PROGRAMME HANDBOOK

M.Tech. – Manufacturing Technology
FULL TIME PROGRAMME
Regulation 2022

(For candidates admitted to M.Tech Manufacturing Technology Programme from June 2022 onwards)

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

COURSE STRUCTURE

Semester - 1

Course Code	Title of Paper	Hours / Per Week			
		L	T	P	C
22248S11	Advanced Engineering Mathematics	3	1	-	4
22254C12	Theory of Metal Cutting	4	-	-	4
22254C13	Advanced Manufacturing Processes	4	-	-	4
22254C14	Advances in Casting & Welding	4	-	-	4
22254C15	Automated Computer Integrated Manufacturing Systems	4	-	-	4
22254E16 (A To C)	Elective – I	3	-	-	3
22254L17	CAD/CAM Laboratory	-	-	3	3
TOTAL NO. OF CREDITS					26

Semester – 2

Course Code	Title of Paper	Hours / Per Week			
		L	T	P	C
22254C21	Tooling for Manufacturing	4	-	-	4
22254C22	MEMS and Nano Technology	4	-	-	4
22254C23	Manufacturing Metrology and Quality Control	4	-	-	4
22254E24 (A to C)	Elective – II	3	-	-	3
22254E25 (A to C)	Elective – III	3	-	-	3
22254L26	Automation Lab	-	-	3	3
222TECWR	Technical Writing/Seminar	-	-	3	3
TOTAL NO. OF CREDITS					24

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

Semester - 3

Course Code	Title of Paper	Hours / Per Week			
		L	T	P	C
22254C31	Metal Forming Process	4	-	-	4
22254E32 (A to C)	Elective – IV	3	-	-	3
22254E33 (A to B)	Elective - V	3	-	-	3
22254E34 (A to B)	Elective - VI	3	-	-	3
22254P35	Project Work Phase I	-	-	10	10
TOTAL NO. OF CREDITS					**23**

Semester – 4

Course Code	Title of Paper	Hours / Per Week			
		L	T	P	C
22254P41	Project Work Phase II	-	-	15	15
TOTAL NO. OF CREDITS					**15**

ELECTIVE –I

Course Code	Title of Paper	Hours / Per Week			
		L	T	P	C
22254E16A	Materials Management and Logistics	3	-	-	3
22254E16B	Quality And Reliability Engineering	3	-	-	3
22254E16C	Manufacturing Information Systems	3	-	-	3

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

ELECTIVE –II

Course Code	Title of Paper	Hours / Per Week			
		L	T	P	C
22254E24A	Finite Element Application in Manufacturing	3	-	-	3
22254E24B	Lean Manufacturing	3	-	-	3
22254E24C	Material management	3	-	-	3

ELECTIVE –III

Course Code	Title of Paper	L	T	P	C
22254E25A	Non-Destructive Testing And Evaluation	3	-	-	3
22254E25B	Maintenance Management	3	-	-	3
22254E25C	Optimization Techniques	3	-	-	3

ELECTIVE –IV

22254E32A	Process Planning And Cost Estimation	3	-	-	3
22254E32B	Instrumentation and Control Engineering	3	-	-	3
22254E32C	Research Methodology	3	-	-	3

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

ELECTIVE -V

Course Code	Title of Paper	Hours / Per Week			
		L	T	P	C
22254E33A	Product Design and Development	3	-	-	3
22254E33B	Fluid Power Automation	3	-	-	3
22254E33C	Internet Of Things For Manufacturing	3	-	-	3

ELECTIVE -VI

22254E34A	Advanced Material Technology	3	-	-	3
22254E34B	Industrial Safety	3	-	-	3
22254E34C	Additive Manufacturing	3	-	-	3

Total No of Credits - 88

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

DEPARTMENT OF MECHANICAL ENGINEERING

M.Tech., MANUFACTURING TECHNOLOGY – FULL TIME PROGRAMME SYLLABI-REGULATIONS- 2022

I - SEMESTER

22248S11E - ADVANCED ENGINEERING MATHEMATICS 3 1 0 4

LAPLACE TRANSFORM: **9+3**

Laplace transform methods for one-dimensional wave equation – Displacement in a long string – longitudinal vibration of an elastic bar – Laplace equation – properties of harmonic functions.

FOURIER TRANSFORM: **9+3**

Fourier transforms methods for one – dimensional heat conduction problems in infinite and semi infinite rod – Fourier transform methods for Laplace equation.

PROBABILITY OF DISTRIBUTION: **9+3**

Probability – definition and introduction – random variable – probability density functions – study of standard distributions: Binomial, poisson, normal exponential and weibull distributions – Applications – Baye's theorem.

TESTING OF HYPOTHESIS: **9+3**

Testing of Hypothesis – Parametric test – Small samples – Test related proportion, Means, Standard deviation – Test based on chi-square, Goodness of fit and test of independence.

THEORY OF ESTIMATION **9+3**

Principles of least squares – Multiple and partial correlation and regression – Estimation of parameters – Method of moments.

TOTAL: 45+30 = 75 PERIODS

BOOKS FOR REFERENCES:

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

1. Sankar Rao.K., Introduction to partial differential equations, Pnentile Hall of India, New Delhi – 1995.
2. Sneddon.I.N., Elements of partial differential equations, MC Graw Hill, 1996
3. Engineering Statistics, Bowher and LIberman
4. Gupta.S.C. & Kappor, V.K. Fundamentals of Mathematical Statistics, Sultan Chand & Sons, Reprint 1999.

22254C12 - THEORY OF METAL CUTTING 4 0 0 4

OBJECTIVE:

To know about the mechanics of chip formation, to analyse the tool failure, and thermodynamics involved in metal cutting and evaluation of tool materials.

UNIT- I: Orthogonal Cutting: 12

Orthogonal Cutting – Theories of merchant – Lee and Shaffer – Merchant's circle diagram – shear angle relationship – chip velocity – force – velocity relationships

UNIT-II: Chip Formation: 12

Mechanism of chip formation – Types of Chips – discontinuous,continuous continuous with BUE – Chip Formation in drilling and Milling – effect of cutting variables of chip reduction coefficient.

UNIT-III : Tool Life and Machinability: 12

Tool Failure:Mode of Plastic failure – Measurement of tool wear – tool life tests – tool life equation for variable theories – variables affecting tool life – machinability – machinability index – problems.

UNIT-IV: Thermal Analysis in Metal Cutting: 12

Thermodynamics of orthogonal cutting – analysis of temperature at shear plane and tool face – experimental methods for temperature measurement.

UNIT-V: Chatter: 12

Chatter - Importance of Chatter in machining – types of chatter – avoidance of chatter.Tools materials – requirements – alloy tools - HSS – carbides –PCD and CBN- properties and application.

TOTAL: 60 PERIODS

BOOKS FOR REFERENCES:

1.
2. Juneja .B.L, "Fundamentals of Metal cutting and Machine tools", New Age International, 1995.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254C13 ADVANCED MANUFACTURING PROCESSES 4 0 0 4

AIM:

To expose the students in the art of manufacturing new products due to the development of new materials and processes. The students will totally get a feel of the relevant suitable process while evaluating and deciding.

OBJECTIVE:

• To inform the students about the various alternative manufacturing processes available.

• To develop an altitude to look for the unconventional manufacturing process to machine

• To make them to understand and appreciate the latest manufacturing process for micro fabrication and devices.

UNIT I NEWER MACHINING PROCESSES - I 12

(Non thermal energy) – Abrasive machining – water jet machining - ultrasonic machining – chemical machining – electro chemical machining – construction working principle – steps - types – process parameters – derivations – problems, merits, demerits and applications .

UNIT II NEWER MACHINING PROCESS – II 12

Wire cut EDM - Electro chemical machining – ECG - Electric discharge machining – construction – principle – types – control - circuits – tool design – merits, demerits & applications.

UNIT III NEWER MACHINING PROCESS – III 12

Laser beam machining – Electron beam machining – Plasma arc machining – Ion beam machining – construction working principle types – process parameter – derivations – problems, merits, demerits and applications.

UNIT IV FABRICATION OF MICRO DEVICES 12

Semiconductors – films and film depurification – Oxidation - diffusion – ion implantation – etching – metallization – bonding – surface and bulk machining – LIGA Process – Solid free form fabrication.

UNIT V MICROFABRICATION TECHNOLOGY 12

Wafer preparation – monolithic processing – moulding – PCB board hybrid & mcm technology – programmable devices & ASIC – electronic material and processing.–
steriolithography SAW devices, Surface Mount Technology,

TOTAL: TOTAL: 60 PERIODS

22254C14

ADVANCES IN CASTING AND WELDING L T P C 3 0 0 3

OBJECTIVES:

 To study the metallurgical concepts and applications of casting and welding process.

 To acquire knowledge in CAD of casting and automation of welding process.

UNIT I CASTING DESIGN 8

Heat transfer between metal and mould –– Design considerations in casting – Designing for directional solidification and minimum stresses - principles and design of gating and risering

UNIT II CASTING METALLURGY 8

Solidification of pure metal and alloys – shrinkage in cast metals – progressive and directional solidification –– Degasification of the melt-casting defects – Castability of steel , Cast Iron, Al alloys, Babbit alloy and Cu alloy.

UNIT III RECENT TRENDS IN CASTING AND FOUNDRY LAYOUT 8

Shell moulding, precision investment casting, CO2 moulding, centrifugal casting, Die casting, Continuous casting, Counter gravity low pressure casting, Squeeze casting and semisolid processes. Layout of mechanized foundry – sand reclamation – material handling in foundry pollution control in foundry –– Computer aided design of casting.

