Water conditioning for chemical factories – reuse – methods of conditioning – Demineralisation – Precipitation – Desalting – Industrial and Sewage waste water treatment. Vegetable oils – Refining of edible oils – Solvent extraction – Processing of animal fat – Hydrogenation – Interesterification - Manufacture of soap and detergents . Biodegradability of surfactants – Methods.

Unit – II

Pulp and paper industries – Sulphite, Sulphate, soda, ground wood pulp for paper – Manufacture of paper – Speciality paper – Paper stock – Structural Boards. Plastics – Manufacture – Resin – Manufacturing process – Condensation polymerization – Manufacture of laminates and other derivatives – Hexamethylene tetramine plastics – Vinyl esters.

UNIT – III

Basic ideas – Flow charts – Chemical Conversion – Batch Versus Continuous processing – Design – Chemical Process control and economics – Market evaluation – Plant location – Management for productivity and Creativity – Research & Development and its role in Chemical industries.

Unit – IV

Rubber industries – Natural rubber – Synthetic rubber – Monomer production – Synthetic rubber polymerization – Butadiene – Styrene copolymers – Butadiene acrylonitrile copolymer – Neoprene – Thiokol – Silicon Rubber – Butyl rubber – Urethane rubber – Rubber processing- chemicals – Rubber compounding – Rubber fabrication – Latex compound- reclaimed rubber- Rubber derivatives.

UNIT – V

Industrial and military explosives – Manufacture – Pyrotechniques – Manufacture of safety matches. Colour photography – Theory – material and process – special applications of photography.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC26B	Discipline Specific Elective - II Macromolecules as Engineering Materials	5	0	0	4

Aim:

- To study about the macromolecules as engineering materials in various fields.

Objective:

- To develop the concept and reactivity of macromolecules.

Outcome:

- Develop the knowledge of characterization and its applications of macromolecules.

UNIT - I

Concepts - Small molecules to macromolecules. Definitions and nomenclature. Classification of polymers, types of polymerizations (chain growth, step growth and living), molecular weights and distribution.

UNIT- II

Study on physical methods of determining molecular weights and distribution.

Synthesis of macromolecules – thermodynamics and kinetics of chain polymerization with reference to industrially important polymers such as polyethylene, polypropylene, polystyrene, polyvinyl chloride.

UNIT- III

Thermodynamics and kinetics of step polymerization with reference to specialty polymers such as PET, Nylon, PC, and PU. Step growth polymerizations involving crosslinking (gelation) or formation of insoluble polymer mass. Determination of polymer structure via IR and NMR spectroscopies.

UNIT - IV

Characterization of polymer structure in the solid state – Characteristics of Amorphous and semicrystalline polymers. Viscoelasticity. Glass transition temperature

and elementary theories of glass transition. Rubber elasticity and thermodynamic theory of rubber elasticity.

UNIT -V

Applications – Engineering and specialty polymers, high performance fibres (Kevlar), Composite materials (BMC and SMC), conducting plastics. Polymers for separation science, biomedical devices, electronics and photonics.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214RMC27	Research Methodology	3	-	-	3

Aim:

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

Objective:

To understand the approaches towards and constraints in good research.

To identify various statistical tools used in research methodology

To appreciate and compose the manuscript for publication

To train in basic computational and software skills for research in physical and chemical sciences.

Outcome:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

UNIT I:

Introduction to Research Methodology

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT II:

Database and Literature Survey

2565

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

UNIT III:

Data Analysis and Chemical Packages

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co-variance (ANCOVA) correlation and multiple regression analysis – Chemical Packages – ChemDraw – ChemSketch – ISIS draw – Origin.

UNIT IV:

Thesis and Paper writing

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

UNIT V:

Laboratory Safety

Basic laboratory guidelines – safety equipment – Leaking compressed gas cylinders – electrical safety. Fire – fire extinguishers. Laboratory injuries and treatment. Chemical spills – Mercury and Biohazardous – clean up procedure - Accident management - Disposal of chemicals and glass wares.

SEMESTER - III

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC31	Organic Chemistry - III	5	0	0	4

Aim:

- To acquaint students with learning Organic Chemistry

Objective:

- To sensitize students to learn Important components of Organic Chemistry

Outcome:

- Having successfully completed this module you will be able to:
- Gaining knowledge organic Synthesis.

Unit I

Reagents in Organic Synthesis:

Use of the following reagents in organic synthesis and functional group transformations, complex metal hydrides, Gilman's reagent, lithium dimethylcuprate, lithium diazopropylamine (LDA), 1,3-dithiane, trimethylsilyl iodide, tri-n-butyltin hydride, Woodward and Prevost hydroxylation, osmium tetroxide, DDQ, selenium dioxide, Peterson's synthesis, Wilkinson's catalyst, baker yeast.

Unit II

Photochemistry:

Cis-trans isomerism, Paterno-Buchi reaction, Norrish type I and II reactions. Photoreduction of ketones, di-pimethane rearrangement, photochemistry of arenes.

Unit III

Pericyclic Reactions:

Selection rules and stereochemistry of electrocyclic reactions, cycloaddition, and sigmatropic shifts, Sommet, Hauser, Cope and Claisen rearrangements.

Unit IV

Selective Organic Name Reactions:

Favorski, Mannich, Stork-Enamine reactions, Sharpless asymmetric epoxidation, Ene reaction, Barton reaction, Hoffmann-Löffler-Freytag reaction, Shapiro, Chichibabin and Bayer-Villiger reactions.

Unit V

Spectroscopy:

Applications of Mass, UV-VIS, IR and NMR spectroscopy for structural elucidation of organic molecules.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC32	Inorganic Chemistry - III	5	0	0	4

Aim:

- To acquaint students with learning Inorganic Chemistry

Objective:

- To learn Important Concepts of Inorganic Chemistry

Outcome:

- Having successfully completed this module you will be able to:
- Recognise Analytical Techniques and Spectroscopy.

UNIT – I

Topics in Analytical Chemistry:

Adsorption partition, exclusion electrochromatography, solvent extraction and ion exchange methods. Application of atomic and molecular absorption and emission spectroscopy in quantitative analysis. Light scattering techniques including nephelometry. Raman Spectroscopy: Electroanalytical techniques; voltammetry, cyclic voltammetry, polarography, amperometry coulometry and conductometry. Ion-selective electrodes, anodic stripping voltammetry, TGA, DTA, DSC and online analyzer.

UNIT –II

Electronic Spectroscopy:

Electronic configuration, terms states and microstates, derivation of term symbols (p^2 , d^2) and arranging the various terms according to their energies. Spectroscopic terms – effect of inter electronic repulsion and spin – orbit coupling – Racah parameters B and C- R-S coupling and JJ coupling. Selection rules and the breakdown of selection rules- group theoretical explanation. Ground states of free ions for d^n systems- Oh and Td

systems and the corresponding energy level diagrams- mixing of orbitals. Orgel diagram – characteristics – prediction and assignment of transitions for dⁿ weak field cases. Tanabe-Sugano diagrams- characteristics – prediction and assignment of transition for weak field and strong field – dⁿ systems band intensity, band widths – band shapes – factors affecting these – distortion and spin-orbit coupling calculation of B and 10q for simple octahedral complexes of Co and Ni.

UNIT – III

IR and Raman Spectroscopy:

Combined uses of IR and Raman spectroscopy in the structural elucidation of simple molecules like H₂O, ClF₃, NO₃, ClO₃. Effect of coordination on ligand vibrations – uses of group vibrations in the structural elucidation of metal complexes of urea, thiourea, cyanide, thiocyanate nitrate, sulphate and dimethylsulphoxide. Effect of isotopic substitution on the vibrational spectra of molecules – vibrational spectra of metal carbonyls with reference to the nature of bonding, geometry and number of C-O stretching vibrations (group theoretical treatment).

UNIT – IV

NMR Spectroscopy:

Chemical shifts and coupling constants (spin-spin coupling involving different nuclei ¹H, ³¹P & ¹³C) interpretation and applications to inorganic compounds. Effects of Quadrupole nuclei (¹H, ¹⁰B, ¹¹B) on the ¹H NMR spectrum. NMR paramagnetic molecules - isotopic shifts, contact and pseudocontact interactions- lanthanide shift reagents. Stereochemistry of non-rigid molecules, satellite spectra – Applications of ³¹P, ¹³C and ¹H NMR of inorganic molecules.

UNIT – V

EPR Spectroscopy:

Basic principles – characteristics of 'g' – hyperfine splitting - selection rules- hyperfine splitting on various structure – bis (salicyldiamine)copper(II) – factors affecting the magnitude of the 'g' values of transition metal ions – dependence on spin – orbit coupling crystal field. Three conditions (i) spin-orbit coupling crystal field (ii) strength of the crystal field effects, (iii) very large crystal field. Ni(II) octahedral complex- Cu²⁺ in a tetragonal – field. Zero-field splitting and signal- effecting spins mixing of saturated zero field splitting. Line widths in solid state EPR – spin – lattice – spin – spin relaxation – exchange processes. Effect of distortion – T, A_g, E_g. ground terms – g (parallel), g (perpendicular), g (average) $\alpha^2\beta^2$ and G parameters from EPR and information obtained from them.

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC34L	Physical Chemistry Lab -I	0	0	5	3

Aims: The physical laboratory class consists of a series of experiments designed to be completed in either one or two sessions. The laboratory is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to a number of spectroscopic and analytical techniques.

Objectives: To perform eight experiments covering analytical chemistry, catalysis, diffraction, IR spectroscopy, kinetics and thermodynamics

1. Kinetics – Acid hydrolysis of Esters - Comparison of strengths of acids.

2. Kinetics – Acid hydrolysis of Esters – Determination of Energy of Activation (E_a)

3. Kinetics – Saponification of Ester - Determination of Energy of Activation (E_a) by conductometry

4. Kinetics – Persulphate – Iodine Reaction - Determination of order, effect of ionic strength on rate constant

5. Distribution Law – Study of Iodine – Iodide equilibrium

6. Distribution law – Study of Association of Benzoic acid in Benzene.

7. Adsorption – Oxalic acid / Acetic acid on charcoal using Freundlich

Isotherm.

8. Conductometry –Determination of dissociation constant of weak acids

9. Acid - alkali titrations

10. Displacement titrations

11. Precipitation titrations

12. Solubility product of sparingly soluble silver salts.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC35L	Physical Chemistry Lab -II	0	0	5	3

Aims: The physical laboratory class consists of a series of experiments designed to be completed in either one or two sessions. The laboratory is designed to illustrate and reinforce concepts covered in the lecture based part of the course. The students will be introduced to a number of spectroscopic and analytical techniques.

Objectives: To perform eight experiments covering analytical chemistry, catalysis, diffraction, IR spectroscopy, kinetics and thermodynamics

1. Determination of molecular weight of substances by cryoscopy

2. Determination of molecular weight of substances by Transition Temperature method

3. Determination of molecular weight of substances by Rast method

4. Determination of Critical Solution Temperature (CST) of phenol – water system and effect of impurity on CST

5. Study of phase diagram of two components forming simple eutectic

6. Study of phase diagram of two components forming a compound.

7. Study of phase Diagram of three components (Acetic acid, Benzene and water)

8. Potentiometric titration's –Acid alkali titration

9. Precipitation titration's

10. Redox titration's

11. Determination of dissociation constant of weak acids.

12. Determination of solubility of silver salts

13. Determination of activity and activity co-efficient of ions

employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
19111OEC	Open Elective - Journalism	4	0	0	2

Aim:

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

UNIT- II

News – Definition, Kinds, Elements, Sources

UNIT- III

Reporters, Qualities, types

UNIT- IV

The Editor and the Sub Editor-qualities, types, editorial department,

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

Course code	Course Title	L	T	P	C
19112OEC	Open Elective: Development of Mathematics Skills	4	0	0	2

Aim:

- To understand the concepts from the five branches of mathematics

Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

Course Code	Course Title	L	T	P	C
19113GEC	Open Elective- Instrumentation	4	0	0	2

Aim:

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

Outcomes:

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

UNIT – I: Introduction

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

UNIT – II: Electronic Instruments – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

UNIT – III: Electronic Instruments – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

Books for Study

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

Books for Reference:

A Course In Electrical And Electronic Measurements and Instrumentation – A.K. Sawhmey – Dhanpat Rai and Sons – 1990.

Electronic Measurements And Instrumentation – Oliver Cage – McGraw Hill –1975.

Course Code	Course Title	L	T	P	C
19114OEC	Open Elective-Food and Adulteration	4	0	0	2

Aim:

- To introduce students to food safety and standardization act and quality control of foods.

Objectives:

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

Outcomes:

- The students will have knowledge about different processing and preservation methods and principles involved.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection.

Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	Course Title	L	T	P	C
19117OEC	Open Elective-Mushroom Technology	4	0	0	2

Aim:

- Mushrooms represent microbial technology that recycles agricultural residues into food and manure
- Mushroom technological interventions aims to increase productivity, quality, and income of farmers through cultivation of mushrooms.

Objectives:

- To strengthen the promotion of mushroom cultivation by establishing a well-equipped laboratory and offices
- To provide the Unit with appropriately trained personnel for the promotion of mushroom production in the country
- To increase the production and consumption of mushrooms.

Outcomes:

- Light. Mushrooms cannot extract nutrients from the sun as green plants do, so they do not need light.
- Cultivating specialty mushrooms is the most accessible way to growing edible mushrooms for profit. The two most popular specialty mushrooms grown in the United States are shiitake and oyster.

Unit – I

Introduction – history – scope of edible mushroom cultivation – Types of edible mushroom available in India – *Calacybeindica*, *VolvariellaVolvacea*, *Pleurotussp.*, *Agaricusbisporus*

Unit – II

Pure culture – preparation of media (PDA and Oatmeal agar media) sterilization – Preparation of test tube slants to store mother culture – culturing of Pleurotus mycelium on petriplates – Preparation of mother spawn in saline bottle and polypropylene bags and their multiplication.

Unit – III

Cultivation Technology : Infra structure, Substrates (locally available) polythene bag, vessels, Inoculation hood – inoculation loop – low cost stove – sieves – Culture rack mushroom unit (Thatched house) – Mushroom bed preparation – Paddy straw, sugarcane trash, maize straw, banana leaves.

Unit – IV

Storage and nutrition : Short term storage – Long term storage (scanning, Pickles, papads, drying, storage in salt solutions) – Nutrition : Proteins, amino acids, mineral elements. Nutrition : Carbohydrates – Crude fiber content, vitamins.

Unit – V

Food preparation, Types of foods prepared from mushroom - soup, cutlet, omelette, samosa, pickles, curry. Research Centres – National level and Regional Level Cost benefit ratio – Marketing in India and abroad – Export value

Course Code	Course Title	L	T	P	C
19120OEC	Open Elective -Web Technology	4	0	0	2

Aim:

- To equip the students with basic programming skill in Web Designing

Objective:

- To understand and practice mark up languages
- To learn Style Sheet and Frames

Outcomes:

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

UNIT III

Ordered and unordered lists – Table handling.

UNIT IV

DHTML and Style Sheet – Frames.

UNIT V

A web page design project – Forms

Text Book

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

Reference Book

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
19122OEC	Open Elective- E-Commerce and its Application	4	0	0	2

Aim:

- To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

Objectives:

- To be aware of all aspects of communication and information exchange in Electronic Commerce, including:
 - Navigation, brokerage, advertising and catalogue exchange in pre-sales activities.
 - Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
 - Secure exchange of documents, content and value in open trading protocols.
 - Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

Outcomes:

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

UNIT-I:

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective

distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

UNIT-II:

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script – XML.

UNIT- III:

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

UNIT-IV:

E-Security: Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

UNIT-V

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet baking-History’s lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stack trading: The high speed alternative.

Reference Book:

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition.

Course Code	Course Title	L	T	P	C
19161OEC	Open Elective – Indirect Taxes	4	0	0	2

Aim:

- To acquaint with the knowledge of indirect taxes

Objectives:

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

Outcome

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

UNIT – I

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

UNIT – II

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

UNIT – III

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

UNIT – IV

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

UNIT – V

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

Reference Books:

Income Tax Law and Practice - N.Hariharan.

Business Taxation – T.S.Reddy/Hari Prasad Reddy.

SEMESTER – IV

COURSE CODE	COURSE TITLE	L	T	P	C
19214SEC33	Physical Chemistry - III	5	1	0	5

Aim:

- The aim of this course is to provide a core for future studies in chemistry and aspects of Physical Chemistry.

Objective:

- To learn the importance of Physical Chemistry.

Outcomes:

- Having successfully completed this module you will be able to:
- Learning various concepts of Electro Chemistry.
- Learning various concepts of Quantum Chemistry.
- Learning various concepts of Thermodynamics

UNIT –I

Electrochemistry:

Electrochemical cell reactions, Nernst equation, electrode kinetics, electrical double layer, electrode /electrolyte interface, batteries-primary & secondary fuel cells, corrosion and corrosion prevention.

UNIT –II

Non-Equilibrium Thermodynamics:

Postulates and methodologies, linear laws, Gibbs equation, Onsagar reciprocal theory.

Ideal and Non-Ideal Solutions:

Excess functions, activities, concept of hydration number, activities in electrolytic solutions, mean ionic activity coefficient, Debye-Huckel treatment of dilute electrolyte solutions.

UNIT –III

Quantum Chemistry:

Planck's quantum theory, wave-particle duality, uncertainty principle, operators and commutation relations, postulates of quantum mechanics, free particle, particle in a box, degeneracy harmonic oscillator, rigid rotator and the hydrogen atom. Angular momentum, including spin coupling of angular momenta including spin-orbit coupling.

UNIT –IV

Born-Oppenheimer Approximation:

Hydrogen molecule ion, LCAO-MO and VB treatments of the hydrogen molecule, electron density, forces, and their role in chemical binding. Hybridization and valence MOs of H₂O, NH₃ and CH₄. Huckel pi-electron theory and its applications to ethylene, butadiene and benzene, idea of self-consistent fields.

UNIT –V

Statistical Thermodynamics:

Thermodynamic probability, and entropy , Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics, partition function, rotational, translational, vibrational and electronic partition functions for diatomic molecules, calculations of thermodynamic functions and equilibrium constants. Theories of specific heat for solids.

employability/Entrepreneurship/Skill development

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC41A	Discipline Specific Elective - III Medicinal Chemistry	5	1	0	4

Aim:

- The aim of this course is to provide a core for future studies and aspects of Medicinal Chemistry.

Objective:

- To learn the importance of Medicinal Chemistry.

Outcomes:

- Having successfully completed this module you will be able to:
- Learning various concepts of Drugs.
- Learning various concepts in medicinal Chemistry.

General Introduction

Introduction to medicinal chemistry, general mechanism of drug action on lipids, carbohydrates, proteins and nucleic acids, drug metabolism and inactivation, receptor structure and sites, drug discovery development, design and delivery systems, gene therapy and drug resistance.

UNIT - II

Drugs

Drugs based on structure or pharmacological basis with examples, synthesis of important drugs such as α - methyl dopa, chloramphenicol, griseofulvin, cephalosporins and nystatin. Molecular modeling, conformational analysis, qualitative and quantitative structure activity relationships.

UNIT - III

Antibiotics

Mechanism of action of lactam antibiotics and non lactam antibiotics, antiviral agents, chemistry, stereochemistry, biosynthesis and degradation of penicillins - An account of semisynthetic penicillins - acid resistant, penicillinase resistant and broad spectrum semisynthetic penicillins.

UNIT- IV

DNA Interactions

DNA-protein interaction and DNA-drug interaction. Introduction to rational approach to drug design, physical and chemical factors associated with biological activities, mechanism of drug action.

UNIT V

Enzyme Reactions: Nomenclature and classification of enzymes, Fischer's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by the use of inhibitors. Enzyme kinetics, Michaelis-Menten and Lineweaver-Burk plots.

COURSE CODE	COURSE TITLE	L	T	P	C
19214DSC41B	Discipline Specific Elective - III Green Organic Synthesis: Principles and Applications	5	0	0	4

Aim:

- To develop the study about green organic synthesis and its principles.

Objective:

- To explain the awareness about soil and water pollution in environment.

Outcome:

- Develop the advanced techniques to reduce chemical waste pollution.

UNIT- I

Green Chemistry: Definition, need for Green chemistry, evolution of Green Chemistry, principles of Green Chemistry.

UNIT - II

Classification of organic reactions under Green chemistry principles: a) Atom economic and non-toxic byproduct reactions: rearrangements, addition reaction, condensations, cascade strategies under catalysis, b) atom uneconomic reactions: substitutions, eliminations, Wittig reactions, degradation reactions.

UNIT - III

Green Strategies and techniques for Organic Synthesis: use of Microwave, Sonochemistry, Ball mill technique, electrochemical reactions, photochemical reactions.

UNIT- IV

Catalysis: Principles of various catalysis techniques in terms of Green Organic Synthesis i) Homogeneous, ii) Heterogeneous, iii) bio (enzyme) catalysis, iv) catalysis with nontoxic metals (Ca, Fe, Co, etc.), v) solid supported catalysis, vi) metal free/organocatalysis, vii) Visible light catalysis viii) phase transfer catalysis
Alternative/Green Solvents for Organic Synthesis i) Water, ii) Ionic liquids, iii) Supercritical liquids (SCL), iv) Poly(ethylene glycol) (PEG), v) Fluorous biphasic Solvents.

UNIT- V

Comparison of greenness of solvents. Understanding the role/effect of these solvents on organic reactions. Solvent Free Organic Synthesis. Reactions at Room Temperature, Applications of the Green strategies in Organic Synthesis. Comparing organic reactions under classical conditions and Green conditions.

Employability/Entrepreneurship/Skill development	

School of Arts and Science
Department of Microbiology
B. Sc., Syllabus-Regulation 2020

Bachelor of Science in Microbiology

Our curriculum is intended to educate our majors in a diversity of significant microbiological disciplines, as well as to inspire and improve Language and communicative skills and capabilities that take persistent value beyond the teaching space.

B. Sc Graduate Attributes

- Research, inquiry and analytical thinking abilities.
- Capability and motivation for intellectual development.
- Ethical, social and professional understanding.
- Communication in intra and inter disciplinary
- Teamwork, collaborative and management skills in scientific research
- Information literacy in respective discipline

Educational Objectives-PEO

- PEO1-To gain and apply knowledge of microorganisms concept to solve the problems.
- PEO2-To identify, analyze and understand the problems related to microbes.
- PEO3-Ability to design and develop solutions to the environment using the microbes.
- PEO4-Ability to design performs experiments, analyze, and interpret data for investigating complex problems.
- PEO5-To decide and apply appropriate tools and techniques for manipulations.

Programme Specific Outcomes (PSOs)

- PSO –Expose input practical skills/competencies in working through microbes for study and use in the laboratory as well as outside, with the use of good microbiological practices.

- PSO – obtain information and understanding of the microbiology perception as appropriate to various areas such as medical, industrial, environment, genetics, agriculture, food and others.
- PSO- proficient enough to use microbiology knowledge and skills to study problems involving microbes, clear these with peers/ team members/ other stakeholders, and undertake remedial measures/ studies etc.
- PSO - Developed a broader standpoint of the regulation of Microbiology to facilitate individual to identify challenging societal troubles and plan their professional career to build up novel decision for such problems

B. Sc Programme Outcome-PO

- PO1-Vital Thinking: Able to acquire knowledgeable actions and give the impression of being at our thoughts and assessments (academic, organizational and individual) from diverse perception.
- PO2-Precious communication: Able to speak, read, write and listen noticeably in person and throughout electronic media in English and in one Indian language and build meaning of the globe by connecting people, thoughts books, media and technology.
- PO3-Effectual citizenship: Able to reveal empathetic social concern and fairness centred national progress and the capability to act with and take part in civic life through volunteering
- PO4- Ethics: Be aware of diverse value systems including the individual, under the ethical dimensions of personal choice, and believe responsibility for them.
- PO5- Environment and Sustainability: Able to analyze the importance of microbes for environmental clean-up and sustainable development.
- PO6- Self directed and life-long learning: Able to gain the talent to employ in self-determining and life-long learning in the broadest circumstance socio technological transforms.
- PO7- Economic liberty and employability potential: Attain the ability to be concerned in economically sustainable opening and pound entrepreneurial skill.

20110AEC11	Tamil-I	4	0	0	2

பிரிஸ்ட் நிகர்நிலைப் பல்கலைக்கழகம்- வல்லம், தஞ்சாவூர்

பாட குறியாடு :

தமிழ் முதல் பருவம்

முதலாம் ஆண்டு

இக்கால இலக்கியம் - செய்யுள், சிறுகதை , நாடகம், இலக்கிய வரலாறு

அலகு : 1.செய்யுள்

1. தாயுமானவ சுவாமிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள்
2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள் ,தமிழ் இனிமை , தமிழ் உணவு

அலகு : 2. செய்யுள்:

6. நாமக்கல் கவிஞர் - தமிழ் தேன் - தமிழ் வளர்க்க சபதம் செய்வோம் , 40 அடிகள்
7. ந.பிச்சமூர்த்தி - வழித்துணை - கவிதை கருடன் , 42 அடிகள்
- 8.சுரதா - தேன்மழை, கலப்பை , 22 அடிகள்
9. கண்ணதாசன் - இலக்கியம் , ஒரு பாணையின் கதை , 54 அடிகள்
10. அப்துல் ரகுமான் - சொந்த சிறகுகள், குப்பையை கிளறும் சிறகுகள், 80 அடிகள்

அலகு : 3. சிறுகதை :

11. சு.சமுத்திரம் - வேரில் பழுத்த பலா

அலகு : 4. நாடகம் :

12. கு. வெ. பாலசுப்பிரமணியன் , கௌதம புத்தர் (உரைநடை நாடகம்)

அலகு : 5. இலக்கிய வரலாறு

13. சிறுகதை , புதினம், நாடகம் உரைநடை , கவிதை , புதுக்கவிதை

Course Code	Course Title	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Learn to edit and do proof reading
- Read and comprehend literature

UNIT – I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Comparison and contrast

Cause and effect

UNIT – IV

Editing

Proof reading

UNIT – V

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

Reference book:

Author	Title of the book	Edition / Year	Publisher
Wren and Martin	English Grammar	2009	S.Chand & Company Ltd
Meenakshi Raman & Sangeetha Sharma	Technical Communication	Second Edition 2011	Oxford University Press
Sudhir Kumar Sharma	The World's Great Speeches	-	Galaxy Publishers

Course Code	Course Title	L	T	P	C
20111AEC12	English-I	4	0	0	2

Aim:

- To acquaint with learning English through literature

Objective:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

Outcome:

- Read and comprehend literature
- Appreciate the different types of poetry and prose

UNIT –I

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

UNIT – II

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

UNIT –III

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

UNIT –IV

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world ‘The Hindu’

UNIT –V

Oliver Twist -Charles Dickens

Text book:

Author	Title of the book	Edition / Year	Publisher
S.Murugesan/ Dr.K.Chellappan	The Art of Reading/ Experiencing Poetry	Reprint 2004	Emerald Publishers

Course Code	Course Title	L	T	P	C
20116AEC13	Fundamentals of Microbiology	6	1	0	5

Aim

- To impart the basic principles and applications of microorganism

Objectives

- To provide a essential informations of microorganism for progressive and applied reforms in biological sciences for human welfare

Out Comes

CO1 – To Describe the characteristics of microorganisms and classification

CO2 – To Understand the concepts of growth and reproduction of microbes

CO3 – To explain the beneficial and detrimental effects of microorganisms

CO4 - To Gather theoretical background of microbial cultivation

Unit – I

Introduction – definition, scope and history of microbiology, differences between the prokaryotic and eukaryotic microorganisms. Classification of microorganisms – general principles and nomenclature – Haeckel’s three kingdom concept, Whittaker’s five kingdom concept – Classification and characterization of bacteria according to Bergey’s manual of Systematic Bacteriology. Basic understanding of classification of viruses, algae, fungi and protozoa.

Unit – II

Microscopy: Principles and application of simple, compound, bright field, dark field, phase contrast, fluorescent and Electron microscopy. Principles of staining: Nature of dyes, types of staining – simple, differential, negative and spore staining. Sterilization: Principles and methods – physical and chemical.

Unit – III

General characteristics and nature of archacbacteria, Eubacteria, Cyanobacteria, Rickettsiae, Chlamydiae, Spirochaetes, Actinomycetes, Protozoa, Viruses including phages, Mycoplasmas, Algae and fungi.

Unit – IV

Microbial Cell: Ultrastructure of bacteria, subcellular structures and cell envelope – slime, capsule, cell wall, pili, flagella, cell inclusions, biosynthesis of bacterial cell wall, cell membrane – Biomembrane, liposomes – membrane transport – diffusion, active and passive transport and osmoregulation

Unit – V

Culture techniques: types of media simple, defined, enriched and transport media with specific examples for each type. Methods of maintenance and preservation of cultures

Text book:

S. No	Author Name	Title of the Book	Edition/year	Publisher
1.	Jr. M.J. Pelczar, E.C.S. Chan and N.R. Kreig.	Microbiology	5 th /1993	Tata McGraw-Hill, Inc, Newyork

Reference Book:

1. Stainer R.Y., Ingraham J.L. Wheelia M.L. and Painter P.R. (1986). General Microbiology, Macmillan Education Ltd, London.
2. Fundamental of Microbiology (2005) By Purohit, Agrobios Publishers, Meerut

Course Code	Course Title	L	T	P	C
20115AEC14B	Bio Chemistry I	6	1	0	4

Aim

- To provide the basics of biochemistry and its application.

Objectives

- It serves as good research techniques and the ability to combine and analyze information.

Outcomes

CO1 – To Develop fundamental knowledge about various biomolecules

CO2 - To Understand the basic concepts related to enzymes

CO3 - To Know various biochemical pathway

CO4 - To Understand the concept of microbial metabolism.

Unit I

Carbohydrates: Definition, Classification and Properties; Structural Elucidation of Glucose and fructose; Biological Functions of Glucose, fructose, starch, Cellulose, Chitin and Heparin.

Unit II

Amino acids: Structure, Classification, Properties.

Peptides: Amides and Peptides, Peptide bond, Peptide synthesis, Biologically important Peptides.

Proteins: Biological importance, Classification, properties; Structural orders; Protein stability; Separation and purification of proteins.

Unit III

Nucleotides and Polynucleotides; Terminology –Components.DNA and RNA – Composition, Structure, their biological importance.

Unit IV

Lipids: Biological Significance, Classification of lipids. Analysis of oils – Iodine Number, Saponification Value, Acid number, Acetyl value and Reichert-Meisel value; Qualitative Tests for Lipids.

Unit V

Vitamins: Source, Structure of Biological Role requirement, deficiency manifestation of fat soluble (A, D, E and K) and water soluble (B complexes and C) vitamins.

- Harper's Biochemistry , 25th edn., McGraw Hill.

Course Code	Course Title	L	T	P	C
20116AEC15L	Fundamentals of Microbiology Lab	0	0	3	2

Aim

- To understand the basic principles of Microbiology laboratory.

Objectives

- Microbiology laboratory guidelines and necessary equipment
- Isolation methods for microorganisms.
- Various staining techniques for the observation of microbes.

Outcomes

CO1 – To Develop basic skills in aseptic techniques formicrobiology practical.

CO2 – To gain Hands on experience in handling ofvarious important instruments.

CO3 - Able to perform basic experiments to grow and study microorganism in laboratory

CO4 - To Develop knowledge on identification of microorganisms.

- Microscope and its operation
- Cleaning of glassware's and sterilization methods – autoclaving and hot air oven
- Preparation of culture media
- Experimental demonstration of ubiquitous nature of microorganisms.
- Quantitative estimation of microorganisms.
- Observation of permanent slides to study the structural characteristics of algae(*Anabaena*, *Nostoc*, *Scytonema*, *Spirulina*, *Oscillatoria*.) Fungi (*Pythium*, *Rhizopus*, *Saccharomyces*, *Penicillium*, *Aspergillus*, *Agricus*) and protozoa (*Entamoeba hystolytica* and *Plasmodium* Spp)
- Isolation of microorganisms from soil, water and air.
- Test for motility of bacteria – Hanging drop method and semi solid media inoculation
- Staining techniques – simple staining. Gram's staining, Spore staining, Capsular staining

Course Code	Course Title	L	T	P	C
20115AEC16BL	Bio Chemistry I Lab	0	0	3	2

Aim

- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.

Objectives

- To familiarize the students with the basic cellular processes at molecular level

Outcomes

CO1 - To gain Practical knowledge about various techniques used in Biochemistry

CO2 - To Exhibit the well practical knowledge about estimation of carbohydrates, protein.

CO3 – To Learn the quantitative and qualitative estimation biochemical analysis.

- Qualitative Analysis of Carbohydrate.
- Qualitative Analysis of Proteins.
- Colour Reactions for Amino Acids.

Course Code	Course Title	L	T	P	C
201ACLSICN	Indian Constitution	-	-	-	2

Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
 2. To appreciate the salient features of the Indian constitution
 3. To know the fundamental rights and constitutional remedies
 4. To make familiar with powers and positions of the union executive, union parliament and the supreme court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Outcome

- CO1- To gain Democratic values and citizenship Training
- CO2- To know the Awareness on fundamental Rights are established
- CO3- To learn the functions of union Government and State Government
- CO4- To learn the Power and functions of the Judiciary thoroughly
- CO5- To learn the Appreciation of Democratic Parliamentary Rule

Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification _method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Aim:

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

Course Objectives :

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realise one's potentials.

Course Outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practised human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realise their potential as human beings and conduct themselves properly in the ways of the world.

Unit I

- Introduction: What is love? Forms of love—for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love.
- Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
- Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Case studies

Unit II

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)
- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore

- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
- Learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Unit III

- Introduction: What is non-violence? Its need. Love, compassion, empathy sympathy for others as pre-requisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non-violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Casestudies

Unit IV

- Introduction: What is righteousness?
- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Unit V

- Introduction: What is peace? Its need, relation with harmony and balance
- Individuals and organisations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Casestudies

Unit VI

- Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature including local folklore
- Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s) regarding service
- Simulated situations
- Case studies

Unit VII

- Introduction: What is renunciation? Renunciation and sacrifice. Self-restraint and ways of overcoming greed. Renunciation with action as true renunciation
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.
- Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

SEMESTER II

Course Code	Course Title	L	T	P	C
20110AEC21	Tamil-II	4	0	0	2

தமிழ் இரண்டாம் பருவம்
முதலாம் ஆண்டு

செய்யுள் , பக்தி இலக்கியம், சிற்றிலக்கியம் , இலக்கிய வரலாறு

அலகு : 1. செய்யுள்:

1. திருஞானசம்பந்தர் தேவாரம் - கோளறு பதிகம்
2. திருநாவுக்கரசர் தேவாரம் - தனிக் குறுந்தொகை
3. சுந்தரர் தேவாரம் - திருநொடித் தான் மலை
4. மாணிக்கவாசகர் - திருவாசகம் - தருப்பொன் ஊசல்

அலகு : 2 . செய்யுள்:

5. குலசேகராழ்வார் - பெருமாள் திருமொழி
6. நம்மாழ்வார் திருவாய் மொழி - இரண்டாம் பத்து - உலகிற்கு உபதேசம்
7. ஆண்டாள் - நாச்சியார் திருமொழி - திருமணக்கனவை உரைத்தல்
8. திருமங்கை ஆழ்வார் - சிறிய திருமடல்

அலகு : 3 . செய்யுள்:

9. திருமூலர் - மூன்றாம் திருமுறை
10. குமரகுருபரர் - மானாட்சியம்மைப் பிள்ளை - தமிழ் வருகைப் பருவம்
11. திரிகூடராசப்பக்கவிராயர் - குற்றாலக்குறவஞ்சி - குறத்தி நாட்டு வளங் கூறுதல்
12. வீரமாமுனிவர் - திருக்காவலூர்க் கலம்பகம்

அலகு : 4 . புதினம்

13. கு.வெ. பாலசுப்ரமணியன் - காளவாய்

அலகு : 5 . இலக்கிய வரலாறு

14. சைவ வைணவ இலக்கியங்கள் , சிற்றிலக்கியங்கள் , (பள்ளு - பிள்ளைத்தமிழ் , - பரணி)

Course Code	Course Title	L	T	P	C
20111AEC21	Advanced English-II	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To know the impact of the biographies of famous people

Outcome:

- Develop technological skill
- Able to write in a variety of formats
- Read biographies and develop personality

UNIT –I

E-mail

Fax

Memos

UNIT – II

Itinerary

Checklist

UNIT – III

Invitation

Circular

UNIT – IV

Instruction

Recommendations

UNIT – V

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

Text Book

Author	Title of the book	Edition / Year	Publisher
Meenakshi Raman & Sangeetha Sharma	Technical Communication	2011	Oxford University Press
Rajendra Pal & J.S.Korlahalli	Business Communication	2015	Sultan

Course Code	Course Title	L	T	P	C
20111AEC22	English-II	4	0	0	2

Aim:

- To acquaint learners with different trends of writing

Objective:

- To acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

Outcome:

- Appreciate different forms of literature
- Enhance language skills through literature
- Broaden the horizon of knowledge

UNIT – I

Ecology	-A.K. Ramanujan
Gift	-Alice Walker
The First Meeting	-Sujata Bhatt

UNIT –II

Fueled	-Marcie Hans
Asleep	-Ernst Jandl
Buying and selling	-Khalil Gibran

UNIT –III

The End of living and The Beginning of Survival	- Chief Seattle
My Wood	- E.M.Forster
The Meeting of Races	- Rabindranath Tagore

UNIT – IV

The Refugee	-K.A. Abbas
I Have a Dream	-Martin Luther king
Those People Next Door	-A.G. Gardiner

UNIT – V

Marriage is a private Affair	-Chinua Achebe
The Fortune Teller	-Karel Capek
Proposal	-Anton Chekov

Text book:

Author	Title of the book	Edition / Year	Publisher
Gowri Sivaraman	Gathered Wisdom	Reprint 2010	Emerald Publishers

Course Code	Course Title	L	T	P	C
20116AEC23	Microbial Physiology	6	1	0	5

Aim

- To instruct the importance of microbial metabolism and energetics for regulation and application of microbes in industry.

Objectives

- To understand the microbial growth and nutritional requirements.
- Studying the comprehensive awareness on metabolic process involved in prokaryotic and eukaryotic microorganisms.

Outcomes

CO1- To Determining the growth features of the microbes with various environmental factors.

CO2– To Analysis the essential nutrients ensuring microbial growth.

CO3 - To understand the significance of microbial surveillance

CO4- To know the Electron transport and metabolic pathway of living systems

Unit – I

Nutrition and growth of microorganisms: Nutritional types of microorganisms, nutritional requirements. Factors influencing the growth of microorganisms temperature, pH, Osmotic pressure, moisture, radiations and different chemicals. Physiology of growth – significance of various phases of growth - Growth Measurements – batch, continuous and synchronous

Unit – II

Enzymes and co –enzymes: classification and nomenclature of enzymes, active site, Lock and key Mechanism and induced fit hypothesis, Enzyme kinetics- negative and positive co-operatively, enzyme inhibition: Reversible – Competitive, Noncompetitive, uncompetitive, Irreversible inhibition.

Unit – III

Metabolism of carbohydrates: Anabolism – photosynthesis – oxygenic –anoxygenic, synthesis of carbohydrate – catabolism of glucose – Embden Mayer – Hoff – Parnas

pathway – Pentose pathway, Kreb’s cycle (TCA) – electron transport system and ATP production.

Unit – IV

Metabolism of protein – metabolic pathways of nitrogen utilization (urea cycle), synthesis of amino acids, peptides, proteins

Unit – V

Anaerobic – Respiration and fermentations. Anabolic and catabolic processes of lipids - Reproductive physiology of microorganisms.

Text Book:

S. No	Author Name	Title of the Book	Edition/year	Publisher
1	Jr. M.J. Pelczar, E.C.S. Chan and N.R. Kreig.	Microbiology	5 th /1993	Tata McGraw-Hill, Inc, Newyork

Reference Book:

1. Holt J.S., Krieg N.R., Sneath P.H.A and Williams S.T.(1994). Bergey’s Manual of Determinative Bacteriology(9th Edition) – Williams & Wilkins, Baltimore.
2. Brige E.A.(1992) Modern Microbiology – Wm.C. Brown Publishers, Deubque, USA
3. Goodfellow M. and O’Dennell A.C.(1994) Chemical methods of prokaryote systematic – John Wiley & Sons, New York
4. Murray R.K., Cranner M.D., Mayea P.A. and Rodwell V.W.(1990). Biochemistry-prentice Hall International Inc., London
5. Bryant D.A. (1994). The molecular Biology of Cyan Bacteria – Khrwer Academic Publisher, London.

Course Code	Course Title	L	T	P	C
20115AEC24	Bio Chemistry II	6	1	0	4

Aim

- To provide the basic of biochemistry and its application.

Objectives

- It serves as good research techniques and the ability to combine and analyze information.

Outcomes

CO1- To Develop a very good understanding of various biomolecules

CO2 - To gain knowledge about lipids and fatty acids

CO3- To gain knowledge about multifarious function of proteins

CO4- To understand about metabolism.

Unit I

Organization of Life. Water – Physical Properties, Structure of Water, Weak Interactions in aqueous environment; Role of Water in life.

Bioenergetics – Laws of thermodynamics; Free energy concepts; ATP and ADP cycles; ATP as energy currency of cells.

Unit II

Release of energy into cells - Major metabolic pathways – Glycolysis, TCA cycle, Glycogenolysis, Gluconeogenesis, Fatty acid oxidation, ETC and Oxidative phosphorylation.

Unit III

Composition and functions of plant and bacterial cell wall. Biological membrane – Fluid mosaic model; Transport across membranes. Phytohormones – Auxin, Gibberlin and cytokinin.

Unit IV

Cell and cell organelles – Structure and functions of cell organelles – Nucleus, Mitochondria, Chloroplast - Photosynthesis, Golgi apparatus, Endoplasmic reticulum and Micro bodies.

Unit V

Enzymes – Classification, Nomenclature, Mechanism of enzyme action; factors influencing enzyme action – pH and Temperature; Specific activity; MM equation and its significances.

- Principles and techniques of practical Biochemistry – Wilson & Walker.

Course Code	Course Title	L	T	P	C
20116AEC25L	Microbial Physiology Lab	0	0	3	2

Aim

- To study the nutritional requirement of microbes.

Objectives

- To study the growth pattern of bacteria
- To test the biochemical characterization of microbes.

Outcomes

CO1- To Understand and predict the various metabolic reactions in microbial cell.

CO2- To Predict the intermediate products which can be employed in industrial production.

CO3- To know the Environmental growth kinetics of microorganism.

- Bacterial culture / isolation techniques, a streaking method, b. Pour plate method
- Isolation and cultivation of fungi
- Bacterial growth curve: cell count / viable count / absorbance (total count)
- Carbohydrate fermentation test:
 - Glucose
 - Lactose,
 - Maltose
 - Sucrose
 - Mannitol
- Biochemical test for identification of Bacteria:
 - Indole test
 - Methyl red
 - Voges – Proskaur test
 - Citrate utilization
 - TSI agar test
 - Urease
 - Catalase
 - Oxidase

- Harold J.Benson, 1994. Microbial Applications, W.M.C. Brown Publishers

Course Code	Course Title	L	T	P	C
20115AEC26L	Bio Chemistry II Lab	0	0	3	2

Aim

- To make students familiar with practical techniques used for studying biochemical structure and analysis of biochemical methods.

Objectives

- To familiarize the students with the basic cellular processes at molecular level

Outcomes

CO1- To demonstrate an understanding of fundamental biochemical principles

CO2-To learn the structure/function of biomolecules, metabolic pathways, and regulation

CO3- Students are able to make buffers, study enzyme kinetics

1. Estimation of reducing sugar by Benedict's Quantitative Method.
2. Estimation of Ascorbic acid by Titrimetric Method.
3. Estimation of Amino Acid by Formal Titration.
4. Estimation of RNA by Orcinol Method.
5. Estimation of DNA by Diphenylamine method.
6. Determination of Acid Number of edible oil.
7. Separation of amino acids by paper chromatography.
8. Separation of amino acids by TLC.
9. Separation of plant pigments by column chromatography.

Course Code	Course Title	L	T	P	C
20116RLC27	Research Led Seminar	-	-	-	1

Course Code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Course Objectives :

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome :

By the end of this program participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barriers to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

- Techniques of effective reading
- Gathering ideas and information from a given text
 - i. Identify the main claim of the text

- ii. Identify the purpose of the text
- iii. Identify the context of the text
- iv. Identify the concepts mentioned
- Evaluating these ideas and information
 - i. Identify the arguments employed in the text
 - ii. Identify the theories employed or assumed in the text
- Interpret the text
 - i. To understand what a text says
 - ii. To understand what a text does
 - iii. To understand what a text means

Unit IV

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalisations and over simplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
 - i. Well-knit logical sequence
 - ii. Narrative sequence
 - iii. Category groupings
- Different modes of Writing
 - i. E-mails
 - ii. Proposal writing for Higher Studies
 - iii. Recording the proceedings of meetings
 - iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office

- iii. Excel
- iv. Powerpoint

Unit VI

- Introduction to social mediawebsites
- Advantages of socialmedia
- Ethics and etiquettes of socialmedia
- How to use Google searchbetter
- Effective ways of using SocialMedia
- Introduction to DigitalMarketing

Unit VII

- Meaning of non-verbalcommunication
- Introduction to modes of non-verbalcommunication
- Breaking the misbeliefs
- Open and Closed Bodylanguage
- Eye Contact and FacialExpression
- HandGestures
- Do's andDon'ts
- Learning fromexperts
- Activities-BasedLearning

SEMESTER – III

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20110AEC31	Tamil-III	4	0	0	2
------------	-----------	---	---	---	---

தமிழ் மூன்றாம் பருவம்
இரண்டாம் ஆண்டு

செய்யுள் , காப்பியங்கள் இலக்கிய வரலாறு

செய்யுள்

அலகு : 1

1. சிலப்பதிகாரம் - மனையறம் படுத்த காதை
2. மணிமேகலை - ஆதிரை பிச்சையிட்ட காதை
3. சீவக சிந்தாமணி - விமலையார் இலம்பகம்

அலகு :2

4. பெரியபுராணம் - இளையான் குடிமாற நாயனார் புராணம்
5. கம்பராமாயணம் - கைகேயி சூழ்வினைப் படலம்

அலகு :3

6. சீறாப்புராணம் - நபி அவதாரப் படலம் - 24 வரிகள்
7. தேம்பாவணி - வாமன் ஆட்சி படலம் - முதல் 5 பாடல்கள்

அலகு :4

8. நளவெண்பா - சுயம்வர காண்டம் (20 - 51)

அலகு . 5 : இலக்கிய வரலாறு

9. காப்பியங்கள் , ஐஞ்சிறு காப்பியங்கள் , புராணங்கள் , இதிகாசங்கள்

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20111AEC31	Advanced English-III	4	0	0	2
------------	----------------------	---	---	---	---

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

Outcome:

- Understand phonetics
- Develop writing skill
- Able to develop creative writing

UNIT –I

The organs of speech

Classification of speech sounds

Vowels and Diphthongs

UNIT –II

Consonants

Consonant cluster

UNIT – III

Syllable

Word accent

Intonation

UNIT – IV

Idiom

Interpretation of graphics

UNIT – V

Slogan writing

Writing advertisement

20111AEC32	English-III	4	0	0	2
------------	-------------	---	---	---	---

Aim:

- To acquaint with learning English through literature

Objective:

- To sensitize language use through prescribed text
- To develop the conversational skills through one act plays

Outcome:

- Appreciate different types of prose
- Develop the conversational skills through one act plays
- Enhance the skill of making grammatically correct sentences.

UNIT – 1

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

UNIT – II

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

UNIT –III

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

UNIT –IV

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

UNIT – V

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

Text book:

Author	Title of the book	Edition / Year	Publisher

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20116AEC33	Immunology	4	1	0	4
------------	------------	---	---	---	---

Aim:

- Intended to impart the basic and essential information on immune system.

Objectives

- This course focuses on the concepts of immune system in human body.
- To create awareness on immunity
- To give knowledge on antigen and antibody
- To learn human diseases and vaccine

Outcomes

CO1- To understand theory linked to cells and organs related to immune system.

CO2- Able to know Immune response and immune mechanism.

CO3- To Understand the mechanism of Immunological disorders.

CO4- To Learn the importance and precautions of Immunodeficiency syndromes

Unit I

Introduction- History of immunology-scope of immunology. Immunity and their types- Innate and Acquired immunity, Active and Passive immunity. Immune response- Humoral and Cell mediated immune response.

Unit II

Lymphoid organs- primary and secondary lymphoid organs and their role. Cells of the immune system – Stem cell, Lymphocytes, T and B lymphocytes. Plasma cell, T Helper cell, T suppressor cell, T-cytotoxic cell, Null cells, Killer cell, Macrophages, Blood cells and platelets.

Unit III

Antigen- types, chemical nature and essential factors of antigen, Hapten, Adjuvants, Immunoglobulin - Structure, classes, properties and functions. Antigen- antibody reactions.

Unit IV

Complement- Salient features, complement activation, Classical pathway, Alternative pathway, Biological function of complement system. Major Histocompatibility complex (MHC)- Types and functions.

Unit V

Monoclonal antibodies, Hypersensitivity reactions, Immunoprophylaxis, Vaccines – types, Toxoid and antitoxin, Immunoelectrophoresis, HLA typing, ELISA and RIA

Text Books

Course Code	Course Title	L	T	P	C
20116AEC34	Cell Biology	4	1	0	5

Aim:

- Students will understand the cellular basis of life and their importance.

Objectives:

- Students will understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles
- Students will understand how these cellular components are used to generate and utilize energy in cells

Outcomes:

- To grasp the significance of cell and its components in living systems
- To understand the and describe the structures and basic components of prokaryotic and eukaryotic cells
- To understand the cyclical events of cell division and types of cell division
- To acquire the knowledge of cell biology for understanding various physiological process
- To understand the synthesis of cellular compounds and cell signaling

Unit - I

History of cell biology, cell as basic unit of life, cell theory, protoplasm theory and organismal theory, broad classification of cell types, Bacteria, Archaea (prokaryotic) and eukaryotic cells and their similarities and differences.

Unit - II

Cell Organelles- Nucleus, Endoplasmic Reticulum(link is external), Golgi Apparatus, Mitochondria(link is external), Chloroplast(link is external), Lysosome, Peroxisome – Protein Sorting & Transport – Cytoskeleton(link is external) & Cell Movement – The Plasma Membrane

Unit - III

Biogenesis of Cellular organelles – Biosynthesis of mitochondria, chloroplast, ER, Golgi complex; Biosynthetic process in ER and golgi apparatus; Protein synthesis and folding in the cytoplasm; Degradation of cellular components.

Unit - IV

Cell cycle - An overview of cell cycle; Components of cell cycle control system; Intracellular and Extra-cellular control of cell division, Programmed cell death (Apoptosis), intrinsic & extrinsic pathways of cell death, Apoptosis in relation with Cancer and Viral disease

Unit - V

Cell communication – overview – types of cell signaling – signal molecules – signal amplification – receptor types – quorum sensing.

20116AEC35L	Immunology Lab	0	0	3	2
-------------	----------------	---	---	---	---

Aim

- To learn the immunological techniques in disease diagnosis.

Objectives

- Acquire knowledge on antigen antibody reactions.
- Studying the immunology tests and their interpretations.

Outcomes

CO1- Able to know about principles and techniques Blood grouping
 CO2- To Understand the immunological experiments for clinical field
 CO3- To know the methods of Counting of RBC, WBC and platelets

Lab work

- ABO Blood Grouping
- Rh typing
- WIDAL Test
- White Blood Cell Count
- Red Blood Cell Count
- Antigen preparation
- Radial Immunodiffusion
- Double Immunodiffusion
- Demonstration of ELISA
- Demonstration of RIA

20116RMC37	Research Methodology	2	0	0	2
------------	----------------------	---	---	---	---

Aim:

To create a basic appreciation towards research process and awareness of various research publication

Objectives:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

Outcomes:

CO1- To Understand research questions and tools

CO2- To gain Experience in scientific writings

CO3- To Practice in various aspects of scientific publications

CO4- To understand Inculcation of research ethics

UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

UNIT IV: Database Survey

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

UNIT V:

Basic Principles of Laboratory Safety and Waste management

Introduction - Access to Laboratory and Emergency Exits - Personal Protective Clothing and Equipment - Good Working Practices-Maintenance of Laboratory Equipment - Working with Hazardous Substances - Storage of Chemicals - Working with Flammable Solvents - Gas Cylinders-Fire Precautions - Emergency Procedures - First Aid - Accident Follow-Up - Safety Manual - Safety Training - Management of Laboratory Safety and Responsibilities - Waste Management.

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

201ACLSOAN	OFFICE AUTOMATION	-	-	-	2
------------	-------------------	---	---	---	---

Aim:

Course Objectives :

To provide an in-depth training in use of office automation, internet and internet tools. The course also helps the candidates to get acquainted with IT.

Course Outcomes:

After completion of the course, students would be able to documents, spreadsheets, make small presentations and would be acquainted with the internet.

UNIT I

Knowing the basics of Computers

UNIT II

Word Processing (MS word)

UNIT III

Spread Sheet (MS XL)

UNIT IV

Presentation (MS Power Point)

UNIT V

Communicating with Internet

Reference:

1. Fundamentals of computers - V.Rajaraman - Prentice- Hall of india
2. Microsoft Office 2007 Bible - John Walkenbach,Herb Tyson,Faithe Wempen,cary N.Prague,Michael R.groh,Peter G.Aitken, and Lisa a.Bucki -Wiley India pvt.ltd.
3. Introduction to Information Technology - Alexis Leon, Mathews Leon, and Leena Leon, Vijay Nicole Imprints Pvt. Ltd., 2013.
4. Computer Fundamentals - P. K. Sinha Publisher: BPB Publications
5. <https://en.wikipedia.org>
6. <https://wiki.openoffice.org/wiki/Documentation>
7. <http://windows.microsoft.com/en-in/windows/windows-basics-all-topics>

SEMESTER – IV

Course Code	Course Title	L	T	P	C
20110AEC41	Tamil-IV	4	0	0	2

தமிழ்.

நான்காம் பருவம்

இரண்டாம் ஆண்டு

செய்யுள் , சங்க இலக்கியம், அற இலக்கியம் , செம்மொழி , இலக்கிய வரலாறு

அலகு . 1 : பண்டைய இலக்கியம் - நற்றிணை;

1. நெய்தல் - தோழி கூற்று - பாடல் எண் . 11
2. குறிஞ்சி - தலைவி கூற்று - பாடல் எண். 64
3. முல்லை - தலைவன் கூற்று - பாடல் எண்.142
4. பாலை - நற்றாய் கூற்று - பாடல் எண். 29
5. மருதம் - தலைவி கூற்று - பாடல் எண். 70

பண்டைய இலக்கியம் குறுந்தொகை

1. குறிஞ்சி - தோழி கூற்று - பாடல் எண்.1
2. முல்லை - செவிலித்தாய் கூற்று - பாடல் எண்.167
3. மருதம் - தலைவி கூற்று - பாடல் எண். 181
4. நெய்தல் - தலைவி கூற்று - பாடல் எண் . 290
5. பாலை - தலைவன் கூற்று - பாடல் எண் . 347

பண்டைய இலக்கியம் ஐங்குறுநூறு

1. மருதம் - கள்வன் பத்து - முதல் இரண்டு பாடல்கள்
2. நெய்தல் - தோழிக்குரைத்த பத்து - முதல் இரண்டு பாடல்கள்
3. குறிஞ்சி - குன்றக் குறவன் பத்து - முதல் இரண்டு பாடல்கள்
4. பாலை - இளவேனிற் பத்து - முதல் இரண்டு பாடல்கள்
5. முல்லை - பாசறைப் பத்து - முதல் இரண்டு பாடல்கள்

அலகு . 2 : கலிந்தொகை

1. பாலை - பாடல் எண். 2
2. குறிஞ்சி - பாடல் எண். 37

அகநானூறு

1. பாலை - பாடல் எண். 5

2. மருதம் - பாடல் எண். 6

புறநானூறு

பாடல் எண் : 6 ,121, 41, 153 ,172 191, 223, 246, 284, 358.

பதிற்றுப்பத்து

இரண்டாம் பத்து பாடல் எண். 4 (நிலம் நீர் வளி விசும்பு)

அலகு.3;

1 . பட்டினப்பாலை - முதல் 105 வரிகள்

2. திருக்குறள் - 1.மருந்து 2.ஊக்கமுடைமை 3.உழவு

அலகு . 4 : செம்மொழி வரனறு ;

(மொழி - விளக்கம் , மொழிக்குடும்பங்கள், உலகச் செம்மொழிகள், இந்தியச் செம்மொழிகள் , செம்மொழித் தகுதிகள் , வரையறைகள், வாழும் தமிழ் செம்மொழி, தொன்மை , தமிழின் சிறப்புகள், தமிழ் செம்மொழி நூல்கள்)

அலகு . 5 : இலக்கிய வரலாறு

சங்க இலக்கியங்கள் , பதினெண்கீழ்க்கணக்கு நூல்கள்.

Course Code	Course Title	L	T	P	C
20111AEC41	Advanced English-IV	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

Outcome:

- Develop writing skill
- Comprehend and describe poems
- Learn interviewing skills

UNIT –I

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation

–Presentation– Type of questions – Answering techniques.

UNIT – II

Flowchart

Proposals

UNIT – III

Discourse markers

Review

UNIT IV

Grammatical forms

Paraphrasing

UNIT –V

Definition

Writing for and against a topic.

Reference books:

Author	Title of the book	Edition / Year	Publisher

Meenakshi Raman & Sangeetha Sharma	Technical Communication	2011	Oxford University Press
Wren & Martin	English Grammar & Composition	2009	S.Chand

Course Code	Course Title	L	T	P	C
20111AEC42	English-IV	4	0	0	2

Aim:

- To learn English through literature

Objective:

- To explore learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

Outcome:

- Improve their ability to read and understand
- Know the genius of Shakespeare
- Express one's views in writing

UNIT –I

My Last Duchess	-Robert Browning
The Toys	-Coventry Patmore
I, too	-Langston Hughes

UNIT –II

How to be a Doctor	-Stephen Leacock
My Visions for India	-A.P.J. Abdul Kalam
Woman, not the weaker sex	-M.K. Gandhi

UNIT –III

The Best Investment I ever made	-A.J.Cronin
The Verger	-W.S Maugham
A Willing Slave	-R.K.Narayan

UNIT –IV

Macbeth
As You Like It

UNIT –V

Henry IV
Tempest

Text book:

Author	Title of the book	Edition / Year	Publisher
Devaraj	English for Enrichment		Emerald Publishers
Board of Editors	Selected Scenes from Shakespeare Book I & II	2012	Emerald Publishers

Course Code	Course Title	L	T	P	C
20116AEC43	Virology	4	1	0	4

Aim:

- To study the characteristics of viruses and viral infections.

Objectives

- To study general aspects of classification and structure of viruses.
- Study in the viral infections, their diagnosis and treatment strategies.

Outcomes

CO1- To Understand the characteristic features of viruses.

CO2– To Gain the knowledge about the biology of bacteriophages.

CO3– To Learn the range of plant viruses and animal viruses.

CO4 -To know the role of viruses in causing of cancer.

UNIT – I

Introduction – Definition, History of virology. General properties of Viruses classification of Viruses – cultivation of Viruses – Structure and replications Viruses.

UNIT – II

Bacterial Viruses – structure of bacteriophage, The Lytic life cycle (T-Even coliphages) – Lysogenic life cycle (*Escherchia coli*, Phage Lambda) noninteractive lysogeny (*Escheirchia coli*).

UNIT – III

Plant Viruses, Common plant viral diseases: Tobacco Mosaic **Virus** (TMV), Bunchy top of banana, satellite virus. Cucumber Mosaic **Virus** (CMV), Cauliflower Mosaic **Virus** (CaMV). Bacteriophages, Viroids.

UNIT – IV

Animal viruses: Morphology, pathogenesis and laboratory diagnosis of Prions, Animal viruses Rinder pest, Blue tongue, Raniket dion, Foot and Mouth Disease. Human Viruses – Herpes, HIV, Hepatitis Viruses. Viral Vaccines. Prevention and treatment of viral diseases. Antiviral agents.

UNIT - V

Virus: Assay, purification and characterization of Viruses, Separation and characterization of viral components and quantification of Viruses. Immune responses to viruses, Interferon and other cytokines, Antiviral therapy.

Course Code	Course Title	L	T	P	C
20116AEC44	Biostatistics and Bioinformatics	5	1	0	5

Aim

To introduce the basic knowledge on Biostatistics and Bioinformatics tools and its applications

Objective

- The basic objective is to give students an introduction to the biostatistics and bioinformatics.
- Emphasis will be given to the application of biostatistics, bioinformatics and biological databases to problem solving in real research problems.

Outcome

- To understand the importance of principal concepts about biostatistics
- To know the knowledge about statistics and its relation with other science and research aspects
- To obtain the knowledge on bioinformatics databases, perform text- and sequence-based searches
- To become familiar with the use of a wide variety of internet applications, biological database and will be able to apply these methods to research problems.

Unit I

Concepts in statistics, Types of Data, presentation of data, types of graphics, relative frequency, cumulative frequency, Measurement of central tendency, Measures of variation, coefficient of variation, Measures of Skewness and Kurtosis, Probability and its applications, Laws of Addition and Multiplication, Compound probability, Baye's Theorem.

Unit II

Random Variables and Distributions. Binomial, Poisson, Exponential and Normal Distributions and their applications. Samples and Sampling Distribution, Standard Error, significance level, Degrees of freedom, Tests of significance, tests for proportion, t and F tests Confidence. Correlation: Simple, Partial and Multiple Correlation. Regression Analysis. Analysis of variance for one and two way classification

UNIT III

Biological Databases: Structure, Sequence and literature databases. Protein sequence database - PIR, SWISS-PROT, MIPS. Protein structure database - PDB, SCOP. DNA sequence databases – Gen Bank, ENBL, MBL, DDBJ. Literature data base – Med Line, PubMed. Patterns, motifs and profile Databases: Metabolic Pathway Databases.

UNIT IV

Sequence Alignment and Analysis: Local and Global alignment. Scoring matrices. Database Similarity Searches: BLAST, FASTA, PSI-BLAST algorithms; Pair wise sequence alignment - NEEDLEMAN and Wunsch, Smith Waterman algorithms; Multiple sequence alignments - CLUSTAL, PRAS; Patterns, motifs and Profiles in sequences.

UNIT V

Important parameters in Drug Discovery and the role of computational methods. Process of drug discovery – Target identification, target validation, lead identification, lead optimization and preclinical pharmacology and toxicology. Computer Aided Drug Design (CADD). Molecular docking - Concept of receptor and target. Receptor binding and activation. Ligand-receptor interaction, non-covalent bonds. Ligand into the binding site.

Course Code	Course Title	L	T	P	C
201ENSTU45	Environmental studies	2	0	0	2

Objectives:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

Outcome

CO1- To Understand eco-system

CO2- To Know social issues and the environment

CO3- To Learn keep the environment eco-friendly

1. Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

2. Natural Resources and Associated Problems.

- Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
 - Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
 - Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
 - Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
 - Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
 - Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,
- Role of an individuals in conservation of natural resources.

3. Ecosystems

Concept of an ecosystem.

Structure and function of an ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,

d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot — spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

5. Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

6. Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
4. Apply their ecological knowledge to illustrate and graph a problem and
5. describe the realities that managers face when dealing with complex issues; and
6. Understand how politics and management have ecological consequences.

Course Code	Course Title	L	T	P	C
20116AEC46L	Virology Lab	0	0	3	2

Aim:

- To study the isolation and cultivation methods for viruses.

Objectives

- Cultivation of viruses and various methods of propagation.

Outcomes

CO1- To Know the structure of plants, animal, bacteria and viruses.

CO2- To grasp the significance of isolation, propagation of various viruses

CO3- To build clinical laboratory testing devices

Lab work

1. Isolation of coliphage from sewage.
2. Determining Bacteriophage Titers
3. Cultivation of viruses in embryonated egg.
4. Chicks Embryo Fibroblast technique for virus cultivation

Demonstrations

1. Isolation of microorganisms from Phyllosphere.
2. Study of the following viral diseases: Tobacco mosaic; Cucumber Mosaic Virus.
3. Demonstrations of some plant, animal & human viruses (photographs, diagram etc.).

Course Code	Course Title	L	T	P	C
20116AEC47L	Biostatistics and Bioinformatics Lab	0	0	3	2

Aim

- To introduce the basic knowledge on Biostatistics and Bioinformatics tools and its applications

Objective

- The basic objective is to give students an introduction to the biostatistics and bioinformatics.
- Emphasis will be given to the application of biostatistics, bioinformatics and biological databases to problem solving in real research problems.

Outcomes

CO1: To Read and learn statistical measures individually.

CO2- To analysis the data from experiments and interpretation of the *results*

CO3- To study the multivariate analysis in biostatistics

CO4 - To understand the nucleotide sequence data of the given species using NCBI / EMBL / DDBJ.

CO5 - To identify the protein sequence of the species using PIR and Swissprot / UniProt

- Mean and Standard deviation using biological samples
- Chi – Square test, Student ‘t’ test and Correlation coefficient
- Regression Coefficient and regression lines
- Pairwise alignment using FASTA, BLAST.
- Multiple alignments using Clustal W.
- Study of internet resources in Bioinformatics – NCBI, ENBL, EBI.

Course Code	Course Title	L	T	P	C
201ACLSLMS	Leadership and Management Skills	-	-	-	2

Aim:

The aim of the course cultivating and nurturing the innate leadership skills of the youth so that they may transform these challenges into opportunities and become torch bearers of the future by developing creative solutions.

Course Objective:

The Module is designed to:

- Help students to develop essential skills to influence and motivate others
- Inculcate emotional and social intelligence and integrative thinking for effective leadership
- Create and maintain an effective and motivated team to work for the society
- Nurture a creative and entrepreneurial mindset
- Make students understand the personal values and apply ethical principles in professional and social contexts.

Course Outcomes :

Upon completion of the course students will be able to:

1. Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
2. Learn and demonstrate a set of practical skills such as time management, self management, handling conflicts, team leadership, etc.
3. Understand the basics of entrepreneurship and develop business plans
4. Apply the design thinking approach for leadership
5. Appreciate the importance of ethics and moral values for making of a balanced personality.

UNIT I- Leadership Skills

a. Understanding Leadership and its Importance

- What is leadership?

- Why Leadership required?
- Whom do you consider as an ideal leader?

b. Traits and Models of Leadership

- Are leaders born or made?
- Key characteristics of an effective leader
- Leadership styles
- Perspectives of different leaders

c. Basic Leadership Skills

- Motivation
- Team work
- Negotiation
- Networking

UNIT II - Managerial Skills

a. Basic Managerial Skills

- Planning for effective management
- How to organise teams?
- Recruiting and retaining talent
- Delegation of tasks
- Learn to coordinate
- Conflict management

b. Self Management Skills

- Understanding self concept
- Developing self-awareness
- Self-examination
- Self-regulation

UNIT III - Entrepreneurial Skills

a. Basics of Entrepreneurship

- Meaning of entrepreneurship
- Classification and types of entrepreneurship
- Traits and competencies of entrepreneur

b. Creating Business Plan

- Problem identification and idea generation
- Idea validation
- Pitch making

UNIT IV - Innovative Leadership and Design Thinking

a. Innovative Leadership

- Concept of emotional and social intelligence
- Synthesis of human and artificial intelligence
- Why does culture matter for today's global leaders

b. Design Thinking

- What is design thinking?
- Key elements of design thinking:
 - Discovery
 - Interpretation
 - Ideation
 - Experimentation
 - Evolution.
- How to transform challenges into opportunities?
- How to develop human-centric solutions for creating social good?

UNIT V- Ethics and Integrity

a. Learning through Biographies

- What makes an individual great?
- Understanding the persona of a leader for deriving holistic inspiration
- Drawing insights for leadership
- How leaders sail through difficult situations?

b. Ethics and Conduct

- Importance of ethics
- Ethical decision making
- Personal and professional moral codes of conduct
- Creating a harmonious life

SEMESTER V

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20116AEC51	Food and Dairy Microbiology	4	1	0	4
------------	-----------------------------	---	---	---	---

Aim:

- To learn the role of microbes in food production, food spoilage and food borne illness.

Objectives

- To learn about factors involved in microbial food spoilage
- Understanding the food preservation methods
- To make aware of food borne diseases

Outcomes

CO1– To identify the role of microorganisms in the production of food

CO2– To know the milk and foods quality test for detecting microorganisms

CO3– To Gain the knowledge regarding food preservation

UNIT – I

Introduction: Importance of food and dairy Microbiology – Types of microorganisms in food – Source of contamination (primary sources) – Factors influencing microbial growth in foods (extrinsic and intrinsic).

UNIT – II

Food fermentations: Cheese, bread, wine, fermented vegetables – methods and organisms used. Food and enzymes from microorganisms – single cell protein, production of enzymes.

UNIT – III

Contamination, spoilage and preservation of different kinds of foods, cereals and cereal products – sugar and sugar products – vegetable and fruits – meat and meat products – fish and other sea foods – eggs and poultry – dairy and fermentative products (ice cream/milk/bread/wine).

UNIT – IV

Food Poisoning: food borne infections (a) Bacterial: *Staphylococcal*, *Brucella*, *Bacillus*, *Clostridium*, *Escherichia*, *Salmonella* (b) Fungal: Mycotoxins including aflatoxins, (c) Viral: Hepatitis, (d) Protozoa – Amoebiasis.

UNIT – V

Food preservation: Principles of food preservation – methods of preservation. a. Physical (irradiation, drying, heat processing, chilling and freezing, high pressure and modification of atmosphere) b. Chemical (Sodium benzoate Class I & II). Food Sanitation: Good manufacturing practices – Hazard analysis, Critical control points, Personnel hygiene.

Course Code	Course Title	L	T	P	C
20116AEC52	Molecular Biology	4	1	0	3

UNIT – I

Historical and conceptual background - Discovery of DNA as genetic material, Griffith's experiment, Hershey and Chase warring blender experiment, Chargaff's rule. Structures of DNA and RNA: Types of genetic material. DNA Structure: Salient features of double helix, types of DNA. RNA Structure. Denaturation and renaturation, cot curves. DNA topology: linking number, topoisomerases. DNA organization in prokaryotes, viruses, eukaryotes

UNIT – II

DNA replication in prokaryotes: Replicons – models of DNA replication – origin and termination of replication – rolling circle replication – proof for semi conservative replication (Meselson and Stahl Experiment) – enzymes and proteins involved in DNA replication (nucleases, polymerases, ligases, helicases, gyrases, single strand binding protein, replisome and primosome) – mechanism of semi discontinuous replication.

UNIT – III

Transcription: Steps involved in transcription of prokaryotes, promoters, transcription factors, RNA polymerases I, II and III – ribosomal RNA transcription and processing – genetic code, deciphering the genetic code, characteristics of genetic code, Wobble hypothesis, central dogma of life and reversal of central dogma.

UNIT – IV

Translation: Steps involved in translation of prokaryotes – role of proteasomes in protein degradation – mechanism of action of antibiotics on protein synthesis (puromycin, chloramphenicol and streptomycin). Regulation of gene expression in prokaryotes – polycistronic mRNA and operons (lac operon and trp operon and attenuation mechanism).

UNIT – V

Mutation: spontaneous and induced mutations – UV and X - rays – mechanism of action of base analogues, alkylating agents, intercalating agents and teratogens – reversion suppressor mutations and mutation rate – repair of damaged DNA - excision repair, SOS, photoreactivation – CRISPR and their role in genome stability

Course Code	Course Title	L	T	P	C
20116AEC53	Agricultural and Environmental Microbiology	4	1	0	4

Aim:

- To learn about microorganisms in the environment and their importance in agriculture.

Objectives

- To know the microbes in various environments like soil, water and air.
- Importance of microbes in agriculture and waste treatment.

Outcome

CO1 - To acquire the information about microbes

CO2 - To Know about microbes and its role in environment.

CO3 - Able to understand about microbes in agriculture and environmental practice.

UNIT – I

Classification of soils. Physical and chemical characteristics and microflora of various soil types. Interactions among microorganisms: Symbiosis – mutualism – commensalisms – competition – amensalism – synergism – parasitism – predation. Biogeochemical cycles. Carbon, nitrogen, phosphorus and sulphur.

UNIT – II

Biofertilizers. Symbiotic nitrogen fixation – (*Rhizobium*, *Frankia*) –Symbiotic nutrient mobilizers – Endomycorrhizae and Ectomycorrhizae – Non symbiotic microbes – *Azotobacter* – *Azospirillum* – Cyanobacteria (*Nostoc*, *Gloeocapsa*, *Anabaena*).

UNIT – III

Microbial Association with higher plants – Rhizosphere – *Rhizobium* – infection – inoculation – nodule formation. Phylloplane association with animals. A brief account of the symptoms, etiology, life-cycle and management of bacterial (blight of paddy, citrus canker) and fungal (late blight of potato and red rot of sugarcane) diseases.

UNIT – IV

Microbiology of air – organisms in air, distribution and sources. Droplet nuclei, aerosol, assessment of air quality. Types of aquatic ecosystems: fresh water – ponds, lakes, streams. Marine habitats – estuaries, mangroves, deepsea, hydrothermal vents, salt pans, coral reefs. Zonations – upwelling – eutrophication – food chain. Potability of water – microbial assessment of water quality – water purification – brief account of water - borne diseases.

UNIT – V

Types of wastes – characterization of solid and liquid wastes. Solid waste treatment – saccharification – gasification – composting, Utilization of solid wastes – food (SCP, mushroom, yeast); fuel (ethanol, methane, hydrogen); fertilizers (composting). Liquid waste treatment. Treatment methods – primary –secondary (anaerobic – methanogenesis; aerobic- trickling activated sludge – oxidation pond – tertiary treatment.

Course Code	Course Title	L	T	P	C
20116AEC55L	Food and Dairy Microbiology and Molecular Biology Lab	0	0	3	2

Aim:

- To analyze microbiological quality of food samples.

Objectives

- Microbiological tests used in the food industry.
- To study and characterize the food borne microorganisms.

Outcome

CO1 - To Analyze the microbes in food and dairy industry products

CO2 - To understand the Production methods of Food and dairy products using microbes

CO3 - To gain Knowledge about Molecular Genome analysis and quantification

CO4 - To understand the Isolation of DNA and amplification using PCR technique.

CO5 - To know about Protein and DNA separation technique

Lab work

1. Assessment of milk quality by methylene blue reduction test
2. Wet mount preparation of fungal organism from spoiled bread, tomato, grapes, potato.
3. Observation of food samples to study *Leuconostoc sp.*, *Lactobacillus sp.*, *Streptococcus lacti* and *Saccharomyces*
4. Preparation of yoghurt
5. Determination of thermal death time (TDT) and thermal death point (TIP) of microorganisms from spoiled foods
6. Direct microscopic examination of milk by standard plate count (SPC) method
7. Isolation of plasmid DNA from bacteria by Spectrophotometric assay.
8. Isolation of chromosomal DNA from bacteria by Spectrophotometric assay.
9. Development of competent cells in *E. coli*.
10. Isolation of antibiotic resistant auxotrophic mutants.
11. Protoplast and Spheroplast isolation

Demonstration

1. Fermenting ability of yeast
2. Antibiotic resistance – plasmid mediated – chromosomal mediated – Gel Electrophoretic methods.
3. Principles and applications of agarose gel electrophoresis and plasmid separation in agarose gel.

Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
20116DSC54A	Bioinoculants	4	1	0	3

Aim:

- To study the importance of microbes as bioinoculants/biofertilizers.

Objectives

- To give an overview about role of microorganisms for the cycle of carbon, nitrogen, phosphorus and sulphur in the nature with a special focus on agrosystems.
- Importance of microorganisms for agricultural production and commercial composts.

Outcomes

CO1- To acquire knowledge in microbial products

CO2- To know the Separation techniques of primary and secondary metabolites

CO3- To grasp the Applications of value added products

CO4- To know the microbial inoculants in agricultural practices

UNIT – I

General account of the microbes used as a biofertilizers for crop plants and their advantages. Symbiotic N₂ fixers: Rhizobium- Isolation, characterization, identification, classification, inoculum, production and field application. Frankia- Isolation, characterization- actinorrhizal nodules-non-leguminous crop symbiosis.

UNIT – II

Non-symbiotic N₂ fixers-Azospirillum-Free living-Azotobacter-free isolation, characterization, mass inoculum production and field application.

UNIT – III

Symbiotic N₂ fixers- Cyanobacteria, Azolla- Isolation, characterization, mass multiplication- role in rice cultivation- Crop response- field application- immobilization.

UNIT – IV

Phosphate solubilizers- phosphate solubilizing microbes- Isolation, characterization, mass inoculum production, field application- Phosphate solubilization mechanism.

UNIT – V

Mycorrhizal bioinoculants- classification- importance of mycorrhizal Ectomycorrhizae- Endomycorrhizae- Ectendo mycorrhizae- Taxonomy of mycorrhizae- Isolation of VA mycorrhizae- quantification and assessment of VAM in roots- Mass inoculum production VAM- field applications of Ectomycorrhizae and VAM.

Course Code	Course Title	L	T	P	C
20116DSC54B	Bioremediation practices	5	0	0	4

AIM

To know the basic principles of Bioremediation practices

COURSE OUTCOME :

CO1- Students gain the knowledge about Bioremediation I

CO2- Get the information about Bioremediation – II Solid phase bioremediation

CO3- learn about Hazardous Waste Management

CO4- Learn to the concept of bioremediation

CO5 - To know about Concepts of phytoremediation

Unit I

Bioremediation- I Introduction, constraints and priorities of Bioremediation, Biostimulation of Naturally occurring microbial activities, Bioaugmentation, in situ, ex situ, intrinsic & engineered bioremediation

Unit II

Bioremediation – II Solid phase bioremediation - land farming, prepared beds, soil piles, Phytoremediation. Composting, Bioventing & Biosparging; Liquid phase bioremediation - suspended bioreactors, fixed biofilm reactors.

Unit III

Hazardous Waste Management biotechnology application to hazardous waste management - examples of biotechnological applications to hazardous waste management – cyanide detoxification - detoxification of oxalate, urea etc. - toxic organics -phenols.

Unit IV

Concept of bioremediation (in-situ & ex-situ), Bioremediation of toxic metal ions biosorption and bioaccumulation principles.

Unit V

Concepts of phytoremediation. Microbial leaching of ore-direct and indirect mechanisms. Mining and metal. Use of microorganisms in augmentation of petroleum recovery. Biotechnology-with special reference to Copper and Iron.

Course Code	Course Title	L	T	P	C
20116DSC54C	Molecular Immunology	5	0	0	4

AIM

To know the basic principles of Advanced immunology

COURSE OUTCOME :

CO1- Students gain the knowledge about the Immune system

CO2- Get the information to Immune responses generated by B and T lymphocytes

CO3- Rapidly evolving scientific area into B-cell maturation, activation and differentiation;

CO4- get the knowledge about Antigen-antibody interactions

Unit I

Immunology- fundamental concepts and anatomy of the immune system Components of innate and acquired immunity; Phagocytosis; Complement and Inflammatory responses; Haematopoiesis; Organs and cells of the immune system primary and secondary lymphoid organs; Antigens - immunogens, haptens; Major Histocompatibility Complex - MHC genes, MHC and immune responsiveness and disease susceptibility, HLA typing.

Unit II

Immune responses generated by B and T lymphocytes Immunoglobulins-basic structure, classes and subclasses of immunoglobulins, antigenic determinants; Multigene organization of immunoglobulin genes; B-cell receptor; Immunoglobulin superfamily; Principles of cell signaling; Immunological basis of self – non-self discrimination; Kinetics of immune response, memory.

Unit III

B-cell maturation, activation and differentiation; Generation of antibody diversity; T-cell maturation, activation and differentiation and T-cell receptors; Functional T Cell Subsets; Cell mediated immune responses, ADCC; Cytokines-properties, receptors and therapeutic uses; Antigen processing and presentation- endogenous antigens, exogenous antigens, non-peptide bacterial antigens and super-antigens; Cell-cell co-operation, Hapten-carrier system.

Unit IV

Antigen-antibody interactions Precipitation, agglutination and complement mediated immune reactions; Advanced immunological techniques - RIA, ELISA, Western blotting, ELISPOT assay, immunofluorescence, flow cytometry and immunoelectron microscopy; Surface plasma resonance, Biosensor assays for assessing ligand –receptor interaction, CMI techniques lymphoproliferation assay, Mixed lymphocyte reaction, Cell Cytotoxicity assays, Apoptosis, Microarrays, Transgenic mice, Gene knock outs.

Unit V

Vaccinology Active and passive immunization; Live, killed, attenuated, sub unit vaccines; Vaccine technology- Role and properties of adjuvants, recombinant DNA and protein based vaccines, plant-based vaccines, reverse vaccinology; Peptide vaccines, conjugate vaccines;

Antibody genes and antibody engineering- chimeric and hybrid monoclonal antibodies; Catalytic antibodies and generation of immunoglobulin gene libraries.

Course Code	Course Title	L	T	P	C
20116DSC54D	Algae Biotechnology	5	0	0	4

AIM

To know the basic principles of genes and proteins

OBJECTIVES:

To understand the gene functions and its genetic engineering aspects To understand the protein functions and its genetic engineering aspects

COURSE OUTCOME :

CO1- Students gain the knowledge about the algal biotechnology

CO2- Get the information about uses of algae

CO3- Rapidly evolving Algal production systems

CO4- Learn to store various Chemical composition of algae.

UNIT I

Introduction to algal biotechnology: Resource potential of algae; commercial utility of algae. Algae as a source of food and feed; Algae as a source of pigments, fine chemicals, fuel and bio-fertilizers. Distribution of economically important algae in India.

UNIT II

Uses of the following algae: Spirulina, Dunaliella, Haematococcus, Chlorella, Scenedesmus, Botryococcus, Porphyridium, Hypnea, Gracilaria, Gelidium, Gelidiella, Kappaphycus, Grateloupia, Sargassum, Turbinaria, Cystoseira, Laminaria, Macrocystis, Porphyra, Caulerpa and Ulva.

UNIT III

Algal production systems; Strain selection; Algal growth curve; Culture media; indoor cultivation methods and scaling up. Measurement of algal growth. Large-scale cultivation of algae. Evaporation and uniform dispersal of nutrients; Harvesting algae. Drying.

UNIT IV

Chemical composition: protein, amino acids, lipids, waxes, glycerol, vitamins, pigments, chlorophyll, carotenoids and phycobiliproteins. Algal immobilization and its applications; Blue-green algal bio-fertilizer: Method of preparation, application and its advantages over inorganic fertilizers.

UNIT V

Liquid seaweed fertilizer: Method of preparation and application. Biodiesel from algae: algae producing biodiesel; Advantages over other sources of biodiesel; Cultivation and extraction methods. Phycoremediation. Role of algae in nanobiotechnology.

Course Code	Course Title	L	T	P	C
20116AEC56L	Agricultural and Environmental Microbiology Lab	0	0	3	2

Aim:

- Understanding the techniques to study the environmental / agriculture microorganisms.

Objectives

- Isolation and characterization of agriculture important microbes.
- To study the environmental microbes and their impact.

Outcome

CO1 - To acquire the information about microbes role in agriculture

CO2 - To Learn about Biofertilizer production

CO3 - To Know about microbes and its role in environment

Lab work

- Isolation and culturing of *Rhizobium* from root nodules.
- Isolation and culturing of *Azospirillum* from grassplant.
- Isolation and culturing of *Azotobacter* from paddy field
- Isolation and culturing of *Phosphobacter* from paddy field
- Isolation and culturing of Blue Green Algae from paddy field
- Isolation and identification of air-borne bio-particles using Open plate method
- Effects of high salt concentration on microbial growth
- Microbial flora of polluted water – Microbial flora of sewage
- Bacterial examination of drinking water by membrane filter technique and MPN

Course Code	Course Title	L	T	P	C
201ACLSPSL	Professional Skills	-	-	-	2

Course Objectives :

The Objectives of the course are to help students/candidates:

1. Acquire career skills and fully pursue to partake in a successful career path
2. Prepare good resume, prepare for interviews and group discussions
3. Explore desired career opportunities in the employment market in consideration of an individual SWOT.

Course Outcomes :

At the end of this course the students will be able to:

1. Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax
2. Participate in a simulated interview
3. Actively participate in group discussions towards gainful employment
4. Capture a self - interview simulation video regarding the job role concerned
5. Enlist the common errors generally made by candidates in an interview
6. Perform appropriately and effectively in group discussions
7. Explore sources (online/offline) of career opportunities
8. Identify career opportunities in consideration of their own potential and aspirations
9. Use the necessary components required to prepare for a career in an identified occupation (as a case study).

Unit I: Resume Skills

Resume Skills : Preparation and Presentation

- Introduction of resume and its importance
 - Difference between a CV, Resume and Bio data
 - Essential components of a good resume
- ii. Resume skills : common errors**
- Common errors people generally make in preparing their resume

- Prepare a good resume of her/his considering all essential components

Unit II: Interview Skills

i. Interview Skills : Preparation and Presentation

- Meaning and types of interview (F2F, telephonic, video, etc.)
- Dress Code, Background Research, Do's and Don'ts
- Situation, Task, Approach and Response (STAR Approach) for facing an interview
- Interview procedure (opening, listening skills, closure, etc.)
- Important questions generally asked in a job interview (open and closed ended questions)

ii. Interview Skills : Simulation

- Observation of exemplary interviews
- Comment critically on simulated interviews

iii. Interview Skills : Common Errors

- Discuss the common errors generally candidates make in interview
- Demonstrate an ideal interview

Unit III: Group Discussion Skills

Meaning and methods of Group Discussion

- Procedure of Group Discussion
- Group Discussion- Simulation
- Group Discussion - Common Errors

Unit IV: Exploring Career Opportunities

Knowing yourself – personal characteristics

- Knowledge about the world of work, requirements of jobs including self-employment.
- Sources of career information
- Preparing for a career based on their potentials and availability of opportunities

SEMESTER VI

Course Code	Course Title	L	T	P	C
20116AEC61	Industrial Microbiology	4	1	0	4

Aim:

- Understanding the industrial importance of microorganisms and their products.

Objectives

- To study the development of industrial microbiology and microbes of industrial prominence.
- To acquire knowledge on design of fermentors and its types.
- Industrial production of various pharmaceutical and commercial products using microbes.

Outcomes

CO1- To understand the vital role of various substrate used in fermentation.

CO2- To Learn the different types of reactors or fermenters.

CO3- To gain knowledge about upstream and downstream processing

Co4 - To acquire the knowledge on different product production

UNIT – I

Historical development of Industrial Microbiology, Industrially important microorganisms, Primary and secondary screening and preservation of industrially important strains. Microbial strains improvement. Primary and secondary metabolites.

UNIT – II

Fermenter: Design, types and basic functions of fermenter. Fermentation media formulation strategies, Essential factors (pH and temperature, incubation), carbon, nitrogen, vitamin and mineral sources, role of buffers, precursors, inhibitors, inducers and antifoams, types of fermentation.

UNIT – III

Downstream processing: Product recovery and purification (intracellular and extracellular), cell disruption, precipitation, filtration, centrifugation, solvent recovery, chromatography, ultrafiltration, drying, Enzyme and cells immobilizations and its applications.

UNIT – IV

Microbial products of pharmaceutical value – raw materials, organism and Industrial processes involved in the production of Pencillin, Streptomycin, Vitamin B12, Riboflavin and rabies vaccine.

UNIT – V

Microbial products of Industrial value – Raw materials, organism and Industrial processes involved in the production of ethanol, vinegar, amylase, protease, glutamic acid. Recycling and safe disposal of Industrial wastes through microbes.

Course Code	Course Title	L	T	P	C
20116SEC62	Clinical Microbiology	4	1	0	5

Aim:

- To understand the clinical significance of microorganisms.

Objectives

- To study virulence of pathogenic microbes.
- To understand the pathogenesis and treatment methods of various diseases
- To understand the various diagnostic techniques.

Outcomes

CO1- To Understand the basic and general concepts of Normal flora of the human body

CO2 –To Understand the sources of infectious diseases and transmission

CO3 - To Study the pathogenicity of bacterial, fungal, protozoa and viral diseases

CO4- To Understand the preventive measures of Hospital acquired infections

UNIT – I

Basics in Medical microbiology - Infectious diseases overview. Medically important microbes. Normal microbial flora of the human body, Host-microbe interactions – virulence factors of microbes. Invasiveness and pathogenicity. Immunity of microbial diseases

UNIT – II

Diagnostic Microbiology – collection and transport of specimen for Microbiological examination – General methods for isolation and identification of bacteria. Typing of bacterial isolates. Sero-diagnosis.

UNIT – III

Clinical symptoms. Epidemiology, pathogenesis, laboratory diagnosis, prevention and treatment of the following bacterial infections (a) Streptococcal infections, (b) Staphylococcal infections, (c) Meningitis, (d) Tuberculosis, (e) Leprosy, (f) Gastrointestinal disorders – typhoid, cholera, bacillary dysentery, (g) Sexually transmitted diseases – syphilis, gonorrhoea. (h) Anaerobic wound infection – tetanus, gas gangrene.

UNIT – IV

Clinical symptoms. Epidemiology, pathogenesis, laboratory diagnosis, prevention and treatment of the following viral infections (a) Respiratory infections, common cold, influenza, measles, mumps and rubella. (b) neurological infection – encephalitis (Dengue, Japanese encephalitis), Rabies (c) Liver diseases : Hepatitis A,B,C,D & E (d) Immunodeficiency diseases, AIDS, CMV (Cytomegaloviruses) Herpes simplex viruses.

UNIT – V

Clinical symptoms. Epidemiology, pathogenesis, laboratory, prevention and treatment of the following fungal and protozoan infections (a) Fungal – superficial, subcutaneous and systemic mycoses, (b) Protozoan: Amoebiasis, Malaria, Leishmaniasis, (c) Helminths – Filariasis, Ascariasis, Zoonotic diseases, Hospital acquired infections.

Discipline Specific Elective - II

Course Code	Course Title	L	T	P	C
20116DSC63A	Bioethics	4	1	0	3

Aim:

- To recognise and understand ethical concepts in biological research.

Objectives

- Understands and can apply the various theories and principles of bioethics
- Can scrutinise and identify health, administrative and public health policies to identify ethical issues
- Bioethics in medicine and clinical research

Outcomes

CO1- To identify ethical issues in a research proposal

CO2- To Understand the Intellectual property Rights (IPR) and patent filling.

CO3- To gain Knowledge about to ensure ethical conduct of biomedical research

CO4- To Describe the basic concepts of legal, ethical, economic, and regulatory measurements.

UNIT – I

General Ethical concerns: the use of nature, Different views of nature, Dynamic nature, interfering with nature, integrity of species; Reducing genetic diversity; Biological warfare; public perception of science.

UNIT – II

Medical ethics; History and culture: The Hippocratic tradition: a profession, Philanthropy, Do no harm, adoption to the oath by western medicine. Competing ethical Traditions; Retaining the Hippocratic oath.

UNIT – III

Status of Human embryo: Human Embryonic development; Ethics through embryo development: Fertilization, the fetus and feeling pain; Scientific Research on Human Embryos: Experimental goals of Human Embryo Research, Human Development; How much Embryo experimentation in ethical?

UNIT – IV

Animal Rights: Making new strains of animal: Ethical limits of animal use: Religious views of animal status; Philosophical views of animal status; regulations.

UNIT –V

Human Gene therapy: Ethics of somatic cells gene therapy: Efficiency of treatment; safety of transferred genes; protecting human life; Affect on family life; Economic factors; when we should use Gene therapy?

Course Code	Course Title	L	T	P	C
20116DSC63B	Biomolecules	4	1	0	3

AIM

To know the functions of Biomolecules

OBJECTIVE :

- To understand the structure and functions of carbohydrates, lipids , proteins and nucleic acids
- To understand the role of nucleic acid in proteins synthesis

OUTCOME

CO1- They acquire knowledge in the quantitative and qualitative estimation of biomolecules

CO2- They study the influence and role of structure in reactivity of biomolecules

CO3- Students have a thorough understanding on the role of biomolecules and their functions.

Unit I

Carbohydrates: Structure and biological functions of Mono, di and Polysaccharides. Types of polysaccharides: Homo polysaccharides -chitin, fructans, mannans, xylans, and galactans. Structure and biological importance of Hetero polysaccharides- Glycoprotein – bacterial cell wall polysaccharides, marine polysaccharides and Lectins.

Unit II

Aminoacids and its general properties. Classification of amino acids. Proteins– classification and general properties. Orders of protein structure, Primary- Secondary structure– the α -helix, β -pleated sheet. Protein sequencing methods.

Unit III

Lipids: Definition and classification of lipids. Biological significance of lipids. Types of Fatty acids-Essential, Non essential. Structure and biological functions of phospholipids, sphingolipids, glycolipids. Steroids – structure and functions of cholesterol, bile acids, sex hormones, ergosterol. Structure and biological role of prostaglandins, thromboxanes and leukotrienes.

Unit IV

Nucleic acid: Structure of purines, pyrimidines, nucleosides and nucleotides. DNA double helical structure. A, B and Z forms of DNA. Properties of DNA- Density, viscosity, hypochromicity, denaturation and renaturation. DNA sequencing– chemical and enzymatic methods. Chemical synthesis of DNA. RNA– types and biological role- Secondary, tertiary structures of RNA.

Unit V

Vitamins: Definition and Classification - Source, Structure and biological role - Daily requirements and deficiency manifestation of fat soluble vitamins and water soluble vitamins.

Course Code	Course Title	L	T	P	C
20116DSC63C	Microbiome	4	1	0	3

AIM

- To inculcate on the role of normal flora and pathogenic microbes.

OBJECTIVE

- To understand the pathogenesis of various diseases
- To understand the various clinical microbiological techniques.

OUTCOME

CO1-Learn normal flora of human body

CO2- Get information about various sources of infection and transmission

CO3- Epidemiology, pathogenesis and treatment of bacterial, fungal and viral diseases

CO4- Learn Strategy of antimicrobial therapy.

Unit – I

Normal microbial flora of human – Host – parasite interaction: The Process of infection. Infective syndromes and diagnostic procedure - Strategy of antimicrobial therapy – Epidemiology and control of community infections.

Unit – II

General properties, epidemiology, transmission, pathogenesis, Symptoms, laboratory diagnosis, prevention and Treatment of the following Bacterial diseases: a) Pneumonia, b) Whooping-cough, c) Meningitis d) Diphtheriae) Pulmonary Tuberculosis, f) Leprosy, g) Typhoid, h) Cholera i) Tetanus, j) Syphilis, k) Gonorrhoea, d) Dental carries.

Unit - III

Mycobacterium: Mycobacterium tuberculosis, Mycobacterium leprae. Spirochaetes, Mycoplasma, Actinomycetes, Helicobacter, Compylobacter and other miscellaneous bacteria, Rickettsia, Chlamydia.

Unit – IV

General properties, epidemiology, transmission, pathogenesis, Symptoms, laboratory diagnosis, prevention and Treatment of the following viral diseases: Small pox, Influenza, Measles, Poliomyelitis, Common cold(Rhino virus), Hepatitis, Encephalitis, Rabies, AIDS.

Unit – V

Pathogenic Fungal diseases- Superficial, Subcutaneous and systemic mycoses, Protozoa-Amoebiasis, Malaria, Helminthes-Liverfluke, Filariasis, Hospital acquired infections: Hospital infections Principles of control – Committee – functions; Hospital waste disposal

- Ethical committee – functions.

Course Code	Course Title	L	T	P	C
20116DSC63D	Tissue Culture	4	1	0	3

AIM

- The emergence of molecular genetics has revolutionized large areas of modern biological and biochemical research work and has had a huge impact on the biotechnology industry.

OBJECTIVE

- To extend the knowledge on molecular basis of mutation at microbial level
- To focus on gene regulation and expression mechanisms
- To understand the principles role of plasmids and gene transfer methods

OUTCOME

CO1- Understood genome organization of model organisms.

CO2 - Learn molecular mechanisms that underlie mutations.

CO3- Study about transformation,transduction and conjugation.

CO4- Are able to describe the nature of the transposable elements

Unit I

Brief history of tissue culture

a. Cellular totipotency

b. Concept of dedifferentiation, redifferentiation and organogenesis

Unit II

Tissue culture media

Media composition Selection of media Media preparation

Unit III

Micropropagation

a. Selection of suitable material

b. Stock plant selection

c. Parts of plant

d. Size of explants

e. Avoid diseased tissue

Unit IV

Types of plant tissue culture - Meristem culture, Callus culture, Anther culture, Embryo culture, Ovary culture, Ovule culture, Pollen culture

Unit V

Benefits of plant tissue culture - Rapid multiplication of clones Genetic uniformity Aseptic condition Controlled environment

Course Code	Course Title	L	T	P	C
20116AEC64L	Industrial Microbiology Lab	0	0	3	2

Aim:

- To train students for industrial production of microbial products.

Objectives

- Methods for screening of industrial important microbes.
- Production of various commercial products using microorganisms.

Outcomes

CO1- To acquire hands on training various microbes for industrial practices

CO2- To know the Screening of desired microbes

CO3-To Learn the optimization process for scale up process

CO4-To understand the technical knowledge on upstream and downstream processing.

Lab work

1. Whole cell immobilization – alginate –Cyanobacteria
2. Estimation of citric acid - *Aspergillus*
3. Estimation of ethanol - Fruit juice
4. Spawn production - Mushroom
5. Mushroom cultivation
6. Starch hydrolysis

Demonstration

1. Preparation of fermented food –cheese

Course Code	Course Title	L	T	P	C
20116SEC65L	Clinical Microbiology Lab	0	0	3	2

Aim:

- To provide technical knowledge on collection and processing of clinical samples.

Objectives

- To isolate and identify the pathogens present in clinical samples.

Outcomes

CO1- To Get practical knowledge in specimen collection and processing

CO2- To gain Knowledge about cyst and protozoa identification.

CO3- To know the Technical practice on diagnosis of pathogenic infection

CO4- To Determine antimicrobial activity of microorganisms.

Lab work

- Examination of parasitic ova and cysts from faecal samples.
- Identification of pathogenic organism with a smear, culture and biochemical test
- Staphylococcus sp*, *E.coli*, *Klebsiella sp*, and *Salmonella typhi*

Demonstration

- LP Mount - *Trichophyton sp.* *Microsporum sp*

Spotters:

- Slides of pathogenic bacteria, fungi and parasites:
- Electron micrographs of viruses – Pox viruses, Herpes simplex virus, HIV, HBV,
 - *Staphylococci*
 - *Streptococci*
 - *Mycobacterium leprae*
 - *Trypanosoma pallidum*
 - *Leptospira sp.*
 - *Bacillus subtilis*
 - *Klebsiella sp.*
 - *E.coli.*
 - *Clostridium tetani.*
 - Permanent mounts of dermatophytes
 - *Candida sp.*
 - *Cryptococcus sp.*
 - *Maduromycetes.*

Course Code	Course Title	L	T	P	C
201ACLSCET	Community Engagement	-	-	-	1

Course Objectives:

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of Learning

Course Outcomes:

After completing this course, student will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and bonds of mutuality with local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

UNIT I - Appreciation of Rural Society

Rural life style, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of "soul of India lies in villages" (Gandhi), rural infrastructure.

UNIT II- Understanding rural economy & livelihood

Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets

UNIT III Rural Institutions

Traditional rural organisations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration

UNIT IV Rural Development Programmes

History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swachh Bharat, PM Awaas Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

Open Elective

Course Code	Course Title	L	T	P	C
201ENOEC	Journalism	4	0	0	2

Aim :

- To acquaint with the basic knowledge of journalism

Objective:

- To instil in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub-editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist
- Explore the different kinds of news

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

UNIT- II

News – Definition, Kinds, Elements, Sources

UNIT- III

Reporters

UNIT- IV

The Editor and the Sub-editor

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

Reference Book:-

Author	Title of the book	Edition / Year	Publisher
Susan	Journalism		
John Hogenberg	Professional Journalism	2012	
M.James Neal	News Writing and Reporting		Surjeet Publication
M.V Komath	The Journalist's Handbook		

Course code	Course Title	L	T	P	C
201MAOEC	Development of Mathematics Skills	4	0	0	2

Aim:

- To understand the concepts from the five branches of mathematics

Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

References

P.A.Navanitham, Business Mathematics & Statistics

Kanti Swarup, P.K.Gupta and Manmohan, “Operations Research”

Course Code	Course Title	L	T	P	C
201PHGEC	Instrumentation	4	0	0	2

Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

- To build the strong foundation in physics of students needed for the field of Instrumentation.
- To prepare student to apply reasoning informed by the contextual knowledge to practice.
- To provide opportunity for students to work as part of teams on multi-disciplinary projects.

UNIT – I: INTRODUCTION

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

UNIT – II: ELECTRONIC INSTRUMENTS – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

UNIT – III: ELECTRONIC INSTRUMENTS – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Integrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

Learning Outcomes:

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhmey – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

Course Code	Course Title	L	T	P	C
201CEOEC	Food and Adulteration	4	0	0	2

Aim:

- To introduce students to food safety and standardization act and quality control of foods.

Objectives:

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

Outcomes:

- The students will have knowledge about different processing and preservation methods and principles involved.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types.
High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

Introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	Course Title	L	T	P	C
201CSOEC	E Learning	4	0	0	2

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop e – learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding elearning, components and models of e-learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

UNIT II CONCEPTS and DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

UNIT III APPLICATIONS

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

REFERENCE BOOKS:

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.
2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.
4. Moodle 2.0 First Look, Mary Cooch, 2010.

Course Code	Course Title	L	T	P	C
201CAOEC	Web Technology	4	0	0	2

AIM

To equip the students with basic programming skill in Web Technology.

OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

UNIT I

Introduction to the Internet: networking- internet – email – Internet Technologies: modem internet addressing .

UNIT II

Internet browsers: Internet Explorer – Netscape navigator- Introduction to HTML: Html document – anchor tag – hyperlink.

UNIT III

Head and body sections: Header section – titles – links- colorful web page – sample html document – Designing the body section: paragraph – tab setting.

UNIT IV

Ordered and unordered lists: list – unordered list – heading in a list- order list- nested list.

UNIT V

Table handling: tables – table creation in html cell spanning multiple rows and columns- coloring cells- sample tables- frames frame set definition- nested frames set.

REFERENCE BOOKS

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
201CMOEC	Open Elective – Banking Service	4	0	0	2

AIM:

To Provide the Bank is financial institution which is involved in borrowing and lending money.

OBJECTIVE:

- To provide a lending money to firms, customers and home buyers.
- To provide keep money for customers
- To provide offering financial advice and related financial services, such as insurance.

OUTCOME:

To help to gather knowledge on banking and financial system in India

To provide knowledge about commercial banks and its products

To create awareness about modern banking services like e-banking-banking and internet banking, ATM System

To introduce recent trends in banking system

To make the student understand the basic concept of banking and financial institutions and expose various types of risk based by banks

UNIT – I

Commercial Banking – An Overview: Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

UNIT – II

E-banking –An Overview: Meaning-Service-E-banking and Financial Services –Benefits-Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking-Services

UNIT – III

Mobile Banking and Telephone Banking –An Overview: Meaning-Features-Registration-Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers

Unit – IV

ATM and Electronic Money: Concept of ATM-Features-Functions-Strategic importance of ATM-Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

Unit-V

EFT System and INFINET: Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

REFERENCES:

1. Banking theory law and Practice
2. Banking Theory law and practice -Santhanam

M.Sc. Microbiology Syllabus

[Regulation 2020]

Skill development	
Skill development/Employability	
Employability/Entrepreneurship/Skill development	

PRIST
DEEMED TO BE
UNIVERSITY
NAAC ACCREDITED
THANJAVUR – 613 403 - TAMILNADU

School of Arts and Science
Department of Microbiology
M. Sc., Syllabus-Regulation 2020

Master of Science in Microbiology

Our curriculum is intended to teach our majors in a diversity of significant microbiological disciplines, as well as to inspire, improve, technological skills and capabilities that take persistent value beyond the teaching space.

M. Sc., Graduate Attributes

- Capability and motivation for intellectual development.
- Research, inquiry and analytical thinking abilities.
- Communication in intra and inter disciplinary
- Ethical, social and professional understanding
- Information literacy in respective discipline
- Teamwork, collaborative and management skills in scientific research

M. Sc Programme Educational Objectives-PEO

- **PEO1-** To provide detailed knowledge of Microbiology and their application fields. To understand the beneficial and harmful role of microorganisms in the environment and in the industries.
- **PEO2-** To understand the fundamentals of physiological reactions including metabolic pathways and biochemical reactions in microorganisms. To understand the fundamental concepts of immunology, biochemistry, biotechnology and genetics etc.
- **PEO3-** To develop human resource and entrepreneurs in microbiology with the ability to independently start their own ventures or small biotech units in the field of biotechnology.
- **PEO4-** Understand modern microbiology - practices and approaches with an emphasis in technology application in pharmaceutical, medical, industrial, environmental and agricultural areas.
- **PEO5-** Gain experience with standard molecular tools and approaches utilized: manipulate genes, gene products and organisms. Become familiar with handling of Laboratory animals for the research purpose. Interpret differences in data distributions via visual displays.

M.Sc Programme Specific Outcomes (PSOs)

- **PSO** -Upon master graduation, Microbiology majors will master a set of advanced skills, which would be useful to function effectively as professionals and to their continued development and learning within the field of Microbiology.
- **PSO** - Able to explain why microorganisms are ubiquitous in nature, inhabiting a multitude of habitats and occupying a wide range of ecological habitats.
- **PSO** -Able to cite examples of the vital role of microorganisms in biotechnology,fermentation, medicine and other industries important to human well-being.
- **PSO** -Able to demonstrate that microorganisms have an indispensable role in the environment, including elemental cycles, biodegradation etc

M. Sc Programme Outcome-PO

- PO1- Vital Thinking: Acquire knowledgeable actions after identifying the hypothesis that frame our idea and dealings, read-through out the degree to which these hypothesis are precise and suitable, and give the impression of being at our thoughts and assessments (academic, organizational and individual) from diverse perception.
- PO2- Effectual citizenship: Reveal empathetic social concern and fairness centred national progress and the capability to act with and take part in civic life through volunteering
- PO3- Ethics: Be aware of diverse value systems including the individual, under the ethical dimensions of personal choice, and believe responsibility for them.
- PO4- Environment and Sustainability: Analyze the importance of microbes for environmental clean-up and sustainable development.
- PO5- Self directed and life-long learning: To gain the talent to employ in self-determining and life-long learning in the broadest circumstance socio technological transforms.
- PO6- Economic liberty and employability potential: attain the ability to be concerned in economically sustainable opening and pound entrepreneurial skill.

SEMESTER I

Course Code	Course Title	L	T	P	C
20216SEC11	Prokaryotic Microbiology	6	1	0	5

AIM :

- Prokaryotic Microbiology introduces basic principles and then applies clinical relevance of many etiological agents responsible for global infectious diseases.

OBJECTIVES :

- The infectious disease cycle of the pathogens enables to solve the epidemics.
- The territory covered by infections and the immune response expands each year; we focus on pathogenic mechanisms in order to foster a student's ability to solve problems in their future clinical career.

COURSE OUTCOME

CO1- Scope and historical importance of microbiology

CO2- Understanding the features and classification of prokaryotes.

CO3- study about isolation and identification of microbes

CO4- Economic value of beneficial bacteria

Unit – I

Microbial classification and diversity of microorganisms – classification based on cellularity, cell and kingdom concepts – Whittaker's classification – major group of prokaryotic microorganisms – their characteristics – microbial diversity of viruses, bacterial and cyanobacteria.

Unit – II

Viruses: Introduction – Classification of viruses – cultivation of viruses, purification and assay, various methods of viral assays. Basic structure of viruses – symmetry – biochemical composition of viruses – Bacteriophages – Ultra structure of T₄ phage – multiplication of bacteriophages – viruses of fungi and algae, slow viruses, viroids, satellite viruses.

Unit – III

Plant viruses: Classification of plant viruses. Tobacco Mosaic Virus – Ultra structure of TMV, Multiplication of TMV. Viruses of various plant hosts / crops and diseases - Plant viruses as gene vectors.

Unit – IV

Bacteriology: Introduction – Diversity of bacterial flora – distribution – morphology of typical bacterial cell – Chemical composition of bacterial cell wall, Reproduction and genetic recombination, Transformation, Conjugation, Transduction, Bacterial growth rate, Bacterial culture methods and culture media for various bacteria. Isolation and enumeration of bacterial cultures, Identification – Gram staining technique, Bacterial diseases of Man.

Unit – V

General characteristics of other Bacteria – Mycobacteria, Myxobacteria, Rickettsia and Chlamydiae and Cyanobacteria – Classification of cyanobacteria – significance of Cyanobacteria in biofertilizers – *Archaeobacteria*, *Actinomycetes*, *Streptomyces*, *Actinoplanes*, *Maduramycetes* and their general characters

2.	R.C. Dubey, D.K. Maheshwari	A Text Book of Microbiology	3 rd / 2003	Chand Publishing

Reference Book:

1. Fundamental of Microbiology (2005) By Purohit, Agrobios Publishers, Meerut

Course Code	Course Title	L	T	P	C
20216SEC12	Eukaryotic Microbiology	6	1	0	5

AIM

- To gain the knowledge with the various inner and outer structures of prokaryotes and in detail.

OBJECTIVES

- To learn the general principles and applications of microbiology

COURSE OUTCOME

CO1- General Features and taxonomy of eukaryotes

CO2- Knowledge about advanced research in mycology, phycology.

CO3- Scope of Algae used as a food

CO4- Economic importance of Lichens and algae

Unit – I

Differentiation of Eukaryotes and Prokaryotes – Salient features of Eukaryotes – Major groups of Eukaryotes – Algae, Fungi, Protozoa and lichens – Classification of Algae, Fungi and Protozoans. Significance of various Algae and fungi in Agricultural Microbiology - Significance of various fungi, algae in environmental biology – biodegradation of Xenobiotics, heavy metals and pesticides, Eukaryotic microbes in Bio pesticides.

Unit – II

Algae: Phycology – Introduction – Distribution of Algae, General features of algae Classification and general characters of prochlorophyta, Rhodophyta, Phaeophyta: Significance of Algae in production.

Unit – III

Biology of Lichens – fungal components and algal component: general characteristics of lichens, physiology of lichens, classification of lichens, Reproduction of lichens, Economic uses of lichens. Single cell protein (SCP) – Spirulina and significance: BGA and significance in agriculture.

Unit – IV

Mycology – Introduction – General characters of Fungi – Structure of fungi – Fungal cell, multiplication of fungi – Fungal diseases of Plants, Animals and Human - Beneficial fungi, VAM – fungi in soil fertility. Predaceous fungi and nematophagous fungi – Fungi in food spoilage and food infections.

Unit – V

Protozoans – Classification of Protozoa – General Characters of protozoa – general structure and life cycle of Amoeboid form – Nutrition and Reproduction in protozoans – Protozoan diseases of Animals and Man

3. Fundamental of Microbiology (2005) By Purohit, Agrobios Publishers, Meerut

Course Code	Course Title	L	T	P	C
20216SEC13	Microbial Physiology	6	1	0	4

AIM :

- To enable the students to understand the physiology and metabolism of microorganismS.

OBJECTIVES :

- To impart knowledge on metabolic function and biochemical reaction going on inside the microbial cell.
- To teach metabolic pathways, their regulation and engineering, and methods used in their elucidation.
- To teach students about cell cycle, growth and methods to determine microbial growth.

COURSE OUTCOME (CO'S):

CO1- Understand the factors influencing the growth of microbes in ecosystem

CO2- Learn about Bioluminescence and their advantages.

CO3- Learn about microorganism to assimilate the nutrients for growth.

CO4- Study about metabolic pathway

Unit – I

Cell structure and function: Biosynthesis of peptidoglycan – Outer membrane, teichoic acid Exopolysaccharides; Cytoplasmic membrane – Pili, fimbriae, S-layer, Transport mechanisms – active, passive, facilitated diffusions – uni, sym, antiports. Electron carriers – artificial electron donors, inhibitors, uncouplers – energy bond – phosphorylation.

Unit – II

Microbial growth: Phases of growth curve – measurement of growth – calculations of growth rate – generation time – synchronous growth – induction of synchronous growth, synchrony index – factors affecting growth – pH, temperature, substrate and osmotic condition. Survival at extreme environments – starvation – adaptive mechanisms in thermophilic, alkalophilic, osmophilic and psychrophilic-Bioluminescence – mechanism – advantages.

Unit – III

Microbial pigments and carbon assimilation: Autotrophs – Cyanobacteria – photosynthetic bacteria and green algae – heterotrophs – bacteria, fungi, myxotrophs. Brief account of photosynthetic and accessory pigments – chlorophyll – fluorescences, phosphorescences – bacteriochlorophyll – rhodopsin – carotenoids – phycobiliproteins: Carbohydrates – anabolism – autotrophy – oxygenic – anoxygenic photosynthesis – autotrophic generation of ATP; fixation of CO₂ – Calvin cycle – C₃ – C₄ pathways. Chemolithotrophy – sulphur – iron – hydrogen – nitrogen oxidations – Brief account of methanotrophs in relation to CO₂ fixation.

Unit – IV

Microbial respiration and fermentative pathway: Respiratory metabolism – Embden Mayer

Hoff pathway – Enter Doudroff pathway – glyoxalate pathway – Krebs cycle – Oxidative and substrate level phosphorylation – reverse TCA cycles – Gluconeogenesis – Pasteur Effect – Fermentation of carbohydrates – homo and heterolactic fermentations. Cell division – endospore – structure – properties – germination.

Unit – V

Spore structure – Function: Cell division – endospore – structure – properties – germination – Microbial development, sporulation and morphogenesis. Hyphae vs yeast forms and their significance. Multicellular organization of selected microbes – Dormancy.

2. Microbial Physiology (1988). A.G. Moat and J.W. Foaster, John Wiley & Sons, New York.

Course Code	Course Title	L	T	P	C
20216SEC14L	Fundamentals of Microbiology Lab	0	0	4	2

AIM

- A student undertaking this course will be learning the principles behind the basic techniques

OBJECTIVES

- This course is put forward with the objectives of equipping the candidates with practical knowledge on basic techniques involved in the isolation,
- Characterization and identification of different types of microorganism.

COURSE OUTCOME :

CO1- practical knowledge about isolation and purification of microbes from various sources.

CO2- Training about staining experiments

CO3- Handling on light and compound microscope.

CO4- Learn essential biochemical analysis

EXPERIMENTS

1. Principles and methods and sterilization – (Wet, dry and cold sterilization)
2. Direct microscopic observations of bacterial shape – cocci, rods, chains, fungal spores, mycelium, yeast budding.
3. Preparation of Media: Nutrient broth, Nutrient agar, plates, slants, soft agar. Pure culture technique: Streak plate, spread plate and pour plate methods
4. Measurement of size of microbes – micrometry method. Motility determination – Hanging drop method.
5. Isolation and purification of cyanobacteria, actinomycetes, fungi and protozoans.
6. Staining methods: Simple, Negatives, acid fast, Gram staining, Capsule Metachromatic granular staining, Lactophenol cotton blue staining – Fungal slide preparation.
7. Measurement of growth – Direct haemocytometer count, viable count – growth curve,
8. Determination of growth rate and generation time.
9. Effect of pH, temperature and osmotic pressure on growth of bacteria.
10. Biochemical test: carbohydrate fermentation – acid – gas production: IMViC test; - Hydrolysis of starch: cellulose, gelatin, casein, catalase test, oxidase, urease test, nitrate reduction – triple sugar iron test, ONPG test, amino acid decarboxylase
11. Blood grouping
12. Widal test
13. Total count of RBC
14. Total count of WBC
15. Differential count of WBC
16. Erythrocyte Sedimentation Rate
17. Preparation of Buffer; pH measurement (Tris, phosphate, acetate buffer)

4. James T. Stanley, Marving, P. Bryant, Bergey's Manual of Systematic Bacteriology (Vol.II), Nobert pfeming Springer Publishers

Discipline Specific Elective-I

Course Code	Course Title	L	T	P	C
20216DSC15A	Immunotechnology	5	0	0	4

AIM:

- To expose the students with the immune system of human body

OBJECTIVES:

- Objectives The aim of this course is to impart knowledge on the basic concepts of cells and components of immune system and immuno diagnostic techniques

COURSE OUTCOMES (CO'S):

CO1- Learn scope and history of immunology.

CO2- Study about immune system and lymphatic organs.

CO3- Learn tumor immunology

CO4- gain knowledge about various immunological techniques

Unit – I

Introduction: History of immunology – types of immunity – Innate and Acquired – Passive and Active - Humoral and cell Mediated Immunity. Lymphoid organs – autoimmunity, physiology of immune response — Immunohaematology

Unit - II

Antigens and Antibodies: Antigens – structure and properties – types – ISO and allo –haptons; adjuvants – antigen specificity, vaccines and toxoids. Immunoglobulins – structure - heterogeneity – types and subtypes – properties (physico – chemical and biological); theories of antibody production - Complement – structure – components - properties and functions of complement components; complement pathways and biological consequences of complement activation

Unit - III

Major Histocompatibility complex: Structure and function of MHC and the HLA system. Gene regulation and Ir – genes. HLA tissue and transplantation – tissue typing methods for organ and tissue transplantation in humans; Graft versus host reaction and rejection. Autoimmunity –diseases-mechanism and disease with their diagnosis

Unit - IV

Tumor Immunology: tumour antigens – immune response to tumors immunodiagnosis of tumors – detection of tumor markers alphafoetal proteins, carcinoembryonic antigen etc. Immunotherapy of malignancy, Hypersensitivity – monoclonal antibody – production and their applications

Unit - V

Immunological techniques and their principles: In vitro of immunological methods – agglutination, precipitation, complement fixation, Immunofluorescence, ELISA, Radio Immuno Assays. Immunodiffusion, Immuno electrophoresis, isoelectric focusing – cytotoxicity assay – labeled – antibody technique in light and Electron Microscopy and Immunohistochemistry. Techniques of Immunization – use of adjuvants – separation of lymphocytes – and preparation of Rosette forming cells - In vivo methods – skin tests and immune complex tissue demonstrations - Applications of these methods in diagnosis of microbial diseases.

Course Code	Course Title	L	T	P	C
20216DSC15B	Bioremediation and Waste Management	5	0	0	4

AIM

- To study the water and waste water treatment for recycling process.

OBJECTIVES:

- To impart knowledge on the management of solid and liquid wastes from municipal and industrial sources and principles of remedial measures of recycling, reuse and recover from the wastes.

COURSE OUTCOMES:

CO1- Understanding on the management of solid and liquid wastes

CO2- Learn the principles of remedial measures of recycling, reuse and recover from the wastes.

CO3- Understand the mechanism and role of microbes in the degradation of various pollutants

UNIT – I

Wastes– Classification and Quantification – Solid Waste Management and Disposal: Sources and Generation of Solid Waste – characterization, composition and classification. Hazardous Waste Management: Cyanides, Dioxins, Detergents, Plastics, Nylon and Paper. Waste Minimization approaches – Monitoring and Management strategies. Radioactive Waste: Sources, half life of radioactive elements, modes of decay. Effects on Plants, Animal and Man. Low and High-level Radioactive Waste Management – Waste Minimization and Treatment, Radiation standards.

UNIT - II

Recycling of Wastes – Types – sources – composition of waste – recycling of waste for Industrial, Agricultural and Domestic Purposes; Recycling of Metals, Reuse, recovery and reduction of paper and plastics; Recycling in Food Manufacturing, Beverages, Apparel, Leather, Paper, Pulp, Chemical and other industries; Fly Ash utilization. Waste Disposal Methods – composting, incineration, pyrolysis, medical waste disposal strategies.

UNIT – III

Microbial Activity in Soil and Ground Water, Lithosphere as Microbial habitat, Microorganisms in rock and minerals, Mineral soil and Organic soil. Physiological groups of prokaryotes, Geomicrobial transformations – Biodegradation of carbonates – Biomobilization of silicon, phosphate, nitrogen. Geomicrobiology of fossil fuel, methane, peat, coal and petroleum.

UNIT – IV

Principles of Bioremediation – Rapid growth and Metabolism- Genetic plasticity – Metabolic pathways for the degradation of xenobiotics, hydrocarbons – Microbial site characterization – Biodegradation potential – Bioprocess design, optimization – Microbial removal rates – inherent problems associated with biotreatment studies. Microbiological methodologies –

Standard biotreatability protocols – Quantification of biodegradation; Biocleaning -Chernobyl radioactive contaminated area - Phytoremediation.

UNIT – V

Aerobic Bioremediation: Bioremediation of Surface Soils: Fate and transport of contaminants in the Vadose zone – Biodegradation in soil ecosystems – Types of soil treatment systems – Bioreactors. Subsurface Aerobic Bioremediation: in situ Bioremediation – in situ Bioventing – in situ treatments of Harbour Sediments and Lagoons. Bioremediation in fresh water and marine systems: Bench and Pilot Scale studies – in situ Bioreactor treatment of sediments – in situ treatment in marine ecosystem. Anoxic/Anaerobic Bioremediation: Anoxic/Anaerobic Processes – Fermentation, Degradation of xenobiotics – Anoxic/Anaerobic bioremediation of hydrocarbons, Phenols, Chlorophenolic compounds, Polycyclic Aromatic Hydrocarbons (PAH), Heterocyclic Compounds, Cyanide, dyes,

SEMESTER II

Course Code	Course Title	L	T	P	C
20216SEC21	Industrial Microbiology	5	1	0	5

AIM

- To study about the industrially importance microorganisms, fermenter design, fermentation process.

OBJECTIVE

- To give knowledge on strain improvement methods.
- To learn about upstream fermentation process .
- To understand about downstream fermentation process

OUTCOME.

CO1- Students will get knowledge on strainimprovement.

CO2- Enable them to work in fermentationindustry.

CO3- Students will get idea on upstream and downstream fermentationprocess

CO4- Economic importance of Bio products

Unit I

Historical development of industrial microbiology: major classes of products and processes and micro organisms used in industrial processes. Industrially important microbes and their development: Screening methods for industrial microbes –strain selection and improvement – Mutation and recombinant DNA techniques for strain development. Batch culture and continuous culture

Unit – II

Fermenters – Design of a fermenter, and components – asepsis and containment requirements – body construction and temperature control – aeration and agitation systems – sterilization of fermenter, air supply, and medium; aseptic inoculation methods – sampling methods, valve systems –monitoring and control devices and types of fermenters and its basic functions.

Unit – III

Downstream processing – extraction, separation, precipitation, filtration, centrifugation, cell disruptions, liquid-liquid extraction, chromatography, recovery & purification, process and quality control.

Unit – IV

Production of Primary metabolites: Organic acids (citric acid, lactic acid, acetic acid) and Amino acids (glutamic acid, lysine). Production of Vitamins (B2 and B12). Production of Secondary metabolites: Antibiotics: beta-lactams (Penicillins, Cephalosporins), aminoglycosides (streptomycin), macrolides (erythromycin) and Quinones (Tetracycline).

Unit –V

Bio products: Bio-pesticides, bio-fertilizers, natural bio-preservatives (Nisin), High Fructose Corn Syrup, Bioplastics and biopolymers (Poly Lactic acid, Poly Glutamic acid, Poly hydroxyl alkoanates, Xanthum Gum and Dextran), Biotransformations - steroids and non-steroids. Enzymes - Proteases, amylases, lipases, cellulases, pectinases, glucose isomerase, L-Asparaginase. Production of vaccines and recombinant proteins (Insulin, Streptokinase). Production of Biofuels (Biomethanol, Bioethanol, Biobutanol, Biohydrogen and Biodiesel).

Course Code	Course Title	L	T	P	C
20216SEC22	Environmental and Agricultural Microbiology	5	1	0	5

AIM

- To study about the biofertilizers, plant disease and increasing soil fertility.v

OBJECTIVES

- To educate the students about concepts of designs of water distribution systems, sewer networks, working principles and design of various physical, chemical and biological treatment systems of water and wastewater.

COURSE OUTCOME (CO)

CO1- Huge Insights into these precious areas of Environmental microbiology.

CO2- Students able to know detailed idea about biofertilizer production and plantdisease.

CO3- Role ofMicrobes in marine and fresh water environment

CO4- Scope of Recycling of Liquid and Solid wastes

Unit I

Aerobiology- Significance of air microflora - Microbial air pollution- sources, biological indicators and effects on plants and human beings. Enumeration of bacteria from air, Air sampling devices, Outline of Airborne diseases (Bacterial, Fungal and Viral), Air sanitation. Biogeochemical cycles -Nitrogen, Carbon, Phosphorous, Sulphur, Iron and their importance.

Unit II

Microbes in marine and fresh water environment – eutrophication – Water pollution – sources and nature of pollutants in water – sewage – treatment of liquid waste – primary, secondary and tertiary treatment – water borne diseases – Assessment of water quality – BOD and COD. Solid waste treatment – saccarification and pyrolysis.

Unit III

Recycling of Liquid and Solid wastes-Composting-Biogas, Mushroom and SCP production from waste. Biodegradation of complex polymers (Cellulose, Hemicellulose, Lignin, Chitin and Pectin), Bioremediation (*In-situ*, *Ex-situ*, Intrinsic), Bioaugmentation and Biostimulation. Bioleaching (Copper and Uranium) -Xenobiotics degradation (Heavy metals).

Unit IV

Microbial association with plants - Phyllosphere, Rhizosphere, Mycorrhizae, nitrogen fixing organism – symbiosis, asymbiosis, associate symbiosis – phosphate solubilizers – application of biofertilizers in agriculture. Biology of nitrogen fixation – genes and regulations in *Rhizobium*.

Unit V

Bacterial, viral and fungal plant pathogens. Morphological, physiological changes with reference to disease establishment in plants – plant protection – phenolics – phytoalexins and related compounds. Disadvantages of chemical pesticides. Microbial pesticides- types, mechanisms, advantages and limitations.

Course Code	Course Title	L	T	P	C
20216SEC23	Clinical Microbiology	5	0	0	4

AIM

- To inculcate on the role of normal flora and pathogenic microbes.

OBJECTIVE

- To understand the pathogenesis of various diseases
- To understand the various clinical microbiological techniques.

OUTCOME

CO1-Learn normal flora of human body

CO2- Get information about various sources of infection and transmission

CO3- Epidemiology, pathogenesis and treatment of bacterial, fungal and viral diseases

CO4- Learn Strategy of antimicrobial therapy.

Unit – I

Normal microbial flora of human – Host – parasite interaction: The Process of infection. Infective syndromes and diagnostic procedure - Strategy of antimicrobial therapy – Epidemiology and control of community infections.

Unit – II

General properties, epidemiology, transmission, pathogenesis, Symptoms, laboratory diagnosis, prevention and Treatment of the following Bacterial diseases: a) Pneumonia, b) Whooping-cough, c) Meningitis, d) Diphtheriae, e) Pulmonary Tuberculosis, f) Leprosy, g) Typhoid, h) Cholera, i) Tetanus, j) Syphilis, k) Gonorrhoea, d) Dental carries.

Unit - III

Mycobacterium: Mycobacterium tuberculosis, Mycobacterium leprae. Spirochaetes, Mycoplasma, Actinomycetes, Helicobacter, Compylobacter and other miscellaneous bacteria, Rickettsia, Chlamydia.

Unit – IV

General properties, epidemiology, transmission, pathogenesis, Symptoms, laboratory diagnosis, prevention and Treatment of the following viral diseases: Small pox, Influenza, Measles, Poliomyelitis, Common cold (Rhino virus), Hepatitis, Encephalitis, Rabies, AIDS.

Unit – V

Pathogenic Fungal diseases- Superficial, Subcutaneous and systemic mycoses, Protozoa-Amoebiasis, Malaria, Helminthes-Liverfluke, Filariasis, Hospital acquired infections: Hospital infections Principles of control – Committee – functions; Hospital waste disposal – Ethical committee – functions.

Course Code	Course Title	L	T	P	C
20216SEC24L	Industrial, Clinical and Environmental and Agricultural Microbiology Lab	0	0	4	2

AIM

- To provide technical knowledge on collection and processing of clinical samples .

OBJECTIVE

- To prepare them to work in clinical laboratory .
- To learn the technique for isolation and identification of pathogens

OUTCOME

CO1- Get practical knowledge in specimen collection and processing

CO2- Become technically expert which will helpful to work in clinical laboratory

CO3- Learn practical understanding of diagnosis of pathogens.

CO4- Acquire knowledge on fermentation process

CO5- Learn bio fertilizer and inoculants production

Industrial and Clinical Microbiology

- Citric acid fermentations by *Aspergillus niger*
- Alcoholic fermentation of fruit juice by yeast (*Saccharomyces cerevisiae*).
- Immobilization techniques using any microbe- alginate beads
- Hydrolysis of starch
- Testing sensitivity of bacteria to antibiotics and Assessing minimum inhibitory concentration(MIC) of antibiotics
- Isolation and identification of certain pathogenic microbes from urine
- Hemoglobin content of blood
- Serum analysis, sugar analysis in blood and urine

Agricultural and Environmental Microbiology

- Isolation and enumeration of soil microorganisms (fungi, bacteria and actinomycetes)
- Isolation and staining of vesicular arbuscular mycorrhizae from plant.
- Isolation and culturing of Rhizobium from root nodules of higher plant
- Mushroom cultivation
- Isolation and identification of air-borne microbes
- Effects of high salt concentration on microbial growth
- Determination of BOD and COD of polluted/pond water.
- Bacterial examination of drinking water by membrane filter technique and MPN

Visit to commercial production units – ethanol, acetic acid, vaccine and Spirulina

Visit to CFTRI/DFRL/FOOD INDUSTRIES and report should be written in the practical record

Discipline Specific Elective-II

Course Code	Course Title	L	T	P	C
20216DSC25A	Clinical research and development	5	0	0	4

AIM

To know the functions of Biomolecules

OBJECTIVE :

- To understand the structure and functions of carbohydrates, lipids , proteins and nucleic acids
- To understand the role of nucleic acid in proteins synthesis

OUTCOME

CO1- They acquire knowledge in the quantitative and qualitative estimation of biomolecules

CO2- They study the influence and role of structure in reactivity of biomolecules

CO3- Students have a thorough understanding on the role of biomolecules and their functions.

Unit I

Carbohydrates: Structure and biological functions of Mono, di and Polysaccharides. Types of polysaccharides: Homo polysaccharides -chitin, fructans, mannans, xylans, and galactans. Structure and biological importance of Hetero polysaccharides- Glycoprotein – bacterial cell wall polysaccharides, marine polysaccharides and Lectins.

Unit II

Aminoacids and its general properties. Classification of amino acids. Proteins– classification and general properties. Orders of protein structure, Primary- Secondary structure– the α -helix, β -pleated sheet. Protein sequencing methods.

Unit III

Lipids: Definition and classification of lipids. Biological significance of lipids. Types of Fatty acids-Essential, Non essential. Structure and biological functions of phospholipids, sphingolipids, glycolipids. Steroids – structure and functions of cholesterol, bile acids, sex hormones, ergosterol. Structure and biological role of prostaglandins, thromboxanes and leukotrienes.

Unit IV

Nucleic acid: Structure of purines, pyrimidines, nucleosides and nucleotides. DNA double helical structure. A, B and Z forms of DNA. Properties of DNA- Density, viscosity, hypochromicity, denaturation and renaturation. DNA sequencing– chemical and enzymatic methods. Chemical synthesis of DNA. RNA– types and biological role- Secondary, tertiary structures of RNA.

Unit V

Vitamins: Definition and Classification - Source, Structure and biological role - Daily requirements and deficiency manifestation of fat soluble vitamins and water soluble vitamins.

Course Code	Course Title	L	T	P	C
20216DSC25B	Soil and Water Engineering	5	0	0	4

AIM

To know the basic principles of genes and proteins

OBJECTIVES:

To understand the gene functions and its genetic engineering aspects

To understand the protein functions and its genetic engineering aspects

COURSE OUTCOME :

CO1- Students gain the knowledge about the interactions between the proteins

CO2- Get the information to predict cell behavior or develop drug targets.

CO3- Rapidly evolving scientific area into **genomes**, proteomes and databases

CO4- Learn to store various data NCBI, DDBJ and EMBL

Unit I

Genomics: genetic and physical maps, physical mapping and map-based cloning, choice of mapping population, simple sequence repeat loci, southern and fluorescence in situ hybridization(FISH) for genome analysis, chromosome microdissection, molecular markers in genome analysis

Unit II

Genome sequencing: genome sizes, organelle genomes, genomic libraries, strategies for genome sequencing, packaging, transfection and recovery of clones, application of sequence information for identification of defective genes. Pharmacogenetics, cancer genetics; immunogenetics; mapping of human genome; somatic cell genetics; DNA polymorphism in mapping; structure and function; biochemical genetics; polygenic inheritance

Unit III

Proteomics: Sample preparation, Gel-based proteomics - two-dimensional gel electrophoresis (2-DGE), two-dimensional fluorescence difference in-gel electrophoresis (DIGE), Staining methods, PF-2D, Tandem FPLC, Mass spectroscopy: basic principle, ionization sources, mass analyzers, different types of mass spectrometers (MALDI-TOF Q-TOF, LC-MS).

Unit IV

Nuclear magnetic resonance spectroscopy (NMR), basic principles, chemical shift, spin-spin interaction, NOE, 2D-NMR, NOESY, COSEY. X-ray Crystallography: Principle of X-ray diffraction, scattering vector, structure factor, phase problem, reciprocal lattice and Ewald sphere, Miller indices, Zone axes, crystal lattice, Lane Equations, Bragg's law, special properties of protein crystals, model building, refinement and R-factor.

Unit V

Protein Engineering: Protein sources, Industrial and medical application of proteins, different expression of proteins for large scale purifications, protein engineering strategy, rational and random mutagenesis. Applications of protein engineering-protein in Chemical and Medical Industries: Generation of heat stable, pH stable enzymes, application in vaccine development, drug development, sensor development.

Course Code	Course Title	L	T	P	C
20216RMC26	Research Methodology	3	0	0	2

AIM:

- The course is to understand the principles and applications of classical and modern techniques in Biology develop skill in preparation of reports, writing research communications and thesis

OBJECTIVES:

- To impart understanding on the concepts of statistics and to improve the Computing knowledge of the statistical methods related to environment

COURSE OUTCOMES:

CO1- Understanding research questions and tools

CO2- Experience in scientific writings

CO3-Practice in various aspects of scientific publications

CO4-Inculcation of research ethics

Unit I

Research Selection of problem-stages in the execution of research: choosing a topic to publication- preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal ; standard of research journals – Impact factor.

Unit II:

Statistical method -Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

Unit III

Comparison of means, chi-square test, student test (ANOVA – partitioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANOVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Brief introduction to pie and histograms. Use of LCD.

UNIT IV:

Chromatography – principle, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, Isoelectric focusing, pulsed field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

UNIT V:

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

SEMESTER III

Course Code	Course Title	L	T	P	C
20216SEC31	Microbial Genetics	6	1	0	6

AIM

- The emergence of molecular genetics has revolutionized large areas of modern biological and biochemical research work it has had a huge impact on the biotechnology industry.

OBJECTIVE

- To extend the knowledge on molecular basis of mutation at microbial level
- To focus on gene regulation and expression mechanisms
- To understand the principles role of plasmids and gene transfer methods

OUTCOME

CO1- Understood genome organization of model organisms.

CO2 - Learn molecular mechanisms that underlie mutations.

CO3- Study about transformation,transduction and conjugation.

CO4- Are able to describe the nature of the transposable elements

Unit I

Trends in Gene discovery. Nucleic acids as genetic information carriers: concept of gene – allele, cistron, replicon – origin of mutation – mutagens – physical, chemical and biological agents. Induced mutation types – mechanisms of mutation induction – suppression of mutations – Intergenic and intragenic suppression.

Unit II

Transformation- Griffith experiments, natural or artificial competence transformation in *Bacillus*, *E. coli*, *Haemophilus* and *Streptococcus* – mechanism of recombination – genetic mapping.

Unit III

Bacterial conjugation – F plasmid – structure and functions. Origin of Conjugation – Hfr and F' strains. Interrupted and uninterrupted mating – time map and recombination map. Conjugation in *E. coli*, *Pseudomonas*. Plasmids, F-factors description and their uses in genetic analysis. Colicins and col factors.

Unit IV

Transduction – generalized and specialized transduction – P1 phage – mechanism of gene transfer through lambda and P1 phages. HFT and LFT lysate. Co- transduction – transduction mapping.

Unit V

Regulation of bacterial gene expression – Operon model – lac, ara, trp and his operons, operon concept, catabolite repression, instability of bacterial RNA, positive and negative regulation, inducers and co-repressors. Attenuation – lac and trp operons; Human genetics: pedigree Analysis, Genetic disease through gene map, Micro array techniques, Single nucleotide polymorphisms (SNPs)

Text Books

Course Code	Course Title	L	T	P	C
20216SEC32	Microbial Biotechnology	6	1	0	6

AIM

To understand the gene and its role in genetic engineering aspects

OBJECTIVES

- To learn the basic principles of nucleic acid and recombinant technology.
- To understand the relationships between molecule/cell level phenomena.
- Studying the concepts and mechanism of central dogma.

COURSE OUTCOME

CO1- Developed an understanding in recombinant DNA technology.

CO2- candidate to recollect the basics of Molecular Genetics and apply a cognitive thinking.

CO3-Possibilities ranging from the treatment of human diseases to develop novel medicines

Unit I:

Nucleic acids – Types- DNA, RNA- structures, functions. Vectors – plasmids (Ti plasmids, pBR322, pSC101, pUC), cosmids, bacteriophages- Structures and functions. DNA replication- process,enzymology and inhibitors of replication. Enzymes-DNA polymerases, RNAses, Ligases, Taq polymerases, Topoisomerases-uses and applications. DNA damage-Types (deamination,oxidative damage, alkylation, pyrimidine dimmers. Repair mechanisms.

Unit II:

Gene-definition, concepts, structure and functions. Cloning techniques, Genomic library. RAPD, RFLP, AFLP and SSR marker in molecular studies and its application. Principles and techniques of Nucleic acid hybridization, protein sequencing and blotting techniques, PCR, DNA fingerprinting.

Unit III:

Biotechnology-Definitions, Concepts and Scope, History and achievements. Screening for products from microorganisms – Inoculum development – Long term preservation of microbes. Biological approaches in microbial production of aminoacids, organic acids, antibiotics, vitamins, steroids and sterols.

Unit IV:

Strain improvement – Applications of mutation, Recombination and DNA Technology. Recombinant DNA Technology – Principles and applications, enzymology of process. Restriction enzymes – Types, recognition sites and specificity.

Unit V:

Biotransformation – Strategies and techniques involved in the process. Immobilization methods – advantages, immobilization production of Mabs. Insulin, somatotropin, IFNs, Vaccines by cloning. Microalgal biotechnology – Dunaliella, Biotechnological potentials of microalgae as food, feed, fuel and pharmaceuticals.

Text Books:

2. Berg. M.M. and Howe, M.M(1989). Mobile DNA. American society for Microbiology, Washington D.C.
3. Brown, T.(1991) Essential Molecular Biology – A Practical approach. Vol.I
Vol II Oxford Univ. Press. Oxford.

Course Code	Course Title	L	T	P	C
20216SEC33L	Microbial Genetics and Biotechnology Lab	0	0	5	3

AIM:

- To facilitate the students to know the biotechnological aspects in plant growth and improvement.

OBJECTIVES

- Genetic laboratory course to introduce the students to learn about prokaryotic and eukaryotic genetic system using modern techniques.

OUTCOMES

- This course will provide to this students about the mechanics of experimentation methods of genetics.

Experiments

- Isolation of plasmid DNA from bacteria by Spectrophotometric assay.
- Isolation of chromosomal DNA from bacteria by Agarose gel electrophoresis.
- Development of competent cells in *E. coli*.
- Separation of protein by SDS PAGE
- Isolation of antibiotic resistant auxotrophic mutants.
- Separation of proteins using Column chromatographic techniques (Gel filtration).
- Immobilization techniques – alginate beads.
- Estimation of citric acid and ethanol.

DEMONSTRATION

- Gel Electrophoretic methods.
- UV transillumination

Course Code	Course Title	L	T	P	C
20216SEC34A	Microalgal Technology	5	0	0	4

AIM:

- To facilitate the students to know the tissue culture aspects in crop improvement

OBJECTIVES

- To understand the basic principles of tissue culture technique and its applications

OUTCOMES

- To know the basic technique of tissue cultures
- To produce new plants through this tissue culture
- To gain the knowledge about tissue culture in crop improvements.
- To know the applications of tissue culture in various fields.

Unit I

Introduction - history, scope and concepts of basic techniques in plant tissue culture. Laboratory requirements and organisation. Sterilization-filter, heat and chemical. Media preparation - inorganic nutrients, organic supplements, carbon source, gelling agents, growth regulators and composition of important culture media (MS, White,s and Gamborg's media).

Unit II

Cell, tissue and organ culture - Isolation of single cells, selection and types of cells, tissue explants and organs for culture - paper, raft nurse technique, plating method, microchamber techniques, cell suspension cultures - batch, continuous, chemostat culture - synchronization of suspension culture, cellular totipotency, cytological, cytochemical and vascular differentiations - totipotency of epidermal and crown – gall cells.

Unit III

Micropropagation - clonal propagation of elite germplasm, factors affecting morphogenesis and proliferation rate, technical problems in micropropagation. Organogenesis - formation of shoots and roots - role of growth regulators and other factors, somaclonal and gametoclonal variations. Somatic embryogenesis - Process of somatic embryogenesis, structure, stages of embryo development, factors affecting embryogenesis, synthetic seeds.

Unit IV

Haploid production - androgenesis, gynogenesis - techniques of anther culture – segmentation pattern in microspore - isolated pollen culture - plantlets from haploids - diploidisation - factors influencing androgenesis, haploidy through gynogenesis, haploid mutants, utilization of haploids in plant breeding. Protoplast culture: Isolation of protoplasts - mechanical and enzymatic sources, culture of protoplasts, viability. Protoplastfusion - spontaneous, mechanical, induced electrofusion, selection of somatic hybrids, cybrids, importance.

Unit V

Cryopreservation and gene bank - Modes of preservation, preparation of materials for deep freezing, cryoprotectors, storage strategies, assessment of successful cryopreservation, application and limitations. Application of tissue culture in forestry, horticulture, agriculture and

pharmaceutical industry, transgenic plants.

Course Code	Course Title	L	T	P	C
20216SEC34B	Nanotechnology	5	0	0	4

Aim

To understand about nanotechnology principles and its applications

Objective:

To gain knowledge about Nanotechnology and its commercial promise

Outcomes:

To understand the basic principles and method of Nanotechnology

To know the applications of Nanotechnology

To understand the groundbreaking innovations in medicine and medical implants, environment and other field

Unit I: Introduction to bionanotechnology

Milestones in History – bionanotechnology – concept and future prospects – application in Life Sciences. Terminologies – nanotechnology, bionanotechnology, nanobiomaterials, biocompatibility, nanomedicine, nanowires, quantum Dots, nanocomposite, nanoparticles, nanosensors. Biotechnology to bionanotechnology, natural bionanomachines. Current status of bionanotechnology.

Unit II: Synthesis of nanoparticles

Molecular nanotechnology – nanomachines – collagen. Uses of nanoparticles – cancer therapy – manipulation of cell and biomolecules. Cytoskeleton and cell organelles. Types of nanoparticles production – physical, chemical and biological. Microbial synthesis (bacteria, fungi and yeast) of nanoparticles – mechanism of synthesis.

Unit III: Types of nanoparticles and methods of characterization

Nanoparticles – types, functions – Silver, Gold and Titanium. Physical and chemical properties of nanoparticles. Characterization of nanoparticles – UV-Vis spectroscopy, particle size analyzer, Electron Microscopy – HRTEM, SEM, AFM, EDS, XRD. Other tools and techniques required for bionanotechnology: rDNA technology, site directed mutagenesis, fusion proteins, X-Ray crystallography, NMR. Bioinformatics: molecular modeling, docking, computer assisted molecular design.

Unit IV: Applications of bionanotechnology

Drug and gene delivery – protein mediated and nanoparticle mediated. Uses of nanoparticles in MRI, DNA and Protein Microarrays. Nanotechnology in health sectors. Nanomedicines, Antibacterial activities of nanoparticles.

Nanotechnology in agriculture. Toxicology in nanoparticles – Dosimetry.

Unit V: Merits and demerits of nanoparticles

Advantages of nanoparticles – drug targeting, protein detection, MRI, development of green chemistry – commercial viability of nanoparticles. Disadvantages – pollution and health risks associated with nanoparticles.

OPEN ELECTIVE

Course Code	Course Title	L	T	P	C
202ENOEC	Writing for the Media	4	0	0	4

Aim:

- To equip students to enter into the realm of mass media.

Objective:

- To comprehend the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

Outcome:

- Understand the intricacies of mass media
- Learn to write for the media

UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluation news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

Reference Book:-

Author	Title of the book	Edition / Year	Publisher
Susan	Journalism		
John Hogenberg	Professional Journalism	2012

M.V Komath	The Journalist's Handbook		
D.S Mehta	Mass Communication & Journalism		

Course Code	Course Title	L	T	P	C
202MAOEC	Applicable Mathematical Techniques	4	0	0	4

Aim:

- To acquaint with the basic concept of Interpolation.

Objectives:

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

Outcomes:

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

Unit I, "Numerical Methods in Science and Engineering" M.K. Venkatraman

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Course Code	Course Title	L	T	P	C
202PHOEC	Biomedical Instrumentation	4	0	0	4

Aim:

- To understand the concepts and application of electronic Instrumentation in the Medical field.

Objective:

- Understanding basic principles and phenomena in the area of medical diagnostic instrumentation,
- Theoretical and practical preparation enabling students to maintain medical instrumentation

OUTCOMES:

- Define basic medical terms and physical values that can be handled by medical instrumentation,
- Describe methods and implementation of electrical and nonelectrical medical parameters diagnostic,
- demonstrate measuring of basic medical parameters,
- Calculate basic parameters of the equipment for using in electro diagnostic and electro therapy,
- Apply safety standards and select disposal method and procedures for electrical diagnostic equipment.

UNIT – I: BIO ELECTRIC SIGNALS AND ELECTRODES

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

UNIT – II: RECORDING SYSTEM AND RECORDERS

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

UNIT – III: MEASUREMENT AND ANALYSIS TECHNIQUES

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

UNIT – IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

UNIT – V: ADVANCED BIO MEDICAL SYSTEMS

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

Book for Reference

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
202CHOEC	Open Elective-Green Chemistry	4	0	0	2

Aim:

- To reduce the soil and water pollution in environment.

Objectives:

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Outcomes:

- To understand the environmental status and evolution.
 - To know about the Pollution and its prevention measures.
 - To familiarize the green chemistry.
 - To learn about the bio-catalytic reactions.
 - To understand about the vitamins and antibiotics.

Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Trends.

Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO₂ - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	Course Title	L	T	P	C
202CSOEC	M-Marketing	4	0	0	4

OBJECTIVES

- Understand Mobile Business strategies.
- To understand Mobile marketing tools and techniques.
- To know Mobile technologies.

OUTCOMES

- Upon Completion of the course, the students should be able to:
- Analyze various mobile marketing strategies.
- Market Mobile based Applications.
- Apply various tools in mobile marketing.

UNIT I : Introduction

Mobile Marketing Campaign, Fortune 500 and Mobile Marketing, consumers engagement with mobile, Terminologies.

UNIT II : Businesses Vs mobile marketing

classic mistakes in mobile marketing, laying foundation for successful mobile marketing campaign, understanding technology behind mobile marketing – Android, iOS, Windows Phone.

UNIT III

Strategic thinking about Mobile marketing campaign, Mobile Marketing Tools – setting up mobile website for different firms, using SMS, MMS and apps to drive customers to business and other ways to attract customers.

UNIT IV: Location Based Marketing

LBS, NFC, Bluetooth and LBA, 2D codes, Tablet, Other Mobile Applications, Business Firms connecting to customers using Mobile – case study, Mobile Marketing for B2B companies, Mobile E-commerce to Drive Revenue.

UNIT V: Mobile Payments

Present and Future Mobile Technology, Mobile Application Development.

REFERENCE BOOKS:

1. Go Mobile: Location Based Marketing, Apps, Mobile Optimized Ad Campaigns, 2D codes and other Mobile Strategies to Grow your Business, Jeanne Hopkins, Jamie Turner, John Wiley&Sons Inc., 2012.
2. M- Commerce, Paul Skeldon, Crimson Publishing, 2012.
3. M-Commerce Technologies, Services and Business Models, Norman Sadeh , Wiley 2002.
4. Mobile Commerce, Opportunities, Applications and Technologies of Wireless Business, Paul Mary, Tom Jell, CambridgeUniversity Press, 2001.

Course Code	Course Title	L	T	P	C
202CMOEC	Open Elective- Financial Services	4	0	0	2

AIM

To analyze the various financial institutions and their services.

OBJECTIVES

1. To gain knowledge on financial services.
2. To understand importance of various services including banking, insurance, mutual funds.

OUTCOME

To introduces meaning and functions of Financial Intermediaries

To understand the role of merchant bank and its services

To provide information regarding management of mutual funds and Regulations

To understand the role and functions of financial services Marketing

To know the structure and types of debt Instruments

To realize Foreign Exchange Market

UNIT – I

Financial system-An Overview: Indian Financial System-Global Financial System-Financial Services Environment- Credit Rating –Factoring and Forfeiting –Leasing

UNIT – II

Financial Markets –An Overview: Definition-Role-Functions-Constituents-Financial Instruments-Capital Market instruments-Indian money and Capital Market-Global Financial Markets.

UNIT – III

Money Market –An Overview:

Definition-Characterstistics-Objectives-Imporatance-Functions-Segment-Financial Institutions-Indian Money Market-Global Money Market

Unit – IV

Capital Market: Money Market-Characteristics-Functions-New financial Instruments-measures of Investor Protection-Indian Capital Market-Major Issues

Unit-V

Stock Exchange: History of Stock Exchange-Functions-Indian Stock Exchanges-Organization structure-Regulations of Stock Exchange –Recent Developments

REFERENCE BOOKS

1. Gordon , Natarajan – Financial Market and Services.
2. Dr. S. Gurusamy – Financial services and Market.
3. Kucchol S.C. – Financial Management
4. Pandey I.M. – Financial Management.

SEMESTER IV

Course Code	Course Title	L	T	P	C
20216SEC41	Pharmaceutical Microbiology	6	1	0	6

AIM

- The information gained will help the students to formulate novel drugs.

OBJECTIVES:

- To facilitate the students to know the definite path of metabolism of drugs and drug discovery

OUTCOMES:

- This course gives information on drug designing, novel techniques in drug discovery and the role of biotechnology in pharmaceuticals.

Unit – 1 Antibiotics and synthetic antimicrobial agents

Antibiotics and synthetic antimicrobial agents, Antifungal antibiotics, antitumor substances. Peptide antibiotics, Chloramphenicol, Sulphonamides and Quinolone antimicrobial agents. Chemical disinfectants, antiseptics and preservatives.

Unit – 2 Mechanism of action of antibiotics

Mechanism of action of antibiotics (inhibitors of cell wall synthesis, nucleic acid and protein synthesis). Molecular principles of drug targeting. Drug delivery system in gene therapy. Bacterial resistance to antibiotics. Mode of action of non – antibiotic antimicrobial agents. Penetrating defenses – How the antimicrobial agents reach the targets (cellular permeability barrier, cellular transport system and drug diffusion).

Unit – 3 Microbial production and Spoilage of pharmaceutical Products

Microbial contamination and spoilage of pharmaceutical products (sterile injectibles, non injectibles, ophthalmic preparations and implants) and their sterilization. Manufacturing procedures and in process control of pharmaceuticals. Other pharmaceuticals produced by microbial fermentations (streptokinase, streptodornase). New vaccine technology, DNA vaccines, synthetic peptide vaccines, multivalent subunit vaccines. Vaccine clinical trials.

