recognize their potential for helping organizations use marketing information more effectively.

COURSECODE	COURSE TITLE	L	T	P	C
20261DSC44B	IV-B-InternationalFinancialManagement	5	0	0	4

AIM:

To learn the finance function in the international context.

OBJECTIVES:

- I. To understand the international monetary system
- II. To study foreign exchange management in India.
- III. To know the working capital management in a multinational context.

UNIT-I

The finance function in the international context – The Balance of Payments – International monetary system – Functions of financial management – Challenges of international financial management.

UNIT-II

The foreign exchange market structure and the participants – Types of transactions – Meaning of Currency – Dealing – Exchange rate – Forward rates – Exchange rate computation.

UNIT-III

Working Capital Management in a multinational Context – Short term Borrowing and Investment – Centralized Vs Decentralized cash management – Cash transactions – Equity Financing in the international markets – Accounts receivable and Inventory management.

UNIT-IV

Long term borrowing in international capital markets – The major market segment – International leasing – Foreign direct investments by multinationals – Capital Budgeting.

UNIT-V

International project appraisal – Review of NPV approach – Adjusted present value – Framework – Project appraisal in the international context – Exchange rate risk and cost of Capital – Joint ventures. Employability

OUTCOME:

- Understand international capital and foreign exchange market.

- Identify and appraise investment opportunities in the international environment.
- Identify risk relating to exchange rate fluctuations and develop strategies to deal with them
- Identify and evaluate foreign direct investment and international acquisition opportunities
- Develop strategies to deal with other types of country risks associated with foreign operations
- Express well considered opinion on issues relating to international financial management.

RESEARCH INTEGRATED CURRICULUM

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student; both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching-research relations, the following framework has been developed and widely adopted to help individual staff; course teams and whole institutions analyze their curricula and consider ways of strengthening in students understanding of and through research. Curriculum can be:

Research–Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research–Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research-Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research-Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified

as, Level 1: Prescribed Research

Level 2: Bounded

Research Level 3: Scaffolded

Research Level 4: Self-actuated Research

Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Com curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project(Scaffold Research)	4
IV	Project Work	12

Blueprint for assessment of student's performance in Research Led Seminar Course

Internal Assessment:	40 Marks
• Seminar Report (UG)/Concept Note (PG) : 5X4=20 Marks	
• Seminar Review Presentation : 10 Marks	
• Literature Survey : 10 Marks	
Semester Examination:	60 Marks
(Essay type Questions set by the concerned resource persons)	

Blueprint for assessment of student's performance in Socio Technical Project

Continuous Internal Assessment through Reviews:	40 Marks
• Review I : 10 Marks	
• Review II : 10 Marks	
• Review III : 20 Marks	
Evaluation of Socio Technical Practicum Final Report:	40 Marks
Viva-Voce Examination:	20 Marks
Total:	100 Marks

Blueprint for assessment of student's performance in Research Methodology

Courses Continuous Internal Assessment:	20 Marks
• Research Tools (Lab) :	10 Marks
• Tutorial:	10 Marks
Model Paper Writing:	40 Marks
• Abstract:	5 Marks
• Introduction:	10 Marks
• Discussion:	10 Marks
• Review of Literature:	5 Marks

• டிரிட் நிசர்நிலைப் பல்கலைக்கழகம்- வல்லம் தஞ்சாவூர்

தமிழ்
முதல் பருவம்
முதலாம் ஆண்டு -(BBA , BA, B.COM, CS ,Bsc)
இக்கால இலக்கியம் - செய்யுள் , சிறுகதை , நாடகம் , இலக்கிய வரலாறு
அலகு : 1.செய்யுள் :

1. தாயுமானவ கவாடிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள்
2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள் - தமிழ் இனிமை , தமிழ் உணர்வு

அலகு : 2. செய்யுள்:

6. நாமக்கல் கவிஞர் - தமிழ் தேன், தமிழ் வளர்ச்சி சபதம் செய்வோம் , 40 அடிகள்
7. ந.பிச்சமூர்த்தி - வழித்துணை - கவிதை கருடன் , 42 அடிகள்
- 8.கரதா - தேன்மழை, கல்பை , 22 அடிகள்
9. கண்ணதாசன் - இலக்கியம் , ஒரு பாணியின் கதை , 54 அடிகள்
10. அப்துல் ரகுமான் - சொந்த சிறகுகள், சும்பையை கிளறும் சிறகுகள், 80 அடிகள்

அலகு : 3. சிறுகதை :

11. க.சமுத்திரம் - வேரில் பழுத்த பவா

அலகு : 4. நாடகம் :

12. கு. வெ. பாலகம்பிரமணியன் , கௌதம புத்தர் (உரைநடை நாடகம்)

அலகு : 5. இலக்கிய வரலாறு

13. சிறுகதை , புதினம், நாடகம் உரைநடை , கவிதை , புதுக்கவிதை

CourseCode	CourseTitle	L	T	P	C
20111AEC11	ADVANCED ENGLISH-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proofread
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Read and comprehend literature

UNIT-I

Glossary of grammar terms
Figures of speech

UNIT-II

Foreign words and phrases
British and American Vocabulary

UNIT-III

Speeches of famous people:
Mahatma Gandhi - Abraham Lincoln - Swami Vivekananda - John F. Kennedy

UNIT-IV

Editing
Proofreading

UNIT-V

Comparison and contrast
Cause and effect

CourseCode	CourseTitle	L	T	P	C
20160SEC14	MANAGERIALECONOMICS	5	0	0	5

MANAGERIALECONOMICS

AIM: Economics is inevitable to business and hence to teach basic of economics to students of Business Administration

COURSE OBJECTIVES

1. To educate the students to understand the fundamentals of economics
2. To understand the application of economics in business decisions
3. To familiarize the students with the economic tools for business analysis.

COURSE OUTCOMES

1. Apply the knowledge of the mechanics of supply and demand to explain working of markets
2. Describe how changes in demand and supply affect markets
3. Understand the choices made by a rational consumer
4. Explain relationships between production and costs
5. Define key characteristics and consequences of different forms of markets

PREREQUISITE: A minimum level of knowledge to understand and application of Economics

SYLLABUS

UNIT I Introduction – Natural & Scope of Managerial Economics – Significance of Managerial Economics.

UNIT II Demand Analysis – Basic Concepts and Tools for Analysis of Demand – Demand forecasting.

UNIT III Cost Concepts and Cost Analysis – Production Function – Cost Price – Output Relations.

UNIT IV Price and Output Decisions under different Market Structures Perfect Competition – Monopoly – Monopolistic Competition – Oligopoly – Pricing Policy – Pricing Methods and Approaches – Product Line Pricing – Price Forecasting.

UNIT V National Income – definition, measurement – Factors – difficulties in measurement. GDP – NDP – Business cycle – phases – Inflation – types and control measures. Managerial Economics in the Context of Globalization.

Employability

CourseCode	CourseTitle	L	T	P	C
20160AEC15	BUSINESSCOMMUNICATION	4	0	0	4

COURSE OBJECTIVES

To provide an overview of Prerequisites to Business Communication. To put in use the basic mechanics of Grammar. To provide an outline to effective Organizational Communication. To underline the nuances of Business communication. To impart the correct practices of the strategies of Effective Business writing.

COURSE OUTCOMES

- To be familiar with the complete course outline/Course Objectives/Learning Outcomes/ Evaluation Pattern & Assignments
- To participate in an online learning environment successfully by developing the implication-based understanding of Paraphrasing, deciphering instructions, interpreting guidelines, discussion boards & Referencing Styles.
- To demonstrate his/her ability to write error free while making an optimum use of correct Business Vocabulary & Grammar.
- To distinguish among various levels of organizational communication and communication barriers while developing an understanding of Communication as a process in an organization.
- To draft effective business correspondence with brevity and clarity.

PREREQUISITE: Prerequisites to Business Communication- Introduction to Blended Learning & Blackboard. Nuances of Academic writing will be discussed which is a prerequisite to Blended Learning.

UNIT I

Introduction–Definition, Characteristics and need for communication–

Importance of effective communication–Process, Principles of Communication- Barriers of communication.

UNIT II

Means of communication – Oral and Written Communication – Flow of Communication – Types of Communication–Non Verbal Communication.

UNIT III

Introduction to Business Correspondence – Structure Layout – Letters of Enquiries, Offers, Quotations and Tenders–Orders, its execution and Cancellation Letters–Sales Letters.

UNIT IV

Bank Correspondence – Letter between banker and customer, Letter between Head office and Branch Office, Letter between Customer and banker. Insurance Correspondence – Fire, Marine, General and Life Insurance. Export and Import Correspondence.

UNIT V

Reports- Structure and Layout – Business Report Writing – Reports by Individuals, Committees, PressReports, Market Reports – Proposal Writing. Technology – Aided Business Communication – Internet, E-Mail, Web-based Communication, IT Trends in Communication.

Employability

CourseCode	CourseTitle	L	T	P	C
20160AEC16	BUSINESSMATHEMATICSANDSTATISTICS	2	2	0	4

Aim: To learn the concepts, applications and methods of mathematics and statistics useful for Business operations.

COURSE OUTCOMES

- Describe and discuss the key terminology, concepts tools and techniques used in business statistical analysis
- Critically evaluate the underlying assumptions of analysis tools
- Understand and critically discuss the issues surrounding sampling and significance
- Discuss critically the uses and limitations of statistical analysis
- Solve a range of problems using the techniques covered

Prerequisite: The learners should have Elementary knowledge in mathematic and statistics.

UNIT-IFUNDAMENTALSOFBUSINESSMATHEMATICS

Arithmetic - Ratios and Proportions - Simple and Compound interest including application of Annuity- Set theory and simple application of Venn diagram- Mathematical reasoning – basic application

UNIT-IIINTRODUCTIONTOSTATISTICS

Meaning and scope of statistics, uses of statistics in business, statistical data – primary and secondary – classification of data – frequency distribution – Diagrammatic presentation.

UNIT-III MEASURES OF CENTRAL TENDENCY AND DISPERSION

Mean, Median, Mode, Mean Deviation - Quartiles and Quartile Deviation - Standard Deviation - Co-efficient of Variation, Coefficient of Quartile Deviation

UNIT-IV CORRELATION AND REGRESSION

Scatter diagram - Karl Pearson's Coefficient of Correlation - Rank Correlation - Regression lines, Regression equations, Regression coefficients

UNIT- V INDEX NUMBERS & TIME SERIES ANALYSIS

Index Numbers - Uses of Index Numbers - Methods of construction of Index Numbers - Problems involved in construction of Index Numbers - **Time Series Analysis** – Components of Time series – Methods of computing time series - Moving Average Method - Method of Least Squares.

Skill Development and Employability

CourseCode	CourseTitle	L	T	P	C
20160SEC23	FINANCIALACCOUNTING	2	3	0	5

AIM: The Basic purpose of this course is to develop an insight of postulates, principles and techniques of accounting, and utilization of financial accounting information for planning, decision-making and control.

COURSE OUTCOMES ·

- Understand the process of recording and classifying the business transactions and events ·
- Understand the financial statements, viz., Profit and Loss Account, Balance Sheet, and cash flow statement of a sole proprietor. ·
- Understand the role of IFRS/Ind-AS in accounting discipline. ·
- Understand and Analyse the financial statements from different the perspective of different stakeholders using ratio analysis. ·
- Understanding of financial distress or bankruptcy prediction and how to analyse management quality means the concept of beyond balance sheet.

PreRequisite: The Learners should have introductory knowledge about accounting.

UNIT-I

Introduction to Financial Accounting – Definition, Meaning, Nature, Objectives and Uses of Accounting – Accounting Concepts, Principles and Conventions – Books of Accounts –

Branches of Accounting – Differences between various branches of accounting.

Skill Development

UNIT-II

Book Keeping – Single Entry System of Book Keeping – Double Entry System of Book Keeping – Recording of Transactions – Journal – Subsidiary books – Ledger – Trail Balance.

UNIT-III

Final Accounts – Manufacturing account – Trading account – Profit and Loss account and Balance Sheet

UNIT-IV

Depreciation Accounting: Introduction, Meaning of Depreciation, Causes for Depreciation, Need for Depreciation, Computation of the Amount of Depreciation, Depreciation on Additions to Fixed Assets, Methods of Depreciation, Calculation of Depreciation under various methods.

UNIT-V

Consignment - Meaning, features of consignment transaction, distinction between consignment and sale, Joint venture - Meaning, features, difference between joint venture and partnership, joint venture and consignment.

Text Book:

- Advance accounting – S.P. Jain and K. L. Narang – Kalayani Publisher.
- Principles of Accounting – Finney H.A. Miller H.E. Prentice Hall
- Principles of Financial Accounting – S.N. Maheshwari

CourseCode	CourseTitle	L	T	P	C
20160SEC24	ORGANIZATIONALBEHAVIOUR	5	0	0	5

AIM:To provide basic knowledge on various models of organizational behavior, To expose them to the concepts of motivation and group dynamics, To help them acquire interpersonal skills.

OBJECTIVES

To help the students to develop cognizance of the importance of human behaviour. To enable students to describe how people behave under different conditions and understand why people behave as they do. To provide the students to analyse specific strategic human resources demands for future action. To enable students to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results.

COURSE OUTCOMES

- Demonstrate the applicability of the concept of organizational behavior to understand the behavior of people in the organization.
- Demonstrate the applicability of analyzing the complexities associated with management of individual behavior in the organization.
- Analyze the complexities associated with management of the group behavior in the organization.
- Demonstrate how the organizational behavior can integrate in understanding the motivation (why) behind behavior of people in the organization.

PreRequisite:The Learners should have basic interpersonal skill and Human behaviour

UNIT-I

Organizational Behaviour – Concept – Nature – Models – Others similar fields of study – Disciplines contributing to Organizational Behaviour – Individual Behaviour – Perception.

UNIT-II

Personality–Definition–Determinants–GroupDynamics–
FormalandInformalGroups,GroupNorms,GroupCohesiveness,GroupBehaviourandGroupDecision– making.
Employability

UNIT-III

20160AEC26	MANAGEMENT INFORMATION SYSTEM	4	0	0	4

MANAGEMENT INFORMATION SYSTEM

AIM: The objective of this course is to help the student acquire the basic knowledge of information system so as to enable them to make more efficient use of information for decision making.

PreRequisite: The Learners should have elementary knowledge about information systems

COURSE OBJECTIVES

To describe the role of information technology and decision support systems in business and record the current issues with those of the firm to solve business problems. To introduce the fundamental principles of computer-based information systems analysis and design and develop an understanding of the principles and techniques used. To enable students understand the various knowledge representation methods and different expert system structures as strategic weapons to counter the threats to business and make business more competitive.

COURSE OUTCOMES

1. Relate the basic concepts and technologies used in the field of management information systems;
2. Compare the processes of developing and implementing information systems.
3. Outline the role of the ethical, social, and security issues of information systems.
4. Translate the role of information systems in organizations, the strategic management processes, with the implications for the management.
5. Apply the understanding of how various information systems like DBMS work together to accomplish the information objectives of an organization.

UNIT-I

Management information system-An overview-concept-evolution and element of MIS-definition-characteristics and basic requirement of MIS- structure- computerized MIS- pre-requisites of an effective MIS.

UNIT-II

System analysis and design-An overview- System study- System design-development and implementation.

UNIT-III

Computers and its effect on MIS- Limitations- MIS and DSS- MIS and information resource management- executive information artificial intelligence and expert system- MIS in Indian organizations-recent developments in information technology.

UNIT-IV

Computers and communication- An overview- the information technology- concept of global village-communication channels-communication networks- local area networks-wide area networks-video conferencing.

UNIT-V

Client/server computing communication servers-digital networks-ERP systems-inter-

organizational information systems- value added networks- networking E-commerce and internet- application of internet and website management.

AIM:To help students understand the nature and scope of management accounting. Gain knowledge in

OBJECTIVES

To help students to explain basic concepts, importance & functions of Management Accounting. To help the students to illustrate the format of Vertical Financial Statements, analysis and interpretations of Financial Statement. To enable students to calculate the various ratios and interpret it. To enable students to prepare Cash flow statements using Indirect method.

COURSE OUTCOMES

- Students would explain the significance of basic concept, importance & functions of Management Accounting.
- Students would illustrate the Vertical format of financial statements, and also tools of financial analysis such as Trend Analysis, Comparative Analysis and Common Size Statement.
- Students would calculate the various ratios and would be able to discuss the significance and use of the various ratios.
- Students would be able to prepare cashflow statements using Indirect method.
- Students would calculate the estimated working capital requirement of the entity.

the preparation of financial statement analysis, fund flow and Cash flow analysis. Utilize the management tools and techniques to take appropriate financial decisions.

Prerequisite:The Learner Should have Elementary knowledge about financial accounting reports and statements.

UNIT-I

Management accounting – Meaning, Objectives, Nature and Scope of Management accounting – Utility and limitations of management accounting.

UNIT-II

Financial Statement Analysis – Comparative Statements – Common Size Statements Ratio Analysis – significance, Uses and limitations – Computation of various ratio – Profitability, Liquidity, Solvency and Turnover ratio.

Employability

UNIT-III

Fund flow analysis – concept of funds – sources and uses of funds – managerial uses of fund flow analysis - construction of fund flow statement.

UNIT-IV

Cash flow analysis – Distinct of Cash flow from fund flow - utility of Cash flow statement – Construction of Cash flow statement.

UNIT-V

Marginal Costing: Meaning, Features, Advantages, Limitations, Absorption costing **Cost-Volume – Profit Analysis:** Contribution, Break even analysis, Profit Volume Ratio, Margin of safety

CourseCode	CourseTitle	L	T	P	C
20160RMC37	RESEARCHMETHODOLOGY	3	0	0	3

AIM: To create a basic appreciation towards research process and awareness of various research publication

OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases

OUTCOME: Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

PREREQUISITES: Basic computer skills for working in window-environment & Conceptual Knowledge on basic matrices

UNIT I

Research in Management: An Introduction – Definition, meaning and nature – Scope and objects of Research. Types of Research

UNIT II

Research Design – Defining Research Problem and Formulation of Hypothesis – Experimental Designs.-Sampling and types of sampling

UNIT III

Research Process – Steps in the process of Research, Data Collection and Measurement: Sources of Secondary data – Methods of Primary data collection – Questionnaire construction.

Employability

UNIT IV

Data presentation and Analysis – Data Processing – Methods of Statistical analysis and interpretation of Data – Testing of Hypothesis and theory of inference- correlation and regression analysis,

UNIT V

Report writing and presentation – steps in Report writing – types of reports – Format of Reports – Presentation of a Report.

To understand the basic accounting concepts and conventions of accounting. To know how the transactions are entered in Double entry book keeping system and various books of accounts. To Prepare the final accounts of an organization and to examine the financial data.

COURSE OUTCOMES

- Developing the ability to use accounting concepts and principles.
- Understanding the nature and purpose of financial statement.
- Demonstrating the ability to use a basic accounting system to create (record, classify and summarize) the business transactions.
- Applying the use of the fundamental accounting equation to analyze the effect of business transactions on an organization.

UNIT-I

Meaning and scope of cost account – Relationship of cost accounting and Financial account – cost analysis – concept and classification – element of cost method – preparation of cost sheet, tender and quotation.

UNIT-II

Purchasing of material -Procedure and documentation involved in purchasing – requisition for store – maximum stock level maximum level reorder level economic ordering quantity perpetual inventory – Bin card – ABC Analysis control over wages – scarp and spoilage. Inventory records method of valuing material.

Employability

UNIT-III

Overhead – Classification of overhead – allocation and absorption of overhead.

UNIT-IV

Process costing – Losses – normal process loss – abnormal loss – abnormal gain – Job costing – contract costing.

UNIT-V

Reconciliation of costs and Financial accounts – Budgetary control.

CourseCode	CourseTitle	L	T	P	C
20160AEC45	RETAILMANAGEMENT	4	0	0	4

Objectives: To gain in-depth knowledge about Retail management practices in Retail Industry.

COURSE OUTCOMES

- Understand the functions of retail business and various retail formats and retail channels.
- Understand the difference between Retail and Manufacturing Supply Chain
- Understand, key drivers of retail supply chain and how to select a retail store location
- Analyze Retail Market and Financial Strategy including product pricing.
- Integrate the various Supply Chain partners and how to collaborate with them

Prerequisite: Students should have mind set of setting Retail outlets. Students must have knowledge on basic retailing concepts

Unit I:

Introduction to Retailing: Concept of Retailing-Functions of Retailing-Terms and Definition of Retailing-Retailing Channels-Importance of Retailing-Retail industry in India.

Employability

Unit II:

Understanding the Retail consumer: Retail consumer Behaviour-Factors influencing retail consumer-Customer decision making Process-Types of Decision Making.

Unit III:

Retail Location Selection: Retail Location-Importance- Types-Factors determining the location of retail outlets-Steps involved in choosing the retail locations

Unit IV:

Retail Space Management and Marketing: Retail Space Management-Store layout and design-Visual Merchandising-Promotions strategy-Relationship Marketing Strategies-CRM-POP displays

Unit V:

Emerging Trends in Retailing: Application of IT to Retailing-Retail Equity-Technology in Retailing-

CourseCode	CourseTitle	L	T	P	C
20160AEC46	INDUSTRIALRELATIONSANDLABOURLAWS	4	0	0	4

COURSE OBJECTIVE:

The course aims at providing fundamental knowledge and exposure to the industrial relations and related aspects prevailing in industries and to familiarize the students with various Labour Legislations applicable to businesses.

COURSE OUTCOMES

- Describe fundamental concepts and nature of Industrial Relations
- To understand the nature and role of trade unions for workers and industries.
- To study the relevance of collective bargaining and its impact on employee-management relations.
- To understand industrial disputes and ways to resolve them.
- To apply various industrial legislations in business.

UNIT-I

Industrial Relations – Concept – Definition – Significance – Objectives – Scope – Approaches – Principles of good Industrial Relations – Role of state Employers and Unions – Labour and the constitution–ConstitutionalFramework.

UNIT-II

International Labour Movement – International Confederation of Free Trade Unions (ICFTU) – ILO–Origin,history, Objectives andFunctions.

UNIT-III

Industrial Disputes – Meaning – Causes – Forms – Machinery – Joint Consultation – Works Committee – Conciliations – Employee Discipline – Grievance Handling – workers participation in Management – Collective Bargaining – Wage Administration – Wage Regulation Machinery.

UNIT-IV

Factories Act, 2048 – Objects – Provisions relating to health, Workers Compensation Act, 2023

– Objects – Employer’s Liability for compensation – Employee’s state Insurance Act, 2048 – Objects – Registration of Factories and establishments – The ESI Corporation – Standing Committee – Offences and penalties – Miscellaneous Provisions.

Employability

UNIT-V

Industrial Disputes Act 2047 – Objects – Authorities for settlement – Lockouts – Lay-Off – Strikes – Retrenchment – Transfer and Closure – Trade Union Act, 2026 – Objects – Registration – Rights and Liabilities of Registered Trade Unions – Procedure – Penalties.

SEMESTER V

CourseCode	CourseTitle	L	T	P	C
20160SEC51	FINANCIALMANAGEMENT	4	1	0	5

COURSE OBJECTIVES - Provide an in-depth view of the process in financial management of the firm .Develop knowledge on the allocation, management and funding of financial resources. Improving students’ understanding of the time value of money concept and the role of a financial manager in the current competitive business scenario. Enhancing student’s ability in dealing short-term dealing with day-to-day working capital decision; and also longer-term dealing, which involves major capital investment decisions and raising long-term finance.

COURSE OUTCOMES

- Explain the concept of fundamental financial concepts, especially time value of money.
- Apply capital budgeting projects using traditional methods.
- Analyze he main ways of raising capital and their respective advantages and disadvantages in different circumstances
- Integrate the concept and apply the financial concepts to calculate ratios and do the capital budgeting

UNIT-I

Concept of Finance, Corporate Finance, Finance Functions and other functions. Structures of the Financial System. Financial Management – Meaning, functions and Objectives of Financial Management - Financial Planning and Forecasting of short term and long term

.UNIT- II

Financing Decision Sources of funds - Capital Structure - Theories of capital structure - Factors affecting capital structure - Leverage - Operating, Financial and combined leverage - Cost of capital - Cost of individual components of capital - Weighted Average cost of capital.

UNIT-III

Investment Decision Capital Budgeting Process - Techniques of investment appraisal: Payback period; Accounting Rate of Return - DCF Techniques - Net present value, Profitability Index and Internal Rate of Return

UNIT-IV

Working Capital Decision Meaning - Nature of working capital - Classification and significance of working capital - financing of Working capital - Component of working capital, Cash, Short-term marketable securities - Management of Cash and Receivables.

Skill Development

UNIT-V

Dividend Decision Theories of Dividend - Determinants of dividend - Dividend Policy - Dividend policies in practice

OBJECTIVES:Toenablestudentsknowthevariousconceptsofservicesmarketing.To understandthes
 trategiesformanagingandmarketingof services
 anddevisestrategiesformarketingservicesintheliberalizedbusinessenvironment.

COURSE OUTCOMES

1. Understand the Concept of Services and intangible products
2. Discuss the relevance of the services Industry to Industry
3. Examine the characteristics of the services industry and the modus operandi
4. Analyse the role and relevance of Quality in Services
5. Visualise future changes in the Services Industry

Prerequisites: Students must have basic Marketing Knowledge and Mindset. Students should have skills of service attitude

UNIT-I

Introduction–Definition–Distinguishing feature of service–Service offer–Service encounter –Service buying process.

UNIT-II

Relationship marketing and customer loyalty – Managing knowledge – Service positioning and Targeting – Service quality.

Skill Development

UNIT-III

Marketing plans for services – Marketing planning process – Marketing strategy formulation – Resource allocation and monitoring – Marketing planning and services – customer focused services – service quality – Improving service quality – customer retention.

UNIT-IV

Pricing of service – promoting service – Internal Marketing – Managing – capacity – Managing the marketing effort – Marketing process – Position analysis.

UNIT– V

Marketing of services – Bank – Marketing – Insurance Marketing – Hospital Marketing – Telecommunications services – Education – Marketing.

Course Code	Course Title	L	T	P	C
20160SEC53	PRODUCTION AND OPERATIONS MANAGEMENT	5	0	0	5

OBJECTIVES: To enable students understand the nature and importance of production management to comprehend the principles and areas of application of shop floor management and know the operations and skills needed for major decisions in material management.

COURSE OUTCOMES

- At the end of the course the students can apply the concept of operations management in manufacturing and service sector and will be able to plan and implement production and service related decisions.
- At the end of the course the student will be able to plan production schedules and plan resources (material and machine) required for production
- At the end of the course the students can design maintenance schedules in manufacturing units, identify and propose material handling equipments and implement industrial safety rules

Prerequisite: Students must have interest and Knowledge of Production and sequence of operations. Students those who are having Industrial Knowledge

UNIT-I

Definition of production managements – Scope of production Managements – Functions and Responsibilities of production manager – Evolution of production management.

Employability

UNIT-II

Production planning and Control: Definition of planning – scope of planning – Production planning of control (PPC). Importance methods or Types of production – Continuous production systems (CPS) – Intermittent production system (IPS)

UNIT-III

Plant Location: Definition of Plant location, Steps, Factors affecting the location of a plant – various factors involved in the location

UNIT-IV

PlantLayout:DefinitionPlantLayout,Objectiveofplantlayout–
Types,Principles,Factorsinfluencingplantlayout.

UNIT-V

Material Handling: Definition of material handling – Importance – Objective – Principles –
Typesofmaterialhandling–Inventorycontrol–Factoraffectinginventorycontrol

20160SEC62	ENTREPRENEURIALDEVELOPMENT	5	0	0	5

AIM: To develop and strengthen entrepreneurial quality and motivation in students and to impart basic entrepreneurial skills and understanding to run a business efficiently and effectively.

OBJECTIVES

The concept of entrepreneurship, types, functions and approaches of entrepreneur. The aspects of entrepreneurial mindset and personality. The business opportunities and to equip the learners with process of project formulation and appraisal. The role of venture capitalists and the legal challenges in entrepreneurship development. Strategic perspectives in entrepreneurship.

COURSE OUTCOMES:

- Summarize the concept of entrepreneurship to acquire entrepreneurial skills.
- Explore new vistas of entrepreneurship in the twenty-first century environment to establish new business opportunities.
- Evaluate entrepreneurial mindset and personality of each individual helping to detect difficulties and propose a timely solution.
- Define and comprehend the concept of entrepreneurial motivation in order to assist anyone achieving their personal objectives.
- Recognize the entrepreneurial mindset for giving value to the company.

UNIT I

ENTREPRENEURSHIP

Entrepreneur – Types of Entrepreneurs –

Difference between Entrepreneur and Intrapreneur Entrepreneurship in Economic Growth, Factors Affecting Entrepreneurial Growth.

Employability

UNIT II

ENTREPRENEURIAL ENVIRONMENT Business Environment - Role of Family and Society

- Entrepreneurship Development Training and Other Support Organisational Services - Central and State Government Industrial Policies and Regulations - International Business.

UNIT III

BUSINESS PLAN PREPARATION Sources of Product for Business - Prefeasibility Study - Criteria for Selection of Product - Ownership - Feasibility Report Preparation and Evaluation Criteria.

UNIT IV

FINANCING AND ACCOUNTING Need – Sources of Finance, Term Loans, Capital Structure, Financial Institution, Management of working Capital, Costing, Break Even Analysis, Taxation – Income Tax, Excise Duty – Sales Tax.

UNIT V

SUPPORT TO ENTREPRENEURS Sickness in small Business – Concept, Magnitude, Causes and Consequences, Corrective Measures – Business Incubators – Government Policy for Small Scale Enterprises – Growth Strategies in small industry – Expansion, Diversification, Joint Venture, Merger and Sub Contracting

COURSE CODE	COURSE TITLE	L	T	P	C
20161DSC64A	TALLY PRIME	3	0	0	2

AIM

To develop the knowledge regarding the concepts of financial accounting in students that is used for learning to maintain accounts.

OBJECTIVES

To impart practical knowledge in TALLY and ensure that finance for the company is always in order and is correct at all given points of time.

UNIT-I

TALLY – Introduction to Tally Prime – Difference between Tally Prime and Tally ERP9
– New Features in Tally Prime

UNIT-II

Company Creation – Chart of Accounts

UNIT-III

Inventory Master and Inventory Vouchers in Tally

UNIT-IV

Payroll Master in Tally

UNIT-V

Reports in Tally

OUTCOME

Students are able to get placements in different offices as well as companies in Accounts departments.

MASTER OF BUSINESS ADMINISTRATION
CURRICULUM
(2020 onwards)

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, and changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching-research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students' understanding of and through research. Curricula can be:

Research–Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research–Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research–Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research-Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed

ResearchLevel 2: Bounded

ResearchLevel 3: Societal

ResearchLevel 4: Self actuated

ResearchLevel5:OpenResearch

TakingintoconsiderationtheabovementionedfactsinrespectofintegratingresearchintotheMBA2020 Curriculum,thefollowing ResearchSkillBased Coursesareintroducedinthe curriculum.

STATISTICS FORMANAGERS

COURSE OBJECTIVE: This course mainly deals with the use of Statistical concepts in the resolution of managerial decision problems. As such the course will deal not only with some of the theoretical concepts in Statistics but will also be concerned with their application.