UNIT IV WELDING METALLURGY AND DESIGN 10

Heat affected Zone and its characteristics – W eldability of steels, cast iron, stainless steel, aluminum, Mg , Cu , Zirconium and titanium alloys – Carbon Equivalent of Plain and alloy steels Hydrogen embrittlement – Lamellar tearing – Residual stress – Distortion and its control . Heat transfer and solidification - Analysis of stresses in welded structures – pre and post welding heat treatments – weld joint design – welding defects – Testing of weldment.

. **UNIT V RECENT TRENDS IN WELDING 11**

Friction welding, friction stir welding – explosive welding – diffusion bonding – high frequency induction welding – ultrasonic welding – electron beam welding – Laser beam welding –Plasma welding – Electro slag welding- narrow gap, hybrid twin wire active TIG – Tandem MIG- modern brazing and soldering techniques – induction, dip resistance, diffusion processes – Hot gas, wave and vapour phase soldering. Overview of automation of welding in aerospace, nuclear, surface transport vehicles and under water welding.

OUTCOMES:

At the end of this course the students are expected to impart knowledge on basic concepts and advances in casting and welding processes.

TOTAL: 45 PERIODS

22254C15 AUTOMATED COMPUTER INTEGRATED MANUFACTURING SYSTEMS 4 0 0 4

AIM:

To stress the role of computers in production.

OBJECTIVE:

To teach the role of computers in processing the information knowing across the various Stages and various departments in a manufacturing concern.

UNIT I INTRODUCTION 10

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts and mathematical models – Simple problems in production models – CIM hardware and software – Major elements of CIM system – Three step process for implementation of CIM – Computers in CIM – Computer networks for manufacturing – The future automated factory – Management of CIM – Impact of CIM on personnel – CIM status.

UNIT II AUTOMATED MANUFACTURING SYSTEMS 14

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design – The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features. Automated Guided Vehicle system – Types of vehicles and AGVs applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance.

UNIT III GROUP TECHNOLOGY AND FMS 14

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies. FMS – Components – workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS, FMS applications, Benefits.

UNIT IV PROCESS PLANNING 12

Process planning – Activities in process planning, Information's required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – selecting among casting process, forming process and machining process. Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study. Typical process sheet – case studies in Manual process planning. Computer Aided Process Planning – Process planning module and data base – Variant process planning – Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning.

UNIT V TYPES OF PROCESS CONTROL AND AUTOMATIC DATA CAPTURE 10

Introduction to process model formulation – linear feedback control systems – Optimal control – Adaptive control –Sequence control and PLC. Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer control. Overviews of Automatic identification methods – Bar code technology – Other Automatic data capture technologies.

TOTAL: 60 PERIODS

22254L19 CAD / CAM LABORATORY 0 0 3 3

OBJECTIVES:

- To teach the students about the drafting of 3D components and analyzing the same using various CAD packages and programming of CNC machines
- To train them to use the various sensors

CAM LABORATORY

1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading,

Grooving canned cycle

2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Strain gauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.

CAD LABORATORY

2D modeling and 3D modeling of components such as

1. Bearing
2. Couplings
3. Gears
4. Sheet metal components
5. Jigs, Fixtures and Die assemblies.

TOTAL: 60 PERIODS

OUTCOMES :

At the end of this course the students are expected

- To impart the knowledge on training the students in the area of CAD/CAM

LIST OF EQUIPMENTS S.NO	EQUIPMENT	QUANTITY
1.	Computer Server	1
2.	Computer nodes or systems (High end CPU with atleast 1 GB main memory) networked to the server	30
3.	A3 size plotter	1
4.	Laser Printer	1
5.	CNC Lathe	1
6.	CNC milling machine	1
SOFTWARE		
7.	Any High end integrated modeling and manufacturing CAD / CAM software	15 licenses
8.	CAM Software for machining centre and turning centre (CNC	15 licenses

	Programming and tool path simulation for FANUC / Sinumeric and Heidenhain controller)	
9.	Licensed operating system	adequate
10.	Support for CAPP	adequate

AIM:

To impart the knowledge on training the students in the area of CAD/CAM.

OBJECTIVES:

To teach the students about the drafting of 3D components and analyzing the same using various CAD/CAM software's.

CAM LABORATORY

1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading, Grooving & canned cycle
2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle.
3. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Strain gauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.
4. Mini project on any one of the CIM elements is to be done. This can be either a software or hardware simulating a CIM element. At the end of the semester, the students has to submit a mini report and present his work before a Committee.

CAD LABORATORY

2D modeling and 3D modeling of components such as
1. Bearing
2. Couplings
3. Gears
4. Sheet metal components
5. Jigs, Fixtures and Die assemblies.

TOTAL: 30 PERIODS.

SEMESTER II

22254C21 TOOLING FOR MANUFACTURING 4 0 0 4

OBJECTIVES:

 To study the various design considerations for tooling.

 Develop knowledge in tooling and work holding devices

UNIT I INTRODUCTION 12

Manufacturing Processes-objectives of manufacturing processes-classification of manufacturing process-Objectives of Tool design-tool design process-Nature and scope of Tool engineering-principles of economy for tooling-problems of economy in tooling-planning and tooling for economy-Manufacturing principles applicable to process and tool planning-tool control-tool maintenance-tool materials and its selection

UNIT II TOOLING FOR METAL REMOVAL PROCESSES 12

Traditional machining processes -work and tool holding devices-tool nomenclatures-Mechanism of machining-force temperature and tool life of single point tool-multipoint tools -tool design-tool wear-special processes-capstan and turret lathe-tooling layout of automats-tooling in NC and CNC machines-tooling for machining centres-CAD in tool design-Jigs and fixtures-design-Non-traditional material removal processes-mechanical, electrical thermal and chemical energy processes-principles-operation-equipment-tooling parameters and limitations

UNIT III TOOLING FOR METAL FORMING PROCESSES 12

Classification of Forming processes-Types of presses-design of -blanking and piercing dies-simple, compound, combination and progressive dies-Drawing dies-Bending dies-forging dies-plastic moulding dies

UNIT IV TOOLING FOR METAL CASTING AND METAL JOINING PROCESSES 12

Tools and Equipment for moulding-patterns –pattern allowances – pattern construction-die casting tools-mechanization of foundries. Tooling for Physical joining processes Design of welding fixtures – Arc welding, Gas welding, Resistance welding, laser welding fixtures-Tooling for Soldering and Brazing Tooling for Mechanical joining processes

UNIT V TOOLING FOR INSPECTION AND GAUGING 12

Survey of linear and angular measurements-standards of measurement-design and manufacturing of gauges- measurement of form-Inspection bench centre-co-ordinate measuring machine-tooling in CMM.

TOTAL: 60 PERIODS

OUTCOMES:

At the end of this course the students are well versed in

1. State of Art in Tooling in Manufacturing and Inspection
2. Design and Develop tooling for Flexible Manufacturing

REFERENCES:

1. Cyril Donaldson Tool Design, Tata McGraw Hill, 1976

22254C22 MEMS AND NANO TECHNOLOGY 4 0 0 4

AIM:

To inspire the students to expect to the trends in manufacturing micro components and measuring systems to nano scale.

OBJECTIVES:

• To expose the students to the evolution of micro electromechanical systems, to the various fabrication techniques and to make students to be award of micro actuators.

• Also to impart knowledge to the students about nano materials and various nano measurements techniques.

UNIT I OVER VIEW OF MEMS AND MICROSYSTEMS 10

Definition – historical development – fundamentals – properties, micro fluidics, design and fabrication micro-system, microelectronics, working principle and applications of micro system.

UNIT II MATERIALS, FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING 14

Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS, conductive polymers. Photolithography, photo resist applications, light sources, in implantation, diffusion process exudation – thermal oxidation, silicon diode, chemical vapour deposition, sputtering - deposition by epitoxy – etching – bulk and surface machining – LIGA process Micro system packaging – considerations packaging – levels of micro system packaging die level, device level and system level.

UNIT III MICRO DEVICES AND MATERIALS 12

Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands displacement sensors, pressure and flow sensors, micro actuators – smart materials – applications.

UNIT IV SCIENCE OF NANO MATERIALS 12

Classification of nano structures – effect of the nanometer length scale effects of nano scale dimensions on various properties – structural, thermal, chemical, mechanical, magnetic, optical and electronic properties – effect of nanoscale dimensions on biological systems. Fabrication methods – Top down processes – bottom up process.

UNIT V CHARACTERIZATION OF NANO MATERIALS 12

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, transmission electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

TOTAL: 60 PERIODS

22254C23 MANUFACTURING METROLOGY AND QUALITY CONTROL 4 0 0 4

AIM:

To expose the students, the importance of measurement and the various latest measuring techniques using Laser, Coordinate measuring machines and Optoelectronics devices. Also to stress upon the Importance of quality in manufacturing.

OBJECTIVES:

To impart through knowledge in various latest measurement systems such as laser metrology, coordinate measuring machines and electro-optical devices. Also to make the students to understand quality

UNIT – I LASER METROLOGY 11

Introduction – types of lasers – laser in engineering metrology – metrological laser methods for applications in machine systems – Interferometry applications – speckle interferometry – laser interferometers in manufacturing and machine tool alignment testing – calibration systems for industrial robots laser Doppler technique – laser Doppler anemometry.

UNIT – II PRECISION INSTRUMENTS BASED ON LASER 11

Laser telemetric systems – detection of microscopic imperfections on high quality surface Pitter NPL gauge interferometer – classification of optical scanning systems – high inertia laser scan technique – rotating mirror technique – laser gauging – bar coding – laser dimensional measurement system.

UNIT – III CO-ORDINATE MEASURING MACHINE 14

Co-ordinate metrology – CMM configurations – hardware components – software – Probe sensors – displacement devices – Performance Evaluations – Software – Hardware – Dynamic errors – Thermal effects diagram – temperature variations environment control – applications.