Unit – 4 Regulatory practices, biosensors and applications in Pharmaceuticals

Financing R&D capital and market outlook. IP, BP, USP. Government regulatory practices and policies, FDA perspective. Reimbursement of drugs and biologicals, legislative perspective. Rational drug design. Immobilization procedures for pharmaceutical applications (liposomes). Macromolecular, cellular and synthetic drug carriers. Biosensors in pharmaceuticals. Application of microbial enzymes in pharmaceuticals.

Unit – 5: Quality Assurance and Validation

Good Manufacturing Practices (GMP) and Good Laboratory Practices (GLP) in

pharmaceutical industry. Regulatory aspects of quality control. Quality assurance and quality management in pharmaceuticals ISO, WHO and US certification. Safety in microbiology laboratory.

BOOKS/REFERENCE

1. Pharmaceutical Microbiology – Edt. by W.B.Hugo & A.D.Russell Sixth edition. Blackwell scientific Publications.

Course Code	Course Title	L	T	P	C
20216SEC42	Biostatistics and Bioinformatics	6	1	0	6

Unit I – Definitions

Scope of Biostatistics, probability analysis – variables in Biology, collection, classification and tabulation of data – Graphical and diagrammatical representation – scale diagrams – Histograms – frequency polygon – frequency curves. Measures of central tendency – arithmetic Mean, Median and Mode – calculation of mean, median, mode in series of individual observations, discrete series, continuous open – end classes. Measure of dispersion – Standard Deviation and Standard curves, Measures of central tendency on Variance.

Unit II – Correlation and regression

Simple correlation – Correlation coefficient – Regression simple linear regression. Basic ideas of significance test – Hypothesis testing level of significance – Test based on student ‘t’ ‘chi’ square and goodness of fit. ‘F’ test – ANOVA.

Unit III – Databases

Biological resource databases – Examples and application – Sequence Analysis – protein and nucleic acid.

Unit IV – Genomics and proteomics

Sequencing genomes – sequence assembly – genome on the web – annotating and analyzing genome sequences. Proteomics pathway databases.

Unit V – Sequence analysis

Pair wise sequence comparison, protein data bank, SWISS-PROT, Genbank – sequence queries against biological databases – BLAST and FASTA – multifunctional tools for sequence analysis, multiple sequence alignments, phylogenetic alignment – profiles and motifs.

Course Code	Course Title	L	T	P	C
20216SEC43L	Pharmaceutical Microbiology Lab	5	0	0	4

Aim

To provides knowledge and understanding with regards to the significance of the presence of bacteria, yeasts, moulds, viruses and toxins in **pharmaceutical** raw materials, intermediates, new products and **pharmaceutical** production.

Objective

Culture and identification of important human pathogens, microbial growth conditions, effect of antimicrobial agents, development of resistance against antimicrobial agents, sterilization and disinfection, bacterial virulence factors, production and control of vaccines.

Course outcome

CO1 - Aseptic condition relevance to healthcare and the pharmaceutical industry.

CO2 - Knowledge and understanding of the practical aspects of pharmaceutical microbiology.

CO3 - Perform practicals on antimicrobial activity

CO4- Learn the production of antibiotics from microbes.

Lab Work

1. Introduction to equipment and glassware used in microbiology laboratory (BOD, Incubator, laminar flow, aseptic hood, autoclave, hot air sterilizer, deep freezer, etc.,)
2. Study of morphology of different microbes
3. Preparation of various culture media (Determination of microbial colony characteristics)
4. Isolation of pure cultures by streak plate, spread plate & pour plate techniques.
5. Enumeration of bacteria by direct microscopic count.
6. Motility test by Hanging drop method
7. Microbiological assay of antibiotics by cup plate method and other methods
8. Characterization of microbes through Bio chemical reactions (IMViC)
9. Evaluation of any disinfectant by phenol coefficient test
10. Study of Oligodynamic action (of metals on bacteria)
11. Preservation of microorganisms (slant and stab cultures)
12. Sterility testing of Pharmaceuticals
13. Microbiological Analysis of Water.
14. Production of antibiotics using microbes

Course Code	Course Title	L	T	P	C
20216SEC44A	Bioethics and IPR	5	0	0	4

Aim

To understand the basic principles of Bioethics and IPR

Objective

Students will gain awareness about Bioethics and Intellectual Property Rights (IPRs) to take measure for the protecting their ideas

Outcome

To know about Bioethics and Intellectual Property Rights (IPRs)

They will able to devise business strategies by taking account of IPRs

They will be able to assists in technology upgradation and enhancing competitiveness.

They will acquire adequate knowledge in the use of genetically modified organisms and its effect on human health

They will gain more insights into the regulatory affairs.

Unit I

Bioethics Concept, philosophical considerations, epistemology of science, ethical terms, principles and theories and relevance to biotechnology. Ethics and the law issues - genetic engineering, stem cells, cloning, medical techniques, transhumanism and bioweapons. Research concerns - animal rights, ethics of human cloning, reproduction and stem cell research.

Unit II

Emerging issues - biotechnology's impact on society, DNA on the witness stand and use of genetic evidence in civil and criminal court cases. Challenges to public policy, regulations, improving public understanding of biotechnology products to correct misconceptions.

Unit III Introduction to IPR & Legal Protection

Basics of patents, types of patents, Indian Patent Act 1970, recent amendments, filing patent application, precautions before patenting – disclosure and non-disclosure. WIPO treaties, Budapest treaty, PCT and implications, role of a country patent office and procedure for filing a PCT application. Types of IP - patents, trademarks, copyright & related rights, industrial design, traditional knowledge, geographical indications and international framework for the protection of IP. Introduction to history of GATT, WTO, WIPO and TRIPS. Global scenario of patents and Indian position, patenting of biological materials. IP as a factor in R&D and IP relevance to Biotechnology.

Unit IV Patent Filing and Infringement

Patent application - forms and guidelines, fee structure and time frames. Types of patent applications, provisional and complete specifications, PCT and convention patent applications. International patenting - requirement, procedures and costs. Financial assistance for patenting and introduction to existing schemes. Publication of patents -gazette of India, status in Europe and US. Patenting by research students, lecturers and scientists. University/organizational rules in India and abroad, credit sharing by workers and financial incentives. Patent infringement - meaning, scope, litigation, case studies and examples.

Unit V Biosafety

Introduction and historical background. Introduction to biological safety cabinets, primary containment for biohazards, biosafety levels, biosafety levels of specific microorganisms, recommended biosafety levels for infectious agents and infected animals. Biosafety guidelines by Government of India. Definition of GMOs and LMOs. Roles of Institutional Biosafety Committee, RCGM, GEAC etc. for GMO's applications in food and agriculture. Environmental release of GMOs, risk assessment; risk management and communication. Overview of national regulations and relevant international agreements including Cartagena protocol.

Course Code	Course Title	L	T	P	C
20216SEC44B	Molecular Immunology	5	0	0	4

Aim:

- This subject considers immune responses at the molecular level and covers the role of immune receptors on immune cells in the initiation of immune responses

Objective:

- To understand the immune response in molecular level

Outcome

- To describe the structure and function of immunological receptors and apply this information towards building a comprehensive understanding of the initiation of immune responses at the molecular level
- To describe the various stages of immune cell development and compare this with abnormal development in a range of immunodeficiency conditions
- To explain how immunoregulation occurs and relate it to the overall function of the immune system in the healthy host as well as in immune disease states

Unit I Fundamental Concepts and Anatomy of the Immune System

Terminology – Antigen, immunogen, hapten, allergen, tolerogen, super antigens, antibody, immunoglobulin, antigenicity, immunogenicity. Self & nonself, innate & acquired immunity. Haematopoiesis. Organs, tissues, cells and mediators of immune system - primary lymphoid organs, secondary lymphoid tissues, lymphocytes, cytokines and lymphokines. Lymphatic system, lymphocyte circulation and lymphocyte homing. Mucosal and Gut associated lymphoid tissue (MALT&GALT) and mucosal immunity. Principles of cell signaling.

Unit - II Immune Responses Generated by B and T lymphocytes

B cell: B cell development, maturation, activation and differentiation. B cell receptor and determinants. B cell subsets. Immunoglobulins - basic structure, classes & subclasses of immunoglobulins, antigenic determinants, multigene organization of immunoglobulin genes and immunoglobulin super gene family. Generation of antibody diversity.

T cell: T cell development, maturation, activation and differentiation. T cell receptor and determinant. T cell subsets. TCR complex. Antigen processing and presentation - endogenous antigens, exogenous antigens, non-peptide bacterial antigens Cell to cell co-operation and hapten-carrier system.

Unit - III Immune Response

Recognition & response: Non specific and Specific. **Nonspecific:** Natural built-in barrier, phagocytosis. Complements, natural killing, inflammatory response. **Specific:** HI & CMI. Antigen recognition and response. Major Histocompatibility Complex - MHC genes, MHC in immune responsiveness and disease susceptibility. HLA typing. Kinetics of immune response and memory. **Unresponsiveness:** tolerance, suppression and potentiation.

Unit - IV Vaccinology

Active, passive and combined immunization. Live, killed, attenuated, plasma derived, sub unit, recombinant DNA, protein based, plant-based, peptide, anti-idiotypic and conjugate vaccines – production & applications. Role and properties of adjuvants & ISCOMS. Antibody genes and antibody engineering - chimeric and hybrid monoclonal

antibodies, catalytic antibodies and generation of immunoglobulin gene libraries.

Unit - V Clinical Immunology

Immunity to infection, bacteria, viral, fungal and parasitic infections (with examples from each group). Hypersensitivity – Type I, II, III and IV. Autoimmunity and types of autoimmune diseases. Mechanism and role of CD4⁺ T cells, MHC and TCR in autoimmunity. Treatment of autoimmune diseases. Transplantation – immunological basis of graft rejection, clinical transplantation and immunosuppressive therapy. Tumor immunology, tumor antigens, immune response to tumors and tumor evasion of the immune system. Cancer immunology and immunotherapy. Immunodeficiency - primary immuno - deficiencies, acquired or secondary immuno - deficiencies.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
2011AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Learn to edit and do proof reading
- Read and comprehend literature

UNIT – I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Comparison and contrast

Cause and effect

UNIT – IV

Editing

Proof reading

UNIT – V

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

Reference book:

Author	Title of the book	Edition / Year	Publisher
Wren and Martin	English Grammar	2009	S.Chand & Company Ltd
Meenakshi Raman & Sangeetha Sharma	Technical Communication	Second Edition 2011	Oxford University Press
Sudhir Kumar Sharma	The World's Great Speeches	-	Galaxy Publishers

EMPLOYABILITY

Course code	Course Title	L	T	P	C
20111AEC12	English-I	4	0	0	2

Aim:

- To acquaint students with learning English through literature

Objectives:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

Outcomes:

- Read and comprehend literature
- Appreciate the different types of poetry and prose

UNIT –I

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

UNIT – II

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

UNIT –III

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

UNIT –IV

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

UNIT –V

Oliver Twist -Charles Dickens

Text book:

Author	Title of the book	Edition / Year	Publisher
S.Murugesan/Dr.K.Chellappan	The Art of Reading/ Experiencing Poetry	Reprint 2004	Emerald Publishers

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20111AEC13	Literature in 1400-1600 Period	4	0	0	4

Aim:

- To acquaint with a sweep from the beginning to the summit stage of English Literature

Objective:

- To study the early English poetry fathered by Chaucer, followed by the early Elizabethan poets and the beginning of English prose and drama

Outcome:

- Understand British Literature from 1400-1600 period
- Explain the connections between their own experiences and the world using the texts

UNIT I

The Prologue to Canterbury Tales-The Prioress, The Wife of Bath, The Parson-Chaucer

UNIT II

Epithalamion -Spenser

UNIT III

Prothalamion -Spenser

UNIT IV

Essays - Of Friendship, Of Studies -Bacon

UNIT V

Spanish Tragedy -Thomas Kyd

EMPLOYABILITY/ SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20111AEC14	Literature in Elizabethan Period	4	0	0	4

Aim:

- To acquaint with the different forms of literature during Elizabethan period

Objective:

- To study the different sonnet forms, 'humor' comedy, Shakespearean tragedy and early prose literature during Elizabethan period
- To learn to appreciate the different forms of literature during Elizabethan period

Outcome:

- Explore British Literature in Elizabethan period
- Interpret the texts

UNIT I

Astrophel & Stella -Sidney

UNIT II

Sonnets -Shakespeare

UNIT III

Unfortunate Traveller -Thomas Nashe

UNIT IV

Alchemist -Ben Jonson

UNIT V

Othello -Shakespeare

EMPLOYABILITY/ SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20111AEC15	Social History of England-I	5	0	0	4

Aim:

- To acquaint with a total picture of the English society for a better understanding

Objective:

- To know the socio-economic aspects from fourteenth century to eighteenth century

Outcome:

- Learn the social background of British literature from 1400 to Puritan England
- Introduce about English life which have shaped English society

UNIT I

The age of Chaucer-Political history, London, Feudalism and the manor, Black Death, Peasants' Revolt, John Wycliffe, Literature

UNIT II

The fifteenth century- Political history, War of Roses, Landlords and tenants, London, Manor houses, Nunneries, Education, William Caxton, Literature

UNIT III

Renaissance
Reformation

UNIT IV

Shakespeare's England-Political history, Social life, Education

UNIT V

Puritan England- Political history, Colonial expansion, Social life, Religion, Literature

Text book:

Author	Title of the book	Edition / Year	Publisher
G.M Trevelyan	English Social History	2011	Surjeeth Publications

EMPLOYABILITY/ SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
2011AEC16	History of English Literature-I	5	0	0	4

Aim:

- To acquaint with the literary background for a better understanding

Objective:

- To know the literary background from fourteenth century to seventeenth century
- To understand the biographies of different writers

Outcome:

- Understand the literary background of British Literature from Chaucer's age to Dryden's age
- Know about author's biography

UNIT I

The age of Chaucer
Fifteenth century literature

UNIT II

The age of Shakespeare-I

UNIT III

The age of Shakespeare-II

UNIT IV

The Caroline age
The age of Milton

UNIT V

The age of Dryden

Text book:

Author	Title of the book	Edition / Year	Publisher
Hudson	History of English Literature	2012	Maple Press

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
201ACLSICN	Indian Constitution	-	-	-	2

Aim

- To understand the salient features of the Indian Constitution

Course Objectives:

- To make the students understand about the democratic rule and parliamentary administration
- To appreciate the salient features of the Indian constitution
- To know the fundamental rights and constitutional remedies
- To make familiar with powers and positions of the union executive ,union parliament and the supreme court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Course outcome:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification _method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

EMPLOYABILITY/ SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Aim:

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

Course Objectives :

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realise one's potentials.

Course Outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practised human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realise their potential as human beings and conduct themselves properly in the ways of the world.

Unit I

Introduction: What is love? Forms of love—forself, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living

Love and compassion and inter-relatedness

Love, compassion, empathy, sympathy and non-violence

Individuals who are remembered in history for practicing compassion and love.

Narratives and anecdotes from history, literature including local folklore

Practicing love and compassion: What will learners learn gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?

Sharing learner's individual and/or group experience(s)

Simulated Situations

Casestudies

Unit II

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)

- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
- Learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Unit III

Introduction: What is non-violence? Its need. Love, compassion, empathy sympathy for others as pre-requisites for non-violence

Ahimsa as non-violence and non-killing

Individuals and organisations that are known for their commitment to non-violence

Narratives and anecdotes about non-violence from history, and literature including

local folklore

Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?

- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Casestudies

Unit IV

Introduction: What is righteousness?

Righteousness and *dharma*, Righteousness and Propriety

Individuals who are remembered in history for practicing righteousness

Narratives and anecdotes from history, literature including local folklore

Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?

Sharing learners' individual and/or group experience(s)

Simulated situations

Casestudies

Unit V

Introduction: What is peace? Its need, relation with harmony and balance

Individuals and organisations that are known for their commitment to peace

Narratives and Anecdotes about peace from history, and literature including local folklore

Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?

Sharing learner's individual and/or group experience(s) about peace

Simulated situations

Casestudies

Unit VI

- Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature including local folklore

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Aim:

Course Objectives :

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome :

By the end of this program participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

Techniques of effective listening
Listening and comprehension
Probing questions
Barriers to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

Techniques of effective reading
Gathering ideas and information from a given text
Identify the main claim of the text
Identify the purpose of the text
Identify the context of the text
Identify the concepts mentioned
Evaluating these ideas and information
Identify the arguments employed in the text
Identify the theories employed or assumed in the text
Interpret the text
To understand what a text says
To understand what a text does
To understand what a text means

Unit IV

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalisations and over simplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
- Well-knit logical sequence
- Narrative sequence

Category groupings

Different modes of Writing

- i. E-mails
- ii. Proposal writing for Higher Studies
- iii. Recording the proceedings of meetings
- iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office
 - iii. Excel
 - iv. Powerpoint

Unit VI

- Introduction to social media websites
- Advantages of social media
- Ethics and etiquettes of social media
- How to use Google search better
- Effective ways of using Social Media
- Introduction to Digital Marketing

Unit VII

- Meaning of non-verbal communication
- Introduction to modes of non-verbal communication
- Breaking the misbeliefs
- Open and Closed Body language
- Eye Contact and Facial Expression
- Hand Gestures
- Do's and Don'ts
- Learning from experts
- Activities-Based Learning

Research – Definition, Objectives, Elements of Literary research, Ethics & Misconduct in research, Plagiarism

UNIT II

Planning the thesis-selecting a topic, reviewing the literature, designing the study, the chapter outline

Writing the thesis- the general format, the page and chapter format

Mechanics of writing-Spelling, Punctuation, Italics, Names, Numbers, Titles, Capitalisation, paragraphs, quotation, work cited, bibliography

Revising the thesis-editing, evaluating, proof reading

UNIT III

Data collection-Primary data- works of the author/s, autobiography, Interviews, articles in newspapers, magazine, letters, data collected through surveys, tools for questionnaire, interviews. Secondary data-Articles in journals, books, critical books on the author, magazines, e-articles, websites.

UNIT IV

Rhetoric and its devices, jargon, terminology, slang, colloquialism, formal writing, vague, concrete words, denotation, connotation, verbosity, precision, sentence structure

UNIT V

Practical exercise to prepare a paper for a journal-poem, short story, novel, drama

Use of computer in research-literary tools used in research

Text Book:

Name of the Author	Title of the book	Edition / Year	Publisher
Joseph Gibaldi	M LA Hand Book	Seventh Edition 2009	East-West Press
C.R Kothari	Research Methodology- Methods and technique	Second Edition 2005	New age International Publishers

EMPLOYABILITY/ SKILL DEVELOPMENT

SEMESTER III

Course Code	Course Title	L	T	P	C
20211SEC31	Critical Approaches to English Literature	6	0	0	5

Aim:

- To acquaint with various approaches to literature.

Objective:

- To realize that an impassioned scientific approach even to aesthetic delight has its own validity.
- To analyse a text using various approaches

Outcome:

- Assess a text using various approaches to English Literature
- Know about various approaches

UNIT-I

Archetypal Approach

UNIT-II

Moral Approach

UNIT-III

Formalistic Approach

UNIT-IV

Psychological Approach

UNIT-V

Sociological Approach

Term paper:

Analyse a text using various approaches to English Literature

ENTREPRENEURSHIP

Course Code	Course Title	L	T	P	C
20211AEC32	American Literature	6	1	0	5

Aim:

- To acquaint how American Literature has evolved to be an independent entity.

Objective:

- To know the genesis and growth of literature such as ‘American’, involving the confluence of varied and variegated cultures
- To learn a historical background to American history and literature
- To analyse the major themes and concerns reflected in American literature

Outcome:

- Understand the major themes and concerns reflected in American literature
- Provide an overview of the different phases of the evolution of American literature

UNIT I

Origin and growth of American Literature- Poetry, Prose

UNIT II

Origin and growth of American Literature- Novel, Drama

UNIT III

Daddy -Sylvia Plath
 After Apple Picking -Robert Frost
 To Helen -Edger Allen Poe

UNIT IV

The American Scholar -Emerson
 Walden-The Battle of Ants -Thoreau
 Farewell to Arms -Hemingway

UNIT V

The Hairy Ape -O’ Neil
 All My sons -Arthur Miller

Self study topics:

The Age of Innocence -Edith Wharton
 Who’s Afraid of Virginia Woolf? -Edward Albee

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20211AEC33	Literary Criticism	6	1	0	5

Aim:

- To recapitulate the origin and development of criticism from the period of Aristotle to modern age.

Objective:

- To introduce that criticism is a creative work bringing about far reaching impact.
- To analyse a text using various criticism
- To understand the theories formulated by various writers

Outcome:

- Assess a text using various criticism
- Get in touch with different views of critics

UNIT – I

Poetics. -Aristotle

An Apology for Poetry. -Sir Philip Sidney

UNIT – II

Preface to the Fables -Dryden

Essay on Criticism -Alexander Pope

UNIT – III

Preface to Shakespeare -Samuel Johnson

The Preface to Lyrical Ballads -William Wordsworth

UNIT – IV

Biographia Literaria -S.T.Coleridge

A Defence of Poetry -Shelley

UNIT – V

The Study of Poetry -Matthew Arnold

Tradition and Individual Talent -T.S.Eliot

ENTREPRENEURSHIP

Course Code	Course Title	L	T	P	C
20211DSC34A	Discipline Specific Elective - III A African Literature	5	0	0	4

Aim:

- To acquaint the students with the African literature

Objective:

- To give a glimpse into the British colonialism and its aftermath.
- To trace the origin and growth of African literature.
- To know how an indomitable urge for seeking separate identity finds expression in the different genres of literature.
- To understand African literature, their landscape, tradition, milieu, spirit, socio cultural ethos, national identity etc.

Outcome:

- Learn the origin and growth of African literature.
- Enable to understand African literature, their landscape, tradition, milieu, spirit, socio cultural ethos, national identity etc.

UNIT – I

Origin and growth of African Literature-Poetry, Prose and Drama

UNIT – II

Poets in Africa -Roy Campbell

The Casualties -J.P.Clark

A Far Cry from Africa -Derek Walcott

UNIT – III

The Arrow of God -Chinua Achebe

Cry the Beloved Country -Alan Patson

UNIT – IV

Waiting for the Barbarians -J.M Coetzee

A Grain of Wheat -Ngugi waThiongo

UNIT – V

The Road -Wole Soyinka

Devil on the Cross -Ngugi waThiongo

EMPLOYABILITY/ SKILL DEVELOPMENT

SEMESTER IV

Course Code	Course Title	L	T	P	C
20211SEC41	Translation	5	1	0	5

Aim:

- To initiate the students into the mechanics of translations

Objective:

- To know the origin and development of translation.
- To promote translation
- To understand the theories of translation
- To encounter the problems in translation.
- To develop their translation skill

Outcome:

- Enhance the translation skill
- Analyse the theories of translation
- Learn modern and cultural translation

UNIT – I

History of translation

UNIT – II

Theories of translation

Theory of meaning

UNIT – III

Literary Translation

Non-Literary Translation

UNIT – IV

Translatability

Difficulties in Translation

UNIT – V

Modern Translation

Cultural translation

Text Book:

Author	Title of the book	Edition/Year	Publisher
P.K. Kalyani	Translation Studies	2001	Creative Books
Dr. Shanthi	Towards Translation	2002	Emerald Publishers

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20211SEC42	English Language Teaching	6	1	0	5

Aim:

- To have a good stead for the career of English teacher

Objective:

- To analyse language theories
- To learn different approaches and methods
- To explore the audio-visual techniques
- To orient in the practical application of ELT
- To understand the principles of foreign language teaching

Outcome:

- Enhance to have a good stead for the career of English teacher
- Study the approaches, methods and techniques in teaching English
- Know how to use audio visual aids

UNIT- I

The place of mother tongue in teaching English

English as a second language

UNIT-II

Principles of foreign language teaching

Theories of Language Learning

UNIT-III

Approaches of Teaching English

Methods of Teaching English

UNIT-IV

Techniques for language teaching

Audio – Visual Teaching

UNIT-V

Micro Teaching

Macro Teaching

Case study

Text Book:

Author	Title of the book	Publisher
Dr. P.S.S Sastry	Methods of Teaching English Book I & Book II	Madhava Publishers

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20211AEC43	English Literature for Competitive Examination	6	0	0	5

Aim:

- To attempt a relation of what is learnt to take up a competitive exam.

Objective:

- To resuscitate what has been learnt in every branch of English Language and Literature and compete with others for a career.
- To impart in students the confidence and skills to face the challenge of a competitive exam

Outcome:

- Take up a competitive exam.
- Learn the different areas in English literature

UNIT-I

British Literature

UNIT-II

American Literature

UNIT-III

Indian Writing in English

UNIT-IV

Literary Forms

UNIT-V

English Language Teaching

Text Book:

Author	Title of the book	Publisher
William Henry Hudson	An Outline History of English literature	Maple Press
Dr. P.S.S Sastry	Methods of Teaching English - Book I & Book II	Madhava Publishers

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20211DSC44A	Discipline Specific Elective - IV A Indian Fiction in Translation	6	0	0	4

Aim:

- To acquaint with the translated fiction in Indian Writing in English

Objective:

- To analyse the techniques of translation
- To know the culture and society of various parts of India
- To understand the fiction in other languages in India

Outcome:

- Comprehend the fiction in other languages in India
- Identify the culture expressed in other languages

UNIT-I

Rudali -Mahasweta Devi

Karukku -Bama, translated by Lakshmi Holmstorm-Oxford

UNIT-II

Godaan -Prem Chand,

A Home in the Sky -Vaasanthi translated by Gomathi Narayanan

UNIT-III

Samskara -U. R Anandamurthy, translated by AK Ramanujan-OUP

Once an Actress -Jayakanthan, translated by K. S Subramanian

UNIT-IV

Tamas -Bhisham Sahni

Bridges -Sivasankari translated by S. Krishnan

UNIT-V

Chemmeen -Thakazli Sivasankar Pillai translated by T. Pillai & Anita Nair

Krishna Krishna -Indira Parthasarathy

Semester	Discipline Specific Elective Courses
I	203ENC13A-Modern Criticism
	203ENC13B-Cultural Studies

Course Code	Course Title	L	T	P	C
203ENC11	RESEARCH METHODOLOGY AND THEORY OF LITERATURE-	2	2	0	2

Aim:

To acquaint with the research methodology

Objective:

To know the convention and format of thesis

To understand the methods and mechanics of research writing

To familiarize with the kinds of the discourse

To gain knowledge to use computer in research

To analyse data

To learn the intrinsic and the extrinsic approach

Outcome:

Can do research activity

Interpret any text using various criticisms and theories

Know and use the kinds of discourses

Analyse data

UNIT-I

Research, Types of Research

Planning the thesis

Writing the thesis- General format, Chapter format

UNIT-II

Mechanics of writing

Documentation-Quotation, Works cited, Bibliography

UNIT-III

Discourse: Narration,Argumentation,Exposition,Description

UNIT-IV

Computer uses in research

Modern technology applied in research

Statistical techniques and data analysis

UNIT-V

The Extrinsic approach to the study of literature-Literature and biography, literature and psychology, literature and society

The Intrinsic approach to the study of literature-The mode of existence of a literary work of art, The nature and modes of narrative fiction.

Reference Books-

Theory of Literature - Wellek and Warren

Thesis and Assignment Writing -Anderson et al

MLA Handbook for writers of research papers -Eighth edition

Research Methodology Methods and Techniques - C.R Kothari

Microsoft Office2003 -Edward C Willett

1stedition 2004 (Wiley Publications, USA)

Fundamentals of Information Technology - Alexis Ieon, Mathews Ieon 1999. (Vikas Publications)

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
203ENC12	LITERARY THEORY	2	2	0	2

Aim:

To acquaint with the concepts and features of different literary theories

Objective:

To sharpen the critical ability by learning the literary theories

To appreciate, interpret and critically evaluate any text

Outcome:

Understand literary theory

Evaluate any text using various theories

Sharpen critical analysis

UNIT – I

Modernism: Meaning, origin, present condition

Structuralism: Meaning, origin, Saussure, Levi Strauss, Genette, reactions

UNIT – II

Post-Structuralism: Meaning, origin, types, Derrida, Deconstruction, reactions

New Historicism: Meaning, origin, Foucault, Old historicist, New historicist, Stephen Grennblat, reactions

UNIT – III

Reader Response Theory: Meaning, influences, limitations

Psychoanalytical Criticism: Meaning, origin, influences, limitations

UNIT – IV

Feminism: Definition, Feminist movement, studies of women writers, influence

Marxism: Definition, Marx and Engelstheories, Marxist literary critics

UNIT – V

Post-colonialism: Meaning, influences, principles, postcolonial critics

Eco-Criticism: Meaning, tradition, Ecocritics

Reference Books:

Classical to Contemporary theory: A Demystified Approach- Dr. Joseph Chandra &

K.S Anthony Samy

Beginning Theory- Peter Harry

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
203ENC13A	MODERN CRITICISM	2	2	0	2

Aim:

To acquaint with the modern criticism

Objective:

To understand the different concepts of modern criticism

Outcome:

Comprehend modern criticism

Evaluate any text using various criticisms

UNIT – I

“The Language of Paradox”. - Cleanth Brooks

“Criticism as Language”. - Ronald Barthes

“Realism and the Contemporary Novel” - Raymond Williams

UNIT – II

“Structuralism and Literature” -Jonathan Culler

“Towards Feminist Poetics” -Elaine Showalter

“The Seven Types of Ambiguity” -William Empson

UNIT – III

“Religion and Literature” -T.S.Eliot

“Four Kinds of Meaning” -I.A.Richards

“Creative Writers and Day Dreaming” -Sigmund Freud

UNIT – IV

“Is there a text in the class?” -Stanley Fish

“Orientalism” - Edward Said

“Cultural Studies and its Theoretical Legacies”- Stuart Hall

UNIT – V

“What is an Author?” -Michael Foucault

“Post-colonial Criticism” - Homi Bhabha

“Can the Subaltern Speak” - Gayatri Spivak

Reference Book:

Twentieth Century Literary Criticism -Bijay Kumar Dass.

Literary Criticism -V.S.Sethuraman

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
203ENC13B	CULTURAL STUDIES	2	2	0	2

Aim:

To acquaint with the different cultures

Objective:

To understand the different cultures of various literature

Outcome:

Scholars can cross through many cultural works and their customs

Evaluate any text using various cultures

UNIT – I

Introduction to Cultural Studies and popular culture

Cultural Studies: Its Development and Trends

UNIT – II

Folklore and Culture

Society and Culture

UNIT – III

Culture and Heritage

Gender and Culture

UNIT – IV

“A Man of the People”- Chinua Achebe

“Voss”– Patrick White

UNIT – V

“Romola” – George Eliot

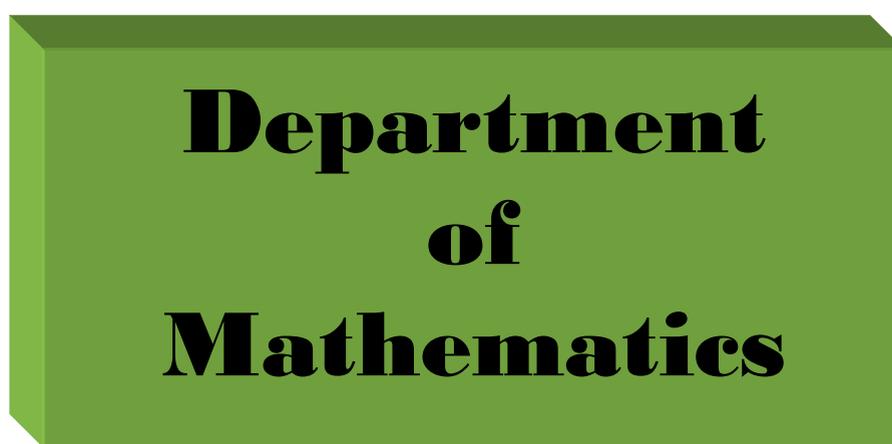

“The Village”- Mulkraj Anand

தமிழ். திரைப்படப் பங்களிப்புகள்- வன்மை, தஞ்சாவூர்
பாட. குறியாடு : தமிழ் முதல் பருவம்
முதலாம் ஆண்டு
இக்கல் இலக்கியம் - வெட்டியல், சிறுகதை , நாடகம், இலக்கிய வரலாறு
ஆககு : 1. வெட்டியல்
 உய்யுள்ளவை கவாமிசன் - ஆதார புலனம் - சிவம்பர றுசியம் - 40 ஆகுகள்
 இராமலிங்க ஆகுகள் - திருவருப்பா - அருணை விண்ணியம் - 40 ஆகுகள்
 அகிலாணி தேசிக விநாயகம் பிள்ளை - மலரும் மாணவரும் - 52 ஆகுகள்
 பாரதியார் - புதுமைப்பிள்ளை - 40 ஆகுகள்
 பாரதிதாசன் - பாரதிதாசன் அகிலாசன் , தமிழ் இனிமை , தமிழ் அணவு
ஆககு : 2. வெட்டியல்
 நாமச்சல் அகிலம் - தமிழ் தேள் - தமிழ் வளர்க்க கூறும் செட்டிலைம் , 40 ஆகுகள்
 ந. பிச்சுபுத்திரி - வழிநடாணை - அகிலாச குருடன் , 42 ஆகுகள்
 கரகா - தேவமறைய, அன்பு , 22 ஆகுகள்
 அண்ணாநாசன் - இலக்கியம் , ஒரு பாணையில் கதை , 54 ஆகுகள்
 அப்துல் ரஹ்மான் - செந்திரசூதிகள் , குப்பையவை கிளையும் சிறுகதைகள், 80 ஆகுகள்
ஆககு : 3. சிறுகதை
 க.சமுத்திரம் - தேலில் புத்திர பகா
ஆககு : 4. நாடகம்
 கு. வெ. பாண்டிமணியன் , செந்திர புத்திர (அரரரரர நாடகம்)
ஆககு : 5. இலக்கிய வரலாறு
 சிறுகதை , புதினம், நாடகம் அரரரரர , அகிலாச , புத்திரககிலாச

Course Code	Course Title	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Learn to edit and do proof reading
- Read and comprehend literature

UNIT – I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Comparison and contrast

Cause and effect

UNIT – IV

Editing

Proof reading

UNIT – V

Speeches of famous people:

Mahatma Gandhi- Abraham Lincoln- Swami Vivekananda- John F. Kennedy

Reference book:

Author	Title of the book	Edition / Year	Publisher
Wren and Martin	English Grammar	2009	S.Chand & Company Ltd
Meenakshi Raman & Sangeetha Sharma	Technical Communication	Second Edition 2011	Oxford University Press
Sudhir Kumar Sharma	The World's Great Speeches	-	Galaxy Publishers

Course Code	Course Title	L	T	P	C
20111AEC12	English-I	4	0	0	2

Aim:

- To acquaint with learning English through literature

Objective:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

Outcome:

- Read and comprehend literature
- Appreciate the different types of poetry and prose

UNIT –I

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

UNIT – II

Enterprise -Nissim Ezekiel

Love poem for a wife -A.KRamanujam

UNIT –III

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -ArunaGnanadason

UNIT –IV

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

UNIT –V

Oliver Twist -Charles Dickens

Text book:

Author	Title of the book	Edition / Year	Publisher
S.Murugesan/Dr.K.Chellappan	The Art of Reading/ Experiencing Poetry	Reprint 2004	Emerald Publishers

Course code	Course Title	L	T	P	C
20112AEC13	Differential Calculus and Vector Calculus	5	0	0	3

Objectives:

This course is designed to give students a secure base in elementary calculus and vector calculus to allow them to tackle the mathematics needed in other sciences. Students wishing to do more mathematics will be given a good foundation from which they can proceed to other courses.

UNIT I:

Successive differentiation — Leibnitz theorem with proof — Problems, Partial derivative of a function.

UNIT II:

Maxima & Minima for functions of two variables — Lagrange multiplier method.

UNIT III:

Curvature (Cartesian, Polar and Pedal form) — evolutes.

UNIT – IV

Vector differentiation – velocity & acceleration vectors- Gradient of a vector directional derivative -Unit normal vector- tangent plane, Divergence- Curl –

Solenoidal&Irrotational vector- Double operators – Properties connecting grad, div & curl of a vector.

Unit –V

Vector integration –Line integrals – Conservative force field – Scalar field- Scalar potential- Work done by d Force- Surface integrals – Volume integrals.

Text Books:

- 1.Differential calculus — T.K.M. Pillai
- 2.Vector calculus — T.K.M. Pillai.

Reference:

T.K. Manickavasagam Pillai, Analytical Geometry (3D) & Vector calculus, Neq Gamma Publishing House, 1991

Learning outcomes

By the end of this course, you should:

- ✓ be able to manipulate, and solve problems using, successive differentiation & vector operators;
- ✓ be able to calculate Maxima & Minima for functions of two variables and Lagrange multiplier method
- ✓ be able to solve curvature, evolutes, asymptotes and envelopes in simple cases.
- ✓ be able to calculate gradient, divergence and curl vectors.

Course code	Course Title	L	T	P	C
20112AEC14	Trigonometry, Analytical Geometry 3 D and	5	0	0	3

Objectives:

This course is designed here to get sufficient ideas about integral calculus, trigonometry and analytical geometry to tackle the mathematics needed in other sciences.

UNIT I:

Expansions of $\cos n\theta$, $\sin n\theta$, $\cos^n\theta$, $\sin^n\theta$ (for positive integral values of n) — series for $\cos\theta$, $\sin\theta$, $\tan\theta$.

UNIT II:

Hyperbolic functions — Principal and general values of logarithms of complex numbers. Separation of real and imaginary parts — factorization.

UNIT III:

Summation of trigonometrical series — method of difference - sum of series of n angles in A.P., C+ is form, Gregory's series.

UNIT IV:

Analytical Geometry (3-D)
Spheres (Simple Properties only) general second degree equations to cone cylinder.

UNIT V:

Integral calculus.
Evaluation of double and Triple integral — Beta and gamma integrals.

Text Books:

1. Trigonometry — T.K.M. Pillai
2. Analytical Geometry (3D) And Integral Calculus — T.K.M. Pillai

Learning outcomes

By the end of this course, you should:

- ✓ be able to manipulate the expansions of basic trigonometric functions
- ✓ be able to calculate summation of trigonometric series and Gregory's series
- ✓ understand the concept of analytical geometry and be able to use properties of spheres, cone and cylinder in real cases.
- ✓ be able to manipulate, and solve problems using, integral calculus

Allied- I- Paper -I PROGRAMMING IN C

Course code	Course Title	L	T	P	C
20120AEC15	Allied- I- Paper -I Programming In C	6	0	0	5

Objectives:

- To learn the concept of programming
- To understand input and output functions
- To study about Structures
- To learn Pointers in C Language

UNIT I :

Evolution and Applications of C - Structure of a C Program -Data Types -

Declaration - Operators - Expressions - Type conversions -Built-in functions.

UNIT II :

Data Input and Output - Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE- DO, DO-WHILE, FOR, BREAK and CONTINUE.

UNIT III :

Functions:

Defining and accessing functions-passing parameters of functions -Arguments - Recursive functions -Storage classes.

Arrays:

Defining and processing Arrays -Multi dimensional arrays - passing arrays to functions -Arrays and strings String functions - String Manipulations.

UNIT IV :

Pointers

Pointers Declarations - Operations on pointers -pointers to functions - Pointer and Strings - pointers and arrays - array of pointers - Structures and pointers -unions.

UNIT V :

Data files -Opening, Closing, and processing files - Files with structures and unions

Register variables - Bit wise Operations - Macros- Pre-processing

Reference:

1. "Programming with C" — ByronS.Gottfried — Schauni's outline series — Tata McGrawHill publications.
2. "Let us C "— Yeswantkanetkar — BPB Publications.

Learning Outcomes:

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications

Allied- I Practical -I PROGRAMMING IN C LAB

Course code	Course Title	L	T	P	C
20120AEC16L	Allied -I -Paper -I Programming in C Lab	0	0	3	2

Objectives

Programming in C Lab provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Quadratic Equation, Sum of Series (Sine, Cosine, e^x), Fibonacci Numbers using recursive functions, Sorting of given names in alphabetical order, Matrix Operations (Addition, Subtraction, Multiplication — use functions) would be taught.

Students are able to the C program

1. Write a C program to find the roots of Quadratic Equation (all cases).
2. Write a C program to find the Sum of Series (Sine, Cosine, e^x)
3. Write a C program to reads an integer N and determine whether N is prime or not.
4. Write a C program to Finding factorials, generating Fibnoacci Numbers using recursive functions.
5. Write a C program to find the numbers in Ascending and Descending order (use it to find largest and smallest numbers).
6. Write a C program to find the sum of natural numbers using WHILE statement.
7. Write a C program for Sorting of given names in alphabetical order.
8. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication — use functions).
9. Write a C program for String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings — use function pointers).

Learning Outcomes:

At the end of the course, the student should be able to:

- Students learned program techniques
- Understand the concept of various functions and pointers
- A knowledge of writing C program
- Design/development of solutions

INDIAN CONSTITUTION

Course Code	Course Title	L	T	P	C
201ACLSICN	Indian Constitution	-	-	-	2

Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
2. To appreciate the salient features of the Indian constitution
3. To know the fundamental rights and constitutional remedies
4. To make familiar with powers and positions of the union executive, union parliament and the Supreme Court

To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification _method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court - functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

UNIVERSAL HUMAN VALUES

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Course Objectives :

The present course deals with meaning, purpose, and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realize one's potentials.

Course outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practiced human values and achieved self-actualization.
3. Become conscious practitioners of human values.
4. Realise their potential as human beings and conduct themselves properly in the way of the world.

Unit I :Love & Compassion

- Introduction: What is love? Forms of love for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love.
- Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn gain if they practice love and compassion? What will learners lose if they

don't practice love and compassion?

- Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Case studies

Unit II: Truth

- Introduction: What is truth? Universal truth, truth as value, truth as fact(veracity, Sincerity, honesty among others)
- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
- Learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit III :Non-Violence

- Introduction: What is non violence? Its need. Love, compassion, empathy sympathy for others as pre-requisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organizations that are known for their commitment to non-violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing on-violence: What will learners learn/gain if they practice non- violence? What will learners lose if they don't practice it?

- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Case studies

Unit IV: Righteousness

- Introduction: What is righteousness?
- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit V: Peace

- Introduction: What is peace? Its need, relation with harmony and balance
- Individuals and organizations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Case studies

Unit VI: Service

- Introduction: What is service? Forms of service, for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature including local folklore
- Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s) regarding service
- Simulated situations
- Case studies

Unit VII: Renunciation(Sacrifice)

- Introduction: What is renunciation? Renunciation and sacrifice. Self-restrain and
Ways of overcoming greed. Renunciation with action as true renunciation
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.
- Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Course Code	Course Title	L	T	P	C
20110AEC12	Tamil -II	4	0	0	2

தமிழ் இலக்கியப் பங்களிப்புகள்- கவிதை, தஞ்சாவூர்
 வல. குழியாடு : தமிழ் இலக்கியப் பருவம்
 முதலாம் பிழைப்பு
 செட்டியன் , பத்தி இலக்கியம், சிறுநிலக்கியம் , இலக்கிய வரலாறு

பிழைப்பு : 1 . செட்டியன் :

1. திருமுறைப்பந்தர் தேவாரம் - சேனாநாயகியம்
2. திருமுறைப்பந்தர் தேவாரம் - தனிச் சிறுநிலக்கியம்
3. சந்திரர் தேவாரம் - திருமுறைப்பந்தர் தனி மறை
4. மாணிக்கவாசகர் - திருமுறைப்பந்தம் - திருமுறைப்பந்தம்

பிழைப்பு : 2 . செட்டியன் :

5. சுவாமிநாதர் - பெருமான் திருமுறை
6. நாயக்கர் திருமுறை பெருமான் - இலக்கியப் பந்தம் - கவிதை கவிதை
7. பிழைப்புகள் - நாயக்கர் திருமுறை - திருமுறைப்பந்தம் கவிதை
8. திருமுறைப்பந்தம் - சிறுநிலக்கியம்

பிழைப்பு : 3 . செட்டியன் :

- 9 . திருமுறை - பிழைப்பு திருமுறை
- 10 . சுவாமிநாதர் - மாணிக்கவாசகர் மீளமை - தமிழ் கருமை பருவம்
- 11 . திருமுறைப்பந்தம் - சிறுநிலக்கியம் - சிறுநிலக்கியம் கவிதை
- 12 . கவிதை - திருமுறைப்பந்தம் கவிதை

பிழைப்பு : 4 . பிழைப்பு

- 13 . சுவாமி. மாணிக்கவாசகர் - கவிதை

பிழைப்பு : 5 . இலக்கிய வரலாறு

- 14 . கவிதை கவிதை இலக்கியங்கள் , சிறுநிலக்கியங்கள் , (பந்தம் - மீளமைத்தமிழ் - பந்தம்)

Course Code	Course Title	L	T	P	C
20111AEC21	Advanced English-II	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

Outcome:

- Develop technological skill
- Able to write in a variety of formats
- Read biographies and develop personality

UNIT – I

E-mail

Fax

Memos

UNIT – II

Itinerary

Checklist

UNIT – III

Invitation

Circular

UNIT – IV

Instruction

Recommendations

UNIT – V

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

Text Book

Author	Title of the book	Edition / Year	Publisher
Meenakshi Raman &Sangeetha Sharma	Technical Communication	2011	Oxford University Press
Rajendra Pal &J.S.Korlahalli	Business Communication	2015	Sultan

Course Code	Course Title	L	T	P	C
20111AEC22	English-II	4	0	0	2

Aim:

- To acquaint learners with different trends of writing

Objective:

- To acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

Outcome:

- Appreciate different forms of literature
- Acquire language skills through literature
- Broaden the horizon of knowledge

UNIT – I

Ecology -A.K. Ramanujan

Gift -Alice Walker

The First Meeting -Sujata Bhatt

UNIT –II

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran

UNIT –III

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

UNIT – IV

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king

Those People Next Door -A.G. Gardiner

UNIT – V

Marriage is a private Affair -Chinua Achebe

The Fortune Teller -Karel Capek

Proposal -Anton Chekov

Text book:

Author	Title of the book	Edition / Year	Publisher
GowriSivaraman	Gathered Wisdom	Reprint 2010	Emerald Publishers

Course code	Course Title	L	T	P	C
20112AEC23	Core -III Basic Mathematics III (Integrals and Differential Equations)	5	0	0	3

INTEGRALS AND DIFFERENTIAL EQUATIONS

UNIT I:

Properties of definite integrals and solve standard problems. Reduction formulae- $\int x^n e^{ax} dx$, $\int x^n \cos ax dx$, $\int \sin^n x dx$, $\int \cos^n x dx$, $\int \cos^m x \sin^n x dx$ and problems based on above types working problems based on $\int \sin^m x \cos^n x dx$

UNIT II:

Second order differential equation with constant coefficients - $e^{\alpha x} g(x)$, $x \sin x$, $x \cos x$, $x^2 \cos x$ types only and with Variable coefficients- Variation of parameters

UNIT III:

Partial differential equations. Formation of equation — General, particular and complete integrals of PDE — Lagrange's method four standard forms

UNIT IV:

Laplace Transforms: Laplace transform and its application for solving ordinary differential equations — convolution theorem for Laplace transform — problems.

UNIT V:

Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions- change of interval — Half range series.

Reference

Calculus -T.K.M.Pillai, Arumugam and S.Narayanan.
Differential equations -S.Narayanan

SEQUENCE AND SERIES

Course code	Course Title	L	T	P	C
20112SEC24	Core -III Basic Mathematics III (Integrals and Differential Equations)	5	0	0	4

UNIT 1:

Sequence, Limits, Convergence-Cauchy's general principle of convergence- Cauchy's first theorem on Limits-Bounded sequences-Monotonic sequence always tends to a limit, finite or infinite - Limit superior and limit inferior.

UNIT 2:

Infinite series-Definition of convergence, Divergence and Oscillation-Necessary Condition for Convergence - Convergence of $\sum 1/n^p$ and Geometric series. Comparison test, D 1 Alembert's ratio test and Raabe's test –Simple problems.

UNIT 3:

Cauchy's condensation test, Cauchy's root test and their simple problems Alternative series with simple problems.

UNIT 4:

General summation of series including successive difference and recurring series.

UNIT 5:

Inequalities - Geometric and Arithmetic means Weistrass inequalities- Cauchy's inequality.

TEXT BOOK:

Alebra Volume I & Volume II T.K.M.Pillai (Relavant problems only)

Unit I : Chapter 2 (4,7)

Unit II : Chapter 2 (8-14,16,18,19)

Unit III : Chapter 2 (15,17,21-24)

Unit IV : Chapter 5

Unit V : Chapter 4 (second volume)

General Reference

Sequence and series: Arumugam and Isaac

Course code	Course Title	L	T	P	C
20120AEC25	Allied -I-Paper-II Web Programming	5	1	0	5

Objectives

- give you a general understanding of how a computer works
- introduce you to assembly-level programming
- prepare you for future courses. .

UNIT-I:

Introduction to HTML- Head and body sections- Hyper text and Link in HTML

documents.

UNIT-II:

Designing the body section- Managing images in HTML.

UNIT-III:

Ordered and Unordered Lists –Table Handling.

UNIT-IV:

DHTML and Style Sheet – Frames.

UNIT-V:

A Webpage design project – Forms.

REFERENCE BOOKS:

1. World Wide Web Design with HTML – c.Xavier –Tata McGraw-Hill-2000.
2. Principles of web design –Joel Sklar –Vikas Publishing House 2001.

Learning outcomes

By the end of this course, you should be able to:

- describe the fetch-execute cycle of a computer
- understand the different types of information which may be stored within a computer memory
- write a simple assembly language program

Allied- I Practical—II WEB PROGRAMMING LAB

Course code	Course Title	L	T	P	C
20120AEC26L	Allied-I Practical-II Web Programming Lab	0	0	3	2

Objectives

1. To create a fully functional website with mvc architecture
2. To develop an online book store
3. To provide an understanding of the language translation peculiarities by designing a complete translator for a mini language

1. Create a Web page for ABC INFOTECH LTD., with necessary images and marquee.

2. Create Web pages which displays the menu card of a hotel. The first page should contain the list of items available. After selection of one item, the corresponding details should be displayed on the next page.

3. Create a Web page which displays the balance sheets for the given list of companies (same as above problem).

4. Create a Web page for XYZ INFOTECH LTD., to display the company profile employee details balance sheet, receive resume, customer service using links.

5. Using frames create web pages for a travel agency

6. Create a Web page using forms for our college students admission process. (Use list box, push button, radio button, command button, rich text box, text box, etc where ever applicable)

7. Create a Web page which receives suggestions from customers for a software development & consultancy agency using necessary.

Learning outcomes

By the end of this course, you should be able to:

- Will create a fully functional website(online book store) using mvc architecture
- Will create a complete translator for a mini language
- Understand the basic terminology used in computer programming
- Use different data types in a computer program.
- Design programs involving decision structures, loops and functions.

Course code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Course Objectives:

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome :

By the end of this program participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I :Listening

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barriers to listening

Unit II: Speaking

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III: Reading

- Techniques of effective reading
- Gathering ideas and information from a given text
 - i. Identify the main claim of the text
 - ii. Identify the purpose of the text
 - iii. Identify the context of the text
 - iv. Identify the concepts mentioned
- Evaluating these ideas and information
 - i. Identify the arguments employed in the text
 - ii. Identify the theories employed or assumed in the text
- Interpret the text
 - i. To understand what a text says
 - ii. To understand what a text does
 - iii. To understand what a text means

Unit IV: Writing and different modes of writing

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalizations and oversimplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
 - i. Well-knit logical sequence
 - ii. Narrative sequence
 - iii. Category groupings
- Different modes of Writing -
 - i. E-mails
 - ii. Proposal writing for Higher Studies
 - iii. Recording the proceedings of meetings
 - iv. Any other mode of writing relevant for learners

Unit V: Digital Literacy

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office
 - iii. Excel
 - iv. PowerPoint

Unit VI: Effective use of Social Media

- Introduction to social media websites
- Advantages of social media
- Ethics and etiquettes of social media
- How to use Google search better
- Effective ways of using Social Media
- Introduction to Digital Marketing

Unit VII: Non-verbal communication

- Meaning of non-verbal communication
- Introduction to modes of non-verbal communication
- Breaking the misbeliefs
- Open and Closed Body language
- Eye Contact and Facial Expression
- Hand Gestures
- Do's and Don'ts
- Learning from experts
- Activities-Based Learning

தமிழ் நவீனப் பல்மொழிப்பாடல் - வல்லம், தஞ்சாவூர்

பாட. குறியாடு :

தமிழ் மூன்றாம் பருவம்

இரண்டாம் ஆண்டு

செய்யுள், நாடகங்கள் இலக்கிய வரலாறு

செய்யுள்

அககு : 1

1. சிவப்பிரகாசம் - மனவாழைப் படுத்தி காணாது
2. மணிமொகை - அழகிய நிகழ்ச்சிகள் காணாது
3. சுவை சந்திரமணி - மொகைகள் இவ்வகை

அககு :2

4. பெரியபுராணம் - இவ்வகை அழகிய நவீனப் புராணம்
5. சிவபுராணம் - கைகவி மூன்றாம் பருவம்

அககு :3

6. சிவபுராணம் - ந.பி அகநாடகம் ப.வம் - 24 வரிகள்
7. தேய்வழி - வாய் அழகிய ப.வம் - முதல் 5 பாடல்கள்

அககு :4

8. நவமொகை - வாய் வரலாறு (20 - 51)

அககு . 5 : இலக்கிய வரலாறு

9. நாடகங்கள் , தஞ்சாவூர் நாடகங்கள் , புராணங்கள் , இதிகாசங்கள்

Course Code	Course Title	L	T	P	C
20111AEC31	Advanced English-III	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

Outcome:

- Understand phonetics
- Develop writing skill
- Able to develop creative writing

UNIT – I

The organs of speech
 Classification of speech sounds
 Vowels and Diphthongs

UNIT – II

Consonants
 Consonant cluster

UNIT – III

Syllable
 Word accent
 Intonation

UNIT – IV

Idiom
 Interpretation of graphics

UNIT – V

Slogan writing
 Writing advertisement

Reference books:

Meenakshi Sharma &Sangeetha Sharma	Technical Communication	2011	Oxford University Press

	Course Title	L	T	P	C
20111AEC32	English-III	4	0	0	2

Aim:

- To acquaint with learning English through literature

Objective:

- To sensitize language use through prescribed text
- To develop the conversational skills through one act plays

Outcome:

- Appreciate different types of prose
- Develop the conversational skills through one act plays
- Enhance the skill of making grammatically correct sentences.

UNIT – I

The Doctor's World - R.K. Narayan

The Postmaster - Rabindranath Tagore

Princess September - E.Somerest Maugham

UNIT – II

The Price of Flowers -Prabhat Kumar Mukhopadhyay

The Open Window -Saki

The Model Millionaire -Oscar Wilde

UNIT –III

My Brother My Brother - Norah Burke

Uneasy Home Coming - Will F. Jenkins

Resignation - Premchand

UNIT –IV

The Referee -W.H. Andrews & Geoffrey Dreamer

The Case of the Stolen Diamonds -Farrell Mitchell

UNIT – V

The Dear Departed -Stanley Houghton

The Princess and the Wood Cutter -Alan Alexander Milne

Text book:

Author	Title of the book	Edition / Year	Publisher
SteuartH.King	Nine Short Stories	Reprint 2001	Blackie Books
T.Prabhakar	One – Act Play		Emerald

Course code	Course Title	L	T	P	C
20112AEC33	Core – V Number Theory	4	0	0	3

Core V - NUMBER THEORY

Objectives:

The objective is for the students to obtain a foundational knowledge of elements of Number Theory through step-by-step proofs of classical theorems, as well as to sharpen their skills through problem-solving.

UNIT 1:

THE FUNDAMENTAL THEOREM OF ARITHMETIC:- Introduction - Divisibility — Greatest Common divisor — Prime numbers — The fundamental theorem of arithmetic — The series of reciprocals of the primes — The Euclidean algorithm — The greatest Common divisor of more than two numbers.

UNIT 2:

ARITHMETICAL FUNCTIONS AND DIRICHLET MULTIPLICATION:- The motions function $\mu(n)$ — The Euler totient function — A relation connecting ϕ and μ - A product formula for $\mu(n)$ — The Dirichlet product of arithmetical functions — Dirichlet inverses and the Mobius inversion formula — the Mangoldt function $\Lambda(n)$ — Multiplicative functions — Multiplicative function and Dirichlet multiplication.

UNIT 3:

AVERAGES OF ARITHMETICAL FUNCTIONS:- The big oh notation Asymptotic equality of functions — Euler's summation formula — some elementary asymptotic formulas- the average order of $d(n)$ — the average order of the divisor fraction $\delta\alpha(n)$ - the average order of $\phi(n)$.

UNIT 4:

SOME ELEMENTARY THEOREMS ON THE DISTRIBUTION OF PRIME NUMBERS:- Chebyshev's function $\psi(x)$ and $\theta(x)$ - Relations connection $\theta(x)$ and $\pi(x)$ - some equivalent forms of the prime number theorem — Inequalities of $\pi(n)$ and P_n — Shapiro's Tauberian theorem — Application of Shapiro's theorem — An asymptotic formula for the partial sums $\sum p_n \leq (1/p)$ - the partial sums of the mobius function.

UNIT 5:

CONGRUENCES:- Definition and basic properties of congruence's — Residue classes complete residue systems — Linear congruence's — Reduced revised systems — Ruler Fernet's Theorem — Polynomial congruence's module Lagranges theorem — Applications of Lagrange's Theorem — Chinese Remainder theorem.

Introduction to Analytic Number Theory by Tom. M.Apostal

For Unit 1 - Chapter 1

For Unit 1 - Chapter 2

For Unit 1 - Chapter 3

For Unit 1 - Chapter 4 Section 4,1 to 4.9 only

For Unit 1 - Chapter 5

General Reference:

1. Number theory : George E.Andrews
2. Introduction to theory of Number : G.H.I-lardy and E.M.Wright.
3. Basic Number Theory :S.B.Malilk.
4. Elements of Number Theory :S.Kumaravelu and SusheelaKumaravelu.

Learning Outcomes:

On satisfying the requirements of this course, students will have the knowledge and skills to:

- ✓ Solve problems in elementary number theory
- ✓ Apply elementary number theory to cryptography
- ✓ Develop a deeper conceptual understanding of the theoretical basis of number theory and cryptography
- ✓ Define and interpret the concepts of divisibility, congruence, greatest common divisor, prime, and prime-factorization,

Core VI - NUMERICAL ANALYSIS

Course code	Course Title	L	T	P	C
20112AEC34	Core – VI Numerical Analysis	4	0	0	3

Objectives:

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems, Numerical differentiation and integration interpolation with equal & unequal intervals are concentrated.

UNIT 1:

Solutions of Algebraic and transcendental equation iterative method, Bisection method-Aitken's process Method of False Position-Newton-Raphson methods.

UNIT II:

Finite differences-Forward differences backward differences Central differences symbolic relations-Newton's formula for interpolation. Interpolation with unevenly spaced points Lagrange's interpolation formula-divided differences and their properties Newton's General interpolation formula.

UNIT III: Numerical differentiation and integration

Numerical differentiation — integration — Trapezoidal rule and Simpson's rule.

UNIT IV: Solution of Linear systems Gaussian Elimination method — Iterative methods Jacobi and Gauss seidal Methods.

UNIT V:

Numerical solution of Ordinary -Differential Equations. Solution by Taylor's series - Picard's method of successive approximations -Euler method

Modifies Euler's method -RungeKutta methods -Predictor Corrector methods -

Adams method and Mines method.

Text Book

Numerical Methods in Science and Engineering by M.K.Venkatraman

Reference:

Introductory methods of Numerical Analysis By S.S. Sastry- Prentice Hall of India Pvt. Ltd.

Chapters:2. 2.1 to 2.5

3.3.1,3.3,3.6,3.9, 3.9.1,3.10,3.10.1

4. 4.2, 4.4, 4.4.1, 4.4.2

5. 5,4

6. 6.1 to 6.5 and 6.6.1 and 6.6.2

Learning Outcomes:

- Solving problems in algebraic and transcended equations
- Understand about finite differences
- Students develop and analyze numerical tech

- Applying Various numerical methods to solve the ordinary differential equations
- Students gets the Research inquiry and analytical thinking abilities

Course code	Course Title	L	T	P	C
20118AEC35	Mathematical Statistics I	5	1	0	5

Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Basic Statistics, Probability, Baye's Theorem, random variables, discrete distributions, continuous functions, Bivariate Distributions, Correlation and Regression would be taught.

UNIT I:

Statistical data — Primary and Secondary data. Formation of frequency distribution Various measures of Central tendency and their merits and demerits various measures of dispersion and their merits and demerits Concept of Skewness and Kurtosis.

UNIT II:

Axiomatic Probability and classical, probability addition, multiplication and Baye's theorems, Simple problems.

UNIT III:

Concept of random variable—discrete and continuous distribution function, probability mass function, probability density function — their properties — mathematical expectation — moment generating function — Simple problems.

UNIT IV :

Bivariate distribution - discrete and continuous, marginal and conditional distribution Statistical independence, Conditional expectation.

UNIT V:

Correlation — Rank Correlation, Karl Pearson's Correlation coefficient and its properties Linear Regression and its properties — Concept of multiple and partial correlation for three variables only.

Text Book:

1. Fundamentals of Mathematical Statistics — S.C.Gupta and V.K.Kapoor, Sultan Chand & Sons, New Delhi.

Reference:

1. Fundamentals of Applied Statistics — S.C.Gupta and V.K.Kapoor. Sultan Chand & Sons.
2. Elementry Statistical Methods – S.P.Gupta, Sultan Chand & Sons, New Delhi.

Learning outcomes

By the end of this course, you should:

- Students gets the methodology for the planning and execution for any scientific enquiry
- Students learning statistical techniques and statistical data
- Understand the concept of random variables
- Understand the concept of Bivariate Distribution..
- A knowledge of constructions and uses correlation and regression.

Course code	Course Title	L	T	P	C
20118AEC36L	Mathematical Statistics – I lab	0	0	3	2

Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course random variables, discrete distributions, continuous distributions would be taught.

List of Practical's

1. Measures of Central tendencies and measures of dispersion.
2. Moments.
3. Skewness and Kurtosis.
4. Fitting of binomial distribution.
5. Fitting of Poisson distribution.
6. Fitting of Normal distribution.
7. Correlation for Discrete Variables.
8. Correlation for Continuous Variables.
9. Rank Correlation.
10. Regression for Discrete Variables.
11. Regression for Continuous Variables.
12. Index Numbers.

Learning outcomes

By the end of this course, you should:

- Students learned statistical techniques and statistical data.
- Understand the concept of various distributions.
- Understand the concept of Correlation and Regression.
- Study of Index Numbers.

RESEARCH METHODOLOGY

Course code	Course Title	L	T	P	C
20112RMC37	Research Methodology	2	0	0	2

UNIT I

Research – Definition, Objectives, Motivation and purpose – types of research – Pure and applied, survey, case study experimental, exploratory – Concept of Research Design – Criteria of Good Research, Problems Encountered by Researchers in India. General guidelines for Good housekeeping & Lab-safety- Hygiene (Eye, foot, skin and hand protection) – Safety rules -Equipment protection – Respiratory protective equipment – safety equipment – Leaking, compressed gas cylinders – electrical safety. Fire – extinguishers.

UNIT II

Research Problem: Definition & need of research problem, Types & selection of proper research question and suitable research design with Examples, Literature types- compendia and tables of information, Reviews, General treatises, Monographs.

UNIT III

Methods of data collection – Primary and secondary data – observation – interview – Questionnaire – Tools for questionnaire; surveying & literature survey, spreadsheets, Technical writing, Construction of tools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, Practical Exercises.

UNIT IV

Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis – descriptive statistics – elements of processing through computer-packages for analysis (Excel).

UNIT V

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Technical Presentation

OFFICE AUTOMATION

Course Code	Course Title	L	T	P	C
201ACLSOAN	OFFICE AUTOMATION	-	-	-	2

Course Objective:

To provide an in-depth training in use of office automation, internet and internet tools. The course also helps the candidates to get acquainted with IT.

Course Outcomes:

After completion of the course, students would be able to documents, spreadsheets, make small presentations and would be acquainted with internet.

Unit I

Knowing the basics of Computers

Unit II

Word Processing (MS word)

Unit III

Spread Sheet (MS XL)

Unit IV

Presentation (MS Power Point)

Unit V

Communicating with Internet

Reference Books:

1. Fundamentals of computers - V.Rajaraman - Prentice- Hall of india

தமிழ் இலக்கியப் பங்களிப்புகள்- கவிதை, தந்திரம்

பல. குடியாடு :தமிழ்.

தமிழ்நாடு இலக்கியப் பங்களிப்புகள்

கவிதை , கவிதை இலக்கியம், தந்திர இலக்கியம் , கவிதை , இலக்கிய வரலாறு

பகுதி . 1 : பங்களிப்புகள் இலக்கியம் - தந்திரம்;

1. கவிதை - கவிதை இலக்கியம் - பல. எண் . 11
2. தந்திரம் - கவிதை இலக்கியம் - பல. எண் . 64
3. பங்களிப்புகள் - கவிதை இலக்கியம் - பல. எண் .142
4. பங்களிப்புகள் - தந்திரம் இலக்கியம் - பல. எண் . 29
5. கவிதை - கவிதை இலக்கியம் - பல. எண் . 70

பங்களிப்புகள் இலக்கியம் குறிப்புகள்

1. தந்திரம் - கவிதை இலக்கியம் - பல. எண் .1
2. பங்களிப்புகள் - கவிதை இலக்கியம் - பல. எண் .167
3. கவிதை - கவிதை இலக்கியம் - பல. எண் . 181
4. கவிதை - கவிதை இலக்கியம் - பல. எண் . 290
5. பங்களிப்புகள் - கவிதை இலக்கியம் - பல. எண் . 347

பங்களிப்புகள் இலக்கியம் குறிப்புகள்

1. கவிதை - கவிதை இலக்கியம் - பல. எண் .1
2. கவிதை - கவிதை இலக்கியம் - பல. எண் .167
3. கவிதை - கவிதை இலக்கியம் - பல. எண் . 181
4. கவிதை - கவிதை இலக்கியம் - பல. எண் . 290
5. பங்களிப்புகள் - கவிதை இலக்கியம் - பல. எண் . 347

பகுதி . 2 : கவிதை இலக்கியம்

1. பங்களிப்புகள் - பல. எண் . 2
2. தந்திரம் - பல. எண் . 37

Course Code	Course Title	L	T	P	C
20111AEC41	Advanced English-IV	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

Outcome:

- Develop writing skill
- Comprehend and describe poems
- Learn interviewing skills

UNIT –I

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation –Presentation– Type of questions – Answering techniques.

UNIT – II

Flowchart

Proposals

UNIT – III

Discourse markers

Review

UNIT IV

Grammatical forms

Paraphrasing

UNIT –V

Definition

Writing for and against a topic.

Wren & Martin	English Grammar & Composition	2009	S.Chand

Course Code	Course Title	L	T	P	C
20111AEC42	English-IV	4	0	0	2

Aim:

- To learn English through literature

Objective:

- To explore learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

Outcome:

- Improve their ability to read and understand them
- Know the genius of Shakespeare
- Express one's views in writing

UNIT –I

My Last Duchess -Robert Browning

The Toys -Coventry Patmore

I, too -Langston Hughes

UNIT –II

How to be a Doctor -Stephen Leacock

My Visions for India -A.P.J. Abdul Kalam

Woman, not the weaker sex -M.K. Gandhi

UNIT –III

The Best Investment I ever made-A.J.Cronin

The Verger -W.S Maugham

A Willing Slave -R.K.Narayan

UNIT –IV

Macbeth

As You Like It

UNIT –V

Henry IV

Tempest

Core VIII- OPERATIONS RESEARCH

Course code	Course Title	L	T	P	C
20112SEC43	Core –VIII Operations Research	4	0	0	3

Objectives:

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

UNIT 1:

Introduction to operations Research — Elementary treatment of linear programming simplex Method $<, =, >$, $=$ constraints.

UNIT 2:

Application to Transportation problem - Transportation Algorithm - Degeneracy in Transportation problem, unbalanced transportation problem, Assignment problem - The assignment algorithm - unbalanced assignment problem.

UNIT 3:

PERT and CPM network — critical and sub critical jobs — Determining the critical path.

Network calculation PERT networks probability aspect of PERT — PERT time — PERT cost (omitting Crashing)

UNIT 4:

Sequencing problem: Processing of n jobs through 2 machines - processing n jobs through 3 machines - processing 2 jobs through m machine

Games Theory: Characteristics of games — Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving 2×2 games.

UNIT 5:

Inventory Theory--Variables in an Inventory problem Techniques of Inventory Control with known demand.

1. Purchasing model with no shortage. 2.. Purchasing model with shortages.
3. Manufacturing model with no shortages, 4. Manufacturing model with shortage.

5. Technique of Inventory Control with uncertain demand. 6. Buffer stock of safety stock model

[In all the units Application of the concept only. No book work]

Reference :

1. Operations Research by Kantiswarup, P.K. Gupta and Manmohan.
2. Resource Management Techniques (Operations Research) V.Sundaresan, K.S. Ganapathy Subramanian, K. Ganesan.
3. Operations Research Methods and Applications, P.Mariappan

Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory
- Students gets the knowledge about inventory theory

Core IX- ASTRONOMY

Course code	Course Title		L	T	P	C
20112AEC44	Core – IX Astronomy		4	0	0	3

Objectives

Knowledge and understanding about celestial objects . Apply scientific reasoning to future astronomical discoveries to understand their validity as well as to everyday situations..Discuss the astronomical refraction zones of Earth, phases of Moon, seasonal Variations, Kepler’s law of motion, anomalies, eclipses.

UNIT-I:

Relevant properties of a sphere & relevant formulae for spherical trigonometry (all without proof) -Celestial sphere -Diurnal motion

UNIT-II:

Earth- Dip of the horizon-Twilight- Astronomical refraction- Tangent& Cosines Formula- Properties & simple problems applying them

UNIT-III:

Keplar’s laws of planetary motion (statement only) -Newton’s deductions from them -Three anomalies of the Earth and relation between them .

UNIT-IV:

Time: Equation of time – Seasons - Years and calendar – Conversion of time - Geocentric parallax - Heliocentric parallax- Aberration of light -simple problems in the above

UNIT-V:

Moon(except Moon’s liberations)-Motions of planet(assume that orbits are circular- Eclipses

Reference

(1) S. Kumaravelu and Prof. SusheelaKumaravelu, Astronomy, SKV Publications,2004

UNIT-I — Chapter1&2

UNIT-II — Chapter 3 Section 1,2,5,6 & Chapter 4

UNIT-III — Chapter 6

UNIT-IV — Chapter 7, Chapter 8 Section 190 - 193 & Chapter 9

UNIT—V—Chapter12,13&14

Reference(s)

[1] J V.Thiruvengkatacharya, A Text Book of Astronomy, S. Chand and Co., Pvt Ltd., 1972

Learning outcomes

By the end of this course, you should:

- **Understand about celestial objects**
- Knowledge about Eclipses
- Different zones of Earth
- Astronomical refraction
- Different phases of Moon

Course code	Course Title	L	T	P	C
20118AEC46	Mathematical Statistics II	5	1	0	5

Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course Central Limit Theorem, Discrete and Continuous Distributions, Small and Large Sampling would be taught.

UNIT I:

Tchebychev's inequality and weak law of large numbers — Simple form of central limit theorem for i.i.d random variables.

UNIT II:

Binomial, Poisson, Negative binomial, geometric distribution — Constants, moment generating function, Cumulant generating function.

UNIT III:

Continuous distribution — rectangular, exponential, beta, gamma distributions, Normal Distributions.

UNIT IV:

Test of Hypothesis—Null and alternative hypothesis(Concept only) One tail and two tail tests, tests of significance based on normal and t distribution for mean, simple correlation and properties.

UNIT V:

Test of significance based on chi square and F distributions for variance, test for goodness of fit and independence of attributes Analysis of variance — One way and two — way classifications with simple problems.

Text Book:

1. Fundamentals of Mathematical Statistics — S.C.Gupta and V.K.Kapoor, Sultan Chand & Sons, New Delhi.

Reference:

1. Fundamentals of Applied Statistics — S.C.Gupta and V.K.Kapoor. Sultan Chand & Sons.
2. Elementry Statistical Methods – S.P.Gupta, Sultan Chand & Sons, New Delhi.

Learning outcomes

By the end of this course, you should:

- Understand the concept of Tchebychev's inequality and Applications of Central Limit Theorem.
- Understand the concept of Bivariate Distribution.
- A knowledge of test of significance based on parametric and non – parametric test.
- Understood the concept of sampling theory.
- Learned the concept of chi square, F-Test and ANOVA.

Course code	Course Title	L	T	P	C
20118AEC47L	Mathematical Statistics – II lab	0	0	3	2

Objectives:

Statistics provides the methodology for the planning and execution for any scientific enquiry, which has been accepted as a valid tool in this content. In this course, chi-square distribution, sampling distributions and analysis of variance would be taught.

List of Practical's

1. Goodness of fit. (Chi-square Test).
2. Attributes, Contingency table.
3. Large sample tests. Type I.
4. Large sample tests. Type II.
5. Large sample tests. Type III.
6. Large sample tests. Type IV.
7. t — tests.
8. Variance tests. (F-Test)
9. ANOVA.
10. Design of Experiments.

Learning outcomes

By the end of this course, you should:

- A knowledge of test of significance based on parametric and non – parametric test.
- Knowledge of Small and Large Sampling Tests.
- Design/development of solutions.

ENVIRONMENTAL STUDIES

(for under graduate students)

Course code	Course Title	L	T	P	C
201ENSTU45	Environmental Studies	2	0	0	2

Objectives:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

2. Nature of Environmental Studies

Definition, scope and importance.
 Multidisciplinary nature of environmental studies
 Need for public awareness.

3. Natural Resources and Associated Problems.

- a) Forest resources: Use and over -exploitation, deforestation, dams and their effects on forests and tribal people.
- b) Water resources: Use and over -utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
- c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer -pesticide problems.
- e) Energy resources: Growing energy needs, renewable and non -renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification,

Role of an individuals in conservation of natural resources.

4. Ecosystems

Concept of an ecosystem.
 Structure and function of an ecosystem.
 Producers, consumers and decomposers.
 Energy flow in the ecosystem.
 Ecological succession.
 Food chains, food webs and ecological pyramids.
 Introduction, types, characteristics features, structure and function of the following ecosystem:
 a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
 d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

4. Biodiversity and its conservation

Introduction -Definition: genetic, species and ecosystem diversity.

Bio -geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega -diversity nation.

Western Ghat as a biodiversity region.

Hot— spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man -wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In -situ and Ex -situ conservation of biodiversity.

5. Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes.

Role of a individual in prevention of pollution.

6. Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.

Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

Learning Outcomes:

Students who graduate with a major in environmental science will be able to:

1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
4. Apply their ecological knowledge to illustrate and graph a problem and
5. describe the realities that managers face when dealing with complex issues; and
6. Understand how politics and management have ecological consequences.

Course code	Course Title	L	T	P	C
201ACLSLMS	Leadership and Management Skills	-	-	-	2

Course Objectives :

The Module is designed to:

- Help students to develop essential skills to influence and motivate others
- Inculcate emotional and social intelligence and integrative thinking for effective leadership
- Create and maintain an effective and motivated team to work for the society
- Nurture a creative and entrepreneurial mindset
- Make students understand the personal values and apply ethical principles in professional and social contexts.

Course Outcomes :

Upon completion of the course students will be able to:

1. Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
2. Learn and demonstrate a set of practical skills such as time management, self management, handling conflicts, team leadership, etc.
3. Understand the basics of entrepreneurship and develop business plans
4. Apply the design thinking approach for leadership
5. Appreciate the importance of ethics and moral values for making of a balanced personality.

Unit I-Leadership Skills

Understanding Leadership and its Importance

- What is leadership?
- Why Leadership required?
- Whom do you consider as an ideal leader?

b. Traits and Models of Leadership

- Are leaders born or made?
- Key characteristics of an effective leader
- Leadership styles
- Perspectives of different leaders

c. Basic Leadership Skills

- Motivation
- Teamwork
- Negotiation
- Networking

Unit II--Managerial Skills

a. Basic Managerial Skills

- Planning for effective management
- How to organize teams?
- Recruiting and retaining talent
- Delegation of tasks
- Learn to coordinate
- Conflict management

b. Self Management Skills

- Understanding self concept
- Developing self-awareness
- Self-examination
- Self-regulation

Unit III--Entrepreneurial Skills

a. Basics of Entrepreneurship

- Meaning of entrepreneurship
- Classification and types of entrepreneurship
- Traits and competencies of entrepreneur

b. Creating Business Plan

- Problem identification and idea generation
- Idea validation
- Pitch making

Unit IV - Innovative Leadership and Design Thinking

a. Innovative Leadership

- Concept of emotional and social intelligence
- Synthesis of human and artificial intelligence
- Why does culture matter for today's global leaders

b. Design Thinking

- What is design thinking?
- Key elements of design thinking:
 - Discovery
 - Interpretation

- Ideation
- Experimentation
- Evolution.

- How to transform challenges into opportunities?
- How to develop human-centric solutions for creating social good?

Unit V- Ethics and Integrity

a. Learning through Biographies

- What makes an individual great?
- Understanding the persona of a leader for deriving holistic inspiration
- Drawing insights for leadership
- How leaders sail through difficult situations?

b. Ethics and Conduct

- Importance of ethics
- Ethical decision-making
- Personal and professional moral codes of conduct
- Creating a harmonious life

Course code	Course Title	L	T	P	C
20112AEC51	Core-X- Modern Algebra	5	0	0	4

SEMESTER – V

Core X. MODERN ALGEBRA

Objectives:

Algebraic structures like Groups, Rings, Vector spaces are studied. The existence of subgroups of given order and the number of such subgroups are studied. The properties of Euclidean rings are discussed. Vector spaces and its properties which will be useful in the study of Field Theory are exposed. Finally, Lattices and their types and finite Boolean algebras are introduced.

UNIT 1:

Permutation Groups - Sub Groups — Cosets and Lagrange's theorem

UNIT II:

Normal subgroups - Quotient groups. -Homeomorphisms -Isomorphism

UNIT III:

RING THEORY:

Definition and Examples of Rings — Some special Classes of Rings — Homomorphisms - Ideals and Quotient Rings — More ideals and Quotient Rings — Euclidean Rings.

UNIT IV:

VECTORS SPACE:

Elementary Basic concepts — Linear independence and Bases and spaces - Inner product spaces

UNIT V:

VECTOR SPACE:

Rank and Nullity-Matrix of a linear transformation

INNER PRODUCT SPACES:

Introduction-Definitions and examples-Orthogonality-Orthogonal Complement

Text Books:

“TOPIC IN ALGEBRA” by Arumugam . S and Isaac. A.T (Second edition)

For UNIT 1 - .Chapter 3: Section 3.4 to 3.8

For UNIT 2 - Chapter 3: Section 3.9 to 3.11

For UNIT 3 - Chapter 4: Section 4.1 to 4.14

For UNIT 4 - Chapter 5: Section 5.0 to 5.6

For UNIT 5 - Chapter 5: Section 5.7 to 5.8 , Chapter 6 section 6.0 to 6.3

General References

1. Modern Algebra: A.R. Vasistha
2. Modern Algebra : Dr. S. Arumugam.

Learning outcomes

By the end of this course, you should:

- Knowledge and understand about Algebraic structures like Groups, Rings, Vector spaces
- Understood about Morphisms
- Skillness in Linear dep. , in- dep. and bases problems

Core XI - REAL ANALYSIS

Course code	Course Title	L	T	P	C
20112AEC52	Core –XI- Real Analysis	5	1	0	4

Objectives:

This paper is intended to cover all elementary topics in Real analysis such as sequence of real numbers, series of real numbers, continuous functions, connectedness, completeness and compactness. This paper is essential for studying Riemann integrals, fundamental theorem of calculus and improper integrals. This enhances the mathematical maturity of the students.

UNIT I: BASIC TOPOLOGY:-

Finite, countable and uncountable sets - Metric spaces - Compact spaces - Perfect sets - Connected sets.

UNIT II: NUMERICAL SEQUENCES AND SERIES:-

Convergent sequences - Subsequence's - Cauchy Sequences - Upper and Lower limits - some special sequences - Series - Series of Non negative Terms - The Number E - The Root and Ratio Tests - Power series - Summation by parts - Absolute convergence - Addition and Multiplication of series.

UNIT III: CONTINUITY:-

Limits of functions - continuous functions - Continuity and compactness - Continuity and connectedness - Discontinuity - Monotonic functions - Infinite limits and limits at infinity.

UNIT IV: DIFFERENTIATION:-

The derivative of a Real function - Mean value theorems - The continuity of Derivatives - L'Hospital's Rule - Derivatives of Higher order - Taylor's theorem.

UNIT V:

THE RIEMANN- INTEGRALS:- Definition and Existence of the Integral — Properties of the Integral — Integration and Differentiation.

Reference:

Principles of Mathematical Analysis by Walter Rudin, MC Graw Hill.

For UNIT I - Chapter-2

For UNIT II - Chapter-3 (section 3.1 to 3.50)

For UNIT III - Chapter-4

For UNIT IV - Chapter-5

For UNIT V - Chapter-6

General References:

1. Real Analysis : Bartle and Schuhest.
2. Real Analysis : Albert smith E.H.

Learning outcomes

By the end of this course, you should

- Knowledge about Connectedness, completeness and compactness
- Understanding the Riemann integrals, fundamental theorem of calculus
- Analyses the problem and finding the solution

Core XII - STATICS

Course code	Course Title	L	T	P	C
20112SEC53	Core – XII – Statics	5	1	0	4

Course Objectives:

Develop an understanding of the principles of statics, and the ability to analyze problems in a systematic and logical manner, including the ability to draw free-body diagrams.

UNIT-1

Forces and equilibrium –Forces-Resultant of two forces-Three forces related to a triangle –Equilibrium of a particle under three or more forces.

UNIT-II

Forces on a rigid body –Moment –Equivalent systems of forces-Parallel forces varignon's theorem – Forces along a triangle-Couples –Equilibrium of a rigid body under three coplanar forces –Reduction of coplanar forces into a force and a couple.

UNIT –III

Friction –Laws of friction-Coefficient of friction, angle and cone of Friction-Limiting equilibrium of a particle on a rough inclined plane, Tilting of a body Simple problems.

UNIT-IV

Virtual work-principle of virtual work-applied to a body or a system of bodies in equilibrium-Equation of virtual work-Simple problems.

UNIT-V

String –Equilibrium of string under gravity –common catenary-suspension bridge.

Reference:

(1)P.DURAI PANDIAN, Mechanics(vector treatment),S.chand&co.june 1997

UNIT-I chapter 2& chap 3 section 3.1

UNIT-II chapter 4 sec 4.1,4.3 to 4.9 & chap 5 sec 5.1

UNIT –III chap 2 sec 2.1,chap 3 sec 3.2,chap 5 sec 5.2

UNIT-IV chapter 8 ,UNIT-V chapter 9

Reference:

(2)A.V.Dharmapadham, Statics, S.Viswanathan publishers Pvt Ltd.,1979

(3)S.L.Lony ,Elements of Statics and Dynamics, part-1,A.I.T.Publishers,1991

Course Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. An ability to construct free-body diagrams and to calculate the reactions necessary to ensure static equilibrium.
2. An understanding of the analysis of couples and friction.

Core-XIII- PROGRAMMING in C++

Course code	Course Title	L	T	P	C
20112SEC54	Core-XIII- Programming in C++	5	0	0	3

Objectives

- Utilize Object Oriented techniques to design C++ programs.
- Use the standard C++ library.
- Exploit advanced C++ techniques

UNIT 1: Principles of OOP — Software evolution — OOP paradigm — basic Concepts of OOP's — Object oriented languages — applications of OOP (Chapter 1)

UNIT 2: Introduction of C++ - tokens, keywords, identifiers, variables, operators, manipulators, expression and control structures in C++ - main function in function prototyping — call by reference — return by reference — function overloading and virtual functions (Chapter 2,3 &4)

UNIT 3: Classes and objects - Constructors and destructors — operator overloading and type conversions, (Chapter 5, 6 &7)

UNIT 4: Inheritance — single inheritance — multilevel inheritance —multiple inheritances — hybrid inheritance. (Chapter 8)

UNIT 5: Pointer — virtual functions and polymorphism — managing console I/O operations (Chapter 9 & 10)

Text Book

Object oriented programming with C++ by E. Balagurusamy, 2e, Tarn. McGraw Hill publishing Co. Ltd., New Delhi.

Reference

1. C++ The Complete Reference by HerbeitSchildt.
2. OOP's with C++ from the foundation by N.R. Parsa, Dream Tech Press India Pvt. Ltd., New Delhi.

Learning Outcomes:

At the end of the course, the students should be able to:

- Able to understand and design the solution to a problem using object-oriented programming concepts.

- Able to reuse the code with extensible Class types, User-defined operators and function Overloading
- Understand functions and parameter passing.
- Understand object-oriented design and programming
- Understand dynamic memory allocation and pointers

Elective 1- FUZZY ANALYSIS

Course code	Course Title	L	T	P	C
20112DSC55A	Elective Paper – I Fuzzy Analysis	5	0	0	3

Objectives

Humans have a remarkable capability to reason and make decisions in an environment of uncertainty, imprecision, incompleteness of information, and partiality of knowledge, truth and class membership. The principal objective of **fuzzy logic** is formalization/mechanization of this capability.

UNIT I:

Fuzzy sets-basic types-basic concepts- α cuts-additional properties of α cuts-extension principle for fuzzy sets.

UNIT II:

Operation on fuzzy sets-types of operations- fuzzy complements-t-norms- fuzzy unions-combinations of operations.

UNIT III:

Fuzzy Arithmetic - Fuzzy numbers-Arithmetic operations on intervals Arithmetic operations on fuzzy numbers.

UNIT IV:

Fuzzy relations-Binary fuzzy relation-fuzzy equivalence relation-fuzzy compatibility relation-fuzzy ordering relations-fuzzy morphism.

UNIT V:

Fuzzy relation equation-general discussion-problem partitioning-solution method-fuzzy relation equations based on \sup_i compositions-fuzzy relation equations based on w_i compositions.

Reference

FUZZY SETS AND FUZZY LOGIC

J.KLIR AND BOYUAN.

PNI,NEWDELHI,2004.

Learning outcomes

By the end of this course, you should,

- Be able to get the knowledge and understand Classical Sets vs Fuzzy Sets (FS) – Types of FS – Operations on FS
- Be able to get the knowledge and understand Zadeh's Extension Principle
- Be able to get the knowledge and understand Fuzzy Relations – Fuzzy Relational Equations – Possibility Theory :
- Be able to get the knowledge and understand Fuzzy Measures. Fuzzy relation equations based on \sup_i compositions-fuzzy relation equations based on w_i compositions.

ELECTIVE - I - FORMAL LANGUAGES AND AUTOMATA THEORY

Course code	Course Title	L	T	P	C
20112DSC55B	Elective Paper-I-Formal Languages and Automata Theory	5	0	0	3

Objectives

1. The course aims to develop an appreciation of the theoretical foundations of computer science through study of mathematical and abstract models of computers and the theory of formal languages.
2. Theory of formal languages and use of various abstract machines as ‘recognizers’ and parsing will be studied for identifying the synthetic characteristics of programming languages.
3. To understand the fundamental models of computation that underlies modern computer hardware, software, and programming languages.
4. Explain computational thinking

Learn the foundations of automata theory, computability theory.

5. Discuss the applications of theory to other areas of computer science such as algorithms, programming languages, compilers, natural language translation, operating systems, and software verification.

UNIT I : The Theory of Automata — definition of an Automaton — Description of a finite Automaton — Transition system — properties of transition function — Acceptability of a string by a finite Automaton — Non deterministic finite state machine — the equivalence of DFA and NDFA — Mealy and Moore models — minimization of finite Automata.

UNIT II: Formal language — basic definition and examples — Chomsky classification of languages — language and their relation — recursive and recursively enumerable sets — operations on languages — languages and Automata.

UNIT III: Regular sets and regular grammars — regular expressions — finite Automaton and regular expressions — Pumping lemma for regular sets — application of pumping lemma.

UNIT IV: Context — free languages — context — free languages and derivation Trees — Ambiguity in context — free grammars — Simplification of context — free grammars — normal forms for context — free grammars.

UNIT V : Push Down Automata — basic definitions — Acceptance by PDA — Push Down Automata and context — free languages — parsing and Push down Automata.

Reference

K.L.P. Mishra and N. Chandrasekaran, “**Theory of Computer Science**”,
(Automata, languages and computation) — Prentice Hall of India private 2: limited — New Delhi, 3.

UNIT I : CHAPTER 2: (2.1 to 2.9)

UNIT II : CHAPTER 3: (section 3.1 to 3.6)

UNIT III : CHAPTER 4 : (section 4.1 to 4.4)

UNIT IV : CHAPTER 5: (section 5.1 to 3.4)

UNIT V : CHAPTER 6 : (section 6.1 to 6.4)

Learning outcomes

By the end of this course you should be able ,

- Design deterministic and non-deterministic machines.
- Design the pushdown automata.
- Comprehend the hierarchy of problems arising in the computer sciences.
- The Student will get an idea for designing Compiler Design.
- The students will get knowledge about regular expressions and computability theory
- Acquire a fundamental understanding of the core concepts in automata theory and formal languages.
- An ability to design grammars and automata (recognizers) for different language classes.
- An ability to identify formal language classes and prove language membership properties.
- An ability to prove and disprove theorems establishing key properties of formal languages and automata.

PROFESSIONAL SKILLS

Course Code	Course Title	L	T	P	C
201ACLSPSL	Professional Skills	-	-	-	2

The Course Professional Skills is divided into two parts:

- a) CareerSkills
- b) Team Skills

A. Career Skills

Course Objectives :

The Objectives of the course are to help students/candidates:

1. Acquire career skills and fully pursue to partake in a successful career path
2. Prepare good resume, prepare for interviews and group discussions
3. Explore desired career opportunities in the employment market in consideration of an individual SWOT.

Course Outcomes :

At the end of this course the students will be able to:

1. Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax
2. Participate in a simulated interview
3. Actively participate in group discussions towards gainful employment
4. Capture a self - interview simulation video regarding the job role concerned
5. Enlist the common errors generally made by candidates in an interview
6. Perform appropriately and effectively in group discussions
7. Explore sources (online/offline) of career opportunities
8. Identify career opportunities in consideration of their own potential and aspirations
9. Use the necessary components required to prepare for a career in an identified occupation (as a case study).

Unit I: Resume Skills

i. Resume Skills : Preparation and Presentation

- Introduction of resume and its importance
- Difference between a CV, Resume and Bio data
- Essential components of a good resume

ii. Resume skills : common errors

- Common errors people generally make in preparing their resume
- Prepare a good resume of her/his considering all essential components

Unit II: Interview Skills

5Hours

i. Interview Skills : Preparation and Presentation

- Meaning and types of interview (F2F, telephonic, video, etc.)
- Dress Code, Background Research, Do's and Don'ts
- Situation, Task, Approach and Response(STAR Approach)for facing an interview
- Interview procedure (opening, listening skills, closure, etc.)
- Important questions generally asked in a job interview(open and closed ended questions)

ii. Interview Skills : Simulation

- Observation of exemplary interviews
- Comment critically on simulated interviews

iii. Interview Skills : Common Errors

- Discuss the common errors generally candidates make in interview
- Demonstrate an ideal interview

Unit III: Group Discussion Skills

- Meaning and methods of Group Discussion
- Procedure of Group Discussion
- Group Discussion-Simulation
- Group Discussion - Common Errors

Unit IV: Exploring Career Opportunities

- Knowing yourself – personal characteristics
- Knowledge about the world of work, requirements of jobs including self-employment.
- Sources of career information
- Preparing for a career based on their potentials and availability of opportunities

Reference

- Foundation Skills In IT (FSIT) -Refer the websites like <https://www.sscnasscom.com/Ssc-projects/capacity-building-and-development/training/fsit/and>
- GlobalBusinessFoundationSkills (GBFS)–Referwebsiteslike<https://www.sscnasscom.Com/ssc-projects/capacity-building-and-development/training>

B. Team Skills

Course Objectives:

The objectives of the course are to make learners:

1. Understand the significance of Team Skills and help them in acquiring them
2. To help them design, develop and adapt to situations as an individual and as a team.

Course Outcomes:

By the end of this course the learners/candidates will be able to:

1. Use common technology messaging tools that are used in enterprises for flow of information and transition from command and control to informal communication during an online/offline team session
2. Actively use and operate online team communication tools: Webinar, Skype, Zoom, Google hangout etc
3. Appreciate and demonstrate Team Skills
4. Participate in a digital lifestyle conversant with computers, applications, Internet and nuances of cyber security
5. Explore (online) and identify career opportunities in consideration of their own potential and aspirations.
6. Discuss and articulate the key requirements of an entrepreneurial exercise
7. Empathize and trust colleagues for improving interpersonal relations
8. Engage in effective communication by respecting diversity and embracing good listening skills
9. Distinguish the guiding principles for communication in a diverse, smaller internal world
10. Practice interpersonal skills for better relations with seniors, juniors, peers and stakeholders
11. Project a good personal image and social etiquette so as to have a positive impact on building of one's chosen career
12. Generate, share and maximise new ideas with the concept of brainstorming and the documentation of key critical ideas/thoughts articulated and action points to be implemented with timelines in a team discussion (as MOM) in identified applicable templates.

SEMESTER –VI

Core XIV - COMPLEX ANALYSIS

Course code	Course Title	L	T	P	C
20112AEC61	Core – XIV-Complex Analysis	5	0	0	3

Objectives:

This paper is an introduction to the theory of analytic functions of one complex variable. Properties of analytic functions, results on linear transformations, problems on complex integration are discussed. Calculus of residues are also studied.

UNIT — I: Analytic Functions:

Functions of complex variables-Limits theorems on limits-continuous functions functions-Differentiability-C.R. Equations-Analytic Functions Harmonic functions (section 2. 1 to 2.8)

UNIT — 2: Bilinear Transformations:

Elementary transformations-Bilinear Transformations-cross ratio-fixed points of bilinear transformations-Some special bilinear transformations. (Section 3. 1 to 3.5)

UNIT —3: Complex Integration:

Definite Integral-Cauchy's Theorem-Cauchy's integral formula-Higher derivations (Section 6.1 to 6.4)

UNIT — 4: Series Expansions:

Taylor's series-Laurent series-Zeros of analytic functions-Singularities (Section 7.1 to 7.4)

UNIT— 5: Calculus of residues:

Residues- Cauchy's Residue theorem — Evaluation of definite integrals (Section 8. 1 to 8.3)

Reference:

1. Complex Analysis by T.K. Manikavasakam Pillai & Others Ananda Book Depot. Madras.
2. Functions of Complex Variable by E.G. Philips.
3. Complex Variable by Dr. P.P. Gupta KedarNath Ram Nath Meerut — Delhi.
4. Functions of Complex Variable by J.N. Sharma Krishna PrakashanMandir Meerut.

Learning outcomes

By the end of this course you should be able

- Represent complex numbers algebraically and geometrically,
- Define and analyze limits and continuity for complex functions as well as consequences of continuity,
- Apply the concept and consequences of analyticity and the Cauchy-Riemann equations and of results on harmonic and entire functions including the fundamental theorem of algebra,
- Analyze sequences and series of analytic functions and types of convergence,
- Evaluate complex contour integrals directly and by the fundamental theorem, apply the Cauchy integral theorem in its various versions, and the Cauchy integral formula, and
- Represent functions as Taylor, power and Laurent series, classify singularities and poles, find residues and evaluate complex integrals using the residue theorem.

Core XV - DYNAMICS

Course code	Course Title	L	T	P	C
20112SEC62	Core –XV Dynamics	5	1	0	3

Course Objectives:

Develop an understanding of the principles of dynamics, and the ability to analyze problems in a systematic and logical manner. Ability to analyze the dynamics of particles, systems of particles and rigid bodies.

UNIT-I:

Kinematics velocity-Relative velocity-Acceleration –coplanar motion components of velocity & acceleration-Newton's laws of motion.

UNIT-II:

Simple harmonic motion-Simple pendulum-Load suspended by an elastic string-projectile-Maximum height reached, range, time of flight-projectile.

UNIT-III:

Impulsive force-conversion of linear momentum-impact of a sphere & a plane-Direct & oblique impact of two smooth sphere –kinetic energy and impulsive.

UNIT-IV:

Central orbit –central force-Differential EQUATION TO A CENTRAL ORBIT IN polar & pedal coordinates-Given the central orbit, to find the law of force-Kepler's laws of planetary motion's.

UNIT-V:

Motion of a rigid body-Moment of inertia of simple bodies-Theorem of parallel & perpendicular axes-motion in two dimension-motion of a rigid body about a fixed axis.

TEXT BOOKS:

1. P.DURAI PANDIAN, VECTOR TREATMENT AS IN MECHANICS,

Unit-I-Chapter 1 & cha 2 sec 2.1, 2.1.1

Unit-II-Cha 12 sec 12.1 to 12.3 & cha 13

Unit-III-Cha 14

Unit –IV-cha 16

Unit-V-Cha 4 sec 4.2 cha 17 & cha 18

General References:

Dynamics – Dr. K.ViswanathNaik and Dr. M.S. Kasi.

Course Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

A knowledge of internal forces and moments in members.

1. An ability to calculate centroids and moments of inertia.
2. A knowledge of kinematic and kinetic analyses and energy and momentum methods for particles and systems of particles.
3. A knowledge of kinematic and kinetic analyses and energy and momentum methods for rigid bodies.

Core XVI – DISCRETE MATHEMATICS

Course code	Course Title	L	T	P	C
20112AEC63	Core-XVI Discrete Mathematics	5	0	0	3

Objectives:

Discrete Mathematics is a bridge connecting various branches of Computer Science and Mathematics. In Discrete Mathematics, we essentially study various finite (discrete) structures of Mathematics which are essential to develop the various concepts of computer science.

UNIT 1 :

RELATIONS:

Cartesian Product of Two sets – Relations – Representation of Relation-Operations

Relations-Equivalence Relation

FUNCTIONS:

Function and Operators- One-to-One , Onto Functions-Special Types of Functions-

Invertible Functions- Compositions of Functions

UNIT 2:

LOGIC:

Introduction-TF –Statements-Connectives-Atomic and Compound Statements-Well

Formed (Statements) Formulae-Truth Table of a Formula- Tautology-Tautological

Implications and Equivalence of Formulae

UNIT 3:

LATTICES AND BOOLEAN ALGEBRA

Lattices – Some Properties of Lattices – New Lattices – Modular and Distributive

Lattices- Boolean Algebra

UNIT 4:

RECURRENCE RELATIONS AND GENERATING FUNCTIONS:

Recurrence an introduction – Polynomials and their Evaluations- Recurrence Relations-

Solution of Finite Order Homogeneous (liner) Relations-Solution of Non- homogeneous

Relations-Generating Functions-Some Common Recurrence Relations-Primitive

Recursive Functions- Recursive and Partial Recursive Functions

UNIT 5:

AUTOMATA, LANGUAGES AND COMPUTATIONS:

Introduction-Finite Automata- Definition of Finite Automaton –Representation of Finite

Automaton-Acceptability of a string by a Finite Automaton-Languages accepted by a

Finite Automaton-Non-deterministic Finite Automata- Acceptability of a String by Non-

Deterministic Finite Automata –Equivalence of FA and NFA

Text Books: Dr.M.K. Venkataraman and N. Sridharan.N.Chandrasekaran

For UNIT 1 - .Chapter 2: Section 2.1 to 2.21& Chapter 3 Section 3.1 to 3.13

For UNIT 2 - Chapter 9: Section 9.1 to 9.30

For UNIT 3 - Chapter 10: Section 10.1 to 10.34

For UNIT 4 - Chapter 5: Section 5.1 to 5.33

For UNIT 5 - Chapter 12: Section 12.1 to 12.18

Learning outcomes

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of Relations and functions
2. A knowledge of logical reasoning is used in mathematics to prove theorems, in computer science to verify the correctness of programs and to prove theorems in physical science to draw the conclusions..
3. An ability to find the solutions of Recurrence relations.
4. A knowledge of to study on ordering relations.

Elective II - GRAPH THEORY

Course code	Course Title	L	T	P	C
20112DSC64A	Elective Paper –II Graph Theory	5	0	0	3

Objectives:

Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory such as Trees, Directed graphs, Connectivity, Euler tours, Hamilton cycles, Matchings, Colourings, Planar graphs

UNIT 1: Definitions of graph — finite and infinite graphs — incidence and degree isolated and pendent vertices — isomorphism — sub graphs — walks, paths and circuits — Connected and disconnected graphs — components — Euler graphs — Operations on graphs — more on Euler graphs — Hamiltonian paths and circuits.

UNIT 2: Trees — Properties of trees — pendent vertices in a tree — distances and centers in a tree — Rooted and binary trees — Spanning trees — fundamental Circuits — Finding all spanning trees of a graph — Spanning trees in a weighted graph.

UNIT 3: Cut-sets — Properties of cut-set- All cut-sets in a graph — Fundamental circuits and cut-sets — connectivity and reparability.

UNIT 4: Planar graphs — Kuratowski's two graphs — Representation of a planar graph — Detection of planarity — Geometrical dual — Combinational dual.

UNIT 5: Matrix representation of graphs — Incidence Matrix — circuit matrix Fundamental circuit and matrix and rank of the circuit matrix — cut-set matrix — Adjacency matrix. Chromatic number — Chromatic partitioning — Chromatic polynomial. Treatment and content as in “Graph Theory with applications to engineering and computer science” by NarsingDeo, Prentice Hall of India, New Delhi.

References:

1. Invitation to graph Theory' by Dr.S. Arumugam and Dr. S. Ramachandran.
2. 'Graph Theory' — F. E-Haray, Narosa Publishing House, New Delhi — Madras - Bombay.
3. Graph Theory — S.A. Choudum, Macmillan India Limited —New Delhi — Madras.

Learning outcomes

By the end of this course, you should be able

- Knowledge in Graph Theory
- Understanding the properties of Graph Theory
- Understanding the concept of Kuratowski's graph
- Understanding Matrix representation of graphs

Elective II - MATHEMATICAL MODELLING

Course code	Course Title	L	T	P	C
20112DSC64B	Elective Paper –II Mathematical Modelling	5	0	0	3

Objectives:

Mathematical modelling can be used for a number of different reasons. How well any particular objective is achieved depends on both the state of knowledge about a system and how well the modelling is done.

1. Developing scientific understanding - through quantitative expression of current knowledge of a system.
2. Test the effect of changes in a system;
3. Aid decision making, including (i) tactical decisions by managers; (ii) strategic decisions by planners.

UNIT-I

Mathematical modeling through ordinary differential equations of first order: linear growth and decay models-nonlinear growth and decay models compartment models-dynamics problems-geometrical problems.

UNIT-II

Mathematical modeling through systems of ordinary differential equations of first order: population dynamics-epidemics-compartment models-economics-medicine. arms race, battles and international trade-dynamics.

UNIT-III

Mathematical modeling through ordinary differential equations of second order: planetary motions-circular motion and motion of satellites- Mathematical modeling through linear differential equations of second order-miscellaneous mathematical models.

UNIT-IV

Mathematical modeling through difference equations: simple models-basic theory of linear difference equations with constant coefficients-economics and finance population dynamics and genetics-probability theory.

UNIT-V

Mathematical modeling through Graphs: solutions that can be modeled through graphs-mathematical modeling in terms of directed graphs, signed graphs, weighted graphs and unoriented graphs.

Reference:

MATHEMATICAL MODELLING, J.N.KAPUR ,WILEYEASTERN LIMITED,
NEWDELHI,1988.

Learning Outcomes:

Having successfully completed this module, you will be able to demonstrate knowledge and understanding of:

- 1) The concept of mathematical modelling.
 - 2) The mathematical descriptions of some real systems.
 - 3) Correct methodology when developing mathematical models.
 - 4) Skill in applications
 - 5) Designing and developing the solutions
-

Course Code	Course Title	L	T	P	C
201ACSSIST	Interview Skills Training and Mock Test	-	-	-	2

Unit I: Presentation Skills

- Types of presentations
- Internal and external presentation
- Knowing the purpose
- Knowing the audience
- Opening and closing a presentation
- Using presentation tools
- Handling questions
- Presentation to heterogenic group
- Ways to improve presentation skills overtime

Unit II: Trust and Collaboration

- Explain the importance of trust in creating a collaborative team
- Agree to Disagree and Disagree to Agree–Spirit of Teamwork
- Understanding fear of being judged and strategies to overcome fear

Unit III: Listening as a Team Skill

- Advantages of Effective Listening

Listening as a team member and team leader. Use of active listening strategies to encourage sharing of ideas (full and undivided attention, no interruptions, no pre- think, us **Credit Distribution**

- empathy, listen to tone and voice modulation, recapitulate points, etc.).**Unit IV: Brainstorming**

- Use of group and individual brainstorming techniques to promote idea generation.
- Learning and showcasing the principles of documentation of team session outcomes

Unit V: Social and Cultural Etiquette

- Need for etiquette (impression, image, earn respect, appreciation, etc)
- Aspects of social and cultural/corporate etiquette in promoting team work
- Importance of time, place, propriety and adaptability to diverse cultures

Unit VI: Internal Communication

- Use of various channels of transmitting information including digital and physical, to team members.

COMMUNITY ENGAGEMENT

Course Code	Course Title	L	T	P	C
201ACLSCET	Community Engagement	-	-	-	2

Course Objectives:

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and there by improve quality of learning

Course Outcomes:

After completing this course, student will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and bonds of mutuality with local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

Unit I : Appreciation of Rural Society

Rural lifestyle, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of “soul of India lies in villages’ (Gandhi), rural infrastructure

Unit II : Understanding rural economy & livelihood

Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets

Unit III : Rural Institutions

Traditional rural organizations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local

administration

Unit IV : Rural Development Programmes

History of rural development in India, current national programmes: SarvaShikshaAbhiyan, BetiBachao, BetiPadhao, Ayushman Bharat, Swatchh Bharat, PM AwaasYojana, Skill India, Gram PanchayatDecentralised Planning, NRLM, MNREGA, etc.

Open Elective

Course Code	Course Title	L	T	P	C
201ENOEC	Journalism	4	0	0	2

Aim :

- To acquaint with the basic knowledge of journalism

Objective:

- To instil in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub-editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist
- Explore the different kinds of news

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

UNIT- II

News – Definition, Kinds, Elements, Sources

UNIT- III

Reporters

UNIT- IV

The Editor and the Sub-editor

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

Reference Book:-

Author	Title of the book	Edition / Year	Publisher
--------	-------------------	----------------	-----------

Susan	Journalism		
John Hogenberg	Professional Journalism	2012	
M.James Neal	News Writing and Reporting		Surjeet Publication
M.V Komath	The Journalist's Handbook		

Course code	Course Title	L	T	P	C
201MAOEC	Development of Mathematics Skills	4	0	0	2

Aim:

- To understand the concepts from the five branches of mathematics

Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

Course Code	Course Title	L	T	P	C
201PHGEC	Instrumentation	4	0	0	2

Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

- To build the strong foundation in physics of students needed for the field of Instrumentation.
- To prepare student to apply reasoning informed by the contextual knowledge to practice.
- To provide opportunity for students to work as part of teams on multi-disciplinary projects.

UNIT – I: INTRODUCTION

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges :
AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

UNIT – II: ELECTRONIC INSTRUMENTS – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

UNIT – III: ELECTRONIC INSTRUMENTS – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

Learning Outcomes:

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

Course Code	Course Title	L	T	P	C
201CEOEC	Food and Adulteration	4	0	0	2

Aim:

- To introduce students to food safety and standardization act and quality control of foods.

Objectives:

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

Outcomes:

- The students will have knowledge about different processing and preservation methods and principles involved.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types.
High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

Introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	Course Title	L	T	P	C
201CSOEC	E Learning	4	0	0	2

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop e – learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding elearning, components and models of e-learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

UNIT II CONCEPTS and DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

UNIT III APPLICATIONS

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

REFERENCE BOOKS:

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.
2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.
4. Moodle 2.0 First Look, Mary Cooch, 2010.

Course Code	Course Title	L	T	P	C
201CAOEC	Web Technology	4	0	0	2

AIM

To equip the students with basic programming skill in Web Technology.

OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

UNIT I

Introduction to the Internet: networking- internet – email – Internet Technologies: modem internet addressing .

UNIT II

Internet browsers: Internet Explorer – Netscape navigator- Introduction to HTML: Html document – anchor tag – hyperlink.

UNIT III

Head and body sections: Header section – titles – links- colorful web page – sample html document – Designing the body section: paragraph – tab setting.

UNIT IV

Ordered and unordered lists: list – unordered list – heading in a list- order list- nested list.

UNIT V

Table handling: tables – table creation in html cell spanning multiple rows and columns- coloring cells- sample tables- frames frame set definition- nested frames set.

REFERENCE BOOKS

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
201CMOEC	Open Elective – Banking Service	4	0	0	2

AIM:

To Provide the Bank is financial institution which is involved in borrowing and lending money.

OBJECTIVE:

- To provide a lending money to firms, customers and home buyers.
- To provide keep money for customers
- To provide offering financial advice and related financial services, such as insurance.

UNIT – I

Commercial Banking – An Overview: Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

UNIT – II

E-banking –An Overview: Meaning-Service-E-banking and Financial Services –Benefits- Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking- Services

UNIT – III

Mobile Banking and Telephone Banking –An Overview: Meaning-Features- Registration- Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers

Unit – IV

ATM and Electronic Money: Concept of ATM-Features-Functions-Strategic importance of ATM- Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

Unit-V

EFT System and INFINET: Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

OUTCOME:

To help to gather knowledge on banking and financial system in India

To provide knowledge about commercial banks and its products

To create awareness about modern banking services like e-banking-banking and internet banking, ATM System

To introduce recent trends in banking system

To make the student understand the basic concept of banking and financial institutions and expose various types of risk based by banks

J. C. Divakar

H.O.D.

M.Sc., MATHEMATICS SYLLABUS

SEMESTER – I Core I: ALGEBRA

Course Title
20212AEC11 Core –I - Algebra

Objectives:

1. Group Theory is the fundamental building blocks for the Abstract Algebra.
2. To study the algebraic aspects of Real and Complex numbers.
3. Module is a third algebraic Model - Applicable to geometry and physics.

UNIT I:

Group theory: Sylow's theorem — direct products — finite abelian groups.

UNIT II:

Ring theory: Polynomial rings — polynomials over the rational field polynomial ring over commutative rings — modules.

UNIT III:

Field: Extension fields — roots of polynomials — more about roots

UNIT IV:

Field: the elements of Galois theory — Finite fields

UNIT V:

Linear transformations — the algebra of linear transformations, Hermitian, Unitary and normal transformations.

Reference

1. Topics in Algebra — I.N. Herstein

Learning Outcomes:

1. Understand the concept of Group Theory, Ring Theory.
 2. A knowledge of Linear Transformations.
 3. An understanding of the analysis of Fields.
 4. Research inquiry and analytical thinking abilities
-

Course Title
20212AEC12 Core –II Real Analysis

Objectives:

1. To introduce the notion of Riemann – Stieltjes integral.
2. To study the infinite series and infinite sequences of functions.
3. To study the multivariate differential calculus.

UNIT I:

Riemann — Stieltjes — integral

UNIT II:

Infinite series and infinite products

UNIT III:

Sequences of functions

UNIT IV:

Multivariable Differential Calculus

UNIT V:

Implicit functions and Extremum problems

Reference:

Mathematical Analysis Tom. M.Apostol. 2nd Edition Narosa Publishing House— 1985

Unit I Chapter— 7(7.1—7.25)

Unit II Chapter — 8(8.1 — 8.18)

Unit III Chapter — 9(9.1 — 9.6, 9.8-9.13)

Unit IV Chapter— 12(12.1—12.5, 12.7— 12.14)

Unit V Chapter— 13(13.1 — 13.6)

Learning Outcomes:

Students will be able to

1. Know the notion of the Riemann-Stieltjes integral, prove elementary properties of the Riemann integral and the Fundamental Theorem of Calculus.
2. Describe the Infinite series and Infinite Products, Sequences of Functions.
3. An understanding of Multivariable Differential Calculus and Implicit Functions and Extremum problem.

Course Title
20212AEC13 Ordinary Differential Equations

Objectives:

1. Teaching the theory and applications to students preparing for advanced training in applied sciences and social sciences.
2. Presenting in easy and lucid language the results of oscillations, boundary value problems (BVP) and elements of control theory.
3. Justifying the inclusion of qualitative theory to students who think it is out of place.
4. Emphasizing the importance of the study of Boundary problems, both in Mathematics and applied sciences.
5. Studying about the stability of stationary solutions.

UNIT I:

Systems of linear differential equations — Chapter 4

UNIT II:

Existence and uniqueness of solutions Chapter 5

UNIT III:

Boundary value problems — Chapter — 7

UNIT IV:

Oscillations of second order equations — Chapter 8

UNIT V:

Stability of linear and nonlinear system — Chapter 9

Reference

Ordinary differential Equations and Stability Theory — S.G.GEO. V.Ragavendra, V.Lakshmikanthan

Learning Outcomes :

Upon completing this course students should be able to:

1. Solve first order equations, systems of periodic coefficients and use these methods to solve applied problems.
2. A knowledge of Sturm-Liouville Problem.
3. Understanding about the stability of stationary solutions.

Course Title
20220SEC14
C++ Programming

Objectives

- Utilise Object Oriented techniques to design C++ programs.
- Use the standard C++ library.
- Exploit advanced C++ techniques

UNIT 1:

Beginning with C++ - what is C++ - applications — simple program — structure of C program — creating the source file — compiling and linking — tokens, expressions and control structures — user defined data types — derived data types — declarations of variables — reference — variables

UNIT II:

Operations in C++ - Manipulators — types cast operator — expressions and implicit conversions — operator over loading — operator precedence — control structures — Functions in C — the main function — functions prototyping, call by reference — return by reference — function overloading

UNIT III:

Class and object — introduction — C structures revisited — C++ program with class — arrays within class — static member function — arrays of objects — returning objects — returning objects — constant member functions — pointers to members.

UNIT IV:

Constructors and destructors — introduction — constructors — parameterized constructors — multiple constructors in a class — copy constructor — dynamic constructor — two dimensional Arrays — destructors — operators over loading and type conversions — defining operator loading — manipulation strings using operations — type conversions.

UNIT V:

Inheritance: extending classes — introduction — defining derived classes — single inheritance — multiple inheritance — virtual base classes — abstract classes — nesting classes.

Reference:

Object Oriented Programming with C++ - E.Balagurusamy.

Learning Outcomes:

At the end of the course, the student should be able to:

- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to reuse the code with extensible Class types, User-defined operators and function Overloading
- Understand functions and parameter passing.
- Understand object-oriented design and programming
- Understand dynamic memory allocation and pointers

Course Title
20212DSC15A
Elective Classical Dynamics

Objectives.

1. Classical mechanics afford the student an opportunity to master many of mathematics techniques.
2. It is certainly true that classical mechanics today is far from being a closed subject.
3. Alternative means exist in the curriculum for acquiring the mathematics needed in other branches.

UNIT I:

Introductory Concepts—Chapter 1(1.1 — 1.5)

UNIT II:

Lagrange's equations — Chapter 2

UNIT III:

Special applications of Lagrange's equations — Chapter 3

UNIT IV:

Hamilton equations — Chapter 4

UNIT V:

Hamilton Jacobi theory — Chapter 5

Reference

CLASSICAL DYNAMICS — Donald T.Greenwood, PHI, India.

Learning Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of mechanical systems , virtual work Energy and Momentum.
 2. Understanding the concept and Applications Lagrange's Equation.
 3. A knowledge of Hamilton's Principal function.
-

Course Title
20212DSC15B Elective- Fluid Dynamics

Objectives:

1. To introduce the behavior of fluid in motion.
2. To study the application of complex analysis in the analysis of flow of fluids.

UNIT I

Real fluids and ideal fluids — velocity of a fluid at a point — streamlines and path lines: steady and unsteady flows — the velocity potential — The velocity vector — local and particle rates of change — the Equations of continuity — Worked examples — Accelerations of a fluid — Pressure at a point in a fluid at rest — Pressure at a point in moving fluids — Conditions at a Boundary to two inviscid immiscible fluids — Euler's equations of motions — Bernoulli's equation — worked examples.

UNIT II

Some flows involving axial symmetry — some special two — Dimensional flow — impulsive Motion. Some three — dimensional flows: Introductions — sources, sinks and doublets — images in a rigid infinite plane — Axis-symmetric flows: Stokes stream functions.

UNIT III

Some two — Dimensional Flows: meaning of a two — Dimensional flow — Use of cylindrical polar coordinates — The stream function — The complex potential for two Dimensional, irrotational, incompressible flow — complex velocity potentials for standard two — dimensional flows — some worked examples — The Milne — Thomson circle theorem and applications — The theorem of Blasius.

UNIT IV

The use of conformal transformation and Hydrodynamical Aspects — stress components in real fluids — relations between Cartesian components of stress — Translational motion of fluid element — The rate of strains Quadratic and principal stresses — Some further properties of the rate of strains quadratic — stress Analysis in fluid motion — Relations between stress and rate of strain — The coefficient of viscous fluids

UNIT V

Some solvable problems in viscous flow — steady viscous flow in tubes of uniform cross section — Diffusion of vorticity — Energy. Dissipation due to viscosity — steady flow past a fixed sphere — Dimensional Analysis; Reynolds Number — Prandtl's Boundary layer.

Reference:

Fluids dynamics by F. Chorlton (CBS Publisher & Distributors, Delhi- 110032) 1985.

- Unit I : Chapter 2. Sec 2.1 to 2.9 and Chapter 3. Sec 3.1 to 3.6
Unit II : Chapter 3. Sec 3.9 to 3.11 and Chapter 4. Sec 4.1, 4.2, 4.3, 4.5
Unit III : Chapter 5. Sec 5.1 to 5.9 except 5.7
Unit IV : Chapter 5. Sec 5.10 and Chapter 8. Sec 8.1 to 8.9
Unit V : Chapter 8. Sec 8.10 to 8.16

General References

Fluids Dynamics Shantny Swarup, Krishna Prakasan Mandir Meerut 1984.

Learning Outcomes:

Students who successfully complete the course will demonstrate the following outcomes by tests, homework, and written reports:

1. A knowledge of behaviour of fluid in motion.
 2. A knowledge of Two Dimensional and conformal mapping.
 3. A knowledge of solving problems in viscous flow-steady viscous flow
-

SEMESTER – II

Course Title
20212AEC21
Complex Analysis

Objectives:

1. To introduce the students to the fascinating world of complex analysis which is different from analysis of real variable.
2. To introduce the concepts of harmonic functions , elliptic functions and periodic functions.

UNIT I:

Harmonic functions — power series expansions partial fraction and factorization — entire functions.

UNIT II:

The Riemann zeta function — normal families.

UNIT III:

The Riemann mapping theorem — conformal mapping of polygons — Chapter 6(6.1, 6.2)

UNIT IV:

A closer look at harmonic functions — the Dirichlet's problem Harmonic measures — Chapter 6 sec 3.4 and 5(5.1 only)

UNIT V:

Simple periodic functions — double periodic functions — the weierstrass theory Chapter 7 sec 1,2,3(3.1, 3.2, 3.3)

Reference

Complex Analysis L.V. Ahlfors 3rd edition McGraw Hill

Learning Outcomes:

On completion of this unit successful students will be able to:

1. Understand the significance of harmonic functions, Riemann zeta function.
2. A knowledge of periodic functions, the weierstrass
3. Research inquiry and analytical thinking abilities
4. Abilities in conformal mapping

Course Title
20212AEC22 Measure Theory and Integration

Objectives:

To gain understanding of the abstract measure theory and definition and main properties of the integral. To construct Lebesgue's measure on the real line and measurability in product space. To explain the basic advanced directions of the theory.

UNIT I

Measure on Real line — Lebesgue outer measure — Measurable sets — Regularity — Measurable function — Borel and Lebesgue measurability.

UNIT II

Integration of non-negative functions — The General integral — Integration of series — Riemann and Lebesgue integrals.

UNIT III

Abstract Measure spaces — Measures and outer measures — Completion of a measure — Measure spaces — Integration with respect to a measure.

UNIT IV

Convergence in Measure — Almost uniform convergence — Signed Measures and Hahn Decomposition — The Jordan Decomposition.

UNIT V

Measurability in a Product space — The product Measure and Fubini's Theorem.

Reference:

[I] G.De Barra, Measure Theory and Integration, New age international (p) Limited.

UNIT — I : Chapter II: Sections 2.1 to 2.5

UNIT—II : Chapter III: Sections 3.1 to 3.4

UNIT — III : Chapter V: Sections 5.1 to 5.6

UNIT— IV : Chapter VII: Sections 7.1 to 7.2, Chapter VIII: Sections 8.1 and 8.2

UNIT —VI : Chapter X: Sections 10.1 to 10.2

Reference(s)

1. Measure and Integration. Second Edition by M.E.Munroe Addison — Wesley publishing company, 1971.
2. P.K.Jain, V.P.Gupta, Lebesgue Measure and integration, New Age International Pvt Limited Publishers, New Delhi, 1986. (Reprint 2000)

4. Inder, K.Rana, An Introduction to Measure and Integration, Narosa Publishing House, New Delhi, 1997.

Learning Outcomes:

To introduce the concepts of *measure* and *integral with respect to a measure*,

To show their basic properties,

To provide a basis for further studies in Analysis, Probability, and Dynamical Systems.

Knowledge in measure spaces

Course Title
20212AEC23 Mathematical Methods

Objectives:

To introduce the concept of Calculus of variations, Fourier Transforms, Hankel Transform, Linear Integral Equations, Method of successive approximations.

UNIT I

Calculus of variations — Maxima and Minima — the simplest case — Natural boundary and transition conditions variational notation — more general case — constraints and Lagrange’s multipliers — variable end points — Sturm - Liouville problems.

UNIT II

Fourier transform — Fourier sine and cosine transform — Properties Convolution — Solving integral equations — Finite Fourier transform — Finite Fourier sine and cosine transforms — Fourier integral theorem Parseval’s identity.

UNIT III

Hankel Transform: Definition - Inverse formula — Some important results for Bessel function — Linearity property — Hankel Transform of the derivatives of the function — Hankel Transform of differential operators — Parsavaj’s Theorem.

UNIT IV

Linear Integral Equations — Definition, Regularity conditions — special kind of kernels — eigen values and eigen functions — convolution integral — the inner and scalar product of two functions — Notation — reduction to a system of Algebraic equations — examples — Fredholm alternative — examples — an approximate method.

UNIT V

Method of successive approximations: Iterative scheme — examples — Volterra Integral equation examples — some results about the resolvent kernel. Classical Fredholm Theory: the method of solution of Fredholm — Fredholm’s first theorem — second theorem — third theorem.

References

- UNIT — I : Chapter 2:Sections 2.1 to 2.9 of [2]
- UNIT — II : Chapter 7 of [3]
- UNIT — III : Chapter 9 of [3]
- UNIT— IV : Chapter 1 and 2 of [1]
- UNIT—V : Chapter 3 and4 of [1]

Learning Outcomes:

On completion of this unit successful students will be able to:

1. Understand the significance of Calculus of Variations, Fourier Transforms and Hankel Transform.
 2. A knowledge of linear integral equations and Method of successive approximations.
 3. Skillness in transformation form one function into another function
 4. Applications
-

Course Title
20212AEC24 Graph Theory

Objectives

1. To give a rigorous study of the basic concepts of Graph Theory.
2. To study the applications of Graph Theory in other disciplines.

UNIT I

Basic Results Basic Concepts - Subgraphs - Degrees of Vertices - Paths and Connectedness Operations on Graphs - Directed Graphs:

UNIT II

Connectivity Vertex Cuts and Edge Cuts - Connectivity and Edge - Connectivity, **Trees: Definitions, Characterization and Simple Properties - Counting the Number of Spanning Trees - Cayley's Formula.**

UNIT III

Independent Sets and Matchings Vertex Independent Sets and Vertex Coverings - Edge Independent Sets - Matchings and Factors - Eulerian Graphs - Hamiltonian Graphs.

UNIT IV

Graph Colourings Vertex Colouring - Critical Graphs - Triangle - Free Graphs - Edge Colourings of Graphs - Chromatic Polynomials.

UNIT V

Planarity Planar and Nonplanar Graphs - Euler Formula and its Consequences - K_5 and $K_{3,3}$ are Nonplanar Graphs - Dual of a Plane Graph - The Four-Colour Theorem and the Heawood Five-Colour Theorem-Kuratowski's Theorem.

Textbook

1. R. Balakrishnan, K. Ranganathan, A Textbook of Graph Theory, Springer International Edition, New Delhi, 2008.

UNIT I Chapter I & II: 1.1 to 1.4, 1.7, 2.1, 2.2

UNIT II Chapter III & IV: 3.1, 3.2, 4.1, 4.3 to 4.4

UNIT III Chapter V & VI: 5.1 to 5.4, 6.1, 6.2

UNIT IV Chapter VII: 7.1 to 7.4, 7.7

UNIT V Chapter VIII: 8.1 to 8.6

3. F. Harary, Graph Theory, Addison - Wesley, Reading, Mass., 1969.

Course Title
20212DSC25A
Elective -Mathematical Probability

Objectives:

The goal of the subject is to extend and master students' knowledge of probability and statistical and to provide theoretical background for studying and applying advanced statistical methods. Students are introduced to probability theory and mathematical statistics. They learn to understand important distributions, present statistical data, and fundamental statistical concepts. Emphasis is placed on evaluation the processes encountered in the real reality and on formulation of problems that are investigated by sampling.

UNIT I

Measure theory — Classes of sets. Singular distributions Probability measures and their distribution functions.

UNIT II

Random Variables — Expectation — Independence — General Definitions — Properties of mathematical expectation — Independence.

UNIT III

Convergence concept — Various modes of convergence — Almost sure convergence — Borel — Cantelli lemma — Vague convergence — continuation — Uniform integrability — convergence of moments.

UNIT IV

Law of large numbers and random series — simple limits theorem's — weak law of large numbers — convergence of series — strong law of large numbers.

UNIT V

Characteristic function — General properties — convolutions — Uniqueness and inversion — convergence theorems.

Reference

A course in Probability Theory — Second Edition — by Kai Lai Chung, Academic Press, New York

- Unit I : Chapter 2
- Unit II : Chapter 3
- Unit III : Chapter 4
- Unit IV : Chapter 5 (Sec.5.1 to 5.4 Only)
- Unit V : Chapter 6 (Sec.6.1 to 6.3 Only)

GENERAL REGERENCE

Modern Probability theory — BR.Bhat, Willy Eastern Limited 0989).

Learning Outcomes:

Knowledge and understanding understand the place of probability theory knowledge in cognitive process, describe the basic probability theory and mathematical statistics concepts; Special abilities and skills.

1. Calculate the probabilities of events with an appropriate choice of the method of calculation;
2. Be familiar with the types of random variables, be able write them, calculate their numerical characteristics;

3. Evaluate numerical characteristics of the sample and interpret the meanings of the parameters of population.
 4. Formulate and test hypotheses, draw the appropriate conclusions.
 5. Understand impotent distribution
-

Course Title
20212DSC25B
Elective- Mathematical Modelling

Objectives:

Mathematical modelling can be used for a number of different reasons. How well any particular objective is achieved depends on both the state of knowledge about a system and how well the modelling is done.

1. Developing scientific understanding - through quantitative expression of current knowledge of a system.
2. Test the effect of changes in a system;
3. Aid decision making, including (i) tactical decisions by managers; (ii) strategic decisions by planners.

UNIT I

Microbial population models, single-species, non — age — structured population models.

UNIT II

Age — structured population models.

UNIT III

Epidemic models.

UNIT IV

Models in genetics.

UNIT V

Mathematical models in Pharmacokinetics.

Reference:

Mathematical models in Biology and Medicine By J.N.Kapur, Affiliated East — West Press Pvt. Ltd., New Delhi

- Unit I : Chapter 2,3
- Unit II : Chapter 4
- Unit III : Chapter 8
- Unit IV : Chapter 9
- Unit V : Chapter 10

General References

1. Mathematical Modelling J N Kapur Wiley Eastern Ltd New Delhi.
2. Theory of Ordinary Differential Equations with Equations with applications in biology and Engineering Ahmad & Mohana Rao Affiliated East — West Pvt Ltd New Delhi, (1999).

Learning Outcomes:

Having successfully completed this module, you will be able to demonstrate knowledge and understanding of:

- 1) The concept of mathematical modelling.

- 2) The mathematical descriptions of some real systems.
 - 3) Correct methodology when developing mathematical models.
 - 4) Skill in applications
 - 5) Designing and developing the solutions.
-

20212RMC26 **Research Methodology**

AIM:

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis

OUTCOME:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

UNIT I: Introduction to Research Methodology

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT II: Database and Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

UNIT III: Data Analysis :

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co -variance (ANCOVA) correlation and multiple regression.

UNIT IV: Thesis and Paper writing:

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

UNIT V: Application of MATLAB:

Numerical Integration - Numerical integration, ordinary differential equations, partial differential equations, boundary value problems

Fourier Analysis - Fourier transforms, convolution.

SEMESTER – III

Course Title
20212AEC31 Core IX- Topology

Objectives:

- 1) The subject of topology is of interest in its our right and it also serves to lay the foundations for future study in analysis, in Geometry and in Algebraic Topology.
- 2) To develop the students' abilities through hard thinking.
- 3) To train the students to develop analytical thinking.

UNIT I

TOPOLOGICAL SPACES: Topological spaces' — Basis for a topology- The order topology — The product topology on $X \times Y$ — The subspace topology — Closed sets and limit points.

UNIT II

CONTINUOUS FUNCTIONS: Continuous functions — the product topology — The metric topology.

UNIT III

CONNECTEDNESS: Connected spaces — connected subspaces of the Real line — Components and local connectedness.

UNIT IV

COMPACTNESS: Compact spaces — compact subspaces of the Real line — Limit Point Compactness — Local Compactness.

UNIT V:

COUNTABILITY AND SEPERATION AXIOMS: The Countability Axioms — The separation Axioms — Normal spaces — The Urysohn Lemma — The Urysohn metrization Theorem — The Tietz extension theorem.'

4. L.Steen and J.Seeback, Counter examples in Topology, Holt, Rinehart and Winston, New York, 1970
5. S.Willard, General Topology, Addison — Wesley, Mass., 1970.

Learning Outcomes:

Upon successful completion of this course, the student will be able to: (Knowledge based)
distinguish among open and closed sets on different topological spaces;

- 1) know the two fundamental topologies: discrete and indiscrete topologies.
 - 2) Identify precisely when a collection of subsets of a given set equipped with a topology forms a topological space;
 - 3) Understand when two topological spaces are homeomorphic;
 - 4) Identify the concepts of distance between two sets; connectedness, denseness, compactness and separation axiom.
-

Course Title
20212AEC32 Core X – Stochastic Process

Objectives

The objective of this course is to provide the fundamentals and advanced concepts of random process to support graduate coursework and research in engineering. The required mathematical foundations will be studied at fairly rigorous level and the applications of the probability theory and random processes to engineering problems will be emphasized. The simulation techniques will also be studied and MATLAB will be used as a software tool for bridging the probability theory and engineering applications.

UNIT I

Elements of Stochastic Processes — Two simple examples of Stochastic processes — Classification of general Stochastic processes — Defining a Stochastic Processes — Markov chains — Definitions — Examples of Markov Chain — Transition probability matrices of a Markov chain — classification of states of a Markov chain — Recurrence — more on Recurrence.

UNIT II

The basic limit theorem of Markov chains and applications — Discrete renewal equation — proof of theorem — Absorption probabilities — criteria for recurrence — Random walk.

UNIT III

Classical Examples of continuous time Markov chains — General pure birth processes and Poisson processes — more about Poisson processes — A counter model — birth and death processes — Differential equations of birth and death processes — Examples of birth and death processes.

UNIT IV

Renewal processes — Definition of Renewal process and related concepts — Some examples of Renewal Processes — More on some special Renewal processes — Renewal equations and elementary Renewal theorem — The Renewal Theorem — Applications of Renewal theorem.

UNIT V

Martingales — Preliminary definitions and examples — Super martingales and Sub martingales — The optional sampling theorem.

Reference

A First course in Stochastic Processes — second Edition by Samuel Karlin and M. Taylor, Academic Press New York.

Unit I : Chapter1(1.2,1.3,1.4 Only) , Chapter 2 (2.1 to 2.5 and 2.7 Only)

Unit II : Chapter 3 (3.1 to 3.4 and 3.7 Only)

Unit III : Chapter 4 (4.1 to 4.6 Only)

Unit IV : Chapter 5 (5.1 to 5.6)

Unit V : Chapter6(6.1,6.2,6.3 Only)

General references

1. “Stochastic Processes” S.K Srinivasan and K.M. Mehata, Tata Mcgraw — Hill Publishing Company Ltd., New Delhi.
2. “Stochastic Processes” JMedhi, Second Edition Wiley Eastern Ltd., New Del/it

Learning Outcomes

1. On successful completion of the course, students should be able to:

2. Explain fundamentals of probability theory, random variables and random processes.
3. Understand the mathematical concepts related to probability theory and random processes
- 4, Understand the characterization of random processes and their properties.
5. Formulate and solve the engineering problems involving random processes.
6. Analyze the given probabilistic model of the problem.
7. Make precise statements about random processes.
8. Use computational techniques to generate simulation results.

Course Title
20212AEC33 Advanced Numerical Analysis

Objectives:

- 1) Derive appropriate numerical methods to solve algebraic and transcendental equations.
- 2) Develop appropriate numerical methods to solve a differential equation.
- 3) Derive appropriate numerical methods to evaluate a derivative at a value.
- 4) Derive appropriate numerical methods to solve a linear system of equations.
- 5) Derive appropriate numerical methods to calculate a definite integral.

Unit – I

Transcendental polynomials equation: Introduction, Methods based on first and second degree equation: secant method - Newton Raphson method - Muller method - Chebyshev method - Rate of convergence. Polynomials Equations: Birge-Vieta method - Bairstow method - Graeffe's root squaring method.

Unit – II

System of linear algebraic equation and Eigen values problems: Jacobi iteration method, Gauss-Seidal iteration method successive over relaxation method. Eigen values and vectors.

Unit – III

Interpolation and approximation – Hermite Interpolation – Bivariate interpolation – Lagrange bivariate interpolation- Newton's bivariate Interpolation for equispaced points – approximations – Gram-Schmidt orthogonalizing process – Chebyshev polynomials.

Unit – IV

Numerical Integration: Methods based on interpolation-Newton-Cotes methods-trapezoidal rule-Simpson's rule-Methods based on undetermined coefficients-Gauss-Legendre integration methods-Labotto integration method-Radau Integration Method and Gauss-Chebystew Integration methods.

Unit – V

Ordinary Differential Equations: Numerical methods – Euler method – Backward Euler method – Mid point method – Taylor series method – Runge Kutta methods – Implicit Runge – Kutta method.

TEXT BOOK:

Numerical methods for scientific and Engineering Computation by M.K.Jain, S.R.K.Iyengar, R.K. Jain III – Edition.

- Unit: I – Chapter-2 Sec 2.3, 2.4, 2.5, 2.8
 Unit: II – Chapter-3 Sec 3.4, 3.5, 3.6
 Unit: III – Chapter-4 Sec 4.5, 4.7, 4.8
 Unit: IV – Chapter-5 Sec 5.6, 5.7, 5.8
 Unit: V – Chapter-6 Sec 6.2, 6.3, 6.4.

Learning Outcomes

Students will be able to

- 1) Solve an algebraic or transcendental equation using an appropriate numerical method.
- 2) Solve a differential equation using an appropriate numerical method.
- 3) Evaluate a derivative at a value using an appropriate numerical method.
- 4) Solve a linear system of equations using an appropriate numerical method.
- 5) Calculate a definite integral using an appropriate numerical method.
- 6) Skill in finding the roots of the given equation

Course Title
20212DSC34A Elective- Cryptography

Objectives:

- 1) Understand the basic concept of Cryptography and Network Security their mathematical models.
- 2) Understand mathematical foundation required for various cryptographic Algorithms.

UNIT I:

Simple cryptosystem — enciphering matrices.

UNIT II:

Idea of public key cryptography — RSA — discrete log.

UNIT III:

Knap sack pseudo primes — Rho method

UNIT IV:

Fermat factorization and factor bases — continued fraction method.

UNIT V:

Basic facts — elliptic curve cryptosystems — elliptic curve factorization.

Reference:

A course in Number Theory and Cryptography — N.Koblitz, Springer — verlog, New York 1987.

Learning Outcomes

- 1) Analyze key agreement algorithms to identify their weaknesses.
 - 2) Describe the ethical issues related to the misuse of computer security.
 - 3) Develop code to implement a cryptographic algorithm or write an analysis report on any existing security product.
-

Course Title
20212DSC34B Elective- Algebraic Coding Theory

Objective:

- To equip students with the basic understanding of the fundamental concept of Coding Theory as they are used in communications.
- To enhance knowledge of codes. Error, Tree Codes, cyclic codes.
- To guide the student through the implications and consequences of fundamental theories and laws of coding theory with reference to the application in modern communication and computer systems

UNIT I

The communication channel. The coding problem. Types of codes. Block codes. Error — detecting and Error — Correcting codes. Linear codes. The hamming metric. Description of linear block codes by matrices. Dual codes. Standard Array. Syndrome. Step — by — step decoding modular representation.

UNIT II:

Error — Correction capabilities of linear codes. Bounds on minimum Distance for block codes. Plotkin bound. Hamming sphere packing bound. Varshamov — Gilbert — Sacks bound. Bounds for Burst — Error detecting and correcting codes. Important linear block codes. Hamming codes. Golay codes. Perfect codes. Quasi — perfect codes. Reed — Muller codes. Codes derived from Hadmard matrices. Product codes. Concatenated codes.

UNIT III:

Tree codes. Convolutional codes. Description of linear tree and convolutional codes by matrices. Standard Array. Bounds on minimum distance for convolutional codes. V. G. S bound. Bounds for Burst — error detecting and correcting convolutional codes. The Lee metric, packing bound for Hamming code w.r.t. Lee metric. The Algebra of polynomial residue classes. Galois fields. Multiplicative group of a Galois field. Cyclic codes. Cyclic codes as ideals.

UNIT IV:

Matrix description of cyclic codes. Hamming and Golay codes as cyclic codes. Error detection with cyclic codes. Error — connection procedure for short — ended cyclic codes. Pseudo cyclic codes. Code symmetry. Invariance of codes under transitive group of permutations. Bose — Chaudhary — Hocquenghem (BCH) codes. Reed — Soloman (RS) codes.

UNIT V:

Majority — Logic decodable codes. Majority — Logic Decoding. Singleton bound. The Griesmer bound, Maximum — distance separable (MDS) codes. Generator and Parity — check matrices of MDS codes. Weight distribution of MDS code. Necessary and sufficient conditions for a linear code to be an MDS code. MDS codes from RS codes. Abramson codes. Closed — loop burst — error correcting codes (fire codes). Error locating codes.

5. F.J. Macwilliams and N.J.A. Sloane, Theory of Error Correcting Codes" North — Roland Publishing Company, 1977.

Learning Outcomes

Upon completion of this course, students should be able to:

- 1) Define channel capacities and properties using Shannon's Theorems.
- 2) Construct efficient codes for data on imperfect communication channels.
- 3) Generalize the discrete concepts to continuous signals on continuous channels.

SEMESTER – IV

Course Title
20212AEC41 Core XII-Functional Analysis

Objectives:

- 1) To study about Converges, Hilbert spaces and Bessels's inequality.
- 2) To study about Spectral Theory.
- 3) To study about convergences in $L(X,Y)$ – Uniform boundedness and The Gelfand Neumark theorem and Banach Algebra.

UNIT I

Algebraic Systems: Groups — Rings — The structure of rings — Linear spaces - The dimension of a linear space — Linear transformations — Algebras — Banach Spaces : The definition and some examples — Continuous linear transformations — The Hahn — Banach theorem — The natural imbedding of N in N^{**} - The open mapping theorem — The conjugate of a operator.

UNIT II

Hilbert Spaces: The definition and some simple properties — Orthogonal complements — Orthonormal sets — The conjugate space H^* - The adjoint of an operator — Self-adjoint operators — Normal and unitary operators — Projections.

UNIT III

Finite-Dimensional Spectral Theory: Matrices — Determinants and the spectrum of an operator — The spectral theorem — A survey of the situation.

UNIT IV

General Preliminaries on Banach Algebras: The definition and some examples — Regular and singular elements — Topological divisors of zero — The spectrum — The formula for the spectral radius — The radical and semi- simplicity.

UNIT V

The Structure of Commutative Banach Algebras: The Gelfand mapping — Applications of the formula $r(x) = \lim \|x^n\|^{1/n}$ - Involutions in Banach Algebras — The Gelfand-Neumark theorem.

Learning Outcomes

Upon successful completion of this course, the student will be able to: (Knowledge based)
distinguish among open and closed sets on different topological spaces;

- 1) know the two fundamental topologies: discrete and indiscrete topologies.
 - 2) Identify precisely when a collection of subsets of a given set equipped with a topology forms a topological space;
 - 3) Understand when two topological spaces are homeomorphic;
 - 4) Identify the concepts of distance between two sets; connectedness, denseness, compactness and separation axioms.
-
- 5) Research inquiry and analytical thinking abilities
-

Course Title
20212AEC42 Core XIII – Visual Programming

Objectives

Learn to design and develop Windows-based business applications using Visual Basic.NET programs that meet commercial programming standards.

- To learn the basic principles of visual programming
- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

UNIT I

Introduction to Visual Basic — Integrated Development Environment (IDE) features — VB Editor — Customizing the IDE — Anatomy of a form — Working with form properties — setting form's properties — Introducing form events and form methods.

UNIT II

Variables in Visual Basic: Declaring variables — Data types — Null value. Error value — Empty value - The scope of a variable Module level variables — Constants — Creating your own constants — Scope of a constant — Converting data types — Arrays — Declaring arrays — Fixed size arrays — Dynamic arrays — Preserve Keyword - ReDim — Writing code in Visual Basic — The anatomy of a procedure — Subroutine and functions — Language constructs — For Next, The While loop, Select case - End select, Exit statement. With structure.

UNIT III

Selecting and Using controls — Introduction to standard controls -- Command buttons - Text boxes — labels — Option buttons — Check boxes — Frame controls — List boxes — Combo boxes — Image objects — Picture boxes — Timer — Scroll bars - File system Controls (Drive, DirList, File List boxes)

UNIT IV

Introduction to Built — in ActiveX Control — Tool bar — The Tree view control — The List view control — The Image list control — Common Dialog Control — Status bar control Rich textbox control — Menu editor.

UNIT V

DDE Properties — DDE Methods — OLE properties — Active Control Creation and Usage and ActiveX DLL creation and usage - Database access — Data Control — field control — Data grid record set using SQL to manipulate data — Open Data Base Connectivity.

Reference:

1. Mohammed Azam, Programming with Visual Basic 6.0 — Vikas Publishing House Pvt, Ltd — 2002
2. Content Development Group, Visual Basic 6.0 — Tata McGraw Hill Publishing Company Limited — 2002.

Learning Outcomes

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic's Integrated Development Environment (IDE).
- Implement syntax rules in Visual Basic programs.

- Write Windows applications using forms, controls, and events
 - Write and apply decision structures for determining different operations.
 - Write and apply loop structures to perform repetitive tasks.
 - Students are able to design a IDE enabled software solution to representative problems.
 - Students can use DDE data I/O components to read and write raster and vector data files.
 - Students can use OLE map components to develop a custom Windows Forms based application with a map and legend.
-

Course Title
20212AEC43 Number Theory

Objectives:

The objective is for the students to obtain a foundational knowledge of elements of Number Theory through step-by-step proofs of classical theorems, as well as to sharpen their skills through problem-solving.

UNIT I :

Fundamentals of Congruence's : Basic properties of Congruence's – Residue-Riffling. Solving Congruence's: Linear Congruence's-the theorems of Fermat and Wilson Revisited-the Chinese remainder Theorem-polynomial congruence's.

UNIT II :

Arithmetic functions: Combinatorial study of $\varphi(n)$ – Formulae for $d(n)$ and $\omega(n)\Omega(n)$. Multiplicative arithmetic functions. The Mobius inversion formula. Primitive roots: properties of reduced systems-primitive roots modulo P.

UNIT III :

Quadratic Residues: Euler's Criterion-the Legendre symbol-the quadratic Reciprocity law-Applications of the Quadratic reciprocity law, Distribution of quadratic residues: Consecutive residues and non residues-consecutive triples and Quadratic residues.

UNIT IV:

Sum of squares: Sums of two squares-Sums of four squares. Elementary partition theory; Introduction-graphical representation-Euler's partition theorem-searching for partition identities.

UNIT V :

Partition generating functions: Infinite products as generating functions-Identities between infinite series and products-partition identities: History and introduction-Euler's pentagonal number theorem-The Roger's Ramanujan identities-Series and Product identities.

TEXT BOOK: Scope and treatment as in "Number Theory" by George E. Andrews, Hindustan Publishing Corporation (India) Delhi-110 007 (1989).

- Unit I : Chapters IV and V
- Unit II : Chapters VI and VII
- Unit III : Chapters IX and X
- Unit IV : Chapters XI and XII
- Unit V : Chapters XIII and XIV

Learning Outcomes:

On satisfying the requirements of this course, students will have the knowledge and skills to:

1. Solve problems in elementary number theory
2. Apply elementary number theory to cryptography
3. Develop a deeper conceptual understanding of the theoretical basis of number theory and cryptography
4. Research inquiry and analytical thinking abilities

Course Title
20212DSC44A Elective –Combinatorial Mathematics

Objectives:

The main objective is to learn how rigorous mathematical tools can be made for the purpose of doing mathematics with help of computers.

UNIT I

Basic combinational numbers.

UNIT II

Generating functions and Recurrence relations symmetric functions.

UNIT III

Multinomials — Inclusion and exclusion principles — permutations with forbidden positions.

UNIT IV

Necklace problem and Burnside's Lemma — Cycle Index of a permutations group.

UNIT V

Polya's theorems and their immediate applications — Binary operations on permutations groups.

Reference

Combinatorics theory and applications by V. Krishnamurthy.

- Unit I : Chapter I (Pages 1 — 15)
- Unit II : Chapter I (Pages 26— 61)
- Unit III : Chapter I (Pages 66 — 98)
- Unit IV : Chapter 11 (Pages 99— 121)
- Unit V : Chapter II (Pages 122 — 159)

General Reference

Introductory Combinatorics — Kenneth P. Bogart — Pitman Publishing mc, MashJield, Mass achusetts.

Learning Outcomes

Upon successful completion of Math 315 - Combinatorics, a student will be able to:

- Apply diverse counting strategies to solve varied problems involving strings, combinations, distributions, and partitions,
- Write and analyze combinatorial, algebraic, inductive, and formal proofs of combinatoric identities,
- Recognize properties of graphs such as distinctive circuits or trees.

- will become familiar with fundamental combinatorial structures that naturally appear in various other fields of mathematics and computer science.
 - They will learn how to use these structures to represent mathematical and applied questions, and they will become comfortable with the combinatorial tools commonly used to analyze such structures.
-
-

Course Title
20212DSC44B Elective- Design And Analysis of algorithms

Objectives:

1. Analyze the asymptotic performance of algorithms.
2. Write rigorous correctness proofs for algorithms.
3. Demonstrate a familiarity with major algorithms and data structures.
4. Apply important algorithmic design paradigms and methods of analysis.
5. Synthesize efficient algorithms in common engineering design situations.

UNIT I INTRODUCTION

What is an algorithm? — Algorithm specification — Performance analysis — Randomized algorithms.

UNIT II ELEMENTARY DATA STRUCTURES

Stacks and Queues — Trees — Dictionaries — Priority Queues — Graph representations.

UNIT III DESIGN OF ALGORITHM METHODS

Divided — And — Conquer — General method — Binary search — finding the maximum and minimum in a set of items — Merge sort — Quick sort.

UNIT IV DESIGN OF ALGORITHM METHODS CONTINUATION

The Greedy method — The general method — Tree vertex Splitting Problem — Tree traversal and search techniques — Techniques for Binary trees — Techniques for Graphs — Breadth first search and depth first search traversal — Connected components and spanning trees — Backtracking — General method — the 8 — Queens Problem — Branch and Bound method — Travelling sales person algorithm.

UNIT V ALGEBRAIC PROBLEMS

Algebraic problems — The general method — Evaluation and Interpolation — The Fast Fourier transform — Modular arithmetic — Even faster evaluation and interpolation.

2. Goodman, S. E and Hedetniemi, S.T Introduction to the design and analysis of algorithms (McGraw Hill international Edition 1987).

Learning Outcomes

Students who complete the course will have demonstrated the ability to do the following:

- 1) Argue the correctness of algorithms using inductive proofs and invariants.
- 2) Analyze worst-case running times of algorithms using asymptotic analysis.
- 3) Describe the greedy paradigm and explain when an algorithmic design situation calls for it. Recite algorithms that employ this paradigm. Synthesize greedy algorithms and analyze them. Compare between different data structures. Pick an appropriate data structure for a design situation

Course Title
20211OEC Open Elective -Writing for the Media

Aim:

- To equip students to enter into the realm of mass media.

Objective:

- To comprehend the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

Outcome:

- Understand the intricacies of mass media
- Learn to write for the media

UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop-Filters- Human interest stories- Recognizing and evaluation news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

Course Title
Open Elective – Applicable Mathematical Techniques

Objectives:

- 1) Understand the basic concept of Interpolation.
- 2) To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

References

1. For unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman
2. For units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

20213OEC OPEN ELECTIVE PAPER BIOMEDICAL INSTRUMENTATION
--

Aim:

- To understand the concepts and application of electronic Instrumentation in the Medical field.

Objective:

- Understanding basic principles and phenomena in the area of medical diagnostic instrumentation,
- Theoretical and practical preparation enabling students to maintain medical instrumentation

UNIT – I: BIO ELECTRIC SIGNALS AND ELECTRODES

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

UNIT – II: RECORDING SYSTEM AND RECORDERS

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

UNIT – III: MEASUREMENT AND ANALYSIS TECHNIQUES

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

UNIT – IV: MAGNETIC RESONANCE AND ULTRASONIC IMAGING SYSTEMS

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

UNIT – V: ADVANCED BIO MEDICAL SYSTEMS

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

OUTCOMES:

- Define basic medical terms and physical values that can be handled by medical instrumentation,
- Describe methods and implementation of electrical and nonelectrical medical parameters diagnostic,
- demonstrate measuring of basic medical parameters,

- Calculate basic parameters of the equipment for using in electro diagnostic and electro therapy,
- Apply safety standards and select disposal method and procedures for electrical diagnostic equipment.

Books for Study

1. R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)
2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

Book for Reference

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Title
20220OEC M-Marketing

OBJECTIVES

- Understand Mobile Business strategies.
- To understand Mobile marketing tools and techniques.
- To know Mobile technologies.

UNIT I Introduction

Mobile Marketing Campaign, Fortune 500 and Mobile Marketing, consumers engagement with mobile, Terminologies.

UNIT II Businesses Vs mobile marketing

classic mistakes in mobile marketing, laying foundation for successful mobile marketing campaign, understanding technology behind mobile marketing – Android, iOS, Windows Phone.

UNIT III

Strategic thinking about Mobile marketing campaign, Mobile Marketing Tools – setting up mobile website for different firms, using SMS, MMS and apps to drive customers to business and other ways to attract customers.

UNIT IV Location Based Marketing

LBS, NFC, Bluetooth and LBA, 2D codes, Tablet, Other Mobile Applications, Business Firms connecting to customers using Mobile – case study, Mobile Marketing for B2B companies, Mobile E-commerce to Drive Revenue.

UNIT V Mobile Payments

Present and Future Mobile Technology, Mobile Application Development.

OUTCOMES

- Upon Completion of the course, the students should be able to:
- Analyze various mobile marketing strategies.
- Market Mobile based Applications.
- Apply various tools in mobile marketing.