COURSE OUTCOME: Students will achieve statistical literacy and will be able to find ways to move beyond the-what of statistics to the how and why of statistics.

UNIT - I Fundamental of Statistics Statistics – Definition, Types. Types of variables – Organising data - Descriptive Statistics – measures of central tendency – measures of dispersion; Skewness & Kurtosis – Frequency distribution – Histograms – Polygons – Definition of random variable.

UNIT - II Fundamentals of Probability Basic definitions and rules for probability, conditional probability independence of events, Baye's theorem, and random variables, Probability distributions: Binomial, Poisson, Uniform and Normal distributions.

UNIT - III Sampling Distribution and Estimation Introduction to Sampling Distributions - Sampling Distribution of Sample Mean and Sample Proportion - Application of Central Limit Theorem - Sampling Techniques - Estimation and Confidence Intervals - Point and Confidence Interval Estimates for Population Parameters of Large-Sample and Small Samples - Determining the Sample Size.

EMPLOYABILITY

UNIT - IV Testing of Hypothesis Hypothesis Testing - General Procedure for Hypothesis Testing - Errors in Hypothesis Testing – One Sample and Two Sample Tests for Means and Proportions of Large Samples (Z-Test) - One Sample and Two Sample Tests for Means of Small Samples (T-Test), (F-test) for two sample standard deviations. ANOVA one and two way classification.

UNIT - V Non-Parametric Methods The Chi-Square Test - Statistic - Applications of Chi-Square Tests - Test of Independence of Attributes - Goodness of Fit - Theory of Correlation and Regression: Meaning of Correlation and regression – Principles of Least squares – Simple Linear Regression – Simple correlation – Co-efficient – Rank Correlation Time Series Analysis - Variations in Time Series.

PRODUCTION AND OPERATIONS MANAGEMENT

COURSE OBJECTIVE: To provide a broad introduction to the field of production and operations management and explain the concepts, strategies, tools and techniques for managing the transformation process that can lead to competitive advantage.

COURSE OUTCOME: The students would have learned about various concepts related to the production and operations management. Also understood the decision role and responsibilities of operations function vis-à-vis other functions in an organization.

UNIT-I: INTRODUCTION OF PRODUCTION AND OPERATIONS MANAGEMENT Production & Operations Management – Meaning, Scope, Functions, Relationship between POM & other functional areas of Management – Effect of Time Element on POM. Classification of Production Systems – Intermittent, Jobshop, Batch, Continuous, Flow and Mass Production Systems.

UNIT-II: PRODUCTION PLANNING AND CONTROL Production Planning & Control – Preplanning – Fore Casting – Scheduling – Dispatching – Routing – Expediting – Plant Location – Factors Influencing Plant Location, Importance of Environmental Health & Safety factors in deciding the location of plant – Cost Factor – Plant Layout – Principles, Flow Patterns, Types of Plant Layout – Capacity Planning – Types of Capacity, Capacity Decision, Capacity Planning Strategies – Manufacturing Model, P & Q Systems, MRP-I & MRP-II.

UNIT-III: DESIGN OF PRODUCT, PROCESS AND WORK SYSTEMS Product Design – Influencing factors, Approaches, Legal, Ethical and Environmental issues. Process – Planning, Selection, Strategy, Major Decisions. Work Study – Objectives, Procedure. Method Study and Motion Study. Work Measurement and Productivity – Measuring Productivity and Methods to improve productivity.

UNIT-IV: SCHEDULING AND PROJECT MANAGEMENT Project Management – Scheduling Techniques, PERT, CPM; Scheduling – work centers – nature, importance; Priority rules and techniques, shop floor control; Flow shop scheduling – Johnson’s Algorithm – Gantt charts; personnel scheduling in services.

UNIT-V: MATERIALS MANAGEMENT Materials Management, Components of Materials Management – Materials Planning, Inventory Control, Purchase Management, Stores Management. Inventory Management – Inventory Decisions, Models of Inventory – ABC Analysis, XYZ Analysis and JIT.

Employability

RESEARCH METHODOLOGY

AIM: To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES: To understand the approaches towards and constraints in good research. To identify various statistical tools used in research methodology. To appreciate and compose the manuscript for publication

OUTCOME: Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES: Research Methodology course in UG level or equivalent knowledge.

Unit I: INTRODUCTION Research – Importance and its types – research approaches – process – problem formulation – development of hypothesis – Research design – determining the sample design – collecting data – analysis of data – identifying research problem.

Unit II: Measurement and its techniques Measurement in research and its problems – meaning of scaling – tests of sound measurement – types of scaling- Techniques of measurement – Attitude scales – summated rating scale – Equal appearing Interview scale– cumulative scale – Rating scale – Scale constructing Techniques- Timeseries analysis- Projection Techniques

Unit III: DATA COLLECTION AND HYPOTHESIS Classification of data – sources of data – collection of primary and secondary data – Questionnaire method – Guidelines for Questionnaire design – Interview technique – Observation techniques – Processing of data – Editing – Coding – Tabulation – Interpretation of data – Formulation of hypothesis – Test of hypothesis.

Unit IV: Statistical Techniques Statistical Techniques- Quantitative and qualitative techniques- Measures of Central Tendency – Arithmetic mean, Median and Mode- Standard deviation – Karl Pearson's coefficient of correlation – Regression – Chi-square test – conditions for applying chi-square test – ANOVA – Spearman's Rank Correlation.

Unit V : INTERPRETATION AND REPORT WRITING Interpretation – Techniques of Interpretation – Significance of Report Writing- Different steps in writing report – layout of research report – types – oral presentation – mechanics of writing a research report – precautions for writing research reports – Role of computers in Research.

DATA ANALYSIS (MS-EXCEL LAB)

COURSE OBJECTIVE: The course aims to understand MS Excel for applying statistical tools.

COURSE OUTCOME: Learning Outcome: The learning outcome is that the student should be able to: Analyse the data to draw inference for decision making. Understand application of statistical measures of central tendency. Understand application of ANOVA. Analyse trends. Test hypotheses.

1. Tabulation of Data in excel (Creating Master Table and Sub Table)
2. Formulas and Functions
3. Filters and Sort and Validation Lists, Data from External Sources.
4. Data Analysis Using Charts and Graphs (Pivot Table & Charts)
5. Time Value of Money
6. Measure of central tendency: mean, median, mode,
7. Measure of dispersion: variance, standard deviation, Coefficient of variation.
8. Correlation, regression lines.
9. t-test
10. F-test
11. ANOVA one way classification,
12. Chi square test, independence of attributes.
13. Time series: forecasting Method of least squares,
14. Moving average method

INTERNATIONALBUSINESSENVIRONMENT

COURSEOBJECTIVE: To familiarize the student to the basic concepts of international business management

COURSEOUTCOME: Students would be familiar with global business environment, global strategic management practices and get acquainted with functional domain practices. They would be familiar with conflict situations and ethical issues in global business.

UNIT-I Nature and scope of international business-Growing relevance of international business-Types, Importance of international business. Business environment- internal and external environment. Economic and political Environment-Economic roles of Government-Demographic environment-Cultural environment.

UNIT-II International Economic Institutions-IMF, World Bank, UNCTAD, UNIDO, GATT, WTO-organizational Structure, objectives and functions

UNIT-III International Trade-Theories-Adam Smith, David Ricardo, Heckscher-Ohlin, and Leontief Paradox. Government influence on trade-protectionism. Exim policy of India-Export promotion-incentives-SEZ-objectives of SEZ.-BoP vs BoT-Components of BoP.

UNIT IV MNCs- Benefits to host country-problems of MNCs –MNCs in India. Transfer of technology-levels, channels-methods of technology transfer-International investments-Significance and types of international investments-FDI, FII-factors affecting FDI-Cross-border M&As.

UNIT-V Globalisation and business –Features of globalization-essential conditions for globalization-foreign market entry strategies-Pros and cons of Globalisation.Global competitiveness-determinants and its pillars-IT revolution and Business Environment.

Employability

OPERATIONSRESEARCH

COURSE OBJECTIVE: To learn the concepts of operations research applied in business decision making using Operations Research Models. To facilitate the students to find out optimal solution for transportation and assignment problems and to empower to equip with the skills of decision making using quantitative techniques

COURSE OUTCOME: To facilitate quantitative solutions in business decision making under conditions of certainty, risk and uncertainty. Develop mathematical models using various techniques for successful project implementation.

Unit I Scope and applications of Operation Research in managerial decision-making- Decision-making environments: Decision-making under certainty, uncertainty and risk situations; Uses of Decision tree.

Unit II Linear programming: Mathematical formulations of LP Models for product-mix problems; graphical and simplex method of solving LP problems; sensitivity analysis; duality
 Transportation problem: Various method of finding Initial basic feasible solution and optimal cost-
 Assignment model: Algorithm and its applications

Unit III Game Theory: Concept of game; Two-person zero-sum game; Pure and Mixed Strategy Games; Saddle Point; Odds Method; Dominance Method and Graphical Method for solving Mixed Strategy
 Game Sequencing Problem: Johnsons Algorithm for n Jobs and Two machines, n Jobs and Three Machines, Two jobs and m Machines Problems.

Employability

Unit IV Queuing Theory: Characteristics of M/M/I Queue model; Application of Poisson and Exponential distribution in estimating

Arrival Rate and Service Rate; Applications of Queue model for better service to the customers

Replacement Problem: Replacement of assets that deteriorate with time, replacement of assets which fails suddenly.

Unit V Project Management: Rules for drawing the network diagram, Application of CPM and PERT techniques in project planning and control; Crashing and resource leveling of operations Simulation and its uses in Queuing theory & Materials Management

COURSECODE		20260SEC41		4	0	0	4

ENTREPRENEURIAL DEVELOPMENT

COURSE OBJECTIVE: The objective of this course is to familiarize the students with the ground realities of starting & managing their own Entrepreneurial ventures.

COURSE OUTCOME: Students will gain knowledge and skills needed to run a business. Gives required competencies to run the successful enterprise. Prepared to become an entrepreneur.

UNIT I INTRODUCTION TO ENTREPRENEURSHIP Understanding the Meaning of Entrepreneur; Characteristics and Qualities of an Entrepreneur; Classification of Entrepreneurs; Factors Influencing Entrepreneurship; Entrepreneurial Environment; Entrepreneurial Growth; Problems and Challenges of Entrepreneurs; Entrepreneurial Scenario in India

UNIT II ENTREPRENEURSHIP FEASIBILITY ANALYSIS Starting an Enterprise; Idea Generation; Identification of Business Opportunities; Market Entry Strategies; Marketing Feasibility; Financial Feasibilities; Political Feasibilities; Economic Feasibility; Social and Legal Feasibilities; Technical Feasibilities; Managerial Feasibility, Location and Other Utilities Feasibilities

UNIT III LAUNCHING OF SMALL BUSINESS Business plan – Meaning, Scope and Need; Business plan Formats; Project report preparation and presentation; Project appraisal; Why some business plan fails? MSMEs, Financial support banks, institutions and agencies; Venture capital; Government schemes and Policies

Entrepreneurship

UNIT IV DEVELOPMENT OF SMALL BUSINESS Role of Government and other Agencies in Promoting Small Business - Preventing Sickness and Rehabilitation of Business Units- Incentives, Subsidies and Grants - Training for Effective Management of small Business.

UNIT V WOMEN ENTREPRENEURS Women Entrepreneurs Problems & Prospects in Women Entrepreneurships, Role of Government in Promoting Women Entrepreneurs. Development of Self Help Groups, Steps taken by Government in Promoting SHGs..

CONSUMER BEHAVIOUR

COURSE OBJECTIVE: The basic objective of this course is to develop an understanding about the consumer decision making process and its applications in marketing function of firms.

COURSE OUTCOME

Able to explain the basic concepts and models of consumer behavior. Able to analyze the effects of psychological, socio-cultural and demographic factors on the consumer decision process with their results. Able to distinguish the relationship between consumer behavior and marketing practices. Able to define the importance of consumer behavior for businesses

Able to compare the relationship between consumer behavior and other disciplines.

UNIT I Introduction - Scope & importance, the consumer research process, quantitative and qualitative research. Market segmentation: Importance and use - Application of Consumer behaviour principles to strategic marketing - Theories of Consumer Behaviour - Consumer decision: Process approach - Factors influencing consumer decision making, Segmentation, Psychographics & VALS; Diffusion of Innovations

UNIT – II Consumer Motivation & Perception - Consumer needs and motivation, Psychographics - Rational vs emotional motives. Dynamic nature of motivation. Motivational research. Personal and psychological influences - Product and Service Positioning, Perceived price, quality and risk - Consumer Attitude formation and Change Concept of attitude, Attitude formation,

UNIT – III Sociocultural Influences Socializations, Family Buying decision, Family Lifecycle, Social Class, Lifestyle Profiles, Culture, Sub-culture, Measurement of Culture, Cultural aspects of emerging markets, Cross Cultural Consumer Behaviour – Communication - Influences on Consumer behavior, High and low involvement - Pre-purchase and post-purchase behavior.

UNIT – IV Consumer Decision Making Process: Consumer Decision making process, Comprehensive models of consumer decision making. New Product purchase and repeat purchase - Problem Recognition - Types of consumer decisions, types of Problem Recognition, Utilizing problem recognition information

UNIT – V Consumer Behaviour Applications: Consumer Behaviour applicable to Profit and Non Profit Service Organizations, Societal Marketing Concept, Government Policy and Consumer Protection, Indian Consumer and Marketing Opportunities in India - Consumerism, consumer protection, consumer right and consumer education, legal consideration. E-Buying behavior

INTEGRATED MARKETING COMMUNICATION

COURSE OBJECTIVE: Due to ever increasing business dealings the subject of International Marketing has gained utmost importance in recent times. The world these days, indeed has shrunk and foreign markets have particularly become important especially for a developing country like India. The major objective of this course is to provide an exposure to the area of Marketing in the International perspective.

COURSE OUTCOME Students create and manage these promotional tools to successfully execute a business' strategic plan.

Unit I: Introduction Integrated Marketing Communication - Concept, Process, Communication Mix, IMC plans- Overview of advertising management; Advertising and IMC process - Advertising Agency - Choosing an advertising agency; Advertising planning and research; Advertising goals- Advertising budget; Advertising design; Advertising media selection.

Unit II: Sales Promotion The scope and role of sales promotion; Types, Planning Sales Promotion Programmes; Consumer oriented sales promotion; Trade oriented sales promotion; Coordinating sales promotion and advertising; Personal Selling, Role, Advantages and Disadvantages, Personal Selling Skills.

Unit III: Public Relations, Publicity and Corporate Advertising Public Relations Publicity and Corporate advertising; Public Relations functions; Creating positive image building activities; Preventing or reducing image damage; sponsorship and event marketing; Role of internet in PR.

Employability

Unit IV: Social and Ethical Aspects of Advertising and Promotion Regulations of Advertising and Promotion in India, regulation of other Promotional Areas, Social Implications of Advertising, Moral and Ethical Issues in Advertising; Advertising to children, Advertising controversial products, Social Aspects of Advertising.

Unit V: Evaluation Monitoring and Control Measuring the effectiveness of promotional program; Conducting research to measure advertising effectiveness; Testing process; Establishing the program for measuring the advertising effects; Measuring the effectiveness of other program elements.

RETAIL MANAGEMENT

COURSE OBJECTIVE: The objective of this course is to introduce students to the basic scope, benefits and types of retailers; and understand the steps involved in designing an appropriate retail organization structure.

COURSE OUTCOME Understand the functions of retail business and various retail formats and retail channels. Understand the difference between Retail and Manufacturing Supply Chain Understand, key drivers of retail supply chain and how to select a retail store location Analyze Retail Market and Financial Strategy including product pricing.

UNIT I INTRODUCTION An overview Retailing – Channels of Distribution, Functions of Retailers, Evolution of Retailing – Global Retail Scenario – Indian Retail Scenario – Emerging Trends and Opportunities in Retail Industry – economic and technological Influences on retail management – Classification of Retailers – Non Traditional Retail Classifications.

UNIT II RETAIL FORMATS Organized and unorganized formats – Different organized retail formats – Characteristics of each format – Emerging trends in retail formats – MNC's role in organized retail formats.

UNIT III RETAIL ADMINISTRATION Choice of retail locations - internal and external atmospherics – Positioning of retail shops – Building retail store Image - Retail service quality management – Retail Supply Chain Management – Retail Pricing Decisions. Merchandising and category management – Human Resources Management – Information System - Buying.

UNIT IV RETAIL SHOP MANAGEMENT Visual Merchandise Management – Space Management – Retail Inventory Management – Retail accounting and audits - Retail store brands – Retail advertising and promotions – Retail Management Information Systems - Online retail – Role of Communication in Retailing – Methods of Retail Communication.

UNIT V RETAIL SHOPPER BEHAVIOUR Understanding of Retail shopper behavior – Shopper Profile Analysis – Shopping Decision Process - Factors influencing retail shopper behavior – Complaints Management – Retail sales force Management – Challenges in Retailing in India.

Skill development

SALES MANAGEMENT

COURSE OBJECTIVE: The purpose of this paper is to acquaint the student with the concepts which are helpful in developing a sound sales policy and in organizing and managing sales force and marketing channels and to impart the knowledge about sales management procedure, and activities.

COURSE OUTCOME - Develop a plan for organizing, staffing and training a sales force. Know the distinction between the skills required for selling and sales management. Identify the key factors in establishing and maintaining high morale in the sales force. Develop an effective sales compensation plan. Evaluate the performance of a sales person.

UNIT – I Sales Management - Nature, Meaning, Evolution and Scope, Objectives of Sales Department, Sales as a function of Marketing Management, Theories of Selling – Buyer Seller Dyads, AIDAS Theory, Right Set of Circumstances Theory, Buying Formula Theory, Behavioral Equation Theory of the Sales Management-Sales Planning, Strategic role of sales management

UNIT – II Selling Process - Prospecting, Planning the Sales call, Selecting the Presentation Method, Making the Sales - Personal Selling - Presentation, Handling Sales Objections, Closing the Sale, Follow up. Role of Relationship Marketing in Personal Selling, Value Added Selling

UNIT – III Nature of Sales Management positions - Functions of Sales Executives - Qualities of Effective Sales Executives - Relationship with Top Management - Management of Sales force, Recruitment & Selection, Training and Evaluation, Compensating Sales Force - Supervision of Salesmen; Motivating Sales Personnel; Sales Meetings and Sales Contests

Skill development

Unit IV Channel Intermediaries – Wholesaling and Retailing; Logistics of Distribution; Channel Planning Organisational Patterns in Marketing Channels; Managing Marketing Channels; Marketing Channel Policies and Legal Issues - Warehouse Management - Warehouse Functions, Processes, Organization and Operations

Unit V Information System and Channel Management, Assessing Performance of Marketing Channels including sales force; International Marketing Channels

SERVICESMARKETING

COURSEOBJECTIVE:

The objective of the course is to develop an understanding of services and service marketing with emphasis on various aspects of service marketing which make it different from goods marketing.

COURSEOUTCOME - Understand the Concept of Services and intangible products 2. Discuss the relevance of the services Industry to Industry 3. Examine the characteristics of the services industry and the modus operandi 4. Analyse the role and relevance of Quality in Services 5. Visualise future changes in the Services Industry

UNIT I Introduction-

Definition, Differences between Services and Goods, Tangibility Spectrum, Distinctive Characteristics of Services, Classification of Services, Categories of Service Providers, Marketing Implications of Service Characteristics, Services Marketing Mix – People, Physical Evidence & Process..

UNIT II Assessing service market potential - Classification of services – Expanded marketing mix – Market segmentation, targeting and positioning - Service Life Cycle – New service development – Service Blue Printing – GAP’s model of service quality – Measuring service quality – SERVQUAL – Service Quality function development - Customer perception, Customer satisfaction, Tolerance zone.

UNIT III Physical Evidence and Servicescape Meaning, Types of Servicescapes, Strategic Roles of Servicescape, Guidelines for Physical Evidence Strategy, Strategic Roles of Servicescape - Internal Marketing, Service-Profit Chain, Emotional labor, Customers' role in service delivery, Customer as a co-producer.

UNIT IV Positioning of services – Designing service delivery System, Service Channel – Pricing of services, methods – Service marketing triangle - Integrated Service marketing communication
Skill development

UNIT V Applications & Strategies of Service Marketing: Marketing of service Sector - Financial Services, Tourism Services, Education Services, Information services (ITES), Health Services, Health Tourism Services - CRM in Service Sector.

INDUSTRIAL MARKETING

COURSE OBJECTIVE: The first part deals with industrial marketing and especially on strategic industry analysis, understanding organizational buying behavior and management of market channels. The second part offers and introduction to major theories and trends within international business.

COURSE OUTCOME: The course is given at the 4th year in the MTIØT program and is mandatory in the first year of the MIENTRE program and aims to contribute to objective 2.2 in the MTIØT objective that requires: "Knowledge ... in line with a masters student in business administration in comparable international studies". The course should give general knowledge on industrial marketing, internationalization, international management and international business.

Unit I Introduction to Business marketing - Organizational buyer- Buyer Behaviour- Business marketing and Consumer marketing- Business products- Organizational buying Process- Classification of Industrial Customers and Industrial Products, Industrial Marketing Environment

Unit II Strategies for customer relationship management for business markets- Strategic planning- Relationship marketing- Managing buyer-seller relationship- Measuring customer profitability - Methods of forecasting demand- Components of Business models- Strategic resources of business marketing - Customer Satisfaction Management and Measurement, Customer Loyalty

Unit III Managing products- Innovation & new product development- Business-to-Business brand- Product positioning- Management of innovation- Steps in New product development- Delivering effective customer solutions- Business-service marketing- Service quality- Service packages- Product line planning.

Unit IV Marketing Strategies Industrial Markets - Product, Price, Promotion and Distribution. Marketing Research for Industrial Products- Marketing strategy for Industrial Firms- Developing & Evaluating Strategies - Effective implementation of Strategies.

Unit V Managing channels- B2B in e-commerce platform & SCM- Pricing strategies: Business marketing channels- Cost of Logistics- B2B logistical management- Pricing Business products across their lifecycle- Competitive pricing tactics- Marketing Communications- advertising & sales promotion- Personal selling- Performance measurement.

CUSTOMER RELATIONSHIP MANAGEMENT

COURSE OBJECTIVE: The paper is designed to impart the skill based knowledge of Customer Relationship Management. The purpose of the syllabus is to not just make the students aware of the concepts and practices of CRM in modern businesses but also enable them to design suitable practices and programs for the company they would be working.

COURSE OUTCOME - Understand the basic concepts of Customer relationship management. To understand marketing aspects of Customer relationship management. Learn basics of analytical Customer relationship management. Understand basics of operational Customer relationship management

UNIT I INTRODUCTION Definitions - Concepts and Context of relationship Management – Evolution - Transactional Vs Relationship Approach – CRM as a strategic marketing tool – CRM significance to the stakeholders.

UNIT II UNDERSTANDING CUSTOMERS Customer information Database – Customer Profile Analysis - Customer perception, Expectations analysis – Customer behavior in relationship perspectives; individual and group customer's - Customer life time value – Selection of Profitable customer segments.

UNIT III CRM STRUCTURES Elements of CRM – CRM Process – Strategies for Customer acquisition – Retention and Prevention of defection – Model of CRM – CRM road map for business applications
Skill development.

UNIT IV Mechanics of CRM Strategic CRM planning process – Implementation issues – CRM Tools- Analytical CRM – Operational CRM – Call center management – Role of CRM Managers - e CRM Solutions – Data Warehousing – Data mining for CRM – an introduction to CRM software packages.

UNIT V Managing Networks for CRM Business Networks, Network Position, Supplier Networks, Distribution Networks, Management of Networks, Supplier Relationships, Product Development, Supplier Accreditation Programmes, Process Alignment, E Procurement, Partners in Value Creation, Benchmarking Partners, Customer Advocacy Groups, Sponsors, Partners in Value Delivery.

SUBJECT TITLE: KNOWLEDGE MANAGEMENT

OBJECTIVE:
 The goal of the course is to prepare students to become familiar with the current theories, practices, tools and techniques in knowledge management (KM), and to assist students in pursuing a career in the information sector for profit and not for profit organizations. In addition, students will learn to determine the infrastructure requirements to manage the intellectual capital in organizations.

COURSE OUTCOMES
 Use a framework and a clear language for knowledge management concepts; Describe how valuable individual, group and organizational knowledge is managed throughout the knowledge management cycle; Define the different knowledge types and explain how they are addressed by knowledge management; Describe the major roles and responsibilities in knowledge management implementations; Identify some of the key tools and techniques used in knowledge management applications.

Unit-I: The Knowledge Economy: Data–Information-Knowledge, Attributes of Knowledge as an Economic Resource – Knowledge Capital Vs Physical Capital - Types of Knowledge - Scope of Knowledge Management-Building Knowledge Societies.

Unit-II: Knowledge Management and Information Technology: Role of Information Technology in Knowledge Management Systems, Knowledge Management Tools and Knowledge Portals – Knowledge Organization & Managing Knowledge Workers

Unit-III: The Knowledge Process: Knowledge Management Systems Life Cycle - Stages of KM Process, Knowledge Creation & Knowledge Architecture– Knowledge Capturing Techniques– Knowledge Codification– Transferring and Sharing Knowledge.

Unit-IV: Implementation of Knowledge Management: Business Intelligence and Internet Platforms, KM & the Indian experience, Net Banking in India– Role of Knowledge Management in Organizational Restructuring– The Mystique of a Learning Organization - Management of Intellectual Property.

Skill development

Unit-V: Future of Knowledge Management and Industry Perspective: Knowledge Management in Manufacturing and service industry, Challenges and Future of Knowledge Management - Measures for meeting the Challenges of KM - Business Ethics and KM.

SUGGESTED READINGS:

1. Mattison: Web Warehousing & Knowledge Management, Tata McGraw-Hill, 2009

SUBJECT TITLE: ORGANIZATIONAL DEVELOPMENT AND CHANGE MANAGEMENT

OBJECTIVE:

The objective of this paper is to prepare students as organizational change facilitators using the knowledge and techniques of behavioral science.

COURSE OUTCOMES

Gaining knowledge about organizational development process. How to change and develop organizations. Better understanding of the change management model. Skills needed to develop an action plan for the development process. Better understanding of change resistance and how to handle it.

Unit I: Organizational Development Concept – OD Models - Characteristics of OD – OD Components - Process and Methods of Managing Organization Development

Unit II: OD Interventions: Nature of OD interventions – Team Interventions, Personal, Interpersonal & Group Process Interventions – Comprehensive Interventions – Structural Interventions – Problems in OD Interventions, Resistance – individual & organizational.

Unit V: Benefits of OD - OD Consultant: Role, Skills and Dilemmas – Success and Failures of OD - Special Applications of OD - Issues in OD – Future of OD & New Perspectives.

Unit IV: Perspectives on Change – How people experience Change - Types of Changes – Forces for Change – Need for Change - Change Process – Seven phases of Change - - organisational culture and change - Factors influencing organisational change – Managing change from gender perspective.

Unit V: Model of Organisational change, causes of failure of changes, organization changes and process consultation, Manager and the change, Internal and external agent of change - Change Agents and their Role - Contemporary Issues in Organisational Change - Managing resistance to change, effective implementation of change.

Skill development

SUGGESTED READINGS:

1. W.L. French & CH Bell: Organization Development, Prentice Hall of India/Pearson Education.
2. SP Robbins: Organizational Behaviour, Prentice Hall of India
3. Udai Pareek : Understanding Organizational Behaviour, OUP

SUBJECT TITLE: PERFORMANCE MANAGEMENT

OBJECTIVE:
 The objective of this course is to help the students gain understanding of the functions of performance management system in the organization and provide them tools and techniques to be used in appraising the performance of the employees.

COURSE OUTCOMES
 Define performance management and offer several examples of how a good performance management system can improve an organization's results.
 Outline the importance of connecting an employee's daily tasks to an organization's mission, vision, values, and business goals.

UNIT-I

Introduction, Role of performance in organization, Dimensions of Performance, Relevance of objectives in organizations, Organizational & individual performance, Performance management & human resources management, Performance Management Process – Performance Management & Performance Appraisal.

UNIT-II

Performance planning, Performance analysis, KPAs, Components of Performance planning, Objectives of performance analysis, Process of Performance analysis – Implementation process, Factors affecting implementation – Pitfalls in implementation – Experiences in performance management – Traditional practices, Recent approaches – Balance Scorecard approach to PMS – Benchmarking process.

UNIT-III

Purpose of Performance Appraisal, Who can Appraise, Performance appraisal factors, Pros & Cons of Appraising, Appraisal Methods on the basis of approaches – Ranking – Forced Distribution – Paired Comparison – Check List – Critical Incident – Graphic Rating Scale – BARS – MBO – Human Resource Accounting – 360 degree Feedback – Definition & Uses of 360 degree feedback – Rationale for 360 degree feedback – Scope of application in various industries – Advantage and disadvantage of 360 degree feedback.
Employability

UNIT-IV

Significance of review, Process of performance review, Performance rating, Rating Errors, Reducing rater bias, Performance review discussions, Objectives, Requisites, Process, Role of mentoring, Coaching in performance review discussions.

UNIT-V

Essentials of Good Performance Management System - Appraisals & HR Decisions, Reward systems & legal issues in PMS, Managing team performance – Role of Technology in Performance Management - Concept of Potential Appraisal – Requirements for an Effective Potential Appraisal system - Performance Appraisal and Potential Appraisal.

SUBJECT TITLE: COMPENSATION & REWARD MANAGEMENT

OBJECTIVE:

The course is designed to promote understanding of issues related to the compensation and rewarding human resources in the organizations and to impart skills in designing, analyzing and restructuring reward management systems, policies and strategies.

COURSE OUTCOMES

Recognize how pay decisions help the organization achieve a competitive advantage. Analyze, integrate, and apply the knowledge to solve compensation related problems in organizations.

UNIT I:

Wage concepts, Theories of Wages, Importance, Wage Policy, Criteria for Wage Fixation, Techniques of Wage Determination, Wage Fixation Machinery, Wage Differentials, and Challenges of Remuneration. Impact of compensation and employees benefit on organizational effectiveness; Economic and Behavioral issues in compensation.

UNIT II:

Role of compensation in organization, Determination of Inter and Intra-industry Compensation Differentials, Internal and External Equity in Compensation Systems. Factors influencing compensation levels, compensation as motivational tool, compensation policy.

UNIT III:

Conventional reward methods and their inadequacies. Developing reward strategy – skill based pay, broadbanding, team based pay, payment by results, and performance related pay, variable compensation. Compensation for executives and R&D staff. Reward structure in new industries (BPO, IT, Hospitality, Tourism, etc.), MNCs and other organizations. Remuneration plan and business strategy.

UNIT IV:

Profit sharing, payment of bonus. Understanding Different Components of Compensation Packages like Fringe Benefits, Incentives and Retirement Plans, Compensation Practices of Multinational Corporations and Strategic Compensation Systems. Understanding tools in designing, improving and implementing compensation packages

Employability

UNIT V:

Law relating to payment of wages and bonus in India. Statutory Provisions Governing Different Components of Reward Systems- Working of Different Institutions Related to Reward System like Wage Boards, Pay Commissions, Role of trade unions in compensation management.