UNIT – IV OPTO ELECTRONICS AND VISION SYSTEM 12

Opto electronic devices – CCD – On-line and in-process monitoring in production – applications image analysis and computer vision – Image analysis techniques – spatical feature – Image extraction – segmentation – digital image processing – Vision system for measurement – Comparison laser scanning with vision system.

UNIT – V QUALITY IN MANUFACTURING ENGINEERING 12

Importance of manufacturing planning for quality – concepts of controllability – need for quality management system and models – quality engineering tools and techniques – statistical process control – six sigma concepts – Poka Yoke – Computer controlled systems used in inspection.

TOTAL: 60 PERIODS

22254L26 AUTOMATION LAB 0 0 3 3

AIM:

To impart knowledge in the area of hydraulic and pneumatic components and its functions.

OBJECTIVE:

• To make the students to learn the basic concepts of hydraulics and pneumatics and its applications in the area of manufacturing process.
• To simulate the various hydraulics and pneumatics circuits.

EXPERIMENTS:

1. Simulation of single and double acting cylinder circuits
2. Simulation of Hydraulic circuits
3. Simulation of electro pneumatic circuits
4. Simulation of electro hydraulic circuits
5. Simulation of PLC circuits
6. Exercises on linear and angular measurements
7. Exercises on speed measurements
8. Exercises on Vibration measurements
9. Exercises on Motion controller using servo motors, encoders, etc.
10. Exercises on fiber optics transducers.
11. Exercises on stepper motor.
12. Exercises on microprocessor based data acquisition system.
13. Software simulation of fluid power circuits using Automation studio.

TOTAL : 30 PERIODS

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

222TECWR **Technical Writing/Seminar** **0 0 3 3**

Seminar should be based on the literature survey on any topic relevant to CAD/CAM/CAE. It may be leading to selection of a suitable topic of dissertation. The report shall contain some contribution by the candidate in the form of experimental results, deductions, compilation and inferences etc.

• Each student has to prepare a write-up of about 25 pages. The report typed on A4 sized sheets and bound in the necessary format should be submitted after approved by the guide and endorsement of the Head of Department.

• The student has to deliver a seminar talk in front of the teachers of the department and his classmates. The Guide based on the quality of work and preparation and understanding of the candidate shall do an assessment of the seminar.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

SEMESTER III

22254C31 METAL FORMING PROCESS 4 0 0 4

OBJECTIVE:

To study about the response of materials under plastic deformation and the various techniques for finding the stress for various metal working processes, and the recent developments in high speed forming.

UNIT-I: Stress and Strain: 10

Stress-State of stress in two dimensions – three dimensions – stress tensor-Mohr's circles – 2D and 3D state of stress – Description of strain at a point – Mohr's circle of strain- Hydrostatic and stress deviator component of stress- Plasticity- flow curve- true and true strain yield criteria for ductile loads combined stress test-plastic stress and strain relations- Levy Mises equations-Prandyl_Resus equations.

UNIT-II: Analysis of Metal Forming: 14

Work Load analysis – work formula for homogeneous deformation- rolling, rod drawing and extrusion processes -Determination of load by stress evaluation method-Determination of drawing load – strip drawing with wedge shaped dies and cylindrical rod drawing with a conical die.

UNIT-III: Stress Evaluation: 12

Stress evaluation method-Determination of forging load-plane strain forging of a thin strip and a flat circular disc- Determination of extrusion load for round band flat strip- upper bound analysis – plane strain indentation with frictionless interface

UNIT-IV: High velocity Forming: 12

Study of effect of high speed on stress strain relationships- High velocity forming equipment-Description of high speed forming machine – hot forging, pneumatic-mechanical, high velocity forging – Fuel combustion process- Electro magnetic forming –Introduction- Procedure - process variables-Applications

UNIT-V: Advanced Forming process: 12

Explosive Forming – Explosives – characteristics- stand off and contact operations- stress waves and their effects- process variables – properties of formed components- applications- Electro hydraulic forming – principles, requirements and characteristics – process variables- water hammer forming-principles and parameters- governing the process.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

List of Electives - Elective I

22254E16A MATERIALS MANAGEMENT AND LOGISTICS 3 0 0 3

AIM:

To introduce to the students the various functions of materials management and logistics

OBJECTIVE:

To make the students familiar with the various concepts and functions of material management, so that the students will be in a position to manage the materials management department independently.

UNIT I INTRODUCTION 6

Introduction to materials management – Objectives – Functions – Operating Cycle – Value analysis – Make or buy decisions.

UNIT II MANAGEMENT OF PURCHASE 7

Purchasing policies and procedures – Selection of sources of supply – Vendor development – Vendor evaluation and rating – Methods of purchasing – Imports – Buyer – Seller relationship – Negotiations.

UNIT III MANAGEMENT OF STORES AND LOGISTICS 12

Stores function – Location – Layout – Stock taking – Materials handling – Transportation – Insurance – Codification – Inventory pricing – stores management – safety – warehousing – Distribution linear programming – Traveling Salesman problems – Network analysis – Logistics Management.

UNIT IV MATERIALS PLANNING 10

Forecasting – Materials requirements planning – Quantity – Periodic – Deterministic models – Finite production.

UNIT V INVENTORY MANAGEMENT 10

ABC analysis – Aggregate planning – Lot size under constraints – Just in Time (JIT) system.

TOTAL: 45 periods

BOOKS FOR REFERENCES:

1. Lamer Lee and Donald W.Dobler, Purchasing and Material Management, Text and cases, Tata McGraw Hill, 1996.
2. Gopalakrishnan.P, Handbook of Materials Management, Prentice Hall of India, 1996.

4. Dr.R. Kesavan, C.Elanchezian and B.Vijaya Ramnath, Production Planning and Control, Anuratha Publications, Chennai, 2008.

5. G. Reghuram, N. Rangaraj, Logistics and supply chain management – cases and concepts, Macmillan India Ltd., 2006.

22254E16B QUALITY AND RELIABILITY ENGINEERING 3 0 0 3

OBJECTIVES:

To make the students to understand the various quality control techniques and to construct the various quality control charts for variables and attributes and also the design concepts for reliable system and maintenance aspects in industries.

UNIT I QUALITY & STATISTICAL PROCESS CONTROL 8

Quality – Definition – Quality Assurance – Variation in process – Factors – process capability – control charts – variables X, R and X, - Attributes P, C and U-Chart tolerance design. Establishing and interpreting control charts – charts for variables – Quality rating – Short run SPC.

UNIT II ACCEPTANCE SAMPLING 8

Lot by lot sampling – types – probability of acceptance in single, double, multiple sampling plans – OC curves – Producer's risk and consumer's risk. AQL, LTPD, AOQL, Concepts – standard sampling plans for AQL and LTPD – use of standard sampling plans.

UNIT III EXPERIMENTAL DESIGN AND TAGUCHI METHOD 9

Fundamentals – factorial experiments – random design, Latin square design – Taguchi method – Loss function – experiments – S/N ratio and performance measure – Orthogonal array.

UNIT IV CONCEPT OF RELIABILITY 9

Definition – reliability vs quality, reliability function – MTBF, MTTR, availability, bathtub curve – time dependent failure models – distributions – normal, weibull, lognormal – Reliability of system and models – serial, parallel and combined configuration – Markove analysis, load sharing systems, standby systems, covarient models, static models, dynamic models.

UNIT V DESIGN FOR RELIABILITY AND MAINTAINABILITY 11

Reliability design process, system effectiveness, economic analysis and life cycle cost, reliability allocation, design methods, parts and material selection, derating, stress-strength and analysis, failure analysis, identification determination of causes, assessments of effects, computation of criticality index, corrective action, system safety – analysis of down-time – the repair time distribution, stochastic point processes system repair time, reliability under preventive maintenance state dependent system with repair. MTTR – mean system down time, repair vs replacement, replacement models, proactive, preventive, predictive maintenance maintainability and availability, optimization techniques for system reliability with redundancy heuristic methods applied to optimal system reliability.

TOTAL: 45 PERIODS

Text Books:

1. Statistical Process Control, by Eugene Grant, Richard Leavenworth, McGraw Hill.
2. Quality Engineering in Production Systems, by G Taguchi , McGraw Hill, 1989.
3. Optimization &Variation Reduction in Quality, byW.A. Taylor,Tata McGraw Hill, 1991.

Reference Books:

1. Jurans Quality Planning and Analysis, by Frank. M.Gryna Jr. McGrawHill
2. Taguchi Techniques for Quality Engineering, (2ndEdition) by Philipposs, McGraw Hill, 1996,.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

3. Reliability Engineering, (3rdEdition), by LS Srinath, Affiliated East West Pvt Ltd,
1991.
4. Reliability Engineering, by E.Bala Guruswamy, Tata McGraw Hill, 1994

OUTCOMES :

At the end of this course the students are exposed to the various quality control techniques , to understand the importance and concept of reliability and maintainability in industries.

REFERENCES:

1. Amata Mitra "Fundamentals of Quality Control and improvement" Pearson Education, 2002.
2. Bester field D.H., "Quality Control" Prentice Hall, 1993.

5. Dhillon, Engineering Maintainability – How to design for reliability and easy maintenance, PHI, 2008.
6. Patrick D To' corner, Practical Reliability Engineering, John-Wiley and Sons Inc, 2002

22254E16C **MANUFACTURING INFORMATION SYSTEMS 3 0 0 3**

AIM:

To impart the knowledge in manufacturing information system.

OBJECTIVE:

On completion of this course, the students are expected to be conversant with order policies, data base terminologies, designing, manufacturing considerations and information system for manufacturing.

UNIT I INTRODUCTION 5

The Evolution of order policies, from MRP to MRP II, the role of Production organization, Operations control.