REFERENCE BOOKS:

1. Go Mobile: Location Based Marketing, Apps, Mobile Optimized Ad Campaigns, 2D codes and other Mobile Strategies to Grow your Business, Jeanne Hopkins, Jamie Turner, John Wiley&Sons Inc., 2012.
2. M- Commerce, Paul Skeldon, Crimson Publishing, 2012.
3. M-Commerce Technologies, Services and Business Models, Norman Sadeh , Wiley 2002.
4. Mobile Commerce, Opportunities, Applications and Technologies of Wireless Business, Paul Mary, Tom Jell, Cambridge University Press, 2001.

Course Title
20214OEC Open Elective-Green Chemistry

Aim:

- To reduce the soil and water pollution in environment.

Objectives:

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Outcomes:

- To understand the environmental status and evolution.
 - To know about the Pollution and its prevention measures.
 - To familiarize the green chemistry.
 - To learn about the bio-catalytic reactions.
 - To understand about the vitamins and antibiotics.

Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO₂ - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Title
20215OEC Open Elective -Herbal Medicine

Aim:

- Be able to advise and educate effectively to create a comprehensive wellness plan incorporating herbal, dietary and lifestyle recommendations integrating self-awareness and lessons of nature

Objective

- Possess knowledge of traditional herbal systems as well as an understanding of the principles and practices of modern Western herbalism
- Demonstrate the ability to critically analyze herbal research and contribute to the current body of herbal literature
- Know how to integrate knowledge of raw materials, formulation, and herbal pharmacy for product development purposes
- Know how to effectively educate individuals and groups about herbs
- Be able to demonstrate basic skills in herb identification, harvesting, and preparation
- Be able to address potential safety concerns including herb-drug interactions

Outcomes

- Accurately gather information regarding past and current health status while differentiating between phenomena and the client's interpretation of phenomena
- Synthesize the above information to create a comprehensive assessment of health inputs and processes
- Work with clients to develop individualized goals and a plan for health and wellness

Unit I

Tribal medicine – methods of disease diagnosis and treatment – Plants in folk religion – *Aegle marmelos*, *Ficus benghalensis*, *Curcuma domestica*, *Cyanodon dactylon* and *Sesamum indicum*.

Unit II

Traditional knowledge and utility of some medicinal plants in Tamilnadu – *Solanum trilobatum*, *Cardiospermum halicacabum*, *Vitex negundo*, *Adathoda vasica*, *Azadirachta indica*, *Gloriosa superba*, *Eclipta alba*, *Aristolochia indica* and *Phyllanthus fraternus*.

Unit III

Plants in day today life – *Ocimum sanctum*, *Centella asiatica*, *Cassia auriculata*, *Aloe vera*. Nutritive and medicinal value of some fruits (Guava, Sapota, Orange, Mango, Banana, Lemon, Pomegranate) and vegetables - Greens (*Moringa*, *Solanum nigrum* Cabbage).

Unit IV

Allergens – types – sources – active principles – Chemical nature – Cell modifiers – Lectins – mutagens, teratogens – Allergic reactions with known examples.

Unit V

Cardiovascular diseases – blood pressure – cardiac drugs of plant origins – alkaloids, anticoagulants – basic mechanism of action. Pulmonary / respiratory disorders – asthma – bronchitis – common cold – allergy – Remedy from plants.

COURSE TITLE
20261OEC FINANCIAL SERVICES

AIM

To analyze the various financial institutions and their services.

OBJECTIVES

- I. To gain knowledge on financial services.
- II. To understand importance of various services including banking, insurance, mutual funds.

UNIT – I

Financial system-An Overview: Indian Financial System-Global Financial System-Financial Services Environment- Credit Rating –Factoring and Forfeiting –Leasing

UNIT – II

Financial Markets –An Overview: Definition-Role-Functions-Constituents-Financial Instruments-Capital Market instruments-Indian money and Capital Market-Global Financial Markets.

UNIT – III

Money Market –An Overview:Definition-Characterstistics-Objectives-Imporatance-Functions-Segment-Financial Institutions-Indian Money Market-Global Money Market

Unit – IV

Capital Market:Money Market-Characteristics-Functions-New financial Instruments-measures of Investor Protection-Indian Capital Market-Major Issues

Unit-V

Stock Exchange: History of Stock Exchange-Functions-Indian Stock Exchanges-Organization structure-Regulations of Stock Exchange –Recent Developments

OUTCOME

- To introduces meaning and functions of Financial Intermediaries
- To understand the role of merchant bank and its services
- To provide information regarding management of mutual funds and Regulations
- To understand the role and functions of financial services Marketing
- To know the structure and types of debt Instruments
- To realize Foreign Exchange Market

REFERENCE BOOKS

1. Gordon ,Natarajan – Financial Market and Services.
2. Dr. S. Gurusamy – Financial services and Market.
3. Kucchol S.C. – Financial Management
4. Pandey I.M. – Financial Management.

Course Title
20280OEC Open Elective - Counselling and Psychology

Aim:

- To acquaint with counselling and its process

Objectives:

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

Out Come:

- Learn counselling and its process

UNIT I

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

UNIT II

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

UNIT III

Approaches to Counselling

Counselling Process

UNIT IV

Psychological Testing

Diagnosis

UNIT V

Educational Counselling

Family Counselling

M Phil- SYLLABUS

(For the candidates admitted from the academic year 2020-2021 onwards)

PAPER – I Research Methodology

(Common for all Subjects except Languages)

Unit – I:

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

Unit – II:

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

Unit – III:

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing – Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

Unit – IV:

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide

Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Main (E-mail) – Intranet and Extranet.

Unit – V:

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

- Research Methodology by C.R. Kothari, Chapter 1,2,3.
- Microsoft Office 2003 – Edward C. Willet. First Edition 2004, Wiley Publications, USA , (Chapters 2,3,4,5,6,12,14,15,26,28,29)

Department of Mathematics
M.Phil Mathematics
Paper – II
203MAC12-ALGEBRA AND ANALYSIS

Course Outcomes:

1. To empower scholars with knowledge of pure mathematics.
2. To introduce the algebraic structure through modules.
3. To acquaint with advance concepts in algebra
4. To understand Borel measures.
5. To enhance problem solving skills in algebra.
6. To understand the techniques in algebra.

Unit-I: Modules

Modules homomorphism and exact sequence–Projective and injective–
Modules homomorphism and duality. (Chapter 4.1, 4.3, 4.4, Text Book-1)

Unit-II: Commutative Rings and Modules

Chain conditions – Prime and primary ideals – Primary decomposition –
Noetherian Rings and modules (Chapter 8.1, 8.2, 8.3, 8.4, Text Book – 1)

Unit III: Positive Borel Measures

Vector spaces – Topological preliminaries – Urysohn’s Lemma–The Riesz
representation theorem. (Chapter 2, Text Book -2, Sections 2.1-2.14).

Unit-IV: Problems in Algebra

Groups, subgroups, normal subgroups, quotient groups, homomorphisms,
cyclic groups, permutation groups, Cayley’s theorem, class equations, Sylow
theorems. Rings, ideals, prime and maximal ideals, quotient rings, Field
extensions, Galois theory. Algebra of matrices, rank and determinant of
matrices, linear equations. Eigenvalues and eigenvectors, Cayley-Hamilton
theorem. Matrix representation of linear transformations. Change of basis,
canonical forms, diagonal forms, triangular forms, Jordan forms

Unit V: Banach Algebras

Banach algebras – Spectrum of an element in Banach algebra – Spectral
radius formula – Quotient algebras–applications.
(Chapter 18, Text Book-2)

Books for Study:

1. Algebra by Thomas W Hungerford, Springer Verlag Indian reprint
2. Real and Complex Analysis by Walter Rudin, Tata McGraw Hill (II Edn) 1996.

Reference Books:

- Abstract Algebra by David.S.Dummit and Richard.M.Foote, 3rd Edition, Wiley Student Edition
2. Linear Algebra by Stephen H. Freidberg, Arnold J. Insel, Lawrence E.Spence, Fourth Edition, Pearson

Paper –III

M.Phil Mathematics

203MAC13-ADVANCED NUMERICAL ANALYSIS

Course Outcomes

1. Basic Knowledge of numerical methods
2. Approximation methods.
3. Linear and nonlinear approximation
4. Understanding polynomial equations
5. Techniques in numerical analysis
6. Initial and boundary value problems.

Unit-I: Transcendental and Polynomial Equations -Iteration method based on second degree equation – Rate of convergence –iterative methods – Methods for finding complex roots – iterative methods:-Birge-Vieta method, Bairtow's method, Gracffe's root squaring method.

Unit-II:System of Algebraic Linear Equations-Direct methods – Gauss Jotdan Elimination Method – Triangularization-method – Cholesky method – Partition method. Error Analysis – iteration methods : Jacobi iteration method – Gauss - seidal iteration method – SOR-method, Jacobi's method for symmetric matrices – power method – Inverse-power method.

Unit-III: Interpolation and Approximation-Hermite interpolation – Piecewise and spline interpolation –Approximation– Least square Approximation.

Unit-IV: Differentiation And Integration-Numerical differentiation – Numerical Integration – Methods based on interpolation.

Unit-V: Ordinary Differential Equations-Multi – step method – predictor – Corrector method – Boundary value-problem – initial value methods – shooting method – Finite Difference method.

Text Book

M.K. Jain, S.R.K. Iyengar and R.K. Jain, Numerical Methods for scientific and Engineering Computation, III Edn, Wiley Eastern Ltd., 1993.

Unit I - Chapter 2 – 2.4 to 2.8

Unit II - Chapter 3 – 3.2 to 3.5

Unit III - Chapter 4 – 4.4 – 4.6, 4.8 to 4.9

Unit IV - Chapter 2 – 2.4 to 2.8

Unit V - Chapter 6 – 6.4, 6.5, 6.8, 6.9, 6.10

References:

RESEARCH AND PUBLICATION ETHICS

Course Code	Course Title	L	T	P	C
CPE_RPE	Research and publication ethics				2

THEORY

Unit I: PHILOSOPHY AND ETHICS (3 hours)

1. Introduction to philosophy, definition, nature and scope, concept, branches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

Unit II: SCIENTIFIC CONDUCT (5 hours)

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

Unit III : PUBLICATION ETHICS (7 hours)

1. Publication ethics: definition, introduction and importance.
2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

PRACTICE

Unit IV: OPEN ACCESS PUBLISHING (4 hours.)

1. Open access publications and initiatives.
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies.
3. Software tool to identify predatory publications developed by SPPU.
4. Journal finder / journal suggestion tools viz, JANE, Elsevier Journal Folder, Springer Journal Suggester, etc.

UNIT V : PUBLICATION MISCONDUCT (4 hours)

A. Group Discussions (2 hours)

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest.
3. Complaints and appeals: examples and fraud from India and abroad.

B. Software tools (2 hours)

Use of plagiarism software like Turnitin, Urkund and other open source software tools.

UNIT VI: DATABASES AND RESEARCH METRICS (7 hours)

A. Databases (4 hours)

1. Indexing databases.
2. Citation database: Web of Science, Scopus etc.

B. Research Metrics (3 hours)

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score.
Metrics: h-index, g index, i10 index, altmetrics.

B.Sc., COMPUTER SCIENCE- REGULATION 2020

B.Sc C.S. Graduate Attributes :

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

B.Sc C.S. Programme Objectives-PEO

- POE1- To study about I/O management, storage management
- POE2- To know the methods of connecting them to the peripheral devices.
- POE3- To learn Software design and Implementation
- POE4- To learn the basic principles of database and database design
- POE5- To understand computational development of graphics with mathematics

B.Sc C.S. Programme Outcomes -PO

- PO1- Understand dynamic memory allocation and pointers.
- PO2- Trace the flow of information from one node to another node in the network.
- PO3- Understand the format and use of objects.
- PO4- Able to Measure the product and process performance using various metrics
- PO5- Design Secure applications.
- PO6- Apply the various optimization techniques.

B.Sc C.S. Courses -C

- C1-** Programming in C with C++
- C2-** Internet and Java Programming
- C3-** Visual Programming
- C4-** Active Server Programming
- C5-** E-Business Technology
- C6-** Operating System
- C7-** Microprocessor and its Applications
- C8-** .NET Programming
- C9-** Relational Data Base Management System

பாடத்தொடர்புடைய கட்டுரை - 20 மதிப்பெண்

ஆத்திச்சூடி - 20 மதிப்பெண்

அறம் செய விரும்பு, ஆறுவது சினம், இயல்வது கரவேல், ஈவது விலக்கேல், உடையது விளம்பீல், ஊக்கமது கைவிடீல், எண் எழுத்து இகழீல், ஏற்பது இகழ்ச்சி, ஐயம் இட்டு உண், ஒப்புரவு ஒழுத, ஒதுவது ஒழியேல், ஓளவியம் பேசேல், கண்டு ஒன்று சொல்லேல், ஞாயம்பட உரை, இடம்பட வீடு எடீல், இணக்கம் அறிந்து இணங்கு, தந்தை தாய்ப்பென்றன்றி மறவேல், பருவத்தீத பயிர்செய், இயல்பு அலாதன செயேல், வஞ்சகம் பேசேல், இளமையில் கல், அனந்தல் ஆடீல், கடிவது மற, கீழமை

அகற்று, குணமது கைவிடீல், கெடுப்பது ஒழி, கேள்வி முயல், சான்றோர் இனத்து இரு, சோம்பித்திரியேல்.

(மேற்கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை(மரபு அல்லது புதுக்கவிதை) கதை, கட்டுரை, நாடகம் எழுதி வரச் செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Read and comprehend literature

UNIT –I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

UNIT – IV

Editing

Proof reading

UNIT – V

Comparison and contrast

Cause and effect

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20111AEC12	English-I	4	0	0	2

AIM:

- To acquaint students with learning English through literature

OBJECTIVE:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

UNIT –I

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason

UNIT – II

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

UNIT –III

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

UNIT –IV

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

UNIT –V

Oliver Twist -Charles Dickens

EMPLOYABILITY

OUTCOME:

- Read and comprehend literature

REFERENCES:-

The Art of Reading/ Experiencing Poetry. -S.Murugesan and Dr.K.Chellappan

Emerald Publishers

Course Code	Course Title	L	T	P	C
20120SEC13	Programming in C with C++	5	1	0	4

AIM

To equip the students with fundamental programming principles and concepts of object oriented design.

OBJECTIVES:

The students should be made to:

- Be exposed to the syntax of C.
- Be familiar with programming in C.
- Learn to use arrays, strings, functions, pointers, structures and unions in C.
- To learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc
- To understand and apply the principles hiding, localization and modularity in software
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes

UNIT -I

Introduction - Basic Structure of C Programs - Character set -C Tokens - Constants - Variables-Data Types - Declaration and Assigning Values to Variables - Defining Symbolic Constants - Operators - Expressions - Type conversions - Built-in functions.

UNIT -II

Managing Input and Output Operators - Decision Making and Branching - Decision Making and Looping – Arrays and its Types.

UNIT –III

Functions: The Form of C Functions-Return Values and Their Types -Calling a Function- Category of Functions- Nesting of Functions-Recursion- Structures and Unions-Pointers.

UNIT-IV

Basic concepts of OOPs- Benefits and Application of OOPs- Inline functions- Function overloading – Friend and Virtual Functions -Constructors and Destructors - Operator overloading.

UNIT-V

Inheritance and its Types- Files - Classes for file stream operations - Opening, Closing and processing files - End of file Detection - File Pointers - Updating a file - Error handling during file operations - Command Line Arguments - Templates - Exception Handling.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications
- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Understand functions and parameter passing.
- Be able to do numeric (algebraic) and string-based computation.
- Understand object-oriented design and programming

REFERENCE BOOKS:

1. "Programming in C" – E. Balagurusamy – Tata McGraw-Hill Publications
2. "Programming with C" – Byron S.Gottfried – Schaum's outline series – Tata McGraw-Hill publications.
3. "Object oriented programming with C++". E. Balagurusamy, Tata McGraw Hill Publishing ltd., New Delhi, 1995.
4. "C++ The complete reference"- Herbert Schildt, 3rd edition, Tata McGraw Hill Pub-Ltd., 1999

Course code	Course Title	L	T	P	C
20112AEC14B	Classical Algebra	4	1	0	3

OBJECTIVES

To learn about the expansion of a Binomial Theorem for a rational index using vandermonde's theorem. Further we aim at learning problems to be solved using the different types in Binomial series .Understanding the relation between roots and coefficients of polynomial equations-symmetric functions-sum of r^{th} power of the roots-two methods And Reciprocal equations-Descartes' rule of signs-simple problems.

UNIT-I

Binomial, exponential and logarithmic series (formulae only)- Summations.

UNIT-II

Non singular, symmetric, skew symmetric orthogonal, Hermitian, skew Hermitian and unitary matrices-characteristic equation, Eigen values, Eigen vector-Cayley Hamilton's theorem(proof not needed)-simple applications.

UNIT-III

Relation between roots and coefficients of polynomial equations-symmetric functions-sum of r^{th} power of the roots-two methods.

UNIT-IV

Transformation of equations-diminishing, increasing and multiplying the roots by a constant-forming equation with the given roots.

UNIT-V

Reciprocal equations-Descartes' rule of signs-simple problems.

Learning outcomes EMPLOYABILITY

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Cayley Hamilton Theorem, and finding the Eigen values & Eigen vectors
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

REFERENCE BOOKS:

Algebra-T.K.M.Pillai, Vol1&2.

Course code	Course Title	L	T	P	C
20112AEC15B	Numerical And Statistical Methods	4	1	0	4

OBJECTIVES:

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems ,Numerical differentiation and integration interpolation with equql & unequal intervals are concentrated. Correlation coefficient and its properties Linear Regression and its properties, Test of significance would also be taught.

UNIT-I

Algebraic and transcendental equations-the iteration method –the Newton Raphson method-False Position method-the bisection method

UNIT-II

Interpolation-Finite difference –Newton’s formulae for interpolation-Lagrange’s formulae for interpolation-Gaussian elimination method –Gauss-Seidal method.

UNIT-III

Numerical different ion and integration-Maximum and minimum values of a tabulated functions-Trapezoidal rule-Simpson’s rule –Numerical solution of ordinary differential equations-Euler’s method –Runge Kutta methods-Predictor corrector method-Boundary value problems.

UNIT-IV

Correlation –different types of correlation –Karl Pearson’s spearman’s correlation-Regression-Regression coefficients-Regression equations-Properties of correlation and regression coefficients.

UNIT-V

Test of hypothesis-null and alternative hypothesis-tests of significance based on normal and distribution for mean, simple correlation and proportion Chi square test-independents of attributes and goodness of fit-applications.

EMPLOYABILITY

REFERENCE BOOKS:

1. Introductory methods of numerical analysis S.S.Sastry, PHI
2. Fundamentals of mathematical statistics-S.C.Gupta & V.K.Kapoor.

Learning outcomes

By the end of this course, you should:

- be able to calculate the solution of algebraic and transcendental equations, Solutions of simultaneous equations,
- be able to calculate the area of the given curve

Course Code	Course Title	L	T	P	C
20120SEC16L	Programming in C with C++ Lab	0	0	3	2

1. Solution of a Quadratic Equation (all cases).
2. Sum of Series (Sine, Cosine, e^x)
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a c program for Matrix Operations (Addition, Subtraction, Multiplication- use functions).
6. Write C++ program using a class to represent a bank account with data members- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.
7. Write C++ programs for implementing inheritance.
8. Write a C++ program using friend function.
9. Write a C++ program which reads a text from a file and the display the following information (Number of Lines, Number of words, and Number of characters).
10. File Processing: Mark sheet preparation.

Course Outcomes:

- *Read understand and trace the execution of programs written in C language.
- *Write the C code for a given algorithm.
- *Implement programs with pointers and arrays, perform pointer arithmetic, and use the pre-processor.
- *Write programs that perform operations using derived data types.
- *Be able to do numeric (algebraic) and string-based computation.
- *Illustrate flowchart and algorithm to the given problem.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
201ACLSICN	Indian Constitution	-	-	-	2

OBJECTIVES:

- To make the students understand about the Democratic Rule and Parliamentary administration.
- To appreciate the salient features of the Indian Constitution.
- To know the fundamental Rights and Constitutional Remedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

UNIT I:

The Making of Indian Constitution

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

UNIT II:

Fundamental Rights and Fundamental Duties of the Citizens

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

UNIT III:

Directive Principles of State Policy

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

UNIT IV:

The Union Executive, Union parliament and Supreme Court

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

UNIT V:

State Council – Election System and Parliamentary Democracy in India

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

EMPLOYABILITY

OUTCOMES

- Democratic values and citizenship Training are gained.
- Awareness on Fundamental Rights are established.
- The functions of union Government and State Governments are learnt.
- The power and functions of the Judiciary learnt thoroughly.
- Appreciation of Democratic parliamentary Rule is learnt.

REFERENCE BOOKS:

1. Palekar S.A. Indian Constitution Government and polities, ABD Publications, India.
2. Aiyer Alladi, Krishnaswami, Constitution and fundamental rights 1955.
3. Markandan K.C. Directive Principles in the Indian Constitution 1966.
4. Kashyap Subash C Our Parliament, National Book, Trust New Delhi 1989.

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Aim:

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

Course Objectives :

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realise one's potentials.

Course Outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practised human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realise their potential as human beings and conduct themselves properly in the ways of the world.

Unit I

- Introduction: What is love? Forms of love—for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love.
- Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn/gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
- Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Case studies

Unit II

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)
- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will

learners lose if they don't practice it?

- Learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Unit III

• Introduction: What is non-violence? Its need. Love, compassion, empathy sympathy for others as pre-requisites for non-violence

- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non-violence

• Narratives and anecdotes about non-violence from history, and literature including local folklore

• Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?

- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Casestudies

Unit IV

• Introduction: What is righteousness?

- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness?

What will learners lose if they don't practice it?

- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Unit V

• Introduction: What is peace? Its need, relation with harmony and balance

- Individuals and organisations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore

• Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?

- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Casestudies

Unit VI

• Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.

- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature

including local folklore

- Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s) regarding service
- Simulated situations
- Casestudies

Unit VII

- Introduction: What is renunciation? Renunciation and sacrifice. Self-restraint and Ways of overcoming greed. Renunciation with action as true renunciation
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.
- Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

20111AEC22	English-II	4	0	0	2

AIM:

- To acquaint learners with different trends of writing

OBJECTIVE:

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

UNIT – I

Ecology -A.K. Ramanujan

Gift -Alice Walker

The First Meeting -Sujata Bhatt

UNIT –II

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran

UNIT –III

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

UNIT – IV

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king

Those People Next Door -A.G. Gardiner

UNIT – V

Marriage is a private Affair -Chinua Achebe

The Fortune Teller -Karel Capek

Proposal -Anton Chekov

OUTCOME: SKILL DEVELOPMENT

- Read and comprehend literature

REFERENCES:-

Gathered Wisdom -GowriSivaraman EmeraldPublishers

Course Code	Course Title	L	T	P	C
20120SEC23	Internet and Java Programming	5	1	0	4

AIM

To equip the students with basic programming skill in Java

OBJECTIVE

- To understand the core principles of the Java Language
- To study about Graphics programming using java Language
- To learn visual tools to produce well designed, effective applications and applets.

UNIT-I

Introduction to the Internet - Internet Technologies - Internet Browsers

UNIT-II

Decision making and looping statements -Classes, Objects and Methods

UNIT-III

Arrays, strings and vectors- Interfaces: Multiple Inheritance – Packages: Putting classes together - Multithreaded Programming.

UNIT-IV

Managing Errors and Exceptions - Applet programming- Graphics programming

UNIT-V

Managing Input/Output files in Java

OUTCOMES:

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

REFERENCE BOOKS:

1. “World Wide Web Design with HTML”, C.Xavier, Tata McGraw-Hill Publishing Company Limited for Unit-1.
2. “Programming with Java”, E.Balagurusamy, Tata McGraw-Hill Publishing Company Limited for Unit-2, 3, 4, 5.

EMPLOYABILITY

Course code	Course Title	L	T	P	C
20112AEC24B	Discrete Mathematics	4	1	0	4

OBJECTIVES:

Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental thm of homomorphism are concentrated. Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory 20 such as Trees, Directed graphs, Connectivity, Euler tours are also concentrated

UNIT I

Groups- Types – Properties Of Groups- Semi Groups-Monoids – Problem In Groups- Cyclic Groups And Subgroups

UNIT-II

cosets & lagrange's thm-Normal groups and quotient groups- Different types of morphisms of groups fundamental thm of homomorphism.

UNIT III

Graph theory - Basic concepts- Finite and infinite graph – Incidence and degree ideas on vertices- Isomorphism-sub graphs – Walks – Paths and circuits.

UNIT IV

Connected Graphs And Disconnected Graphs And Components - Euler Graphs – Hamiltonian Path And Circuits

UNIT V

Trees-properties of trees -pendent vertices – Distance and centers in a tree rooted and binary trees.

REFERENCE BOOKS

1. **Algebra - Arumugan Issac**
2. **Graph theory – Narasingh deo**

Learning outcomes

By the end of this course, you should be able

- Understood the concept of Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental theorem of homomorphism
- Knowledge in Graph Theory
- Understood the properties of Graph Theory
- Understood the concept of Euler theorem and its applications

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20112AEC25B	Operations Research	4	1	0	3

OBJECTIVES:

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

UNIT — I

Basic of operations research (OR) characteristics of OR - Necessity of OR in industry, OR and decision making - role of computers in OR Linear Programming: Formulations and graphical solution of (2 variable) canonical and standard forms of linear programming problem.

UNIT — II

Algebraic Solution: Simplex methods — Charnes method of penalty - Two phase simplex method.

UNIT — III

Transportation Model: Definition — Formulation and solution of transportation models the row — Minima, column minima, Matrix minima and Vogel's approximation method.

Assignment Model: Definition of assignment model— comparison with transportation model - Formulation and solution of assignment model

UNIT — IV

Sequencing problem: Processing of n jobs through 2 machines - processing n jobs through 3 machines - processing 2 jobs through m machine Games Theory: Characteristics of games — Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving 2 x 2 games.

UNIT — V

PERT computation — Resource scheduling.

EMPLOYABILITY

REFERENCES BOOK

1. Hamdy A. Taha: Operation Research - An Introduction 5th Edition, PHI, New Delhi 1996
2. Ackoff, R Land Sasieni, M.N: Fundamental of Operation research, John Wiley and sons, New york 1968.

Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory

Course Code	Course Title	L	T	P	C
20120SEC26L	Internet and Java Programming Lab	0	0	3	2

1. Simple programming using for, while, do-while, ternary and switch.

2. String handling using string and string buffer. Inheritance.

3. Polymorphism

4. Interfaces and Packages

5. Data files (creation, processing)

6. Vector manipulation

7. Simple programs using Applets

8. Exercises using predefined and user defined exceptions

9. Graphics programs for drawing lines, rectangle, oval, string using Applets.

Course Outcome:

*To solve computational problems using basic constructs like if-else, control structures, array and strings.

*To implement relationships between classes and Usage in Data Structures.

*To evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements.

*To develop software applications using Java programming language.

*Write modular, multithreading and event driven programming.

*Implement interfaces, inheritance, polymorphism, exception handling, file IO and multithreading as programming techniques for application development.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Aim:

Course Objectives :

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome :

By the end of this program participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barriers to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

- Techniques of effective reading
- Gathering ideas and information from a given text
 - i. Identify the main claim of the text
 - ii. Identify the purpose of the text
 - iii. Identify the context of the text
 - iv. Identify the concepts mentioned
- Evaluating these ideas and information
 - i. Identify the arguments employed in the text
 - ii. Identify the theories employed or assumed in the text
- Interpret the text
 - i. To understand what a text says

- ii. To understand what a text does
- iii. To understand what a text means

Unit IV

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalisations and over simplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
 - i. Well-knit logical sequence
 - ii. Narrative sequence
 - iii. Category groupings
- Different modes of Writing
 - i. E-mails
 - ii. Proposal writing for Higher Studies
 - iii. Recording the proceedings of meetings
 - iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office
 - iii. Excel
 - iv. Powerpoint

Unit VI

- Introduction to social media websites
- Advantages of social media
- Ethics and etiquettes of social media
- How to use Google search better
- Effective ways of using Social Media
- Introduction to Digital Marketing

Unit VII

- Meaning of non-verbal communication

- Introduction to modes of non-verbal communication
- Breaking the misbeliefs
- Open and Closed Body language
- Eye Contact and Facial Expression
- Hand Gestures
- Do's and Don'ts
- Learning from experts
- Activities-Based Learning

காப்பியங்கள்

ஐஞ்சீறுகாப்பியங்கள்

புராணங்கள், இதிகாசங்கள்

தாள் - III

ஒப்படைவு - மதிப்பெண் 40

பாடத்தொடர்புடையக் கட்டுரை 20 மதிப்பெண்

வெற்றி வேற்கை 20 மதிப்பெண்

எழுத்து அறிவித்தவன் இறைவன் ஆகும், கவ்விக்கு அழகு கசடற மொழிதல், செல்வர்க்கு அழகு செழுங்கிளை தாங்குதல், மன்னவர்க்கு அழகு செங்கோல் முறைமை, வைசியர்க்கு அழகு வளர் பொருள் ஈட்டல், உழவர்க்கு அழகு உழுது ஊண் விரும்பல், மந்திரிக்கு அழகு வரும் பொருள் உரைத்தல், தந்திரிக்கு அழகு தறுகண் ஆண்மை, உண்டிக்கு அழகு விருந்தோடு உண்டல், பெண்டிர்க்கு அழகு எதிர் பேசாதிருத்தல், அறிஞர்க்கு அழகு கற்றுணர்ந்து அடங்கல், வறிஞர்க்கு அழகு வறுமையில் செம்மை, பெரியோர் எல்லாம் பெரியோரும் அல்லர், சிறியோர் எல்லாம் சிறியரும் அல்லர், அடினும் ஆவின் பால் தன் சுவை குன்றாது, சுடினும் செம்பொன் தன்னொளி கெடாது, அறைக்கினும் சந்தனம் தன் மனம் மாறாது பெருமையும் சிறுமையும் தான் தர வருமே, அறிவுடை ஒருவனை அரசும் விரும்பு, யானைக்கு இல்லை தானமும், தருமமும், பூனைக்கு இல்லை தவமும் தயையும், ஞானிக்கு இல்லை இன்பமும் துன்பமும் , அச்சமும் நாணமும் அறிவிலோருக்கு இல்லை, நாளும் கிழமையும் நலிந்தோருக்கு இல்லை, கேளும் கிளையும் கெட்டோருக்கு இல்லை, உடைமையும் வறுமையும் ஒரு வழி நிலலா, இரந்தோர்க்கு ஈவதும் உடையோர் கடனே, பழியா வருவது மொழியாது ஒழிவது, சுழியா வருபுனல் இழியாது ஒழிவது, துணையோடு அல்லது நெடுவழி போகேல்.

(மேற்கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை(மரபு அல்லது புதுக்கவிதை) கதை, கட்டுரை, நாடகம் எழுதி வரச் செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC31	Advanced English-III	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

Outcome:

- Understand Phonetics
- Develop writing skill

UNIT –I

The organs of speech, Classification of speech sounds , Vowels and Diphthongs

UNIT –II

Consonants, Consonant cluster

UNIT – III

Syllable, Word accent, Intonation

UNIT – IV

Idiom, Interpretation of graphics

UNIT – V

Slogan writing, Writing advertisement

References:

English Grammar -Wren and Martin
 English Grammar and Composition -Radhakrishna Pillai
 Technical Communication -Meenakshi Sharma & Sangeetha Sharma
 A text book of Phonetics for Indian Students -T.B. Balasubramaniyan

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20111AEC32	English-III	4	0	0	2

AIM:

- To acquaint students with learning English through literature

OBJECTIVE:

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

OUTCOME:

- Read and comprehend literature

UNIT – 1

The Doctor’s World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

UNIT – II

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

UNIT –III

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

UNIT –IV

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

UNIT – V

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

REFERENCES:-

Nine Short Stories	-Steuart H.King Blackie Books
One-Act plays of Today	-T.Prabhakar Emerald Publishers

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC33	Visual Programming	4	1	0	4

AIM:

To equip the students with principles of various visual programming environment

OBJECTIVE:

- To learn the basic principles of visual programming
- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

UNIT I

Visual Basic – Integrated Development Environment (IDE) features – VB editor – customizing the IDE – anatomy of a form working with form properties – setting form’s properties – introducing form events and form methods.

UNIT II

Variables in Visual Basic : Declaring variables – Data types – Null values, Error value – empty value – the scope of a variable – Module level variable – Constants – Creating your own constants – Scope of a constant – Converting data types – arrays – Declaring arrays – Fixed size arrays – Dynamic arrays – Preserve keywords – ReDim. Writing code in Visual Basic – The anatomy of a procedure – Subroutine and Functions – Language constructs – For...Next, The While loop, Select case...End select, Exit statement, with structure.

UNIT III

Selecting and Using controls – Introduction to standard controls: command buttons – Text boxes – labels – frames – option buttons – Check boxes – Scroll Bars – Timer – working with Common Dialog Control.

UNIT IV

The Image list control – the List view control – slider control – status bar control – Tool bar control – The Tree view control – Menu editor. –File System Controls (Drive, Dirlist, File List boxes).

UNIT V

OLE properties – OLE automation – building COM/OLE DLL servers – Data control – design time(for access – style databases) –programming with the data control– Database access – set using SQL –transaction control – testing the control – Open Database Connectivity.

OUTCOMES:

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic's Integrated Development Environment (IDE).
- Implement syntax rules in Visual Basic programs.
- Write Windows applications using forms, controls, and events
- Write and apply decision structures for determining different operations.
- Write and apply loop structures to perform repetitive tasks.

REFERENCE BOOKS:

1. Mohammed Azam, Programming with Visual Basic 6.0 – Vikas Publishing House Pvt Ltd – 2002(unit-I, unit-II)
2. Content Development Group, Visual Basic 6.0 – Tata McGraw Hill Publishing Company Limited – 2002(unit-III, unit-IV, unit-V)

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20113AEC34A	Applied physics –I	4	1	0	5

AIM

To provide students with a broad and balanced foundation of physics knowledge and Practical Skill.

OBJECTIVES:

- To develop in students through an education in Physics a range of transferable skills of Value in physics and other areas.
- To instill in students a sense of enthusiasm for physics, and appreciation of its applications in different contexts.
- To provide students with a knowledge and skills base for further studies in physics or multi-disciplinary areas involving physics.

UNIT – I: ELECTROSTATICS

Gauss theorem and its application – Intensity at a point due to uniformly charged cylinders – Electrostatic potential – Equipotential surface – Capacitor – Principle of a capacitor – Spherical and cylindrical capacitors – Capacitors in series and in parallel – Energy of a charged capacitor – Energy loss due to sharing of charges.

UNIT – II: MAGNETOSTATICS

Magnetic field – Intensity of magnetization – Permeability – Susceptibility – Relation between them – Potential due to dipole – Relation between potential and intensity – Properties of dia, para, fero magnetic materials – Hysteresis – B.H curve.

UNIT – III: CURRENT ELECTRICITY

Ohm's law – Kirchoff's law – Application to Wheatstone's Bridge – Carey Foster Bridge – Potentiometer – Measurement of current and resistance – Calibration of low and high range voltmeter – Fleming's left and right hand rule – Theory of moving coil galvanometer – Ballistic galvanometers.

UNIT – IV: ELECTROMAGNETIC INDUCTION

Laws of Electromagnetic induction – Relation between induced emf and mutual inductance – Eddy current – Determination of self inductance – Anderson method – Co-efficient of mutual induction – Co-efficient of coupling – Transformer theory.

UNIT – V: ALTERNATING CURRENT

A.C Circuit with single components – Double components – Measurement of current and voltages – Power in A.C Circuits – Wattless current – Series and parallel resonance circuits – Q factor – Oscillatory discharge of a condenser.

Learning Outcomes:

Cognitive abilities and skills relating to solution of problems in Physics and Physics Related Disciplines

Practical skills relating to the conduct of laboratory and industrial work in

General skills relating to non-subject specific competencies, communication, ICT knowledge, interpersonal, organization skills and ethical standards.

REFERENCE BOOK:

- 1) Electricity and Magnetism – Brijlal and Subramaniam.
- 2) Electricity and Magnetism – Narayanamoorthi and Nagarathnam.
- 3) Electricity and Magnetism – D.L. Seghal and Chopra.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20120SEC35L	Visual Programming Lab	0	0	3	2
-------------	------------------------	---	---	---	---

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to expand and shrinking an object – while program is running.
4. Write a code to design and implement a scientific calculator.
5. Write a program to create animation by using move method and timer Object.
6. Write a program for preparing students mark list.
7. Write a program to populate the label entities using data bound control.
8. Write a program to expand and shrink Objects using timer control and move method

Course Outcomes:

- Design,create,build and debug visual basic applications.
- Apply arithmetic operations for displaying numeric output.
- Apply decision structures for determining different operations.
- Write windows applications using forms,controls and events.
- Create one and two dimensional arrays for sorting,calculating and displaying of data.
- Write Visual Basic programs using object-oriented programming techniques including classes, objects, methods, instance variables, composition, and inheritance, and polymorphism.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20113AEC36AL	Applied physics Lab-I	0	0	3	2

1. Semiconductor diode Characteristics
2. Zener diode characteristics
3. Transistor characteristics –CE Configuration
4. IC Regulated power supply
5. Post office Box-Resistance
6. Figure of merit of galvanometer.
7. Potentiometer- Ammeter Calibration
8. Potentiometer- Voltmeter Calibration
9. Zener Regulated Power supply.
10. Carey foster bridge

Course Outcomes:

- Practical skills relating to the conduct of laboratory and industrial work in
- General skills relating to non-subject specific competencies, communication, ICT knowledge, interpersonal, organization skills and ethical standards.
- Demonstrate a working knowledge of the basic concepts and theories of physics.
- Formulate hypotheses and devise and perform experiments to test a hypothesis as individuals and in a team.
- Effectively apply current technology and scientific methodologies for problem solving in various scientific, professional and community settings.
- Cognitive abilities and skills relating to solution of problems in Physics and Physics Related Disciplines

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120RMC37	Research Methodology	2	0	0	2

AIM:

To create a basic appreciation towards research process and awareness of various research publication.

OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-based
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

PREREQUISITES:

Basic computer skill for working in window environment & conceptual knowledge on basic matrices.

UNIT-I Introduction to Research Methodology

Meaning of research – Objectives of research – Type of research – Significance of research – Research approaches.

UNIT-II Research Methods

Research methods versus Methodology – Research and scientific method – criteria of good research – Problems encountered by researchers in India.

UNIT-III Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Review – General treatises – Monographs.

UNIT-IV Database Survey

Database search – NIST –MSDS –PubMed – Scopus – Science citation index – Information about a specific search.

UNIT-V Introduction to MATLAB:

What is MATLAB? Matrix and its application in different areas: MATLAB approach to environmental modeling; Arithmetic Matrix – Operators; Arithmetic Array – Operators and its applications in MATLAB; Expressions, Opening M-Files; Structure of MATLAB Programming; Programming; Concatenation of strings; Vectorization ; Basic Graphics.

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.

5. Introduction to MATLAB for Engineers by William J. Palm III.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
201ACLSOAN	OFFICE AUTOMATION	-	-	-	2

Aim:

Course Objectives :

To provide an in-depth training in use of office automation, internet and internet tools. The course also helps the candidates to get acquainted with IT.

Course Outcomes:

After completion of the course, students would be able to documents, spreadsheets, make small presentations and would be acquainted with internet.

UNIT I

Knowing the basics of Computers

UNIT II

Word Processing (MS word)

UNIT III

Spread Sheet (MS XL)

UNIT IV

Presentation (MS Power Point)

UNIT V

Communicating with Internet

ஒப்படைவு மதிப்பெண்-40

பாடத்தொடர்புடைய கட்டுரை 20 மதிப்பெண்

பாரதியார், பாரதிதாசன் புதிய ஆத்திச்சூடி 20 மதிப்பெண்

பாரதியார்

அச்சம் தவிர், ஆண்மை தவறேல், இளைத்தல் இகழ்ச்சி, உடலினை உறுதி செய், எண்ணுவது உயர்வு, ஏறுபோல் நட, ஐம்பொறி ஆட்சி கொள், ஒற்றுமை வலிமையாம், காலம் அழியேல், கீழாருக்கு அஞ்சேல், குன்றென நிமிர்ந்து நில், கொடுமையை எதிர்த்து நில், சிதையா நெஞ்சு கொள், செய்வது துணிந்து செய், தீயாருக்கு அஞ்சேல், பெரிதினும் பெரிது கேள், வையத்தலைமை கொள், யாரையும் மதித்து வாழ்

பாரதிதாசன்

காற்றினைத் தூய்மை செய், குற்ற நினைவு தீர், தளையினைக் களைந்து வாழ் தூய நீராடு, தெருவெல்லாம் மரம் வளர், தைக்க இனிதுரை, தொன்மை மாற்று, நினைவினில் தெளிவு கொள், நீனிலம் உன் இல்லம், போர்த் தொழில் பழகு, மாறுவது இயற்கை, வையம் வாழ் வாழ்.

(மேற்கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை(மரபு அல்லது புதுக்கவிதை) கதை,கட்டுரை,நாடகம் எழுதி வரச் செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்

Course Outcomes:

- Realize how the ancient people changed their life style according to the ages
- Learn how to change one's lifestyle according to the needs of the future
- Accept the modern trend and its uses.
- Obtaining More information about one's culture and tradition;
- Encourage creative writing and developing self-confidence.
- Aiming at enriching human excellence.

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC41	Advanced English-IV	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

Outcome:

- Develop communicative skill
- Read and comprehend literature

UNIT –I

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

UNIT – II

Flowchart

Proposals

UNIT – III

Discourse markers

Review

UNIT IV

Grammatical forms

Paraphrasing

UNIT –V

Definition

Writing for and against a topic.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20111AEC42	English-IV	4	0	0	2

AIM:

To acquaint students with learning English through literature

OBJECTIVE:

- To introduce learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

UNIT –I

How to be a Doctor -Stephen Leacock
My Visions for India -A.P.J. Abdul Kalam
Woman, not the weaker sex -M.K. Gandhi

UNIT –II

My Last Duchess -Robert Browning
The Toys -Coventry Patmore
I, too -Langston Hughes

UNIT –III

The Best Investment I ever made-A.J.Cronin
The Verger -W.S Maugham
A Willing Slave -R.K.Narayan

UNIT –IV

Macbeth
As You Like It

UNIT –V

Henry IV Tempest

OUTCOME:

Read and comprehend literature

-Emerald Publishers

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC43	Active Server Programming	4	1	0	4

AIM

To equip the student to learn the Active Server Page

OBJECTIVE:

- To study about scripting languages concepts
- To understand scripting languages components
- To learn ADO cursors

UNIT I

Introduction to ASP-Active sever pages model-ASP file-The process of serving an active server page-Using scripting languages-Setting the primary scripting languages-Including other files-Understanding objects

UNIT II

Understanding components-Working with users-Working with HTML forms-retrieving form data-using text boxes and text areas

UNIT III

Cookies-Working with cookies-applications of cookies-addressing the drawbacks of using cookies-using cookies in ASP applications. Working with connections and data sources-creating connections with OLEDB and ODBC – connecting to Microsoft SQL server-Connecting to a Microsoft access database

UNIT IV

About the connection object – executing a SQL statement with the connection object-Understanding session and connection pooling – working with record sets-retrieving a record set-record set cursor and locking types-Understanding ADO cursors-paging through a record set

UNIT V

Working with the command object-creating stored procedures-executing stored procedures with the connection object –executing stored procedures with the command object – retrieving parameter information

OUTCOMES

- Explain concepts of Active Server Pages.
- Apply methods and properties of various objects and components of ASP
- Develop Dynamic real life website using the concept of ADO and ASP.

REFERENCE BOOK:

1. Practical ASP-Ivan bayross, BPB Publications, 2000

2. Special Edition using Active Server Pages – Scot Johnson, Prentice Hall of India Private Limited 2001

EMPLOYABILITY,/ENTREPRENEURSHIP

Course Code	Course Title	L	T	P	C
20113AEC44A	Applied physics –II	5	1	0	5

AIM:

To prepare the student for the study of physics by introducing general concepts and methods this will be applied throughout the course.

OBJECTIVES:

- To introduce and develop the fundamental techniques of experiment in physics.
- Introduce the student to the basic concepts in electricity and magnetism.
- To expose the students to experiments in Light, Modern Physics, AC circuits, and Devices.
- To introduce the student to elementary alternating current circuits

UNIT – I: SEMI CONDUCTOR PHYSICS

Theory of Energy bands in crystals – Distinction between conductors, insulators and semiconductors – Hall effect in semi conductors – Zener diode – Tunnel diode – Backward diode – Breakdown voltage – Avalanche Breakdown.

UNIT – II: TRANSISTORS

NPN and PNP transistors – Characteristics of CE and CB configurations – H-Parameters – Transistor as an amplifier and oscillator – FET – N-Channel and P-Channel – FET Characteristics – FET amplifier.

UNIT – III: LASER AND MASERS

Basic concepts of stimulated emission – Principles of Laser – Population inversion and Meta stable state – Ammonia maser – Ruby laser and He-Ne laser production – Applications of laser and maser.

UNIT – IV: OPTO ELECTRONIC DEVICES

LED – LED Voltage and current – Advantages of LED – Applications of LED's – Photo diode – Photo diode operation – characteristics of photo diode – Photo transistor – Seven segment display.

UNIT – V: OPERATIONAL AMPLIFIER

The basic operational amplifier – Inverting and Non inverting operational amplifiers – CMRR – Basic uses of operational amplifier as Integrator, Differentiator, Adder, Subtractor – D/C Binary weighted method – R-2R method.

Learning Outcomes:

The Applied Physics program will produce intellectually engaged graduates accomplished in application of fundamental physics principles, and prepared for direct entry into the workplace or continuing professional development. Demonstrate a working knowledge of the basic concepts and theories of physics.

REFERENCE BOOK:

1. Principles of Electronics – V.K. Metha, S. chand and Co.,
2. Electronic Devices and Circuits – Millman and Halkias.
3. The Fundamentals of solid state physics – Theraja.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
201ENSTU45	Environmental Studies	2	0	0	2

AIM:

To create the awareness about environmental problems among the students.

OBJECTIVE:

- It deals with the study of flow of energy and materials in the environment
- It deals with the study of natural and its function

UNIT-I

The Multidisciplinary Nature of Environmental Studies – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources** - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

UNIT-II

Ecosystems - Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

UNIT-III

Biodiversity and its Conservation – Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

UNIT-IV

Environmental Pollution – Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

UNIT-V

Social Issues and the Environment - From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - Human Population and the Environment.

EMPLOYABILITY,/ENTREPRENEURSHIP,/SKILL DEVELOPMENT

Course Outcomes:

- Understand key concepts from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- Appreciate concepts and methods from ecological and physical sciences and their application in environmental problem solving.
- Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

REFERENCE BOOK:

1. "ENVIRONMENTAL STUDIES", K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

Course Code	Course Title	L	T	P	C
20120SEC46L	Active Server Programming Lab	0	0	3	2

1. Create an ASP file to display the message “Have a good Week end” if it a Saturday other wise “Have a nice day”
2. Write an ASP program to get the rollno and display the corresponding name & mark details
3. Create a login form to expire if the user does not type the password within 100 seconds.
4. Create an advertisement for a book shop using Ad Rotator component.
5. Create a course registration form with name, address and list of available course. Reply with the corresponding course fees on selection of a single course or a collection of courses.
6. Write an ASP program to manipulate cookies with the information between HTTP sessions such as
 - a. Last date visited
 - b. Last Time visited
 - c. Number of visits
7. Create a student database and manipulate the records using the connection object in ASP
8. Create an employee database and manipulate the records using command object in ASP

Course Outcomes:

Contrast and compare major elements of the .NET Framework and explain how C# fits into the .NET platform.

Analyze the basic structure of a C# application and be able to document, debug, compile, and run a simple application.

Create, name, and assign values to variables.

Use common statements to implement flow control, looping, and exception handling.

Create methods (functions and subroutines) that can return values and take parameters.

Create, initialize, and use arrays.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20113AEC47AL	Applied physics Lab –II	0	0	3	2

- 1) FET-Characteristics
- 2) Logic Gates-Universality of NOR Gate.
- 3) LCR — Series Resonance Circuit.
- 4) LCR parallel – resonance circuit.
- 5) OP AMP-Addition,Subtraction.
- 6) Verification basic logic gates.
- 7) Verification of Demorgon’s theorem..
- 8) Half adder and Half subtractor.
- 9) Logic Gates-Universality of NAND Gate.
- 10) OP AMP Differentiator ,Intergrator.

Course Outcomes:

- Effectively use and critically evaluate current technical/scientific research literature, online information, as well as information related to scientific issues in the mass media.
- Integrate and relate scientific knowledge learned from classroom with real life situations.
- Communicate in written and oral forms with interested citizens and professionals on key concepts in physics and general scientific issues.
- Work cooperatively as part of a research team.
- Maintain life-long learning in the sciences and incorporate new information into the existing body of knowledge.
- Outline the applications of physics in industry and the role of physicists as entrepreneurs.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
201ACLSLMS	Leadership and Management Skills	-	-	-	2

Aim:

The aim of the course cultivating and nurturing the innate leadership skills of the youth so that they may transform these challenges into opportunities and become torch bearers of the future by developing creative solutions.

Course Objective:

The Module is designed to:

- Help students to develop essential skills to influence and motivate others
- Inculcate emotional and social intelligence and integrative thinking for effective leadership
- Create and maintain an effective and motivated team to work for the society
- Nurture a creative and entrepreneurial mindset
- Make students understand the personal values and apply ethical principles in professional and social contexts.

Course Outcomes :

Upon completion of the course students will be able to:

1. Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
2. Learn and demonstrate a set of practical skills such as time management, self management, handling conflicts, team leadership, etc.
3. Understand the basics of entrepreneurship and develop business plans
4. Apply the design thinking approach for leadership
5. Appreciate the importance of ethics and moral values for making of a balanced personality.

UNIT I- Leadership Skills

- a. **Understanding Leadership and its Importance**
 - What is leadership?
 - Why Leadership required?
 - Whom do you consider as an ideal leader?
- b. ***Traits and Models of Leadership***

- Are leaders born or made?
- Key characteristics of an effective leader
- Leadership styles
- Perspectives of different leaders

*c. **Basic Leadership Skills***

- Motivation
- Team work
- Negotiation
- Networking

UNIT II - Managerial Skills

*a. **Basic Managerial Skills***

- Planning for effective management
- How to organise teams?
- Recruiting and retaining talent
- Delegation of tasks
- Learn to coordinate
- Conflict management

*b. **Self Management Skills***

- Understanding self concept
- Developing self-awareness
- Self-examination
- Self-regulation

UNIT III - Entrepreneurial Skills

*a. **Basics of Entrepreneurship***

- Meaning of entrepreneurship
- Classification and types of entrepreneurship
- Traits and competencies of entrepreneur

*b. **Creating Business Plan***

- Problem identification and idea generation
- Idea validation
- Pitch making

UNIT IV - Innovative Leadership and Design Thinking

*a. **Innovative Leadership***

- Concept of emotional and social intelligence
- Synthesis of human and artificial intelligence
- Why does culture matter for today's global leaders

*b. **Design Thinking***

- What is design thinking?
- Key elements of design thinking:
 - Discovery
 - Interpretation
 - Ideation

- Experimentation
- Evolution.
- How to transform challenges into opportunities?
- How to develop human-centric solutions for creating social good?

UNIT V- Ethics and Integrity

a. Learning through Biographies

- What makes an individual great?
- Understanding the persona of a leader for deriving holistic inspiration
- Drawing insights for leadership
- How leaders sail through difficult situations?

b. Ethics and Conduct

- Importance of ethics
- Ethical decision making
- Personal and professional moral codes of conduct
- Creating a harmonious life

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC51	Data Communication and Networking	4	1	0	4

AIM:

To equip the students with Computer Networks and its security.

OBJECTIVES:

- To learn basic network concepts.
- To understand various switching techniques and protocols.
- To study about wireless technology and network security.

UNIT-I

Introduction-Components-Topologies-Categories of Network-OSI model-TCP/IP suite - Addressing.

UNIT-II

Transmission media-Connecting Devices-Error detection and correction-Flow and Error Control-piggy backing- IEEE standard.

UNIT-III

Switching-Namespace- DNS - TCP/UDP- Ipv4 vs Ipv6 - Remote logging- SMTP-POP-IMAP-FTP

UNIT-IV

Wireless WAN: Cellular telephony- Generations- Satellite-GSM-GPRS-Internet-WWW-HTTP

UNIT-V

Attacks-Web security consideration-SNMP-Secure Socket Layer- Principles of public key cryptography- Digital signature-Key management-Intruders and viruses-Firewall.

OUTCOMES:

At the end of the course, the student should be able to:

- Identify the components required to build different types of networks.
- Identify solution for each functionality at each layer.
- Trace the flow of data from one node to another node.

REFERENCE BOOK:

- 1."Data Communications and Networking "Behrouz A Forouzan, TATA McGraw-Hill
- 2." Network Security Essentials" William Stallings, Pearson Education
3. "Data and Computer Communications", William Stallings, Pearson Education

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC52	Operating System	4	1	0	3

AIM:

To equip the students with operating system and their components

OBJECTIVES:

- To learn the fundamental functionality of Operating system
- To understand the memory management, process management
- To study about I/O management, storage management

UNIT I

Evolution of Operating System – Types of Operating System – Different views of Operating System – Design and Implementation of Operating System – I/O Programming concepts – Interrupts Structure & Processing.

UNIT II

Memory Management : Single Contiguous Allocation – Partitioned Allocation – Relocatable Partitioned Allocation – Paged and Demand – Paged Memory Management – Segmented Memory Management – Segmented and Demand – Paged memory Management – Swapping and overlay techniques.

UNIT III

Process Management : Job Scheduling – Process Scheduling – Functions and Policies – Evaluation of Round Robin multiprogramming performance – Process Synchronization – Race Condition – Synchronization Mechanism – Deadly Embrace, Prevention , Avoidance and Detection and Recovery Methods.

UNIT IV

Device Management : Techniques for Device Management – Device Characteristics – I/O Traffic Controller, I/O Scheduler, I/O Device Handler – Virtual Devices – Spooling.

UNIT V

File management: Simple file system, General Model of a file system, Physical and Logical file system.

OUTCOMES:

At the end of the course, the student should be able to:

- Design various Scheduling algorithms.
- Apply the principles of concurrency.
- Design deadlock, prevention and avoidance algorithms.
- Compare and contrast various memory management schemes.
- Design and Implement a prototype file systems.

REFERENCE BOOK:

1. Operating Systems by Stuart E. Madnick and John J. Donovan – Tata McGraw Hill Publishing Company Ltd.
- 2.. Operating Systems (Concepts and Design) Milan Milenkovic – McGraw Hill International Edition

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20120SEC53	Microprocessor and its Applications	4	1	0	4

AIM

To equip the students with the architecture and instruction sets of different Microprocessors and to design systems using microprocessors.

OBJECTIVE

- To study the architecture of microprocessors like 8085 and higher versions
- To understand the Assembly language programming
- To know the methods of connecting them to the peripheral devices.
- To learn the basic concepts and Microprocessor applications

UNIT I

Evolution of microprocessors – single chip microcomputers – memory buses -memory address capacity – Intel 8085 – instruction cycle – timing diagram.

UNIT II

Instruction set of Intel 8085 – instruction and data formats – addressing modes – status flags – Intel 8085 instruction – programming of microprocessors – assembler – stacks and subroutines – macros and microprogramming.

UNIT III

Assembly language programming – simple examples – addition and subtraction of binary and decimal numbers – complements – shift – masking – finding max and min number in an array-arranging a series of numbers – multiplication , division, multi-byte addition and subtraction.

UNIT IV

Peripheral devices and interfacing – address space partitioning – memory and I/O interfacing – data transfer schemes – interrupts of Intel 8085 – interfacing devices and I/O devices – I/O ports – programmable peripheral interface.

UNIT V

Microprocessor applications - delay subroutines – interfacing of 7 segment LED displays – frequency measurement – temperature measurement and control – water level indicator-microprocessor based traffic control.

OUTCOMES:

At the end of the course, the student should be able to:

- Design and implement programs on 8086 microprocessor.
- Design I/O circuits.
- Design Memory Interfacing circuits.
- Design and implement 8051 microcontroller based systems

REFERENCE BOOK:

1. Fundamental of microprocessor and microcomputers – Badri ram – Fifth revised and enlarged edition – Dhanpat rai publications – 2001.
2. Microprocessor architecture, programming and application with 8085 – Ramesh S. Goankar.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C

20120DSC54A	Cloud Computing	4	1	0	3
-------------	-----------------	---	---	---	---

AIM:

To provide a strong foundation in Developing Cloud Services.

OBJECTIVES:

- To understand the concept of Cloud Computing.
- To get an idea about Sharing Files.

UNIT I

Understanding Cloud Computing: An introduction to Cloud Computing – Computing in the Cloud – Developing Cloud Services.

UNIT II

Cloud Computing for the Family – Cloud Computing for the Community – Cloud Computing for the Corporation

UNIT III

Collaborating on Calendars, Schedules and Task Management – On Event Management – On Contact Management – On Project Management – On Word Processing – On Spreadsheets – On Databases – On Presentations

UNIT IV

Storing and Sharing Files and other online content – Sharing Digital Photographs – Controlling it all with Web-Based Desktops

UNIT V

Collaborating via Web-Based Communication Tools – Collaborating via Social Networks and Groupware – Collaborating Via Blogs and Wikis

OUTCOMES:

- Compare the strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Apply suitable virtualization concept.
- Choose the appropriate cloud player , Programming Models and approach.
- Address the core issues of cloud computing such as security, privacy and interoperability
- Design Cloud Services and Set a private cloud

REFERENCE BOOK:

1. Michael Miller, Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online, Pearson, 2009.
2. Haley Beard, Cloud Computing Best Practices for Managing and Measuring Processes for On-demand Computing, Applications and Data Centers in the Cloud with SLAs, Emereo Pty Limited, July 2008.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20120DSC54B	Middleware Technology	4	1	0	3
-------------	-----------------------	---	---	---	---

UNIT I

CLIENT / SERVER CONCEPTS

9

Client-Server – File server – Database server – Group server – Object server –
 Webserver – Middleware – General middleware – Service specific middleware – Client
 /server building blocks – RPC.

UNIT II

EJB ARCHITECTURE

EJB – EJB architecture – Overview of EJB software architecture – View of EJB
 –Conversation – Building and Ddeploying EJBs – Roles in EJB.

UNIT III

EJB APPLICATIONS

EJB session beans – EJB entity beans – EJB clients – EJB deployment – Building an
 application with EJB

UNIT IV

CORBA

CORBA – Distributed systems – Purpose – Exploring CORBA alternatives
 –Architecture overview – CORBA and networking Model – CORBA object model –IDL –
 ORB – Building an application with CORBA.

UNIT V

COM

COM – Data types – Interfaces – Proxy and stub – Marshalling – Implementing
 Server/Client – Interface pointers – Object creation – Invocation – Destruction
 –Comparison COM and CORBA.

TEXT BOOKS

1. Robert Orfali, Dan Harkey and Jeri Edwards, “The Essential Client/Server Survival Guide”, Galgotia Publications Pvt. Ltd., 2002.
2. Tom Valesky, “Enterprise Java Beans”, Pearson Education, 2002
3. Jason Pritchard, “COM and CORBA side by side”, Addison Wesley, 2000
4. Jesse Liberty, “Programming C#”, 2nd Edition, O’Reilly Press, 2002.

Course Outcome:

- To understand how middleware facilitates the development of distributed applications in heterogeneous environments
- To study how it helps to incorporate application portability, distributed application component interoperability and integration.
- Understand Distributed systems design and implementation
- Understand existing Distributed Technologies
- Understand Web services architectures

REFERENCES

1. Mowbray, “Inside CORBA”, Pearson Education, 2002.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20120DSC54C	Enterprise resource planning	4	1	0	3

COURSE OBJECTIVE

- Become familiarize with ERP process.
- Learn ERP implementation process using information technology.

COURSE OUTCOMES

- Design and Develop ERP applications by using features of ERP tools.

UNIT I BASICS OF ERP

ERP essentials – ERP evolution – ERP market – ERP tiers – information systems – Presentation tier – application tier – database tier.

UNIT II ENTERPRISE SYSTEMS

Enterprise systems – stand alone mainframe systems – client server architecture – service oriented architecture – types of enterprise systems – types of data – SAP overview.

UNIT III PROCESS IN ERP

Basic Procurement process – physical flow – document flow – information flow – financial impact- role of enterprise systems in the procurement process – fulfillment process – production process.

UNIT IV INTEGRATION

Integrated processes – Integrated processes execution – additional intracompany processes – extended (intracompany) processes.

UNIT V CASE STUDY

ERP for construction industry – ERP for a corrugated box manufacturing company – ERP for lens making company – ERP for furniture manufacturing company – ERP for toys manufacturing company - Mc Donald's story – Automobile enterprises.

REFERENCE BOOKS:

1. Simha R Magal, Jeff Word, “Essentials of Business Processes and Information Systems”, Wiley Publications, 2009.
2. Marianne Bradford, “Modern ERP: Select, Implement and use Today's advanced business systems”, Lulu Publishers, Second Edition, 2010.
3. Jyotindra Zaveri, “Enterprise Resource Planning”, Second edition, Himalaya Publishing house, 2012.

Course Outcomes:

- Make basic use of Enterprise software, and its role in integrating business functions.
- Analyze the strategic options for ERP identification and adoption.
- Design the ERP implementation strategies.

- Create reengineered business processes for successful ERP implementation.
- "To aim at preparing the students technological competitive and make them ready to
- self-upgrade with the higher technical skills.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC55L	Microprocessor Lab	0	0	3	2

The following programming exercises using 8085 instruction set,

1. 8-bit addition & subtraction
2. 8-bit multiplication & division
3. Multi byte addition
4. Multi byte subtraction
5. Sum of series & data transfer
6. Maximum & minimum values
7. Hexadecimal to decimal and decimal to hexadecimal conversion
8. Sorting the numbers

Course Outcome:

- Identify relevant information to supplement to the Microprocessor and Microcontroller course.
- Set up programming strategies and select proper mnemonics and run their program on the training boards.
- Practice different types of programming keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.
- Develop testing and experimental procedures on Microprocessor and Microcontroller analyze their operation under different cases.

- Prepare professional quality textual and computational results, incorporating accepted data analysis and synthesis methods, simulation software, and word-processing tools.

SKILLDEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC56L	Operating System Lab	0	0	3	2

1. Write a menu driven shell program for the following :

- a. List of files.
- b. Processes of users.
- c. Today's Date
- d. Users of system.
- e. Quit of Unix

2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.

3. Write a shell program which accepts the name of a file from the standard input and perform the following

- a. Accept five names in a file.
- a. Sorts the names in existing file.
- b. Lists unsorted and sorted file.
- c. Quit

4. Write a menu driven shell program to copy, edit, rename and delete a file.

5. Write a menu driven shell program to perform the following task

- a. Write a sentence in file.
- b. Search for a given word or pattern in an existing file.
- c. Quit.

6. Write a shell program to prepare electricity bill for domestic consumers.

For first 100 units – Rs. 0.75 / Unit

For next 100 units – Rs. 1.50 / Unit

Above 200 units – Rs. 3.00 / Unit

Prepare the bill for the following format.

7. Write a shell program to display the result PASS or FAIL using the

information given below student name ,student reg.no.,

mark1,mark2,mark3,mark4 the minimum pass for each subject is 50.

8. Merge the contents of the file file1,file2 and store in another file.

Course Outcome:

- Install a Linux operating system with a custom partitioning scheme and log into and out of a UNIX/Linux computer system using graphical and command line environments.

- Use UNIX/Linux command line (shell) commands to navigate and manage the UNIX/Linux file system, customize the user shell environment,
- Use archiving and compression to back up files.
- Use file name globing and regular expressions to find files and text in the system.
- To Manage user and group accounts and permissions.
- To Manage processes and jobs.

SKILLDEVELOPMENT

Course Code	Course Title	L	T	P	C
201ACLSPSL	Professional Skills	-	-	-	2

Aim:

Course Objectives :

The Objectives of the course are to help students/candidates:

1. Acquire career skills and fully pursue to partake in a successful career path
2. Prepare good resume, prepare for interviews and group discussions
3. Explore desired career opportunities in the employment market in consideration of an individual SWOT.

Course Outcomes :

At the end of this course the students will be able to:

1. Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax
2. Participate in a simulated interview
3. Actively participate in group discussions towards gainful employment
4. Capture a self - interview simulation video regarding the job role concerned
5. Enlist the common errors generally made by candidates in an interview
6. Perform appropriately and effectively in group discussions
7. Explore sources (online/offline) of career opportunities
8. Identify career opportunities in consideration of their own potential and aspirations
9. Use the necessary components required to prepare for a career in an identified occupation (as a case study).

Unit I: Resume Skills

Resume Skills : Preparation and Presentation

- Introduction of resume and its importance
 - Difference between a CV, Resume and Bio data
 - Essential components of a good resume
- ii. Resume skills : common errors*
- Common errors people generally make in preparing their resume
 - Prepare a good resume of her/his considering all essential components

Unit II: Interview Skills

- i. Interview Skills : Preparation and Presentation**
- Meaning and types of interview (F2F, telephonic, video, etc.)
 - Dress Code, Background Research, Do's and Don'ts
 - Situation, Task, Approach and Response (STAR Approach) for facing an interview
-
- Interview procedure (opening, listening skills, closure, etc.)
 - Important questions generally asked in a job interview (open and closed ended questions)
- ii. Interview Skills : Simulation**
- Observation of exemplary interviews
 - Comment critically on simulated interviews
- iii. Interview Skills : Common Errors**
- Discuss the common errors generally candidates make in interview
 - Demonstrate an ideal interview

Unit III: Group Discussion Skills

Meaning and methods of Group Discussion

- Procedure of Group Discussion
- Group Discussion- Simulation
- Group Discussion - Common Errors

Unit IV: Exploring Career Opportunities

Knowing yourself – personal characteristics

- Knowledge about the world of work, requirements of jobs including self-employment.
- Sources of career information
- Preparing for a career based on their potentials and availability of opportunities

EMPLOYABILITY,/ENTREPRENEURSHIP,/SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC61	.NET Programming	4	1	0	4

AIM

To cover the fundamental concepts of the .NET framework.

OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

UNIT III

Interfacing with the End user-Asp.NET Applications.

UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

REFERENCE BOOKS:

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20120SEC62	Relational Data Base Management System	4	1	0	5

AIM

To equip the students with principles and concepts of database design

OBJECTIVE

- To learn the basic principles of database and database design
- To learn the basics of RDBMS
- To learn the concepts of database manipulation SQL

UNIT I

An Overview of Database Management-Introduction -Definition of Database system - Data Independence - Relational Systems - Database System Architecture - Three Levels of the Architecture - Distributed Processing.

UNIT II

An Introduction to Relational Databases- Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to SQL - Embedded SQL - Domains , Relations , Relvars

UNIT III

Relational Algebra - Introduction - Syntax - Semantics - Examples - Additional Operators - Relational Calculus - Introduction - Tuple Calculus - Examples - Calculus Vs Algebra - Domain Calculus - SQL Specialties .

UNIT IV

Database Design - Functional Dependencies - Introduction - Basic Definitions - Normalization - First , Second ,Third Normal Forms - BOYCE / CODD Normal Form.

UNIT V

Transaction Management - Recovery - Introduction - Transactions - Transaction Recovery - System Recovery - Media Recovery - Concurrency -Three Concurrency Problem - Locking - Deadlock - Serializability .

OUTCOMES:

At the end of the course, the student should be able to:

- Design Databases for applications.
- Use the Relational model, ER diagrams.
- Apply concurrency control and recovery mechanisms for practical problems.
- Design the Query Processor and Transaction Processor.
- Apply security concepts to databases.

REFERENCE BOOK:

" An Introduction to Database Systems - C.J.DATE Addison - Wesley Publications - 7th Edition 2000

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120DSC63A	Data Mining	4	1	0	3

AIM:

To emphasis on the design aspects of Data mining and Data Warehousing.

OBJECTIVE

- To understand briefly some of the data mining Techniques.
- Discuss a number of more efficient algorithms.
- To know accuracy of classification methods and how accuracy may be improved.

UNIT-I

Introduction: What is Data Mining- Why Data Mining now-The Data Mining Process-Data Mining Application-Data Mining Techniques-The Future of Data Mining-Guidelines for Successful Data Mining-Data Mining Software-Software Evaluation and Selection.

UNIT-II

Association Rules Mining: Introduction-Basics-The Task and a Naïve Algorithm - The Apriori Algorithm- Improving the Efficiency of the Apriori Algorithm- Apriori-Tid -Direct Hashing and Pruning (DHP)-Dynamic Itemset Counting (DIC)-Mining Frequent Pattern without Candidate Generation (FP-Growth)-Performance Evaluation of Algorithms- Software for Association Rule Mining

UNIT-III

Classification: Introduction-Decision Tree-Building a Decision Tree-The Tree Induction Algorithm-Split Algorithm Based on Information Theory-Split Algorithm based on the Gini

Index-Over fitting and Pruning-Decision Tree Rules-Naïve Bayes Method-Estimating Predictive Accuracy of Classification Methods-Improving Accuracy of Classification Methods.

UNIT-IV

Cluster Analysis: What is Cluster Analysis-Desired Features of Cluster Analysis-Types of Data-Computing Distance-Types of Cluster Analysis Methods-Partitional Methods-Hierarchical Methods-Density-Based Methods-Dealing with Large Databases-Quality and Validity of Cluster Analysis Methods-Cluster Analysis Software.

UNIT-V

Web Data Mining: Introduction-Web Terminology and Characteristics-Locality and Hierarchy in the Web-Web Content Mining-Web Usage Mining-Web Structure Mining-Web Mining Software.

OUTCOMES:

- Understanding of data mining software available on the market.
- Acquiring Knowledge about various algorithms.
- Acquiring Knowledge about cluster analysis techniques.

REFERENCE BOOKS:

1. “Introduction to Data Mining with Case Studies”, G.K.Gupta, Easter Economy Edition.

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20120DSC63B	Artificial Intelligence and Expert Systems	4	1	0	3

AIM:

To Acquire Knowledge on various AI Techniques and Expert Systems.

OBJECTIVE:

- To learn AI Basic Concepts
- To understand Expert Systems Architectural-Components
- To study Expert System development process

UNIT I

The AI definition - AI Techniques- Problems, Problem Space and search- Defining the problem as a state space search- Problem Characteristics- Heuristic Search Techniques- Generate and Test- hill Climbing- Best First Search- Problem reduction - Constraint Satisfaction- means -ends analysis.

UNIT II

Game Playing- Min-Max Procedure- Adding Alpha-Beta Cutoffs- Additional Refinements- Searching AND/OR Graphs - Using Predicate Logic- Representing Simple Facts and Logic- Representing instance and IS a relationships- Computable functions and predicates- Use of the predicate calculus in AI Resolution- natural deduction.

UNIT III

Representing knowledge using rules- Procedural versus declarative knowledge- Logic Programming- Forward versus Backward Reasoning- Resolving within AND/OR Graphs matching- control knowledge-Symbolic Reasoning under uncertainty- Non-monotonic reasoning- Implementation issues- - Fuzzy Logic.

UNIT IV

Expert Systems- Architectural-Components- Explanation facilities- Knowledge acquisition.

UNIT V

Expert System development process- Non-formal representation of knowledge- Semantic networks- Frames- Scripts- Expert System Tools.

OUTCOMES:

At the end of the course, the student should be able to:

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalize a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.

REFERENCE BOOK

1. For Units I, II, III: Elaine Rich and Kevin Kaight, “**Artificial Intelligence**”, Tata McGraw Hill, 2nd Edition, 1991.
2. For Units IV, V: David W. Rolston, “**Principles of Artificial Intelligence and Expert Systems Development**”, McGraw Hill.
Nills J.Nilsson “**Artificial Intelligence** “, Narosa Publicshing House, 1990.

EMPLOYABILITY,/ENTREPRENEURSHIP,/SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120DSC63C	Ethical hacking	4	1	0	3

OBJECTIVES:

To understand and analyse Information security threats & countermeasures

To perform security auditing & testing

To understand issues relating to ethical hacking

To study & employ network defense measures

To understand penetration and security testing issues

UNIT I ETHICAL HACKING OVERVIEW

Understanding the importance of security, Concept of ethical hacking and essential Terminologies Threat, Attack.

UNIT II FOOTPRINTING & PORT SCANNING

Footprinting - Introduction to foot printing, Understanding the information gathering methodology of the hackers, Tools used for the reconnaissance phase. Port Scanning - Introduction, using port scanning tools, ping sweeps, Scripting Enumeration-Introduction, Enumerating windows OS & Linux OS.

UNIT III SYSTEM HACKING

Aspect of remote password guessing, Role of eavesdropping, Various methods of password cracking, Keystroke Loggers, Understanding Sniffers, Comprehending Active and Passive Sniffing, ARP Spoofing and Redirection, DNS and IP Sniffing, HTTPS Sniffing.

UNIT IV HACKING WEB SERVICES & SESSION HIJACKING

Web application vulnerabilities, application coding errors, SQL injection into Back-end Databases, cross-site scripting, cross-site request forging, authentication bypass, web services and related flaws, protective http headers Understanding Session Hijacking, Phases involved in Session Hijacking, Types of Session Hijacking, Session Hijacking Tools.

UNIT V HACKING WIRELESS NETWORKS

Introduction to 802.11, Role of WEP, Cracking WEP Keys, Sniffing Traffic, Wireless DOS attacks, WLAN Scanners, WLAN Sniffers, Hacking Tools, Securing Wireless Networks.

Course Outcome:

- Plan a vulnerability assessment and penetration test for a network.
- Execute a penetration test using standard hacking tools in an ethical manner.
- Report on the strengths and vulnerabilities of the tested network.
- Identify legal and ethical issues related to vulnerability and penetration testing.
- Use of standard hacking tools in an ethical manner
- Evaluation of the penetration test results

EMPLOYABILITY, /SKILL DEVELOPMENT

COURSE CODE	COURSE TITLE	L	T	P	C
201ENOEC	Journalism	4	0	0	2

Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

UNIT- II

News – Definition – Kinds – Elements – Sources

UNIT- III

Reporters

UNIT- IV

The Editor and the Sub Editor

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

EMPLOYABILITY,/ENTREPRENEURSHIP,/SKILLDEVELOPMENT

COURSE CODE	COURSE TITLE	L	T	P	C
201MAOEC	Development Of Mathematical Skills	4	0	0	2

Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

References

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

Learning outcomes

- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)
- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Course Code	COURSE TITLE	L	T	P	C
201PHOEC	Instrumentation	4	0	0	2

Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

UNIT – I: Introduction

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

UNIT – II: ELECTRONIC INSTRUMENTS – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

UNIT – III: ELECTRONIC INSTRUMENTS – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

Learning Outcomes:

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhney – Dhanpat Rai and Sons – 1990.

2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

EMPLOYABILITY

Course Code	COURSE TITLE	L	T	P	C
201CHOEC	Food and Adulteration	4	0	0	2

Aim: To introduce students to food safety and standardization act and quality control of foods.

Objectives:

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Outcomes:

- Ability to apply principles of food engineering in industry.
- Understand, identify and analyze a problem related to food industry and ability to find an appropriate solution for the same.
- Design, implement and evaluate a research based project to meet demands of the society.
- Use appropriate techniques, skills, and modern tools in the food industry and in academic profession.
- Understanding of professional, ethical, legal, security and social issues and responsibilities for entrepreneurship skills.

EMPLOYABILITY,/ENTREPRENEURSHIP

Course Code	COURSE TITLE	L	T	P	C
201MBOEC	Wild Life Conservation	4	0	0	2

Aim:

To enable the students understand the need of conservation of wildlife in India.

Objectives:

Maintenance of rare species in protected areas such as national parks, santuries etc.,
Establishment of specific biosphere reserves for endangered plants and animals.
Protection of wild life through legislation such as banning hunting etc.,
Imposing specific restrictions on export of endangered plants and animals or their products.

Outcome:

Protection of natural habitats of organisms through controlled exploitation.
Educating the public about the need to protect and preserve the environment as a long range goal for the welfare of future generations

Unit I: Wildlife Management: Basic concepts and principles - Wildlife management before and after implementation of Wild Life (Protection) Act, 1972 – IUCN – CITES – NBA – IBA –

Evaluation of Wildlife habitat: Define habitat – Forest habitat types - basic survey techniques of habitats – Vegetative analyses – Point centered quadrat, Quadrat, strip transect – Habitat manipulation: Food, Water, shade, impact and removal of invasive alien species.

Unit II: Introduction to conservation biology, the origin of conservation biology, ethical and economical values of conservation biology, definition of biodiversity, types of biodiversity, threats to biodiversity. Scopes and importance of conservation methods – *In-situ* and *Ex-situ* conservation approaches of Indian animals. Captive breeding (Lion-tailed macaque, white tiger and vultures) and reintroduction (Tiger, rhinoceros, gaur).

Unit III: Biodiversity: Definition and importance - Biodiversity hotspots in India: Western Ghats, Eastern Himalayas. Mega diversity nations – an introduction. Landscape approach and people participation in biodiversity conservation.

Unit IV: Role of Government and Non-Government organizations in conservation.–
Government - Wildlife Institute of India, Ministry of Environment and Forests (MoEF), National Biodiversity Authority (NBA), Zoological Survey of India (ZSI), Botanical Survey of India (BSI), Salim Ali Centre for Ornithology and Natural History (SACON), Centre for Ecological Sciences (CES). **NGOs.** –Bombay Natural History Society (BNHS), World Wide Fund for Nature (WWF), Wildlife Trust of India (WTI), Nilgiri Wildlife and Environment Association (NWEA), Wildlife Conservation Society (WCS).

Unit V: Conservation Biology Tools - Biological Parks, Zoological Parks, Forest Research Institute, Agricultural Research Institutions, Gene Pools, Cryopreservation Centres, Interpretation Centres and role of Field Biologists.

References:

1. Anon, 1992. Conservation on biological diversity. Text and annexure – WWF-India.
2. Gaughley, G. and A. Gunn. 1995. Conservation Biology in Theory and practice. Blackwell Publishers.
3. Dobson, A.P. 1996. Conservation and biodiversity scientific American Library, New York, USA.

SKILL DEVELOPMENT

COURSE CODE	COURSE TITLE	L	T	P	C
201CSOEC	Web Technology	4	0	0	2

AIM

To equip the students with basic programming skill in Web Technology.

OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

UNIT I

Introduction to the Internet: networking- internet – email – Internet Technologies: modem internet addressing .

UNIT II

Internet browsers: Internet Explorer – Netscape navigator- Introduction to HTML: Html document – anchor tag – hyperlink.

UNIT III

Head and body sections: Header section – titles – links- colorful web page – sample html document – Designing the body section: paragraph – tab setting.

UNIT IV

Ordered and unordered lists: list – unordered list – heading in a list- order list- nested list.

UNIT V

Table handling: tables – table creation in html cell spanning multiple rows and columns- coloring cells- sample tables- frames frame set definition- nested frames set.

OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

REFERENCE BOOKS

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

EMPLOYABILITY

B.COM

COURSE CODE	COURSE TITLE	L	T	P	C
201CMOEC	BANKING SERVICES	5	0	0	5

AIM:

To Provide the Bank is financial institution which is involved in borrowing and lending money.

OBJECTIVE: you should be able to

- To provide a lending money to firms, customers and home buyers.
- To provide keep money for customers
- To provide offering financial advice and related financial services, such as insurance.

UNIT – I

Commercial Banking – An Overview: Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

UNIT – II

E-banking –An Overview: Meaning-Service-E-banking and Financial Services –Benefits- Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking- Services

UNIT – III

Mobile Banking and Telephone Banking –An Overview: Meaning-Features- Registration- Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers

Unit – IV

ATM and Electronic Money: Concept of ATM-Features-Functions-Strategic importance of ATM- Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

Unit-V

EFT System and INFINET: Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

OUTCOME:

To help to gather knowledge on banking and financial system in India

To provide knowledge about commercial banks and its products

To create awareness about modern banking services like e-banking-banking and internet banking, ATM System

To introduce recent trends in banking system

To make the student understand the basic concept of banking and financial institutions and expose various types of risk based by banks

REFERENCES:

1. Banking theory law and Practice
2. Banking Theory law and practice -Santhanam
3. Banking Awareness - N.K.Gupta
4. Management of Banking and financial Services-Padmalathasuresh,Justinpaul

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20120SEC64L	.NET Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker’s details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:
(i). Insertion (ii) Updating (iii) Deletion (iv) Selection
Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information’s from table in SQL server.

Course Outcomes:

- Contrast and compare major elements of the .NET Framework and explain how C# fits into the .NET platform.
- Analyze the basic structure of a C# application and be able to document, debug, compile, and run a simple application.
- Create, name, and assign values to variables.

- Use common statements to implement flow control, looping, and exception handling.
- Create methods (functions and subroutines) that can return values and take parameters.
- Create, initialize, and use arrays

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20120SEC65L	Oracle Lab	0	0	3	2

1. Write SQL queries to create the following tables and insert rows in it.
Employee (eno, ename, deptno, salary, designation)
Dept (deptno, deptname, location)
Student (rollno, name, course, paper1, paper2, paper3)
2. Write SQL queries to create primary key and foreign key constraints in the above given tables and perform all types of simple retrieval.
3. Write SQL queries to perform all types of advance retrieval using (i) nested sub queries (ii) set operators.
4. Write SQL queries to perform all types of joins.
5. Write SQL queries to illustrate all built-in functions.
6. Write SQL queries to create views and index/indices for the tables Employee, Dept and Student.
7. Write a database trigger to prevent transactions during weekend. Create PL/SQL procedures and store them in a package and execute them in the command prompt.
8. Write a PL/SQL program that prints mark sheet of students in a University using cursor.
9. Payroll using forms
10. Mark sheet processing using forms

Course Outcomes:

- Brief knowledge about SQL Fundamentals
- Unary and Binary table Operations.
- Able to handle with different database languages.
- Table view, Log and Triggers.
- Handling online Transactions.
- Database Connectivity with front-end.
-

Course Code	Course Title	L	T	P	C
20121PRW66	Project Work	0	0	0	4

Each student will develop and implement individually developed application software based on any of the latest technologies.

SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
201ACLSCET	Community Engagement	-	-	-	1

Aim:**Course Objectives:**

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

Course Outcomes:

After completing this course, student will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and bonds of mutuality with local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

UNIT I - Appreciation of Rural Society

Rural life style, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of “soul of India lies in villages” (Gandhi), rural infrastructure.

UNIT II- Understanding rural economy & livelihood

Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets.

UNIT III Rural Institutions

Traditional rural organisations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration

UNIT IV Rural Development Programmes

History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awaas Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

EMPLOYABILITY,/ENTREPRENEURSHIP

Course Code	Course Title	L	P	T	C
201ACSSBBE	Basic Behavioural Etiquette				

Aim:

Objectives:

Training is mainly focused on discipline, grooming, career planning and building personality. As it is the first year of the university, students are given awareness about the job market right from the start so that they prepare accordingly at their own pace and potential.

Eliminating negative thought, developing enriching habits, unlocking individual potentials and well versed communication is the aim of this program. The module consists of

- Communication Skills
- Goal Setting
- Career Planning
- Reaching your Potential
- Time Management
- Stress Management
- Grooming and Discipline
- Learning skills
- Listening Skills
- Team Building

Outcomes:

- Etiquette helps us to be thoughtful about our conduct.
- It helps us to be aware of the feelings and rights of others. By eliminating discourteous behaviour and prioritising other people's feelings, etiquette promotes kindness, consideration, and humility.
- Business etiquette training, a key part of soft skills & communication, facilitated by Momentum enlightens participants on the accepted behaviour patterns and manners key to their profession.
- It emphasises on a set of practices used and accepted in a multi-national work environment.

EMPLOYABILITY

Course Code	Course Title	L	P	T	C
201ACSSAQA	General Aptitude and Quantitative Ability				

Aim:

1. General Aptitude

- Introduction
- Introduction to Aptitude Tests
- Diagnostic Tests
- Introduction to Speed Maths
- Quantitative Ability – Number Theory
- Numbers
- Properties of Numbers
- Concept of Multiples and Factors
- LCM and HCF
- Factorial Concept
- Last Digit Concept
- Remainders Concept

Quantitative Ability – Arithmetic - 1

- Percentage
- Ratio and Proportion
- Simple Interest and Compound Interest
- Profit Loss
- Discount
- Mixture and Allegation
- Questions from Company Papers will be discussed

Quantitative Ability – Arithmetic - 2

- Speed Distance Time
- Time and Work
- Chain Rule
- Clocks and Calendars
- Averages
- Questions from Company Papers will be discussed

Quantitative Ability – Algebra

- Basic Terminologies in Algebra
- Equations
- Simple Equation
- Quadratic Equation
- Cubic Equation
- Functions
- Graphs
- Maxima and Minima
- Questions from Company Papers will be discussed

Quantitative Ability – Modern Maths

- Set Theory
- Fundamental way of Counting
- Permutations and Combinations
- Probability
- Questions from Company Papers will be discussed
- Data Analysis
- Data Sufficiency

Analytical and Logical Reasoning

- Mono variate conditions
- Multi variate conditions

Puzzles

- Coding
- Decoding
- Family tree
- Direction sense
- Alpha numeric
- Brain teasers

Deductive Reasoning

Visual Sequence

Mathematical Reasoning

2. English Aptitude

- Fill in the blanks
- Comprehension
- Odd man out
- Phrases and Sentences
- Sequencing
- Basic Grammar
- Meanings

Outcomes:

- The student will be able to • Use their logical thinking and analytical abilities to solve Quantitative aptitude questions from company specific and other competitive tests.
- Solve questions related to Time and distance and time and work etc. from company specific and other competitive tests.
- " The main aim of introducing "Quantitative Aptitude"for mathematics students is to develop skill to meet the competitive examinations for better job opportunity.
- "
- Effort has been made to accommodate fundamental, mathematical aspects to instill confidence among students.
- Effort has been made to accommodate fundamental, mathematical aspects to instill confidence among students.
- This course consists of practice exercises for Quantitative or Numerical and Verbal Ability. Prepare for Aptitude Tests for Entrance Exams like GATE, CAT, Bank PO, SAT, GMAT, GRE, UPSC and RRB.

Course Code	Course Title	L	P	T	C
201ACSSIST	Interview Skills Training and Mock Test				

Aim:

➤ Exclusive Pre-Placement Training – both General Aptitude and Technical Aptitude is carried out by External Training firms, Corporate Professionals for final year students.- with a focus on the Corporate Selection Process during the Campus Hiring Visit

➤ Mock Tests on Company Specific Aptitude Question papers are carried out along with Mock Interviews. Based on such companies face-to-face- Technical & HR – interviewing style and finally placement offer provide to the students.

Course Outcomes:

- Help candidates reduce their stress and anxiety before a real job interview.
- Help you boost your confidence.
- Provide you with useful feedback in a low-stress environment.
- Help you prepare for behavioral-based interview questions.
- Interviewing Skills Training focuses on the skills required to conduct engaging interviews that include effective questions.
- This will allow a hiring manager or interviewer to ensure the best practices are followed to hire the right candidates with the applicable skills, behavior, and mindset.

EMPLOYABILITY,/SKILL DEVELOPMENT

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.Sc.,(IT) curriculum, the following Research Skill Based Courses are introduced in the B.Sc.,(IT) curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	2
V	Participation in Bounded Research	1
VI	Project Work	4

Blueprint for assessment of student's performance in Research Led Seminar Course

<input type="checkbox"/>	Internal Assessment:	40 Marks
<input type="checkbox"/>	Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks	
<input type="checkbox"/>	Seminar Review Presentation : 10 Marks	
<input type="checkbox"/>	Literature Survey : 10 Marks	
<input type="checkbox"/>	Semester Examination :	60
	Marks	

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Research Methodology Courses

Continuous Internal Assessment:	20 Marks
<input type="checkbox"/> Research Tools(Lab) :	10 Marks
<input type="checkbox"/> Tutorial:	10 Marks
Model Paper Writing:	40 Marks
● Abstract:	5 Marks
● Introduction:	10 Marks
● Discussion:	10 Marks
● Review of Literature:	5 Marks
● Presentation:	10 Marks
Semester Examination:	40 Marks
Total:	100 Marks

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20122DSC63A	Software Project management	4	1	0	3
-------------	-----------------------------	---	---	---	---

UNIT I INTRODUCTION TO PROJECT MANAGEMENT

Project Definition – Contract Management – Activities Covered By Software Project Management – Overview Of Project Planning – Stepwise Project Planning.

UNIT II PROJECT EVALUATION

Strategic Assessment – Technical Assessment – Cost Benefit Analysis – Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation.

UNIT III ACTIVITY PLANNING

Objectives – Project Schedule – Sequencing And Scheduling Activities – Network Planning Models – Forward Pass – Backward Pass – Activity Float – Shortening Project Duration – Activity On Arrow Networks – Risk Management – Nature Of Risk – Types Of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning And Control.

UNIT IV MONITORING AND CONTROL

Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance.

UNIT V MANAGING PEOPLE AND ORGANIZING TEAMS

Introduction – Understanding Behavior – Organizational Behaviour: A Background – Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation – The Oldman–Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress – Health And Safety – Case Studies.

Course Outcomes:

- Identify the different project contexts and suggest an appropriate management strategy.
- Practice the role of professional ethics in successful software development.
- Identify and describe the key phases of project management.
- Determine an appropriate project management approach through an evaluation of the business context and scope of the project.

GRADUATE ATTRIBUTES :

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

PROGRAMME OBJECTIVES:

- Be exposed to the syntax of C.
- Be Familiar with the Basics of C Programming Language.
- To study about Graphics programming using java Language
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes
- To learn the basic principles of database and database design
- To understand computational development of graphics with mathematics

PROGRAMME OUTCOMES (O₁):

- Able to understand and design the solution to a problem using object-oriented programming concepts
- Trace the flow of information from one node to another node in the network
- Design Databases for applications.
- Able to Measure the product and process performance using various metrics

- Gain the knowledge of different media streams in multimedia transmission
- Apply the various optimization techniques.

COURSES (C₁):

- Core -I Programming in C with C++
- Core -II Data Structure and Algorithms
- Core -III Internet and Java Programming
- Core –IV Visual Programming
- Core –V Relational Database Management Systems
- Core –VI .NET Programming
- Core –VII Designing and supporting Computer Networks
- Core –VIII Advanced Web Technology
- Core –IX Operating System

ஒப்படைவு - மதிப்பெண் 40

பாடத்தொடர்புடைய கட்டுரை - 20 மதிப்பெண்

ஆத்திச்சூடி - 20 மதிப்பெண்

அறம் செய விரும்பு, ஆறுவது சினம், இயல்வது கரவேல், ஈவது விலக்கேல், உடையது விளம்பேல், ஊக்கமது கைவிடேல், எண் எழுத்து இகழேல்,ஏற்பது இகழ்ச்சி, ஐயம் இட்டு உண், ஒப்புரவு ஒழுது, ஒதுவது ஒழியேல்,ஒளவியம் பேசேல், கண்டு ஒன்று சொல்லேல், ஞயம்பட உரை, இடம்பட வீடு எடேல், இணக்கம் அறிந்து இணங்கு, தந்தை தாய்ப்பேன்,நன்றி மறவேல்,பருவத்தீத பயிர்செய், இயல்பு அலாதன செயேல்,வஞ்சகம் பேசேல்,இளமையில் கல்,அனந்தல் ஆடேல்,கடிவது

மற,கீழ்மை அகற்று,குணமது கைவிடேல்,கெடுப்பது ஒழி, கேள்வி முயல்,சான்றோர் இனத்து இரு, சோம்பித்திரியேல்.

(மேற்கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை(மரபு அல்லது புதுக்கவிதை) கதை,கட்டுரை,நாடகம் எழுதி வரச் செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

Course Outcome:

- Learn the changes occurred in literature since classical period.
- Make use of vocabulary systematically.
- Obtaining More information about one's culture and tradition;
- Encourage creative writing and developing self-confidence.
- Aiming at enriching human excellence;
- Increasing the level of comprehension and exercising communal harmony

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Read and comprehend literature

UNIT –I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Speeches of famous people: Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

UNIT – IV

Editing Proof reading

UNIT – V

Comparison and contrast

Cause and effect

20111AEC12	English-I	4	0	0	2

AIM:

To acquaint students with learning English through literature

OBJECTIVE:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

OUTCOME:

- Read and comprehend literature

UNIT –I

The Art of Reading - Lin Yutang
 An Eco-Feminist Vision -Aruna Gnanadason

UNIT – II

The Merchant of Death -Nanda Kishore Mishra & John Kennet
 She Spoke for all Nature -Young world 'The Hindu'

UNIT –III

Because I could not Stop for Death -Emily Dickinson
 Stopping by Woods on a Snowy Evening -Robert Frost

UNIT –IV

Enterprise -Nissim Ezekiel
 Love poem for a wife -A.K Ramanujam

UNIT –V

Oliver Twist -Charles Dickens

 Emerald Publishers

Course Code	Course Title	L	T	P	C
20122SEC13	Programming in C with C++	5	1	0	4

AIM

To equip the students with fundamental programming principles and concepts of object oriented design.

OBJECTIVES:

The students should be made to:

- Be exposed to the syntax of C.
- Be familiar with programming in C.
- Learn to use arrays, strings, functions, pointers, structures and unions in C.
- To learn how C++ supports Object Oriented principles such as abstraction, polymorphism etc
- To understand and apply the principles hiding, localization and modularity in software
- Design and implement reliable and maintainable object-oriented applications of moderate complexity composed of several classes

UNIT -I

Introduction - Basic Structure of C Programs - Character set -C Tokens - Constants - Variables-Data Types - Declaration and Assigning Values to Variables - Defining Symbolic Constants - Operators - Expressions - Type conversions - Built-in functions.

UNIT -II

Managing Input and Output Operators - Decision Making and Branching - Decision Making and Looping – Arrays and its Types.

UNIT –III

Functions: The Form of C Functions-Return Values and Their Types -Calling a Function- Category of Functions- Nesting of Functions-Recursion- Structures and Unions-Pointers.

UNIT-IV

Basic concepts of OOPs- Benefits and Application of OOPs- Inline functions- Function overloading – Friend and Virtual Functions -Constructors and Destructors - Operator overloading.

UNIT-V

Inheritance and its Types- Files - Classes for file stream operations - Opening, Closing and processing files - End of file Detection - File Pointers - Updating a file - Error handling during file operations - Command Line Arguments - Templates - Exception Handling.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Design C Programs for problems.
- Write and execute C programs for simple applications
- Able to understand and design the solution to a problem using object-oriented programming concepts.
- Able to demonstrate the use of virtual functions to implement polymorphism.
- Understand functions and parameter passing.
- Be able to do numeric (algebraic) and string-based computation.
- Understand object-oriented design and programming

REFERENCE BOOKS:

1. “Programming in C” – E. Balagurusamy – Tata McGraw-Hill Publications
2. “Programming with C” – Byron S.Gottfried – Schaum’s outline series – Tata McGraw-Hill publications.
3. "Object oriented programming with C++". E. Balagurusamy, Tata McGraw Hill Publishing ltd., New Delhi, 1995.
4. “C++ The complete reference”- Herbert Schilt, 3rd edition, Tata McGraw Hill Pub-Ltd., 1999

Course code	Course Title	L	T	P	C
20112AEC14B	Classical Algebra	4	1	0	3

OBJECTIVES:

To learn about the expansion of a Binomial Theorem for a rational index using vandermonde's theorem. Further we aim at learning problems to be solved using the different types in Binomial series .Understanding the relation between roots and coefficients of polynomial equations-symmetric functions-sum of r^{th} power of the roots-two methods And Reciprocal equations-Descartes' rule of signs-simple problems.

UNIT-I

Binomial, exponential and logarithmic series (formulae only)-Summations.

UNIT-II

Non singular, symmetric, skew symmetric orthogonal, Hermition, skew Hermition and unitary matrices-characteristic equation, Eigen values, Eigen vector-Cayley Hamilton's theorem(proof not needed)-simple applications.

UNIT-III

Relation between roots and coefficients of polynomial equations-symmetric functions-sum of r^{th} power of the roots-two methods.

UNIT-IV

Transformation of equations-diminishing, increasing and multiplying the roots by a constant-forming equation with the given roots.

UNIT-V

Reciprocal equations-Descartes' rule of signs-simple problems.

EMPLOYABILITY

LEARNING OUTCOMES

By the end of this course, you should:

- Understand the theory of, and be able to solve problems in Cayley Hamilton Theorem, and finding the Eigen values & Eigen vectors
- be able to manipulate relation between root and coefficients, symmetric functions of the roots in terms of the coefficients and transformation of equation .
- be able to calculate summation related to Binomial, Exponential and Logarithmic series

REFERENCE BOOKS:

Algebra-T.K.M.Pillai, Vol1&2.

Course code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

20112AEC15B	Numerical And Statistical Methods	4	1	0	4
-------------	-----------------------------------	---	---	---	---

OBJECTIVES:

The roll of numerical analysis is to develop and analyze the numerical techniques. In this paper, different methods for finding the roots of algebraic and transcendental equations, solutions of simultaneous equations, solutions of ordinary differential equations Solution of Linear systems, Numerical differentiation and integration interpolation with equal & unequal intervals are concentrated. Correlation coefficient and its properties Linear Regression and its properties, Test of significance would also be taught.

UNIT-I

Algebraic and transcendental equations-the iteration method –the Newton Raphson method-False Position method-the bisection method

UNIT-II

Interpolation-Finite difference –Newton’s formulae for interpolation-Lagrange’s formulae for interpolation-Gaussian elimination method –Gauss-Seidal method.

UNIT-III

Numerical different ion and integration-Maximum and minimum values of a tabulated functions-Trapezoidal rule-Simpson’s rule –Numerical solution of ordinary differential equations-Euler’s method –Runge Kutta methods-Predictor corrector method-Boundary value problems.

UNIT-IV

Correlation –different types of correlation –Karl Pearson’s spearman’s correlation-Regression-Regression coefficients-Regression equations-Properties of correlation and regression coefficients.

UNIT-V

Test of hypothesis-null and alternative hypothesis-tests of significance based on normal and distribution for mean, simple correlation and proportion Chi square test-independents of attributes and goodness of fit-applications.

EMPLOYABILITY

Learning outcomes

By the end of this course, you should be able to calculate the solution of algebraic and transcendental equations.

- solutions of simultaneous equations, be able to calculate the area of the given curve
- Understood the concept of correlation and regression
- A knowledge of test of significance based on parametric and non – parametric test

REFERENCE BOOKS:

1. Introductory methods of numerical analysis S.S.Sastry, PHI
2. Fundamentals of mathematical statistics-S>C>Gupta & V.K.Kapoor.

Course Code	Course Title	L	T	P	C
20122SEC16L	Programming in C with C++ Lab	0	0	3	2

1. Solution of a Quadratic Equation (all cases).
2. Sum of Series (Sine, Cosine, e^x)
3. Ascending and descending order of number using Arrays (Use it to find largest and smallest numbers).
4. Sorting of names in Alphabetical order.
5. Write a c program for Matrix Operations (Addition, Subtraction, Multiplication- use functions).
6. Write C++ program using a class to represent a bank account with data members- name of depositor, account number, type of account, balance and member functions - deposit amount, withdraw amount, show Name and balance. Check the program with your own data.
7. Write C++ programs for implementing inheritance.
8. Write a C++ program using friend function.
9. Write a C++ program which reads a text from a file and the display the following information (Number of Lines, Number of words, and Number of characters).

10. File Processing: Mark sheet preparation.

SKILL DEVELOPMENT

Course Outcome:

- Read understand and trace the execution of programs written in C language.
- Write the C code for a given algorithm.
- Implement programs with pointers and arrays, perform pointer arithmetic, and use the pre-processor.
- Write programs that perform operations using derived data types.
- Illustrate flowchart and algorithm to the given problem.
- Understand basic Structure of the C-Programming ,declaration and usage of variables

Course Code	Course Title	L	T	P	C
201ACLSICN	Indian Constitution	-	-	-	-

OBJECTIVES:

- To make the students understand about the Democratic Rule and Parliamentary Administration.
- To appreciate the salient features of the Indian Constitution.
- To know the fundamental Rights and Constitutional Remedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

UNIT I: THE MAKING OF INDIAN CONSTITUTION

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

UNIT II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

UNIT III: DIRECTIVE PRINCIPLES OF STATE POLICY

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

UNIT IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

**UNIT V: STATE COUNCIL – ELECTION SYSTEM AND PARLIAMENTARY
DEMOCRACY IN INDIA**

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

SKILL DEVELOPMENT

OUTCOMES

1. Democratic values and citizenship Training are gained.
2. Awareness on Fundamental Rights are established.
3. The functions of union Government and State Governments are learnt.
4. The power and functions of the Judiciary learnt thoroughly.
5. Appreciation of Democratic parliamentary Rule is learnt.

REFERENCE BOOKS:

1. Palekar S.A. Indian Constitution Government and politics, ABD Publications, India.
2. Aiyer Alladi, Krishnaswami, Constitution and fundamental rights 1955.
3. Markandan K.C. Directive Principles in the Indian Constitution 1966.
4. Kashyap Subash C Our Parliament, National Book, Trust New Delhi 1989.

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Aim:

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

Course Objectives :

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realise one's potentials.

Course Outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practised human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realise their potential as human beings and conduct themselves properly in the ways of the world.

Unit I

- Introduction: What is love? Forms of love—for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love.
- Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
- Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Casestudies

Unit II

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)
- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
- Learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit III

- Introduction: What is non-violence? Its need. Love, compassion, empathy sympathy for others as pre-requisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non-violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Case studies

Unit IV

- Introduction: What is righteousness?
- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit V

- Introduction: What is peace? Its need, relation with harmony and balance
- Individuals and organisations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will

learners lose if they don't practice it?

- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Casestudies

Unit VI

• Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.

- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature including local folklore

• Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?

- Sharing learners' individual and/or group experience(s) regarding service
- Simulated situations
- Casestudies

Unit VII

• Introduction: What is renunciation? Renunciation and sacrifice. Self-restraint and Ways of overcoming greed. Renunciation with action as true renunciation

• Individuals who are remembered in history for practicing this value.

• Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.

• Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?

- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC21	Advanced English-II	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

Outcome:

- Develop writing skill
- Read and comprehend literature

UNIT –I

E-mail, Fax, Memos

UNIT – II

Itinerary, Checklist

UNIT – III

Invitation, Circular

UNIT – IV

Instruction, Recommendations

UNIT – V

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

EMPLOYABILITY

Course Code	Course Title	L	T	P	C
20111AEC22	English-II	4	0	0	2

AIM:

To acquaint learners with different trends of writing

OBJECTIVE:

- To empower students to acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

OUTCOME:

- Read and comprehend literature
- Read and appreciate literature
- Know more about Mahatma Gandhi, Mother Teresa, Martin Luther King

UNIT – I

Ecology	-A.K. Ramanujan
Gift	-Alice Walker
The First Meeting	-Sujata Bhatt

UNIT –II

Fueled	-Marcie Hans
Asleep	-Ernst Jandl
Buying and selling	-Khalil Gibran

UNIT –III

UNIT – IV

The Refugee	-K.A. Abbas
I Have a Dream	-Martin Luther king
Those People Next Door	-A.G. Gardiner

UNIT – V

Marriage is a private Affair	-Chinua Achebe
The Fortune Teller	-Karel Capek
Proposal	-Anton Chekov

SKILL DEVELOPMENT

REFERENCES:-

Course Code	Course Title	L	T	P	C
20122SEC23	Data Structure and Algorithms	5	1	0	4

AIM

To equip the students with principles data structure concepts and algorithms.

OBJECTIVES:

The Student Should Be Made To:

- Be Familiar with the Basics of C Programming Language.
- Be Exposed To The Concepts Of Adts
- Learn Linear Data Structures – List, Stack, And Queue.
- Be Exposed To Sorting, Searching, Hashing Algorithms

UNIT –I

Arrays and sequential Representations - Ordered Lists - stacks and Queues- Evaluation of expressions - Multiple stacks and queues - Singly Linked lists - linked stacks and queues - polynomial addition - doubly linked lists and dynamic storage management - strings.

UNIT-II

Trees - binary tree representations - Tree traversal - Threaded binary trees - binary tree representation of trees - set representations -decision trees - games trees and counting binary trees -graphs and representations traversals, connected components and spanning trees shortest paths and transitive closure - activity networks - topological sort and critical paths.

UNIT-III

Algorithms - conventions - Writing structured programs - Analyzing algorithms - sorting heap sort - binary search - finding the maximum and minimum – merge sort – quick sort - selection sort

UNIT-IV

Greedy method: The general method - optimal storage on tapes knapsack problem - job sequencing with deadlines - optimal merge patterns - minimum spanning trees-single source shortest paths.

UNIT-V

Backtracking : The general method - the 8 queens problem - sum of subsets - graph coloring - Hamiltonian cycles - knapsack problem. BRANCH AND BOUND: The general method - 0/1 knapsack problem - Traveling salesperson - Efficiency considerations.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Use the control structures of C appropriately for problems.
- Apply the different linear data structures to problem solutions.
- Critically analyze the various algorithms.

REFERENCE BOOKS:

1. Fundamental of Data Structure - Ellis Horowitz and Sartaj Sahni.
Chapters 2,3,4,5 only (Excluding 2.3,3.2,4.5,4.6,4.7,4.10,4.12,6.5)
2. Fundamental of computer algorithms - Ellis Horowitz and sartaj Sahni
Galgotia Publications.
3. Data Structures - LIPSCHUTA, Tata MaGrawHill, Schaum's Outline series.

Course code	Course Title	L	T	P	C
20112AEC24B	Discrete Mathematics	4	1	0	4

OBJECTIVES:

Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental them of homomorphism are concentrated. Graph Theory is an integral part of Discrete Mathematics. It has applications to many fields, including computer science, physics, chemistry, psychology and sociology. In this course we teach basic topics in graph theory 20 such as Trees, Directed graphs, Connectivity, Euler tours are also concentrated

UNIT I

Groups- Types – Propertices Of Groups- Semi Groups-Monoids – Problem In Groups- Cyclic Groups And Subgroups

UNIT-II

cosets & lagrange’s thm-Normal groups and quotient groups- Different types of morphisms of groups fundamental thm of homomorphism.

UNIT III

Graph theory - Basic concepts- Finite and infinite graph – Incidence and degree ideas on vertices- Isomorphism-sub graphs – Walks – Paths and circuits

UNIT IV

Connected Graphs And Disconnected Graphs And Components - Euler Graphs – Hamiltonian Path And Circuits

UNIT V

Trees-properties of trees -pendent vertices – Distance and centers in a tree rooted and binary trees.

EMPLOYABILITY

Learning outcomes

By the end of this course, you should be able

- Understood the concept of Algebraic structures like Groups ,cosets , different types of morphisms of groups fundamental theorem of homomorphism
- Knowledge in Graph Theory
- Understood the properties of Graph Theory
- Understood the concept of Euler theorem and its applications

REFERENCE BOOKS:

1. Algebra - Arumugan Issac
2. Graph theory – Narasingh deo

Course Code	Course Title	L	T	P	C
20112AEC25B	Operations Research	4	1	0	3

OBJECTIVES:

Optimization is an important tool of modern applied mathematics. This course gives an idea to the student to recognize potential linear programming problems, to formulate such problems as linear programming models, to employ the proper computational techniques to solve these problems, and to understand the mathematical aspects that tie together these elements of linear programming. The objective of this paper is to highlight the theoretical, computational and applied aspects of linear programming problems.

UNIT — I

Basic of operations research (OR) characteristics of OR - Necessity of OR in industry, OR and decision making - role of computers in OR Linear Programming: Formulations and graphical solution of (2 variable) canonical and standard terms of linear programming problem.

UNIT — II

Algebraic Solution: Simplex methods — Charnes method of penalty - Two phase simplex method.

UNIT — III

Transportation Model: Definition — Formulation and solution of transportation models the row — Minima, column minima, Matrix minima and Vogel's approximation method. Assignment Model: Definition of assignment model— comparison with transportation model - Formulation and solution of assignment model

UNIT — IV

Sequencing problem: Processing of n jobs through 2 machines - processing n jobs through 3 machines - processing 2 jobs through m machine Games Theory: Characteristics of games — Maximin, Minmax, criteria of optimality — Dominance property - Algebraic and graphical method of solution of solving 2 x 2 games

.UNIT — V

PERT computation — Resource scheduling.

EMPLOYABILITY

Learning outcomes

By the end of this course,

- Students using OR techniques in business tools for decision making
- Students develop PERT and CPM networks and finding the shortest path
- Understand the concept of sequencing problems and game theory
- Students get the knowledge about inventory theory

REFERENCE BOOKS:

1. Hamdy A. Taha: Operation Research - An Introduction 5th Edition, PHI, New Delhi 1996
2. Ackoff, R Land Sasieni, M.N: Fundamental of Operation research, John Wiley and sons, New York 1968.

Course Code	Course Title	L	T	P	C
20122SEC26L	Data Structure and Algorithms Lab	0	0	3	2

1. SORTING:

- a. Bubble sort
- b. Heap sort
- c. Insertion Sort

2. **SEARCHING:**

- a. Linear search
- b. Binary search

3. Operations on Stack
4. Operations on Queue
5. Operations on single Linked list
6. Operations on doubly linked list
7. Binary Tree Traversal

EMPLOYABILITY

Course Outcome:

- Implement basic data structures such as arrays and linked list.
- Programs to demonstrate fundamental algorithmic problems including Tree Traversals, Graph Traversals and Shortest Paths.
- Implement various searching and sorting algorithms.
- To develop application using data structure algorithms.
- Implement the concept of data structures through ADT including List,Stack,Queues.
- Apply Algorithm for solving problems like sorting,searching,insertion and deletion of data

Course Code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Aim:

Course Objectives :

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome :

By the end of this program participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barriers to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

- Techniques of effective reading
- Gathering ideas and information from a given text
- i. Identify the main claim of the text
- ii. Identify the purpose of the text
- iii. Identify the context of the text
- iv. Identify the concepts mentioned

- Evaluating these ideas and information
- i. Identify the arguments employed in the text
- ii. Identify the theories employed or assumed in the text
- Interpret the text
- i. To understand what a text says
- ii. To understand what a text does
- iii. To understand what a text means

Unit IV

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalisations and over simplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
- i. Well-knit logical sequence
- ii. Narrative sequence
- iii. Category groupings
- Different modes of Writing -
- i. E-mails
- ii. Proposal writing for Higher Studies
- iii. Recording the proceedings of meetings
- iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in workplace
- Internet Basics
- Introduction to MS Office tool
- Office
- Excel
- Powerpoint

Unit VI

- Introduction to social mediawebsites
- Advantages of socialmedia
- Ethics and etiquettes of socialmedia
- How to use Google searchbetter
- Effective ways of using SocialMedia
- Introduction to DigitalMarketing

Unit VII

- Meaning of non-verbalcommunication
- Introduction to modes of non-verbalcommunication
- Breaking the misbeliefs
- Open and Closed Bodylanguage
- Eye Contact and FacialExpression
- HandGestures
- Do's andDon'ts
- Learning fromexperts
- Activities-BasedLearning

SKILL DEVELOPMENT

ஒப்படைவு - மதிப்பெண் 40

பாடத்தொடர்புடையக் கட்டுரை 20 மதிப்பெண்

வேற்றி வேற்கை 20 மதிப்பெண்

எழுத்து அறிவித்தவன் இறைவன் ஆதும், கவ்விக்கு அழகு கசடற மொழிதல், செல்வர்க்கு அழகு செழுங்கிளை தாங்குதல், மன்னவர்க்கு அழகு செங்கோல் முறைமை, வைசியர்க்கு அழகு வளர் பொருள் ஈட்டல், உழவர்க்கு அழகு உழுது ஊண் விரும்பல், மந்திரிக்கு அழகு வரும் பொருள் உரைத்தல், தந்திரிக்கு அழகு தறுகண் ஆண்மை, உண்டிக்கு அழகு விருந்தோடு உண்டல், பெண்டிர்க்கு அழகு எதிர் பேசாதிருத்தல்,அறிஞர்க்கு அழகு கற்றுணர்ந்து அடங்கல், வறிஞர்க்கு அழகு வறுமையில் செம்மை, பெரியோர் எல்லாம் பெரியோரும் அல்லர்,சிறியோர் எல்லாம் சிறியரும் அல்லர்,அடினும் ஆவின் பால் தன் சுவை குன்றாது, சுடினும் செம்பொன் தன்னொளி கெடாது, அறைக்கினும் சந்தனம் தன் மனம் மாறாது பெருமையும் சிறுமையும் தான் தர வருமே, அறிவுடை ஒருவனை அரசும் விரும்பு, யானைக்கு இல்லை தானமும், தருமமும்,பூனைக்கு இல்லை தவமும் தயையும், ஞானிக்கு இல்லை இன்பமும் துன்பமும் , அச்சமும் நாணமும் அறிவிலோருக்கு இல்லை, நாளும் கிழமையும் நலிந்தோருக்கு இல்லை, கேளும் கிளையும் கெட்டோருக்கு இல்லை,உடைமையும் வறுமையும் ஒரு வழி நிலலாஇரந்தோர்க்கு ஈவதும்

உடையோர் கடனே,பழியா வருவது மொழியாது ஒழிவது, சுழியா வருபுனல் இழியாது ஒழிவது, துணையோடு அல்லது நெடுவழி போகேல்.

(மேற்கண்ட தலைப்புகளில் ஏதேனும் ஒன்றனுக்கு கவிதை(மரபு அல்லது புதுக்கவிதை) கதை,கட்டுரை,நாடகம் எழுதி வரச் செய்து சரிப்பார்த்து மதிப்பெண் வழங்கிடவும்)

Course Code	COURSE TITLE	L	T	P	C
20111AEC31	Advanced English-III	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation.
- To know how to interpret graphics
- To write slogans and advertisements

Outcome:

- Understand Phonetics
- Develop writing skill

UNIT –I

The organs of speech, Classification of speech sounds , Vowels and Diphthongs

UNIT –II

Consonants, Consonant cluster

UNIT – III

Syllable, Word accent, Intonation

UNIT – IV

Idiom, Interpretation of graphics

UNIT – V

Slogan writing, Writing advertisement

UNIT – V

Slogan writing, Writing advertisement

SKILL DEVELOPMENT

20111AEC32	English-III	4	0	0	2

AIM:

To acquaint students with learning English through literature

OBJECTIVE:

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

OUTCOME:

- Read and comprehend literature

UNIT – 1

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

UNIT – II

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

UNIT –III

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins

Resignation - Premchand

UNIT –IV

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

UNIT – V

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

Course Code	Course Title	L	T	P	C
20122SEC33	Internet and Java Programming	4	1	0	4

AIM

To equip the students with basic programming skill in Java

OBJECTIVE

- To understand the core principles of the Java Language
- To study about Graphics programming using java Language
- To learn visual tools to produce well designed, effective applications and applets.

UNIT-I

Introduction to the Internet - Internet Technologies - Internet Browsers

UNIT-II

Decision making and looping statements -Classes, Objects and Methods

UNIT-III

Arrays, strings and vectors- Interfaces: Multiple Inheritance – Packages: Putting classes together
- Multithreaded Programming

UNIT-IV

Managing Errors and Exceptions - Applet programming- Graphics programming

UNIT-V

Managing Input/Output files in Java

EMPLOYABILITY

OUTCOMES:

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

REFERENCE BOOKS:

1. “World Wide Web Design with HTML”, C.Xavier, Tata McGraw-Hill Publishing Company Limited for Unit-1.
2. “Programming with Java”, E.Balagurusamy, Tata McGraw-Hill Publishing Company Limited for Unit-2, 3, 4, 5.

Course Code	Course Title	L	T	P	C
20161SEC34	Financial Accounting	4	1	0	4

AIM:

To train the students to record all business events as per standard principles and established conventions.

OBJECTIVES:

- To ascertain whether the business operations have been profitable or not
- To assess the financial position of the business.
- To generate information.

UNIT – I

Meaning of Accounting- Meaning & objects of Book Keeping – Advantages of Accounting – Concepts and conventions – Principles of double entry – Kinds of accounts – Journal and ledger accounts.

UNIT – II

Subsidiary books – Advantages Subsidiary books - Purchases Book, Sales Book, Purchases returns Book, Sales returns Book, - Cash Book.

UNIT – III

Trial balance – Preparation - Rectification of errors –Bank Reconciliation Statement.

UNIT – IV

Final Accounts – Trading Accounts - Profit and Loss Accounts - Balance Sheet.

UNIT – V

Bills of Exchange – Single Entry System – Simple Problems.

EMPLOYABILITY**OUTCOMES:**

Students are now familiarizes with the accounting principles and practices and the ascertainment of the profitability and the financial position of the business.

REFERENCE BOOKS:

1. R.L.Gupta – Financial Accounting
2. S.P.Jain and K.L.Narang – Principles of Accounting
3. Readdy and Murthy – Financial Accounting
4. Dr.Radha - Financial Accounting

Course Code	Course Title	L	T	P	C
20113AEC35A	Allied Physics – I Electricity and Electronics	3	1	0	3

AIM:

To introduce the scientific principles relevant to electric circuits, and electronic devices.

OBJECTIVES:

Solve simple problems in basic electrical circuit theory. Analyse and predict the behaviour of simple logic circuits and electronic devices. To prepare the student for the study of physics by introducing general concepts and methods which will be applied throughout the course.

UNIT – I: CIRCUIT ELEMENTS:

Resistance in series and parallel – Capacitor in series and parallel – Conversion of galvanometer into voltmeter – Conversion of galvanometer into ammeter – Multimeter – CRO, AFO (Qualitative study only).

UNIT – II: ELECTRICITY:

Ohm's law – Kirchof's law – Wheatstone bridge – condition for bridge balance – Meter bridge – Specific resistance – Temperature co-efficient of resistance – Potentiometer – Measurement of current – voltage and resistance.

UNIT – III: SEMICONDUCTORS:

Conductors, Insulators, Semiconductors, P-type, N-type – semiconductors – PN-Junction diode – Zener diode – Static characteristics – Voltage regulation – Rectifiers: – Half wave rectifiers – Bridge Rectifiers – Calculation of ripple factor and efficiency.

UNIT – IV: BREAK DOWN DEVICES:

FET – Design of FET – FET characteristics – working of FET – SCR – Design – Characteristics – Triac – design and characteristics – Diac – design and characteristics.

UNIT – V: OPTO ELECTRONIC DEVICES:

LED – voltage and current – Advantages and applications of LED – LCD – Photo diode – its operation and application – Phototransistor – LED as Seven segment display.

EMPLOYABILITY

LEARNING OUTCOMES:

Learn how to develop and employ circuit models for elementary electronic components, e.g., resistors, sources, inductors, capacitors, diodes and transistors;

Become adept at using various methods of circuit analysis, including simplified methods such as series-parallel reductions, voltage and current dividers, and the node method;

REFERENCE BOOKS:

- 1) Electricity and Magnitism by Brijlal and Subramaniam.
- 2) Principles of electronics by V.K. Metha.

Course Code	Course Title	L	T	P	C
20122SEC36L	Internet and Java Programming Lab	0	0	3	2

1. Simple programming using for, while, do-while, ternary and switch.
2. String handling using string and string buffer.
3. Inheritance.
4. Polymorphism
5. Interfaces and Packages
6. Data files(creation, processing)
7. Vector manipulation
8. Simple programs using Applets
9. Exercises using predefined and user defined exceptions
10. Graphics programs for drawing lines, rectangle, oval, string using Applets.

EMPLOYABILITY

Course Outcome:

- To solve computational problems using basic constructs like if-else, control structures, array and strings.
- To implement relationships between classes.
- To evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements.
- To develop software applications using java programming language.
- Write modular, multithreading and event driven programming
- Implement interfaces, inheritance, polymorphism, exception handling, file IO and multithreading as programming techniques for application development.

Course Code	Course Title	L	T	P	C
20120RMC37	Research Methodology	2	0	0	2

AIM:

To create a basic appreciation towards research process and awareness of various research publication.

OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-based
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computation frame works used in mathematical researches.

PREREQUISITIES:

Basic computer skill for working in window environment & conceptual knowledge on basic matrices.

UNIT-I Introduction to Research Methodology

Meaning of research – Objectives of research – Type of research – Significance of research – Research approaches.

UNIT-II Research Methods

Research methods versus Methodology – Research and scientific method – criteria of good research – Problems encountered by researchers in India.

UNIT-III Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Review – General treatises – Monographs.

UNIT-IV Database Survey

Database search – NIST –MSDS –PubMed – Scopus – Science citation index – Information about a specific search.

UNIT-V Introduction to MATLAB:

What is MATLAB? Matrix and its application in different areas: MATLAB approach to environmental modeling; Arithmetic Matrix – Operators; Arithmetic Array – Operators and its applications in MATLAB; Expressions, Opening M-Files; Structure of MATLAB Programing; Programing; Concatenation of strings; Vectorization ; Basic Graphics.

EMPLOYABILITY

4. A Guide to MATLAB: For Beginners and experienced Users by Brian R. Hunt (Editor), Ronald L. Lipsman, J. Rosenberg
5. Introduction to MATLAB for Engineers by William J. Palm III.

Course Code	Course Title	L	T	P	C
201ACLSOAN	OFFICE AUTOMATION	-	-	-	2

Aim:

Course Objectives :

To provide an in-depth training in use of office automation, internet and internet tools. The course also helps the candidates to get acquainted with IT.

Course Outcomes:

After completion of the course, students would be able to documents, spreadsheets, make small presentations and would be acquainted with internet.

UNIT I

Knowing the basics of Computers

UNIT II

Word Processing (MS word)

UNIT III

Spread Sheet (MS XL)

UNIT IV

Presentation (MS Power Point)

UNIT V

Communicating with Internet

REFERENCE BOOKS:-

- English for Enrichment -Devaraj Emerald Publishers
Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Course Code	Course Title	L	T	P	C
20122SEC43	Visual Programming	4	1	0	4

AIM:

To equip the students with principles of various visual programming environment

OBJECTIVE:

- To learn the basic principles of visual programming
- To study the necessary skills to create software solutions using visual programming
- Understood the Open Data Base Connectivity using Visual programming.
- To inculcate knowledge on Programming and Project Development using Visual Basic.

UNIT I

Visual Basic – Integrated Development Environment (IDE) features – VB editor – customizing the IDE – anatomy of a form working with form properties – setting form’s properties – introducing form events and form methods.

UNIT II

Variables in Visual Basic : Declaring variables – Data types – Null values, Error value – empty value – the scope of a variable – Module level variable – Constants – Creating your own constants – Scope of a constant – Converting data types – arrays – Declaring arrays – Fixed size arrays – Dynamic arrays – Preserve keywords – ReDim. Writing code in Visual Basic – The anatomy of a procedure – Subroutine and Functions – Language constructs – For...Next, The While loop, Select case...End select, Exit statement, with structure.

UNIT III

Selecting and Using controls – Introduction to standard controls: command buttons – Text boxes – labels – frames – option buttons – Check boxes – Scroll Bars – Timer – working with Common Dialog Control.

]

UNIT IV

The Image list control – the List view control – slider control – status bar control – Tool bar control – The Tree view control – Menu editor. –File System Controls (Drive, Dirlist, File List boxes).

UNIT V

OLE properties – OLE automation – building COM/OLE DLL servers – Data control – design time(for access – style databases) –programming with the data control– Database access – set using SQL –transaction control – testing the control – Open Database Connectivity.

EMPLOYABILITY

OUTCOMES:

Upon completion of this course, the student will be able to:

- Design, create, build, and debug Visual Basic applications.
- Explore Visual Basic's Integrated Development Environment (IDE).
- Implement syntax rules in Visual Basic programs.
- Write Windows applications using forms, controls, and events
- Write and apply decision structures for determining different operations.
- Write and apply loop structures to perform repetitive tasks.

Digital Electronics

AIM:

To understand various digital system and their applications

OBJECTIVES:

To learn about the design principles of different digital electronic circuits.

To study the application digital electronics circuits

UNIT – I: NUMBER SYSTEMS AND CODES:

Decimal, Binary, Octal, and Hexa decimal systems – Conversion from one to another – Binary addition – Binary subtraction – Binary multiplication – Binary division – Complements, Codes: BCD, Gray, Alpha numeric.

UNIT – II: BOOLEAN ALGEBRA:

Basic logic gates – Universal gates – Fundamental concepts of Boolean algebra – De Morgan’s theorem: Simplification of expressions – Karnaugh map.

UNIT – III: LOGIC DESIGN:

Half adder – Half subtractor – Multiplexers – Demultiplexer, Flip-flops: R-S flip flop, J-K flip flop, D-flip flop, T-flip flop.

UNIT – IV: MEMORY ELEMENTS:

RAM – types – ROM: ROM, PROM, EPROM, EEPROM – Magnetic tape – Magnetic disc – Bubble memory.

UNIT – V: REGISTERS AND COUNTERS:

Registers: Shift register – Left shift register – Right shift register – Counters: Ripple counter – Mode N counter – up counter – down counter.

SKILL DEVELOPMENT

LEARNING OUTCOMES

Express positive integers in different number systems (binary, octal, decimal hexadecimal)

Codify data elements or information (signal values) by binary variables (signals) using standard codes for positive integers (binary, BCD, Gray) and characters (ASCII code)

Codify signed integers (positive and negative) using the two's-complement system

Perform basic arithmetic operations (addition, subtraction, multiplication) of signed integers by means of the 2's complement system

List a set of simulation tools for digital electronics

REFERENCE BOOKS:

- 1) Digital Principles and Applications by Malvino and Leach

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

201ENSTU45	Environmental Studies	2	0	0	2
------------	-----------------------	---	---	---	---

UNIT-I

The Multidisciplinary Nature of Environmental Studies – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources** - Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

UNIT-II

Ecosystems - Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

UNIT-III

Biodiversity and its Conservation – Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

UNIT-IV

Environmental Pollution – Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - **Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.**

UNIT-V

Social Issues and the Environment - From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - Human Population and the Environment.

EMPLOYABILITY

Course Outcomes:

CO 1: Discover knowledge in ecological perspective and value of environment.

CO 2: Understand the significance of various natural resources and its management.

CO 3: Demonstrate a comprehensive understanding of the world's biodiversity and the importance of its conservation.

CO 4: Categorize different types of pollutions and their control measures. Discover effective methods of waste Management. Analyze global environmental problems and come out with best possible solutions.

CO 5: Understand environmental laws and sustainable development.

REFERENCE BOOK:

1. "ENVIRONMENTAL STUDIES", K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

Course Code	Course Title	L	T	P	C
20122SEC46L	Visual Programming Lab	0	0	3	2

1. Simple exercises using standard controls.
2. Write a program to design a calendar of any year.
3. Write a program to expand and shrinking an object – while program is running.
4. Write a code to design and implement a scientific calculator.
5. Write a program to create animation by using move method and timer Object.
6. Write a program for preparing students mark list.
7. Write a program to populate the label entities using data bound control.
8. Write a program to expand and shrink Objects using timer control and move method

SKILL DEVELOPMENT

Course Outcome:

- Design,create,build and debug visual basic applications.
- Apply arithmetic operations for displaying numeric output.
- Apply decision structures for determining different operations.
- Write windows applications using forms,controls and events.
- Create one and two dimensional arrays for sorting,calculating and displaying of data.
- Write Visual Basic programs using object-oriented programming techniques including classes, objects, methods, instance variables, composition, and inheritance, and polymorphism

Course Code	Course Title	L	T	P	C
20113AEC47AL	Allied Physics Lab -I	0	0	3	2

- 1) FET-Characteristics
- 2) Logic Gates-Universality of NOR Gate.
- 3) LCR — Series Resonance Circuit.
- 4) LCR parallel – resonance circuit.
- 5) OP AMP-Addition,Subtraction.
- 6) Verification basic logic gates.
- 7) Verification of Demorgon’s theorem..
- 8) Half adder and Half subtractor.
- 9) Logic Gates-Universality of NAND Gate.
- 10) OP AMP Differentiator ,Intergrator.

EMPLOYABILITY

Course Outcome:

Learn the basics of gates.

Construct basic combinational circuits and verify their functionalities.

Apply the design procedures to design basic sequential circuits.

Learn about counters.

Learn about Shift Registers.

To understand the basic digital circuits and to verify their operation.

Course Code	Course Title	L	T	P	C
201ACLSLMS	Leadership and Management Skills	-	-	-	2

Aim:

The aim of the course cultivating and nurturing the innate leadership skills of the youth so that they may transform these challenges into opportunities and become torch bearers of the future by developing creative solutions.

Course Objective:

The Module is designed to:

- Help students to develop essential skills to influence and motivate others
- Inculcate emotional and social intelligence and integrative thinking for effective leadership
- Create and maintain an effective and motivated team to work for the society
- Nurture a creative and entrepreneurial mindset
- Make students understand the personal values and apply ethical principles in professional and social contexts.

Course Outcomes :

Upon completion of the course students will be able to:

1. Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
2. Learn and demonstrate a set of practical skills such as time management, self management, handling conflicts, team leadership, etc.
3. Understand the basics of entrepreneurship and develop business plans
4. Apply the design thinking approach for leadership
5. Appreciate the importance of ethics and moral values for making of a balanced personality.

UNIT I- Leadership Skills

- a. **Understanding Leadership and its Importance**
 - What is leadership?
 - Why Leadership required?
 - Whom do you consider as an ideal leader?
- b. ***Traits and Models of Leadership***
 - Are leaders born or made?
 - Key characteristics of an effective leader
 - Leadership styles
 - Perspectives of different leaders
- c. ***Basic Leadership Skills***
 - Motivation
 - Team work
 - Negotiation
 - Networking

UNIT II - Managerial Skills

- a. **Basic Managerial Skills**
 - Planning for effective management
 - How to organise teams?
 - Recruiting and retaining talent
 - Delegation of tasks
 - Learn to coordinate
 - Conflict management
- b. ***Self Management Skills***
 - Understanding self concept
 - Developing self-awareness
 - Self-examination
 - Self-regulation

UNIT III - Entrepreneurial Skills

- a. **Basics of Entrepreneurship**
 - Meaning of entrepreneurship
 - Classification and types of entrepreneurship
 - Traits and competencies of entrepreneur
- b. ***Creating Business Plan***
 - Problem identification and idea generation
 - Idea validation
 - Pitch making

UNIT IV - Innovative Leadership and Design Thinking

- a. **Innovative Leadership**

- Concept of emotional and social intelligence
- Synthesis of human and artificial intelligence
- Why does culture matter for today's global leaders

b. *Design Thinking*

- What is design thinking?
- Key elements of design thinking:
 - Discovery
 - Interpretation
 - Ideation
 - Experimentation
 - Evolution.
- How to transform challenges into opportunities?
- How to develop human-centric solutions for creating social good?

UNIT V- Ethics and Integrity

a. *Learning through Biographies*

- What makes an individual great?
- Understanding the persona of a leader for deriving holistic inspiration
- Drawing insights for leadership
- How leaders sail through difficult situations?

b. *Ethics and Conduct*

- Importance of ethics
- Ethical decision making
- Personal and professional moral codes of conduct
- Creating a harmonious life

EMPLOYABILITY

Course outcomes:

- Identify different leadership styles;
- Select the leadership style that best suits their situation;
- Communicate effectively by saying no, delegating, and promoting others' growth;
- Improve their social skills and social understanding;
- Mediate conflicts in their work environment.

Course Code	Course Title	L	P	T	C
201ACSSBBE	Basic Behavioural Etiquette				

Aim:

Objectives:

Training is mainly focused on discipline, grooming, career planning and building personality. As it is the first year of the university, students are given awareness about the job market right from the start so that they prepare accordingly at their own pace and potential.

Eliminating negative thought, developing enriching habits, unlocking individual potentials and well versed communication is the aim of this program. The module consists of

- Communication Skills
- Goal Setting
- Career Planning
- Reaching your Potential
- Time Management
- Stress Management
- Grooming and Discipline
- Learning skills
- Listening Skills
- Team Building

EMPLOYABILITY

Course Outcome:

Etiquette helps us to be thoughtful about our conduct.

It helps us to be aware of the feelings and rights of others. By eliminating discourteous behaviour and prioritising other people's feelings, etiquette promotes kindness, consideration, and humility.

Business etiquette training, a key part of soft skills & communication, facilitated by Momentum enlightens participants on the accepted behaviour patterns and manners key to their profession.

It emphasises on a set of practices used and accepted in a multi-national work environment.

Course Code	Course Title	L	P	T	C
201ACSSAQA	General Aptitude and Quantitative Ability				

Aim:

1. General Aptitude

- Introduction
- Introduction to Aptitude Tests
- Diagnostic Tests
- Introduction to Speed Maths
- Quantitative Ability – Number Theory
- Numbers
- Properties of Numbers
- Concept of Multiples and Factors
- LCM and HCF
- Factorial Concept
- Last Digit Concept
- Remainders Concept

Quantitative Ability – Arithmetic - 1

- Percentage
- Ratio and Proportion
- Simple Interest and Compound Interest
- Profit Loss
- Discount
- Mixture and Allegation
- Questions from Company Papers will be discussed

Quantitative Ability – Arithmetic - 2

- Speed Distance Time
- Time and Work
- Chain Rule
- Clocks and Calendars
- Averages
- Questions from Company Papers will be discussed

Quantitative Ability – Algebra

- Basic Terminologies in Algebra
- Equations
- Simple Equation
- Quadratic Equation
- Cubic Equation
- Functions
- Graphs
- Maxima and Minima
- Questions from Company Papers will be discussed

Quantitative Ability – Modern Maths

- Set Theory
- Fundamental way of Counting
- Permutations and Combinations
- Probability
- Questions from Company Papers will be discussed
- Data Analysis
- Data Sufficiency

Analytical and Logical Reasoning

- Mono variate conditions
- Multi variate conditions

Puzzles

- Coding
- Decoding
- Family tree
- Direction sense
- Alpha numeric
- Brain teasers

Deductive Reasoning

Visual Sequence

Mathematical Reasoning

2. English Aptitude

- Fill in the blanks

- Comprehension
- Odd man out
- Phrases and Sentences
- Sequencing
- Basic Grammar
- Meanings

EMPLOYABILITY

Course Outcomes:

- The student will be able to • Use their logical thinking and analytical abilities to solve Quantitative aptitude questions from company specific and other competitive tests.
- Solve questions related to Time and distance and time and work etc. from company specific and other competitive tests.
- " The main aim of introducing "Quantitative Aptitude"for mathematics students is to develop skill to meet the competitive examinations for better job opportunity.
- Effort has been made to accommodate fundamental, mathematical aspects to instill confidence among students.
- Effort has been made to accommodate fundamental, mathematical aspects to instill confidence among students.

This course consists of practice exercises for Quantitative or Numerical and Verbal Ability. Prepare for Aptitude Tests for Entrance Exams like GATE, CAT, Bank PO, SAT, GMAT, GRE, UPSC and RRB.

Course Code	Course Title	L	P	T	C
201ACSSIST	Interview Skills Training and Mock Test				

Aim:

➤ Exclusive Pre-Placement Training – both General Aptitude and Technical Aptitude is carried out by External Training firms, Corporate Professionals for final year students.- with a focus on the Corporate Selection Process during the Campus Hiring Visit

➤ Mock Tests on Company Specific Aptitude Question papers are carried out along with Mock Interviews. Based on such companies face-to-face-Technical & HR – interviewing style and finally placement offer provide to the students.

EMPLOYABILITY

Course outcomes:

Help candidates reduce their stress and anxiety before a real job interview.

Help you boost your confidence.

Provide you with useful feedback in a low-stress environment.

Help you prepare for behavioral-based interview questions.

Interviewing Skills Training focuses on the skills required to conduct engaging interviews that include effective questions.

This will allow a hiring manager or interviewer to ensure the best practices are followed to hire the right candidates with the applicable skills, behavior, and mindset.

Course Code	Course Title	L	T	P	C
20122SEC51	Relational Database Management Systems	4	1	0	4

AIM

To equip the students with principles and concepts of database design

OBJECTIVES:

- To learn the basic principles of database and database design
- To learn the basics of RDBMS
- To learn the concepts of database manipulation SQL

UNIT- I

An Overview of Database Management-Introduction -Definition of Database system - Data Independence - Relational Systems - Database System Architecture - Three Levels of the Architecture - Distributed Processing.

UNIT -II

An Introduction to Relational Databases- Introduction - Relational Model - Relations and Relvars - Optimization - Transactions - An Introduction to SQL - Embedded SQL - Domains , Relations , Relvars.

UNIT- III

Relational Algebra - Introduction - Syntax - Semantics - Examples - Additional Operators - Relational Calculus - Introduction - Tuple Calculus - Examples - Calculus Vs Algebra - Domain Calculus - SQL Specialties .

UNIT -IV

Database Design - Functional Dependencies - Introduction - Basic Definitions - Normalization - First , Second ,Third Normal Forms - BOYCE / CODD Normal Form

UNIT- V

Transaction Management - Recovery - Introduction - Transactions - Transaction Recovery - System Recovery - Media Recovery - Concurrency -Three Concurrency Problem - Locking - Deadlock - Serializability .

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Design Databases for applications.
- Use the Relational model, ER diagrams.
- Design the Query Processor and Transaction Processor.

REFERENCE BOOKS:

“An Introduction to Database Systems”. C.J.DATE. Addison - Wesley Publications - 7th Edition 2000.

Course Code	Course Title	L	T	P	C
20122SEC52	.NET Programming	4	1	0	3

AIM

To cover the fundamental concepts of the .NET framework.

OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

UNIT III

Interfacing with the End user-Asp.NET Applications.

UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

EMPLOYABILITY

OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

REFERENCE BOOKS:

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.
4. Visual Basic.Net Black Book- Steven Holzner.

Course Code	Course Title	L	T	P	C
20122SEC53	Designing and supporting Computer Networks	4	1	0	4

AIM:

To equip the students with Computer Networks

OBJECTIVE:

- To learn the Network concepts
- To understand the Network Switching Concepts
- To study about Network Security.

UNIT I

The Internet and its uses – OSI model – ISP Troubleshooting – Planning a Network Upgrade

UNIT II

Planning the Addressing Structure – IP Addressing in the LAN – NAT and PAT – Configuring Network Devices: Initial ISR Configuration – Configuring an ISR with SDM

UNIT III

Configuring a Router Using IOS CLI – Connecting the CPE to the ISP – Routing: Enabling Routing Protocols – Exterior Routing Protocols

UNIT IV

ISP Services: Protocols that support ISP Services – DNS – Services and Protocols – ISP Responsibility: ISP security considerations – Security tools

UNIT V

Monitoring and Managing the ISP – Backups and Disaster Recovery – Troubleshooting: Troubleshooting Methodologies and Tools

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Identify the components required to build different types of networks
- Choose the required functionality at each layer for given application
- Identify solution for each functionality at each layer
- Trace the flow of information from one node to another node in the network

REFERENCE BOOKS:

“Working at a Small-to-Medium Business or ISP CCNA Discovery Learning Guide” – Allan Reid and Jim Lorenz – CISCO Press – Pearson Education

Course Code	Course Title	L	T	P	C
20122DSC54A	Computer Organization and Architecture	4	1	0	3

AIM:

To equip the students with the Computer Organization and Architecture.

OBJECTIVES:

- To Make Students Understand The Basic Structure And Operation Of Digital Computer.
- To Familiarize The Students With Arithmetic And Logic Unit And Implementation Of Fixed Point And Floating-Point Arithmetic Operations.
- To Expose The Students With Different Ways Of Communicating With I/O Devices And Standard I/O Interfaces.

UNIT I

Digital logic circuits: Digital computers- Logic gates – Boolean algebra - Map simplification - Combinational circuits - Flip-flops - Sequential circuits.

UNIT II

Digital components: Integrated circuits – Decoders - Multiplexers - Registers - Shift Registers - Binary Counters - Memory unit.

UNIT III

Data Representation: Data types - Complements

– Fixed point representation –Floating Point representation – Other binary codes – Error detection codes.

UNIT IV

Central processing unit: General Register organization – Stack organization – Instruction formats – Addressing modes – Data transfer and manipulation – Program control – Reduced instruction set computers.

UNIT V

Memory Organization: Memory hierarchy – Main memory – Auxiliary memory – Associative Memory – Cache Memory – Virtual Memory – Memory Management and Hardware.

SKILL DEVELOPMENT

OUTCOMES:

At the end of the course, the student should be able to:

- Design arithmetic and logic unit.
- Design and analyse pipelined control units
- Evaluate performance of memory systems.

REFERENCE BOOKS:

1. Computer System Architecture - Morris Mano.M PHI, Third Edition - 1999
2. Digital Computer Fundamentals – Thomas C. Bartee- Sixth Edition - TataMcGrawHill.
3. Digital Design – Mano – Second Edition

Course Code	Course Title	L	T	P	C
20122DSC54B	E-Learning	4	1	0	3

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop e – learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding elearning, components and models of e-learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

UNIT II CONCEPTS and DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

UNIT III APPLICATIONS

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

EMPLOYABILITY

REFERENCE BOOKS:

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.
2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.

4. Moodle 2.0 First Look, Mary Cooch, 2010.

Course Code	Course Title	L	T	P	C
20122SEC55L	Oracle Lab	0	0	3	2

1. Write SQL queries to create the following tables and insert rows in it.

Employee (eno, ename, deptno, salary, designation)

Dept (deptno, deptname, location)

Student (rollno, name, course, paper1, paper2, paper3)

2. Write SQL queries to create primary key and foreign key constraints in the above given tables and perform all types of **simple retrieval**.

3. Write SQL queries to perform all types of **advance retrieval** using (i) nested subqueries (ii) set operators.

4. Write SQL queries to perform all types of **joins**.

5. Write SQL queries to illustrate all **built-in** functions.

6. Write SQL queries to create **views** and **index/indices** for the tables Employee, Dept and Student.

7. Write a database trigger to prevent transactions during weekend. Create PL/SQL procedures and store them in a package and execute them in the command prompt.

8. Write a PL/SQL program that prints mark sheet of students in a University using cursor.

SKILL DEVELOPMENT

Course Outcomes:

Brief knowledge about SQL Fundamentals

Unary and Binary table Operations.

Able to handle with different database languages.

Table view, Log and Triggers.

Handling online Transactions.

Database Connectivity with front-end.

Course Code	Course Title	L	T	P	C
20122SEC56L	.NET Programming Lab	0	0	3	2

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:

i). Insertion (ii) Updating (iii) Deletion (iv) Selection
Hint: Do operations using Ms-Access and SQL-Server

10. Create an application using Data grid control to access information's from table in SQL server.

SKILL DEVELOPMENT

Course Outcome:

Contrast and compare major elements of the .NET Framework and explain how C# fits into the .NET platform.

Analyze the basic structure of a C# application and be able to document, debug, compile, and run a simple application.

Create, name, and assign values to variables.

Use common statements to implement flow control, looping, and exception handling.

Create methods (functions and subroutines) that can return values and take parameters.

Create, initialize, and use arrays.

Course Code	Course Title	L	T	P	C
201ACLSPSL	Professional Skills	-	-	-	2

Aim:

Course Objectives :

The Objectives of the course are to help students/candidates:

1. Acquire career skills and fully pursue to partake in a successful career path
2. Prepare good resume, prepare for interviews and group discussions
3. Explore desired career opportunities in the employment market in consideration of an individual SWOT.

Course Outcomes :

At the end of this course the students will be able to:

1. Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax
2. Participate in a simulated interview
3. Actively participate in group discussions towards gainful employment
4. Capture a self - interview simulation video regarding the job role concerned
5. Enlist the common errors generally made by candidates in an interview
6. Perform appropriately and effectively in group discussions
7. Explore sources (online/offline) of career opportunities
8. Identify career opportunities in consideration of their own potential and aspirations
9. Use the necessary components required to prepare for a career in an identified occupation (as a case study).

Unit I: Resume Skills

Resume Skills : Preparation and Presentation

- Introduction of resume and its importance
 - Difference between a CV, Resume and Bio data
 - Essential components of a good resume
- ii.* **Resume skills : common errors**
- Common errors people generally make in preparing their resume
 - Prepare a good resume of her/his considering all essential components

Unit II: Interview Skills

- i.* **Interview Skills : Preparation and Presentation**
- Meaning and types of interview (F2F, telephonic, video, etc.)
 - Dress Code, Background Research, Do's and Don'ts
 - Situation, Task, Approach and Response (STAR Approach) for facing an interview
- Interview procedure (opening, listening skills, closure, etc.)
 - Important questions generally asked in a job interview (open and closed ended questions)
- ii.* **Interview Skills : Simulation**
- Observation of exemplary interviews
 - Comment critically on simulated interviews
- iii.* **Interview Skills : Common Errors**
- Discuss the common errors generally candidates make in interview
 - Demonstrate an ideal interview

Unit III: Group Discussion Skills

Meaning and methods of Group Discussion

- Procedure of Group Discussion
- Group Discussion- Simulation
- Group Discussion - Common Errors

Unit IV: Exploring Career Opportunities

Knowing yourself – personal characteristics

- Knowledge about the world of work, requirements of jobs including self-employment.

- Sources of career information
- Preparing for a career based on their potentials and availability of opportunities

EMPLOYABILITY

SEMESTER – VI

Course Code	Course Title	L	T	P	C
20122SEC61	Advanced Web Technology	4	1	0	4

AIM:

To equip the students with basic programming skill in Web Designing

OBJECTIVES:

- To understand and practice mark up languages
- To understand and practice embedded dynamic scripting on client side Internet Programming
- To understand and practice web development techniques on client-side

UNIT-I

Introduction to HTML – Head and body sections – Designing the body section. Ordered and unordered lists – Table handling.

UNIT-II

DHTML and Style Sheet – Frames-Forms.

UNIT-III

VBScript –VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Data type Conversion Features – Putting it all together with VBScript – using the Script Debugger.

UNIT-IV

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. **JavaScript and Html Documents: The JavaScript Execution Environment.**

UNIT-V

Introduction to PHP: Origins and Uses of PHP – Overview of PHP – General syntactic characteristics – Primitives, Operation and Expressions – Output – Control Statements – Arrays – Functions – Pattern Matching – Form Handling – Files – Cookies – Session Tracking.

EMPLOYABILITY

OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Acquire knowledge about PHP.

REFERENCE BOOKS:

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

For UNIT I & II.

2. “Using Active Server Page”. - Scot Johnson-For UNIT III.

3. “Programming the World Wide Web” - Robert W.Sebesta , Third edition.

For UNIT IV, V.

Course Code	Course Title	L	T	P	C
20122SEC62	Operating System	4	1	0	5

AIM:

To equip the students with operating system and their components

OBJECTIVES:

The student should be made to:

- Study the basic concepts and functions of operating systems.
- Understand the structure and functions of OS.
- Learn about Processes, Threads and Scheduling algorithms.
- Understand the principles of concurrency and Deadlocks.
- Learn various memory management schemes.
- Study I/O management and File systems.

UNIT- I

Evolution of Operating Systems – Types of Operating Systems – Different views of OS – Design and implementation of Operating Systems – I/O Programming concepts – Interrupt structure and Processing.

UNIT-II

Memory management: Single contiguous allocation – Partitioned Allocation – Relocatable Partitioned Allocation – Paged and Demand Pages Memory Management – Segment Memory Management – Segmented and Demand Paged Memory Management – Swapping and Overlay Techniques.

UNIT- III

Processor management: Job Scheduling – Process Scheduling – Functions and Policies – Evaluation of Round Robin Multiprogramming performance – Process synchronization – Race condition – Synchronization Mechanism – Deadly Embrace Prevention and Detect and Recover Methods.

UNIT- IV

Device management: Techniques for device management – Device Characteristics – I/O Traffic controller, I/O scheduler, I/O device handler – Virtual Devices – Spooling

UNIT-V

File management: Simple file system, General Model of a file system, Physical and Logical file system. Case studies: DOS, UNIX/LINUX Operating systems

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Design various Scheduling algorithms.
- Apply the principles of concurrency.
- Design deadlock, prevention and avoidance algorithms.
- Compare and contrast various memory management schemes.
- Design and Implement a prototype file systems.
- Perform administrative tasks on Linux Servers.

REFERENCE BOOKS:

1. Operating systems – E. Madnick and John J. Donovan – Tata McGraw Hill
2. Operating Systems (Concepts and Design) Milan Milenkovic – McGraw Hill International Edition

Course Code	Course Title	L	T	P	C
20122DSC63A	Software Project management	4	1	0	3

UNIT I INTRODUCTION TO PROJECT MANAGEMENT

Project Definition – Contract Management – Activities Covered By Software Project Management – Overview Of Project Planning – Stepwise Project Planning.

UNIT II PROJECT EVALUATION

Strategic Assessment – Technical Assessment – Cost Benefit Analysis – Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation.

UNIT III ACTIVITY PLANNING

Objectives – Project Schedule – Sequencing And Scheduling Activities – Network Planning Models – Forward Pass – Backward Pass – Activity Float – Shortening Project Duration – Activity On Arrow Networks – Risk Management – Nature Of Risk – Types Of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning And Control.

UNIT IV MONITORING AND CONTROL

Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance.

UNIT V MANAGING PEOPLE AND ORGANIZING TEAMS

Introduction – Understanding Behavior – Organizational Behaviour: A Background – Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation – The Oldman–Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress – Health And Safety – Case Studies.

EMPLOYABILITY

Outcome:

Identify the different project contexts and suggest an appropriate management strategy.

Practice the role of professional ethics in successful software development.

Identify and describe the key phases of project management.

Determine an appropriate project management approach through an evaluation of the business context and scope of the project.

Plan and manage projects at each stage of the software development life cycle (SDLC)

Create project plans that address real-world management challenges

REFERENCES:

Course Code	Course Title	L	T	P	C
20122DSC63B	Object oriented analysis and design	4	1	0	3

AIM:

To equip the students with object oriented analysis and design

OBJECTIVES:

The student should be made to:

- Learn the basics of object oriented analysis and design skills.
- Learn the UML design diagrams.
- Learn to map design to code.
- Be exposed to the various testing techniques.

UNIT- I

Introduction to object-oriented Development- object-oriented themes – Modeling- The object modeling Technique- object and classes Links and Associations concepts- Generalization and Inheritance- Grouping constructs.

UNIT- II

Advanced object modeling- Aggregation- Abstract classes- Extension and Restriction- Multiple inheritance- Metadata – Candidate keys- Constraints. Dynamic modeling:- Events and states – Operations- Nested state diagram- Concurrency. Function modeling:- Functional models- Data flow diagram- Specifying operations- Constraints.

UNIT- III

OMT as software Engineering Methodology- The OMT Methodology- Impact of an object oriented Approach. Analysis: - Overview of analysis – problem statement – automated teller machine example – object modeling – Dynamic modeling – functional modeling- adding operations iterating the analysis.

UNIT- IV

System Design- overview of system design – Breaking a system into subsystem – identifying concurrency – allocating subsystems to processors and tasks – management of data stores- handling global resources – choosing software control implementation- handling boundary design – overview of object design – combining the three models – designing algorithms - design optimization - implementation of control.

UNIT- V

Implementation: Implementation using a programming language- Implementation using a database system. **Programming style:** object – oriented style – reusability – extensibility – Robustness - object oriented language features – survey of object – oriented languages.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Design and implement projects using OO concepts.
- Use the UML analysis and design diagrams.
- Apply appropriate design patterns.
- Create code from design.
- Compare and contrast various testing techniques.

REFERENCE BOOKS:

1. Object Oriented Modeling and Design – James Rumbaugh, Michael Blaha, William Premerlani – PHI Twelfth Printing – 2001.
2. Object Oriented Analysis and Design with Applications- Grady Booch Second Edition – Pearson Education Asia publications.

COURSE CODE	COURSE TITLE	L	T	P	C
201ENOE	Journalism	4	0	0	2

Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

UNIT- II

News – Definition – Kinds – Elements – Sources

UNIT- III

Reporters

UNIT- IV

The Editor and the Sub Editor

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

EMPLOYABILITY

outcome:

- Classifying newspaper as a recorder of news and events, as an organ of public opinion, instrument of social service, promoter of democracy.
- Defining News and understanding its elements, news sources and different types of news.
- Understanding the role of the news editor and its functions, duties and responsibilities.
- Analyzing the duties and qualities of Chief Sub editor and Sub editors.