SUBJECT TITLE: SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT

OBJECTIVE:

The objective of this course is to impart knowledge to students regarding the theory and practice of Security Analysis and to give the students an in-depth knowledge of the theory and practice of Portfolio Management.

COURSE OUTCOME

To provide a theoretical and practical background in the field of investments. • Designing and managing the bond as well as equity portfolios in the real world. • Valuing equity and debt instruments. • Measuring the portfolio performances.

UNIT-I: Introduction to Investment and Securities

Introduction to Securities – Types of Securities - Investment Process – Investment Alternatives – Securities Markets - Stock Exchanges and its Functions – Functions and guidelines of SEBI. Risk Return: Security Returns-Risk Measurements–Picturing Risk and Return.

UNIT III FUNDAMENTAL ANALYSIS

Economic Analysis – Economic forecasting and stock Investment Decisions – Forecasting techniques. Industry Analysis : Industry classification, Industry life cycle – Company Analysis Measuring Earnings – Forecasting Earnings – Applied Valuation Techniques – Graham and Dodds investment ratios.

UNIT IV TECHNICAL ANALYSIS

Fundamental Analysis Vs Technical Analysis – History of Technical Analysis – Technical Tools – Dow theory - Trend Models- Market Indicators – Efficient Market Theory : Basic Concepts – The Random Walk Theory.

Employability

UNIT-III: Valuation of Securities

Valuation of Bonds: Bond VS Debenture- Classification of Bonds – Time Value Concept – Methods of Bond Return and Valuation- Bond Value Theorems – Convexity – Immunisation – Valuation of Equity: Return on Equity – Various Model of Equity Valuation.

UNIT-5: Portfolio Management

Portfolio Management: Definition – Selection of portfolio – Markowitz model – Sharp Index Model – Capital Asset Pricing Theory and Arbitrage Pricing Model – Portfolio Evaluation – Portfolio Revision.

SUBJECT TITLE: DERIVATIVES MANAGEMENT

OBJECTIVE:

To give an in-depth knowledge of the functioning of derivatives securities market.

COURSE OUTCOME Students will be able to analyze the risks in different financial markets. Acquire ability to selection of various options and then can apply them to specific markets. Student will be able to strategically manage the financial derivatives.

UNIT I INTRODUCTION

Derivatives – Definition – Types – Forward Contracts – Futures Contracts – Options – Swaps – Differences between Cash and Future Markets – Types of Traders – OTC - Derivative Market - Economic functions of derivative market.

UNIT II FUTURES CONTRACT

Specifications of Futures Contract - Margin Requirements – Contract Size - Market Quotes - Hedging using Futures – Types of Futures Contracts – Delivery Options – Relationship between Future Prices, Forward Prices and Spot Prices.

UNIT III OPTIONS

Definition – Exchange Traded Options, OTC Options – Option Pricing Models – Call and Put Options – American and European Options – Option payoff, options on Securities, Stock Indices, Currencies and Futures .

UNIT IV SWAPS & Forward Contract

Definition of SWAP – Types of SWAP - Interest Rate SWAP – Currency SWAP – Role of Financial Intermediary – Valuation of Interest Rate SWAPs and Currency SWAPs– Forward Contract– Forward Pricing

UNIT V DERIVATIVES IN INDIA

Evolution of Derivatives Market in India – Regulations & Framework – Derivative Trading – Commodity Futures - Determination of the Fair Value of Futures and Options Prices, Interactions between Spot Equity Trading and Trading in Derivatives. Index Options and Futures, Constructing an Index.

Employability

SUBJECT TITLE: PROJECT FINANCE

OBJECTIVE:

The objective of the course is to provide to the students a specialized knowledge of the techniques of evaluating proposed investments and to acquaint them with the problems encountered in the decisional process pertaining to capital investments of the project.

COURSE OUTCOME

Understand project finance, process, structures, participants and their interests Discuss types of project finance and cooperation Value projects and forecast cash flows with detailed sensitivity analysis Analyse potential financing opportunities for project finance and evaluate forms of financing

UNIT I:

Basics of Project Finance: Characteristic and major elements of Projects, Project Planning and Control, - Macroeconomic assumptions - project costs and funding

UNIT II:

Sources of Finance: Sources of finance for projects - Financial Instruments - Performance indicators for projects - project cash flows - Appraisal and validity of financing projects - Financial Engineering

UNIT III:

Project Risk Management: Project Risk - Identification - Types of Project Risks - Risk Analysis and Transfer - understanding risk measurement techniques.

EMPLOYABILITY

UNIT IV:

Contract Management: Introduction - Preparation of Tender - Initial evaluation of Tender - Preparation of promoter's bids - project conditions - Incentives and Penalties - Legal Aspects and agreements.

UNIT V:

Project feasibility analysis: capital budgeting - project evaluation - project planning - Tools used for analyzing the feasibility of a project - project appraisal process - CPM and PERT.

OBJECTIVE:

To give the students an overall view of the international financial system – instruments and markets.

COURSE OUTCOME Students shall have a fair understanding of the international financial tactics including the international trade, international investment scenario and various kinds of exposures. Students will be aware of the different kinds of foreign exchange management techniques including hedging, currency arbitrage, etc. They will be in a position to manage multinational working capital in an efficient and effective manner.

Students will also understand & manage the risks that MNCs have to deal with.

Unit I

International Financial Management: An overview, Importance, nature and scope, International Business Methods, Recent changes and challenges in IFM - History of Global Monetary Systems - Evolution and practices in Foreign Exchange Markets - International Financial Institutions

Unit II

Fundamentals of Foreign Exchange – Parity theory and conditions – Factors affecting determination of Exchange rate – Various exchange rate types.

Unit III

Exposure and Risk Management - hedging – speculation – arbitrage - internal and external techniques of hedging – derivatives – meaning – significance – types.

Unit IV

Regulatory Framework for International Finance - Short term financial management in a global set-up – treasury functions – International Taxation – Double Taxation Avoidance Agreement

Unit V

Global capital Markets: Issues, investors, intermediaries. Disintermediation, Deregulation, Securitization, Globalization. Various methods of raising resources by borrowers in International markets. Types

Bonds, Floating Rate Notes (FRNs), Deep Discount Bonds, Zero Coupon Bonds, Dual Currency Bonds, Equity related Bonds. Procedure for Bonds Issues.

Skill development

COURSECODE	20260EC38			3	0	0	3

SUBJECT TITLE: INSURANCE AND RISK MANAGEMENT

OBJECTIVE:

To provide the basics of insurance contracts and to explain the various types of insurance policies.

COURSE OUTCOME

Evaluate the growth and Development of Insurance Business. • Understand the working and functioning of the Insurance Sector. • Study the inter-relationship between Insurance & Risk Management. • Analyze the Role of Insurance Business Intermediaries. • Obtain an overview of Regulatory Framework of Insurance Sector

UNIT-I: Introduction to Insurance:

Insurance- Principles of Insurance- Insurance Contracts- Objectives of Insurance Contracts- Elements of a valid contract- Characteristics of Insurance Contracts. benefits and cost of insurance system

UNIT-II: Types of Insurance:

Classification of Insurance- Life Insurance - Principles - Products - General Insurance – Principles of general insurance – General Insurance Products (Fire, Motor, Health). Insurance Pricing – Insurance Market & Regulation – Solvency regulation.

UNIT- III Risk Management:

Risk - Types of Risk – Objectives of risk management – Sources of risk – Risk Identification – Measurement of risk. Understanding the cost of risk- the evolution of enterprise risk management.

UNIT-IV: Risk Management Techniques:

Risk Avoidance – Loss Control – Risk retention – risk transfer – Value of risk Management – Pooling and diversification of risk - Options – Forward contracts – Future contracts – SWAPS – Hedging – Optimal hedges for the real world.

Skill development

UNIT V Insurance as a Risk Management Technique

Insurance Principles – Policies – Insurance Cost & Fair Pricing – Expected claim costs – Contractual provisions that limit Insurance Coverage.

SUGGESTED READINGS:

COURSECODE		20260EC39		3	0	0	3

SUBJECT TITLE: CORPORATE FINANCE

OBJECTIVE:

Student will acquire Nuances involved in short term corporate financing, Good ethical practices

COURSE OUTCOME -Students are able to calculate the cost of capital, to analyze empirical data that determines risk factors; to build long-term and short-term financial models, describing the company's growth; to understand the principles of the credit policy of the company, the relationship of long-term and short-term decisions and their impact on the company's value; to perform the company's valuation based on different approaches.

UNIT I INDUSTRIAL FINANCE

Indian Capital Market– Basic problem of Industrial Finance in India. Equity – Debenture financing – Guidelines from SEBI, advantages and disadvantages and cost of various sources of Finance - Finance from international sources, financing of exports–role of EXIM bank and commercial banks– Finance for rehabilitation of sick units.

UNIT II SHORT TERM-WORKING CAPITAL FINANCE

Estimating working capital requirements – Approach adopted by Commercial banks, commercial paper- Public deposits and intercorporate investments.

UNIT III ADVANCED FINANCIAL MANAGEMENT

Appraisal of Risky Investments, certainty equivalent of cash flows and risk adjusted discount rate, risk analysis in the context of DCF methods using Probability information, nature of cash flows, Sensitivity analysis; Simulation and investment decision, Decision tree approach in investment decisions.

Skill development

UNIT IV FINANCING DECISION

Simulation and financing decision -cash inadequacy and cash insolvency-determining the probability of cash insolvency-Financing decision in the Context of option pricing model and agency costs-Inter-dependence of investment-financing and Dividend decisions.

UNIT V CORPORATE GOVERNANCE

Corporate Governance- SEBI Guidelines- Corporate Disasters and Ethics- Corporate Social Responsibility- Stakeholders and Ethics- Ethics, Managers and Professionalism.

TEXTBOOKS

COURSE CODE		20260EC42		3	0	0	3

SUBJECT TITLE: MICROFINANCE

Objectives: To enable the student to understand the principles, practices and application in Micro Finance.

COURSE OUTCOME.

The participants would get a good understanding on the functioning of the various Micro finance models which are existing in India as well as abroad.

It seeks to develop an understanding about the MFIs and their changing role in developing the sector and how Micro Finance is being marketed in the economy.

UNIT I Introduction: Evolution: Impact and Importance: Micro Financial Services: Steps Initiated in Development of Microfinance

UNIT II Role of Regulatory body in Micro finance: Rural Credit system: Self Help groups (SHG): What is SHG: Features of SHG: Objectivity of SHG: Role of SHG in Micro finance: Self Help group promoting institutions (SHPI): Formation of SHG: Credit Linkage

UNIT III Micro Finance Services: Weaker Sections: SHG-Bank Linkage: Banks and Financial Intermediaries: SHG-Thrift, credit, and Other Financial Services

Skill development

UNIT IV Formation and development of Micro Services. Micro Finance Institutions: Role of MFI in developing Micro Finance: Enhancing Institutional Finance

UNIT V Micro Finance and Rural Development: Micro Credit Institutions: Non Government Organization (NGO). Prospects of Micro Finance: RBI Role in Regulating: Bank's Role in Micro Finance: Growth of Micro Finance: Development of Micro Finance: Credit Plans: Credit Schemes: social Banking.

COURSECODE		20260EC43		3	0	0	3

SUBJECT TITLE: STRATEGIC FINANCIAL MANAGEMENT

Objectives: To equip the students with necessary strategic knowledge and skills received to evaluate discussions or capital restructuring, mergers and acquisitions.

COURSE OUTCOME

Learners will recognize the current market scenario and upgrade the skills and knowledge of long-term sustainability. Learners will absorb changing scenario in Banking Sector and provide guidance towards choosing banking as a career option and also study made on financial management in banking sector. Learners will realize the contemporary issues related to financial management.

UNIT I Sale of existing assets and making discussions on complex investment opportunities and managing risk- Financial planning- Analyzing Financial Performance – Approaches to Financial Planning – Short-term Financial Planning

UNIT II Strategic Alliances- Ownership Restructuring- Leveraged Buyouts- Sell Offs- Leveraged Recapitalizations- Distress Restructuring- Merges & Acquisitions- Financial Frame Work- Merger as a Capital Budgeting Decision- Legal and Tax Aspects- Post Merger Integration Issue,

UNIT III Acquisition/ Takeover Codes- Techniques – Defensive Strategies- Cross Border Deals

Employability

UNIT IV Corporate Sickness- The Magnitude- Different interpretation of Sickness- Causes- Turnaround- Turnaround Types- Basic Approaches- Surgical Vs. Human – Phases in Turnaround Management-

UNIT V Strategy and Cost Management- Strategy Formulation and Cost System Design- Alternate Strategies- Objectives of Cost Management Systems- Broken Cost System- Causes and Remedies- Cost of Quality- Activity Based Costing principles- Target Costing.

COURSECODE		20260EC44		3	0	0	3

SUBJECT TITLE: MERCHANT BANKING AND FINANCIAL SERVICES

OBJECTIVES: To enable student to Understand the modes of issuing securities, Acquire and financial evaluation technique of leasing and hire purchase.

COURSE OUTCOME

To impart knowledge regarding the components of Indian Financial System. • To provide in depth understanding of different avenues of financial system viz. capital markets, banking, insurance, mutual funds & other related services. • To enable the students to understand the role & functioning of regulatory bodies in financial sector

UNIT I MERCHANT BANKING

Introduction – An Over view of Indian Financial System – Merchant Banking in India – Recent Developments and Challenges ahead – Institutional Structure – Functions of Merchant Bank – Legal and Regulatory Framework – Relevant Provisions of Companies Act - SERA - SEBI guidelines - FEMA, etc. - Relation with Stock Exchanges and OTCEI.

UNIT II ISSUE MANAGEMENT

Role of Merchant Banker in Appraisal of Projects, Designing Capital Structure and Instruments – Issue Pricing – Book Building – Preparation of Prospectus Selection of Bankers, Advertising Consultants, etc. - Role of Registrars – Bankers to the Issue, Underwriters, and Brokers. – Offer for Sale – Green Shoe Option – E-IPO, Private Placement – Bought out Deals – Placement with FIs, MFs, FIIs, etc. Off - Shore Issues. – Issue Marketing – Advertising Strategies – NRIMarketing – Post Issue Activities.

UNIT III OTHER FEE BASED SERVICES

Mergers and Acquisitions – Portfolio Management Services – Credit Syndication – Credit Rating – Mutual Funds - Business Valuation.

UNIT IV FUND BASED FINANCIAL SERVICES

Leasing and Hire Purchasing – Basics of Leasing and Hire purchasing – Financial Evaluation.

EMPLOYABILITY

UNIT V OTHER FUND BASED FINANCIAL SERVICES

Consumer Credit – Credit Cards – Real Estate Financing – Bills Discounting – factoring and Forfeiting – Venture Capital.

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE	20260ED33			3	0	0	3

SUBJECTTITLE:PROJECTMANAGEMENTO

OBJECTIVE:

This course focuses on project management methodology that will increase the ability of students to initiate and manage projects more efficiently and effectively. Also they will learn key project management phases through an innovative model.

COURSE OUTCOME

Assumes responsibility as a professional practitioner of project management, applying PM principles and practices while maintaining high standards of practice, making ethical judgments and decisions in a respectful, and sustaining professional standing through a commitment to life-long learning

UNIT I INTRODUCTION TO PROJECT MANAGEMENT

Project Management – Definition – Goal –

Lifecycles. Project Selection Methods. Project Portfolio Process – Project Formulation. Project Manager – Roles – Responsibilities and Selection – Project Teams.

UNIT II PLANNING AND BUDGETING

The Planning Process – Work Break down Structure – Role of Multidisciplinary teams.

Budget the Project –

Methods. Cost Estimating and Improvement. Budget uncertainty and risk management.

UNIT III SCHEDULING & RESOURCE ALLOCATION

PERT & CPM Networks - Crashing – Project Uncertainty and Risk Management – Simulation –

Gantt Charts – Expediting a project – Resource loading and leveling. Allocating scarce resources

– Goldratt's Critical Chain.

UNIT IV CONTROL AND COMPLETION

The Plan-Monitor-Control cycle – Data Collecting and reporting – Project Control –

Designing the control system. Project Evaluation, Auditing and Termination.

UNIT V PROJECT ORGANISATION & CONFLICT MANAGEMENT

Project Management Information System: Computer based tools, features of PMIS, using project management software, (MS Projects). Project Evaluation, Reporting & Termination:

Project reviews & reporting, closing the contract.

SUGGESTED READINGS:

1. Clifford Gray and Erik Larson, Project Management, Tata McGraw Hill Edition, 2005.

2. John M. Nicholas, Project Management for Business and Technology - Principles and

Practice, Second Edition, Pearson Education, 2006.

SUBJECT TITLE: PLANNING & CONTROL OF OPERATIONS

OBJECTIVE:

This course is designed to acquaint the student with the methods of planning and control for Operations. It helps to identify and discuss forecasting models in the qualitative and quantitative areas.

COURSE OUTCOME

Identify the elements of operations management and various transformation processes to enhance productivity and competitiveness. Analyze and evaluate various facility alternatives and their capacity decisions, develop a balanced line of production & scheduling and sequencing techniques in operation environments. Develop aggregate capacity plans and MPS in operation environments. Plan and implement suitable materials handling principles and practices in the operations. Plan and implement suitable quality control measures in Quality Circles to TQM.

UNIT-I

Planning & Control of Operations: Need, Functions - Routing, Scheduling, shop loading and dispatch, follow up. Relations with other departments, Routing-Process layout indicating flow Chart of material from machine to machine. Dispatch in production control-documentation.

UNIT-II

Demand Forecasting: Forecasting as a planning tool, Why do we forecast, Forecasting time horizon, Design of forecasting systems, Developing the logic of forecasting, Sources of data, Models for forecasting, Extrapolative methods using time series, Causal methods of forecasting, Accuracy of forecasts, Using the forecasting system.

UNIT-III

Aggregate Production Planning: Planning Hierarchies in operations, Aggregate Production planning, Need for Aggregate Production planning, Alternatives for managing demand, Alternatives for managing supply, Basic strategies for aggregate production planning, Aggregate production planning methods, Master Production Scheduling.

UNIT-IV

Resources Planning: Dependent Demand Attributes, Planning a framework - the basic building blocks: Multiple levels in products, Product Structure, The Bill of Materials, Time phasing of the requirements, Determining the Lot Size, Incorporating Lead time information, Establishing the planning premises. MRP Logic, Using the MRP system, Capacity Requirements planning, Manufacturing Resources Planning (MRP II), Enterprise Resource Planning (ERP), Resource Planning in services.

UNIT-V

Scheduling of Operations: Need for Scheduling, Scheduling - Alternative terms, Loading of machines, Scheduling Context, Scheduling of Flow Shops, Scheduling of Job Shops, Input-Output Control, Operational Control Issues in Mass production systems.

SUGGESTED READINGS:

1. Operations Management: Theory and Practice by B Mahadevan, Pearson, 2nd Edition.
2. Operations Management by Terry Hill, Palgrave, 2nd Edition
3. The fundamentals of Production Planning and Control by Stephen Chapman, Pearson, 1st Ed.

COURSE CODE	20260ED35			3	0	0	3

SUBJECT TITLE: TECHNOLOGY MANAGEMENT

OBJECTIVE:

This course helps to understand the dynamics of technological innovation and be familiar with how to formulate technology strategies.

COURSE OUTCOME- Apply Measurement And Analytical Tools To Improve Process Systems
 Apply Measurement And Analytical Tools To Increase The Quality Of Products And/Or Services
 Provide Leadership, Guidance, And Assistance To Coworkers When Implementing Changes
 Understand The Financial And Legal Workings Of Organizations.

UNIT-I

Introduction

Definition, Characteristics of Technology, Role and Importance of Management of Technology - Technological Environment - Levels of Environment - Changes in the Technological Environment, Major Developments in Technological Environment.

UNIT-II

Innovation Management: Concept of Innovation; invention and creativity, Drivers and process of innovation - Classification of innovation management of innovation. Technology Evolution -

Technology progression, Technology change agents, Evolutionary characteristics of technological change - Drivers of Change in Value Chain, Modes of Value Chain Configuration, Value Chain Configuration and Organizational Characteristics

UNIT-III

Technological Forecasting: Meaning of Technology forecasting, uses of Technology forecasting, Technology forecasting techniques: Exploratory and Normative technique; Process and application of techniques like Delphi, Growth Curves, S- curve, Pearl Curve, Gompertz curve :Relevance Tree, Morphological Analysis, Mission Flow Diagram

UNIT- IV

Technology and Competition

Competitive Consequences of Technological Change, Technological Characteristics of Competitive Domains, Dynamics of Change in Competitive Domains - Technology Intelligence - Technology Strategy

UNIT-V

Technology and Organizational Issues: Technological change and Industrial Relations, Technology Assessment and Environmental Impact Analysis Integration of People and Technology, Organizational and Psychological Factors, Organizational Structure.

SUGGESTED READINGS:**1. Managing**

Technology and Innovation for Competitive Advantage, V.K. Narayanan, Pearson Education.

2. Managing Technology – The Strategic View, Lowell W. Steele, McGraw Hill.

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSE CODE	20260ED36			3	0	0	3

SUBJECT TITLE: LOGISTICS MANAGEMENT**OBJECTIVE:**

The objective of this course is to get the exposure of logistics management and to understand the relationship between the logistics and packaging.

COURSE OUTCOME

learn logistics concepts and basic activities

Know the history of Logistics.

Define basic logistics activities.

Associate logistics activities with other business activities.

UNIT-I: Introduction to Logistics and Competitive Strategy

Definition and Scope of Logistics – Functions and Objectives – Customer Value Chain – Service Phases and Attributes – Value Added Logistics Services – Role of Logistics in Competitive Strategy.

UNIT- II: Warehousing and Materials Handling

Warehousing Functions – Types – Site Selection – Decision Model – Layout Design – Costing – Virtual Warehouse. Material Handling equipment and Systems – Role of Material Handling in Logistics. Material Storage Systems – Principles – Benefits – Methods. Automated Material Handling.

UNIT-III: Performance Measurement and Costs

Performance Measurement –

Need, System, Levels and Dimensions. Internal and External Performance Measurement. Logistics Audit. Total Logistics Cost – Concept, Accounting Methods. Cost – Identification, Time Frame and Formatting.

EMPLOYABILITY**UNIT- IV: Transportation and Packaging**

Transportation System – Evolution, Infrastructure and Networks. Freight Management – Route Planning – Containerization. Modal Characteristics, Inter-Modal Operators and Transport Economies. Packaging – Design considerations, Material and Cost. Packaging as Unitization – Consumer and Industrial Packaging.

UNIT- V: Current Trends

Logistics Information Systems – Need, Characteristics and Design. E-Logistics – Structure and

Operation. Logistics Resource Management. Automatic Identification Technologies. Warehouse Simulation. Reverse Logistics – Scope, Design and as a Competitive Tool. Global Logistics – Operational and Strategic Issues. Strategic Logistics Planning.

SUGGESTED READINGS:

1. Douglas M Lambert et al, Fundamentals of Logistic Management, McGraw Hill, 1997.
2. Sople Vinod V, Logistics Management – The Supply Chain Imperative, Pearson Education, Indian Reprint 2004.

SUBJECT TITLE: SUPPLY CHAIN MANAGEMENT

COURSE OUTCOME

Develop a sound understanding of the important role of supply chain management in today’s business environment. Become familiar with current supply chain management trends Understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations

OBJECTIVE:

The objective of this course is to get the exposure of supply chain management and to understand the relationship between the procurement and supply chain management.

UNIT- I: Introduction

Supply Chain – Fundamentals, Importance, Decision Phases, Process View. Supplier – Manufacturer – Customer Chain. Drivers of Supply Chain Performance. Structuring Supply Chain Drivers. Overview of Supply Chain Models and Modeling Systems.

UNIT-II: Strategic Sourcing

In-sourcing and Out-sourcing – Types of Purchasing Strategies. Supplier Evaluation, Selection and Measurement. Supplier Quality Management. Creating a world class Supply Base. World Wide Sourcing.

UNIT- III: Supply Chain Network

Distribution Network Design – Role, Factors Influencing, Options, Value Addition. Models for Facility Location and Capacity Location. Impact of uncertainty on Network Design. Network Design Decisions Using Decision Trees. Distribution Center Location Models. Supply Chain Network Optimization Models.

EMPLOYABILITY

UNIT-IV:PlanningDemand,InventoryAndSupply

Overview of Demand Forecasting in the Supply Chain. Aggregate Planning in the Supply Chain. Managing Predictable Variability. Managing Supply Chain Cycle Inventory. Uncertainty in the Supply Chain – Safety Inventory. Determination of Optimal Level of Product Availability. Coordination in the Supply Chain.

UNIT- V:CurrentTrends

E-Business – Framework and Role of Supply Chain in e-Business and B2B Practices. Supply

ChainITFramework.InternalSupplychainmanagement.FundamentalsofTransactionManagement. Supply Chain in IT Practice. Supplier Relationship Management. InformationSystemsDevelopment.PackagesinSupplyChain– eSRM,eLRM,eSCM.SupplyBaseManagement.

SUBJECT TITLE: BUSINESS PROCESS REENGINEERING

OBJECTIVE:

The objectives of this course are to acquaint the student with understanding process orientation in business management and develop skills and abilities in re-engineering and business process for optimum performance.

COURSE OUTCOME

Understanding various BPR methodologies and their applications. Understanding the critical success factors for implementing BPR. Appreciate various alternative techniques of BPR – TQM, Work Study, Benchmarking and their applications. Basic understanding of ISO standard 9001:2015, IACBE and their applications in education and industry. Analyze and integrate issues and challenges of applying tools/techniques of Information Technology for BPR and learn to apply them in the industry.

UNIT-I

Introduction to Business Process Reengineering (BPR): Definition of business process-History, Basics, Definition, Emergence of BPR, The need for reengineering, Benefits of BPR, Role of leader & manager, Breakthrough reengineering model, BPR guiding principles, Business process reengineering & performance improvement, Key targets of BPR.

UNIT-II

BPR in Manufacturing Industry: Introduction, Enablers of BPR in manufacturing Agile Manufacturing, Lean Manufacturing, JIT, Collaborative Manufacturing, Intelligent Manufacturing, Production Planning, Product design & development.

UNIT-III

BPR & Information Technology: Introduction, Relationship between BPR & Information Technology, Role of Information Technology in reengineering, Role of IT in BPR (with practical examples), Criticality of IT in business process, BPR tools & techniques, Enablers of process reengineering, Tools to support BPR, Future role of IT in reengineering.

UNIT-IV

BPR implementation methodology: Reasons of implementation of BPR, Necessary attributes, BPR team characteristics, BPR methodology, Different phases of BPR, BPR model, Common steps to be taken for BPR implementation, Steps of process reengineering, Organizational redesign using BPR, Impact of BPR on organizational performance, Performance measures of BPR, Business process reengineering project management,

EMPLOYABILITY

UNIT-V

Success factors and Managing barriers of BPR: Reengineering success factors, Critical success factors of BPR, Reasons for BPR project failure & success, Reengineering drives cause many changes- Potential project implementation success, Risks associated with business process reengineering projects, Business process reengineering implementation barriers, Information Technology barriers, A framework for barrier management.

SUGGESTED READINGS:

1. Business Process Reengineering by Radhakrishnan, Balasubramanian, PHI, Eastern Economy Edition, 2008.
2. Business Process Reengineering by Jayaraman, Ganesh Natrajan and Rangaramanujan, TMGH
3. Business Process Reengineering and Change Management by Dey, Biztantra

COURSE CODE	20260ED39			3	0	0	3

SUBJECT TITLE: MATERIALS MANAGEMENT

OBJECTIVE:

To understand the working of a materials management department, Aspects of Stores management, Warehousing management and material requirement planning.

COURSE OUTCOME

Identifying the scope for integrating materials management function over the logistics and supply chain operations. Integrate the organization wide materials requirement to develop an overall plan (MRP). Identify, study, compare, and evaluate alternatives, select and relate with a good supplier. Apply various purchasing method and inventory controlling techniques into practice. Analyzing the materials in storage, handling, packaging, shipping distributing and standardizing.

UNIT – I Dynamics of material management , Level of material management, Scope, Objective, Importance–Integrated material managements–System approach to material managements

UNIT–II Warehousing management, purchasing cycle, material handling

UNIT–

III Vendor rating, contract management. Legal aspects of buying spare parts management, material requirement planning, .

EMPLOYABILITY

UNIT – IV Capacity management, Forecasting, Product & Processes, Just-in-time manufacturing, TQM, Incoming, Material quality.

UNIT–V Cost-

effectiveness & performance management, material management, Information system, stores management, material management

SUBJECTTITLE:MAINTENANCEMANAGEMENT

OBJECTIVE:

Toenablethestudentstounderstandtheprinciples,practices andapplicationsinMaintenanceManagement.

COURSE OUTCOME

To present modern basic maintenance theory, especially related to industrial challenges within terminnology, maintenance management, concepts, indicators, CMMS, modern analyses within maintenance and maintenance optimization.

UNIT – I Objectives, Importance of Maintenance- Roles and responsibilities of maintenance professionals

UNIT–II Safety management-Productivity and maintenance. Scheduled maintenance–preventive maintenance–predictive maintenance–planned maintenance–corrective maintenance routine maintenance–inspection, lubrication, calibration and maintenance quality.

UNIT–III Typical causes of BDM-disadvantages- maintenance as a perspective of asset EMPLOYABILITY

management- Total Productive Management –Contract maintenance – Breakdown history and other maintenance records

UNIT – IV Technical and financial factors for replacement – Methods of replacement analysis salvaging spare parts procurement

UNIT–V warehousing and logistics management. Emerging trends in maintenance management – Global scenario-Indian experience – need for maintenance training – Managing obsolescence.

COURSE CODE	20260ED43			3	0	0	3

SUBJECT TITLE: SERVICE OPERATIONS MANAGEMENT

OBJECTIVE:
To help understand how service performance can be improved by studying service operations management

COURSE OUTCOME
Implement statistical methods and management techniques to monitor, control and improve service processes of an organisation. Propose solutions with which a service organisation can improve its operations and achieve sustainable competitive advantage.

UNIT I INTRODUCTION Services – Importance, role in economy, service sector – growth; Nature of services – Service classification , Service Package, distinctive characteristics , open-systems view; Service Strategy – Strategic service vision, competitive environment, generic strategies, winning customers; Role of information technology; stages in service firm competitiveness; Internet strategies – Environmental strategies.

UNIT II SERVICE DESIGN New Service Development – Design elements – Service Blue-printing - process structure – generic approaches – Value to customer; Retail design strategies – store size – Network configuration ; Managing Service Experience – experience economy, key dimensions; Vehicle Routing and Scheduling

UNIT III SERVICE QUALITY Service Quality-Dimensions, Service Quality Gap Model; Measuring Service Quality – SERVQUAL- Walk-through Audit; Quality service by design - Service Recovery - Service Guarantees; Service Encounter – triad, creating service orientation, service profit chain; Front-office Back-office Interface – service decoupling.