UNIT II DATABASE 7

Terminologies – Entities and attributes – Data models, schema and subschema - Data Independence – ER Diagram – Trends in database.

UNIT III DESIGNING DATABASE 13

Hierarchical model – Network approach- Relational Data model concepts, principles, keys, relational operations – functional dependence – Normalization types – Query.

UNIT IV MANUFACTURING CONSIDERATION 10

The product and its structure, inventory and process flow – Shop floor control Data structure and procedure – various model – the order scheduling module, Input/output analysis module the stock status database – the complete IOM database.

UNIT V INFORMATION SYSTEM FOR MANUFACTURING 10

Parts oriented production information system – concepts and structure – Computerized production scheduling, online production control systems; Computer based production management system, computerized manufacturing information system – case study.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Luca G.Sartori, “Manufacturing Information Systems”, Addison-Wesley Publishing Company, 1988.
2. Date.C.J.,”An Introduction to Database Systems” Addison Wesley, 8th Edn,.2003

4. Kerr.R, “Knowledge based Manufacturing Management”, Addison-Wesley,1991.
5. Manufacturing Information & Data Systems Analysis, Design & Practice,CECELJA FRANJO, 2002.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

List of Electives - Elective II

22254E24A FINITE ELEMENT APPLICATIONS IN MANUFACTURING 3 0 0 3

AIM:

To impart knowledge in the area of finite element methods and its application in manufacturing.

OBJECTIVE:

To study the fundamentals of one dimensional and two dimensional problems using FEA in manufacturing.

UNIT I INTRODUCTION 6

Fundamentals – Initial, boundary and eigen value problems – weighted residual, Galerkin and Raleigh Ritz methods - Integration by parts – Basics of variational formulation – Polynomial and Nodal approximation.

UNIT II ONE DIMENSIONAL ANALYSIS 10

Steps in FEM – Discretization. Interpolation, derivation of elements characteristic matrix, shape function, assembly and imposition of boundary conditions-solution and post processing – One dimensional analysis in solid mechanics and heat transfer.

UNIT III SHAPE FUNCTIONS AND HIGHER ORDER FORMULATIONS 10

Shape functions for one and two dimensional elements- Three noded triangular and four nodded quadrilateral element Global and natural co-ordinates—Non linear analysis – Isoparametric elements – Jacobian matrices and transformations – Basics of two dimensional, plane stress, plane strain and axisymmetric analysis.

UNIT IV COMPUTER IMPLEMENTATION 9

Pre Processing, mesh generation, elements connecting, boundary conditions, input of material and processing characteristics – Solution and post processing – Overview of application packages – Development of code for one dimensional analysis and validation.

UNIT V ANALYSIS OF PRODUCTION PROCESSES 10

FE analysis of metal casting – special considerations, latent heat incorporation, gap element – Time stepping procedures – Crank – Nicholson algorithm – Prediction of grain structure – Basic concepts of plasticity and fracture – Solid and flow formulation – small incremental deformation formulation – Fracture criteria – FE analysis of metal cutting, chip separation criteria, incorporation of strain rate dependency – FE analysis of welding.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Reddy, J.N. An Introduction to the Finite Element Method, McGraw Hill,1985.
2. Rao, S.S., Finite Element method in engineering, Pergammon press, 1989.
3. Lewis R.W.Morgan, K, Thomas, H.R. and Seetharaman, K.N. The Finite Element Method in Heat Transfer Analysis, John Wiley, 1994.

22254E24B LEAN MANUFACTURING 3 0 0 3

AIM:

To introduce the concepts of lean manufacturing system.

OBJECTIVES:

- To study the various tools for lean manufacturing (LM).
- To apply the above tools to implement LM system in an organization.

UNIT – I INTRODUCTION TO LEAN MANUFACTURING 7

Conventional Manufacturing versus Lean Manufacturing – Principles of Lean Manufacturing – Basic elements of lean manufacturing – Introduction to LM Tools.

UNIT – II CELLULAR MANUFACTURING, JIT, TPM 9

Cellular Manufacturing – Types of Layout, Principles of Cell layout, Implementation. JIT – Principles of JIT and Implementation of Kanban. TPM – Pillars of TPM, Principles and implementation of TPM.

UNIT – III SET UP TIME REDUCTION, TQM, 5S, VSM 10

Set up time reduction – Definition, philosophies and reduction approaches. TQM – Principles and implementation. 5S Principles and implementation - Value stream mapping - Procedure and principles.

UNIT – IV SIX SIGMA 9

Six Sigma – Definition, statistical considerations, variability reduction, design of experiments – Six Sigma implementation.

UNIT – V CASE STUDIES 10

Various case studies of implementation of lean manufacturing at industries.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Design and Analysis of Lean Production Systems, Ronald G. Askin & Jeffrey B. Goldberg, John Wiley & Sons, 2003
2. Rother M. and Shook J, 1999 ‘Learning to See: Value Stream Mapping to Add Value and Eliminate Muda’ , Lean Enterprise Institute, Brookline, MA.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

1. Mikell P. Groover (2002) ‘Automation, Production Systems and CIM.

22254E24C Materials Management 3 0 0 3

OBJECTIVE :

To introduce to the students the various concepts of materials management

UNIT I INTRODUCTION 6

Introduction to materials management – Objectives – Functions – Operating Cycle – Value analysis – Make or buy decisions.

UNIT II MANAGEMENT OF PURCHASE 7

Purchasing policies and procedures – Selection of sources of supply – Vendor development – Vendor evaluation and rating – Methods of purchasing – Imports – Buyer – Seller relationship – Negotiations.

UNIT III MANAGEMENT OF STORES AND LOGISTICS 12

Stores function – Location – Layout – Stock taking – Materials handling – Transportation – Insurance – Codification – Inventory pricing – stores management – safety – warehousing – Distribution linear programming – Traveling Salesman problems – Network analysis – Logistics Management.

UNIT IV MATERIALS PLANNING 10

Forecasting – Materials requirements planning – Quantity – Periodic – Deterministic models – Finite production.

UNIT V INVENTORY MANAGEMENT 10

ABC analysis – Aggregate planning – Lot size under constraints – Just in Time (JIT) system.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course the students are

 Familiarized with the various concepts and functions of material management, so that the students will be in a position to manage the materials management department independently.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

List of Electives - Elective III

22254E25A NON-DESTRUCTIVE TESTING AND EVALUATION 3 0 0 3

OBJECTIVES :
To stress the importance of NDT in engineering.

UNIT I NON-DESTRUCTIVE TESTING: AN INTRODUCTION, VISUAL INSPECTION & LIQUID PENETRANT TESTING 6

Introduction to various non-destructive methods, Comparison of Destructive and Non destructive Tests, Visual Inspection, Optical aids used for visual inspection, Applications.
Physical principles, procedure for penetrant testing, Penetrant testing materials, Penetrant testing methods-water washable, Post – Emulsification methods, Applications

UNIT II EDDY CURRENT TESTING & ACOUSTIC EMISSION 10

Principles, Instrumentation for ECT, Absolute, differential probes, Techniques – High sensitivity techniques, Multi frequency, Phased array ECT, Applications.
Principle of AET, Instrumentation, Applications - testing of metal pressure vessels, Fatigue crack detection in aerospace structures.

UNIT III MAGNETIC PARTICLE TESTING & THERMOGRAPHY 10

Principle of MPT, procedure used for testing a component, Equipment used for MPT, Magnetizing techniques, Applications.
Principle of Thermography, Infrared Radiometry, Active thermography measurements, Applications – Imaging entrapped water under an epoxy coating, Detection of carbon fiber contaminants.

UNIT IV ULTRASONIC TESTING 10

Principle, Ultrasonic transducers, Ultrasonic Flaw detection Equipment, Modes of display A- scan, B-Scan, C- Scan, Applications, Inspection Methods - Normal Incident Pulse-Echo Inspection, Normal Incident Through-transmission Testing, Angle Beam Pulse-Echo testing, TOFD Technique, Applications of Normal Beam Inspection in detecting fatigue cracks, Inclusions, Slag, Porosity and Intergranular cracks - Codes, standards, specification and procedures and case studies in ultrasonics test.

UNIT V RADIOGRAPHY 9

Principle of Radiography, x-ray and gamma ray sources- safety procedures and standards, Effect of radiation on Film, Radiographic imaging, Inspection Techniques – Single wall single image, Double wall Penetration, Multiwall Penetration technique, Real Time Radiography - Codes, standards, specification and procedures and case studies in Radiography test.
Case studies on defects in cast, rolled, extruded, welded and heat treated components - Comparison and selection of various NDT techniques

TOTAL: 45 PERIODS

OUTCOMES:
At the end of this course the students are expected to have hands on experience on all types of NDT and their applications in Engineering.

22254E25B MAINTENANCE MANAGEMENT 3 0 0 3

OBJECTIVE:

To understand the concepts of maintenance management and to have knowledge in developing a suitable maintenance system for any type of an organization.

UNIT I: Introduction to Maintenance Management: 7

Maintenance: Its role and scope in total Organizational contexts - role of Maintenance. Centralized and decentralized maintenance organization structures. Maintenance Economics – reliability and Availability – MTBF, MTTR.

UNIT II: Maintenance Categories: 10

Maintenance system– Categories - Design and its selection – Breakdown Maintenance –Routine Maintenance- Predictive Maintenance –Preventive Maintenance- Corrective Maintenance-Total Productive Maintenance –Maintenance Schedule – Repair Cycle.

UNIT III: Spare Parts Management: 8

Pareto's principles for repetitive breakdown analysis, spares management, planning considerations for each type of activities.