- Understanding news writing and different structures of news writing.
- Analyzing crime and legal reporting, science and financial reporting.

COURSE CODE	COURSE TITLE	L	T	P	C
201MAOEC	Development Of Mathematical Skills	4	0	0	2

Objectives

Knowledge and understanding are fundamental to studying mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.

To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

References

1. P.A.Navanitham, Business Mathematics & Statistics
2. Kanti swarup, P.K.Gupta and Manmohan, “ Operations Research”

SKILL DEVELOPMENT

Learning outcomes

- By the end of this course, you should be able to
- know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, statistics, Matrices and Business mathematics)

- use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Course Code	COURSE TITLE	L	T	P	C
201PHOEC	Instrumentation	4	0	0	2

Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.

A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

UNIT – I: Introduction

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges :

AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

UNIT – II: ELECTRONIC INSTRUMENTS – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using

rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters –

Component measuring instruments (quantitative studies)

UNIT – III: ELECTRONIC INSTRUMENTS – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation

amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

EMPLOYABILITY

Learning Outcomes:

Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.

Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K.

Sawhmey – DhanpatRai and Sons – 1990.

2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill –1975.

Course Code	COURSE TITLE	L	T	P	C
201CHOEC	Food and Adulteration	4	0	0	2

Aim: To introduce students to food safety and standardization act and quality control of foods.

Objectives:

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

SKILL DEVELOPMENT

Course outcomes:

Understand various areas of Food Safety & Quality Assurance.

Grasp knowledge of the quality assessments of food products.

Comprehend food quality management systems.

Apprehend the Indian and International food laws.

Conceive the concept of adulteration in food products.

Apprehend the quality assessment of food products using various instruments.

References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	COURSE TITLE	L	T	P	C
201MBOEC	Wild Life Conservation	4	0	0	2

Aim:

To enable the students understand the need of conservation of wildlife in India.

Objectives:

Maintenance of rare species in protected areas such as national parks, santuries etc.,
Establishment of specific biosphere reserves for endangered plants and animals.
Protection of wild life through legislation such as banning hunting etc.,
Imposing specific restrictions on export of endangered plants and animals or their products.

Outcome:

Protection of natural habitats of organisms through controlled exploitation.

Educating the public about the need to protect and preserve the environment as a long range goal for the welfare of future generations

Unit I: Wildlife Management: Basic concepts and principles - Wildlife management before and after implementation of Wild Life (Protection) Act, 1972 – IUCN – CITES – NBA – IBA –

Evaluation of Wildlife habitat: Define habitat – Forest habitat types - basic survey techniques of habitats – Vegetative analyses – Point centered quadrat, Quadrat, strip transect – Habitat manipulation: Food, Water, shade, impact and removal of invasive alien species.

Unit II: Introduction to conservation biology, the origin of conservation biology, ethical and economical values of conservation biology, definition of biodiversity, types of biodiversity, threats to biodiversity. Scopes and importance of conservation methods – *In-situ* and *Ex-situ* conservation approaches of Indian animals. Captive breeding (Lion-tailed macaque, white tiger and vultures) and reintroduction (Tiger, rhinoceros, gaur).

Unit III: Biodiversity: Definition and importance - Biodiversity hotspots in India: Western Ghats, Eastern Himalayas. Mega diversity nations – an introduction. Landscape approach and people participation in biodiversity conservation.

Unit IV: Role of Government and Non-Government organizations in conservation.–
Government - Wildlife Institute of India, Ministry of Environment and Forests (MoEF), National Biodiversity Authority (NBA), Zoological Survey of India (ZSI), Botanical Survey of India (BSI), Salim Ali Centre for Ornithology and Natural History (SACON), Centre for Ecological Sciences (CES). **NGOs.** –Bombay Natural History Society (BNHS), World Wide Fund for Nature (WWF), Wildlife Trust of India (WTI), Nilgiri Wildlife and Environment Association (NWEA), Wildlife Conservation Society (WCS).

Unit V:

Conservation Biology Tools - Biological Parks, Zoological Parks, Forest Research Institute, Agricultural Research Institutions, Gene Pools, Cryopreservation Centres, Interpretation Centres and role of Field Biologists.

SKILL DEVELOPMENT

Outcome:

Wildlife habitat studies will enable students to solve problems of conservation.

Describe habitat management.

Understanding of Conservation will help protection of wildlife.

Explain wildlife trade that may enhance the economy.

Wildlife legislation will systematically organize the understanding of wildlife conservation, trade and management.

Evaluate current events and public information related to wildlife conservation as being scientifically-based or opinion-based and contribute to the knowledge base of information.

Course Code	Course Title	L	T	P	C
201CSOEC	E-Learning	4	0	0	2

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop e – learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding elearning, components and models of e-learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

UNIT II CONCEPTS and DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

UNIT III APPLICATIONS

Moodle 2.0 **E-Learning Course Development – Features, Architecture, Installation and Configuring Site.**

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

EMPLOYABILITY

REFERENCE BOOKS:

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.

2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.
4. Moodle 2.0 First Look, Mary Cooch, 2010.

B.COM

COURSE CODE	COURSE TITLE	L	T	P	C
201CMOEC	BANKING SERVICES	5	0	0	5

AIM:

To Provide the Bank is financial institution which is involved in borrowing and lending money.

OBJECTIVE: you should be able to

- To provide a lending money to firms, customers and home buyers.
- To provide keep money for customers
- To provide offering financial advice and related financial services, such as insurance.

UNIT – I

Commercial Banking – An Overview: Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

UNIT – II

E-banking –An Overview: Meaning-Service-E-banking and Financial Services –Benefits-Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking-Services

UNIT – III

Mobile Banking and Telephone Banking –An Overview: Meaning-Features- Registration-Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers

Unit – IV

ATM and Electronic Money: Concept of ATM-Features-Functions-Strategic importance of ATM- Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

Unit-V

EFT System and INFINET: Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

EMPLOYABILITY

OUTCOME:

To help to gather knowledge on banking and financial system in India

To provide knowledge about commercial banks and its products

To create awareness about modern banking services like e-banking-banking and internet banking, ATM System

To introduce recent trends in banking system

To make the student understand the basic concept of banking and financial institutions and expose various types of risk based by banks

REFERENCES:

1. Banking theory law and Practice
2. Banking Theory law and practice -Santhanam
3. Banking Awareness – N.K.Gupta
4. Management of Banking and financial Services-Padmalathasuresh,Justinpaul

Course Code	Course Title	L	T	P	C
20122SEC64L	Advanced Web Technology Lab	0	0	3	2

1. Create a small paragraph about 10 lines. Try to use different font, title, head tags, Size and colors.
2. Create a table with rows & columns and split them using row span & cols pan.
3. Create a web page in the format of front page of a newspaper using text link
4. Write a program for addition using VBScript.
5. Develop a picture gallery having at least 3 pages. Each of them is having several pictures.
6. Create a java script for automatic type conversion.
7. Develop a Java Script program that handles event using button and check box.
8. Develop a program using java script for events handling text area and text field.
9. Develop a calculator for simple calculation using java script.
10. Develop a PHP program and check message passing mechanism between pages.

EMPLOYABILITY

Course Outcome:

- Understand analyze and apply the role of languages like HTML, DHTML, CSS, XML, Javascript, VBScript, ASP, PHP and protocols in the workings of the web and web applications.
- Analyze a web page and identify its elements and attributes.
- Create a web pages using HTML,DHTML and Cascading styles Sheets.
- Create interactive web applications using ASP.NET.
- Build and consume web services.
- Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.

Course Code	Course Title	L	T	P	C
20122SEC65L	Operating System Lab	0	0	3	2

1. Write a menu driven shell program for the following:
 - a. List of files.
 - b. Processes of users.
 - c. Today's Date
 - d. Users of system.
 - e. Quit of Unix

2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.

3. Write a shell program which accepts the name of a file from the standard input and perform the following

- a. Accept five names in a file.
- b. Sorts the names in existing file.
- c. Lists unsorted and sorted file.
- d. Quit

4. Write a menu driven shell program to copy, edit, rename and delete a file.

5. Write a menu driven shell program to perform the following task
 - a. Write a sentence in file.
 - b. Search for a given word or pattern in an existing file.
 - c. Quit.

6. Write a shell program to prepare electricity bill for domestic consumers.

For first 100 units – Rs. 0.75 / Unit

For next 100 units – Rs. 1.50 / Unit

Above 200 units – Rs. 3.00 / Unit

Prepare the bill for the following format.

7. Write a shell program to display the result PASS or FAIL using the information given below student name, student register number, mark1, mark2, mark3, mark4 the minimum pass for each subject is 50.

8. Merge the contents of the file file1, file2 and store in another file

SKILL DEVELOPMENT

COURSE OUTCOME

- INSTALL A LINUX OPERATING SYSTEM WITH A CUSTOM PARTITIONING SCHEME AND LOG INTO AND OUT OF A UNIX/LINUX COMPUTER SYSTEM USING GRAPHICAL AND COMMAND LINE ENVIRONMENTS.
- USE UNIX/LINUX COMMAND LINE (SHELL) COMMANDS TO NAVIGATE AND MANAGE THE UNIX/LINUX FILE SYSTEM, CUSTOMIZE THE USER SHELL ENVIRONMENT,
- USE ARCHIVING AND COMPRESSION TO BACK UP FILES.
- USE FILE NAME GLOBING AND REGULAR EXPRESSIONS TO FIND FILES AND TEXT IN THE SYSTEM.
- TO MANAGE USER AND GROUP ACCOUNTS AND PERMISSIONS.
- TO MANAGE PROCESSES AND JOBS.

Course Code	Course Title	L	T	P	C
20122PRW66	Project Work	0	0	0	4

Each student will develop and implement individually developed application software based on any of the latest technologies.

Course Code	Course Title	L	T	P	C
201ACLSCET	Community Engagement	-	-	-	1

Aim:

Course Objectives:

To develop an appreciation of rural culture, life-style and wisdom amongst students

To learn about the status of various agricultural and rural development programmes

To understand causes for rural distress and poverty and explore solutions for the same

To apply classroom knowledge of courses to field realities and thereby improve quality of learning

Course Outcomes:

After completing this course, student will be able to

Gain an understanding of rural life, culture and social realities

Develop a sense of empathy and bonds of mutuality with local community

Appreciate significant contributions of local communities to Indian society and economy

Learn to value the local knowledge and wisdom of the community

Identify opportunities for contributing to community's socio-economic improvements

UNIT I - Appreciation of Rural Society

Rural life style, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of “soul of India lies in villages” (Gandhi), rural infrastructure.

UNIT II- Understanding rural economy & livelihood

Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets

UNIT III Rural Institutions

Traditional rural organisations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration

UNIT IV Rural Development Programmes

History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awaas Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

SKILL DEVELOPMENT

Course outcomes:

Demonstrate an ability to engage respectfully with others in a diverse society.

Convey a message effectively.

Demonstrate an ability to engage respectfully with others in a diverse society.

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the B.C.A., curriculum, the following Research Skill Based Courses are introduced in the B.C.A., curriculum.

Semester	RSB Courses	Credits
II	Research Led Seminar	1
III	Research Methodology	2
V	Participation in Bounded Research	1
VI	Project Work	4

Blueprint for assessment of student's performance in Research Led Seminar Course

•	Internal Assessment:	40 Marks
•	Seminar Report (UG)/Concept Note(PG)	: 5 X 4= 20 Marks
•	Seminar Review Presentation	: 10 Marks
•	Literature Survey	: 10 Marks
•	Semester Examination	60
	Marks	
	(Essay type Questions set by the concerned resource persons)	

Blueprint for assessment of student's performance in Research Methodology Courses

	Continuous Internal Assessment:	20 Marks
•	Research Tools(Lab) :	10 Marks
•	Tutorial:	10 Marks
	Model Paper Writing:	40 Marks
•	Abstract:	5 Marks
•	Introduction:	10 Marks
•	Discussion:	10 Marks
•	Review of Literature:	5 Marks
•	Presentation:	10 Marks
	Semester Examination:	40 Marks
	Total:	100 Marks

Course Code	Course Title	L	T	P	C
20122DSC56B20	Data Mining	5	0	0	4

OBJECTIVE

- To understand briefly some of the data mining Techniques.
- Discuss a number of more efficient algorithms.
- To know accuracy of classification methods and how accuracy may be improved.

UNIT-I

Introduction: What is Data Mining- Why Data Mining now-**The Data Mining Process-Data Mining Application**-Data Mining Techniques-The Future of Data Mining-Guidelines for Successful Data Mining-Data Mining Software-Software Evaluation and Selection.

UNIT-II

Association Rules Mining: Introduction-Basics-The Task and a Naïve Algorithm - The Apriori Algorithm- Improving the Efficiency of the Apriori Algorithm- Apriori-Tid -Direct Hashing and Pruning (DHP)-Dynamic Itemset Counting (DIC)-Mining Frequent Pattern without Candidate Generation (FP-Growth)-Performance Evaluation of Algorithms- Software for Association Rule Mining

UNIT-III

Classification: Introduction-Decision Tree-Building a Decision Tree-The Tree Induction Algorithm-Split Algorithm Based on Information Theory-Split Algorithm based on the Gini Index-Over fitting and Pruning-Decision Tree Rules-Naïve Bayes Method-Estimating Predictive Accuracy of Classification Methods-Improving Accuracy of Classification Methods.

UNIT-IV

Cluster Analysis: What is Cluster Analysis-Desired Features of Cluster Analysis-Types of Data-Computing Distance-Types of Cluster Analysis Methods-Partitional Methods-Hierarchical Methods-Density-Based Methods-Dealing with Large Databases-Quality and Validity of Cluster Analysis Methods-Cluster Analysis Software.

UNIT-V

Web Data Mining: Introduction-Web Terminology and Characteristics-Locality and Hierarchy in the Web-Web Content Mining-Web Usage Mining-Web Structure Mining-WebMining Software.

ENTRENEURSHIP

OUTCOMES:

- Understanding of data mining software available on the market.
- Acquiring Knowledge about various algorithms.
- Acquiring Knowledge about cluster analysis techniques.

REFERENCE BOOKS:

1. “Introduction to Data Mining with Case Studies”, G.K.Gupta, Easter Economy Edition.

Discipline specific Elective-II

IM:

Course code	Course Title	L	T	P	C
20122DSC63A	Software Project Management				

To equip the students with the processes of software development skills

OBJECTIVE

To learn about the principles and methods of software engineering

- To understand the concepts of Software cost estimation
- To learn Software design and Implementation
- To study about development of software products from an industry perspective

UNIT I
Introduction – definition-size factors- quality and productivity factors-managerial issues.Planning - software project – introduction – defining the problem - developing a strategy - planning the development process-planning an organizational structure.

UNIT II

Software cost estimation – cost factors – cost estimation techniques – staffing – levelestimation – estimating software maintenance costs. Software requirements definition – software requirements specification techniques – languages and processors for requirements.

UNIT III

Software design – fundamental design concepts – modules and modulation criteria – design notations – design techniques – detail design considerations – real time and distributed system design – test plans – milestones walkthroughs and inspections – design guidelines.

UNIT IV

Implementation issues – structured coding techniques – coding style – standards and guidelines – documentation guidelines – data abstraction – exception handling – concurrency mechanisms.

UNIT V

Verification and validation techniques – quality assurance – walkthrough and inspections – static analysis – symbolic executions – unit testing and debugging – system testing – formal verification. Software maintenances – enhancing maintainability during development – managerial aspects – configuration management – source code metrics.

EMPLOYABILITY

Course Outcomes:

Identify the different project contexts and suggest an appropriate management strategy.

Practice the role of professional ethics in successful software development.

Identify and describe the key phases of project management.

Determine an appropriate project management approach through an evaluation of the business context and scope of the project.

- Get an insight into the processes of software development
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

REFERENCE BOOKS:

“Software Engineering Concepts “– Richard fairly TMH “Software Engineering”- Roger S.Pressman, 5th edition 2001.

DISCIPLINE SPECIFIC ELECTIVE COURSES:

Semester	Discipline Specific Elective Courses
----------	--------------------------------------

I	a) 20222DSC17A - Mobile Computing b)20222DSC17B - Knowledge based decision support system
II	a) 20222DSC27A - Game Programming b) 20222DSC27B - Multimedia and Graphics c) 20222DSC27C - Middleware Technology
III	a) 20222 DSC 36A - Information Security b) 20222 DSC36B - Internet of Things c) 20222DSC36C - M-Marketing

Credit Distribution:

Sem	AEC	SEC	DSC	OEC	Research	Others	Total
I	4	16	4		1		25
II		17	4		4		25
III		19	4		2		25
IV		13			10	2	25
TOTAL	4	65	12		17	2	100

SEMESTER I

20222SEC11	J2EE Programming	4	0	0	4
------------	------------------	---	---	---	---

AIM:

To enable the students to develop standalone programming and Internet based application

OBJECTIVES:

- To learn java programming concepts under Client Sever environment
- To develop Database Application in Java .
- To learn java programming concepts like reflection, native code interface, threads etc
- To develop network programs in java.
- To understand concepts needed for distributed and multi-tier applications.
- To understand issues in enterprise application development.

UNIT I

Fundamentals of OOPS-overview of java language-data type –variables and arrays-Class Fundamentals-declaring objects-constructor-overloading methods-inner classes-method overriding.

UNIT II

AWT classes-window fundamentals-AWT controls- handling events by extending AWT components Applet class-Applet architecture-html applet tag-passing parameters in applet.

UNIT III

Java Database Connectivity: JDBC/ODBC Bridge-The connectivity model being used-The java.sql Package-The JDBC Exception Classes. JDBC working with user interface: **Data manipulation-Data Navigation-Data Storage.**

UNIT IV

RMI: What is Distributed Object System? -Distributed object Technologies-RMI for distributed computing-RMI Architecture- RMI Registry service-Creating RMI Applications-Steps involved in running the RMI Applications-Removing objects from a Registry.

UNIT V

Java Servlets – Java Server Pages – Java and XML: Generating an XML Document.

EMPLOYABILITY

OUTCOMES

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

20222SEC12	Relational Data Base Management System.	4	0	0	4
------------	---	---	---	---	---

AIM :

To provide an in-depth knowledge of Relational database system using Oracle.

COURSE OBJECTIVES

- To understand the fundamentals of data models and conceptualize and depict a database system using ER diagram
- To make a study of SQL and relational database design.
- To know about data storage techniques and query processing.
- To impart knowledge in transaction processing, concurrency control techniques and recovery procedures.

UNIT-I

Introduction- File systems versus Database systems – Data Models – DBMS Architecture – Data Independence – Introduction Relational Model and E-R model.

UNIT-II

Introduction to SQL – Basic structure and Basic operations of SQL – Set operations - Aggregate functions – Nested queries – Join expressions and views – Functions and procedure – Triggers

UNIT-III

Relational query languages - Relational algebra – Tuple relational calculus – Domain relational calculus – Relational database design - Functional dependency – Normalization – 1NF,2NF,3NF and BCNF

UNIT-IV

Transaction management - Transaction Processing –Properties of Transactions - Serializability – concurrency control lock based protocols – Deadlock handling Time Stamp based protocol - Validation Techniques - Recovery system - Log Based Recovery.

UNIT-V

Data base System Architecture – Centralized client-server Architecture- Server system Architecture – Parallel Data bases – Distributed data bases – Distributed Data storage – Distributed transaction – commit protocol – Concurrency control in Distributed Database.

EMPLOYABILITY

COURSE OUTCOMES:

- Understand the basic concepts of the database and data models.
- Design a database using ER diagrams and map ER into Relations and normalize the relations.
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.

Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

20222SEC13	Routing and Switching in LAN	4	0	0	4
------------	------------------------------	---	---	---	---

AIM:

To provide complementary perspective on the LAN routing and Switching in an Enterprise.

OBJECTIVES:

- Gives a systematic approach to hierarchical network that support voice, video, and data.
- Expertise the functions of basic switch.
- Provides idea on VLAN, VTP, STP and Inter-VLAN Routing.
- Teaches components of a wireless LAN and its operations.

UNIT I

LAN Design: Switched LAN Architecture-Matching Switches to specific LAN functions.

UNIT II

Basic switching concepts and configuration-Introduction to Ethernet-802.3 LANS- Forwarding frame using switches-switch management configuration.

UNIT III

VLAN- Introducing VLAN-VLAN Trucking- Configure VLAN and Trunks.

UNIT IV

VTP-VTP –Concepts-VTP Operation- configure VTP

UNIT V

Introduction to STP-STP convergence- Inter VLAN routing-the wireless LAN.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Systematic approach to hierarchical network that support voice, video, and data.
- Idea on VLAN, VTP, STP and Inter-VLAN Routing.
- Components of a wireless LAN and its operations.

REFERENCES:

1. "LAN Switching and wireless" CCNA E xploration companion guide- wayue lewis- cisco press-pearson Education.

20212SEC14	Discrete Mathematics	4	0	0	4
------------	----------------------	---	---	---	---

AIM:

To provide in-depth knowledge of Mathematical logics, Boolean Algebra.

OBJECTIVES:

- To understand the concept of Set Theory and Functions.
- To solve the Recurrence Relations using Generating functions.

UNIT I

Sets, Relations & Functions : Property of binary relations, Equivalence, Compatibility, Partial ordering relations, Hasse diagram, Functions, Inverse function, Compositions of functions, Recursive functions.

UNIT II

Mathematical logic : Logic operators, Truth tables, Theory of inference and deduction, Mathematical Calculus, Predicate Calculus, Predicates and Qualifiers.

UNIT III

Groups & Subgroups : Group axioms, Permutation groups, Cosets, Normal subgroups, Semi groups, Free semi groups, Monoids, Sequential Machines, Error Correcting Codes, Modular arithmetic Grammars.

UNIT IV

Lattices & Boolean Algebra: Axiomatic definition of Boolean algebra as algebra as algebraic structures with two operations, Basic results truth values and truth tables, The algebra of propositional functions, Boolean algebra of truth tables.

UNIT V

Combinatorics & Recurrence Relations : Disjunctive and sequential counting, Combinations and permutations, Enumeration without repetition, Recurrence Relation, Fibonacci relation, Solving

recurrence relation by Substitution, Solving non recurrence relation by conversion to linear recurrence relation.

EMPLOYABILITY

Course Outcome:

- Students completing this course will be able to express a logic sentence in terms of predicates, quantifiers, and logical connectives.
- Students completing this course will be able to apply the rules of inference and methods of proof including direct and indirect proof forms, proof by contradiction, and mathematical induction.
- Students completing this course will be able to use tree and graph algorithms to solve problems.
- Students completing this course will be able to evaluate Boolean functions and simplify expressions using the properties of Boolean algebra.
- Use the basic ideas of discrete probability
- Complete and use truth tables for expressions involving the following logical connectives: negation, conjunction, disjunction, conditional, and biconditional.

2. C.L.Liu “ Elements of Discrete Mathematics “ Tata Mc Graw Hill.

20222SEC15L	J2EE Programming Lab	0	0	3	2
-------------	----------------------	---	---	---	---

1. Develop a simple real-life application program to illustrate the use of multithreads.
2. Packages and interfaces:

Create a package called “pgmdetails” with the following details.

Pgmdetails	(character)
Broadcastday	(character)
Stationname	(character)
Directorname	(character)
Pgmtree	(character)
Broadcasttime	(character) in railway time

Create another package called “chargedetails” with the following details

- if pgmtree is “commercials” – Rs 20 per min
- if pgmtree is “drama” – Rs 100 per min
- if pgmtree is “education” – Rs 50 per min

Inherit the necessary details from “pgmdetailes”

Using an interface “radio” calculate the amount to be paid by the programmers to the station, if they want their programs to broadcast display full information list about the given details by creating objects.

3. Create a try block that is likely to generate three types of exception and than incorporate necessary catch blocks to catch and handle them appropriately.
4. Load an image on to applet. As the user selects portions of this image, rectangular regions corresponding to the selection should be highlighted by enveloping them in rectangles (use mouse events). Also the user can change the colors of selected regions.

5. Create an application, which consists of a dialog box that could be used to obtain an user name and a password to connect to some on line service. The dialog box consists of two fields user name, password and two buttons of Ok & Cancel for accepting user input.

6. Write a program, which will open an existing file and then append text to that file.

7. Write a java program, which will make balls of various colors to move within the frame windows.

8. Create an Animating Program using Beans.

EMPLOYABILITY

Course Outcomes:

- In depth manual testing teaching with case studies.
- programmer training by creating standardized, reusable modular components and by enabling the tier to handle many aspects of programming automatically.
- Identify advance concepts of java programming with database connectivity.
- Design and develop platform independent applications using a variety of component based frameworks
- Able to implement the concepts of Hibernate, XML& EJB for building enterprise applications.

20222SEC16L	RDBMS Lab	0	0	3	2
-------------	-----------	---	---	---	---

1. Creating, Updating and Inserting into databases and simple queries.
2. Uses of Select statement – for queries using
 - (i) AND,OR,NOT Operations, WHERE clause
 - (ii) UNION, INTERSECTION , MINUS
 - (iii) Sorting and Grouping
3. Nested queries using SQL
 - (i) Sub queries
 - (ii) Join
4. Built-in functions of SQL
5. Creation of simple forms
6. Use of indexes, creating views and querying in views
7. **Cursors, triggers and stored procedures and functions**
8. Case Studies

- i. Student Evaluation systems
- ii. Pay-roll system
- iii. Income tax calculation
- iv. Seat reservation problems
- v. Mark sheet preparation

EMPLOYABILITY

Course Outcomes:

- Sharing of data and data integrity.
- Reducing Data Redundancy.
- The file based data management systems contained multiple files that were stored in many different locations in a system or even across multiple systems.
- Be able to write SQL commands to create tables and indexes, insert/update/delete data, and query data in a relational DBMS.
- Foundation knowledge in database concepts

20222DSC17A	Discipline Specific Elective – I Mobile Computing	4	0	0	4
-------------	--	---	---	---	---

UNIT-I

Mobile Computing: An Overview of Mobile Computing-Mobile Computing Architecture-Mobile Devices-Mobile System Networks-Mobility Management. Mobile Device and Systems: Mobile

Phones-Digital Music Players-Hand Held Devices: operating System-Limitation of Mobile Devices

UNIT-II

Medium Access Control-SDMA, FDMA, TDMA-Tele Communication System:

GSM-Mobile Services-System Architecture-Satellite System: Application, Basics.

UNIT-III

Wireless LAN: Infra-red Vs Radio transmission-Infra Structure and ad-hoc networks- IEEE 802.11: System Architecture, Protocol Architecture, Physical Layer-MAC Management- HIPERLAN: WATM-Bluetooth: User Scenarios, Architecture.

UNIT-IV

Mobile IP: Goals, assumptions and requirements-Entities and terminology-IP Packet Delivery-Tunneling and Encapsulation-Reverse Tunneling-Mobile ad-hoc Networks: Overview ad-hoc routing protocols

UNIT-V

Mobile Application Language: XML, Java, J2ME & Java Card-Mobile Operating System

EMPLOYABILITY

Outcomes:

- Enhanced Productivity
- Location Flexibility.
- Streamlining of Business Processes.
- Understand fundamentals of wireless communications.
- Analyze security, energy efficiency, mobility, scalability, and their unique characteristics in wireless networks.

REFERENCE BOOKS:

1. "Mobile computing"-Raj Kamal, Oxford University published in 2007. For Unit1-1,Unit-5.
- 2."Mobile Communications"-Jochen H.Schiller,published by Pearson Education Limited.For Unit-2, 3, 4.

20222DSC17B	Discipline Specific Elective – I Knowledge based decision support system.	4	0	0	4
-------------	--	---	---	---	---

AIM:

To Explore the use of Artificial Intelligence techniques for applications development.

OBJECTIVES:

To understand the various AI Techniques for application development using:

- LISP programming
- Symbolic logic
- Matching techniques
- Knowledge Acquisition

UNIT I

Overview of AI – Knowledge: General Concepts – LISP and other programming languages.

UNIT II

Formalized symbolic logics – Dealing with inconsistencies and uncertainties – structured knowledge: Graphs, Frames & Related Structures – Object Oriented representations.

UNIT III

Search and control strategies – Matching Techniques.

UNIT IV

General concepts in knowledge Acquisition – Learning by induction.

UNIT V

Natural language processing – Pattern recognition – Visual image understanding – Expert system architecture.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalise a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.
- Design and carry out an empirical evaluation of different algorithms on a problem formalisation, and state the conclusions that the evaluation supports

SEMESTER II

20222SEC21	Python Programming	4	0	0	4
------------	--------------------	---	---	---	---

AIM

To enable the student to be familiar with Python Programming.

OBJECTIVES:

On successful completion of the course the student should have understood the concepts in Python and its application.

Unit - I

Core Python: Introduction-features-Comparative study-Comments-Operators-Variables and Assignments-Numbers-String-List and Tuple-Dictionary-Statements and Iterative statements-list comprehensive-Errors and Exception-functions-Classes-Modules-Useful function. Basics: Syntax and Statements-Variable Assignments-Identifier-Style-Memory Management-Application Example. Objects: Introduction-Standard Type- Built-in-type-Internal type-Standard type operator and Built-in functions-Categorizing standard type-Unsupported type.

Unit – II

Numbers: Introduction- Integer-Floating Point-Complex numbers-Operators-Built-in-functions- Other numeric type-Sequence-Strings-Strings and Operator-String only operator-Built-in-Functions-Built-in-Methods-String Features-Unicode-Related Modules.

Unit – III

List-Operators-Built-in-Functions-Built-in-Methods-Features of List-Tuple: Introduction- Operators and Built-in-Functions-Features-Related Modules-Mapping type: Dictionaries- Operators-Built-in and Factory Functions-Built-in- Methods. Set type: Introduction-Operators- Built-in Function-Built-in Methods-Related Modules-Conditional and looping statement.

Unit – IV

File: Objects- Built in Functions-Methods-Attributes-Standard files-Command line Argument- File System-File Execution-Persistent Storage Modules-Related Module. Class: Introduction- Class and Instance- Method calls. Exception and Tools: Why use it?-Exception roles-Short story-Try/finally statement.

Unit – V

Regular Expression: Introduction-Special Symbols and characters-Regexes and Python-Examples of Regexes. Network Programming: Architecture-Socket. Internet Client Programming- Transferring files-Email.GUI Programming: Introduction-Tkinter and Python.DB Programming: Introduction-Python DB-API-Non-Relational DB. Web Services: Introduction-Microblogging with Twitter.

EMPLOYABILITY

Outcomes:

Presence of Third Party Modules.

Extensive Support Libraries.

Open Source and Community Development

Express proficiency in the handling of strings and functions.

Identify the commonly used operations involving file systems and regular expressions.

REFERENCES:

1. Chun, J Wesley, Core Python Programming, 2nd Edition, Pearson, 2007 Reprint 2010.

3. Lutz, Mark, Learning Python, 5th Edition, O Rielly

20222SEC22	Cryptography Network security	4	1	0	3
------------	-------------------------------	---	---	---	---

AIM:

To introduce about Internet Security in terms of measures to deter, prevent, detect, and correct security violations that involve the transmission of information

OBJECTIVES:

- To know the methods of conventional encryption.
- To understand the concepts of public key encryption and number theory

- To understand authentication and Hash function.
- To know the network security tools and system level security used.

UNIT I

CLASSICAL ENCRYPTION TECHNIQUES: Symmetric Cipher Model-substitution techniques-transposition technique-Rotor machine-Steganography.BLOCK CIPHERS AND THE DATA ENCRYPTION STANDARD: Simplified DES-Block cipher principles-The data encryption standard-the strength of DES-Differential and linear cryptanalysis-Block cipher design principles-Block cipher modes of operation.

UNIT II

PUBLIC KEY CRYPTOGRAPHY AND RSA: Principles of public key cryptosystem-The RSA algorithm.KEY MANAGEMENT OTHER PUBLIC KEY CRYPTOSYSTEMS: key management-Diffie-Hellman Key Exchange-Elliptic curve Arithmetic-Elliptic curve cryptography.

UNIT III

HASH ALGORITHM :MD5 Message Digest Algorithm-Secure Hash Algorithm-RIPEMD-160-HMAC.DIGITAL SIGNATURE AND AUTHENTICATION PROTOCOLS: Digital Signatures-Authentication Protocols-Digital Signature Standard.

UNIT IV

AUTHENTICATION APPLICATION : Kerberos-X.509 Authentication Service-Recommended Reading and Websites.ELECTRONIC MAIL SECURITY: Pretty Good Privacy-S/MIME IP Security : IP Security Overview-IP security Architecture-Authentication Header-Encapsulating Security Payload- Combining Security Associations -Key Management.WEB SECURITY : Web security considerations – Secure Socket Layer and Transport Layer Security – Secure Electronic Transactions.

UNIT V

INTRUDERS : Intruders – Intrusion detection – Password management. MALICIOUS SOFTWARES : Viruses and Related Threats – Virus countermeasures.

FIREWALLS: Firewalls Design Principles-Trusted Systems.

EMPLOYABILITY

OUTCOMES:

Upon Completion of the course, the students should be able to:

- Compare various Cryptographic Techniques
- Design Secure applications
- Inject secure coding in the developed applications

REFERENCES:

1. “Cryptography and Network Security “ – William Stallings – 3rd Edition Pearson Education 2003.
2. “Network Security essentials Applications and Standards”, William Stalings , Pearson Education 2007.

20222SEC23	Open Source programming	4	0	0	3
------------	-------------------------	---	---	---	---

AIM:

To improve the Programming Knowledge of VBScript, JavaScript, Perl & PHP.

OBJECTIVES:

- To have the knowledge of VBScript, JavaScript.
- To explore the use of Perl & PHP.

UNIT I:

VBScript –VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Datatype Conversion Features – Putting it all together with VBScript – using the Script Debugger.

UNIT II:

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. JavaScript and Html Documents: The JavaScript Execution Environment – The Document Object Model – Element Access in JavaScript – Events and Event Handling – Handling Events from Body Elements, Button Elements, Text Box and Password Elements – The DOM 2 Event Model – The navigator Object.

UNIT III:

The Basics of Perl: Origins and Uses of Perl – Scalars and their Operations – Assignment Statements and Simple Input and Output – Control Statements – Fundamentals of Arrays – Hashes – References – Functions – Pattern Matching – File Input and Output. Using Perl for CGI Programming: The Common Gateway Interface – CGI Linkage – Query String Format – The CGI .pm Module – Cookies.

UNIT IV:

Introduction to PHP: Origins and Uses of PHP – Overview of PHP – General syntactic characteristics – Primitives, Operation and Expressions – Output – Control Statements – Arrays – Functions – Pattern Matching – Form Handling – Files – Cookies – Session Tracking.

UNIT V:

Database Access through the Web: Relational Databases – An Introduction to the Structured Query Language – Architecture for Database Access – The MySQL Database System – Database Access with Perl and MySQL – Database Access with PHP and MySQL – Database Access with JDBC and MySQL .

EMPLOYABILITY

OUTCOMES:

- Understand process of executing a PHP-based script on a webserver.
- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops.
- Understand the paradigm for dealing with form-based data, both from the syntax of HTML forms, and how they are accessed inside a PHP-based script.

REFERENCES:

1. UNIT I: Scot Johnson “Using Active Server Page”.
2. UNIT II, III, IV, V: Robert W.Sebesta, “Programming the World Wide Web” Third edition.
3. Internet & WWW How to program by Deital , Third edition.

0222SEC24	Web Service	4	0	0	3
-----------	-------------	---	---	---	---

AIM:

To have thorough knowledge about web service and web security.

OBJECTIVES:

- To provide an idea on Processing XML.
- To understand the concepts of SOAP, UDDI.
- To understand the concepts of Web security.

UNIT I

Introduction – What are web services? -Why Web Services are important?– Web services and enterprises. XML Fundamentals: XML: The Lingua Franca of web services- XML Documents- XML namespaces - XML Schema - Processing XML

UNIT II

SOAP and WSDL: The SOAP Model- SOAP- SOAP Messages - SOAP encoding – SOAP RPC- Using alternative SOAP Encodings, Document, RPC, Literal, Encoded -SOAP web services and the REST Architecture- Looking back to SOAP 1.1 - WSDL– Using SOAP and WSDL UDDI: UDDI at a glance- The UDDI Business registry- UDDI under the covers – Accessing UDDI- How UDDI is playing out.

UNIT III

Conversations: Overview –Web services Conversation Language – WSCL Interface components – The Bar scenario conversations – Relationship between WSCL and WSDL Workflow: **Business Process Management – Workflow and Workflow management systems.**

UNIT IV

Transactions: ACID Transactions – Distributed Transactions and two phase commit – Dealing with Heuristic outcomes – Scaling transactions to web services – OASIS business transaction protocol – Other web services transaction Protocol .

UNIT V

Security: Everyday security basis – Security is an end to end product – Web service security issues – Types of Security attacks and threats - Web services security road map WS – Security.

EMPLOYABILITY

OUTCOMES:

Upon Completion of the course, the students should be able to:

- Get an idea on Processing XML.

- Understand the concepts of SOAP, UDDI.
- Understand the concepts of Web security.

REFERENCES:

1. Developing Enterprise Web Services - An Architect's Guide – Sandeep Chatterjee, James Webber, Pearson Education– Second Indian Reprint 2005.
2. Understanding SOA with Web Services, Eric Newcomer, Greg Lomow, Pearson Education, First Indian Reprint 2005.

20222SEC25L	Python Programming Lab	0	0	3	2
-------------	------------------------	---	---	---	---

1. Find the square root of a number (Newton's method)
2. Exponentiation (power of a number)
3. Find the maximum of a list of numbers
4. Linear search and Binary search
5. Selection sort, Insertion sort
6. Merge sort

7. First n prime numbers
8. Multiply matrices
9. Programs that take command line arguments (word count)
10. Find the most frequent words in a text read from a file

EMPLOYABILITY

Course Outcomes:

Duck typing and huge standard library

Presence of third-party modules.

Express proficiency in the handling of strings and functions.

Extensive support libraries(NumPy for numerical calculations, Pandas for data analytics etc).

Open source and community development.

To write programs for a wide variety problem in mathematics, science, and games.

20222SEC26L	Open Source programming Lab	0	0	3	2
-------------	-----------------------------	---	---	---	---

1. Prepare a web page in ASP which displays course submission form using objects.
2. Write a program for addition using VBScript.
3. Write a program for finding maximum number using JavaScript.
4. Develop a web page which display window shrinking using JavaScript
5. Write a program in JavaScript a)OnMouse move b)OnMouse out.
6. Write a Perl script using array find element in list.
7. Write a Perl script for simple manipulation.
8. Develop a PHP program and check message passing mechanism between pages.
9. Develop a PHP program to display student information using MYSQL table.

10. Develop a college application form using MYSQL table.

EMPLOYABILITY

Course Outcomes:

- Understand process of executing a PHP-based script on a webserver.
- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops.
- Understand the paradigm for dealing with form-based data, both from the syntax of HTML forms, and how they are accessed inside a PHP-based script.
- To understand the role and future of open source software in the industry along with the impact of legal, economic and social issues for such software.

20222DSC27A	Discipline Specific Elective – II GAME PROGRAMMING	5	0	0	4
-------------	--	---	---	---	---

OBJECTIVES:

- To get subsequent understanding of game design and development, which includes the processes, mechanics, issues in game design, game engine development, modeling, techniques, handling situations, and logic.
- To create interactive games

UNIT I BASICS FOR GAME PROGRAMMING

Coordinate Systems, Ray Tracing, Modeling in Game Production, Vertex Processing, Rasterization, Fragment Processing and Output Merging, Illumination and Shaders, Parametric Curves and Surfaces, Shader Models, Image Texturing, Bump Mapping, Advanced Texturing, Character Animation, Physics-based Simulation.

UNIT II GAME DESIGN PRINCIPLES & THEORY

Game Logic, Game AI, Path Finding, Game Theory, Character development, Story Telling, Narration, Game Balancing, Core mechanics, Principles of level design, Genres of Games, Collision Detection.

UNIT III GAMING ENGINE REQUIREMENT & DESIGN

Renderers, Software Rendering, Hardware Rendering, and Controller based animation, Spatial Sorting, Level of detail, collision detection, standard objects, and physics.

UNIT IV GAMING PLATFORMS AND FRAMEWORKS

Flash, DirectX, OpenGL, Java, Python, XNA with Visual Studio, Mobile Gaming for the Android, iOS, Game engines - Adventure Game Studio, DX Studio, Unity.

UNIT V GAME DEVELOPMENT ENVIRONMENT

Developing 2D and 3D interactive games using OpenGL, DirectX – Isometric and Tile Based Games, Puzzle games, Single Player games, and Multi Player games.

EMPLOYABILITY

OUTCOMES:

- Illustrate an understanding of the concepts behind game programming techniques.
- Implement game programming techniques to solve game development tasks.
- Construct a basic game engine using open-source programming libraries.

20222DSC27B	Discipline Specific Elective – II Multimedia and Graphics	5	0	0	4
-------------	--	---	---	---	---

AIM

To impart the fundamental concepts of Multimedia and Graphics.

OBJECTIVES

- To study the multimedia concepts and various I/O technologies.
- To study the graphics techniques and algorithms.
- To enable the students to develop their creativity

UNIT I

Introduction – Definition- Multimedia Hardware- Multimedia Software- MULTIMEDIA networking- Multimedia Applications- Multimedia Environments- Multimedia Computer Components- Multimedia Standards- Multimedia PC.

UNIT II

Multimedia Software : Basic Tools : Text Editing and Word Processing Tools – OCR Software – Painting and Drawing Tools – 3-D Modeling and Animation Tools – Image-Editing Tools – Sound Editing Tools – Animation, Video, and Digital Movie Tools – Helpful Accessories. Making Instant Multimedia : Linking Multimedia Objects – Office Suites - Word Processors – Spreadsheets – Databases – Presentation Tools – Multimedia Authoring Tools – Types of Authoring Tools – Card and Page-Based Authoring tools – Icon –Based Authoring tools – Time Based Authoring tools- Object – Oriented Authoring tools – Gross platform Authoring Notes.

UNIT III

Multimedia Building blocks : Text : The Power of Meaning – About fonts and Faces Using Text in Multimedia – Computers and Text – Font Editing and Design Tools – Hypermedia and Hypertext. Sound: The Power of Sound – Multimedia System Sounds – MIDI versus Digital Audio – Making MIDI Audio – Audio File Formats –Working with Sound on the Macintosh –

Toward Professional sound – Production Tips. Images: – Making Still Images – Color – Image File formats. Computer Animation - Using Digital Video in Multimedia Applications.

UNIT IV

Computer Graphics and output primitives: Concepts and applications, Random and Raster scan devices, Refresh Cathode ray tubes, LCD monitors, Laser, Printers, Keyboards, Mouse, Scanners, Graphics Software output primitives: Line drawing algorithm: DDA along with Bresenhan’s. Circle generating algorithm, Midpoint algorithms: ellipse and other curves.

UNIT V

Two-dimensional Transformations: Translation, scaling, rotation, reflection, shear, matrix representation of all homogeneous coordinates composite transformation. Three dimensional concepts: 3D Display methods- parallel projection, perspective projection, Depth cueing. Three dimensional object representations: Polygon Surface, Tables, Plane Equation.

EMPLOYABILITY

OUTCOMES:

- Gain proficiency in 3D computer graphics API programming
- Enhance the perspective of modern computer system with modeling, analysis and interpretation of
- 2D and 3D visual information.
- Able to understand different realizations of multimedia tools
- Able to develop interactive animations using multimedia tools
- Gain the knowledge of different media streams in multimedia transmission

20222DSC27C	Discipline Specific Elective – II MIDDLEWARE TECHNOLOGIES	5	0	0	4
-------------	---	---	---	---	---

AIM :

To understand the design and implementation of a simple compiler.

OBJECTIVES:

The main objective of the course is to create a practical, wide-ranging discussion on Middleware Technologies to help students understand what is going on so they can pick out the real issues from the imaginary issues and start building complex distributed systems with confidence. Upon completion of this course the students will be able to

- Understand Distributed systems design and implementation
- Understand existing Distributed Technologies
- Use Middleware to Build Distributed Applications
- Understand Middleware Interoperability
- Understand Web services architectures Course

UNIT I INTRODUCTION

Emergence of Middleware – Objects, Web Services – Middleware Elements – Vendor Architecture – Interoperability – Middleware in Distributed Applications – Types of Middleware – Transaction-Oriented Middleware – MOM – RPC.

UNIT II OBJECT ORIENTED MIDDLEWARE

OOM – Developing with OOM – Heterogeneity – Dynamic Object Request – Java RMI – COM+.

UNIT III COMPONENT OBJECT RESOURCE BROKER ARCHITECTURE (CORBA)

Naming – Trading – Life Cycle – Persistence – Security – CORBA.

UNIT IV WEB SERVICES

Introduction – XML Web Services standards – Creating Web Services – Extending Web Services – Messaging Protocol – Describing – Discovering – Securing.

UNIT V OTHER TYPES OF MIDDLEWARE

Real-time Middleware – RT CORBA – Multimedia Middleware – Reflective Middleware – Agent-Based Middleware – RFID Middleware.

EMPLOYABILITY

Outcomes:

At the end of the course the student will be able to

- Learn how to use Middleware to Build Distributed Applications
- Implement Business Processes
- Learn about MiddleWare Technologies
- Implement Business Processes
- Learn application design and IT architecture

20222RMC28	Research Methodology	3	0	0	2
------------	----------------------	---	---	---	---

AIM:

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in MATLAB platform for basic computational programming and analysis.

OUTCOME:

Ability to develop research questions and the various research strategies and compile research results in terms of journal manual scripts.

PREREQUISITES:

Research methodology course in UG level or equivalent knowledge.

UNIT-I Introduction to research methodology

Objectives of research – type of research – Significance of research. Research methodology – Research and scientific method – Criteria of good research – Problems encountered by research in India.

UNIT-II Data base and Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts –Chemical Abstract Service – Reviews – Monographs – Literature search.

UNIT-III Data Analysis:

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors –normal distribution curve – Statistical treatment of finite samples – T test and F test (ANOVA) co – Variance (ANCOVA) correlation and multiple regression.

UNIT-IV Thesis and paper writing:

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – Reference and Appendices.

UNIT-V Application on MATLAB:

Numerical Integration – Numerical integration, ordinary differential equations, partial differential equations, and boundary value problems - Fourier analysis – Fourier transforms, convolution.

SEMESTER III

20222SEC31	Data mining and warehousing	6	1	0	5
------------	-----------------------------	---	---	---	---

AIM:

To emphasis on the design aspects of Data mining and Data Warehousing.

OBJECTIVES:

- To introduce the concept of Data Mining with in detail coverage of basic tasks metrics issues and implication .Core topics like classification, clustering and association rules are exhaustively dealt with.
- To introduce the concept of Data Warehousing with special emphasis on architecture and design.

UNIT I

Introduction: Data mining-data mining functionalities-clasification-Task Primitives-Data processing: data cleaning-data integration and transformation-data reduction-data discretization and concepts.

UNIT II

Data mining concepts: Efficient and scalable mining methods-various kinds of association rules- from association mining to correlation analysis-constraint based association mining.

UNIT III

Classification and prediction: classification by decision tree-Bayesian classification-classification by backpropagation-prediction. Cluster analysis: types of data in Cluster analysis-partitioning methods –hierarchical methods.

UNIT IV

Data ware house: What is data warehousing-Multidimensional data model-data ware house architecture-Dataware house implementation-From data ware housing to data mining.

UNIT V

Multidimensional analysis: spatial data mining-Multimedia data mining-Text mining-Mining and world wide web-Data mining applications

EMPLOYABILITY

OUTCOMES:

After completing this course, the student will be able to:

- Apply data mining techniques and methods to large data sets.
- Use data mining tools
- Compare and contrast the various classifiers.

REFERENCES:

1. Data Mining concept & Techniques”, Jiaweri Han & Micheline , Morgan kauffman publications –2000.

20222SEC32	Grid and Cloud Computing.	6	1	0	4
------------	---------------------------	---	---	---	---

AIM

To understand the technology application and tool kits for grid computing and to provide a strong foundation in Developing Cloud Services.

OBJECTIVES

- To understand the genesis of grid computing.
- To know the application of grid computing.
- To understand the technology and tool kits to facilitate the grid computing
- To understand the concept of Cloud Computing.
- To get an idea about Sharing Files

UNIT I

Introduction - Definition - Scope of grid computing

UNIT II

Grid Computing Organizations and their roles – Grid Computing analog – Grid Computing road map

UNIT III

Understanding Cloud Computing: An introduction to Cloud Computing – Computing in the Cloud – Developing Cloud Services.

UNIT IV

Cloud Computing for the Family – Cloud Computing for the Community – Cloud Computing for the Corporation

UNIT V

Collaborating via Web-Based Communication Tools – Collaborating via Social Networks and Groupware – Collaborating Via Blogs and Wikis

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to

- Use the grid and cloud tool kits.
- Design and implement applications on the Grid.
- Compare the strengths and limitations of cloud computing
- Identify the architecture, infrastructure and delivery models of cloud computing
- Design Cloud Services and Set a private cloud

REFERENCES:

20222SEC33	.NET Programming	5	0	0	4
------------	------------------	---	---	---	---

AIM

To cover the fundamental concepts of the .NET framework.

OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

UNIT III

Interfacing with the End user-Asp.NET Applications.

UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

EMPLOYABILITY

OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

REFERENCES:

20222SEC34	Object Oriented System Design	5	0	0	4
------------	-------------------------------	---	---	---	---

AIM

To understand the concepts of object oriented analysis and design.

OBJECTIVES

- To understand the object oriented life cycle.

- To know how to identify objects, relationships, services & attributes through UML.
- To understand the use-case diagrams.
- To know the Object Oriented Design process.
- To know about software quality and usability.

UNIT I

Introduction: an overview of object oriented system development object basics-object oriented system development life cycle.

UNIT II

Methodology, modeling, & unified modeling language: object-oriented methodologies-UML.

UNIT III

Object-oriented analysis: object –oriented analysis process. Identifying use case –object analysis classification identifying object relation, attribute & methods.

UNIT IV

Object oriented designing: the object oriented designing process & design axioms- designing classes – access layer.

UNIT V

View layer –software Quality assurance- system usability & measuring user & satisfaction.

EMPLOYABILITY

OUTCOMES:

- Understand the basic concepts to identify state & behavior of real world objects
- Able to learn the various object oriented methodologies and choose the appropriate one for solving the problem with the help of various case studies
- Understand the concept of analysis, design & testing to develop a document for the project
- Able to implement analysis, design & testing phases in developing a software project

- Able to understand the testing strategies and know about automated testing tools

20222SEC35L	.NET Programming Lab.	0	0	3	2
-------------	-----------------------	---	---	---	---

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data Manipulations:
(i). Insertion (ii) Updating (iii) Deletion (iv) Selection
Hint: Do operations using Ms-Access and SQL-Server
10. Create an application using Data grid control to access information's from table in SQL server.

EMPLOYABILITY

Outcomes:

- It provides re-usability.
- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- develop menu based program for text manipulation.
- Utilize the .NET environment to create Web Service-based applications and components.
- Less Coding and Increased Reuse of Code: This framework works on object-oriented programming which eliminates unnecessary codes and involves less coding for the developers.

2022DSC36A	Discipline Specific Elective – III Information Security	5	0	0	4
------------	---	---	---	---	---

AIM

To study the critical need for ensuring Information Security in Organizations

OBJECTIVES

- To understand the basics of Information Security
- To know the legal, ethical and professional issues in Information Security
- To know the aspects of risk management
- To become aware of various standards in this area
- To know the technological aspects of Information Security

UNIT I INTRODUCTION

History, what is Information Security, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II SECURITY INVESTIGATION

Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT III SECURITY ANALYSIS

Risk Management : Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT IV LOGICAL DESIGN

Blueprint for Security, Information Security Policy, Standards and Practices, ISO 17799 / BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V PHYSICAL DESIGN

Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control

Devices, Physical Security, Security and Personnel

EMPLOYABILITY

Outcomes:

- Securing confidential information.
- Protection from malicious attacks on your network.
- Develop an understanding of security policies.
- Deletion and/or guaranteeing malicious elements within a preexisting network.
- Prevents users from unauthorized access to the network.

REFERENCES

20222DSC36B	Discipline Specific Elective – III Internet of Things	5	0	0	4
-------------	---	---	---	---	---

OBJECTIVES:

- To understand the fundamentals of Internet of Things
- To learn about the basics of IOT protocols
- To build a small low cost embedded system using Raspberry Pi.
- To apply the concept of Internet of Things in the real world scenario

UNIT I INTRODUCTION TO IoT

Internet of Things - Physical Design- Logical Design- IoT Enabling Technologies - IoT Levels & Deployment Templates - Domain Specific IoTs - IoT and M2M - IoT System Management with NETCONF-YANG- IoT Platforms Design Methodology.

UNIT II IoT ARCHITECTURE

M2M high-level ETSI architecture - IETF architecture for IoT - OGC architecture - IoT reference model - Domain model - information model - functional model - communication model - IoT reference architecture

UNIT III IoT PROTOCOLS

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus– Zigbee Architecture – Network layer – 6LowPAN - CoAP - Security

UNIT IV BUILDING IoT WITH RASPBERRY PI & ARDUINO

Building IOT with RASPBERRY PI- IoT Systems - Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device -Building blocks -Raspberry Pi -Board - Linux on Raspberry Pi – Raspberry Pi Interfaces -Programming Raspberry Pi with Python - Other IoT Platforms - Arduino.

UNIT V CASE STUDIES AND REAL-WORLD APPLICATIONS

Real world design constraints - Applications - Asset management, Industrial automation, smart grid, Commercial building automation, Smart cities - participatory sensing - Data Analytics for IoT – Software & Management Tools for IoT Cloud Storage Models & Communication APIs - Cloud for IoT - Amazon Web Services for IoT.

EMPLOYABILITY

OUTCOMES:

- Upon completion of the course, the student should be able to:
- Analyze various protocols for IoT
- Develop web services to access/control IoT devices.
- Design a portable IoT using Raspberry Pi
- Deploy an IoT application and connect to the cloud.
- Analyze applications of IoT in real time scenario

20222DSC36C	Discipline Specific Elective – III M-Marketing	5	0	0	4
-------------	--	---	---	---	---

OBJECTIVES

- Understand Mobile Business strategies.
- To understand Mobile marketing tools and techniques.
- To know Mobile technologies.

UNIT I Introduction

Mobile Marketing Campaign, Fortune 500 and Mobile Marketing, consumers engagement with mobile, Terminologies.

UNIT II Businesses Vs mobile marketing

classic mistakes in mobile marketing, laying foundation for successful mobile marketing campaign, understanding technology behind mobile marketing – Android, iOS, Windows Phone.

UNIT III

Strategic thinking about Mobile marketing campaign, Mobile Marketing Tools – setting up mobile website for different firms, using SMS, MMS and apps to drive customers to business and other ways to attract customers.

UNIT IV Location Based Marketing

LBS, NFC, Bluetooth and LBA, 2D codes, Tablet, Other Mobile Applications, Business Firms connecting to customers using Mobile – case study, Mobile Marketing for B2B companies, Mobile E-commerce to Drive Revenue.

UNIT V Mobile Payments

Present and Future Mobile Technology, Mobile Application Development.

EMPLOYABILITY

OUTCOMES

- Upon Completion of the course, the students should be able to:

- Analyze various mobile marketing strategies.
- Market Mobile based Applications.
- Apply various tools in mobile marketing.

REFERENCE BOOKS:

1. Go Mobile: Location Based Marketing, Apps, Mobile Optimized Ad Campaigns, 2D codes and other Mobile Strategies to Grow your Business, Jeanne Hopkins, Jamie Turner, John Wiley&Sons Inc., 2012.
2. M- Commerce, Paul Skeldon, Crimson Publishing, 2012.
3. M-Commerce Technologies, Services and Business Models, Norman Sadeh , Wiley 2002.
4. Mobile Commerce, Opportunities, Applications and Technologies of Wireless Business, Paul Mary, Tom Jell, Cambridge University Press, 2001.

SEMESTER IV

20222SEC41	Human Computer Interaction.	6	0	0	4
------------	-----------------------------	---	---	---	---

AIM:

To have a thorough knowledge about Human Computer Interaction.

OBJECTIVES

- To understand the concept of HCI Ergonomics and WIMP interface.
- To learn about Heuristic process and Evaluation techniques.

UNIT I

The interaction: Introduction - Models of interaction - Frameworks and HCI - Ergonomics - Interaction Styles - Elements of WIMP interface - Interactivity - The Context of the interaction - Paradigm: Introduction - Paradigms for interaction.

UNIT II

Interaction Design basics: Introduction - what is design? - User focus - Scenarios - Navigation design - Screen design and layout - Interaction and prototyping - HCI in the software process: Introduction - The software lifecycle - Usability engineering – interactive design and prototyping – Design rationale.

UNIT III

Design rules: Introduction - Principles to support usability - Standards – Guidelines-Golden rules and heuristics - HCI patterns - Implementation Support: Introduction -elements of windowing systems - Programming the application - Using toolkits- User interface management systems.

UNIT IV

Evaluation techniques: What is evaluation - Goals of evaluation - Evaluation through expert analysis - Evaluation through user participation - Choosing an evaluation method - Universal Design: Introduction - Universal design principles - Multi-modal interaction - Designing for diversity.

EMPLOYABILITY

OUTCOMES:

Upon completion of the course, the student should be able to:

- Design effective dialog for HCI.
- Design effective HCI for individuals and persons with disabilities.
- Assess the importance of user feedback.
- Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Websites.

REFERENCES:

1. "**Human-computer Interaction**" - Alan Dix - Pearson Education - 2004.

20222SEC42	Software Project Management	6	0	0	4
------------	-----------------------------	---	---	---	---

UNIT I INTRODUCTION TO PROJECT MANAGEMENT

Project Definition – Contract Management – Activities Covered By Software Project Management – Overview Of Project Planning – Stepwise Project Planning.

UNIT II PROJECT EVALUATION

Strategic Assessment – Technical Assessment – Cost Benefit Analysis – Cash Flow Forecasting – Cost Benefit Evaluation Techniques – Risk Evaluation.

UNIT III ACTIVITY PLANNING

Objectives – Project Schedule – Sequencing And Scheduling Activities – Network Planning Models – Forward Pass – Backward Pass – Activity Float – Shortening Project Duration – Activity On Arrow Networks – Risk Management – Nature Of Risk – Types Of Risk – Managing Risk – Hazard Identification – Hazard Analysis – Risk Planning And Control.

UNIT IV MONITORING AND CONTROL

Creating Framework – Collecting The Data – Visualizing Progress – Cost Monitoring – Earned Value – Prioritizing Monitoring – Getting Project Back To Target – Change Control – Managing Contracts – Introduction – Types Of Contract – Stages In Contract Placement – Typical Terms Of A Contract – Contract Management – Acceptance.

UNIT V MANAGING PEOPLE AND ORGANIZING TEAMS

Introduction – Understanding Behavior – Organizational Behaviour: A Background – Selecting The Right Person For The Job – Instruction In The Best Methods – Motivation – The Oldman–Hackman Job Characteristics Model – Working In Groups – Becoming A Team – Decision Making – Leadership – Organizational Structures – Stress – Health And Safety – Case Studies.

EMPLOYABILITY

Course Outcomes:

Apply project management concepts and techniques to an IT project.

Identify issues that could lead to IT project success or failure.

Explain project management in terms of the software development process.

Explain the quality management & different types of metrics used in software development.
Describe the responsibilities of IT project managers.

REFERENCES:

4. P.Jalote “Software Project Management In Practice”, Pearson Education, 2000.

20222SEC43	Big Data	6	0	0	5
------------	----------	---	---	---	---

OBJECTIVES:

- ❖ To explore the fundamental concepts of big data analytics
- ❖ To learn to analyze the big data using intelligent techniques.
- ❖ To understand the various search methods and visualization techniques.
- ❖ To learn to use various techniques for mining data stream.
- ❖ To understand the applications using Map Reduce Concepts.

UNIT I INTRODUCTION TO BIG DATA

Introduction to BigData Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools - Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error.

UNIT II MINING DATA STREAMS

Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.

UNIT III HADOOP

History of Hadoop- The Hadoop Distributed File System – Components of Hadoop- Analyzing the Data with Hadoop- Scaling Out- Hadoop Streaming- Design of HDFS-Java interfaces to HDFSBasics-Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats- Map Reduce Features

UNIT IV HADOOP ENVIRONMENT

Setting up a Hadoop Cluster - Cluster specification - Cluster Setup and Installation - Hadoop Configuration-Security in Hadoop - Administering Hadoop – HDFS - Monitoring-Maintenance- Hadoop benchmarks- Hadoop in the cloud

UNIT V FRAMEWORKS

Applications on Big Data Using Pig and Hive – Data processing operators in Pig – Hive services – HiveQL – Querying Data in Hive - fundamentals of HBase and ZooKeeper - IBM InfoSphere BigInsights and Streams. Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications

EMPLOYABILITY

OUTCOMES:

- The students will be able to:
- Work with big data platform
- Analyze the big data analytic techniques for useful business applications.
- Design efficient algorithms for mining the data from large volumes.
- Analyze the HADOOP and Map Reduce technologies associated with big data analytics
- Explore on Big Data applications Using Pig and Hive
- Understand the fundamentals of various bigdata analysis techniques

20222PRW44	Project work	0	0	15	10
------------	--------------	---	---	----	----

Each student will develop and implement individually developed application software based on any of the latest technologies.

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.C.A., curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	2
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project (Scaffolded Research)	2
IV	Project Work	10

Blueprint for assessment of student’s performance in Research Led Seminar Course

- Internal Assessment:** **40 Marks**
- Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
- Seminar Review Presentation : 10 Marks

- Literature Survey : 10 Marks
- Semester Examination : 60

Marks

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Socio Technical Project

- Continuous Internal Assessment through Reviews: 40 Marks**
- Review I : 10 Marks
- Review II : 10 Marks
- Review III : 20 Marks
- Evaluation of Socio Technical Practicum Final Report: 40 Marks**
- Viva- Voce Examination: 20 Marks**
- Total: 100 Marks**

Blueprint for assessment of student's performance in Research Methodology Courses

Continuous Internal Assessment: 20 Marks

- Research Tools(Lab) : 10 Marks
- Tutorial: 10 Marks

Model Paper Writing: 40 Marks

- Abstract: 5 Marks
- Introduction: 10 Marks
- Discussion: 10 Marks
- Review of Literature: 5 Marks
- Presentation: 10 Marks

Semester Examination: 40 Marks

Total: 100 Marks

SCHOOL OF ARTS & SCIENCE
DEPARTMENT OF COMPUTER SCIENCE
M.Sc., (Computer Science)

Graduate Attributes :

- Information Literacy
- Problem Analysis
- Design/development of solutions
- Modern tool usage
- Professional and Ethical understanding

Program Objectives (Po):

- PO1:** To apply and continuously acquire knowledge, both theoretical and applied, related to core areas of computer science.
- PO2 :**To demonstrate the ability to work effectively as a team member and/or leader in an ever-changing professional environment.
- PO3 :**To work productively as computer professionals (in traditional careers, graduate school, or academia) by: demonstrating effective use of oral and written communication, working competently as a member of a team unit, adhering to ethical standards in the profession.

Program Outcomes (POs)

- PO1:**To communicate computer science concepts, designs, and solutions effectively and professionally;
- PO2:**To apply knowledge of computing to produce effective designs and solutions for specific problems;
- PO3:** To identify, analyse, and synthesize scholarly literature relating to the field of computer science;
- PO4:**To use software development tools, software systems, and modern computing platforms.
- PO5:**To an understanding of professional, ethical, legal, security and social issues and responsibilities
- PO6:**To do capable of evaluating personal and professional choices in terms of codes of ethics and ethical theories and understanding the impact of their decisions on themselves, their professions, and on society
- PO7:** To apply design and development principles in the construction of software systems of varying complexity.

Program Specific Outcomes (PSO)

- PSO1:** Demonstrate understanding of the principles and working of the hardware and software aspects of computer systems.
- PSO2:** Understanding the structure and development methodologies of software systems. Possess professional skills and knowledge of software design process. Familiarity and practical competence with a broad range of programming language and open source platforms.
- PSO3:** Acquainted with the contemporary issues, latest trends in technological development and thereby innovate new ideas and solutions to existing problems.

Course Outcomes:

CO1 -J2EE programming:

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.
- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

CO2 -Relational Data Base Management System:

- Identify what students will know and be able to do if they master the material.
- Understand the basic concepts of the database and data models.
- Design a database using ER diagrams and map ER into Relations and normalize the relations.
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.

CO3 -Discrete Mathematics:

- The common 2-year sequence works well for many disciplines.
- Topics can be introduced "just-in-time" for many disciplines.
- Since all students take the same sequence, advising is relatively easy
- Ability study of **mathematical structures** that are countable or otherwise distinct and separable.
- Examples of **structures** that are **discrete** are combinations, graphs, and logical statements. **Discrete structures** can be finite or infinite.

CO4 -J2EE programming Lab:

- The students able to Design and develop GUI applications using Abstract Windowing Toolkit (AWT)
- Swing and Event Handling
- Web applications and Designing
- Enterprise based applications for business logic
- In depth manual testing teaching with case studies.
- Programmer training by creating standardized, reusable modular components and by enabling the tier to handle many aspects of programming automatically.

CO5 :RDBMS Lab:

- The students able to Design and develop Normalize a database

- Can Declare and enforce integrity constraints on a database using a state-of-the-art.\
- Programming PL/SQL including stored Procedures.
- Can Design GUI applications
- Sharing of data and data integrity.
- Reducing Data Redundancy.

Discipline Specific Elective I:

CO6 : a) WAP & XML:

- To Identify advance concepts of **WAP browser** for mobile devices such as mobile phones that uses the mobile protocol.
- XML/WML** is used to design wap pages for mobile devices.
- To develop a animated GIF, Java AWT, Frames, ActiveX Controls, Shockwave, movie clips, audio.
- To Designed for large bandwidth (compared to wireless access) and low delay

CO7: b) Computer Architecture:

- Analyze processor Performance improvement using instruction level parallelism.
- Learn the function of each element of a memory hierarchy.
- Study various data transfer techniques in digital computer.
- Articulate design issues in the development of processor or other components that satisfy design requirements and objectives.
- Learn microprocessor architecture and study assembly language programming

CO8: Research Led Seminar:

- It is clear that the lowest value the students place on the link between *research* and teaching is that research led teaching .
- Helps develop skills in data collection and complex analysis.
- This in turn being connected with technical, procedural and theoretical learning *outcomes* at the required level.
- Promoting the values of enquiry and deep approaches to learning.
- The motivation and development of students as a consequence of exposure to expert subject matter.

CO9 : Python Programming:

- Presence of Third Party Modules.
- Extensive Support Libraries.
- Open Source and Community Development
- Able to determine the methods to create and manipulate **Python** programs.
- Can Identify the commonly used operations involving file systems and regular expressions

CO10: Cryptography & Network Security:

- Develop basic skills of secure **network** architecture and explain the theory behind the **security** of different **cryptographic** algorithms.
- Describe common **network** vulnerabilities and attacks, defence mechanisms against **network** attacks, and **cryptographic** protection mechanisms.
- Compare various Cryptographic Techniques
- Design Secure applications
- Inject secure coding in the developed applications

CO11 :Software Engineering:

- Graduates of the *program* are expected to demonstrate the problem
- An ability to identify, formulate, and solve complex *engineering* problems by applying principles of *engineering*, science, and mathematics.
- To Explain methods of capturing, specifying, visualizing and analyzing software requirements.
- To understand concepts and principles of software design and user-centric approach and principles of effective user interfaces.
- To Understand the nature of software life cycle.

CO12 Python Programming Lab:

- Able to determine the methods to create and manipulate Python programs.
- By utilizing the data structures like lists, dictionaries, tupelos and sets.
- Identify the commonly used operations involving file systems and regular expressions
- Duck typing and huge standard library
- Presence of third-party modules.
- Extensive support libraries(NumPy for numerical calculations, Pandas for data analytics etc).

CO13 UNIX Lab:

- To introduce Basic Unix general purpose Commands
- To learn network Unix commands.
- To learn C programming in Unix editor environment.
- To learn shell script and sed concepts.
- To learn file management and permission advance commands.
- To learn awk, grap, perl scripts.

Discipline Specific Elective II:

CO14 a)Operating Ststem:

- To understand the main components of an OS & their functions.
- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC.
- To Understand the concepts and implementation Memory management policies and virtual memory.
- To understand the working of an OS as a resource manager, file system manager, process manager, memory manager and I/O manager and methods used to implement the different parts of OS.

CO15 b)Artificial Intelligence:

- To impart basic proficiency in representing difficult real life problems in a state space representation so as to solve them using AI techniques like searching and game playing
- To introduce advanced topics of AI such as planning, Bayes networks,
- Analyze and formalize the problem as a state space, graph, design heuristics and select amongst different search or game based techniques to solve them.
- Develop intelligent algorithms for constraint satisfaction problems and also design intelligent systems for Game Playing
- Attain the capability to represent various real life problem domains using logic based techniques and use this to perform inference or planning.
- Formulate and solve problems with uncertain information using Bayesian approaches.

CO16: Research Methodology:

- These students able to demonstrate knowledge of **research** processes (reading, evaluating, and developing)
- Can identify, explain, compare, and prepare the key elements of a **research** proposal/report.
- To compare and contrast quantitative and qualitative **research** paradigms
- Ability to develop research questions and the various research strategies
- Compile research results in terms of journal manual scripts

CO17 Participation in Bounded Research:

- To understand the general definition of research design.
- To be able to identify the overall process of designing a research study from its inspection to its report.
- Familiar with how to write a good introduction to an education, research study and the components that comprise such an introduction.
- To know the type of descriptive statistics typically reported in educational research studies.
- Able to identify a research problem stated in a study.

CO18 Open Source programming:

- Develop **open source programming** products which are normally free to download, although it does incur running costs such as storage and computing power.
- Even those rare paid-for **open source** products still tend to be far cheaper than closed **source** alternatives
- Understand process of executing a PHP-based script on a webserver.
- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops

CO19 .Net Programming:

- To demonstrate advanced knowledge of networking understands the key protocols which support the Internet.
- Be familiar with several common **programming** interfaces for **network** communication.
- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.

- Utilize the .NET environment to create Web Service-based applications and components.

CO20 .Net Programming Lab:

- The students are able to develop *programs* using *C#* based on object oriented concepts
- Write the ROBUST, EXTENSIBLE and EFFICIENT *programs* by using *c#* code and ASP.Net
- Create dynamic web pages for further development.
- It provides re-usability.
- Less Coding and Increased Reuse of Code:

CO21 Open Source programming Lab:

- These students able to develop efficient open source programmes for rapidly developing network world
- Reliability and auditability.
- Integrated management.
- Simple license management

Discipline Specific Elective III

CO22 Wireless communication Network:

- These students able to understand and develop wireless communication and its infrastructure.
- Understand design considerations for wireless communication networks
- Understand the fundamentals of wireless networks.
- Learn and analyze the different wireless technologies.
- Evaluate Ad-hoc networks and wireless sensor networks.
- Understand and evaluate emerging wireless technologies and standards

CO23 Real time Operating System:

- Ability to estimate if a system takes distributed system characteristic into account in a reasonable way.
- Knowing the basic structures (e.g. client-server) and knowing the existing middleware frameworks.
- Ability to estimate framework suitability for different applications.
- Ability to implement a simple distributed software laboratory work with socket and RMI interfaces.
- Understanding the mathematical principles behind validity of algorithms solving the problems of distribution.
- Understanding the problems that will arise if atomicity and timing issues are not handled in a distributed application.

CO24 Societal project (Mini Project):

- These students will learn to real world project developing skill.
- Group discussion.
- Cost effective development
- Breaking problem
- Reassembling problem

CO25 Internship:

- Develop communication, interpersonal and other critical skills in the job interview process.
- Explore career alternatives prior to graduation.
- Integrate theory and practice.
- Assess interests and abilities in their field of study.
- Learn to appreciate work and its function in the economy.
- Develop work habits and attitudes necessary for job success.

CO26 Software Testing:

- Apply modern **software testing** processes in relation to **software** development and project management.
- Create **test** strategies and plans, design **test** cases, prioritize and execute them.
- To develop, implement black box and white box testing cases.
- To understand use of Flow graphs and computing cyclomatic complexity using various methods.
- To understand and implement Automated software testing techniques for Web testing, Performance testing, and GUI testing.
- To develop, implement, and demonstrate the learning through a project that meet stated specifications.

CO27 Human Computer Interaction:

- Design effective dialog for HCI.
- Design effective HCI for individuals and persons with disabilities.
- Assess the importance of user feedback.
- Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Websites
-

Discipline Specific Elective IV:

CO28 a) Multimedia And Its Application:

- To customize the specific parts of the Multimedia Applications (Power Point) software.
- To prepare visuals by making arrangements on the slide master, and placeholders, etc.
- An understanding of multimedia development in the business world, and how successful development is contingent on detailed client specifications, user and audience research, and design decisions taken during the planning phase.
- An understanding of the content of learning materials available from e-skills UK and how these can be used with learners to develop multimedia products
- To work with learners to plan and create a multimedia product that includes animation, audio and video

CO29 b) Middleware technology:

- In business, it helps streamline processes and improves efficiency in terms of organization.
- It facilitates communication between systems,
- It is able to maintain the integrity of information across a multitude of systems within a network.
- Understand Middleware Interoperability.

CO30 Project work:

- Can be able to develop plans with relevant people to achieve the **project's** goals.
- Break **work** down into tasks and determine handover procedures.
- Identify links and dependencies, and schedule to achieve deliverable handover

Estimate and cost the human and physical resources required, and make plans to obtain the necessary resources.

It supports students to show their talent.

CO31 Program Exit Examination:

The exam is supposed to measure the learning outputs of the program as a whole not a individual course.

The primary purpose of the exit exams is to assess students' educational achievement in the courses in their major area of program study.

The exam is supposed to measures the learning outputs of the program as a whole not the individual courses.

20220SEC11	J2EE Programming	6	0	0	4
------------	------------------	---	---	---	---

AIM:

To enable the students to develop standalone programming and Internet based application

OBJECTIVES:

- To learn java programming concepts under Client Sever environment
- To develop Database Application in Java .
- To learn java programming concepts like reflection, native code interface, threads etc
- To develop network programs in java.
- To understand concepts needed for distributed and multi-tier applications.
- To understand issues in enterprise application development.

UNIT I

Fundamentals of OOPS-Overview of java language-Data type-Variables and arrays-Class Fundamentals-declaring objects-constructor-overloading methods-inner classes-method overriding.

UNIT II

Applet class-Applet architecture-Html applet tag-Passing parameters in applet-AWT classes-Window fundamentals-AWT controls- Handling events by extending AWT components.

UNIT III

Java Database Connectivity: JDBC/ODBC Bridge-The connectivity model being used-The java.sql Package-The JDBC Exception Classes- JDBC working with user interface-Database connectivity- Data manipulation-Data Navigation-Data Storage.

UNIT IV

RMI: What is Distributed Object System? -Distributed object Technologies-RMI for distributed computing-RMI Architecture- RMI Registry service-Creating RMI Applications-Steps involved in running the RMI Applications-Removing objects from a Registry.

UNIT V

Java and XML: Generating an XML Document- Java Servlets- Java Server Pages

EMPLOYABILITY

Outcomes:

- Understand the format and use of objects.
- Understand basic input/output methods and their use.
- Understand object inheritance and its use.

- Understand development of JAVA applets vs. JAVA applications.
- Understand the use of various system libraries.

2. WEB ENABLED COMMERCIAL APPLICATION DEVELOPMENT USING....JAVA 2.0-IVAN BAYROSS.

(For UNIT III& IV: Chapters 11, 13).

3. THE COMPLETE REFERENCE J2EE - KEOGH

(For UNIT – V: Chapters 9, 10, 11)

20220SEC12	RDBMS	6	0	0	4
------------	-------	---	---	---	---

AIM :

To provide an in-depth knowledge of Relational database system using Oracle.

OBJECTIVES:

- To understand about SQL Queries.
- To learn about Oracle Web Application.
- To impart knowledge in transaction processing, concurrency control techniques and recovery Procedures.

UNIT-I

Introduction- File systems versus Database systems – Data Models – DBMS Architecture – Data Independence – Introduction Relational Model and E-R model.

UNIT-II

Introduction to SQL - Basic structure and Basic operations of SQL – Set operations - Aggregate functions – Nested queries – Join expressions and views–Functions and procedure – Triggers

UNIT-III

Relational query languages - Relational algebra – Tuple relational calculus – Domain relational calculus – Relational database design - Functional dependency – Normalization – 1NF,2NF,3NF and BCNF

UNIT-IV

Transaction management - Transaction Processing –Properties of Transactions - Serializability – concurrency control lock based protocols – Deadlock handling Time Stamp based protocol - Validation Techniques - Recovery system - Log Based Recovery.

UNIT-V

Data base System Architecture – Centralized client-server Architecture- Server system Architecture – Parallel Data bases – Distributed data bases – Distributed Data storage – Distributed transaction – commit protocol – Concurrency control in Distributed Database.

EMPLOYABILITY

COURSE OUTCOMES:

- Understand the basic concepts of the database and data models.
- Design a database using ER diagrams and map ER into Relations and normalize the relations.
- Acquire the knowledge of query evaluation to monitor the performance of the DBMS.
- Develop a simple database applications using normalization.

Acquire the knowledge about different special purpose databases and to critique how they differ from traditional database systems.

20212SEC13	Discrete Mathematics	6	0	0	4
------------	----------------------	---	---	---	---

AIM:

To provide in-depth knowledge of Mathematical logics, Boolean Algebra.

OBJECTIVES:

- To understand the concept of Set Theory and Functions.
- To solve the Recurrence Relations using Generating functions.

UNIT I

Sets, Relations & Functions : Property of binary relations, Equivalence, Compatibility, Partial ordering relations, Hasse diagram, Functions, Inverse function, Compositions of functions, Recursive functions.

UNIT II

Mathematical logic : Logic operators, Truth tables, Theory of inference and deduction, Mathematical Calculus, Predicate Calculus, Predicates and Qualifiers.

UNIT III

Groups & Subgroups : Group axioms, Permutation groups, Cosets, Normal subgroups, Semi groups, Free semi groups, Monoids, Sequential Machines, Error Correcting Codes, Modular arithmetic Grammars.

UNIT IV

Lattices & Boolean Algebra: Axiomatic definition of Boolean algebra as algebra as algebraic structures with two operations, Basic results truth values and truth tables, The algebra of propositional functions, Boolean algebra of truth tables.

UNIT V

Combinatorics & Recurrence Relations : Disjunctive and sequential counting, Combinations and permutations, Enumeration without repetition, Recurrence Relation, Fibonacci relation, Solving recurrence relation by Substitution, Solving non recurrence relation by conversion to linear recurrence relation.

EMPLOYABILITY

Outcomes:

- The common 2-year sequence works well for many disciplines.
- Topics can be introduced ""just-in-time"" for many disciplines.
- Since all students take the same sequence, advising is relatively easy
- Ability study of mathematical structures that are countable or otherwise distinct and separable.
- Examples of structures that are discrete are combinations, graphs, and logical statements. Discrete structures can be finite or infinite.

20220SEC14L	J2EE programming Lab	0	0	3	2
-------------	----------------------	---	---	---	---

1. Load an image on to applet. As the user selects portions of this image, rectangular regions corresponding to the selection should be highlighted by enveloping them in rectangles (use mouse events). Also the user can change the colors of selected regions.
2. Create an application, which consists of a dialog box that could be used to obtain an user name and a password to connect to some on line service. The dialog box consists of two fields user name, password and two buttons of Ok & Cancel for accepting user input.
3. Write a java program, which will make balls of various colors to move within the frame windows.
4. Write a JSP Program to manipulate the following information:
 - a. Last Date Visited
 - b. Last Time Visited
 - c. Number of Visited
4. Create Mark List Program using JDBC with UI Concept.
5. Create a SERVLET Program with JDBC.
6. Create a JSP Program to display a message.
7. Create a conversation using RMI concept.

EMPLOYABILITY

Course outcomes:

- The students able to Design and develop GUI applications using Abstract Windowing Toolkit (AWT)
- Swing and Event Handling
- Web applications and Designing
- Enterprise based applications for business logic
- In depth manual testing teaching with case studies.
- Programmer training by creating standardized, reusable modular components and by enabling the tier to handle many aspects of programming automatically.

20220SEC15L	RDBMS Lab	0	0	3	2
-------------	-----------	---	---	---	---

1. Creating, Updating and Inserting into databases and simple queries.
2. Uses of Select statement – for queries using
 - (i) AND,OR,NOT Operations, WHERE clause
 - (ii) UNION, INTERSECTION , MINUS
 - (iii) Sorting and Grouping
3. **Nested queries using SQL**
 - (i) **Sub queries**
 - (ii) **Join**
4. **Built-in functions of SQL**
5. Creation of simple forms
6. Use of indexes, creating views and querying in views
7. Cursors, triggers and stored procedures and functions
8. Case Studies

- i. Student Evaluation systems
- ii. Pay-roll system
- iii. Income tax calculation
- iv. Seat reservation problems
- v. Mark sheet preparation

EMPLOYABILITY

Course Outcomes:

- The students able to Design and develop Normalize a database
- Can Declare and enforce integrity constraints on a database using a state-of-the-art.
- Programming PL/SQL including stored Procedures.
- Sharing of data and data integrity.
- Reducing Data Redundancy.

20220DSC16A	Discipline Specific Elective – I WAP and XML	6	0	0	4
-------------	---	---	---	---	---

Aim:

To provide a web – like experience on small portable devices..

Objectives:

- To bring internet content and advanced data services to digital cellular phones and other terminal
- To create a global wireless protocol specification that will work across differing wireless network technologies.
- Xml was designed to carry data with focus on what data is.
- Xml tags are not predefined like HTML tags are.

UNIT-I

Overview of wap: wap&wireless world- wap application architecture – wap internal Structure –Wap versus web-setting up wap: available software products –wap resources –the development tool kit

UNIT-II

Wap gateways: definition –functionality of a wap gateways the web model versus wap model – positioning of a wap gateway in the network-selecting a wap gateway Basic WML: extensible mark-up language- WML structure -a basic WML card-text formatting-navigation –advance display features

UNIT-III

Interacting with the user: making a selection-events-variable-input parameter passing- WML script-need for WML script-lexical structures-variable & literal-operators-automatic Data type conversion-control constructs-functions using the standard libraries-pragmas-dealing with errors.

Unit-IV

Xml-introduction to Xml-an eagle’s eye-view of xml-xml definition –life of an xml document-related technologies-an introduction to xml application-xml application-xml for xml- first xml document structuring data: xmlizing the data-the advantages of the xml format-preparing style sheet for document display.

Unit-V

Attributes, empty tags and xsl: attribute versus element- empty tags- xsl- well formed Xml Document- foreign language and non – roman text- non roman scripts, character set, fonts and glyphs- legacy character set –Unicode character set- procedure to write xml in Unicode.

EMPLOYABILITY

Course Outcomes:

- To Identify advance concepts of WAP browser for mobile devices such as mobile phones that uses the mobile protocol.
- XML/WML is used to design wap pages for mobile devices.
- To develop a animated GIF, Java AWT, Frames, ActiveX Controls, Shockwave, movie clips, audio.
- To Designed for large bandwidth (compared to wireless access) and low delay

TEXT BOOK:

Unit-1, 2,3: Professional WAP with XML, WML scripts – Charles Arehat.

Unit-4, 5: XML TM BIBLE – Elliotte vusty Harold

20220DSC16B	Discipline Specific Elective – I Advanced Computer Architecture	6	0	0	4
-------------	--	---	---	---	---

Aim:

To provide depth knowledge about computer design and memory of computer.

OBJECTIVES:

The student should be made to:

Understand the micro-architectural design of processors

Learn about the various techniques used to obtain performance improvement and power savings in current processors

UNIT I FUNDAMENTALS OF COMPUTER DESIGN

Review of Fundamentals of CPU, Memory and IO – Trends in technology, power, energy and cost, Dependability - Performance Evaluation

UNIT II INSTRUCTION LEVEL PARALLELISM

ILP concepts – Pipelining overview - Compiler Techniques for Exposing ILP – Dynamic Branch Prediction – Dynamic Scheduling – Multiple instruction Issue – Hardware Based Speculation – Static scheduling - Multi-threading - Limitations of ILP – Case Studies.

UNIT III DATA-LEVEL PARALLELISM

Vector architecture – SIMD extensions – Graphics Processing units – Loop level parallelism.

UNIT IV THREAD LEVEL PARALLELISM

Symmetric and Distributed Shared Memory Architectures – Performance Issues – Synchronization – Models of Memory Consistency – Case studies: Intel i7 Processor, SMT & CMP Processors

UNIT V MEMORY AND I/O

Cache Performance – Reducing Cache Miss Penalty and Miss Rate – Reducing Hit Time – Main Memory and Performance – Memory Technology. Types of Storage Devices – Buses – RAID – Reliability, Availability and Dependability – I/O Performance Measures.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

Evaluate performance of different architectures with respect to various parameters

Analyze performance of different ILP techniques

Identify cache and memory related issues in multi-processors

TEXT BOOK:

1. John L Hennessey and David A Patterson, “Computer Architecture A Quantitative Approach”,

Morgan Kaufmann/ Elsevier, Fifth Edition, 2012.

REFERENCES:

SEMESTER II

20220SEC21	Python Programming	5	0	0	4
------------	--------------------	---	---	---	---

AIM

To enable the student to be familiar with Python Programming.

OBJECTIVES:

On successful completion of the course the student should have understood the concepts in Python and its application.

Unit - I

Core Python: Introduction-features-Comparative study-Comments-Operators-Variables and Assignments-Numbers-String-List and Tuple-Dictionary-Statements and Iterative statements-list comprehensive-Errors and Exception-functions-Classes-Modules-Useful function. Basics: Syntax and Statements-Variable Assignments-Identifier-Style-Memory Management-Application Example. Objects: Introduction-Standard Type- Built-in-type-Internal type-Standard type operator and Built-in functions-Categorizing standard type-Unsupported type.

Unit – II

Numbers: Introduction- Integer-Floating Point-Complex numbers-Operators-Built-in-functions-Other numeric type-Sequence-Strings-Strings and Operator-String only operator-Built-in-Functions-Built-in-Methods-String Features-Unicode-Related Modules.

Unit – III

List-Operators-Built-in-Functions-Built-in-Methods-Features of List-Tuple: Introduction-Operators and Built-in-Functions-Features-Related Modules-Mapping type: Dictionaries-Operators-Built-in and Factory Functions-Built-in-Methods. Set type: Introduction-Operators-Built-in Function-Built-in Methods-Related Modules-Conditional and looping statement.

Unit – IV

File: Objects- Built in Functions-Methods-Attributes-Standard files-Command line Argument-File System-File Execution-Persistent Storage Modules-Related Module. Class: Introduction-Class and Instance- Method calls. Exception and Tools: Why use it?-Exception roles-Short story-Try/finally statement.

Unit – V

Regular Expression: Introduction-Special Symbols and characters-Regexes and Python-Examples of Regexes. Network Programming: Architecture-Socket. Internet Client

Programming- Transferring files-Email.GUI Programming: Introduction-Tkinter and Python.DB Programming: Introduction-Python DB-API-Non-Relational DB. Web Services: Introduction-Microblogging with Twitter.

EMPLOYABILITY

Outcomes:

- Presence of Third Party Modules.
- Extensive Support Libraries.
- Open Source and Community Development
- Able to determine the methods to create and manipulate Python programs.
- Can Identify the commonly used operations involving file systems and regular expressions

REFERENCES:

1. Chun, J Wesley, Core Python Programming, 2nd Edition, Pearson, 2007 Reprint 2010.
2. Wesley J Chun Core python Application Programming,3rd Edition,
3. Lutz, Mark, Learning Python, 5th Edition, O Rielly

20220SEC22	Cryptography & Network Security	5	0	0	4
------------	---------------------------------	---	---	---	---

AIM:

To introduce about Internet Security in terms of measures to deter, prevent, detect, and correct security violations that involve the transmission of information

OBJECTIVES:

- To know the methods of conventional encryption.
- To understand the concepts of public key encryption and number theory
- To understand authentication and Hash function.
- To know the network security tools and system level security used.

UNIT I

CLASSICAL ENCRYPTION TECHNIQUES: Symmetric Cipher Model-substitution techniques-transposition technique-Rotor machine-Steganography.BLOCK CIPHERS AND THE DATA ENCRYPTION STANDARD: Simplified DES-Block cipher principles-The data encryption standard-the strength of DES-Differential and linear cryptanalysis-Block cipher design principles-Block cipher modes of operation.

UNIT II

PUBLIC KEY CRYPTOGRAPHY AND RSA: Principles of public key cryptosystem-The RSA algorithm.KEY MANAGEMENT OTHER PUBLIC KEY CRYPTOSYSTEMS: key management-Diffie-Hellman Key Exchange-Elliptic curve Arithmetic-Elliptic curve cryptography.

UNIT III

HASH ALGORITHM :MD5 Message Digest Algorithm-Secure Hash Algorithm-RIPEMD-160-HMAC.DIGITAL SIGNATURE AND AUTHENTICATION PROTOCOLS: Digital Signatures-Authentication Protocols-Digital Signature Standard.

UNIT IV

AUTHENTICATION APPLICATION : Kerberos-X.509 Authentication Service-Recommended Reading and Websites.ELECTRONIC MAIL SECURITY: Pretty Good Privacy-S/MIME IP Security : IP Security Overview-IP security Architecture-Authentication Header- Encapsulating Security Payload- Combining Security

Associations -Key Management.WEB SECURITY : Web security considerations – Secure Socket Layer and Transport Layer Security – Secure Electronic Transactions.

UNIT V

INTRUDERS : Intruders – Intrusion detection – Password management. MALICIOUS SOFTWARES : Viruses and Related Threats – Virus countermeasures.

FIREWALLS: Firewalls Design Principles-Trusted Systems.

EMPLOYABILITY

OUTCOMES:

Upon Completion of the course, the students should be able to:

- Compare various Cryptographic Techniques
- Design Secure applications
- Inject secure coding in the developed applications

REFERENCES:

1. “Cryptography and Network Security “ – William Stallings – 3rd Edition Pearson Education 2003.
2. “Network Security essentials Applications and Standards”, William Stalings , Pearson Education 2007.

20220SEC23	Software Engineering	5	0	0	4
------------	----------------------	---	---	---	---

AIM:

To introduce the methodologies involved in the development and maintenance of Software (i.e) over its entire life cycle.

OBJECTIVES:

- To be aware of Softwares
- Different Life Cycle models.
- Requirements dictation process.
- Verification Validation techniques.
- Project planning and Management.

UNIT I

Introduction - definitions - size factors - quality and productivity factors - managerial issues. Planning a software project - introduction - defining the problem - developing a solution strategy - planning the development process - planning an organizational structure - other planning activities.

UNIT II

Software cost estimation - cost factors - cost estimation techniques staffing level estimation - estimating software maintenance costs. Software requirements definition - software requirement specification - formal specification techniques - languages and processors for requirements.

UNIT III

Software design - fundamental design concepts - modules and modularization criteria - design notations - design techniques - detailed design considerations - real time and Distributed system design - test plans - milestones, walkthrough and inspections - design guidelines.

UNIT IV

Implementations issues - structured coding techniques - coding style - standards and guidelines - documentation guidelines -data abstraction - exception handling - concurrency mechanisms.

UNIT V

Verification and validation techniques - quality assurance - walkthrough and inspections - static analysis - symbolic execution - UNIT testing and debugging - system testing - formal verification. Software maintenance -

enhancing maintainability during development - managerial aspects - configuration management - source code metrics - other maintenance tools and techniques.

EMPLOYABILITY

OUTCOMES:

- Get an insight into the processes of software development
- Able to understand the problem domain for developing SRS and various models of software engineering
- Able to Model software projects into high level design using DFD,UML diagrams
- Able to Measure the product and process performance using various metrics
- Able to Evaluate the system with various testing techniques and strategies

REFERENCES:

1. Software Engineering Concepts - Richard Fairley TMH
2. Roger S.pressman, "Software engineering", 5th edition, 2001, MGH publishers.
3. Marlim L.Shoeman, "Software Ezngineering", 1983,MGH Publishers.

20220SEC24L	Python Programming Lab	0	0	3	2
-------------	------------------------	---	---	---	---

1. Find the square root of a number (Newton's method)

2. Exponentiation (power of a number)
3. Find the maximum of a list of numbers
4. **Linear search and Binary search**
5. Selection sort, Insertion sort
6. Merge sort
7. First n prime numbers
8. Multiply matrices
9. Programs that take command line arguments (word count)
10. Find the most frequent words in a text read from a file

EMPLOYABILITY

Outcome:

- Able to determine the methods to create and manipulate Python programs.
- By utilizing the data structures like lists, dictionaries, tuples and sets.
- Identify the commonly used operations involving file systems and regular expressions
- Duck typing and huge standard library
- Presence of third-party modules.

20220SEC25L	UNIX Lab	0	0	3	2
-------------	----------	---	---	---	---

1. Write a menu driven shell program for the following :

- a. List of files.
- b. Processes of users.

- c. Today's Date
- d. Users of system.
- e. Quit of Unix

2. Write a shell program which accepts the name of a file from the standard input and tests to find the file access permissions, such as read, write and execute.

3. Write a shell program which accepts the name of a file from the standard input and perform the following

a. Accept five names in a file.

a. Sorts the names in existing file.

b. Lists unsorted and sorted file.

c. Quit

4. Write a menu driven shell program to copy, edit, rename and delete a file.

5. Write a menu driven shell program to perform the following task

a. Write a sentence in file.

b. Search for a given word or pattern in an existing file.

c. Quit.

6. Write a shell program to prepare electricity bill for domestic consumers.

For first 100 units – Rs. 0.75 / Unit

For next 100 units – Rs. 1.50 / Unit

Above 200 units – Rs. 3.00 / Unit

Prepare the bill for the following format.

7. Write a shell program to display the result PASS or FAIL using the information given below student name ,student reg.no., mark1,mark2,mark3,mark4 the minimum pass for each subject is 50.

8. Merge the contents of the file file1,file2 and store in another file.

SKILL DEVELOPMENT

Course Outcome:

- To introduce Basic Unix general purpose Commands
- To learn network Unix commands.
- To learn C programming in Unix editor environment.
- To learn shell script and sed concepts.
- To learn file management and permission advance commands.
- To learn awk, grap, perl scripts.

20220DSC26A	Discipline Specific Elective – II Artificial Intelligence	5	0	0	4
-------------	--	---	---	---	---

Aim:

To Acquire Knowledge on various AI Techniques and Expert Systems.

Objective:

- To learn AI Basic Concepts
- To understand Expert Systems Architectural-Components
- To study Expert System development process
-

UNIT I

The AI definition - AI Techniques- Problems, Problem Space and search- Defining the problem as a state space search- Problem Characteristics- Heuristic Search Techniques- Generate and Test- hill Climbing- Best First Search- Problem reduction - Constraint Satisfaction- means -ends analysis.

UNIT II

Game Playing- Min-Max Procedure- Adding Alpha-Beta Cutoffs- Additional Refinements- Searching AND/OR Graphs - Using Predicate Logic- Representing Simple Facts and Logic- Representing instance and IS a relationships- Computable functions and predicates- Use of the predicate calculus in AI Resolution- natural deduction.

UNIT III

Representing knowledge using rules- Procedural versus declarative knowledge- Logic Programming- Forward versus Backward Reasoning- Resolving within AND/OR Graphs matching- control knowledge-Symbolic Reasoning under uncertainty- Non-monotonic reasoning- Implementation issues- - Fuzzy Logic.

UNIT IV

Expert Systems- Architectural-Components- Explanation facilities- Knowledge acquisition.

UNIT V

Expert System development process- Non-formal representation of knowledge- Semantic networks- Frames- Scripts- Expert System Tools.

EMPLOYABILITY

OUTCOMES:

At the end of the course, the student should be able to:

- Identify problems that are amenable to solution by AI methods.
- Identify appropriate AI methods to solve a given problem.
- Formalize a given problem in the language/framework of different AI methods.
- Implement basic AI algorithms.
-

REFERENCE BOOK:

1. For Units I, II, III: Elaine Rich and Kevin Kaight, “**Artificial Intelligence**”, Tata McGraw Hill, 2nd Edition, 1991.
2. For Units IV, V: David W. Rolston, “**Principles of Artificial Intelligence and Expert Systems Development**”, McGraw Hill.

20220DSC26B	Discipline Specific Elective – II Distributed Operating System	5	0	0	4
-------------	---	---	---	---	---

Aim:

To understand the concept of distributed computing

Objectives

- It is easy for users to access remote resources and to share them with others in a controlled way.

- Ideally this arrangement is drastically more fault tolerant and more powerful than many combinations of stand-alone computer systems..

UNIT-I:

Introduction to distributed system-what is a distributed system-goals-h/w concepts- s/w concepts – design issues. Communication in distributed systems: layered protocols –asynchronous transfer mode network.

UNIT-II:

The client/server model-remote procedure call- group communication. Synchronization in distributed systems: clock synchronous-mutual exclusion-election algorithm-atomic transaction-deadlock in distributed system.

UNIT-III:

Process & processors in distributed system: Threads system-models-processor allocation- scheduling in distributed system-fault tolerance-real time distributed system.File system: distributed file system design-distributed file system implementation-trends in distributed file system.

UNIT-IV:

Distributed shared memory: Introduction to distributed shared memory- consistency models-page based distributed shared memory-shared variable distributed shared memory-object based distributed shared memory-comparison.

UNIT-V:

Naming facility in distributed operating system-security in distributed operating system.

Case studies: Amoeba-V-system-Mach-Chorus-DCE-comparison.

EMPLOYABILITY

Outcome:

- To study the process management and scheduling.
- To understand various issues in Inter Process Communication (IPC) and the role of OS in IPC.
- To Understand the concepts and implementation Memory management policies and virtual memory.

REFERENCE BOOK:

“**Distributed Operating System**” – Andrew S.Tanenbaum.

“**Distributed Operating Systems**” – Pradeep K.Sinha.

20220RMC27	Research Methodology	4	0	0	2
------------	----------------------	---	---	---	---

AIM:

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication

- To train in MATLAB platform for basic computational programming and analysis.

OUTCOME:

Ability to develop research questions and the various research strategies and compile research results in terms of journal manual scripts.

PREREQUISITES:

Research methodology course in UG level or equivalent knowledge.

UNIT-I Introduction to research methodology

Objectives of research – type of research – Significance of research. Research methodology – Research and scientific method – Criteria of good research – Problems encountered by research in India.

UNIT-II Data base and Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

UNIT-III Data Analysis:

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – normal distribution curve – Statistical treatment of finite samples – T test and F test (ANOVA) co – Variance (ANCOVA) correlation and multiple regression.

UNIT-IV Thesis and paper writing:

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – Reference and Appendices.

UNIT-V Application on MATLAB:

Numerical Integration – Numerical integration, ordinary differential equations, partial differential equations, and boundary value problems - Fourier analysis – Fourier transforms, convolution.

EMPLOYABILITY

Outcome:

These students able to demonstrate knowledge of research processes (reading, evaluating, and developing)

Can identify, explain, compare, and prepare the key elements of a research proposal/report.

To compare and contrast quantitative and qualitative research paradigms

Ability to develop research questions and the various research strategies

Compile research results in terms of journal manual scripts

5. Introduction to MATLAB for Engineers by William J. Palm III.

SEMESTER III

20220SEC31	Open Source programming	6	0	0	6
------------	-------------------------	---	---	---	---

AIM:

To improve the Programming Knowledge of VBScript, JavaScript, Perl & PHP.

OBJECTIVES:

- To have the knowledge of VBScript, JavaScript.
- To explore the use of Perl & PHP.

UNIT I:

VBScript –VBScript Programming Basics – Working with Operators – Controlling Program flow with VBScript- Working with Functions, Subroutines and Dialog boxes – Data type Conversion Features – Putting it all together with VBScript – using the Script Debugger.

UNIT II:

The Basic of JavaScript: Overview of JavaScript – Object Orientation and JavaScript – General Syntactic Characteristics – Primitives, Operation and Expressions – Screen Output and Keyboard Input – Control Statements – Object Creation and Modification – Arrays – Functions – Constructors – Pattern Matching Using Regular Expressions. JavaScript and Html Documents: The JavaScript Execution Environment – The Document Object Model – Element Access in JavaScript – Events and Event Handling – Handling Events from Body Elements, Button Elements, Text Box and Password Elements – The DOM 2 Event Model – The navigator Object.

UNIT III:

The Basics of Perl: Origins and Uses of Perl – Scalars and their Operations – Assignment Statements and Simple Input and Output – Control Statements – Fundamentals of Arrays – Hashes – References – Functions – Pattern Matching – File Input and Output. Using Perl for CGI Programming: The Common Gateway Interface – CGI Linkage – Query String Format – The CGI .pm Module – Cookies.

UNIT IV:

Introduction to PHP: Origins and Uses of PHP – Overview of PHP – General syntactic characteristics – Primitives, Operation and Expressions – Output – Control Statements – Arrays – Functions – Pattern Matching – Form Handling – Files – Cookies – Session Tracking.

UNIT V:

Database Access through the Web: Relational Databases – An Introduction to the Structured Query Language – Architecture for Database Access – The MySQL Database System – Database Access with Perl and MySQL – Database Access with PHP and MySQL – Database Access with JDBC and MySQL .

EMPLOYABILITY

OUTCOMES:

- Understand process of executing a PHP-based script on a webserver.
- Be able to develop a form containing several fields and be able to process the data provided on the form by a user in a PHP-based script.
- Understand basic PHP syntax for variable use, and standard language constructs, such as conditionals and loops.
- Understand the paradigm for dealing with form-based data, both from the syntax of HTML forms, and how they are accessed inside a PHP-based script.

3. Internet & WWW How to program by Deital , Third edition.

20220SEC32	.Net Programming	6	0	0	5
------------	------------------	---	---	---	---

AIM

To cover the fundamental concepts of the .NET framework.

OBJECTIVES

- To gain knowledge in the concepts of the .NET framework and its technologies.
- To get experience in building sample applications of large-scale projects.

UNIT I

Visual basic.NET and the .NET Framework –The elements of Visual Basic .NET

UNIT II

Visual Basic .NET operators-software Design, conditional structures, and controls Flow-Methods.

UNIT III

Interfacing with the End user-Asp.NET Applications.

UNIT IV

Web Form Fundamentals – Web Controls – Validation and Rich Controls.

UNIT V

ADO.NET Data Access – Data Binding –Data List, DataGrid, and Repeater.

SKILL DEVELOPMENT

OUTCOMES:

- Create web-based distributed applications using ASP.NET, SQL Server and ADO.NET
- Utilize DirectX libraries in the .NET environment to implement 2D and 3D animations and game-related graphic displays and audio.
- Utilize the .NET environment to create Web Service-based applications and components.

REFERENCES:

1. The Complete Reference VB.NET – Jeffrey R-Shapiro- Tata McGrawHill Edition
2. The Complete Reference ASP.NET- Matthew MacDonald- Tata McGrawHill Edition
3. Visual Basic .Net Programming -Bible.
4. Visual Basic.Net Black Book- Steven Holzner.

20220SEC33L	Open Source programming Lab	0	0	3	2
-------------	-----------------------------	---	---	---	---

1. Prepare a web page in ASP which displays course submission form using objects.
2. Write a program for addition using VBScript.
3. Write a program for finding maximum number using JavaScript.
4. Develop a web page which display window shrinking using JavaScript
5. Write a program in JavaScript a)OnMouse move b)OnMouse out.
6. Write a Perl script using array find element in list.
7. Write a Perl script for simple manipulation.
8. Develop a PHP program and check message passing mechanism between pages.
9. Develop a PHP program to display student information using MYSQL table.
10. Develop a college application form using MYSQL table.

SKILL DEVELOPMENT

Outcome:

- These students able to develop efficient open source programmes for rapidly developing network world
- Reliability and auditability.
- Integrated management.
- Simple license management

20220SEC34L	.Net Programming Lab	0	0	3	2
-------------	----------------------	---	---	---	---

1. Write a program in VB. Net to check whether given number is Odd or Even.
2. Write a program to find maximum from given numbers.
3. Write a program to find are of a circle
4. Design ASP.Net web form using Html Server Controls to enter job seeker's details.
5. Create an ASP.Net web form using Web control to enter E-Mail registration form.
6. Apply appropriate validation techniques in E-Mail registration form using
7. Validation controls.
8. Write an ASP.Net application to retrieve form data and display it the client browser in a table format.
9. Create a web application using ADO.Net that uses which performs basic data

Manipulations:

(i). Insertion (ii) Updating (iii) Deletion (iv) Selection

Hint: Do operations using Ms-Access and SQL-Server

10. Create an application using Data grid control to access information's from table in SQL server.

EMPLOYABILITY

Outcome:

- The students are able to develop programs using C# based on object oriented concepts
- Write the ROBUST, EXTENSIBLE and EFFICIENT programs by using c# code and ASP.Net
- Create dynamic web pages for further development.
- It provides re-usability.
- Less Coding and Increased Reuse of Code:

20220DSC35A	Discipline Specific Elective – III Real time Operating Systems	5	0	0	4
-------------	---	---	---	---	---

Aim:

A real time operating system is intended to serve real time applications that process data as it comes in, typically without buffer delays.

objectives:

- To understand the basics of operating systems tasks and basic OS architectures and
- develop these to RTOS
- To understand concepts of task scheduling
- To understand problems and issues related with multitasking
- To learn strategies to interface memory and I/O with RTOS kernels
- To impart skills necessary to develop software for embedded computer systems using
- a real-time operating system.

Unit I

Operating system objectives and functions, Virtual Computers, Interaction of O. S. & hardware architecture, Evolution of operating systems. Architecture of OS (Monolithic, Microkernel, Layered, Exo-kernel and Hybrid kernel structures). Batch, Multi programming, Multitasking, Multiuser, distributed & real –time O.S.

Unit II

Uniprocessor Scheduling: Types of scheduling: Scheduling algorithms: FCFS, SJF, Priority, Round Robin NIX Multi-level feedback queue scheduling, Thread scheduling, Multiprocessor Scheduling concept concurrency: Principles of Concurrency, Mutual Exclusion. H/W Support, software approaches, Semaphores and Mutex, Message Passing techniques.

Unit III

Deadlock: Principles of deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, An Integrated Deadlock Strategies. memory Management requirements, Memory partitioning: Fixed, dynamic, partitioning.

Unit IV

Memory allocation Strategies (First Fit, Best Fit, Worst Fit, Next Fit), Fragmentation, Swapping, Segmentation, Paging, Virtual Memory, Demand paging.

Unit V

Page Replacement Policies (FIFO, Thrashing, Working Set Model, Operating System Design issues, I/O Buffering, Disk Scheduling (FCFS, SCAN, C-SCAN, SSTF), Disk Caches .

Text Books:

1. C.M. Krishna and G. Shin, Real Time Systems, McGraw-Hill International Edition, 1997.
2. Jean J Labrosse, Embedded Systems Building Blocks Complete and Ready-to-use Modules in C, CMP books, 2/e, 1999.

EMPLOYABILITY

Outcome:

- Ability to estimate if a system takes distributed system characteristic into account in a reasonable way.
- Knowing the basic structures (e.g. client-server) and knowing the existing middleware frameworks.
- Ability to estimate framework suitability for different applications.
- Ability to implement a simple distributed software laboratory work with socket and RMI interfaces.
- Understanding the mathematical principles behind validity of algorithms solving the problems of distribution.
- Understanding the problems that will arise if atomicity and timing issues are not handled in a distributed application.

References:

1. Jean J Labrosse , Micro C/OS-II, The Real Time Kernel, CMP Books, 2011
2. Sam Siewert, V, Real-Time Embedded Components and Systems: With Linux and RTOS (Engineering), 2015

20220DSC35B	Discipline Specific Elective – III Wireless Communication Network	5	0	0	4
-------------	--	---	---	---	---

AIM

To promote the international exchange of information related to Wireless Communication systems.

OBJECTIVES:

- To understand the concepts of Transmission fundamentals.
- To study the functions of TCP/IP suite.
- To describe communication protocols , data transmission modes and satellite communication.

UNIT I

Introduction – Transmission fundamentals.

UNIT II

Communication Networks – Protocols and TCP/IP suite.

UNIT III

Wireless communication Technology – Antennas and propagation – signal encoding technique – spread spectrum – coding & Error control.

UNIT IV

Wireless networking: satellite communication – cellular wireless networks – cordless systems and wireless local loop – mobile IP and wireless Access protocol.

UNIT V

Wireless LANs: Wireless LAN Technology – WiFi and IEEE802.11 –wireless LAN standard – Bluetooth and IEEE 802.15.

EMPLOYABILITY

OUTCOMES:

Upon Completion of the course, the students should be able to:

- Understand the concepts of Transmission fundamentals.
- Study the functions of TCP/IP suite.
- Describe communication protocols , data transmission modes and satellite communication

REFERENCES:

1. William Stallings “wireless communication & Networks”, Second Edition.
2. Blake “wireless communication Technology”
3. Kaveh pahlavan, Prashant Krishnamurthy “Principles of Wireless network”.

SEMESTER IV

20220SEC41	Software Testing	6	0	0	6
------------	------------------	---	---	---	---

AIM:

To introduce the methodologies involved in the development and maintenance of Software

OBJECTIVES

To be aware of

- Different Life Cycle models software development
- Various Testing methods in software development process

UNIT I

Principles of testing – Software Development lifecycle models.

UNIT II

Testing: White box testing – Black box testing – Integration testing – System acceptance.

UNIT III

Performance – Regression – Internationalization – Adhoc.

UNIT IV

Test planning – Test management – Test process – Test reporting.

UNIT V

Test Metrics and Measurements.

SKILL DEVELOPMENT

OUTCOMES:

- Test the software by applying testing techniques to deliver a product free from bugs
- Evaluate the web applications using bug tracking tools.
- Investigate the scenario and the able to select the proper testing technique
- Explore the test automation concepts and tools
- Deliver quality product to the clients by way of applying standards such as TQM, Six Sigma
- Evaluate the estimation of cost, schedule based on standard metrics

REFERENCES:

1. “Software Testing principles and practices “ by srinivasan Desikan gopalswamy Ramesh.
- 2.” Effective methods for software testing” by William E.perry, Third Edition.

20220SEC42	Human Computer Interaction	6	0	0	5
------------	----------------------------	---	---	---	---

AIM:

To have a thorough knowledge about Human Computer Interaction.

OBJECTIVES

- To understand the concept of HCI Ergonomics and WIMP interface.
- To learn about Heuristic process and Evaluation techniques.

UNIT I

The interaction: Introduction - Models of interaction - Frameworks and HCI - Ergonomics - Interaction Styles - Elements of WIMP interface - Interactivity - The Context of the interaction - Paradigm: Introduction - Paradigms for interaction.

UNIT II

Interaction Design basics: Introduction - what is design? - User focus - Scenarios - Navigation design - Screen design and layout - Interaction and prototyping - HCI in the software process: Introduction - The software lifecycle - Usability engineering – interactive design and prototyping – Design rationale.

UNIT III

Design rules: Introduction - Principles to support usability - Standards – Guidelines-Golden rules and heuristics - HCI patterns - Implementation Support: Introduction -elements of windowing systems - Programming the application - Using toolkits- User interface management systems.

UNIT IV

Evaluation techniques: What is evaluation - Goals of evaluation - Evaluation through expert analysis - Evaluation through user participation - Choosing an evaluation method - Universal Design: Introduction - Universal design principles - Multi-modal interaction - Designing for diversity.

UNIT V

User Support: Instruction - Requirements of user support - Approaches to user support - Adaptive help system - Designing user support systems.

SKILL DEVELOPMENT

OUTCOMES:

Upon completion of the course, the student should be able to:

- Design effective dialog for HCI.
- Design effective HCI for individuals and persons with disabilities.
- Assess the importance of user feedback.
- Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Websites.

REFERENCES:

1. "Human-computer Interaction" - Alan Dix - Pearson Education - 2004.

20220DSC43A	Discipline Specific Elective – IV Multimedia and its application	4	0	0	4
-------------	---	---	---	---	---

AIM:

To enable the students to learn the multimedia Systems and its applications.

OBJECTIVES:

- To making multimedia presentation.
- To learn the Multimedia animation.
- To study about multimedia and Internet concepts

UNIT-I:

Introduction – Definition- Multimedia Hardware- Multimedia Software- MULTIMEDIA networking- Multimedia Applications- Multimedia Environments- Multimedia Computer Components- Multimedia Standards- Multimedia PC.

UNIT-II:

Multimedia Information Systems: Limitations in workstation operating systems. Middleware System Services Architecture: Goals of Multimedia System Services- Multimedia System Services Architecture Text: Elements of Text- Using Text in Multimedia Applications- Graphics: Element of Graphics- Images and Color- Graphics file and Application Formats- Obtaining Images for Multimedia use- Using Graphics on Multimedia Applications.

UNIT-III:

Digital Audio Representation and Processing: Uses of Audio in Computer Applications- Digital Representations of sound- Transmission of Digital Sound- Digital Audio Signal Processing, Video Technology: Raster Scanning Principles- Sensors for TV Cameras- Color fundamentals- Color Video- Digital Video and Image Compression: Evaluating Compression System- Video Compression Techniques- JPEG Image Compression Standard- MPEG motion Video Compression Standard.

UNIT-IV:

Multimedia Communications Systems: Applications Network Services- Network Protocols. Multimedia Conferencing: Teleconferencing systems- Requirements for Multimedia Communications- Multimedia Conferencing Architectures.

UNIT-V:

Multimedia and Internet: Internet- Client/Server Technology- Communications protocol- Internet Addressing- Internet Functions- HTML and Web Authoring. Multimedia development Team: Team Approach- Assembling multimedia Production Team- Multimedia Development Process: Multimedia Project- Structured Multimedia development- casting multimedia project.

EMPLOYABILITY

OUTCOMES:

- Enhance the perspective of modern computer system with modeling, analysis and interpretation of 2D and 3D visual information.
- Able to understand different realizations of multimedia tools
- Able to develop interactive animations using multimedia tools
- Gain the knowledge of different media streams in multimedia transmission

20220DSC43B	Discipline Specific Elective – IV Middleware Technology	4	0	0	4
-------------	--	---	---	---	---

Aim:

To foster interaction between different aspects of an application or even between applications themselves.

Objectives

- To provide a simple environment to manage complex, heterogeneous and distributed infrastructures.
- It can be defined as a layer that is placed above an operating system or networking software and below the application tier.

UNIT I INTRODUCTION

Emergence of Middleware – Objects, Web Services – Middleware Elements – Vendor Architecture – Interoperability – Middleware in Distributed Applications – Types of Middleware – Transaction-Oriented Middleware – MOM – RPC.

UNIT II OBJECT ORIENTED MIDDLEWARE

OOM – Developing with OOM – Heterogeneity – Dynamic Object Request – Java RMI –COM+.

UNIT III COMPONENT OBJECT RESOURCE BROKER ARCHITECTURE (CORBA)

Naming – Trading – Life Cycle – Persistence – Security – CORBA.

UNIT IV WEB SERVICES

Introduction – XML Web Services standards – Creating Web Services – Extending Web

Services – Messaging Protocol – Describing – Discovering – Securing.

UNIT V OTHER TYPES OF MIDDLEWARE

Real-time Middleware – RT CORBA – Multimedia Middleware – Reflective Middleware – Agent-Based Middleware – RFID Middleware.

SKILL DEVELOPMENT

Outcome:

- In Business it helps streamline processes and improve efficiency in terms of organization.
- It facilitates communication between the system.
- It is able to maintain the integrity of information across the multitude of systems with in a network.
- Understand middleware interoperability.
- Can able to develop middleware component.

202MAOEC	Open Elective Applicable Mathematical Techniques	4	0	0	3
----------	---	---	---	---	---

Aim:

- To acquaint with the basic concept of Interpolation.

Objectives:

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

Outcomes:

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

SKILL DEVELOPMENT

Units II to V, “Operations Research”, Kantiswarup, P.K. Gupta and Manmohan

202BCOEC	Open Elective Herbal Medicine chniques	4	0	0	3
----------	---	---	---	---	---

Aim:

- Be able to advise and educate effectively to create a comprehensive wellness plan incorporating herbal, dietary and lifestyle recommendations integrating self-awareness and lessons of nature

Objective

- Possess knowledge of traditional herbal systems as well as an understanding of the principles and practices of modern Western herbalism
- Demonstrate the ability to critically analyze herbal research and contribute to the current body of herbal literature
- Know how to integrate knowledge of raw materials, formulation, and herbal pharmacy for product development purposes
- Know how to effectively educate individuals and groups about herbs
 - Be able to demonstrate basic skills in herb identification, harvesting, and preparation
 - Be able to address potential safety concerns including herb-drug interactions

Outcomes

- Accurately gather information regarding past and current health status while differentiating between phenomena and the client’s interpretation of phenomena
- Synthesize the above information to create a comprehensive assessment of health inputs and processes

- Work with clients to develop individualized goals and a plan for health and wellness

Unit I

Tribal medicine – methods of disease diagnosis and treatment – Plants in folk religion – *Aegle marmelos*, *Ficus benghalensis*, *Curcuma domestica*, *Cyanodon dactylon* and *Sesamum indicum*.

Unit II

Traditional knowledge and utility of some medicinal plants in Tamilnadu – *Solanum trilobatum*, *Cardiospermum halicacabum*, *Vitex negundo*, *Adathoda vasica*, *Azadirachta indica*, *Gloriosa superba*, *Eclipta alba*, *Aristolochia indica* and *Phyllanthus fraternus*.

Unit III

Plants in day today life – *Ocimum sanctum*, *Centella asiatica*, *Cassia auriculata*, *Aloe vera*. Nutritive and medicinal value of some fruits (Guava, Sapota, Orange, Mango, Banana, Lemon, Pomegranate) and vegetables - Greens (Moringa, *Solanum nigrum* Cabbage).

Unit IV

Allergens – types – sources – active principles – Chemical nature – Cell modifiers – Lectins – mutagens, teratogens – Allergic reactions with known examples.

Unit V

Cardiovascular diseases – blood pressure – cardiac drugs of plant origins – alkaloids, anticoagulants – basic mechanism of action. Pulmonary / respiratory disorders – asthma – bronchitis – common cold – allergy – Remedy from plants.

SKILL DEVELOPMENT

202CHOEC	Open Elective Green Chemistry	4	0	0	3
----------	----------------------------------	---	---	---	---

Objectives: To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollutionPollution prevention.

Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentationAntibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO₂ - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

EMPLOYABILITY

Outcomes:

- To understand the environmental status and evolution.
To know about the Pollution and its prevention measures.
To familiarize the green chemistry.
To learn about the bio-catalytic reactions.
To understand about the vitamins and antibiotics.
To expertise the global warming and its effects.
To learn about the control and remedial measures of green house effect.
To know about the various analytical green methods

20220PRW44	Project work	0	0	0	10
------------	--------------	---	---	---	----

Each student will develop and implement individually developed application software based on any of the latest technologies.

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student’s knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research

Level 2: Bounded Research

Level 3: Scaffolded Research

Level 4: Self actuated Research

Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Sc.,(CS) curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	2
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project (Scaffolded Research)	2
IV	Project Work	10

Blueprint for assessment of student's performance in Research Led Seminar Course

<input type="checkbox"/>	Internal Assessment:	40 Marks
<input type="checkbox"/>	Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks	
<input type="checkbox"/>	Seminar Review Presentation : 10 Marks	
<input type="checkbox"/>	Literature Survey : 10 Marks	
<input type="checkbox"/>	Semester Examination :	60 Marks
	(Essay type Questions set by the concerned resource persons)	

Blueprint for assessment of student's performance in Socio Technical Project

<input type="checkbox"/>	Continuous Internal Assessment through Reviews:	40 Marks
<input type="checkbox"/>	Review I : 10 Marks	
<input type="checkbox"/>	Review II : 10 Marks	
<input type="checkbox"/>	Review III : 20 Marks	
<input type="checkbox"/>	Evaluation of Socio Technical Practicum Final Report:	40 Marks
<input type="checkbox"/>	Viva- Voce Examination:	20 Marks
<input type="checkbox"/>	Total:	100 Marks

Blueprint for assessment of student's performance in Research Methodology Courses

	Continuous Internal Assessment:	20 Marks
<input type="checkbox"/>	Research Tools(Lab) :	10 Marks
<input type="checkbox"/>	Tutorial:	10 Marks
	Model Paper Writing:	40 Marks
●	Abstract:	5 Marks
●	Introduction:	10 Marks
●	Discussion:	10 Marks
●	Review of Literature:	5 Marks
●	Presentation:	10 Marks
	Semester Examination:	40 Marks
	Total:	100 Marks

Programme Specific Outcomes (PSOs)

PSO	Upon completion of M.Phil degree programme, the graduates will be able to:	PO Addressed
PSO – 1	Pursue Ph.D programme with norms of scholarly research that chip into the augmentation of students personal and professional development	PO - 1
PSO – 2	Acquire in-depth knowledge of the process of developing new models, programming scripts as well as gain expertise of well-defined area of research in computer science	PO - 2
PSO – 3	Develop innovative methodologies to tackle issues identified and contributing to the development of technological knowledge and intellectual property	PO - 3
PSO – 4	Evolve as excellent professionals in the public sector units CSRD/DRDO/CSIR laboratories and contribute towards the scientific growth of the country	PO - 5
PSO – 5	Modern Internet of things and tools usage: Create, select, and apply appropriate techniques, resources, and modern computing and IT tools including prediction and modeling to complex scientific activities with an understanding of the limitations.	PO - 2
PSO – 6	NOSQL database: Apply the complex skill towards database and analysis NOSQL	PO - 7
PSO – 7	PO7. Project management: Demonstrate knowledge understanding of the deployment, administrative and query principles and apply these to one's own work, as a member and leader in a team, to manage projects and in Multi skills and language of software and theoretical view.	PO - 8
PSO - 8	Develop and enhance leadership and teaching skills	PO - 4

Semester I**Course outcomes (COs)****Research methodology****Subject code: 203CSC11**

CO	Upon completion of this course, students will be able to	PSOs
CO-1	Understand the basic concepts of research and its	PSO - 1
CO-2	Solve partial differential equations and special function of problem solving (greedy function, Fourier functions, Gaussian functions, associate law, relational database management system of relational of functional dependency, concurrency ACID translation function).	PSO - 3
CO-3	Demonstrate an understanding of the basic features and concepts programming and problem solving of real time problems (expanding Universe using concepts of the teaching ability, learning skills)	PSO - 4
CO-4	Examine the fundamental principles, theories and applications of recent technologies.	PSO - 3

Semester I

Course outcomes (COs)

Advanced Technologies in Computer Science

Subject Code: 203CSC12

CO	Course outcomes	PSOs

CO-3	Describe Relationships between the relational, Graph databases Schemaless databases. Distribution data models - Single server, Shading in various networking, service providers.	PSO -4
CO-4	Categorize different types of networking and their	PSO - 3

PROGRAMME OUTCOMES (PO):

POs describe what students are expected to know or be able to do by the time of graduation. The Program Outcomes of M.Phil. in Computer Science as follows:

At the end of the programme, the students will be able to:

- 1) Apply the concepts of graph connectivity at appropriate points of graph theory and identify the surfaces which the given graph can be embedded.
- 2) Use Network Flow theory to solve many real time problem such as, Hall's Marriage problem, Konig's problem, deduction of Menger's theorem, finding maximum matching in bipartite graphs.
- 3) Use Polya's theory to count certain configurations in the combinatorial aspects.

- 1) Apply domination theory in installing common facility in appropriate points in Town planning. Further labelling theory is used to allot radio frequency for transmission of messages.
- 2) Apply knowledge of Mathematics, in all the fields of learning including higher research and its extensions.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO):

PEO 1: Technical Proficiency:

Victorious in getting employment in different areas, such as industries, laboratories, Banks, Insurance Companies, Educational/Research institutions, Administrative positions, since the impact of the subject concerned is very wide.

PEO 2: Professional Growth:

Keep on discovering new avenues in the chosen field and exploring areas that remain conducive for research and development.

PEO 3: Supervision Skills:

Encourage personality development skills like time management, crisis management, stress interviews and working as a team.

PEO 4: Administration Skills:

Encourage the administration of computer system to develop a model, log file, clustering skills of partitions of operating management, deadlock management, scheduling processes and handling fault tolerance.

PROGRAM SPECIFIC OUTCOMES (PSO):

PSO 1: To develop research level thinking in the field of pure and applied mathematics for problem solving.

PSO 2: To assimilate complex real time problems ideas and arguments.

PSO 3: To improve your own learning and performance.

PSO 4: To develop abstract rethinking of technologies.

CURRICULUM MAPPING

Course Code	Course Title
PO₁	Core -I Research Methodology
PO₂	Core -II Advanced Technologies in Computer Science
PO₃	Core -III Advanced Networking
PO₄	Core -IV Thesis

M Phil- SYLLABUS

(For the candidates admitted from the academic year 2020-2021 onwards)

PAPER – I RESEARCH METHODOLOGY

(Common for all Subjects except Languages)

Course Code	Course Title	L	T	P	C
203CSC11	Research Methodology	6	0	0	4

Unit – I:

Methods and Technique. An introduction – Defining the research problem – What is a research problem?, Selecting the problem, Necessity of defining the problem, Technique involved in defining the problem, An illustration and conclusion. Research design – Meaning of research design, Need for research design, Features of good design, Important concepts of relating to research design, different research designs, Basic principles of experimental design and conclusion.

Unit – II:

Assignment and Thesis at the tertiary level: Writing at the tertiary level – assignments and term papers, thesis and dissertations, conventions of writing-the question of style. Planning the assignment – A time schedule, consulting source materials, preparing a work bibliography, taking notes, the outlines and the first draft. Planning the thesis – selecting a topic, reviewing the literature, designing the study and the chapter outline. Scholarly writing – a case study

Unit – III:

Writing the thesis or assignment: General format – preliminaries, the text, the reference material, the abstract and final product Page and Chapter format – chapter divisions and sub-divisions, spacing, pagination, margins, paragraph indentation and sample pages Tables and Figures – use of tables and figures, placement of tables and figures, Numbering of tables, numbering of pages, numbering of figures, table and figure captions, format of tables, format of figures, preparation of figures, foot notes to tables and figures, very large table and figures, pagination and margin, spacing and alignment, abbreviations and special symbols and numbers. Referencing –

Reference systems, Essential informations, spacing capitalization and underline, alphabetical and chronological order, edited works and sum special cases.

Unit – IV:

Computer packages and Internet: Word Basics – Creating and working with documents – working with text and tables – Using Mail Merge. Using Excel: Working with worksheets – creating chart – working with Formula and Functions. Using Power Point: Working with power point – User Interfaces – Using templates and wizard (slide Presentation) - - Creating chart and Tables. Internet and World Wide Web (WWW) – Electronic Mail (E-mail) – Intranet and Extranet.

Unit – V:

Descriptive statistics – tabulation, graphical representation – bar diagram – and pie diagrams – various measures of variance, measures of central tendency and normal distribution. Differential statistics “t” test, Chi – square test, “F” test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis - Introduction to SPSS.

EMPLOYABILITY

Course Outcomes:

CO-1 Understand the basic concepts of research and its methodologies of scholarly writing and evaluate its quality.

CO-2 Solve partial differential equations and special function of problem solving (greedy function, Fourier functions, Gaussian functions, associate law, relational database management system of relational of functional dependency, concurrency ACID translation function).

CO-3 Demonstrate an understanding of the basic features and concepts programming and problem solving of real time problems (expanding Universe using concepts of the teaching ability, learning skills)

CO-4 Examine the fundamental principles, theories and applications of recent technologies.

193CSC12 - ADVANCED TECHNOLOGIES IN COMPUTER SCIENCE				
	6	0	0	5
Pre-requisite: NIL Course Type:	Course Category: Core Theory			

UNIT – I : TCP/IP

TCP/IP Protocol suite – Addressing – Classful addressing – Addressing issues – Subnetting and Supernetting – Variable length blocks – Packet delivery – Forwarding – Routing – ARP and RARP – Internet Protocol – ICMP – IGMP – UDP – TCP – Flow Control – Error Control – Congestion Control – Intra and Inter Domain Routing – Distance Vector Routing – Link State Routing- Path Vector Routing – Multicast Routing – BOOTP – DHCP – DNS – Remote Login and Telnet – FTP and TFTP – Electronic Mail – Network Management – IPV6.

UNIT – II : ADAPTIVE WEB TECHNOLOGY

J2ee: Overview-Multi-tier Architecture-the Enterprise Application-Clients-Sessions Management Web Tier-EJB Tier-J2ee Web Services, Technologies, Components .NET Framework –Architecture-Design Principles- Alternative Implementations Networking-Remoting-Security, **Building Web Applications-Webservices-Characteristics-Architecture-ComponentsSecurity,Standards. Overview of xml.**

UNIT - III : BIG DATA ANALYTICS

Data science process – roles, stages in data science project – working with data from files – working with relational databases – exploring data – managing data – cleaning and sampling for modeling and validation – introduction to NoSQL- Big Data and its importance, Four Vs, rivers for Big data, Big data analytics, Big data applications. Algorithms using map reduce, Matrix vector Multiplication by Map Reduce- Big data Business Analytics - State of the practice in Analytics role of data scientists - Key roles for successful analytic project - Main phases of life cycle - Developing core deliverables for stakeholders. The Evolution of Big Data-Big Data: The Modern Era- Bringing It All Together-The Path to Big Data-The Realities of Thinking Big DataHands-on Big Data-The Big Data Pipeline in Depth-Big Data Visualization-Big Data Privacy.

UNIT IV : INTERNET OF THINGS

Introduction to IoT – Physical and Logical Design of IoT – Enabling Technologies of IoT – IoT Devices – Pillars of IoT: M2M, RFID, WSN, SCADA – Connection and Management of IoT Devices – IoT Applications: Intelligent Transport – Smart Grid – Smart Buildings.

UNIT V : NoSQL DATABASES

Introduction to NoSQL, Aggregate Data Models - Aggregates - Key - Value and Document. Data models – Column Family stores - Relationships - Graph databases – Schemaless databases - Materialized views. Distribution data models - Single server - Sharding - Master – slave replication – Peer-to peer replication. Consistency - Update consistency - Read consistency - Relaxing consistency - CAP theorem - Version stamps - Business and system Transactions - Version stamps on multiple nodes. MapReduce - Basic MapReduce - Partitioning and combining - Composing MapReduce calculations. Implementation - Key value databases – Document databases - Column Family stores - Graph databases.

EMPLOYABILITY

Outcome:

Interpret the band structure of POP, M2M, RFID, WSN, SCADA and Map Reduce algorithm.

Analyze the structure, preparation of new model of networking in various cluster, cloud and grid in real time environment.

Describe the various crystal growth techniques and determine the growth parameters of various technologies

Categorize different types of programming language, scripts and their characteristics.

203CSC13A - Advanced Networking				
	6	0	0	5
Pre-requisite: NIL		Course Category: Core		
Course Type:		Theory		

Unit I : Telecommunication systems:

GSM services – subsystem – system architecture - Handover - DECT system architecture – TETRA – UMTS system architecture – UTRAN – CDMA2000 - GPRS : system architecture – 802.11 system architecture - **Bluetooth system architecture – IrDa protocol – ZigBee architecture - HSPA**

Unit II : ADHOC Wireless Network

Ad Hoc Wireless Network –MAC protocol – issues in MAC protocol – Routing protocols – issues in Routing protocol - Transport Layer Protocol -issues in transport protocol - QOS – Energy Management – Security in Adhoc network

Unit III : Wireless Sensor Network

Architecture and Design – Medium Access Control – Routing – Transport Layer – power management – sensor localization – clock synchronization - Energy model Issues in wireless sensor network.

Unit IV

LTE and Advanced LTE pro – network architecture and interface – FDD air interface and radio network TD LTE air interface – network sharing – MOCN – MORAN - LTE security architecture – scheduling - VoLTE –VoWifi – Mission critical communication

Unit V

5G Technologies – overview – Non Orthogonal Multiple Access for 5G Systems Millimeter Wave Communications for 5G Networks – Visible Light Communication in 5G – Massive IMO Scheduling Protocols – Cellular 5G Access for Massive Internet of things.

EMPLOYABILITY

Course Outcomes:

Differentiate between different LAN-based forwarding devices so that they can make thoughtful suggestions on how to build a network.

Write networking code that uses TCP and UDP in client-server applications.

Design and implement networking protocols.

Design and implement networking applications.

203CSC13B – Big Data Analytics				
	6	0	0	5

Pre-requisite: NIL
Course Type:

Course Category: Core
Theory

Objective:

To impart knowledge in Fundamentals, Big Data Analytics, **Technologies and databases, Hadoop and Map Reduce Fundamentals**

Unit I

Introduction to big data: Data, Characteristics of data and Types of digital data: Unstructured, Semi-structured and Structured, Sources of data, Working with unstructured data, Evolution and Definition of big data, Characteristics and Need of big data, Challenges of big data, Data environment versus big data environment

Unit II

Big data analytics: Overview of business intelligence, Data science and Analytics, Meaning and Characteristics of big data analytics, Need of big data analytics, Classification of analytics, Challenges to big data analytics, Importance of big data analytics, Basic terminologies in big data environment

Unit III

Big data technologies and Databases: Introduction to NoSQL, Uses, Features and Types, Need, Advantages, Disadvantages and Application of NoSQL, Overview of NewSQL, Comparing SQL, NoSQL and NewSQL, Introduction to MongoDB and its needs, Characteristics of MongoDB, Introduction of apache cassandra and its needs, Characteristics of Cassandra

Unit IV

Hadoop foundation for analytics: History, Needs, Features, Key advantage and Versions of Hadoop, Essential of Hadoop ecosystems, RDBMS versus Hadoop, Key aspects and Components of Hadoop, Hadoop architectures

Unit V

HadoopMapReduce and YARN framework: Introduction to MapReduce, Processing data with Hadoop using MapReduce, Introduction to YARN, Components, Need and Challenges of YARN, Dissecting YARN, MapReduce application, Data serialization and Working with common serialization formats, Big data serialization formats

Text Book

Seema Acharya and Subhashini Chellappan, “Big Data and Analytics”, Wiley India Pvt. Ltd., 2016

EMPLOYABILITY

Course Outcomes:

- Understand Big Data and its analytics in the real world 1
- Analyze the Big Data framework like Hadoop and NOSQL to efficiently store and process Big Data to generate analytics
- Design of Algorithms to solve Data Intensive Problems using Map Reduce Paradigm
- Design and Implementation of Big Data Analytics using pig and spark to solve data intensive problems and to generate analytics
- Implement Big Data Activities using Hive

RESEARCH AND PUBLICATION ETHICS

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

CPE_RPE	Research and publication ethics	-	-	-	2
---------	---------------------------------	---	---	---	---

THEORY

Unit I: PHILOSOPHY AND ETHICS (3 hours)

1. Introduction to philosophy, definition, nature and scope, concept, branches.
2. Ethics: definition, moral philosophy, nature of moral judgements and reactions.

Unit II: SCIENTIFIC CONDUCT (5 hours)

1. Ethics with respect to science and research.
2. Intellectual honesty and research integrity.
3. Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing.
5. Selective reporting and misrepresentation of data.

Unit III : PUBLICATION ETHICS (7 hours)

1. Publication ethics: definition, introduction and importance.
2. Best practices / standards setting initiatives and guidelines: COPE, WAME, etc.
3. Conflicts of interest.
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types.
5. Violation of publication ethics, authorship and contributorship.
6. Identification of publication misconduct, complaints and appeals.
7. Predatory publishers and journals.

PRACTICE

Unit IV: OPEN ACCESS PUBLISHING (4 hours.)

1. Open access publications and initiatives.
2. SHERPA/RoMEO online resource to check publisher copyright & self-archiving policies.
3. Software tool to identify predatory publications developed by SPPU.

4. Journal finder / journal suggestion tools viz, JANE, Elsevier Journal Folder, Springer Journal Suggester, etc.

UNIT V : PUBLICATION MISCONDUCT (4 hours)

A. Group Discussions (2 hours)

1. Subject specific ethical issues, FFP, authorship
2. Conflicts of interest.
3. Complaints and appeals: examples and fraud from India and abroad.

B. Software tools (2 hours)

Use of plagiarism software like Turnitin, Urkund and other open source software tools.

UNIT VI: DATABASES AND RESEARCH METRICS (7 hours)

A. Databases (4 hours)

1. Indexing databases.
2. Citation database: Web of Science, Scopus etc.

B. Research Metrics (3 hours)

1. Impact Factor of journal as per Journal Citation Report, SNIP, SJR, IPP, Cite Score.
2. Metrics: h-index. g index, i10 index, altmetrics.

தமிழ் இலக்கியப் பண்டமாக்கியல் - வணம், தஞ்சை

பா. குதியாடு : தமிழ் முதல் பருவம்

முதலாம் ஆண்டு

இக்கலை இலக்கியம் - செம்புள், சிறுகதை , நடகம், இலக்கிய வரலாறு

பகுதி : 1. செம்புள்

தாயுமானவ சுவாமிகள் - அத்தார புலனம் - சிறும்பு நகரியம் - 40 அடிகள்

இராமலிங்க அடிகள் - திருவாய்மொழி - அருணை விண்ணப்பம் - 40 அடிகள்

அவிமணி தேசிக விநாயகம் நினைவு - மலரும் மானவயும் - 52 அடிகள்

பாரதியார் - புதுமைப்பெண் - 40 அடிகள்

பாரதிதாசன் - பாரதிதாசன் அவிதைகள் , தமிழ் இனிமை , தமிழ் அணவு

பகுதி : 2. செம்புள்

நாமக்கல் அவிதர் - தமிழ் தேன் - தமிழ் வளர்ச்சி சபை செம்புள் , 40 அடிகள்

ந.சி.சுப்பிரமணியன் - வந்தியத்தன - அவிதை சபை , 42 அடிகள்

சுரதா - தேன்பழை, அன்பை , 22 அடிகள்

சுண்ணாம்பா - இலக்கியம் , ஒரு பாணியின் கதை , 54 அடிகள்

அ.புதுவர் குமாரன் - செந்திரகுமார் , அன்பைய சிறையும் சிறுகதைகள், 80 அடிகள்

பகுதி : 3. சிறுகதை

க.சுப்பிரமணியன் - தேரில் புழங்கு பாசா

பகுதி : 4. நடகம்

கு. வெ. பாண்டிரமணியன் , செந்திரகுமார் (அரைநடை நடகம்)

பகுதி : 5. இலக்கிய வரலாறு

சிறுகதை , புதினம், நடகம் அரைநடை , அவிதை , புதுக்கவிதை

COURSE CODE	COURSE TITLE	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Read and comprehend literature
-

UNIT –I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

UNIT – IV

Editing

Proof reading

UNIT – V

Comparison and contrast

Cause and effect

Course Code	English-I	L	T	P	C
20111AEC12		4	0	0	2

Aim:

- To acquaint students with learning English through literature

Objective:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

Outcome:

- Read and comprehend literature

UNIT –I

The Art of Reading

- Lin Yutang

An Eco-Feminist Vision

-ArunaGnanadason

UNIT – II

The Merchant of Death

-Nanda Kishore Mishra & John Kennet

She Spoke for all Nature

-Young world ‘The Hindu’

UNIT –III

Because I could not Stop for Death

-Emily Dickinson

Stopping by Woods on a Snowy Evening

-Robert Frost

UNIT –IV

Enterprise

-Nissim Ezekiel

Love poem for a wife

-A.K Ramanujam

(SKILL DEVELOPMENT)

UNIT –V

Oliver Twist

-Charles Dickens

Course Code	Core Paper - I Properties Of Matter	L	T	P	C
20113AEC13		6	1	0	6

Aim:

The course presents an introduction to the physics of the objects whose sizes span from atomic dimensions to macroscopic, human scale dimensions, and beyond: atoms, molecules, gases, liquids, and solids. The aim is to show how the properties of macroscopic bodies can be derived from the knowledge that matter is made up from atoms.

Objectives:

Recognize the difference between physical and chemical properties
Distinguish between extensive and intensive properties

UNIT – I Elasticity:

Stress – Strain – Hooke’s law – Relation between elastic constants – poisson’s Ratio – Expression for poisson’s ratio in terms of elastic constants – work done in twisting –Torsional pendulum – determination of rigidity modulus – Young’s modulus – determination – uniform – non-uniform bending.

UNIT – II Surface Tension:

Definition, Explanation of surface tension– Surface energy and surface tension – Pressure difference across a liquid surface – Excess of pressure inside a soap bubble – Angle of contact – Measurement of angle of contact – Experimental determination of surface tension by Jaegers method - Capillary rise method – Surface tension and vapour pressure over a liquid surface – Effect of Evaporation and condensation.

UNIT – III Viscosity:

Definition – flow of liquid through a capillary tube – Stokes Law – Poiseuille’s method for coefficient of viscosity – conception of poiseuille’s equation-Ostwald’s viscometer – viscosity of highly viscous liquids – Stokes method – variation of viscosity of a liquid with temperature – viscosity of Gases and kinetic energy.

UNIT – IV Diffusion – Osmosis:

Osmosis and osmotic pressure – Laws of osmotic pressure – Experimental determination of osmotic pressure – Prefer method – Berkley method – Elevation of Boiling point and Depression of freezing point – Diffusion – Fick’s law – Experimental measurement of Diffusivity – Graham’s Laws of Diffusion of Gases – Effusion, Transpiration and Transfusion.

UNIT - V Gravitation:

Newton's Law – Kepler's Law –Deductions of Newton's law from Kepler's Law – Law of Gravitation– Gravitational potential: Potential energy – Gravitation Potential and Field at a point due to spherical shell, solid sphere, Hollow sphere – Satellites – Stationary satellite – Escape velocity – Rocket – Jet plane.

(EMPLOYABILITY)

Learning outcomes:

On completion successful students will be able to demonstrate an understanding of:

1. The relationships between physics on the atomic scale and the properties of matter.
2. The roles played by microscopic states of system, their numbers and their accessibility.
3. Techniques for finding appropriate averages to predict macroscopic behavior.
4. How these techniques are applied to the calculation of the properties of matter.

Reference:

1. Properties of matter – Subramaniaiyer and Jeyaraman.
2. Elements of properties of matter – D.S. Mathur, S Chand and Co.,
3. Properties of Matter – Brijlal and Subramaniam, S. Chand and Co.,

Course.Code	PROPERTIES OF MATTER LAB	L	T	P	C
20113AEC14L		0	0	3	2

List of Experiments

1. Young's modulus – uniform bending – pin and microscope.
2. Young's modulus – non uniform bending – scale and telescope .
3. Static torsion – Rigidity modulus.
4. Torsion pendulum – Rigidity modulus.
5. Cantilever depression – scale and telescope method.
6. Surface tension – capillary rise method.
7. Viscosity – capillary flow method.
8. Newton's ring –determination of R.
9. Compound pendulum.
10. Long focus convex lens – f, R, u determination.

Course Code	Allied Paper - I Calculus and Fourier Series	L	T	P	C
20112AEC15A		4	0	0	4

Aim and objectives:

This paper aims at enabling the students to know various concepts and principles of differential and integral calculus.

Sound Knowledge of calculus is essential for the students of mathematics for the better perceptions of the subject and its development

Unit – I

Leibnitz theorem (Proof not needed) and its applications – curvature and radius of curvature in Cartesian only (Proof not needed) – total differential coefficient (Proof not needed) – Jacobians of two & three variables – Simple problems in all these.

Unit – II

Reduction formula (when n is a +ve integer) for (i)

i. $\int_a^b e^{ax} x^n dx$

ii. $\int_a^b \sin^n x dx$

iii. $\int_a^b \cos^n x dx$

iv. $\int_0^x e^{ax} x^n dx$

v. $\int_0^x \sin^n x dx$

vi. without proof $\int_0^x \sin^n x \cos^n x dx$ and illustrations

Unit – III

Beta and Gamma functions

Unit – IV

Evaluation of double and triple integrals in simple cases – changing the order and evaluating of the double integration (Cartesian only)

[ENTERPRENEURSHIP]

Unit – V

Definition of Fourier series – Finding Fourier coefficients for a given periodic function with period 2π and with period $2l$ – use of odd and even functions in evaluating Fourier coefficients – half range sine and cosine series.

Outcomes:

- Calculate definite integral values using Beta and Gamma Functions
- Develop the skill of evaluating Laplace and inverse Laplace transform to solve Linear systems under initial and boundary conditions

Text Books

Calculus – T.K.M. Pillai

Trigonometry & Fourier Series – T.K.M. Pillai.

Course Code	Allied Paper - II Algebra and Trigonometry	L	T	P	C
20112AEC16A		4	0	0	4

Aim and Objectives:

This paper emphasizes general techniques of problemsolving and explores the creation of mathematical patters. It aims at introducing a course that initiates the students into the world of Discrete Mathematics.

Unit – I

Binomial, Exponential & Logarithmic series (Formulae only) – Summation

Unit – II

Nonsingular, symmetric, skew symmetric, orthogonal, Hermitian, skew Hermitian and unitary matrices – Characteristics equation, Eigen values, Eigen vector – Cayley Hamilton’s theorem (proof not needed) Simple application only.

Unit – III

Expansion of $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ and $\sin^n \theta$, $\cos^n \theta$, $\sin^n \theta \cos^m \theta$ (m & n being a positive integer) – Expansion of in a series of sines and cosines of multiples of θ (θ – given in radius) Expansion of $\sin \theta$, $\cos \theta$ and $\tan \theta$ in terms of powers of θ (only problems in all the above)

Unit – IV

Euler’s formula for $e^{i\theta}$ – definition of hyperbolic functions – formulae involving hyperbolic functions – relation between hyperbolic and circular function – expansion of $\sinh x$, $\cosh x$, $\tanh x$ in power of x.

Unit – V

Expansion of inverse hyperbolic function – $\sinh^{-1} x$, $\cosh^{-1} x$ and $\tanh^{-1} x$ - Separation of real and imaginary parts of $\sin(x+iy)$, $\cos(x+iy)$, $\tan(x+iy)$, $\sinh(x+iy)$, $\cosh(x+iy)$, $\tanh(x+iy)$

[ENTERPRENEURSHIP]

Outcomes:

The topic like Mathematical Logic, Set Theory, Relations, Functions, Mathematical Induction, Recursive relations and Matrices.

Text Books:

T.K.M. Pillai, T.Natarajan, K.S. Ganapathi, **Algebra, Vol I**. S.ViswanathanPvt.Ltd., Chennai – 2004

Course Code	Skill Based Elective Package Lab - I	L	T	P	C
20120SEC01AL		0	0	2	1

MS-WORD

1. Prepare a bio-data with photo using text styles.
2. Prepare a college course details with headings, bullets and numbering.
3. Prepare a document in a newspaper format with header and footer.
4. Create a calendar by using auto format.
5. Prepare a contemporary letter using templates.
6. Picture Insertion and Alignment
 - a. Prepare a Greeting Card
 - b. Prepare a Handout
7. Create a Mark sheet using tables and find out the total marks.
8. Prepare a Business letter for more than one company using Mail Merge

Course Code	Skill Based Elective -I	L	T	P	C
20160SEC01B	Effective Communication	0	0	2	1

UNIT I

Effective communication I

Oral Communication: Listening skills -Speaking skills (what to say and how to say it) – Gender neutral Language-Conflict, criticism, anger- Telephone skills.

UNIT II

Effective communication II

Written Communication: Mechanics of writing, letters, notes, and reports- Resume preparation Faxes- Web sites- Email and Memos.

Nonverbal Communication: Behavior, Body language and Attitude.

Course Code	Communicative English-I	L	T	P	C
20111SEC01L		0	0	1	1

Aim:

- To acquaint with the basic grammar

Objective:

- To know English grammar and all the concomitant linguistic items
- To be aware of basic concepts related to the study of communication
- To understand the types of sentences and its patterns

Outcome:

- Understand grammar

UNIT –I

Noun

Pronoun

Adjective

UNIT – II

Verb

Adverb

UNIT –III

Conjunction

Preposition

Interjection

UNIT – IV

Kinds of Sentences

UNIT –V

Patterns of sentences

[ENTERPRENEURSHIP]

Course Code	Indian constitution	L	T	P	C
201INDCONS		1	0	0	1

Aim and Objectives:

1. To make the students understand about the Democratic Rule and Parliamentary Administration.
2. To appreciate the salient features of the Indian Constitution.
3. To know the fundamental Rights and Constitutional Remedies.
4. To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
5. To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

UNIT I: THE MAKING OF INDIAN CONSTITUTION

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

UNIT II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties .

UNIT III: DIRECTIVE PRINCIPLES OF STATE POLICY

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

UNIT IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.
[SKILL DEVELOPMENT]

UNIT V: STATE COUNCIL – ELECTION SYSTEM AND PARLIAMENTARY DEMOCRACY IN INDIA

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

Outcomes

1. Democratic values and citizenship Training are gained.
2. Awareness on Fundamental Rights are established.
3. The functions of union Government and State Governments are learnt.
4. The power and functions of the Judiciary learnt thoroughly.
5. Appreciation of Democratic parliamentary Rule is learnt.

References:-

Gathered Wisdom -GowriSivaramanEmeraldPublishers

CourseCode	Core Paper - II Mechanics and Special Theory of Relativity	L	T	P	C
20113AEC23		6	1	0	6

Aim:

To deepen understanding of Mechanics.

To prepare students for courses in quantum field theory and gauge theory

Objectives:

Find the unitary transformations linked to symmetry operations.

Apply time-dependent perturbation theory to variety of problems.

Unit I :Dynamics projectile , impulse, impact

Projectile - range of horizontal and inclined plane – Impulse – Impact – Impulsive force – Laws of impact – Impact of a smooth sphere on a smooth horizontal plane – Direct and oblique impacts – Loss in kinetic energy – Motion of two interacting bodies – reduced mass.

Unit II: Dynamics of Rigid bodies

Kinetic energy of rotation - Theory of compound pendulum - Equivalent simple pendulum – Reversibility of centers of oscillation and suspension - Determination of 'g' and radius of gyration of a bar pendulum-period of oscillation of a Bifilar pendulum with Parallel threads.

Center of mass - velocity and acceleration of center mass - system of variable mass-equation for a rocket – Conservation of linear and angular momentum.

Unit III: Center of Gravity and states of equilibrium:

Center of gravity of simple bodies – Center of gravity of solid hemisphere, hemispherical bowl, and right solid cone – stable, Unstable and neutral equilibrium of a rigid body supported about an axis.

Unit IV: Center of Pressure:

Center of pressure of vertical rectangular Lamina – Vertical triangular lamina – Vertical circular lamina – Atmospheric Pressure – Variation of atmospheric pressure with altitude – Hydro dynamics – stream line flow of an ideal fluid – equation of continuity of flow – Bernoulli's theorem and its applications to liquids.

Unit V: Special theory of relativity:

Frame of reference – Newton's relativity – Inertial frame of reference – Galilean transformations – Transformation of position , velocity and acceleration – time dilation & length contraction – Lorentz Transformations – Mass –Energy relation– variation of mass with velocity.

[EMPLOYABILITY]

Learning Outcomes:

Derive a mathematical description of quantum motion in electromagnetic fields.

Apply the relativistic wave equations to simple single-particle problems.

Books for Study:

1. Mechanics – Part I and II – NarayanaMoorthy
2. Mechanics – D.S. Mathur
3. Mechanics – Brij.Lal and N. Subramaniam

Course Code	Core Practical – II Mechanics Lab	L	T	P	C
20113AEC24L		0	0	3	2

List of Experiments

1. Characteristics of junction diode.
2. Characteristics of Zener diode.
3. Potentiometer – low range voltmeter calibration.
4. Potentiometer – specific resistance.
5. Transistor characteristics –CE configuration.
6. Spectrometer - μ of a solid prism.
7. Air wedge – thickness of a wire.
8. Specific heat capacity of liquid – Newton’s law of cooling.
9. Thermal conductivity of a bad conductor- lee’s disk.
10. Carey fosters bridge – specific resistance measurement.