UNIT IV SERVICE FACILITY Service gaps – behaviour – environmental dimensions – framework; Facility design – nature, objectives, process analysis – process flow diagram, process steps, simulation; Service facility layout; Service Facility Location – considerations, facility location techniques – metropolitan metric, Euclidean, centre of gravity, retail outlet location, location set covering problem

UNIT V MANAGING CAPACITY AND DEMAND Managing Demand – strategies; Managing capacity – basic strategies, supply management tactics, operations planning and control; Yield management; Inventory Management in Services – Retail Discounting Model, Newsvendor Model; Managing Waiting Lines – Queuing systems, psychology of waiting; Managing for growth – expansion strategies, franchising, globalization.

COURSE CODE		20260ED44		3	0	0	3

SUBJECT TITLE: PRODUCT DESIGN

OBJECTIVE:

To help understand the application of structured methods to develop a product. Student gains knowledge on how a product is designed based on the needs of a customer.

COURSE OUTCOME

- Use the Product Design and Development Process, as a means to manage the development of an idea from concept through to production.
- Employ research and analysis methodologies as it pertains to the product design process, meaning, and user experience.

- **Apply creative process techniques in synthesizing information, problem-solving and critical thinking.**

UNIT I INTRODUCTION: Defining Product, Types of products. Product development – characteristics, duration and cost, challenges. Development Process: Generic Process- Adapting to product types. Evaluation – decay curve – cost expenditure curve.

UNIT II PRODUCT PLANNING: Product Planning Process – Steps. Opportunity identification – breakdown structure- product development charter. Product Life Cycle. Technology Life Cycle - Understanding Customer Needs - Disruptive Technologies- Product Specification - Concept Generation – Activity-Steps-Techniques.

UNIT III PRODUCT CONCEPT Selection – Importance, Methodology, concept Screening, Concept Scoring. Concept Testing. Product Architecture- Definition, Modularity, implication, Establishment, Delayed Differentiation, Platform Planning.

UNIT IV INDUSTRIAL DESIGN AND DESIGN TOOLS Industrial Design, Design for Manufacturing- Value Engineering- Ergonomics- Prototyping- Robust Design- Design for X-failure rate curve- product use testing- Collaborative Product development- Product development economics- scoring model- financial analysis.

UNIT V PATENTS Defining Intellectual Property and Patents, Patent Searches and Application, Patent Ownership and Transfer, Patent Infringement, New Developments and International Patent Law.

SKILL DEVELOPMENT

TEXTBOOKS

1. Karl T. Ulrich, Steven D. Eppinger, Anita Goyal Product Design and Development, Tata McGraw-Hill, Fourth Edition, reprint 2009.

LOGISTICS AND SUPPLY CHAIN MANA GEMENT

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		20260EE33		3	0	0	3

SUBJECT TITLE: PURCHASING AND PROCUREMENT MANAGEMENT

OBJECTIVE:

The objective of this module is to provide the students with a good knowledge on purchase function of the organization, material planning, source selection and negotiation techniques.

COURSE OUTCOME

Understand the basic concepts of Purchasing & Supplier Relationship Management. To understand the purchasing integration for competitive advantage Learn the basics of strategic sourcing & it's the issues, challenges & strategies in developing a World Class Supply Base: Supplier Evaluation and Development Understand basics of strategic sourcing process & its application

UNIT I The role of Purchase in business, Objectives, Relationship of purchasing department with Other Departments, Profit Centre Concept, Partnership Sourcing, Network Sourcing, Benchmarking, Buying Decision Models, Purchasing Market Research, Role of Information Technology in Purchasing and the Portfolio of Purchasing Skills.

UNIT II Materials Planning, Materials Codification: Evolution of Codes, Classification, Methodology, Advantages. Standardization: Definition, Specification, Advantages, Techniques. Value Analysis: Concept, Organization for Value Analysis, Application, Techniques, Steps for Value Analysis.

UNIT III Supply Sources: Importance of Source Selection, Vendor Development & Maintenance, Vendor Rating, Competitive Bidding, Selecting the Source. Pricing Principles: Economic Consideration in Determining the Right Price, Price Analysis, Discounts. Cost Analysis: Elements of Affecting Costs, Sources of Cost Data, Direct & Indirect Costs, Target Costing.

UNIT IV Purchasing capital equipment – contract buying, retail buying, engineering and construction contracting, state and institutional purchasing, international buying, negotiations. Purchasing Environment: Changes in Environmental Conditions, Strategic Purchasing Management.

SKILL DEVELOPMENT

UNIT V Negotiation: Objectives, Process, Techniques, Price Negotiation Contract Management. Import Substitution Public Buying Traffic: Transportation Cost, Shipping Terms, Modes of Transportation, Loss and Damage of Freight, Demurrage, Transportation Strategy and Cost reduction.

SUGGESTED READINGS:

1. Dobler & Burt: Purchasing & Supply Management
2. P. Gopala Krishan: Purchasing & Materials Management
3. L.N. Aggarwal & Parag Diwan: Management & Production Systems
4. N.G. Nair: Production & Operations Management

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		20260EE34		3	0	0	3

SUBJECT TITLE: MATERIAL MANAGEMENT

OBJECTIVE:

The aims of the course are to make the students familiar, understand and realize the importance of effective materials management to an organization's survival and profitability. Also, they learn about the major activities of materials management and linkages between one another.

COURSE OUTCOME

Identifying the scope for integrating materials management function over the logistics and supply chain operations. Integrate the organization wide materials requirement to develop an overall plan (MRP). Identify, study, compare, and evaluate alternatives, select and relate with a good supplier. Apply various purchasing method and inventory controlling techniques into practice. Analyzing the materials in storage, handling, packaging, shipping distributing and standardizing.

UNIT I: Material management: objectives, evolution, strategies, functions of material management, organization structures in material management, role of material management techniques in improved material productivity.

UNIT II: Material planning: objectives, material requirement planning, manufacturing resource planning, JIT production planning, strategic material planning, material control: acceptance, sampling, inspection, make or buy decisions, economic analysis, break even analysis, breakeven point theory, whether to add or drop product line, product explosion.

UNIT III: Purchasing: importance of good purchasing system, organization of purchasing functions, purchase policy and procedures, responsibility and limitations, purchasing decisions, purchasing role in new product development, role of purchasing in cost reduction, negotiations and purchase, purchasing research: identification of right sources of supply, vendor rating, standardization, vendor certification plans, vendor and supply reliability, developing new source of supply.

UNIT IV: Cost reduction: cost control v/s cost reduction, price analysis, material cost reduction techniques, variety reduction, cost reduction and value improvement, techniques of cost control, standard costing, cost effectiveness, cost analysis for material management, material flow cost control.

SKILL DEVELOPMENT

UNIT V: Inventory Management: Stages; Selective Control; Demand Forecasting; Lead time; Safety Stock; Fixed Quantity Reorder System; Fixed Period Reorder System; Inventory Valuation. Warehousing and Transportation: Warehouse Location; Transportation; Receiving, Issuing and Store Keeping.

SUGGESTED READINGS:

1. Materials Management, Gopal Krishna & Sudarsan, TMH
2. Materials Management- Procedures, Texts & Cases, A. K. Dutta, Pearson
3. Handbook of Materials Management – Gopal Krishnan – PHI
4. Inventory Control and Management – Waters – Wiley
5. Procurement Principles & Mgt. – Bailey/Farmer/Crocker/Jessop – Pearson

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		20260EE35		3	0	0	3

SUBJECT TITLE: INVENTORY MANAGEMENT

OBJECTIVE:

The objective of this module is to provide the students with a good knowledge on corporate business communication channel, hierarchy and the report writing methodologies.

COURSE OUTCOME

comprehend the dynamics of inventory management's principles, concepts, and techniques as they relate to the entire supply chain (customer demand, distribution, and product transformation processes), 2. understand the methods used by organizations to obtain the right quantities of stock or inventory, 3. familiarize themselves with inventory management practices.

Unit II Inventory – Inventory Management - Inventory Control - Importance & Scope of Inventory Control - Types of Inventory - Costs Associated with Inventory – Organizational setup for inventory management.

Unit II Selective Inventory Control - Economic Order Quantity - Safety Stocks - Inventory Management Systems - Forecasting Techniques - Material Requirement Planning and execution – Ratio Analysis on Inventory - Profit Margin.

Unit III Manufacturing Planning (MRP-II) - Just in Time (JIT) - Work in Process Inventories - Make or Buy Decisions: Concept of outsourcing, Factors influencing Make Or Buy Decisions - Trends in Make Or Buy Decisions in context of core competency.

Unit IV Purpose of Inventory - Goods – Types of Goods - Finished Goods Inventories - General Management of Inventory – Stocks – Types of Stocks – Tracking the Paper Life.

SKILL DEVELOPMENT

Unit V Spare Parts Inventories - Use of Computers in Inventory Management - Evaluation of Performance of Materials Function - Criteria and methodology of evaluation.

SUGGESTED READINGS:

1. Inventory Management: By Bose & D Chandra, 1st edition.
2. Sridhara Bhat, Inventory Management, 2nd edition.
3. Zipkin, Foundations of Inventory Management, McGraw Hill 1st edition.
4. Seetharama L Narasimhan, Dennis W McLeavy, Peter J Billington, Production Planning and Inventory Control, Prentice Hall of India
5. J.R. Tony Arnold, Stephen N Chapman, Introduction to materials management, Prentice Hall of India 3rd edition.

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		20260EE36		3	0	0	3

SUBJECT TITLE: SUPPLY CHAIN MANAGEMENT

OBJECTIVE:

At the end of the subject, the students will be able to analyze an existing supply chain of a company, apply various supply chain management concepts, and improve the supply chain and design an efficient supply chain in alignment with the strategic goals of the company.

COURSE OUTCOME

- Develop a sound understanding of the important role of supply chain management in today's business environment
- Become familiar with current supply chain management trends Understand and apply the current supply chain theories, practices and concepts utilizing case problems and problem-based learning situations
- Learn to use and apply computer-based supply chain optimization tools including the use of selected state of the art supply chain software suites currently used in business

UNIT I The concept of Supply Chain Management - The Supply Chain Revolution - Extended organization - Integrative Management – Responsiveness – Financial Sophistication – Globalization - Digital Business Transformation.

UNIT II Building Blocks of a Supply Chain Network – Performance Measures – Decisions in the Supply Chain World – Models for Supply Chain Decision-making – Economic Order Quantity Model – Reorder Point Model.

UNIT III Supply Chain Process - Supply Chain Planning – Supply Chain Facilities Layout- Capacity Planning – Inventory Optimization – Dynamic Routing and Scheduling.

UNIT IV E-procurement – E-Logistics – Internet Auctions – E-Markets - E-commerce advantages and disadvantages for SCM – EDI – Exchanges, hubs and marketplaces – ERP.

UNIT V Evolution of world class supply chains - Global Supply Chain Integration- Supply Chain Security- International Sourcing.

SKILL DEVELOPMENT

SUGGESTED READINGS:

1. Supply Chain Logistics Management - Bowersox, Closs & Cooper - McGraw-Hill, 2nd Indian ed.
2. World Class Supply Management - Burt, Dobbler, Starling, TMGH, 7th ed.
3. Designing and Managing the supply chain - David Simchi, Levi & Philip Kaminski, McGraw-Hill Companies Inc., 2000.
4. Y. Narahari and S. Biswas. Supply Chain Management: Models and Decision Making.
5. Ram Ganeshan and Terry P. Harrison. An Introduction to Supply Chain Management.

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		20260EE37		3	0	0	3

SUBJECT TITLE: LOGISTICS MANAGEMENT

OBJECTIVE:

The course outlines the historical background of Logistics Management. It is intended to prepare students to acquire knowledge and skills that lead them to fill management and analysis positions that will enable them to focus on the processes and systems of Logistics Management.

COURSE OUTCOME

learn logistics trends

- Know the third, fourth and fifth party logistics.
- Explain the reverse logistics concept.
- Know the relationship between logistics and supply chain.
- Know the global logistic concept.

UNIT I Logistics – Objectives, Components, Significance - The Logistical Value Proposition- The Work Of Logistics-Logistical Operating Arrangements - Supply Chain Synchronization – Logistic fields - The Quality Imperative -Procurement– Manufacturing– Logistics Outsourcing– Logistics Automation.

UNIT II Inventory Functionality and Definitions - Inventory Carrying Cost - Planning Inventory - Managing Uncertainty-Inventory Management Policies-Inventory Management Practices.

UNIT III Strategic Warehousing- Warehousing Operations -Warehousing Ownership Arrangements- Warehouse Decisions.

EMPLOYABILITY

UNIT IV Transport Functionality, Principles and Participants - Transportation Service - Transportation Economic and Pricing-Transport Administration –Documentation.

UNIT V Packaging Perspectives - Packaging For Materials Handling Efficiency – Principles of Material Handling System-Materials Handling Equipments–Safety Issues.

SUGGESTED READINGS:

1. Harrison, A. and R van Hoek (2005). Logistics Management and Strategy (2nd Edition) Prentice Hall.
2. Muller, M. (2003), Essentials of inventory management, American Management Association, NY 10019

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE		20260EE38		3	0	0	3

SUBJECT TITLE: CUSTOM HOUSE PRACTICE AND LEGALITIES

OBJECTIVE:

This subject deals with the business transaction with the Customs and Central Excise for successfully executing an Import or Export transaction. This deal with various rules and regulations and schemes adopted by the Indian Customs as per the directions of the Ministry of Finance and provides an opportunity for the student to get a job opportunity in a CUSTOM HOUSE AGENCY.

COURSE OUTCOME

Explain the concepts in custom clearance in international business with respect to foreign trade CO2. Apply the current custom clearance phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects CO3. Analyse the principle of international business and strategies adopted by firms to for exporting products globally CO4. Integrate concept in custom clearance concepts with functioning of global trade

UNIT I: Role of Customs - Powers of Customs - Custom House Agent - Custom house agents duties - Licensing of Custom House Agents - Restrictions of Custom House Agents - Customs Power to bring a ceiling on the License - Temporary and regular license - Customs Power to Advise fees chargeable by Custom House Agent.

UNIT II: Import Bill Processing - Important Papers for filing Bill of Entry - Apprising - Open Inspection - Payment of Duties - Out of Charge - Clearance of goods - payment of duties - Duty exemption - Bonding of Cargo - Exbonding.

UNIT III: Export Bills - Important papers for filing Shipping Bills - Factory Stuffing - Port or CFS Stuffing - Supervision by Customs - Sealing and print out - Custom officer overtime - Importance of Shipping Bill - Comparison of Shipping Bill with Mate's Receipt and Bills of Lading.

EMPLOYABILITY

UNIT IV: Duties and Obligations - Liabilities of Custom house agents - Custom house agent and Information Technology - ICE GATE and On line filing of Bills - Records to be maintained by Custom House Agents .

UNIT V: Custom House Licensing - Certification and Qualifications to become a Custom House Agent - Rule 8 - G Card - Identity to enter Custom Houses - Power of Customs to cancel the License of a CHA - Draw backs and Duties - Support of CHA to Importers and Exporters.

SUGGESTED READINGS:

1. Handbook of Procedure of Exim Policy 1997-2002.

SUBJECT TITLE: EXPORT TRADE AND DOCUMENTATION

OBJECTIVE:

The objective of this module is to provide the students with a good knowledge on Export trade, types of trades, formalities of trade, legalities of export trade and the documentation process of it.

COURSE OUTCOME

Explain the concepts in trade documentation in international business with respect to foreign trade Apply the current business phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects Analyse the principle of international business and strategies adopted by firms to expand globally Integrate concept in international business concepts with functioning of global trade

Unit I Exporting Preliminary Consideration -Generation of Foreign enquiries, obtaining local quotation & offering to overseas buyers scrutinizing export order, opening L/C by buyers -Export Controls and Licenses -Patent, Trade Mark, Copy Right Registrations -Confidentiality and NDA.

Unit II Export Sales - Selling and Purchasing - Consignment - Leases - Marine and Air Causality Insurances - Export Finance - Forex - Major currencies, Exchange rates, relations & impact - Export costing and pricing & Incoterms -Export License -Import License.

Unit III Export Packaging - Preparation of pre shipment documentation - Methods of Transportation - Country of Origin Marking- Inspection of Export consignment - Export by Post, Road, Air & Sea - Claiming for Export benefits and Duty drawbacks.

EMPLOYABILITY

Unit IV Shipment & Shipping documents - Complicated problems in shipments & negotiation of shipping documentations - Corporate marketing strategies - 100% EOU & Free trade zone - Deemed Export - Isolated Sales Transactions.

Unit V Acts for export/import - Commencement - Customs Formalities - Export Documentation - Export of Services - Export of Excisable Goods - Import Documentation - Clearance - 100% export oriented units - custom house agents - import of different products - import/export incentives - import licenses etc.

SUGGESTED READINGS:

1. Export and Import Procedures and Documentations - Thomas E Johnson and Donna L Bade - 4th Edition.
2. Export Import Procedures - Documentation and Logistics, Publisher: New Age International, Shri C Rama Gopal, Chartered Accountant.
3. Export Import Management, Justin Paul & Rajiv Aserkar.
4. Export Management, PK Khurana

SEM	FOUR	NATURE	ELECTIVE	L	P	T	C
COURSECODE		20260EE42		3	0	0	3

SUBJECT TITLE: QUALITY MANAGEMENT

OBJECTIVE:

The objective of this module is to provide the students with a good knowledge and importance of quality concept, quality culture, quality control and organizations for quality. It also incorporates the Managerial reasoning and analyzing in order to derive an appropriate course of action by focusing quality in products and services.

COURSE OUTCOME

To realize the importance of significance of quality Manage quality improvement teams Identify requirements of quality improvement programs

UNIT I Quality-

Concepts, Role of Quality in Changing Business Conditions, Contribution of Deming, Juran, Philip Crosby, Kaizen and Continuous Improvement, Tradeoff between Quality Costs and Schedules, Quality Costs and its Analysis, Life Cycle Costs, Quality Problems and Causes.

UNIT II Pareto Analysis, Ishikawa Cause and Effect Diagnosis. Quality Control - Control of Quality, quality control techniques, Statistical Process Control, Control Charts, Acceptance Sampling.

UNIT III Strategic Quality Management, Quality Management in Marketing, Quality Management in Designing, Quality Management in Manufacturing, Quality Management in Suppliers, Quality Management System.

EMPLOYABILITY

UNIT IV Total Quality Management - Concepts, Organization for Quality, Developing a Quality Culture. Quality Certification- Quality Assurance, ISO 9000 Series Concepts and Procedure - Six Sigma, Certification Requirements - Standards for Quality.

UNIT V Introduction to Benchmarking - Quality Function Deployment - Quality Circle - Quality Awards.

SUGGESTED READINGS:

1. Juran, J.M. & Gryna, P.M. Quality Planning & Analysis
2. James Evans and William M. Lindsay, The Management and Control of Quality, Thomson Learning, 5th edition, 2002.
3. Narayana V and N. Sreenivasan, Quality Management - Concepts and Tasks, New Age International, 1996.
4. Shailendra Nigam, Total Quality Management, Excel Books, New Delhi.
5. Feigenbaum, A. V. "Total Quality Management, McGraw-Hill, 1991

SUBJECT TITLE: AIRCARGO LOGISTICS MANAGEMENT**OBJECTIVE:**

The objective of this module is to provide the students with a good knowledge of airfreight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales.

COURSE OUTCOME

Understand concept of freight forwarding and air cargo. 2. Understand the process involved in air cargo management. 3. Quote the rates for transfer to air cargo from origin to the destination.

Unit I Introduction to Airline Industry - History - Regulatory Bodies - Navigation systems – Air Transport System – Management – Operations – Civil Aviation - Safety and Security - Aircraft operator's security program – ICAO security manual - Training and awareness – Rescue and fire fighting - Industry regulations - Future of the Industry.

Unit II Introduction to Air Cargo: Aviation and airline terminology - IATA areas - Country – Currency – Airlines - Aircraft lay out - different types of aircraft - aircraft manufacturers - ULD - International Air Routes - Airports - codes – Consortium – Hub & Spoke – Process Flow.

Unit III Standardization in Logistics - Air freight Exports and Imports - Sales & Marketing , Environment, Marketing Research, Strategies and Planning, Audits, Segmentation, SWOT, Marketing Management Control, Consignee controlled cargo – Sales leads – Routing Instructions - Customer service, Future trends..

EMPLOYABILITY

Unit IV Advices – Booking - SLI – Labeling – Volume/ Weight Ratio – Shipment Planning - TACT – Air Cargo Rates and Charges - Cargo operations - Cargo Operations process - Customs clearance.

Unit V Air Freight Forwarding: Air freight Exports and Imports - Special Cargoes - Consolidation - Documentation - Air Way Bill (AWB) – Communication – Handling COD shipments – POD – Conditions of contract - Dangerous (DGR) or Hazardous goods.

SUGGESTED READINGS:

1. Air transport logistics by Simon Taylor (Hampton)
2. Air cargo distributions: a management analysis of its economic and marketing benefits/[by] Paul Jackson and William Brackenridge (Gower Press)
3. Air freight: operations, marketing and economics/(by) Peter S. Smith (Faber)
4. 4th Party Cyber Logistics for Air Cargo by Sung Chi-Chu (Boston: Kluwer Academic Publishers)
5. Accelerated Logistics by Mark Wang (Santa Monica CA)
6. Airports; some elements of design and future development - John Walter Wood
7. Fundamental of air transport management by P.S. Senguttavan.
8. Oxford ATLAS - OXFORD PUBLISHING
9. Aviation century: wings of change - A global survey - Ratandeep Singh - Jain book

SUBJECT TITLE: SHIPPING AND OCEAN FREIGHT LOGISTICS MANAGEMENT

OBJECTIVE:

The objective of this module is to provide the students with a good knowledge of ocean freight operations, services and management that can support them in various business functions and roles such as operations, customer service, account management and sales.

COURSE OUTCOME

Analyse issues in International sourcing and trade and take a strategic view of the global business environment impacting International supply chains Apply analytical techniques to arrive at cost effective solutions to meet SC requirements of efficiency and responsiveness. Decide optimal financing options for International trade Manage International Logistics & Supply chain partners and service providers Deploy knowledge of regional and international trading blocs in solving problems of International logistics

Unit I Shipping industry and business - description of a ship. Uses of a ship or a floating vessel. Classification of ship (route point) (cargo carried) - superstructure - tonnages & cubics - drafts & load lines - flag registration - Different types of cargo. (packaging, utility or value). Trimming - Cleansing - Unitized cargo.

Unit II Stevedoring, Lighterage Services and Security - Port trusts - operational unit - services - Seaports - Vessel Operations - pilotage - Stevedoring - Dock Labour Boards - charges - Automated Container Handling - security at ports and harbors. Role of security agencies - lighterage services.

Unit III Shipping Lines - Hub & Spoke - Process flow - Advices - Booking - Containerization - Containers - Container numbering - Process flow - Shipping Sales - Leads - Quotations - Customer Service.

Unit IV Operations - Volume / Weight calculations - Shipment Planning basics - Preparing & loading containers - Types of container services - FCL - Consolidation - LCL - Advanced Scientific shipment planning - Container de-stuffing.

EMPLOYABILITY

Unit V Documentation - Bill of Lading basics - MBL - HBL - CY - CFS - Advanced learning in Bills of Lading - Sea Way bill - Combined transport - MTO - Multimodal Transport Document (MTD) - Invoicing - Release of cargo - Cross Trade & Documentation - Conditions of Contract - Managing Key Accounts - Trade Lane Development - Consortium.

SUGGESTED READINGS:

1. Carriage of goods by sea / John F. Wilson (Harlow: Longman).
2. Containerization / (by) J.R. Whittaker (Hemisphere; Wiley)
3. The economics of tramp shipping / (by) B.N. Metaxas. (Athlone Press)
4. Shipping and Logistics Management by Yuen Ha Lun, Kee Hung Lai, Tai Chiu Edwin Cheng (Springer)
5. Getting the Goods: Ports, Labor, and the Logistics Revolution by Edna Bonacich and Jake B. Wilson (Cornell University Press)
6. Ocean Freights and Chartering by Cyril Frederick Hardy Cufley (Adlard Coles Nautical)
7. Logistics and Distribution Management by Alan Rushton, Phil Croucher & Peter Baker (CILT)

INTERNATIONALBUSINESS

COURSECODE		20260EF33		3	0	0	3

SUBJECT TITLE: INTERNATIONAL MARKETING

Objectives: To understand the principles & concepts in Marketing, to provide the knowledge of marketing management in the international perspective to develop marketing strategies for the dynamic international markets.

COURSE OUTCOME

- Demonstrate interactive communications skills
- Demonstrate use of information technology
- Obtain an understanding of the globalization context for business
- Apply critical thinking skills to complex business problems
- Be able to use analytic skills in addressing business problems

Unit 1: International Marketing: Scope and Significance of International Marketing, the strategic importance of international marketing, Differences between international and domestic marketing. Need for international trade, trends in foreign trade. International market environment - Business Customs in International Market.

Unit 2: Canalising and targeting international market opportunities: regional market Characteristics, Marketing in transitional economies and third world countries, international market segmentation and targeting. International Market Entry Strategies: Indirect Exporting, Domestic Purchasing, Direct Exporting, Foreign Manufacturing Strategies Without Direct Investment, Foreign Manufacturing Strategies With Direct Investment. Entry Strategies of Indian Firms.

Unit 3: International product management: International product positioning, Product saturation Levels in global Market, International product life cycle, Geographic Expansion Strategic Alternatives. New products in International Marketing, Product and culture, brands in International Market.

EMPLOYABILITY

Unit 4: International Marketing Channels: channels Distribution Structures, Distribution Patterns, Factors effecting Choice of Channels, the Challenges in Managing An international Distribution Strategy Selecting Foreign Country Market intermediaries. The management of physical distribution of goods.

Unit 5: Pricing and Promotion for international Markets: Environmental influences on Pricing Decisions, Grey Market goods, Transfer pricing, Global Pricing Policy Alternatives. Global Advertising and branding, selecting an advertising agency. Personal selling, Sales Promotion, Public Relations and Publicity, Sponsorship Promotion. Export Policy Decisions of a firm, EXIM policy of India. Export costing and pricing, Export procedures and export documentation. Export assistance and incentives in India.

SUBJECT TITLE: CROSSCULTURALMANAGEMENT

Objectives: To provide a thorough understanding of the impact of an international context on management practices based on culture. To explain and evaluate frameworks for guiding cultural and managerial practice in international business.

COURSE OUTCOME

- Develop an in-depth understanding of the nature of societal culture and its multiple dimensions, and enhance their ability to analyze the influence of culture on behaviour, particularly with respect to management;
- Enhance their situational awareness and critical thinking through exposure to many examples of cross-cultural interaction in different cultures, organizations, and management situations;
- Increase their behavioral effectiveness in interactions with people from other cultures;

Unit-1: Introduction Determinants of Culture Facets of culture Level of Culture National Cultural dimensions in the business context The influence of National Culture on business culture. Business Cultures: East and West.

Unit-2: Cultural Dimensions and Dilemmas: Value orientations and Dimensions Reconciling cultural dilemmas Culture and Styles of Management: Management tasks and cultural values.

Unit-3: Culture and Organizations: Culture and corporate structures Culture and Leadership Culture and Strategy Cultural change in Organizations - Culture and marketing Cultural Diversity.

Unit- 4: Culture and Communications: Business communication across cultures Barriers to intercultural communication Negotiating Internationally.

Unit-5: Cross Cultural Team Management: Working with International teams Groups processes during international encounters Conflicts and cultural difference Understanding and dealing with conflicts Developing Intercultural relationships.

EMPLOYABILITY

SUBJECT TITLE: GLOBAL LOGISTICS AND SUPPLY CHAIN MANAGEMENT

Objective: The course provides the analytical framework for understanding the logistic models and supply chain techniques in an international perspective.

COURSE OUTCOME

Analyse issues in International sourcing and trade and take a strategic view of the global business environment impacting International supply chains. Apply analytical techniques to arrive at cost effective solutions to meet SC requirements of efficiency and responsiveness. Decide optimal financing options for International trade Manage International Logistics & Supply chain partners and service providers Deploy knowledge of regional and international trading blocs in solving problems of International logistics

UNIT I Logistics Management: Concepts – Importance – Elements of the logistic System – Marketing and logistic mix – Logistics and marketing interface – Value-chain and production efficiency.

UNIT II Shipping Industry: Types of ships – Shipping systems: linear, Tramp, conference, chartering, Baltic freight exchange – Shipping intermediaries: agent, forwarder, brokers and others – containerization – types of containers – ICDs – CFS – CONCOR.

UNIT III Air Transport: Air transport – Air freight – IATA – Cargo handling – Designing the International Information system – system modules – Distribution and Transportation.

UNIT IV Supply chain: Definition – scope and importance of supply chain – supply chain drivers and metrics - efficient and responsive supply chain - Designing supply chain network: Distribution network – Factor influencing distribution - Transportation decision in supply chain management

UNIT V Forecasting and planning in supply chain management – Pricing in supply chain management - Role of IT in supply chain management - co-ordination in supply chain management.

EMPLOYABILITY

SUBJECT TITLE: INTERNATIONAL TRADE PROCEDURES AND DOCUMENTATION

Objectives: It gives an understanding on the India's trade position in the world and the various trade procedures involved in an international business. It gives an insight to the various documents required for trading.

COURSE OUTCOME

Explain the concepts in trade documentation in international business with respect to foreign trade Apply the current business phenomenon and to evaluate the global business environment in terms of economic, social and legal aspects Analyse the principle of international business and strategies adopted by firms to expand globally Integrate concept in international business concepts with functioning of global trade

UNIT I International Trade: Need and importance of International Trade – Recent Trends in World Trade – Leading players – India's Foreign Trade – Commodity composition and Destination – India's position in World merchandise trade and services – India's Foreign Trade Policy.

UNIT II Export Procedure: Starting an export firm – Selection of an export product – Market selection – Buyer selection - Registration procedure with Sales Tax, Central Excise and various Boards and councils – Exim code number – Elements of export contract – Incoterms – Terms of payment and Letter of Credit.

UNIT III Export Documentation: Types of documents – Transport, Negotiation and Insurance documents.

UNIT IV Export Finance: Sources of Finance - Role of commercial bank, EXIM Bank, ECGC and others – Export promotion Schemes – Insurance for Export – Types – export credit insurance – Risk Management – Types of risks – mitigation methods.

UNIT V Import Procedure and Documentation: Global sourcing – Types of global procurement – Tender – Negotiation – Contract and others – Customs regulations and import clearance formalities – Types of import licenses - Export Promotion Capital Goods Scheme (EPCG) license - Duty exemption scheme – Duty Entitlement Pass Book Scheme (DEPBS) - Import formalities for 100% EOUs and SEZs - Import Risk Management..

EMPLOYABILITY

SUBJECT TITLE: INTERNATIONAL STRATEGIC MANAGEMENT

Objectives: The objective of the course is to familiarize the participants with the concepts, tools and techniques of international strategic management so as to enable them develop analytical and conceptual skills and the ability to look at the totality of situations.