UNIT – IV: Condition Monitoring: 10

Condition Monitoring (CM) – Introduction- Economics of CM – On-load and off-load testing – Methods and instruments for CM – Temperature sensitive tapes – Pistol thermometers – wear-debris analysis.

UNIT V: Maintenance Manpower Cost, Performance Management: 10

Maintenance man power planning - Selection training - Scheduling maintenance costs - Budget preparation and budgetary control of maintenance expenditures Maintenance effectiveness various performance indices - evaluation, uses and limitations - Monitoring of Maintenance performance.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254E25C **OPTIMIZATION TECHNIQUES** **3 0 0 3**

UNIT I - INTRODUCTION TO OPTIMIZATION **7**

Formulation of an optimization problem- Classification of optimization problem – optimization techniques- Classical optimization technique – Single variable optimization – Multi variable optimization algorithms

UNIT II - MINIMIZATION METHODS **8**

One dimensional minimization methods: unimodal function – elimination methods: unrestricted search, exhaustive search, Dichotomous search, Fibonacci methods, Golden section methods, Interpolation methods: Quadratic and cubic interpolation methods.

UNIT III - CONSTRAINED OPTIMIZATION TECHNIQUES **10**

Optimization with equality and inequality constraints - Direct methods – Indirect methods using penalty functions, Lagrange multipliers - separable programming and Geometric programming.

UNIT IV - UNCONSTRAINED OPTIMIZATION TECHNIQUES **10**

Multi variable unconstrained optimization techniques: Direct search methods: Random search method, unvaried method, pattern search method, steepest descent method and Conjugate gradient method.

UNIT V - APPLICATIONS OF HEURISTICS IN OPTIMIZATION **10**

Heuristics-Introduction-Multi objective optimization: Genetic algorithms and Simulated Annealing techniques; neural network & Fuzzy logic principles in optimization.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

List of Electives - Elective IV

22254E32A PROCESS PLANNING AND COST ESTIMATION 3 0 0 3

OBJECTIVES: To introduce the process planning concepts to make cost estimation for various products after process planning

UNIT I INTRODUCTION TO PROCESS PLANNING 10

Introduction- methods of process planning-Drawing interpretation-Material evaluation – steps in process selection-.Production equipment and tooling selection

UNIT II PROCESS PLANNING ACTIVITIES 10

Process parameters calculation for various production processes-Selection jigs and fixtures election of quality assurance methods – Set of documents for process planning-Economics of process planning- case studies

UNIT III INTRODUCTION TO COST ESTIMATION 8

Importance of costing and estimation –methods of costing-elements of cost estimation –Types of estimates – Estimating procedure- Estimation labor cost, material cost- allocation of over head charges-Calculation of depreciation cost

UNIT IV PRODUCTION COST ESTIMATION 8

Estimation of Different Types of Jobs – Estimation of Forging Shop, Estimation of Welding Shop, Estimation of Foundry Shop

UNIT V MACHINING TIME CALCULATION 9

Estimation of Machining Time – Importance of Machine Time Calculation- Calculation of Machining Time for Different Lathe Operations ,Drilling and Boring – Machining Time Calculation for Milling, Shaping and Planning -Machining Time Calculation for Grinding

TOTAL: 45 PERIODS

OUTCOMES: At the end of this course the students are expected to use the concepts of process planning and cost estimation for various products.

22254E32B INSTRUMENTATION AND CONTROL ENGINEERING 3 0 0 3

UNIT–I: Introduction to Instrumentation: 8

Mechanical Instrumentation- General concepts, General measurement system. Classification of Instruments - indicators, recorders and integrators- working principles, Precision and Accuracy: Measurement Error and calibration.

UNIT–II: Measuring Devices 10

Measurement of speed, frequency, acceleration - Vibrometer, Accelerometer etc. Pressure measurement: Gravitational, Bourdon, elastic transducers, strain gauge, pressure cells, and measurement of high and low pressure. Temperature measurement: Bi-Metallic, Resistance Thermometer, Thermocouples, Pyrometer, thermostats, Magnetic flow meter , Ultrasonic flow meter.

UNIT – III: Transducers: 8

Transducers – Introduction – Types -Variable resistance Transducers-Variable reactive transducers- Piezo Electric transducers- Fibre optic transducers- Laser instrumentation-analogue and digital type -incremental and absolute measurement.

UNIT – IV: Machine Diagnostic and Condition Monitoring: 10

Machine Diagnostics – Basic Concepts - Analysis of failure in machines-Distribution of fault occurrences-Objectives of monitoring-Monitoring techniques applied to Machineries.

UNIT – V: Computer Control System: 9

Data acquisition system-Introduction-Direct Digital control-Programmable Logic Controls (PLC) -Ladder diagrams-Communication used in PLC.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254CRM **RESEARCH METHODOLOGY**

AIM: **3 0 0 3**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

OUTCOME:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

UNIT I **9**

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

UNIT II **9**

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

UNIT III **9**

Data Analysis using Excel- Tabulation of Data in excel (Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

UNIT IV **9**

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software

UNIT V **9**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references

List of Electives - Elective V

22254E33A PRODUCT DESIGN AND DEVELOPMENT 3 0 0 3

UNIT I - INTRODUCTION 7

Significance of product design, product design and development process, sequential engineering design method, the challenges of product development.

UNIT II - PRODUCT PLANNING AND PROJECT SELECTION 8

Identifying opportunities evaluate and prioritize projects, allocation of resources Identifying Customer Needs, Interpret raw data in terms of customers need, organize needs in hierarchy and establish the relative importance of needs.

UNIT III - PRODUCT SPECIFICATIONS 8

Establish target specifications, setting final specifications, Concept Generation: Activities of concept generation, clarifying problem, search both internally and externally.

UNIT IV - INDUSTRIAL DESIGN AND CONCEPT SELECTION 10

Assessing need for industrial design, industrial design process, management, assessing quality of industrial design, Overview, concept screening and concept scoring, methods of selection.

UNIT V - THEORY OF INVENTIVE PROBLEM SOLVING (TRIZ) AND CONCEPT TESTING 12

Fundamentals, methods and techniques, General Theory of Innovation and TRIZ, Value engineering Applications in Product development and design, Model-based technology for generating innovative ideas Elements of testing: qualitative and quantitative methods including survey, measurement of customers' response, Intellectual Property: Elements and outline, patenting procedures.

BOOKS FOR REFERENCES:

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254E33B FLUID POWER AUTOMATION 3 0 0 3

AIM:

To impart knowledge in the area of hydraulics, pneumatic and fluid power components and its functions.

OBJECTIVE:

• To make the students to learn the basic concepts of hydraulics and pneumatics and their controlling elements in the area of manufacturing process.

• To train the students in designing the hydraulics and pneumatic circuits using ladder diagram.

UNIT I INTRODUCTION 5

Need for Automation, Hydraulic & Pneumatic Comparison – ISO symbols for fluid power elements, Hydraulic, pneumatics – Selection criteria.

UNIT II FLUID POWER GENERATING/UTILIZING ELEMENTS 8

Hydraulic pumps and motor gears, vane, piston pumps-motors-selection and specification-Drive characteristics – Linear actuator – Types, mounting details, cushioning – power packs – construction. Reservoir capacity, heat dissipation, accumulators – standard circuit symbols, circuit (flow) analysis.

UNIT III CONTROL AND REGULATION ELEMENTS 8

Direction flow and pressure control valves-Methods of actuation, types, sizing of ports pressure and temperature compensation, overlapped and under lapped spool valves operating characteristics-electro hydraulic servo valves-Different types-characteristics and performance.

UNIT IV CIRCUIT DESIGN 10

Typical industrial hydraulic circuits-Design methodology – Ladder diagram-cascade, method-truth table-Karnaugh map method-sequencing circuits-combinational and logic circuit.

UNIT V ELECTRO PNEUMATICS & ELECTRONIC CONTROL OF HYDRAULIC AND PNEUMATIC CIRCUITS 7

Electrical control of pneumatic and hydraulic circuits-use of relays, timers, counters, Ladder diagram. Programmable logic control of Hydraulics Pneumatics circuits, PLC ladder diagram for various circuits, motion controllers, use of field busses in circuits. Electronic drive circuits for various Motors.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254E33C INTERNET OF THINGS FOR MANUFACTURING 3 0 0 3

OBJECTIVES:

 To discover key IoT concepts including identification, sensors, localization, wireless protocols

 To explore IoT technologies, architectures, standards, and regulation

 To realize the value created by collecting, communicating, coordinating, and leveraging data

 To examine developments that will likely shape the industrial landscape in the future;

UNIT I INTRODUCTION 9

Technology of the IoT and applications,. IoT data management requirements, Architecture of IoT, Security issues Opportunities for IoT -Issues in implementing IoT. Technological challenges, RFID and the Electronic Product Code (EPC) network, the web of things.

UNIT II DESIGN OF IoT 9

Design challenges in IoT -Standardization, Security and privacy, Infrastructure, Analytics. Design steps for implementing IoT.

UNIT III PROTOTYPING OF IoT 9

Design principles for connected devices -Embedded devices, physical design, online components, embedded coding system. Informed Manufacturing plant – Elements, IoT implementation in Transportation and logistics, Energy and utilities, Automotive Connected supply chain, Plant floor control automation, remote monitoring, Management of critical assets, Energy management and resource optimization, proactive maintenance.