Course Code	Allied Paper - III ODE, PDE And Laplace Transform	L	T	P	C
20112AEC25A		4	0	0	4

Aim:

Introduce the Concepts of laplace and fourier transforms

Objectives:

Find the Fourier series representation of a function of one variable

Find the solution of the wave,diffusion and Laplaceequations using the Fourier series.

UNIT I:

Ordinary differential equations of first order but of higher degree- Equations solvable for x and y – solvable for dy/dx, clairaut’s form (simple case only)- homogeneous linear differential equation(Variable coefficients), variation of parameter.

UNIT II:

Formation of partial differential equation by eliminating constants and by eliminating of arbitrary functions- definition of general, particular and complete solution – singular integral(Geometrical meaning not required) solution of first order equations in the slandered forms $f(p,q)=0$, $f(x,p,q)=0$, $f(z,p,q)=0$ $f_1(x,p)=f_2(y,p)$ $z=(x,p+yq=f(p,q)$.

UNIT III:

Lagrange’s method for solving $P_p + Q_q = R$ where p,q,r functions of X, Y, Z- (geometrical meaning is not needed)- (only problem in all the above- No proof needed for any formula) Cherpit’s method The four standard forms.

UNIT IV:

Laplace Transforms- Definitions-

$L(e^{at})$ $L(\cos at)$, $L(\sin at)$, $L(t^n)$ where n is a positive integer – Basic theorem in Laplace transform (Statement only) $L(e^{-st} \cos bt)$, $L(e^{-st} \sin bt)$, $L[e^{-st} f(t)]-L[F(t)$, $L[f(t)]$, $L[f'(t)]$

[ENTERPRENEURSHIP]

UNIT V:

Inverse Laplace transform related to the above standard forms- solving second order ODE with constant coefficients using Laplace transforms and simultaneous equation, variable coefficients. Fourier series: Periodic functions — Dirichlet conditions (Without Proof) Odd and Even functions change of interval — Half range series.

Outcomes:

Solve an initial value problem for an n th order ordinary differential equation using the Laplace transform.

Solve a Cauchy problem for the wave or diffusion equations using the Laplace,

Text Books

Differential Equations - S. Narayanan

Differential Calculus T.K.M Pillai & S. Narayanan

Differential Calculus - M.L. Khanna

Course Code	Allied Paper - IV 3D Vector Calculus	L	T	P	C
20112AEC26A		4	0	0	4

Aim and Objective:

The course is designed to lay a strong foundation of Geometry and Vector Calculus.

UNIT – I

Vector differentiation – velocity & acceleration vectors- Gradient of a vector directional derivative - unit normal vector- tangent plane

Unit- II

Divergence- Curl – Solenoidal&Irrotational vector- Double operators – Properties connecting grad, div & curl of a vector.

Unit –III

Vector integration –Line integrals – Conservative force field – Scalar field- Scalar potential- work done by d Force- Surface integrals – Volume integrals.

Unit –IV

Gauss divergence theorem ,Stoke’s theorem (statement, application & verification only)

Unit –V

Equation of sphere – Tangent plane – plane section of a sphere – Finding the centre& radius of the circle of integration – sphere through the circle of integration (only problem in all above)

[ENTERPRENEURSHIP]

Outcomes:

- Vector calculus plays an important role in deferential geometry and in the
- study of partial deferential equations. It is used extensively in physics and
- engineering, especially in the description of electromagnetic ends, gravitational elysian uid dynamics.

MS –EXCEL

1. Prepare the addressing methods in excel
2. Prepare an Excel Document using different type of Functions.
3. Draw a Graph by using your own data
4. Prepare an Individual Pay Bill preparation for an employee in an organization.
5. Prepare a Mark List for the Students.
6. Prepare a Worksheet for a Company.
7. Prepare an Inventory Report for a Shop.
8. Prepare an Electricity Bill for the Domestic Customers.

Course Code	Skill Based Elective -II	L	T	P	C
20160SEC01B	Self Development	0	0	2	1

UNIT I

Self -Assessment

Self-Assessment, Self-Awareness, Self-Esteem, Personal success factors, handling failure, Depression and Habit, Self appraisal, SWOT analysis Perceptions and Attitudes, Positive Attitude, Values and Belief Systems, Personal Goal setting, Career Planning, Building of Self Confidence, prioritization.

UNIT II

Self- Management

Managing Time, Managing Stress, Conflict Management

Course Code	Communicative English-II	L	T	P	C
20111SEC02L		0	0	2	1

Aim:

- To acquaint with the basic grammar

Objective:

- To learn about the auxiliary and the models
- To understand the different tenses and use it in sentences
- To know where to use and where not to use the articles
- To familiarize with the participle

Outcome:

- Understand grammar

UNIT –I

Auxiliaries

UNIT –II

Modals

UNIT –III

Tenses-Simple, Perfect

UNIT –IV

Tenses-Continuous, Perfect continuous

Nine Short Stories	-SteuartH.King Blackie Books
One-Act plays of Today	-T.Prabhakar Emerald Publishers

Course Code	Core Paper - III Heat and Thermodynamics	L	T	P	C
20113AEC33		5	0	0	6

Aim:

To develop the ideas of classical thermodynamics

To deepen the appreciation of the link between the microscopic properties of individual atoms or other particles and the macroscopic properties of many-body systems formed from them

To demonstrate the power of statistical methods in physics

Objectives:

Demonstrate an understanding of the first and second laws of thermodynamics, and of the concept of entropy.

Explain and derive the fundamental thermodynamic relation.

Unit – I: Thermodynamics

Transport Phenomenon – Viscosity- Thermal conductivity – Diffusion – Experimental confirmation of kinetic theory – Zeroth law of thermodynamics – First law of thermodynamics – Heat engines – Reversible and irreversible process – Carnot’s theorem – Second law of thermodynamics – Entropy – Change of entropy in reversible and irreversible processes.

Unit – II: Low Temperature

Joule – Thomson’s effect – Porus plug experiment – Liquefaction of gases – Adiabatic expansion process – adiabatic demagnetization – practical application of low temperature – Refrigerating mechanism – Electrolux refrigeration – Air conditioning machines.

Unit – III: Radiation

Radiation – Stefan’s law – Boltzmann law – Black body – Rayleigh radiation – Rayleigh-Jeans law – Stefan fourth power law – Pyrometry – Solar constant – Sources of solar energy .

Unit – IV: Specific Heat

Specific heat of solids – Dulong and Petit’s law – Einstein’s theory of specific heat – Debye’s theory – Specific heat of gases – Variations of specific heat of Diatomic gases – Quantization of various contributions to energy of a diatomic molecules.

Unit – V: Statistical Physics:

Quantum statistics of identical particles – M.B statistics – Ideal gas - B.E statistics – Specific heat - F.D. Statistics – Richardson equation –Comparison of M.B,B.E and F.D statistics.

[EMPLOYABILITY]

Learning Outcomes:

Use the formalism of thermodynamics, including the thermodynamic potentials and Maxwell's relations, and apply these tools to simple systems in thermal equilibrium.

Explain the basic concepts of statistical mechanics, including the derivation of the general formula for entropy in terms of the ensemble partition function.

Explain the statistical origin of the second law of thermodynamics; and

Construct a partition function for a system in thermal equilibrium and use it to obtain thermodynamic quantities of interest.

Books for Reference:

- 1) Heat and Thermodynamics – J.B. Rajam and C.L. Arora.
- 2) Thermodynamics and Statistical Physics – Sharma and Sarkan.
- 3) Heat and Thermodynamics – Brijlal and Subramanian.
- 4) Statistical Mechanics – Satyaprakash and C. Agarwal.

Course Code	Core Practical – III Heat and Optics Lab	L	T	P	C
20113AEC34L		0	0	3	2

List of Experiments

- 1) Sonometer – Verification of laws.
- 2) Stokes method – Viscosity of highly viscous liquid.
- 3) P.O. Box – Temperature coefficient.
- 4) Potentiometer – Calibration of high range voltmeter.
- 5) Spectrometer – i-d curve.
- 6) Joule’s calorimeter – Specific heat capacity.
- 7) Study of logic gates – discrete components.
- 8) Potentiometer – Calibration of ammeter.
- 9) Spectrometer – Grating – normal incidence method.
- 10) Emissive power of a surface – Spherical calorimeter.

Course Code	Allied Paper -II	L	T	P	C
20114AEC35	Inorganic, Organic and Physical Chemistry- I	4	0	0	4

UNIT- I : Polar effect:

Inductive effect +I and – I groups, relative strength of – foamic , acetic and propionicacids – acetic and chloroacetic acids – ammonia and methyl amine. Resonance – resonating structure of benzene, butadiene and COOH groups – conditions – applications (resonance energy and stability). Acidic & basic properties of phenol & aniline. Hyperconjugation.- consequence of hyperconjugation. Steric effects – Steric accelerated reaction and steric inhibited reaction.

UNIT –II : Industrial chemistry

Fuel gases – Watergas, products gas, L.P.G gas, Gobar gas and natural gas. Fertilizers – NPK and mixed fertilizers, micronutrients, and their role in plant life and biofertilizers, soap and detergents an elementary idea about preparation cleaning action of soap detergents.

UNIT III : Aromatic compounds :

structure, stability, resonance and aromaticity of benzene. Substitution reactions, Nitration, Halogenation and Alkylation Naphthalene Isolation, Synthesis, properties, and structural elucidation and uses .Organic compounds: Benzoin, Perkin, Cannizzaro, Claisen reactions. Chemotherapy: Definition and uses of Antibiotic, Analgesic Antibacteria, Antiviral, Antidiabetic, Antihypertensive, Antiseptic and disinfectant, Antimalarial- Anaesthetics – local and general.

[ENTERPRENEURSHIP]

UNIT –IV :Energetic:

Review first law of thermodynamic state and path functions need for the second law Carnot cycle and thermodynamic scale of temperature spontaneous and non spontaneous process and Third law.

UNIT – V : Chemical kinetics:

Order of reactions and their determinations. Activation energy, effect of temperature on reaction rate. Catalysis Types, mechanism of catalytic reactions, industrial applications.

POWER POINT

1. Create a slide show presentation for a Seminar (choose your own topics)
 - a. Enter the Text in the Outline View
 - b. Create Non-Bulleted and Bulleted Text
2. Create a slide show presentation for a Science Exhibition
 - a. Create Non-Bulleted and Bulleted text
 - b. Apply appropriate Text Attributes
3. Create slide show presentation for an Invitation
 - a. Insert an Object from a Bitmap File
 - b. Apply appropriate Text Attributes
 - c. Rotate the Object to 45 degree
 - d. Apply Shadow to the object
4. Create a slide show presentation to display percentage of marks in each semester for all Students
 - a. Use Bar chart (x-axis: semester; y-axis: % of marks)
 - b. Use different Presentation Template and different Transition Effect for each slide
 - c. Use different Text Attributes in each slide
5. Create a slide show presentation for a Shop Advertisement to be open shortly
6. Create a slide show presentation to display Percentage of Sales in each quarter for the any Vendor using bar chart (x-axis: Quarter; y-axis: % of sales)
7. Create a slide show presentation for Tourists Places
8. Create a slide for Calendar using appropriate Text attributes and insert an object from a Bitmap file

English for Enrichment -Devaraj Emerald Publishers
 Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Sub. Code	Core Paper - IV	L	T	P	C
20113AEC43	Optics	6	1	0	6

Aim:

To introduce geometric optics and the use of ray diagrams using lenses and mirrors.

To understand how simple optical instruments work.

Objectives:

Produce ray diagrams to predict the position and size of the image produced by simple lenses. Measure the focal length of a simple convex lens by producing an image of a distant object. Calculate the focal length of a simple lens by making measurements of image and object distance and using the lens equation.

Unit – I: Geometrical Optics

Thick lens – Principal foci and principal points – Thick lens formulae – Power of a thick lens – Nodal points – Optical centre of a lens.

Chromatic, chromatic combination of lenses, Aberrations: Spherical aberration – Methods of reducing spherical aberration – Coma – Aplanatic surface – Astigmatism – Curvature of the field.

Unit – II: Optical Instruments

Kellner’s eyepiece – Ramsden’s eyepiece – Huygen’s eyepiece. Rayleigh’s criterion, Resolving power of Optical Instruments: Resolving power – Resolving power of Telescope, Microscope, Prism and Grating.

Unit – III: Interference

Colours of thin films – Air wedge – Newton’s rings – Brewster’s fringes – Michelson Interferometer and its applications – Fabry-Perrot Interferometer – Interference filter – Stationary waves in light – Colour photography – Holography.

Unit – IV: Diffraction

Fresnel’s diffraction – Diffraction at a circular aperture, straight edge – Fraunhofer diffraction at a single slit – Double slit – Diffraction pattern – Transmission grating with theory – Experimental determination of wavelength – Oblique incidence.

[EMPLOYABILITY]

Unit – V: Polarization and Fibre optics

Nicol prism – Nicol prism as an analyzer and polarizer – Huygen’s explanation of double refraction in Uniaxial crystal – Elliptically and circularly polarized light – Production and detection – quarter wave plate and half wave plate – Basic ideas of optical fibre – Numerical aperture – Stepped and graded index fibres – Fibre optic communication (Block diagram only).

Learning Outcomes:

Generate ray diagrams to predict the position and size of images in optical systems.

Understand and use the mathematical formulae to predict the position and size of images produced by simple lenses.

Measure the focal length of lenses and mirrors using various methods.

Understand the origin of spherical aberration in lenses.

Books for study:

- 1) Text Book of Optics – Brijlal and Subramaniam , S. Chand & Co.,
- 2) Optics by Khanna and Gulati.
- 3) Fibre Optic Communication systems – Subirkumarsarkar, S.Chand& Co.,

Sub. Code	Core Practical– IV Basic Electronics Lab	L	T	P	C
20113AEC44L		0	0	3	3

List of Experiments

- 1) CRO – Study of waveforms – Lissajous figures – determination.
- 2) Potentiometer – Temperature coefficient of resistance.
- 3) FET Characteristics.
- 4) Field along the axis of a coil – determination of magnetic moment.
- 5) Spectrometer – Grating – Minimum deviation method.
- 6) Potentiometer – EMF of a thermocouple.
- 7) Spectrometer - $i-i'$ curve.
- 8) Koenig's method – Uniform bending – Young's modulus.
- 9) Cauchy's Constant determination.
- 10) IC Regulated power supply.

Course Code	Allied Paper-II Inorganic, Organic and Physical Chemistry- II	L	T	P	C
20114AEC45		5	0	0	5

UNIT – I : Amino acids and proteins

Amino acids- Classification based on structure and essential and non - essential amino acids – preparation and properties – peptides – (elementary treatment) proteins – Classification, based on physical properties and functions. Structure of proteins – primary and secondary (elementary treatment)

UNIT – II: Coordination chemistry

Nomenclature of mononuclear complexes – Werner Sidgwick, and Pauling’s theories – Chelation and its industrial importance to EDTA. Biological role of hemoglobin and chlorophyll Metallic bond Electron gas, Pauling and band theories. Semiconductors intrinsic, n- type and p-type.

UNIT –III: Synthetic polymers:

Teflon, Alkyl and epoxy resins, poly esters – General treatment only. Heterocyclic compounds – Furan, Thiophene, pyrrole and pyridine – preparation and properties of pyridine and pyrrole – Quinoline and isoquinoline.

Stereoisomerism – lactic and tartaric acid – racemic mixture and resolution. Geometrical keto – enol tautomerism Meaning of E, Z, R, S, D, L, meso, (+), (-) in stereochemistry.

UNIT- IV : Electrochemistry:

Specific and equivalent conductivities – their determination – Oswald’s dilution law, Kohlrausch law. P_H and Buffer: Importance of pH and buffers in living systems – P_H determination by colorimetric and electrometric methods.

UNIT –V : Surface chemistry:

Emulsion, gels preparation, properties and applications. Electrophoresis, Chromatography – Column, paper and thin layer chromatography.

[ENTERPRENEURSHIP]

Course code	Allied-II Practical-II Volumetric Analysis Lab- II	L	T	P	C
20114AEC46L		0	0	3	2

I - A study of the reactions of the following organic compounds:

- a. Carbohydrate,
- b. Amide,
- c. Aldehyde,
- d. Ketone,
- e. Acid,
- f. Phenol.

The students may be trained to perform the specific reactions like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional group present and record their observations.

II - Preparation (Single stage) involving

- a. Nitration,
- b. Hydrolysis
- c. Bromination.

Course Code	Skill Based Elective Package Lab -IV	L	T	P	C
20120SEC04AL			0	0	2

MS-ACCESS

1. Create a Database with a simple Table
2. Create a Database for Students Mark List using Queries.
3. Create a Database for the employees in an organization and sort by their date of joining.
4. Create Queries to Select Records that matches specific condition.
5. Create Relationships among the different Tables.
6. Create Queries using Built-in Functions.
7. Develop Forms to enter data in to the Student Marks Database
8. Develop Forms to enter data in to the Electricity bill Database.

Course Code	Skill based Elective -IV	L	T	P	C
20160SEC04B	Etiquette and Interviewing Skills	0	0	2	1

UNIT I

Corporate

Corporate grooming and dressing, Etiquettes in social as well as office settings, Email Etiquettes, Telephone Etiquettes, Contemporary issues in corporate life: diversity, Attrition, Work life balance, Hygiene and health.

UNIT II

Interviewing Skills

Researching the job-Researching the company -Questions to research the company- Informational interviews-Behavioral interviewing- Types of interview (Individual interviews, panel interviews, serial interviews, video interviews and teleconferencing) references-selling yourself-dressing for success-body language-stress reduction-Handling illegal questions.

Course Code	Communicative English-IV	L	T	P	C
20111SEC04L		0	0	1	1

Aim:

- To develop communicative skills

Objective:

- To use gerund and make sentences
- To change sentences from direct to indirect and vice versa
- To understand the listening skill
- To enhance reading skill
- To familiarize with the singular and plural forms
- To describe a picture

Outcome:

- Understand grammar
- Develop listening and reading skills

UNIT –I

Gerund

Infinitive

UNIT –II

Direct and Indirect

UNIT –III

Listening -types-features of a good listener-active and passive listening-effective listening

UNIT –IV

Reading-purpose-technique-types-reading rates-reading & interpretation

UNIT –V

Singular and Plural

Letter writing

-Meenakshi Sharma &Sangeetha Sharma

Course Code	Environmental Studies	L	T	P	C
201ENVTSTU		1	0	0	1

Aim:

Provide MESM students the opportunity to formulate learning outcomes for their degree program through interaction with URI faculty and staff involved in the six different MESM advising tracks as well with URI faculty and staff working in environmental science and management.

Objectives

The fundamental objective of the course is to introduce new Master of Environmental Science and Management (MESM) students to the opportunities and structure of the degree program. Specifically, the course will:

UNIT-I

The Multidisciplinary Nature of Environmental Studies – Definition, Scope and Importance - Need for public awareness - **Natural Resources: Renewable and Non-Renewable Resources**- Forest resources - Water resources - Mineral resources - Food resources - Energy resources - Land resources.

UNIT-II

Ecosystems- Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Types of ecosystem - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems.

UNIT-III

Biodiversity and its Conservation– Definition - Genetic, species and ecosystem diversity - Biogeographical classification of India - Values of biodiversity - Biodiversity at global, National and local levels - India as a mega - diversity nation - Hot-spots of biodiversity - Threats to biodiversity - Endangered and endemic species of India - Conservation of biodiversity.

UNIT-IV

Environmental Pollution– Definition - Air pollution - Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - Solid waste Management - Role of an individual in prevention of pollution - Disaster management.

[ENTERPRENEURSHIP]

UNIT-V

Social Issues and the Environment- From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Environmental ethics - Climate change green house effect and global warming - Ozone depletion - Waste land reclamation - Consumerism and waste products - Environmental Legislation - Issues involved in enforcement of environmental legislation - Public awareness - **Human Population and the Environment.**

Learning outcomes:

Provide MESM graduate students the opportunity to identify and develop professional internships (EVS 597) through interactions with professionals representing environmental agencies, nongovernmental organizations, or private firms.

TEXT BOOK:

1. "ENVIRONMENTAL STUDIES", K.Kumarasamy, A.Alagappa Moses, M.Vasanthi.

Course Code	Core Paper - V Electricity And Magnetism	L	T	P	C
20113AEC51		6	0	0	6

Aim:

To develop a basic understanding of electric and magnetic fields in free space using the integral forms of Maxwell's laws.

Objectives:

Describe the electric field and potential, and related concepts, for stationary charges. Calculate electrostatic properties of simple charge distributions using Coulomb's law, Gauss's law and electric potential.

Unit – I: Electrostatics

Coulomb's law – electrical images – Electric intensity and potential due to an earthed conducting sphere, Different case, applying the principle of electrical images – Electrometers: quadrant electrometers.

Unit – II: Magnetic Properties of Materials

Definitions – IH and BH curves for a magnetic material, Magnetometer method, Ballistic galvanometer method – Hysteresis –coercivity –retentivity – loss of energy per cycle – Difference in the magnetic properties of iron and steel – Magnetic circuit – Magnetic circuit of an iron ring with small air gap.

Unit – III: Chemical effects of electric current

Faraday's law's of electrolysis – Ionic velocities and Mobilities – Calculation and experimental determination of ionic mobilities – Transport numbers.

Thermo electricity – Peltier coefficient – Thomson coefficient – Application of thermodynamics to a thermocouple and Relation between Peltier and Thomson coefficients – Thermo electric diagrams – Uses.

Unit – IV: LCR Circuits

Determination of Self inductance by Rayleigh method – DC circuits: Growth and decay of current in a circuit containing resistance and inductance – Growth and decay of charge in a circuit containing resistance and capacitor – Application of electromagnetic induction – Flux meter.

[EMPLOYABILITY]

Unit – V:

AC Bridges: Owen's bridge – Anderson's bridge – Electromagnetic theory – Maxwell's equations – derivation – Propagation of energy – poynting vector.

Learning Outcomes:

Describe the magnetic field for steady currents and moving charges.

Calculate magnetic properties of simple current distributions using Biot-Savart and Ampere's laws.

Describe electromagnetic induction and related concepts, and make calculations using Faraday and Lenz's laws.

Describe the basic physical content of Maxwell's laws in integral form.

Books for Reference:

- 1) Electricity and Magnetism – Brijlal & Subramaniam.
- 2) A text book of Electricity & Magnetism – K.K. Tiwal

Course Code	Core Paper - VI Atomic Physics	L	T	P	C
20113AEC52		6	1	0	6

Aim:

This course will introduce students to the fundamentals of atomic physics and rudimentary nuclear physics. It aims to provide a coherent and concise coverage of traditional atomic and physics.

Objectives:

Important topics of current research interest will be also discussed, such as laser cooling and trapping which plays an important role in the realization of Bose-Einstein condensate in atomic vapors.

Unit – I: Positive ray analysis

Properties – e/m of positive rays: Thomson’s parabola method – Aston and Bain bridges – Determination of critical potential – Franck and Hertz’s experiment.

Unit – II: Photo Electricity

Photo electric emission – laws – Lenard’s experiment – Richardson and Compton experiments – Einstein’s photoelectric equation – Experimental verification of Einstein’s photoelectric equation by Millikan’s experiment.

Unit – III: Vector atom model

Various quantum numbers, L-S and j-j couplings – Pauli’s exclusion principle – electronic configuration of elements and periodic classification – Magnetic dipole moment of electron due to orbital and spin motion – Bohr magneton Stern and Gerlach experiment.

[EMPLOYABILITY]

Unit – IV: Fine structure of special Lines

Special terms and notations – Selection rules – Intensity rule and interval rule – Fine structure of sodium D lines – Alkali spectra – Fine structure in Alkali spectra.

Spectrum of Helium – Zeeman effect – Larmor’s theorem – Debyes quantum mechanical explanation of the normal Zeeman effect – Anamolous Zeeman effect – (Qualitative study Only).

Unit – V: X – Rays:

X – Rays – Bragg’s law – Bragg’s, X-Ray spectrometer – Origin and analysis of continuous X – ray spectrum and characteristic X – ray spectrum – Moseley’s law and its importance – Compton effect – derivation of expression for change in wavelength – its experimental verification.

[EMPLOYABILITY]

Learning Outcomes:

Explain how light interacting with atom; the working principle of laser trapping and cooling
Recognize the general features of atomic/nuclear spectroscopy

Books for Reference:

- 1) Modern Physics by R. Murugeshan.
- 2) Modern Physics by J.B. Rajam
- 3) Atomic and Nuclear Physics – N. Subramaniam and Brijlal.

Course Code	Core Paper - VII Basic Electronics	L	T	P	C
20113AEC53		5	0	0	5

Aim:

Electronic systems are built with components like resistance, capacitance, diodes, Transistors, etc. The intention of the course is to create awareness about the principle and

Objectives:

Working of the commonly used components in electronic systems. Upon completion of the Course the student is expected to be able to identify, use and check various electronic components.

Unit – I: Semiconductors

Introduction – Pure semiconductor – Impurity semiconductor – Fermi level in semiconductor – Hall effect – Junction diodes – PN Junction – Biased PN Junction – Volt Ampere characteristic of a PN Junction – Zener diode – Tunnel diode.

Unit – II: Transistors

Junction Transistor – Transistor construction – Modes of operation of a transistor – α and β of a transistor – Relation – static characteristic in CB and CE modes – Transistor amplifier – Transistor Biasing.

[EMPLOYABILITY]

Unit – III: Special Semiconductor Devices

Field effect transistor – FET parameters – Comparison between FET and Transistor – SCR – UJT.

Unit – IV: Amplifiers

Voltage and Power amplifiers: R-C coupled Transistor amplifier – Power amplifier – Class A, Class B and Class C power amplifier – Push pull amplifier – Effect of negative feedback.

Unit – V: Oscillators

Types of Oscillators – Concept of feedback oscillator – Hartley – Colpitts - Phase shift oscillator – Tuned collector oscillator – Wien-Bridge oscillator.

[EMPLOYABILITY]

Learning Outcomes:

Students will be able to explain basic circuit concepts and responses.

Will be able to do linear modeling of passive elements and sources.

Will be able to use analytical techniques in resistive circuits energized by direct current voltage and current sources.

Books for Reference:

- 1) Principles of Electronics – V.K. Metha
- 2) A text book of Applied Electronics – R.S. Sedha

Course Code	Core Practical – V	L	T	P	C
20113AEC54L	Digital Electronics Lab	0	0	3	3

List of Experiments

- 1) M and H – Absolute determination using deflection and vibration magnetometer.
- 2) Zener regulated power supply – percentage of Regulation.
- 3) Logic gates, IC- Version.
- 4) Universality of NOR gates.
- 5) Verification of Logical Expressions
- 6) Hartley oscillator – Transistor.
- 7) Universality of NAND gates.
- 8) Operational Amplifier – Adder and Subtractor.
- 9) 8-bit addition and subtraction using microprocessor 8085.
- 10) 8-bit multiplication and division using microprocessor 8085.

Course Code	Discipline Specific Elective -I	L	T	P	C
20113DSC55A	Energy Physics	5	0	0	4

Aim:

To understand the physical background and mechanisms associated with power generation and related issues.

Objectives:

Understand the forms of energy, its production, transport and storage

Understand basic nuclear physics and interactions with matter

Unit – I: Non- Renewable energy sources

World Energy Futures – Energy Sources and their Availability – Coal – Oil – Natural gas – merits and demerits.

[EMPLOYABILITY]

Unit – II: Renewable Energy Sources

Solar energy – nature of solar radiation – solar constant – Determination of Solar constant – Solar water heaters – Solar cooling – Solar ponds – Solar cookers – Water desalination.

Unit – III: Other renewable energy sources

Bio mass energy – gobar gas plants – geothermal energy – wind energy – Wind mill – Types of Wind mills – ocean thermal energy conversion (OTEC) – Energy from waves and tides.

[EMPLOYABILITY]

Unit – IV: Energy Storage

Energy storage systems – Mechanical Energy storage – Compressed Air storage – Electrical storage – Thermal energy storage.

Unit – V: Impacts of Non-conventional energy

Energy consumption in domestic, Industrial- Transportation and Agricultural sectors – Energy options for the developing countries – Impacts due to non conventional energy sources – global warming. and its impacts.

[EMPLOYABILITY]

Learning Outcomes:

Understand the conditions necessary for sustainable chain reactions in fissile material

Understand the design criteria for the control of a nuclear reactor

Understand the principles of nuclear fusion useful in power generation and stellar fusion

Understand physical ideas and issues associated with renewable forms of energy

Books for Reference:

- 1) Solar energy utilization – G.D. Rai.
- 2) Solar energy – S.P. Sukhatme

Course Code	Title	L	T	P	C
20113DSC56B	POLYMER SCIENCE	5	0	0	3

UNIT I - Properties of an isolated polymer molecule.

Ideal chain
 Segmental distribution
 Non-ideal chains
 Scaling laws

UNIT II - Concentrated solutions and melts

Thermodynamics of polymer solutions
 Concentration fluctuations in polymer solutions
 Blends
 Block copolymers

UNIT III - Polymer gels.

Elasticity
 The stress optical law
 Interactions between partial chains
 Swelling of gels

UNIT IV - Molecular motion of polymers in dilute solution.

Brownian motion
 Bead-spring model
 Dynamic light scattering

UNIT V - Molecular motion in entangled polymer systems.

Dynamics of concentration fluctuations
 Reptation
 Viscoelasticity of polymers

[EMPLOYABILITY]

Reference Books:

- 1) "Introduction to Polymer Physics" M. Doi, Clarendon Press 1996.
- 2) "Scaling concepts in polymer physics" P. G. de Gennes 1979.
- 3) "The theory of polymer dynamics" Oxford University Press, 1986.
- 4) "Principles of polymer chemistry." P. J. Flory, 1953.

Course Code	Title	L	T	P	C
20113DSC56C	SOLAR ENERGY FOR ENVIRONMENT	5	0	0	3

UNIT-I – Solar Radiation:

Sun as a source of energy, Solar radiation, Solar radiation at the Earth's surface, Measurement of Solar radiation-Pyroheliometer, Pyranometer, Sunshine recorder, Prediction of available solar radiation, Solar energy-Importance, Storage of solar energy, Solar pond

UNIT-II – Solar Thermal Systems:

Principle of conversion of solar radiation into heat, Collectors used for solar thermal conversion: Flat plate collectors and Concentrating collectors, Solar Thermal Power Plant, Solar cookers, Solar hot water systems, Solar dryers, Solar Distillation, Solar greenhouses.

UNIT-III – Solar Photovoltaic Systems:

Conversion of Solar energy into Electricity - Photovoltaic Effect, Solar photovoltaic cell and its working principle, Different types of Solar cells, Series and parallel connections, Photovoltaic applications: Battery chargers, domestic lighting, street lighting and water pumping

UNIT IV – Experimental I

1. Plot sun chart and locate the sun at your location for a given time of the day.
2. Analyse shadow effect on incident solar radiation and find out contributors.
3. Connect solar panels in series & parallel and measure voltage and current.
4. Measure intensity of solar radiation using Pyranometer and radiometers.

[EMPLOYABILITY]

UNIT V – Experimental II

5. Construct a solar lantern using Solar PV panel (15W)
6. Assemble solar cooker
7. Designing and constructing photovoltaic system for a domestic house requiring 5kVA power
8. Assignments/Model Exam.

Reference Books:

1. Solar Energy Utilization, G. D. Rai, Khanna Publishers
2. Solar Energy-Principles of thermal energy collection & storage, S.P. Sukhatme, Tata McGraw Hill Publishers, 1999.
3. Solar Photovoltaics- Fundamentals, technologies and applications, Chetan Singh Solanki, PHI Learning Pvt. Ltd.,
4. Science and Technology of Photovoltaics, P. Jayarama Reddy, BS Publications, 2004.

Course Code	Title	L	T	P	C
20113DSC56D	SEMICONDUCTOR PHYSICAL SCIENCE	5	0	0	3

UNIT – I Semiconductors:

Energy Band and Charge Carriers: Energy bands in semiconductors, Types of semiconductors, Charge carriers, Intrinsic and extrinsic materials. Carrier concentration: Fermi Level, Electron and hole concentration equilibrium, Temperature dependence of carrier concentration, Compensation and charge neutrality. Conductivity and mobility, Effect of temperature, Doping and high electric field.

UNIT – II Optical Excitation in Semiconductor:

Optical absorption, carrier generation, Carrier life time, diffusion length and photo conductivity, Direct and indirect recombination and trapping, Photoconductive devices. Diffusion of carriers, Einstein relation, Continuity equation, Carrier injection, Diffusion length. Haynes-Shockley experiment.

UNIT – III Junctions:

p-n junction and contact potential, Fermi levels, Space charge, Reverse and Forward bias, Zener and Avalanche breakdown. Capacitance of p-n junction, Schottky barriers; Schottky barrier height, C-V characteristics, current flow across Schottky barrier: thermionic emission, Rectifying contact and Ohmic contact.

UNIT IV Field Effect Transistors:

JEFT amplifying and switching, Pinch off and saturation, Gate control, I-V characteristics. MOSFET, Operation, MOS capacitor, Debye screening length, Effect of real surfaces; Work function difference, Interface charge, Threshold voltage and its control, MOS C-V analysis and time dependent capacitance. Output and transfer characteristics of MOSFET.

UNIT V Photonics:

LED: Radiative transition, Emission spectra, Luminous efficiency and LED materials, Solar cell and photodetectors: Ideal conversion efficiency, Fill factor, Equivalent circuit, Voc, Isc and Load resistance, Spectral response. Reverse saturation current in photodetector.

[EMPLOYABILITY]

Recommended Books

1. Streetman, B. and Banerjee, S., Solid State Electronics, Prentice Hall India, (2006).
2. Sze, S.M., Physics of Semiconductor Devices, John Wiley, (1981).

Course Code	Title	L	T	P	C
20113DSC56E	ELECTRICAL AND NETWORK SKILLS	5	0	0	3

UNIT - I

Basic Electricity Principles: Voltage, Current, Resistance, and Power. Ohm's law. Series, parallel, and series-parallel combinations. AC Electricity and DC Electricity. Familiarization with multimeter, voltmeter and ammeter.

UNIT – II

Understanding Electrical Circuits: Main electric circuit elements and their combination. Rules to analyze DC sourced electrical circuits. Current and voltage drop across the DC circuit elements. Single-phase and three-phase alternating current sources. Rules to analyze AC sourced electrical circuits. Real, imaginary and complex power components of AC source. Power factor. Saving energy and money.

UNIT – III

Electrical Drawing and Symbols: Drawing symbols. Blueprints. Reading Schematics. Ladder diagrams. Electrical Schematics. Power circuits. Control circuits. Reading of circuit schematics. Tracking the connections of elements and identify current flow and voltage drop.

UNIT – IV

Generators and Transformers: DC Power sources. AC/DC generators. Inductance, capacitance, and impedance. Operation of transformers.

Electric Motors: Single-phase, three-phase & DC motors. Basic design. Interfacing DC or AC sources to control heaters & motors. Speed & power of ac motor.

UNIT – V

Electrical Protection: Relays. Fuses and disconnect switches. Circuit breakers. Overload devices. Ground-fault protection. Grounding and isolating. Phase reversal. Surge protection. Interfacing DC or AC sources to control elements (relay protection device)

Electrical Wiring: Different types of conductors and cables. Basics of wiring-Star and delta connection. Voltage drop and losses across cables and conductors. Instruments to measure

current, voltage, power in DC and AC circuits. Insulation. Solid and stranded cable. Conduit. Cable trays. Splices: wirenuts, crimps, terminal blocks, split bolts, and solder. Preparation of extension board.

[EMPLOYABILITY]

Reference Books:

- A text book in Electrical Technology - B L Theraja - S Chand & Co.
- A text book of Electrical Technology - A K Theraja
- Performance and design of AC machines - M G Say ELBS Edn.

Course Code	Core Paper - VIII Digital Electronics And Microprocessors	L	T	P	C
20113AEC61		6	1	0	6

Aim:

To achieve a basic understanding of logic systems and to use this understanding in simple circuit designs.

Objectives:

To show familiarity with basic logic gates, Boolean algebra and binary numbers.

To understand how particular logical functions may be implemented and to design systems

To implement simple truth tables.

To understand how binary addition may be implemented using logic gates.

Unit – I: Number systems and codes

Decimal, Binary, Octal and Hexa decimal systems – Conversion from one to another – Binary addition, subtraction, multiplication, division, complements – Codes: BCD, Weighted, excess three, Gray code.

Unit – II: Boolean Algebra

Fundamental concepts of Boolean algebra – Basic gates and universal gates – De Morgan’s theorem: Simplification of expressions – Karnaugh map, Sop - Pas.

Unit – III: Logic Design

Half adder – Full adder, Subtractors, Multiplexers, Demultiplexer, Flip-Flops: R-S Flip Flops, J-K Flip Flop, D-Flip Flop, T-Flip Flop, Master Slave – Shift Registers – Counters – BCD – Up - Down.

Unit – IV: Memory elements

Memory cell - RAM – types – ROM: ROM, PROM, EPROM, EEPROM – Magnetic Disk Memories – Magnetic tapes – Compact disc.

Unit – V: Micro processor

Organization of 8085 – working – Machine language – Assembly language – Addressing mode, Instruction set – Programming for 8 – bit addition , subtraction, Finding a Largest number in an array – Finding a smallest number in an array.

[EMPLOYABILITY]

Learning Outcomes:

understand latches and simple memory devices.

appreciate the progression from latches to flip-flops and understand the operation of the J-K flip-flop.

be able to use and predict the behaviour of simple circuits involving J-K flip-flops.

understand excitation tables and be able to use them to design simple cyclic circuits.

Books for Reference:

- 1) Digital Principles and application – Albert Paul Malvino and Donald Leach.
- 2) Digital Design – M. Morris Mano.
- 3) Fundamentals of Microprocessors and Microcomputers – B.Ram.

Course Code	Core Paper - IX Wave Mechanics And Nuclear Physics	L	T	P	C
20113AEC62		6	1	0	6

Aim:

To explore the detailed behaviour of vibrating systems and wave motion in many different physical systems.

Objectives:

Demonstrate understanding of the behaviour of oscillating systems and wave motion.

Unit – I: Duality

Planck's hypothesis, Planck's theory and black body radiation – confirmation of quantum of energy – Compton effect and photoelectric effect – De Broglie waves – Phase and group velocities – Davison-Germer experiment – G.P Thomson experiment.

Unit – II:

Postulates, Observables, Operators, wave packets – Probability density – Physical significance of the wave function – continuity equation – expectation values – Box normalisation – Schrodinger's time independent and time dependent wave equations.

Unit – III:

Uncertainty principle, two applications – Grating and Gamma ray experiment – step potential – square well potential – L.H.O – Tunneling effect – particle in a box.

[EMPLOYABILITY]

Unit – IV: Nucleus

Review of basic properties of nuclei – mass, radius, binding energy, packing fractions, nuclear moments – isotopes – isobars – radioactivity – Linear accelerator - Cyclotron – Betatron – Geiger Muller counter – Cloud chamber – Photographic emulsions – Q value of nuclear reaction – discovery of neutron – Exp.- reactions.

Unit – V:

Liquid drop model – application to fission, fission fragments, neutrons in fission process – nuclear energy – nuclear chain reactions - thermonuclear reactor – neutron life cycle – atom bomb.

Shell model – magic numbers – spin orbit coupling – application to islands of isomerism and nuclear moments – Basic ideas of a nuclear reactor.

[EMPLOYABILITY]

Learning Outcomes:

Use the mathematical formalism that describes them.

Recognize examples across many areas of physics.

Books for Reference:

- 1) Modern Physics – Brijlal and Subramanian.
- 2) Modern Physics – R. Murugasan.
- 3) Nuclear Physics – D.C. Tayal.
- 4) Introduction to Modern Physics – F.K. Richmyer.
- 5) Nuclear Physics – I. Kaplan.

Course Code	Core Practical – VI	L	T	P	C
20113AEC63L	Advanced Digital Electronics Lab	0	0	3	3

List of Experiments

- 1) LCR Circuit – Series and Parallel.
- 2) Half adder and Half Subtractor.
- 3) Verification of DeMorgan's Theorems.
- 4) Single stage RC Coupled amplifier – Transistor.
- 5) Astablemultivibrator.
- 6) FET amplifier.
- 7) Full adder.
- 8) Conversion from decimal to hexadecimal system using microprocessor 8085.
- 9) 16 – bit addition using microprocessor 8085.
- 10) Timer Using 555 IC.

Course Code	Discipline Specific Elective -II Material Physics	L	T	P	C
20113DSC64A		5	0	0	4

Aim

The subject-specific aims of a degree in materials science are to understand the structure, properties, processing and performance of the principal classes of materials, and to understand and exploit the relationships between these four aspects of materials.

Objectives:

To understand the design, selection and processing of materials for a wide range of applications in engineering and elsewhere.

Unit – I: Crystallographic fundamentals

Crystal lattice – Primitive and Unit cell – Seven classes of crystals – Bravais lattice – Miller Indices – Structure of crystals – Simple cubic, Hexagonal close packed structure, Face centered cubic structure, Body centered cubic structure – Sodium chloride structure – Zinc Blende structure – Diamond Structure.

[EMPLOYABILITY]

Unit – II: Crystallography

Diffraction of X-Rays by Crystals – Bragg's law in one dimension – Experimental method in X-Ray diffraction – Laue method, Rotating crystal method – Powder Photograph method – Laue's equations.

Unit – III: Magnetism

Different types of magnetic materials – Classical theory of diamagnetism (Langevin's Theory) – Langevin's theory of paramagnetism – Weiss theory of paramagnetism – Qualitative explanation of Heisenberg's interpretation of internal field and quantum theory of ferromagnetism.

[EMPLOYABILITY]

Unit – IV: Dielectrics

Fundamental Definitions – Dielectrics – Different types of electric polarization – Frequency and Temperature effects on polarization – Dielectric loss – Local field on internal field – Clausius–Mossotti Relation – Determination of Dielectric constant.

Unit – V : Modern materials and new materials

Polymers – Ceramics – Super strong materials – Cermets – Electrets – Metallic glasses – Optical materials – Acoustic materials – Bio materials – Nuclear materials.

[SKILL DEVELOPMENT]

LearningOutcomes:

To understand how and why the properties of materials are controlled by structure and bonding at the atomic-scale, and by features at the microstructural and macroscopic levels. To understand how and why the structure and composition of a material may be controlled by processing.

Books for Study:

Material Science – M. Arumugam.

Course Code	Title	L	T	P	C
20113DSC65B	PARTICLE PHYSICS	5	0	0	3

UNIT I Introduction:

Fermions and bosons, Particles and antiparticles, Quarks and leptons, Yukawa picture, Types of fundamental interactions - electromagnetic, weak, strong and gravitational, HEP Units, Bound states of quarks, Hadron, Mesons and Baryons.

UNIT II Invariance Principles and Conservation Laws:

Interactions and fields in particle physics, Classical and quantum pictures Invariance in classical mechanics and in quantum mechanics types of symmetries and their breaking, Parity, Pion parity, Charge conjugation, Time reversal invariance, CP violation, CPT theorem.

UNIT III Hadron-Hadron Interactions:

Cross section and decay rates, Pion spin, Isospin, Two-nucleon system, Pion-nucleon system, Strangeness and Isospin, and Hypercharge.

UNIT IV Static Quark model of Hadrons:

The Eightfold way, Meson nonet, Baryon octet, Baryon Decuplet, hypothesis of quarks, SU (3) symmetry, Quark spin and color, Quark-antiquark combinations.

UNIT V Weak Interactions:

Classification of weak interactions, Fermi theory, Parity non-conservation in β -decay, Helicity of neutrino, Experimental verification of parity violation.

[SKILL DEVELOPMENT]

Recommended Books

1. Perkins, D.H., Introduction to High Energy Physics, Cambridge University Press, (2000).
2. Hughes, I.S., Elementary Particles, Cambridge University Press, (1991).
3. Close, F.E., Introduction to Quarks and Partons, Academic Press, (1979).
4. Segre, E., Nuclei and Particles, Benjamin-Cummings, (1977).
5. Khanna, M.P., Introduction to Particle Physics, Prentice-Hall of India, (2004).

Course Code	Title	L	T	P	C
20113DSC65C	Photovoltaics for Energy Conversion	5	0	0	3

AIM

The aim of this course is not just to impart theoretical knowledge to the students but to provide them with exposure and hands-on learning wherever possible

UNIT I Generation and recombination of electron-hole pairs:

Bandgap-to-bandgap processes, Shockley–Read–Hall recombination, Auger recombination, Surface recombination, Carrier concentration in non-equilibrium; Semiconductor junctions: p-n homojunctions, Heterojunctions, Metal-semiconductor junctions

UNIT II Solar cell parameters and equivalent circuit:

External solar cell parameters, external quantum efficiency, the equivalent circuit.

UNIT III Losses and efficiency limits:

The thermodynamic limit, The Shockley-Queisser limit, additional losses, Design rules for solar cells.

UNIT IV Crystalline silicon solar cells:

Crystalline silicon, Production of silicon wafers, Designing c-Si solar cells, fabricating c-Si solar cells, High-efficiency concepts;

UNIT V Thin-film solar cells:

Transparent conducting oxides, The III-V PV technology, Thin-film silicon technology; Chalcogenide solar cells, Organic photovoltaics, Hybrid organic- inorganic solar cells; Plasma-enhanced chemical vapour deposition, Physical vapour deposition, Screen printing technology, Electroplating technology;

[SKILL DEVELOPMENT]

3. Jenny Nelson, “The Physics of Solar Cells” Imperial College Press, 2003.

Course Code	Title	L	T	P	C
20113DSC65D	PHYSICS OF RADIOGRAPHY	5	0	0	3

Aim:

The material in this section is designed to teach the basics of radiological physics, interaction of radiation with matter, basic dosimetric concepts and radiation detectors.

Unit1: Ionizing & Non ionizing Radiation

Electromagnetic spectrum- Different sources of Non Ionizing radiation-Radiofrequency, Microwaves, Infrared, Visible and Ultra violet radiation production, physical properties and their interaction with tissues. Radiation quantities and units - Radiometry - particle flux and fluence - energy flux and fluence -Linear and mass attenuation coefficients – Mass energy transfer and mass energy absorption coefficients

[SKILL DEVELOPMENT]

Unit 2: X-Ray Generators

Discovery- Production – Properties of X-rays – Characteristics and continuous spectra– Design of hot cathode X-ray tube – Basic requirements of medical diagnostics, therapeutic and industrial radiographic tubes – Rotating anode tubes – Hooded anode tubes – Industrial X-ray tubes - Safety devices in X-ray tubes –X ray tubes for crystallography.

Unit 3: Particle Accelerators

Particle accelerators for industrial, medical and research application – The Resonant transformer – Cascade generator – Van De Graff Generator – Pelletron – Cyclotron – Betatron Synchro-Cyclotron – Linear Accelerator – Klystron and magnetron –Travelling and Standing Wave Accelerations – Microtron – Electron Synchrotron –Proton synchrotron.

Unit 4: Interaction of photons with Matter

Interaction of electromagnetic radiation with matter- Photoelectric and Compton process and energy absorption – Pair production – Attenuation and mass energy absorption coefficients – Relative importance of various processes.

Unit 5: Interaction of charged particles with Matter

Classical theory of inelastic collisions with atomic electrons- Energy loss per ion pair by primary and secondary ionization –Dependence of collision energy losses on the physical and chemical state of the absorber - Cerenkov radiation – Electron absorption process – Scattering Excitation and Ionization –Radiative collision - Bremstrahlung – Range energy relation - Continuous slowing down approximation(CSDA) – transmission and depth dependence methods for determination of particle penetration – empirical relation between range and energy

3. R. E. Lapp, Nuclear Radiation Physics (Prentice-Hall Inc., New York, 2048).
4. L. Slack and K. Way, Radiations from Radioactive Atoms in frequent use,(United States Government Printing Office, Washington, 2059).
5. K. S. Krane, Introductory Nuclear Physics (John-Wiley, New York 2087).

Course Code	Title	L	T	P	C
20113DSC65E	PHOTONICS	5	0	0	3

Aim:

- To learn the basic principles and working of lasers, basic processes and features of nonlinear optical materials and fiber optics.

UNIT – I: SOLID STATE LASERS

Solid state crystalline and glass Lasers – Advantages – Construction of the Ruby Laser – Mechanism of Excitation of the Ruby Laser – Neodymium Lasers – Nd-YAG Laser Nd-glass Laser – Alexandrite Laser – Fiber Glass Laser – Solid state Tunable Laser – Titanium Sapphire Laser – Colour center Lasers – DPSSL.

UNIT – II: LIQUID AND DYE LASERS

Geometry of Dye lasers – Pulsed Dye lasers pumped by Flash lamps – Tunable pulsed lasers pumped by other lasers – Tunable continuous Wave Dye lasers – Mode-locked Ring Dye lasers – Mechanism of Excitation of Mode – locked Ring Dye laser – Helium-neon Laser – Argon Iron Laser – Krypton Ion laser – Metal Vapour lasers – Carbon Dioxide Laser – Gas Dynamic Laser – Nitrogen Laser.

UNIT – III: CHEMICAL, X-RAY AND FREE ELECTRON LASERS

Hydrogen chloride laser – Hydrogen fluoride laser – X-ray lasers – Free Electron Lasers (FEL) – Characteristics of semiconductors lasers – Semiconductor diode lasers – Heterojunction semiconductors materials – Double Hetero structure Laser – Quantum – well Lasers – Higher power Semiconductor Diode Lasers – Single Mode Lasers – Multimode Lasers – Surface – Emitting Lasers (SELS).

UNIT – IV: Industrial Applications of Lasers (Material Processing)

High Power Gas Lasers – Material Processing with Lasers – Metals and Lasers Interactions – Materials Processing mechanism – Hole Drilling with Lasers – Cutting Process with Lasers - Laser Welding – The Welding Process – Micro Laser Welding – Deep Penetration Welding (High Power Laser Welding) Laser Hardening – Marking with Lasers – Wire Striping with laser – Lasers in Nuclear Science – Isotope Separation – Lasers in Spectroscopy – Lasers in Chemistry – Light Detecting and Ranging (LIDAR).

UNIT – V: Laser Communication / Holography and Its Applications / Medical Science

Optical Sources for fiber optical communication – Photo (or photon) Detectors – Operation of Optical Receivers – Essential Characteristics of Laser in Fiber Optic Communication – Types of Holograms – Intensity Distribution in a Hologram – Fourier Hologram – Thick Hologram – Colour Holograms – Computer Holograms – Holographic Microscopy & Applications – Laser Diagnostics – Photo medicine – Lasers in Ophthalmology – Lasers for General Surgery – Lasers In Dermatology – Cardiology – Lasers In Dermatology – Cardiology – Lasers In Density – Lasers Used in Medicine.

[SKILL DEVELOPMENT]

Books for Study:

1. Koechner. W. Solid State laser engineering (Springer – Verlag, New York, 2092).
2. Svelto, O. Principles of Lasers (Plenum Press, New York, 2076).
3. Schafer F.P. Dye Lasers (Springer – Verlag, Berlin, 2073).
4. Rampal, V.V. Lasers and Applications (South Asian Publishers, New Delhi, 2093).

Course Code	General Elective Journalism	L	T	P	C
20111GEC		4	0	0	2

Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

UNIT- II

News – Definition, Kinds, Elements, Sources

UNIT- III

Reporters

UNIT- IV

The Editor and the Sub Editor

[SKILL DEVELOPMENT]

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

References:-

Course code	General Elective	L	T	P	C
20112GEC	Development of Mathematics Skills	4	0	0	2

Aim:

- To understand the concepts from the five branches of mathematics

Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

Course Code	General Elective Food And Adulteration	L	T	P	C
20114GEC		4	0	0	2

Aim: To introduce students to food safety and standardization act and quality control of foods.

Objectives:

1. To educate about common food adulterants and their detection.
2. To impart knowledge in the legislative aspects of adulteration.
3. To educate about standards and composition of foods and role of consumer.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

[ENTREPRENEURSHIP]

References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor

Course Code	General Elective Mushroom Technology	L	T	P	C
20120GEC			4	0	0

UNIT-1

Introduction-history-scope of edible mushroom cultivation-types of edible mushroom in India-calacybleindica, volvariellavolvacea ,pleurotus sp. Agaricusbisporus

UNIT-II

Pure culture-preparation of media(PDA and oat meal agar media)sterilization-preparation of test tube slants to store mother culture-culturing of pleurotus mycelium on petriplates-preparation of mother spawn in saline bottle and polypropylene bags and their multiplication

UNIT-III

Cultivation technology:infrastructure,substrates(locally available)polythene bag,vessels,inoculation hood-inoculation loop-low cost stove-sieves-culture rack mushroom unit(Thatched mouse)-mushroom bed preparation-paddy straw,sugarcane trash,maizastraw,banana leaves

UNIT-IV

Storage and nutrition:short term storage-long term storage (Scanning,pickles, papads,drying,storage ion salt solutions)-nutrition:proteins,aminoacids,mineral elements,nutrition:carbohydrates-crude fiber content,vitamins

UNIT-V

Food preparation, types of foods prepared from mushroom-soup,cutlet,omelette,samosa,pickles,curry,researchcentres-national level and regional level cost benefit ratio-marketing in India and abroad-export value

Course Code	General Elective	L	T	P	C
20120GEC	Web Technology	4	0	0	2

Aim:

- To equip the students with basic programming skill in Web Designing

Objective:

- To understand and practice mark up languages
- To learn Style Sheet and Frames

Outcomes:

- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages

UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

UNIT III

Ordered and unordered lists – Table handling.

UNIT IV

DHTML and Style Sheet – Frames.

UNIT V

A web page design project – Forms.

Text Book

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

Reference Book

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
20122GEC	E-Commerce and its Application	4	0	0	2

Aim:

To organize and promote the exchange of information on communication protocols and information exchange mechanisms for Electronic Commerce.

Objectives:

To be aware of all aspects of communication and information exchange in Electronic Commerce, including:

- Navigation, brokerage, advertising, and catalogue exchange in pre-sales activities.
- Negotiation and contract making protocols in interactions between consumers, businesses, and public administration.
- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government.

UNIT-I:

History of E-commerce and Indian Business Context: Early Business Information Interchange Effort - Emergence of the Internet-Emergence of the world wide web – The milestones – Advantages of E-Commerce- Disadvantages of E-commerce-Online Extension of a BAM model- Transition to E-commerce in India- The internet and India TELCO-Managing Supply chain on the Internet- Hindustan Lever – Getting the E-advantage – Asian paints – E-transforming the organization - CRISIL – Cost – Effective distribution channels – ICICI Bank – Comprehensive Transactions – E-transition challenges for Indian Corporate – The Information Technology Act,2000 – ITC’S echoupal

Business Models for E-Commerce: E-business models based on the Relationship of Transaction parties- E-business model base on the relationship of transaction types.

UNIT-II:

Enabling Technologies of the World Wide Web: Internet client – Server Application – Networks and Internets –Software agents – Internet Service Provider – Broadband Technologies – Hypertext –Java Script - XML

UNIT- III:

E-Marketing: Traditional Marketing – Identifying web presence Goals –The Browsing Behaviour model – online marketing – E-advertising – Internet Marketing Trends – Target Markets – E-branding – Marketing strategies – The Times of India.

UNIT-IV:

E-Security: Information system security-security on the Internet-E-Business risk Management issues-Information security environment in India.

UNIT-V

E-payment Systems: E-Banking at ICICI bank-Main concerns in internet banking-History's lesson about payments: People drive change-digital payment requirements-digital token-based E-payment systems-classification of new payment system-properties of electronic cash(E-cash)-check payment system on the Internet-risk and E-payment system-Designing E-payment system-digital signature-online financial service in India-online stock trading: The high speed alternative.

Outcomes:

- Secure exchange of documents, content and value in open trading protocols.
- Communication platforms for the e-Economy, including e-commerce, e-business and e-government

Reference Book:

“E-Commerce: An Indian Perspective” P.T.Joseph, S.J. Third Edition

Course Code	General Elective	L	T	P	C
20161GEC	Indirect Taxes	4	0	0	2

Aim:

- To acquaint with the knowledge of indirect taxes

Objectives:

- To make the students to gain expert knowledge in indirect taxes.
- To have practical knowledge on excise duties and customs duties.
- To learn the fundamentals of service tax, sales tax and VATS.

Outcome

- Students gained knowledge of various provisions of central excise customs law, service tax, VAT and sales tax and their applications in different circumstance.

UNIT – I

Objectives of Taxation - contribution to Government revenue- cannons of Taxation – Tax system in India – Direct and Indirect taxes Advantages and Disadvantages of Indirect taxes.

UNIT – II

Central Excise Duty – Meaning - Levy and collection - Distinction between Excise duty and Customs Duty and Sales Tax. Types of excise duties Methods of Levying Excise Duty – Excise and small scale Industries – Excise and Exports.

UNIT – III

Customs Duty – Levy and collection of customs duty Different types of customs Duties – Prohibition on importation and exportation of goods. Exemptions from customs duty.

UNIT – IV

Service Tax – Growth of Service sector – Meaning of Service Tax – Elements of Service Tax- exempted services from tax - Value of taxable services-Different services on which tax is payable.

UNIT – V

Value Added Tax (VAT)

Meaning of VAT, Justification of VAT – VAT and Sales Tax Advantages and Disadvantages of VAT. Methods of Calculating VAT Levy of VAT and Types of VAT.

Reference Books:

- Income Tax Law and Practice - N.Hariharan.
- Business Taxation – T.S.Reddy/Hari Prasad Reddy.

Course Code	Skill Based Elective	L	T	P	C
20120SEC06AL	Package Lab -V I	0	0	2	1

FLASH

1. Drawing and painting original art by using simple objects in flash.
2. Develop a Flash Document by applying different type of Styles in Text with Animations.
3. Create a frame-by-frame animation technique.
4. Develop a program for animation with motion Tweening.
5. Develop a program for animation with shape Tweening.
6. Develop a program for adding sound to your movies.
7. Create a simple Banner.
8. Create a simple animation by using MovieClip and Graphic Symbols.

Course Code	Skill based Elective -VI	L	T	P	C
20160SEC06B	Life Skills and other Skills	0	0	2	1

UNIT I

Life Skills

Knows how to use technology to communicate safely and effectively. - Knows how to access community resources in case of emergency. -Knows how to obtain copies of personal documents - knows how to book train ticket, Bus Ticket and Air Ticket - Occupational Safety , First-aid

UNIT II

Other Skills

Meditation. Improving personal memory, Study skills that include Rapid Reading, Notes Taking, Self learning, Complex problem solving and creativity.

Course Code	Communicative English-VI	L	T	P	C
20111SEC06L		0	0	2	1

Aim:

- To develop communicative skills

Objective:

- To extract the main ideas from a text
- To understand the meaning of text
- To expand an idea
- To shorten a text
- To develop vocabulary
- To enhance writing skills
- To write simple, compound and complex sentences

Outcome:

- Develop communicative skills

UNIT –I

Jumbled words

Paragraph writing

UNIT –II

Prefix and suffix

Precise writing

UNIT –III

Eponyms

Summarizing

UNIT –IV

Compound words

Simple, Compound and Complex

UNIT –V

Homophones

Essay writing

Course Code	CORE PAPER – I ADVANCED MATHEMATICAL PHYSICS	L	T	P	C
20213SEC11		6	2	0	5

Aim:

- To learn various mathematical concepts and techniques in vector space, groups and functions of special types to solve physical problems

UNIT – I: MATRIX THEORY

Definitions of basic matrix theory – Rank of matrix – Inverse matrix – characteristic matrix and characteristic equation of a matrix – Cayley –Hamilton theory – characteristic root and vectors of a matrix [eigen values & eigen vectors] – Diagonalization of matrices.

VECTOR FIELDS:

Line, surface and volume integrals – Divergence of vector function – curl of vector function – Gauss divergence theorem – Stokes theorem – Green’s theorem – Orthogonal curvilinear coordinate systems: Expression for gradient, divergence, curl and Laplacian.

[EMPLOYABILITY]

UNIT – II: COMPLEX ANALYSIS

Functions at Complex Variables- Differentiability – Cauchy – Riemann Conditions – Complex Integration – Cauchy’s Integral Theorem and Integral Formula – Taylor’s and Laurent’s series – Residues and Singularities – Cauchy Residue Theorem – Evaluation of Definite Integrals.

UNIT – III

Fourier Series – Sine and Cosine Half Range Series – Fourier Transformations – Sine and Cosine Transforms – Faltung Theorem- Application to Heat and Wave Equation.

Laplace Transform – Convolution Theorem – Solution of Ordinary Equations.

UNIT – IV

Gamma and Beta Functions – Series Solution – Legendre, Bessel, Laguerre and Hermite Differential Equations – Rodriguez Formula – Generating Functions – Orthogonality Relations – Important Recurrence Relations.

UNIT - V: NUMERICAL METHODS

Principals of Least Square – Curve Fitting – Parabola- Exponential – Solutions of Numerical Algebraic and Transcendental Equations – Newton Raphson Method – solution of simultaneous Linear Algebraic Equations – Gauss Elimination Method – Numerical Integration – Trapezoidal Rule, Simpson’s

1/3 Rule- Solution of Ordinary Differential Equations – Euler's Method – Second Order and fourth order Runge-Kutta Method.

[EMPLOYABILITY]

Books for Study and Reference:

1. E. Kreyszig, Advanced Engineering Mathematics. (Wiley Eastern, New Delhi, 1983)
2. G. Arfken and H.J. Weber, Mathematical Methods of Physics.
3. A.K. Ghatak, I.C. Goyal and A.J. Chua, Mathematical physics.
4. W.W. Bell, Special Functions for Scientists and Engineers.
5. Transforms – Goyal Gupta.
6. Numerical methods for scientist and engineers – M.K. Venkatraman.
7. Mathematical Physics – B.D. Gupta.

Course Code	CORE PAPER – II CLASSICAL AND STATISTICAL MECHANICS	L	T	P	C
20213SEC12		6	1	0	5

Aim:

- To learn various mathematical techniques of classical mechanics and their applications to physical systems and introduce relativistic dynamics.

UNIT – I: FUNDAMENTAL PRINCIPLES AND LAGRANGIAN FORMULATION

Constraints - Generalised Co-ordinates – D’Alembert’s Principle and Lagrange’ Equation – Hamilton Formulation – Lagrange’s Equation of Motion.

LAGRANGIAN FORMULATIONS – APPLICATIONS:

Theory of Small Oscillations – Normal Modes – Wave Motion – Wave Equation. Euler Angles – Euler’s Equations – Linear Tri Atomic Molecule.

UNIT – II: HAMILTON’S FORMULATION

Hamilton’s Canonical Equation of Motion – Hamilton’s Equation from Variation Principle – Principle of Least Action Poisson Brackets – Invariance of PB Under canonical Transformation Method – Action Angle Variable.

[EMPLOYABILITY]

UNIT –III: NON – LINEAR DYNAMICS

Regular and Chaotic Motions – Linear and Non-Linear Forces – Dissipative and Conservative Systems – Discrete and Continues Time Dynamical System – Logistic Map – Fixed Point Analysis – Period Doubling Phenomena – Route to Chaos – Characterization of Chaos – Dynamic of MLC Circuits.

SOLUTION: Linear and Non – Linear Waves – Solitary – Kdv Equation.

UNIT – IV: CLASSICAL STATISTICAL MECHANICS

Macro and Micro States – Statistical Equilibrium – Phase Space and Ensembles – Density Function – Liouville’s Theorem – Maxwell – Boltzmann Distribution Laws – Micro Canonical Ensembles – Ideal Gas Entropy – Partition Function – Principle of Equipartition of Energy - Canonical and Grand Canonical Ensembles.

UNIT – V: QUANTUM STATISTICAL MECHANICS

Basic Concepts – Quantum Ideal Gas – Bose Einstien and Fermi Dirac Statistics – Distribution Laws – Sackur – Tetrode Equation – Equation of State – Bose Einstein Condensation.

Ideal Bose Gas – Black Body and Plank's Radiation – Phonons – Liquid Helium – Degeneracy – Fermi Gas – Pauli's Para Magnetism.

[EMPLOYABILITY]

References:

1. Classical Mechanics – Golstien
2. Classical Mechanics – Gupta Kumar

Course Code	CORE PAPER – III ELECTRONICS AND COMMUNICATIONS	L	T	P	C
20213SEC13		6	1	0	4

Aim:

- To understand the working of advanced semiconductor devices and digital circuits and the utility of OP-AMP and learn the basics of integrated circuit fabrication, applications of timer IC-555 and building block of digital systems.

UNIT – I: OPTO ELECTRONICS

LED – applications – Photo emissive devices – Photomultiplier tube – photovoltaic devices – Bulk type photoconductive cell – Photodiodes – Phototransistor – LCD – applications.

POWER ELECTRONICS

TRIAC – construction – operation – characteristics – application – DIAC – application – Unijunction transistor (UJT) – equivalent circuit – application.

UNIT – II: TELEVISION FUNDAMENTALS

Introduction to Antenna – Current and voltage Distribution – UHF Antenna – Horn Antenna – Wide Band Antenna – Log Periodic Type – Loop Antenna.

Essential of Colour T.V.: Colour perception – Three colour theory – Luminance, Hue and Saturation – Colour T.V. camera – Luminance signal – colour T.V. display tubes – Delta-gun – Gun-in-line – trinitron colour picture tube – NTSC colour T.V. system – PAL colour T.V. system.

UNIT – III: COMMUNICATION SYSTEMS

Pulse Modulation – Time Division Multiplexing – Pulse Time Modulation – Pulse width Modulation – Pulse code Modulation – Basic Digital Communication System – Amplitude Shift Keying – Phase Shift keying and Frequency Shift Keying.

UNIT – IV: FIBER OPTIC COMMUNICATION

Basic Optical Laws and Definitions – Optic Fiber Modes and Configurations- Wave equation for Step Index Fiber – Graded Index Fiber Structure – Fiber materials – Fiber Fabrications – Double Crucible Method – Attenuation – Lensing Schemes for Coupling – Fiber to Fiber Joints – Optical Fiber Connectors- Optical Source – LED, Laser Diode – Photo Detectors – Noise Detector Responding Time.

[EMPLOYABILITY]

UNIT – V: SATELLITE COMMUNICATION

Introduction Satellite Communication System – Satellite orbits – Basic Components of Satellite Communication – Constructional Features – Commonly used Frequencies – Communication Package Communication in India. ISDN, LAN, VAN.

Books for Study and Reference:

1. Principals of Communication Engineering – Anokh Singh, A.K. Chabra, S. Chand.
2. Electronic Communication System – Kennedy and Davis, Tata McGraw Hill Edition.
3. Optical Fiber Communications – Gerd Keiser, McGraw Hill International Editions.
4. Basic electronics solid state – B.L. Theraja, S. Chand & co.
5. Principals of Electronics – V.K. Metha, Rohit Metha, S. Chand & co Ltd.
6. Monochrome and colour television – R.R. Gultai, New Age International (P) Ltd Publishers, New Delhi.

Course Code	CORE PRACTICAL –I SPECTROSCOPY AND GENERAL ELECTRONICS LAB	L	T	P	C
20213SEC14L		0	0	4	3

Aim:

- Experimental determination of certain physical constants and its properties.
- Experimental verification of characteristics and applications of electronic components with devices.

SECTION A

1. Determination of q , n , σ by elliptical fringes method.
2. Determination of q , n , σ by hyperbolic fringes method.
3. Determination of Stefan's Constant.
4. Determination of dielectric constant at a high frequency by Lecher wire.
5. Determination of e/m of an electron by Thomson's method.
6. Iron Arc spectrum.
7. Copper Arc spectrum.
8. Brass Arc spectrum.

SECTION B

1. Feed back amplifier.
2. Characteristics of JFET.
3. Characteristics of UJT.
4. Characteristics of SCR.
5. Characteristics of LDR.
6. Common sources amplifier using FET.
7. Design and study of Bistable multivibrator using 555 timer.
8. Opamp CMRR, inverting and non inverting amplifiers.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-I	L	T	P	C
20213DSC15A	INSTRUMENTATION	5	0	0	4

Aim:

- To understand the concepts and application of electronic Instrumentation in the Medical field.

UNIT I: DISPLACEMENT MEASUREMENT

Electrical Method – The Strain Gauge – The LVDT – Capacitance Gauges – Piezoelectric Material – Piezo Electrical Transducers.

UNIT II: PRESSURE MEASUREMENT

Manometers – Elastic Types – Bourdon Tubes – Diaphragm Elements – Bellows Elements – Electrical Transducers as Secondary Transducers – Resistive Transducers – Inductive Transducers – Measurements of Low Pressure (Vacuum gauges) - Thermo Couple Vacuum Gauge – Pirani Gauges.

UNIT III: TEMPERATURE MEASUREMENT

Resistance Thermometers – Bi Metallic Thermometers - Radiation Pyrometers – Radiation Receiving Elements – Total Radiation Pyrometers – Infra-red Pyrometers – Optical Pyrometers – Measurements of Very High or Stellar Temperature.

UNIT IV: FLOW MEASUREMENT

Flow Rate Sensing Elements – Measurement of Flow – Turbine Meters – Electromagnetic Flow Meters - Hot Wire Anemometers – Flow Meter Using Thermistors – Ultrasonic Flow Transducers.

UNIT V: MEASUREMENT OF LEVEL , THICKNESS AND HUMIDITY

Electrical Methods – Resistive Method – Inductive Methods – Capacitive Methods – Measurement of Liquid Level with Gamma Rays – Liquid Level Measurement Using Float. Measurement of Thickness: Inductive Methods – Ultrasonic Vibration Methods – Measurement of Humidity.

[ENTREPRENEURSHIP]

Book for Study:

1. A Course in Electrical and Electronic Measurement and Instrumentation – A.K. Sawhney

Course Code	Course Title	L	T	P	C
20213DSC15B	Medical Physics	5	0	0	4

UNIT - 1

PHYSICS OF DIAGNOSTIC AND THERAPEUTIC SYSTEMS-I

X-RAYS: Electromagnetic spectrum – production of x-rays – x-ray spectra- Bremsstrahlung- Characteristic x-ray – X-ray tubes – Coolidge tube – x-ray tube design – tube cooling stationary mode – Rotating anode x-ray tube –HT cables.

UNIT - II

RADIATION PHYSICS: Radiation units - exposure - absorbed dose – units: rad, gray - relative biological effectiveness - effective dose - inverse square law - interaction of radiation with matter Geiger counter – Scintillation counter – ionization chamber – Dosimeters – survey methods – area monitors – TLD and semiconductor detectors.

UNIT - III

MEDICAL IMAGING PHYSICS: X-ray diagnostics and imaging, Physics of nuclear magnetic resonance (NMR) – NMR imaging – MRI Radiological imaging – Radiography – magnetic resonance imaging – thyroid uptake system – Gamma camera (Only Principle, function and display)

UNIT - IV

RADIATION THERAPY PHYSICS: Radiotherapy – kilo voltage machines – deep therapy machines – Telecobalt machines – Medical linear accelerator. Basics of Teletherapy units – deep x-ray, Telecobalt units, medical linear accelerator –bolus – percentage depth dose – tissue – air ratio – back scatter factor.

UNIT - V

RADIATION AND RADIATION PROTECTION: Principles of radiation protection – protective materials-radiation effects – somatic, genetic stochastic & deterministic effect, Personal monitoring devices - Radiation monitors.

[ENTREPRENEURSHIP]

References:

- Medical Physics, J.R. Cameron and J.G.Skofronick, Wiley (1978)
- Basic Radiological Physics Dr. K. Thayalan - Jayapee Brothers Medical Publishing Pvt. Ltd. New Delhi (2003)

Course Code	Course Title	L	T	P	C
20213DSC15C	PHYSICS WORKSHOP SKILL	5	0	0	4

UNIT – I

Introduction: Measuring units. conversion to SI and CGS. Familiarization with meter scale, Vernier calliper, Screw gauge and their utility. Measure the dimension of a solid block, volume of cylindrical beaker/glass, diameter of a thin wire, thickness of metal sheet, etc. Use of Sextant to measure height of buildings, mountains, etc.

UNIT – II

Mechanical Skill I: Concept of workshop practice. Overview of manufacturing methods: casting, foundry, machining, forming and welding. Types of welding joints and welding defects. Common materials used for manufacturing like steel, copper, iron, metal sheets, composites and alloy, wood.

UNIT – III

Mechanical Skill II:

Concept of machine processing, introduction to common machine tools like lathe, shaper, drilling, milling and surface machines. Cutting tools, lubricating oils. Cutting of a metal sheet using blade. Smoothing of cutting edge of sheet using file. Drilling of holes of different diameter in metal sheet and wooden block. Use of bench vice and tools for fitting. Make funnel using metal sheet.

UNIT - IV

Electrical and Electronic Skill: Use of Multimeter. Soldering of electrical circuits having discrete components (R, L, C, diode) and ICs on PCB. Operation of oscilloscope. Making regulated power supply. Timer circuit, Electronic switch using transistor and relay.

UNIT - V

Introduction to prime movers: Mechanism, gear system, wheel, Fixing of gears with motor axel. Lever mechanism, Lifting of heavy weight using lever. braking systems, pulleys, working principle of power generation systems. Demonstration of pulley experiment.

[ENTREPRENEURSHIP]

Reference Books:

- A text book in Electrical Technology - B L Theraja – S. Chand and Company.
- Performance and design of AC machines – M.G. Say, ELBS Edn.

Course Code	Course Title	L	T	P	C
20213DSC15D	COMPUTATIONAL PHYSICS	5	0	0	4

UNIT – I

Introduction:

Importance of computers in Physics, paradigm for solving physics problems for solution. Usage of linux as an Editor.

UNIT – II

Algorithms and Flowcharts:

Algorithm: Definition, properties and development. Flowchart: Concept of flowchart, symbols, guidelines, types. Examples: Cartesian to Spherical Polar Coordinates, Roots of Quadratic Equation, Sum of two matrices, Sum and Product of a finite series, calculation of $\sin(x)$ as a series, algorithm for plotting (1) lissajous figures and (2) trajectory of a projectile thrown at an angle with the horizontal.

UNIT – III

Scientific Programming:

Some fundamental Linux Commands (Internal and External commands). Development of FORTRAN, Basic elements of FORTRAN: Character Set, Constants and their types, Variables and their types, Keywords, Variable Declaration and concept of instruction and program. Operators: Arithmetic, Relational, Logical and Assignment Operators.

UNIT – IV

Expressions:

Arithmetic, Relational, Logical, Character and Assignment Expressions. Fortran Statements: I/O Statements (unformatted/formatted), Executable and Non-Executable Statements, Layout of Fortran Program, Format of writing Program and concept of coding, Initialization and Replacement Logic. Examples from physics problems.

UNIT – V

Control Statements: Types of Logic (Sequential, Selection, Repetition), Branching Statements (Logical IF, Arithmetic IF, Block IF, Nested Block IF, SELECT CASE and ELSE IF Ladder statements), Looping Statements (DO-CONTINUE, DO-ENDDO, DOWHILE, Implied and Nested DO Loops), Jumping Statements (Unconditional GOTO, Computed GOTO, Assigned GOTO) Subscripted Variables (Arrays: Types of Arrays, DIMENSION Statement, Reading and

Writing Arrays), Functions and Subroutines (Arithmetic Statement Function, Function Subprogram and Subroutine), RETURN, CALL, COMMON and EQUIVALENCE Statements), Structure, Disk I/O Statements, open a file, writing in a file, reading from a file. Examples from physics problems.

Course Code	ADVANCED CRYSTAL TECHNIQUES	L	T	P	C
20213DSC15E		5	0	0	4

AIM:

To introduce the knowledge on crystal growth and characterization.

OBJECTIVE:

To expose the students with theories of nucleation• & crystal growth, crystal growth by from solution, melt and vapour phase and their characterization.

Unit – 1: Crystal growth theory

Classical theory of nucleation: Gibbs Thomson equation for vapour and solution – Modified Thomson’s Equation for melt – Spherical nucleus – Cylindrical nucleus - Heterogeneous nucleation – cap-shaped nucleus – disc shaped nucleus – Kinetics of crystal growth – Kossel, Stranski, Volmer (KSV) theory – Burton, Cabrera and Frank (BCF) theory.

Unit – 2:Solution growth

Low temperature solution growth – Expression of supersaturation – Methods of crystallization – Constant temperature bath – Nonlinear phenomena in KDP family crystals – High temperature solution growth – Principles of Flux growth.

Unit – 3: Gel growth

Growth from gel: structure and properties of gel – single diffusion method – Double diffusion method.

Unit – 4: Melt growth

Growth from melt: Bridgmann and related technique – Crystal pulling technique – Liquid encapsulated Czochralski technique – Zone melting technique – Skull melting process – Verneuil process.

Unit – 5: Vapour Growth

Physical vapour deposition – Chemical vapour transport – hydrothermal growth – low pressure autoclaves - high pressure autoclaves – growth of zinc oxides – growth of garnets Electrocrystalization – electro chemical potential – Nernst relation – Voltametry.

[ENTREPRENEURSHIP]

Course Code	CORE PAPER – IV MICROPROCESSOR AND MICROCONTROLLER	L	T	P	C
20213SEC21		6	0	0	5

Aim:

- To learn basic principles of architecture and functioning of microprocessor and microcontroller and programming and interfacing aspects of them.

UNIT – I: MICROPROCESSOR 8085

8085 Microprocessor – Bus Architecture – registers – Central processing unit – timing and control unit – Instruction and Data flow – System timings – Examples – Instruction set – Data transfer group – Logical group – Branch group – Stack and I/O control instructions – Addressing modes.

UNIT – II: ASSEMBLY LANGUAGE PROGRAMS (8085 ONLY)

Addition – Subtraction – Multiplication – Division – BCD arithmetic – Searching an array for a given number – Choosing the biggest and smallest numbers from a list – Ascending and Descending order – Square root of a number – Time Delay – Square wave generator.

UNIT – III: MICROPROCESSOR 8086

Organization of the 8086 Microprocessor – Memory organization – Register structure – Addressing modes in 8086 – Minimum mode and maximum mode – Exception handling in 4086 – Assembler and Multiprocessing – Assembler – Directives and operators – Data definition and storage allocation – Assigning names and expressions – Segment definition – Program definition – Alignment directives.

UNIT – IV: INTERFACING MEMORY AND I/O DEVICES

Interfacing memory and devices – I/O and memory mapped I/O – Types of interfacing devices – Data transfer schemes – Programmed and DMA data transfer schemes – Programmable Peripheral Interface (8255 A) – 8253 Timer Interface – DMA controller – Programmable Interrupt Controller (8259) – Programmable communication interface (8251).

[EMPLOYABILITY]

UNIT – V: MICROCONTROLLER 8051

Introduction of Microprocessor and Micro controllers – Comparison of microprocessor and microcontrollers – 8051 architecture – Internal memory – Input output pins, ports external memory – Addressing modes.

Instruction set of 8051 – Data transfer instruction – Arithmetic instruction – Branch instruction – Bit manipulation instruction.

Books for Study and Reference:

1. R. Goankar, Microprocessor Architecture, programming and applications (Wiley Eastern).
2. B. Ram, Fundamentals of Microprocessor and Microcomputers (Dhanapet Rai & Sons).
3. Introduction to Microprocessor – Aditya P. Mathur.
4. Microcomputer System 8086/8088 Family – Yuchngliv and clenn A Gibson Prentice Hall.
5. Microprocessors and Interfacing – Programming and Hardware Douglas V Hall.
6. The 8051 Microcontroller Architecture, Programming & Applications – Kenneth J. Ayla, Penram International Publishing (India).

Course Code	CORE PAPER – V QUANTUM MECHANICS	L	T	P	C
20213SEC22		6	0	0	5

Aim:

- To learn the fundamental concepts and certain theoretical methods of quantum mechanics and their applications to microscopic systems.

UNIT I: SCHRODINGER EQUATION AND GENERAL FORMULATION

Schrodinger Equation – Physical Meaning and Condition on the Wave Function – Expectation Values and Ehrenfest's Theorem – Hermitian Operators and their Properties – Commutation Relation Uncertainty Relation – Bra and Ket Vectors – Schrodinger, Heisenberg and Interaction Pictures.

UNIT II: EXACTLY SOLVABLE SYSTEM

Liner Harmonic Oscillator – Solving the one Dimensional Schrodinger Equation – Abstract Operator Method – Particle in a Box-Square Well Potential – Rectangular Barrier Potential – Rigid Rotator – Hydrogen Atom.

UNIT III: APPROXIMATION METHODS

Time Independent Perturbation Theory: Non-degenerate and Degenerate Perturbation Theories – Stark Effect – WKB Approximation – Application to Tunneling Problem and Quantization Rules.

Time Dependent Perturbation Theory: Harmonic Perturbation – Transition Probability.

UNIT IV: SCATTERING THEORY

Scattering Cross Section – Born Approximation – Partial Wave Analysis.

Angular Momentum: Matrix Representation of J-Spin Angular Momentum – Eigen Values – Addition of Angular Momenta – Clebsch –Gordan Coefficients (Basics Idea only).

UNIT V: RELATIVISTIC QUANTUM MECHANICS

Klien-Gordan Equation for a Free Particle and in Electromagnetic Field – Dirac Equation for a Free Particle. Charge and Current Densities – Dirac Matrices – Plane Wave Solution – Negative Energy States – Spin Angular Momentum – Spin-Orbit Coupling.

[EMPLOYABILITY]

Books for Study:

1. Quantum Mechanics by L.Schiff - Tata McGraw Hill.
2. A Text Book of Quantum Mechanics by P.M.Mathews and K.Venkatesan - Wiley Eastern.
3. Quantum Mechanics by V.K.Thankappan – Wiley Eastern.
4. Quantum Mechanics by A.Goswamy

Course Code	CORE PAPER – VI CONDENSED MATTER PHYSICS	L	T	P	C
20213SEC23		6	0	0	5

Aim:

- To learn the basics of crystal structure and underlying theoretical development for the description of certain properties and phenomena of solid states.

UNIT – I: CRYSTAL STRUCTURE

Crystal classes – symmetry elements – 2D, 3D lattices – Bravais lattices – Symmetry point groups – Atomic scattering factor – Structure factor.

Defects in solids: Point defect – Line defect – Surface defect – volume defect – effects of crystal imperfections.

UNIT – II: LATTICE, VIBRATIONS AND THERMAL PROPERTIES

Vibration of monoatomic lattice – Lattices with two atoms per primitive cell – Quantization of lattice vibrations – Phonon momentum – Inelastic scattering of neutrons by phonons – Lattice heat capacity – Einstein model – Density of modes in one-dimension and three-dimension – Debye model of the lattice heat capacity – Thermal conductivity.

UNIT – III: FREE ELECTRON THEORY, ENERGY BANDS AND SEMICONDUCTOR CRYSTALS

Introduction – Free electron gas – sommerfield model – density of electron states – Schottky effect – Photoelectric effect – Photoelectric emission. Band theory: Energy spectra in atoms molecules and gases – Wave equation in a periodic potential – Bloch theorem – Kronig-penney model – Electrical conductivity and Ohm's law – Motion in magnetic fields – Hall effect – Thermo-electric effect – Peltier effect – Semiconductors – Band gap – Effective mass – Intrinsic carrier concentration.

[EMPLOYABILITY]

UNIT – IV: DIAMAGNETISM, PARAMAGNETISM, FERRO MAGNETISM AND ANTIFERROMAGNETISM

Langevin classical theory of diamagnetism and paramagnetism – Weiss theory – Quantum theory of paramagnetism – Demagnetisation of a paramagnetic salt – paramagnetic susceptibility of conduction electrons – Hund's rules – Kondo effect – Ferroelectric order – Curie point and exchange integral – Temperature dependence of saturation magnetization – Ferromagnetic order – Antiferromagnetic order – Ferromagnetic domains – Origin of domains – Coercive force and hysteresis.

UNIT – V: DIELECTRICS AND FERROELECTRICS AND SUPERCONDUCTIVITY

Macroscopic electric field – Local electric field at an atom – Dielectric constant and polarizability – Clausius-Mossotti equation – Polarization catastrophe – Ferroelectric domain – Occurrence of superconductivity – Meissner effect – Thermodynamics of superconducting transition – London equation – Coherence length – BCS theory – Flux Quantization – Type I and Type II superconductors – Josephson superconductor tunneling – DC and AC Josephson effect.

Books for Study and Reference:

1. C. Kerrel, Introduction to Solid State Physics (Wiley Eastern, NewDelhi).
2. N.W. Ashorof and N.D. Mermin, Solid State Physics (Hot. Rinehart and Winston).
3. A.J. Dekker, Solid State Physics, (McMillian, Madras).
4. Gupta and Kumar, Solid State Physics (K. Nath & co., Meerut).
5. M. Arumugam, Material science (Anuradha agencies publishers).
6. S.O. Pillai, Solid State Physics (New Age International, NewDelhi).

Course Code	CORE PRACTICAL – II ADVANCED GENERAL EXPERIMENTS	L	T	P	C
20213SEC24L	LAB	0	0	4	3

Aim:

- Experimental determination of certain physical constants and its properties with the suitable experiments.

(Any 10 from the following)

1. Determination of magnetic susceptibility of liquid by Guoy method.
2. Determination of magnetic susceptibility of solid by Guoy method.
3. Determination of magnetic susceptibility of powder sample by Guoy method.
4. Determination of magnetic susceptibility of liquid by quinck's method.
5. Determination of wavelength and thickness of a film by using Michelson's interferometer.
6. Charge of an electron by spectrometer.
7. Polarizability of liquids by finding the refractive index at different wavelength.
8. Determination of wavelength of monochromatic source using biprism.
9. Determination of refractive index of liquids using biprism (scale and telescope method).
10. Determination of specific rotatory power of a liquid using polarimeter.
11. Rydberg's constant using spectrometer.
12. Forbe's method – Thermal conductivity.
13. Laser grating – Determination of wavelength.
14. Optical Fiber – Numerical aperture.
15. Brass Arc spectrum.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-II	L	T	P	C
20213DSC25A	ATOMIC AND MOLECULAR PHYSICS	5	0	0	4

Aim:

- To familiarize with the basic principles of various spectroscopic techniques and their applications in the determination of atomic structure, chemical composition and physical properties of materials.

UNIT - I: ATOMS IN EXTERNAL FIELDS AND QUANTUM CHEMISTRY

Quantum theory of Zeeman, Stark and Paschen Back effect.

QUANTUM CHEMISTRY OF MOLECULES:

Born – Oppenheimer approximation – Heitler – London theory of hydrogen – Concept of atomic, hybrid and molecular orbital's- LCAO treatment of molecular orbitals of CH₄, C₂H₆ and C₂H₄- Huckels molecular approximation- Application to butadiene and benzene.

UNIT – II: MICROWAVE SPECTROSCOPY

Rotational spectra of diatomic molecules – Rigid rotator – Non rigid rotator – Effect of isotopic substitution – Rotation spectra of polyatomic molecules – linear, symmetric top and asymmetric top molecules – Experimental technique.

IR SPECTROSCOPY:

Vibrating diatomic molecule – Vibrating Rotator – Linear symmetric top molecule – characteristics and group frequencies – Experimental technique.

UNIT –III: RAMAN SPECTROSCOPY

Raman effect and Quantum theory of Raman effect - Rotational and vibration Raman shifts of diatomic molecules

ELECTRONIC SPECTROSCOPY OF MOLECULES:

Electronic Spectra of Diatomic Molecules – Frank Condon Principle – Dissociation energy and Dissociation products – Rotational fine structure of electronic vibration transitions .

[ENTREPRENEURSHIP]

UNIT – IV: RESONANCE SPECTROSCOPY

NMR:

Basic principles – Classical and Quantum Mechanical Description – Bloch equations – Spin – Spin and Spin lattice relation times – Experimental method – Single coil & double coil methods – high resolution methods.

ESR:

Basic Principle ESR Spectrometer – Nuclear interaction & Hyperfine structure – Relaxation effects – g- factor – characteristics – Free radical studies & biological application.

UNIT – V: LASERS

Emission and absorption of radiation – Einstein relations – absorption of radiation – population inversion – Optical feedback – Threshold conditions – Laser modes – Single mode operation – frequency Stabilization – mode locking – laser applications – Holography – Holographic computer memories – Laser induced nuclear fusion.

Books for Study & Reference

1. C.N. Bannwell – Fundamental of molecular spectroscopy
2. B.P. Straughan & S. Walker – Spectroscopy – Vol -1
3. H.S. Marry & G.K. Metita – Introduction to Modern physics
4. A.K. Chandra, Introductory quantum Chemistry
5. Proble, Sctineducer & Berstein, High Resolution NMR
6. G.M. Barrow, Introduction to Molecular Spectroscopy
7. C.P. Slotcher, Principles of Magnetic Resonance
8. R. Charng, Basic Principles of Spectroscopy.
9. J. Wilson, J.F.B. Hawkes Optoelectronics an introduction, Prentice Hall of India, New Delhi.
10. Pallab Bhattacharya, Semiconductor optoelectronic devices Prentice Hall of India, New Delhi

Course Code	Course Title	L	T	P	C
20213DSC25B	BASIC INSTRUMENTATION SKILLS	5	0	0	4

UNIT – I

Basic of Measurement: Instruments accuracy, precision, sensitivity, resolution range etc. Errors in measurements and loading effects. **Multimeter:** Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance.

UNIT – II

Electronic Voltmeter: Advantage over conventional multimeter for voltage measurement with respect to input impedance and sensitivity. Principles of voltage, measurement (block diagram only). Specifications of an electronic Voltmeter/ Multimeter and their significance.

AC millivoltmeter: Type of AC millivoltmeters: Amplifier- rectifier, and rectifier- amplifier. Block diagram ac millivoltmeter, specifications and their significance.

UNIT – III

Cathode Ray Oscilloscope: Block diagram of basic CRO. Construction of CRT, Electron gun, electrostatic focusing and acceleration (Explanation only– no mathematical treatment), brief discussion on screen phosphor, visual persistence & chemical composition. Time base operation, synchronization. Front panel controls. Specifications of a CRO and their significance. Use of CRO for the measurement of voltage (dc and ac frequency, time period. Special features of dual trace, introduction to digital oscilloscope, probes. Digital storage Oscilloscope: Block diagram and principle of working.

UNIT – IV

Signal Generators and Analysis Instruments: Block diagram, explanation and specifications of low frequency signal generators. pulse generator, and function generator. Brief idea for testing, specifications. Distortion factor meter, wave analysis.

Impedance Bridges & Q-Meters: Block diagram of bridge. working principles of basic (balancing type) RLC bridge. Specifications of RLC bridge. Block diagram & working principles of a Q- Meter. Digital LCR bridges.

UNIT – V

Digital Instruments: Principle and working of digital meters. Comparison of analog & digital instruments. Characteristics of a digital meter. Working principles of digital voltmeter.

Digital Multimeter: Block diagram and working of a digital multimeter. Working principle of time interval, frequency and period measurement using universal counter/ frequency counter, time- base stability, accuracy and resolution.

[ENTREPRENEURSHIP]

Reference Books:

- A text book in Electrical Technology - B L Theraja - S Chand and Co.
- Performance and design of AC machines - M G Say ELBS Edn.
- Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.

Course Code	Course Title	L	T	P	C
20213DSC25C	RENEWABLE ENERGY	5	0	0	4

UNIT – I

Fossil fuels and Alternate Sources of energy: Fossil fuels and Nuclear Energy, their limitation, need of renewable energy, non-conventional energy sources. An overview of developments in Offshore Wind Energy, Tidal Energy, Wave energy systems, Ocean Thermal Energy Conversion, solar energy, biomass, biochemical conversion, biogas generation, geothermal energy tidal energy, Hydroelectricity.

UNIT – II

Solar energy: Solar energy, its importance, storage of solar energy, solar pond, non convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell, absorption air conditioning. Need and characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, and sun tracking systems.

UNIT – III

Wind Energy harvesting: Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines, Power electronic interfaces, and grid interconnection topologies.

Ocean Energy: Ocean Energy Potential against Wind and Solar, Wave Characteristics and Statistics, Wave Energy Devices. Tide characteristics and Statistics, Tide Energy Technologies, Ocean Thermal Energy, Osmotic Power, Ocean Bio-mass.

UNIT – IV

Geothermal Energy: Geothermal Resources, Geothermal Technologies.

Hydro Energy: Hydropower resources, hydropower technologies, environmental impact of hydro power sources.

Piezoelectric Energy harvesting: Introduction, Physics and characteristics of piezoelectric effect, materials and mathematical description of piezoelectricity, Piezoelectric parameters and modeling piezoelectric generators, Piezoelectric energy harvesting applications, Human power

UNIT – V

Electromagnetic Energy Harvesting: Linear generators, physics mathematical models, recent applications Carbon captured technologies, cell, batteries, power consumption Environmental issues and Renewable sources of energy, sustainability.

Course Code	Course Title	L	T	P	C
20213DSC25D	Radiation Safety	5	0	0	4

UNIT – I

Basics of Atomic and Nuclear Physics: Basic concept of atomic structure; X rays characteristic and production; concept of bremsstrahlung and auger electron, The composition of nucleus and its properties, mass number, isotopes of element, spin, binding energy, stable and unstable isotopes, law of radioactive decay, Mean life and half life, basic concept of alpha, beta and gamma decay, concept of cross section and kinematics of nuclear reactions, types of nuclear reaction, Fusion, fission.

UNIT – II

Interaction of Radiation with matter: Types of Radiation: Alpha, Beta, Gamma and Neutron and their sources, sealed and unsealed sources,

Interaction of Photons – Photoelectric effect, Compton Scattering, Pair Production, Linear and Mass Attenuation Coefficients,

Interaction of Charged Particles: Heavy charged particles - Beth-Bloch Formula, Scaling laws, Mass Stopping Power, Range, Straggling, Channeling and Cherenkov radiation. Beta Particles- Collision and Radiation loss (Bremsstrahlung),

UNIT – III

Interaction of Neutrons- Collision, slowing down and Moderation. Radiation detection and monitoring devices: Radiation Quantities and Units: Basic idea of different units of activity, KERMA, exposure, absorbed dose, equivalent dose, effective dose, collective equivalent dose, Annual Limit of Intake (ALI) and derived Air Concentration (DAC).

UNIT – IV

Radiation detection: Basic concept and working principle of *gas detectors* (Ionization Chambers, Proportional Counter, Multi-Wire Proportional Counters (MWPC) and Gieger Muller Counter), *Scintillation Detectors* (Inorganic and Organic Scintillators), *Solid States Detectors* and *Neutron Detectors*, *Thermo luminescent Dosimetry*.

UNIT – V

Radiation safety management: *Biological effects of ionizing radiation*, Operational limits and basics of radiation hazards evaluation and control: radiation protection standards, International Commission on Radiological Protection (ICRP) principles, justification, optimization, limitation, introduction of safety and risk management of radiation. Nuclear waste and disposal management. Brief idea about Accelerator driven Sub-critical system (ADS) for waste management.

Course Code	WEATHER FORECASTING	L	T	P	C
20213DSC25E		5	0	0	4

UNIT – I

Introduction to atmosphere: Elementary idea of atmosphere: physical structure and composition; compositional layering of the atmosphere; variation of pressure and temperature with height; air temperature; requirements to measure air temperature; temperature sensors: types; atmospheric pressure: its measurement; cyclones and anticyclones: its characteristics.

UNIT – II

Measuring the weather: Wind; forces acting to produce wind; wind speed direction: units, its direction; measuring wind speed and direction; humidity, clouds and rainfall, radiation: absorption, emission and scattering in atmosphere; radiation laws.

UNIT – III

Weather systems: Global wind systems; air masses and fronts: classifications; jet streams; local thunderstorms; tropical cyclones: classification; tornadoes; hurricanes.

UNIT – IV

Climate and Climate Change: Climate: its classification; causes of climate change; global warming and its outcomes; air pollution; aerosols, ozone depletion, acid rain, environmental issues related to climate.

UNIT – V

Basics of weather forecasting: Weather forecasting: analysis and its historical background; need of measuring weather; types of weather forecasting; weather forecasting methods; criteria of choosing weather station; basics of choosing site and exposure; satellites observations in weather forecasting; weather maps; uncertainty and predictability; probability forecasts.

Course Code	RESEARCH METHODOLOGY	L	T	P	C
20213RMC26		3	0	0	3

Aim:

- To enhance the ability of research work along with document preparation for journal publication.

UNIT I: INTRODUCTION TO RESEARCH METHODOLOGY

Objectives of research – Types of research – Significance of research. Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT II: DATABASE AND LITERATURE SURVEY

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Chemical Abstract Service – Reviews – Monographs – Literature search.

UNIT III: DATA ANALYSIS AND CHEMICAL PACKAGES:

Precision and accuracy – Reliability – Determinate and random errors – Distribution of random errors – Normal distribution curve – Statistical treatment of finite samples – t test and F test (ANOVA) co -variance (ANCOVA) correlation and multiple regression analysis – Chemical Packages – ChemDraw – ChemSketch – ISIS draw – Origin.

UNIT IV: THESIS AND PAPER WRITING:

Conventions in writing – General format – Page and chapter format – Use of quotations and footnotes – Preparations of tables and figures – References – Appendices.

UNIT V: LABORATORY SAFETY AND NUMERICAL METHODS

Basic laboratory guidelines – safety equipment – Leaking compressed gas cylinders – electrical safety. Fire – fire extinguishers. Laboratory injuries and treatment. Chemical spills – Mercury and Biohazardous – clean up procedure - Accident management - Disposal of chemicals and glass wares.

Solutions of equations - Simple iterative methods - Newton - Raphson method - Numerical Integration - Simpson's 3/8 rule - Runge Kutta method II order - Solution of

Simultaneous equation - Differentiation - Numerical differentiation with interpolation polynomials. [SKILL DEVELOPMENT]

Course Code	CORE PAPER – VII ELECTROMAGNETIC THEORY	L	T	P	C
20213SEC31		6	0	0	5

Aim:

- To learn the theory for the fields produced by stationary and moving charge and charged systems and propagation of electromagnetic fields.

UNIT – I: INTRODUCTION TO ELECTROSTATICS

Coulomb's law- Electric field – Gauss Law – Scalar potential – Surface distribution of charges and dipoles – Poisson and Laplace Equation – Green's theorem – Dirichlet and Neumann boundary conditions – electrostatic boundary value problems : Methods of Images Illustrations: Point charge in the presence of (i) a grounded conducting sphere. (ii) a charged insulated and conducting sphere.

UNIT – II: ELECTROSTATICS OF MACROSCOPIC MEDIA

Multipole expansion – Boundary value problems with dielectric Illustration (i) a point charge embedded at a distance away from a dielectric interface. (ii) Dielectric sphere in a uniform electric field. Molecular polarizability and electric susceptibility Electrostatic energy in dielectric media.

UNIT – III: MAGNETOSTATICS

Biot and Savart law – Force between current carrying conductors – Differential equations of magnetostatics and Ampere's law – Vector potential – Force and torque and energy of a localized current distribution in an external magnetic induction – Macroscopic equations.

UNIT – IV: ELECTROMAGNETICS

Faraday's law in induction – Maxwell's displacement current – Maxwell equations Maxwell equations in terms of vector and scalar potentials – Gauge transformations Lorentz gauge, Coulomb gauge – Poynting's theorem – Conservation of energy and momentum for a system of charged particles and electromagnetic fields.

UNIT – V: ELECTROMAGNETIC WAVES AND WAVE PROPAGATION

Electromagnetic waves – reflection – refraction – dispersion and polarization – wave guides – charge particle in electric and magnetic fields – Radiation from moving charges, dipoles and retarded potentials. [EMPLOYABILITY]

Books for Reference:

1. J.D.Jackson, Classical Electrodynamics, Wiley Eastern 1988.
2. David. J. Griffiths, Introduction to Electrodynamics, PHI, New Delhi, 1995.
3. EC. Jordon and K.G. Balmain , Electromagnetic waves and Radiating System.
4. Chopra & Agrawal, Electromagnetic theory, K.Nath & co- Mccrut.

Course Code	CORE PAPER – VIII NUCLEAR AND PARTICLE PHYSICS	L	T	P	C
20213SEC32		6	0	0	5

Aim:

- To learn the various aspects of nucleus and its behavior under various conditions.

UNIT I: BASIC NUCLEAR PROPERTIES

Nuclear Size, Shape, Mass – Charge Distribution – Spin and Parity – Binding Energy – Semi Empirical Mass Formula – Nuclear Stability – Mass Parabola – Nature of Nuclear Forces – Ground State of Deuteron – Magnetic Dipole Moment of Deuteron – Proton-Neutron Scattering at Low energies – Scattering Length, Phase Shift – Properties of Nuclear Forces – Spin Dependences – Charge Symmetry – Charge Independence – Repulsion at Short Distances – Exchange Forces – Meson Theory.

UNIT II: RADIO ACTIVE DECAYS

Alpha Emission – Geiger-Nuttal Law – Gamow Theory – Neutrino Hypothesis – Fermi Theory of Beta Decay–Selection Rules – Non-conservation of Parity – Gamma Emission – Selection Rules-Internal Conversion – Nuclear Isomerism – Interaction of Charged Particles and X-rays with Matter – Basic Principles of Particle Detectors – Ionization Chamber – Proportional Counter and G.M. Counters – Solid State Detectors – Scintillation and Semiconductor Detectors.

UNIT III: NUCLEAR REACTION AND NUCLEAR MODELS

Q-Values and Kinematics of Nuclear Cross Section – Energy and Angular Dependence – Reciprocity Theory – Briet-Wigner Formula – Compound Nucleus – Resonance Theory – Optical Model – Shell Model – Liquid Drop Model – Collective Model.

UNIT IV: ACCELERATORS AND REACTORS

Cyclotron – Synchrocyclotron – Betatron Synchrotron – Linear Accelerators – Characteristic of Fission – Mass Distribution of Fragments – Radioactive Decay Process –Fission Cross Section – Energy in Fission – Bohr-Wheeler’s Theory of Nuclear Fission – Fission Reactors – Thermal Reactors – Homogeneous – Reactor – Heterogeneous Reactors – Basic Fusion Processes – Characteristic of Fusion – Solar Fusion – Controlled Fusion Reactors. [EMPLOYABILITY]

UNIT V: ELEMENTARY PARTICLES

Building Block of Nucleus – Nucleons, Leptons, Mesons, Baryons, Hyperons, Hadrons, Strange Particles – Classification of Fundamental Forces and Elementary Particles – Basic Conservation Laws – Additional Conservation Laws: Baryonic, Leptonic, Strangeness and Isospin Charges/Quantum Numbers – Gell-Mann-Nishijima Formula – Multiplets – Invariance Under Time Reversal (T) Charge Conjugation (C) and Parity (P) – TCP Theorem – Parity Non-conservation in Weak Interactions – CP Violation –

Eight-Fold Way and Supermultiple – SU(3) Symmetry and quark model – Basic Ideas on the Theories of Weak and Strong Interaction.

Book for Reference:

1. Nuclear Physics, an Introduction by S.B. Patel – (Wily –Eastern, New Delhi).
2. Concepts of Nuclear Physics by B.L. Cohen – (Tata McGraw Hill, New Delhi).
3. Introduction to Elementary Particles by D. Griffiths – (Wily International, New York).

Course Code	CORE PRACTICAL – III ADVANCED ELECTRONICS LAB	L	T	P	C
20213SEC33L		0	0	4	3

Aim:

- Verification of characteristics and applications of electronic components and devices.

(Any 12 from the following)

1. Logic gates – Universality of NAND/NOR gates using IC's.
2. Verification of Demorgans theorems and Boolean Expressions.
3. Astable and bistable and monostable multivibrator using IC 555.
4. Wein's bridge oscillator using IC 741.
5. Construction of dual regulated power supply.
6. Half and Full wave precision rectifier using IC 741.
7. Study of the characteristics of Load cell.
8. Digital to analog converter – R-2R method and weighted method.
9. Study the function of multiplexer and demultiplexer.
10. Study the function of decoder and encoder.
11. Flip flops.
12. Half adder and Full adder (using only NAND gates).
13. Half subtractor and Full subtractor (using only NAND gates).
14. Digital comparator using XOR and NAND gates.
15. Study of counter using IC 7490 (0 - 9).
16. Analog to digital converters – Born approximation method.
17. Calibration of thermistor.
18. Study of the characteristics of Strain gauge.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-III NON CONVENTIONAL ENERGY PHYSICS	L	T	P	C
20213DSC34A		5	0	0	4

Aim:

- To learn about geothermal energy, energy from oceans and hydrogen and its applications.

UNIT – I: GEOTHERMAL ENERGY

Geothermal Energy – Nature of geothermal fields – Geothermal sources – Hydrothermal resources – Vapour Dominated systems – Liquid dominated systems – Geopressed resources – Hot dry rock resources – Magma resources – Advantages and disadvantages – applications of geothermal energy.

UNIT –II: ENERGY FROM OCEANS

Ocean thermal electric conversion – Open cycle OTEC system – closed cycle OTEC system – Energy from tides – Principle of tidal power – Components of tidal plants – operation methods of utilization of tidal energy – wave energy conversion by floats – High level reservoir wave machine – The Dolphin type wave power machine – Estimate of energy and power in Tidal system – Advantages and Limitations of Tidal power generation.

UNIT –III: HYDROGEN ENERGY

Introduction to Hydrogen energy – Properties of Hydrogen – Hydrogen production – Electrolytic production – tank type electrolyzer – Fossil field methods – Coal gasification for the production of Hydrogen – Coal gasification plants – Solar energy methods - Hydrogen Transportation – Safty rules in handling Hydrogen fuel – Hydrogen storage. [EMPLOYABILITY]

UNIT – IV: MHD POWER

Magneto hydro dynamic power generation (MHD) – Principles of MHD power generation – MHS systems – open cycle systems – closed cycle systems – Liquid metal system – Advantages of MHD.

UNIT – V: ENERGY CONSERVATION

Economic concept of energy – Principles of energy conservation and energy Audit – Different types of Audit – Co-Generation – types of Co-generation – Heat Recuperators – Uses of heat recuperators – Heat generators.

Books for Study:

1. Non- Conventional Energy Sources – G.D. Rai, Kannah Publication.

Course Code	Course Title	L	T	P	C
20213DSC34B	Fluid Mechanics	5	0	0	4

Fundamentals of Dynamics : Review of vector algebra and differential calculus of vectors: gradient, divergence and curl. Reference frames. Inertial frames; Review of Newton's Laws of Motion. Dynamics of a system of particles. Centre of Mass. Principle of conservation of momentum. Impulse. Momentum of variable-mass system: motion of rocket.

Work and Energy: Work and Kinetic Energy Theorem. Conservative and non-conservative forces. Force as the gradient of potential energy. Work & Potential energy. Elastic potential energy. Law of Conservation of Energy with an example of a spring-mass system. Work done by nonconservative forces (with an example of damped oscillations). Energy diagram. Stable and unstable equilibrium.

Rotational Dynamics: Angular momentum of a particle and system of particles. Torque. Principle of conservation of angular momentum. Rotation about a fixed axis. Moment of Inertia. Calculation of moment of inertia for rectangular, cylindrical and spherical bodies. Kinetic energy of rotation. Motion involving both translation and rotation.

Elasticity: Relation between Elastic constants. Twisting torque on a Cylinder or Wire. Determination of Rigidity modulus:- Torsional pendulum and Searle's method.

Non-Inertial Systems: Non-inertial frames and fictitious forces. Uniformly rotating frame. Laws of Physics in rotating coordinate systems. Centrifugal force. Coriolis force and its applications. Components of Velocity and Acceleration in Cylindrical and Spherical Coordinate Systems. [EMPLOYABILITY]

TEXT BOOKS

- Physics, Resnick, Halliday and Walker 8/e. 2008, Wiley.
- Fundamentals-of-Physics-I-Mechanics, R. Shankar, 2014, Yale University Press
- An introduction to mechanics, D. Kleppner, R.J. Kolenkow, 1973, McGraw-Hill.
- Mechanics, Berkeley Physics, vol.1, C.Kittel, W.Knight, et.al. 2007, Tata McGraw-Hill.
- Analytical Mechanics, G.R. Fowles and G.L. Cassiday. 2005, Cengage Learning.

Course Code	Course Title	L	T	P	C
20213DSC34C	Electromagnetic Induction	5	0	0	4

Electrostatic energy: System of charges, Charged sphere. Conductors in an electrostatic Field. Surface charge and force on a conductor. Capacitance of a system of charged conductors. Parallel-plate capacitor. Capacitance of an isolated conductor. Method of Images and its application to: (1) Plane Infinite Sheet and (2) Sphere.

Electromagnetic Induction: Faraday's Law. Lenz's Law. Self Inductance and Mutual Inductance. Reciprocity Theorem. Energy stored in a Magnetic Field. Introduction to Maxwell's Equations. Charge Conservation and Displacement current.

Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits. Complex Reactance and Impedance. Series LCR Circuit: (1) Resonance, (2) Power Dissipation and (3) Quality Factor, and (4) Band Width. Parallel LCR Circuit.

Network theorems: Ideal Constant-voltage and Constant-current Sources. Network Theorems: Thevenin theorem, Norton theorem, Superposition theorem, Reciprocity theorem, Maximum Power Transfer theorem. Applications to dc circuits.

Ballistic Galvanometer: Torque on a current Loop. Ballistic Galvanometer: Current and Charge Sensitivity. Electromagnetic damping. Logarithmic damping. CDR.
[EMPLOYABILITY]

TEXT BOOKS

1. Introduction to Electrodynamics, D.J. Griffiths, 3rd Edn., 2012, Pearson Prentice Hall.
2. Electricity and Magnetism, Edward M. Purcell, 2017, McGraw-Hill Education
3. Electricity, Magnetism & Electromagnetic Theory, S. Mahajan and Choudhury, 2012, Tata McGraw
4. Fundamentals of Physics Vol. II, R. Shankar, Yale University Press, 2016

Course Code	Course Title	L	T	P	C
20213DSC34D	Waves and Optics	5	0	0	4

Wave Motion: Plane and Spherical Waves. Longitudinal and Transverse Waves. Plane Progressive (Travelling) Waves. Wave Equation. Particle and Wave Velocities. Differential Equation. Pressure of a Longitudinal Wave. Energy Transport. Intensity of Wave. Water Waves: Ripple and Gravity Waves

Velocity of Waves: Velocity of Transverse Vibrations of Stretched Strings. Velocity of Longitudinal Waves in a Fluid in a Pipe. Newton's Formula for Velocity of Sound. Laplace's Correction.

Superposition of Harmonic Waves: Standing (Stationary) Waves in a String: Fixed and Free Ends. Analytical Treatment. Changes with respect to Position and Time. Energy of Vibrating String. Transfer of Energy. Normal Modes of Stretched Strings. Plucked and Struck Strings. Melde's Experiment.

Wave Optics: Electromagnetic nature of light. Definition and properties of wave front. Huygens Principle. Temporal and Spatial Coherence.

Interference: Division of amplitude and wavefront. Young's double slit experiment. Lloyd's Mirror and Fresnel's Biprism. Phase change on reflection: Stokes' treatment. Interference in Thin Films: parallel and wedge-shaped films.
[EMPLOYABILITY]

TEXT BOOKS

- Waves: Berkeley Physics Course, vol. 3, Francis Crawford, 2007, Tata McGraw-Hill.
- Fundamentals of Optics, F.A. Jenkins and H.E. White, 1981, McGraw-Hill
- Principles of Optics, Max Born and Emil Wolf, 7th Edn., 1999, Pergamon Press.

Course Code	Thermal Physics	L	T	P	C
20213DSC34E		5	0	0	4

Real Gases: Deviations from the ideal gas equation, Virial equation, Andrew's experiments on CO₂ gas, critical constants, continuity of liquid and gaseous State, vapor and gas; Boyle temperature, Van der Waal's equation of state for real gases, values of critical constants, law of corresponding states, comparison with experimental curves, p-V diagrams,

Transport phenomenon in gases: Molecular collisions, mean free path, collision probability, estimates of mean free path, transport phenomenon in ideal gases: (1) viscosity, (2) thermal conductivity, and (3) diffusion. brownian motion and its significance.

Zeroth and First Law of Thermodynamics: Extensive and intensive Thermodynamic Variables, Thermodynamic Equilibrium, Zeroth Law of Thermodynamics & Concept of Temperature, Concept of Work & Heat, State Functions, First Law of Thermodynamics and its differential form.

Second Law of Thermodynamics: Reversible and Irreversible process with examples. Conversion of Work into Heat and Heat into Work. Heat Engines. Carnot's Cycle, Carnot engine & efficiency. Refrigerator & coefficient of performance, 2nd Law of Thermodynamics: Kelvin-Planck and Clausius Statements and their Equivalence.

Entropy: Concept of Entropy, Clausius Theorem, Clausius Inequality, second Law of Thermodynamics in terms of entropy, entropy of a perfect gas, principle of increase of entropy, entropy changes in reversible and irreversible processes with examples, entropy of the universe, entropy changes in reversible and irreversible processes, principle of increase of entropy, third law of thermodynamics. unattainability of absolute zero.
[EMPLOYABILITY]

TEXT BOOKS

- Heat and Thermodynamics, M.W. Zemansky, Richard Dittman, 1981, McGraw-Hill.
- A Treatise on Heat, Meghnad Saha, and B.N.Srivastava, 1958, Indian Press
- Thermal Physics, S. Garg, R. Bansal and Ghosh, 2nd Edition, 1993, Tata McGraw-Hill

Course Code	GENERAL ELECTIVE COURSE WRITING FOR THE MEDIA	L	T	P	C
20213GEC35		4	0	0	2

Aim:

- To equip students to enter into the realm of mass media.

Objectives:

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

Outcome:

- Understand the intricacies of mass media

UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop-Filters- Human interest stories- Recognizing and evaluating news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

References-

Journalism	-Susan
Professional Journalism	-John Hogenberg
News Writing and Reporting	-M.James Neal (Surjeet Publication)

Mass Communication & Journalism	-D.S Mehta,

Course Code	Course Title	L	T	P	C
20213GEC35	General Elective Course Applicable Mathematical Techniques	4	0	0	2

Aim:

- To acquaint with the basic concept of Interpolation.

Objectives:

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

Outcomes:

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

References

Unit I, "Numerical Methods in Science and Engineering" M.K.Venkatraman

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Course Code	GENERAL ELECTIVE COURSE-III GREEN CHEMISTRY	L	T	P	C
20213GEC35		4	0	0	2

Objectives: To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollutionPollution prevention.

Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentationAntibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Trends.

Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO₂ - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

Outcomes:

- To understand the environmental status and evolution.

- To know about the Pollution and its prevention measures.
- To familiarize the green chemistry.
- To learn about the bio-catalytic reactions.
- To understand about the vitamins and antibiotics.

References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnesand
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	GENERAL ELECTIVE COURSE-III BIOANALYTICAL TECHNIQUES	L	T	P	C
20213GEC35		4	0	0	2

Unit I

Separation techniques – Solvent extraction – principles and applications of soxhlet extraction and super critical fluid extraction; Distillation – Theory of distillation, method and application of fractional and steam distillation; Techniques of sublimation and its applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hassel balch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

Unit II

Chromatography – Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC .

Unit III

Centrifugation – Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges. Radioisotopes – Radioactivity, types, law of radioactivity, decay processes, units of radioactivity; Applications of radioisotopes in biology.

Unit IV

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

Unit V

Spectroscopy – Principles and components of instruments and applications of Colorimeter, Spectrophotometer, Fluorescence spectrometry, AAS and Flame photometer. Principles and applications of Raman spectroscopy, IR spectrometry, NMR and ESR.

References:

1. Biophysical Chemistry – Nirmalendu nath
2. Biophysical Chemistry – Upadhyay, Upadhyay and nath.
3. Principles and techniques of practical Biochemistry – Keith Wilson and Walker.
4. Principles of Instrumental analysis – B.K.Sharma.
5. Instrumental analysis – Chatwall Anand

Course Code	General Elective Course	L	T	P	C
20213GEC35	Internet and Web Design	4	0	0	2

Aim

To equip the students with basic programming skill in Web Designing

Objective

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

UNIT III

Ordered and unordered lists – Table handling.

UNIT IV

DHTML and Style Sheet – Frames.

UNIT V

A web page design project – Forms.

Outcomes:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

Reference Book

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	General Elective Course	L	T	P	C
20213GEC35	Insurance Services	4	0	0	2

Aim:

- To look after the interests of people from uncertainty by providing certainty of compensation.

Objectives:

- To learn the fundamental concepts and principles of insurance.
- To explain the nature of different insurance policies, insurance contracts and settlement of claims.

Out Come:

- The course helped the students to learn the principles of Insurance and the functions of Life and general insurances and the IRDA

UNIT – I

Insurance and Assurance – Importance of Insurance – Functions of Insurance – Insurance contract and their Elements – Fundamental Principles of Insurance contracts

UNIT – II

Types of Insurance contracts – Differences between Life and General Insurance – Concepts in Insurance - Insurer, Insured, Premiums and Claims – Reinsurance – Double Insurance

UNIT – III

Life Insurance – Advantages of Life Insurance – Procedure for Effective Life Insurance – Risk Factors in Life Insurance – Procedure for Settlement of Life Insurance Claims – Different kinds of Life Insurance Policies including Endowment and whole Life Policies.

UNIT – IV

General Insurance – Fire Insurance – Contract of Fire Insurance – Fire Policy Conditions – Subject matter of Fire Insurance – Fire Policy – Marine Insurance – Motor, burglary and Personal Accident Insurance.

UNIT – V

Reforms in Insurance Sector – principles and Types – I.R.D.A., Privatisation of Insurance – Insurance and Employment – Insurance Agents and career Agents – Investments by Insurance companies in housing sector and other infrastructure projects.

Reference Books:

Dr.MR.Mishra – Law of Insurance – Central Law Agency Allahabad

Dr.M.M.Verma & R.K.Agarwal – Insurance

Pandy & Ratogi – Insurance

M.N.Mishra & S.Chand - Principles and Practice of Insurance

Course Code	General Elective Course	L	T	P	C
20213GEC35	Counselling Psychology	4	0	0	2

Aim:

- To acquaint with counselling and its process

Objectives:

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

Out Come:

- Learn counselling and its process

UNIT I

Definition of Counselling

Counselling as a Solution to Human Problems

Counselling-Expectations & Goals

UNIT II

Personality Determinates, Intellectual Determinates, Emotional Determinates

Social Determinates

UNIT III

Approaches to Counselling

Counselling Process

UNIT IV

Psychological Testing

Diagnosis

UNIT V

Educational Counselling

Family Counselling

Course Code	CORE PAPER – IX PROGRAMMING IN C++	L	T	P	C
20213SEC41		6	0	0	5

Aim:

- To develop programming skills of C & C++ programming in solving some mathematical problems and their applications.

UNIT – I: PRINCIPALS OF OBJECTS ORIENTED PROGRAMMING (OOP)

Software evolution – object oriented programming paradigm – basic concepts of OOP’s – benefits of OOP’s – Introduction to C++ - token’s keywords – identifiers, variables, operators, manipulators, expression.

UNIT – II: CONTROL STATEMENTS & FUNCTIONS

Control structures in C++ - Functions in C++ - main functions – function prototyping – call by reference – return by reference – functions over loading – friend and virtual functions.

UNIT – III: CLASSES AND OBJECTS

Specification of a class – Accessing class members – member functions of class – objects – array of objects – passing objects as Function arguments – Friend functions – Const Member functions – Special member functions constructors – Destructors Operator overloading – overloading operators – Rules for overloading operators – Type conversions.

UNIT – IV: INHERITANCE

Single inheritance – multilevel inheritance – multiple inheritance – hierarchical inheritance – hybrid inheritance pointers – virtual function and polymorphism managing console I/O operations working with files – Classes for file stream operations – opening and closing a file – eof-of-file, deduction – file pointers updating a file error handling during file operations – Command line arguments.

UNIT – V: PROGRAMS

1. Arranging words in alphabetical order
2. Picking largest and smallest of a set of numbers
3. Solving quadratic equation
4. Multiplication of two square matrices
5. Least square curve fitting

6. Programs for handling files
7. To solve simultaneous equation by Gauss elimination method
8. Write a program to convert a number given in base to other bases and number to words
9. Write functions for (i) find the length of the string (ii) to find a substring with a given string
10. Write functions for (i) reversing the string (ii) converting integer into string
11. Write functions for (i) string copy (ii) string compare (iii) to replace a substring with another string
12. Read in a string of characters and determine if they are palindrome (i) to replace the half with first half (ii) reverse them half separately.

[SKILL DEVELOPMENT]

Text Book:

E. Balagurusamy – Objects Oriented Programming with C++, Tata McGraw Hill Publishing Company.

Course Code	CORE PRACTICAL – IV MICROPROCESSORS AND COMPUTER LABORATORY	L	T	P	C
20213SEC42L		0	0	5	5

Aim:

- To develop programming skills of microprocessor and C++ programming in solving some mathematical problems and their applications.

(Any 12 experiments only, minimum 6 from each section)

SECTION A

1. 8 bit addition, subtraction, multiplication and division using 4085.
2. 16 bit addition, 2's complement and 1's complement subtraction (4086/4088).
3. Conversion from decimal to octal and hexa systems.
4. Conversion from octal, hexa to decimal systems.
5. Study of seven segment display add on board.
6. Study of ADC interfacing (DAV 0900)
7. Traffic control system using microprocessor.
8. Microprocessor as digital clock.
9. Generation of square, triangular, saw-tooth staircase and sine waves using DAC 0400.
10. Control of stepper motor using microprocessor.

SECTION B

1. Roots of algebraic equations – Newton-Raphson method.
2. Least-square curve fitting-Straight line fit.
3. Solution of simultaneous linear algebraic equations – Gauss elimination method.
4. Solution of simultaneous linear algebraic equations – Gauss Seidal method.
5. Interpolation – Lagrange method.
6. Numerical integration – Composite trapezoidal rule.
7. Numerical integration – Composite Simpson's rule.
8. Numerical differentiation – Euler method.
9. Solution of ordinary differential equations – Runge – Kutta 2nd order method.
10. Solution of ordinary differential equations – Runge – Kutta 4th order method.

Course Code	DISCIPLINE SPECIFIC ELECTIVE COURSE-IV	L	T	P	C
20213DSC43A	NANO SCIENCE AND TECHNOLOGY	5	0	0	4

Aim:

- To learn the structures, properties, characterization and applications of nanomaterials.

UNIT – I: NANO POWDERS AND NANO MATERIALS

Preparation – Plasma arcing chemical vapour deposition – Sol–gel Technique – Silica gels – Hydrolysis – Condensation and Polymerization of monomer to form particles – Zirconia and yttrium gels – Aluminosilicate gels – Forming nanostructured surfaces using the sol – gel process – Trapping by Sol – gel Electrodeposition –High power magnets – Motors vehicles and aircraft – Medical Implants – Other medical uses.

UNIT – II: MOLECULAR NANOTECHNOLOGY TOOLS

Atoms by inference Electron microscope – Scanning electron microscope – Modern transmission electron microscopes – Scanning probe microscopy – Atomic force microscope – Scanning tunneling microscope – Nanomanipulator – Nanotweezers – Atom manipulation – Nanodots.

UNIT – III: THE CARBON AGE AND NANO BIOMATERIALS

New forms of carbon – Types of nanotubes – Formation of nanotubes – Methods and reactants – Arcing in the presence of cobalt – Laser methods – Chemical vapour deposition method – ballmilling – other methods – Assemblies –Uses of nanotubes – Electronics – hydrogen storage – Materials – Mechanical machines – Space elevators.

UNIT-II: OPTICS, PHOTONICS AND SOLAR ENERGY

Properties of light and nanotechnology – Reflectance of light – Transmission of light – Polarization of Radiation – Interaction of light and nanotechnology – Photon trapping and plasmas – Dielectric constant and polarization - Optically use full nanostructured polymers – Polymeric crystals, surface wave guides and control of light paths.

[SKILL DEVELOPMENT]

UNIT – V: NANOELECTRONICS & FUTURE APPLICATION

The tools of micro and nanofabrication – Optical lithography – electron beam lithography – Atomic lithography – molecular beam epitaxy – Quantum electronics devices – High electron mobility transistors – Quantum interface transistors –Nano electronics and magnetic devices – new computing systems – Optoelectronics devices – Light emitting diodes – Thermionic solar power –Environmental applications.

Books for Study:

Mick Wilson, K.K Geroff Smith, Michelle and Bukhard Raguse, Nano technology –Basic science and Emerging technologies, Overseas press 2005.

Course Code	Course Title	L	T	P	C
20213DSC44B	Analog Systems and Applications	5	0	0	4

Introduction to CRO: Block Diagram of CRO. Electron Gun, Deflection System and Time Base. Deflection Sensitivity. Applications of CRO: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency, and Phase Difference.

Semiconductor Diodes: P and N type semiconductors. Energy Level Diagram. Conductivity and Mobility, Concept of Drift velocity. PN Junction Fabrication (Simple Idea). Barrier Formation in PN Junction Diode. Static and Dynamic Resistance.

Bipolar Junction transistors: n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains α and β Relations between α and β . Load Line analysis of Transistors. DC Load line and Q-point. Physical Mechanism of Current Flow. Active, Cutoff and Saturation Regions.

Amplifiers: Transistor Biasing and Stabilization Circuits. Fixed Bias and Voltage Divider Bias. Transistor as 2-port Network. h-parameter Equivalent Circuit. Analysis of single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains.

Sinusoidal Oscillators: Barkhausen's Criterion for self-sustained oscillations. RC Phase shift oscillator, determination of Frequency. Hartley & Colpitts oscillators.

[SKILL DEVELOPMENT]

TEXT BOOKS

- Integrated Electronics, J. Millman and C.C. Halkias, 1991, Tata Mc-Graw Hill.
- Electronics: Fundamentals and Applications, J.D. Ryder, 2004, Prentice Hall.
- Solid State Electronic Devices, B.G.Streetman & S.K.Banerjee, 6th Edn.,2009, PHI Learning.

Course Code	Course Title	L	T	P	C
20213DSC44C	Elements of Modern Physics	5	0	0	4

Solution of Schrodinger equation for one dimensional problems: One dimensional infinitely rigid box- energy eigenvalues and eigenfunctions, normalization; Quantum dot as example; Quantum mechanical scattering and tunnelling in one dimension-across a step potential & rectangular potential barrier.

Lasers: Einstein's A and B coefficients. Metastable states. Spontaneous and Stimulated emissions. Optical Pumping and Population Inversion. Three- Level and Four-Level Lasers. Ruby Laser and He-Ne Laser.

Nuclear models: Size and structure of atomic nucleus and its relation with atomic weight; Impossibility of an electron being in the nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, Liquid Drop model: semi-empirical mass formula and binding energy, Nuclear Shell Model and magic numbers.

Radioactivity: stability of the nucleus; Law of radioactive decay; Mean life and half-life; Alpha decay; Beta decay- energy released, spectrum and Pauli's prediction of neutrino; Gamma ray emission, energy-momentum conservation: electron-positron pair creation by gamma photons in the vicinity of a nucleus.

Fission and fusion: mass deficit, relativity and generation of energy; Fission - nature of fragments and emission of neutrons. Nuclear reactor: slow neutrons interacting with Uranium 235; Fusion and thermonuclear reactions driving stellar energy (brief qualitative discussions).

[SKILL DEVELOPMENT]

TEXT BOOKS

- Quantum Mechanics, Robert Eisberg and Robert Resnick, 2nd Edn., 2002, Wiley.
- Concepts of Modern Physics, Arthur Beiser, 2002, McGraw-Hill.
- Introduction to Modern Physics, Rich Meyer, Kennard, Coop, 2002, Tata McGraw Hill
- Introduction to Quantum Mechanics, David J. Griffith, 2005, Pearson Education.

Course Code	Course Title	L	T	P	C
20213DSC44D	Digital Systems and Applications	5	0	0	4

Timers: (a) IC 555: block diagram and applications: Astable multivibrator and Monostable multivibrator.

Shift registers: (a) Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in- Serial-out and Parallel-in-Parallel-out Shift Registers (only up to 4 bits).

Counters (4 bits): (a) Ring Counter. Asynchronous counters, Decade Counter. Synchronous Counter.

Computer Organization: (a) Input/Output Devices. Data storage (idea of RAM and ROM). Computer memory. Memory organization & addressing. Memory Interfacing. Memory Map

Introduction to Assembly Language: 1 byte, 2 byte & 3 byte instructions. **Conversion:** Resistive network (Weighted and R-2R Ladder). Accuracy and Resolution. A/D Conversion (successive approximation)

[SKILL DEVELOPMENT]

TEXT BOOKS

- Digital Fundamentals, 11/e Thomas L. Floyd, 2015, Pearson.
- Digital Principles and Applications, A.P. Malvino, D.P. Leach and Saha, 7th Ed., 2011, Tata McGraw
- Fundamentals of Digital Circuits, Anand Kumar, 2nd Edn, 2009, PHI Learning Pvt. Ltd.
- Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.

Course Code	Experimental Techniques	L	T	P	C
20213DSC43E		5	0	0	4

Measurements: Accuracy and precision. Significant figures. Error and uncertainty analysis. Types of errors: Gross error, systematic error, random error. Statistical analysis of data (Arithmetic mean, deviation from mean, average deviation, standard deviation, chi-square) and curve fitting. Gaussian distribution.

Signals and Systems: Periodic and aperiodic signals. Impulse response, transfer function and frequency response of first and second order systems. Fluctuations and Noise in measurement system. S/N ratio and Noise figure. Noise in frequency domain. Sources of Noise: Inherent fluctuations, Thermal noise, Shot noise, 1/f noise.

Shielding and Grounding: Methods of safety grounding. Energy coupling. Grounding. Shielding: Electrostatic shielding. Electromagnetic Interference.

Digital Multimeter: Comparison of analog and digital instruments. Block diagram of digital multimeter, principle of measurement of I, V, C. Accuracy and resolution of measurement

Impedance Bridges and Q-meter: Block diagram and working principles of RLC bridge. Q-meter and its working operation. Digital LCR bridge.

முதலாம் ஆண்டு

இக்கால இலக்கியம் - செய்யுள், சிறுகதை, நாடகம், இலக்கிய வரலாறு

அலகு : 1. செய்யுள்

1. தாயுமானவ சுவாமிகள் - ஆதார புவனம் - சிதம்பர ரகசியம் - 40 அடிகள்
2. இராமலிங்க அடிகள் - திருவருட்பா - கருணை விண்ணப்பம் - 40 அடிகள்
3. கவிமணி தேசிக விநாயகம் பிள்ளை - மலரும் மாலையும் - 52 அடிகள்
4. பாரதியார் - புதுமைப்பெண் - 40 அடிகள்
5. பாரதிதாசன் - பாரதிதாசன் கவிதைகள், தமிழ் இனிமை, தமிழ் உணவு

அலகு : 2. செய்யுள்:

6. நாமக்கல கவிஞர் - தமிழ் தேன் - தமிழ் வளர்க்க சபதம் செய்வோம், 40 அடிகள்
7. ந.பிச்சமூர்த்தி - வழித்துணை - கவிதை கருடன், 42 அடிகள்
8. சுரதா - தேன்மழை, கலப்பை, 22 அடிகள்
9. கண்ணதாசன் - இலக்கியம், ஒரு பானையின் கதை, 54 அடிகள்
10. அப்துல் ரகுமான் - சொந்த சிறகுகள், குப்பையை கிளறும் சிறகுகள், 80 அடிகள்

அலகு : 3. சிறுகதை:

11. சு.சமுத்திரம் - வேரில் பழுத்த பலா

அலகு : 4. நாடகம்:

12. கு. வெ. பாலசுப்பிரமணியன், கௌதம புத்தர் (உரைநடை நாடகம்)

அலகு : 5. இலக்கிய வரலாறு

13. சிறுகதை, புதினம், நாடகம் உரைநடை, கவிதை, புதுக்கவிதை

***Employability**

Course Code	Course Title	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Course Objective:

- To familiarize with the glossary terms, figures of speech
- To enhance vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms
- To understand the impact of the speeches of famous people

Course Outcome:

- Develop vocabulary
- Learn to edit and do proof reading
- Read and comprehend literature

UNIT – I

Glossary of grammar terms, Figures of speech

UNIT – II

Foreign words and phrases, British and American Vocabulary

UNIT – III

Comparison and contrast, Cause and effect

UNIT – IV

Editing , Proof reading

UNIT – V

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

Reference book:

Author	Title of the book	Edition / Year	Publisher
Wren and Martin	English Grammar	2009	S.Chand& Company Ltd
Meenakshi Raman & Sangeetha Sharma	Technical Communication	Second Edition 2011	Oxford University Press
Sudhir Kumar Sharma	The World's Great Speeches	-	Galaxy Publishers

***Skill Development**

Course Code	Course Title	L	T	P	C
20111AEC12	English-I	4	0	0	2

Aim:

- To acquaint with learning English through literature

Objective:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

Outcome:

- Read and comprehend literature
- Appreciate the different types of poetry and prose

UNIT –I

Because I could not Stop for Death -Emily Dickinson

Stopping by Woods on a Snowy Evening -Robert Frost

UNIT – II

Enterprise -Nissim Ezekiel

Love poem for a wife -A.KRamanujam

UNIT –III

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -ArunaGnanadason

UNIT –IV

The Merchant of Death -Nanda Kishore Mishra & John Kennet

She Spoke for all Nature -Young world 'The Hindu'

UNIT –V

Oliver Twist -Charles Dickens

Text book:

Author	Title of the book	Edition / Year	Publisher
S.Murugesan/Dr.K.Chellappa n	The Art of Reading/ Experiencing Poetry	Reprint 2004	Emerald Publishers

***Skill Development**

Course Code	Course Title	L	T	P	C
20115AEC13	Biomolecules	6	1	0	5

Aim

- To know the various biomolecules present in biological system

Course objectives

- To understand the properties and importance of water in biological system
- To introduce the importance of vitamins in human body

Course outcomes (CO's)

- Recognize water as a universal solvent and elixir of life by knowing its importance
- Identify the properties and classification of carbohydrates
- Recall the role of various lipids in biomembrane including signal transduction
- Categories the amino acids and know their properties
- Differentiate the structure, properties and functions of DNA and RNA
- List the functions and deficiency disease of fat and water soluble vitamins

Unit I Carbohydrates:

Classification - structural elucidation of glucose and fructose. Interconversion of sugars. Structure, Properties and biological functions of mono, di, oligo and polysaccharides. Homoglycans and Heteroglycans.

Unit II Amino acids and protein:

Amino acid Structure, classification, physical and chemical properties. Peptides, peptide bond, peptide synthesis, biologically important peptides. Proteins: classification, physical and chemical properties, Biological importance. Primary structure, Secondary, tertiary and quaternary structure- forces stabilizing the structure of proteins.

Unit III Nucleic acids:

Components of mono nucleotides- pyrimidines, purines, nucleosides, nucleotide. 5'diphosphates and 5' triphosphates. Polynucleotides: DNA and RNA Composition, structure- and biological importance. Properties -hydrolysis of nucleic acids by acids, bases and enzymes. Denaturation and renaturation. Isolation, separation and purification of DNA and RNA

Unit IV Lipids:

Classification and Biological significance. Simple lipids: types of fatty acids, triglycerides, waxes. Compound lipids-structure and functions- Phospholipids, sphingolipids and

glycolipids. Lipoproteins- classification and composition. Steroids and prostaglandins- structure and functions. Characterization of oils: Reichert-Meisel value, Iodine number, saponification value, acid number and determination of acetyl value.

Unit V Vitamins and Antibiotics:

Definition and classification. Source, Structure and biological role, daily requirement and deficiency manifestation of the fat soluble vitamins A,D,E & K. Water soluble vitamins- Ascorbic acid, thiamine, riboflavin, pyridoxine, niacin, pantothenic acid, lipoic acid, biotin, folic acid and vitamin B12. Antibiotics – Definition, types and general properties; Structure and significance of Penicillin and tetracycline

REFERENCE BOOKS:

1. Principles of Biochemistry – 7th edition Lehninger, Nelson Cox Macmillan worth Publishers, 2013.

8. Introductory Experiments on Biomolecules and their Interactions, Robert K. 2015.
9. Biochemistry – Stryer

***Employability/**

Course Code	Course Title	L	T	P	C
20114AEC14	Chemistry - I	6	1	0	4

Aim

The behavior of, and interactions between, matter and energy at both the atomic and molecular levels.

Course Objective

- Use standardized names and symbols to represent atoms, molecules, ions and Chemical reactions.
- Predict atomic structure, chemical bonding or molecular geometry based on Accepted models.

Course Outcome:

1. Apply quantitative reasoning skills to matter and energy, and physical or chemical changes that occur.
2. Use accepted models to describe the reactions between acids and basis and basic equilibrium concepts. Demonstrate competence in collecting and interpreting data in the laboratory.

UNIT- I

Polar effect:

Inductive effect +I and – I groups, relative strength of – foamic , acetic and propionicacids – acetic and chloroacetic acids – ammonia and methyl amine. Resonance – resonating structure of benzene , butadiene and COOH groups – conditions – applications (resonance energy and stability). Acidic & basic properties of phenol & aniline. Hyperconjugation.- consequence of hyperconjugation. Steric effects –Steric accelerated reaction and steric inhibited reaction.

UNIT –II

Industrial chemistry

Fuel gases – Watergas, products gas, L.P.G gas, Gobar gas and natural gas. Fertilizers – NPK and mixed fertilizers, micronutrients, and their role in plant life and biofertilizers, soap and detergents an elementary idea about preparation cleaning action of soap detergents.

UNIT III

Aromatic compounds : structure, stability, resonance and aromaticity of benzene. Substitution reactions, Nitration, Halogenation and Alkylation Naphthalene Isolation, Synthesis, properties, and structural elucidation and uses .Organic compounds: Benzoin, Perkin, Cannizaro, Claisen reactions. Chemotherapy: Definition and uses of Antibiotic,

Analgesic Antibacteria, Antiviral, Antidiabetic, Antihypertensive, Antiseptic and disinfectant, Antimalarial- Anaesthetics – local and general.

UNIT –IV

Energetic: Review first law of thermodynamic state and path functions need for the second law Carnot cycle and thermodynamic scale of temperature spontaneous and non spontaneous process and Third law.

UNIT – V

Chemical kinetics: Order of reactions and their determinations. Activation energy, effect of temperature on reaction rate. Catalysis Types, mechanism of catalytic reactions, industrial applications.

***Skill Development**

Course Code	Course Title	L	T	P	C
20115AEC15L	Biomolecules Lab-I	0	0	3	2

Aim

- To know the safety measures to be followed in laboratory

Course Objectives

- To give hands on experience on the preparation of buffers and various solutions.
- To identify and separate the biomolecules
- To quantify the vitamin in a sample

Course outcomes (CO's)

1. Gain knowledge on lab safety
2. Trained on preparation of reagents and solution
3. Able to analyse biomolecules and vitamins qualitatively and quantitatively
4. Handle the instruments associated with the practical
5. To identify the structure of biomolecules

1. Qualitative Analysis of Carbohydrates:

(a) Glucose

(b) Fructose

(c) Xylose

(d) Maltose

(e) Lactose

(f) Sucrose.

2. Qualitative Analysis of Protein:

(a) Egg Albumin

(b) Egg Flakes

(c) Casein

3. Colour Reactions for Amino Acids.

4. Qualitative Analysis of Lipids.

5. Preparations:

(a) Starch from Potato.

(b) Casein from Milk.

*Entrepreneurship

Course Code	Course Title	L	T	P	C
20114AEC16L	Volumetric Analysis Lab	0	0	3	2

Aim

- This course aims to familiarize students with the principles of volumetric analysis.

Course objective

- Experimental practice of quantitative volumetric analysis.
- The objective of the estimation of ferrous sulphate, oxalic acid, copper, potassium dichromate and potassium permanganate.
- The main objective of volumetric analysis is to determine the amount of a substance in a given sample.
- When dealing with volumetric analysis the concept of strong acid and base

Course Outcome

1. To understand the apparatus used in volumetric analysis and correct volumetric analysis.
2. To know Good laboratory practice

Experiments:

1. Strong Acid and Strong Base
2. Weak acid vs Strong base
3. Estimation of ferrous sulphate.
4. Estimation of oxalic acid.
5. Estimation of copper.
6. Estimation of potassium dichromate
7. Estimation of potassium permanganate

***Skill Development**

Course Code	Course Title	L	T	P	C
201ACLSICN	Indian Constitution	-	-	-	2

Aim:

The aim of the constitution is mentioned in the *preamble that is to constitute* India into a sovereign, socialist, democratic republic and it's the provision of the rights of citizens.it's primary objective is to provide economic, social & political justice.

Course Objectives:

- To make the students understand about the democratic rule and parliamentary administration
- To appreciate the salient features of the Indian constitution
- To know the fundamental rights and constitutional remedies
- To make familiar with powers and positions of the union executive ,union parliament and the supreme court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Course outcome:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

Unit I:The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion- cultural and educational rights -right to constitutional remedies -fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification _method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India

State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

- 4) Kashyap. Subash c, Our parliament ,National book trust , New Delhi 1989

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Aim:

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

Course Objectives :

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realize one's potentials.

Course Outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practiced human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realize their potential as human beings and conduct themselves properly in the ways of the world.

Unit I

- ② Introduction: What is love? Forms of love for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
- Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love.
- Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
- Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Case studies

Unit II

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)

- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
- Learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit III

- Introduction: What is non-violence? Its need. Love, compassion, empathy, sympathy for others as pre-requisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non-violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing non-violence: What will learners learn/gain if they practice non-violence? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about non-violence
- Simulated situations
- Case studies

Unit IV

- Introduction: What is righteousness?
- Righteousness and *dharma*, Righteousness and Propriety
- Individuals who are remembered in history for practicing righteousness
- Narratives and anecdotes from history, literature including local folklore
- Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

Unit V

- Introduction: What is peace? Its need, relation with harmony and balance
- Individuals and organisations that are known for their commitment to peace
- Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about peace
- Simulated situations
- Case studies

Unit VI

- Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes dealing with instances of service from history, literature including local folklore

- Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s) regarding service
- Simulated situations
- Case studies

Unit VII

- Introduction: What is renunciation? Renunciation and sacrifice. Self-restraint and Ways of overcoming greed. Renunciation with action as true renunciation
- Individuals who are remembered in history for practicing this value.
- Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.
- Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Case studies

***Skill development**

SEMESTER II

Course Code	Course Title	L	T	P	C
20110AEC21	Tamil-II	4	0	0	2

முதலாம் ஆண்டு
செய்யுள் , பக்தி இலக்கியம், சிற்றிலக்கியம் , இலக்கிய வரலாறு

அலகு : 1. செய்யுள்:

1. திருநானசம்பந்தர் தேவாரம் - கோளறு பதிகம்
2. திருநாவுக்கரசர் தேவாரம் - தனிக் குறுந்தொகை
3. சுந்தரர் தேவாரம் - திருநொடித் தான் மலை
4. மாணிக்கவாசகர் - திருவாசகம் - தருப்பொன் ஊசல்

அலகு : 2. செய்யுள்:

5. குலசேகராழ்வார் - பெருமாள் திருமொழி
6. நம்மாழ்வார் திருவாய் மொழி - இரண்டாம் பத்து - உலகிற்கு உபதேசம்
7. ஆண்டாள் - நாச்சியார் திருமொழி - திருமணக்கனவை உரைத்தல்
8. திருமங்கை ஆழ்வார் - சிறிய திருமடல்

அலகு : 3. செய்யுள்:

9. திருமூலர் - மூன்றாம் திருமுறை
10. குமரகுருபரர் - மானாட்சியம்மைப் பிள்ளை - தமிழ் வருகைப் பருவம்
11. திரிகூடராசப்பக்கவிராயர் - குற்றாலக்குறவஞ்சி - குறத்தி நாட்டு வளங் கூறுதல்
12. வீரமாமுனிவர் - திருக்காவலூர்க் கலம்பகம்

அலகு : 4. புதினம்

13. கு.வெ. பாலசுப்ரமணியன் - காளவாய்

அலகு : 5. இலக்கிய வரலாறு

14. சைவ வைணவ இலக்கியங்கள், சிற்றிலக்கியங்கள், (பள்ளு - பிள்ளைத்தமிழ் , - பரணி)

***Employability**

Course Code	Course Title	L	T	P	C
20111AEC21	Advanced English-II	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations
- To understand the impact of the biographies of famous people

Outcome:

- Develop technological skill
- Able to write in a variety of formats
- Read biographies and develop personality

UNIT – I

E-mail, Fax , Memos

UNIT – II

Itinerary, Checklist

UNIT – III

Invitation, Circular

UNIT – IV

Instruction , Recommendations

UNIT – V

Biographies of famous people: Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

Text Book

Author	Title of the book	Edition / Year	Publisher
Meenakshi Raman & Sangeetha Sharma	Technical Communication	2011	Oxford University Press
Rajendra Pal & J.S.Korlahalli	Business Communication	2015	Sultan

***Skill Development**

Course Code	Course Title	L	T	P	C
20111AEC22	English-II	4	0	0	2

Aim:

- To acquaint learners with different trends of writing

Objective:

- To acquire language skills through literature
- To enable the students to appreciate literature
- To develop the conversational skills through one act plays

Outcome:

- Appreciate different forms of literature
- Acquire language skills through literature
- Broaden the horizon of knowledge

UNIT – I

Ecology -A.K. Ramanujan

Gift -Alice Walker

The First Meeting -Sujata Bhatt

UNIT –II

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran

UNIT –III

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore

UNIT – IV

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king

Those People Next Door -A.G. Gardiner

UNIT – V

Marriage is a private Affair -Chinua Achebe

The Fortune Teller -Karel Capek

Proposal -Anton Chekov

***Skill Development**

Text book:

Author	Title of the book	Edition / Year	Publisher
Gowri Sivaraman	Gathered Wisdom	Reprint 2010	Emerald Publishers

Course Code	Course Title	L	T	P	C
20115AEC23	Biochemical Techniques	6	1	0	5

Aim

The course aims to provide an advanced understanding of the core principles and topics of Biochemistry

Course objectives

- To teach students on various techniques used for the assessment of various diseases and research studies.
- To teach the good laboratory practice required to execute the learned techniques.

Course outcomes (CO's)

- To learn various techniques and acquire the skills to use appropriate methods.
- To acquire the good laboratory practices.
- This skill based course will teach the students the various instrumentations that are used in the analytical laboratories.
- This course covers both fundamental and applications of the instruments that are routinely used for the characterization of biomolecules
- It trains the students in adopting various techniques in biological research.
- The units of this paper are crucial for implementation of research ideas at molecular level.

Unit I:

Colorimetry: Beer Lambert's Law, Light absorption and its transmittance, Absorption Spectroscopy - Principle, instrumentation and applications of colorimetry and UV-Vis spectrophotometer. Emission Spectroscopy – Spectrofluorimeter - Principle, instrumentation and applications. Flame photometry - principle and applications.

Electrochemical techniques – Standard hydrogen electrode, pH measurements; Buffers in biological systems; Henderson-Hassel balch equation. Principle and application of oxygen electrode; Potentiometric titrations of oxidation-reduction reactions.

Unit II:

Chromatography techniques: Principles, materials, techniques and applications of Paper chromatography, TLC, Column chromatography, Gel permeation chromatography, Ion-exchange chromatography, Affinity chromatography, HPLC and GLC.

Unit III:

Centrifugation: Types of centrifuges; Preparative ultracentrifuges – Principles, techniques and applications of differential and density gradient centrifugation; Principles, instrumentation and applications of analytical ultracentrifuges.

Unit IV:

Electrophoresis – Principles, instrumentations and biological applications of Paper, Cellulose acetate, agar gel, PAGE, SDS-PAGE, immuno and isoelectric focusing electrophoresis. Blotting techniques – Principles, materials, methods and applications of Southern, Northern and Western blotting techniques.

Unit V:

Radio isotopic techniques: Types of radioactive decay, rate of radioactive decay, decay constant, Units of radio activity, measurement of radioactivity based on ionization- GM counter and excitation- Scintillation counter. Autoradiography. Applications of radioisotopes in biology. Hazards of radioactivity.

REFERENCES:

2. Biophysical Chemistry – Upadhyay, Upadhyay and nath.
3. Principles and techniques of practical Biochemistry – Keith Wilson and Walker.
4. Principles of Instrumental analysis – B.K.Sharma.
5. Instrumental analysis – Chatwall Anand
6. Analytical Biochemistry – Dr.P.Asoken

***Employability/Entrepreneurship/Skill Development**

Course Code	Course Title	L	T	P	C
20114AEC24	Chemistry –II	6	1	0	4

Aim

The behavior of, and interactions between, matter and energy at both the atomic and molecular levels.

Course Objective

- Use standardized names and symbols to represent atoms, molecules, ions and Chemical reactions.
- Predict atomic structure, chemical bonding or molecular geometry based on Accepted models.

Course Outcome:

- Apply quantitative reasoning skills to matter and energy, and physical or Chemical changes that occur.
- Use accepted models to describe the reactions between acids and basis and basic equilibrium concepts.
- Demonstrate competence in collecting and interpreting data in the laboratory.

UNIT – I

Amino acids and proteins

Aminoacids- Classification based on structure and essential and non - essential aminoacids – preparation and properties – peptides – (elementary treatment) proteins – Classification, based on physical properties and functions. Structure of proteins – primary and secondary (elementary treatment)

UNIT – II

Coordination chemistry

Nomenclature of mononuclear complexes – Werner sidgwick, and pauling’s theories – Chelation and its industrial importance to EDTA. Biological role of hemoglobin and chlorophyll Metallic bond Electron gas, pauling and band theories. Semiconductors intrinsic, n- type and p-type.

UNIT –III

Synthetic polymers:

Teflon, Alkyl and epoxy resins, poly esters – General treatment only. Heterocyclic compounds – Furan, Thiophene, pyrrole and pyridine – preparation and properties of pyridine and pyrrole – Quinoline and isoquinoline.

Stereoisomerism – lactic and tartaric acid – racemic mixture and resolution. Geometrical keto – enol tautomerism Meaning of E,Z,R,S,D,L, meso, (+),(-) in stereochemistry.

UNIT- IV

Electrochemistry: Specific and equivalent conductivities – their determination – Oswald's dilution law, Kohlrausch law. P^H and Buffer: Importance of pH and buffers in living systems – P^H determination by colorimetric and electrometric methods.

UNIT -V

Surface chemistry:

Emulsion, gels preparation, properties and applications. Electrophoresis, Chromatography – Column, paper and thin layer chromatography.

***Skill Development**

5. I.L.Finar, organic chemistry, Volume I
6. R.D.Madan, Advanced Inorganic chemistry.
- 7.Puri and Sharma, Text book of Physical chemistry.

Course Code	Course Title	L	T	P	C
20115AEC25L	Biochemical Technique Lab-I	0	0	3	2

Aim

To know the safety measures to be followed in laboratory

Course Objectives

- To know the safety measures to be followed in laboratory
- To give hands on experience on the preparation of buffers and various solutions.
- To identify and separate the biomolecules
- To quantify the vitamin in a sample

Course outcomes (CO's)

- Gain knowledge on lab safety
- Trained on preparation of reagents and solution
- Able to analyse biomolecules and vitamins qualitatively and quantitatively
- Handle the instruments associated with the practical
- Students will understand the concept of spectrophotometer
- They will be able to assess the suitability of chromatographic techniques for solving specific bio- analytical problems and critically apply the knowledge for biomolecules

EXPERIMENTS:

1. Estimation of Amino Acid (Glycine) by formal titration.
2. Estimation of Ascorbic Acid by using 2, 6- Dichloro phenol indophenols.
3. Determination of Acid Number of edible oil.
4. Estimation of reducing sugar by Benedict's method.
5. Determination of Saponification Number.
6. Estimation of RNA by Orcinol Method.
7. Estimation of DNA by Diphenyl amine method.

REFERENCES:

2. Manual in Biochemistry – S,Ramakrishnan
3. Practical Biochemistry – Plummer
4. Introductory Practical Biochemistry – S.K.Sawhney, Randhir Singh.

*Employability/Entrepreneurship

Course Code	Course Title	L	T	P	C
20114AEC26L	Organic Analysis Lab	0	0	3	2

AIM:

Aim of this course, students should be able to: Handle organic chemicals in a safe and competent manner

Course objective

- Comprehension of principles of elemental analysis and learning of current applications.
- The primary goal of this course is to make students aware of how chemical processes can be designed, developed and run in a sustainable way.
- Students acquire the competence to think of chemistry as a sustainable activity.