COURSE OUTCOME

Understand the basic concepts and principles of strategic management analyse the internal and external environment of business • Develop and prepare organizational strategies that will be effective for the current business environment • Devise strategic approaches to managing a business successfully in a global context

UNIT I Concept, Characteristics and Dimensions of Strategic Management – Emergence of International Strategic Management (ISM) – Logic and process of Internationalization – Forces necessitating the adoption of ISM concept by MNC's as well as Indian Companies – Corporate global strategy

UNIT II Nature, components and significance of environmental scanning – Corporate capability analysis – Diagnosing industry globalization potential – Building global market participation – Competition in global industries

UNIT III Core competencies – Significance of core competence concept in strategy making – Value Chain Analysis – Significance of value chain analysis in strategy making – Balanced Scorecard to link today's action with tomorrow's goals

EMPLOYABILITY

UNIT IV Setting corporate objectives in MNC's – External and internal forces interacting with corporate objectives – Identifying strategic alternatives – Stability strategy – Growth and diversification strategy – Merger, acquisitions and retrenchment

UNIT V Choice of corporate strategy : CIT, CASCADE and PORTFOLIO MODELS – Formulating generic competitive strategy – Implementing corporate strategy – Strategic control and operational control

SUBJECT TITLE: GLOBAL BUSINESS ETHICS & CORPORATE GOVERNANCE

Objectives: The course is to sensitize the students to issues pertaining to sustainable development and business ethics and enable development and business ethics and enable them to understand the implications of various statutory and policy guidelines concerning corporate governance for actual business decision making.

COURSE OUTCOME

Comprehend the relationship between ethics, morals and values in the workplace.
Analyze and understand various ethical philosophies to explain how they contribute to current management practices. Critically apply understanding of ethics of real-world contexts and gather and analyse information by way of undertaking a research project on a topic relevant to business ethics.

UNIT I Business Ethics – trans-cultural Human Values in Management Education – Relevance of Values in Management – Need for values in Global Change – Indian Perspective – Values for Global managers

UNIT II Ethical Dilemma – Ethical decision making – Ethical Reasoning – Benefits of managing ethics in work place – Organization Ethics Development System - Organizational Culture – Ethics Tools – Code of ethics – Guidelines for developing code of ethics – Value based leadership

UNIT III Work ethics – work culture – Ethical theories – Ethical Values – Environmental ethics – Environmental Management – Environmental Management System – Environmental Laws – Consumer Protection

UNIT IV Corporate Governance – Meaning – Code of Corporate Governance – Audit Committee – Corporate Excellence – Role of Independent Directors – protection of Stakeholders – Corporate Social Responsibility – Changing Role of Corporate Boards with changing times – Corporate Governance for Market Capitalism

EMPLOYABILITY

UNIT V Indian Ethos in Management – Principles – Approaches – Role of Gita – Karma Yoga – Wisdom Management – Quality of Work Life – Strategies for Work Life Balance

SUBJECT TITLE: MANAGEMENT OF INTERNATIONAL DEVELOPMENT ORGANIZATIONS

Objectives: The course is to sensitize the students to issues pertaining to sustainable development and business ethics and enable development and business ethics and enable them to understand the implications of various statutory and policy guidelines concerning corporate governance for actual business decision making.

COURSE OUTCOME

Explain the role of incentives in political behaviour and economic performance. Discuss what stable institutional constellations comprise, how they come about, and under which conditions they perish. Map the links from incentive systems to micro and macro level economic performance. Compare and contrast why certain organisations are better suited to certain types of services and/or environments than others

Unit-1: International Development Organizations (IDO) Nature, Scope and Functions government/Non-government IDOs (UNESCO, UNIDO, DFID, UNAID, IMF, UNDP, DEEP) - IDOs & Specific Development Areas (Health, Education, HIV & AIDS, Disability, Rights and Empowerment, Women Empowerment, Child Rights, Environment, Energy conservation, etc.) - legal and Political factors.

Unit-2: Assistance and funding to IDOs: Prerequisites, Regulations and Formalities to avail funding to IDOs - International aid flows ILO, UNESCO, UNDP, UNESCAP, UN-HABITAT, UNAID, USAID, DFID and other International NGOs.

Unit-3: Evaluation of Performance Based on parameters such as: Economic planning logical Framework - Financial and Economic Analysis - Process of Documentation - Social audit - Monitoring and Evaluation - Accountability - Estimation of Welfare, Poverty Inequality - Economic Growth - Ethical and Social issues

Unit-4: Cooperation and Collaborations: Role of Nations Policies - Role of International Government organizations, NGOs, INGOs, MNCs

EMPLOYABILITY

Unit-5: Functional Strategies: In specific issues pertaining to HR, Marketing Management and Finance - Case studies.

SUBJECT TITLE: MERGERS AND ACQUISITIONS

Objectives: The course is to sensitize the students to issues pertaining to sustainable development and business ethics and enable development and business ethics and enable them to understand the implications of various statutory and policy guidelines concerning corporate governance for actual business decision making.

COURSE OUTCOME

Understanding of different types of mergers and acquisitions and the process involved in executing their deals. Develop an ability to understand factors influencing the valuation of a business and different methods used in Business Valuation.

Basic understanding about regulatory environment of mergers and acquisitions in India.

Unit-I: Introduction to Mergers and Acquisitions: Participants in Mergers and Acquisitions Common Motivations and Impact of Mergers and Acquisitions Challenges towards successful Mergers and Acquisitions. Take over Tactics: Alternative Takeover Tactics Alternative Takeover decision Prebid and Postbid.

Unit II: Regulatory Issues in Mergers: Federal Security Laws Insider Trading Laws Antitrust laws State Regulation effecting Mergers and Acquisitions Regulated industries Environmental Laws Labour and Benefit Law.

Unit III: Developing Business and Acquisition Plans: Planning Based Approach for Mergers and Acquisitions Building Business Plan Building Mergers and Acquisitions plan The Search and Screening Process Negotiations Implementing Post Closing Evaluation.

EMPLOYABILITY

Unit IV: Integration: Mergers, Acquisitions and Business Alliances: The Role of Integration in successful mergers and Acquisitions Integration as a process Integrating Business Alliances.

Unit V: Shared Growth and Shared Control Strategies: Motivations for Business Alliances Critical Success Factors for Business Alliances Strategic and Operational Plans Strategic and Operational Plans Business Alliances Deal Structuring. **Alternative Exit and Restructuring Strategies-** Motivators for Exiting Businesses Divestitures Spinoffs and Splitups - **Equity** Carveouts Voluntary Liquidations.

95					

SUBJECT TITLE: INTERNATIONAL FINANCIAL MANAGEMENT

OBJECTIVE: To give the students an overall view of the international financial system – instruments and markets.

COURSE OUTCOME

Apply appropriate formats and technologies to financial communication. Analyse, apply and evaluate information within the global financial environment of foreign exchange to solve problems and make informed decisions.

Unit I

International Financial Management: An overview, Importance, nature and scope, International Business Methods, Recent changes and challenges in IFM - History of Global Monetary Systems - Evolution and practices in Foreign Exchange Markets - International Financial Institutions

Unit II

Fundamentals of Foreign Exchange – Parity theory and conditions – Factors affecting determination of Exchange rate – Various exchange rate types.

Unit III

Exposure and Risk Management - hedging – speculation – arbitrage - internal and external techniques of hedging – derivatives – meaning – significance – types.

Unit IV

Regulatory Framework for International Finance - Short term financial management in a global set-up – treasury functions – International Taxation – Double Taxation Avoidance Agreement

EMPLOYABILITY

Unit V

Global capital Markets: Issues, investors, intermediaries. Disintermediation, Deregulation, Securitization, Globalization. Various methods of raising resources by borrowers in International markets. Types of Bonds, Floating Rate Notes (FRNs), Deep Discount Bonds, Zero Coupon Bonds, Dual Currency Bonds, Equity related Bonds. Procedure for Bonds Issues.

SUBJECTTITLE:SOFTWAREPROJECTMANAGEMENT

OBJECTIVE:

This course gives an overview of software project management and the project planning. It also covers the Step Wise framework in project planning. It also imparts knowledge to the students on how to evaluate and assess the projects and to find the cost of the project using cost benefit evaluation techniques.

Unit I SYSTEM ANALYSIS & DESIGN

Overview of system analysis & Design : Introduction to different methodologies & Structured system analysis – Details of SDLC approach – E.R. diagrams – DFD concepts – Data dictionary concepts. Structure charts – modular programming – I/O & file design consideration.

Unit II SYSTEM IMPLEMENTATION

System implementation & maintenance: Implementation Strategies – SW / HW selection & procurement – Control & security – issues of designing & implementing on-line systems – data communication requirements – selection issues

Unit III PROJECT DEVELOPMENT & DATABASE DESIGN

Introduction to Database technologies & CASE tools with specific packages – overview of relational model – Database creation – SQL command – Normalization – designing forms & reports – using CASE tools for system analysis & design – case studies – Cost / benefit analysis – project & resource planning – design & development testing & documentation.

Unit IV SOFTWARE PROJECT MANAGEMENT

Software project management: challenges & opportunities – changing technologies & approaches – choice of development of methodologies & technical platforms, project management techniques – monitoring & measurement of progress.

EMPLOYABILITY

Unit V SOFTWARE PROJECT MANAGEMENT

Software project management – elements, cost estimation, manpower planning, Software & Product Metrics – Quality assurance & control – standards & documentation – testing – implementation – training – technology management – quality standards – certificate – handling multiple projects, issues of shared development.

SUBJECT TITLE: RELATIONAL DATABASE MANAGEMENT SYSTEMS

OBJECTIVE:

This course helps the student to understand the roles and technology of databases for the Internet and Worldwide Web. This also helps to understand the roles of database administration in the enterprise and be able to perform common database administration functions.

COURSE OUTCOME

Identify the different project contexts and suggest an appropriate management strategy. Practice the role of professional ethics in successful software development. Identify and describe the key phases of project management. Determine an appropriate project management approach through an evaluation of the business context and scope of the project.

UNIT–I Introduction

Basic concepts of Database – purpose of database - characteristics of database; roles of database manager, database administrator and database users. Database systems, concepts and architecture. Distributed databases-structure and design.

UNIT– II Data Models

Data models, schema and instances. E-R models – E-R diagram. Hierarchical model, relational model, object oriented model, object relational model – comparison of models.

UNIT–III Database system and query languages

Relational model, Languages and system, structure of relational database, modifying the database. Relational commercial language–SQL. Relational database management system ORACLE/DB2.

UNIT-IV Relational Database design

Normalization process – First, second, Third, Fourth normal forms. Mapping relational data to files, data dictionary storage.

EMPLOYABILITY

UNIT–V Database Security

Database integrity, security, concurrency, recovery, client/server architecture.

SUGGESTED READINGS:

1. Leon.A, Database Management Systems, 'BPB publications', Delhi, 1997.

COURSECODE	20260EG36			3	0	0	3

SUBJECT TITLE: E-BUSINESS TECHNOLOGY AND MANAGEMENT

OBJECTIVE:

This course will help the students to recognize and understand ways of using digital technologies to improve intra and inter-organizational processes; and to analyze the impact that electronic commerce is having and will likely have on key sectors of the economy and assess the strategic implications this analysis holds for an organization.

COURSE OUTCOME

- understand the issues around defining ‘technology’, ‘innovation’ and ‘innovation management’
- recognise the diversity of types of innovation, innovators and innovation settings
- understand the nature and extent of technological change and innovation
- critically assess and explain key current issues in our understanding of innovation as a field of study.

UNIT-I

Introduction to E-Business: Overview of E-Business; Information Services; Interpersonal Communication; Shopping Services; Virtual Enterprises. E-Commerce: Origin and Need of E-Commerce; Factors affecting E-Commerce; Business dimension and technological dimension of E-Commerce; Internet as an E-Commerce enabler handling business transactions.

UNIT- II

E-commerce business models. Consumer oriented e-commerce –etailing and models - Marketing on web – advertising, e-mail marketing, e-CRM; Business oriented e-commerce – E-Government, SCM; Web Auctions, Virtual communities and Web portals. Mobile Commerce.

UNIT-III

EDI: EDI application in business development; EDI technology; EDI as a re-engineering tool; Financial EDI. E-Commerce and retailing: On-line retail industry dynamics; On-line mercantile models from customer perspective; Management challenges in on-line retailing

SKILL DEVELOPMENT

UNIT-IV

Handling payments: Electronic Fund Transfer System, Digital Token and notational based electronic payment system, smart card, credit card and emerging financial instruments. E payments - Characteristics of payment of systems, protocols, E-cash, E-check and Micro payment systems. E-Commerce and Banking: changing dynamics in banking industry; Management Issues in online banking.

UNIT-V

Indian Perspective: Benefits of E-Commerce; Drawbacks and limitations of E-Commerce; Major requirements in E-Business; Emerging trends and technologies in E-Business; From E-Commerce to E-Business; Web security: Introduction; Firewalls and transaction security.

SUGGESTED READINGS:

SUBJECT TITLE: DATA WAREHOUSING AND DATA MINING

OBJECTIVE:

This course helps the students to understand the overall architecture of a data warehouse and techniques and methods for data gathering and data pre-processing tools. The different data mining models and techniques will be discussed in this course. Data mining and data warehousing applications will also be explored.

COURSE OUTCOME

Analyzing Dimensionality. Reduction. Feature Subset Selection. Understanding. Discretization and. Analyzing Similarity – Basics and Dissimilarity. Understanding. Association Rules.

Understanding APRIORI. principal, support and.

UNIT-I

Data – Types of Data - Data warehousing concepts– difference between operational system and data warehouse system-Application of data warehouse–Benefit of data warehousing systems-Metadata.

UNIT-II

Data warehousing methodology - Data warehousing process - Data warehouse architecture - Designing data warehouse.

UNIT-III

Data mining concepts – Integration of a Data Mining System with a Data Warehouse - Benefits of data mining systems - Data Mining Functionalities - Interestingness of patterns - Classification of Data Mining Systems.

UNIT-IV

Data mining process - Data mining techniques – Data mining tools - Data mining applications - Issues in data mining.

UNIT-V

Web Data Mining – Association Rule Mining

SKILL DEVELOPMENT

SUGGESTED READINGS:

1. G.K. Gupta, Introduction to Data Mining with Case Studies, Easter Economy Edition, Prentice Hall India, 2006.

SUBJECTTITLE: CLOUDCOMPUTING

COURSEOBJECTIVE: To understand basics of cloud computing for business management

OUTCOMES

- Explain the core concepts of the cloud computing paradigm: how and why this paradigm shift came about, the characteristics, advantages and challenges brought about by the various models and services in cloud computing.
- Apply the fundamental concepts in datacenters to understand the tradeoffs in power, efficiency and cost.
- Identify resource management fundamentals, i.e. resource abstraction, sharing and sandboxing and outline their role in managing infrastructure in cloud computing.
- Analyze various cloud programming models and apply them to solve problems on the cloud.

UNIT I INTRODUCTION: Introduction to Cloud Computing, Evolution - Cloud Computing, Hardware, Internet and Software, Virtualization, Web Services on Cloud, Infrastructure-as-a-Service, Platform-as-a-Service, Software-as-a-Service, Building Cloud Network.

UNIT II IMPLEMENTATION AND CONTROL Privacy and its relation to Cloud-based Information Systems, Security in the Cloud, Common Standards in the Cloud, End-User Access to the Cloud Computing, legal and ethical dimensions.

UNIT III CLOUD COMPUTING FOR MANAGERS Centralizing Email Communications – Collaborating on Schedules, To-Do Lists, Contact Lists – online Community development – online collaboration tools for projects – Cloud Computing for business.

UNIT IV APPLICATIONS OF CLOUD SERVICES Applications – Online Planning and Task Management – Event Management – CRM- Cloud service development tools – word processing, databases, storing and file sharing on cloud.

SKILL DEVELOPMENT.

UNIT V VIRTUAL OFFICE MANAGEMENT Web-based communication tools – Web Mail Services – Web Conference Tools – Social Networks and Groupware – collaborating via blogs and Wikis; IBM, Amazon Ec2, Google Apps for Business, Salesforce.com, Ramco-On-Demand

SUBJECT TITLE: DECISION SUPPORT SYSTEM AND INTELLIGENT SYSTEMS

OBJECTIVE: To understand the components of DSS and IS. To know the appropriate model to be used for a problem

OUTCOMES

- Apply techniques of IDSS (e.g. artificial neural networks, machine learning, rule-based systems, etc.) and validate IDSS techniques to solve a complex industrial problem
- Identify decision factors, models, and analysis of intelligent decision support systems (IDSS) to support a smart production system.
- Appraise the frameworks of IDSS.
- Design a knowledge-based system for a smart production system.

UNIT I INTRODUCTION Management Support systems, Decision making, Models, DSS Overview, Data, Model, Knowledge Management system.

UNIT II DATA AND MODEL MANAGEMENT SYSTEMS Data Collection, Data Warehousing, Data Mining, Data visualization, Modeling, Static and dynamic, Optimization, Heuristic, Simulation, Multidimensional modeling.

UNIT III GSS, ENTERPRISE DSS, KMS Group support system, Technologies, Enterprise DSS, Knowledge management methods, Technologies, Tools.

UNIT IV KNOWLEDGE BASED DSS Artificial Intelligence, Expert System, Knowledge Acquisition and validation, Knowledge representation, Inference techniques.

SKILL DEVELOPMENT

UNIT V ADVANCED INTELLIGENT SYSTEMS Neural Computing, Fuzzy Logic, Intelligent Agents, Implementation, Integration, Intelligent DSS.

HOSPITAL MANAGEMENT

SEM	THREE	NATURE	ELECTIVE	L	P	T	C
COURSECODE	20260EH33			3	0	0	3

SUBJECT TITLE: MANAGEMENT OF HOSPITAL SERVICES

OBJECTIVE:

To enable the students gain insights into various aspects like importance, functions, policies and procedures, equipping, controlling, co-ordination, communication, staffing, reporting and documentation of both the clinical and non clinical services in a hospital

OUTCOMES

CO1: Describe the health systems of various Countries including India

CO2: Discuss and learn public health care system in India

CO3: Develop, implement and manage various public health programs

CO4: Critically analyze the various components of health care delivery system in India

Unit- I Overview: Hospital operations management, role and decisions, Difference of hospital operations from other service and manufacturing organizations.

Unit – II Out Patient Services: Overview of the department, day care, accident and emergency services, physical medicine and rehabilitation, occupational therapy unit, physiotherapy department. **In Patient Services:** Ward design (general & specialized), critical care services – ICU, CCU, NICU, , medical services, surgical services – operation theater, nuclear medicine, burn unit, nursing services and administration.

Unit – III Specialty Services: Pediatrics, OBG & GYN, ENT, Ophthalmology, Orthopedic, Psychiatry, Anesthesia, Dental. **Super-specialty Services:** Cardiology, Thoracic Surgery, Neurology, Neurosurgery, Nephrology-Dialysis Unit, Transplantation Services

SKILL DEVELOPMENT

Unit–

IV Hospital Acquired Infection: Source and Control, Modern trends in Hospital Administration, Disaster Management, Information Systems, Telemedicine.

Unit–V Disaster Management Services: Basics of disaster management and Mass casualties Components of disaster plan : pre-hospital and hospital, Disaster alertness in Hospital Disaster management planning and implementation, Severity of illness amongst disaster victims and risk assessment- **Disaster preparedness-** Policies & procedures for general safety, fire safety procedure for evacuation, disaster plan and crisis management.

SUBJECT TITLE:

COMMUNITY HEALTH AND MANAGEMENT OF NATIONAL HEALTH PROGRAMMES

OBJECTIVE:

After completion of community health and management of National health programs module, students will be able to recognize and identify the elements in designing the strategies for health care delivery for community.

OUTCOMES

- To appreciate the Educational heritage of India.
- To understand the nature of Education as a discipline and its correlation with other disciplines.
- To comprehend the basic features of Indian Constitution and its implication in Education.
- Critically examine the pivotal issues of contemporary India.
- Analyse vision, aims of education, and recommendations of various commissions after independence in shaping the present educational system of India.
- Evaluate the basic concepts/issues of Education with reference to NCF (2005) and NCFTE(2009).

UNIT – I Concepts in Health and Disease – Introduction of medicine, public health and community health; Definition of health: the determinants and relative concept; Agent – Host – Environmental factors in health and disease, indices used in measurement of health, levels of prevention; Epidemiology of common communicable diseases and chronic non-communicable diseases and condition.

UNIT – II Health care delivery system in India: Introduction, Demography and Family Planning; Maternal and child health; Urban health; Occupational health; Mental health; Community geriatrics; Essential Medicines and Counterfeit Medicines.

UNIT – III Health Education: Definition, approach in health education, methods, barrier to effective communication, principles of health education; International Health Regulations and International classification of diseases,

UNIT – IV International Health agencies and organizations: WHO, UNICEF, UNOP, World Bank, UNFPA, CARE, IHO, Notifiable diseases.

EMPLOYABILITY

UNIT –

V National Health Programs: Objectives, strategy, achievements, critical analysis; Cancer screening and national cancer control program, National AIDS Control program and NACO, National leprosy eradication program, Universal immunization program, National vector borne disease control program, RNTCP, RCH, National Program for control of blindness, National Health Policies, National Population Policy, National Rural Health Mission.

COURSECODE	20260EH42			3	0	0	3

SUBJECTTITLE:MEDICALTOURISM

OBJECTIVE:

To understand the Significance of Medical Tourism, Role of government, Communication for medical tourists. This will enable students to learn effects of medical tourism in nation's economy, Pricing of Medical Services, Emerging trends on Medical Tourism.

COURSE OUTCOME

Define the basic concepts related to medical tourism

Have information about intermediary institutions and organizations in medical tourism

Discuss medical tourism practices in Turkey and the World

Explain digital transformation in the field of health

Unit-I

Introduction to Medical Tourism – History – Evolution of Medical Tourism – Scope of Medical Tourism – Importance-Medical Tourism Process.

Unit-II

Medical Tourism Destinations – National & International Destinations - Travel Retailing and Logistics for Health Tourism.

Unit-III

Marketing Concepts and Strategies-Hospitality and Hotel Industry linkages- Spa and Wellness Tourism.

Unit-IV

Medical Tourism-Ethical, Legal and Social Concerns-Medical Tourism-Issues & Challenges.

EMPLOYABILITY

Unit-V

Quality Standards in Medical Tourism-Medical Tourism-The Future of Health Services – International Healthcare Accreditation.

COURSECODE	20260EI35			3	0	0	3

SUBJECT TITLE: DESTINATION PLANNING AND DEVELOPMENT

OBJECTIVE:

- To facilitate the assessment of the tourism potential of a destination and prepare tourism development plans as well as marketing techniques;
- To familiarize with the destination branding practices; and
- To introduce advanced analysis and research in the field of destination development.

COURSE OUTCOME

To understand the basic terminologies of tourism destination planning and development >> To develop conceptual clarity about the fundamental concepts of destination planning and development >> To identify the steps involved in tourism planning process >> To know the importance of destination planning and development

Unit-1 Destination Development - Types of destinations, Characteristics of destinations - Destinations and products-Destination Management Systems-Destination planning guidelines- Destination Selection Process-The Values of Tourism.

Unit-II Destination Planning Process and Analysis-National and Regional Tourism Planning and Development-Assessment of tourism potential-Planning for Sustainable Tourism Development-Contingency Planning - Economic, Social, Cultural and Environmental considerations - Demand and supply match-Design and innovations.

Unit-III Destination Image Development-Attributes of Destinations: Person's determined image, Destination determined image, measurement of destination image - Destination branding perspectives and challenges-Creating the Unique Destination Proposition-Place branding and destination image-Destination image formation process; unstructured image-Product development and packaging-Destination branding and the web-Case Study of Puducherry as a brand.

Unit-IV Destination Promotion and Publicity - Six 'A's framework for tourism destinations - The dynamic wheel of tourism stakeholders - Destination Marketing Mix - Destination Competitiveness - Distribution Channels-Marketing Communication and Strategies.

Unit-V Institutional Support: Public Private Partnership (PPP) - National Planning Policies for Destination Development-WTO Guidelines for Planners-Role of urban civic bodies: Town planning-Characteristics of rural tourism planning- Environmental Management Systems - Destination Vision- The focus of Tourism Policy: the competitive sustainable destination- Destination Mapping (practical assignment).

Objective: To familiarize students with the Agricultural Financial System, Microfinance System and tools and techniques used for better management decisions.

COURSE OUTCOME

Enable students to gain knowledge on agricultural marketing, challenges and prospects for improving agricultural marketing system. Gain skills to analyze Marketing Functions, Market Information and Intelligence. Imparting knowledge of the marketing efficiency and agricultural prices.

Learn the Markets and Market Structure. Provide the platform to the students of Marketing of Agricultural Inputs.

UNIT I Agribusiness Management

Concept of E-agribusiness, Need & importance of E-agribusiness, Different models in E-agribusiness, Microfinance with special reference to SHGs.

UNIT II Greenhouse/Polyhouse techniques

Basic concept of Green house / Polyhouse, Constructing Green House / Polyhouse, Different commercially important horticultural and other plants grown in Green House / Polyhouse, Importance & future scope of the technique.

UNIT III Plant Tissue culture Basic concept, scope & importance of plant tissue culture, Fundamental technique followed in tissue culture, Major crop plants exploited in tissue culture technique. **Biodiesel sector** Basic concept of biodiesel, Different crop plants used in biodiesel, Benefits of biodiesel in comparison to crude diesel / petrol, Manufacturing biodiesel, Algal biodiesel.

UNIT IV Managerial aspects in Food Processing Industry Organization of a food processing unit: Different department involved in a food processing company and importance of coordination in those departments etc. Importance of production, marketing & distribution aspects in food processing sector. **Management of Agro Processing Industry** Factors to be considered while establishing food processing plant including government norms & requirements, Actual processing of Agri-produce into final products, Utilization of byproducts in agro processing industry.

UNIT V Water Management:

Sources of water and water requirement of crops, irrigation water use efficiency. Micro-irrigation systems, economic use of water. Water conservation measures, rainwater harvesting, gully plugging, contour bunding, terracing, checking run-off water. Watershed development programmes, problems of water management, water pollution and strategies to overcome them. **Reference Books**

SEMESTER – I

COURSE CODE	COURSE TITLE	L	T	P	C
20110AEC11	Tamil – I	4	0	0	2

தமிழ் -1

பாடத்திட்டம்

இளங்கலை: பருவம் 1 – பிரிவு –1 முதல் பருவம் - தாள் - 1

இக்கால இலக்கியம், செய்யுள், சிறுகதை, இலக்கணம், இலக்கிய வரலாறு மனப்பாடப்பகுதி

அலகு – 1

பாரதியார் தேசபக்திப் பாடல்கள் சுதந்திரப் பெருமை சுதந்திரப் பயிர் சுதந்திர தேவியின் துதி தொண்டு செய்யும் அடிமை பாரதிதாசன் வீரத்தாய்

அலகு – 2

சுரதா – நல்ல தீர்ப்பு கண்ணதாசன் - கந்தல் துணியின் கதை பட்டுக்கோட்டை கல்யாணசுந்தரம் - நண்டு செய்த தொண்டு – காலம் சரியில்லே மு.மேத்தா – வாழையடி வாழை வாலி – தாய்

அலகு – 3

சிறுகதை - இளவேனிற் குறிப்புகள் - திருவையாறு பாலகுமார்
அலகு - 4

இலக்கணம் எழுத்து மனப்பாடப்பகுதி

அலகு - 5

இலக்கிய வரலாறு சிறுகதை, புதினம், நாடகம், உரைநடை,
கவிதை,புதுக்கவிதை

தாள் - 1

ஒப்படைவு - மதிப்பெண் 40

பாடத்தொடர்புடைய கட்டுரை - 20 மதிப்பெண்

ஆத்திச்சூடி - 20 மதிப்பெண்

அறம் செய விரும்பு, ஆறுவது சினம், இயல்வது கரவேல், ஈவது
விலக்கேல், உடையது விளம்பேல், ஊக்கமது கைவிடேல், எண்
எழுத்து இகழேல், ஏற்பது இகழ்ச்சி, ஐயம் இட்டு உண், ஒப்புரவு
ஒழுக்கு, ஒதுவது ஒழியேல், ஒளவியம் பேசேல், கண்டு ஒன்று
சொல்லேல், ஞாயம்பட உரை, இடம்பட வீடு எடேல், இணக்கம்
அறிந்து இணங்கு, தந்தை தாய்ப்பேன், நன்றி
மறவேல், பருவத்தே பயிர்செய், இயல்பு அலாதன
செயேல், வஞ்சகம் பேசேல், இளமையில்
கல், அனந்தல் ஆடேல், கடிவது மற, கீழ்மை அகற்று, குணமது
கைவிடேல், கெடுப்பது ஒழி, கேள்வி முயல், சான்றோர் இனத்து
இரு, சோம்பித்திரியேல்.

(மேற்; கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை (மரபு
அல்லது புதுக்கவிதை) கதை, கட்டுரை, நாடகம் எழுதி வரச்
செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

To improve the knowledge of English

Objective:

To familiarize with the glossary terms, figures of speech

To improve vocabulary

To learn how to edit and proof read

To know the comparison and contrast and cause and effect forms

To understand the impact of the speeches of famous people

Outcome:

Develop vocabulary

Read and comprehend literature

UNIT –I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

UNIT – IV

Editing

Proof reading

UNIT – V

Comparison and contrast

Cause and effect

-Jewelcy Jawahar

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC12	English-I	4	0	0	2

Aim:

To acquaint students with learning English through literature

Objective:

To improve English delightfully through simple poems, essays

To throw light on fiction

To read and comprehend literature

Outcome:

Read and comprehend literature

UNIT –I

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-Aruna Gnanadason

UNIT – II

The Merchant of Death

-Nanda Kishore Mishra & John

Kennet

She Spoke for all Nature

-Young world 'The Hindu'

UNIT –III

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

UNIT –IV

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

UNIT –V

Oliver Twist

-Charles Dickens

COURSE CODE	COURSE TITLE	L	T	P	C
20114AEC13	General Chemistry - I	6	1	0	5

Aim:

To study about the theoretical and molecular models of chemical compounds.

Objective:

To provide a broad foundation in chemistry that stresses scientific reasoning and analytical problem solving with a molecular perspective.

To expose the students to a breadth of experimental techniques using modern

instrumentation.

Outcome:

The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.

UNIT – I

Basic concepts in organic chemistry -Electron displacement effects – Inductive, electrometric and mesmeric effects, resonance, hyperconjugation and steric effects. Homolytic and heterolytic fission of carbon - carbon bonds. Reaction intermediates: - free radicals, carbocations, carbanions, carbenes, nitrenes and arynes - their stability.

UNIT II

Standard solution - primary and secondary standards solution, Types of titrimetric reactions - redox and precipitation titrimetric reactions. Indicators - effect of change in pH - neutralization – mixed and fluorescent indicators. Halogen family comparative study of halogens and their compounds- unique nature of fluorides and Oxides and oxyacids of halogens - preparation and properties

UNIT III

Nomenclature of organic compounds - IUPAC naming of simple and substituted Aliphatic, aromatic and alicyclic compounds_Alkanes : Mechanism of free radical substitution in alkanes. Petroleum-thermal and catalytic process of cracking Synthetic petrol - Fischer, Tropsch and Bergtius processes, flash point, fire point, smoke point, knocking, octane number

UNIT IV

Liquid State: Liquid crystals classification, structures Properties and applications. Colloidal State: Size of colloidal particles-gold number- peptisation, stability of colloids, coagulation and protection. Reverse Osmosis and desalination of sea water. Electrophoresis and endosmosis.