UNIT IV PREREQUISITES FOR IoT 9

IOT Technologies Wireless protocols low-power design (Bluetooth Low Energy), range extension techniques (data mining and mesh networking), and data-intensive IoT for continuous recognition applications Data storage and analysis Localization algorithms Localization for mobile systems

UNIT V APPLICATION IN MANUFACTURING 9

Applications HCI and IoT world -Multilingual interactions Robotics and Autonomous Vehicles Sensing and data processing-Simultaneous mapping and localization-Levels of autonomy, Smart factories, Future research challenges

TOTAL : 45 PERIODS

OUTCOMES:

 At the end of this course the students are expected to

 Utilizing sensors to gain greater visibility and real-time situational awareness

 Vertical applications that provide a clear business case and a pressing opportunity

 Emerging technologies to address IoT challenges

List of Electives - Elective VI

22254E34A ADVANCED MATERIAL TECHNOLOGY 3 0 0 3

AIM:

To impart knowledge on advance concepts of material technology

OBJECTIVE:

- To enlight the PG students on elastic, plastic and fractured behaviour of engineering Materials.
- To train the PG students in selection of metallic and non-metallic materials for the various engineering applications.

UNIT I ELASTIC AND PLASTIC BEHAVIOR 10

Elasticity in metals and polymers Anelastic and visco-elastic behaviour – Mechanism of plastic deformation and non metallic shear strength of perfect and real crystals – Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity – Deformation of non crystalline materials.

UNIT II FRACTURE BEHAVIOUR 10

Griffith's theory, stress intensity factor and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracture mechanism maps – Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law. Effect of surface and metallurgical parameters on fatigue – Fracture of non metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

UNIT III SELECTION OF MATERIALS 10

Motivation for selection, cost basis and service requirements – Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications – Computer aided materials selection.

UNIT IV MODERN METALLIC MATERIALS 8

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel – Intermetallics, Ni and Ti aluminides – smart materials, shape memory alloys – Metallic glass and nano crystalline materials.

UNIT V NON METALLIC MATERIALS 7

Polymeric materials – Formation of polymer structure – Production techniques of fibers, foams, adhesives and coating – structure, properties and applications of engineering polymers – Advanced structural ceramics, WC, TIC, TaC, Al_2O_3, SiC, Si_3N_4 CBN and diamond – properties, processing and applications.

TOTAL: 45 PERIODS

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254E34B INDUSTRIAL SAFETY 3 0 0 3

OBJECTIVE:

To develop and strengthen the safety ideas and motivate the students to impart basic safety skills and understandings to run an industry efficiently and effectively

UNIT I OPERATIONAL SAFETY 9

Hot metal operation, boiler, pressure vessels – heat treatment shop – gas furnace operation – electroplating – hot bending pipes – safety in welding and cutting, Cold – metal operation – safety in machine shop – cold bending and chamfering of pipesmetal cutting – shot blasting, grinding, painting – power press and other machines. Management of toxic gases and chemicals – industrial fires and prevention – road safety – highway and urban safety – safety of sewage disposal and cleaning – control of environmental pollution – managing emergencies in industries – planning security and risk assessments, on – site and off site. Control of major industrial hazards.

UNIT II SAFETY APPRAISA L AND ANALYSIS 9

Human side of safety – personal protective equipment – causes and cost of accidents. Accidents prevention program – specific hazard control strategies – HAZOP training and development of employees – first aid – fire fight devices – accident reporting, investigation. Measurement of safety performance, accident reporting and investigation – plant safety inspection, job safety analysis – safety permit procedures. Product safety – plant safety rules and procedures – safety sampling – safety inventory systems. Determining the cost effectiveness of safety measurement.

UNIT **III OCCUPATIONAL HEALTH 9**

Concept and spectrum of health functional units and activities of operational health service – occupational and related disease – levels of prevention of diseases – notifiable occupational diseases Toxicology Lead – Nickel, chromium and manganese toxicity – gas poisoning (such as CO, Ammonia Chlorise, So2, H2s.) their effects and prevention – effects of ultra violet radiation and infrared radiation on human system.

UNIT IV SAFETY AND HEALTH REGULATIONS 9

Safety and health standards – industrial hygiene – occupational diseases prevention welfare facilities. The object of factories act 1948 with special reference to safety provisions, model rules 123a, history of legislations related to safety – pressure vessel act – Indian boiler act – the environmental protection act – electricity act – explosive act.

UNIT V SAFETY MANAGEMENT 9

Evaluation of modern safety concepts – safety management functions – safety organization, safety department- safety committee, safety audit – performance measurements and motivation – employee participation in safety - safety and productivity.

TOTAL: 45 PERIODS

OUTCOME:

At the end of this course the students are expected to gain knowledge and skills needed to run an industry with utmost safety precautions.

22254E34C ADDITIVE MANUFACTURING

OBJECTIVE:

 To educate students with fundamental and advanced knowledge in the field of Additive manufacturing technology and the associated Aerospace, Architecture, Art, Medical and industrial applications.

UNIT I INTRODUCTION: 8

Need - Development of AM systems – AM process chain - Impact of AM on Product Development - Virtual Prototyping- Rapid Tooling – RP to AM -Classification of AM processes-Benefits- Applications.

UNIT II REVERSE ENGINEERING AND CAD MODELING: 10

Basic concept- Digitization techniques – Model reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data requirements – Geometric modeling techniques: Wire frame, surface and solid modeling – data formats - Data interfacing, Part orientation and support generation, Support structure design, Model Slicing, Tool path generation-Software for AM- Case studies.

UNIT III LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS 10

Stereolithography Apparatus (SLA): Principle, pre-build process, part-building and post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications.

Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modeling (FDM): Principle, details of processes, process variables, types, products, materials and applications. Laminated Object Manufacturing (LOM): Working Principles, details of processes, products, materials, advantages, limitations and applications - Case studies.

UNIT IV POWDER BASED ADDITIVE MANUFACTURING SYSTEMS: 10

Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS- powder structures, materials, post processing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations and applications– Case Studies.

UNIT V OTHER ADDITIVE MANUFACTURING SYSTEMS: 7

Three dimensional Printing (3DP): Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Shape Deposition Manufacturing (SDM), Ballastic Particle Manufacturing (BPM), Selective Laser Melting, Electron Beam Melting.

TOTAL: 45 PERIODS

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

OUTCOMES:

On completion of this course the students are expected to learn about a variety of Additive Manufacturing (AM) technologies, their potential to support design and manufacturing, case studies relevant to mass customized manufacturing, and some of the important research challenges associated with AM and its data processing tools

Research Integrated Curriculum

The relationship between teacher and learner is completely different in higher education from what it is in school. At the higher level, the teacher is not there for the sake of the student, both have their justification in the service of scholarship. For the students who are the professionals of the future, developing the ability to investigate problems, make judgments on the basis of sound evidences, take decisions on a rational basis and understand what they are doing and why is vital. Research and inquiry is not just for those who choose to pursue an academic career. It is central to professional life in the twenty-first century.

It is observed that the modern world is characterized by heightened levels of complexity and uncertainty. Fluidity, fuzziness, instability, fragility, unpredictability, indeterminacy, turbulence, changeability, contestability: these are some of the terms that mark out the world of the twenty-first century. Teaching and research is correlated when they are co-related. Growing out of the research on teaching- research relations, the following framework has been developed and widely adopted to help individual staff, course teams and whole institutions analyse their curricula and consider ways of strengthening students understanding of and through research. Curricula can be:

Research – Led: Learning about current research in the discipline

Here the curriculum focus is to ensure that what students learn clearly reflects current and ongoing research in their discipline. This may include research done by staff teaching them.

Research – Oriented: Developing research skills and techniques

Here the focus is on developing student's knowledge of and ability to carry out the research methodologies and methods appropriate to their discipline(s)

Research – Based: Undertaking research and inquiry

Here the curriculum focus is on ensuring that as much as possible the student learns in research and or inquiry mode (i.e. the students become producers of knowledge not just consumers). The strongest curricula form of this is in those special undergraduate programmes for selected students, but such research and inquiry may also be mainstreamed for all or many students.

Research- Tutored: engaging in research discussions

Here the focus is on students and staff critically discussing ongoing research in the discipline.

All four ways of engaging students with research and inquiry are valid and valuable and curricula can and should contain elements of them.

Moreover, the student participation in research may be classified as,

Level 1: Prescribed Research
Level 2: Bounded Research
Level 3: Scaffolded Research
Level 4: Self actuated Research
Level 5: Open Research

Taking into consideration the above mentioned facts in respect of integrating research into the M.Tech - Manufacturing Technology curriculum, the following Research Skill Based Courses are introduced in the curriculum.

Semester	RSB Courses	Credits
I	Research Led Seminar	1
II	Research Methodology	3
II	Participation in Bounded Research	2
III	Design Project/ Socio Technical Project	6
III	Project Work Phase I	10
IV	Project Work	15

Blueprint for assessment of student's performance in Research Led Seminar Course

- **Internal Assessment: 40 Marks**
  - Seminar Report (UG)/Concept Note(PG) : 5 X 4= 20 Marks
  - Seminar Review Presentation : 10 Marks
  - Literature Survey : 10 Marks
- **Semester Examination : 60 Marks**

(Essay type Questions set by the concerned resource persons)

Blueprint for assessment of student's performance in Design/Socio Technical Project

- **Continuous Internal Assessment through Reviews: 40 Marks**
  - Review I : 10 Marks
  - Review II : 10 Marks
  - Review III : 20 Marks
- **Evaluation of Socio Technical Practicum Final Report: 40 Marks**
- **Viva- Voce Examination: 20 Marks**
- **Total: 100 Marks**

Blueprint for assessment of student's performance in Research Methodology Courses

Continuous Internal Assessment: 20 Marks

- Research Tools(Lab) : 10 Marks
- Tutorial: 10 Marks

Model Paper Writing:	**40 Marks**
• Abstract:	5 Marks
• Introduction:	10 Marks
• Discussion:	10 Marks
• Review of Literature:	5 Marks
• Presentation:	10 Marks
Semester Examination:	**40 Marks**
Total:	**100 Marks**

DEPARTMENT OF MECHANICAL ENGINEERING

M.TECH., MANUFACTURING TECHNOLOGY - PART TIME PROGRAMME SYLLABUS-REGULATIONS- 2022

I - SEMESTER

22248S11EP ADVANCED ENGINEERING MATHEMATICS 3 1 0 4

LAPLACE TRANSFORM:

Laplace transform methods for one-dimensional wave equation – Displacement in a long string – longitudinal vibration of an elastic bar – Laplace equation – properties of harmonic functions.