Course Outcome:

- Apply significant figures rules in all calculations providing the correct number of significant figures and units
- Convert between different units using conversion factors and dimensional analysis.
- Name elements, provide their symbols and determine the number of protons, neutrons, electrons and nuclei in elements and compounds,
- Calculate percent composition given a molecular formula and molecular formula given the percent composition.
- Name salt, acids, bases and covalent compounds and provide formulas for these given a molecular formula.
- Explain the difference between solubility and dissociation in water and apply this knowledge to acids, bases and salts.
- Identify weak and strong acids and bases and insoluble compounds using dissociation and solubility rules.
- Construct molecular, total and net ionic equations for double displacement reactions

EXPERIMENTS:

A study of elemental analysis of the following compounds:

- a. Carbohydrates,
- b. Amides,
- c. Aldehydes,
- d. Ketones,
- e. Acids,
- f. Phenols.

The students may be trained to perform the analysis like tests for elements (nitrogen only) aliphatic or aromatic saturated or unsaturated and functional groups present and record their observations.

***Skill Development**

Course Code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Aim:

The aim to develop communication skills

Course Objectives:

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome:

By the end of this program, participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barriers to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

- Techniques of effective reading
- Gathering ideas and information from a given text
 - i. Identify the main claim of the text
 - ii. Identify the purpose of the text
 - iii. Identify the context of the text
 - iv. Identify the concepts mentioned
- Evaluating these ideas and information
 - i. Identify the arguments employed in the text
 - ii. Identify the theories employed or assumed in the text
- Interpret the text
 - i. To understand what a text says
 - ii. To understand what a text does
 - iii. To understand what a text means

Unit IV

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalizations and oversimplification of issues
- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
 - i. Well-knit logical sequence
 - ii. Narrative sequence
 - iii. Category groupings
- Different modes of Writing-
 - i. E-mails
 - ii. Proposal writing for Higher Studies
 - iii. Recording the proceedings of meetings
 - iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
- Trends and opportunities in using digital technology in the workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office
 - iii. Excel
 - iv. Power point

Unit VI

- Introduction to social media websites
- Advantages of social media
- Ethics and etiquettes of social media
- How to use Google search better
- Effective ways of using Social Media
- Introduction to I Marketing

Unit VII

- Meaning of non-verbal communication
- Introduction to modes of non-verbal communication
- Breaking the misbeliefs
- Open and Closed Body language
- Eye Contact and Facial Expression
- Hand Gestures
- Do's and Don'ts
- Learning from experts
- Activities-Based Learning

2. Silvia P. J. (2007), *How to Read a Lot*, American Psychological Association, Washington DC

***Skill Development**

Course Code	Course Title	L	T	P	C
201ACSSCBBE	Basic Behavioral Etiquette	-	-	-	2

Objectives:

Training is mainly focused on discipline, grooming, career planning and building personality. As it is the first year of the university, students are given awareness about the job market right from the start so that they prepare accordingly at their own pace and potential.

Eliminating negative thought, developing enriching habits, unlocking individual potentials and well versed communication is the aim of this program. The module consists of

- i) **Communication Skills**
- j) **Goal Setting**
- k) **Career Planning**
- l) **Reaching your Potential**
- m) **Time Management**
- n) **Stress Management**
- o) **Grooming and Discipline**
- p) **Learning skills**
- q) **Listening Skills**
- r) **Team Building**

***Skill Development**

SEMESTER – III

Course Code	Course Title	L	T	P	C
20110AEC31	Tamil-III	4	0	0	2

செய்யுள்

அலகு : 1

1. சிலப்பதிகாரம் - மனையறம் படுத்த காதை
2. மணிமேகலை - ஆதிரை பிச்சையிட்ட காதை
3. சீவக சிந்தாமணி - விமலையார் இலம்பகம்

அலகு :2

4. பெரியபுராணம் - இளையான் குடிமாற நாயனார் புராணம்
5. கம்பராமாயணம் - கைகேயி சூழ்வினைப் படலம்

அலகு :3

6. சீறாப்புராணம் - நபி அவதாரப் படலம் - 24 வரிகள்
7. தேம்பாவணி - வாமன் ஆட்சி படலம் - முதல் 5 பாடல்கள்

அலகு :4

8. நளவெண்பா - சுயம்வர காண்டம் (20 - 51)

அலகு . 5 : இலக்கிய வரலாறு

9. காப்பியங்கள், ஐஞ்சிறு காப்பியங்கள், புராணங்கள், இதிகாசங்கள்

*Employability

Course Code	Course Title	L	T	P	C
20111AEC31	Advanced English-III	4	0	0	2

Aim:

To improve the knowledge of English

Course Objective:

To familiarize with the organs of speech and the description and classification of speech sounds

To understand consonant cluster, syllable, word accent and intonation.

To know how to interpret graphics

To write slogans and advertisements

Course Outcome:

Understand phonetics

Develop writing skill

Able to develop creative writing

UNIT –I

The organs of speech, Classification of speech sounds, Vowels and Diphthongs

UNIT –II

Consonants, Consonant cluster

UNIT – III

Syllable, Word accent, Intonation

UNIT – IV

Idiom, Interpretation of graphics

UNIT – V

Slogan writing, Writing advertisement

***Skill Development**

REFERENCE BOOKS:

Author	Title of the book	Edition / Year	Publisher
T.B. Balasubramanian	A text book of Phonetics for Indian Students	Reprint 2008	Macmillian
Meenakshi Sharma & Sangeetha Sharma	Technical Communication	2011	Oxford University Press

Course Code	Course Title	L	T	P	C
20111AEC32	English-III	4	0	0	2

Aim:

- To acquaint with learning English through literature

Course Objective:

- To sensitize language use through prescribed text
- To develop the conversational skills through one act plays

Course Outcome:

- Appreciate different types of prose
- Develop the conversational skills through one act plays
- Enhance the skill of making grammatically correct sentences.

UNIT – I

The Doctor's World	- R.K. Narayan
The Postmaster	- Rabindranath Tagore
Princess September	- E.Somerest Maugham

UNIT – II

The Price of Flowers	-Prabhat Kumar Mukhopadhyay
The Open Window	-Saki
The Model Millionaire	-Oscar Wilde

UNIT –III

My Brother My Brother	- Norah Burke
Uneasy Home Coming	- Will F. Jenkins
Resignation	- Premchand

UNIT –IV

The Referee	-W.H. Andrews & Geoffrey Dreamer
The Case of the Stolen Diamonds	-Farrell Mitchell

UNIT – V

The Dear Departed	-Stanley Houghton
The Princess and the Wood Cutter	-Alan Alexander Milne

Text book:

Author	Title of the book	Edition / Year	Publisher
SteuartH.King	Nine Short Stories	Reprint 2001	Blackie Books
T.Prabhakar	One – Act Play		Emerald

***Skill Development**

Course Code	Course Title	L	T	P	C
20115AEC33	Cell Biology and Genetics	4	1	0	4

Aim

The aim of the course is to give basic knowledge about the structure and function of cells and cellular components.

Course objectives

- To know the tools required for studying cell morphology
- To enlight the students with structure and functions of various organelle
- To understand the cytoskeletal network and extracellular matrix
- To introduce the cell cycle, cell division and cell death process

Course outcomes (CO's)

- Differentiate the prokaryotic and eukaryotic cell
- Understand the principle behind studying the cell morphology using various microscope
- Identify the structure and functions of each organelle in cell
- Recognise the mechanism behind the protein sorting and transport to their destinations like lysosome, mitochondria and chloroplast
- Maintenance of cytoskeleton structure and function of micro, macro and intermediary filaments
- Identify the proteins involved in cell cell interaction
- Enumerate the phases of cell cycle, events in cell division and mechanism of cell death.

Unit I

An Overview of cells: Origin and evolution of cells. Cell theory, Classification of cells – Prokaryotic and Eukaryotic cells. Comparison of prokaryotic and eukaryotic cells. Cell Membrane – Fluid mosaic model of membrane structure and its composition. Cell cycle.

Unit II

Cytoplasmic organelles – Golgi bodies – Endoplasmic reticulum – Ribosomes – mitochondria – plastids – Lysosomes – micro bodies - peroxisomes – microfilaments – microtubules – centrosomes – Basal bodies -Cilia and flagella.

Unit III

Cell growth and division – Nucleus, Nucleolus, chromatin chromosomes – structure of DNA - cell cycle – division – mitosis – meiosis .

Unit IV

Genetics – Mendel's laws – Epistasis – Gene interaction - Lethal genes – inheritance of multiple genes - multiple alleles – structure of gene – gene mutation.

Unit V

Linkage and crossing over – mapping of chromosomes – Human cytogenetics – sex linked inheritance – sex differentiation and determination - Eugenics – Euphenics – population genetics.

REFERENCES:

1. Cell Biology – CB Powar
2. Cell Biology – Rastogi S.C.
3. Cell Biology – Verma and Agarwal
4. Genetics – Verma and Agarwal
5. Genetics – Strickberger

*Employability

Course Code	Course Title	L	T	P	C
20120AEC34	Programming in C	4	1	0	4

Aim

To equip the students with fundamental programming principles

Objective

- To learn the concept of programming
- To understand input and output functions
- To study about Structures
- To learn Pointers in C Language

UNIT I

Evolution and Applications of C – Structure of a C Program – Data Types –Declarations – Operators – Expressions – Type conversions – Built-in functions.

UNIT II

Data Input and Output – Control statements: IF, ELSE-IF, GOTO, SWITCH, WHILE-DO, DO-WHILE, FOR, BREAK and CONTINUE.

UNIT III

Functions: Defining and accessing functions-passing parameters of functions -Arguments – Recursive functions – Storage classes.

Arrays: Defining and processing Arrays – Multi dimensional arrays – passing arrays to functions – Arrays and strings – String functions – String Manipulations.

UNIT IV

Pointers:Pointers Declarations – Operations on pointers – pointers to functions – Pointer and Strings – pointers and arrays – array of pointers - Structures and pointers – unions.

UNIT V

Data files – Opening, Closing, and processing files – Files with structures and unions – Register variables – Bit wise Operations – Macros- Preprocessing

*Skill Development

OUTCOMES:

At the end of the course, the student should be able to:

- Design C Programs for problems.

- Write and execute C programs for simple applications

TEXT BOOK:

“Programming in C” – E. Balagurusamy – Tata McGrawHill Publications

Book For Reference:

1. “ Programming with C” – Byron S.Gottfried – Schaum’s outline series – Tata McGrawHill publications.
2. “Let us C “ – Yeswant kanetkar – BPB Publications.

Course Code	Course Title	L	T	P	C
20115AEC35L	Cell Biology and Genetics Lab-I	0	0	3	2

Aim

To identify and isolate the enzymes , Proteins, vitamins etc.

Course Objective:

This practical course on proteins describes qualitative and quantitative analysis, as well as its purification and characterization.

Course outcomes (CO's):

- By the end of the course, students can be able to demonstrate the importance of the chromatography and their wide applications
- Understand and apply the principles and techniques of separation of pigments, amino acid and protein which prepares students for further education and/or employment in teaching, basic research, or the health professions.
- It trains the students in adopting various techniques in biological research.
- would be able to separate the plant pigments, identify and distinguish different amino acid, protein, lipids
- would be able to identify and outline the structure of an cell membranr at different magnification

EXPERIMENTS

1. Separation of Amino acids by Ascending, Descending, Circular & Two dimensional Paper Chromatography.
2. Extraction of Brain Lipids
3. Separation of Amino acids by TLC method.
4. Separation of Lipids by TLC.
5. Separation of Plant pigments by Column Chromatography.
6. Separation of Serum protein by Paper Electrophoresis.
7. Lipid Solubility of Membranes

*Employability

REFERENCES:

- 1 Manuals in Biochemistry – J.Jayaraman
2. Manual in Biochemistry – S,Ramakrishnan
3. Practical Biochemistry – Plummer
4. Introductory Practical Biochemistry – S.K.Sawhney, Randhir Singh.

Course Code	Course Title	L	T	P	C
20120AEC36L	Programming in C lab	0	0	3	2

Course Objectives:

- To make the student learn a programming language.
- To learn problem solving techniques.
- To teach the student to write programs in C and to solve the problems.

Course Outcome

- To know the proper lines of C, Encapsulation, Inheritance and Polymorphism
- To explain the various data types, operations and functions of C
- To know the concept of constructors and destructors
- To explain the concept of inheritances, types of inheritance and polymorphism, virtual function
- To explain the types of streams, format and format of input and output operations.

Experiments

1. Write a C program to find the roots of Quadratic Equation (all cases).
2. Write a C program to find the Sum of Series (Sine, Cosine, e^x)
3. Write a C program to reads an integer N and determine whether N is prime or not.
4. Write a C program to Finding factorials, generating Fibnoacci Numbers using recursive functions
5. Write a C program to find the numbers in Ascending and Descending order (use it to find largest and smallest numbers).
6. Write a C program to find the sum of natural numbers using WHILE statement.
7. Write a C program for Sorting of given names in alphabetical order.
8. Write a C program for Matrix Operations (Addition, Subtraction, Multiplication – use functions).
9. Write a C program for String Manipulation without using String functions (String length, String Comparison, String Copy, Palindrome checking, counting words and lines in strings – use function pointers).

*Skill Development

Course Code	Course Title	L	T	P	C
20120RMC37	Research Methodology	2	0	0	2

Aim:

To create a basic appreciation towards research process and awareness of various research publication

Course objectives:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

Course outcome:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

UNIT IV: Database Survey

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

UNIT V:

B. Sc. (Life Sciences)

Basic Principles of Laboratory Life Sciences Laboratory

Introduction - Access to Laboratory and Emergency Exits - Basic Biostatistics, Mean, Median, Mode and its Application - Fundamental of Biosafety, Bioethics, Replication – Advantages and Disadvantages, Standard division, Standard Error, Preparation of Chemicals – Percentage, Molarity and Normality, Ratio Solution, PPM Solution etc. Ethical Issue in Animal Handling, Basic of DMRT, ANOVA etc.

*Employability

Course Code	Course Title	L	T	P	C
201ACLSOAN	OFFICE AUTOMATION	-	-	-	2

Aim:

Course Objectives:

To provide an in-depth training in the use of office automation, internet and internet tools. The course also helps the candidates to get acquainted with IT.

Course Outcomes:

After completion of the course, students would be able to documents, spreadsheets, make small presentations and would be acquainted with the internet.

UNIT I

Knowing the basics of Computers

UNIT II

Word Processing (MS word)

UNIT III

Spread Sheet (MS XL)

UNIT IV

Presentation (MS Power Point)

UNIT V

Communicating with Internet

SEMESTER – IV

Course Code	Course Title	L	T	P	C
20110AEC41	Tamil-IV	4	0	0	2

தமிழ்.

செய்யுள் , சங்க இலக்கியம், அற இலக்கியம் , செம்மொழி , இலக்கிய வரலாறு

அலகு . 1 : பண்டைய இலக்கியம் - நற்றிணை;

1. நெய்தல் - தோழி கூற்று - பாடல் எண் . 11
2. குறிஞ்சி - தலைவி கூற்று - பாடல் எண் . 64
3. முல்லை - தலைவன் கூற்று - பாடல் எண் .142
4. பாலை - நற்றாய் கூற்று - பாடல் எண் . 29
5. மருதம் - தலைவி கூற்று - பாடல் எண் . 70

பண்டைய இலக்கியம் அறுந்தொகை

1. குறிஞ்சி - தோழி கூற்று - பாடல் எண் .1
2. முல்லை - செவிலித்தாய் கூற்று - பாடல் எண் .167
3. மருதம் - தலைவி கூற்று - பாடல் எண் . 181
4. நெய்தல் - தலைவி கூற்று - பாடல் எண் . 290
5. பாலை - தலைவன் கூற்று - பாடல் எண் . 347

பண்டைய இலக்கியம் ஊங்குநூறு

1. மருதம் - கள்வன் பத்து - முதல் இரண்டு பாடல்கள்
2. நெய்தல் - தோழிக்குரைத்த பத்து - முதல் இரண்டு பாடல்கள்
3. குறிஞ்சி - குன்றக் குறவன் பத்து - முதல் இரண்டு பாடல்கள்
4. பாலை - இளவேனிற் பத்து - முதல் இரண்டு பாடல்கள்
5. முல்லை - பாசறைப் பத்து - முதல் இரண்டு பாடல்கள்

அலகு . 2 : கவிந்தொகை

1. பாலை - பாடல் எண் . 2
2. குறிஞ்சி - பாடல் எண் . 37

அகநானூறு

1. பாலை - பாடல் எண் . 5
2. மருதம் - பாடல் எண் . 6

புறநானூறு

பாடல் எண் : 6 ,121, 41, 153 ,172 191, 223, 246, 284, 358.

பதிற்றுப்பத்து

இரண்டாம் பத்து பாடல் எண் . 4 (நிலம் நீர் வளி விசம்பு)

அலகு.3;

1. பட்டினப்பாலை - முதல் 105 வரிகள்
2. திருக்குறள் - 1.மருந்து 2.ஊக்கமுடைமை 3.உழவு

அலகு . 4 : செம்மொழி வரனறு ;

(மொழி - விளக்கம் , மொழிக்குடும்பங்கள், உலகச் செம்மொழிகள், இந்தியச் செம்மொழிகள் , செம்மொழித் தகுதிகள் , வரையறைகள், வாழும் தமிழ் செம்மொழி, தொன்மை, தமிழின் சிறப்புகள், தமிழ் செம்மொழி நூல்கள்)

அலகு . 5 : இலக்கிய வரலாறு

சங்க இலக்கியங்கள் , பதினெண்கீழ்க்கணக்கு நூல்கள்.

***Employability**

Course Code	Course Title	L	T	P	C
20111AEC41	Advanced English-IV	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

Outcome:

- Develop writing skill
- Comprehend and describe poems
- Learn interviewing skills

UNIT –I

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation – Presentation– Type of questions – Answering techniques.

UNIT – II

Flowchart, Proposals

UNIT – III

Discourse markers, Review

UNIT IV

Grammatical forms, Paraphrasing

UNIT –V

Definition, Writing for and against a topic.

***Skill Development**

Course Code	Course Title	L	T	P	C
20111AEC42	English-IV	4	0	0	2

Aim:

- To learn English through literature

Course Objective:

- To explore learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

Course Outcome:

- Improve their ability to read and understand them
- Know the genius of Shakespeare
- Express one's views in writing

***Skill Development**

Text book:

Author	Title of the book	Edition / Year	Publisher
Devaraj	English for Enrichment	2012	Emerald Publishers
Board of Editors	Selected Scenes from Shakespeare Book I & II	2012	Emerald Publishers

Course Code	Course Title	L	T	P	C
20115AEC43	Human Physiology	4	1	0	4

Aim

Student would know about their own body system and its functions.

Course objectives

- Human Physiology aims to promote mechanistic advances in human integrative and translational physiology.
- Human Physiology provides a forum for many physiological areas.

Course outcomes (CO's)

- The purpose of this course is to promote knowledge in the integration of theories, methods and research in human physiology.
- It gives and exposure about human anatomy and physiology.
- Understand Anatomy & Physiology of various systems in Human which gives a clear picture about various systems and their respective disorders.
- Acquire good knowledge on Nervous & Muscular systems
- A Fair knowledge on Human Reproductive Biology provides information with the system, hormones involved, disorders associated with them in, and treatments in both genders respectively. 6. Understand "Anatomy & Physiology of various Systems such as Nervous system, Muscular system, Reproductive system, Liver.

Unit I Digestive system

Anatomy of digestive system, Types of digestion, salivary, gastric and biliary secretions-composition and its physiological role. Intestinal hormones. Movements in GIT. Digestion and absorption of carbohydrate, lipids & proteins. Digestion and absorption in small intestine.

Unit II Circulation

Respiratory system – Mechanism of respiration - Blood – Composition – Haemopoiesis – functions of cells – Haemoglobin – Blood coagulation – Lymph- composition and function - Heart - Cardiac cycle - ECG

Unit III Excretory system

Structure of kidney and Nephron, Composition and formation of urine, role of kidney in regulation of acid-base balance. Muscle: Kinds of muscle, structure, muscle proteins – functions – Mechanism of muscle contraction.

Unit IV Central Nervous system

Central nervous system- General organization. Functional units. Resting and action potential-conduction of nerve impulse. Synaptic transmission. Brainchemical composition, metabolism, metabolic adaptation, neurotransmitters and cAMP. Biochemical aspects of learning and memory. Enkephalins and endorphins.

Unit V Physiology of reproductive system

General anatomy of the male and female reproductive organs, steps of spermatogenesis, spermatozoan, transportation of sperm, female reproductive process – Maturation of ovum(Oogenesis) and fertilization process. Hormonal regulation of reproduction and pregnancy – Male and female sex hormones

6. Text book of human physiology – Sharadha subramaniam

Course Code	Course Title	L	T	P	C
20120AEC44	Fundamentals of Computing	5	1	0	5

Aim:

To equip the students with Basic concepts of computing

Course Objective:

- Identify the main system elements of a computer system.
- Describe the main hardware components of a Personal Computer
- Describe the main software elements of a computer system
- Describe the Internet Concepts.

Course Outcomes:

- Be familiar with basic hardware and software types
- Be familiar basic understanding of the structure and operation of a computer
- Identify the components required to build different types of Multimedia tools
- Be familiar basic understanding of the Internet concepts

UNIT I

Introduction to Computer – Classification of Digital Computer system – Computer Architecture – Memory Units – Auxiliary Storage Devices – Input and Output devices.

UNIT II

Introduction to Computer Software - Operating System – Programming Languages – General Software features and trends.

UNIT III

Database System: Introduction – Data processing – Introduction to Data Base Management System - Data base design.

UNIT IV

Internet -Introduction - hardware and software requirement web browser-email concepts-chatting – Intranet – WWW concepts.

UNIT V

Multimedia tools – Virtual Reality – E-Commerce – Data warehousing – Data mining – Geographical Information System – Computer in Business, industry, home, education and training.

2. The compact guide to micro-soft office professional Ron Mansfield, BPB publications

ENVIRONMENTAL STUDIES

(for under graduate students)

Course Code	Course Title	L	T	P	C
201ENSTU45	Environmental studies	2	0	0	2

Aim

- Creating awareness about the environmental problems among people. Imparting basic knowledge about the environment and its allied problems

Course Objectives:

- Creating the awareness about environmental problems among people.
- Imparting basic knowledge about the environment and its allied problems.
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- **Striving to attain harmony with Nature.**

Course Outcomes:

Students who graduate with a major in environmental science will be able to:

1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
4. Apply their ecological knowledge to illustrate and graph a problem and
5. describe the realities that managers face when dealing with complex issues; and
6. Understand how politics and management have ecological consequences.

1. Nature of Environmental Studies

Definition, scope and importance.

Multidisciplinary nature of environmental studies

Need for public awareness.

2. Natural Resources and Associated Problems.

- a) Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
- b) Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
- c) Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- d) Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
- e) Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- f) Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification, Role of an individuals in conservation of natural resources.

2. Ecosystems

Concept of an ecosystem.
Structure and function of an ecosystem.
Producers, consumers and decomposers.
Energy flow in the ecosystem.
Ecological succession.
Food chains, food webs and ecological pyramids.
Introduction, types, characteristics features, structure and function of the following ecosystem:
a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,
d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.
Bio — geographical classification of India.
Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.
India as a mega — diversity nation.
Western Ghat as a biodiversity region.
Hot — spot of biodiversity.
Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.
Endangered and endemic species of India.
Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

5. Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.
Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

6. Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides.
Urban problems related to energy Water conservation, rain water harvesting, watershed management
Resettlement and rehabilitation of people; its problems and concerns.
Environmental ethics: Issue and possible solutions.
Global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust.
Wasteland reclamation.
Consumerism and waste products.

7. Environmental Protection

From Unsustainable to Sustainable development.
Environmental Protection Act.
Air (Prevention and Control of Pollution) Act.
Water (Prevention and control of Pollution) Act.
Wildlife Protection Act.
Forest Conservation Act.
Population Growth and Human Health, Human Rights.

8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

Course Code	Course Title	L	T	P	C
20115AEC46L	Biochemical Techniques Lab-II	0	0	3	2

Aim

The aim of the course is study about Hematology experiments and buffer preparation

Course Objective:

- Describe the process of buffer
- Discuss how the hemoglobin, hematocrit, erythrocyte to indices, and ESR are used to diagnose.
- Discuss how the clinical science of hematology

Course outcomes (CO's):

By the end of the course,

- students can be able to demonstrate the importance of the blood, buffer and their wide applications
- This skill based course will teach the students the various instrumentations that are used in the analytical laboratories.
- This course covers both fundamental and applications of the instruments that are routinely used for the characterization of biomolecules
- Perform skillful specimen collection, identification and processing
- Utilize communication skills necessary for working in the health care setting
- Exhibit professionalism, initiative, positive interpersonal skills, teamwork, respect and integrity.

EXPERIMENTS

1. Preparation of Buffer varying in their strength and pH value of Acetate, Phosphate, Bicarbonate and Citrate buffers.
2. Determination of pKa value of Amino acids
3. Hematology
 - ABO Blood grouping,
 - Haemoglobin estimation,

RBC Count WBC count

Blood smear preparation,

ESR,

PCV

*Employability/Entrepreneurship

Course Code	Course Title	L	T	P	C
20120AEC47L	WEB DESIGN LAB	0	0	3	2

Aim

The aim of this lab is to to develop an ability to design and implement static and dynamic website

Course Outcome

- Acquire knowledge about functionalities of World Wide Web and E-Mail.
- Apply a structured approach to identifying needs, interests, and functionality of a website.
- Write well-structured, easily maintained, standards-compliant, accessible HTML code.
- Write CSS code to present html pages in different ways.
- ExploreMarkup languages features and create interactive web pages using them.
- Design dynamic websites that meet specified needs and interests.
- Learn and design Client side validation using scripting languages.
- Acquire knowledge about Scripting libraries

Course objective

- This course is intended to teach the basics involved in publishing content on the World Wide Web.
- This includes the ‘language of the Web’ – HTML, the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the Web, and a general grounding introduction to more advanced topics such as programming and scripting.
- This will also expose students to the basic tools and applications used in Web publishing.

Experiments

1. Create a Web page for ABC INFOTECH LTD., with necessary images and marquee.
2. Create Web pages which displays the menu card of a hotel. The first page should contain the list of items available. After selection of one item, the corresponding details should be displayed on the next page.

3. Create a Web page which displays the balance sheets for the given list of companies (same as above problem).
4. Create a Web page for XYZ INFOTECH LTD., to display the company profile employee details balance sheet, receive resume, customer service using links.
5. Using frames create web pages for a travel agency
6. Create a Web page using forms for our college students admission process. (Use list box, push button, radio button, command button, rich text box, text box, etc where ever applicable)
7. Create a Web page which receives suggestions from customers for a software development & consultancy agency using necessary.

Course Code	Course Title	L	T	P	C
201ACLSLMS	Leadership and Management Skills	-	-	-	2

Aim:

The aim of the course cultivating and nurturing the innate leadership skills of the youth so that they may transform these challenges into opportunities and become torchbearers of the future by developing creative solutions.

Course Objective:

The Module is designed to:

- Help students to develop essential skills to influence and motivate others
- Inculcate emotional and social intelligence, and integrative thinking for effective leadership
- Create and maintain an effective and motivated team to work for the society
- Nurture a creative and entrepreneurial mindset
- Make students understand the personal values and apply ethical principles in professional and social contexts.

Course Outcomes :

Upon completion of the course, students will be able to:

1. Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
2. Learn and demonstrate a set of practical skills such as time management, self management, handling conflicts, team leadership, etc.
3. Understand the basics of entrepreneurship and develop business plans
4. Apply the design thinking approach to leadership
5. Appreciate the importance of ethics and moral values for making of a balanced personality.

UNIT I- Leadership Skills

a. Understanding Leadership and its Importance

- What is leadership?
- Why Leadership required?
- Whom do you consider as an ideal leader?

b. Traits and Models of Leadership

- Are leaders born or made?
- Key characteristics of an effective leader
- Leadership styles
- Perspectives of different leaders

c. Basic Leadership Skills

- Motivation

- Team work
- Negotiation
- Networking

UNIT II - Managerial Skills

a. Basic Managerial Skills

- Planning for effective management
- How to organise teams?
- Recruiting and retaining talent
- Delegation of tasks
- Learn to coordinate
- Conflict management

b. Self Management Skills

- Understanding self concept
- Developing self-awareness
- Self-examination
- Self-regulation

UNIT III - Entrepreneurial Skills

a. Basics of Entrepreneurship

- Meaning of entrepreneurship
- Classification and types of entrepreneurship
- Traits and competencies of entrepreneur

b. Creating Business Plan

- Problem identification and idea generation
- Idea validation
- Pitch making

UNIT IV - Innovative Leadership and Design Thinking

a. Innovative Leadership

- Concept of emotional and social intelligence
- Synthesis of human and artificial intelligence
- Why does culture matter for today's global leaders

b. Design Thinking

- What is design thinking?
- Key elements of design thinking:
 - Discovery
 - Interpretation
 - Ideation
 - Experimentation
 - Evolution.
- How to transform challenges into opportunities?
- How to develop human-centric solutions for creating social good?

UNIT V- Ethics and Integrity

a. Learning through Biographies

- What makes an individual great?

- Understanding the persona of a leader for deriving holistic inspiration
- Drawing insights for leadership
- How leaders sail through difficult situations?

b. Ethics and Conduct

- Importance of ethics
- Ethical decision making
- Personal and professional moral codes of conduct
- Creating a harmonious life

***Skill Development**

Course Code	Course Title	L	T	P	C
201ACSSAQA	General Aptitude and Quantitative Ability	-	-	-	2

Course Outcome:

- **Understand and practice quantitative aptitude**
- Understand and practice Logical reasoning
- Understand and practice verbal reasoning
- **Understand different placement practice techniques**

1. General Aptitude

- Introduction
- Introduction to Aptitude Tests
- Diagnostic Tests
- Introduction to Speed Maths
- Quantitative Ability – Number Theory
- Numbers
- Properties of Numbers
- Concept of Multiples and Factors
- LCM and HCF
- Factorial Concept
- Last Digit Concept
- Remainders Concept

Quantitative Ability - Arithmetic - 1

- Percentage
- Ratio and Proportion
- Simple Interest and Compound Interest
- Profit Loss
- Discount
- Mixture and Allegation
- Questions from Company Papers will be discussed

Quantitative Ability - Arithmetic - 2

- Speed Distance Time
- Time and Work
- Chain Rule
- Clocks and Calendars
- Averages
- Questions from Company Papers will be discussed

Quantitative Ability – Algebra

- Basic Terminologies in Algebra
- Equations

- Simple Equation
- Quadratic Equation
- Cubic Equation
- Functions
- Graphs
- Maxima and Minima
- Questions from Company Papers will be discussed

Quantitative Ability – Modern Maths

- Set Theory
- Fundamental way of Counting
- Permutations and Combinations
- Probability
- Questions from Company Papers will be discussed
- Data Analysis
- Data Sufficiency

Analytical and Logical Reasoning

- Mono variate conditions
- Multi variate conditions

Puzzles

- Coding
- Decoding
- Family tree
- Direction sense
- Alpha numeric
- Brain teasers
- Deductive Reasoning
- Visual Sequence
- Mathematical Reasoning

SEMESTER V

Course Code	Course Title	L	T	P	C
20115AEC51	Enzymes	4	1	0	4

Aim

To learn the application of enzymes in health and diseases

Course objectives

- To understand the basic concepts of enzymes
- To study the kinetics of enzyme catalysed reactions
- To learn the mechanism of action of enzymes and enzyme inhibition concepts
- To understand various modes of enzyme regulation

Course outcomes (CO's)

- o Understand the basic concepts on enzymes
- o Relate the initial velocity and substrate concentration of enzymes and be able to understand the kinetics of inhibition reactions
- o Able to understand the regulation pattern of various enzymes
- o Relate the regulation pattern of enzymes for its application in health and diseases
- Understand the application of enzymes in Industrial and therapeutic.

Unit I

Enzymes – Definition, Nomenclature, Classification of enzymes based on IUB system, Properties, Enzymes Specificity, Specific activity, Coenzymes – Functions, (NAD,NADH,FAD,FMN,TPP,PLP) Units of enzyme activity, turn over number. Metallo enzymes and metal activated enzymes. Non-protein enzyme-ribozymes and abzymes.

Unit II

Mechanism of Enzyme action – Active site, Lock and key hypothesis, Koshland's model, Mechanism of enzyme catalysis – Acid base catalysis, covalent catalysis; enzyme regulation - Allosteric enzymes – properties - Feedback regulation;

Unit III

Enzyme Kinetics: Factors influencing enzyme activity. Derivation of Michaelis – Menton equation, Line weaver – Burk plot, activators,- enzyme inhibition (competitive, Non-Competitive and uncompetitive)- enzyme inhibitors.

Unit IV

Multienzyme complex – PDH, isoenzymes - lactate dehydrogenase - Immobilized enzymes – principles, methods and applications

Unit V

Applications of enzymes in industry and therapeutics - Clinical significance of serum enzymes - Enzyme electrodes, enzyme biosensors ,principles, types and their applications - Biochips.

***Employability/Entrepreneurship/Skill Development**

REFERENCES:

1. Enzymes – Dixon & Webb.
2. Understanding enzymes – T.Palmer, Prentice Hall.
3. Fundamentals of enzymes – Price.
4. Biochemistry – Stryer
5. Enzymes – P.Ashokan.
6. Enzyme Kinetics – Marangoni A.G.

Course Code	Course Title	L	T	P	C
20115AEC52	Bioenergetics and Metabolism	4	1	0	3

Aim

The aim of this course is to associate concepts in the areas of bioenergetics and metabolism.

Course objectives

- The focus is on the main metabolic pathways involved in carbohydrate, lipid, and protein metabolism, how these pathways are regulated and disrupted in disease and how energy is obtained to meet the cell's needs.
- To shed knowledge on generation and transformation of energy in metabolic pathways.
- To know the various metabolic pathways associated with carbohydrate, lipid, protein and nucleic acid metabolism, their regulation and associated disorders.
- To understand the inter relationship of carbohydrate, lipid, protein and nucleic acid metabolism and understand the importance of TCA cycle.
- To aware about the homeostatis of glucose of metabolites by intrinsic and extrinsic control mechanism.

Course outcomes (CO's)

- Gain knowledge on glucose anabolic and catabolic pathways that ultimately control the glucose homeostatis.
- Able to explain the role of lipids, their metabolism and their stringent control by hormones and other factors.
- Understand the anabolic and catabolic processes associated with amino acids and nucleic acids and their regulation.
- Able to understand the energy Biological oxidation

Unit I : Approaches to Biochemical Investigations

Whole Organism studies – perfusion of isolated organs – Tracer Techniques and mutant studies. Studies of elucidation of metabolic pathways.

Bioenergetics: Free energy concept, standard free energy – loss of thermodynamics - endergonic and exergonic reactions, high and low energy phosphates – energy Transfer in metabolism.

Unit II: Carbohydrate metabolism

Glycolysis – reactions – energetics – oxidation of pyruvate – TCA cycle – reactions – amphibolic role - energetics – glycogenesis – glycogenolysis - Gluconeogenesis – HMP shunt - metabolic significance. Glucuronic acid cycle.

Unit III: Lipid metabolism

Lipogenesis – Fatty Acid synthase complex – Oxidation of fatty acids – (α, β, ω) – Role of carnitine – metabolism of Triglycerides and Phospholipids – Ketogenesis – ketolysis – Synthesis and degradation of cholesterol – lipoprotein metabolism.

Unit IV:Protein, nucleic acid and porphyrin metabolims

Biological value of protein - Nitrogen balance – Deamination – Transamination – Decarboxylation – Urea cycle. Biosynthesis and degradation of purine and pyrimidine nucleotides – *Denovo* and salvage pathway . Biosynthesis and degradation porphyrin and Heme.

Unit V:Biological oxidation

Biological Oxidation- Enzyme and Coenzymes in Oxidation – reduction reactions – Electron Transport chain – Inhibitors – Oxidative phosphorylation – Chemiosmotic Theory – mechanism – structure of ATP synthase complex - Inhibitors, uncouplers, Ionophores – substrate level phosphorylation.

4. Biochemistry – An introduction - Mckee.
5. Textbook of Medical Biochemistry – M.N.Chatterjee.

Course Code	Course Title	L	T	P	C
20115AEC53	Immunology	4	1	0	4

Aim

The aim of the course is deals with the study of an organism's immune system, in both health and disease.

Course Objectives:

- The students will be able to identify the cellular and molecular basis of immune responsiveness.
- The students will be able to describe the roles of the immune system in both maintaining health and contributing to disease.
- The students will be able to describe immunological response and how it is triggered and regulated.
- The students will be able to demonstrate a capacity for problem-solving about immune responsiveness.
- The students will be able to transfer knowledge of immunology into clinical decision-making through case studies presented in class.

Course Outcomes (CO's):

The students may understand the immune system, its components and various techniques used in bio manipulation.

- Describe surface membrane barriers and their protective functions.
- Explain the importance of phagocytosis and natural killer cells in innate body defense.
- Describe the roles of different types of T cells, B cells and APCs.
- Compare and contrast the origin, maturation process, and general function of B and T lymphocytes.

Unit I

The immune system-Components – Lymphoid Organs, Primary, Secondary, Tertiary – Lymphoid Tissues – Cells of the immune system. Immunity-Innate, Acquired – Active and Passive immunity – phagocytosis – Inflammation.

Unit II

Antigens-Antigenicity – Immunogenicity – Types of antigens – Haptens – specificity– Blood group antigens – Blood grouping and applications. Immunoglobulins. Structure – Functions – classes of immunoglobulins and functions. Complement system - Complement – classical and alternate pathway – Consequence of activation .

Unit III

Immune response- B and T cell development Cellular interactions – Antigen Presenting Cell(APC) –Major Histocompatibility complex (MHC) – cytokines – T Cell Receptor(TCR) – cluster of differentiation – Humoral Immunity (HI) and Cell Mediated Immunity (CMI) – Regulation of immune response – Primary and secondary immune response – Immuno tolerance.

Unit IV

Serological Techniques- Antigen – Antibody reactions -characteristics – Precipitation – types – immunodiffusion – Immuno-electrophoresis - Agglutination – Complement Fixation - opsonization – bacteriolysis - Immunofluorescence – RIA and ELISA . Production of antisera – Production of monoclonal and polyclonal antibodies – Hybridoma technology.

Unit V

Immunity to infection - Autoimmunity – causes – types – hypersensitivity – classification – mechanism – organ transplantation – graft rejection- tissue typing – immunosuppressive drugs.

2. Roitts. Essential Immunology Roitt et al., Blackwell science
3. Immunology, Short Course - Eli Benjamin AV. et al.
4. Fundamentals of Immunology - Wier et al.
5. Fundamental Immunology - Coleman.
6. Immunology an introduction – Tizard

Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
20115DSC54A	Pharmaceutical Biochemistry	4	1	0	3

Aim

The aim is to identify the needs and differences in drug use for various patient groups, and devise appropriate strategies from perspectives of dosage forms.

Course objectives The students should be able to:

- Explain the relationship among physicochemical and biological factors, dosage forms, routes of administration and therapeutic outcomes
- Illustrate the principles of pharmaceuticals and biopharmaceuticals in dosage form design and development
- Describe production procedures, quality control measurements and stability improvements for tablets and sterile products and different routes of drug administration in principles and applications

Course outcomes (CO's)

- Students be able to explain biopharmaceutical, physiological, biochemical and cell biology-related aspects on the transport and metabolism of drugs in the gastrointestinal tract and in the liver.
- Students be able to explain mechanisms behind the transport of drug and metabolism and how drugs can interact with other drugs and food and methods to study these - having developed its ability to plan, compile, analyse and report experiment that has importance for biopharmaceutical issues -
- Students be able to account for regulatory requirements within the biopharmaceutical area
- Students be able to describe the role of biopharmaceuticals in drug development within the pharmaceutical industry

Unit I

Pharmacodynamics and kinetics- Drug – Definition, Nomenclature, Classification. Routes of drug administration. Drug Absorption, Drug Distribution. Principles of Drug action, Mechanism of drug action – physical, chemical, enzymes, receptors. Combined effect of drugs. Dose – response relationship. Factors modifying drug action- novel methods of drug administration. Drug excretion – kinetics of elimination.

Unit II

Biotransformation – endogenous and exogenous substance – benzpyrene and phenacetin – bilirubin – corticosteroids - Phase I and Phase II reactions - Drug metabolizing enzymes. Cytochrome P450 monooxygenase and flavin monooxygenase – Physiological important of Xenobiotic metabolism.

Unit III

Chemotherapy – Antibacterial , Antifungal, Antiviral agents. Cholinergic and Anticholinergic drugs. Cardiac glycosides – digitalis – hypolipidemic drugs - statins – Plasma expanders.

Unit IV

Adverse Drug Effects – Side effects – secondary effect – Toxic effects – Poisoning – Intolerance – Idiosyncrasy – Drug allergy – Photosensitivity – Drug addiction – Drug abuse – Drug withdrawal reactions – Teratogenicity. Biochemical Mechanism of Drug resistance. Toxicity assessment- acute, subchronic, chronic exposure, determination of ED₅₀ and LD₅₀ values.

Unit V

Anaesthesia – Stages of Anaesthesia. Anaesthetic classification – Inhalational and Intravenous anaesthetics. Antiepileptic drugs – Phenobarbitone, Phenytoin. Antianxiety drugs. Benzodiazepines. beta-blockers. Antimaniac drugs – Lithium carbonate. Antiseptics and Disinfectants – phenol and related compounds, formaldehyde, ethanol.

***Employability**

2. Principles of Medicinal Chemistry – W.O.Foye.
3. Pharmacology and pharmacotherapeutics – R.S Satoskar et al.,
4. Textbook of pharmaceutical chemistry – Jayashree ghosh
5. Biochemistry an introduction – Mckee

Course Code	Course Title	L	T	P	C
20115DSC54B	Basic Biotechnology	4	1	0	3

AIM:

The aim of the paper to study about basic biotechnology about animal and plant tissue culture, genetic and transformation techniques in animals, plants and its applications in various fields.

Course Objectives:

- It gives introduction to the various transformation techniques employed in animal, plant systems.
- It also describes the application of genetically modified animals, plants in the various fields of science.
- The techniques of animal cell, plant tissue culture and its industrial and medical applications are described.

Course Outcome:

- To understand principles of animal culture, media preparation.
- To explain basic principles of cloning.
- To get insight in applications or recombinant DNA technology in agriculture, production of therapeutic proteins.
- To describe commercial production of fuels, microbial enzymes.
- To explain the microbial degradation of pesticides, Bioremediation& Biofertilizers

Unit I: Fermentation Biotechnology –Biotechnology – scope and importance, Basic principles of microbial growth, Bioreactor- batch and continuous bioreactor, fermentation culture medium, downstream processing. Fermentation production of penicillin and vitamin B12.

Unit II: Food and Industrial Biotechnology – Fermentation production of yoghurt and cheese.Production of single cell protein; spirulina: cultivation and uses. Biofertilizers – blue green algae: cultivation and uses. Production of amylase and protease.

Unit III: Molecular Biotechnology - Basic principles of cloning, Introduction of foreign DNA in to host by particle bombardment gun, electroporation and microinjection. Basic Polymerase Chain Reaction (PCR), applications, Micro arrays, the human genome project.

Unit IV: Animal and Plant Biotechnology – Elementary details of Animal cell and tissue culture, medium, transfection, targeted gene transfer, transgenic

animals. Plant cell and tissue culture, medium, totipotent, pluripotent cells, protoplast culture, artificial seeds, and transgenic plants.

Unit V: Environmental Biotechnology – Biological fuel generation- ethanol and methane from biomass. Sewage treatment. Bioremediation: oil spill cleanup, bioleaching, IPR, Biosafety and hazards of environmental engineering.

*Employability

Course Code	Course Title	L	T	P	C
20115AEC55L	Food and Enzyme Analysis Lab	0	0	3	2

Aim

Analyze the optimum pH, substrate concentration for the maximum enzyme activity and food analysis

Course Objectives

- To estimate the mineral content in food
- To know the sources of enzymes and study the extraction and partial purification of enzyme acid phosphatase
- To standardize the optimum pH, optimum substrate concentration required for the maximum activity of acid phosphatase
- To analyse the inhibition pattern by various competitive inhibitors for the enzyme acid phosphatase purified from germinated mung bean
- To assay the activity of Lactate dehydrogenase and glucose – 6 – phosphate dehydrogenase enzymes

Course outcome (CO's)

- To illustrate various aspects of food engineering.
- To know the sources of enzymes and study the extraction and partial purification of enzyme.
- To standardize the optimum pH, optimum substrate concentration required for the maximum activity of enzyme.
- The students will be expertise in estimation of minerals in food.
- To understand the optimum activity of enzyme.

EXPERIMENTS:

1. Moisture Content of Food Materials.
2. Ash Content of Food Materials.
3. Determination of calcium in food.
4. Estimation of Fat Content in Food Materials.
5. Estimation of Nitrogen in Food
6. Estimation of Iron in Food
7. Estimation of Phosphorus in Food
8. Estimation of Vitamin C in Food by Dye method
9. Determination of Alkaline Phosphatase Activity.
 - a. Effect of PH

- b. Effect of Temperature.
 - c. Specific Activity
 - d. K_m (Saturation Method).
10. Determination of Salivary Amylase Activity.
- a. Effect of PH
 - b. Effect of Temperature.
 - c. Specific Activity
 - d. K_m (Saturation Method).

Course Code	Course Title	L	T	P	C
20115AEC56L	Immunology Lab	0	0	3	2

Aim:

The study of the immunological techniques

Course Objective:

Upon successful completion students will –

- To promote critical thinking among students;
- to provide students with a foundation in immunological processes;
- to provide students with knowledge on how the immune system works building on their previous knowledge from biochemistry, genetics, cell biology and microbiology;

Course Outcome

- This course has been designed to provide hands-on experience on the tools and techniques used in immunology.
- The experiments have been designed in such a way that the student will have the opportunity to isolate a specific protein from a natural source, purify it and determine its activity
- Besides, students will get an opportunity to learn diffusion and electrophoresis.
- Basic understanding of Immunotechnology
- Study the principle and applications of various immuno techniques ranging from precipitation and agglutination reactions to ELISA, Radio immunoassay

EXPERIMENTS

1. Double Immunodiffusion
2. Single Radial Immuno diffusion
3. Rocket Immunoelectrophoresis
4. Direct ELISA
5. Haemeagglutination tests for indentification of human blood groups
6. Detection by viral fever by slide agglutination tests.
7. Dialysis.

Course Code	Course Title	L	T	P	C
201ACLSPSL	Professional Skills	-	-	-	2

Aim:

Course Objectives :

The Objectives of the course are to help students/candidates:

1. Acquire career skills and fully pursue to partake in a successful career path
2. Prepare a good resume, prepare for interviews and group discussions
3. Explore desired career opportunities in the employment market in consideration of an individual SWOT.

Course Outcomes :

At the end of this course the students will be able to:

1. Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax
2. Participate in a simulated interview
3. Actively participate in group discussions towards gainful employment
4. Capture a self - interview simulation video regarding the job role concerned
5. Enlist the common errors generally made by candidates in an interview
6. Perform appropriately and effectively in group discussions
7. Explore sources (online/offline) of career opportunities
8. Identify career opportunities in consideration of their own potential and aspirations
9. Use the necessary components required to prepare for a career in an identified occupation (as a case study).

Unit I: Resume Skills

Resume Skills: Preparation and Presentation

- Introduction of resume and its importance
- Difference between a CV, Resume and Bio data
- Essential components of a good resume

Resume skills : common errors

- Common errors people generally make in preparing their resume
- Prepare a good resume of her/his considering all essential components

Unit II: Interview Skills

Interview Skills: Preparation and Presentation

- Meaning and types of interview (F2F, telephonic, video, etc.)
- Dress Code, Background Research, Do's and Don'ts
- Situation, Task, Approach and Response (STAR Approach) for facing an interview

- Interview procedure (opening, listening skills, closure, etc.)
- Important questions generally asked in a job interview (open and closed ended questions)

Interview Skills: Simulation

- Observation of exemplary interviews
- Comment critically on simulated interviews

Interview Skills : Common Errors

- Discuss the common errors generally candidates make in interview
- Demonstrate an ideal interview

Unit III: Group Discussion Skills

Meaning and methods of Group Discussion

- Procedure of Group Discussion
- Group Discussion- Simulation
- Group Discussion - Common Errors

Unit IV: Exploring Career Opportunities

Knowing yourself – personal characteristics

- Knowledge about the world of work, requirements of jobs including self-employment.
- Sources of career information
- Preparing for a career based on their potentials and availability of opportunities

***Skill Development**

SEMESTER VI

Course Code	Course Title	L	T	P	C
20115AEC61	Clinical Biochemistry	4	1	0	4

Aim

The Aim of the course to study about Clinical Chemistry and use of laboratory investigations in connection with diseases of the major organs and the systems

Course Objectives

The general **objectives** of the **course** are:

- Familiarize students with the specific characteristics of a laboratory of **clinical biochemistry**.
- Understanding the pathophysiology and molecular basis of the most prevalent diseases.
- Know the analytical methods commonly used in the **clinical** laboratory.

Course Outcomes

At the end of the course,

- the student will be able to describe the diagnostic laboratory, according to the main stages pre-analytical, analytical and post-analytical
- describe the diagnostic significance of the main laboratory investigations know the problems related to the preparation of the patient, the collection and knowledge of the samples .
- Describe the various disorders
- Understand and explain the acid-base and water-electrolyte balance in the body.
- Understand the difference between plasma, serum, normal and abnormal constituents in various body fluids. Blood clotting mechanism and anticoagulants.
- Explain the nature and function of various enzymes, normal levels and elevated levels in various diseases.
- Comprehend that blood is a universal fluid for carrying different minerals, nutrients, proteins etc to and from various tissues.
- Learn that many diseases result from imbalance in certain enzymes and helps in diagnosis of liver, cardiac, gastrointestinal, kidney diseases.

Unit 1

Gastric function tests- hyper, hypo and achlorhydria. Liver function tests. Jaundice hemolytic, hepatic and obstructive jaundice. Renal function tests. Biochemical findings in nephritis and nephrotic syndrome. Normal and abnormal constituents of urine.

Unit 2

Disorders of carbohydrate metabolism: Sugar level in normal blood maintenance of blood sugar concentration- endocrine influence on carbohydrate metabolism, hypoglycemia, hyperglycemia, glycosuria, renal threshold value, diabetes mellitus classification, complications; Glucose tolerance test (GTT), diabetic coma, diabetic ketoacidosis, glycogen storage diseases, fructosuria, galactosemia and hypoglycemic agents.

Unit 3

Disorders of lipid metabolism. Plasma lipoproteins- lipoproteinemias, lipid metabolism in liver and adipose tissue. Fatty liver. Hypo and hypercholesterolemia. Atherosclerosis.

Unit 4

Disorders of amino acid metabolism. Plasma proteins in health and disease. Disorders of purine, pyrimidine and porphyrin metabolism. Hyperuricemia and gout. Lesch- Nyhan syndrome. Orotic aciduria, porphyrias.

Unit 5

Disorders of endocrine system. Disorders of thyroid, pituitary, adrenal medulla, and sex hormones. Disturbances in blood clotting mechanisms- hemophilia and anemia. Complications of Acquired immune deficiency syndrome (AIDS)

***Employability/Entrepreneurship/Skill Development**

5. Clinical Biochemistry in diagnosis and treatment. Mayne ELBS.

Course Code	Course Title	L	T	P	C
20115SEC62	Molecular Biology	4	1	0	5

Aim

The aim of the paper to study about Molecular biology.

Course objectives

The course aims to provide students with a basic understanding of

- Organization of DNA in a genome and the mechanism behind replication, transcription and translation.
- Regulation of gene expression in prokaryotes and Eukaryotes.

Course outcomes (CO's)

At the end of the course, student will be able to

- Discuss the most significant discoveries and theories through the historical progress of biological scientific discoveries, and their impacts on the development of molecular biology.
- Compare the structure of eukaryotic cells with the structure of simpler prokaryotic cells and with the structure of viruses
- To understand molecular concept of DNA, RNA.
- They will be familiarized with mechanism of action and resistance to antibiotics at molecular level
- They will be able to describe the mechanisms of protein transport to various sub cellular sites and process of protein degradation
- Students will be able to describe how gene expression is regulated at the transcriptional and post-transcriptional level.
- They will be able to read and understand scientific articles related to subject and gain a critical understanding of their contents.
- They will be able to give a spoken and written presentation of scientific topics and research results.

Unit I

DNA – Types, Properties, Structure and Functions. DNA as genetic material – Griffith experiment. Watson and Crick Model of DNA. RNA-, Types, Properties, Structure and Functions.

Unit II

DNA Replication – conservative, Semiconservative, Dispersive mode of Replication. Enzymes involved in replication. ϕ X 174 Replication. Eukaryotic genome organization.

Unit III

RNA synthesis – RNA processing. Genetic code – Wobble hypothesis – Protein synthesis. Post translational modification. Inhibitors of transcription and Translation.

Unit IV

Operon concept – Lac Operon, Trp Operon, DNA methylation. DNA repair,
Mutation - types – Recombination – Transposition – transposable elements..

Unit V

Cancer – characteristics, Oncogenesis mechanism, proto oncogenes, Antioncogenes – tumor suppressor gene, anti cancer agents,. Recombinant DNA Technology – Cloning vehicles – plasmids – phages – cosmids – yeast – transgenic plants and transgenic animals - Applications of genetic engineering.

***Employability/Entrepreneurship/Skill Development**

6. Advanced Molecular Biology – R.M.Twymann.

Course code	Course Title	L	T	P	C
20115DSC63A	Biochemistry of Plants and Microbes	4	1	0	3

Aim

- Build up the knowledge of the students in medicinal plant phytochemical screening.

Course objectives

- Open up the students to detailed plant physiological studies to pave way for plant tissue culture techniques.
- Students will have knowledge on some of the general methods used in the study of microorganisms and to recognize and compare structure and function of microbes and factors affecting microbial growth.

Course outcomes (CO's)

- The students are able to perform plant phytochemical pigments to study about water microbiology.
- Prepare stained smears, culture micro-organisms, perform tests to identify bacteria and fungi, and to study food microbiology

Unit I

Photosynthesis: Photosynthetic pigments and photosynthetic apparatus. Light Reaction, Hill Reaction. Emerson effect. Dark Reaction – CO₂ fixation in C₃, C₄, CAM Plants. Factors affecting photosynthesis and photorespiration. Plant growth regulators – growth hormones - growth inhibitors.

Unit II

Nitrogen Fixation – Symbiotic & Non Symbiotic enzymes - Nitrogenase, Nitrate assimilation, nitrate and nitrite reductase. Mineral Nutrients.

Unit III

Bacteria: Morphology – Ultra structure. Bacterial growth curve. Factors affecting growth. Blue Green Algae – Morphology – Algae – Biological Importance. Fungi Classification, Cultivation and morphology of yeast and moulds. Life cycle of Yeast.

Unit IV

Food Microbiology : Food spoilage, Food Preservation. Fermented foods, Infected food and human illness – botulism, clostridium welchi poisoning, staphylococcus poisoning. Salmonella infection.

Unit V

Water Microbiology: Purification of drinking water. Test for purity of Water, water borne diseases. Air borne Diseases. Antimicrobial agents. Viruses: Structure and replication of Viruses infecting bacteria, plants and animals.

Course Code	Course Title	L	T	P	C
20115DSC63B	Hospital Management	4	1	0	3

Aim:

The aim of this course is to enable the participants to understand the principles and practice of management and its application in hospitals.

Course Objectives:

This course aims to make understand the principles and practice of management. At the end of the course the students would be able to accept professional management practice in healthcare.

Course Outcomes:

- Understand the theories of management.
- Understand the management process and integrated approach in management.
- Manage service organizations by accepting the inbuilt challenges.
- Manage hospitals by understanding the complexity, levels and role of hospital administrator.
- Understand the current issues that have an implication in administration practice hospital administration

Unit I: Introduction to Hospital management: Eligibility and personal skills required for Hospital management. Job opportunities in Hospital management. Important hospital management Institutes in India and around the World.

Unit II: Hospital management system: Benefits and Modules of Hospital management systems. Interfacing of analyzer. Pathology lab management. Radiology, Blood Bank, Pharmacology, management softwares.

Unit III: Health Care Services: Health and Hospitals Services, Classification and Characteristics of Service Organizations, , Healthcare Revolution, Dimensions of Health, Indicators of Health- Composition of Health Sector, Types of Care, Pyramidal Structure of Health Services, Hospitals, Types of Hospitals and Role of Hospital in Healthcare.

Unit IV: Health care Facilities: Functioning of modern hospitals & changing need of patients Hospitality in Hospital Care, Invasive and non-invasive diagnostic facilities in modern hospital Care offered in Specialty and Super specialty Hospitals.

Unit V: Health and Management: Current Issues in Healthcare Accreditation-Tele medicine-Health Tourism-Health Insurance and Managed Care-Disaster Management-Hospital Wastes Management.

Course Code	Course Title	L	T	P	C
20115AEC64L	Hematology and Clinical Biochemistry Lab	0	0	3	2

AIM:

The aim of the paper to study about hematological and clinical biochemical experiments

COURSE OUTCOME

- Explain the origin of blood cells and articulate the process of erythropoiesis and leukopoiesis as it relates to health and disease.
- Discuss the coagulation process and its role in maintaining hemostasis.
- Demonstrate current hematological procedures used to diagnose, monitor and evaluate disorders.
- Demonstrate the basic principles of hematology and clinical biochemistry instrumentation
- Describe and Identify inborn defects in metabolism and correlate them with deficiency of key metabolic markers in the clinical laboratory, their common methods of analysis, and their clinical significance.
- Relate laboratory results to clinical diagnosis and relationship to heart, liver, kidney and pancreas function.

COURSE OBJECTIVE

- Familiarize students with the specific characteristics of a laboratory of clinical biochemistry.
- Understanding the serological diseases.
- Know the analytical methods commonly used in the clinical laboratory.
- Know how can contribute the clinical laboratory to assess the health status of individuals.

EXPERIMENTS

Hematology Experiment:

1. To determine total platelet count
2. To perform PT
3. To perform APTT
4. To perform thrombin time
5. Determination of haemoglobin by various methods.
6. Determination of Total RBC count.

Clinical Biochemistry experiment:

1. Estimation of Glucose by Ortho Toluidine Method
2. Estimation of Cholesterol by Zak's Method

3. Estimation of Protein by Biuret Method
4. Estimation of Iron by Dipyriddy Method
5. Estimation of Urea by DAM Method
6. Estimation of Uric Acid by Caraway Method
7. Estimation of Calcium by Clark and Collip Method
8. Estimation of Bilirubin by Malloy and Evelyn Method

*Employability/Entrepreneurship/Skill Development

Course Code	Course Title	L	T	P	C
20115SEC65L	Molecular biology Lab	0	0	3	2

Aim

The aim of the paper to study about molecular experiments

Course Objective: The student

- Can use a broad range of basic and advanced methods in molecular biology
- Can examine, assess, interpret and communicate data acquired from laboratory experiments
- Molecular Biology gives in-depth knowledge of biological and/or medicinal processes through the investigation of the underlying molecular mechanisms.

Course Outcome

- Exhibit a knowledge base in genetics, cell and molecular biology.
- Demonstrate the knowledge of common and advanced laboratory practices in cell and molecular biology.
- It can explain the principles of separation of DNA.
- To know the general safety routines for laboratory work in molecular biology.

EXPERIMENTS:

1. Estimation of DNA by Diphenylamine method
2. Estimation of RNA by Orcinol method
3. Isolation of DNA from bacterial, plant and animal cells
4. Separation of DNA by Agarose gelelectrophoresis
5. Isolation of Plasmid DNA from E.coli
6. Estimation of DNA and purity determination by UV absorption method.

*Employability/Entrepreneurship/Skill Development

Course Code	Course Title	L	T	P	C
201ENOE C	Open Elective - Journalism	4	0	0	2

Aim :

- To acquaint with the basic knowledge of journalism so that it may enthuse the students to become journalists.

Objective:

- To instill in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements, Ethics of Journalism, Press

UNIT- II

News – Definition, Kinds, Elements, Sources

UNIT- III

Reporters, Qualities, types

UNIT- IV

The Editor and the Sub Editor-qualities, types, editorial department,

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials, articles, middle, features, column

*** Skill Development**

Course code	Course Title	L	T	P	C
201MAOEC	Open Elective Development of Mathematics Skills	4	0	0	2

Aim:

- To understand the concepts from the five branches of mathematics

Course Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Course Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

* Skill Development

Course Code	Course Title	L	T	P	C
191PHOEC	Open Elective- Instrumentation	4	0	0	2

Aim:

- Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Course Objectives:

- The use of instruments is of course not confined to physicists and this kind of experience is valuable in many situations which many students will encounter after graduation.
- A good physicist will bring a critical mind aiming to understand not only the result of an investigation but the primary reasons for the behavior of the data. Understand that there are finite limits to our ability to make good measurements, and why.

Course Outcomes:

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.
- Be able to apply Fourier and Laplace transforms to analyse the behaviour and stability of complex systems.

UNIT – I: Introduction

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges : AC bridges – Maxwell, Owen, Schering and De Sauty’s bridges – Wien bridges.

UNIT – II: Electronic Instruments – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

UNIT – III: Electronic Instruments – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

Books for Study

Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

Books for Reference:

A Course In Electrical And Electronic Measurements and Instrumentation – A.K.

Sawhmey – Dhanpat Rai and Sons – 1990.

Electronic Measurements And Instrumentation – Oliver Cage – McGraw Hill –1975.

* Skill Development

Course Code	Course Title	L	T	P	C
201CHOEC	Open Elective-Food and Adulteration	4	0	0	2

Aim:

- To introduce students to food safety and standardization act and quality control of foods.

Course Objectives:

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

Course Outcomes:

- The students will have knowledge about different processing and preservation methods and principles involved.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types.

High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

* Skill Development

Course Code	Course Title	L	T	P	C
191CSOEC	Open Elective- E-Learning	4	0	0	2

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop e – learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding elearning, components and models of e-learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

UNIT II CONCEPTS and DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

UNIT III APPLICATIONS

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

*** Skill Development**

Course Code	Course Title	L	T	P	C
201CAOEC	Open Elective -Web Technology	4	0	0	2

Aim:

- To equip the students with basic programming skill in Web Designing

Course Objective:

- To understand and practice mark up languages
- To learn Style Sheet and Frames

Course Outcomes:

Explore markup languages features and create interactive web pages using them

Learn and design Client side validation using scripting languages

UNIT I

Introduction to the Internet – Internet Technologies – Internet browsers.

UNIT II

Introduction to HTML – Head and body sections – Designing the body section.

UNIT III

Ordered and unordered lists – Table handling.

UNIT IV

DHTML and Style Sheet – Frames.

UNIT V

A web page design project – Forms.

Text Book

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

Reference Book

Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
201CMOEC	Open Elective-Banking service	4	0	0	2

Aim:

- To provide the bank is financial institution which is involved in borrowing and lending money.

Course Objective:

- To provide a lending money to firms, customers and home buyers.
- To provide keep money for customers
- To provide offering financial advice and related financial services, such as insurance.

Course Outcome:

- To help to gather knowledge on banking and financial system in India
- To provide knowledge about commercial banks and its products
- To create awareness about modern banking services like e-banking-banking and internet banking,
- ATM System
- To introduce recent trends in banking system
- To make the student understand the basic concept of banking and financial institutions and expose various types of risk based by banks

UNIT – I

Commercial Banking – An Overview: Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

UNIT – II

E-banking –An Overview: Meaning-Service-E-banking and Financial Services –Benefits-Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking-Services

UNIT – III

Mobile Banking and Telephone Banking –An Overview: Meaning-Features- Registration-Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers

Unit – IV

ATM and Electronic Money: Concept of ATM-Features-Functions-Strategic importance of ATM- Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

Unit-V

EFT System and INFINET: Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

Course Code	Course Title	L	T	P	C
201ACLSCET	Community Engagement	-	-	-	1

Aim:

Course Objectives:

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of learning

Course Outcomes:

After completing this course, students will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and the bonds of mutuality with the local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

UNIT I - Appreciation of Rural Society

Rural lifestyle, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of “soul of India lies in villages” (Gandhi), rural infrastructure.

UNIT II-Understanding rural economy & livelihood

Agriculture, farming, land ownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets

UNIT III Rural Institutions

Traditional rural organisations, Self-help Groups, Panchayati Raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration

UNIT IV Rural Development Programmes

History of rural development in India, current national programmes: Sarva Shiksha Abhiyan,

Beti Bachao, Beti Padhao, Ayushman Bharat, Swachh Bharat, PM Awaas Yojana, Skill India,

Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

DEPARTMENT OF BIOCHEMISTRY
M. Sc., Curriculum-Regulation 2020

PROGRAMME OUTCOME(POs)

PG biochemistry graduate will be able to achieve

- ❑ **PO 1. Critical Thinking and Effective Communication:** The teaching is intended to kindle the critical thinking of the student to address problems (Problem based learning) and equip them to list out their understanding (Activity based learning). The syllabus also includes journal paper presentation and analysis on specific topics of all subjects which will be evaluated by faculty handling the subject.
- ❑ **PO 2. Future Career:** To prepare students for future careers in the various fields of biochemistry such as academic and research institution.
- ❑ **PO 3. Societal Contribution and Social Interaction:** The Biochemistry Programme will benefit the society on the whole by adding to the highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe. Inside the classrooms group discussion is encouraged on topics during the last five minutes of class to improve the understanding and to share the knowledge and view point. Outside the classroom, various outreach programme are conducted on various health initiatives.
- ❑ **PO 4. Identification and Differential Diagnosis:** To acquire biochemist position in leading hospitals and scientist position in industries.
- ❑ **PO 5. Ethics:** Students learn about the significance of having right moral features to develop good interpersonal skills.

PROGRAMME SPECIFIC OUTCOME (PSOs)

- o To prepare students for future careers in various fields of biochemistry by enhancing analytical and critical-thinking skills in which a core understanding of the chemistry of biological processes is important for the understanding of human health and disease.

- o To equip highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe.
- o The skills acquired in the programme will help the students in acquiring scientific, academic and industrial positions such as Analyst, Research Scientist at Pharma (R&D) Industries, Academician, Project Associates (JRF, SRF), Doctoral Research positions abroad at India and abroad. Clinical biochemist at renowned hospitals, medical coding, Scientific writers.

PROGRAMME EDUCATIONAL OBJECTIVE (PEOs)

- ☐ **PEO 1.** The course aims to impart advanced and in depth understanding on all the human physiological and pathological state. To understand the molecular process and their perturbation during disease.
- ☐ **PEO 2.** The programme covers various aspects of Biomolecule estimation and regulation to ascertain health and disease state. metabolic pathways alterations along with their regulation at the replication, transcriptional, translational, and post-translational levels including by studying DNA, RNA and protein molecules, immunology, endocrinology, advancements in rDNA technologies to circumvent genetic disorders.
- ☐ **PEO 3.** Further to enrich research understanding various genomic, proteomic and bioinformatics tools are added. Animal cell culture, IPR, Biostatistics, research methodology, clinical research and Plant tissue culture are offered as elective papers to get specialized in a specific area. The final semester is devoted exclusively to enrich the students to address specific research objective.
- ☐ **PEO 4.:** Understand the role of citizen to maintain sustainable environment and encourage Eco-friendly initiatives.
- ☐ **PEO 5.:** Acquire the ability to engage in independent and life-long learning in the broadest context of health and disease.

Course Code	Course Title	L	T	P	C
20215SEC11	Biomolecules	6	1	0	5

Aim

To know the structure and role of water in biological system

Course objectives

- To understand the structure and organization of carbohydrates, lipids, proteins and nucleic acids
- To realize the interactions nucleic acid with proteins

Course Outcomes

CO1- Recognize water as a universal solvent and elixir of life by knowing its importance

CO2- Identify the properties and classification of carbohydrates

CO3 -Recall the role of various lipids in biomembrane including signal transduction

CO4 -Categories the amino acids and know their properties

CO5 -Differentiate the structure, properties and functions of DNA and RNA

CO6 -List the functions and deficiency disease of fat and water soluble vitamin

Unit I: Carbohydrates:

Occurrence, classification, characteristics, structure and functions of monosaccharides, disaccharides, trisaccharides and polysaccharides; Structure and conformation of sugars; Stereoisomerism and optical isomerism; Selected chemical reactions of the functional groups; Sugar derivatives; Mucopolysaccharides; Glycosaminoglycans; Proteoglycans; Glycoproteins.

Unit II: Lipids:

Classification and types of lipids; Structure, nomenclature and properties of fatty acids; Glycosides; Soaps; Micelles; Structure, classification, properties and functions of phospholipids and sphingolipids; Glycolipids; Composition and biological role of lipoproteins; Structure and functions of steroids and prostaglandins; Eicosanoids; ω 3 and ω 6 fatty acids.

Unit III: Amino acids, nucleotides and water:

Structure, nomenclature, classification, acid-base behavior and chemical reactions of amino acids; Stereoisomerism and optical properties of amino acids; Modified amino acids; Nucleotides; Water and its physicochemical properties, Ionization of water, pH scale, Henderson-Hasselbalch equation.

Unit IV: Hormones/Signaling:

Molecules General characteristics of hormones and other signaling molecules; Classification, functions, mechanism of action and abnormalities of the hormones of

thyroid, pancreas, hypothalamus, pituitary and gonads; Hormone replacement therapy; Plant hormones with specific reference to Auxins; Pheromones: types and functions.

UNIT V: Terpens:

Terpens - classification - isoprene rule - isolation - structural formula of Geranion , nerol , menthoil and terpenol. Alkaloids - general methods of isolation - structural formula of cocaine, papin, nicotine-applications. Vitamin- classification - occurrence- biological importance of fat soluble and water soluble vitamins. Minerals - macro and micro nutrients -examples.

***Employability**

Course Code	Course Title	L	T	P	C
20215SEC12	Biochemical and Instrumental Analysis	6	1	0	5

Aim

The aim of this paper to study about Biochemical analysis, xenobiotics and biotic (macromolecules, proteins, DNA, large molecule drugs, metabolites) in biological system.

Course objectives

- The primary objectives of this course are to develop the skills to understand the theory and practice of bio analytical techniques.
- To provide scientific understanding of analytical techniques and detail interpretation of results

Course outcomes (CO's)

CO 1 This skill based course will teach the students the various instrumentations that are used in the analytical laboratories.

CO2 Understanding the principles of Electrophoresis, Spectrophotometry and ELISA and their applications in biological investigations/experiments

CO3 This course covers both fundamental and applications of the instruments that are routinely used for the characterization of biomolecules

CO 4 Develop competence in handling various chromatographic techniques and apply them in isolating and characterizing different biological molecules.

CO 5 Purify proteins by affinity chromatography

CO 6 Understanding the principles of Electrophoresis, Spectrophotometry and ELISA and their applications in biological investigations/experiments

CO 8 To acquire the good laboratory practices

UNIT - I

Electrochemical techniques - General principles and electrochemical reactions, pH measurements, Standard hydrogen electrode, oxygen electrode, metallic indicator and membrane indicator electrodes, Biosensors and biochips – Principles, methods and applications. Radioisotopes - Law of radioactivity and decay processors, Detection methods - Scintillation counter and autoradiography; Applications of radioisotopes in biology.

UNIT - II

Chromatography - Principles, materials, packing, instruments, optimization of column performance and application of Affinity chromatography, Immunoaffinity chromatography, size-exclusion chromatography, Ion-exchange chromatography, RPHPLC, HPLC, GLC, GSC, Super critical fluid chromatography and chromatofocussing. Centrifugation - Typing of

centrifuges; Principles and application of differential, density gradient and analytical ultracentrifuges.

UNIT - III

Electrophoresis – Principles- theories – Factors affecting electrophoretic mobility; Agar gel electrophoresis, PAGE, SDS-PAGE, Capillary electrophoresis, Isoelectric focussing electrophoresis and Pulse Field gel electrophoresis.

UNIT – IV

Spectroscopy – Principles, Instrumentation, application and limitations of UV-Visible spectrometry, Fluorescence spectrometry, Raman Spectroscopy, IR Spectroscopy, AAS, ORD, CD, ESI – and MALADI- Mass Spectrometry, Basic concepts and applications of ESR, NMR, X-Ray crystallography and laser techniques.

UNIT – V

PCR – general principles; Types of PCR – Single sided PCR, Reverse PCR, RT-PCR and RACE-PCR; Applications of PCR in general and clinical diagnosis; ELISA – DAS-ELISA, DAC-ELISA and PAC-ELISA; Use of molecular probes in analyzing RFLP, DNA finger printing and DNA foot printing; Hybridization techniques; Chromosomes walking, Blotting techniques – Southern, Northern and Western blotting.

6. Instrumental analysis – Skoog.

***Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
20215SEC13	Enzymology	6	1	0	4

Aim

The course aims to provide an advanced understanding of the core principles and topics of enzymes.

Course Objective

- To understand the structure of enzymes and their classifications.
- To analyze the active site of enzymes by various experimental approaches.
- To learn the importance of enzyme immobilization and its wide applications in medicine and industries.
- To study various fermentor designs and culture systems.
- To understand the application of fermentation process in industry.
- To learn the fermented products preparation, downstream processing and its industrial applications

Course Outcomes

- CO1 Upon successful completion of this course, the student will learn, the major classes of enzyme and their functions in the cell.
- CO2 The course also provides information pertaining to role of co-enzyme cofactor in enzyme catalyzed reaction, properties of enzymes and regulation of biochemical pathways.
- CO3 To acquire fundamental knowledge on enzymes and their importance in biological reactions.
- CO4 Exposure to the concept of activation energy and its importance in biological reactions.
- CO5 Understanding the role of enzymes in clinical diagnosis and industries.
- CO6 Exposure to the nature of non-protein enzymes such as ribozymes.
- CO7 Differentiate between equilibrium and steady state kinetics and analyzed simple kinetic data and estimate important parameter (K_m , V_{max} , K_{cat} etc)

UNIT-I

Enzymes- Introduction to enzymes, purification, localization, extraction of enzymes, properties, Nomenclature and IUB classification of enzymes, specificity of enzymes, units of enzyme activity, assay of enzymes-principle, turn over number-Coenzymes- Active site - investigation of active site structure, formation of ES complex.

UNIT-II

Enzyme inhibition and kinetics- Michaelis- Menton plot, linear transformation, Lineweaver- Burk plot, Eadie - Hofstee plot equations, Factors affecting enzyme action. Irreversible and reversible competitive, non competitive, uncompetitive inhibition. Pre steady state kinetics, Kinetics of Allosteric enzymes, sequential bisubstrate mechanism. Ping-Pong reactions, End product inhibition and substrate inhibition- K_{cat}

UNIT-III

Enzyme regulation,;General mechanism of enzyme regulation,allosteri regulation, feed back inhibition and feed forward stimulation, Enzyme repression, induction and degradation, control of enzymic activity by products and substrates.

UNIT-IV

Mechanism of enzyme catalysis- Acid base catalysis, covalent catalysis,Mechanism of action of lysozyme, carboxy peptidase-A, chymotrypsin, DNA polymerase, RNAase and serine proteases. Isoenzyme forms and multi functional enzymes- FAS system, PDH. Metal dependent and metalloenzymes.

UNIT-V

Enzyme technology- immobilization of enzymes- methods- properties and applications- abzymes- ribozymes- artificial enzymes- DNA enzymes- enzyme engineering - Enzymes in Pharmaceuatical industry, Leather industry, detergent industry and Food industry- Research, theraoeutic and clinical diagnosis.

***Employability/Entrepreneurship**

Course Code	Course Title	L	T	P	C
20215SEC14L	Biochemical Techniques Lab - I	0	0	4	2

Aim

The aim of the paper to study about quantitative measurement Biochemical compounds.

Course objectives

- To teach students on various techniques used for the assessment of various diseases and research studies.
- To teach the good laboratory practice required to execute the learned techniques.

Course outcomes (CO's)

- CO1 By the end of the course, students can be able to demonstrate the importance of the protein chemistry and their wide applications.
- CO2 This skill based course will teach the students the various instrumentations that are used in the analytical laboratories.
- CO3 This course covers both fundamental and applications of the instruments that are routinely used for the characterization of biomolecules
- CO4 Perform skillful specimen collection, identification and processing
- CO5 Utilize communication skills necessary for working in the health care setting
- CO6 Exhibit professionalism, initiative, positive interpersonal skills, teamwork, respect and integrity.

EXPERIMENTS:

1. Estimation of proteins, DNA, RNA and Carbohydrates by Colorimetric methods.
2. Determination of Concentration and extinction co-efficient of proteins spectrophotometer.
3. Analyzing the Quality of Oils – acid number, Saponification number and Iodine number.
4. Estimation of ascorbic acid and calcium from natural sources.
5. Estimation of Sodium, Potassium and Phosphorous in body fluids by flame photometry.
6. Separation of amino acid and lipids by Thin layer chromatography.
7. SDS- PAGE of proteins.
8. Separation of proteins by Size –exclusion chromatography.

REFERENCE:

1. Instrumental analysis – chatwall & Anand.
2. Practical Biochemistry - David T.plummer.
3. Principles of instrumental analysis - B.K. Sharma.
4. Practical Biochemistry – Wilson and Walker.
5. Biophysical Chemistry - Upadhyay and padhyay
6. Instrumental analysis – Skoog.

***Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
20215DSC15A	Biostatistics	5	0	0	4

Aim

The aim is Students able to characterize data and understand different sampling methods.

Course Objective

Mathematical and statistics form an integral part of any discipline of science.

Course Outcomes

CO1 To use basic analytical techniques to generate results

CO2 interpret results of commonly used statistical analyses in written summaries

CO3 demonstrate statistical reasoning skills correctly and contextually

CO4 They play an important role in interpretation of result of experiments and research work.

This course will provide information how to utilize various tools of biostatistics in interpretation of biological data.

CO5 The students will understand the principles of collection of data in biological experiments, proper statistical analysis of the data and its presentation.

CO6 Knowing statistical methods will help students in improving their analytical and interpretation skill.

UNIT – I

Research – definition, importance and types – Literature survey – journals – types, abstracting and indexing journals – Internet and its applications-e Mail – Web browsing – selection of topics – research schedule – sample collection – techniques – data collection – interpretation of data - art of scientific writing – presenting a scientific seminar.

UNIT – II

Probability:- Definition – Addition theorem – Multiplication Theorem (Statement only) – Conditional Probability – Independent events – Simple Problems.

UNIT – III

Measure of Averages – Mean, Median and mode, Use of these measures in biological studies, Measures of Dispersion for biological characters – Quartile Deviation, Mean Deviation and Standard deviation and coefficient of variation, Measures of skewness and Kurtosis, Correlation and Regression – Rank Correlation – Regression equations, Simple problems based on biochemical data.

UNIT – IV

Basic concepts of sampling – Simple random sample, stratified sample and systematic sampling, Sample statistics, Sampling distribution and standard error, Tests of significance based large samples, Test for mean, difference of mean, proportions and equality of proportion.

UNIT – V

Small sample tests – Student ‘t’ test for mean, difference of two means, test for correlation and regression coefficients, Chi-square test for goodness of an independence of attributes, F test for equality of variances.

5. Research methodology and statistical techniques – Santhosh Gupta.

***Employability**

Course Code	Course Title	L	T	P	C
20215DSC15B	Immunology	5	0	0	4

Aim:

To learn the immune system and reaction

Objectives:

- To expose the students with the immune system of human body

Outcomes:

- CO1 The students may understand the immune system, its components and various techniques used in bio manipulation.
- CO2 The course will provide technical knowledge as to how different diseases are caused and various responses mediated by living cells to combat pathogen attack.
- CO3 Compare and contrast the origin, maturation process, and general function of B and T lymphocytes.
- CO4 At The course will provide sound knowledge of how immune system deals with various pathogens, different processes and cell types involved in prevention of disease.
- CO5 To understand the principles of tolerance, autoimmunity and the role of immunity in protection against pathogens.
- CO6 Along with this the students will become aware about concept, synthesis and action mechanism of vaccines.

UNIT-I

Infection

Types – Factors influencing infection – endotoxins and exotoxins – pathogenicity and virulence – sources of infection agents – carriers – portals of entry. **Immunity:** Innate – Acquired – Active and Passive Immunity – phagocytosis – Inflammation. **Immune system:** Components – Lymphoid organs, Primary, Secondary, Tertiary – Lymphoid Tissues – Cells of the immune system.

UNIT-II

Antigens: Antigenicity – Immunogenicity – Types of antigens – Haptens – specificity – Blood group antigens – Blood grouping. **Immunoglobulins:** Isolation – structure and function – Antibodies – classes of immunoglobulins – Biosynthesis and antibody diversity. **Complement:** Complement – chemical and alternate pathway – Consequence of activation – Anaphylotoxins.

UNIT-III

Immune response: B and T cell development Cellular interaction – APC – MHC – cytokines – TCR – cluster of differentiation – HI and CMI – Regulation of immune response – Primary and secondary immune response – Immune tolerance - Immune suppression.

UNIT-IV

Immunological Techniques: Antigen – Antibody reaction – Precipitation – Agglutination – CTI – Torsion neutralization – Immunodiffusion – Immunofluorescence – Immune adherence

– Immuno-electrophoresis – EIA – ELISA – RIA – Immunochemistry – Hybridoma Technology – Merits and Demerits – Production of Vaccines and their uses. Production of antisera – Fractionation of leucocytes – Identification of lymphocytes and their subsets – Experimental animal models – Inbred strains – SCID Mice, Nude mice – mice cell culture system.

UNIT-V

Immunodeficiency disorders – Cancer and AIDS – Immunity to bacteria and viruses – Auto immunity – Hypersensitivity – classification. Organ Transplantation – Graft rejection – mechanism – Tissue typing – immunosuppressing drugs – Immunotherapy.

REFERENCE:

1. Immunology – Richard A. Goldsby and Kuby.

7. Fundamental Immunology – Coleman.
8. Textbook of microbiology – Anantha marayanan & panikar.

***Employability**

Course Code	Course Title	L	T	P	C
20215SEC21	Cellular Biochemistry	5	1	0	5

Aim

To understand the molecular machinery of living cells.

Course objectives

- To enable the students to understanding the molecules within cells and interactions between cells that allows construction of multi cellular organisms.
- To understand the membrane transport mechanisms.

Course outcomes (CO's)

- CO1 Describe the general principles of gene organization and expression in both prokaryotic and eukaryotic organisms.
- CO2 Describe the structure and function of biological membranes including the roles of gradients in energy transduction.
- CO3 Explain the basic pathways and mechanisms in biological energy transduction from oxidation of metabolites to synthesis of ATP.
- CO4 Explain various levels of gene regulation and protein function including signal transduction and cell cycle control.
- CO5 To become aware with the variations in the levels of triglycerides and lipoproteins and their relationship with various diseases.
- CO6 Relate properties of cancerous cells to mutational changes in gene function.

UNIT I

Cell & cell cycle: Cell structures- plant and animal cell structures, Types of tissues- Epithelium – Organization and its types. Bones, Cartilage structure. Extra cellular matrix- ECM components, Collagen, Elastin, Fibrillin, Fibronectin, Laminin, Proteoglycans.

UNIT II

Biomembrane- Membrane assembly- Unit membrane concept, physical, Physiological functions and properties. Different forms of plasma membrane- gap junction, tight junction, Plasmadesmata, desmosomes- Active, passive transport system- Endocytosis, Exocytosis.

UNIT III

Cell division- mitosis-meiosis- significance. Cell cycle-phases and regulation- check points in cell cycle- programmed cell death-Apoptosis- Necrosis-Autolysis.

UNIT IV

Signal Transduction-types of signaling-receptors- signaling pathways-second messengers- cyclic nucleotides- lipids- calcium ions- cross talk signaling pathways.

UNIT V

Cancer biology-morphology and characteristics of cancer cells- Benign and malignant tumors- tumor markers- agents causing cancer- mechanism of carcinogenesis- Oncogenes and proto oncogenes- tumors suppressor genes- p53-Telomerase-anti cancer agents

***Employability/Entrepreneurship**

3. The cell- Cooper
4. Molecular cell biology-Lodish et. al.,

Course Code	Course Title	L	T	P	C
20215SEC22	Metabolism and Regulation	5	1	0	5

Aim

The course aims to provide an advanced understanding of the metabolism and its regulation.

Course objectives

- To know the various metabolic pathways associated with carbohydrate, lipid, protein and nucleic acid metabolism, their regulation and associated disorders.
- To understand the inter relationship of carbohydrate, lipid, protein and nucleic acid metabolism and understand the importance of TCA cycle.
- To aware about the homeostatis of glucose of metabolites by intrinsic and extrinsic control mechanism.

Course outcomes (CO's)

- CO1 Gain knowledge on glucose anabolic and catabolic pathways that ultimately control the glucose homeostatis.
- CO2 Describe surface membrane barriers and their protective functions.
- CO3 Able to explain the role of lipids, their metabolism and their stringent control by hormones and other factors.
- CO4 To acquire knowledge related to the role of TCA cycle in central carbon metabolism, importance of anaplerotic reactions and redox balance.
- CO5 Understanding the importance of high energy compounds, electron transport chain, synthesis of ATP under aerobic and anaerobic conditions.
- CO6 Understand the anabolic and catabolic processes associated with amino acids and nucleic acids and their regulation.
- CO7 Able to understand the energy homeostatis during starvation and energy excess.

UNIT -I

BIOENERGETICS

Thermodynamics-Free energy-energy Transfer-energy Compounds -ATP-Enzymes involved in redox reactions. Electron transport chain -Inhibitors- Oxidative Phosphorylation -Chemiosmotic Theory-Inhibitors -uncouplers-Ionophores-Regulation-substrate level Phosphorylation. Electron transport system -Mitochondrial and Microsomal system -Shuttle Mechanism -Malate and glycerol phosphate shuttle.

UNIT -II

CARBOHYDRATE METABOLISM

Glycogen metabolism -Glycogen storage diseases -Regulation -Glycolysis -control -Oxidative decarboxylation -PDH complex -energetics -TCA cycle -regulation -energetics.

Gluconeogenesis -Glucogenic substates -Cori cycle and Glucose alanine cycle-regulation - HMP shunt and metabolic significance-Glucuronic acid cycle-Blood glucose homeostasis.

UNIT-III

LIPID METABOLISM

Adipose Tissue-Lipogenesis -FA Synthase complex -Regulation -Oxidation of fatty acids -alpha,beta,omega-carnitine shuttle-Metabolism of Triglycerides-Phospholipids and glycolipids-Regulation. Ketogenesis-Ketolysis-Metabolism of cholestrol-Bile acids - lipoprotein meatabolism.

UNIT-IV

NITROGEN METABOLISM

Nitrogen balance -Oxidative and Non Oxidative demination -Transamination - Transdeamination -decarboxylation -Biogenic amines -Ureogenesis and regulation. Essential and non essential amino acids - Ketogenic and ghlycogenic amino acids - Anabolism and catabolism of individual amino acids - disorders of amino acid metabolism. Biosynthesis of purine and pyrimidines -*Denovo* and salvage pathway - Catabolism of purines and pyrimidines - disorders of nucleic acid metabolism.

UNIT-V

METABOLIC INTEGRATION AND REGULATION

Role of hormones -Insulin - Role of organs - Liver, Brain, Kidney, Muscle and Adipose tissue - Metabolic interrelationship in well-fed state, fasting state, Obesity, starvation, Diabetes Mellitus, Exercise, injury, stress and pregnancy and lactation.

***Employability/Entrepreneurship**

Course Code	Course Title	L	T	P	C
20215SEC23	Neuro Biochemistry	5	0	0	4

Aim:

The course aims to provide students with a basic understanding of: the principles and major mechanisms of metabolic control and of molecular signalling by hormones; the control of cell proliferation

Course Objective:

By the end of the course, students should be able to:

- demonstrate knowledge and understanding of the molecular machinery of living cells;
- demonstrate knowledge and understanding of the principles that govern the structures of macromolecules and their participation in molecular recognition;
- use basic laboratory skills and apparatus to obtain reproducible data from biochemical experiments.

Course outcomes:

- CO1 To understand various neurological system
- CO2 Recognize the need for, and engage in life-long learning in neurological system
- CO3 To understand various Exocytosis of neurotransmitter
- CO4 To able to understand DNA microarrays, Methodology, types and applications
- CO5 To acquire knowledge related to LEARNING AND MEMORY
- CO6 Gain knowledge of contemporary issues
- CO7 to understand biochemistry of vision and muscle contraction

UNIT I : NERVOUS SYSTEM

Structure and function of the brain. Central Nervous System, Peripheral and Autonomic Nervous system. Cells of Nervous System – Neurons, Astrocytes, Glial cells, Oligodendrocytes and Schwann cells. Chemical composition of brain – utilization and uptake of glucose and amino acids, Blood – Brain barrier.

UNIT II: NEUROTRANSMISSION

Membrane potentials, Resting potential – Depolarization, repolarization and hyperpolarization, Action potential. Mechanism of axonal neurotransmission. Membrane channels – Types of channels, ion gated, voltage gated, chemically gated, mechanically gated and responsive to intracellular messengers. DISEASES OF NERVOUS SYSTEM Molecular basis of Parkinson's disease, Alzheimer's disease, Schizophrenia, Myasthenia gravis and Multiple sclerosis.

UNIT III: NEUROTRANSMITTERS

Synthesis, storage, release, uptake, degradation and action of neurotransmitters. Acetyl choline, GABA, Serotonin, Dopamine, Glutamate, Aspartate, Nitrous oxide, etc. Neuropeptides. Synaptic transmission – Cholinergic receptors – Nicotinic and Muscarinic

receptors, Agonists and Antagonists – their mode of action and effects. Adrenergic receptors, serpentine receptors and intracellular signaling. Fast and slow receptors. Exocytosis of neurotransmitter – Role of synapsins, synaptogamins, SNAP, SNARE and other proteins in docking, exocytosis and recycling of vesicles.

UNIT IV : LEARNING AND MEMORY

Mechanism of short term memory and Long Term Potentiation. NMDA and AMPA glutamate receptors. Retrograde messengers in synaptic transmission. Role of CAM kinase II, Calcium, protein kinases, cAMP, NO, Calpain and other proteins in memory and learning process. Synaptic plasticity INTERACTION OF DRUGS WITH CNS Mechanism of action of anesthetics, analgesics, hallucinogens, depressants, stimulants and toxins on the nervous system. Addiction and drugs of abuse.

UNIT V: BIOCHEMISTRY OF VISION AND MUSCLE CONTRACTION:

Rod and cone cells, visual cycle, mechanism and regulation of vision, color vision. Thick and thin filaments, interaction of actin and myosin muscle contraction, role of calcium and regulation of muscle contraction. Smooth muscle contraction and its regulation

Course Code	Course Title	L	T	P	C
20215SEC24L	Enzymology Lab- II	0	0	4	2

Aim:

To list the factors that can affect the rate of a chemical reaction and enzyme activity

Course Objectives:

- To obtain a general knowledge about how enzymes work.
- To determine the optimum pH, temperature and concentration of an enzyme for a certain reaction.
- To demonstrate skill and knowledge in the use of the spectrophotometer.
- To learn methods and calculations for diluting material in the lab

Course Outcomes:

- CO1 Students will gain an enhanced overall understanding of enzymology, enzyme assays, and in particular the influence of various physicochemical characteristics upon enzyme activity.
- CO2 Acquiring training to estimate activity of enzymes.
- CO3 To determine pH optimum, K_m and V_{max} of enzymes and to analyse enzyme kinetics
- CO4 To determine optimum temperature for the activity of an enzyme.
- CO5 Students will gain direct laboratory experience in spectrophotometry.
- CO6 Students will gain an understanding of buffers and their importance in the context of pH control.
- CO7 Students will gain an appreciation of working as part of an integrated research team.

EXPERIMENTS:

1. Determination of enzyme activity and specific activity of Salivary amylase, Lipase, Catalase, Lactate dehydrogenase and Glucose -6-phosphate dehydrogenase.
2. The progress curve of acid phosphate and amylase – catalyzed reactions.
3. Effect of PH and Temperature on enzyme activity of urease and alkaline phosphatase.
4. Determination of activation energy and K_m value of any two enzymes.
5. Effect of activation and inhibitors on activity of any one enzyme.
6. Estimation of free energy of any two enzymes.

***Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
20215DSC25A	Endocrinology	5	0	0	4

Aim:

To have a basic understanding of the endocrine system

Course Objective:

The specific objectives of the program are to train the fellows to:

- History and physical examination with emphasis on examination of the thyroid, breasts, penis, testes and female reproductive organs.
- Selection and interpretation of endocrine biochemical tests.

Course Outcomes:

- CO1 Apply the knowledge from this course while working in medical laboratory to diagnose different hormone disorders
- CO2 Explain recent laboratory methods in diagnosis hormone disorders
- CO3 Knowledge and Understanding the synthesis of different endocrine gland hormones
- CO4 Ability to analyze and solve problems related to hormone tests
- CO5 To know the pathophysiology significance of the system with special reference to humans
- CO6-Understand the synthesis of various hormones by respective gland

UNIT: I

Hormones in general - definition – types of secretions – nature – classification synthesis and their role – Feed back control with specific examples Hormones action Proteins and Steroids – Cell Signaling in hormone action.

UNIT: II

Hypothalamo hypophysial axis - Hormones of hypothalamus and their role Structure of pituitary - Secretions - Physiology role -Pathophysiology Current status of pituitary as a master gland.

UNIT: III

Thyroid - Parathyroid - structure - hormones – synthesis – storage – releases- carrier proteins (eg. TBA and TBG) – Physiology role – Pathophysiology

UNIT: IV

Adrenal and Gonadal Hormones – Steroid biosynthesis – maintenance of cyclicity. Physiological role – Pathophysiology – Steroids in metabolism

UNIT: V

Gastro intestinal hormones – pancreas as an endocrine organ – secretions- functions – physiological role and pathophysiology other endocrine organs in vertebrate Insect and crustacean hormones – their role in growth and metamorphosis.

*Employability/Entrepreneurship

Course Code	Course Title	L	T	P	C
20215DSC25B	Clinical nutrition and dietetics	5	0	0	4

Aim

- Are qualified to translate the science of nutrition in health and disease into practical information about food.

Course Objective

- Work to promote good health by teaching the public and other health professionals about diet and nutrition.
- Act as advisors to the Trust on the nutritional standards and specifications for the patient food service to ensure that the needs of all patients can be met.

Course Outcomes

- CO1 To learn glycemic index, balanced diet, micronutrient deficiencies and the remedies, nutraceuticals and their importance, junk foods and their hazards
- CO2 Understanding merits and demerits of vegetarian and non-vegetarian foods
- CO3 To understand the need for specialized food for people with special needs - diabetes, pregnancy, inherited genetic disorders
- CO4 To know the use of alternate crops – cereals and pulses and their importance
- CO5 Patients receive medical or surgical help with their conditions, but some have conditions that can also benefit from special diets. Eating more of certain foods, and/or avoiding certain things can help to control a patient's symptoms.
- CO6 In some cases, by carefully monitoring what a sick patient eats and drinks, the dietitian can reduce the chance that patient will have problems in the long-term, and can establish and/or help maintain the patient's quality of life

UNIT I

Definition of nutrition, over nutrition and undernutrition and malnutrition. signs of good and poor nutrition – relation of good nutrition to health. Nutritional deficiency disease – anaemia, protein. Calorie malnutrition, vitamin-A deficiency. Aetiology, symptoms, prevention and treatment. Role of dietary fibre in health and disease.

UNIT II

Energy- definition of calorie and joule. Energy value of foods – bomb calorimeter. Direct and indirect calorimeter. Basal metabolism, definition, methods of determining basal metabolism rate (BMR) ,factors influencing BMR – calculation of total energy requirement. Factors affecting total energy requirement, food sources.

UNIT III

Purpose and principles of therapeutic diets, hospital diets- etiology and dietary modifications. (a) Obesity, aetiology treatment. (b) Underweight – definition, aetiology, treatment. (c) Diet in febrile conditions- typhoid, tuberculosis. (d) Diabetes mellitus - definition, predisposing factors, factors that maintain blood glucose level, symptoms, diagnosis, biochemical changes in the metabolism of carbohydrates, fats, protein, food exchange list and treatment.

UNIT IV

(a) Diet in disease of gastrointestinal tract, peptic ulcer and duodenal ulcer, acute and chronic diarrhea, constipation. (b) Diet in disease liver-cirrhosis and hepatitis (c) Diet in disease of cardiovascular system- atherosclerosis and hypertension. (d) Diet in disease of kidney and urinary tract- acute and chronic nephritis and nephrotic syndrome.

UNIT V

(a) Assessing the food nutritional problems in the community methods available for the assessment of the nutritional status of an individual and the community. Assessment methods- nutritional anthropometry- biochemical tests-diet surveys. (b) Measures to overcome malnutrition. Role of nutrition education and nutrition intervention programmes. Role of ICMR, ICAR, CFTRI, ICDS,- nutritious noon meal programme, contribution of international organizations- WHO, UNICEF, FAO.

Course Code	Course Title	L	T	P	C
20215DSC25C	Bioinformatics	5	0	0	4

Aim:

The aims of bioinformatics are threefold. First, at its simplest bioinformatics organizes data in a way that allows researchers to access existing information and to submit new entries as they are produced, eg the Protein Data Bank for 3D macromolecular structures.

Course objectives: To make the students

- To make students understand the essential features of the interdisciplinary field of science for better understanding the biological data.
- To create students opportunity to interact with algorithms, tools and data in current scenario.
- To make the students look at a biological problem from a computational point of view.
- To find out the methods for analyzing the expression, structure and function of proteins, and understanding the relationships between species.

Course outcomes (CO's):

- CO1 The student will choose biological data, submission and retrieval from databases.
- CO2 The students will be able to experiment pair wise and multiple sequence alignment and will analyze the secondary and tertiary structures of protein sequences.
- CO3 The students will acquire training in different areas of bioinformatics related to various biological databases such as protein databases, nucleic acid databases, metabolic pathway databases, etc.
- CO4 To understand the Role of computers in Biology
- CO5 To know the Software in Bioinformatics - C, C++, bioperl, Biopython and oracle
- CO6 The student will understand the data structure (databases) used in bioinformatics and interpret the information (especially: find genes; determine their functions), understand and be aware of current research and problems relating to this area.

UNIT-I

Bioinformatics - Definition, the history and scope of Bioinformatics; Bioinformatics as a tool; Role of computers in Biology; The CPU and operating systems - computer networks - the internet, modem, the world wide web, search engines; FTP,HTML, URL and IP address; Virtual Library; search the biochemical information on SWISS - PROT, NCBI and MEDLINE.

UNIT-II

Software in Bioinformatics - C, C++, bioperl, Biopython and oracle. The Bioinformatics workstation, Unix system - Files, directories, Functions and application of Unix system.

UNIT-III

Data base - Types, data base management systems and data base security; biological data bases - sequence data bases for proteins and nucleic acids; searching sequence data bases; structural data base - PDB; Motif data bases; Genome data bases; Miscellaneous data bases, Data submission and data retrieval with Enterz.

UNIT-IV

Definition and concepts on homology, analogy, orthology and paralogy; sequence similarity searches - FASTA, BLAST, DBGET, SRS, Enterz. Theory and data bases of pair wise and multiple sequence alignments; BLOSUM matrices; phylogenetics - phylogenetic trees; sequence annotation, Markov models for data base similarity searches.

UNIT-V

Protein secondary structure predictions - Chow - Fasman, JPRED, AGADIR; Quandex; protein tertiary structure prediction - comparative modelling, fold Recognition and Ab initio prediction; Visualization of protein structures - RASMOL; Drug discovery - combinational chemistry and docking;

DNA microarrays - Methodology, types and applications - Goals of human genome project- structural and functional genome - Agroinformatics - Medical informatics - Metabolomics - E-cell.

*Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
20215RMC26	Research Methodology	3	0	0	2

AIM:

To create a basic appreciation towards research process and awareness of various research publication

COURSE OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

COURSE OUTCOME:

- CO1 Understanding research questions and tools
- CO2 Experience in scientific writings
- CO3 Practice in various aspects of scientific publications
- CO4 Inculcation of research ethics

UNIT I:

Selection of problem-stages in the execution of research: choosing a topic to publication- preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal ; standard of research journals – Impact factor.

UNIT II:

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

UNIT III:

Coparision of means, chisquard test, student test (ANOVA ‘’portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

UNIT IV:

Chromatography – principle, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, Isoelectric focusing, pulsed field gel electrophoresis and capillary electrophoresis. Spectrometry – Centrifugation techniques.

UNIT V:

X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

Code	Course Title	L	T	P	C
20215SEC31	Molecular Biology	6	1	0	6

Aim:

Course on molecular Biology & genetics will enhance the knowledge base about functional and structural organization of nucleic acid.

Course objectives:

The course aims to provide students with a basic understanding of

- Organization of DNA in a genome and the mechanism behind replication, transcription and translation.
- Regulation of gene expression in prokaryotes and Eukaryotes.

Course outcomes (CO's):

- CO1 Understand the structure of nucleic acids and the DNA replication process
- CO2 Learn about the process of transcription
- CO3 Understand the mechanism of translation
- CO4 Learn about gene regulation in prokaryotes
- CO5 Study the discovery of DNA as genetic material, transcription, DNA repair and translation
- CO6 Analyse coding and non-coding regions of eukaryotic genome and their importance.
- CO7 Exposure with the importance of E. coli lac operon

UNIT-I

Structure and functions of DNA, Eukaryotic genome organization .DNA replication . DNA damage and repair . Gene arrangements . Recombination

UNIT-II

Prokaryotic and Eukaryotic RNA polymerases – structures and function Mechanism of prokaryotic and eukaryotic transcription. Regulation of gene expression-In prokaryotes- Operon concept ,Attenuation and termination . In Eukaryotes – hormonal (steroid hormone receptors) Phosphorylation (STAT proteins). Activation of transcription elongation by HIV Tat protein . Post transcriptional processing in prokaryotes and eukaryotes , Ribozymes, Antisense RNA.

UNIT –III

Genetic code- Translation in bacteria and eukaryotes. Translational control in bacteria and eukaryotes. Regulation of protein synthesis. Inhibitors of protein synthesis . Co and post

translational modifications. Protein targeting to membrane and organelles. Protein degradation – Protein folding

UNIT –IV

Levels of Gene expression. Principle of gene regulation , Cis acting elements and trans acting factors . Upregulation ,Down regulation, Induction ,Repression ,Global and narrow domain mechanisms. Comparison of gene regulation strategies in prokaryotes and eukaryotes. Epigenetic gene regulation by DNA methylation. Transposable elements .

UNIT –V

Mutation and mutagenesis – chemical and UV mutagenesis-types –Ames test-Bacterial genetic system – Transformation –Conjugation- Transduction. Development genetics – Overview. Drosophila development maternal effect gene ;zygotic genes .

*Employability/Skill development

6. Advanced Molecular Biology –R.M.Twmymann.

Course Code	Course Title	L	T	P	C
20215SEC32	Clinical Biochemistry	6	1	0	6

AIM:

Describe the principles of analytical measurement in Clinical Chemistry Identify the meaning and use of laboratory investigations in connection with diseases of the major organs and the systems

Course Objectives:

Clinical Chemistry are to enable the student to acquire the basic knowledge (theoretical and practical) to enable them to critically evaluate both the methodologies relevant to Clinical Chemistry and the meaning of the data obtained in relation to the pathological conditions.

Course Outcomes:

- CO1 To learn about the normal constituents of urine, blood and their significance in maintaining good health
- CO2 Exposure to the mechanisms of causation of diseases of liver and kidney.
- CO3 Develop understanding of the current concepts related to mechanism of Cancer
- CO4 To become aware with the variations in the levels of triglycerides and lipoproteins and their relationship with various diseases
- CO5 able to describe the diagnostic laboratory, according to the main stages pre-analytical, analytical and post-analytical
- CO6 describe the diagnostic significance of the main laboratory investigations know the problems related to the preparation of the patient, the collection and knowledge of the samples

UNIT-I

Disorder of blood –Sickle cell disease - hereditary methemoglobinemias-Thalassemias-Porphyrrias- Agranulocytosis, Thrombocytopenia, aplastic-hemolytic, Anemia, Hematuria, disorders of clotting mechanism.

UNIT –II

Inborn errors of metabolism – PKU – Tyrosinosis - Alkaptonuria – maple syrup urine disease – homocystinuria – histidinuria – albinism – parkinson’s diseases – Diseases involving lysine and ornithine – Folic acid deficiency – Clinical problems related to glutathione. Disorders of purine metabolism – lesch nyhan syndrome, immune deficiency

diseases , gout. Diabetes mellitus – lactic acidosis – G-6-PD deficiency- mucopolysaccharides – galactosemia – glycogen storage diseases

UNIT: III

Apolipoproteinuria and genetic abnormalities in lipid energy Transport – Lipid storage diseases – Fatty liver – causes– types and features – Atherosclerosis – Hypertension. Cerebrospinal fluid – protein concentration and gold curve – glucose and protein level in CSF under pathological condition.

UNIT: IV

Liver function test, metabolism of bilirubin, differential diagnosis of jaundice, hepatitis, cirrhosis and hepatic coma. Gastric analysis – acidity curves – stimulation tests- insulin and pentagastrin, peptic ulcer- gastritis and Zollinger-Ellison syndrome – gall stones

UNIT: V

Biochemical changes in pregnancy – menstrual cycle- hormonal changes – placental hormones – parturition - lactation – prenatal and postnatal diagnosis. Amniotic Fluid – origin , composition and analysis of amniotic acid

***Employability Skill development**

Course Code	Course Title	L	T	P	C
20215SEC33L	Clinical Biochemistry Lab	0	0	5	3

AIM:

Describe the principles of analytical measurement in Clinical Chemistry Identify the meaning and use of laboratory investigations in connection with diseases of the major organs and the systems

Course Objectives:

Clinical Chemistry are to enable the student to acquire the basic knowledge in practical to enable them to critically evaluate both the methodologies relevant to Clinical Chemistry

Course outcomes (CO's)

- CO1 Identify the principal analytical procedures used to measure biochemical magnitudes.
- CO2 Interpret and integrate the analytical data from the principal biochemical and molecular genetics tests for the screening, diagnosis, prognosis and monitoring of pathologies.
- CO3 Interpret experimental results and identify consistent and inconsistent elements.
- CO4 To introduce them to metabolic pathways of the major biomolecules and relevance to clinical conditions.
- CO5 Manage information and the organization and planning of work.
- CO6 To learn qualitative and quantitative analysis of constituents of biological fluids such as urine, blood and their estimation using standard methods.

EXPERIMENTS:

1. Urine qualitative Analysis- normal and abnormal constituents.
2. Blood- ESR, TC/DC, blood grouping, hemoglobin.
3. Quantitative analysis of blood- sugar, urea, uric acid, creatinine, TG, Cholesterol, HDL, phospholipids, calcium, iron, inorganic phosphorus, protein (biuret method), bilirubin, chloride.
4. Assay of serum enzyme- SGOT, SGPT, Acid phosphatase and Alkaline phosphatase, amylase.

*Employability/Skill development

5. Practical biochemistry- Plummer.

Course Code	Course Title	L	T	P	C
20215DSC34A	Genetics and Genetic Engineering	5	0	0	4

Aim:

To comprehend cellular mechanisms of developmental stages.

Course objective :

- Specific objectives of this course are to provide an understanding and discuss ramifications of inheritance, gene structure and function, gene mutation, and research related to genetics and its applications.

Course outcomes (CO's):

- CO1 Comprehensive, detailed understanding of the chemical basis of heredity
- CO2 Comprehensive and detailed understanding of genetic methodology and how quantification of heritable traits in families and populations provides insight into cellular and molecular mechanisms.
- CO3 Comprehensive detailed understanding of cellular mechanisms of developmental stages.
- CO4 Exposure to the concepts of genomics, proteomics, metabolomics and their importance in human health
- CO5 Acquaintance with the merits and demerits of transgenic crops.
- CO6 To produce insulin using recombinant DNA technology.

UNIT- I

Overview of genetics; relation between genes and traits; mendelian genetics –three potulates- dihybrid cross-test cross-punnett squax-trihybrid cross-pedigree analysis-linkage-complete and incomplete linkage- crossing over-four crossing over-recombination frequencies-gene mapping in eukaryotes. Sex determination – sex chromosomes- klinefilter and turners syndrome- sex differentiation in humans- dosage compensation- barr bodies-sex linked epigenetic inheritance-gene mutations. Eugenics- gene interactions- pleiotropism.

UNIT – II

Population genetics- gene frequency-gene pool- hardy Weinberg equilibrium- allele frequencies- factors influencing – human cytogenetics. Evolutionary genetics- origin of species- genetic drift-polymorphism- natural selection- genetic code- genetic death- genetic homeostasis.

UNIT-III

Genetic engineering- overview-Analyzing DNA sequences- Maxam and Gilbert method,chain- terminator method and semi –automated method; southern and northern blotting – methods,merits and limitations ;polymerase chain reactions-basic principles ,types,special features and applications cutting and joining DNA molecules- nomenclature, target sites and applications;site- directed mutagenesis- cassette mutagenesis, primer extension and PCR- based mutagenesis.

UNIT- IV

Gene cloning- general strategies- cloning vehicles- plasmids, bacteriophages, cosmids, plasmids and YAC; shuttle and broad host range vectors; recombinant DNA and methods for introducing rDNA into host cells; screening: expression of cloned DNA; cloning in e-coli, bacillus subtilis and saccharomyces cerevisiae- merits and limitations; gene transfer into plants through Ti plasmids; transferring gene into animal cells- eggs and embryos.

UNIT-V

Transgenic plants- insect and herbicide resistant plants; transfer of Nif genes; transgenic animals- animal bioreactors, molecular farming and breeding strategies; genetic engineering in the production of insulin, somatostatin, vaccines and antibodies; gene therapy- types, methods and prevention of diseases; Manipulation of reproduction in animals.

***Employability/Entrepreneurship/Skill development**

Course Code	Course Title	L	T	P	C
20215DSC34B	Pharmaceutical Biotechnology	5	0	0	4

Aim:

This course offers the students comprehensive information and insights in pharmaceutical biotechnology and the development of biopharmaceuticals in pharmaceutical industry.

Course Objectives:

- To facilitate the students to know the definite path of metabolism of drugs and drug discovery. The information gained will help the students to formulate novel drugs.

Course Outcomes (CO's):

- CO1 Understanding the importance of Immobilized enzymes in Pharmaceutical Industries.
- CO2 Genetic engineering applications in relation to production of pharmaceuticals
- CO3 This course gives information on drug designing, novel techniques in drug discovery and the role of biotechnology in pharmaceuticals.
- CO4 Importance of Monoclonal antibodies in Industries
- CO5 Appreciate the use of microorganisms in fermentation technology
- CO6 Exposure with the importance of expression vectors and their importance in Biotechnology.

Unit-I:

Definition and scope – potential and achievements – Fermentation technology and industrial microbiology Fermentation as a biochemical process, bioconversion and biotransformation.

Unit-II:

Fermented construction and working, downstream processing, fermentation monitoring, in-situ recovery of fermentation products, proof of efficacy of biotech products. General application of fermentation in the manufacturing of antibiotics (Pencillin, streptomycin, tetracycline) dextran, vitamin (Vit.B2 and Vit.B12).

Unit-III:

Microbial enzymes, microbial limit tests and assays (antibodies, Vitamin, amino acids etc.). standards of water used in fermentation, pharmaceutical and cosmetic industry.

Unit-IV:

Preparation and characteristics of immunologicals – Preparation and standardization of vaccines, sera, allergenic extracts, diagnostics, biologicals. Introduction to veterinary vaccines, immunomodulating substances, lymphokines, preparation of monoclonal antibodies, applications of monoclonal antibodies.

Unit-V:

Biotechnology derived products (therapeutic proteins) Examples of biotechnology derived therapeutic products of human Insulin, Interferon, somatostatin and somatotrapin.

Course Code	Course Title	L	T	P	C
20211OEC	Open Elective -Writing for the Media	4	0	0	3

Aim:

To equip students to enter the realm of mass media.

Course Objectives:

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

Course Outcome:

- Understand the intricacies of mass media

UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news- Scoop- Filters- Human interest stories- Recognizing and evaluating news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters- Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

***Skill development**

Course Code	Course Title	L	T	P	C
20212OEC	Open Elective – Applicable Mathematical Techniques	4	0	0	3

Aim:

To acquaint with the basic concept of Interpolation.

Course Objectives:

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

Course Outcomes:

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

***Skill development**

Course Code	Course Title	L	T	P	C
20213OEC	Open elective Biomedical Instrumentation	4	0	0	3

Aim:

To understand the concepts and application of electronic Instrumentation in the Medical field.

Course Objective:

- Interpret technical aspects of medicine
- Solve Engineering Problems related to medical field
- Understand medical diagnosis and therapy

Course Outcomes:

- To familiarize students with various medical equipments and their technical aspects
- To introduce students to the measurements involved in some medical equipment.
- Ability to understand diagnosis and therapy related equipments
- Understanding the problem and ability to identify the necessity of an equipment to a specific problem

UNIT – I: Bio Electric Signals And Electrodes

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

UNIT – II: Recording System And Recorders

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

UNIT – III: Measurement And Analysis Techniques

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

UNIT – IV: Magnetic Resonance And Ultrasonic Imaging Systems

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological effects of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

UNIT – V: Advanced Bio Medical Systems

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

BOOKS FOR STUDY

1. R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)
2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

BOOK FOR REFERENCE

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
20214OEC	Open Elective-Green Chemistry	4	0	0	3

Aim:

To reduce the soil and water pollution in environment.

Course Objectives:

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Course Outcomes:

- To understand the environmental status and evolution.
 - To know about the Pollution and its prevention measures.
 - To familiarize the green chemistry.
 - To learn about the bio-catalytic reactions.
 - To understand about the vitamins and antibiotics.

Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO₂ - Impact of green house

effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

Course Code	Course Title	L	T	P	C
20222OEC	Open Elective –M- Marketing	4	0	0	2

Aim

Course OBJECTIVES

- Understand Mobile Business strategies.
- To understand Mobile marketing tools and techniques.
- To know Mobile technologies.

Course Outcome

- Upon Completion of the course, the students should be able to:
- Analyze various mobile marketing strategies.
- Market Mobile based Applications.
- Apply various tools in mobile marketing.

UNIT I Introduction

Mobile Marketing Campaign, Fortune 500 and Mobile Marketing, consumers engagement with mobile, Terminologies.

UNIT II Businesses Vs mobile marketing

classic mistakes in mobile marketing, laying foundation for successful mobile marketing campaign, understanding technology behind mobile marketing - Android, iOS, Windows Phone.

UNIT III

Strategic thinking about Mobile marketing campaign, Mobile Marketing Tools - setting up mobile website for different firms, using SMS, MMS and apps to drive customers to business and other ways to attract customers.

UNIT IV Location Based Marketing

LBS, NFC, Bluetooth and LBA, 2D codes, Tablet, Other Mobile Applications, Business Firms connecting to customers using Mobile - case study, Mobile Marketing for B2B companies, Mobile E-commerce to Drive Revenue.

UNIT V Mobile Payments

Present and Future Mobile Technology, Mobile Application Development.

Course Code	Course Title	L	T	P	C
20280OEC	Open Elective-Counselling Psychology	4	0	0	3

Aim:

- To acquaint with counselling and its process

Course Objectives:

- To learn the fundamental concepts of counselling.
- To know the nature of different determinates.
- To familiarize with the approaches of counselling

Course Outcome:

- Learn counselling and its process

UNIT I

Definition of Counseling, Counseling as a Solution to Human Problems, Counseling - Expectations & Goals

UNIT II

Personality Determinates, Intellectual Determinates, Emotional Determinates, Social Determinates

UNIT III

Approaches to Counseling, Counseling Process

UNIT IV

Psychological Testing, Diagnosis

UNIT V

Educational Counseling, Family Counseling

SEMESTER IV

Course Code	Course Title	L	T	P	C
20215SEC41	Molecular Basis of diseases	6	0	0	6

Aim: This paper provides a thorough knowledge about molecular structure and function of cells, molecular mechanism of diseases.

Course objectives:

The syllabi of Molecular compliments and supplements the necessary knowledge students have gained in Physiology. Consequently it incorporates topics like Drug resistance, inflammation, Vaccines, cellular ageing and other infectious diseases. It also provides the necessary inputs for the other disciplines like Pharmacology, social and preventive medicine, medicinal biochemistry etc.

Course outcomes: After the completion of this course, the student will be able to

- CO1 Attain a thorough knowledge on the molecular mechanisms for Tuberculosis, Typhoid, Cholera
- CO2 Understand the pathological changes during infectious diseases.
- CO3 Provide an insight into the history of pathology covering all the basic definitions and common terms.
- CO4 Detail on the survival mechanism in diseases, an insight into microscopic and cellular pathology.
- CO5 Elaborate the overview of Dengue Hemorrhagic Fever, and Chlamydiae, opportunistic fungal pathogens
- CO6 review the causes and mechanisms of Emerging and re-emerging infectious diseases and pathogens

UNIT I:

Overview of infectious diseases, infectious agents - Bacteria, Viruses, protozoa and fungi, pathogenicity and virulence; Facultative / obligate intracellular pathogens.

UNIT II:

Emerging and re-emerging infectious diseases and pathogens including X-MDR M. tuberculosis, MRSA, SARS virus, Bird flu, prions, AIDS, Dengue Hemorrhagic Fever, and Chlamydiae, opportunistic fungal pathogens.

UNIT III:

Viral diseases, epidemiology, signs and symptoms, causative agent, history, infection and pathogenesis, Detection, Drugs and inhibitors, Vaccines, molecular mechanisms for AIDS, hepatitis, influenza, dengue, polio, herpes.

UNIT IV:

Bacterial disease, epidemiology, signs and symptoms, causative agent, history, infection and pathogenicity, Diagnostics, Therapeutics and vaccines. Drug resistance, mechanisms, Multidrug efflux pumps, extended spectrum β -lactamases (ESBL) and implications on public health, molecular mechanisms for Tuberculosis, Typhoid, Cholera.

UNIT V:

Parasitic diseases epidemiology, signs and symptoms, causative agents, history, Vectors, life cycle, Host parasite interactions, Diagnostics, Drugs and Inhibitors, Resistance, Vaccine development, molecular mechanisms for Malaria.

*Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
20215SEC42	Environmental Biochemistry	6	1	0	6

Aim : To understand the fundamental chemical principles that govern complex biological systems.

Course objective: To provide knowledge about biochemistry of environmental processes and ecology.

Course outcomes

- CO1 students will be able to explain fundamentals of earth atmosphere and its interconnectivity between various components.
- CO2 students will be able to describe different elements of the environments and their impact on sustaining the environment.
- CO3 students will be able to interpret the fundamentals of ecology and its role in biological evolution
- CO4 Gain knowledge about pollution control
- CO5 understand the importance of Structure and functions of ecosystem
- CO6 exposure with the importance of Value of Biodiversity

UNIT I

Definition, scope and importance. Concept of an ecosystem. Structure and functions of ecosystem. Producers, consumers and decomposers. Energy flow in an ecosystem. Ecological succession. Food chains, food webs and ecological pyramids Introduction, types, characteristic features, structure and function of the following ecosystem. Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (Pond, streams, lakes, rivers, oceans, estuaries.)

UNIT II

Causes, effects and control measure of, Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal Pollution, Bioremediation.

UNIT III

Introduction – Definition, genetic, species and ecosystem diversity. Value of Biodiversity : Consumptive use, Productive uses social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. Hot spots of biodiversity, Threats to biodiversity Endangered and endemic species of India Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

UNIT IV

Enzymes: Immobilization of enzymes, enzymes engineering ,isolation and culturing of microorganisms, production of enzymes ,fermentation ,antibiotics, use of microbes to treat sewage water and industrial effluents and mining.

UNIT V

Pollution Control: Cleaner technologies, reducing environment impact of industrial effluents, chemical pesticides, herbicides and fertilizers. Renewable source of energy through through waste materials; biogas, energy crops, cellulose current levels of biodiversity and gene banks.

Course Code	Course Title	L	T	P	C
20215SEC43L	Molecular and Environmental Biochemistry lab	0	0	5	3

AIM: This paper to study in laboratory techniques in both molecular biology and environmental biochemistry, and be able to apply the scientific method to the processes of experimentation and Hypothesis testing.

COURSE OBJECTIVES: The course aims

- to develop skills of performing basic molecular and environmental biochemical tests important in clinical investigations,
- to develop familiarity with molecular and biochemical laboratory techniques, and
- to introduce students to various practical aspects of molecular biology and their correlation in disease conditions.

COURSE OUTCOMES:

- CO1 After the completion of this course, the student will be able to Learn how to isolate genomic DNA.
- CO2 Track various techniques adopted for separation of DNA.
- CO3 Demonstrate separation of protein by Western blotting and Animal Tissue culture.
- CO4 Separate chromosomal and plasmid DNA using enzyme.
- CO5 Gain the knowledge about COD and BOD
- CO6 demonstrate basis of Animal tissue culture

EXPERIMENTS:

1. Isolation & Purification of genomic DNA from bacteria
2. Isolation & Purification of plasmid DNA
3. Agarose gel electrophoresis of chromosomal & plasmid DNA
4. Restriction Digestion of chromosomal & plasmid DNA
5. Isolation of DNA fragment from agarose gel
6. Western blotting (Demonstration only).

7. Animal tissue culture (demonstration only).
8. Determination of BOD and COD form contaminated water
9. Bacterial examination of drinking water by MPN techniques

*Employability/Entrepreneurship/Skill development

Course Code	Course Title	L	T	P	C
20215DSC44A	Medical Biotechnology	5	0	0	4

AIM: This paper provide the information about History and scope of medical biotechnology, current status and future prospects.

Course Objectives:

- To enlighten the knowledge of the Students on different areas of Medical Biotechnology.
- To train the Students in a hospital based setup and familiarize them with the clinical diagnostics of diseases.

Course Outcomes:

- CO1 Explain insights about genetic diseases and also about the molecular aspects related to human disease
- CO2 Gain new insights into molecular mechanisms of nucleic acid and gene therapy
- CO3 Gain knowledge about therapeutic recombinant proteins and immunotherapy for the treatment of different diseases
- CO4 understand then Nucleic acid based Therapy
- CO5 exposure with Gene therapy
- CO6 able to interpret the molecular basis of diseases

Unit I:

Classification of genetic diseases: Chromosomal disorders – Numerical disorders e.g. trisomies & monosomies, Structural disorders e.g deletions, duplications, translocations & inversions, Chromosomal instability syndromes. Gene controlled diseases – Autosomal and X-linked disorders, Mitochondrial disorders.

Unit II:

Molecular basis of human diseases: - Pathogenic mutations Gain of function mutations: Oncogenes, Huntingtons Disease, Pittsburg variant of alpha 1 antitrypsin. Loss of function - Tumour Suppressor. Genomic. Dynamic Mutations - Fragile- X syndrome, Myotonic dystrophy. Mitochondrial diseases

Unit III:

Gene therapy: Ex-vivo, In vivo, In situ gene therapy, Strategies of gene therapy: gene augmentation Vectors used in gene therapy Biological vectors – retrovirus, adenoviruses, Herpes Synthetic vectors– liposomes, receptor mediated gene transfer. Gene therapy trials – Familial Hypercholesterolemia, ADA, AIDS, Cystic Fibrosis, Solid tumors.

Unit IV:

Nucleic acid based Therapy: Gene silencing technology, siRNA, Aptamers, antisense oligodeoxynucleotides (AS-ODN), Ribozymes, Peptide Nucleic Acids, Clinical management and Metabolic syndrome: – PKU, Familial Hypercholesterolemia, Rickets, ADA, Congenital hypothyroidism.

UNIT V:

Recombinant & Immunotherapy; Clinical applications of recombinant technology; Erythropoietin; Insulin analogs and its role in diabetes; Recombinant human growth hormone; Streptokinase and urokinase in thrombosis; Recombinant coagulation factors, Monoclonal antibodies and their role in cancer; Role of recombinant interferons; Immunostimulants; Immunosuppressors in organ transplants; Role of cytokine therapy in cancers;

***Employability//Skill development**

Course Code	Course Title	L	T	P	C
20215DSC44B	Applied Microbial Biochemistry	5	0	0	4

AIM:

Students will gain knowledge about different energy sources such as inorganic compounds, organic compounds and visible radiation for organisms.

COURSE OBJECTIVES:

- To provide knowledge about microbial culture techniques.
- To learn the concepts of different energy sources.
- To provide knowledge about industrial application of microbes.

COURSE OUTCOME:

- CO1 Will be acquainted with methods of measuring microbial growth, calculating growth kinetic parameters with understanding of steady state and continuous growth.
- CO2 Will have gained an in-depth knowledge of primary, secondary and group translocation transport systems existing in bacteria, simultaneously learning membrane transport proteins and kinetics of solute transport.
- CO3 Will have learnt central metabolic pathways for carbon metabolism in bacteria enlisting differences with eukaryotic systems and their regulation in diverse physiological conditions. This allows students to apply the acquired knowledge in engineering metabolic pathways for developing industrially useful strains.
- CO4 Will have gathered understanding of inorganic and organic nitrogen assimilation and its regulation. Also knows role of glutathione in cellular redox regulation and biochemistry of glutamate overproducing strains.
- CO5 will have learnt Microbial products in pharmaceutical and agriculture industry
- CO6 exposure with Medical microbiology and microbial metabolism

Unit-I: Microbiological techniques

Culture techniques: Isolation of microbes from various sources, serial dilution techniques, pure culture techniques, anaerobic culture methods – chemical and physical methods. Culture preservation techniques. Nutritional requirements: - different kinds of media, composition of media-carbon sources, nitrogen sources, vitamin and growth factors, mineral, inducers, precursors and inhibitors. Sterilization methods.

Unit-II: Sources of energy

Energy from inorganic compounds - ET in chemolithotrophs, production of reducing power in chemolithotrophs; Energy from visible radiation – photosynthesis in eukaryotes, blue-green algae, bacteria. Bioenergy: Renewable and non-renewable energy sources – Green technology - Biofuels, biogas, bioethanol.

Unit III- Microbial metabolism-

Overview. Photosynthesis in microbes. Role of chlorophylls, carotenoids and phycobilins, Calvin cycle. Chemolithotrophy; Hydrogen– iron– nitrite oxidising bacteria; nitrate and sulfate reduction; methanogenesis and acetogenesis, fermentations– diversity, syntrophy-role of anoxic decompositions. Nitrogen metabolism, nitrogen fixation, hydrocarbon transformation.

Unit-IV: Medical microbiology

Infectious Diseases process – Diagnosis – Process of sample collection, transport and examinations of the specimens. Antibioassay. Bacteriology: Morphology, cultural characteristics, pathogenicity and laboratory diagnosis of Gram positive organisms - Staphylococcus aureus, Mycoplasma; Gram negative organisms: E. coli. Infections, antimicrobial agents for textiles, international standards for the assessment of antimicrobial activity of textiles.

Unit-V: Microbial products in pharmaceutical and agriculture industry:

Production, harvest, recovery and uses– Enzymes, Antibiotics (Penicillins, Tetracycline), vitamins (B2, B12), Aminoacids (lysine, glutamic

**B.Sc. BIOTECHNOLOGY
CURRICULUM**

REGULATION 2020

PRIST
DEEMED TO BE
UNIVERSITY
NAAC ACCREDITED
THANJAVUR – 613 403 - TAMILNADU

SCHOOL OF ARTS AND SCIENCE

DEPARTMENT OF BIOTECHNOLOGY

B.sc., CURRICULUM - REGULATION-2020

B.sc., Graduate Attributes

- Research, inquiry and analytical thinking abilities.
- Capability and motivation for intellectual development.
- Ethical, social and professional understanding.
- Communication in intra and inter disciplinary
- Teamwork, collaborative and management skills in scientific research •
Information literacy in respective discipline

B.sc., Program Educational Objectives PEO

- **PEO 1** : To obtain detailed information about the fundamentals of Biotechnology, allied subjects and life skills.
- **PEO 2** : To provide information about the molecular methods which are involved in cellular processes of living systems such as microbes to higher order organisms for applied aspects. To address the emerging need for skilled scientific manpower with research ethics involving organisms.
- **PEO 3** : To impart the basics and current molecular tools in the areas of Molecular Diagnostics, Fermentation Technology, Plant, Animal & Environmental Biotechnology are included to train the students for man power development and also sensitize them to scope for research. The practical subjects will provide information about the careers in the industry and applied research where the biological system is employed.
- **PEO 4** : To make the graduates of Biotechnology to learn and to adopt in a competitive world of technology update and contribute to all forms of life •
PEO5- To enable them to execute a research objective through experimentation

B.Sc., Programme Specific Outcome (PSO)

- **PSO1**- Graduates will exhibit contemporary knowledge in Biotechnology and students will be eligible for doing jobs in pharmaceutical and biotechnological Industry.
- **PSO2**-An expert in biotechnology and allied fields (medical, microbial, agricultural, environmental, plant and animal) for utilizing the practical skill to address biotechnological challenges.
- **PSO3**- Graduates will be able to work individually as well as in team to survive in multidisciplinary environment.
- **PSO4**- If students will engage themselves in the process of effective learning, it will give opportunities to utilize acquired knowledge for the catering the needs of science and technology as well as for the betterment of human mankind.

- **PSO5**-Graduates will be able to understand the potentials, and impact of biotechnological innovations on environment and their implementation for finding sustainable solution to issues pertaining to environment, health sector, agriculture, etc.

B.Sc., Program Outcome PO

- **PO1**-Understand the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life
- **PO2**-Understanding and better knowledge of the causes, types and control methods for environmental pollution by the students.
- **PO3**-The student will be able to discuss the mechanisms associated with gene expression system in prokaryotes and eukaryotes.
- **PO4**-Developed various communication skills such as reading, listening, speaking etc.,
- **PO5**-Acquired the skills in handling scientific instruments, planning and performing in laboratory experiments
- **PO6**-Ethics: Convey and practice social, environmental and biological ethics.
- **PO7**-To get knowledge about research tools and learn to do review literature. Ability to carry out independent literature survey corresponding to the specific publications type and asses basic research tool

Employability

Course Code	Course Title	L	T	P	C
20111AEC11	Advanced English-I	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the glossary terms, figures of speech
- To improve vocabulary
- To learn how to edit and proof read
- To know the comparison and contrast and cause and effect forms •
- To understand the impact of the speeches of famous people

Outcome:

- Develop vocabulary
- Read and comprehend literature

UNIT – I

Glossary of grammar terms

Figures of speech

UNIT – II

Foreign words and phrases

British and American Vocabulary

UNIT – III

Speeches of famous people:

Mahatma Gandhi-Abraham Lincoln-Swami Vivekananda-John F. Kennedy

UNIT – IV

Editing

Proof reading

UNIT – V

Comparison and contrast

Cause and effect

Great Speeches - Sudhir Kumar Sharma Galaxy Publishers English Work Book-I&II

-Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
20111AEC12	English-I	4	0	0	2

Aim:

- To acquaint students with learning English through literature

Objective:

- To improve English delightfully through simple poems, essays
- To throw light on fiction
- To read and comprehend literature

Outcome:

- Read and comprehend literature

UNIT –I

The Art of Reading - Lin Yutang

An Eco-Feminist Vision -Aruna Gnanadason **UNIT – II**

The Merchant of Death -Nanda Kishore Mishra & John Kennet She Spoke for all Nature

-Young world 'The Hindu' **UNIT –III**

Because I could not Stop for Death -Emily Dickinson Stopping by

Woods on a Snowy Evening -Robert Frost

UNIT –IV

Enterprise -Nissim Ezekiel

Love poem for a wife -A.K Ramanujam

UNIT –V

Oliver Twist -Charles Dickens

References:-

The Art of Reading/ Experiencing Poetry. -S.Murugesan and Dr.K.Chellappan
Emerald Publishers

Course Code	Course Title	L	T	P	C
20117AEC13	Fundamentals of Biological system	6	1	0	5

Aim:

- To study the diversity of life, the interactions of the environment, to study problems, and to propose solutions to those problems.

Objectives:

- (Science: psychology) Perceptible to the external senses.
- (Science: ophthalmology) The lens or system of lenses in a microscope (or telescope) that is nearest to the object under examination

Outcomes :

- Understand the physical, chemical, and mathematical basis of biolog •
Appreciate the different scales of biological systems

UNIT – I

Diversity of Life: evolution and organization of life- living and non-living things-prokaryotes and eukaryotes- Classification of Microorganisms, Nomenclature, Endosymbiotic theory

UNIT II

Inorganic perspective of life: Elements Are Fundamental Types of Matter-Bonding-types, chemical reactions and concept of equilibrium, colligative properties of solution, laws of thermodynamics, bonding, water as an essential to life-properties Organisms Balance Acids pH scale Abiogenesis

UNIT III

Energy of Life- Biomolecules: carbohydrates, proteins, lipids and Nucleic acids classification- general properties- functions, Metabolism-Regulation of Metabolism Enzymes.

UNIT IV

Cellular organization of life: cell theory- cell organization-cell organelles- plant and animal cell- tissue organization- cell size and its constraints- movement in and out of the cell, Cellular Respiration-Bacteria, Plants and animals.

UNIT V

Biology of environment: biotic and abiotic factors- influence of environmental factors on life major biogeo cycles-carbon, nitrogen, oxygen cycles- ecosystems- food web- food chain and pyramids.

REFERENCE

1. Biology 2nd edition, George H. Fried and George J. Hademenos, Tata MacGraw Hill Publishers.
2. Biology: Concepts and Investigations, Third EDITION. By Marielle Hoefnagels 2012. McGraw-Hill.
3. Biology, By Mader, Sylvia S, Tenth Edition, 2010. McGraw-Hill.

Code	Course Title	L	T	P	C
20115AEC14A	Biological Chemistry	6	1	0	4

Aim:

- To understanding on the underlying principles of Biomolecules

Objectives:

- This course is designed to provide clear understanding on the underlying principles of structures and functions of biomolecules to the students of the subjects.

Outcomes:

- The learners will acquire knowledge on the structure and functions relationship of proteins nucleic acid carbohydrates and as well their roll in various biological process.

UNIT I

Carbohydrates : definition- classification- monosaccharide – structure , function and biological significance- disaccharides- polysaccharides- types and biological importance carbohydrate metabolism- glycolysis- TCA cycle- HMP shunt- glycogenesis- glycogenolysis oxidative phosphorylation.

UNIT II

Amino acids and proteins: amino acid classification- essential and non-essential amino acids structure and properties- proteins- definition- classification- functions- protein metabolism deamination – decarboxylation- transamination of amino acids- urea cycle.

UNIT III

Lipids: classification- physical and chemical properties- saturated and unsaturated fatty acids structure of cell membrane- fluid mosaic model- lipid metabolism- beta oxidation biosynthesis of saturated fatty acids.

UNIT IV

Nucleic acids: Nucleoside, Nucleotide, DNA- Base composition, double helical structure, RNA - Types.

UNIT V

Vitamins, minerals and hormones: classification – occurrence- deficiency symptoms biochemical functions.

- Biochemistry by Voet and Voet.
- Biochemistry by L.Stryer

Course Code	Course Title	L	T	P	C
20117AEC15L	Fundamentals of Biological system Lab	0	0	3	2

Aim:

- To understanding The biological natural theory, characters and futures of some biological techniques

Objectives:

- The foundation of biology as it exists today is based on five basic principles. They are the cell theory, gene theory, evolution, homeostasis, and laws of thermodynamics.
Cell Theory

Outcomes:

- The learners will acquire knowledge on the structure and functions relationship of biological system and as well their roll in various biological process.

EXPERIMENTS

- Microscopic techniques- types
- Observation of prokaryotic and eukaryotic cells
- Living cell / temporary/ permanent preparations histochemical techniques •
Staining procedure *in vivo* and *in vitro*, living and non-living
- Different types of cells and tissues
- Taxonomical identification of any 2 plants
- Species diversity studies- any 2 methods
- Study of representative animals for each group
- Plankton analysis

REFERENCE:

Course Code	Course Title	L	T	P	C
20115AEC16AL	Biological Chemistry Lab	0	0	3	2

Aim:

- To understand the molecular orbital theory, preparation and properties of inorganic compounds.

Objectives:

- Theory of covalent bond, polar effects and stereochemistry of organic compounds.
- About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment

Outcomes:

- The molecular orbital theory, preparation and properties of inorganic compounds
 - Theory of covalent bond, polar effects and stereochemistry of organic compounds
- Elements of photochemistry, chemical kinetics and chromatography.

EX:

- Preparation of buffers
- Preparation of solutions of various dilutions.
- Estimation of carbohydrates.
- Estimation of proteins.
- Estimation of lipids.
- Qualitative analysis of carbohydrates
- Qualitative analysis of amino acids.
- Separation of amino acids by TLC method.
- Estimation of pH

- Biochemical methods II Edition Sadasivam, A. and Manickam, A. New age international P ltd. Publishers.

Course Code	Course Title	L	T	P	C
201ACLSICN	Indian Constitution	-	-	-	2

Objectives:

1. To make the students understand about the democratic rule and parliamentary administration
 2. To appreciate the salient features of the Indian constitution
 3. To know the fundamental rights and constitutional remedies
 4. To make familiar with powers and positions of the union executive, union parliament and the Supreme Court
- To exercise the adult franchise of voting and appreciate the electoral system of Indian democracy.

Unit I: The making of Indian constitution

The constitution assembly organization –character -work salient features of the constitution- written and detailed constitution -socialism –secularism-democracy and republic.

Unit II: Fundamental rights and fundamental duties of the citizens

Right of equality -right of freedom- right against exploitation -right to freedom of religion-cultural and educational rights -right to constitutional remedies -fundamental duties .

Unit III: Directive principles of state policy

Socialistic principles-Gandhi an principles-liberal and general principles -differences between fundamental rights and directive principles

Unit IV: The union executive, union parliament and Supreme Court

Powers and positions of the president -qualification _method of election of president and vice president -prime minister -Rajya Sabah -Lok Sabah .the supreme court -high court -functions and position of supreme court and high court

Unit V: State council -election system and parliamentary democracy in India State council of ministers -chief minister -election system in India-main features election commission-features of Indian democracy.

References:

- 1) Palekar.s.a. Indian constitution government and politics, ABD publications, India
- 2) Aiyer, alladi krishnaswami, Constitution and fundamental rights 1955.
- 3) Markandan. k.c.directive Principles in the Indian constitution 1966.
- 4) Kashyap. Subash c, ourparliament, National book trust, New Delhi 1989

Learning Out comes:

1. Democratic values and citizenship training are gained
2. Awareness on fundamental rights are established
3. The function of union government and state government are learnt
4. The power and functions of the judiciary are learnt thoroughly
5. Appreciation of democratic parliamentary rule is learnt

UNIVERSAL HUMAN VALUES

Course Code	Course Title	L	T	P	C
201ACLSUHV	Universal Human Values	-	-	-	2

Aim:

This course aims at making learners conscious about universal human values in an integral manner, without ignoring other aspects that are needed for learner's personality development.

Course Objectives :

The present course deals with meaning, purpose and relevance of universal human values and how to inculcate and practice them consciously to be a good human being and realise one's potentials.

Course Outcomes :

By the end of the course the learners will be able to:

1. Know about universal human values and understand the importance of values in individual, social circles, career path, and national life.
2. Learn from case studies of lives of great and successful people who followed and practised human values and achieved self-actualisation.
3. Become conscious practitioners of human values.
4. Realise their potential as human beings and conduct themselves properly in the ways of the world.

Unit I

- Introduction: What is love? Forms of love—for self, parents, family, friend, spouse, community, nation, humanity and other beings, both for living and non-living
- Love and compassion and inter-relatedness
 - Love, compassion, empathy, sympathy and non-violence
- Individuals who are remembered in history for practicing compassion and love.
- Narratives and anecdotes from history, literature including local folklore
- Practicing love and compassion: What will learners learn/gain if they practice love and compassion? What will learners lose if they don't practice love and compassion?
 - Sharing learner's individual and/or group experience(s)
- Simulated Situations
- Casestudies

Unit II

- Introduction: What is truth? Universal truth, truth as value, truth as fact (veracity, sincerity, honesty among others)
- Individuals who are remembered in history for practicing this value
- Narratives and anecdotes from history, literature including local folklore
- Practicing Truth: What will learners learn/gain if they practice truth? What will learners lose if they don't practice it?
 - Learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Unit III

- Introduction: What is non-violence? Its need. Love, compassion, empathy sympathy for others as pre-requisites for non-violence
- Ahimsa as non-violence and non-killing
- Individuals and organisations that are known for their commitment to non violence
- Narratives and anecdotes about non-violence from history, and literature including local folklore
- Practicing non-violence: What will learners learn/gain if they practice non violence? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about non-violence • Simulated situations
- Casestudies

Unit IV

- Introduction: What is righteousness?
 - Righteousness and *dharma*, Righteousness and Propriety
 - Individuals who are remembered in history for practicing righteousness • Narratives and anecdotes from history, literature including local folklore • Practicing righteousness: What will learners learn/gain if they practice righteousness? What will learners lose if they don't practice it?
 - Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Unit V

- Introduction: What is peace? Its need, relation with harmony and balance • Individuals and organisations that are known for their commitment to peace • Narratives and Anecdotes about peace from history, and literature including local folklore
- Practicing peace: What will learners learn/gain if they practice peace? What will learners lose if they don't practice it?
- Sharing learner's individual and/or group experience(s) about peace • Simulated situations
- Casestudies

Unit VI

- Introduction: What is service? Forms of service for self, parents, family, friend, spouse, community, nation, humanity and other beings—living and non-living, persons in distress or disaster.
- Individuals who are remembered in history for practicing this value. • Narratives and anecdotes dealing with instances of service from history, literature including local folklore
 - Practicing service: What will learners learn/gain if they practice service? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s) regarding service • Simulated situations
- Casestudies

Unit VII

- Introduction: What is renunciation? Renunciation and sacrifice. Self restraint and Ways of overcoming greed. Renunciation with action as true renunciation

- Individuals who are remembered in history for practicing this value. •
- Narratives and anecdotes from history and literature, including local folklore about individuals who are remembered for their sacrifice and renunciation.
- Practicing renunciation and sacrifice: What will learners learn/gain if they practice Renunciation and sacrifice? What will learners lose if they don't practice it?
- Sharing learners' individual and/or group experience(s)
- Simulated situations
- Casestudies

Course Code	Course Title	L	T	P	C
20111AEC21	Advanced English-II	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To understand the format of e-mail, fax and memos
- To write itinerary, checklist, invitation, circular, instruction, recommendations •
- To understand the impact of the biographies of famous people

Outcome:

- Develop writing skill
- Read and comprehend literature

UNIT –I

E-mail

Fax

Memos

UNIT – II

Itinerary

Checklist

UNIT – III

Invitation

Circular

UNIT – IV

Instruction

Recommendations

UNIT – V

Biographies of famous people:

Mother Teresa-Madam Curie-Charles Chaplin-Vikram Sarabhai

SKILL DEVELOPMENT

Lives -Maruthi Publishers

English Work Book-I&II -Jewelcy Jawahar

Course Code	Course Title	L	T	P	C
20111AEC22	English-II	4	0	0	2

Aim:

- To acquaint learners with different trends of writing

Objective:

- To empower students to acquire language skills through literature •
To enable the students to appreciate literature
- To develop the conversational skills through one act plays

Outcome:

- Read and comprehend literature

UNIT – I

Ecology -A.K. Ramanujan Gift -Alice Walker

The First Meeting -Sujata Bhatt

UNIT –II

Fueled -Marcie Hans

Asleep -Ernst Jandl

Buying and selling -Khalil Gibran **UNIT –III**

The End of living and The Beginning of Survival - Chief Seattle

My Wood - E.M.Forster

The Meeting of Races - Rabindranath Tagore **UNIT – IV**

The Refugee -K.A. Abbas

I Have a Dream -Martin Luther king Those People Next Door -A.G.

Gardiner **UNIT – V**

Marriage is a private Affair -Chinua Achebe The Fortune Teller

-Karel Capek

Proposal

-Anton Chekov

References:-

Gathered Wisdom -GowriSivaraman EmeraldPublishers

Course Code	Course Title	L	T	P	C
20117AEC23	Cell biology and genetics	6	1	0	5

Aim:

- Students will understand the cellular components underlying mitotic cell division.

Objectives:

- Students will understand the structures and purposes of basic components of prokaryotic and eukaryotic cells, especially macromolecules, membranes, and organelles
- Students will understand how these cellular components are used to generate and utilize energy in cells

Outcomes:

- This paper will enable the students to learn the basics and lay strong foundation in understanding the composition of cells, how cells works is fundamental to living systems.s

UNIT I

Genetics- History, Genetics in Society and Biology, Fundamental Concepts of Genetics
Mendelian genetics: Monohybrid cross, Dihybrid cross, Test Cross, Back cross, Sex
determination and Sex-Linked Chromosomes, genetic vs environmental effect-multiple
alleles. Deviations from Mendelian Genetic Principles.

UNIT II

Prokaryotic and Eukaryotic Chromosomes – organization and structure-Transposable
elements, Cellular Reproduction in Prokaryotic and Eukaryotic cells - ~~mitosis and meiosis~~
significance- cell cycle-Linkage, mechanism of crossing over-genetic variability,

UNIT III

Gene concept: modern concept of gene- DNA as a genetic material- Watson and Crick model
of DNA- DNA replication- repair- Telomeres-Linkage-Recombination-Gene Mapping- DNA
Senescence.

UNIT IV

Prokaryotic and Eukaryotic Transcription and Translation-RNA and its types-Genetic code.
Control of Gene Expression:– Operon concept- Lac and Trp operon

UNIT V

Gene Mutation and Chromosome variations-Genetic disorders- in borne errors of metabolism, Banding techniques, chromosomal aberrations.

Cell Junctions and the Extracellular Matrix-Cell–Cell junctions-the Extracellular Matrix
Cancer and oncogenes.

Course Code	Course Title	L	T	P	C
20116AEC24	Microbiology 3740	6	1	0	4

Aim:

- Students will understand the cellular components underlying microbial cell division.

Objectives:

- To impart knowledge on classification of microbes, function and biochemical reaction going on inside the microbial cell.

Outcomes:

- Students will gain rigorous foundation in various methods to cultivate the microbes and maintenance of the microorganism.

Unit I

Overview of history of Microbiology - Biogenesis and abiogenesis Contributions of Redi, Spallanzani, Needham, Pasteur, Tyndal, Joseph Lister, Koch [Germ Theory], Edward Jenner and Flemming [Penicillin], Scope of Microbiology. Classification of Microbes - Nutritional types [Definition and examples]. Classification on the basis of oxygen requirement.

Unit II

Ultrastructure and characteristics of bacteria, fungi, algae, and protozoans. Microbes in Extreme Environment – thermophilic, methanogenic and halophilic. Archaea - live in extreme conditions like cold, and space. Beneficial aspects of microorganisms.

Unit III

Pathogenic Microorganisms – List of common bacterial, fungal and viral diseases of human beings [Name of the disease, causative pathogen, parts affected]. Concept of Sterilization - Definition of sterilization, dry and moist heat, pasteurization, tyndalization; radiation, ultrasonication, filtration. Physical and Chemical methods of sterilization; disinfection sanitization, antiseptics sterilants and fumigation.

Unit IV

Stains and staining techniques – Definition of auxochrome, chromophores, dyes, Classification of stains, Theories of staining, Mechanism of gram staining, acid fast staining, negative staining, capsule staining, flagella staining, endospore staining. Fungal staining.

Unit V

Basic concepts of Virology - General characteristics of viruses, differences between bacteria and viruses. Classification of viruses. Ultrastructure of TMV and Bacteriophage. **SKILL**

DEVELOPMENT

REFERENCE:

- Microbiology M.J.Pelczar E.C.S.Chan and N.R.Crick. 2007.Mc Graw Hill

Course Code	Course 3742	L	T	P	C
-------------	-------------	---	---	---	---

20117AEC25L	Cell biology and genetics Lab	0	0	3	2
-------------	-------------------------------	---	---	---	---

Aim:

- To enable students to learn the basics of prokaryotic and eukaryotic cells

Objectives:

- To develop practical biological skills such as staining, sterilization, dialysis etc
- To prepare students for subsequent biological courses that require an understanding of the physiology of organisms such as cell division, enzyme activity etc.

Outcomes:

- It will provide an understanding of the unique features of plant cells and animal cell.
- Gain understanding on the interaction between cells and the environment

EX:

- Mitosis in onion root
- Meiosis in flower bud
- Normal human karyotyping
- preparation of polytene chromosome
- Isolation of chloroplast from spinach leaves
- Isolation of protoplast
- Life cycle of Drosophila
- Culturing techniques and handling of flies

REFERENCE:

1. Experimental procedures in Life Sciences, S.Rajan and R. Selvi Christy, 2010, Anjanaa book house

Course Code	Course Title	L	T	P	C
20116AEC26L	Microbiology lab	0	0	3	2

Aim:

- To enable students to learn the basics of microbial cells

Objectives:

- Genetic laboratory course to introduce the students to learn about prokaryotic and eukaryotic genetic system using modern techniques.

Outcomes:

- This course will provide to this students about the mechanics of experimentation methods of genetics.

EX

- Microscopic techniques.
- Sterilization methods - Moist heat (Autoclave)& Dry heat (Hot air oven).
- Preparation of media (Liquid and Solid) & (Selective and Differential media) for growth of various microorganisms.
- Culturing and Purification of various microorganisms – Pour, Spread and Streak method.
- Staining of microorganisms – Bacteria (Gram staining, Endospore, capsule, Flagella and cell wall staining), Fungi (Lactophenol Cotton Blue method)
- Growth curve, measurement of bacterial population by turbidometry
- Assay of antibiotics production and demonstration of antibiotic resistance.

SKILL DEVELOPMENT

- Experiments in Microbiology, Plant Pathology, Tissue Culture and Mushroom Production technology. K.R.Aneja. 2001. New age international (P) Ltd Publishers.

Course Code	Course Title	L	T	P	C
201ACLSCOS	Communication Skills	-	-	-	2

Aim:

Course Objectives :

This course has been developed with the following objectives:

1. Identify common communication problems that may be holding learners back
2. Identify what their non-verbal messages are communicating to others
3. Understand role of communication in teaching-learning process
4. Learning to communicate through the digital media
5. Understand the importance of empathetic listening
6. Explore communication beyond language.

Course Outcome :

By the end of this program participants should have a clear understanding of what good communication skills are and what they can do to improve their abilities.