UNIT V

Solid state: Nature of the solid state - seven crystal systems - Bravais lattice unit cell, law of rational indices (Weiss indices), Miller indices, symmetry) elements in crystals (for cubic system)

X-Ray diffraction by crystals — derivation of Bragg's equation – Bragg method - Crystal structure of NaCl, KCl, ZnS, CsCl, determination of Avogadro number

B.R.Puri and Sharma, Principles of Physical Chemistry.

COURSE CODE	COURSE TITLE	L	T	P	C
20112AEC15A	Calculus and Fourier Series	4	0	0	4

Aim:

To equip the students with basic differentiation, integration and Fourier series.

Objectives:

This course is designed to give students, basic elementary calculus to allow them to tackle to solve Fourier series problems.

Outcomes:

By the end of this course, the student should solve the differentiation, integration and Fourier series.

Unit – I

Leibnitz theorem (Proof not needed) and its applications – curvature and radius of curvature in Cartesian only (Proof not needed) – total differential coefficient (Proof not needed) – Jacobians of two & three variables – Simple problems in all these.

Unit – II

Reduction formula (when n is a +ve integer) for (i)

$$\int_a^b e^{ax} x^n dx$$

$$\int_a^b \sin^n x dx$$

$$\int_a^x \cos^n x \, dx$$

$$\int_0^x e^{ax} x^n \, dx$$

$$\int_0^x \sin^n x \, dx$$

without proof $\int_0^x \sin^n x \cos^n x \, dx$ and illustrations

Unit – III

Beta and Gamma functions

Unit – IV

Evaluation of double and triple integrals in simple cases – changing the order and evaluating of the double integration (Cartesian only)

Unit – V

Definition of Fourier series – Finding fourier coefficients for a given periodic function with period 2π and with period $2l$ – use of odd and even functions in evaluating fourier coefficients – half range sine and cosine series.

Reference:

Calculus – T.K.M. Pillai

Trigonometry & Fourier series – T.K.M. Pillai.

COURSE CODE	COURSE TITLE	L	T	P	C
20112AEC16A	Algebra and Trigonometry	4	0	0	4

Aim:

To study Algebra and Trigonometry to solve various applications in chemistry.

Objectives:

This course is designed to give students, the student should know the algebra and trigonometry.

Outcomes:

By the end of this course, the student should solve the algebra and Trigonometry concepts to solve the problems.

Unit – I

Binomial, Exponential & Logarithmic series (Formulae only) – Summation

Unit – II

Nonsingular, symmetric, skew symmetric, orthogonal, Hermitian, skew Hermitian and unitary matrices – Characteristics equation, eigen values, eigen vector – Cayley

Hamilton's theorem (proof not needed) Simple application only.

Unit – III

Expansion of $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ (n being a positive integer) – Expansion of $\sin^n \theta$, $\cos^n \theta$, $\sin^n \theta \cos^m \theta$ in a series of sines and cosines of multiples of θ (θ – given in radius) Expansion of $\sin \theta$, $\cos \theta$ and $\tan \theta$ in terms of powers of θ (only problems in all the above)

Unit – IV

Euler's formula for $e^{i\theta}$ – definition of hyperbolic functions – formulae involving hyperbolic functions – relation between hyperbolic and circular function – expansion of $\sinh x$, $\cosh x$, $\tanh x$ in power of x.

Unit – V

Expansion of inverse hyperbolic function – $\sinh^{-1} x$, $\cosh^{-1} x$ and $\tanh^{-1} x$ - Separation of real and imaginary parts of $\sin(x+iy)$, $\cos(x+iy)$, $\tan(x+iy)$, $\sinh(x+iy)$, $\cosh(x+iy)$, $\tanh(x+iy)$

20114SEC14L	Volumetric Analysis Lab	0	0	3	2

Strong acid vs strong base.
 Weak acid vs strong base.
 Estimation of ferrous sulphate.
 Estimation of oxalic acid.
 Estimation of copper.
 Estimation of potassium dichromate.
 Estimation of potassium permanganate.
 Estimation of Ca by EDTA.

Employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
201INDCONS	Indian Constitution	1	0	0	1

Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
2. To appreciate the salient features of the Indian constitution
3. To know the fundamental rights and constitutional remedies
4. To make familiar with powers and positions of the union executive ,union parliament and the supreme court .
5. To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Learning Out comes:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies - fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification _method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court - high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India.
State council of ministers -chief minister -election system in India-main features
election commission-features of Indian democracy.

அல்லது புதுக்கவிதை) கதை, கட்டுரை, நாடகம் எழுதி வரச்
செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC21	Advanced English-II	4	0	0	2

Aim:

To improve the knowledge of English

Objective:

To understand the format of e-mail, fax and memos

To write itinerary, checklist, invitation, circular, instruction, recommendations

To understand the impact of the biographies of famous people

Outcome:

Develop writing skill

Read and comprehend literature

UNIT – I

E-mail, Fax, Memos

UNIT – II

Itinerary, Checklist

UNIT – III

Invitation, Circular

UNIT – IV

Instruction, Recommendations

UNIT – V

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

References:

English Grammar

English Work Book-I&II

-Jewelcy Jawahar

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC22	English-II	4	0	0	2

Aim:

To acquaint learners with different trends of writing

Objective:

To empower students to acquire language skills through literature

To enable the students to appreciate literature

To develop the conversational skills through one act plays

Outcome:

Read and comprehend literature.

UNIT – I

Ecology

-A.K. Ramanujan

Gift

-Alice Walker

The First Meeting

-Sujata Bhatt

UNIT –II

Fueled

-Marcie Hans

Asleep

-Ernst Jandl

Buying and selling

-Khalil Gibran

UNIT –III

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

UNIT – IV

The Refugee

-K.A. Abbas

I Have a Dream

-Martin Luther king

Those People Next Door

-A.G. Gardiner

UNIT – V

Marriage is a private Affair

-Chinua Achebe

The Fortune Teller

-Karel Capek

Proposal

-Anton Chekov

<u>COURSE</u> <u>CODE</u>	<u>COURSE TITLE</u>	<u>L</u>	<u>T</u>	<u>P</u>	<u>C</u>
20114SEC23	General Chemistry -II	6	1	0	5

Aim:

Develop an appreciation of chemistry and its application in daily life.

Objective:

To teach students to analyze data from experiments or from other sources.

To acquire students a readiness in becoming responsible citizens in a changing world.

Outcome:

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to explore new areas of research in both chemistry and allied fields of science and technology.

UNIT I

Alkynes: Acidity of acetylene, formation of acetylides, addition of water with HgSO₄ catalyst, addition of hydrogen halides and halogens, oxidation, ozonolysis and hydroboration (mechanisms).

Cycloalkanes: Preparation using Wurtz's reaction, Dieckmann's ring closure and reductions of aromatic hydrocarbons. Substitution and ring opening reactions. Baeyer's strain theory and theory of stainless rings.

UNIT II

Quantum numbers - principal, Azimuthal, magnetic and spin quantum numbers and their significance - Pauli exclusion principle - Hund's rule - Aufbau principle, (n+1) rule, stability of half-filled and fully filled orbitals - inert pair effect.

UNIT III

Quantum theory: Bohr's model of atoms. Bohr's theory of hydrogen and spectral lines. Limitations of Bohr model. Sommerfeld's extinction. Photoelectric effect and Compton Effect. Debroglie's equation and verification (Davisson and Germer expt)

UNIT IV

Chemical Kinetics: Rate of reactions, rate laws, rate constant, order and molecularity of reactions. Rate equations for zero, first, second and third order reactions. Derivation of rate constant for Zero, first and second order reactions. Fractional

order reactions. Examples- Half-life period, Pseudo first order reactions.

UNIT V

Polymerization: Types- free radical, cationic and anionic polymerizations with mechanisms.

Preparation of polymers - addition polymers (PE, PVC, Teflon and PS)-Condensation polymers (Nylon6.6, tereylene) - synthetic rubbers (Buna, Butyl rubber, SBR, neoprene) - natural rubber.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC24L	Organic Analysis Lab	0	0	3	2

A study of the reactions of the following organic compounds,:

Carbohydrate,

Amide,

Aldehyde,

Ketone,

Acid,

Phenol.

The students may be trained to perform the specific reactions like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional group present and record their observations.

Preparation (Single stage) involving

Nitration,

Hydrolysis

Bromination.

Employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
20112AEC25A	ODE, PDE and Laplace Transform	4	0	0	4

Aim:

To study the Ordinary Differential Equations, Partial Differential Equations and Laplace Trans for my to solve mathematical applications in chemistry.

Objectives:

This course is designed to give students, the student should know the Differential Equations and Laplace Transform.

Outcomes:

By the end of this course, the student should solve the ODE, PDE and LAPLACE TRANSFORM concepts to solve the problems.

UNIT I:

Ordinary differential equations of first order but of higher degree- Equations solvable for x and y – solvable for dy/dx, clairaut's form (simple case only)- homogeneous linear differential equation(Variable coefficients), variation of parameter.

UNIT II:

Formation of partial differential equation by eliminating constants and by eliminating of arbitrary functions- definition of general, particular and complete solution – singular integral(Geometrical meaning not required) solution of first order equations in the slandered forms $f(p,q)=0$, $f(x,p,q)=0$, $f(z,p,q)=0$ $f_1(x,p)=f_2(y,p)$ $z=(x,p+yq=f(p,q)$.

UNIT III:

Lagrange's method for solving $Pp + Qq = R$ where p,q,r functions of X, Y, Z- (geometrical meaning is not needed)- (only problem in all the above- No proof needed for any formula) Cherpit's method The four standard forms.

UNIT IV:

Laplace Trnsforms- Definitions-

$L(eat)$ $L(\cos at)$, $L(\sin at)$, $L(t^n)$ where n is a positive integer – Basic theorem inlaplace (transform only) $L(e^{-st} \cos bt)$, $L(e^{-st} \sin bt)$, $L[e^{-st} f(t)]-L[F(t)$, $L[f(t)]$, $L[f'(t)]$

UNIT V:

Inverse Laplace transform related to the above standard forms- solving second order ODE with constant coefficients using laplace transforms and simultaneous equation, variable coeffieicients. Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions, change of interval — Half range series.

References:

1. S. Narayanan – differential equations
2. T.K.M Pillai & S.Narayanan- calculus
3. M.L.Khanna- differential calculus

COURSE CODE	COURSE TITLE	L	T	P	C
20112AEC26A	Analytical Geometry in Vector Calculus	4	0	0	4

Aim:

To study analytical geometry in vector calculus for the application in Chemistry.

Objectives:

This course is designed to give students; the student should know and solve the analytical geometry in vector calculus.

Outcomes:

By the end of this course, the student should solve problems of analytical Geometry in vector calculus.

UNIT – I

Vector differentiation – velocity & acceleration vectors- Gradient of a vector directional derivative - Unit normal vector- tangent plane

Unit- II

Divergence- Curl – Solenoidal & Irrotational vector- Double operators – Properties connecting grad, div & curl of a vector.

Unit –III

Vector integration –Line integrals – Conservative force field – Scalar field- Scalar potential- work done by d Force- Surface integrals – Volume integrals.

Unit –IV

Gauss divergence theorem , Stoke's theorem (statement, application & verification only)

Unit –V

Equation of sphere – Tangent plane – plane section of a sphere – Finding the centre & radius of the circle of integration – sphere through the circle of integration (only problem in all above)

SEMESTER – III

COURSE CODE	COURSE TITLE	L	T	P	C

தமிழ்

பாடத்திட்டம்

இளங்கலை : பருவம் மூன்று-

தாள் - 3 செய்யுள் - காப்பியங்கள், இலக்கணம்,இலக்கிய வரலாறு, மனப்பாடப்பகுதி

அலகு-1

சிலப்பதிகாரம்-வழக்குரை காதை மணிமேகலை-ஆதிரை பிச்சையிட்ட காதை சீவகசிந்தாமணி-நாட்டுவளம் 10 பாடல்கள்

அலகு-2

பெரியபுராணம்- மெய்ப்பொருள் நாயனார் புராணம் கம்பராமாயணம்-வாலி வதைப்படலம்

அலகு-3

சீறாப்புராணம் - கரம் பொருத்து படலம் இயேசுகாவியம் - மழைப்பொழிவு

அலகு-4

இலக்கணம் யாப்பு மனப்பாடப்பகுதி

அலகு-5

இலக்கிய வரலாறு காப்பியங்கள் ஐஞ்சிறுகாப்பியங்கள் புராணங்கள், இதிகாசங்கள்

தாள் - 3

ஒப்படைவு – மதிப்பெண் 40

பாடத்தொடர்புடையக் கட்டுரை 20 மதிப்பெண்

வெற்றி வேற்கை 20 மதிப்பெண்

எழுத்து அறிவித்தவன் இறைவன் ஆகும், கவ்விக்கு அழகு கசடற மொழிதல், செல்வர்க்கு அழகு செழுங்கிளை தாங்குதல், மன்னவர்க்கு அழகு செங்கோல் முறைமை, வைசியர்க்கு அழகு வளர் பொருள் ஈட்டல், உழவர்க்கு அழகு உழுது ஊண் விரும்பல், மந்திரிக்கு அழகு வரும் பொருள் உரைத்தல், தந்திரிக்கு அழகு தறுகண் ஆண்மை, உண்டிக்கு அழகு விருந்தோடு உண்டல், பெண்டிர்க்கு அழகு எதிர் பேசாதிருத்தல், அறிஞர்க்கு அழகு கற்றுணர்ந்து அடங்கல், வறிஞர்க்கு அழகு வறுமையில் செம்மை, பெரியோர் எல்லாம் பெரியோரும் அல்லர். சிறியோர் எல்லாம் சிறியரும் அல்லர், அடினும் ஆவின் பால் தன் சுவை குன்றாது, சுடினும் செம்பொன் தன்னொளி கெடாது, அறைக்கினும் சந்தனம் தன் மனம் மாறாது பெருமையும் சிறுமையும் தான் தர வருமே, அறிவுடை ஒருவனை அரசும் விரும்பு, யானைக்கு இல்லை தானமும், தருமமும், பூனைக்கு

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC31	Advanced English-III	4	0	0	2

Aim:

To improve the knowledge of English

Objective:

To familiarize with the organs of speech and the description and classification of speech sounds

To understand consonant cluster, syllable, word accent and intonation.

To know how to interpret graphics

To write slogans and advertisements

Outcome:

Understand Phonetics

Develop writing skill

UNIT –I

The organs of speech, Classification of speech sounds , Vowels and Diphthongs

UNIT –II

Consonants, Consonant cluster

UNIT – III

Syllable, Word accent, Intonation

UNIT – IV

Idiom, Interpretation of graphics

UNIT – V

Slogan writing, Writing advertisement

References:

English Grammar	-Wren and Martin

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC32	English-III	4	0	0	2

Aim:

To acquaint students with learning English through literature

Objective:

To sensitize students to language use through prescribed text

To develop the conversational skills through one act plays

Outcome:

Read and comprehend literature

UNIT – 1

The Doctor's World	-	R.K. Narayan
The Postmaster	-	Rabindranath Tagore
Princess September	-	E.Somerest Maugham

UNIT – II

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

UNIT –III

My Brother My Brother	-	Norah Burke
Uneasy Home	Coming	- Will F. Jenkins
Resignation	-	Premchand

UNIT –IV

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

UNIT – V

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

References:-

Nine Short Stories	-Steuart H.King	Blackie Books
One-Act plays of Today	-T.Prabhakar	Emerald Publishers

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC33	General Chemistry - III	5	0	0	5

Aim:

To acquaint with the knowledge of nature of metals and its characters.

Objective:

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.

The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

Outcome:

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.

UNIT I

Alkali and alkaline earth metals:

Comparative study of alkali and alkaline metal compounds (oxides, halides, hydroxides, carbonates, sulphates). Diagonal relationship between lithium and magnesium, lithium aluminium hydride and sodium borohydride — preparation, properties and uses. Coinage metals: Comparative study of coinage metals. Zinc Group metals: Comparative study of Zinc group metals. Galvanization, existence of mercurous ion and Hg^{2+} principles of qualitative analysis -solubility product, principles of elimination of interfering radicals, common effect, reactions including spot tests in qualitative analysis.

UNIT II

Inner transition elements:

Lanthanides—occurrence—electronic configuration — oxidation states, magnetic properties, complexation behaviour. Actinides —occurrence — electronic configuration — oxidation states, magnetic properties and complexation behavior. Lanthanide contraction. Chemistry of thorium and uranium — occurrence, extraction and uses. Mineral wealth of India —minerals found in India. Steel and alloy steels — Heat treatment of steel.

UNIT III

Aromatic hydrocarbons and Aromaticity:

Structure and stability of benzene ring — resonance in benzene — delocalized π electron cloud in benzene. Aromaticity — Huckel's Rule — examples — benzene, naphthalene, anthracene, furan, pyrrole, thiophene and ferrocene. Electrophilic substitution reactions in aromatic compounds. General mechanism of electrophilic

substitution reactions — Nitration, sulphonation , halogenation, Friedel-Crafts alkylation and acylation reactions — nuclear and side chain halogenations.

UNIT IV

Polynuclear hydrocarbons-

Napthalene and anthracene — isolation, properties, structure and uses. Aromatic nucleophilic substitution — Benzyne mechanism and intermediate complex formation mechanism — effect of substituents on reactivity.

UNIT V

Magnetic properties of matter- magnetic flux- magnetic permeability —magnetic susceptibility. diamagnetism, paramagnetism, ferro and anti-ferro magnetism — Curie temperature. Determination of magnetic susceptibility —Buoy's method — number of unpaired electrons. Application to structural problems $K_3Fe(CN)_6$, $K_4Fe(CN)_6$ and $Ni(CO)_4$.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC34L	Physical Chemistry Lab - I	0	0	3	3

Kinetics – Acid hydrolysis of Ester – (Methyl acetate)

– (IN HCL & 0.5N HCL)

Kinetics – Acid hydrolysis of Ester – (Ethyl acetate))

2490(IN HCL & 0.5N HCL)

Determination of molecular weight of substance by Rast method
 Determination of (CST) of phenol – water system
 Effect of impurities on CST
 Determination of molecular weight of substances by Transition
 Temperature method.

Employability/Entrepreneurship/Skill development.

COURSE CODE	COURSE TITLE	L	T	P	C
20113AEC35	Physics - I	5	0	0	4

Aim:

The course presents an introduction to the physics of the objects whose sizes span from atomic dimensions to macroscopic, human scale dimensions, and beyond: atoms, molecules, gases, liquids, and solids.

The aim is to show how the properties of macroscopic bodies can be derived from the knowledge that matter is made up from atoms.

Objectives:

Recognize the difference between physical and chemical properties

Distinguish between extensive and intensive properties

Outcomes:

On completion successful students will be able to demonstrate an understanding of:

1. The relationships between physics on the atomic scale and the properties of matter.
2. The roles played by microscopic states of system, their numbers and their accessibility.
3. Techniques for finding appropriate averages to predict macroscopic behavior.

Unit I: Mechanics

Center of gravity of a solid hemisphere – Hollow hemisphere – Solid cone. Stability of floating bodies – Meta center – Determination of Meta centric height of a ship.

Unit II: Sound

Simple harmonic motion – comparison of two simple harmonic motion – A long straight line – At right angle to each other Lissa Hou's figures and their application – Acoustics of buildings reverberation – reverberation time Sabine's formula – conditions for good acoustics.

Decibel – phon – Intensity measurements by hotwire microphone method.

Unit III: Properties of matter

Diffusion: Fick's law – Coefficients of diffusion – experimental determination of coefficient of diffusion – application.

Osmosis: Laws of osmotic pressure Berkelly and Hartly method of determining osmotic pressure – elimination of boiling and depression of freezing point – application.

Unit IV

Thermal Physics: Newton's law of cooling – Verification – specific heat capacity of liquid by cooling – bomb calorie meter.

Conduction: Coefficeint of thermal conductivity – good and bad conductor – Stefan's law of radiation - Solar constant – Angstorm's phyro heliometers – temperature of the sun.

Unit V

Optics: Electro magnetic spectrum – spectral response of human eye – UV and IR spectroscopy

Raman effect – experimental arrangement – application of Raman effect.

Fiber optic communication: Introduction – optic fiber – numerical aperture – coherent bundle – fiber optic communication system and its advantage – multimode optic sensors.

Reference:

Sound , Saigal, S-Chand & co.

Properties of matter, D.S.Matur.

Heat and Thermodynamics, Brijal Subramaniyam.

Optics, Brijal Subramaniyam.

Static, Hydrostatics and Hydrodynamics, Nrayanamoorthy & Nagarathinam.

COURSE CODE	COURSE TITLE	L	T	P	C
20113AEC36L	Physics Lab - I	0	0	3	3

List of Experiments

Semi-conductor diode characteristics

Surface tension – Drop weight method

Meter Bridge – Determinations of resistance

Post office Box – Resistance
 Non-uniform Bending – Young’s modulus
 Potentiometer – Voltmeter calibration
 Sonometer – Verification of laws
 Spectrometer – Determinations of refractive index
 Bridge Rectifier
 Basic Logic Gates – Discrete components

COURSE CODE	COURSE TITLE	L	T	P	C
20114RMC37	Research Methodology	3	0	0	3

AIM:

To create a basic appreciation towards research process and awareness of various research publication

OBJECTIVES:

To understand the steps in research process and the suitable methods.

To identify various research communications and their salient features

To carry out basic literature survey using the common data-bases

To give exposure to standard laboratory precautions and best practices for experimental work

To provide orientation for basic mathematical computation useful in basic research

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

PREREQUISITES:

Basic mathematical and experimental skills and exposure to window-based computer operation system.

UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents –

Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

UNIT IV: Database Survey

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

UNIT V: Laboratory Safety

General guidelines. Hygiene – Eye, foot, skin and hand protection – Safety rules
Equipment protection – Respiratory protective equipment – safety equipment –
Leaking
compressed gas cylinders – electrical safety. Fire – fire extinguishers.

20120SEC03AL	Packages Lab-III	0	0	2	1

Packages Lab-III (Power Point)

Create a slide show presentation for a seminar (choose your own topics)

Enter the text in the outline view

Create Non-bulleted and bulleted text

Create a slide show presentation for a science exhibition

Create Non-bulleted and bulleted text

Apply appropriate text attributes

Create slide show presentation for an invitation

Insert an object from a bitmap file

Apply appropriate text attributes

Rotate the object to 45 degree

Apply shadow to the object
 Create a slide show presentation to display percentage of marks in each semester for all students
 Use bar chart (x-axis: semester; y-axis: % of marks)
 Use different presentation template and different transition effect for each slide
 Use different text attributes in each slide
 Create a slide show presentation for a shop advertisement to be open shortly
 Create a slide show presentation to display percentage of sales in each quarter for the any vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
 Create a slide show presentation for a tourists places
 Create a slide for calendar using appropriate text attributes and insert an object from a bitmap file

COURSE CODE	COURSE TITLE	L	T	P	C
20111SEC03L	Communicative English-III	0	0	2	1

Aim:

To acquaint with the basic grammar

Objective:

To familiarize with the clauses and phrases

To learn the different degrees of comparison

To change a sentence from active to passive and vice versa

To know where to use punctuations

To frame sentences

To know the features, process, forms and barriers of communication

Outcome:

Understand grammar

UNIT –1

Clauses

Phrases

UNIT –II

Degrees of comparison

20111AEC42	English-IV	4	0	0	2

Aim:

To acquaint students with learning English through literature

Objective:

To introduce learners to the standard literary texts

To impart wisdom through morally sound poems and essays

To introduce Shakespeare to non-literature students

Outcome:

Read and comprehend literature

UNIT –I

How to be a Doctor -Stephen Leacock

My Visions for India -A.P.J. Abdul Kalam

Woman, not the weaker sex -M.K. Gandhi

UNIT –II

My Last Duchess -Robert Browning

The Toys -Coventry Patmore

I, too -Langston Hughes

UNIT –III

The Best Investment I ever made-A.J.Cronin

The Verger -W.S Maugham

A Willing Slave -R.K.Narayan

UNIT –IV

Macbeth, As You Like It

UNIT –V

Henry IV, Tempest

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC43	General Chemistry - IV	6	0	0	6

Aim:

2499

To acquaint with the knowledge of nature of metals and its characters.

Objective:

The student will acquire a foundation of chemistry of sufficient breadth and depth to enable them to understand and critically interpret the primary chemical literature.

The student will learn the laboratory skills needed to design, safely conduct and interpret chemical research.

Outcome:

Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.

Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.

UNIT I

TRANSITION METALS AND THEIR COMPOUNDS - Group study of Titanium, Vanadium, Chromium, Manganese and Iron. Metallurgy and uses of V, W and Mo. Comparison of lanthanides and actinides and their position in the periodic table. Elements with atomic number 104 and 105; preparation and their position in the periodic table. Chemistry of Thorium and Uranium — occurrence, ores, extraction and uses.

UNIT II

BIOLOGICALLY IMPORTANT COORDINATION COMPOUNDS — Chlorophyll, Hemoglobin, Vitamin B 12 — their structure, application (Structure elucidation is not required). Metal carbonyls — Mono and poly nuclear carbonyls of Ni, Fe, Cr, Co and Mn — synthesis, reactions, structure and uses. Nitrosyl compounds — classification, preparation, properties and structure of nitrosyl chloride and sodium nitroprusside.

UNIT III

ALIPHATIC NUCLEOPHILIC SUBSTITUTIONS — mechanism of SN1, SN2, and SNii reactions, effect of solvents, leaving groups, nucleophiles and structure of substrates.

Elimination reactions — Hoffmann and Saytzeff's eliminations — cis, trans eliminations. Mechanism of E1 and E2 reactions. Relative reactivity of ethyl, vinyl, allyl and benzyl halides.

UNIT IV

POLYHYDRIC ALCOHOLS: Ethylene glycol, glycerol - properties including oxidation using periodic acid and LTA.

Unsaturated alcohols: Thioalcohols — preparation, properties and uses of ethyl mercaptan. Ethers- Methods of preparation of aliphatic and aromatic ethers — reactions of ethers — 1,4-dioxane — preparation and uses — Epoxides — Preparation and reactions. Thioethers — Preparation and uses.

UNIT V

Thermodynamics: system and surrounding — isolated, closed and open systems — homogeneous & heterogeneous systems, State of the system, intensive and extensive variables. Thermodynamic process — cyclic processes, reversible and irreversible, isothermal and adiabatic processes — state and path functions, concept of heat and work. First law of thermodynamics — statements, definition of internal energy (U), enthalpy (H), heat capacity. Relation between C_p and C_v ;

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC44L	Physical Chemistry Lab - II	0	0	3	3
Conductometric Experiments					
Cell constant					
Equivalent conductance					
Verification of on- Sager equation					
Acid- base titrations					
Precipitation titrations					
Potentiometric Experiments:					
FAS vs $KMnO_4$					
KI Vs $KMnO_4$					
FAS VS $K_2Cr_2O_7$					
KI Vs $K_2Cr_2O_7$					
Determination of solubility of silver salts.					
COURSE CODE	COURSE TITLE	L	T	P	C
	2501				

Aim:

To develop a basic understanding of electric and magnetic fields in free space using the Integral forms of Maxwell's laws.

Objectives:

Describe the electric field and potential and related concepts, for stationary charges.

Calculate electrostatic properties of simple charge distributions using Coulomb's law, Gauss's law and electric potential.

Outcomes:

Describe the magnetic field for steady currents and moving charges.

Calculate magnetic properties of simple current distributions using Biot-Savart and Ampere's Laws.

Describe electromagnetic induction and related concepts, and make calculations using Faraday and Lenz's laws.

Describe the basic physical content of Maxwell's laws in integral form.

Unit I: Electrostatics

Coulomb's law-Gauss theorem, its application Field due to an infinite long plane, Sphere and Cylinder- Mechanical force on the surface of a charged conductor – Electrostatics energy in The Medium – Capacitors – Principles of a capacitor – Capacity of a capacitor – Capacity of an Isolated sphere and cylinder – Energy of a charged capacitor – Sharing charges and loss of energy.

Unit II: Electricity

Kirchoff's law's and their applications to Wheatstone's network – condition for bridge balance – Carey Forster's bridge – Laws of electromagnetic Induction – Expression for induced EMF – Self and Mutual Induction – Self Inductance of a Solenoid – Mutual inductance of a solenoid Inductor – Coefficient of coupling – Determination of coefficient of self induction by Raleigh's method

Unit III: Atomic Physics

Atom models – Summerfield's and Vector atom Models – Pauli's exclusion principle – various quantum numbers and quantization of orbits.

X-rays – Continuous and Characteristic X-ray – Mosle's Law and its importance Bragg's Law – Miller indices – Determination of Crystal structure by Laue's Powder photograph method.

Unit IV: Nuclear Physics

Nucleus – Nuclear size – charge – Mass and spin – Liquid drop and Shell models.
 Nuclear Radiations and their properties, particle accelator – Betatron and Proton
 Synchrotron, Particle Detectors – Cloud Chamber and Bubble Chambers. Four types
 of reactions – Elementary particles and their classifications

Unit V: Digital Electronics

Decimal – Binary – Octal and Hexa Decimal number systems and their Mutual
 conversions – ‘s and 2’s complement of a Binary number and Binary arithmetic
 (Addition, Subtraction, Multiplication and Division) – Binary subtraction by 1’s and
 2’s complement methods – Basic logic gates – AND, OR, NOT, NOR, NAND and
 EXOR gates – NAND & NOR as universal building gates – Boolean algebra – Laws
 of Boolean algebra – De-Morgan’s Theorems – Their verifications using truth table.

Reference:

- Magnetism and Electricity – Khare and Srivastave – AtmaRam and sons – New Delhi
- Modern Physics – Murughesan – S.Chand and co
- Digital principles and their applications – Malvino and Leach – Tata McGraw Hill
- Hand Book of Electronics – Gupta and Kumar – Pragati Prakasan
- Ancillary Physics II – A Sundaraveluswami

COURSE CODE	COURSE TITLE	L	T	P	C
20113AEC46L	Physics Lab - II	0	0	3	2

List of Experiments

- Figure of merits of Galvanometer
- Potentiometer – Ammeter calibration
- Carey Forster Bridge
- Viscosity of Liquid – Poiseulle’s flow method
- Lee’s Disc – Thermal conductivity
- Specific capacity of a liquid
- Spectrometer – Wavelength determination using Grating
- Meter Bridge verification of serial and parallel connections of resistance wires
- Logic Gates – IC Version
- Zener Diode characteristics

COURSE CODE	COURSE TITLE	L	T	P	C
201ENVSTU	Environmental Studies	1	0	0	1

Aim:

To study about the awareness of environmental pollution and its issues.

Objectives:

Creating the awareness about environmental problems among people.

Imparting basic knowledge about the environment and its Ancillary problems.

Developing an attitude of concern for the environment.

Motivating public to participate in environment protection and environment improvement.

Acquiring skills to help the concerned individuals in identifying and solving environmental problems.

Striving to attain harmony with Nature.

Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;

Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;

Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;

Apply their ecological knowledge to illustrate and graph a problem and describe the realities that managers face when dealing with complex issues; and

Understand how politics and management have ecological consequences.

Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

Natural Resources and Associated Problems.

Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.

Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.

Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.

Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.

Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.

Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

- a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
- d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot— spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global wanTling, acid rain, ozone layer depletion, nuclear accidents and holocaust. Wasteland reclamation.

Consumerism and waste products.

7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC51	Inorganic Chemistry - I	5	0	0	5

Aim:

To know about the details of co-ordination compounds and nature of metals.

Objective:

To know about ligand types and their different methods of coordination

To know about isomerism in transition metal complexes.

To know some basic Chemistry of first row transition metal ions.

Outcome:

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

The bonding models, structures, reactivities, and applications of coordination complexes, boron hydrides, metal carbonyls, and organometallics

UNIT - I

Coordination Compounds: Types of ligands. IUPAC nomenclature. Theories of coordination compounds — Werner, Sidgwick, valence bond, crystal field, molecular orbital and ligand field theories.

UNIT- II

Isomerism — stability of complexes — factors affecting the stability of complexes. Unimolecular and bimolecular nucleophilic substitution reactions in octahedral and square planar complexes — Trans effect. Application of coordination compounds - Detection of potassium ions, separation of copper and cadmium ions. Estimation of nickel using DMG and aluminium using oxime. Structure of EDTA and its complexes. Complexometric titrations — principles and applications.

UNIT — III

Metallic state: Packing of atoms in metal (BCP, CCP(FCC), HCP). Theories of metallic bonding — electron gas, Pauling and band theories. Structure of alloys — substitutional and interstitial solid solutions — HUME Rothery ratios. Ionic Bond, crystal structure and advanced covalent bonding: Radius ratio rules — Calculation of some limiting radius ratio values for C.N.3(planar triangle), C.N.4 (tetrahedral) & C.N.6 (octahedral).

UNIT — IV

Binary compounds — hydrides, borides, carbides and nitrides — classification, preparation, properties and uses. Organometallic compounds of alkenes and cyclopentadienes.

UNIT - V

Group Theory and its Applications: Symmetry elements —symmetry operations — mathematical group of multiplication tables, point group of simple molecules (H₂, HCl, CO₂, H₂O, BF₃ and NH₃).

Cotton and Wilkinson, Advanced Inorganic Chemistry, 5th edn

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC52	Organic Chemistry - I	5	0	0	5

Aim:

To know about the organic molecules and its reactivity.

Objective:

To know about isomerism types and their different reactivity.

To detail about carbonyl compounds and its reactions.

To know some basic acids and its derivatives .

Outcome:

Describe bonding models and appreciate how these impact on the properties of a simple molecule.

Understand the importance of stereo isomerism and carbonyl compounds on a molecule structure and reactivity.

UNIT – I: STEREOISOMERISM - I

Stereoisomerisms — definition — optical and geometrical isomerism —classification of optical isomerism — optical activity — observed and specific rotation — conditions for optical activity in solid, liquid and gaseous phases —criteria for optical activity. Asymmetric center chirality's — achiral molecule — meaning of + and — and D and L notations — elements of symmetry —racemisation — methods of racemisation (by substitution and tautomerism) —resolution — methods of resolution (mechanical separation, seeding, biochemical and conversion to diastereoisomers) — asymmetric synthesis partial and absolute asymmetric synthesis — Walden inversion, Vant Hoff rule of superposition —m Freudenberg's rule of

shift. Notations for optical isomers — Cahn — Ingold — Prelog rules — R.S. Notations for optical isomer with one asymmetric carbon — erythro and threo representations. Fischer projections, Sawhorse, Newman projections - representation of molecules with two asymmetric carbon atoms.

UNIT- II: STEREOISOMERISM - II

Optical activity in compounds containing no asymmetric carbons -biphenyls, allenes and spiranes. Optical activity on symmetric system (lactic acid, dissymmetric system (1,2- trans cyclopropane dicarboxylic acid). Geometrical isomerism — cis, —trans, syn and anti and E — Z notations-geometrical isomerism in maleic and fumaric acids and in unsymmetrical ketoximes — methods of distinguishing geometrical isomers (dipole moment, dehydration, heat of hydrogenation, cyclisation , melting points) — methods of determining the configuration of geometrical isomers no details required). Geometrical and optical isomerism in three member rings.

UNIT III: REACTIONS OF CARBONYL COMPOUNDS

Carbonyl polarization - reactivity of carbonyl group — acidity of α -hydrogen. Mechanisms of aldol, Perkin, Knoevenagel and benzoin condensations. Mechanisms of Claisen, Reformatsky, Wittig and Cannizzaro reactions. Mechanisms of reduction (sodium borohydride, LiAlH_4 , Wolff — Kishner and MPV reductions) — mechanisms of haloform reaction and Michael addition and Oppenauer oxidation. Photochemistry of carbonyl compounds — Norrish I and II Types. Problems and conversion wherever applicable.

UNIT IV: ACIDS AND ACID DERIVATIVES

Ionization of carboxylic acids — acidity constant- comparison of acid strengths of substituted halo acids — acid strengths of substituted benzoic acids Hammett equation. Hell — Volhard — Zeliniski reaction. Dicarboxylic acids — preparation and properties of oxalic, malonic, succinic, glutaric and adipic acids, unsaturated acids and hydroxy acids. malonic acid, acetoacetic esters — characteristics of reactivities of methylene group — synthetic uses of malonic and acetoacetic esters. Tautomerism — definition — keto-enol tautomerism (identification, acid and bases catalysed interconversion mechanisms. Preparations - amido — imido and — acnitro tautomerisms). Nucleophilic acyl substitutions, acid — base hydrolysis of ester, hydrolysis of amides and trans esterification.

UNIT V: HETEROCYCLIC COMPOUNDS

Aromatic characteristics of heterocyclic compounds. Preparation, properties and uses of furan, pyrrole, & thiophene. Synthesis and reactions of pyridine and piperidine — comparative basic characters of pyrrole, pyridine and piperidine with amines. Synthesis and reactions of Quinoline, isoquinoline and indole with reference to Skraup, Bischler Napieralski and Fischer indole synthesis. Structural elucidation of pyridine, quinoline and isoquinolines.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC53	Physical Chemistry – I	4	1	0	4

Aim:

To know about the physical properties of molecules and its reactivity.

Objective:

To understand different properties of molecular structure.

To understand the basic features of spectroscopy.

To know some basic acids and its derivatives .

To knowledge about thermodynamics and its applications.

Outcome:

Able to recognize different regions for thermodynamics.

Able to explain the concept of thermochemistry.

Able to explain the concept and applications of surface chemistry.

UNIT- I THERMOCHEMISTRY:

Internal energy and enthalpy changes in chemical reactions. Relation between E and H . Relation between enthalpy of reaction at constant volume (q_v) and at constant pressure(q_p). Thermochemical equations, laws of thermochemistry — Hess's law and its applications. Standard states — standard enthalpy of formation, enthalpy of combustion, enthalpy of neutralization, integral and differential heats of solution and

dilution. Bond dissociation energy — its calculation from thermobhemical data, temperature dependence of ΔH - Kirchoff's equation.

UNIT - II SECOND LAW OF THERMODYNAMICS:

Need for the law, different statements of the law- concept of entropy. Entropy as a state function — entropy as a function of P, V and T. Entropy changes in phase changes — entropy of mixing. Gibbs and Helmholtz functions. Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities- ΔA and ΔG as criteria for thermodynamic equilibrium and spontaneity — variation of ΔA and ΔG with P, V, T- Gibbs- Helmholtz equation and their applications — Maxwell's relations.

UNIT - III

APPLICATIONS OF II LAW OF THERMODYNAMICS:

Equilibrium constants and free energy change. Thermodynamic derivation of law of mass action. Equilibrium constants in terms of pressure and concentration — NH_3 , PCl_5 , CaCO_3 . Thermodynamic interpretation of LeChatlier's principle. (concentration, temperature, pressure and addition of inert gases). Equilibrium between different phases — system of variable composition — partial molar quantities — chemical potential of component in an ideal mixture — Gibbs - Duhem equation — variation of chemical potential with T, P, S and X (mole fraction). Reaction isotherm — van't Hoff's equation — van't Hoff's isochore - Clapeyron equation and Clausius Clapeyron equation — Applications.

UNIT - IV

THIRD LAW OF THERMODYNAMICS:

Need for the law. Nernst heat theorem, third law of thermodynamics — statement and concept of residual entropy. Evaluation of absolute entropy from heat capacity data. Exception to third law. (ortho & para hydrogen, CO_2 , N_2O and ice). Thermodynamic properties of real gases — fugacity — definition, calculation (real gases) and variation of fugacity with temperature, pressure and composition (Duhem-Margules equation).

UNIT - V

SURFACE PHENOMENA:

Adsorption and free energy reaction relation at interphase — physisorption and chemisorption — potential energy diagram- Lannord-Jones plot — Langmuir, BET isotherm — surface area determination- heats of adsorption, determination — adsorption from solutions — Gibbs adsorption isotherm. Activity and activity coefficient — definitions. experimental determination of activity and activity coefficients of non-electrolytes — activities in electrolytic solutions — determination of activity coefficient of electrolytes by freezing points.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC54L	Inorganic Qualitative Analysis Lab	0	0	3	3

Analysis of a mixture containing two cations and two anions of which one will be an interfering ion.

Semimicro methods using the conventional scheme with hydrogen sulphide may be adopted.

Cations: Pb, Co, Cd, Fe, Al, Zn, Cu, Ni, Sr, Mg and Sb.

Anions: Sulphide, bromide, chromate, arsenate, fluoride, oxalate, chloride, carbonate and sulphate.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC55L	Gravimetric Analysis Lab	0	0	3	3

Estimation of:
 Barium as barium chromate
 Nickel as nickel dimethylglyoxime complex.
 Lead as lead chromate.
 Calcium as calcium oxalate.
 Lead as lead sulphate.

COURSE CODE	COURSE TITLE	L	T	P	C
20114DSC56A	Discipline Specific Elective: I Pharmaceutical Chemistry	5	0	0	4

Aim:

To develop pharmaceutical knowledge to the learners.

Objectives:

Imparting basic knowledge about the drugs.

Developing knowledge about pharmacy.

Learning Outcomes:

Students who graduate with a major in Pharmaceutical Chemistry will be able to:
 Understand the principles of Pharmaceutical Chemistry.

To know the knowledge about antiseptic and anaesthetics.

To have employability.

UNIT I

ALKALOIDS — general methods of extraction from a plant source, colour reaction and detection — morphine and quinine with special reference to structure relationship (SAR) and uses. Chemistry of sulphonamides — sulphapyridine phthalyl sulphathiazole — sulpha furazole and protosil — preparation and uses — vitamins — classification of vitamins — vitamin A, B1 and B2, ascorbic acid — their synthesis, estimation and uses.

UNIT II

ENZYMES — characteristics — classification — composition and biological functions — composition of blood and blood plasma — analysis of serum proteins

— functions of plasma proteins — osmotic regulation — functions of hemoglobin, transport of oxygen and maintenance of pH of blood — analysis of hemoglobin in blood — Rh factor — blood pressure — normal, high and low and to control — diagnostic test for sugar, salt and cholesterol in serum — medically important compounds of Al, P, As and Fe — their preparation and applications.

UNIT III

SYNTHESIS OF HETEROCYCLICS - drugs derived from — pyridine derivatives — triphenyl amine and mepyramine — quinoline derivatives — chloroquine and primaquine — pyrimidines — urides and barbiturates. Antibiotics — pharmacological action — structural elucidation — synthesis and rises of chloramphenicol and penidillin.

UNIT IV

ORGANIC DIAGNOSTIC AGENTS — x-ray contrast media (radiopaques) sodium diatrizolate,— evan's blue — indigocarmine — methylene blue — histamine — pentagastrin — xylose and sodium benzoate — clinical estimation of proteins, glucose, urea, blood, cholesterol and hemoglobin — analgesic — classification — narcotic analgesics — morphine and derivatives — totally synthetic analgesic — pethidine and methadones — antipyretic analgesics — salicylic acid derivatives, indolyl derivatives and p-aminophenol derivatives —synthetic — action and uses.

UNIT V

ANAESTHETICS— preparation and uses of general and local gaseous anaesthetics —ether, vinyl ether, methoxy flourane, halogenated hydrocarbons like chloroform, halothane, trichloroethylene, ethyl chloride, cyclopropane, nitrous oxide. Thiopentane sodium, methohexitone and propanoid- local anaesthetics- cocaine and its derivatives. Antiseptic and disinfectants- phenols and related compounds, organic mercurials- dyes, cationic surface active agents, chloramine-T, chlorhexidine, diqualinium chloride. Preservatives, antioxidants, coloring, flavoring and sweetening agents, emulsifying agents-and suspending agents- ointment bases- disintegrating agents.

COURSE CODE	COURSE TITLE	L	T	P	C
20114DSC56B	Discipline Specific Elective: I Agricultural Chemistry	5	0	0	4

Aim:

To develop agricultural knowledge to the learners.

Objectives:

Imparting basic knowledge about the soil nature.

Developing knowledge about fertilizers and pesticides.

Learning Outcomes:

Students who graduate with a major in Agricultural Chemistry will be able to:

Understand the principles of Agricultural Chemistry.

To know the knowledge about nutrients and its importance.

To have employability.

UNIT-I

DEFINITION OF SOIL-SOIL composition. Soil Physical properties-soil separates and particle size distribution-soil texture and structure —Bulk density, particle density, pore space, soil air, soil temperature, soil water, soil consistence-significance of physical properties to plant growth. Soil chemical properties — soil colloids —Inorganic colloids — clay minerals — amorphous — Ion exchange reactions —organic colloids — soil organic matter-Decomposition-Humus formation —significance on soil fertility, soil reaction —Biological properties of soil —nutrient availability.

UNIT-II

FERTILIZER — definition-fertilizer recommendation based on soil testing- Nitrogenous fertilizers — Effect of Nitrogen on plant growth and development .Phosphate fertilizers — Effect of phosphorous on plant growth and development.- super phosphate & Bone meal .Potassium fertilizers — function of Potassium on plant growth. Secondary and micronutrient fertilizers — complex and mixed fertilizer- sources. Manufacture, properties and reactions in soils. Biofertilizersnitrogen fixing biofertilizer- rhizobium, azospirillum- Phosphate Mobilizing.

UNIT-III

ORGANIC MANURES —Agricultural, industrial and urban Wastes — preparation of enriched farm yard manures — Zinc enriched organics. Green manures-green leaf

manure-bulky organic and concentrated organic manures -compost — enriched farm yard manures, oil cakes, bone meal, fish meal, guano poultry manures- Fertilizer use efficiency —integrated nutrient management. Preparation of slow release fertilizer- compatability of fertilizers —fertilizers Blending- preparation of different fertilizer mixtures — fertilizer prescription for different soils and crops.

UNIT - IV

PEST MANAGEMENT AND CONTROL .PESTICIDES — formulations — emulsifiable concentrate, water miscible liquids, wettable powders, dusts, granules , classification of pesticides — mode of action — characteristics — uses — fate of pesticides in soil and plants — impact of pesticides on environment — safety measures in the analysis of pesticides.

Insecticides — plant products — Nicotine, pyrethrum, rotenone, petroleum oils. In organic pesticides — Arsenical fluorides, borates. Organic pesticides — organo chlorine compounds — D.D.T , B.H.C, methoxychlor, chloredane, endousulfon.

UNIT - V

FUNGICIDES-inorgnic-sulphur compounds-copper compounds- Mercuric compounds-organic- dithio carbamates – dithane M.boredeaux mixture Herbicides: Inorganic herbidea- Arsenical compounds Boron compound- cyanamide- cyanides and thiocyanates, chlorates and sulphamates. Organic herbicides & Nitro – compounds- chlorinated compound – urea herbicides, Alachlor.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC61	Inorganic Chemistry - II	5	1	0	5

Aim:

To develop knowledge about inorganic metals and its characteristics.

Objective:

To know the differences between transition elements and main group elements.

To know about ligand types and their different methods of coordination.

To know about isomerism in transition metal complexes

Outcome:

Able to write electronic configuration of given atomic number.

Able to tell the name of orbitals by recognizing shapes of orbitals.

Able to calculate bond order of different molecules.

UNIT I

NUCLEAR CHEMISTRY: Introduction—composition of nucleus and nuclear forces, nuclear stability — o/p ratio, mass defect, binding energy, packing fraction and magic numbers, shell and drop models. Isotopes —detection and separation. Isotopic constitution of elements and whole number rule-deviation of atomic weights from whole numbers-isobars, isotones and isomers.

UNIT — II

RADIOACTIVITY: Discovery, detection and measurements (Wilson cloud chamber). Radioactive emanations-disintegration theory — decay — group displacement law — rate of disintegration — half-life and average life — Radioactive series. Nuclear transformations — uses of projectiles, nuclear reactors. Applications of radio isotopes — carbon dating — radioactive waste disposal - radiolysis of water and hydrated electron.

UNIT — III

X-RAY CRYSTALLOGRAPHY: Solid state-difference between point groups and space groups — screw axis — glide planes. Crystal symmetry elements-crystal classes-crystal systems-unit cell, Bravais lattices, Asymmetric unit space group-equivalent positions — relations between molecular symmetry and crystallographic symmetry — basic concepts. The concept of reciprocal lattice and its application. X-ray diffraction by single crystal — structure factor — systematic absences. Determination of space group — heavy atom method. Neutron diffraction — elementary treatment. Comparison of X-ray diffraction, electron diffraction — basic principles.

UNIT — IV

SOME SPECIAL CLASSES OF COMPOUNDS: Clathrates-examples and structures. Interstitial compounds and non-stoichiometric compounds. Silicones-composition, raw materials, manufacture, structures, properties and uses. Metal alkyls, co-ordination polymers and phosphonitrilic polymers. Silicates — classification into discrete anions, one, two and three dimensional structures with

typical examples. Composition, properties and uses of beryl, asbestos, talc, mica, zeolites and ultramarines.

UNIT-V

FOSSIL FUELS:- Varieties of coal and petroleum- petroleum refineries in India. Gaseous fuels-natural, gohar, coal, water, semiwater and producer gases, liquefied petroleum gas (LPG). Safety matches, fire-works and explosives, paints and varnishes. Effluents and their treatment (dye, cement, tannery, distillery units).

- S.Glasstone, Source Book on Atomic Energy, 3rd Edn., East West Press.

COURSE CODE	COURSE TITLE	L	T	P	C
20114SEC62	Organic Chemistry – II	5	1	0	5

Aim: To study about the organic and bioorganic molecules and its characteristics.

Objective:

Structural theory, Lewis structures, isomers, basic resonance theory.

Atomic, molecular, and hybrid orbitals, covalent bonding, shapes of molecules.

Polarity of molecules and bonds.

Outcome:

Students will have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in Organic Chemistry.

Able to study of biomolecules and its activity.

UNIT — I

NITROCOMPOUNDS AND AMINES : Conversion of nitrobenzene to ortho-, para- and meta- dinitrobenzenes. TNT - aromatic nitro compounds —reduction in neutral, acidic and alkaline media. Relative basic characters of aliphatic and aromatic amines. Ring substitution in aromatic amines, diazotisation and its mechanism. Synthetic applications of diazonium salts, diazomethane and diazoacetic ester — preparation, structure and their synthetic uses. Phenylene diamines, sulphanilic acid, sulphanilamide, saccharin, chloramine-T, diamide — preparation, properties and uses of urea and thiourea.

UNIT — II

AMINOACIDS AND PROTEINS: Classification of aminoacids. Essential and non-essential amino acids. Preparation of L — amino acids, properties and reactions. Zwitter ions, isoelectric points, peptide synthesis. Structure determinations of polypeptides - end group analysis. Proteins-classification based on physical and chemical properties based on physiological functions. Primary and secondary structures of proteins. Helical and sheet structures (elementary treatment only) - denaturation of proteins. Nucleic acid-structures of nucleobases — adenine, guanine, thiamine, uracil and cytosine-nucleosides- nucleotides- polynucleotides - types of nucleic acids — DNA and RNA — biological functions.

UNIT—III

CARBOHYDRATES: Classification, constitution of glucose and fructose. Reactions of glucose and fructose - oxazone formation, mutarotation, and its mechanism, cyclic structure, pyranose and furanose forms. Determination of ring size, formulas, configuration of monosaccharide. Epimerisation, chain lengthening and chain shortening

UNIT—IV

MOLECULAR REARRANGEMENTS: Classification (anionotrophics, cationotrophic) Intermolecular and intramolecular. Pinacol- Pinacolone rearrangement (Mechanism, Evidences for carbonium ion intermediate formation — Migratory aptitude) Beckmann, Benzidine, Hofmann, Curtius, Benzilic acid rearrangements (mechanisms only) Claisen Rearrangement (sigmatropic rearrangement) — Evidence for intramolecular nature and allylic carbon attachment paraclaisen rearrangement, cope and oxycope rearrangements , Fries rearrangement (Two mechanisms).

UNIT — V

NATURAL PRODUCTS: Terpenes, geraniol, nerol, menthol, and α - terpinol Alkaloids — general and methods of isolation and general methods of structural

determination of conine, piperine and nicotine. Vitamins — thiamine, riboflavin, pyrodoxine and ascorbic acid occurrence and biological importance. Structural elucidations of pyridoxine and ascorbic acid.

COURSE CODE	COURSE TITLE	L	T	P	C
20114AEC63L	Industrial Chemistry Practical	0	0	3	2

1. Estimation of glucose in food samples.
2. Determination of dissolved oxygen in water.
3. Determination of Chemical Oxygen Demand (COD)
4. Determination of Biological Oxygen Demand (BOD)
5. Estimation of phosphoric acid in superphosphate fertilizer.
6. Determination of alkali content in antacid tablet using Hcl.
7. Estimation of Calcium in Calcium ammonium nitrate fertilizer.
8. Testing of turmeric powder, milk and mustard oil for adulterants.
9. Determination of total permanent and temporary hardness of water using EDTA.
10. Measurement of chloride, sulphate and salinity of water samples by simple titration method. (AgNO₃ and potassium chromate)

Suggested Readings

COURSE CODE	COURSE TITLE	L	T	P	C
20114DSC65A	Discipline Specific Elective:II Nano Science	5	0	0	3

Aim: To study about the importance and applications of Nano science.

Objective:

- To foundational knowledge of the Nanoscience and related fields.
- To make the students acquire an understanding the Nanoscience and Applications.
- To help them understand in broad outline of Nanoscience.

Outcome:

- Learn about the background on Nanoscience
- Understand the synthesis of nanomaterials and their application and the impact of nanomaterials on environment
- Apply their learned knowledge to develop Nanomaterial's.

UNIT I:

INTRODUCTION AND HISTORY

Background to nanotechnology - scientific revolutions –atomic structure-atomic size – bottom up/top down nanotechnology-chemical reactivity-Incremental nanotechnology-Evolutionary nanotechnology-Radical nanotechnology-Emergence of nanotechnology-Challenging in nanotechnology-Misnomers and misconception of Nanotechnology.

UNIT II:

2523

EVOLUTION AND GROWTH OF NANOSYSTEM

Basic problems and limitations - opportunities of nano scale -evolution of band structures and Fermi surface. Nanoparticles through homogeneous and heterogeneous nucleation-Growth controlled by surface and diffusion process- Oswald ripening process - influence of reducing agents-solid state phase segregation- grain growth and sintering precipitation in solid solutionhume rothery rule.

UNIT III:

NANOMATERIALS AND CLASSIFICATIONS

Carbon Nanotubes (CNT) - Metals (Au, Ag, Pd, Cu) - Metal oxides (TiO₂, CeO₂, ZnO, MgO) - Semiconductors (Si, Ge, CdS, ZnSe). Classifications of nanomaterials-zero dimensional-one dimensional-two dimensional-three dimensional nanostructures- Quantum dots-Quantum wireQuantum well-semiconductors and ceramics.

UNIT IV: SPECIAL NANOMATERIALS

Carbon fullerenes-fullerene derived crystals- carbon nanotubes. Micro and Mesoporous materialOrdered mesoporous materials-Random mesoporous materials-crystalline microporous materials.Core/Shell structures-Metal oxide structures-Metal polymer structures-Intercalation compounds-nanograined materials.

UNIT V: MATERIALS STRUCTURE AND PROPERTIES

Space lattice and unit cells, crystal system, Symmetry operation, Structures of common metallic, Semiconductor ceramic and superconductor materials, Miller Indices, Packing fractions, Formation of dangling bonds-atom like behavior of nanomaterials-physicochemical properties. Optical properties of nanomaterials-semiconductor-metal nanoparticles-Electrical and electronic propertiesThermal properties-Ferro electric properties-mechanical and magnetic properties.

COURSE CODE	COURSE TITLE	L	T	P	C
20114DSC65B	Discipline Specific Elective:II Polymer Chemistry	5	0	0	3

Aim: To develop knowledge about polymers to the learners.

Objectives:

- Imparting basic knowledge about the different types of polymers.
- Developing knowledge about production and advantages of polymers.

Learning Outcomes: Students who graduate with a major in Polymer Chemistry will be able to:

- Understand the principles of Polymer Chemistry.
- To know the knowledge about various techniques of polymers and its importance.
- To have employability.

UNIT — I

Basic concepts- an introduction of polymers and macromolecules. Natural and synthetic polymers. Molecular forces and chemical bonding polymers. Classification of polymers- addition and condensation polymers. General methods of preparation of polymers. Polymerisation through functional groups, multiple bonds and ring opening. Polymerisation techniques- bulk, solution, suspension and emulsion polymerization.

UNIT—II

Copolymerisation- homo and copolymers. Block copolymers and graft copolymers. Kinetics of free radical and cationic polymerization reactions. Mean kinetic chain length, degree of polymerization. Inhibition and retardation.

UNIT — III

Thermoplastic and thermosetting resins. Constituents of plastics, fillers, dyes, pigments, plasticizers, lubricants and catalysts. Acrylics, polyvinyl and cellulose derivatives of thermoplastic resins. Silicone resins, epoxy resins, phenolic resins and alkyl resins of thermosetting resins.

UNIT — IV

Nylon 66, terylene, viscose rayon, polyesters —definition and polymer requirement. Polymers of acrylic acid, methacrylic acid and poly acrylates.

UNIT — V

Polymer structure- linear, branched and cross-linked polymers- isotactic, syndiotactic and atactic. Properties- melting point, glassy state, glass transition temperature. Thermal analysis of polymers, thermal high energy radiation, oxidative and hydrolytic polymer degradation.

COURSE CODE	COURSE TITLE	L	T	P	C
201LSCCE	Community Engagement	-	-	-	1

a) Objectives:

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

b) Learning outcomes:

After completing this course, student will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and bonds of mutuality with local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

c) Contents

Divided into four Modules, field immersion is part of each Unit

S. No.	Module Title	Module Content	Assignment	Teaching/ Learning Methodology	No. of Classes
1	Appreciation of Rural Society	Rurallifestyle, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of “soul of India lies in villages’ (Gandhi), rural infrastructure	Prepare a map (physical, visual or digital) of the village you visited and write an essay about inter-family relations in that village.	- Classroom discussions - Field visit** - Assignment Map	2 4 2
2	<i>Understanding rural economy & livelihood</i>	Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets	Describe your analysis of rural household economy, its challenges and possible pathways to address them	- Field visit** - Group discussions in class - Assignment	3 4 1
3	<i>Rural Institutions</i>	Traditional rural organisations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration	How effectively are Panchayati raj institutions functioning in the village? What would you suggest to improve their effectiveness? Present a case study (written or audio-visual)	- Classroom - Field visit** - Group presentation of assignment	2 4 2

4	Rural Development Programmes	History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awaas Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.	Describe the benefits received and challenges faced in the delivery of one of these programmes in the rural community; give suggestions about improving implementation of the programme for the rural poor.	- Classroom - Each student selects one program for field visit** - Written assignment	2 4 2
---	-------------------------------------	---	---	---	-------------

COURSE CODE	COURSE TITLE	L	T	P	C
201SSCIM	Interview Skills Training and Mock Test	-	-	-	2

Objectives:

Preparing for your job interview could very well be one of the most important moments of your career.

Learning Outcomes:

Prepare for the interview.

Know common interview questions and questions to ask your future employer.

Describe body language and its impact on the interview.

Course Goals

Lesson One: Interview Preparation

Lesson Two: Common Interview Questions

Lesson Three: What Employers Want

Lesson Four: Attitude and Effort

Lesson Five: Body Language

Lesson Six: Research

Lesson Seven: The Mock Interview

Lesson Eight: Phone Interviews

Lesson Nine: Behavioral Interviews

Lesson Ten: Closing the Interview

Lesson Eleven: Thank You Notes

Revised content

COURSE CODE	COURSE TITLE	L	T	P	C
20114PEE	Programme Exit Examination	0	0	0	1

UNIT - I

General Reasoning: Analytical Reasoning, Syllogisms, Analogies, Directions, Coding-Decoding, Classification Alphabet Series, Symbols and Notations, Similarities and Differences, Number Series, Blood Relationships Arrangements, Statements, Data Sufficiency, Non-verbal Reasoning, Visual Ability, Graphical Analysis Data Analysis

General Aptitude: Simplifications, Number System, Average, Algebra, Percentage Time & Work

Simple & Compound Interest, Time & Speed, HCF, LCM Problems, Area, Profit & Loss, Bar Graph, Pictorial Graph, Pie Chart Ratio & Proportion, Permutation & Combination

UNIT - II Inorganic Chemistry

General Chemistry: periodic trends, electronic structure, acid-base theory and reactions, balancing equations, stoichiometry, oxidation states and nuclear chemistry.

Structure and bonding: Lewis diagrams, molecular geometries and VSEPR concept, valence bond description and hybridization, bond energies, van der Waals radii of the elements, molecular orbitals and intermolecular forces

Metallic and ionic substances: lattice structure, lattice energies, theory of metallic bonding, conductors, semiconductors, superconductors and liquid crystals.

Chemistry of the main group elements: physical and chemical properties of the elements and their compounds, and occurrences and recovery.

Chemistry of the transition elements: electronic structures, physical and chemical properties of the elements and their compounds, occurrences and recovery, coordination chemistry, including ligands, stereochemistry, nomenclature, bonding, spectroscopy, thermodynamic and kinetic aspects.

Special topics: bioinorganic chemistry, catalysis, environmental chemistry, organometallic chemistry, including effective atomic number rule, bonding and reactions

Unit - III Organic Chemistry

Molecular structure: bonding, Lewis structures, orbital hybridization, resonance, aromaticity, stereochemistry, conformational analysis, acid base properties, IUPAC nomenclature, IR, NMR, UV/visible spectroscopy and mass spectrometry.

Functional groups: preparation and reactions of alkanes, alkenes, alkynes, dienes, alkyl halides, alcohols, thiols, ethers, sulfides, epoxides, aromatic compounds, aldehydes, ketones, amines, carboxylic acids and their derivatives.

Reaction mechanisms: electrophilic substitutions and eliminations, nucleophilic substitutions and additions, nucleophilic addition-eliminations, cycloadditions, and radical reactions, catalysis, reaction coordinate diagrams, thermodynamic and kinetic control, stereochemistry of reactions, relative reactivities, relative stabilities and reactive intermediates (carbocations, carbanions, radicals, carbenes, enols, enolates, etc.)