FOURIER TRANSFORM

Fourier transforms methods for one – dimensional heat conduction problems in infinite and semi infinite rod – Fourier transform methods for Laplace equation.

PROBABILITY OF DISTRIBUTION

Probability – definition and introduction – random variable – probability density functions – study of standard distributions: Binomial, poisson, normal exponential and weibull distributions – Applications – Baye's theorem.

TESTING OF HYPOTHESIS

Testing of Hypothesis – Parametric test – Small samples – Test related proportion, Means, Standard deviation – Test based on chi-square, Goodness of fit and test of independence.

THEORY OF ESTIMATION

Principles of least squares – Multiple and partial correlation and regression – Estimation of parameters – Method of moments.

BOOKS FOR REFERENCE:

1. Sankar Rao.K., Introduction to partial differential equations, Pnentile Hall of India, New Delhi – 1995.
2. Sneddon.I.N., Elements of partial differential equations, MC Graw Hill, 1996

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254C12P THEORY OF METAL CUTTING 3 1 0 4

OBJECTIVE:

To know about the mechanics of chip formation, to analyse the tool failure, and thermodynamics involved in metal cutting and evaluation of tool materials.

UNIT- I: Orthogonal Cutting:

Orthogonal Cutting – Theories of merchant – Lee and Shaffer – Merchant's circle diagram – shear angle relationship – chip velocity – force – velocity relationships

UNIT-II: Chip Formation:

Mechanism of chip formation – Types of Chips – discontinuous,continuous continuous with BUE – Chip Formation in drilling and Milling – effect of cutting variables of chip reduction coefficient.

UNIT-III : Tool Life and Machinability:

Tool Failure:Mode of Plastic failure – Measurement of tool wear – tool life tests – tool life equation for variable theories – variables affecting tool life – machinability – machinability index – problems.

UNIT-IV: Thermal Analysis in Metal Cutting:

Thermodynamics of orthogonal cutting – analysis of temperature at shear plane and tool face – experimental methods for temperature measurement.

UNIT-V: Chatter:

Chatter - Importance of Chatter in machining – types of chatter – avoidance of chatter.Tools materials – requirements – alloy tools - HSS – carbides –PCD and CBN- properties and application.

BOOKS FOR REFERENCE:

1. Juneja .B.L, "Fundamentals of Metal cutting and Machine tools", New Age International,1995.

2. Bhattacharya.A, "Metal Cutting Theory and Practice", Central book publications
3. Kuppusamy .G, "Principle of Metal Cutting", University Press,1996.
4. Shaw .M.C, "Metal Cutting Principles",I BH Publications,1992.

Armarego E.J.A and Brown R.H, "The Machining of Metals", Prentice Hall,1969

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254C13P ADVANCED MANUFACTURING PROCESSES 4 0 0 4

OBJECTIVE:

• To inform the students about the various alternative manufacturing processes available.
• To develop an altitude to look for the unconventional manufacturing process to machine
• To make them to understand and appreciate the latest manufacturing process for micro fabrication and devices.

UNIT I NEWER MACHINING PROCESSES - I 9

(Non thermal energy) – Abrasive machining – water jet machining - ultrasonic machining – chemical machining – electro chemical machining – construction working principle – steps - types – process parameters – derivations – problems, merits, demerits and applications .

UNIT II NEWER MACHINING PROCESS – II 9

Wire cut EDM - Electro chemical machining – ECG - Electric discharge machining – construction – principle – types – control - circuits – tool design – merits, demerits & applications.

UNIT III NEWER MACHINING PROCESS – III 9

Laser beam machining – Electron beam machining – Plasma arc machining – Ion beam machining – construction working principle types – process parameter – derivations – problems, merits, demerits and applications.

UNIT IV FABRICATION OF MICRO DEVICES 9

Semiconductors – films and film depurification – Oxidation - diffusion – ion implantation – etching – metallization – bonding – surface and bulk machining – LIGA Process – Solid free form fabrication.

UNIT V MICROFABRICATION TECHNOLOGY 9

Wafer preparation – monolithic processing – moulding – PCB board hybrid & mcm technology – programmable devices & ASIC – electronic material and processing.–
steriolithography SAW devices, Surface Mount Technology,

TOTAL: 45 PERIODS

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22254L19 CAD / CAM LABORATORY 0 0 3 3

OBJECTIVES:

 To teach the students about the drafting of 3D components and analyzing the same using various CAD packages and programming of CNC machines

 To train them to use the various sensors

CAM LABORATORY

1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading,

Grooving canned cycle

2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Strain gauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.

CAD LABORATORY

2D modeling and 3D modeling of components such as

1. Bearing
2. Couplings
3. Gears
4. Sheet metal components
5. Jigs, Fixtures and Die assemblies.

TOTAL: 60 PERIODS

OUTCOMES :

At the end of this course the students are expected

 To impart the knowledge on training the students in the area of CAD/CAM

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

LIST OF EQUIPMENTS S.NO	EQUIPMENT	QUANTITY
1.	Computer Server	1
2.	Computer nodes or systems (High end CPU with atleast 1 GB main memory) networked to the server	30
3.	A3 size plotter	1
4.	Laser Printer	1
5.	CNC Lathe	1
6.	CNC milling machine	1
SOFTWARE		
7.	Any High end integrated modeling and manufacturing CAD / CAM software	15 licenses
8.	CAM Software for machining centre and turning centre (CNC Programming and tool path simulation for FANUC / Sinumeric and Heidenhain controller)	15 licenses
9.	Licensed operating system	adequate
10.	Support for CAPP	adequate

AIM:

To impart the knowledge on training the students in the area of CAD/CAM.

OBJECTIVES:

To teach the students about the drafting of 3D components and analyzing the same using various CAD/CAM software's.

CAM LABORATORY

1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading, Grooving & canned cycle
2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle.
3. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Strain gauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.
4. Mini project on any one of the CIM elements is to be done. This can be either a software or hardware simulating a CIM element. At the end of the semester, the students has to submit a mini report and present his work before a Committee.

CAD LABORATORY

2D modeling and 3D modeling of components such as

1. Bearing
2. Couplings
3. Gears
4. Sheet metal components
5. Jigs, Fixtures and Die assemblies.

TOTAL: 30 PERIODS.

22254C21 TOOLING FOR MANUFACTURING 4 0 0 4

OBJECTIVES:

 To study the various design considerations for tooling.

 Develop knowledge in tooling and work holding devices

UNIT I INTRODUCTION 12

Manufacturing Processes-objectives of manufacturing processes-classification of manufacturing process-Objectives of Tool design-tool design process-Nature and scope of Tool engineering-principles of economy for tooling-problems of economy in tooling-planning and tooling for economy-Manufacturing principles applicable to process and tool planning-tool control-tool maintenance-tool materials and its selection

UNIT II TOOLING FOR METAL REMOVAL PROCESSES 12

Traditional machining processes -work and tool holding devices-tool nomenclatures-Mechanism of machining-force temperature and tool life of single point tool-multipoint tools -tool design-tool wear-special processes-capstan and turret lathe-tooling layout of automats-tooling in NC and CNC machines-tooling for machining centres-CAD in tool design-Jigs and fixtures-design-Non-traditional material removal processes-mechanical, electrical thermal and chemical energy processes-principles-operation-equipment-tooling parameters and limitations

UNIT III TOOLING FOR METAL FORMING PROCESSES 12

Classification of Forming processes-Types of presses-design of -blanking and piercing dies-simple, compound, combination and progressive dies-Drawing dies-Bending dies-forging dies-plastic moulding dies

UNIT IV TOOLING FOR METAL CASTING AND METAL JOINING PROCESSES 12

Tools and Equipment for moulding-patterns –pattern allowances – pattern construction-die casting tools-mechanization of foundries. Tooling for Physical joining processes Design of welding fixtures – Arc welding, Gas welding, Resistance welding, laser welding fixtures-Tooling for Soldering and Brazing Tooling for Mechanical joining processes

UNIT V TOOLING FOR INSPECTION AND GAUGING 12

Survey of linear and angular measurements-standards of measurement-design and manufacturing of gauges- measurement of form-Inspection bench centre-co-ordinate measuring machine-tooling in CMM.

TOTAL: 60 PERIODS

OUTCOMES:

At the end of this course the students are well versed in

1. State of Art in Tooling in Manufacturing and Inspection
2. Design and Develop tooling for Flexible Manufacturing

REFERENCES:

1. Cyril Donaldson Tool Design, Tata McGraw Hill, 1976

5. Wellar, J Non-Traditional Machining Processes, SME, 1984

22254C22P MEMS AND NANO TECHNOLOGY 4 0 0 4

AIM:

To inspire the students to expect to the trends in manufacturing micro components and measuring systems to nano scale.

OBJECTIVES:

• To expose the students to the evolution of micro electromechanical systems, to the various fabrication techniques and to make students to be award of micro actuators.

• Also to impart knowledge to the students about nano materials and various nano measurements techniques.

UNIT I OVER VIEW OF MEMS AND MICROSYSTEMS 6

Definition – historical development – fundamentals – properties, micro fluidics, design and fabrication micro-system, microelectronics, working principle and applications of micro system.