Unit I

- Techniques of effective listening
- Listening and comprehension
- Probing questions
- Barriers to listening

Unit II

- Pronunciation
- Enunciation
- Vocabulary
- Fluency
- Common Errors

Unit III

- Techniques of effective reading
- Gathering ideas and information from a given text
 - i. Identify the main claim of the text
 - ii. Identify the purpose of the text
 - iii. Identify the context of the text
 - iv. Identify the concepts mentioned
- Evaluating these ideas and information
 - i. Identify the arguments employed in the text
 - ii. Identify the theories employed or assumed in the text
- Interpret the text
 - i. To understand what a text says
 - ii. To understand what a text does
 - iii. To understand what a text means

Unit IV

- Clearly state the claims
- Avoid ambiguity, vagueness, unwanted generalisations and over simplification

of issues

- Provide background information
- Effectively argue the claim
- Provide evidence for the claims
- Use examples to explain concepts
- Follow convention
- Be properly sequenced
- Use proper signposting techniques
- Be well structured
 - i. Well-knit logical sequence
 - ii. Narrative sequence
 - iii. Category groupings
- Different modes of Writing -
 - i. E-mails
 - ii. Proposal writing for Higher Studies
 - iii. Recording the proceedings of meetings
 - iv. Any other mode of writing relevant for learners

Unit V

- Role of Digital literacy in professional life
 - Trends and opportunities in using digital technology in workplace
- Internet Basics
- Introduction to MS Office tools
 - i. Paint
 - ii. Office
 - iii. Excel
 - iv. PowerPoint

Unit VI

- Introduction to social media websites
- Advantages of social media
- Ethics and etiquettes of social media
- How to use Google search better
- Effective ways of using Social Media
- Introduction to Digital Marketing

Unit VII

- Meaning of non-verbal communication
 - Introduction to modes of non-verbal communication
- Breaking the misbeliefs
- Open and Closed Body language
- Eye Contact and Facial Expression
- Hand Gestures
- Do's and Don'ts
- Learning from experts
- Activities-Based Learning

SEMESTER – III

Course Code	Course Title	L	T	P	C
20110AEC31	Tamil-III	4	0	0	2

பிரிஸ்ட் நிகர்நிலைப் பல்கலைக்கழகம்- வல்லம், தஞ்சாவூர்

பாட குறியாடு :

தமிழ் மூன்றாம் பருவம்

இரண்டாம் ஆண்டு

செய்யுள் , காப்பியங்கள் இலக்கிய வரலாறு

செய்யுள்

செய்யுள்

அலகு : 1

1. சிலப்பதிகாரம் - மனையறம்படுத்த காளை

2. மணிமேகலை - ஆதினா பிச்சையிட்ட காளை

3. சீவக சிந்தாமணி - விம்மலையா துலம்பகம்

அலகு 2

4. பெரியபுராணம் - துளையான குடிமாற நாயனார புராணம்

5. கம்பராமாயணம் - சுகேதவி குழலினைப்படலம்

அலகு 3

6. சீறாப்புராணம் - நபி அவதாரப் படலம் : 24 வரிகள்

7. சீதம்பாவணி - வாமன் ஆட்சி படலம் - முதல் 5 பாடல்கள்

அலகு 4

8. நளவேண்பா - சயம்வர காண்டம் (20 - 31)

அலகு : 5: இலக்கிய வரலாறு

9. காப்பியங்கள், பழஞ்சிறு காப்பியங்கள், புராணங்கள், இலக்கியங்கள்

Employability

Course Code	Course Title	L	T	P	C
20111AEC31	Advanced English-III	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the organs of speech and the description and classification of speech sounds
- To understand consonant cluster, syllable, word accent and intonation. •
To know how to interpret graphics
- To write slogans and advertisements

Outcome:

- Understand Phonetics
- Develop writing skill

UNIT –I

The organs of speech
Classification of speech sounds
Vowels and Diphthongs

UNIT –II

Consonants
Consonant cluster

UNIT – III

Syllable
Word accent
Intonation

UNIT – IV

Idiom
Interpretation of graphics

UNIT – V

Slogan writing
Writing advertisement

Phonetics for Indian Students -T.B. Balasubramaniyan

Course Code	Course Title	L	T	P	C
20111AEC32	English-III	4	0	0	2

Aim:

- To acquaint students with learning English through literature

Objective:

- To sensitize students to language use through prescribed text
- To develop the conversational skills through one act plays

Outcome:

- Read and comprehend literature

UNIT – 1

The Doctor's World -R.K. Narayan

The Postmaster -Rabindranath Tagore

Princess September -E.Somerest Maugham

UNIT – II

The Price of Flowers -Prabhat Kumar Mukhopadhyay The Open

Window -Saki

The Model Millionaire -Oscar Wilde

UNIT –III

My Brother My Brother - Norah Burke

Uneasy Home Coming - Will F. Jenkins

Resignation - Premchand

UNIT –IV

The Referee -W.H. Andrews & Geoffrey Dreamer The Case of the

Stolen Diamonds -Farrell Mitchell

UNIT – V

The Dear Departed -Stanley Houghton

The Princess and the Wood Cutter -Alan Alexander Milne

References:-

Nine Short Stories -Steuart H.King Blackie Books One-Act plays of

Today -T.Prabhakar Emerald Publishers

Course Code	Course Title	L	T	P	C
20117AEC33	Plant physiology	4	1	0	4

Aim:

- Understand the interaction between the environment and plant growth and development

Objective:

- understand the relationship between structure and function as it relates to plant macromolecules, cells, and tissues
- Gain an appreciation of the metabolic and physiological processes unique to plants

Outcome:

- Provide examples of the variety of plants on Earth, their distinctive features, and how they fit into their unique ecosystems.

UNIT – I

Properties of water, Water potential, Osmotic potential and stomatal physiology. Uptake, transport and translocation of water, ions through cells, xylem and phloem. Transpiration and anti-transpirants. Solute transport, Ascent of sap.

UNIT-II

Mineral nutrition – deficiency symptoms, mineral salt absorption mechanism, Ion exchange theory and cytochrome-pump hypothesis, factors affecting salt absorption

UNIT-III

Principles of light absorption, energy transfer and electron transfer; CO₂ fixation - C3, C4 and CAM pathway, Mechanism of Photosynthesis. Respiration: Glycolysis, TCA cycle Electron transport system and Photorespiration. Bioluminescence.

UNIT-IV

Application of Auxins, Gibberellins, Ethylene and Abscisic acid in agriculture. Biological Nitrogen fixation, Nitrogen cycle, nif gene. Structure and function of Phytochrome, Photoperiodism and Biological clocks.

UNIT-V

Stress physiology-definition and types, Physiological responses to biotic and abiotic stresses, Mechanism of resistance to biotic stress and tolerance to abiotic stress.

Course Code	Course Title	L	T	P	C
20117AEC34	Immunology	4	1	0	5

Aim:

- To learn the immune system and reaction

Objectives:

- To expose the students with the immune system of human body

Outcomes:

- The students may understanding the immune system, its components and various Techniques used in bio manipulation.

Unit I

Introduction, Lymphocytes, their origin and differentiation, antigens, their structure and classification, complement and their biological functions, types of immune responses, anatomy of immune response.

Unit II

B-Lymphocytes and their activation, structure and function of immunoglobulin, immunoglobulin classes and subclasses, genetic control of antibody production, mono-clonal antibodies and diagnosis, idiotypic and antibodies, major histocompatibility complex.

Unit III

Thymus derived Lymphocytes (T Cells) their classification antigen presenting cells (APC), macrophages, langerhans cells, their origin and function, mechanisms of phagocytosis, identification of cell types of immune system, immunosuppression.

Unit IV

Hypersensitivity reactions, mechanisms of T cell activation, cytokines and their role in immune response macrophage activation and granuloma formation.

Unit V

Graft rejection, evidence and mechanisms of graft rejection, prevention of graft rejection, immunosuppressive drugs, HLA and disease, mechanisms of immunity to tumor antigens.

REFERENCES:

- Immunology by I.J. Kubey .1991 Freseman and company.
- Essential immunology Ivan Roitt , 1994. Blackwell Scientific publisher, Oxford.

Course Code	Course Title	L	T	P	C
20117AEC35L	Plant physiology Lab	0	0	3	2

Aim:

- Student identify and assess viability of cells by microscopic examination.

Objectives:

- Identify the problems associated with growing, storing and identifying a wide range of different cell types.
- Analyze data using appropriate techniques.

Outcomes:

- Produce a report of their work, which employs a range of skills of written expression and uses appropriate vocabulary consisting of a practical report.

EX:

- To demonstrate the ascent of sap takes place by xylem (Ringing experiment)
- To demonstrate the phenomenon of Transpiration
- To find out Transpiration and Absorption ratio (T/A)
- To measure the rate of transpiration by using Ganong's potometer
- To demonstrate the oxygen is liberated in the process of photosynthesis
- To demonstrate the CO₂ and light is essential for photosynthesis (Molls half leaf experiment)

REFERENCES:

Course Code	Course Title	L	T	P	C
20117AEC36L	Immunology Lab	0	0	3	2

Aim:

- To enable students to learn the basics of immunological techniques

Objectives:

- To impart knowledge on the immune system and characterization of immune aspects

Outcomes:

- Students will get an knowledge on enzyme characteristic analysis

EX:

- Antigen preparation
- Blood grouping
- Rh factor typing
- Blood collection- serum and plasma preparation
- Antigen and antibody reaction
- Determination of blood cell count- RBC, WBC and platelets

EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT

REFERENCES:

2. Biochemical methods II Edition Sadasivam, A. and Manickam, A. New age International P ltd. Publishers.

Course Code	Course Title	L	T	P	C
20117RMC37	Research Methodology	2	0	0	2

AIM:

To create a basic appreciation towards research process and awareness of various research publication

OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to MATLAB platform for effective computational and graphic works required for quality research

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic computational frameworks used in mathematical researches.

PREREQUISITES:

Basic computer literacy & skills for working in window-environment

UNIT I: Introduction to Research Methodology

Meaning of research – Objectives of research – Types of research – Significance of research – Research approaches

UNIT II: Research Methods

Research methods versus methodology – Research and scientific method – Criteria of good research – Problems encountered by researchers in India.

UNIT III: Literature Survey

Articles – Thesis – Journals – Patents – Primary sources of journals and patents – Secondary sources – Listing of titles – Abstracts – Reviews – General treatises – Monographs.

UNIT IV: Database Survey

Database search – NIST – MSDS – PubMed – Scopus – Science citation index – Information about a specific search.

UNIT V:

Basic Principles of Laboratory Safety and Waste management

Introduction - Access to Laboratory and Emergency Exits - Personal Protective Clothing and Equipment - Good Working Practices-Maintenance of Laboratory Equipment - Working with Hazardous Substances - Storage of Chemicals - Working with Flammable Solvents - Gas Cylinders-Fire Precautions - Emergency Procedures - First Aid - Accident Follow-Up - Safety Manual - Safety Training - Management of Laboratory Safety and Responsibilities - Waste Management.

Course Code	Course Title	L	T	P	C
201ACLSOAN	OFFICE AUTOMATION	-	-	-	2

Aim:

Course Objectives :

To provide an in-depth training in use of office automation, internet and internet tools. The course also helps the candidates to get acquainted with IT.

Course Outcomes:

After completion of the course, students would be able to documents, spreadsheets, make small presentations and would be acquainted with internet.

UNIT I

Knowing the basics of Computers

UNIT II

Word Processing (MS word)

UNIT III

Spread Sheet (MS XL)

UNIT IV

Presentation (MS Power Point)

UNIT V

Communicating with Internet

Explanatory

Course Code	Course Title	L	T	P	C
20111AEC41	Advanced English-IV	4	0	0	2

Aim:

- To improve the knowledge of English

Objective:

- To familiarize with the objectives and types of interview
- To know the types of questions and answering techniques
- To prepare reviews and proposals
- To learn the grammatical forms
- To understand the meaning of a poem and write the content
- To write for and against a topic
- To draw a flowchart
- To write definitions

Outcome:

- Develop communicative skill
- Read and comprehend literature

UNIT –I

Interviews

Objectives, types, ten success factors, ten failure factors - Planning and preparation

– Presentation– Type of questions – Answering techniques.

UNIT – II

Flowchart

Proposals

UNIT – III

Discourse markers

Review

UNIT IV

Grammatical forms

Paraphrasing

UNIT –V

Definition

Writing for and against a topic.

Course Code	Course Title	L	T	P	C
20111AEC42	English-IV	4	0	0	2

Aim:

- To acquaint students with learning English through literature

Objective:

- To introduce learners to the standard literary texts
- To impart wisdom through morally sound poems and essays
- To introduce Shakespeare to non-literature students

Outcome:

- Read and comprehend literature

UNIT –I

How to be a Doctor -Stephen Leacock
 My Visions for India -A.P.J. Abdul Kalam
 Woman, not the weaker sex -M.K. Gandhi

UNIT –II

My Last Duchess -Robert Browning
 The Toys -Coventry Patmore
 I, too -Langston Hughes

UNIT –III

The Best Investment I ever made-A.J.Cronin
 The Verger -W.S Maugham
 A Willing Slave -R.K.Narayan

UNIT –IV

Macbeth
 As You Like It

UNIT –V

Henry IV
 Tempest

References:-

English for Enrichment -.Devaraj Emerald Publishers Selected Scenes from Shakespeare Book I &II -Emerald Publishers

Course Code	Course Title	L	T	P	C
20117AEC43	Animal physiology	4	1	0	4

Aim:

- To be able to read, interpret and discuss scientific journal articles in physiology.

Objectives:

- To provide advanced undergraduate and introductory graduate students with a comprehensive overview of animal physiology from molecular, cellular and whole animal systems approaches.
- To critically evaluate clinical and research case problems relating to endocrinology and cell biology.

Outcomes:

- Understand the physiological processes that regulate body functions and the regulation of an organ system from the molecular all the way to the whole animal level
- Understand how changes in one system may impact a different system

UNIT I

Respiration: Availability of oxygen- respiratory organs in animals- properties and functions of respiratory pigments- regulation of respiration

UNIT II

Circulation: types of hearts- composition and functions of blood- cardiac rhythm- cardiac output- ECG- blood pressure- electrical activity and properties of heart- regulation of cardiovascular function.

UNIT III

Coordination (neuromuscular and neuroendocrine): Nerveimpulse conduction- ultrastructure of muscle – theories of muscle contraction

UNIT IV

Excretion: structure and functions of different excretory organs in animals- mechanism of urine formation in man

UNIT V

Homeostasis: Significance- mechanism of osmo-ion regulation in fresh water, estuarine and marine fishes.

Course Code	Course Title	L	T	P	C
20117AEC44	Molecular biology	5	1	0	5

Aim:

- Understand the basic concepts and applications of molecular mechanisms in a cell.

Objectives:

- To outline the basics of A central goal is understanding gene regulation at all levels, and the structure-function relationships of nucleic acids and proteins.

Outcomes:

- To Understand the regulation of protein and nucleic acids function
- To know the structure-function relationships and macromolecular interactions. • To find out newer methods to implement rDNA Technology for various organisms.
- To understand several modern molecular methods to elucidate molecular and genetic questions.

UNIT I:

Organization of chromosomes, specialized chromosomes, chromosome abnormalities Numerical and Structural chromosome mutations, crossing over.

DNA and RNA as genetic material, Concept of Gene, Gene-cistron relationship in prokaryotes and eukaryotes.

UNIT II:

Principles of Transcriptional Regulation, Regulation of Chromatin Structure, regulatory RNAs, silencing gene expression by small RNAs, Viral infection strategy and gene expression

DNA damage and repair – excision repair, recombinational repair, promotor, operator, terminator and attenuator, Oncogenes and Tumor-suppressor genes

UNIT III:

Gene expression in prokaryotes and eukaryotes, Natural Gene Transfer in Bacteria Types, Homologous recombination, Genomes and Mapping, gene linkage, three-point cross, tetrad analysis, Mobile Genetic Elements-Transposons, Retroelements and their consequences.

UNIT IV:

Plasmids-classification, replication and maintenance, artificial plasmids' Gene cloning: principles and strategies, Cloning vectors for higher plants and animals- Cloning DNA Sequences That Encode Eukaryotic Proteins.

Natural and artificial plasmid transfer and their applications. Insertion sequence in prokaryotes.

UNIT V:

Model organisms used as tool in rDNA Technology-*Escherichia coli*, *Saccharomyces cerevisiae*, *Saccharomyces cerevisiae*, *Caenorhabditis elegans* and *Arabidopsis thaliana*, zebrafish. Principles of PCR- Types and their applications. Construction of genomic

Course Code	Course Title	L	T	P	C
201ENSTU45	Environmental Studies	2	0	0	2

Aim:

- To motivate for participation in environment protection and improvement.

Objectives:

- Creating the awareness about environmental problems among people. •
- Imparting basic knowledge about the environment and its allied problems. •
- Developing an attitude of concern for the environment.
- Motivating public to participate in environment protection and environment improvement.
- Acquiring skills to help the concerned individuals in identifying and solving environmental problems.
- Striving to attain harmony with Nature.

Outcomes:

- Students will gain about environmental pollutions, preventive measures. • Student will gain information related to societal issues in concern with environment. • Students should have out line knowledge on natural resources and effective management of resources.

1. Nature of Environmental Studies

- Definition, scope and importance.
- Multidisciplinary nature of environmental studies
- Need for public awareness.

2. Natural Resources and Associated Problems.

- Forest resources: Use and over — exploitation, deforestation, dams and their effects on forests and tribal people.
- Water resources: Use and over — utilization Of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
- Mineral resources: Usage and exploitation. Environmental effects of extracting and using mineral resources.
- Food resources: World food problem, changes caused by agriculture effect of modern agriculture, fertilizer — pesticide problems.
- Energy resources: Growing energy needs, renewable and non — renewable energy resources, use of alternate energy sources. Solar energy, Biomass energy, Nuclear energy.
- Land resources: Solar energy, Biomass energy, Nuclear energy, Land as a resource, land degradation, man induced landslides, soil erosion and desertification, Role of an individuals in conservation of natural resources.

3. Ecosystems

- Concept of an ecosystem.
- Structure and function of an ecosystem.
- Producers, consumers and decomposers.
- Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, characteristics features, structure and function of the following ecosystem:

a) Forest ecosystem, b) Grassland ecosystem, c) Desert ecosystem,

d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

4. Biodiversity and its conservation

Introduction — Definition: genetic, species and ecosystem diversity.

Bio — geographical classification of India.

Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

India as a mega — diversity nation.

Western Ghat as a biodiversity region.

Hot — spot of biodiversity.

Threats to biodiversity habitat loss, poaching of wildlife, man — wildlife conflicts.

Endangered and endemic species of India.

Conservation of biodiversity: In — situ and Ex — situ conservation of biodiversity.

5. Environmental Pollution

Definition: Causes, effects and control measures of: Air pollution, Water pollution, soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards.

Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of a individual in prevention of pollution.

6. Social Issues and the Environment

Disaster management: floods, earthquake, cyclone, tsunami and landslides. Urban problems related to energy Water conservation, rain water harvesting, watershed management

Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics: Issue and possible solutions.

Global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Wasteland reclamation.

Consumerism and waste products.

7. Environmental Protection

From Unsustainable to Sustainable development.

Environmental Protection Act.

Air (Prevention and Control of Pollution) Act.

Water (Prevention and control of Pollution) Act.

Wildlife Protection Act.

Forest Conservation Act.

Population Growth and Human Health, Human Rights.

8. Field Work

Visit to a local area to document environmental assets — River / Forest / Grassland / Hill / Mountain.

or

Visit to a local polluted site — Urban / Rural / Industrial / Agricultural.

or

Study of common plants, insects, birds.

or

Study of simple ecosystems — ponds, river, hill slopes, etc.

Learning Outcomes:

- Students who graduate with a major in environmental science will be able to:
1. Understand the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale;
 2. Develop critical thinking and/or observation skills, and apply them to the analysis of a problem or question related to the environment;
 3. Demonstrate ecology knowledge of a complex relationship between predators, prey, and the plant community;
 4. Apply their ecological knowledge to illustrate and graph a problem and
 5. describe the realities that managers face when dealing with complex issues; and
 6. Understand how politics and management have ecological consequences.

Course Code	Course Title	L	T	P	C
20117AEC46L	Animal physiology Lab	0	0	3	2

Aim:

- To develop further practical biological skills introduced in 1A Physiology of Organisms

Objective:

- To provide a course of study in mammalian, principally human, systems physiology, building on knowledge of basic physiological principles established in the Part IA Physiology of Organisms course

Outcome:

- Have an enhanced knowledge and appreciation of mammalian physiology
- Understand the functions of important physiological systems including the cardio respiratory, renal, reproductive and metabolic systems

EX:

- Estimation of oxygen consumption in an aquatic animal (fish)
- Blood smear: total and differential count (prepared slides)
- Qualitative analysis of excretory products in animals
- Enzyme activity in relation to pH
- Measurement of blood pressure
- Physiological response to exercise

EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
20117AEC47L	Molecular Biology Lab	0	0	3	2

Aim:

- Understand the basic structure and applications of molecular mechanisms in a cell.

Objectives:

- To understanding gene regulation at all levels, and the structure-function relationships of nucleic acids and proteins.

Outcomes:

- To know the isolation methods of protein and nucleic acids
- To know the structure-function of nucleic acid and protein.
 - To find out newer methods to implement rDNA Technology for various organisms.
- To understand several modern molecular methods to elucidate molecular and genetic questions.

Experiments

1. Isolation of Genomic DNA
2. Isolation of Protein
3. Salting out- Dialysis method.
4. Protein precipitation method
5. Agarose Gel Electrophoresis
6. Amplification of DNA using PCR
7. Isolation of RNA.

Course Code	Course Title	L	T	P	C
201ACLSLMS	Leadership and Management Skills	-	-	-	2

AIM:

The aim of the course cultivating and nurturing the innate leadership skills of the youths so that they may transform these challenges into opportunities and become torchbearers of the future by developing creative solutions.

Course Objective:

The Module is designed to:

- Help students to develop essential skills to influence and motivate others
- Inculcate emotional and social intelligence and integrative thinking for effective leadership
- Create and maintain an effective and motivated team to work for the society
- Nurture a creative and entrepreneurial mindset
- Make students understand the personal values and apply ethical principles in professional and social contexts.

Course Outcomes :

Upon completion of the course students will be able to:

1. Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
2. Learn and demonstrate a set of practical skills such as time management, self management, Handling conflicts, team leadership, etc.
3. Understand the basics of entrepreneurship and develop business plans
4. Apply the design thinking approach for leadership
5. Appreciate the importance of ethics and moral values for making of a balanced personality.

UNIT I- Leadership Skills

a. Understanding Leadership and its Importance

- What is leadership?
- Why Leadership required?
- Whom do you consider as an ideal leader?

b. Traits and Models of Leadership

- Are leaders born or made?
- Key characteristics of an effective leader
- Leadership styles
- Perspectives of different leaders

c. Basic Leadership Skills

- Motivation
- Teamwork
- Negotiation
- Networking

UNIT II - Managerial Skills

a. Basic Managerial Skills

- Planning for effective management
- How to organise teams?
- Recruiting and retaining talent
- Delegation of tasks
- Learn to coordinate
- Conflict management

b. Self-Management Skills

- Understanding self concept
- Developing self-awareness
- Self-examination
- Self-regulation

UNIT III - Entrepreneurial Skills

a. Basics of Entrepreneurship

- Meaning of entrepreneurship
 - Classification and types of entrepreneurship
 - Traits and competencies of entrepreneur

b. Creating Business Plan

- Problem identification and idea generation
- Idea validation
- Pitchmaking

UNIT IV - Innovative Leadership and Design Thinking

a. Innovative Leadership

- Concept of emotional and social intelligence
- Synthesis of human and artificial intelligence
- Why does culture matter for today's global leaders

b. Design Thinking

- What is design thinking?
- Key elements of design thinking:
 - Discovery
 - Interpretation
 - Ideation
 - Experimentation
 - Evolution.
- How to transform challenges into opportunities?
- How to develop human-centric solutions for creating social good?

UNIT V - Ethics and Integrity

a. Learning through Biographies

- What makes an individual great?
- Understanding the persona of a leader for deriving holistic inspiration • Drawing insights for leadership
 - How leaders sail through difficult situations?

b. Ethics and Conduct

- Importance of ethics
- Ethical decisionmaking
- Personal and professional moral codes of conduct
- Creating a harmonious life

SEMESTER – V

Course Code	Course Title	L	T	P	C
20117AEC51	Food and Agricultural Biotechnology	4	1	0	4

Aim:

- To study the production mechanisms and various properties of Food and agricultural biotechnology

Objectives:

- The students will be able to apply principles of biotechnology in food and agriculture through biotechnology.
- To introduce basic processes in food technology and regulatory bodies and various factors in food shelf life evaluation

Outcomes:

- To study about molecular biology and enzymes and fermentation in food.
- To understand the food production and preservation techniques
- To acquire knowledge on agricultural techniques
- To know the knowledge about genetically modified food
- To understand food safety and standards

Unit I -Introduction to Food Biotechnology

History and evolution of food processing technology. Genetically Modified Foods Plant and Animal origin. Ethical issues concerning GM Foods, testing for genetically modified organisms.

Unit II –Food Quality, Preservation and Processing

Basic principles and application of processing techniques-Food Additives. Principles of Food Preservation - processing of foods criteria for assessing freshness handling of fresh materials – on board handling and chilling methods.

Unit III –Drying, Freezing, Packing and Management

Drying and dehydration – conventional and modern methods. Freezing and cold storage – process of freezing and its types. Packing – Principles, food packaging requirements, packaging materials, types. Food hazards of physical and chemical origin and biological origin and its management.

Unit IV - Introduction and Importance of Agricultural biotechnology Agricultural biotechnology - Introduction, Organic farming, green manure production, Soil fertility and management, vermicomposting. Fundamentals of Crop Production: evolution of crops – civilization of human, Crop improvement hybridization and plant breeding techniques, Technology for Crop Production.

Unit V – Future prospects of Agriculture Biotechnology

Introduction to GM Crops, Implications of GM-Crops in Agriculture, Ethical Aspects and Public Acceptance, Crop seasons and crop rotation, Sustainable agriculture; pheromones, traps etc., - Benefits and controversies

6. Arie Altman, 2006, Agricultural Biotechnology, Taylor & Francis

Course Code	Course Title	L	T	P	C
20117AEC52	Cell and Tissue Culture	4	1	0	3

Aim:

- To develop and standardize protocols for the in vitro propagation from ex vitro explants

Objectives:

- To optimize the culture conditions for rapid propagation to increase the biomass production
- Optimization of medium and culture conditions for the enhancement of active principle production by different approaches

Outcomes:

- The students should be able to know how to use different sources of tissues

UNIT I

History of plant cell, tissue and organ culture- laboratory organization- aseptic techniques
nutritional requirement

UNIT II

Culture media- types of culture- solid- liquid- stationary- agitated- batch culture.
Organogenesis- callus induction-rhizogenesis- induction of multiple shoots

UNIT III

Micro propagation- mass production of plantlets- hardening and mist chamber
transplantation to field- techniques for maintaining plantlets in the field- somatic
embryogenesis-protoplast isolation and culture.

UNIT IV

Principle of animal cell and tissue culture- advantages and disadvantages of culture methods
types of cells- primary and established cell lines- kinetics of cell growth-applications of
animal tissue culture

UNIT V

Techniques of animal cell and tissue culture: Sources of cells- techniques of cell culture- cell
culture media- culture procedure- preparation of animal materials- slide and coverslip culture-
double cover slip culture- flask culture- test tube culture-measurement of cell death.

REFERENCES:

Course Code	Course Title	L	T	P	C
20117AEC53	Industrial Biotechnology	4	1	0	4

Aim:

- Understanding the industrial importance of microorganisms and their products.

Objectives

- To study the development of industrial biotechnology and microbes of industrial prominence.
- To acquire knowledge on design of fermenters and its types.
- Industrial production of various pharmaceutical and commercial products using microbes.

Outcomes

CO1- To understand the vital role of various substrate used in fermentation.

CO2- To Learn the different types of reactors or fermenters.

CO3- To gain knowledge about upstream and downstream processing

Co4 - To acquire the knowledge on different product production

UNIT – I

Historical development of Industrial Microbiology, Industrially important microorganisms, Primary and secondary screening and preservation of industrially important strains. Microbial strains improvement. Primary and secondary metabolites.

UNIT – II

Fermenter: Design, types and basic functions of fermenter. Fermentation media formulation strategies, Essential factors (pH and temperature, incubation), carbon, nitrogen, vitamin and mineral sources, role of buffers, precursors, inhibitors, inducers and antifoams, types of fermentation.

UNIT – III

Downstream processing: Product recovery and purification (intracellular and extracellular), cell disruption, precipitation, filtration, centrifugation, solvent recovery, chromatography, ultrafiltration, drying, Enzyme and cells immobilizations and its applications.

UNIT – IV

Microbial products of pharmaceutical value – raw materials, organism and Industrial processes involved in the production of Penicillin, Streptomycin, Vitamin B12, Riboflavin and rabies vaccine.

UNIT – V

Microbial products of Industrial value – Raw materials, organism and Industrial processes involved in the production of ethanol, vinegar, amylase, protease, glutamic acid. Recycling and safe disposal of Industrial wastes through microbes.

Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
20117DSC54A	rDNA Technology	4	1	0	3

Aim:

- To improve the analytical and desirable manipulation skill for recombinant DNA technology

Objectives:

- The main objective of the paper is to expose students in using the current tools for rDNA technology and their applications.

Outcomes:

- This paper provides the student a thorough knowledge in principles and methods in genetic engineering and their applications.

UNIT I

Gene cloning: principles and strategies - vectors- general characters- types-replication plasmids- phage vectors- cosmids- plant and animal vectors- Restriction Endonucleases and Ligases.

UNIT II

Gene Transfer Methods- transformation- artificial methods of gene transfer- Physical, chemical and biological methods-electroporation, biolistics, microinjection- liposome mediated gene transfer.

UNIT III

Genetic Transformation of Prokaryotes-Introduction of DNA into Living Cells-Identification of recombinants-Introduction of phage DNA into bacterial cells
Cloning vectors for higher plants and animals- Cloning DNA Sequences That Encode Eukaryotic Proteins.

UNIT IV

Construction of genomic DNA libraries and c-DNA library- probes- types and construction
Screening a Library-labelling of probes- applications of probe. Cloning in *E.coli* and yeast.
Concept of PCR- applications- PCR variants- analysis of amplified product- cDNAs, Gene Synthesis by PCR

UNIT V

Applications of rDNA technology in medicine, agriculture and industry. Safety aspects of rDNA technology. Production of Protein from Cloned Genes, Production of recombinant protein by eukaryotic cells- animal and plant cells

EMPLOYABILITY/ ENTREPRENEURSHIP /SKILL DEVELOPMENT

Discipline Specific Elective -I

Course Code	Course Title	L	T	P	C
20117DSC54B	Bioinformatics and Biostatistics	4	1	0	3

Aim:

- know the theory behind fundamental bioinformatics analysis methods. •
- Be familiar with widely used bioinformatics databases.

Objective:

- The course is aimed at introducing the students to the field of Bioinformatics and enable them understand the concepts of statistics in biology.

Outcome:

- Know the applications and limitations of different bioinformatics and statistical methods.
- Be able to perform and interpret bioinformatics and statistical analyses with real molecular biology data.
- Be able to describe statistical methods and probability distributions relevant for molecular biology data.

UNIT I

Introduction to bioinformatics- scope and applications- characteristics of hardware and software- types of computer- computer network- sending and receiving email- searching biological articles in net.

UNIT II

Uses of databases in biology- sequence databases- structural databases- tools for analysis BLAST, FASTA, CLUSTAL W. Database organizations- NCBI, EMBL, DDBJ

UNIT III

Sequence analysis of proteins/ nucleic acids- structural comparisons- molecular

modeling Applications of statistics in biology- measures of central tendency- mean,

median and mode- measures of dispersion- standard deviation and standard error.

UNIT V

- Introduction to Biostatistics by Sokal and Rohif , 1973, Toppan Co. Japan.
- Molecular databases for protein sequence and structure studies by J.A. Sillince and M. Sillince, 1991, Springer International.

Course Code	Course Title	L	T	P	C
20117AEC55L	Food and Agricultural Biotechnology, Tissue Culture Lab	0	0	3	2

Aim:

- To study evaluation of microbiological quality and various properties of Food and agricultural biotechnology
- Identify and describe the structural features of plants.
- Explain the mechanisms which lead to cell determination.

Objectives:

- To introduce basic processes in food technology and regulatory bodies and various factors in food shelf life evaluation
- Discuss the basic processes of plant metabolism, transport, nutrition, growth, and reproduction.

Outcomes:

- To understand the principles of biotechnology in food and agriculture through biotechnology.
- To know the food and agriculture analytical techniques
- To gain knowledge on design experiments to test the hypothesis.

Experiments

1. Effect of cleaning and disinfection on microbial load
2. Analysis of water for potable and food purposes
3. Detection/Estimation of adulterants in some foods.
4. Acid hydrolysis and action of salivary amylase on starch
5. Evaluation of microbiological quality of milk
6. Demonstration of microbial production of curd
7. Microbial Examination of vegetable sample-surface washing and internal tissue
8. Preparation of Tissue culture Media
9. Demonstration of surface sterilisation of explant
10. Isolation of protoplast
11. Induction of Callus
12. Primary cell culture and maintenance of cell lines

Course Code	Course Title	L	T	P	C
20117AEC56L	Industrial Biotechnology Lab	0	0	3	2

Aim:

- To learn the methods of industrial product production

Objectives:

- To make students familiar with principles of enzyme activity, analysis of enzyme on the immune system and different product production

Outcomes:

- To gain knowledge on enzyme production and characteristic analysis.
- To know the industrial process of various product production
- To gain the knowledge on industrial strain isolation and purification

Experiments

1. Microbial cell growth kinetics
2. Kinetic study of amylase
3. Immobilization of cells and enzymes by calcium alginate method
4. Estimation of enzyme (amylase)
5. Enzyme production and extraction-Lipase, protease and cellulase
6. Production of citric acid
7. Isolation and screening of antibiotic producers by crowded plate technique.
8. Isolation of Actinomycetes from soil
9. Isolation of Nitrogen fixers from soil
10. Enzyme activity – Effect of pH

AUDIT COURSE				
201ACLSPSL	Professional Skills	-	-	2

Course Objectives:

The Objectives of the course are to help students/candidates:

Acquire career skills and fully pursue to partake in a successful career path

Prepare a good resume, prepare for interviews and group discussions

Explore desired career opportunities in the employment market in consideration of an individual SWOT.

Course Outcomes:

At the end of this course the students will be able to:

- Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax
- Participate in a simulated interview
- Actively participate in group discussions towards gainful employment
- Capture a self - interview simulation video regarding the job role concerned
- Enlist the common errors generally made by candidates in an interview
- Perform appropriately and effectively in group discussions
- Explore sources (online/offline) of career opportunities
- Identify career opportunities in consideration of their own potential and aspirations
- Use the necessary components required to prepare for a career in an identified occupation (as a case study).

Unit I: Resume Skills: Preparation and Presentation, Introduction of resume and its importance, Difference between a CV, Resume and Biodata, Essential components of a good resume, Resume skills: common errors, Common errors people generally make in preparing their resume, prepare a good resume of her/his considering all essential components

Unit II:

Interview Skills: Preparation and Presentation, Meaning and types of interviews (F2F, telephonic, video, etc.). Dress Code, Background Research, Do's and Don'ts, Situation, Task, Approach and Response (STAR Approach) for facing an interview. Interview procedure (opening, listening skills, closure, etc.). Important questions generally asked in job interview (open and closed ended questions).

Unit III:

Interview Skills: Simulation Observation of exemplary interviews Comment critically on simulated interviews, Interview Skills: Common Errors: Discuss the common errors generally candidates make in interview Demonstrate an ideal interview

Unit IV:

Group Discussion Skills: Meaning and methods of Group Discussion, Procedure of Group Discussion, Group Discussion-Simulation, Group Discussion - Common Errors.

Unit V:

Exploring Career Opportunities: Knowing yourself - personal characteristics,

Knowledge about the world of work, requirements of jobs including self-employment.

Sources of career information, preparing for a career based on their potentials and availability of opportunities

SEMESTER VI

Course Code	Course Title	L	T	P	C
20117AEC61	Plant and animal biotechnology	4	1	0	4

Aim:

- Activities of Animal biotechnology
- Activities of plant biotechnology

Objective:

- Definitions and scope of Animal biotechnology
- Use the Big Data technology to assist basic and translational research in plants.

Outcomes:

- Basic concepts and procedures, pitfalls, and remedies of using machine learning.

UNIT – I

Plant genome organization - Nucleus, Chloroplast genome and Mitochondrial genome, cytoplasmic male sterility. Regulation of gene expression in plant development. Plant–microbes-associated insect vectors and diseases.

UNIT – II

Agrobacterium and crown gall tumour, Ti and Ri plasmids, T-DNA, binary vectors, viral vectors, 35S and other promoters, use of reporter genes and marker genes, Gene transfer methods in plants: direct and indirect DNA transfer. Manipulation of genes and regulatory sequences in plants.

UNIT - III

Genetic engineering in plants. Plant transformation techniques, Pest and disease resistant plants. Benefits of transgenic technology , Applications of plant biotechnology Biotechnology for improved crop quality and productivity. Genetically Engineered Microorganisms-Genetically Modified Crops.

UNIT – IV

Genetic engineering in animals: -transformation of animal cells- vectors for animal cells- gene therapy- DNA fingerprinting in forensic science. *In vitro* fertilization and embryo transfer- transgenic animal production. - Xenograft

UNIT –V

Applications of Biotechnology Techniques - Animal models, Upstream and Downstream Process Technology, Molecular biotechnology for diagnostics techniques in identification and

Course Code	Course Title	L	T	P	C
20117SEC62	Applied Biotechnology	4	1	0	5

Aim:

- To introduce students to the application of mathematical modeling in the analysis of biological systems including populations of molecules, cells and organisms.

Objectives:

- The applied biotechnology major provides students with the scientific background and laboratory experience necessary for employment in the biotechnology

Outcomes:

- have an enhanced knowledge and understanding of mathematical modeling and statistical methods in the analysis of biological systems;

UNIT-I

Sericulture: History and origin of sericulture in India; Silk worms, rearing, controlling factors, harvesting techniques; Host plant varieties, distribution, cultivation techniques. Silk reeling; Natural enemies of mulberry garden and silk worms; By-products of sericulture.

UNIT – II

Vermiculture: Compost development, Quantification and characterization of solid waste, factors responsible for composting. Earthworm- rearing of earthworm, role of earthworms in vermicompost, vermisppecies, earthworms and microorganisms- vermicompost- methods and steps, nutrition enrichment- applications of vermiculture.

UNIT –III

Mushroom cultivation: Mushroom culture. Historical background; Present status of Mushroom culture in India. Cultivation methods – infrastructure substrates; Preparation of spawns; Formulation and preparation of composts; Spawn running and cropping; Control of pathogens and pests. Cultivation of *Volvariella* sp, *Pleurotus* sp and *Agaricus bisporus*. Nutritional values, Recipes from Mushroom.

UNIT – IV

Aquaculture:Definition- extensive, intensive and semi intensive practices- preparation and management of ponds- estimation of live feed organisms- natural and artificial feeds- nutritional ecology- spawning and breeding- cultural techniques.

UNIT – V

Apiculture:Species of honey bees- life history- bee colony, castes, developmental significance of social life- natural colonies and their yield. Honey extraction- uses of honey and bee wax

REFERENCES:

- G. Ganga 2003 Comprehensive Sericulture Volume 2: Silkworm Rearing and Silk Reeling.Science Publishers, USA
- Beekeeping in India by Sardar Singh (I.C.M.A.R)

Course Code	Course Title	L	T	P	C
20117SEC64L	Plant, Animal Biotechnology lab	0	0	3	2

Aim:

- Able to understand Scope, principle, merits and demerits of animal and plant tissue culture.

Objectives:

- Laboratory facilities and culture media for animal tissue culture.
- Isolation and identification of Xanthomonas citri, Rizobium sp, Azotobactor

Outcomes:

- Economic aspects of transgenic animals and Ethical issues of animal welfare and animal rights.
- Determination of IAA Activity

EX:

- Shoot induction from callus
- Root induction from explant
- Monoclonal antibody production.
- Purification of Immunoglobulins.
- Sericulture preparation
- Spawn preparation
- Mushroom cultivation
- Preparation of vermibeds
- Collection and Identification of earthworm
- Isolation of microorganism from vermicompost

REFERENCES:

- Experiments in Microbiology, Plant Pathology, Tissue Culture and Mushroom production technology. K.R.Aneja. 2001. New age international (P) Ltd publishers.

Discipline Specific Elective - II

Course Code	Course Title	L	T	P	C
20117DSC63A	Environmental Biotechnology	4	1	0	3

Aim:

- students are able to understand

Objectives:

- Bioremediation – Characterization site for bioremediation ,Types of bioremediation
- Biodegradation-Assimilation , Detoxification , Biotransformation , Factor Affecting

Outcomes:

- Biofuels: Advantages , Energy from biomass, Biogas, Biohydrogen, Biosafety
- Toxicity – Bio magnification, Threshold Dose, Factor Affecting Toxicity , Antidotal Procedure

UNIT:I

Environment: Basic Concepts; Environmental Pollution; Types of Pollution; Measurement of Pollution; Environmental Management. Water Pollution and Its Control: Water as a Resource; Water Bodies; Need for Water Management; Sources of Water Pollution; Measurement of Water Pollution

UNIT:II :

Sewage/Waste water treatment - collection, Primary treatment, Secondary treatment –Aerobic process: Activated sludge, Oxidation ditches, Trickling filters, towers, rotating discs, rotating drums, oxidation ponds. Anaerobic processes: Anaerobic digestion, Anaerobic filters, Tertiary treatment. Waste water treatment for some industries - dairy, distillery, tannery, sugar, antibiotic industries.

UNIT:III

Biopesticides and biofertilizers; their role in pest and nutrient Management; Wormiculture
Solid Wastes: Sources and Management; Composition; Methane Production; Food, Feed and Fuel from Biomass

UNIT:IV

Degradation of Xenobiotic Compounds in Environment: Decay Behaviour and Degradative Plasmids; Hydrocarbons; Substituted Hydrocarbons; Oil Pollution; Surfactants; Bioremediation of Contaminated Soils

UNIT – V

Global environmental problems: Ozone depletion, Green house effect and acid rain, their impact and biotechnological approaches for management. Environmental protection agencies

REFERENCES

1. Biotechnology - U.Sathyanarayana 2008
2. Environmental Biotechnology - Bruce E.Rittmann and Perry L.McCarty.2001.

Discipline Specific Elective - II

Course Code	Course Title	L	T	P	C
20117DSC63B	Pharmaceutical Biotechnology	4	1	0	3

Aim: To understand the various techniques in biotechnology and their applications.

Course objective:

- To sensitize the students to the fact that as we go down the scale of magnitude from cells to organelles to molecules
- To understanding of various biological processes becomes deeper and inclusive
- To educate students about the fundamental concepts of bioprocess technology and its related applications

Course outcomes:

Students should be able to:

- Know the significance and application of biotechnology in healthcare sector
- Appreciate relevance of microorganisms from industrial context
- Explain and apply design and operations of various fermenters; the fundamental principles for basic methods in production technique for biobased products
- Explain and apply of important microbial/enzymatic industrial processes

UNIT-I

Biotechnology in the Pharmaceutical Industry: Introduction - cell chemistry and biosynthesis; chemical organization of cells; internal organization of the cell - cell membranes; Cell cycle and its regulation; cell division: mitosis, meiosis and cytokinesis; cell differentiation: stem cells, their differentiation into different cell types and organization into specialized tissues; Cell-ECM and cell-cell interactions; cell receptors and trans-membrane signaling; cell motility and migration; cell death: different modes of cell death and their regulation.

UNIT-II

Genetic manipulation methods: Genetic manipulation in bacterial, plant and animal cells: Natural recombination in bacterial cells, Principles of Recombinant DNA Technology; Vectors and types, expression systems, molecular biology methods to study recombinant biomolecules, Plant Transformation methods: Agrobacterium mediated transformation; Hairy root culture; Plant products of industrial importance, Production of secondary metabolites; Accessing germline of animals; transfection methods of animal cells, Non-transgenic Methods of Animal Manipulation.

UNIT-III

Basic principles of biochemical engineering: Isolation, screening and maintenance of industrially important microbes; strain improvement for increased yield and other desirable characteristics. Microbial metabolites: Industrially important microbial metabolites: Process technology for the production of primary metabolites eg. citric acid, lactic acid, amino acids,

polysaccharides, nucleosides and bioplastics; Production of secondary metabolites- penicillin, cephalosporins, streptomycin, vitamins etc.

UNIT-IV

Fermentation technology and bioreactors: Batch and continuous fermenters; modifying batch and continuous reactors: chemostat with recycle, multistage chemostat systems, fed-batch operations; conventional fermentation, biotransformations; large scale animal and plant cell cultivation; upstream processing: media formulation and optimization; sterilization; aeration, agitation and heat transfer in bioprocess; scale up and scale down; measurement and control of bioprocess parameters.

UNIT-V

Enzyme fermentation using immobilized enzymes: Different techniques of immobilization of enzymes and whole cells; Advantages and disadvantages of immobilization, Application and future of immobilized enzyme technology. Application of fermentation technology in producing compounds of pharmaceutical interests: Therapeutic proteins, Vitamins, Amino acids, Monoclonal Antibodies

AUDIT COURSE					
201ACLSCET	Community Engagement	-	-	-	1

Aim:

Course Objectives:

- To develop an appreciation of rural culture, life-style and wisdom amongst students
- To learn about the status of various agricultural and rural development programmes
- To understand causes for rural distress and poverty and explore solutions for the same
- To apply classroom knowledge of courses to field realities and thereby improve quality of Learning

Course Outcomes:

After completing this course, student will be able to

- Gain an understanding of rural life, culture and social realities
- Develop a sense of empathy and bonds of mutuality with local community
- Appreciate significant contributions of local communities to Indian society and economy
- Learn to value the local knowledge and wisdom of the community
- Identify opportunities for contributing to community's socio-economic improvements

UNIT I - Appreciation of Rural Society

Rural life style, rural society, caste and gender relations, rural values with respect to community, nature and resources, elaboration of "soul of India lies in villages" (Gandhi), rural infrastructure.

UNIT II- Understanding rural economy & livelihood

Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, rural entrepreneurs, rural markets

UNIT III Rural Institutions

Traditional rural organisations, Self-help Groups, Panchayati raj institutions (Gram Sabha, Gram Panchayat, Standing Committees), local civil society, local administration

UNIT IV Rural Development Programmes

History of rural development in India, current national programmes: Sarva Shiksha Abhiyan, Beti Bachao, Beti Padhao, Ayushman Bharat, Swatchh Bharat, PM Awaas Yojana, Skill India, Gram Panchayat Decentralised Planning, NRLM, MNREGA, etc.

Open Elective

Course Code	Course Title	L	T	P	C
201ENOEC	Journalism	4	0	0	2

Aim :

- To acquaint with the basic knowledge of journalism

Objective:

- To instil in the minds of students the different aspects of journalism
- To understand the different kinds of news
- To learn the qualities and duties of a reporter, editor and sub-editor
- To familiarize with the style and features of the different sections in a newspaper

Outcome:

- Become a journalist
- Explore the different kinds of news

UNIT- I

Journalism – Definition, Qualities of a journalist, Forms of journalism, Role and elements

UNIT- II

News – Definition, Kinds, Elements, Sources

UNIT- III

Reporters

UNIT- IV

The Editor and the Sub-editor

UNIT –V

Language of Journalism, Style

Qualities of a Writer

Writing a News story, Opinion Pieces, Reviews, Headlines, Editorials

Reference Book:-

Author	Title of the book	Edition / Year	Publisher
Susan	Journalism		
John Hogenberg	Professional Journalism	2012	
M.James Neal	News Writing and Reporting		Surjeet Publication
M.V Komath	The Journalist's Handbook		

Course code	Course Title	L	T	P	C
201MAOEC	Development of Mathematics Skills	4	0	0	2

Aim:

- To understand the concepts from the five branches of mathematics

Objectives

- Knowledge and understanding are fundamental to study mathematics and form the base from which to explore concepts and develop problem-solving skills. Through knowledge and understanding students develop mathematical reasoning to make deductions and solve problems.
- To develop student's ability to apply both conventional and creative techniques to the solution of mathematical problems

Outcomes

- Know and demonstrate understanding of the concepts from the five branches of mathematics (Operations Research, Set Theory, Statistics, Matrices and Business mathematics)
- Use appropriate mathematical concepts and skills to solve problems in both familiar and unfamiliar situations including those in real-life contexts
- Select and apply general rules correctly to solve problems including those in real-life contexts.

Unit I

Simple interest and compound interest

Unit II

Sinking fund – discounting – trade discount – quantity discount – cash discount

Unit III

Set theory – Series

Unit IV

Matrices – Determinants

Unit V

Assignment problems

References

P.A.Navanitham, Business Mathematics & Statistics

Kanti Swarup, P.K.Gupta and Manmohan, "Operations Research"

Course Code	Course Title	I	T	P	C
201PHGEC	Instrumentation	4	0	0	2

Aim:

Making and analyzing measurements is the primary task of the experimental physicist. This includes designing experiments. Most experimental work, whether in bench-top situations, or using complex instruments. To many physicists this can be as interesting and involving as the basic physics one is trying to do.

Objectives:

- To build the strong foundation in physics of students needed for the field of Instrumentation.
- To prepare student to apply reasoning informed by the contextual knowledge to practice.
- To provide opportunity for students to work as part of teams on multi-disciplinary projects.

UNIT – I: INTRODUCTION

Potentiometer - calibration of volt meter and ammeter, measurement of resistance, Principles of network theorems – Thevenin’s and Norton’s theorem – Bridges :
AC bridges – Maxwell, Owen, Schering and deSauty’s bridges – Wien bridges.

UNIT – II: ELECTRONIC INSTRUMENTS – I

Basic characteristics of instruments – resolution – sensitivity - Audio frequency oscillator, Conversion of galvanometer into voltmeter and ammeter – resistance meter - Amplified D.C. meter – Chopper stabilized amplifier – A.C. Voltmeter using rectifiers – Electronic multimeter – Differential voltmeter – Digital voltmeters – Component measuring instruments (quantitative studies)

UNIT – III: ELECTRONIC INSTRUMENTS – II

Signal conditioning systems – DC and AC carrier systems – Instrumentation amplifiers – Vibrating capacitor amplifier – Analog to digital data and sampling – A/D and D/A convertor (successive approximation, ladder and dual slope conversions).

Unit IV – Recording Devices

Recorders necessity – Recording requirements – Analog recorders – Graphic recorders – strip chart recorders – Galvanometer types recorders – Null type recorders.

Unit V – CRO

CRO – Construction and action – Beam transit time and frequency limitations – Measurement of potential, current, resistance, phase and frequency – Special purpose oscilloscopes – Sampling storage oscilloscope.

Books for Study

1. Electronic Instrumentation and Measurement techniques – W.D. Cooper and A.D. Helfrick – PHI – Third edn. – 1989

Learning Outcomes:

- Appreciate important practical aspects of theoretical knowledge: how important components work, when to impedance match, non-ideal behaviour of op-amps etc.
- Acquire a sound understanding of the role of noise in measurement systems and know how to apply noise reduction techniques.

Books for Reference:

1. A course in electrical and electronic measurements and Instrumentation – A.K. Sawhmey – DhanpatRai and Sons – 1990.
2. Electronic measurements and instrumentation – Oliver Cage – McGraw Hill – 1975.

Course Code	Course Title	I	T	F	C
201CEOEC	Food and Adulteration	4	0	0	2

Aim:

- To introduce students to food safety and standardization act and quality control of foods.

Objectives:

- To educate about common food adulterants and their detection.
- To impart knowledge in the legislative aspects of adulteration.
- To educate about standards and composition of foods and role of consumer.

Outcomes:

- The students will have knowledge about different processing and preservation methods and principles involved.

Unit-I Introduction to Food Chemistry

Introduction to Food Chemistry- Water (Structure of water and ice, Physical constants of water, Types of water, Water activity) Composition of Food- Carbohydrates, Proteins, Lipids, Vitamins & Minerals.

Unit- II Food Pigments

Introduction- classification, types of food pigments- chlorophyll, carotenoids, anthocyanins, flavanoids.

Unit – III Food Preservation

Introduction - Importance, principle and Types. High and low temperatures preservation - Pasteurization - Sterilization- Canning- Freezing- Refrigeration.

Unit – IV Food Additives

Introduction- antioxidants, sequestrants, preservatives, nutrient supplement, emulsifiers, stabilizers and thickening agents, bleaching and maturing agent, sweeteners, humectants and anti-caking agents, coloring and flavoring substance.

Unit-V Food Adulteration

Types of adulterants- intentional and incidental adulterants, methods of detection. Detection of common food adulterants in Spices , Grains, Coffee , Tea, Oil fats , Food colours and Milk. Health hazards and risks.

References:

1. The Food Safety and Standard ACT, 2006 – Seth & Capoor
2. Hand book of Food Adulteration and Safety Laws – Sumeet Malik
3. Food Science – B.Srilakshmi

Course Code	Course Title	I	T	F	C
201CSOEC	E Learning	4	0	0	2

COURSE OBJECTIVES

- Learn the basics of E-Learning concepts.
- Learn the content development techniques.

COURSE OUTCOMES

- Develop e – learning application on their own.
- Ability to develop contents for e-learning.
- To perform course management using tools.

UNIT I INTRODUCTION

Introduction – Training and Learning, Understanding elearning, components and models of e-learning, Advocacy of e-learning – benefits, learning styles, criteria for choosing, - Applications of E-learning.

UNIT II CONCEPTS and DESIGN

E-Learning Strategy, the essential elements of elearning strategy, Quality assuring e-learning, suppliers and resources, virtual learning environments, authoring tools, e-assessment, Learning Design Issues – purpose, general principles, designing live e-learning, designing self managed learning.

UNIT III APPLICATIONS

Moodle 2.0 E-Learning Course Development – Features, Architecture, Installation and Configuring Site.

UNIT IV COURSE MANAGEMENT

Creating – Categories, Courses, Adding Static Course Material – Links, Pages, Moodle HTML Editor, Media Files, Interacting with Lessons and Assignments – Evaluating Students – Quizzes and Feedback.

UNIT V ENHANCEMENT

Adding Social Activities - Chat, Forum, Ratings, Blocks – Types, Activities, Courses, HTML, Online Users – Features for Teachers.

REFERENCE BOOKS:

1. Delivering E-Learning: A complete Strategy for Design, Application and Assessment, Kenneth Fee, Kogan page, 2009.
2. Designing Successful e-Learning, Michael Allen, Pfeiffer Publication, 2007.
3. Moodle 2.0 E-learning Course Development, William Rice, PACKT, 2011.
4. Moodle 2.0 First Look, Mary Cooch, 2010.

Course Code	Course Title	L	T	P	C
201CAOEC	Web Technology	4	0	0	2

AIM

To equip the students with basic programming skill in Web Technology.

OBJECTIVE

- To understand the concepts and architecture of the Worldwide Web.
- To understand and practice mark up languages
- To learn Style Sheet and Frames

OUTCOMES:

- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

UNIT I

Introduction to the Internet: networking- internet – email – Internet Technologies: modem internet addressing .

UNIT II

Internet browsers: Internet Explorer – Netscape navigator- Introduction to HTML: Html document – anchor tag – hyperlink.

UNIT III

Head and body sections: Header section – titles – links- colorful web page – sample html document – Designing the body section: paragraph – tab setting.

UNIT IV

Ordered and unordered lists: list – unordered list – heading in a list- order list- nested list.

UNIT V

Table handling: tables – table creation in html cell spanning multiple rows and columns- coloring cells- sample tables- frames frame set definition- nested frames set.

REFERENCE BOOKS

1. World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.
2. Principles of web design – Joel Sklar – Vikas publishing house 2001.

Course Code	Course Title	L	T	P	C
201CMOEC	Open Elective – Banking Service	4	0	0	2

AIM:

To Provide the Bank is a financial institution which is involved in borrowing and lending money.

OBJECTIVE:

- To provide lending money to firms, customers and home buyers.
- To provide keep money for customers
- To offer financial advice and related financial services, such as insurance.

UNIT – I

Commercial Banking – An Overview: Banking-Classification- Banking system- Universal Banking- Commercial Banking- functions – Role of Banks in Economic Development

UNIT – II

E-banking –An Overview: Meaning-Service-E-banking and Financial Services –Benefits-Internet Banking –Internet Banking Vs Traditional Banking –Mechanics of Internet Banking-Services

UNIT – III

Mobile Banking and Telephone Banking –An Overview: Meaning-Features- Registration-Services –Security Issues –Banking Facilities- Telephone Banking System – Drawbacks- Call Centers

Unit – IV

ATM and Electronic Money: Concept of ATM-Features-Functions-Strategic importance of ATM-Electronic Money – Categories –Merits – E-Money and Monetary Policy-Policy Issues for the RBI

Unit-V

EFT System and INFINET: Meaning- Steps in EFT- RBI Guidelines-EFT Systems Vs Traditional System - ECS-Features-Factors- Benefits –Handicaps -Applications

OUTCOME:

To help to gather knowledge on banking and financial system in India

To provide knowledge about commercial banks and its products

To create awareness about modern banking services like e-banking-banking and internet banking,

ATM System

To introduce recent trends in banking system

To make the student understand the basic concept of banking and financial institutions and expose

various types of risk based by banks

SCHOOL ARTS AND SCIENCE

DEPARTMENT OF BIOTECHNOLOGY

M.Sc. BIOTECHNOLOGY CURRICULUM

REGULATION 2020

DEPARTMENT OF BIOTECHNOLOGY

M. Sc - BIOTECHNOLOGY

PROGRAMME OUTCOMES	
PO1	Understand the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life
PO2	Understanding and better knowledge of the causes, types and control methods for environmental pollution by the students
PO3	The student will be able to discuss the mechanisms associated with gene expression system in prokaryotes and eukaryotes
PO4	Developed various communication skills such as reading, listening, speaking etc.,
PO5	Acquired the skills in handling scientific instruments, planning and performing in laboratory experiments
PO6	Ethics: Convey and practice social, environmental and biological ethics
PO7	To get knowledge about research tools and learn to do review literature. Ability to carry out independent literature survey corresponding to the specific publications type and asses basic research tool
PROGRAM SPECIFI COUTCOME	
PSO1	Graduates will exhibit contemporary knowledge in Biotechnology and students will be eligible for doing jobs in pharmaceutical and biotechnological Industry.
PSO2	An expert in biotechnology and allied fields (medical, microbial, Agricultural, environmental, plant and animal) for utilizing the practical skill to address biotechnological challenges.
PSO3	Graduates will be able to work individually as well as in team to survive in multidisciplinary environment.
PSO4	If students will engage themselves in the process of effective learning, it will give opportunities to utilize acquired knowledge for the catering the needs of science and technology as well as for the betterment of human mankind.
PSO5	Graduates will be able to understand the potentials, and impact of biotechnological innovations on environment and their implementation for finding sustainable solution to issues pertaining to environment, health sector, agriculture, etc.
PROGRAM EDUCATIONAL OBJECTIVES	
PEO1	To obtain detailed information about the fundamentals of Biotechnology, allied subjects and life skills
PEO2	To provide information about the molecular methods which involved in cellular processes of living systems such as microbes to higher order organisms for applied aspects. To address the emerging need for skilled scientific manpower with research ethics involving organisms
PEO3	To impart the basics and current molecular tools in the areas of Molecular Diagnostics, Fermentation Technology, Plant, Animal & Environmental Biotechnology are included to train the students for man power development and also sensitize them to scope for research. The practical subjects will provide information about the careers in the industry and applied research where biological system is employed
PEO4	To make the graduates of Biotechnology to learn and to adopt in a competitive world of technology update and contribute to all forms of life
PEO5	To enable them to excute a research objective through experimentation

SEMESTER I

Course Code	GENERAL MICROBIOLOGY	L	T	P	C
20217AEC11		6	1	0	5

AIM:

- This paper provides the knowledge about different types of microorganisms and their identification techniques in modern biology and there by the usefulness of the techniques in research and commercial purposes.

OBJECTIVES:

- In order to make the students to understand the identification of microorganisms using advanced microbiological methods and applications of microorganisms.

OUTCOMES:

- Students can gain the idea of how to identify the microorganisms based on the modern polyphasic approach.

Unit I

Definition and historical account of microbiology. Diversified microbial world-Classification of microbes based on Whittaker's five kingdom system of classification. Structure of Algae, Bacteria, Fungi and Virus.

Unit II

Nutritional requirements and growth cycles of the above mentioned groups. Media for growth: Types, preparation, methods of sterilization. Isolation and enumeration of microorganisms in soli, water and air. Isolation of microorganisms from contaminated food. Techniques of pure culture, maintenance and preservation; staining: stains and dyes, types of staining; General techniques involved in Virology and Protozoology.

Unit III

Microbial physiology: Factors influencing the growth of microbes-classification based on the temperature, pH, nutrition, symbiotic associations, commensals, saprophytes, etc., Microbiology of fermented foods-dairy products, meat and fish, alcoholic beverages-beer, wine etc., Food spoilage and preservation process. Microbes as source of food. Application of microbes in industries production of antibiotics, amino acids, organic acids, bioconversion process, microbial insecticides.

Unit IV

Biochemistry of Metabolism: Carbohydrates and energy metabolism – fermentation and glycolysis, TCA cycle and oxidative phosphorylation, ammonia metabolism. Biosynthesis of glutamate. Purine and pyrimidine biosynthesis. Synthesis of DNA and RNA. Biosynthesis of cell wall – Peptidoglycan and Teichoic acid.

Unit V

Microbes as components of the environment – nutrient cycles – C, N, S, H, O, Mn, K, Mg, Cl and phosphorus cycles, Degradation of industrial wastes, petroleum hydrocarbons, pesticides, biofouling and corrosion. Bacterial photosynthesis, symbiotic and non-symbiotic nitrogen fixation, antimicrobial agents – structure of antibiotics, antibacterial and antiviral (function & mechanism of action)

- Microbial Biotechnology – Alexander N. Glazer, Hiroshni-Kaido, W.H. Freeman and Co. 1995.
- Chemical Microbiology – Antony H. Rose, Butterworths, 3rd Edition, Plenum Press, 1976.

Course Code	Molecular genetics	L	T	P	C
20217AEC12		6	1	0	5

AIM:

- This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

OBJECTIVE:

- The major objective of the paper is to envisage thorough knowledge in genetics and genome organizations in organisms.

OUTCOME:

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

Unit I

Gene as the unit of mutation and recombination. Identification of DNA as the genetic material. Mutations: Molecular nature, mutagenesis by nitrous acid, hydroxylamine, alkylating agents, intercalators and UV, origin of spontaneous mutations and control, parasexual process in bacteria, transformation, transduction and conjugal gene transfer the phenomena, mechanisms and applications. Fine structure genetic analysis with examples.

Unit II

Recombinations – Control, models and mechanisms. Gene as the unit of expression. Gene – cistron relationship in prokaryotes and eukaryotes. Colinearity of gene and polypeptide. Elucidation of the genetic code. Wobble base pairing. Suppression of nonsense, missense and frameshift mutations. Regulation of gene expression in prokaryotes and eukaryotes. The operon concept – positive and negative control, attenuation control. Control sequences, promoter, operator, terminator and attenuator, DNA methylation and epigenic regulation.

Unit III

DNA damage and repair DNA damage by UV, alkylating agents, cross linkers. Mechanisms of repair – photoactivation, excision repair, recombinational repair. The SOS and adoptive responses and their regulation, heat shock response.

Unit IV

Extrachromosomal heredity, Biology of plasmids – discovery, types and structure of RTF, col-factors and Ti. Replication and partitioning. Incompatibility and copy number control. Natural and artificial plasmid transfer and their applications. Transposable genetic elements: discovery, early experiments of McClintock in maize. Insertion sequences in prokaryotes. Complex transposons – Tn 10, Tn 5, Tn 9 and Tn 3 as examples. Mechanisms control, consequences and applications of transposition by simple and complex elements. Retro elements.

Unit V

Genetics of Eukaryotes: Gene linkage and chromosome mapping, crossing over, three point cross, tetrad analysis. Complementation. Organization of chromosomes, specialized chromosomes. Chromosome abnormalities, quantitative inheritance, population genetics. Developmental genetics using *Drosophila* as model system. Somatic cell genetics.

Course Code	BIOCHEMISTRY	L	T	P	C
20217SEC13		6	1	0	4

AIM:

- This paper presents the study of identification and quantitative determination of the substances, studies of their structure, determining how they are synthesized metabolized and degraded in organisms, and elucidating their role in the operation of the organism.

OBJECTIVE:

- On the successful completion of the course the students will get an overall understanding of structure of atoms, molecules and chemical bonds, enzyme kinetics, bio polymers and metabolic reactions in a living system.

OUTCOME:

- This paper in biochemistry has been designed to provide the student with a firm foundation in the biochemical aspects of cellular functions which forms a base for their future research.

Unit I

Principles of Bioenergetics. Glycolysis and carbolism of hexoses the citric acid cycle.Oxidation of fatty acids. Oxidation of amino acids. Oxidative phosphorylation.Glyoxylate cycle, TCA cycle, Kreb cycle, Pentose Phosphate pathway. Nitrogen cycle.

Unit II

Carbohydrate – types, structure and functions of carbohydrates,biosynthesis, lipidbiosynthesis, C2, C3, C4 cycles. Biosynthesis of fatty acids and triacyl glycerol.Secondary metabolites – occurrence, classification and functions of phenolics, terpenes,flavonoids, alkaloids, saponins, glycosides.Applications of secondary metabolites in food, dairy, agricultural, cosmetics and pharmaceutical Industries.

Unit II

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity,Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, autoantigens.

Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

Unit III

Mechanism of Immune response, Generation of Immunological diversity, Antigen recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & lymphoid system.

Unit III

Biosynthesis of amino acids, nucleotides and related molecules. Classification of proteins based on functions and solubility, types of proteins structure and functions. Chemical synthesis of peptides and oligosaccharides. A general account of secondary metabolic pathway.

Unit IV

Integration and hormonal regulation of mammalian metabolism. Biological membrane and transport. Enzymes classification, mechanism, factors affecting enzyme action Vitamins and minerals.

Unit V

Lipids classification, importance, fatty acids, essential non essential fatty acids. Prostaglandins, leukotrienes, thromboxanes, interferons and interleukins. Antibiotics, cytoskeletal organization, ribozymes.

Course Code	MICROBIOLOGY & MOLECULAR	L	T	P	C
20217SEC14L	GENETICS LAB	0	0	4	2

- AIM: This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

OBJECTIVE:

- The major objective of the paper is to envisage thorough knowledge in genetics and genome organizations in organisms.

OUTCOME:

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

1. Culture media preparation liquid and solid media.

2. Selective differential media

3. Methods of sterilization and testing of sterility

4. Enumeration of bacteria, fungi and actinomycetes from soil

5. Pure culture techniques – Pour, spread and looping methods

6. Maintenance and preservation of cultures

7. Staining of Bacteria – gram, spore and AFB, Fungal wet mount – LPB

8. Motility test – hanging drop and soft agar inoculation

9. Water quality test – MPN

10. Effect of different parameters on bacterial growth kinetics (Substrate, pH,

Temperature)

11. Single colony – isolation and checking for genetic markers, measurements of growth rate one step growth curve using T7 phage.

12. Induced mutagenesis and isolation of antibiotic resistant and auxotrophic mutants

enrichment methods for auxotrophic and antibiotic resistant mutants.

13. Genetic mapping by p1 transduction, genetic mapping of conjugation and transformation.

14. Transposon mutagenesis of chromosomal DNA, Transposon mutagenesis of plasmid DNA

15. Experiments with gene fusion.

4) Methods for Genetics and Molecular Bacteriology – RGF Murray, W.A. Wood & N.B. Krig 1994 American Society for Microbiology.

Course Code	DISCIPLINE SPECIFIC ELECTIVE I	L	T	P	C
20217DSC15A	Immunology	5	0	0	4

AIM:

- Understanding the immune system, antigen antibody reactions, applications of immunological techniques, humoral and cell mediated immunity, hypersensitivity reactions and hybridoma technology.

OBJECTIVE:

- To expose the students with various immune systems of human body.

OUTCOME:

- This course will provide the student insights into the various aspects of Immunology such as classical immunology, clinical immunology, Immunotherapy and diagnostic immunology.

Unit I

Molecular cells & organs of Immune system, Historical perspective, Innate Immunity:-Skin, Mucosal Surface, Physiological barrier, Inflammation, Adaptive Immunity, Molecules of innate & Acquired immune system:- Complement, Interferon, other molecules Cells of Innate & Acquired Immune system. Organs of the immune system:-Primary Lymphoid organs, Secondary Lymphoid organs, Lymphatic etc.

Unit II

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity, Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, autoantigens. Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

Unit III

Mechanism of Immune response, Generation of Immunological diversity, Antigen recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & lymphoid system.

Unit IV

MHC & Transplantation Immunology - MHC:- General organization, MHC molecules & genes, Cell recognition of self & nonself, MHC restriction, Tolerance:- Central Peripheral & acquired tolerance. HLA typing methods using serological and molecular techniques.

Unit V

The Immune system in Health & Disease, AIDS & other Immunodeficiencies, Autoimmunity &

autoimmune diseases. Hypersensitivity, Vaccines:- Principle & types of vaccines, Recent advances in vaccination, Monoclonal & Recombinant antibodies. Immunological techniques: RIA, ELISA, Immunocytochemistry, Immunoblotting, Fluorescence antibody techniques.

Course Code	DISCIPLINE SPECIFIC ELECTIVE	L	T	P	C
--------------------	-------------------------------------	----------	----------	----------	----------

AIM:

- This course has been designed to provide the student insights into these invaluable areas of biotechnology, which play a crucial role in determining its future use and applications.

OBJECTIVE:

- Students get an idea about the advantages and disadvantages of biotechnological applications, ethical implications, and intellectual property rights.

OUTCOME:

- To study the diversity of plants and animal life in a particular habitat, ethical issues and potential of biotechnology for the benefit of man kind

Unit 1:

Introduction and historical background. Introduction to biological safety cabinets, primary containment for biohazards, biosafety levels, biosafety levels of specific microorganisms, recommended biosafety levels for infectious agents and infected animals. Biosafety guidelines by Government of India. Definition of GMOs and LMOs.

Unit 2:

Environmental release of GMOs, risk assessment; risk management and communication. Overview of national regulations and relevant international agreements including Cartagena protocol.

UNIT 3 :

Biodiversity – Concept and Definition Scope a**Unit II**

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity, Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, autoantigens. Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

Unit III

Mechanism of Immune response, Generation of Immunological diversity, Antigen recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & lymphoid system.

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

Constraints of Biodiversity Science, Composition and Scales of Biodiversity: Genetic Diversity, Species/ Organismal Diversity, Ecological/ Ecosystem Diversity, Landscape/ Pattern Diversity,

Agrobiodiversity, Biocultural Diversity and Urban Biodiversity.

UNIT 4 :

Values of biodiversity Instrumental/Utilitarian value and their categories, Direct use value; Indirect/ Non-consumptive use value, Introduction to Ecological Economics; Monetizing the value of Biodiversity; Intrinsic Value; Ethical and aesthetic values, Anthropocentrism, Biocentrism, Ecocentrism and Religions; Intellectual Value; Deep Ecology.

UNIT 5 :

Threats to biodiversity Habitat Destruction, Fragmentation, Transformation, Degradation and Loss: Causes, Patterns and consequences on the Biodiversity of Major Land and Aquatic Systems Invasive Species' pathways, biological impacts on terrestrial and aquatic systems.

Extinction: Types of Extinctions, Processes responsible for Species Extinction, Current and Future Extinction Rates, IUCN Threatened Categories, Sixth Extinction/Biological Crisis.

Course Code	CELL & MOLECULAR BIOLOGY	L	T	P	C
20217AEC21		5	1	0	5

AIM:

- This paper provides a thorough knowledge about structure and function of cells, cellular energetics, protein trafficking, bio molecules and cellular development.

OBJECTIVE:

- Understanding the structural and functional aspects of the cell provides the student with a strong foundation in the molecular mechanisms underlying cellular function.

OUTCOME:

- Students after completion of this paper will be exceptionally well prepared to pursue careers in cellular and sub cellular biological research, biomedical research, or medicine or allied health fields.

UNIT-I:

Cell architecture: Structure of cells – structure of prokaryotic and eukaryotic cells; Surface appendages – Cilia and Flagella, Capsules, Pili, Fimbriae and slime layers; Cell walls – Algae, fungi, bacteria ; Membranes of Gram positive, Gram negative bacteria and acid fast bacteria; protoplast, spheroplast and endospores; Transport across membrane – active and passive transport, transport channels and pumps, transport across nuclear membrane; Neurotransmission, neuromuscular junction.

UNIT-II:

Cellular constituents: Cytoskeleton and structural components – Microfilaments, Intermediate filaments, Microtubules; Mitochondria – structure, biogenesis; Chloroplast – structure, biogenesis; Endoplasmic reticulum and Golgi complex – structure, function, vesicular transport and import into cell organelles; Structure and function of ribosomes, mesosomes, lysosomes, peroxysomes.

UNIT-III:

Nucleus: Nucleus structure – structural organization, nucleosome, supranucleosomal structures, specialized chromosomes, polytene and lamp brush chromosomes and chromosome banding; Nucleic acid structure: DNA and RNA.

UNIT-IV:

Cell cycle: Mechanism of cell division – Mitosis, meiosis and genetic recombination; regulation of cell cycle – factors and genes regulating cell cycle (Cyclins, CDK and CDKI). Biochemistry and molecular biology of Cancer – malignant growth, tumour suppressor genes (p53, RB) and oncogenes (Ras), chemical carcinogenesis, hormonal imbalances.

UNIT-V:

Cellular development: Extracellular matrix – cell to cell and cell-matrix adhesion, cell junctions; Cellular systematic – components of systematic, receptors (cell surface – GPCR, RTK, TGF- β , Hedgehog, Wnt, Notch-Delta, NF-K β , ion channels; intracellular – NO, Nuclear receptor), secondary messengers, effectors ; cell differentiation; gametogenesis and fertilization; development of Drosophila and Arabidopsis – spatial and temporal regulation of gene expression.

Course Code	BIOPHYSICS & BIO INFORMATICS	L	T	P	C
20217AEC22		5	1	0	5

AIM:

- Biology is fast becoming an interdisciplinary science. There is accumulation of large amount of information in different areas of biology - on genome sequences of many organisms, genetic and biochemical interaction networks, cell interactions during development, and organism response to environmental stimuli, along with molecular understanding of diseases. This has led to the

emerging need for a holistic description of the working of biological systems at different scales.

OBJECTIVES:

- To gain an appreciation for the field of systems biology. To understand and learn the technical details of several current experiments or technologies used in the field of systems biology. To understand some of the larger questions and issues with systems biology and large-scale data collection and analysis.

OUTCOMES:

- This paper has been designed to give the students comprehensive training in the emerging and exciting upcoming field of Systems Biology, which will help students to get career in both Industry/R&D.

UNIT-1

Physics and biology: scope and methods of biophysics. Levels of molecular organization. Association of macromolecules, lipids in biological membranes. Protein in biological membranes. Molecular machines and dynamics.

UNIT-II

Understanding structures of proteins at different levels.- primary, secondary, tertiary and quaternary: conformational analysis and forces. Understanding structures of nucleic acids at different levels- primary, secondary, tertiary and quaternary: conformational analysis of interactions- polysaccharides

UNIT-III

Introduction to Bioinformatics-scope and application characteristics of hardware and software. Types of computer, Bio-chips, computer network sending and receiving e-mail. Internet browsing- searching biological articles information in internet.

UNIT-IV

Computer applications in biology- uses of databases in biology- analysis of proteins and nucleic acid sequence- molecular modeling- introduction to data processing- files- data collection- preparation-editing- backup- file recovery-procedure-sorting-searching and merging.

UNIT-V

Biomolecules- carbohydrate, protein, lipids and nucleic acids, protein conformation-prediction of protein structure-fold recognition, comparative modeling (homology)-basic principles of X-ray diffraction studies, NMR, Mass spectroscopy in identifying protein information.

- Molecular databases for protein sequence and structure studies by sillinee. JA and sillince .M (1991) spring verlag.
- Sequence analysis primer by M. Gribskov, J.Dvvereux()1989 stockton press.

Course Code	INDUSTRIAL BIOTECHNOLOGY	L	T	P	C
20217AEC23		5	0	0	4

AIM:

- To understand the, environmental pollution and remediation using Biotechnology and its control.

OBJECTIVE:

- Students will get an idea about the hazards to our environment, solutions to protect it and for sustainable development.

OUTCOMES:

- This course is important in the era of industrialization leading to environmental hazards and hence will help students to take up a career in tackling industrial pollution and also to take up the research in areas like development of biological systems for remediation of contaminated environments (land, air, water), and for environment-friendly processes such as green manufacturing technologies and sustainable development.

UNIT-I

Industrial microbiology an introduction- modern fermentation process and biochemical engineering- isolation, screening and strain improvement of microorganisms.

UNIT-II

Media design and sterilization for fermentation processes- media requirements for fermentation processes- examples of simple and complex media. Design and usage of commercial media for industrial fermentations- batch and continuous fermentations system- sterilization system of liquid media and air.

UNIT-III

Basic principles of bioprocess-media formulation- fermentation equipment and its use- type of fermentor (Batch and continuous fermentor) and its application. Tray, CSTR, BCF, HFMB, RBC and inner and outer loop.

UNIT-IV

Traditional industrial process – anaerobic process ethanol, lactic acid, acetone- butanol production)- aerobic process (citric acid baker’s yeast penicillin production).

UNIT-V

Medical application of bioprocess engineering- commercial tissue culture process- gene therapy using viral vectors- models of viral infections- mass production of retrovirus. Advanced biological

waste water treatment applications

--------------------	-------------	----------	----------	----------	----------

AIM:

This is a comprehensive study of the endocrine system which will allow the student to integrate and better understand the functions of the other systems of the body. The relationship of the nervous system to the endocrine system is explored in the context of signaling within a multicellular organism..

OBJECTIVE:

- To have a basic understanding of the endocrine system.

OUTCOMES:

- To know the pathophysiological significance of the system with special reference to humans.

UNIT-I

Hormones in general- definition- types of secretions- nature-classification, synthesis and their role- feedback control with specific examples hormone action proteins and steroids- cell signaling in hormone action

UNIT-II

Hypothalamo hypo physical axis – hormones of hypothalamus and their role structure of pituitary –secretions-physiological role- pathophysiology current status of pituitary as a master gland.

UNIT-III

Thyroid- parathyroid – structure- hormones- synthesis-storage-release-carrier proteins(eb. TBA&TBG)-physiological role-pathophysiology.

UNIT-IV

Adrenal and gonadal hormones- steroid biosynthesis- maintenance of cyclicity physiological role- pathophysiology- steroids in metabolism

UNIT-V

Gastro intestinal hormones-pancreas as an endocrine organ- secretions- functions-physiological role and pathophysiology other endocrine organs in vertebrates insect and crustacean hormones- their role in growth and metamorphosis.

- Physiological review of biochemistry-harper and others

Course Code	DISCIPLINE SPECIFIC ELECTIVE II	L	T	P	C
20217DSC25B	BIOETHICS AND IPR	5	0	0	4

AIM:

To acquire to acquire specialized knowledge of law and practice relating to Insurance.

OBJECTIVE:

- The aim of this paper is to introduce the basic concepts of Intellectual property laws to the students for first time and familiarize them with the kind of rights, remedies and licensing regime associated with each kind of intellectual property so that students can have a basic understanding of Intellectual Property laws.

OUTCOME:

- To get registration in our country and foreign countries of their invention, designs and thesis or theory written by the students during their project work and for this they must have knowledge of patents, copy right, trademarks, designs and information Technology Act. Further teacher will have to demonstrate with products and ask the student to identify the different types of IPR'

Unit 1: Overview of Intellectual Property

Introduction and the need for intellectual property right (IPR) - Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design, Geographical Indication, Plant Varieties and Layout Design – Genetic Resources and Traditional Knowledge – Trade Secret - IPR in India : Genesis and development – IPR in abroad - Major International Instruments concerning Intellectual Property Rights: Paris Convention, 1883, the Berne Convention, 1886, the Universal Copyright Convention, 1952, the WIPO Convention, 1967,the Patent Co-operation Treaty, 1970, the TRIPS Agreement, 1994

Unit2: Patents

Patents - Elements of Patentability: Novelty , Non Obviousness (Inventive Steps), Industrial Application - Non - Patentable Subject Matter - Registration Procedure, Rights and Duties of Patentee, Assignment and licence , Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties - Patent office and Appellate Board

Unit 3: Copyrights

Nature of Copyright - Subject matter of copyright: original literary, dramatic, musical, artistic

works; cinematograph films and sound recordings - Registration Procedure, Term of protection, Ownership of copyright, Assignment and licence of copyright - Infringement, Remedies & Penalties – Related Rights - Distinction between related rights and copyrights

Unit 4: Trademarks

Concept of Trademarks - Different kinds of marks (brand names, logos, signatures, symbols, well known marks, certification marks and service marks) - Non Registrable Trademarks - Registration of Trademarks - Rights of holder and assignment and licensing of marks - Infringement, Remedies & Penalties - Trademarks registry and appellate board

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT

Unit 5: Other forms of IP

Design: meaning and concept of novel and original - Procedure for registration, effect of registration and term of protection

Geographical Indication (GI): Geographical indication: meaning, and difference between GI and trademarks - Procedure for registration, effect of registration and term of protection Plant Variety Protection

Plant variety protection: meaning and benefit sharing and farmers’ rights – Procedure for registration, effect of registration and term of protection Layout Design Protection

Layout Design protection: meaning – Procedure for registration, effect of registration and term of protection

.Reference book:

Course Code		L	T	P	C
20217RMC26	RESEARCH METHODOLOGY	3	0	0	2

AIM:

- This course introduces and discusses approaches, strategies, and data collection methods relating to research in social sciences. Students will consider how to select the appropriate methodology for use in a study to be performed.

OBJECTIVE:

- This course aims to guide Master One students at the Section of English in the university of Biskra towards achieving competence and proficiency in the theory of and practice to research. This fundamental objective can be realised through helping these students to develop the subject of their research, encourage the formation of higher level of trained intellectual ability, critical analysis, rigour, and independence of thought, foster individual judgement, and skill in the application of research theory and methods, and develop skills required in writing research proposals, reports, and dissertation

OUTCOME:

- To culminate this final stage, students will learn to write a comprehensive research proposal that may be conducted in the future.

Unit I – Research

Selection of problem-stages in the execution of research: choosing a topic to publication- preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal; standard of research journals – Impact factor.

Unit II: Statistical method

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

Unit III

Coparision of means, chisquard test, student test (ANOVA ‘portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

UNIT IV:

Chromatography – priniciple, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, isoelectric focusing, plused field gel electrophoresis and capillary electrophoresis. Spectrometry –

Centrifugation techniques.

UNIT V:

Unit2: Patents

Patents - Elements of Patentability: Novelty , Non Obviousness (Inventive Steps), Industrial Application - Non - Patentable Subject Matter - Registration Procedure, Rights and Duties of Patentee, Assignment and licence , Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties - Patent office and Appellate Board

Unit 3: Copyrights

Nature of Copyright - Subject matter of copyright: original literary, dramatic, musical, artistic works; cinematograph films and sound recordings - Registration Procedure. X-Rays
– X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

Course Code	GENOMICS	L	T	P	C
20217AEC31		6	1	0	6

AIM:

- To study prokaryotic and eukaryotic genomes, general methods of genome sequencing techniques, genome analysis and annotations, genome mapping techniques and applications of genomics.

OBJECTIVE:

- Explain the aspects of genome organisation, analysis and applications.
- Provide the details of prokaryotic and eukaryotic genome.

OUTCOME:

- Acquire the aspects of Gene Contig and Shotgun method.
- Know the features of the Genome Mapping databases.

UNIT -I INTRODUCTION: Genome structure and anatomy of prokaryotic and eukaryotic genome – Nuclear genomes – Organelle genomes – Repetitive DNA sequence – Transposable elements– Pseudo genes – Genome databases – organisms-specific databases.

UNIT -II GENOME SEQUENCING DNA sequencing techniques: Maxam Gilbert method – Sanger's method – Pyrosequencing – Whole genome sequencing – Gene Contig and Shotgun method – Human genome project.

UNIT -III GENOME ANALYSIS AND ANNOTATION: Searching and locating Genes – Programs and databases – Determining function of genes – Gene Prediction – Methods of gene prediction – Softwares and tools.

UNIT -IV GENOME MAPPING: Mapping databases – Types of mapping – Genetic mapping: DNA markers – RFLP, SSLP, RH maps, SNP – Linkage analysis – Physical mapping: Restriction mapping – FISH – STS mapping

UNIT -V APPLICATIONS OF GENOMICS DNA: microarray and its applications – Medical applications: Development of Antibiotics – Vaccines – Drug discovery – Human genetics diseases: Identification – Gene Diagnosis and Gene therapy– Genomics in Plant Biology.

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT**MATERIALS FOR STUDY AND REFERENCE:**

Course Code	PROTEOMICS	L	T	P	C
20217AEC32		6	1	0	6

AIM:

- To understand the proteins enclosed by the genes with respect to structure, function, protein – protein interactions, techniques for separation and analysis, database and applications.

OBJECTIVE:

- Give a detailed description on protein sequencing.
- Provide an overview of proteome databases.

OUTCOME:

- Gain knowledge on phylogenetic profiles
- Describe the features of Yeast two-hybrid system.

UNIT -I INTRODUCTION: Proteomics introduction – Protein sequencing – Protein Digestion Techniques – Mass Spectrometers for Protein and Peptide Analysis – Protein Identification by Peptide Mass Fingerprinting – Software Tools for Peptide Mass Fingerprinting: Finding the Matches – Peptide Sequence Analysis and Protein Identification with Tandem Mass Spectrometry

UNIT -II PROTEOME DATABASES: Proteome databases – Comparative proteomics methods – 2D gel databases – Protein interaction data bases – Metabolic pathway databases – resources for interaction prediction – network and pathway visualization tools – Protein network analysis

UNIT -III PROTEOMICS TOOLS : 2D gel electrophoresis and Mass spectra – Protein identification from 2D gel, mass spectra and sequence data – Protein property prediction – bulk, active sites, modification sites, interactive sites, location, localization, stability, shape, domains properties, secondary and tertiary structures – Protein identification programs – Muscot – PeptIdent – Protein prospector – GFS

UNIT- IV FUNCTIONAL PROTEOMICS Functional proteomics – protein phenotypes – Protein-Protein Interaction Mapping: Experimental – Yeast two-hybrid system – phage display – protein fragment complementation assays – Computational approach

UNIT -IV APPLICATION OF PROTEOMICS: Applications of Proteomics – Protein Expression Profiling – Identifying Protein – Protein Interactions and Protein Complexes – Mapping Protein Modifications – Protein Arrays and Protein Chips – Application of proteomics to medicine, toxicology and pharmaceuticals

UNIT -V Current Contours: (For Continuous Internal Assessment only) Computational Proteomics and Metabolomics- Sequence comparison. – Genome sequencing. – Proteomics. – Phylogeny. – Gene expression - Enzymology

Course Code	Genomics & Proteomics - lab	L	T	P	C
20217SEC33L		0	0	5	3

AIM:

- The study of animal cells has helped us gain an insight not only in the structure and function of cells and tissues but also in different physiological, biochemical and immunological processes

OBJECTIVE:

- The major objective is to provide a world-class training experience for these students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.

OUTCOME:

- This paper will help students interested in careers as laboratory, research or animal care technicians in the fields of veterinary and human health or biotechnology.

• Isolation of DNA from bacteria, fungus, animal tissues.

• Bacterial gene expression.

• Restriction mapping.

• PCR techniques.

• DNA finger printing PFLP, RAPD.

• Human Genome - Wellcome Trust Genome Browser

• FlyBase - A Database of Drosophila Genes & Genomes.

• Tandem repeats finder- A program to analyze DNA sequences

• PeptideCutter - Predicts potential cleavage sites cleaved by proteases or chemicals in a given protein sequence.

• PSORT - Program for the prediction of protein localization sites in c

• PROSITE - Protein Domain, Family & Functional Site Prediction

Course Code		L	T	P	C
20217DSC34A	DISCIPLINE SPECIFIC ELECTIVE COURSE-III NANOBIOTECHNOLOGY 3835	5	0	0	4

AIM:

- One of major applications of nanoscience is in biotechnology field.

OBJECTIVE:

- nanotechnology attracts students from various disciplines, a single course which starts by sensitizing students from a varied background about the biological/biotechnological basics and culminates into modern day applications of nanoscience in biotechnology

OUTCOME:

- This course will act as a bridge between students from non-biology course at all levels

Unit- I

Basic biology principles and practice of micro fabrication techniques, Atomic force microscopy, biological production of metal nano particles, macro molecular assemblies.

Unit-II

Application in Biomedical and biological research, nano particles, viruses as nano- particles, nano chemicals and application., tumor targeting and other diagnostic application.

Unit-III

Developing drug delivery tools through nano biotechnology, nano particle based immobilization assays, quantum dots technology and its application.

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT**Unit-IV**

Synthesis and characterization of different classes of biomedical polymers their uses in pharmaceutical, cardiovascular ophthalmologic orthopedic areas.

Unit-V

Biosensors and nano biotechnology principles used in construction of microelectronic devices sensors and macro mechanical structures.and their functioning, immunonanotechnology.

Textv Book:

- Nano Biotechnology by Balaji, Subbaih

Reference Books:

- Nanobiotechnology- concepts, applications and perspectives, niemeyer, christofm. Mirkin, chad a. wiley publishers.
- Nanobiotechnology of biomimetic membranes, martin, donald (edt), springer verlag publishers.

Course Code	DISCIPLINE SPECIFIC ELECTIVE	L	T	P	C
20217DSC34B	COURSE-III Environmental biotechnology	5	0	0	4

AIM:

- To understand the energy sources, environmental pollution and remediation using biotechnology and its control.

OBJECTIVE:

- Students will get an idea about the hazards to our environment, solutions to protect and for sustainable development.

OUTCOME:

- This course is important in the era of industrialization leading to environmental hazards and hence will help students to take up a career in tackling industrial pollution and also who is willing to take up the research in areas like development of biological systems for remediation of contaminated environments (land, air, water), and for environment- friendly processes such as green manufacturing technologies and sustainable development

Unit I

Introduction, Importance and Scope of Environment Biotechnology. Renewable and Non-Renewable Resources of Energy. Conventional fuels and their impact on Environment – Firewood, Animal wastes, Coal, Petroleum and Animal oils.

Unit II

Modern fuels and their impact on environment – Methanogenic Bacteria, Biogas Production, Microbial Hydrogen Production, Conversion of Sugar to Alcohol, Gasohol. Effect of Green Revolution and Industrial Revolution on Environment.

Unit III

Waste Water Pollution (Sewage) Treatment Process - Septic tank, Mechanical and Biological Treatment, Trickling Filters, Activated Sludge Process, Oxidation Ponds, Anaerobic Sludge Digestion. Solid Waste Disposal- Sanitary Landfills, Composting, Vermicompost

Unit IV

Biofertilizers- Definition, Distinguished Features of Biofertilizers and Organic Manures. Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil, Algal and fungal biofertilizers (VAM).

Unit V

Bioleaching- Ore Leaching and Role of Microbes in Mines (copper, and Uranium). Environmental significance of Genetically modified microbes, plants and animals. Bio- assessment of environmental quality.

EMPLOYABILITY / ENTREPRENEURSHIP /SKILL DEVELOPMENT

- Nicholas C Price – Fundamentals of Enzymology Chaplin & Bueke – Enzyme technology
- Moses and Capes – Biotechnology- the Science and Business

Course Code	Course Title	L	T	P	C
202ENOEC	Open Elective -Writing for the Media	4	0	0	2

Aim:

- To equip students to enter the realm of mass media.

Objectives:

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

Outcome:

- Understand the intricacies of mass media

UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluating news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

Course Code	Course Title	L	T	P	C
202MAOEC	Open Elective – Applicable Mathematical Techniques	4	0	0	2

Aim:

- To acquaint with the basic concept of Interpolation.

Objectives:

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

Outcomes:

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

Units II to V, "Operations Research", Kantiswarup, P.K. Gupta and Manmohan

Course Code	Course Title	L	T	P	C
202PHOEC	Open elective Biomedical Instrumentation	4	0	0	2

Aim:

- To understand the concepts and application of electronic Instrumentation in the Medical field.

Objective:

- Interpret technical aspects of medicine
- Solve Engineering Problems related to medical field
- Understand medical diagnosis and therapy

Outcomes:

- To familiarize students with various medical equipments and their technical aspects
- To introduce students to the measurements involved in some medical equipment.
- Ability to understand diagnosis and therapy related equipments
- Understanding the problem and ability to identify the necessity of an equipment to a specific problem

UNIT – I: Bio Electric Signals And Electrodes

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

UNIT – II: Recording System And Recorders

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

UNIT – III: Measurement And Analysis Techniques

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

UNIT – IV: Magnetic Resonance And Ultrasonic Imaging Systems

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

UNIT – V: Advanced Bio Medical Systems

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

Books for Study

1. R.S Khandpur, Handbook of Biomedical instrumentation, Tata McGraw Hill publishing company Limited. New Delhi,(2003). (Unit I,II,IV & V)
2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

Book for Reference

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
202CHOEC	Open Elective-Green Chemistry	4	0	0	2

Aim:

- To reduce the soil and water pollution in environment.

Objectives:

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Outcomes:

- To understand the environmental status and evolution.
 - To know about the Pollution and its prevention measures.
 - To familiarize the green chemistry.
 - To learn about the bio-catalytic reactions.
 - To understand about the vitamins and antibiotics.

Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO₂ - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	Course Title	L	T	P	C
202CSOEC	Open Elective-M- Marketing	4	0	0	2

Aim :

- To provide the conceptual and technological developments in the field of internet and web designing with the emphasis on comprehensive knowledge of internet.

Objectives:

- To understand the web designing and web development with the knowledge of internet.
- To learn the overview of the design of HTML & Scripting Languages.
- To learn the use of website and internet design and development.

Outcomes:

- Acquire knowledge about functionalities of Internet
- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

UNIT I

Internet, Growth of Internet, Owners of the Internet, Anatomy of Internet, ARPANET and Internet history of the World Wide Web, basic Internet Terminology, Net etiquette. Internet Applications – Commerce on the Internet, Governance on the Internet, Impact of Internet on Society – Crime on/through the Internet. Connectivity types: level one, level two and level three connectivity, Setting up a connection: hardware requirement, selection of a modem, software requirement, modem configuration, Internet accounts by ISP: Telephone line options, Protocol options, Service options, Telephone line options – Dialup connections through the telephone system, dedicated connections through the telephone system, ISDN, Protocol options – Shell, SLIP, PPP, Service options – E-mail, WWW, News Firewall

UNIT II

Network definition, Common terminologies: LAN, WAN, Node, Host, Workstation, bandwidth, Interoperability, Network administrator, network security, Network Components: Servers, Clients, Communication Media, Types of network: Peer to Peer, Clients Server, Addressing in Internet: DNS, Domain Name and their organization, understanding the Internet Protocol Address. Network topologies: Bust, star and ring, Ethernet, FDDI, ATM and Intranet.

UNIT III

Email Networks and Servers, Email protocols –SMTP, POP3, IMAP4, MIME6, Structure of an Email – Email Address, Email Header, Body and Attachments, Email Clients: Netscape mail Clients, Outlook Express, Web based E-mail. Email encryption- Address Book, Signature File.

UNIT IV

HTML page structure, HTML Text, HTML links, HTML document tables, HTML Frames,

HTML Images, multimedia - ASP, VB Script, JAVA Script, JAVA and Front Page, Flash

UNIT V

Overview, SGML, Web hosting, HTML. CGL, Documents Interchange Standards, Components of Web Publishing, Document management, Web Page Design Consideration and Principles, Search and Meta Search Engines, WWW, Browser, HTTP, Publishing Tools Overview of Internet Security, Firewalls, Internet Security, Management Concepts and Information Privacy and Copyright Issues, basics of asymmetric cryptograms.

Course Code	Course Title	L	T	P	C
20CM1OEC	Open Elective-Financial Services	4	0	0	2

AIM

To analyze the various financial institutions and their services.

OBJECTIVES

- I. To gain knowledge on financial services.
- II. To understand importance of various services including banking, insurance, mutual

funds.

UNIT – I

Financial system-An Overview: Indian Financial System-Global Financial System-Financial Services Environment- Credit Rating –Factoring and Forfeiting –Leasing

UNIT – II

Financial Markets –An Overview: Definition-Role-Functions-Constituents- Financial Instruments-Capital Market instruments-Indian money and Capital Market-Global Financial Markets.

UNIT – III

Money Market –An Overview: Definition-Characterstistics-Objectives- Imporatance-Functions-Segment-Financial Institutions-Indian Money Market-Global Money Market

Unit – IV

Capital Market: Money Market-Characteristics-Functions-New financial Instruments-measures of Investor Protection-Indian Capital Market-MajorIssues

Unit-V

Stock Exchange: History of Stock Exchange-Functions-Indian Stock Exchanges-Organization structure-Regulations of Stock Exchange –Recent Developments

OUTCOME

To introduces meaning and functions of Financial IntermediariesTo understand the role of merchant bank and its services

To provide information regarding management of mutual funds and Regulations

To understand the role and functions of financial services MarketingTo know the structure and types of debt Instruments

To realize Foreign Exchange Market

REFERENCE BOOKS

1. Gordon , Natarajan – Financial Market and Services.
2. Dr. S. Gurusamy – Financial services and Market.
3. Kucchol S.C. – Financial Management
4. Pandey I.M. – Financial Management.

SEMESTER IV

Course Code	FOOD TECHNOLOGY	L	T	P	C
20217AEC41		6	1	0	6

Aim: This course aims to help the students to understand the various properties of food and

the factors that make it vulnerable for spoilage

Objectives:

- This course is designed to understand the chemical nature and associated microbes of food and to understand the principles of food processing, preservation and manufacture.

Outcomes:

- To understand the basic food safety issues in the food market
- To develop and evaluate quality of new food products using objective and subjective methodologies.
- To understand the basic concepts in food chemistry and food analysis

Unit I

Basics of Food Technology Food chemistry: constituents of food - contribution to texture, flavour and organoleptic properties of food. Food additives - intentional and nonintentional and their functions. Enzymes in food processing.

Unit II

Microbiology of Food Sources and activity of microorganisms associated with food. Food fermentation & food chemicals. Food borne diseases - infections and intoxications. Food spoilage - causes.

Unit III

Food Processing Raw material characteristics; cleaning, sorting and grading of foods; physical conversion operations - mixing, emulsification, extraction, filtration, centrifugation, membrane separation, crystallization, heat processing.

Unit IV

Food Preservation Use of high temperatures - sterilization, pasteurization, blanching, canning - concept, procedure & application; Low temperature storage - freezing curve characteristics. Factors affecting quality of frozen foods. Irradiation preservation of foods.

Unit V

Manufacture of Food Products Bread and baked foods. Dairy products - milk processing, cheese, butter, ice-cream. Vegetable and fruit products. Edible oils and fats. Meat, poultry and fish products. Confectionery, beverages.

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

Reference Books

Course Code	Course Title	L	T	P	C
20217AEC42	BIOINSTRUMENTATION	6	1	0	6

Aim:

- The students searching for Biomedical Instrumentation Courses and Training Programs found the following related articles

Objectives:

- This course will give an understanding about the working principles, construction and applications of the instruments often used in the studies related to various disciplines of Biological Sciences.

Outcomes:

- Check for analytical functions and find the analytical function and study .
- Learn the measurement systems, errors of measurement,
- Demonstrate basic knowledge of Biotechniques

Unit I

Basic Instrumentation (Theory & Demo) Principles, operation protocol & applications of the following instruments: Weighing balance, pH meter, Polarography, Radioactivity, ECG, FTIR.

Unit II

Microscopy (Hands on) Observation of different microbes. Light – Bright & Dark field; Phase contrast, Inverted Phase contrast; Fluorescent, Electron – TEM & SEM; Confocal

Unit III

Spectroscopy (Theory & Demo) Colorimeter, Spectrometer, UV visible spectrometer, X – ray spectrometer, ELISA reader, Atomic absorption spectrometer, Flame photometer, Flourimeter & Spectro flourimeter.

Unit IV

Separation Techniques (Theory & Demo) Centrifugation - Principle, operation, types & applications. Chromatography - Principle, operation & applications - Paper – ascending, descending & Circular, TLC, HPTLC, GC, HPLC, Column Chromatography, Ion Exchange & Affinity Chromatography, LC – MS.

Unit V

Electrophoresis (Theory & Demo) Native & denatured - zone, iso-electrofocusing & isotachopheresis, 1D & 2D. PCR, MoldiTof

- S.SadasivamA. Manickam. 2004. Biochemical Methods.

Course Code	Course Title	L	T	P	C
20217SEC43L	FOOD TECHNOLOGY AND BIO INSTRUMENTATION LAB	0	0	5	3

Aim:

- To understand the principle and application of Bioinstrumentation and food technology

Objectives:

- By doing this course the students will get hand on exposure & understand the chemical nature and associated microbes of food and the principles of food processing, preservation and manufacture. And the techniques used in understanding the biological process

Outcomes:

- Ability to apply principles of food engineering in industry.
- Understand, identify and analyze a problem related to food industry and ability to find an appropriate solution for the same.

1. Test for sensitivity of microorganisms.
2. Down stream processes of enzymes – dialysis.
3. Ion exchange chromatography – drying – cellulose column chromatography.
4. Immobilization of yeast cell by alginate beads
5. Bioassay techniques for antibiotics.
6. Large scale production of organic acids, large scale production of solvents using fermentor (Demo) Visit to Distillery unit; alcohol production and pharmacological industries. Pasteur Institute(Field visit).
7. Isolation & identification microbes from spoiled food.
8. Production of yogurt, butter.
9. Antibiotic production by different strains of microbes (Theory).
10. Calculate BMI
11. Handling of Colorimeter and Spectrophotometer

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT

12. Estimation of RNA by orcinol method.
13. Estimation of DNA by Diphenylamine metho, Demonstratio
14. Paper chromatography for separations and detections of simple sugars and amino acids.
15. Separation of plant pigments by column chromatography.
16. Thin layer chromatography of amino acids.

Refrence book:

- Laboratory Mannual in Biochemistry by J. Jayaraman. New Age International Publishers. 2nd Edn. 1981.
- Stanbury, P.F., A. Whitaker ans S.J. Hall. 1995. Principles of fermentation Technology, Pergamon, UK.

Course Code	Course Title	L	T	P	C
20217 DSC44A	GENE THERAPY UTILIZATION PHARMACOLOGY	5	0	0	4

Aim:

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

Objective:

- This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

Outcomes:

- understand some of the types of disease that might be treatable by gene therapy
- understand the basic principals of genetic manipulation
- Understand how genetics may be used in the design of drugs..

UNIT I: History of genetics

Gene as the unit of mutation and recombination. Identification of DNA as the genetic material. Mutations: Molecular nature, mutagenesis by nitrous acid, hydroxylamine, alkylating agents, intercalators and UV, origin of spontaneous mutations and control, parasexual process in bacteria, transformation, transduction and conjugal gene transfer the phenomena, mechanisms and applications. Fine structure genetic analysis with examples.

UNIT II: Genetic mapping

Haplotype, Physical and Cytogenetic mapping, SNP, RFLP, TRE, PCR-OLA, SSCP, RAPD

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

UNIT III: Identifying human disease genes

General gene therapy strategies, Targeted killing of specific cells, Targeted mutation correction, Targeted inhibition of gene expression. Gene replacement therapy by viral vectors: Oncovirus, Lentivirus, Adenovirus, Adenoassociated virus, Herpes Simplex virus, Naked DNA or direct injection or particle bombardment-gene gun, Liposome mediated DNA transfer, Receptor mediated endocytosis, Repair of mutations in situ through the cellular DNA repair machinery, Antisense induced exon splicing, In-utero fetal gene therapy

UNIT IV: Gene blocking therapies

Gene Knockouts, Gene disruption-p53, prion diseases, immunological, short RNA, Gene therapy for non-inheritable diseases, stem cell therapy, somatic cell gene therapy and germ line gene therapy

UNIT V: Gene therapy: problem, solutions and future prospects

Controversial issues in medical genetics

In vitro fertilization, Prenatal sex determination, Surrogate therapy, Genetic counseling, Germline gene therapy, ELSI, NBAC, IPR, Patenting, Human transgene

- Introduction of Genetic Analysis of Griffiths – Freeman Co., 1996.

Course Code	Course Title	L	T	P	C
20217 DSC44B	PLANT CONSERVATION & DISASTER MANAGEMENT	5	0	0	4

Aim:

- Understanding foundations of hazards, disasters and associated natural/social phenomena.

Objective:

- To maintain essential ecological processes and life supporting systems.
- To preserve the diversity of species or the range of genetic material found in the worlds organisms.
- The course focuses on the reasons responsible for disaster, its impact on the environment and society. To impart the knowledge on the measures and steps to minimise or overcome the burden on the ecosystem.

Outcomes:

- To make sustainable utilization of species and ecosystems.
- Familiarity with disaster management theory (cycle, phases) Knowledge about existing global frameworks and existing agreements (e.g. Sendai)

UNIT I: Plant Diversity

Biodiversity – Concept and Definition Scope and Constraints of Biodiversity Science, Composition and Scales of Biodiversity: Genetic Diversity, Species/ Organismal Diversity, Ecological/ Ecosystem Diversity, Landscape/ Pattern Diversity, Agrobiodiversity, Biocultural Diversity and Urban Biodiversity.

UNIT II: Conservation challenges in the twenty first century

Urbanisation; Creating knowledge society, Conflict management and decision making, Management of introduced species. 18 Evaluation of priorities for conservation of habitats and species Selection criteria for protection of species – species quality, IUCN Guidelines for Red List categories and criteria (version 7.0), Red List of Indian Flora and Fauna, Selection criteria for protection of habitats – hotspots, Conservation

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

UNIT III : Introduction to Disasters

Natural Disasters –Educative – Trends in Climatology, Meteorology and Hydrology. Seismic Activities. Changes in Coastal Zone, Coastal Erosion, Beach Protection. Coastal Erosion due to Natural and Manmade Structures.

UNIT IV : Types of Disasters – Natural

Disasters – Nature and characteristics of Cyclones – Tornadoes – Avalanches – Flood – Drought – Volcanic – Earthquakes – Fire – Landslides – Causes and effects - Impact on Environment- Forecasting and Warning System – Disaster Profile of India. Manmade disasters: Nuclear, chemical, fire explosion, accidents, bioweapons. Deforestation, monoculture, Building construction.

UNIT V : Disaster Management

Disaster Management Cycle- Predisaster Planning -Training of Disaster – Prone Areas – Prioritization – Regulations – Protection Measures during Disaster and Post Disaster. Relief Camp Organization — Disaster Training – Role of Information and Communication Technology, GPS, Remote Sensing and Geographic Information System in Disaster Management.

M.PHIL – BIOTECHNOLOGY

COURSE STRUCTURE

PAPER- III - ENVIRONMENTAL BIOTECHNOLOGY (Sub. Code: 203BTE13)

UNIT – I

Environment: Basic concepts –Environmental Pollution: Types of pollution, Pollution monitoring and measurement; Methodology of environmental management – The problem solving approach and its limitations.

UNIT – II

Biofertilizers- Defination, Distinguished Features of Biofertilizers and Organic Manures. Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil, Algal and fungal biofertilixers (VAM). Bioleaching- Ore Leaching and Role of Microbes in Mines (copper, and Uranium). Environmental significance of Genetically modified microbes, plants and animals. Bio- assessment of environmental quality.

UNIT – III

Sewage/Waste water treatment - collection, Primary treatment, Secondary treatment –Aerobic process: Activated sludge, Oxidation ditches, Trickling filters, towers, rotating discs, rotating drums, oxidation ponds. Anaerobic processes: Anaerobic digestion, Anaerobic filters, Tertiary treatment. Waste water treatment for some industries - dairy, distillery, tannery, sugar, antibiotic industries. Water recycling.

UNIT – IV

Solid waste treatment and disposal - : Sources and management - Composting, vermiculture and methane production. Biodegradation and bioremediation - Xenobiotics Hydrocarbons, oil pollution, surfactants, pesticides.

UNIT – V

Global environmental problems: Ozone depletion, Green house effect and acid rain, their Bioremediation of contaminated soils and waste land.

Paper II ADVANCED BIOTECHNOLOGY (Sub. Code: 203BTC12)

UNIT – I

INTRODUCTION TO GENETIC ENGINEERING

Salient features of cloning vectors, restriction enzymes and their mode of action, recombinant DNA- types of cloning vectors, plasmids, cosmids, M-13 Phage. Microinjection, particle bombardment, electroporation (Vector less mode), Construction of genomic DNA library and cDNA library.

UNIT– II

PLANT BIOTECHNOLOGY

Vectors for gene transfer (Ti , Ri plasmids, cointegrate, intermediate and helper plasmids) Binary vectors, viruses as vectors gene transfer techniques using Agrobacterium, selectable markers, reporter genes and promoters , transgenic plants, crop improvement , resistance to herbicide insects, pests and viruses, cytoplasmic male sterility, delayed fruit ripening, antibody vaccine and interferon production in plants, synthetic seeds.

UNIT – III

BIOPROCESS

Bioreactor designs and types of fermentation and fermentors. Concepts & basic modes of fermentation - Batch, fed batch and continuous fermentation. Conventional fermentation versus biotransformation. Solid substrate, surface and submerged fermentation. Fermentation economics and fermentation media. Fermenter design - mechanically agitated, pneumatic and hydrodynamic fermenters. Large scale animal and plant cell cultivation and air sterilization. Upstream processing - media formulation, sterilization, aeration and agitation. Measurement and control of bioprocess parameters, scale up and scale down process

UNIT- IV

TECHNIQUES IN BIOTECHNOLOGY

PCR- key concept- applications- PCR variants- analysis of amplified product by gel electrophoresis- Nucleic acid blotting techniques- sequencing – Sangers method, Maxam and Gilbert method- primer walking- automated sequencing- DNA chips and microarray-DNA fingerprinting.

UNIT – V

BIOTECHNOLOGY – INTELLECTUAL PROPERTY

- i) Intellectual property of rights, patents, trade secrets, copyrights, trade mark, choice of Intellectual Property Protection (IPR), and Plant genetic Resources (PGR), GATT (Genetic Agreement of Tariff and Trade), TRIP (trade Related Intellectual property).
- ii) Patents for higher plants, patenting transgenic organism and isolated genes, patenting genes and DNA sequences, Plant Breeders Rights (PBR) and farmers Right.
- iii) Ethical issues in animal biotechnology. Management aspects of biotechnology and genetic engineering.

DEPARTMENT OF BIOTECHNOLOGY

M. Sc - BIOTECHNOLOGY

PROGRAMME OUTCOMES	
PO1	Understand the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life
PO2	Understanding and better knowledge of the causes, types and control methods for environmental pollution by the students
PO3	The student will be able to discuss the mechanisms associated with gene expression system in prokaryotes and eukaryotes
PO4	Developed various communication skills such as reading, listening, speaking etc.,
PO5	Acquired the skills in handling scientific instruments, planning and performing in laboratory experiments
PO6	Ethics: Convey and practice social, environmental and biological ethics
PO7	To get knowledge about research tools and learn to do review literature. Ability to carry out independent literature survey corresponding to the specific publications type and asses basic research tool
PROGRAM SPECIFIC OUTCOME	
PSO1	Graduates will exhibit contemporary knowledge in Biotechnology and students will be eligible for doing jobs in pharmaceutical and biotechnological Industry.
PSO2	An expert in biotechnology and allied fields (medical, microbial, Agricultural, environmental, plant and animal) for utilizing the practical skill to address biotechnological challenges.
PSO3	Graduates will be able to work individually as well as in team to survive in multidisciplinary environment.
PSO4	If students will engage themselves in the process of effective learning, it will give opportunities to utilize acquired knowledge for the catering the needs of science and technology as well as for the betterment of human mankind.
PSO5	Graduates will be able to understand the potentials, and impact of biotechnological innovations on environment and their implementation for finding sustainable solution to issues pertaining to environment, health sector, agriculture, etc.
PROGRAM EDUCATIONAL OBJECTIVES	
PEO1	To obtain detailed information about the fundamentals of Biotechnology, allied subjects and life skills
PEO2	To provide information about the molecular methods which involved in cellular processes of living systems such as microbes to higher order organisms for applied aspects. To address the emerging need for skilled scientific manpower with research ethics involving organisms
PEO3	To impart the basics and current molecular tools in the areas of Molecular Diagnostics,

	Fermentation Technology, Plant, Animal & Environmental Biotechnology are included to train the students for man power development and also sensitize them to scope for research. The practical subjects will provide information about the careers in the industry and applied research where biological system is employed
PEO4	To make the graduates of Biotechnology to learn and to adopt in a competitive world of technology update and contribute to all forms of life
PEO5	To enable them to excute a research objective through experimentation

SEMESTER I

Course Code	GENERAL MICROBIOLOGY	L	T	P	C
20217AEC11		6	1	0	5

AIM:

- This paper provides the knowledge about different types of microorganisms and their identification techniques in modern biology and there by the usefulness of the techniques in research and commercial purposes.

OBJECTIVES:

- In order to make the students to understand the identification of microorganisms using advanced microbiological methods and applications of microorganisms.

OUTCOMES:

- Students can gain the idea of how to identify the microorganisms based on the modern polyphasic approach.

Unit I

Definition and historical account of microbiology. Diversified microbial world-Classification of microbes based on Whittaker's five kingdom system of classification. Structure of Algae, Bacteria, Fungi and Virus.

Unit II

Nutritional requirements and growth cycles of the above mentioned groups. Media for growth: Types, preparation, methods of sterilization. Isolation and enumeration of microorganisms in soli, water and air. Isolation of microorganisms from contaminated food. Techniques of pure culture, maintenance and preservation; staining: stains and dyes, types of staining; General techniques involved in Virology and Protozoology.

Unit III

Microbial physiology: Factors influencing the growth of microbes-classification based on the temperature, pH, nutrition, symbiotic associations, commonsals, saprophytes, etc., Microbiology of fermented foods-dairy products, meat and fish, alcoholic beverages-beer, wine etc., Food spoilage and preservation process. Microbes as source of food. Application of microbes in industries production of antibiotics, amino acids,

organicacids, bioconversion process, microbial insecticides.

Unit IV

Biochemistry of Metabolism: Carbohydrates and energy metabolism – fermentation and glycolysis, TCA cycle and oxidative phosphorylation, ammonia metabolism. Biosynthesis of glutamate. Purine and pyrimidine biosynthesis. Synthesis of DNA and RNA. Biosynthesis of cell wall – Peptidoglycan and Teichoic acid.

Unit V

Microbes as components of the environment – nutrient cycles – C, N, S, H, O, Mn, K, Mg, Cl and phosphorus cycles, Degradation of industrial wastes, petroleum hydrocarbons, pesticides, biofouling and corrosion. Bacterial photosynthesis, symbiotic and non-symbiotic nitrogen fixation, antimicrobial agents – structure of antibiotics, antibacterial and antiviral (function & mechanism of action)

- Chemical Microbiology – Antony H. Rose, Butterworths, 3rd Edition, Plenum Press, 1976.

Course Code	Molecular genetics	L	T	P	C
20217AEC12		6	1	0	5

AIM:

- This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

OBJECTIVE:

- The major objective of the paper is to envisage thorough knowledge in genetics and genome organizations in organisms.

OUTCOME:

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

Unit I

Gene as the unit of mutation and recombination. Identification of DNA as the genetic material. Mutations: Molecular nature, mutagenesis by nitrous acid, hydroxylamine, alkylating agents, intercalators and UV, origin of spontaneous mutations and control, parasexual process in bacteria, transformation, transduction and conjugal gene transfer the phenomena, mechanisms and applications. Fine structure genetic analysis with examples.

Unit II

Recombinations – Control, models and mechanisms. Gene as the unit of expression. Gene – cistron relationship in prokaryotes and eukaryotes. Colinearity of gene and polypeptide. Elucidation of the genetic code. Wobble base pairing. Suppression of nonsense, missense and frameshift mutations. Regulation of gene expression in prokaryotes and eukaryotes. The operon concept – positive and negative control, attenuation control. Control sequences, promoter, operator, terminator and attenuator, DNA methylation and epigenic regulation.

Unit III

DNA damage and repair DNA damage by UV, alkylating agents, cross linkers. Mechanisms of repair – photoactivation, excision repair, recombinational repair. The SOS and adoptive responses and their regulation, heat shock response.

Unit IV

Extrachromosomal heredity, Biology of plasmids – discovery, types and structure of RTF, col-factors and Ti. Replication and partitioning. Incompatibility and copy number control. Natural and artificial plasmid transfer and their applications. Transposable genetic elements: discovery, early experiments of McClintock in maize. Insertion sequences in prokaryotes. Complex transposons – Tn 10, Tn 5, Tn 9 and Tn 3 as examples. Mechanisms control, consequences and applications of transposition by simple and complex elements. Retro elements.

Unit V

Genetics of Eukaryotes: Gene linkage and chromosome mapping, crossing over, three point cross, tetrad analysis. Complementation. Organization of chromosomes, specialized chromosomes. Chromosome abnormalities, quantitative inheritance, population genetics. Developmental genetics using *Drosophila* as model system. Somatic cell genetics.

Course Code	BIOCHEMISTRY	L	T	P	C
20217SEC13		6	1	0	4

AIM:

- This paper presents the study of identification and quantitative determination of the substances, studies of their structure, determining how they are synthesized metabolized and degraded in organisms, and elucidating their role in the operation of the organism.

OBJECTIVE:

- On the successful completion of the course the students will get an overall understanding of structure of atoms, molecules and chemical bonds, enzyme kinetics, bio polymers and metabolic reactions in a living system.

OUTCOME:

- This paper in biochemistry has been designed to provide the student with a firm foundation in the biochemical aspects of cellular functions which forms a base for their future research.

Unit I

Principles of Bioenergetics. Glycolysis and carbolism of hexoses the citric acid cycle.Oxidation of fatty acids. Oxidation of amino acids. Oxidative phosphorylation.Glyoxylate cycle, TCA cycle, Kreb cycle, Pentose Phosphate pathway. Nitrogen cycle.

Unit II

Carbohydrate – types, structure and functions of carbohydrates,biosynthesis, lipidbiosynthesis, C2, C3, C4 cycles. Biosynthesis of fatty acids and triacyl glycerol.Secondary metabolites – occurrence, classification and functions of phenolics, terpenes,flavonoids, alkaloids, saponins, glycosides.Applications of secondary metabolites in food, dairy, agricultural, cosmetics and pharmaceutical Industries.

Unit II

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity,Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, autoantigens.

Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

Unit III

Mechanism of Immune response, Generation of Immunological diversity, Antigen recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & lymphoid system.

Unit III

Biosynthesis of amino acids, nucleotides and related molecules. Classification of proteins based on functions and solubility, types of proteins structure and functions. Chemical synthesis of peptides and oligosaccharides. A general account of secondary metabolic pathway.

Unit IV

Integration and hormonal regulation of mammalian metabolism. Biological membrane and transport. Enzymes classification, mechanism, factors affecting enzyme action Vitamins and minerals.

Unit V

Lipids classification, importance, fatty acids, essential non essential fatty acids. Prostaglandins, leukotrienes, thromboxanes, interferons and interleukins. Antibiotics, cytoskeletal organization, ribozymes.

Course Code	MICROBIOLOGY & MOLECULAR	L	T	P	C
20217SEC14L	GENETICS LAB	0	0	4	2

- AIM: This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

OBJECTIVE:

- The major objective of the paper is to envisage thorough knowledge in genetics and genome organizations in organisms.

OUTCOME:

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

1. Culture media preparation liquid and solid media.

2. Selective differential media

3. Methods of sterilization and testing of sterility

4. Enumeration of bacteria, fungi and actinomycetes from soil

5. Pure culture techniques – Pour, spread and looping methods

6. Maintenance and preservation of cultures

7. Staining of Bacteria – gram, spore and AFB, Fungal wet mount – LPB

8. Motility test – hanging drop and soft agar inoculation

9. Water quality test – MPN

10. Effect of different parameters on bacterial growth kinetics (Substrate, pH,

Temperature)

11. Single colony – isolation and checking for genetic markers, measurements of growth rate one step growth curve using T7 phage.

12. Induced mutagenesis and isolation of antibiotic resistant and auxotrophic mutants

enrichment methods for auxotrophic and antibiotic resistant mutants.

13. Genetic mapping by p1 transduction, genetic mapping of conjugation and transformation.

14. Transposon mutagenesis of chromosomal DNA, Transposon mutagenesis of plasmid DNA

15. Experiments with gene fusion.

4) Methods for Genetics and Molecular Bacteriology – RGF Murray, W.A. Wood & N.B. Krig 1994 American Society for Microbiology.

Course Code	DISCIPLINE SPECIFIC ELECTIVE I	L	T	P	C
20217DSC15A	Immunology	5	0	0	4

AIM:

- Understanding the immune system, antigen antibody reactions, applications of immunological techniques, humoral and cell mediated immunity, hypersensitivity reactions and hybridoma technology.

OBJECTIVE:

- To expose the students with various immune systems of human body.

OUTCOME:

- This course will provide the student insights into the various aspects of Immunology such as classical immunology, clinical immunology, Immunotherapy and diagnostic immunology.

Unit I

Molecular cells & organs of Immune system, Historical perspective, Innate Immunity:-Skin, Mucosal Surface, Physiological barrier, Inflammation, Adaptive Immunity, Molecules of innate & Acquired immune system:- Complement, Interferon, other molecules Cells of Innate & Acquired Immune system. Organs of the immune system:-Primary Lymphoid organs, Secondary Lymphoid organs, Lymphatic etc.

Unit II

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity, Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, autoantigens. Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

Unit III

Mechanism of Immune response, Generation of Immunological diversity, Antigen recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & lymphoid system.

Unit IV

MHC & Transplantation Immunology - MHC:- General organization, MHC molecules & genes, Cell recognition of self & nonself, MHC restriction, Tolerance:- Central Peripheral & acquired tolerance. HLA typing methods using serological and molecular techniques.

Unit V

The Immune system in Health & Disease, AIDS & other Immunodeficiencies, Autoimmunity &

autoimmune diseases. Hypersensitivity, Vaccines:- Principle & types of vaccines, Recent advances in vaccination, Monoclonal & Recombinant antibodies. Immunological techniques: RIA, ELISA, Immunocytochemistry, Immunoblotting, Fluorescence antibody techniques.

New Yor

Course Code	DISCIPLINE SPECIFIC ELECTIVE	L	T	P	C
--------------------	-------------------------------------	----------	----------	----------	----------

AIM:

- This course has been designed to provide the student insights into these invaluable areas of biotechnology, which play a crucial role in determining its future use and applications.

OBJECTIVE:

- Students get an idea about the advantages and disadvantages of biotechnological applications, ethical implications, and intellectual property rights.

OUTCOME:

- To study the diversity of plants and animal life in a particular habitat, ethical issues and potential of biotechnology for the benefit of man kind

Unit 1:

Introduction and historical background. Introduction to biological safety cabinets, primary containment for biohazards, biosafety levels, biosafety levels of specific microorganisms, recommended biosafety levels for infectious agents and infected animals. Biosafety guidelines by Government of India. Definition of GMOs and LMOs.

Unit 2:

Environmental release of GMOs, risk assessment; risk management and communication. Overview of national regulations and relevant international agreements including Cartagena protocol.

UNIT 3 :

Biodiversity – Concept and Definition Scope a**Unit II**

Antigens, Antibody & Ag-Ab Interaction - Antigens: - Immunogenicity vs Antigenicity, Factors influencing Immunogenicity, Adjuvant, Epitopes & Haptens, super antigens, autoantigens. Antibody:- Structure, classes & functions, Allotypes & Idiotypes. Basic principles of Antigen-Antibody Interaction. Immunological techniques: Principles & Applications: Precipitation & agglutination, Radio. Immunoassay, Enzyme linked Immunosorbent Assay etc.

Unit III

Mechanism of Immune response, Generation of Immunological diversity, Antigen recognition, Lymphocyte development & activation, Lymphocyte interaction, cytokines & lymphoid system.

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

Constraints of Biodiversity Science, Composition and Scales of Biodiversity: Genetic Diversity, Species/ Organismal Diversity, Ecological/ Ecosystem Diversity, Landscape/ Pattern Diversity,

Agrobiodiversity, Biocultural Diversity and Urban Biodiversity.

UNIT 4 :

Values of biodiversity Instrumental/Utilitarian value and their categories, Direct use value; Indirect/ Non-consumptive use value, Introduction to Ecological Economics; Monetizing the value of Biodiversity; Intrinsic Value; Ethical and aesthetic values, Anthropocentrism, Biocentrism, Ecocentrism and Religions; Intellectual Value; Deep Ecology.

UNIT 5 :

Threats to biodiversity Habitat Destruction, Fragmentation, Transformation, Degradation and Loss: Causes, Patterns and consequences on the Biodiversity of Major Land and Aquatic Systems Invasive Species' pathways, biological impacts on terrestrial and aquatic systems.

Extinction: Types of Extinctions, Processes responsible for Species Extinction, Current and Future Extinction Rates, IUCN Threatened Categories, Sixth Extinction/Biological Crisis.

Course Code	CELL & MOLECULAR BIOLOGY	L	T	P	C
20217AEC21		5	1	0	5

AIM:

- This paper provides a thorough knowledge about structure and function of cells, cellular energetics, protein trafficking, bio molecules and cellular development.

OBJECTIVE:

- Understanding the structural and functional aspects of the cell provides the student with a strong foundation in the molecular mechanisms underlying cellular function.

OUTCOME:

- Students after completion of this paper will be exceptionally well prepared to pursue careers in cellular and sub cellular biological research, biomedical research, or medicine or allied health fields.

UNIT-I:

Cell architecture: Structure of cells – structure of prokaryotic and eukaryotic cells; Surface appendages – Cilia and Flagella, Capsules, Pili, Fimbriae and slime layers; Cell walls – Algae, fungi, bacteria ; Membranes of Gram positive, Gram negative bacteria and acid fast bacteria; protoplast, spheroplast and endospores; Transport across membrane – active and passive transport, transport channels and pumps, transport across nuclear membrane; Neurotransmission, neuromuscular junction.

UNIT-II:

Cellular constituents: Cytoskeleton and structural components – Microfilaments, Intermediate filaments, Microtubules; Mitochondria – structure, biogenesis; Chloroplast – structure, biogenesis; Endoplasmic reticulum and Golgi complex – structure, function, vesicular transport and import into cell organelles; Structure and function of ribosomes, mesosomes, lysosomes, peroxysomes.

UNIT-III:

Nucleus: Nucleus structure – structural organization, nucleosome, supranucleosomal structures, specialized chromosomes, polytene and lamp brush chromosomes and chromosome banding; Nucleic acid structure: DNA and RNA.

UNIT-IV:

Cell cycle: Mechanism of cell division – Mitosis, meiosis and genetic recombination; regulation of cell cycle – factors and genes regulating cell cycle (Cyclins, CDK and CDKI). Biochemistry and molecular biology of Cancer – malignant growth, tumour suppressor genes (p53, RB) and oncogenes (Ras), chemical carcinogenesis, hormonal imbalances.

UNIT-V:

Cellular development: Extracellular matrix – cell to cell and cell-matrix adhesion, cell junctions; Cellular systematic – components of systematic, receptors (cell surface – GPCR, RTK, TGF- β , Hedgehog, Wnt, Notch-Delta, NF-K β , ion channels; intracellular – NO, Nuclear receptor), secondary messengers, effectors ; cell differentiation; gametogenesis and fertilization; development of Drosophila and Arabidopsis – spatial and temporal regulation of gene expression.

20217AEC22		5	1	0	5

AIM:

- Biology is fast becoming an interdisciplinary science. There is accumulation of large amount of information in different areas of biology - on genome sequences of many organisms, genetic and biochemical interaction networks, cell interactions during development, and organism response to environmental stimuli, along with molecular understanding of diseases. This has led to the

emerging need for a holistic description of the working of biological systems at different scales.

OBJECTIVES:

- To gain an appreciation for the field of systems biology. To understand and learn the technical details of several current experiments or technologies used in the field of systems biology. To understand some of the larger questions and issues with systems biology and large-scale data collection and analysis.

OUTCOMES:

- This paper has been designed to give the students comprehensive training in the emerging and exciting upcoming field of Systems Biology, which will help students to get career in both Industry/R&D.

UNIT-1

Physics and biology: scope and methods of biophysics. Levels of molecular organization. Association of macromolecules, lipids in biological membranes. Protein in biological membranes. Molecular machines and dynamics.

UNIT-II

Understanding structures of proteins at different levels.- primary, secondary, tertiary and quaternary: conformational analysis and forces. Understanding structures of nucleic acids at different levels- primary, secondary, tertiary and quaternary: conformational analysis of interactions- polysaccharides

UNIT-III

Introduction to Bioinformatics-scope and application characteristics of hardware and software. Types of computer, Bio-chips, computer network sending and receiving e-mail. Internet browsing- searching biological articles information in internet.

UNIT-IV

Computer applications in biology- uses of databases in biology- analysis of proteins and nucleic acid sequence- molecular modeling- introduction to data processing- files- data collection- preparation-editing- backup- file recovery-procedure-sorting-searching and merging.

UNIT-V

Biomolecules- carbohydrate, protein, lipids and nucleic acids, protein conformation-prediction of protein structure-fold recognition, comparative modeling (homology)-basic principles of X-ray diffraction studies, NMR, Mass spectroscopy in identifying protein information.

Reference books:

- Introduction to protein structure by C. Branden and J. Tooze(1991) Garland publishing company

- Biochemistry by L.Stryer. (1995) WH freeman and co.
- Biophysical chemistry part-I& III by cantor amd schimmel(1980) WH freeman and co.
- Biophysics and bio physical chemistry by debajyoti Das (1987) academic press.
- Molecular databases for protein sequence and structure studies by sillinee. JA and sillince .M (1991) spring verlag.
- Sequence analysis primer by M. Gribskov, J.Dvvereux()1989 stockton press.

Course Code	INDUSTRIAL BIOTECHNOLOGY	L	T	P	C
20217AEC23		5	0	0	4

AIM:

- To understand the, environmental pollution and remediation using Biotechnology and its control.

OBJECTIVE:

- Students will get an idea about the hazards to our environment, solutions to protect it and for sustainable development.

OUTCOMES:

- This course is important in the era of industrialization leading to environmental hazards and hence will help students to take up a career in tackling industrial pollution and also to take up the research in areas like development of biological systems for remediation of contaminated environments (land, air, water), and for environment-friendly processes such as green manufacturing technologies and sustainable development.

UNIT-I

Industrial microbiology an introduction- modern fermentation process and biochemical engineering- isolation, screening and strain improvement of microorganisms.

UNIT-II

Media design and sterilization for fermentation processes- media requirements for fermentation processes- examples of simple and complex media. Design and usage of commercial media for industrial fermentations- batch and continuous fermentations system- sterilization system of liquid media and air.

UNIT-III

Basic principles of bioprocess-media formulation- fermentation equipment and its use- type of fermentor (Batch and continuous fermentor) and its application. Tray, CSTR, BCF, HFMB, RBC and inner and outer loop.

UNIT-IV

Traditional industrial process – anaerobic process ethanol, lactic acid, acetone- butanol production)- aerobic process (citric acid baker’s yeast penicillin production).

UNIT-V

Medical application of bioprocess engineering- commercial tissue culture process- gene therapy using viral vectors- models of viral infections- mass production of retrovirus. Advanced biological

waste water treatment applications

EMPLOYABILITY / ENTREPRENEURSHIP/ SKILL DEVELOPMENT

Course Code	MOLECULAR BIOLOGY & INDUSTRIAL BIOTECHNOLOGY lab	L	T	P	C
20217SEC24L		0	0	4	2

AIM:

This paper provides a thorough knowledge about structure and function of cells, cellular energetics, protein trafficking, bio molecules and cellular development.

OBJECTIVE:

Understanding the structural and functional aspects of the cell provides the student with a strong foundation in the molecular mechanisms underlying cellular function.

OUTCOME:

Students after completion of this paper will be exceptionally well prepared to pursue careers in cellular and sub cellular biological research, biomedical research, or medicine or allied health fields

- Living cells preparation by histochemical techniques
- Microtomy
- Squash preparation of onion root tip
- Production of enzyme (amylase)
- Immobilization of cells and enzymes by calcium alginate method
- Effect of different parameters on bacterial growth kinetics (ph, temperature)
- Production of organic acid
- Immunocytochemical analysis for specific cellular constituents
- Cytochemical study of cells/ cell types using specific dyes reagents
- Estimation of protein and carbohydrates
- Alcoholic fermentation of fruit juice by yeast (*Saccharomyces cerevisiae*)
- Separation of amino acid by paper chromatograph.

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT

Course Code	3883	L	T	P	C
--------------------	-------------	----------	----------	----------	----------

AIM:

This is a comprehensive study of the endocrine system which will allow the student to integrate and better understand the functions of the other systems of the body. The relationship of the nervous system to the endocrine system is explored in the context of signaling within a multicellular organism..

OBJECTIVE:

- To have a basic understanding of the endocrine system.

OUTCOMES:

- To know the pathophysiological significance of the system with special reference to humans.

UNIT-I

Hormones in general- definition- types of secretions- nature-classification, synthesis and their role- feedback control with specific examples hormone action proteins and steroids- cell signaling in hormone action

UNIT-II

Hypothalamo hypo physical axis – hormones of hypothalamus and their role structure of pituitary –secretions-physiological role- pathophysiology current status of pituitary as a master gland.

UNIT-III

Thyroid- parathyroid – structure- hormones- synthesis-storage-release-carrier proteins(eb. TBA&TBG)-physiological role-pathophysiology.

UNIT-IV

Adrenal and gonadal hormones- steroid biosynthesis- maintenance of cyclicity physiological role- pathophysiology- steroids in metabolism

UNIT-V

Gastro intestinal hormones-pancreas as an endocrine organ- secretions- functions-physiological role and pathophysiology other endocrine organs in vertebrates insect and crustacean hormones- their role in growth and metamorphosis.

REFERENCE:

- Text book of endocrinology-williams
- Physiological review of biochemistry-harper and others

Course Code	DISCIPLINE SPECIFIC ELECTIVE II	L	T	P	C
20217DSC25B	BIOETHICS AND IPR	5	0	0	4

AIM:

To acquire to acquire specialized knowledge of law and practice relating to Insurance.

OBJECTIVE:

- The aim of this paper is to introduce the basic concepts of Intellectual property laws to the students for first time and familiarize them with the kind of rights, remedies and licensing regime associated with each kind of intellectual property so that students can have a basic understanding of Intellectual Property laws.

OUTCOME:

- To get registration in our country and foreign countries of their invention, designs and thesis or theory written by the students during their project work and for this they must have knowledge of patents, copy right, trademarks, designs and information Technology Act. Further teacher will have to demonstrate with products and ask the student to identify the different types of IPR’

Unit 1: Overview of Intellectual Property

Introduction and the need for intellectual property right (IPR) - Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design, Geographical Indication, Plant Varieties and Layout Design – Genetic Resources and Traditional Knowledge – Trade Secret - IPR in India : Genesis and development – IPR in abroad - Major International Instruments concerning Intellectual Property Rights: Paris Convention, 1883, the Berne Convention, 1886, the Universal Copyright Convention, 1952, the WIPO Convention, 1967, the Patent Co-operation Treaty, 1970, the TRIPS Agreement, 1994

Unit2: Patents

Patents - Elements of Patentability: Novelty , Non Obviousness (Inventive Steps), Industrial Application - Non - Patentable Subject Matter - Registration Procedure, Rights and Duties of Patentee, Assignment and licence , Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties - Patent office and Appellate Board

Unit 3: Copyrights

Nature of Copyright - Subject matter of copyright: original literary, dramatic, musical, artistic

works; cinematograph films and sound recordings - Registration Procedure, Term of protection, Ownership of copyright, Assignment and licence of copyright - Infringement, Remedies & Penalties – Related Rights - Distinction between related rights and copyrights

Unit 4: Trademarks

Concept of Trademarks - Different kinds of marks (brand names, logos, signatures, symbols, well known marks, certification marks and service marks) - Non Registrable Trademarks - Registration of Trademarks - Rights of holder and assignment and licensing of marks - Infringement, Remedies & Penalties - Trademarks registry and appellate board

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT

Unit 5: Other forms of IP

Design: meaning and concept of novel and original - Procedure for registration, effect of registration and term of protection

Geographical Indication (GI): Geographical indication: meaning, and difference between GI and trademarks - Procedure for registration, effect of registration and term of protection Plant Variety Protection

Plant variety protection: meaning and benefit sharing and farmers’ rights – Procedure for registration, effect of registration and term of protection Layout Design Protection

Layout Design protection: meaning – Procedure for registration, effect of registration and term of protection

.Reference book:

- V K Ahuja; Law relating to Intellectual Property Rights; Lexis Nexis, 2017 Reference

Course Code		L	T	P	C
20217RMC26	RESEARCH METHODOLOGY	3	0	0	2

AIM:

- This course introduces and discusses approaches, strategies, and data collection methods relating to research in social sciences. Students will consider how to select the appropriate methodology for use in a study to be performed.

OBJECTIVE:

- This course aims to guide Master One students at the Section of English in the university of Biskra towards achieving competence and proficiency in the theory of and practice to research. This fundamental objective can be realised through helping these students to develop the subject of their research, encourage the formation of higher level of trained intellectual ability, critical analysis, rigour, and independence of thought, foster individual judgement, and skill in the application of research theory and methods, and develop skills required in writing research proposals, reports, and dissertation

OUTCOME:

- To culminate this final stage, students will learn to write a comprehensive research proposal that may be conducted in the future.

Unit I – Research

Selection of problem-stages in the execution of research: choosing a topic to publication- preparation of manuscript-report writing- format of journals – proof reading – sources of information: Journals, reviews, books, monographs, etc, Bibliography. Journal; standard of research journals – Impact factor.

Unit II: Statistical method

Measures of dispersion: Universe and population – delimiting population – sampling method – random sampling, stratified random sampling – types of variables: qualitative and quantitative variables – continuous and discontinuous variables – scaling method S- mean – standard deviation – standard error – coefficient of variation.

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

Unit III

Coparision of means, chisquard test, student test (ANOVA ‘portioning of variation). F test – model sums on one way ANOVA with interpretation of data – introduction to MANIVA – Statistical and their use – significance test and fixing levels of significance – use of statistical software like COSTAT and STATISTICA. Breif introduction to pie and histograms. Use of LCD.

UNIT IV:

Chromatography – priniciple, operative technique and applications of paper, TLC, adsorption chromatography, GLC and HPLC. Ion-Exchange, molecular sieve, Electrophoretic techniques – principle and technique of gel, SDS, high voltage and discontinuous electrophoresis, isoelectric focusing, plused field gel electrophoresis and capillary electrophoresis. Spectrometry –

Centrifugation techniques.

UNIT V:

Unit2: Patents

Patents - Elements of Patentability: Novelty , Non Obviousness (Inventive Steps), Industrial Application - Non - Patentable Subject Matter - Registration Procedure, Rights and Duties of Patentee, Assignment and licence , Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties - Patent office and Appellate Board

Unit 3: Copyrights

Nature of Copyright - Subject matter of copyright: original literary, dramatic, musical, artistic works; cinematograph films and sound recordings - Registration Procedure. X-Rays – X-Ray diffraction, crystals and detectors, quantitative analysis and applications. Radio chemical methods – Basic concepts, counting methods and applications. Autoradiography, detection and measurement of radioactivity, applications of radioisotopes in biology.

Course Code	GENOMICS	L	T	P	C
20217AEC31		6	1	0	6

AIM:

- To study prokaryotic and eukaryotic genomes, general methods of genome sequencing techniques, genome analysis and annotations, genome mapping techniques and applications of genomics.

OBJECTIVE:

- Explain the aspects of genome organisation, analysis and applications.
- Provide the details of prokaryotic and eukaryotic genome.

OUTCOME:

- Acquire the aspects of Gene Contig and Shotgun method.
- Know the features of the Genome Mapping databases.

UNIT -I INTRODUCTION: Genome structure and anatomy of prokaryotic and eukaryotic genome – Nuclear genomes – Organelle genomes – Repetitive DNA sequence – Transposable elements– Pseudo genes – Genome databases – organisms-specific databases.

UNIT -II GENOME SEQUENCING DNA sequencing techniques: Maxam Gilbert method – Sanger’s method – Pyrosequencing – Whole genome sequencing – Gene Contig and Shotgun method – Human genome project.

UNIT -III GENOME ANALYSIS AND ANNOTATION: Searching and locating Genes – Programs and databases – Determining function of genes – Gene Prediction – Methods of gene prediction – Softwares and tools.

UNIT -IV GENOME MAPPING: Mapping databases – Types of mapping – Genetic mapping: DNA markers – RFLP, SSLP, RH maps, SNP – Linkage analysis – Physical mapping: Restriction mapping – FISH – STS mapping

UNIT -V APPLICATIONS OF GENOMICS DNA: microarray and its applications – Medical applications: Development of Antibiotics – Vaccines – Drug discovery – Human genetics diseases: Identification – Gene Diagnosis and Gene therapy– Genomics in Plant Biology.

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT

Course Code	PROTEOMICS	L	T	P	C
20217AEC32		6	1	0	6

AIM:

- To understand the proteins enclosed by the genes with respect to structure, function, protein – protein interactions, techniques for separation and analysis, database and applications.

OBJECTIVE:

- Give a detailed description on protein sequencing.
- Provide an overview of proteome databases.

OUTCOME:

- Gain knowledge on phylogenetic profiles
- Describe the features of Yeast two-hybrid system.

UNIT -I INTRODUCTION: Proteomics introduction – Protein sequencing – Protein Digestion Techniques – Mass Spectrometers for Protein and Peptide Analysis – Protein Identification by Peptide Mass Fingerprinting – Software Tools for Peptide Mass Fingerprinting: Finding the Matches – Peptide Sequence Analysis and Protein Identification with Tandem Mass Spectrometry

UNIT -II PROTEOME DATABASES: Proteome databases – Comparative proteomics methods – 2D gel databases – Protein interaction data bases – Metabolic pathway databases – resources for interaction prediction – network and pathway visualization tools – Protein network analysis

UNIT -III PROTEOMICS TOOLS : 2D gel electrophoresis and Mass spectra – Protein identification from 2D gel, mass spectra and sequence data – Protein property prediction – bulk, active sites, modification sites, interactive sites, location, localization, stability, shape, domains properties, secondary and tertiary structures – Protein identification programs – Muscot – PeptIdent – Protein prospector – GFS

UNIT- IV FUNCTIONAL PROTEOMICS Functional proteomics – protein phenotypes – Protein-Protein Interaction Mapping: Experimental – Yeast two-hybrid system – phage display – protein fragment complementation assays – Computational approach

UNIT -IV APPLICATION OF PROTEOMICS: Applications of Proteomics – Protein Expression Profiling – Identifying Protein – Protein Interactions and Protein Complexes – Mapping Protein Modifications – Protein Arrays and Protein Chips – Application of proteomics to medicine, toxicology and pharmaceuticals

UNIT -V Current Contours: (For Continuous Internal Assessment only) Computational Proteomics and Metabolomics- Sequence comparison. – Genome sequencing. – Proteomics. – Phylogeny. – Gene expression - Enzymology

20217SEC33L		0	0	5	3

AIM:

- The study of animal cells has helped us gain an insight not only in the structure and function of cells and tissues but also in different physiological, biochemical and immunological processes

OBJECTIVE:

- The major objective is to provide a world-class training experience for these students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology.

OUTCOME:

- This paper will help students interested in careers as laboratory, research or animal care technicians in the fields of veterinary and human health or biotechnology.

• Isolation of DNA from bacteria, fungus, animal tissues.

• Bacterial gene expression.

• Restriction mapping.

• PCR techniques.

• DNA finger printing PFLP, RAPD.

• Human Genome - Wellcome Trust Genome Browser

• FlyBase - A Database of Drosophila Genes & Genomes.

• Tandem repeats finder- A program to analyze DNA sequences

• PeptideCutter - Predicts potential cleavage sites cleaved by proteases or chemicals in a given protein sequence.

• PSORT - Program for the prediction of protein localization sites in c

• PROSITE - Protein Domain, Family & Functional Site Prediction

Course Code		L	T	P	C
20217DSC34A	DISCIPLINE SPECIFIC ELECTIVE COURSE-III NANOBIOTECHNOLOGY 3893	5	0	0	4

AIM:

- One of major applications of nanoscience is in biotechnology field.

OBJECTIVE:

- nanotechnology attracts students from various disciplines, a single course which starts by sensitizing students from a varied background about the biological/biotechnological basics and culminates into modern day applications of nanoscience in biotechnology

OUTCOME:

- This course will act as a bridge between students from non-biology course at all levels

Unit- I

Basic biology principles and practice of micro fabrication techniques, Atomic force microscopy, biological production of metal nano particles, macro molecular assemblies.

Unit-II

Application in Biomedical and biological research, nano particles, viruses as nano- particles, nano chemicals and application., tumor targeting and other diagnostic application.

Unit-III

Developing drug delivery tools through nano biotechnology, nano particle based immobilization assays, quantum dots technology and its application.

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT**Unit-IV**

Synthesis and characterization of different classes of biomedical polymers their uses in pharmaceutical, cardiovascular ophthalmologic orthopedic areas.

Unit-V

Biosensors and nano biotechnology principles used in construction of microelectronic devices sensors and macro mechanical structures.and their functioning, immunonanotechnology.

Course Code	DISCIPLINE SPECIFIC ELECTIVE	L	T	P	C
20217DSC34B	COURSE-III Environmental biotechnology	5	0	0	4

AIM:

- To understand the energy sources, environmental pollution and remediation using biotechnology and its control.

OBJECTIVE:

- Students will get an idea about the hazards to our environment, solutions to protect and for sustainable development.

OUTCOME:

- This course is important in the era of industrialization leading to environmental hazards and hence will help students to take up a career in tackling industrial pollution and also who is willing to take up the research in areas like development of biological systems for remediation of contaminated environments (land, air, water), and for environment- friendly processes such as green manufacturing technologies and sustainable development

Unit I

Introduction, Importance and Scope of Environment Biotechnology. Renewable and Non-Renewable Resources of Energy. Conventional fuels and their impact on Environment – Firewood, Animal wastes, Coal, Petroleum and Animal oils.

Unit II

Modern fuels and their impact on environment – Methanogenic Bacteria, Biogas Production, Microbial Hydrogen Production, Conversion of Sugar to Alcohol, Gasohol. Effect of Green Revolution and Industrial Revolution on Environment.

Unit III

Waste Water Pollution (Sewage) Treatment Process - Septic tank, Mechanical and Biological Treatment, Trickling Filters, Activated Sludge Process, Oxidation Ponds, Anaerobic Sludge Digestion. Solid Waste Disposal- Sanitary Landfills, Composting, Vermicompost

Unit IV

Biofertilizers- Definition, Distinguished Features of Biofertilizers and Organic Manures. Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil, Algal and fungal biofertilizers (VAM).

Unit V

Bioleaching- Ore Leaching and Role of Microbes in Mines (copper, and Uranium). Environmental significance of Genetically modified microbes, plants and animals. Bio- assessment of environmental quality.

EMPLOYABILITY / ENTREPRENEURSHIP /SKILL DEVELOPMENT

Course Code	Course Title	L	T	P	C
202ENOEC	Open Elective -Writing for the Media	4	0	0	2

Aim:

- To equip students to enter the realm of mass media.

Objectives:

- To help students to understand the intricacies of mass media
- To know about the barriers to mass communication
- To understand the function of mass media
- To learn the different kinds of news
- To enhance the different kinds of writing for media

Outcome:

- Understand the intricacies of mass media

UNIT-I

Mass communication- Barriers to mass communication and mass culture- Function of mass media - Media effects, Qualities of media men.

UNIT-II

News- Hard and soft news- Expected and unexpected news- Box news- Follow up news-Scoop- Filters- Human interest stories- Recognizing and evaluating news.

UNIT-III

News and views- News analysis, Editorial, Columns, Article, Middle reviews, Letters-Features.

UNIT-IV

Reporting- Crime, Court, Election, Legislature, Sports, Development Investigative, Interpretative depth.

UNIT-V

Writing for Media-Inverted pyramid style-Feature style-TV/Broadcast, New style writing TV/Radio Documentaries- Writing Advertisements-Practical

Course Code	Course Title	L	T	P	C
202MAOEC	Open Elective – Applicable Mathematical Techniques	4	0	0	2

Aim:

- To acquaint with the basic concept of Interpolation.

Objectives:

- Understand the basic concept of Interpolation.
- To enhance the knowledge about Assignment Problems, Replacement Problems, Decision Analysis and Game Theory.

Outcomes:

- Students using OR techniques in business tools for decision making
- Students develop Assignment problem and Replacement problems
- Understand the concept of decision analysis and game theory
- Students gets the knowledge about interpolation

UNIT I

Interpolation with unequal intervals: Newton's, Lagrange's, and inverse interpolation

UNIT II

Assignment Problems

UNIT III

Replacement Problems

UNIT IV

Decision Analysis

UNIT V

Game Theory

Course Code	Course Title	L	T	P	C
202PHOEC	Open elective Biomedical Instrumentation	4	0	0	2

Aim:

- To understand the concepts and application of electronic Instrumentation in the Medical field.

Objective:

- Interpret technical aspects of medicine
- Solve Engineering Problems related to medical field
- Understand medical diagnosis and therapy

Outcomes:

- To familiarize students with various medical equipments and their technical aspects
- To introduce students to the measurements involved in some medical equipment.
- Ability to understand diagnosis and therapy related equipments
- Understanding the problem and ability to identify the necessity of an equipment to a specific problem

UNIT – I: Bio Electric Signals And Electrodes

Fundamentals of medical instrumentation – Sources of biomedical signals – basic medical instrumentation – Intelligent medical instrumentation system – Origin of Bio electric signals – Recording Electrodes – Silver – Silver chloride electrodes – Electrodes for ECG – Electrodes for EEG – Electrodes for EMG.

UNIT – II: Recording System And Recorders

Basic recording system – General consideration for signal conditions – Preamplifiers – Biomedical signal analysis technique – main amplifier and driver stage – Writing systems – direct writing recorders – the ink jet recorders – Electrocardiograph, Electroencephalograph – Electromyography and other Biomedical recorders.

UNIT – III: Measurement And Analysis Techniques

Electro cardiography – measurements of Blood pressure - measurements of Blood flow and cardiac output, Respiratory therapy Equipment – Origin of EEG – Action Potentials of the brain – evoked potentials – Placement of electrodes – Recording set up – Analysis of EEG.

UNIT – IV: Magnetic Resonance And Ultrasonic Imaging Systems

Principles of NMR Imaging system – Image reconstruction Techniques – Basic NMR components – Biological efforts of NMR Imaging – Advantages of NMR Imaging System – Diagnostic ultra Sound – Physics of ultrasonic waves – medical ultra sound – basic pulse – echo apparatus, A – Scan – echocardiograph(M mode).

UNIT – V: Advanced Bio Medical Systems

Pacemakers – Need for Cardiac pacemaker – External Pace makes – Implantable Pace makers – recent development in Implantable Pacemakers – Pacing system Analyzer – Defibrillator – Pacer – Cardioverter – Physiotherapy and electro therapy equipment – High frequency heat therapy – short wave diathermy – microwave and ultrasonic therapy – pain relief through electrical simulation.

Books for Study

2. Lestlie Cromwell, Fred J. Weibell, Erich A. Pfeiffer, Bio medical instrumentation and measurements, PHI, New Delhi.(Unit-III)

Book for Reference

1. M.Arumugam, Biomedical Instrumentation, Anuradha Agencies, Kumbakonam (2000).

Course Code	Course Title	L	T	P	C
202CHOEC	Open Elective-Green Chemistry	4	0	0	2

Aim:

- To reduce the soil and water pollution in environment.

Objectives:

- To learn about the environmental status, public awareness in evolution, principles involved in green chemistry, bio-catalytic reactions, global warming and its control measures, availability of green analytical methods.

Outcomes:

- To understand the environmental status and evolution.
 - To know about the Pollution and its prevention measures.
 - To familiarize the green chemistry.
 - To learn about the bio-catalytic reactions.
 - To understand about the vitamins and antibiotics.

Unit I - Introduction

Introduction-Current status of chemistry and the Environment-Evolution of the Environmental movement: Public awareness - Dilution is the solution to pollution-Pollution prevention.

Unit II - Principles

Green Chemistry – Definition – Principles of Green Chemistry - Why is this new area of Chemistry getting to much attention - Why should chemist pursue the Goals of Green Chemistry - The roots of innovation – Limitations.

Unit III - Bio Catalytic Reactions

Green Chemistry Using Bio Catalytic Reactions – Introduction - Fermentation and Bio transformations - Production of Bulk and fine chemicals by microbial fermentation Antibiotics – Vitamins - Bio catalyses synthesis of industrial chemicals by bacterial constructs - Future Tends.

Unit IV - Green House Effect

Green house effect and Global Warming – Introduction - How the green house effect is produced - Major sources of green house gases - Emissions of CO₂ - Impact of green house effect on global climate - Control and remedial measures of green house effect - Global warming a serious threat - Important points.