Biochemistry: carbohydrates, amino acids, peptides, proteins, lipids, alkaloids, pharmaceuticals, nucleotides and nucleic acids, glycoproteins, polysaccharides, terpenes and steroids

Special topics: catalysis, organometallic chemistry, polymers and rearrangements

Unit - IV Physical Chemistry

Thermodynamics: first, second and third laws; equilibrium constants; spontaneity; LeChatelier's principle; thermochemistry; mixing; phase equilibria; colligative properties; electrochemistry and statistical thermodynamics

Kinetics: kinetic theory of gases, ideal and real gas equations and properties, rate laws, rate constants, half-life, reaction mechanisms, enzyme kinetics, activated complex theory, collision theory, photochemistry and solution dynamics.

Quantum chemistry and applications: classical experiments, principles of quantum mechanics, atomic and molecular structure, molecular spectroscopy

Unit -V Analytical Chemistry

Experimental design and data acquisition: accuracy and precision, random and systematic error, standard deviation, confidence limits, calibration, detection limits, sensitivity and significant figures

Homogeneous equilibria: acid-base equilibria and titrations, redox reactions and titrations, electrochemical cells and complexometric titrations

Heterogeneous equilibria: gravimetric analysis, solubility and chemical separations

Solutions: concentration terms, ionic strength and activity, standardizations and primary standards

Instrumental methods: Beer's law, spectroscopic methods, chromatographic methods, radiochemical methods, electrolysis, potentiometry and lasers

DEPARTMENT OF CHEMISTRY
M.Sc CHEMISTRY – REGULATION 2019
COURSE STRUCTURE

M.Sc. Graduate Attributes

- Domain knowledge
- Investigative
- Critical thinking
- Resourceful and Responsible
- Effective Communication
- Ethical and Moral values

M.Sc. Programme Educational Objective – PEO

- PEO1-To demonstrate broad knowledge of descriptive Chemistry.
- PEO2-To impart the basic analytical and technical skills to work effectively in the various fields of chemistry.
- PEO3- To motivate critical thinking and analysis skills to solve complex chemical problems, e.g., analysis of data, synthetic logic, spectroscopy, structure and modeling, team-based problem solving, etc.
- PEO4-To demonstrate an ability to conduct experiments in the above sub-disciplines with mastery of appropriate techniques and proficiency using core chemical instrumentation and modeling methods.
- PEO5-To demonstrate the ability to perform accurate quantitative measurements with an understanding of the theory and use of contemporary chemical instrumentation, interpret experimental results, perform calculations on these results and draw reasonable, accurate conclusions.
- PEO6-To develop skills in quantitative modeling of static and dynamic chemical systems.
- PEO7-To develop laboratory competence in relating chemical structure to spectroscopic phenomena.
- PEO8-To demonstrate the ability to synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment, and modern instrumentation.

M.Sc Programme Outcome –PO

- PO1-Think critically and analyze chemical problems.
- PO2-Present scientific and technical information resulting from laboratory experimentation in both written and oral formats.
- PO3-Work effectively and safely in a laboratory environment.
- PO4-Use technologies/instrumentation to gather and analyze data.
- PO5-Work in teams as well as independently.
- PO6-Apply modern methods of analysis to chemical systems in a laboratory setting.

Aim:

- To acquaint students with learning Organic Chemistry.

Objective:

- To sensitize students to learn Important components of Organic Chemistry.

Outcome:

Having successfully completed this module you will be able to:

- Recognise many functional groups and their reactivity
- Set up glassware and apparatus to conduct experiments in Organic Chemistry.
- Interpret data from a range of physical techniques to characterise Organic compounds.
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis

Unit - I**Bonding, Structure & Aromaticity**

Hybridization with reference to carbon compounds-Shapes of simple organic molecules-bond angle and bond length in organic molecules. Electronegativity of atoms and groups. Dipole moments of molecules-Applications of dipole moment to study the properties of organic molecules. Polarity of solvents. Hydrogen bonding-Inter and Intramolecular hydrogen bonding. **Electronic Effects**-Inductive, resonance and hyperconjugative effects and their influence-rules of resonance. Tautomerism. Steric effects. Aromatic character-Huckel's rule and applications-Craig's rule and applications-Consequences of aromaticity – non-alteration in bond length-Resonance energy from heat of hydrogenation, heat of combustion and Huckel's MO calculation, antiaromatic compounds.

Unit - II

Essentials of Organic Stereochemistry

Principles of symmetry-concept of chirality. Molecular symmetry and chirality. Newmann, Sawhorse, Fischer and Wedge representations and their interconversions. Types of molecules exhibiting optical activity. Configurational nomenclatures of acyclic and cyclic molecules: *cis-trans* and *E,Z* – and *D, L; R, S*; erythro and threo; *syn* and *anti*; *endo* and *exo*. Stereochemistry of molecules with axial chirality-atropisomerism – biphenyls-allenes, spiranes and analogues. Helicity and chirality. Topocity and prostereoisomerism- Diastereotopic ligands and faces. Resolution –methods of Resolution. Conformations six membered ring systems and their optical activity. Quantitative correlation between conformation and reactivity- Winstein-Eliel equation

Unit - III

Reactive Intermediates Methods of Determining Reaction Mechanisms

Carbocations, Carbanions, Carbenes and Nitrenes – Generation and stability of reactive intermediates. Correlation of reactivity with structure of reactive intermediates. Free radicals – Configurations – Identification by chemical and spectral methods – Free radical halogenation - NBS. Types of reactions: Homolytic and Heterolytic cleavages of bonds. Thermodynamic and kinetic aspects, Hammond's postulate, isotope effects. Energy profile diagrams –Intermediate versus transition state, Product analysis and its importance, Crossover experiments, Kinetic methods, Stereochemical studies, Isotopic and substituent effects

Unit - IV

Nucleophilic Substitutions in Aliphatic and Aromatic Substrates

SN1 and SN2 mechanisms-effect of substrate structure, leaving group, attacking nucleophile and solvent polarity-neighbouring group participation-substitution at vinylic and allylic carbons and reactivity. Ambient nucleophiles and substrates. Hydrolysis of esters-mechanisms. Selected reactions-Von-Braun, Dieckmann, Williamson. SNAr mechanism- SN1 (Aromatic) mechanism with evidences - Benzyne mechanism - Effect of substrate structure, leaving group, attacking nucleophile and solvent.

Unit -V

Heterocycles

Nomenclature of heterocycles having not more than two hetero atoms such as oxygen, nitrogen and sulphur. Synthesis, reactivity and applications of the following heterocycles: Pyrazoles, Oxazoles, Pyridazines, Pyrimidine and Pyrazines.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC12	Inorganic Chemistry – I	5	0	0	4

Aim:

- To acquaint students with learning Inorganic Chemistry

Objective:

- To learn Important Concepts of Inorganic Chemistry

Outcome:

- Having successfully completed this module you will be able to:
- .
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis

Unit - I

18 electron rule - EAN rule - theories of coordination compounds - valence bond theory - crystal field theory - splitting of d orbitals in different symmetries - crystal field stabilization energy - factors affecting the magnitude of $10 Dq$ - evidence for crystal field stabilization - spectrochemical series - site selection in spinels - tetragonal distortion from octahedral symmetry - Jahn-Teller distortion - molecular orbital theory - octahedral complexes - tetrahedral and square planar complexes - pi bonding and molecular orbital theory - experimental evidence for pi bonding.

Unit - II

Term states of dn ions - electronic spectra of coordination compounds - selection rules - band intensities and band widths - energy level diagrams of Orgel and Tanabe - Sugano - spectra of Ti^{3+} , V^{3+} , Ni^{2+} , Cr^{3+} , Co^{2+} , Cr^{2+} and Fe^{2+} - calculation of $10Dq$ and B for V^{3+} (oct) and Ni^{2+} (oct) complexes.

Magnetic properties of coordination compounds - change in magnetic properties of complexes in terms of spin orbit coupling - temperature independent paramagnetism - spin cross over phenomena.

Unit - III

Substitution reactions in square planar complexes - the rate law for nucleophilic substitution in a square planar complex - the trans effect - theories of trans effect - mechanism of nucleophilic substitution in square planar complexes - kinetics of octahedral substitution - ligand field effects and reaction rates - mechanism of substitution in octahedral complexes - reaction rates influenced by acid and bases - racemization and isomerization - mechanisms of redox reactions - outer sphere mechanisms - excited state outer sphere electron transfer reactions - inner sphere mechanisms - mixed valent complexes.

Unit - IV

Structure of coordination compounds with reference to the existence of various coordination numbers - complexes with coordination number two - complexes with coordination number three - complexes with coordination number four - tetrahedral and square planar complexes - complexes with coordination number five - regular trigonal bipyramidal and square pyramidal - site preference in trigonal bipyramidal complexes - site preference in square planar complexes - isomerism in five coordinate complexes - coordination number six - distortion from perfect octahedral symmetry - trigonal prism - geometrical isomerism in octahedral complexes - coordination number seven and eight.

Unit - V

Inorganic chains - rings - cages and clusters - catenation - heterocatenation - intercalation chemistry - one dimensional conductor - isopolyanions - heteropolyanions - borazines - phosphazenes - phosphazene polymers - ring compounds of sulphur and nitrogen - homocyclic inorganic systems - cages - boron cage compounds - metal clusters - dinuclear clusters - trinuclear clusters - tetranuclear clusters - hexanuclear clusters - structural prediction of organometallic clusters.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC13	Physical Chemistry – I	5	0	0	4

Aim:

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry .

Objective:

- To learn the importance of Physical Chemistry.

Outcome:

- Having successfully completed this module you will be able to:

- Determine rate constants and half-life for 0, 1st and 2nd order reactions from experimental datasets.
- Understand and apply the Boltzmann distribution and its effect on the observed spectra; integrate most functions encountered in chemical practice.
- Solve separable first-order ordinary differential equations.

UNIT - I

Classical Mechanics

Symmetry of space and its relation to conservation laws-Conservation theorems - conservation of linear momentum, angular momentum and energy-Equations of motion - Newtonian, Lagrangian, Hamiltonian- Definition of classical mechanics, quantum mechanics and relativistic mechanics- Assumptions of classical mechanics. Classical wave equation- Conversion of classical wave equation into Schrodinger wave equation- Failure of Classical mechanics-Black body radiation-Photoelectric effect-Heat capacity of substances-Hydrogen atom spectrum.

UNIT- II

Mathematics for Quantum Chemistry

Functions - definition, classification-Linearly dependent and independent functions, odd and even functions-Inner product - normalization - orthogonality - orthonormal functions-Kronecker delta - Eigen functions - need for normalization. Operators - Linear, angular momentum, energy operators-Linear and non-linear operators. Hermitian operators and their properties- Proof for Hermiticity of linear, angular, position and Hamiltonian operators-Commutator of operators-Commutation relation among angular momentum operators L_x, L_y, L_z - Vectors - vector space - Euclidean space, Hermitian space, Hilbert space.

UNIT - III

Basic Quantum Chemistry

Wave - particle dualism-Compton effect-Uncertainty principle and its applications-Postulates of quantum mechanics-Setting up Schrodinger wave equation and solving for particle in a 1D and 3D box, Harmonic oscillator, Rigid rotor, Hydrogen atom-Hydrogen atomic orbitals-Analytical and graphical representations-Radial probability distribution function-Orthogonality of 1s, 2s, 2p orbitals- Many electron atom – one electron orbital and one electron potential, Pauli's exclusion principle, Slater's determinant.

UNIT -IV

Fundamentals of Statistical Thermodynamics

Permutations and combinations-Combinatory rule – probability theorems. Microstates, macrostates-Methods of counting microstates of distinguishable and indistinguishable particles-Heat capacity of solids-Einstein and Debye models-Maxwell-Boltzmann statistics-Phase space-Thermodynamic probability-Statistical equilibrium. Derivation of

M.B. statistics-Relationship between entropy and probability-Statistical meaning of third law of thermodynamics.

UNIT -V

Applications of Statistical Thermodynamics

Partition functions -Translational, rotational and vibrational partition functions of diatomic molecules-Translational, rotational and vibrational partition functions of polyatomic molecules-Electronic partition function-Derivation of thermodynamic quantities E, S, A, H, G, K and Cp, Cv using partition function-Sackur-Tetrode equation- Quantum statistics. Bose Einstein statistics-Behaviour of helium at low temperature-Fermi Dirac statistics.

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC14L	Organic Chemistry Lab – I	0	0	5	3

Aims: The organic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecturebased part of the course. The students will be introduced to key synthetic techniques and will regularly employ spectroscopic techniques to examine the outcome of experiments.

Objectives: To perform seven experiments that have been divided into 3 topics:

Functional group interconversions, carbon-carbon bond formation / enolate chemistry, and electrophilic aromatic substitution. To take part in spectroscopy workshops that will demonstrate further topics in spectroscopy and the use of spectroscopic techniques in the characterisation of organic compounds. To learn new synthetic techniques: distillation under reduced pressure, reactions involving continuous removal of water and preparative chromatography. To gain experience in the identification and characterisation of unknown products using ^1H NMR spectroscopy, ^{13}C NMR spectroscopy, IR spectroscopy and mass spectrometry. To introduce the concept of multi-step organic synthesis.

ORGANIC CHEMISTRY LAB – I

Qualitative analysis of an organic mixture containing two components.

- Pilot separation
- Bulk separation
- Analysis
- Derivatization

Preparation of Organic compounds (Single stage)

- Glucose pentaacetate from glucose (acetylation)
- Resorcinol from resorcinol (acetylation)
- Benzophenone oxime from benzophenone (addition)
- p*-Benzoquinone from hydroquinone (oxidation)
- Phenyl-azo-2-naphthol from aniline (diazotization).

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC15L	Inorganic Chemistry Lab – I	0	0	5	3

Aims:

The inorganic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture-based part of the course. To equip students with the basic skills and expertise required to carry out

careful and precise procedures in the modern practical chemistry laboratory whilst providing experiments that illustrate and support the lecture course. To train students in the art of good scientific report writing and in the use of spectroscopic techniques for the structural elucidation of inorganic compounds. To encourage student to become more aware of the risks and hazards associated with careful laboratory work and to assess risks and methods for minimizing them.

Objectives:

Analytical Experiments:

(1) To be familiar with the use of pipettes, burettes and analytical balances. To be able to transfer quantitatively liquids and solids.

(2) To be familiar with the techniques of gravimetric analysis, complexometric titration, colorimetry and atomic absorption spectrometry for the analysis of inorganic compounds.

(3) To learn about gases in the environment and how to analyse for concentrations of gas components via spectrophotometry and IR spectroscopy. In modern analytical chemistry instrumental methods are replacing traditional titration and gravimetric methods. Nevertheless, a good grasp of the basic techniques is essential in all forms of instrumental analysis.

Among these techniques are:

- (a) the ability to make up a standard solution
- (b) the ability to make careful measurements
- (c) an appreciation of errors and significant figures.

INORGANIC CHEMISTRY LAB – I

1. Qualitative analysis: Qualitative analysis employing semi-micro methods and spot tests of mixtures of common cations and ions of the following less familiar elements. Molybdenum, tungsten, selenium, tellurium, cerium, thorium, titanium, zirconium, vanadium, uranium and lithium.

2. Colorimetry: Colorimetric estimations of copper, nickel, iron and chromium using photoelectric colorimeter.

3. Industrial analysis: (i) Analysis of two of the following alloys: brass, bronze, stainless steel, solder type metal. (ii) Analysis of any one of the following: cement, glass, ultramarine.

4. Titrimetry: Complexometric titrations involving estimations of calcium, magnesium, nickel, zinc and hardness of water.

5. Quantitative analysis: Quantitative analysis involving volumetric and gravimetric estimations of at least four mixtures of cations.

6. Preparation of inorganic complexes: About six preparations involving different techniques selected from the following.

(i) Potassium tris(oxalato)aluminate

(ii) Nickel ammonium sulphate

(iii) Tris(thiourea)copper(I) chloride

(iv) Potassium tris(oxalato)ferrate

(v) Hexamminecobalt(III) chloride

(vi) Ammonium hexachloro stannate(IV)

(vii) Tetrammine copper(II) sulphate

(viii) Cis and trans bis(glycinate) copper.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC16A	Discipline Specific Elective - I Environmental Chemistry	5	0	0	4

Aim: To learn the important of Environmental Chemistry.

Objective:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its Ancillary problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

Outcomes:

Students who graduate with a major in environmental science will be able to:

- Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
- Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
- Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
- Apply their ecological knowledge to illustrate and graph a problem and describe the realities that managers face when dealing with complex issues; and
- Understand how politics and management have ecological consequences.

UNIT – I

Pollution

Environmental pollution - structure of atmosphere - biogeological cycles - oxygen - nitrogen – carbon – phosphorous – sulphur - biodistribution of elements - air pollutions - reactions in atmosphere - primary pollutants - air quality standards - analysis of CO, nitrogen oxides, sulphur oxides, hydrocarbons and particulate matter - particulate pollution - control methods - vehicular pollution - green house effect and global warming - climatic changes – ozone - photochemical smog - acid rain - sampling - monitoring – control.

UNIT – II

Water Pollution

Hydrosphere: Water pollution - hydrological cycle - chemical composition - sea water composition - water quality criteria for domestic and industrial uses - BIS and WHO standards - ground water pollution - surface water pollution - lake and river water - eutrophication - marine pollution - water pollutants - biodegradability of detergents – pesticides - endosulfan and related case studies.

UNIT – III

Water Treatment

Principles of water and waste water treatment - aerobic and anaerobic treatment - industrial waste water treatment - heavy metal pollution - hard water - softening - purification of water for drinking purposes - water treatment for industrial use -

electrodialysis - reverse osmosis - other purification methods - chemical speciation of elements.

UNIT – IV

Water Analysis

Color - odor - conductivity - TDS - pH - acidity - alkalinity - chloride - residual chlorine - hardness - trace metal analysis - elemental analysis - ammonia - nitrite - nitrate - fluoride - sulphide - phosphate - phenols - surfactants - BOD - COD - DO - TOC - nondispersive IR spectroscopy - anode stripping - ICP - AES - Chromatography - ion selective electrodes - neutron activation analysis.

UNIT – V

Soil Pollution:

Soil humus - soil fertility - inorganic and organic components in soil - acid - base and ion exchange reactions in soils - micro and macro nutrients - wastes and pollutants in soil - introduction to geochemistry - solid waste management - treatment and recycling soil analysis - radioactive pollution - disposal of radioactive waste.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC16B	Discipline Specific Elective - I Supramolecular Chemistry	5	0	0	4

Aim:

2551

- To focuses on non-covalent bonding interactions of molecule.

Objective:

- To explain the chemical reactions and molecular rearrangements of non-covalent bond molecules.
- To forces include hydrogen bonding ,metal coordination, van der waals forces, pi-pi interactions and electrostatic effects.

Outcome:

- Understand the reactivity of non-covalent bonding molecules.
- Develop the interaction and nature of organic solvents to others.

UNIT- I

Definition of supramolecular chemistry: Nature of binding interactions in supramolecular structures: ion-ion, ion-dipole, dipole-dipole, hydrogen bonding, cation- π , anion- π , π - π , and van der Waals interactions.

UNIT -II

Synthesis and structure of crown ethers: lariat ethers, podands, cryptands, spherands, calixarenes, cyclodextrins, cyclophanes, cryptophanes, carcerands and hemicarcerands.

UNIT- III

Host-Guest interactions: pre-organization and complimentarity, lock and key analogy. Binding of cationic, anionic, ion pair and neutral guest molecules. Crystal engineering: role of H-bonding and other weak interactions.

UNIT- IV

Self-assembly molecules: design, synthesis and properties of the molecules, self assembling by H-bonding, metal-ligand interactions and other weak interactions, metallomacrocycles, catenanes, rotaxanes, helicates and knots.

UNIT -V

Molecular devices: molecular electronic devices, molecular wires, molecular rectifiers, molecular switches, molecular logic.

Relevance of supramolecular chemistry to mimic biological systems: cyclodextrins as enzyme mimics, ion channel mimics, supramolecular catalysis.

employability/Entrepreneurship/Skill development

SEMESTER - II

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC21	Organic Chemistry - II	4	0	0	4

Aim:

- To acquaint students with learning Organic Chemistry

Objective:

- To sensitize students to learn Important components of Organic Chemistry

Outcome:

- Having successfully completed this module you will be able to:
- Gaining knowledge about Carbon –Carbon Double bonds
- About rearrangements
- Interpret data from a range of physical techniques to characterise Organic compounds.
- Present the results of a practical investigation in a concise manner.
- Recognise many fundamental bond forming reactions and how to apply them in synthesis.

UNIT- I

Addition to Carbon–Carbon Multiple Bonds

Electrophilic and nucleophilic additions, addition to conjugated systems, orientation and reactivity, addition of halogen and nitrosyl chloride to olefins, hydration of olefins and acetylenes, hydroboration, hydroxylation epoxidation, Michael addition, 1,3 dipolar addition, Diels-Alder reaction.

UNIT- II

Addition to Carbon–Hetero Atom Multiple Bonds

Mechanism and reactivity, Mannich, Stobbe, Darzen-Glycidic ester condensation, Benzoin condensation, Peterson olefination (Silyl Wittig reaction), Strecker synthesis, Wittig, Wittig Horner, Perkin, Thorpe, Ritter, Prins reactions.

UNIT -III

Elimination Reactions

E₁, E₂, E₁CB mechanisms, Orientation of the double bond, Hofmann and Saytzeff rule, competition between elimination and substitution, dehydration and dehydrohalogenation reactions. Stereochemistry of E₂ eliminations in cyclohexane ring systems, mechanism of pyrolytic eliminations, Chugaev reaction and Cope elimination.

UNIT - IV

Molecular Rearrangements

A detailed study of the mechanism of the following rearrangements: Nucleophilic. Electrophilic and Free radical rearrangements-memory effects, Migratory aptitudes,

Pinacol-Pinacolone. Oppener-Wagner-Meerwin, Demyanov, Dienone-Phenol, Favorski, Baeyer-Villiger, Wolff, Stevens and Von-Richter (a few examples in each rearrangement are to be studied), rearrangements involving nitrenes- Hofmann, Curtius, Lossen, and Beckmann.

UNIT –V

Oxidation and Reduction

Study of the following oxidation reaction with mechanism: Oxidation of alcohols by CrO_3 - DMSO. DMSO in combination with DCC; acetic anhydride and oxyl chloride, oxidation of aryl methane, allylic oxidation of olefins, oxidative cleavage of glycols, oxidative cleavage of double bonds by ozonolysis., NBS Oxidation.

Study of the following reduction reactions with mechanism: Reduction of carbonyl compounds by hydrides, selectivity in reduction of 4-ter-butylcyclohexanone using selenides, Clemmenson and Wolff-Kishner reductions, Birch reduction, MPV reduction.

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC22	Inorganic Chemistry - II	4	0	0	5

Aim:

- To acquaint students with learning Inorganic Chemistry

Objective:

- To learn Important Concepts of Inorganic Chemistry

Outcome:

- Having successfully completed this module you will be able to:
- .
- Present the results of a practical investigation in a concise manner.
- Recognise Nuclear chemistry and transition Elements

UNIT- I

Nuclear Chemistry:

Radioactive decay and equilibrium, Nuclear reactions; Q value, cross sections, types of reactions, Chemical effects of nuclear transformations; fission and fusion, fusion products and fission yields. Radioactive techniques; tracer technique, neutron activation analysis, counting techniques such as G.M. ionization and proportional counter.

UNIT - II

Chemistry of Non-transition Elements:

General discussion on the properties of the non transition element special features of individual elements; synthesis, properties and structure of their halides and oxides, polymorphism of carbon, phosphorus and sulphur. Synthesis, properties and structure of boranes, carbonates, borazines, silicates carbides, silicones, phosphazenes, sulphur-nitrogen compounds; peroxo compounds of boron, carbon and sulphur; oxy acids of nitrogen, phosphorous, sulphur and halogens, interhalogens pseudohalides and noble gas compounds.

UNIT- III

Chemistry of Transition Elements:

Coordination chemistry of transition metal ions; stability constants of complexes and their determination; stabilization of unusual oxidation states. Stereochemistry of coordination compounds. Ligand field theory, splitting of d-orbital in low-symmetry environments. , John – Teller effect : interpretation of electronic spectra including charge transfer spectra; spectrochemical series , nephelauxetic series Magnetism; Dia, para; ferro- and antiferromagnetism, quenching of orbital angular momentum, spin-orbit coupling,

inorganic reaction mechanisms; substitution reactions, trans effect and electron transfer reactions.

UNIT - IV

Chemistry of Lanthanides and Actinides:

Spectral and magnetic properties ; Use of lanthanide compounds as shift reagents molecules metal clusters, Spin crossover in coordinating Photo chemical reaction of chromium and ruthenium complexes. Fluxional compounds.

UNIT -V

Organometallic Chemistry of Transition Elements:

Synthesis, structure and bonding, organometallic reagents in organic synthesis and in homogeneous catalytic reaction (hydrogenation, hydroformylation, isomerisation and polymerization); pi-acid metal complexes, activation of small molecules by coordination.

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC23	Physical Chemistry - II	4	0	0	4

Aim:

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry.

Objective:

- To learn the importance of Physical Chemistry.

Outcomes:

- Having successfully completed this module you will be able to:
- Learning various concepts of Surface Phenomenon and Spectroscopy.
-

UNIT - I

Surface Phenomena:

Adsorption and free energy reaction at inter –phase-physisorption and chemisorption-potential energy diagram-Lennard –Jones Plot-Langmuir,BET isotherm-Gibbs & Freundlich’s adsorption isotherms.

Role of surfaces in catalysis- Semiconductor catalysis-n and p type surfaces-kinetics of surface reactions involving adsorbed species-Langmuir-Hinshelwood mechanism of bimolecular reaction- Langmuir-Rideal mechanism of biomolecularr reaction- Rideal-Eley mechanism.

UNIT- II

Partition Functions:

Calculation of thermodynamic probability of a system –difference between thermodynamics and statistical probability-definition of micro and macro states – different methods of counting macro states-distinguisable and indistinguishable particles classical statistics-derivation of Maxwell-Boltzman Distribution law.

Transational ,rotational.vibrational,electronic-calculation of enthalpy internal energy,entropy and other thermodynamic functions – applications of partition functions to monoatomic and diatomic molecules.

UNIT - III

Spectroscopy:

Microwave Spectroscopy - Theory of linear, symmetric top and asymmetric top molecules.

IR Spectroscopy - Vibrational spectra- selection rules-harmonic and unharmonic oscillator- (fundamental absorption, first and second overtones, hot bands etc)-rotation, vibration spectra of diatomic molecules-influence of rotation on the spectra of polyatomic molecules- FT- IR spectrometry.

UNIT- IV

Raman Spectroscopy: Raman's effect – elastic and inelastic scattering- selection rules-pure rotational Raman spectra(linear, spherical top, symmetric top and asymmetric top molecules)-vibrational Raman's spectra-polarisation of lights and Raman effect-comparison of IR and Raman spectra –simple molecules-mutual exclusion principle-fermi resonance- Laser Raman's Spectroscopy (LRS).

UNIT-V

Group Theory: Elements of group theory- properties of subgroup –classes –group multiplication table –isomorphism groups –symmetry element and symmetry operations –inter relation among symmetry operation- generations- points group of molecules-matrix representation theory –construction of character tables- reducible and irreducible representations –MOs for systems like ethylene, butadiene, monocyclic and aromatic compounds

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC24L	Organic Chemistry Lab - II	0	0	5	3

Aims: The organic laboratory class consists of a series of experiments designed to complete in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to key synthetic techniques and will regularly employ spectroscopic techniques to examine the outcome of experiments.

Objectives: To perform seven experiments that have been divided into 3 topics: Functional group interconversions, carbon-carbon bond formation / enolate chemistry, and electrophilic aromatic substitution. To take part in spectroscopy workshops that will demonstrate further topics in spectroscopy and the use of spectroscopic techniques in the characterisation of organic compounds. To learn new synthetic techniques: distillation under reduced pressure, reactions involving continuous removal of water and preparative chromatography. To gain experience in the identification and characterisation of unknown products using ¹H NMR spectroscopy, ¹³C NMR spectroscopy, IR spectroscopy and mass spectrometry. To introduce the concept of multi-step organic synthesis.

ORGANIC CHEMISTRY LAB – II

Qualitative analysis of Organic Compounds:

Estimation of

- a) Phenol
- b) Aniline
- c) Ketone
- d) Glucose

Preparation of Organic Compounds (Double stage)

- a) p-bromoacetanilide from aniline (acetylation & bromination)
- b) 1,3,5- tribromobenzene from aniline (bromination, diazotization & hydroxylation)
- c) p-nitroaniline from acetanilide (nitration & hydrolysis)
- d) p-aminobenzoic acid from para- nitrotoluene, (oxidation & reduction).

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC25L	Inorganic Chemistry Lab - II	0	0	5	3

Aims:

The inorganic laboratory class consists of a series of experiments designed to be completed in either one or two sessions. A written report discussing notable features of each experiment and the significance of the data is to be carried out each week. The course is designed to illustrate and reinforce concepts covered in the lecture-based part of the course. To equip students with the basic skills and expertise required to carry out careful and precise procedures in the modern practical chemistry laboratory whilst providing experiments that illustrate and support the lecture course. To train students in the art of good scientific report writing and in the use of spectroscopic techniques for the structural elucidation of inorganic compounds. To encourage student to become more aware of the risks and hazards associated with careful laboratory work and to assess risks and methods for minimizing them.

Objectives:

Analytical Experiments:

- (1) To be familiar with the use of pipettes, burettes and analytical balances. To be able to transfer quantitatively liquids and solids.
- (2) To be familiar with the techniques of gravimetric analysis, complexometric titration, colorimetry and atomic absorption spectrometry for the analysis of inorganic compounds.
- (3) To learn about gases in the environment and how to analyse for concentrations of gas components via spectrophotometry and IR spectroscopy. In modern analytical chemistry instrumental methods are replacing traditional titration and gravimetric methods. Nevertheless, a good grasp of the basic techniques is essential in all forms of instrumental analysis.

Among these techniques are:

- (a) the ability to make up a standard solution
- (b) the ability to make careful measurements
- (c) an appreciation of errors and significant figures.

Titrimetry and gravimetry (any two)

A mixture(s) of solution given for estimation.

Cu (V)	AND	Ni (G)
Cu (V)	AND	Zn (G)
Fe (V)	AND	Zn (G)
Zn (V)	AND	Cu (G)
Ca (V)	AND	Ba (G)

Preparation of the following compounds (any three)

Tetramminecopper(II) sulphate
 Potassium trioxalatochromate
 Potassium trioxalatoaluminate
 Trithioureacopper(I) chloride

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC26A	Discipline Specific Elective - II Industrial Chemistry	4	0	0	4

Aim:

- The aim of this course is to provide a core for future studies in chemistry and aspects of Industrial Chemistry .

Objective:

- To learn the importance of Industrial Chemistry.

Outcomes:

- Having successfully completed this module you will be able to:
- Learning various concepts of industries using Chemicals.

Unit – I