Unit V - Green Analytical Methods

Future trends in Green Chemistry - Green analytical methods, Redox reagents, Green catalysts; Green nano-synthesis, Green polymer chemistry, Exploring nature, Biomimetic, Proliferation of solvent-less reactions; Non-covalent derivatization, Biomass conversion, emission control

References:

1. Introduction to Green Chemistry – M.Rayan and M.Tinnes
2. New Trends in Green Chemistry – V.K.Ahluwalia and M.Kidwai

Course Code	Course Title	L	T	P	C
202CSOEC	Open Elective-M- Marketing	4	0	0	2

Aim :

- To provide the conceptual and technological developments in the field of internet and web designing with the emphasis on comprehensive knowledge of internet.

Objectives:

- To understand the web designing and web development with the knowledge of internet.
- To learn the overview of the design of HTML & Scripting Languages.
- To learn the use of website and internet design and development.

Outcomes:

- Acquire knowledge about functionalities of Internet
- Acquire knowledge about functionalities of world wide web
- Explore markup languages features and create interactive web pages using them
- Learn and design Client side validation using scripting languages
- Acquire knowledge about Open source JavaScript libraries
- Able to design front end web page and connect to the back end databases.

UNIT I

Internet, Growth of Internet, Owners of the Internet, Anatomy of Internet, ARPANET and Internet history of the World Wide Web, basic Internet Terminology, Net etiquette. Internet Applications – Commerce on the Internet, Governance on the Internet, Impact of Internet on Society – Crime on/through the Internet. Connectivity types: level one, level two and level three connectivity, Setting up a connection: hardware requirement, selection of a modem, software requirement, modem configuration, Internet accounts by ISP: Telephone line options, Protocol options, Service options, Telephone line options – Dialup connections through the telephone system, dedicated connections through the telephone system, ISDN, Protocol options – Shell, SLIP, PPP, Service options – E-mail, WWW, News Firewall

UNIT II

Network definition, Common terminologies: LAN, WAN, Node, Host, Workstation, bandwidth, Interoperability, Network administrator, network security, Network Components: Servers, Clients, Communication Media, Types of network: Peer to Peer, Clients Server, Addressing in Internet: DNS, Domain Name and their organization, understanding the Internet Protocol Address. Network topologies: Bust, star and ring, Ethernet, FDDI, ATM and Intranet.

UNIT III

Email Networks and Servers, Email protocols –SMTP, POP3, IMAP4, MIME6, Structure of an Email – Email Address, Email Header, Body and Attachments, Email Clients: Netscape mail Clients, Outlook Express, Web based E-mail. Email encryption- Address Book, Signature File.

UNIT IV

HTML page structure, HTML Text, HTML links, HTML document tables, HTML Frames,

HTML Images, multimedia - ASP, VB Script, JAVA Script, JAVA and Front Page, Flash

UNIT V

Overview, SGML, Web hosting, HTML. CGL, Documents Interchange Standards, Components of Web Publishing, Document management, Web Page Design Consideration and Principles, Search and Meta Search Engines, WWW, Browser, HTTP, Publishing Tools Overview of Internet Security, Firewalls, Internet Security, Management Concepts and Information Privacy and Copyright Issues, basics of asymmetric cryptograms.

Text Book

World Wide Web design with HTML – C. Xavier – Tata McGraw – Hill – 2000.

Course Code	Course Title	L	T	P	C
20CM1OEC	Open Elective-Financial Services	4	0	0	2

AIM

To analyze the various financial institutions and their services.

OBJECTIVES

- I. To gain knowledge on financial services.
- II. To understand importance of various services including banking, insurance, mutual

funds.

UNIT – I

Financial system-An Overview: Indian Financial System-Global Financial System-Financial Services Environment- Credit Rating –Factoring and Forfeiting –Leasing

UNIT – II

Financial Markets –An Overview: Definition-Role-Functions-Constituents- Financial Instruments-Capital Market instruments-Indian money and Capital Market-Global Financial Markets.

UNIT – III

Money Market –An Overview: Definition-Characterstistics-Objectives- Imporatance-Functions-Segment-Financial Institutions-Indian Money Market-Global Money Market

Unit – IV

Capital Market: Money Market-Characteristics-Functions-New financial Instruments-measures of Investor Protection-Indian Capital Market-MajorIssues

Unit-V

Stock Exchange: History of Stock Exchange-Functions-Indian Stock Exchanges-Organization structure-Regulations of Stock Exchange –Recent Developments

OUTCOME

To introduces meaning and functions of Financial IntermediariesTo understand the role of merchant bank and its services

To provide information regarding management of mutual funds and Regulations

To understand the role and functions of financial services MarketingTo know the structure and types of debt Instruments

To realize Foreign Exchange Market

REFERENCE BOOKS

1. Gordon , Natarajan – Financial Market and Services.
2. Dr. S. Gurusamy – Financial services and Market.
3. Kucchol S.C. – Financial Management
4. Pandey I.M. – Financial Management.

SEMESTER IV

Course Code	FOOD TECHNOLOGY	L	T	P	C
20217AEC41		6	1	0	6

Aim: This course aims to help the students to understand the various properties of food and

the factors that make it vulnerable for spoilage

Objectives:

- This course is designed to understand the chemical nature and associated microbes of food and to understand the principles of food processing, preservation and manufacture.

Outcomes:

- To understand the basic food safety issues in the food market
- To develop and evaluate quality of new food products using objective and subjective methodologies.
- To understand the basic concepts in food chemistry and food analysis

Unit I

Basics of Food Technology Food chemistry: constituents of food - contribution to texture, flavour and organoleptic properties of food. Food additives - intentional and nonintentional and their functions. Enzymes in food processing.

Unit II

Microbiology of Food Sources and activity of microorganisms associated with food. Food fermentation & food chemicals. Food borne diseases - infections and intoxications. Food spoilage - causes.

Unit III

Food Processing Raw material characteristics; cleaning, sorting and grading of foods; physical conversion operations - mixing, emulsification, extraction, filtration, centrifugation, membrane separation, crystallization, heat processing.

Unit IV

Food Preservation Use of high temperatures - sterilization, pasteurization, blanching, canning - concept, procedure & application; Low temperature storage - freezing curve characteristics. Factors affecting quality of frozen foods. Irradiation preservation of foods.

Unit V

Manufacture of Food Products Bread and baked foods. Dairy products - milk processing, cheese, butter, ice-cream. Vegetable and fruit products. Edible oils and fats. Meat, poultry and fish products. Confectionery, beverages.

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

Reference Books

Course Code	Course Title	L	T	P	C
20217AEC42	BIOINSTRUMENTATION	6	1	0	6

Aim:

- The students searching for Biomedical Instrumentation Courses and Training Programs found the following related articles

Objectives:

- This course will give an understanding about the working principles, construction and applications of the instruments often used in the studies related to various disciplines of Biological Sciences.

Outcomes:

- Check for analytical functions and find the analytical function and study .
- Learn the measurement systems, errors of measurement,
- Demonstrate basic knowledge of Biotechniques

Unit I

Basic Instrumentation (Theory & Demo) Principles, operation protocol & applications of the following instruments: Weighing balance, pH meter, Polarography, Radioactivity, ECG, FTIR.

Unit II

Microscopy (Hands on) Observation of different microbes. Light – Bright & Dark field; Phase contrast, Inverted Phase contrast; Fluorescent, Electron – TEM & SEM; Confocal

Unit III

Spectroscopy (Theory & Demo) Colorimeter, Spectrometer, UV visible spectrometer, X – ray spectrometer, ELISA reader, Atomic absorption spectrometer, Flame photometer, Flourimeter & Spectro flourimeter.

Unit IV

Separation Techniques (Theory & Demo) Centrifugation - Principle, operation, types & applications. Chromatography - Principle, operation & applications - Paper – ascending, descending & Circular, TLC, HPTLC, GC, HPLC, Column Chromatography, Ion Exchange & Affinity Chromatography, LC – MS.

Unit V

Electrophoresis (Theory & Demo) Native & denatured - zone, iso-electrofocusing & isotachopheresis, 1D & 2D. PCR, MoldiTof

- S.SadasivamA. Manickam. 2004. Biochemical Methods.

- J.Jayaraman. 2000. Laboratory Manual in Biochemistry. New Age International Publishers.

Course Code	Course Title	L	T	P	C
20217SEC43L	FOOD TECHNOLOGY AND BIO INSTRUMENTATION LAB	0	0	5	3

Aim:

- To understand the principle and application of Bioinstrumentation and food technology

Objectives:

- By doing this course the students will get hand on exposure & understand the chemical nature and associated microbes of food and the principles of food processing, preservation and manufacture. And the techniques used in understanding the biological process

Outcomes:

- Ability to apply principles of food engineering in industry.
- Understand, identify and analyze a problem related to food industry and ability to find an appropriate solution for the same.

- Test for sensitivity of microorganisms.
- Down stream processes of enzymes – dialysis.
- Ion exchange chromatography – drying – cellulose column chromatography.
- Immobilization of yeast cell by alginate beads
- Bioassay techniques for antibiotics.
- Large scale production of organic acids, large scale production of solvents using fermentor (Demo) Visit to Distillery unit; alcohol production and pharmacological industries. Pasteur Institute(Field visit).
- Isolation & identification microbes from spoiled food.
- Production of yogurt, butter.
- Antibiotic production by different strains of microbes (Theory).
- Calculate BMI
- Handling of Colorimeter and Spectrophotometer

EMPLOYABILITY / ENTREPRENEURSHIP/SKILL DEVELOPMENT

- Estimation of RNA by orcinol method.
- Estimation of DNA by Diphenylamine metho, Demonstratio
- Paper chromatography for separations and detections of simple sugars and amino acids.
- Separation of plant pigments by column chromatography.
- Thin layer chromatography of amino acids.

Refrence book:

- Laboratory Mannual in Biochemistry by J. Jayaraman. New Age International Publishers. 2nd Edn. 1981.
- Stanbury, P.F., A. Whitaker ans S.J. Hall. 1995. Principles of fermentation Technology, Pergamon, UK.

Course Code	Course Title	L	T	P	C
20217 DSC44A	GENE THERAPY UTILIZATION PHARMACOLOGY	5	0	0	4

Aim:

- After successful completion of the paper the students will get an overall view about genetic makeup of organisms and can take up a career in research.

Objective:

- This paper in genetics has been structured to give the student an in depth knowledge of the organization of the genome in prokaryotes and eukaryotes, the principles of genetic inheritance and other vital aspects such as Hardy Weinberg law, pedigree analysis and the genetic basis of disease inheritance.

Outcomes:

- understand some of the types of disease that might be treatable by gene therapy
- understand the basic principals of genetic manipulation
- Understand how genetics may be used in the design of drugs..

UNIT I: History of genetics

Gene as the unit of mutation and recombination. Identification of DNA as the genetic material. Mutations: Molecular nature, mutagenesis by nitrous acid, hydroxylamine, alkylating agents, intercalators and UV, origin of spontaneous mutations and control, parasexual process in bacteria, transformation, transduction and conjugal gene transfer the phenomena, mechanisms and applications. Fine structure genetic analysis with examples.

UNIT II: Genetic mapping

Haplotype, Physical and Cytogenetic mapping, SNP, RFLP, TRE, PCR-OLA, SSCP, RAPD

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

UNIT III: Identifying human disease genes

General gene therapy strategies, Targeted killing of specific cells, Targeted mutation correction, Targeted inhibition of gene expression. Gene replacement therapy by viral vectors: Oncovirus, Lentivirus, Adenovirus, Adenoassociated virus, Herpes Simplex virus, Naked DNA or direct injection or particle bombardment-gene gun, Liposome mediated DNA transfer, Receptor mediated endocytosis, Repair of mutations in situ through the cellular DNA repair machinery, Antisense induced exon splicing, In-utero fetal gene therapy

UNIT IV: Gene blocking therapies

Gene Knockouts, Gene disruption-p53, prion diseases, immunological, short RNA, Gene therapy for non-inheritable diseases, stem cell therapy, somatic cell gene therapy and germ line gene therapy

UNIT V: Gene therapy: problem, solutions and future prospects

Controversial issues in medical genetics

In vitro fertilization, Prenatal sex determination, Surrogate therapy, Genetic counseling, Germline gene therapy, ELSI, NBAC, IPR, Patenting, Human transgene

Reference Books:

- Human Molecular Genetics- Tom Strachan
- Concepts of Genetics- William s. Klug
- Emery's Elements of Medical Genetics- Robert F. Mueller & Ian D. Young

- Introduction of Genetic Analysis of Griffiths – Freeman Co., 1996.

Course Code	Course Title	L	T	P	C
20217 DSC44B	PLANT CONSERVATION & DISASTER MANAGEMENT	5	0	0	4

Aim:

- Understanding foundations of hazards, disasters and associated natural/social phenomena.

Objective:

- To maintain essential ecological processes and life supporting systems.
- To preserve the diversity of species or the range of genetic material found in the worlds organisms.
- The course focuses on the reasons responsible for disaster, its impact on the environment and society. To impart the knowledge on the measures and steps to minimise or overcome the burden on the ecosystem.

Outcomes:

- To make sustainable utilization of species and ecosystems.
- Familiarity with disaster management theory (cycle, phases) Knowledge about existing global frameworks and existing agreements (e.g. Sendai)

UNIT I: Plant Diversity

Biodiversity – Concept and Definition Scope and Constraints of Biodiversity Science, Composition and Scales of Biodiversity: Genetic Diversity, Species/ Organismal Diversity, Ecological/ Ecosystem Diversity, Landscape/ Pattern Diversity, Agrobiodiversity, Biocultural Diversity and Urban Biodiversity.

UNIT II: Conservation challenges in the twenty first century

Urbanisation; Creating knowledge society, Conflict management and decision making, Management of introduced species. 18 Evaluation of priorities for conservation of habitats and species Selection criteria for protection of species – species quality, IUCN Guidelines for Red List categories and criteria (version 7.0), Red List of Indian Flora and Fauna, Selection criteria for protection of habitats – hotspots, Conservation

EMPLOYABILITY / ENTREPRENEURSHIP / SKILL DEVELOPMENT

UNIT III : Introduction to Disasters

Natural Disasters –Educative – Trends in Climatology, Meteorology and Hydrology. Seismic Activities. Changes in Coastal Zone, Coastal Erosion, Beach Protection. Coastal Erosion due to Natural and Manmade Structures.

UNIT IV : Types of Disasters – Natural

Disasters – Nature and characteristics of Cyclones – Tornadoes – Avalanches – Flood – Drought – Volcanic – Earthquakes – Fire – Landslides – Causes and effects - Impact on Environment- Forecasting and Warning System – Disaster Profile of India. Manmade disasters: Nuclear, chemical, fire explosion, accidents, bioweapons. Deforestation, monoculture, Building construction.

UNIT V : Disaster Management

Disaster Management Cycle- Predisaster Planning -Training of Disaster – Prone Areas – Prioritization – Regulations – Protection Measures during Disaster and Post Disaster. Relief Camp Organization — Disaster Training – Role of Information and Communication Technology, GPS, Remote Sensing and Geographic Information System in Disaster Management.

M.PHIL – BIOTECHNOLOGY

COURSE STRUCTURE

PAPER- III - ENVIRONMENTAL BIOTECHNOLOGY (Sub. Code: 203BTE13)

UNIT – I

Environment: Basic concepts –Environmental Pollution: Types of pollution, Pollution monitoring and measurement; Methodology of environmental management – The problem solving approach and its limitations.

UNIT – II

Biofertilizers- Definition, Distinguished Features of Biofertilizers and Organic Manures. Role of symbiotic and asymbiotic nitrogen fixing bacteria in the enrichment of soil, Algal and fungal biofertilizers (VAM). Bioleaching- Ore Leaching and Role of Microbes in Mines (copper, and Uranium). Environmental significance of Genetically modified microbes, plants and animals. Bio- assessment of environmental quality.

UNIT – III

Sewage/Waste water treatment - collection, Primary treatment, Secondary treatment –Aerobic process: Activated sludge, Oxidation ditches, Trickling filters, towers, rotating discs, rotating drums, oxidation ponds. Anaerobic processes: Anaerobic digestion, Anaerobic filters, Tertiary treatment. Waste water treatment for some industries - dairy, distillery, tannery, sugar, antibiotic industries. Water recycling.

UNIT – IV

Solid waste treatment and disposal - : Sources and management - Composting, vermiculture and methane production. Biodegradation and bioremediation - Xenobiotics Hydrocarbons, oil pollution, surfactants, pesticides.

UNIT – V

Global environmental problems: Ozone depletion, Green house effect and acid rain, their Bioremediation of contaminated soils and waste land.

Paper II ADVANCED BIOTECHNOLOGY (Sub. Code: 203BTC12)

UNIT – I

INTRODUCTION TO GENETIC ENGINEERING

Salient features of cloning vectors, restriction enzymes and their mode of action, recombinant DNA- types of cloning vectors, plasmids, cosmids, M-13 Phage. Microinjection, particle bombardment, electroporation (Vector less mode), Construction of genomic DNA library and cDNA library.

UNIT– II

PLANT BIOTECHNOLOGY

Vectors for gene transfer (Ti , Ri plasmids, cointegrate, intermediate and helper plasmids) Binary vectors, viruses as vectors gene transfer techniques using Agrobacterium, selectable markers, reporter genes and promoters , transgenic plants, crop improvement , resistance to herbicide insects, pests and viruses, cytoplasmic male sterility, delayed fruit ripening, antibody vaccine and interferon production in plants, synthetic seeds.

UNIT – III

BIOPROCESS

Bioreactor designs and types of fermentation and fermentors. Concepts & basic modes of fermentation - Batch, fed batch and continuous fermentation. Conventional fermentation versus biotransformation. Solid substrate, surface and submerged fermentation. Fermentation economics and fermentation media. Fermenter design - mechanically agitated, pneumatic and hydrodynamic fermenters. Large scale animal and plant cell cultivation and air sterilization. Upstream processing - media formulation, sterilization, aeration and agitation. Measurement and control of bioprocess parameters, scale up and scale down process

UNIT- IV

TECHNIQUES IN BIOTECHNOLOGY

PCR- key concept- applications- PCR variants- analysis of amplified product by gel electrophoresis- Nucleic acid blotting techniques- sequencing – Sangers method, Maxam and Gilbert method- primer walking- automated sequencing- DNA chips and microarray-DNA fingerprinting.

UNIT – V

BIOTECHNOLOGY – INTELLECTUAL PROPERTY

- i) Intellectual property of rights, patents, trade secrets, copyrights, trade mark, choice of Intellectual Property Protection (IPR), and Plant genetic Resources (PGR), GATT (Genetic Agreement of Tariff and Trade), TRIP (trade Related Intellectual property).
- ii) Patents for higher plants, patenting transgenic organism and isolated genes, patenting genes and DNA sequences, Plant Breeders Rights (PBR) and farmers Right.
- iii) Ethical issues in animal biotechnology. Management aspects of biotechnology and genetic engineering.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OBJECTIVES:

1. To develop the basic reading and writing skills of first year engineering and technology students.
2. To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
3. To help learners develop their speaking skills and speak fluently in real contexts.
4. To help learners develop vocabulary of a general kind by developing their reading skills

UNIT I SHARING INFORMATION RELATED TO ONESELF/FAMILY & FRIENDS 12

Reading- short comprehension passages, practice in skimming-scanning and predicting-**Writing-** completing sentences- - developing hints. **Listening-** short texts- short formal and informal conversations. **Speaking-** introducing oneself - exchanging personal information-**Language development-** What Questions- asking and answering-yes or no questions- parts of speech. **Vocabulary development-** prefixes- suffixes- articles.- count/ uncount nouns.

UNIT II GENERAL READING AND FREE WRITING 12

Reading - comprehension-pre-reading-post reading- comprehension questions (multiple choice questions and /or short questions/ open-ended questions)-inductive reading- short narratives and descriptions from newspapers including dialogues and conversations (also used as short Listening texts)- register- **Writing** – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –**Listening-**telephonic conversations. **Speaking-** sharing information of a personal kind—greeting – taking leave- **Language development** – prepositions, conjunctions **Vocabulary development-**guessing meanings of words in context.

UNIT III GRAMMAR AND LANGUAGE DEVELOPMENT 12

Reading- short texts and longer passages (close reading) **Writing-** understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences **Listening** –listening to longer texts and filling up the table- product description- narratives from different sources. **Speaking-** asking about routine actions and expressing opinions. **Language development-** degrees of comparison- pronouns- direct vs indirect questions- **Vocabulary development** – single word substitutes- adverbs.

UNIT IV READING AND LANGUAGE DEVELOPMENT 12

Reading- comprehension-reading longer texts- reading different types of texts- magazines **Writing-** letter writing, informal or personal letters-e-mails-conventions of personal email-**Listening-** listening to dialogues or conversations and completing exercises based on them. **Speaking-** speaking about oneself-speaking about one's friend- **Language development-**Tenses- simple present-simple past- present continuous and past continuous- **Vocabulary development-** synonyms-antonyms- phrasal verbs

UNIT V EXTENDED WRITING 12

Reading- longer texts- close reading-**Writing-** brainstorming -writing short essays – developing an outline-identifying main and subordinate ideas- dialogue writing-**Listening** – listening to talks- conversations-**Speaking-** participating in conversations- short group conversations-**Language development-**modal verbs-present/ past perfect tense – **Vocabulary development-**collocations- fixed and semi-fixed expressions

OUTCOMES: At the end of the course, learners will be able to:

- Read articles of a general kind in magazines and newspapers.
- Participate effectively in informal conversations; introduce themselves and their friends and express opinions in English.
- Comprehend conversations and short talks delivered in English
- Write short essays of a general kind and personal letters and emails in English.

OBJECTIVES:

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus. The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modelling the engineering problems mathematically and obtaining solutions. This is a foundation course which mainly deals with topics such as single variable and multivariable calculus and plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I DIFFERENTIAL CALCULUS 12

Representation of functions - Limit of a function - Continuity - Derivatives - Differentiation rules - Maxima and Minima of functions of one variable.

UNIT II FUNCTIONS OF SEVERAL VARIABLES 12

Partial differentiation – Homogeneous functions and Euler’s theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor’s series for functions of two variables – Maxima and minima of functions of two variables – Lagrange’s method of undetermined multipliers.

UNIT III INTEGRAL CALCULUS 12

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

UNIT IV MULTIPLE INTEGRALS 12

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variables in double and triple integrals.

UNIT V DIFFERENTIAL EQUATIONS 12

Higher order linear differential equations with constant coefficients - Method of variation of parameters – Homogenous equation of Euler’s and Legendre’s type – System of simultaneous linear differential equations with constant coefficients - Method of undetermined coefficients.

TOTAL : 60 PERIODS

OUTCOMES:

After completing this course, students should demonstrate competency in the following

- skills: Use both the limit definition and rules of differentiation to differentiate functions.

Apply differentiation to solve maxima and minima problems.

- Evaluate integrals both by using Riemann sums and by using the Fundamental Theorem of Calculus. Apply integration to compute multiple integrals, area, volume, integrals in polar coordinates, in addition to change of order and change of variables.
- Evaluate integrals using techniques of integration, such as substitution, partial fractions and integration by parts.
- Determine convergence/divergence of improper integrals and evaluate convergent improper integrals.
- Apply various techniques in solving differential equations.

4. Srimantha Pal and Bhunia, S.C, "Engineering Mathematics" Oxford University Press, 2015.
5. Weir, M.D and Joel Hass, "Thomas Calculus", 12th Edition, Pearson India, 2016.

OBJECTIVES:

- To enhance the fundamental knowledge in Physics and its applications relevant to various streams of Engineering and Technology.

UNIT I PROPERTIES OF MATTER 9

Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment - I-shaped girders - stress due to bending in beams.

UNIT II WAVES AND FIBER OPTICS 9

Oscillatory motion – forced and damped oscillations: differential equation and its solution – plane progressive waves – wave equation. Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Semiconductor lasers: homojunction and heterojunction – Fiber optics: principle, numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) – losses associated with optical fibers - fibre optic sensors: pressure and displacement.

UNIT III THERMAL PHYSICS 9

Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conduction in solids – thermal conductivity - Forbe's and Lee's disc method: theory and experiment - conduction through compound media (series and parallel) – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar water heaters.

UNIT IV QUANTUM PHYSICS 9

Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – tunnelling (qualitative) - scanning tunnelling microscope.

UNIT V CRYSTAL PHYSICS 9

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances - coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures - crystal imperfections: point defects, line defects – Burger vectors, stacking faults – role of imperfections in plastic deformation - growth of single crystals: solution and melt growth techniques.

TOTAL: 45 PERIODS**OUTCOMES:**

Upon completion of this course,

- the students will gain knowledge on the basics of properties of matter and its applications, the students will acquire knowledge on the concepts of waves and optical devices and their applications in fibre optics,
- the students will have adequate knowledge on the concepts of thermal properties of materials and their applications in expansion joints and heat exchangers,
- the students will get knowledge on advanced physics concepts of quantum theory and its applications in tunneling microscopes, and
- the students will understand the basics of crystals, their structures and different crystal growth techniques.

TEXT BOOKS:

1. Bhattacharya, D.K. & Poonam, T. "Engineering Physics". Oxford University Press, 2015.
2. Gaur, R.K. & Gupta, S.L. "Engineering Physics". Dhanpat Rai Publishers, 2012.
3. Pandey, B.K. & Chaturvedi, S. "Engineering Physics". Cengage Learning India, 2012.

REFERENCES:

1. Halliday, D., Resnick, R. & Walker, J. "Principles of Physics". Wiley, 2015.
2. Serway, R.A. & Jewett, J.W. "Physics for Scientists and Engineers". Cengage Learning, 2010.
3. Tipler, P.A. & Mosca, G. "Physics for Scientists and Engineers with Modern Physics". W.H. Freeman, 2007.

OBJECTIVES:

- To make the students conversant with boiler feed water requirements, related problems and watertreatment techniques.
- To develop an understanding of the basic concepts of phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys.
- Preparation, properties and applications of engineering materials.
- Types of fuels, calorific value calculations, manufacture of solid, liquid and gaseous fuels.
- Principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuel cells.

UNIT I WATER AND ITS TREATMENT 9

Hardness of water – types – expression of hardness – units – estimation of hardness of water by EDTA – numerical problems – boiler troubles (scale and sludge) – treatment of boiler feed water – Internal treatment (phosphate, colloidal, sodium aluminate and calgon conditioning) external treatment – Ion exchange process, zeolite process – desalination of brackish water - Reverse Osmosis.

UNIT II SURFACE CHEMISTRY AND CATALYSIS 9

Adsorption: Types of adsorption – adsorption of gases on solids – adsorption of solute from solutions – adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – contact theory – kinetics of surface reactions, unimolecular reactions, Langmuir - applications of adsorption on pollution abatement. Catalysis: Catalyst – types of catalysis – criteria – autocatalysis – catalytic poisoning and catalytic promoters - acid base catalysis – applications (catalytic convertor) – enzyme catalysis– Michaelis–Menten equation.

UNIT III ALLOYS AND PHASE RULE 9

Alloys: Introduction- Definition- properties of alloys- significance of alloying, functions and effect of alloying elements- Nichrome and stainless steel (18/8) – heat treatment of steel. Phase rule: Introduction, definition of terms with examples, one component system -water system - reduced phase rule - thermal analysis and cooling curves - two component systems - lead-silver system - Pattinson process.

UNIT IV FUELS AND COMBUSTION 9

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufacture of metallurgical coke (Otto Hoffmann method) - petroleum - manufacture of synthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas - compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel. Combustion of fuels: Introduction - calorific value - higher and lower calorific values- theoretical calculation of calorific value - ignition temperature - spontaneous ignition temperature - explosive range - flue gas analysis (ORSAT Method).

UNIT V ENERGY SOURCES AND STORAGE DEVICES 9

Nuclear fission - controlled nuclear fission - nuclear fusion - differences between nuclear fission and fusion - nuclear chain reactions - nuclear energy - light water nuclear power plant - breeder reactor - solar energy conversion - solar cells - wind energy. Batteries, fuel cells and supercapacitors: Types of batteries – primary battery (dry cell) secondary battery (lead acid battery, lithium-ion-battery) fuel cells – H₂-O₂ fuel cell.

TOTAL: 45 PERIODS

OUTCOMES:

- The knowledge gained on engineering materials, fuels, energy sources and water treatment techniques will facilitate better understanding of engineering processes and applications for further learning.

TEXT BOOKS:

1. S. S. Dara and S. S. Umare, "A Textbook of Engineering Chemistry", S. Chand & Company LTD, New Delhi, 2015
2. P. C. Jain and Monika Jain, "Engineering Chemistry" Dhanpat Rai Publishing Company (P) LTD, New Delhi, 2015
3. S. Vairam, P. Kalyani and Suba Ramesh, "Engineering Chemistry", Wiley India PVT, LTD, New Delhi, 2013.

REFERENCES:

1. Friedrich Emich, "Engineering Chemistry", Scientific International PVT, LTD, New Delhi, 2014.
2. Prasanta Rath, "Engineering Chemistry", Cengage Learning India PVT, LTD, Delhi, 2015.
3. Shikha Agarwal, "Engineering Chemistry-Fundamentals and Applications", Cambridge University Press, Delhi, 2015.

OBJECTIVES:

- To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination)

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREEHAND SKETCHING 7+12

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACE 6+12

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS 5+12

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.

UNIT IV PROJECTION OF SECTIONED AND DEVELOPMENT OF SURFACES 5+12

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 6+12

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method .

TOTAL: 90 PERIODS**OUTCOMES:**

On successful completion of this course, the student will be able to

- familiarize with the fundamentals and standards of Engineering graphics
- perform freehand sketching of basic geometrical constructions and multiple views of objects.
- project orthographic projections of lines and plane surfaces. draw projections and solids and development of surfaces.
- visualize and to project isometric and perspective sections of simple solids.

2. IS 9609 (Parts 0 & 1) – 2001: Technical products Documentation – Lettering.
3. IS 10714 (Part 20) – 2001 & SP 46 – 2003: Lines for technical drawings.
4. IS 11669 – 1986 & SP 46 – 2003: Dimensioning of Technical Drawings.
5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods.

Special points applicable to University Examinations on Engineering Graphics:

1. There will be five questions, each of either or type covering all units of the syllabus.
2. All questions will carry equal marks of 20 each making a total of 100.
3. The answer paper shall consist of drawing sheets of A3 size only. The students will be permitted to use appropriate scale to fit solution within A3 size.
4. The examination will be conducted in appropriate sessions on the same day

OBJECTIVES:

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures — lists, tuples, dictionaries.
- To do input/output with files in Python.

UNIT I ALGORITHMIC PROBLEM SOLVING 9

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT IV LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

UNIT V FILES, MODULES, PACKAGES 9

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

TOTAL : 45 PERIODS**OUTCOMES:****Upon completion of the course, students will be able to**

- Develop algorithmic solutions to simple computational problems
- Read, write, execute by hand simple Python programs.
- Structure simple Python programs for solving problems.
- Decompose a Python program into functions.

Represent compound data using Python lists, tuples, dictionaries. Read and write data from/to files in Python Programs.

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

6. Timothy A. Budd, "Exploring Python", Mc-Graw Hill Education (India) Private Ltd., 2015.

OBJECTIVES:

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data **from/to files in Python.**

LIST OF PROGRAMS

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton's method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Programs that take command line arguments (word count)
11. Find the most frequent words in a text read from a file
12. Simulate elliptical orbits in Pygame
13. Simulate bouncing ball using Pygame

TOTAL: 60 PERIODS

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux

OUTCOMES:

Upon completion of the course, students will be able to

- Write, test, and debug simple Python programs.
- Implement Python programs with conditionals and loops.
- Develop Python programs step-wise by defining functions and calling them.
- Use Python lists, tuples, dictionaries for representing compound data.
- Read and write data from/to files in Python.

OBJECTIVES:

- To introduce different experiments to test basic understanding of physics concepts applied in optics, thermalphysics, properties of matter and liquids.

LIST OF EXPERIMENTS: PHYSICS LABORATORY (Any 5 Experiments)

1. Determination of rigidity modulus – Torsion pendulum
2. Determination of Young's modulus by non-uniform bending method
3. (a) Determination of wavelength, and particle size using Laser
(b) Determination of acceptance angle in an optical fiber.
4. Determination of thermal conductivity of a bad conductor – Lee's Disc method.
5. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer
7. Determination of wavelength of mercury spectrum – spectrometer grating
Determination of band gap of a semiconductor
8. Determination of thickness of a thin wire – Air wedge method

TOTAL: 30 PERIODS

OUTCOMES:

Upon completion of the course, the students will be able to

- apply principles of elasticity, optics and thermal properties for engineering applications.

CHEMISTRY LABORATORY: (Any seven experiments to be conducted)**OBJECTIVES:**

- To make the student to acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
- To acquaint the students with the determination of molecular weight of a polymer by viscometry.

1. Estimation of HCl using Na₂CO₃ as primary standard and Determination of alkalinity in water sample.
2. Determination of total, temporary & permanent hardness of water by EDTA method.
3. Determination of DO content of water sample by Winkler's method.
4. Determination of chloride content of water sample by argentometric method.
5. Estimation of copper content of the given solution by Iodometry.
6. Determination of strength of given hydrochloric acid using pH meter.
7. Determination of strength of acids in a mixture of acids using conductivity meter.
8. Estimation of iron content of the given solution using potentiometer.
9. Estimation of iron content of the water sample using spectrophotometer (1, 10-Phenanthroline / thiocyanate method).
10. Estimation of sodium and potassium present in water using flame photometer.
11. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.
12. Pseudo first order kinetics-ester hydrolysis.
13. Corrosion experiment-weight loss method.
14. Determination of CMC.
15. Phase change in a solid.
16. Conductometric titration of strong acid vs strong base.

TOTAL: 30 PERIODS

OUTCOMES:

- The students will be outfitted with hands-on knowledge in the quantitative chemical analysis of water quality related parameters.

TEXTBOOKS:

1. Vogel's Textbook of Quantitative Chemical Analysis (8TH edition, 2014)

The Induction Program is designed to make the newly joined students feel comfortable, sensitize them towards exploring their academic interests and activities, reducing competition and making them work for excellence, promote bonding with in them, build relations between teachers and students, give a broader view of life, and building of character.

Induction program	3 weeks duration
Induction program for students to be offered right at the start of the first year.	<ul style="list-style-type: none"> • Physical activity • Creative Arts • Universal Human Values • Literary • Proficiency Modules • Lectures by Eminent People • Visits to local Areas • Familiarization to Dept./Branch & Innovations

The activities during the Induction Program would have an Initial Phase, a Regular Phase and a Closing Phase. The Initial and Closing Phases would be two days each.

OBJECTIVES:

The Course prepares second semester engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialisation.

UNIT I INTRODUCTION TECHNICAL ENGLISH 12

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- **Speaking** – Asking for and giving directions- **Reading** – reading short technical texts from journals- newspapers- **Writing**- purpose statements – extended definitions – issue- writing instructions – checklists-recommendations-**Vocabulary Development**- technical vocabulary **Language Development** – subject verb agreement - compound words.

UNIT II READING AND STUDY SKILLS 12

Listening- Listening to longer technical talks and completing exercises based on them-**Speaking** – describing a process-**Reading** – reading longer technical texts- identifying the various transitions in a text- paragraphing- **Writing**- interpreting charts, graphs- **Vocabulary Development** - vocabulary used in formal letters/emails and reports **Language Development**- impersonal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING AND GRAMMAR 12

Listening- Listening to classroom lectures/ talks on engineering/technology -**Speaking** – introduction to technical presentations- **Reading** – longer texts both general and technical, practice in speed reading; **Writing**- Describing a process, use of sequence words- **Vocabulary Development**- sequence words- Misspelled words. **Language Development**- embedded sentences.

UNIT IV REPORT WRITING 12

Listening- Listening to documentaries and making notes. **Speaking** – mechanics of presentations- **Reading** – reading for detailed comprehension- **Writing**- email etiquette- job application – cover letter – Résumé preparation(via email and hard copy)- analytical essays and issue based essays--**Vocabulary Development**- finding suitable synonyms- paraphrasing-. **Language Development**- clauses- if conditionals.

UNIT V GROUP DISCUSSION AND JOB APPLICATIONS 12

Listening- TED/Ink talks; **Speaking** – participating in a group discussion -**Reading**– reading and understanding technical articles **Writing**– Writing reports- minutes of a meeting- accident and survey- **Vocabulary Development**- verbal analogies **Language Development**- reported speech.

TOTAL: 60 PERIODS

OUTCOMES:

At the end of the course learners will be able to:

- Read technical texts and write area- specific texts effortlessly.
- Listen and comprehend lectures and talks in their area of specialisation successfully. Speak appropriately and effectively in varied formal and informal contexts.
- Write reports and winning job applications.

5. Raman, Meenakshi and Sharma, Sangeetha- **Technical Communication Principles and Practice.** Oxford University Press: New Delhi, 2014.

OBJECTIVES:

- This course is designed to cover topics such as Matrix Algebra, Vector Calculus, Complex Analysis and Laplace Transform. Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering. Vector calculus can be widely used for modeling the various laws of physics. The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines.

UNIT I MATRICES**12**

Eigen values and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigen values and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

UNIT II VECTOR CALCULUS**12**

Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Area of a curved surface - Volume integral - Green's, Gauss divergence and Stoke's theorems – Verification and application in evaluating line, surface and volume integrals.

UNIT III ANALYTIC FUNCTIONS**12**

Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates - Properties – Harmonic conjugates – Construction of analytic function – Conformal mapping – Mapping by functions $w = z + c, cz, \frac{1}{z}, z^2$ - Bilinear transformation.

UNIT IV COMPLEX INTEGRATION**12**

Line integral - Cauchy's integral theorem – Cauchy's integral formula – Taylor's and Laurent's series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour.

UNIT V LAPLACE TRANSFORMS**12**

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulse function – Basic properties – Shifting theorems -Transforms of derivatives and integrals – Initial and final value theorems – Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear second order ordinary differential equations with constant coefficients.

TOTAL: 60 PERIODS**OUTCOMES:**

After successfully completing the course, the student will have a good understanding of the following topics and their applications:

- Eigenvalues and eigenvectors, diagonalization of a matrix, Symmetric matrices, Positive definite matrices and similar matrices.
- Gradient, divergence and curl of a vector point function and related identities.
- Evaluation of line, surface and volume integrals using Gauss, Stokes and Green's theorems and their verification.
- Analytic functions, conformal mapping and complex integration.
- Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.

5. Wylie, R.C. and Barrett, L.C., “Advanced Engineering Mathematics” “Tata McGraw Hill Education Pvt. Ltd, 6th Edition, New Delhi, 2012.

OBJECTIVE:

- To introduce the principles of thermal, acoustics, optics and new materials for civil engineering applications.

UNIT I THERMAL PERFORMANCE OF BUILDINGS 9

Heat transfer through fenestrations, thermal insulation and its benefits - heat gain and heat loss estimation - factors affecting the thermal performance of buildings, thermal measurements, thermal comfort, indices of thermal comfort, climate and design of solar radiation, shading devices central heating. Principles of natural ventilation - ventilation measurements, design for natural ventilation - Window types and packaged air conditioners - chilled water plant - fan coil systems - water piping - cooling load - Air conditioning systems for different types of buildings - Protection against fire to be caused by A. C. Systems.

UNIT II ACOUSTICS 9

Classification of sound- decibel- Weber–Fechner law – Sabine’s formula- derivation using growth and decay method – Absorption Coefficient and its determination –factors affecting acoustics of buildings and their remedies. Methods of sound absorptions - absorbing materials - noise and its measurements, sound insulation and its measurements, impact of noise in multi-storeyed buildings.

UNIT III LIGHTING DESIGNS 9

Radiation quantities – spectral quantities – relationship between luminescence and radiant quantities – hemispherical reflectance and transmittance – photometry: cosines law, inverse square law. Vision – photopic, mesopic, scotopic visions. Colour – luminous efficiency function - Visual field glare, colour - day light calculations - day light design of windows, measurement of day-light and use of models and artificial skies, principles of artificial lighting, supplementary artificial lighting.

UNIT IV NEW ENGINEERING MATERIALS 9

Composites - definition and classification - Fibre reinforced plastics (FRP) and fiber reinforced metals (FRM) - Metallic glasses - Shape memory alloys - Ceramics - Classification - Crystalline - Non Crystalline - Bonded ceramics, Manufacturing methods - Slip casting - Isostatic pressing - Gas pressure bonding - Properties - thermal, mechanical, electrical and chemical ceramic fibres - ferroelectric and ferromagnetic ceramics - High Aluminium ceramics.

UNIT V HAZARDS 9

Seismology and Seismic waves - Earth quake ground motion - Basic concepts and estimation techniques - site effects - Probabilistic and deterministic Seismic hazard analysis - Cyclone and flood hazards - Fire hazards and fire protection, fire-proofing of materials, fire safety regulations and firefighting equipment - Prevention and safety measures.

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of this course,

- the students will have knowledge on the thermal performance of buildings, the students will acquire knowledge on the acoustic properties of buildings, the students will get knowledge on various lighting designs for buildings,
- the students will gain knowledge on the properties and performance of engineering materials, and the students will understand the hazards of buildings.

3. Shearer, P.M. “Introduction to Seismology”, Cambridge University Press, 1999.

OBJECTIVES:

- To study the nature and facts about environment.
- To finding and implementing scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To study the dynamic processes and understand the features of the earth's interior and surface.
- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.

UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY**14**

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hill slopes, etc.

UNIT II ENVIRONMENTAL POLLUTION**8**

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

UNIT III NATURAL RESOURCES**10**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT**7**

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment

SKILL DEVELOPMENT**EMPLOYABILITY****ENTREPRENEURSHIP**

production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

6

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL: 45 PERIODS

OUTCOMES:

- Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental Protection. One will obtain knowledge on the following after completing the course.
- Public awareness of environmental is at infant stage.
- Ignorance and incomplete knowledge has lead to misconceptions
- Development and improvement in std. of living has lead to serious environmental disasters

TEXTBOOKS:

1. Benny Joseph, 'Environmental Science and Engineering', Tata McGraw-Hill, New Delhi, 2006.
2. Gilbert M.Masters, 'Introduction to Environmental Engineering and Science', 2nd edition, Pearson Education, 2004.

REFERENCES :

1. Dharmendra S. Sengar, 'Environmental law', Prentice hall of India Pvt Ltd, New Delhi, 2007.

4. Rajagopalan, R, 'Environmental Studies-From Crisis to Cure', Oxford University Press, 2005.

OBJECTIVES:

- To explain the basic theorems used in Electrical circuits and the different components and function of electrical machines.
- To explain the fundamentals of semiconductor and applications. To explain the principles of digital electronics
- To impart knowledge of communication.

UNIT I ELECTRICAL CIRCUITS & MEASUREMENTS 9

Fundamental laws of electric circuits – Steady State Solution of DC Circuits – Introduction to AC Circuits – Sinusoidal steady state analysis – Power and Power factor – Single Phase and Three Phase Balanced Circuits. Classification of instruments – Operating Principles of indicating Instruments

UNIT II ELECTRICAL MACHINES 9

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Introduction - Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier.

UNIT IV DIGITAL ELECTRONICS 9

Binary Number System – Boolean Algebra theorems – Digital circuits - Introduction to sequential Circuits – Flip-Flops – Registers and Counters – A/D and D/A Conversion – digital processing architecture.

UNIT V FUNDAMENTALS OF COMMUNICATION ENGINEERING 9

Introduction – Elements of Communication Systems – Modulation and Demodulation: Principles of Amplitude and Frequency Modulations. Digital Communication - Communication Systems: Radio, Antenna, TV, Fax, ISDN, Microwave, Satellite and Optical Fibre (Block Diagram Approach only).

TOTAL: 45 PERIODS

OUTCOMES:

- ability to identify the electrical components and explain the characteristics of electrical machines.
- ability to identify electronics components and understand the characteristics

TEXT BOOKS:

1. D P Kothari and I.J Nagarath, "Electrical Machines "Basic Electrical and Electronics Engineering", McGrawHill Education(India) Private Limited, Third Reprint ,2016

6. Nagsarkar T K and Sukhija M S, "Basics of Electrical Engineering", Oxford press 2005.

SKILL DEVELOPMENT

EMPLOYABILITY

ENTREPRENEURSHIP

OBJECTIVES:

- To develop capacity to predict the effect of force and motion in the course of carrying out the design functions of engineering.

UNIT I STATICS OF PARTICLES 9+6

Introduction – Units and Dimensions – Laws of Mechanics – Lami's theorem, Parallelogram and triangular Law of forces – Vectorial representation of forces – Vector operations of forces - additions, subtraction, dot product, cross product – Coplanar Forces – rectangular components – Equilibrium of a particle – Forces in space – Equilibrium of a particle in space – Equivalent systems of forces – Principle of transmissibility .

UNIT II EQUILIBRIUM OF RIGID BODIES 9+6

Free body diagram – Types of supports – Action and reaction forces – stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon's theorem – Single equivalent force -Equilibrium of Rigid bodies in two dimensions – Equilibrium of Rigid bodies in three dimensions

UNIT III PROPERTIES OF SURFACES AND SOLIDS 9+6

Centroids and centre of mass – Centroids of lines and areas - Rectangular, circular, triangular areas by integration – T section, I section, - Angle section, Hollow section by using standard formula – Theorems of Pappus - Area moments of inertia of plane areas – Rectangular, circular, triangular areas by integration – T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Principal moments of inertia of plane areas – Principal axes of inertia-Mass moment of inertia – mass moment of inertia for prismatic, cylindrical and spherical solids from first principle – Relation to area moments of inertia.

UNIT IV DYNAMICS OF PARTICLES 9+6

Displacements, Velocity and acceleration, their relationship – Relative motion – Curvilinear motion Newton's laws of motion – Work Energy Equation– Impulse and Momentum – Impact of elastic bodies.

UNIT V FRICTION AND RIGID BODY DYNAMICS 9+6

Friction force – Laws of sliding friction – equilibrium analysis of simple systems with sliding friction – wedge friction-. Rolling resistance -Translation and Rotation of Rigid Bodies – Velocity and acceleration – General Plane motion of simple rigid bodies such as cylinder, disc/wheel and sphere.

TOTAL : (45+30)=75 PERIODS

OUTCOMES:

On successful completion of this course, the student will be able to

- illustrate the vectorial and scalar representation of forces
- and moments analyse the rigid body in equilibrium
- evaluate the properties of surfaces and
- solids calculate dynamic forces exerted in rigid body
- determine the friction and the effects by the laws of friction

TEXT BOOKS:

3. Irving H. Shames and Krishna Mohana Rao. G., “Engineering Mechanics – Statics and Dynamics”, 4th Edition, Pearson Education 2006.
4. Meriam J.L. and Kraige L.G., “ Engineering Mechanics- Statics - Volume 1, Dynamics- Volume 2”, Third Edition, John Wiley & Sons, 1993.
5. Rajasekaran S and Sankarasubramanian G., “Engineering Mechanics Statics and Dynamics”, 3rd Edition, Vikas Publishing House Pvt. Ltd., 2005.

OBJECTIVES:

- To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

GROUP A (CIVIL & MECHANICAL)**I CIVIL ENGINEERING PRACTICE****14****Buildings:**

- (a) Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.
- (b) Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.
- (c) Study of pipe connections requirements for pumps and turbines.
- (d) Preparation of plumbing line sketches for water supply and sewage works.
- (e) Hands-on-exercise:
- (f) Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components.
- (g) Demonstration of plumbing requirements of high-rise buildings.

Carpentry using Power Tools only:

- (a) Study of the joints in roofs, doors, windows and furniture.
- (b) Hands-on-exercise:
Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE**18****Welding:**

- (a) Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.
- (b) Gas welding practice

Basic Machining:

- (a) Simple Turning and Taper turning
- (b) Drilling Practice

Sheet Metal Work:

- (a) Forming & Bending:
- (b) Model making – Trays and funnels.
- (c) Different type of joints.

- (a) Study of centrifugal pump
- (b) Study of air conditioner

- (a) Smithy operations, upsetting, swaging, setting down and bending.
Example – Exercise – Production of hexagonal headed bolt.
- (b) Foundry operations like mould preparation for gear and step cone pulley.
- (c) Fitting – Exercises – Preparation of square fitting and V – fitting models.

GROUP B (ELECTRICAL & ELECTRONICS)**III ELECTRICAL ENGINEERING PRACTICE****12****13**

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
2. Fluorescent lamp wiring.
3. Stair case wiring
4. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit.
5. Measurement of energy using single phase energy meter.
6. Measurement of resistance to earth of an electrical equipment.

IV ELECTRONICS ENGINEERING PRACTICE

16

1. Study of Electronic components and equipments – Resistor, colour coding measurement of AC signal parameter (peak-peak, rms period, frequency) using CR.
2. Study of logic gates AND, OR, EX-OR and NOT.
3. Generation of Clock Signal.
4. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
5. Measurement of ripple factor of HWR and FWR.

TOTAL: 60 PERIODS

OUTCOMES:

On successful completion of this course, the student will be able to

- fabricate carpentry components and pipe connections including plumbing works. use welding equipments to join the structures.
 - Carry out the basic machining operations Make the models using
 - sheet metal works Illustrate on centrifugal pump, Air conditioner,
 - operations of smithy, foundry and fittings
 - Carry out basic home electrical works and
 - appliances Measure the electrical quantities
- Elaborate on the components, gates, soldering practices.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:

CIVIL

1. Assorted components for plumbing consisting of metallic pipes, plastic pipes, flexible pipes, couplings, unions, elbows, plugs and other fittings. 15 Sets.
2. Carpentry vice (fitted to work bench) 15 Nos.
3. Standard woodworking tools 15 Sets.
4. Models of industrial trusses, door joints, furniture joints 5 each
5. Power Tools:
 - (a) Rotary Hammer 2 Nos
 - (b) Demolition Hammer 2 Nos
 - (c) Circular Saw 2 Nos
 - (d) Planer 2 Nos
 - (e) Hand Drilling Machine 2 Nos
 - (f) Jigsaw 2 Nos

MECHANICAL

1. Arc welding transformer with cables and holders 5 Nos.
2. Welding booth with exhaust facility 5 Nos.
3. Welding accessories like welding shield, chipping hammer, wire brush, etc. 5 Sets.
4. Oxygen and acetylene gas cylinders, blow pipe and other welding outfit. 2 Nos.
5. Centre lathe 2 Nos.
6. Hearth furnace, anvil and smithy tools 2 Sets.
7. Moulding table, foundry tools 2 Sets.
8. Power Tool: Angle Grinder 2 Nos
9. Study-purpose items: centrifugal pump, air-conditioner One each.

ELECTRICAL

1. Assorted electrical components for house wiring 15 Sets

2. Electrical measuring instruments	10	Sets
3. Study purpose items: Iron box, fan and regulator, emergency lamp		1 each
4. Megger (250V/500V)	1	No.
5. Power Tools: (a) Range Finder	2	Nos
		Nos
(b) Digital Live-wire detector	2	

ELECTRONICS

1. Soldering guns	10	Nos.
2. Assorted electronic components for making circuits	50	Nos.
3. Small PCBs	10	Nos.
4. Multimeters	10	Nos.
5. Study purpose items: Telephone, FM radio, low-voltage power supply		

OBJECTIVES:

- To introduce the students to draft the plan, elevation and sectional views of buildings in accordance with development and control rules satisfying orientation and functional requirements as per National Building Code.

LIST OF EXPERIMENTS

1. Principles of planning, orientation and complete joinery details (Paneled and Glazed Doors and Windows)
2. Buildings with load bearing walls
3. Buildings with sloping roof
4. R.C.C. framed structures.
5. Industrial buildings – North light roof structures

TOTAL: 60 PERIODS**OUTCOMES:**

- The students will be able to draft the plan, elevation and sectional views of the buildings, industrial structures, and framed buildings using computer softwares.

TEXTBOOKS:

1. Sikka V.B., A Course in Civil Engineering Drawing, 4th Edition, S.K.Kataria and Sons, 2015.

3. Shah.M.G., Kale. C.M. and Patki.S.Y., Building Drawing with an Integrated Approach to Built Environment, Tata McGraw Hill Publishers Limited, 2007.
4. Verma.B.P., Civil Engineering Drawing and House Planning, Khanna Publishers, 2010.

Aim:

- To understand the salient features of the Indian Constitution

Objectives:

- To make the students understand about the Democratic Rule and Parliamentary Administration.
- To appreciate the salient features of the Indian Constitution.
- To know the fundamental Rights and Constitutional Remedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- To exercise the adult franchise of voting and appreciate the Electoral system of Indian Democracy.

Outcomes

- Democratic values and citizenship Training are gained.
- Awareness on Fundamental Rights are established.
- The functions of union Government and State Governments are learnt.
- The power and functions of the Judiciary learnt thoroughly.
- Appreciation of Democratic Parliamentary Rule is learnt.

UNIT I: The Making Of Indian constitution

The Constituent Assembly Organization Character – Work – Salient features of the constitution – Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

UNIT II: Fundamental Rights And Fundamental Duties Of The Citizens

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom of Religion – Cultural and Educational Rights – Right to Constitutional Remedies – Fundamental Duties.

UNIT III: Directive Principles Of State Policy

Socialism Principles – Gandhian Principles – Liberal and General Principles – Differences between Fundamental Rights and Directive principles.

UNIT IV: The Union Executive, Union parliament And Supreme Court

Powers and positions of the President – Qualification Method of Election of President and vice president – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

UNIT V: State Council – Election System And Parliamentary Democracy In India

State council of Ministers – Chief Minister – Election system in India- Main features – Election Commission - Features of Indian Democracy.

References:

1. Palekar S.A. Indian Constitution Government and politics, ABD Publications, India.
2. Aiyer Alladi, Krishnaswami, Constitution and fundamental rights 1955.
3. Markandan K.C. Directive Principles in the Indian Constitution 1966.
4. Kashyap Subash C Our Parliament, National Book, Trust New Delhi 1989.

OBJECTIVES:

- To introduce the basic concepts of PDE for solving standard partial differential equations.
- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations. To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.

UNIT I PARTIAL DIFFERENTIAL EQUATIONS 12

Formation of partial differential equations – Singular integrals - Solutions of standard types of first order partial differential equations - Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.

UNIT II FOURIER SERIES 12

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis.

UNIT III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12

Classification of PDE – Method of separation of variables - Fourier Series Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heat conduction.

UNIT IV FOURIER TRANSFORMS 12

Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT V Z - TRANSFORMS AND DIFFERENCE EQUATIONS 12

Z-transforms - Elementary properties – Inverse Z-transform (using partial fraction and residues) – Initial and final value theorems - Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

TOTAL: 60 PERIODS

OUTCOMES :

- Upon successful completion of the course, students should be able to:
- Understand how to solve the given standard partial differential equations.
 - Solve differential equations using Fourier series analysis which plays a vital role in engineering applications. Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
 - Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
 - Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

6. Wylie, R.C. and Barrett, L.C., "Advanced Engineering Mathematics "Tata McGraw Hill Education Pvt. Ltd, 6th Edition, New Delhi, 2012.

OBJECTIVE:

- At the end of this course the students will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and to apply this knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor.

UNIT I PHYSICAL GEOLOGY 9

Geology in civil engineering – branches of geology – structure of earth and its composition weathering of rocks – scale of weathering – soils - landforms and processes associated with river, wind, groundwater and sea – relevance to civil engineering. Plate tectonics – Earth quakes – Seismic zones in India.

UNIT II MINEROLOGY 9

Physical properties of minerals – Quartz group, Feldspar group, Pyroxene - hypersthene and augite, Amphibole – hornblende, Mica – muscovite and biotite, Calcite, Gypsum and Clay minerals.

UNIT III PETROLOGY 9

Classification of rocks, distinction between Igneous, Sedimentary and Metamorphic rocks. Engineering properties of rocks. Description, occurrence, engineering properties, distribution and uses of Granite, Dolerite, Basalt, Sandstone, Limestone, Laterite, Shale, Quartzite, Marble, Slate, Gneiss and Schist.

UNIT IV STRUCTURAL GEOLOGY AND GEOPHYSICAL METHODS 9

Geological maps – attitude of beds, study of structures – folds, faults and joints – relevance to civil engineering. Geophysical methods – Seismic and electrical methods for subsurface investigations.

UNIT V APPLICATION OF GEOLOGICAL INVESTIGATIONS 9

Remote sensing for civil engineering applications; Geological conditions necessary for design and construction of Dams, Reservoirs, Tunnels, and Road cuttings - Hydrogeological investigations and mining - Coastal protection structures. Investigation of Landslides, causes and mitigation.

TOTAL: 45 PERIODS

OUTCOMES:

The students completing this course

- Will be able to understand the importance of geological knowledge such as earth, earthquake, volcanism and the action of various geological agencies.
 - Will get basics knowledge on properties of minerals.
 - Gain knowledge about types of rocks, their
 - distribution and uses. Will understand the methods of
 - study on geological structure.
- Will understand the application of geological investigation in projects such as dams, tunnels, bridges, roads, airport and harbor

OBJECTIVE:

- To introduce students to various materials commonly used in civil engineering construction and their properties.

UNIT I STONES – BRICKS – CONCRETE BLOCKS 9

Stone as building material – Criteria for selection – Tests on stones – Deterioration and Preservation of stone work – Bricks – Classification – Manufacturing of clay bricks – Tests on bricks – Compressive Strength – Water Absorption – Efflorescence – Bricks for special use – Refractory bricks – Concrete blocks – Lightweight concrete blocks.

UNIT II LIME – CEMENT – AGGREGATES – MORTAR 9

Lime – Preparation of lime mortar – Cement – Ingredients – Manufacturing process – Types and Grades – Properties of cement and Cement mortar – Hydration – Compressive strength – Tensile strength – Fineness – Soundness and consistency – Setting time – fine aggregates – river sand – crushed stone sand – properties – coarse Aggregates – Crushing strength – Impact strength – Flakiness Index – Elongation Index – Abrasion Resistance – Grading

UNIT III CONCRETE 9

Concrete – Ingredients – Manufacturing Process – Batching plants – mixing – transporting – placing – compaction of concrete – curing and finishing – Ready mix Concrete – Mix specification.

UNIT IV TIMBER AND OTHER MATERIALS 9

Timber – Market forms – Industrial timber – Plywood – Veneer – Thermocol – Panels of laminates – Steel – Aluminum and Other Metallic Materials – Composition – Aluminium composite panel – Market forms – Mechanical treatment – Paints – Varnishes – Distempers – Bitumens.

UNIT V MODERN MATERIALS 9

Glass – Ceramics – Sealants for joints – Fibre glass reinforced plastic – Clay products – Refractories – Composite materials – Types – Applications of laminar composites – Fibre textiles – Geomembranes and Geotextiles for earth reinforcement.

TOTAL: 60 PERIODS**OUTCOMES:**

On completion of this course the students will be able to

- Compare the properties of most common and advanced building materials. understand the typical and potential applications of lime, cement and aggregates
- know the production of concrete and also the method of placing and making of concrete elements. understand the applications of timbers and other materials
- Understand the importance of modern material for construction.

6. IS1542-1992: Indian standard specification for sand for plaster, 2009
7. IS 10262-2009: Indian Standard Concrete Mix Proportioning –Guidelines, 2009

OBJECTIVES:

- To learn the fundamental concepts of Stress, Strain and deformation of solids.□
- To know the mechanism of load transfer in beams, the induced stress resultants and deformations.□ To understand the effect of torsion on shafts and springs.□
- To analyze plane and space trusses□

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 12

Simple Stresses and strains – Elastic constants - Relationship between elastic constants – Stress Strain Diagram – Ultimate Stress – Yield Stress – Deformation of axially loaded member - Composite Bars - Thermal Stresses – State of Stress in two dimensions – Stresses on inclined planes – Principal Stresses and Principal Planes – Maximum shear stress - Mohr's circle method.

UNIT II TRANSFER OF LOADS AND STRESSES IN BEAMS 12

Types of loads, supports, beams – concept of shearing force and bending moment - Relationship between intensity of load, Shear Force and Bending moment - Shear Force and Bending Moment Diagrams for Cantilever, simply supported and overhanging beams with concentrated load, uniformly distributed load, uniformly varying load and concentrated moment. Theory of Simple Bending – Stress Distribution due to bending moment and shearing force - Flitched Beams - Leaf Springs.

UNIT III DEFLECTION OF BEAMS**12**

Elastic curve – Governing differential equation - Double integration method - Macaulay's method - Area moment method - conjugate beam method for computation of slope and deflection of determinant beams.

UNIT IV TORSION**12**

Theory of Torsion – Stresses and Deformations in Solid and Hollow Circular Shafts – combined bending moment and torsion of shafts - Power transmitted to shaft – Shaft in series and parallel – Closed and Open Coiled helical springs – springs in series and parallel – Design of buffer springs.

UNIT V ANALYSIS OF TRUSSES**12**

Determinate and indeterminate trusses - Analysis of pin jointed plane determinate trusses by method of joints, method of sections and tension coefficient – Analysis of Space trusses by tension coefficient method.

TOTAL: 60 PERIODS**OUTCOMES:**

Students will be able to

- Understand the concepts of stress and strain, principal stresses and principal planes.
- Determine Shear force and bending moment in beams and understand concept of theory of simple bending. Calculate the deflection of beams by different methods and selection of method for determining slope or deflection.
- Apply basic equation of torsion in design of circular shafts and helical springs, .Analyze the pin jointed plane and space trusses

6. Gambhir. M.L., "Fundamentals of Solid Mechanics", PHI Learning Private Limited., New Delhi, 2009.

OBJECTIVE:

- To understand the basic properties of the fluid, fluid kinematics, fluid dynamics and to analyze and appreciate the complexities involved in solving the fluid flow problems.

UNIT I FLUID PROPERTIES AND FLUID STATICS 12

Fluid – definition, distinction between solid and fluid - Units and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapour pressure, capillarity and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures - pressure measurements by manometers-forces on planes – centre of pressure – buoyancy and floatation.

UNIT II FLUID KINEMATICS AND DYNAMICS 12

Fluid Kinematics – Classification and types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- stream line-streak line-path line- stream function - velocity potential function - flow net. Fluid dynamics - equations of motion -Euler's equation along a streamline - Bernoulli's equation – applications - venturi meter, orifice meter and Pitot tube- linear momentum equation and its application to pipe bend.

UNIT III DIMENSIONAL ANALYSIS AND MODEL STUDIES 12

Fundamental dimensions - dimensional homogeneity - Rayleigh's method and Buckingham Pi-theorem - dimensionless parameters - similitudes and model studies - distorted models.

UNIT IV FLOW THROUGH PIPES 12

Reynold's experiment - laminar flow through circular pipe (Hagen poiseulle's) - hydraulic and energy gradient – flow through pipes - Darcy - Weisbach's equation - pipe roughness -friction factor-Moody's diagram- major and minor losses of flow in pipes - pipes in series and in parallel.

UNIT V BOUNDARY LAYER 12

Boundary layer – definition- boundary layer on a flat plate – laminar and turbulent boundary layer- displacement, energy and momentum thickness – Momentum integral equation-Boundary layer separation and control – drag on flat plate.

TOTAL: 60 PERIODS**OUTCOMES:**

At the end of the course students will be able to

- Get a basic knowledge of fluids in static, kinematic and dynamic equilibrium. Understand and solve the problems related to equation of motion.
- Gain knowledge about dimensional and model analysis. Learn types of flow and losses of flow in pipes.
- Understand and solve the boundary layer problems.

4. Mohd. Kaleem Khan, "Fluid Mechanics and Machinery", Oxford University Press, New Delhi, 2015.
5. Bansal.R.K., "Fluid Mechanics and Hydraulic Machines", Laxmi Publications Pvt. Ltd., New Delhi, 2013.

OBJECTIVES:

- To introduce the rudiments of plane surveying and geodetic principles to Civil Engineers.
- To learn the various methods of plane and geodetic surveying to solve the real world Civil Engineering problems.
- To introduce the concepts of Control
- Surveying To introduce the basics of Astronomical Surveying

UNIT I FUNDAMENTALS OF CONVENTIONAL SURVEYING AND LEVELLING 12

Classifications and basic principles of surveying - Equipment and accessories for ranging and chaining - Methods of ranging - Compass - Types of Compass - Basic Principles- Bearing – Types - True Bearing - Magnetic Bearing - Levelling- Principles and theory of Levelling – Datum- - Bench Marks – Temporary and Permanent Adjustments- Methods of Levelling- Booking – Reduction - Sources of errors in Levelling - Curvature and refraction.

UNIT II THEODOLITE AND TACHEOMETRIC SURVEYING 12

Horizontal and vertical angle measurements - Temporary and permanent adjustments - Heights and distances - Tacheometer - Stadia Constants - Analytic Lens -Tangential and Stadia Tacheometry surveying - Contour – Contouring – Characteristics of contours – Methods of contouring – Tacheometric contouring - Contour gradient – Uses of contour plan and map

UNIT III CONTROL SURVEYING AND ADJUSTMENT 12

Horizontal and vertical control – Methods – specifications – triangulation- baseline – satellite stations – reduction to centre- trigonometrical levelling – single and reciprocal observations – traversing – Gale’s table. - Errors Sources- precautions and corrections – classification of errors –true and most probable values - weighed observations – method of equal shifts – principle of least squares - normal equation – correlates-level nets- adjustment of simple triangulation networks.

UNIT IV ADVANCED TOPICS IN SURVEYING 12

Hydrographic Surveying – Tides – MSL – Sounding methods – Three point problem – Strength of fix – astronomical Surveying – Field observations and determination of Azimuth by altitude and hour and methods- Astronomical terms and definitions-coordinate systems-different time systems-Nautical corrections-Field observations and determination altitude and hour angle method

UNIT V MODERN SURVEYING 12

Total Station : Advantages - Fundamental quantities measured- Parts and a principle On board calculations - Field procedure - Errors and good station GPS Surveying : Different segments – space control configuration-signal structure - Orbit determination and representation. Selective availability- Task of control segment –processing – traversing and triangulation.

TOTAL: 45 PERIODS**OUTCOMES:**

At the end of the course the student will be able to

- understand The use of various surveying
- instruments and mapping
- Measuring Horizontal angle and vertical angle using different
- instruments Methods of Leveling and setting Levels with different instruments

Concepts of astronomical surveying and methods to determine time, longitude, latitude and azimuth Concept and principle of modern surveying.

5. Arora K.R., "Surveying Vol I & II", Standard Book house, 10th Edition 2008

OBJECTIVE:

- To facilitate the understanding of the behavior of construction materials.

I. TEST ON FINE AGGREGATES **12**

1. Grading of fine aggregates
2. Test for specific gravity and test for bulk density
3. Compacted and loose bulk density of fine aggregate

II. TEST ON COARSE AGGREGATE **12**

1. Determination of impact value of coarse aggregate
2. Determination of elongation index
3. Determination of flakiness index
4. Determination of aggregate crushing value of coarse aggregate

III. TEST ON CONCRETE **12**

1. Test for Slump
2. Test for Compaction factor
3. Test for Compressive strength - Cube & Cylinder
4. Test for Flexural strength

IV. TEST ON BRICKS AND BLOCKS **12**

1. Test for compressive strength of bricks and blocks
2. Test for Water absorption of bricks and blocks
3. Determination of Efflorescence of bricks
4. Test on tiles

TOTAL: 60 PERIODS**OUTCOME:**

- The students will have the required knowledge in the area of testing of construction materials and components of construction elements experimentally.

REFERENCES:

1. Construction Materials Laboratory Manual, Anna University, Chennai-600 025.
2. IS 4031 (Part 1) – 1996 – Indian Standard Method for determination of fineness by dry sieving.
3. IS 2386 (Part 1 to Part 6) – 1963 – Indian Standard methods for test for aggregate for concrete
4. IS 383 – 1970 Indian Standard specification for coarse and fine aggregates from natural sources for concrete.

OBJECTIVE:

- At the end of the course the student will possess knowledge about Survey field techniques

LIST OF EXPERIMENTS:**Chain Survey 12**

1. Study of chains and its accessories, Aligning, Ranging, Chaining and Marking Perpendicular offset
2. Setting out works – Foundation marking using tapes single Room and Double Room

Compass Survey 12

3. Compass Traversing – Measuring Bearings & arriving included angles

Levelling - Study of levels and levelling staff

4. Fly levelling using Dumpy level & Tilting level
5. Check levelling

Theodolite - Study of Theodolite 12

6. Measurements of horizontal angles by reiteration and repetition and vertical angles
7. Determination of elevation of an object using single plane method when base is accessible/inaccessible.

Tacheometry – Tangential system – Stadia system 12

8. Determination of Tacheometric Constants
9. Heights and distances by stadia Tacheometry
10. Heights and distances by Tangential Tacheometry

Total Station - Study of Total Station, Measuring Horizontal and vertical angles 12

12. Traverse using Total station and Area of Traverse
13. Determination of distance and difference in elevation between two inaccessible points using Total station

TOTAL: 60 PERIODS**OUTCOME:**

- Students completing this course would have acquired practical knowledge on handling basic survey instruments including Theodolite, Tacheometry, Total Station and GPS and have adequate knowledge to carryout Triangulation and Astronomical surveying including general field marking for various engineering projects and Location of site etc.

LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS

Sl.No.	Description of Equipment	Quantity
1.	Total Station	3 Nos
2.	Theodolites	Atleast 1 for every 5 students
3.	Dumpy level / Filling level	Atleast 1 for every 5 students
4.	Pocket stereoscope	1
5.	Ranging rods	1 for a set of 5 students
6.	Levelling staff	
7.	Cross staff	
8.	Chains	
9.	Tapes	
10.	Arrows	
11.	Prismatic Compass	10 nos
12.	Surveyor Compass	2 nos
13.	Survey grade or Hand held GPS	3 nos

OBJECTIVES:

The Course will enable learners to:

- Equip students with the English language skills required for the successful undertaking of academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage in specific academic speaking activities.
- improve general and academic listening skills
- Make effective presentations.

UNIT I**6**

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation - pronunciation basics taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances.

UNIT II**6**

Listen to a process information- give information, as part of a simple explanation - conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics.

UNIT III**6**

Lexical chunking for accuracy and fluency- factors influence fluency, deliver a five-minute informal talk - greet - respond to greetings - describe health and symptoms - invite and offer - accept - decline - take leave - listen for and follow the gist- listen for detail

UNIT IV**6**

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizing academic readings and lectures conversational speech listening to and participating in conversations - persuade.

UNIT V**6**

Formal and informal talk - listen to follow and respond to explanations, directions and instructions in academic and business contexts - strategies for presentations and interactive communication - group/pair presentations - negotiate disagreement in group work.

TOTAL: 30 PERIODS**OUTCOMES:**

At the end of the course Learners will be able to:

- Listen and respond appropriately.
- Participate in group discussions
- Make effective presentations
- Participate confidently and appropriately in conversations both formal and informal

TEXTBOOKS:

1. Brooks, Margret. Skills for Success. Listening and Speaking. Level 4 Oxford University Press, Oxford: 2011.

COURSE OUTLINE**Unit-I Concepts**

Sex vs. Gender, masculinity, femininity, socialization, patriarchy, public/ private, essentialism, binaryism, power, hegemony, hierarchy, stereotype, gender roles, gender relation, deconstruction, resistance, sexual division of labour.

Unit-II Feminist Theory

Liberal, Marxist, Socialist, Radical, Psychoanalytic, postmodernist, eco-feminist.

Unit-III Women's Movements: Global, National and Local

Rise of Feminism in Europe and America. Women's Movement in India.

Unit-IV Gender and Language

Linguistic Forms and Gender. Gender and narratives.

Unit-V Gender and Representation

Advertising and popular visual media. Gender and Representation in Alternative Media. Gender and social media.

OBJECTIVES :

- To introduce the basic concepts of solving algebraic and transcendental equations.
- To introduce the numerical techniques of interpolation in various intervals in real life situations.
- To acquaint the student with understanding of numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquaint the knowledge of various techniques and methods of solving ordinary differentialequations.
- To understand the knowledge of various techniques and methods of solving various types of partialdifferential equations.

UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 12

Solution of algebraic and transcendental equations - Fixed point iteration method – Newton Raphson method - Solution of linear system of equations - Gauss elimination method – Pivoting - Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel - Eigenvalues of a matrix by power method and Jacobi’s method for symmetric matrices.

UNIT II INTERPOLATION AND APPROXIMATION 12

Interpolation with unequal intervals - Lagrange's interpolation – Newton’s divided difference interpolation- Cubic Splines - Difference operators and relations Interpolation intervals-with equal - Newton’s forward and backward difference formulae.

UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 12

Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson’s 1/3 rule – Romberg’s Method - Two point and three point Gaussian quadrature formulae – Evaluation of double integrals by Trapezoidal and Simpson’s 1/3 rule – Romberg’s Method - Two point and three point simpson’s 1/3 rule

UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 12

Single step methods - Taylor’s series method - Euler’s method - Modified Euler’s method - Fourth order Runge - Kutta method for solving first order equations - Multi step methods - Milne’s and Adams - Bash forth predictor corrector methods for solving first order equations.

UNIT V BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 12

Finite difference methods for solving second order two - point linear boundary value problems - Finite difference techniques for the solution of two dimensional Laplace’s and Poisson’s equations on rectangular domain – One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods – One dimensional wave equation by explicit method.

TOTAL: 60 PERIODS**OUTCOMES :**

CIVIL – 2020R

Page 61

Upon successful completion of the course, students should be able to:

- Understand the basic concepts and techniques of solving algebraic and transcendental equations.
- Appreciate the numerical techniques of interpolation and error approximations in various intervals in real life situations.
- Apply the numerical techniques of differentiation and integration for engineering problems.
- Understand the knowledge of various techniques and methods for solving first and second order ordinary differential equations.
- Solve the partial and ordinary differential equations with initial and boundary conditions by using certain techniques with engineering applications.

OBJECTIVE:

- The main objective of this course is to make the student aware of the various construction techniques, practices and the equipment needed for different types of construction activities. At the end of this course the student shall have a reasonable knowledge about the various construction procedures for sub to super structure and also the equipment needed for construction of various types of structures from foundation to super structure.

UNIT I CONSTRUCTION TECHNIQUES 9

Structural systems - Load Bearing Structure - Framed Structure - Load transfer mechanism – floor system - Development of construction techniques - High rise Building Technology - Seismic effect - Environmental impact of materials – responsible sourcing - Eco Building (Green Building) - Material used - Construction methods - Natural Buildings - Passive buildings - Intelligent(Smart) buildings - Meaning - Building automation - Energy efficient buildings for various zones-Case studies of residential, office buildings and other buildings in each zones.

UNIT II CONSTRUCTION PRACTICES 9

Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork - masonry – stone masonry – Bond in masonry - concrete hollow block masonry – flooring – damp proof courses – construction joints – movement and expansion joints – pre cast pavements – Building foundations – basements – temporary shed – centering and shuttering – slip forms – scaffoldings – de-shuttering forms – Fabrication and erection of steel trusses – frames – braced domes – laying brick – weather and water proof – roof finishes – acoustic and fire protection.

UNIT III SUB STRUCTURE CONSTRUCTION 9

Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques - well and caisson - sinking cofferdam - cable anchoring and grouting - driving diaphragm walls, sheet piles - shoring for deep cutting - well points -Dewatering and stand by Plant equipment for underground open excavation.

UNIT IV SUPER STRUCTURE CONSTRUCTION 9

Launching girders, bridge decks, off shore platforms – special forms for shells - techniques for heavy decks – in-situ pre-stressing in high rise structures, Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors - Erection of articulated structures, braced domes and space decks.

UNIT V CONSTRUCTION EQUIPMENT 9

Selection of equipment for earth work - earth moving operations - types of earthwork equipment - tractors, motor graders, scrapers, front end waders, earth movers – Equipment for foundation and pile driving. Equipment for compaction, batching, mixing and concreting - Equipment for material handling and erection of structures – types of cranes - Equipment for dredging, trenching, tunneling.

TOTAL: 60 PERIODS

OUTCOMES:

On successful completion of this course, students will be able to:

- know the different construction techniques and structural systems
- Understand various techniques and practices on masonry construction, flooring, and roofing. Plan the requirements for substructure construction.
- Know the methods and techniques involved in the construction of various types of super structures
- Select, maintain and operate hand and power tools and equipment used in the building construction sites.

TEXTBOOKS:

4. Mahesh Varma, "Construction Equipment and its Planning and Application", Metropolitan Book Company, New Delhi, 1983.

OBJECTIVES:

- To know the method of finding slope and deflection of beams and trusses using energy theorems and to know the concept of analysing indeterminate beam
- To estimate the load carrying capacity of columns, stresses due to unsymmetrical bending and various theories for failure of material. □

UNIT I ENERGY PRINCIPLES 12

Strain energy and strain energy density – strain energy due to axial load (gradual, sudden and impact loadings), shear, flexure and torsion – Castigliano's theorems – Maxwell's reciprocal theorem - Principle of virtual work – unit load method - Application of energy theorems for computing deflections in determinate beams, plane frames and plane trusses – lack of fit and temperature effects - Williot Mohr's Diagram.

UNIT II INDETERMINATE BEAMS 12

Concept of Analysis - Propped cantilever and fixed beams - fixed end moments and reactions – sinking and rotation of supports - Theorem of three moments – analysis of continuous beams – shear force and bending moment diagrams.

UNIT III COLUMNS AND CYLINDERS 12

Euler's column theory – critical load for prismatic columns with different end conditions – Effective length – limitations - Rankine-Gordon formula - Eccentrically loaded columns – middle third rule - core of a section – Thin cylindrical and spherical shells – stresses and change in dimensions - Thick cylinders – Compound cylinders – shrinking on stresses.

UNIT IV STATE OF STRESS IN THREE DIMENSIONS 12

Stress tensor at a point – Stress invariants - Determination of principal stresses and principal planes – Volumetric strain. Theories of failure: Maximum Principal stress theory – Maximum Principal strain theory – Maximum shear stress theory – Total Strain energy theory – Maximum distortion energy theory – Application problems.

UNIT V ADVANCED TOPICS 12

Unsymmetrical bending of beams of symmetrical and unsymmetrical sections – Shear Centre - curved beams – Winkler Bach formula – stresses in hooks.

TOTAL: 60 PERIODS**OUTCOMES:**

Students will be able to

- Determine the strain energy and compute the deflection of determinate beams, frames and trusses using energy principles.
- Analyze propped cantilever, fixed beams and continuous beams using theorem of three moment equation for external loadings and support settlements.
 - find the load carrying capacity of columns and stresses induced in columns and cylinders
 - Determine principal stresses and planes for an element in three dimensional state of stress and study various theories of failure
- Determine the stresses due to Unsymmetrical bending of beams, locate the shear center, and find the stresses in curved beams.

OBJECTIVE:

- To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines. At the completion of the course, the student should be able to relate the theory and practice of problems in hydraulic engineering.

UNIT I	UNIFORM FLOW	12
Definition and differences between pipe flow and open channel flow - Types of Flow - Properties of open channel - Velocity distribution in open channel - Steady uniform flow: Chezy equation, Manning equation - Best hydraulic sections for uniform flow – Wide open channel - Specific energy and specific force – Critical flow .		
UNIT II	GRADUALLY VARIED FLOW	12
Dynamic equations of gradually varied flows – Types of flow profiles - Classifications: Computation by Direct step method and Standard step method – Control section – Break in Grade – Computation.		
UNIT III	RAPIDLY VARIED FLOW	12
Application of the momentum equation for RVF - Hydraulic jumps - Types - Energy dissipation – Celerity – Rapidly varied unsteady flows (positive and negative surges)		
UNIT IV	TURBINES	12
Impact of Jet on flat, curved plates, Stationary and Moving –Classification of Turbines – Pelton wheel – Francis turbine – Kaplan turbine - Specific speed – Characteristic Curves of Turbines-Draft tube and cavitation.		
UNIT V	PUMPS	12
Classification of Pumps - Centrifugal pumps – Work done - Minimum speed to start the pump - NPSH - Multistage pumps – Characteristics curve - Reciprocating pumps - Negative slip - Indicator diagrams and its variations – Air vessels - Savings in work done.		

TOTAL: 45 PERIODS**OUTCOMES:**

On completion of this course the students will be able to

- Apply their knowledge of fluid mechanics in addressing problems in open channels. □ Able to identify a effective section for flow in different cross sections. □
- To solve problems in uniform, gradually and rapidly varied flows in steady state conditions. □ Understand the principles, working and application of turbines. Understand the principles, working and application of pumps.

4. Jain.A.K., " Fluid Mechanics" (Including Hydraulic Machines), Khanna Publishers, Twelfth Edition, 2016.
5. Subramanya.K., " Fluid Mechanics and Hydraulic Machines", Tata McGraw Hill Education Private Limited, New Delhi, 2010.

OBJECTIVE:

- To impart knowledge to the students on the properties of materials for concrete by suitable tests, mix design for concrete and special concretes.

UNIT I CONSTITUENT MATERIALS 9

Cement - Different types - Chemical composition and Properties – Hydration of cement - Tests on cement - IS Specifications - Aggregates – Classification - Mechanical properties and tests as per BIS - Grading requirements – Water - Quality of water for use in concrete.

UNIT II CHEMICAL AND MINERAL ADMIXTURES 9

Accelerators – Retarders - Plasticizers - Super plasticizers - Water proofers - Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaoline - Effects on concrete properties.

UNIT III PROPORTIONING OF CONCRETE MIX 9

Principles of Mix Proportioning - Properties of concrete related to Mix Design - Physical properties of materials required for Mix Design - Design Mix and Nominal Mix - BIS Method of Mix Design - Mix Design Examples

UNIT IV FRESH AND HARDENED PROPERTIES OF CONCRETE 9

Workability - Tests for workability of concrete - Segregation and Bleeding - Determination of strength Properties of Hardened concrete - Compressive strength – split tensile strength - Flexural strength - Stress-strain curve for concrete - Modulus of elasticity – durability of concrete – water absorption – permeability – corrosion test – acid resistance.

UNIT V SPECIAL CONCRETES 9

Light weight concretes - foam concrete- self compacting concrete – vacuum concrete - High strength concrete - Fibre reinforced concrete – Ferrocement - Ready mix concrete – SIFCON - Shotcrete – Polymer concrete - High performance concrete - Geopolymer Concrete.

TOTAL: 60 PERIODS**OUTCOMES:**

Students will be able to understand

- The various requirements of cement, aggregates and water for making concrete
- The effect of admixtures on properties of concrete
- The concept and procedure of mix design as per IS method
- The properties of concrete at fresh and hardened state
- The importance and application of special concretes.

4. Job Thomas, “Concrete Technology”, Cengage Learning India Pvt. Ltd., Delhi, 2015
5. Kumar P Mehta., Paulo J M Monterio., “Concrete - Microstructure, Properties and Materials”, McGraw Hill Education (India) Private Limited, New Delhi, 2016.

OBJECTIVE:

- To impart knowledge to classify the soil based on index properties and to assess their engineering properties based on the classification. To familiarize the students about the fundamental concepts of compaction, flow through soil, stress transformation, stress distribution, consolidation and shear strength of soils. To impart knowledge of design of both finite and infinite slopes.

UNIT I SOIL CLASSIFICATION AND COMPACTION 9

History – formation and types of soil – composition - Index properties – clay mineralogy structural arrangement of grains – description – Classification – BIS – US – phase relationship – Compaction – theory – laboratory and field technology – field Compaction method – factors influencing compaction.

UNIT II EFFECTIVE STRESS AND PERMEABILITY 9

Soil - water – Static pressure in water - Effective stress concepts in soils – Capillary phenomena— Permeability – Darcy's law – Determination of Permeability – Laboratory Determination (Constant head and falling head methods) and field measurement pumping out in unconfined and confined aquifer – Factors influencing permeability of soils – Seepage - Two dimensional flow – Laplace's equation – Introduction to flow nets – Simple problems Sheet pile and weir.

UNIT III STRESS DISTRIBUTION AND SETTLEMENT 9

Stress distribution in homogeneous and isotropic medium – Boussinesq's theory – (Point load, Line load and udl) Use of Newmark's influence chart – Components of settlement – Immediate and consolidation settlement – Factors influencing settlement – Terzaghi's one dimensional consolidation theory – Computation of rate of settlement. – \sqrt{t} and $\log t$ methods. e - $\log p$ relationship consolidation settlement N-C clays – O.C clays – Computation.

UNIT IV SHEAR STRENGTH 9

Shear strength of cohesive and cohesion less soils – Mohr-Coulomb failure theory – shear strength - Direct shear, Triaxial compression, UCC and Vane shear tests – Pore pressure parameters – Factors influences shear strength of soil.

UNIT V SLOPE STABILITY 9

Infinite slopes and finite slopes — Friction circle method – Use of stability number – Guidelines for location of critical slope surface in cohesive and $c - \phi$ soil – Slope protection measures.

TOTAL: 45 PERIODS**OUTCOMES:**

Students will be able to

- classify the soil and assess the engineering properties, based on index
- properties. Understand the stress concepts in soils
- Understand and identify the settlement in
- soils. Determine the shear strength of soil
- Analyze both finite and infinite slopes.

6. Purushothama Raj. P., “Soil Mechanics and Foundations Engineering”,2nd Edition, PearsonEducation, 2013.
7. Venkatramaiah.C., “Geotechnical Engineering”, New Age International Pvt. Ltd., New Delhi,2017

OBJECTIVE:

- To expose the students to the testing of different materials under the action of various forces and determination of their characteristics experimentally.

LIST OF EXPERIMENTS

1. Tension test on steel rod
2. Compression test on wood
3. Double shear test on metal
4. Torsion test on mild steel rod
5. Impact test on metal specimen (Izod and Charpy)
6. Hardness test on metals (Rockwell and Brinell Hardness Tests)
7. Deflection test on metal beam
8. Compression test on helical spring
9. Deflection test on carriage spring

TOTAL: 60 PERIODS**OUTCOME:**

- The students will have the required knowledge in the area of testing of materials and components of structural elements experimentally.

REFERENCES:

1. Strength of Materials Laboratory Manual, Anna University, Chennai - 600 025.
2. IS 1786-2008 (Fourth Revision, Reaffirmed 2013), 'High strength deformed bars and wires for concrete reinforcement – Specification', 2008.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Sl. No.	Description of Equipment	Quantity
1.	UTM of minimum 400 kN capacity	1
2.	Torsion testing machine	1
3.	Izod impact testing machine	1
4.	Hardness testing machine Rockwell Vicker's (any 2) Brinell	1 each
5.	Beam deflection test apparatus	1
6.	Extensometer	1
7.	Compressometer	1
8.	Dial gauges	Few
9.	Le Chatelier's apparatus	2
10.	Vicat's apparatus	2
11.	Mortar cube moulds	10

OBJECTIVE:

- – □ Students should be able to verify the principles studied in theory by performing the experiments in lab.

LIST OF EXPERIMENTS**A. Flow Measurement**

1. Calibration of Rotameter
2. Calibration of Venturimeter / Orificemeter
3. Bernoulli's Experiment

B. Losses in Pipes

4. Determination of friction factor in pipes
5. Determination of minor losses

C. Pumps

6. Characteristics of Centrifugal pumps
7. Characteristics of Gear pump
8. Characteristics of Submersible pump
9. Characteristics of Reciprocating pump

D. Turbines

10. Characteristics of Pelton wheel turbine
11. Characteristics of Francis turbine/Kaplan turbine

E. Determination of Metacentric height

12. Determination of Metacentric height of floating bodies

TOTAL: 60 PERIODS**OUTCOMES:**

- The students will be able to measure flow in pipes and determine frictional losses. The students will be able to develop characteristics of pumps and turbines.

REFERENCES:

1. Sarbjit Singh. "Experiments in Fluid Mechanics", Prentice Hall of India Pvt. Ltd, Learning Private Limited, Delhi, 2009.
2. "Hydraulic Laboratory Manual", Centre for Water Resources, Anna University, 2004.
3. Modi P.N. and Seth S.M., "Hydraulics and Fluid Mechanics", Standard Book House, New Delhi, 2000.
4. Subramanya K. "Flow in open channels", Tata McGraw Hill Publishing Company, 2001.

LIST OF EQUIPMENTS

1. One set up of Rotometer
2. One set up of Venturimeter/Orifice meter
3. One Bernoulli's Experiment set up
4. One set up of Centrifugal Pump
5. One set up of Gear Pump
6. One set up of Submersible pump
7. One set up of Reciprocating Pump
8. One set up of Pelton Wheel turbine
9. One set up of Francis turbines/one set of Kaplan turbine
10. One set up of equipment for determination of Metacentric height of floating bodies
11. One set up for determination of friction factor in pipes
12. One set up for determination of minor losses.

OBJECTIVES:

- Strengthen the reading skills of students of engineering.
- Enhance their writing skills with specific reference to technical writing.
- Develop students' critical thinking skills.
- Provide more opportunities to develop their project and proposal writing skills.

UNIT I

Reading - Strategies for effective reading-Use glosses and footnotes to aid reading comprehension- Read and recognize different text types-Predicting content using photos and title Writing-Plan before writing-Develop a paragraph: topic sentence, supporting sentences, concluding sentence –Write a descriptive paragraph.

UNIT II

Reading-Read for details-Use of graphic organizers to review and aid comprehension Writing-State reasons and examples to support ideas in writing- Write a paragraph with reasons and examples- Write an opinion paragraph

UNIT III

Reading- Understanding pronoun reference and use of connectors in a passage- speed reading techniques-Writing- Elements of a good essay-Types of essays- descriptive-narrative- issue-based-argumentative-analytical.

UNIT IV

Reading- Genre and Organization of Ideas- Writing- Email writing- visumes – Job application-project writing-writing convincing proposals.

UNIT V

Reading- Critical reading and thinking- understanding how the text positions the reader- identify Writing- Statement of Purpose- letter of recommendation- Vision statement

TOTAL: 30 PERIODS**OUTCOMES:**

At the end of the course Learners will be able to: Write

- different types of essays.
- Write winning job applications.
- Read and evaluate texts critically.
- Display critical thinking in various professional contexts.

TEXT BOOKS:

1. Gramer F. Margot and Colin S. Ward Reading and Writing (Level 3) Oxford University Press:Oxford, 2011

3. Withrow, Jeans and et al. Inspired to Write. Readings and Tasks to develop writing skills.Cambridge University Press: Cambridge, 2004
4. Goatly, Andrew. Critical Reading and Writing. Routledge: United States of America, 2000
5. Petelin, Roslyn and Marsh Durham. The Professional Writing Guide: Knowing Well andKnowing Why. Business & Professional Publishing: Australia, 2004

OBJECTIVES:

- To introduce the different types of philosophies related to design of basic structural elements such as slab, beam, column and footing which form part of any structural system with reference to Indian standard code of practice.

UNIT I INTRODUCTION 9+6

Objective of structural design-Steps in RCC Structural Design Process- Type of Loads on Structures and Load combinations- Code of practices and Specifications - Concept of Working Stress Method, Ultimate Load Design and Limit State Design Methods for RCC –Properties of Concrete and Reinforcing Steel - Analysis and Design of Singly reinforced Rectangular beams by working stress method - Limit State philosophy as detailed in IS code - Advantages of Limit State Method over other methods - Analysis and design of singly and doubly reinforced rectangular beams by Limit State Method.

UNIT II DESIGN OF BEAMS 9+6

Analysis and design of Flanged beams for – Use of design aids for Flexure - Behaviour of RC members in Shear, Bond and Anchorage - Design requirements as per current code - Behaviour of rectangular RC beams in shear and torsion - Design of RC members for combined Bending, Shear and Torsion.

UNIT III DESIGN OF SLABS AND STAIRCASE 9+6

Analysis and design of cantilever, one way simply supported and continuous slabs and supporting beams- Two way slab- Design of simply supported and continuous slabs using IS code coefficients- Types of Staircases – Design of dog-legged Staircase.

UNIT IV DESIGN OF COLUMNS 9+6

Types of columns –Axially Loaded columns – Design of short Rectangula Square and circular columns – Design of Slender columns- Design for Uniaxial and Biaxial bending using Column Curves

UNIT V DESIGN OF FOOTINGS 9+6

Concepts of Proportioning footings and foundations based on soil properties-Design of wall footing – Design of axially and eccentrically loaded Square, Rectangular pad and sloped footings – Design of Combined Rectangular footing for two columns only.

TOTAL: 75 PERIODS

OUTCOMES:

Students will be able to

- Understand the various design methodologies for the design of RC elements.
- Know the analysis and design of flanged beams by limit state method and sign of beams for shear, bond and torsion.
- design the various types of slabs and staircase by limit state
- method. Design columns for axial, uniaxial and biaxial eccentric
- loadings.
- Design of footing by limit state method.

8. Shah V L Karve S R., "Limit State Theory and Design of Reinforced Concrete", StructuresPublilcations, Pune, 2013

OBJECTIVE:

- To introduce the students to basic theory and concepts of classical methods of structural analysis

UNIT I STRAIN ENERGY METHOD 9

Determination of Static and Kinematic Indeterminacies – Analysis of continuous beams, plane frames and indeterminate plane trusses by strain energy method (up to two degree of redundancy).

UNIT II SLOPE DEFLECTION METHOD 9

Slope deflection equations – Equilibrium conditions - Analysis of continuous beams and rigid frames – Rigid frames with inclined members - Support settlements- symmetric frames with symmetric and skew-symmetric loadings.

UNIT III MOMENT DISTRIBUTION METHOD 9

Stiffness and carry over factors – Distribution and carryover of moments - Analysis of continuous Beams- Plane rigid frames with and without sway – Support settlement - symmetric frames with symmetric and skew-symmetric loadings.

UNIT IV FLEXIBILITY METHOD 9

Primary structures - Compatibility conditions – Formation flexibility matrices - Analysis of indeterminate pin- jointed plane frames, continuous beams and rigid jointed plane frames by direct flexibility approach.

UNIT V STIFFNESS METHOD 9

Restrained structure –Formation of stiffness matrices - equilibrium condition - Analysis of Continuous Beams, Pin-jointed plane frames and rigid frames by direct stiffness method.

TOTAL: 60 PERIODS**OUTCOMES:**

Students will be able to

- Analyze continuous beams, pin-jointed indeterminate plane frames and rigid plane frames by strainenergy method
- Analyze the continuous beams and rigid frames by slope defection method.
- Understand the concept of moment distribution and analysis of continuous beams and rigid frameswith and without sway.
- Analyze the indeterminate pin jointed plane frames continuous beams and rigid frames usingmatrix flexibility method.
- Understand the concept of matrix stiffness method and analysis of continuous beams, pin jointedtrusses and rigid plane frames.

OBJECTIVE:

- To equip the students with the principles and design of water treatment units and distribution system. □

UNIT I SOURCES OF WATER 12

Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater – Impounding Reservoir – Development and selection of source – Source Water quality – Characterization – Significance – Drinking Water quality standards.

UNIT II CONVEYANCE FROM THE SOURCE 12

Water supply – intake structures – Functions; Pipes and conduits for water – Pipe materials – Hydraulics of flow in pipes – Transmission main design – Laying, jointing and testing of pipes – appurtenances – Types and capacity of pumps – Selection of pumps and pipe materials.

UNIT III WATER TREATMENT 12

Objectives – Unit operations and processes – Principles, functions, and design of water treatment plant units, aerators of flash mixers, Coagulation and flocculation – Clariflocculator-Plate and tube settlers - Pulsator clarifier - sand filters - Disinfection - Residue Management – Construction, Operation and Maintenance aspects.

UNIT IV ADVANCED WATER TREATMENT 12

Water softening – Desalination- R.O. Plant – demineralization – Adsorption - Ion exchange–Membrane Systems – RO Reject Management - Iron and Manganese removal - Defluoridation - Construction and Operation & Maintenance aspects – Recent advances - MBR process

UNIT V WATER DISTRIBUTION AND SUPPLY 12

Requirements of water distribution – Components – Selection of pipe material – Service reservoirs – Functions – Network design – Economics – Analysis of distribution networks -Computer applications – Appurtenances – Leak detection. Principles of design of water supply in buildings – House service connection – Fixtures and fittings, systems of plumbing and types of plumbing.

TOTAL: 45 PERIODS**OUTCOMES:**

The students completing the course will have

- an insight into the structure of drinking water supply systems, including water transport, treatment and distribution
 - the knowledge in various unit operations and processes in water treatment □
 - treatment □ an ability to design the various functional units in water treatment □
 - treatment □ an understanding of water quality criteria and standards, and their relation to public health
- the ability to design and evaluate water supply project alternatives on basis of chosen criteria. □

TEXTBOOKS:

1. Garg, S.K. Environmental Engineering, Vol.I Khanna Publishers, New Delhi, 2010.
2. Modi, P.N., Water Supply Engineering, Vol.I Standard Book House, New Delhi, 2010.
3. Punmia, B.C., Ashok Jain and Arun Jain, Water Supply Engineering, Laxmi Publications (P) Ltd., New Delhi, 2014.

REFERENCES:

1. Manual on Water Supply and Treatment, CPHEEO, Ministry of Urban Development, Government of India, New Delhi, 1999.
2. Syed R. Qasim and Edward M. Motley Guang Zhu, Water Works Engineering Planning, Design and Operation, Prentice Hall of India Learning Private Limited, New Delhi, 2009.

OBJECTIVE:

- To impart knowledge to plan and execute a detail site investigation programme, to select geotechnical design parameters and type of foundations. Also to familiarize the students for the geotechnical design of different type of foundations and retaining walls.

UNIT I SITE INVESTIGATION AND SELECTION OF FOUNDATION 9

Scope and objectives – Methods of exploration – Auguring and boring – Wash boring and rotary drilling – Depth and spacing of bore holes – Soil samples – Representative and undisturbed – Sampling methods – Split spoon sampler, Thin wall sampler, Stationary piston sampler – Penetration tests (SPT and SCPT) – Data interpretation - Strength parameters - Bore log report and Selection of foundation.

UNIT II SHALLOW FOUNDATION 9

Location and depth of foundation – Codal provisions – Bearing capacity of shallow foundation on homogeneous deposits – Terzaghi's formula and BIS formula – Factors affecting bearing capacity – Bearing capacity from in-situ tests (SPT, SCPT and plate load) – Allowable bearing pressure – Seismic considerations in bearing capacity evaluation. Determination of Settlement of foundations on granular and clay deposits – Total and differential settlement – Allowable settlements – Codal provision – Methods of minimizing total and differential settlements.

UNIT III FOOTINGS AND RAFTS 9

Types of Isolated footing, Combined footing, Mat foundation – Contact pressure and settlement distribution – Proportioning of foundations for conventional rigid behaviour – Minimum thickness for rigid behaviour – Applications – Compensated foundation – Codal provision

UNIT IV PILE FOUNDATION 9

Types of piles and their functions – Factors influencing the selection of pile – Carrying capacity of single pile in granular and cohesive soil – Static formula – Dynamic formulae (Engineering news and Hileys) – Capacity from insitu tests (SPT and SCPT) – Negative skin friction – Uplift capacity-Group capacity by different methods (Feld's rule, Converse – Labarra formula and block failure criterion) – Settlement of pile groups – Interpretation of pile load test (routine test only), Under reamed piles – Capacity under compression and uplift – Cohesive – expansive – non expansive – Cohesionless soils – Codal provisions.

UNIT V RETAINING WALLS 9

Plastic equilibrium in soils – Active and passive states – Rankine's theory – Cohesionless and cohesive soil – Coulomb's wedge theory – Condition for critical failure plane – Earth pressure on retaining walls of simple configurations – Culmann's Graphical method – Pressure on the wall due to line load – Stability analysis of retaining walls – Codal provisions.

TOTAL: 45 PERIODS**OUTCOMES:**

Students will be able to

- Understand the site investigation, methods and sampling. Get knowledge on bearing capacity and testing methods. Design shallow footings.
- Determine the load carrying capacity, settlement of pile foundation. Determine the earth pressure on retaining walls and analysis for stability.

OBJECTIVE:

To develop skills to test the soils for their index and engineering properties and to characterise the soil based on their properties.

EXERCISES:**1. DETERMINATION OF INDEX PROPERTIES 20**

- a. Specific gravity of soil solids
- b. Grain size distribution – Sieve analysis
- c. Grain size distribution - Hydrometer analysis
- d. Liquid limit and Plastic limit tests
- e. Shrinkage limit and Differential free swell tests 62

2. DETERMINATION OF INSITU DENSITY AND COMPACTION CHARACTERISTICS 12

- a. Field density Test (Sand replacement method and core cutter method)
- b. Determination of moisture – density relationship using standard Proctor compaction test.
- c. Determination of relative density (Demonstration only)

3. DETERMINATION OF ENGINEERING PROPERTIES 28

- a. Permeability determination (constant head and falling head methods)
- b. One dimensional consolidation test (Determination of Co-efficient of consolidation only) c.
- Direct shear test in cohesionless soil
- d. Unconfined compression test in cohesive soil
- e. Laboratory vane shear test in cohesive soil
- f. Tri-axial compression test in cohesionless soil (Demonstration only)
- g. California Bearing Ratio Test

TOTAL: 60 PERIODS**OUTCOME:**

- Students are able to conduct tests to determine both the index and engineering properties of soils and to characterize the soil based on their properties.

LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS

Sl.No.	Description of Equipment	Quantity
1.	Sieves	2 sets
2.	Hydrometer	2 sets
3.	Liquid and Plastic limit apparatus	2 sets
4.	Shrinkage limit apparatus	3 sets
5.	Proctor Compaction apparatus	2 sets
6.	UTM of minimum of 20kN capacity	1
7.	Direct Shear apparatus	1
8.	Thermometer	2
9.	Sand replacement method accessories and core cutter method accessories	2
10.	Tri-axial Shear apparatus	1
11.	Three Gang Consolidation test device	1
12.	Relative Density apparatus	1
13.	Van Shear apparatus	1
14.	Weighing machine – 20kg capacity	1 No
15.	Weighing machine – 1kg capacity	3 No

COURSE OBJECTIVES:

1. To analyse the physical, chemical and biological characteristics of water and waste water
2. To quantify the dosage requirement for coagulation process
3. To study the growth of micro-organism and its quantificationTo quantify the sludge

Course Content:

1. Physical, Chemical and biological characteristics of water and wastewater
2. Jar test
3. Chlorine demand and residual test
4. Growth of micro-organism

COURSE OUTCOME:

On the completion of the course, the students will be able to:

- Quantify the pollutant concentration in water and wastewater
- Suggest the type of treatment required and amount of dosage required for the treatmentExamine the conditions for the growth of micro-organisms

TOTAL: 60 PERIODS

List of Experiments:

1. Determination of pH, Turbidity and conductivity
2. Determination of Hardness
3. Determination of Alkalinity and Acidity
4. Determination of Chlorides
5. Determination of Phosphates and Sulphates
6. Determination of iron and fluoride
7. Determination of Optimum Coagulant dosage
8. Determination of residual chlorine and available chlorine in bleaching powder
9. Determination of Oil, and Grease
10. Determination of suspended, settleable, volatile and fixed solids
11. Determination Dissolved Oxygen and BOD for the given sample
12. Determination of COD for given sample
13. Determination of SVI of Biological sludge and microscopic examination
14. Determination of MPN index of given water sample

The objective of the survey camp is to enable the students to get practical training in the field work. Groups of not more than six members in a group will carry out each exercise in survey camp. The camp must involve work on a large area of not less than 40 acres outside the campus (Survey camp should not be conducted inside the campus). At the end of the camp, each student shall have mapped and contoured the area. The camp record shall include all original field observations, calculations and plots.

Two weeks Survey Camp will be conducted during summer vacation in the following activities:

1. Traverse - using Total station

2. Contouring

(i). Radial tachometric contouring - Radial Line at Every 45 Degree and Length not less than 60 Meter on each Radial Line

(ii). Block Level/ By squares of size at least 100 Meter x 100 Meter atleast 20 Meter interval

(III). L.S & C.S - Road and canal alignment for a Length of not less than 1 Kilo Meter atleast L.S at Every 30M and C.S at every 90 M

3. Offset of Buildings and Plotting the Location

4. Sun observation to determine azimuth (guidelines to be given to the students)

5. Use of GPS to determine latitude and longitude and locate the survey camp location

6. Traversing using GPS

7. Curve setting by deflection angle

Apart from above students may be given survey exercises in other area also based on site condition to give good exposure on survey.

AIM:

To create a basic appreciation towards research process and awareness of various research publication

OBJECTIVES:

- To understand the steps in research process and the suitable methods.
- To identify various research communications and their salient features
- To carry out basic literature survey using the common data-bases
- To give exposure to standard laboratory precautions and best practices for experimental work
- To provide orientation for basic mathematical computation useful in basic research

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

PREREQUISITES:

Basic mathematical and experimental skills and exposure to window-based computer operations system.

UNIT I 9

Introduction to Research – Definition, Objectives, Motivation and purpose – types of research – Pure and applied, survey, case study experimental, exploratory – Research Design – Steps in selection and formulation of research problem - Steps in research – Criteria of Good Research, Problems Encountered by Researchers in India.

UNIT II 9

Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem - Research design - Needs and features of good design - Different research design - Basic principles of experimental designs. Development of a research plan, Formulation of Hypothesis – Sampling techniques – Sampling error and sample size. Literature types- compendia and tables of information, Reviews, General treatises, Monographs.

UNIT III 9

Methods of data collection – Primary and secondary data – observation – interview – Questionnaire – Tools for questionnaire; surveying & literature survey, spreadsheets, Technical writing, Construction of tools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, Practical Exercises. Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software

utilization in literature collection.

UNIT IV **9**

Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis-Uncertainty, accuracy and precision- Mean value; standard deviation; error on the mean- Using a spreadsheet for data analysis- Graphs and graph plotting-Least squares methods – descriptive statistics – elements of processing through computer- packages for analysis (Excel).

UNIT V **9**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references, Technical Presentation.

TOTAL: 45 PERIODS

Course Outcomes

After the completion of the course, the students will be able to:

- Comprehend the role of bounded rationality, framing, causation and effectuation in entrepreneurial decision making.
- Demonstrate an ability to design a business model canvas.
- Evaluate the various sources of raising finance for startup ventures.
- Understand the fundamentals of developing and presenting business pitching to potential investors.

Course Content**Module – I**

Introduction to Entrepreneurship: Entrepreneurs; entrepreneurial personality and intentions- characteristics, traits and behavioral; entrepreneurial challenges.

Module-II

Module Entrepreneurial Opportunities: Opportunities. discovery/ creation, Pattern identification and recognition for venture creation: prototype and exemplar model, reverse engineering.

Module –III

Entrepreneurial Process and Decision Making: Entrepreneurial ecosystem, Ideation, development and exploitation of opportunities; Negotiation, decision making process and approaches, Effectuation and Causation.

Module-IV

Crafting business models and Lean Start-ups: Introduction to business models; Creating value propositions-conventional industry logic, value innovation logic; customer focused innovation; building and analyzing business models; Business model canvas, Introduction to lean startups, Business Pitching.

Module – V

Organizing Business and Entrepreneurial Finance: Forms of business organizations; organizational structures; Evolution of Organisation, sources and selection of venture finance options and its managerial implications. Policy Initiatives and focus; role of institutions in promoting entrepreneurship.

OBJECTIVE:

To introduce the students to limit state design of structural steel members subjected to compressive, tensile and bending loads, including connections. Design of structural systems such as roof trusses, gantry girders as per provisions of current code (IS 800 - 2007) of practice for working stress and Limit state Method.

UNIT I INTRODUCTION AND ALLOWABLE STRESS DESIGN 9

Structural steel types – Mechanical Properties of structural steel- Indian structural steel products-Steps involved in the Design Process -Steel Structural systems and their Elements- -Type of Loads on Structures and Load combinations- Code of practices, Loading standards and Specifications - Concept of Allowable Stress Method, and Limit State Design Methods for Steel structures-Relative advantages and Limitations- Strengths and Serviceability Limit states. Allowable stresses as per IS 800 section 11 -Concepts of Allowable stress design for bending and Shear –Check for Elastic deflection-Calculation of moment carrying capacity –Design of Laterally supported Solid Hot Rolled section beams-Allowable stress design of Angle Tension and Compression Members and estimation of axial load carrying capacity.

UNIT II CONNECTIONS IN STEEL STRUCTURES 9

Type of Fasteners- Bolts Pins and welds- Types of simple bolted and welded connections Relative advantages and Limitations-Modes of failure-the concept of Shear lag-efficiency of joints- Axially loaded bolted connections for Plates and Angle Members using bearing type bolts –Prying forces and Hanger connection– Design of Slip critical connections with High strength Friction Grip bolts.-Design of joints for combined shear and Tension- Eccentrically Loaded Bolted Bracket Connections- Welds-symbols and specifications- Effective area of welds-Fillet and butt Welded connections-Axially Loaded connections for Plate and angle truss members and Eccentrically Loaded bracket connections.

UNIT III TENSION MEMBERS 9

Tension Members - Types of Tension members and sections –Behaviour of Tension Members-modes of failure-Slenderness ratio- Net area – Net effective sections for Plates ,Angles and Tee in tension –Concepts of Shear Lag- Design of plate and angle tension members-design of built up tension Members-Connections in tension members – Use of lag angles – Design of tension splice.

UNIT IV COMPRESSION MEMBERS 9

Types of compression members and sections–Behaviour and types of failures-Short and slender columns-Current code provisions for compression members- Effective Length, Slenderness ratio –Column formula and column curves- Design of single section and compound Angles-Axially Loaded solid section Columns-Design of Built up Laced and Battened type columns – Design of column bases – Plate and Gusseted bases for Axially loaded columns- Splices for columns.

UNIT V DESIGN OF FLEXURAL MEMBERS 9

Types of steel Beam sections- Behaviour of Beams in flexure- Codal Provisions – Classification of cross sections- Flexural Strength and Lateral stability of Beams –Shear Strength-Web Buckling, Crippling and deflection of Beams- Design of laterally supported Beams- Design of solid rolled section Beams- Design of Plated beams with cover plates - Design Strength of Laterally unsupported Beams – Design of laterally unsupported rolled section Beams- Purlin in Roof Trusses-Design of Channel and I section Purlins.

TOTAL: 45 PERIODS

OUTCOMES:

Students will be able to

- Understand the concepts of various design philosophies
- Design common bolted and welded connections for steel structures
- Design tension members and understand the effect of shear lag.
- Understand the design concept of axially loaded columns and column base connections.
- Understand specific problems related to the design of laterally restrained and unrestrained steelbeams.

7. SP 6(1) Hand book on structural Steel Sections

OBJECTIVES:

- To learn the method of drawing influence lines and its uses in various applications like beams and plane trusses.
- To analyse the arches, suspension bridges and space
- trusses. Also to learn Plastic analysis of beams and rigid frames.

UNIT I INFLUENCE LINES FOR DETERMINATE BEAMS 9

Influence lines for reactions in statically determinate beams – Influence lines for shear force and bending moment – Calculation of critical stress resultants due to concentrated and distributed moving loads – absolute maximum bending moment - influence lines for member forces in pin jointed plane frames.

UNIT II INFLUENCE LINES FOR INDETERMINATE BEAMS 9

Muller Breslau's principle – Influence line for Shearing force, Bending Moment and support reaction components of propped cantilever, continuous beams (Redundancy restricted to one), and fixed beams.

UNIT III ARCHES 9

Arches - Types of arches – Analysis of three hinged, two hinged and fixed arches - Parabolic and circular arches – Settlement and temperature effects.

UNIT IV CABLES AND SUSPENSION BRIDGES 9

Equilibrium of cable – length of cable - anchorage of suspension cables – stiffening girders- cables with three hinged stiffening girders – Influence lines for three hinged stiffening girders.

UNIT V PLASTIC ANALYSIS 9

Plastic theory – statically indeterminate structures-plastic moment of resistance-plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – collapse load - Static and kinematic methods – Upper and lower bound theorems - Plastic analysis of indeterminate beams and frames.

TOTAL: 60 PERIODS**OUTCOMES:**

Students will be able to

- Draw influence lines for statically determinate structures and calculate critical stress resultants. Understand Muller Breslau principle and draw the influence lines for statically indeterminate beams. Analyse of three hinged, two hinged and fixed arches.
- Analyse the suspension bridges with stiffening girders
- Understand the concept of Plastic analysis and the method of analyzing beams and rigid frames.

OBJECTIVE:

- The student is exposed to different phases in irrigation practices and Planning and management of irrigation. Further they will be imparted required knowledge on Irrigation storage and distribution canal system and Irrigation management.

UNIT I CROP WATER REQUIREMENT 9

Need and classification of irrigation- historical development and merits and demerits of irrigation-types of crops-crop season-duty, delta and base period- consumptive use of crops- estimation of Evapotranspiration using experimental and theoretical methods

UNIT II IRRIGATION METHODS 9

Tank irrigation – Well irrigation – Irrigation methods: Surface and Sub-Surface and Micro Irrigation – design of drip and sprinkler irrigation – ridge and furrow irrigation-Irrigation scheduling – Water distribution system- Irrigation efficiencies.

UNIT III DIVERSION AND IMPOUNDING STRUCTURES 9

Types of Impounding structures - Gravity dam – Forces on a dam -Design of Gravity dams; Earth dams, Arch dams- Diversion Head works - Weirs and Barrages-

UNIT IV CANAL IRRIGATION 9

Canal regulations – direct sluice - Canal drop – Cross drainage works-Canal outlets – Design of prismatic canal-canal alignments-Canal lining - Kennedy's and Lacey's Regime theory-Design of unlined canal

UNIT V WATER MANAGEMENT IN IRRIGATION 9

Modernization techniques- Rehabilitation – Optimization of water use-Minimizing water losses- On farm development works-Participatory irrigation management- Water resources associations-Changing paradigms in water management-Performance evaluation-Economic aspects of irrigation

TOTAL: 45 PERIODS**OUTCOMES:**

Students will be able to

- Have knowledge and skills on crop water requirements. Understand the methods and management of irrigation. Gain knowledge on types of Impounding structures Understand methods of irrigation including canal irrigation.
- Get knowledge on water management on optimization of water use.

7. Basak, N.N, "Irrigation Engineering", Tata McGraw Hill Publishing Co. New Delhi, 1999

OBJECTIVE:

- To give an overview about the highway engineering with respect to, planning, design, construction and maintenance of highways as per IRC standards, specifications and methods.

UNIT I HIGHWAY PLANNING AND ALIGNMENT 9

Significance of highway planning – Modal limitations towards sustainability - History of road development in India – factors influencing highway alignment – Soil suitability analysis - Road ecology - Engineering surveys for alignment, objectives, conventional and modern methods - Classification of highways – Locations and functions – Typical cross sections of Urban and Rural roads

UNIT II GEOMETRIC DESIGN OF HIGHWAYS 9

Cross sectional elements - Sight distances – Horizontal curves, Super elevation, transition curves, widening at curves – Vertical curves - Gradients, Special consideration for hill roads - Hairpin bends – Lateral and vertical clearance at underpasses.

UNIT III DESIGN OF FLEXIBLE AND RIGID PAVEMENTS 9

Pavement components and their role - Design principles -Design practice for flexible and rigid Pavements (IRC methods only) – Embankments- Problems in Flexible pavement design.

UNIT IV HIGHWAY CONSTRUCTION MATERIALS AND PRACTICE 9

Highway construction materials, properties, testing methods – CBR Test for subgrade - tests on aggregate & bitumen – Test on Bituminous mixes-Construction practice including modern materials and methods, Bituminous and Concrete road construction, Polymer modified bitumen, Recycling, Different materials – Glass, Fiber, Plastic, Geo-Textiles, Geo-Membrane (problem not included) – Quality control measures - Highway drainage — Construction machineries.

UNIT V EVALUATION AND MAINTENANCE OF PAVEMENTS 9

Pavement distress in flexible and rigid pavements – Types of maintenance – Pavement Management Systems - Pavement evaluation, roughness, present serviceability index, skid resistance, structural evaluation, evaluation by deflection measurements – Strengthening of pavements –Highway Project formulation.

TOTAL: 60 PERIODS**OUTCOMES:**

Students will be able to

- Get knowledge on planning and aligning of highway.
- Geometric design of highways
- Design flexible and rigid pavements.
- Gain knowledge on Highway construction materials, properties, testing methods
- Understand the concept of pavement management system, evaluation of distress and maintenance of pavements.

OBJECTIVE:

- The objectives of this course is to help students develop the ability to apply basic understanding of physical, chemical, and biological phenomena for successful design, operation and maintenance of sewage treatment plants.

UNIT I PLANNING AND DESIGN OF SEWERAGE SYSTEM 9

Characteristics and composition of sewage - population equivalent -Sanitary sewage flow estimation – Sewer materials – Hydraulics of flow in sanitary sewers – Sewer design – Storm drainage-Storm runoff estimation – sewer appurtenances – corrosion in sewers – prevention and control – sewage pumping-drainage in buildings-plumbing systems for drainage - Rain Water ting.

UNIT II PRIMARY TREATMENT OF SEWAGE 9

Objectives – Unit Operations and Processes – Selection of treatment processes – Onsite sanitation - Septic tank- Grey water harvesting – Primary treatment – Principles, functions and design of sewage treatment units - screens - grit chamber-primary sedimentation tanks – Construction, Operation and Maintenance aspects.

UNIT III SECONDARY TREATMENT OF SEWAGE 9

Objectives – Selection of Treatment Methods – Principles, Functions, - Activated Sludge Process and Extended aeration systems -Trickling filters– Sequencing Batch Reactor(SBR) – Membrane Bioreactor - UASB – Waste Stabilization Ponds – - Other treatment methods -Reclamation and Reuse of sewage - Recent Advances in Sewage Treatment – Construction, Operation and Maintenance aspects.

UNIT IV DISPOSAL OF SEWAGE 9

Standards for– Disposal - Methods – dilution – Mass balance principle - Self purification of river- Oxygen sag curve – deoxygenation and reaeration - Streeter–Phelps model - Land disposal – Sewage farming – sodium hazards - Soil dispersion system.

UNIT V SLUDGE TREATMENT AND DISPOSAL 9

Objectives - Sludge characterization – Thickening - Design of gravity thickener- Sludge digestion– Standard rate and High rate digester design- Biogas recovery – Sludge Conditioning and Dewatering – Sludge drying beds- ultimate residue disposal – recent advances.

TOTAL: 45 PERIODS**OUTCOMES:**

The students completing the course will have

- An ability to estimate sewage generation and design sewer system including sewage pumpingstations
- The required understanding on the characteristics and composition of sewage, self-purification of streams
- An ability to perform basic design of the unit operations and processes that are used in sewage treatment

TEXTBOOKS:

1. Garg, S.K., Environmental Engineering Vol. II, Khanna Publishers, New Delhi, 2015.
2. Duggal K.N., “Elements of Environmental Engineering” S.Chand and Co. Ltd., New Delhi, 2014.

3. Syed R. Qasim “Wastewater Treatment Plants”, CRC Press, Washington D.C., 2010
4. Gray N.F, “Water Technology”, Elsevier India Pvt. Ltd., New Delhi, 2006.

OBJECTIVE :

- To learn the principles and procedures of testing of highway materials

EXERCISES :**I TEST ON AGGREGATES**

- a) Specific Gravity
- b) Los Angeles Abrasion Test
- c) Water Absorption of Aggregates

II TEST ON BITUMEN

- a) Specific Gravity of Bitumen
- b) Penetration Test
- c) Viscosity Test
- d) Softening Point Test
- e) Ductility Test

III TESTS ON BITUMINOUS MIXES

- a) Stripping Test
- b) Determination of Binder Content
- c) Marshall Stability and Flow Values

IV DEMONSTRATION OF ANY ONE FIELD TESTING EQUIPMENT LIKE SKIDRESISTANCE TESTER/ BENKELMAN BEAM ETC**TOTAL: 60 PERIODS****OUTCOME:**

- Student knows the techniques to characterize various pavement materials through relevant tests.

REFERENCES:

4. Mix Design Methods Asphalt Institute Manual Series No. 2, Sixth Edition, 1997, Lexington, KY, USA.

LIST OF EQUIPMENTS FOR A BATCH OF 30 STUDENTS

Sl.No	Description of Equipment	Quantity
1.	Concrete cube moulds	6
2.	Concrete cylinder moulds	3
3.	Concrete Prism moulds	3
4.	Sieves	1 set
5.	Concrete Mixer	1
6.	Slump cone	3
7.	Flow table	1
8.	Vibrator	1
9.	Trowels and planers	1 set
10.	UTM – 400 kN capacity	1
11.	Vee Bee Consistometer	1
12.	Aggregate impact testing machine	1
13.	CBR Apparatus	1
14.	Blains Apparatus	1
15.	Los - Angeles abrasion testing machine	1
16.	Marshall Stability Apparatus	1

OBJECTIVE:

- At the end of the semester, the student shall conceive, design and draw the irrigation and environmental engineering structures in detail showing the plan, elevation and Sections.

PART A: IRRIGATION ENGINEERING

1. TANK COMPONENTS 9 Fundamentals of design - Tank surplus weir – Tank sluice with tower head - Drawings showing foundation details, plan and elevation

2. IMPOUNDING STRUCTURES

6

Design principles - Earth dam – Profile of Gravity Dam

3. CROSS DRAINAGE WORKS

6

General design principles - Aqueducts – Syphon aqueduct (Type III) – Canal drop (Notch Type) – Drawing showing plan, elevation and foundation details.

4. CANAL REGULATION STRUCTURES

9

General Principles - Direct Sluice - Canal regulator - Drawing showing detailed plan, elevation and foundation details.

PART B: ENVIRONMENTAL ENGINEERING

1. WATER SUPPLY AND TREATMENT

15

Design and Drawing of flash mixer, flocculator, clarifier – Rapid sand filter – Service reservoirs – Pumping station – House service connection for water supply and drainage.

4. SEWAGE TREATMENT & DISPOSAL

15

Design and Drawing of screen chamber - Grit channel - Primary clarifier - Activated sludge process – Aeration tank – Trickling filter – Sludge digester – Sludge drying beds – Septic tanks and disposal arrangements.

TOTAL: 60 PERIODS

OUTCOME:

- The students after completing this course will be able to design and draw various units of Municipal water treatment plants and sewage treatment plants.

TEXTBOOKS:

1. Satya Narayana Murthy Challa, “Water Resources Engineering: Principles and Practice”, New Age International Publishers, New Delhi, 2002.

OBJECTIVES: The course aims to:

- └ Enhance the Employability and Career Skills
 - └ of students Orient the students towards
 - └ grooming as a professional Make them
 - └ Employable Graduates
- Develop their confidence and help them attend interviews successfully.

UNIT I

Introduction to Soft Skills-- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Time Management—General awareness of Current Affairs

UNIT II

Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice— presenting the visuals effectively – 5 minute presentations

UNIT III

Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstorming the topic — questioning and clarifying –GD strategies- activities to improve GD skills

UNIT IV

Interview etiquette – dress code – body language – attending job interviews– telephone/skype interview -one to one interview &panel interview – FAQs related to job interviews

UNIT V

Recognizing differences between groups and teams- managing time-managing stress- networking professionally- respecting social protocols-understanding career management-developing a long-term career plan-making career changes

TOTAL :30 PERIODS

OUTCOMES: At the end of the course Learners will be able to:

- **Make effective presentations**
- **Participate confidently in Group Discussions.**
- **Attend job interviews and be successful in them.**
- **Develop adequate Soft Skills required for the workplace**

Recommended Software

1. Globearena
2. Win English

REFERENCES:

5. S. Hariharanetal. Soft Skills. MJP Publishers: Chennai, 2010.

OBJECTIVE:

- The students will acquire knowledge in estimation, tender practices, contract procedures, and valuation and will be able to prepare estimates, call for tenders and execute works.

UNIT I QUANTITY ESTIMATION 9

Philosophy – Purpose – Methods of estimation – Types of estimates – Approximate estimates – Detailed estimate – Estimation of quantities for buildings, bituminous and cement concrete roads, septic tank, soak pit, retaining walls – culverts (additional practice in class room using computer softwares)

UNIT II RATE ANALYSIS AND COSTING 9

Standard Data – Observed Data – Schedule of rates – Market rates – Standard Data for Man Hours and Machineries for common civil works – Rate Analysis for all Building works, canals, and Roads– Cost Estimates (additional practice in class room using Computer softwares) - (Analysis of rates for the item of work asked, the data regarding labour, rates of material and rates of labour to be given in the Examination Question Paper)

UNIT III SPECIFICATIONS, REPORTS AND TENDERS 9

Specifications – Detailed and general specifications – Constructions – Sources – Types of specifications – Principles for report preparation – report on estimate of residential building – Culvert – Roads – TTT Act 2000 – Tender notices – types – tender procedures – Drafting model tenders , E-tendering-Digital signature certificates- Encrypting -Decrypting – Reverse auctions.

UNIT IV CONTRACTS 9

Contract – Types of contracts – Formation of contract – Contract conditions – Contract for labour, material, design, construction – Drafting of contract documents based on IBRD / MORTH Standard bidding documents – Construction contracts – Contract problems – Arbitration and legal requirements.

UNIT V VALUATION 9

Definitions – Various types of valuations – Valuation methods - Necessity – Capitalised value – Depreciation – Escalation – Valuation of land – Buildings – Calculation of Standard rent – Mortgage – Lease

TOTAL: 60 PERIODS**OUTCOMES:**

The student will be able to

- Estimate the quantities for buildings,
- Rate Analysis for all Building works, canals, and Roads and Cost Estimate.
- Understand types of specifications, principles for report preparation, tender notices types.Gain knowledge on types of contracts
- Evaluate valuation for building and land.

4. Standard Bid Evaluation Form, Procurement of Good or Works, The World Bank, April 1996
5. Standard Data Book for Analysis and Rates, IRC, New Delhi, 2003

OBJECTIVE:

- To introduce the students about Railways planning, design, construction and maintenance and planning design principles of airport and harbour

UNIT I RAILWAY PLANNING AND CONSTRUCTION 10

Elements of permanent way – Rails, Sleepers, Ballast, rail fixtures and fastenings, Selection of gauges – Track Stress, coning of wheels, creep in rails, defects in rails – Route alignment surveys, conventional and modern methods--Geometric design of railway, gradient, super elevation, widening of gauge on curves- Level Crossings.

UNIT II RAILWAY CONSTRUCTION AND MAINTENANCE 8

Earthwork – Stabilization of track on poor soil - Track drainage – Calculation of Materials required for track laying - Construction and maintenance of tracks – Railway Station and yards and passenger amenities- Signalling

UNIT III AIRPORT PLANNING 7

Air transport characteristics - airport classification – ICAO - airport planning: Site selection typical Airport Layouts, Case Studies, parking and Circulation Area

UNIT IV AIRPORT DESIGN 10

Runway Design: Orientation, Wind Rose Diagram, Problems on basic and Actual Length, Geometric Design – Elements of Taxiway Design – Airport Zones – Passenger Facilities and Services – Runway and Taxiway Markings.

UNIT V HARBOUR ENGINEERING 10

Definition of Basic Terms: Harbour, Port, Satellite Port, Docks, Waves and Tides – Planning and Design of Harbours: Harbour Layout and Terminal Facilities – Coastal Structures: Piers, Break waters, Wharves, Jetties, Quays, Spring Fenders, Dolphins and Floating Landing Stage – Inland Water Transport – Wave action on Coastal Structures and Coastal Protection Works – Coastal Regulation Zone, 2011

TOTAL: 60 PERIODS**OUTCOMES:**

Students who successfully complete this course will be able to:

- Understand the methods of route alignment and design elements in Railway Planning and Constructions.
- Understand the Construction techniques and Maintenance of Track laying and Railway stations. Gain an insight on the planning and site selection of Airport Planning and design.
- Analyze and design the elements for orientation of runways and passenger facility systems.
- Understand the various features in Harbours and Ports, their construction, coastal protection works and coastal Regulations to be adopted.

2. Mundrey J S, Railway Track Engineering, McGraw Hill Education (India) Private Ltd, New Delhi, 2013

OBJECTIVE:

- This course aims at providing students with a solid background on the principles of structural engineering design. Students will be acquire the knowledge of liquid retaining structures, bridges components, retaining wall and industrial structures.

UNIT I RETAINING WALLS 9+6

Reinforced concrete Cantilever and Counter fort Retaining Walls–Horizontal Backfill with Surcharge– Design of Shear Key–Design and Drawing.

UNIT II FLAT SLAB and BRIDGES 9+6

Design of Flat Slabs with and without drops by Direct Design Method of IS code- Design and drawing.

UNIT III LIQUID STORAGE STRUCTURE 9+6

RCC Water Tanks - On ground, Elevated Circular, underground Rectangular Tanks– Hemispherical Bottomed Steel Water Tank –Design and Drawing

UNIT IV INDUSTRIAL STRUCTURES 9+6

Structural steel Framing - Steel Roof Trusses – Roofing Elements – Beam columns – Codal provisions - Design and Drawing.

UNIT V GIRDERS AND CONNECTIONS 9+6

Plate Girders – Behaviour of Components–Deign of Welded Plate Girder–Design of Industrial Gantry Girders – Design of Eccentric Shear and Moment Resisting connections.

TOTAL: 75 PERIODS

Design and Drawing Exercises for practical component Part A**- RCC Structures**

1. Rectangular Column and Footing
2. Combined footing with Two columns
3. RCC one way & Two way Slab and beam system
4. Cantilever Retaining wall
5. RCC T beam bridge deck
6. Underground Rectangular Water Tank
7. Elevated circular water

TankPart B- Steel Structures

1. Built up column, column base and Foundation
2. Simple Steel Roof Trusses
3. Industrial building Elements
4. Plate Girder (welded)
5. Framed Connections and Detailing
6. Gantry girder
7. Steel water Tank

STRUCTURAL DESIGN AND DRAWING	Theory Examination		Practicals	
	Question paper Pattern	Marks to awarded	Question paper Pattern	Marks to awarded
This paper is a theory cum practical course weightage for theory 80% and for practical 20%	Five Either/Or type questions 5 x20 = 100 marks : covering all the five units Total Duration of Examination will be 3 hours Each Question include Design - 12 Marks Free hand Drawing (Not to scale) - 8 marks	Theoretical component Marks will carry 80% weightage. End Semester Examination will be conducted by COE	2 Questions, one from Part A - RCC Structures & one from Part B- Steel Structures	Practical component Marks will carry 20% weightage. Practical Examination will be conducted by the respective institution as internal mode.

OUTCOMES:

At the end of the course the student will be able to

1. Design and draw reinforced concrete Cantilever and Counter fort Retaining Walls
Design and draw flat slab as per code provisions
2. Design and draw reinforced concrete and steel bridges
3. Design and draw reinforced concrete and steel water tanks
4. Design and detail the various steel trusses and cantry girders

16. IRC 6-2014, Standard Specifications and Code of Practice for Road Bridges Section: II- Loads and Stresses, The Indian Roads Congress, New Delhi.

OBJECTIVE:

- To use the knowledge acquired in Civil Engineering to do a mini project, which allows the students to come up with designs, fabrication or algorithms and programs expressing their ideas in a novel way.

TOTAL: 60 PERIODS**STRATEGY**

To identify a topic of interest in consultation with Faculty/Supervisor. Review the literature and gather information pertaining to the chosen topic. State the objectives and develop a methodology to achieve the objectives. Carryout the design / fabrication or develop computer code. Demonstrate the novelty of the project through the results and outputs.

OBJECTIVE:

- To train the students in field work so as to have a firsthand knowledge of practical problems in carrying out engineering tasks. To develop skills in facing and solving the field problems.

STRATEGY:

The students individually undertake training in reputed civil engineering companies for the specified duration. At the end of the training, a report on the work done will be prepared and presented. The students will be evaluated through a viva-voce examination by a team of internal staff.

OUTCOMES:

At the end of the course the student will be able to understand

- The intricacies of implementation textbook knowledge into practice
- The concepts of developments and implementation of new techniques

OBJECTIVE:

- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

STRATEGY:

The student works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction. The student will be evaluated based on the report and the viva voce examination by a team of examiners including one external examiner.

TOTAL: 300 PERIODS**OUTCOME:**

- On Completion of the project work students will be in a position to take up any challenging practical problems and find solution by formulating proper methodology.

VALUES OBJECTIVE:

- To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNIT I HUMAN VALUES

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority
 – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT V GLOBAL ISSUES

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership – Code of Conduct – Corporate Social Responsibility.

OUTCOMES:

- Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

TEXT BOOKS:

1. Mike W. Martin and Roland Schinzinger, — Ethics in Engineering, Tata McGraw Hill, New Delhi, 2003.

5. Laura P. Hartman and Joe Desjardins, —Business Ethics: Decision Making for Personal Integrity and Social Responsibility, McGraw Hill education, India Pvt. Ltd., New Delhi, 2013.
6. World Community Service Centre, _ Value Education', Vethathiri publications, Erode, 2011.

OBJECTIVES:

To introduce the fundamentals and components of Geographic Information System
To provide details of spatial data structures and input, management and output processes.

UNIT I FUNDAMENTALS OF GIS 9

Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attribute data- types of attributes – scales/ levels of measurements.

UNIT II SPATIAL DATA MODELS 9

Database Structures – Relational, Object Oriented – Entities – ER diagram - data models - conceptual, logical and physical models - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector Models- TIN and GRID data models.

UNIT III DATA INPUT AND TOPOLOGY 9

Scanner - Raster Data Input – Raster Data File Formats – Georeferencing – Vector Data Input – Digitiser – Datum Projection and reprojection -Coordinate Transformation – Topology - Adjacency, connectivity and containment – Topological Consistency – Non topological file formats - Attribute Data linking – Linking External Databases – GPS Data Integration

UNIT IV DATA QUALITY AND STANDARDS 9

Data quality - Basic aspects - completeness, logical consistency, positional accuracy, temporal accuracy, thematic accuracy and lineage – Metadata – GIS Standards –Interoperability - OGC - Spatial Data Infrastructure

UNIT V DATA MANAGEMENT AND OUTPUT 9

Import/Export – Data Management functions- Raster to Vector and Vector to Raster Conversion - Data Output - Map Compilation – Chart/Graphs – Multimedia – Enterprise Vs. Desktop GIS- distributed GIS.

TOTAL: 45 PERIODS**OUTCOMES:**

This course equips the student to

- Have basic idea about the fundamentals of GIS. Understand the types of data models.
- Get knowledge about data input and topology. Gain knowledge on data quality and standards.

Understand data management functions and data output

TEXT BOOKS:

1. Kang - Tsung Chang, Introduction to Geographic Information Systems, McGraw Hill Publishing, 2nd Edition, 2011.
2. Ian Heywood, Sarah Cornelius, Steve Carver, Srinivasa Raju, “An Introduction Geographical Information Systems, Pearson Education, 2nd Edition, 2007.

REFERENCE:

1. Lo.C.P., Albert K.W. Yeung, Concepts and Techniques of Geographic Information Systems, Prentice-Hall India Publishers, 2006

OBJECTIVES:

- To introduce the need for prestressing in a structure
- To explain the methods, types and advantages of prestressing to the students.
- To make the students to design a prestressed concrete structural elements and systems
- To introduce the students the effect of prestressing in the flexural and shear behaviour of structural elements.

UNIT I INTRODUCTION – THEORY AND BEHAVIOUR 12

Basic concepts – Advantages and disadvantages – Materials required – Systems and methods of prestressing – Analysis of sections – Stress concept – Strength concept – Load balancing concept – Effect of loading on the tensile stresses in tendons – Effect of tendon profile on deflections – Factors influencing deflections – Calculation of deflections – Short term and long term deflections - Losses of prestress – Estimation of crack width.

UNIT II DESIGN FOR FLEXURE AND SHEAR 12

Basic assumptions of flexural design – Permissible stresses in steel and concrete as per I.S.1343 Code – Different Types of sections - Design of sections of Type I and Type II post-tensioned and pre tensioned beams – Check for flexural capacity based on I.S. 1343 Code – Influence of Layout of cables in post-tensioned beams – Location of wires in pre-tensioned beams – Design for shear based on I.S. 1343 Code.

UNIT III DEFLECTION AND DESIGN OF ANCHORAGE ZONE 12

Factors influencing deflections – Short term deflections of uncracked members – Prediction of long term deflections due to creep and shrinkage – Check for serviceability limit states. Determination of anchorage zone stresses in post-tensioned beams – design of anchorage zone reinforcement – Check for transfer bond length in pre-tensioned beams.

UNIT IV COMPOSITE BEAMS AND CONTINUOUS BEAM 12

Analysis and design of composite beams – Methods of achieving continuity in continuous beams – Analysis for secondary moments – Concordant cable and linear transformation – Calculation of stresses – Principles of design.

UNIT V TENSION AND COMPRESSION MEMBERS 12

Role of prestressing in members subjected to Tensile forces and compressive forces - Design of tension and compression members – Tanks, pipes and poles – Partial prestressing – Definition, methods of achieving partial prestressing, merits and demerits of partial prestressing.

TOTAL: 60 PERIODS**OUTCOMES:**

On successful completion of this course, students will be able to:

- Understand the behaviour of prestressed concrete members and able to analyze the prestressed concrete beams.
- Design the prestressed concrete members for flexure and shear as per the relevant design code (IS1343).
- Analyze for deflection of prestressed concrete members and design the anchorage zone. Analyze and design of composite beams and continuous beams.
- Design of prestressed concrete structures - sleepers, Tanks, pipes and poles.

TEXTBOOKS:

1. Krishna Raju N., "Prestressed concrete", 5th Edition, Tata McGraw Hill Company, New Delhi, 2012
2. Pandit.G.S. and Gupta.S.P., "Prestressed Concrete", CBS Publishers and Distributers Pvt.

1. Rajagopalan.N, "Prestressed Concrete", Narosa Publishing House, 2002.
2. Dayaratnam.P., "Prestressed Concrete Structures", Oxford and IBH, 2013
3. Lin T.Y. and Ned.H.Burns, "Design of prestressed Concrete Structures", Third Edition, Wiley IndiaPvt. Ltd., New Delhi, 2013.
4. IS1343:1980, Code of Practice for Prestressed Concrete, Bureau of Indian Standards, New Delhi,2012
5. IS 3370- Part 4 (2008) Indian standard Code of practice for concrete structures for the storage of liquid- Design tables, code of practice, bureau of Indian standards, new Delhi.

OBJECTIVE:

- To impart knowledge to students on modular construction, industrialised construction and design of prefabricated elements and construction methods. □

UNIT I INTRODUCTION 9

Need for prefabrication – Principles of prefabrication – Modular coordination – Standardization – Materials – Systems – Production – Transportation – Erection.

UNIT II PREFABRICATED COMPONENTS 9

Behaviour and types of structural components – Large panel systems- roof and floor slabs- Walls panels - Beams - Columns - Shear walls

UNIT III DESIGN PRINCIPLES 9

Design philosophy- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation - Demountable precast concrete systems.

UNIT IV JOINTS AND CONNECTIONS IN STRUCTURAL MEMBERS 9

Types of Joints – based on action of forces - compression joints - shear joints - tension joints - based on function - construction, contraction, expansion. Design of expansion joints - Dimensions and detailing - Types of sealants - Types of structural connections - Beam to Column - Column to Column - Beam to Beam - Column to foundation.

UNIT V DESIGN FOR ABNORMAL LOADS 9

Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

TOTAL: 45 PERIODS

OUTCOMES:

1. The student will have good knowledge about design principles, layout of factory and stages of loading in precast construction.
2. Acquire knowledge about panel systems, slabs, connections used in precast construction and they will be in a position to design the elements.
3. Acquire knowledge about types of floor systems, stairs and roofs used in precast construction. Acquire knowledge about types of walls used in precast construction, sealants, design of joints. Acquire knowledge about components in industrial building.

TEXTBOOKS:

1. Bruggeling A.S. G and Huyghe G.F. "Prefabrication with Concrete", A.A. Balkema Publishers, USA, 1991.
2. Lewitt, M. "Precast Concrete- Materials, Manufacture, Properties And Usage", Applied Science Publishers, London And New Jersey, 1982.
3. Bachmann, H. and Steinle, A. "Precast Concrete Structures", Ernst & Sohn, Berlin, 2011.

REFERENCES:

1. Koncz T., "Manual of precast concrete construction", Vol. I, II and III, Bauverlag, GMBH, 1976.
2. "Handbook on Precast Concrete Buildings", Indian Concrete Institute, 2016.
3. "Structural design manual", Precast concrete connection details, Society for the studies in the use of precast concrete, Netherland Beton Verlag, 2009.

COURSE OBJECTIVE

- To provide an understanding of the concept of energy consumption in buildings and design an energy efficient building

UNIT I INTRODUCTION 9

Climate adapted and climate rejecting buildings – Heat Transfer – Measuring Conduction – Thermal Storage – Measurement of Radiation – The Greenhouse Effect – Convection – Measuring latent and sensible heat – Psychrometry Chart – Thermal Comfort – Microclimate, Site Planning and Development – Temperature – Humidity – Wind – Optimum Site Locations – Sun Path Diagrams – Sun Protection – Types of Shading Devices – Design responses to energy conservation strategies.

UNIT II PASSIVE SOLAR HEATING AND COOLING 9

General Principles of passive Solar Heating – Key Design Elements – Sunspace – Direct gain – Trombe Walls, Water Walls – Convective Air loops – Concepts – Case Studies – General Principles of Passive Cooling – Ventilation – Principles – Case studies – Courtyards – Roof Ponds – Cool Pools Predicting ventilation in buildings – Window Ventilation Calculations – Room Organization Strategies for Cross and Stack Ventilation – Radiation – Evaporation and dehumidification – Wind Catchers – Mass Effect – Zoning – Load Control – Air Filtration and odor removal.

UNIT III DAYLIGHTING AND ELECTRICAL LIGHTING 9

Materials, components and details – Insulation – Optical materials – Radiant Barriers – Glazing materials – Glazing Spectral Response – Day lighting – Sources and concepts – Building Design Strategies – Case Studies – Daylight apertures – Light Shelves – Codal requirements – Day lighting design – Electric Lighting – Light Distribution – Electric Lighting control for day lighted buildings – Switching controls – Coefficient of utilization – Electric Task Lighting – Electric Light Zones – Power Adjustment Factors.

UNIT IV HEAT CONTROL AND VENTILATION 9

Hourly Solar radiation – Heat insulation – Terminology – Requirements – Heat transmission through building sections – Thermal performance of Building sections – Orientation of buildings – Building characteristics for various climates – Thermal Design of buildings – Influence of Design Parameters – Mechanical controls – Examples. Ventilation – Requirements – Minimum standards for ventilation – Ventilation Design – Energy Conservation in Ventilating systems – Design for Natural Ventilation – Calculation of probable indoor wind speed.

UNIT V DESIGN FOR CLIMATIC ZONES 9

Energy efficiency – An Overview of Design Concepts and Architectural Interventions – Embodied Energy – Low Embodied Energy Materials – Passive Downdraft Evaporative Cooling – Design of Energy Efficient Buildings for Various Zones – Cold and cloudy – Cold and sunny – Composite – Hot and dry – Moderate – Warm and humid – Case studies of residences, office buildings and other buildings in each zones – Commonly used software packages in energy efficient building analysis and design - Energy Audit – Certification.

TOTAL: 45 PERIODS

COURSE OUTCOMES

On completion of this course, the student is expected to be able to

- CO1** Explain environmental energy supplies on buildings
- CO2** Explain the passives of heating, cooling system
- CO3** Discuss the various aspects of day-lighting and electrical lighting in a building
- CO4** Predict and design building ventilation and heat control for indoor comfort
- CO5** Design a building for climatic zone and apply simulation programs of buildings to perform energy calculations

COs- PO's & PSO's MAPPING

PO/PSO		Course Outcome					Overall Correlation of COs to POs
		CO1	CO2	CO3	CO4	CO5	
PO1	Knowledge of Engineering Sciences	3	3	3	3	3	3
PO2	Problem analysis	-	-	-	3	3	2
PO3	Design/development of solutions	2	2	2	3	3	3
PO4	Investigation	-	-	-	-	1	2
PO5	Modern Tool Usage	-	-	-	-	2	1
PO6	Individual and Teamwork	1	-	-	-	-	1
PO7	Communication	-	-	-	1	1	1
PO8	Engineer and Society	3	3	3	3	3	3
PO9	Ethics	2	-	-	-	2	2
PO10	Environment and Sustainability	3	3	3	3	3	3
PO11	Project Management and Finance	-	-	-	-	-	-
PO12	Life Long Learning	3	-	-	-	-	3
PSO1	Knowledge of Construction Engineering & Management discipline	3	3	3	3	2	3
PSO2	Critical analysis of Construction management problems and innovation	2	2	2	3	3	3
PSO3	Conceptualization and evaluation of engineering solutions to Construction Issues	1	1	2	3	3	3

Course Objectives:

Students will gain

1. Understanding of energy conservation options in various industrial processes.
2. The knowledge of tools and techniques for energy auditing.
3. About Energy Audit report including economic feasibility.

UNIT I: ENERGY SCENARIO**9**

Primary and Secondary Energy, Commercial and Non-commercial Energy, Renewable and Non-Renewable Energy, Global and Indian Energy Scenario, Growing Energy Needs and Long-Term Energy Scenario for India, Energy Pricing in India, Energy Sector Reforms, Energy Security, Energy Strategy for the Future, Basics of Energy and Its Various Forms: Various Forms of Energy, Electrical Energy Basics, Thermal Energy Basics, Units and Conversions Energy

UNIT II: MATERIAL AND ENERGY BALANCE**9**

Basic Principles, The Sankey Diagram and its Use, Material Balances, Energy Balances, Process Flow Chart, Facility as an Energy System, Energy Action Planning: Key elements, Formulation, Ratification. **Energy Audit:** ESCOs Energy Management & Government Programmes: BEE & State Development Agencies, Government & EESL Programmes, PAT Scheme, Ujala & SEEP Programmes, Municipal & Agriculture DSM Initiatives, Standards and Labelling Programme. Energy Audit: Types and Methodology, Energy Audit Report, Understanding Energy Costs, Maximizing System Efficiency, Fuel and Energy Substitution, Energy Audit Instruments

UNIT III: ENVIRONMENTAL AUDITING**9**

Definition and types of audits, Guidelines for environmental auditing, methodologies for Environmental Auditing, Matrix methods and Battelle method of auditing, Types of projects requiring Environmental Clearance, EAC, EIA M. Tech. Energy & Environmental Engineering Scheme and Syllabus (w.e.f. 2020-21) 40 case studies, Legal requirements for environmental auditing. Restoration and rehabilitation technologies, Environmental planning, urban planning, rural planning and land use pattern.

UNIT IV: ENVIRONMENTAL IMPACT ASSESSMENT**9**

Environment Impact Assessment (EIA) - Principles, Origin, development, types, issues, problems and limitations, environmental management plan, environmental impact statement (EIS), Strategic Environmental Assessment (SEA), EIA guidelines (1994) and notifications (Govt. of India 2006), Scope of EIA in project planning and implementation, Indian directions of EIA. Monitoring tools for EIA, surveys, spatial databases, experiments, models, Decision support system, Sources and collection of data for EIA, various appendices and forms for application.

UNIT V: COMPONENTS OF EIA**9**

EIA methodology – project screening, scoping, base line data, impact identification, prediction, evaluation, mitigation. Assessment techniques – cost benefit analysis, analysis of alternatives, methods of prediction matrices, networks, checklists and overlays and assessment of impacts – air, water, soil, noise, biological, social, cultural, economical, environmental factors. EIA standards and guidelines, public participation- procedure of public hearing, presentation, review and decision making. Quality control – trends in EIA practice, evaluation criteria, expert system in EIA, use of regulations. Documentation and monitoring – Generic structure of EIA Document, planning, collection, use of display materials, team writing, checklist, environmental monitoring guidelines and policies, post audit.

TOTAL: 45 PERIODS

Course Outcomes:

The students will be able to:

CO1: To identify the key aspects of energy and environmental audit

CO2: Lay foundation on the concept and components of energy and environmental auditing and environmental impact assessment.

CO3: Develop skill to evaluate the issues and problems in energy and environmental auditing and environmental impact assessment from the perspective of process, methods, and goals.

CO4: Be able to access different case studies/examples of EIA in practice

CO5: Learn to write EIA report M. Tech. Energy & Environmental Engineering Scheme and Syllabus (w.e.f. 2020-21) 41

OBJECTIVES:

1. To have an increased awareness among students on issues in the area of Sustainability
2. To understand the role of engineering and technology within sustainable development.
3. To know the methods, tools and incentives for sustainable product-service system development.

UNIT I INTRODUCTION

9

Sustainability-Introduction, Need and concept of sustainability, Social-environmental and economic sustainability concepts. Sustainable Development, Nexus between Technology and Sustainable development, Challenges for Sustainable Development. Multilateral environmental agreements and Protocols - Clean Development Mechanism (CDM), Environmental legislations in India - Water Act, Air Act

UNIT II SUSTAINABLE DESIGN

9

Basic concepts of sustainable habitat, Green buildings, green materials for building construction, material selection for sustainable design, green building certification- GRIHA & IGBC Certification for buildings, Energy efficient building design- Passive solar design technique, Thermal storage, Cooling strategies, high performance insulation. Sustainable cities, Sustainable transport.

UNIT III SUSTAINABLE DESIGN

9

Basic concepts of sustainable habitat, Green buildings, green materials for building construction, material selection for sustainable design, green building certification- GRIHA & IGBC Certification for buildings, Energy efficient building design. Sustainable cities, Sustainable transport.

UNIT IV SUSTAINABLE DESIGN

9

Basic concepts of sustainable habitat, Green buildings, green materials for building construction, material selection for sustainable design, green building certification- GRIHA & IGBC Certification for buildings, Energy efficient building design. Sustainable cities, Sustainable transport.

UNIT V CLEAN TECHNOLOGY AND ENERGY

9

Energy sources: Basic concepts Conventional and non-conventional, solar energy, Fuel cells, Wind energy, Small hydro plants, biofuels, Energy Derived from oceans, Geothermal energy. Rain water harvesting.

TOTAL: 45 PERIODS

OBJECTIVES:

Overview of smart materials, Piezoelectric Ceramics, Piezo-polymers, Magnetostrictive Materials, Electroactive Polymers, Shape Memory Alloys, Electro and Magneto Rheological Fluids, Modelling of smart materials, introduction to composite smart materials, Mechanics of smart composite materials, Smart sensors based on high bandwidth low strain smart materials, Low-bandwidth high strain smart actuators, Micro-electro mechanical Smart Systems, Intelligent devices based on smart materials, Applications of Smart Actuators: Active and Hybrid Vibration Control, Active Shape Control, Distributed Sensing and Control of Smart Beams.

UNIT I OVERVIEW OF SMART MATERIALS**9**

Introduction to Smart Materials, Principles of Piezoelectricity, Perovskite Piezoceramic Materials, Single Crystals vs Polycrystalline Systems, Piezoelectric Polymers, Principles of Magnetostriction, Rare earth Magnetostrictive materials, Giant Magnetostriction and Magneto-resistance Effect, Introduction to Electro-active Materials, Electronic Materials, Electro-active Polymers, Ionic Polymer Matrix Composite (IPMC), Shape Memory Effect, Shape Memory Alloys, Shape Memory Polymers, Electro-rheological Fluids, Magneto Rheological Fluids.

UNIT II HIGH-BAND WIDTH, LOW STRAIN SMART SENSORS**9**

Piezoelectric Strain Sensors, In-plane and Out-of Plane Sensing, Shear Sensing, Accelerometers, Effect of Electrode Pattern, Active Fibre Sensing, Magnetostrictive Sensing, Villari Effect, Matteuci Effect and Nagoka-Honda Effect, Magnetic Delay Line Sensing, Application of Smart Sensors for Structural Health Monitoring (SHM), System Identification using Smart Sensors

UNIT III SMART ACTUATORS**9**

Modelling Piezoelectric Actuators, Amplified Piezo Actuation – Internal and External Amplifications, Magnetostrictive Actuation, Joule Effect, Wiedemann Effect, Magnetovolume Effect, Magnetostrictive Mini Actuators, IPMC and Polymeric Actuators, Shape Memory Actuators, Active Vibration Control, Active Shape Control, Passive Vibration Control, Hybrid Vibration Control

UNIT IV SMART COMPOSITES**9**

Review of Composite Materials, Micro and Macro-mechanics, Modelling Laminated Composites based on Classical Laminated Plate Theory, Effect of Shear Deformation, Dynamics of Smart Composite Beam, Governing Equation of Motion, Finite Element Modelling of Smart Composite Beams

UNIT V ADVANCES IN SMART STRUCTURES & MATERIALS**9**

Self-Sensing Piezoelectric Transducers, Energy Harvesting Materials, Autophagous Materials, SelfHealing Polymers, Intelligent System Design, Emergent System Design.