UNIT II MATERIALS, FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING 10

Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS, conductive polymers. Photolithography, photo resist applications, light sources, in implantation, diffusion process exudation – thermal oxidation, silicon diode, chemical vapour deposition, sputtering - deposition by epitoxy – etching – bulk and surface machining – LIGA process Micro system packaging – considerations packaging – levels of micro system packaging die level, device level and system level.

UNIT III MICRO DEVICES AND MATERIALS 8

Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands displacement sensors, pressure and flow sensors, micro actuators – smart materials – applications.

UNIT IV SCIENCE OF NANO MATERIALS 10

Classification of nano structures – effect of the nanometer length scale effects of nano scale dimensions on various properties – structural, thermal, chemical, mechanical, magnetic, optical and electronic properties – effect of nanoscale dimensions on biological systems. Fabrication methods – Top down processes – bottom up process.

UNIT V CHARACTERIZATION OF NANO MATERIALS 11

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, transmission electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

22254L24P AUTOMATION LAB 0 0 3 3

AIM:

To impart knowledge in the area of hydraulic and pneumatic components and its functions.

OBJECTIVE:

• To make the students to learn the basic concepts of hydraulics and pneumatics and its applications in the area of manufacturing process.

• To simulate the various hydraulics and pneumatics circuits.

EXPERIMENTS:

1. Simulation of single and double acting cylinder circuits
2. Simulation of Hydraulic circuits
3. Simulation of electro pneumatic circuits
4. Simulation of electro hydraulic circuits
5. Simulation of PLC circuits
6. Exercises on linear and angular measurements
7. Exercises on speed measurements
8. Exercises on Vibration measurements
9. Exercises on Motion controller using servo motors, encoders, etc.
10. Exercises on fiber optics transducers.
11. Exercises on stepper motor.
12. Exercises on microprocessor based data acquisition system.
13. Software simulation of fluid power circuits using Automation studio.

TOTAL : 30 PERIODS

222TECWRP Technical Writing/Seminar: 0 0 3 3

Seminar should be based on the literature survey on any topic relevant to CAD/CAM/CAE. It may be leading to selection of a suitable topic of dissertation. The report shall contain some contribution by the candidate in the form of experimental results, deductions, compilation and inferences etc.

• Each student has to prepare a write-up of about 25 pages. The report typed on A4 sized sheets and bound in the necessary format should be submitted after approved by the guide and endorsement of the Head of Department.

• The student has to deliver a seminar talk in front of the teachers of the department and his classmates. The Guide based on the quality of work and preparation and understanding of the candidate shall do an assessment of the seminar.

RESEARCH METHODOLOGY

AIM:

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

OUTCOME:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

UNIT I

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

UNIT II

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

UNIT III

Data Analysis using Excel- Tabulation of Data in excel (Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

UNIT IV

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software

UNIT V

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references

22254C31P ADVANCES IN CASTING AND WELDING L T P C 3 0 0 3

OBJECTIVES:

 To study the metallurgical concepts and applications of casting and welding process.
 To acquire knowledge in CAD of casting and automation of welding process.

UNIT I CASTING DESIGN 8

Heat transfer between metal and mould –– Design considerations in casting – Designing for directional solidification and minimum stresses - principles and design of gating and risering

UNIT II CASTING METALLURGY 8

Solidification of pure metal and alloys – shrinkage in cast metals – progressive and directional solidification –– Degasification of the melt-casting defects – Castability of steel , Cast Iron, Al alloys, Babbit alloy and Cu alloy.

UNIT III RECENT TRENDS IN CASTING AND FOUNDRY LAYOUT 8

Shell moulding, precision investment casting, CO2 moulding, centrifugal casting, Die casting, Continuous casting, Counter gravity low pressure casting, Squeeze casting and semisolid processes. Layout of mechanized foundry – sand reclamation – material handling in foundry pollution control in foundry –– Computer aided design of casting.

UNIT IV WELDING METALLURGY AND DESIGN 10

Heat affected Zone and its characteristics – W eldability of steels, cast iron, stainless steel, aluminum, Mg , Cu , Zirconium and titanium alloys – Carbon Equivalent of Plain and alloy steels Hydrogen embrittlement – Lamellar tearing – Residual stress – Distortion and its control . Heat transfer and solidification - Analysis of stresses in welded structures – pre and post welding heat treatments – weld joint design – welding defects – Testing of weldment.

UNIT V RECENT TRENDS IN WELDING 11

Friction welding, friction stir welding – explosive welding – diffusion bonding – high frequency induction welding – ultrasonic welding – electron beam welding – Laser beam welding –Plasma welding – Electroslag welding- narrow gap, hybrid twin wire active TIG – Tandem MIG- modern brazing and soldering techniques – induction, dip resistance, diffusion processes – Hot gas, wave and vapour phase soldering. Overview of automation of welding in aerospace, nuclear, surface transport vehicles and under water
welding.

OUTCOMES:

At the end of this course the students are expected to impart knowledge on basic concepts and advances in casting and welding processes.

TOTAL: 45 PERIODS

22254C32P AUTOMATED COMPUTER INTEGRATED MANUFACTURING SYSTEMS 4 0 0 4

OBJECTIVE:

To teach the role of computers in processing the information knowing across the various Stages and various departments in a manufacturing concern.

UNIT I INTRODUCTION 6

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts and mathematical models – Simple problems in production models – CIM hardware and software – Major elements of CIM system – Three step process for implementation of CIM – Computers in CIM – Computer networks for manufacturing – The future automated factory – Management of CIM – Impact of CIM on personnel – CIM status.

UNIT II AUTOMATED MANUFACTURING SYSTEMS 10

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design – The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features. Automated Guided Vehicle system – Types of vehicles and AGVs applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance.

UNIT III GROUP TECHNOLOGY AND FMS 10

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies. FMS – Components – workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS, FMS applications, Benefits.

UNIT IV PROCESS PLANNING 10

Process planning – Activities in process planning, Information's required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – selecting among casting process, forming process and machining process. Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study. Typical process sheet – case studies in Manual process planning. Computer Aided Process Planning – Process planning module and data base – Variant process planning – Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning.

UNIT V TYPES OF PROCESS CONTROL AND AUTOMATIC DATA CAPTURE 9

Introduction to process model formulation – linear feedback control systems – Optimal control – Adaptive control –Sequence control and PLC. Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer control. Overviews of Automatic identification methods – Bar code technology – Other Automatic data capture technologies.

22254C41P MANUFACTURING METROLOGY AND QUALITY CONTROL 3 1 0 4

AIM:

To expose the students, the importance of measurement and the various latest measuring techniques using Laser, Coordinate measuring machines and Optoelectronics devices. Also to stress upon the Importance of quality in manufacturing.

OBJECTIVES:

To impart through knowledge in various latest measurement systems such as laser metrology, coordinate measuring machines and electro-optical devices. Also to make the students to understand quality

UNIT – I LASER METROLOGY 8

Introduction – types of lasers – laser in engineering metrology – metrological laser methods for applications in machine systems – Interferometry applications – speckle interferometry – laser interferometers in manufacturing and machine tool alignment testing – calibration systems for industrial robots laser Doppler technique – laser Doppler anemometry.

UNIT – II PRECISION INSTRUMENTS BASED ON LASER 9

Laser telemetric systems – detection of microscopic imperfections on high quality surface Pitter NPL gauge interferometer – classification of optical scanning systems – high inertia laser scan technique – rotating mirror technique – laser gauging – bar coding – laser dimensional measurement system.

UNIT – III CO-ORDINATE MEASURING MACHINE 10

Co-ordinate metrology – CMM configurations – hardware components – software – Probe sensors – displacement devices – Performance Evaluations – Software – Hardware – Dynamic errors – Thermal effects diagram – temperature variations environment control – applications.

UNIT – IV OPTO ELECTRONICS AND VISION SYSTEM 9

Opto electronic devices – CCD – On-line and in-process monitoring in production – applications image analysis and computer vision – Image analysis techniques – spatical feature – Image extraction – segmentation – digital image processing – Vision system for measurement – Comparison laser scanning with vision system.

UNIT – V QUALITY IN MANUFACTURING ENGINEERING 9

Importance of manufacturing planning for quality – concepts of controllability – need for quality management system and models – quality engineering tools and techniques – statistical process control – six sigma concepts – Poka Yoke – Computer controlled systems used in inspection.

TOTAL: 45 PERIODS

22254C42P METAL FORMING PROCESS 4 0 0 4

OBJECTIVE: To study about the response of materials under plastic deformation and the various techniques for finding the stress for various metal working processes, and the recent developments in high speed forming.

UNIT-I: Stress and Strain:

Stress-State of stress in two dimensions – three dimensions – stress tensor-Mohr's circles – 2D and 3D state of stress – Description of strain at a point – Mohr's circle of strain- Hydrostatic and stress deviator component of stress- Plasticity- flow curve- true and true strain yield criteria for ductile loads combined stress test-plastic stress and strain relations- Levy Mises equations-Prandyl_Resus equations.

UNIT-II: Analysis of Metal Forming:

Work Load analysis – work formula for homogeneous deformation- rolling, rod drawing and extrusion processes -Determination of load by stress evaluation method-Determination of drawing load – strip drawing with wedge shaped dies and cylindrical rod drawing with a conical die.

UNIT-III: Stress Evaluation:

Stress evaluation method-Determination of forging load-plane strain forging of a thin strip and a flat circular disc- Determination of extrusion load for round band flat strip- upper bound analysis – plane strain indentation with frictionless interface

UNIT-IV: High velocity Forming:

Study of effect of high speed on stress strain relationships- High velocity forming equipment-Description of high speed forming machine – hot forging, pneumatic-mechanical, high velocity forging – Fuel combustion process- Electro magnetic forming –Introduction- Procedure - process variables- Applications

UNIT-V: Advanced Forming process:

Explosive Forming – Explosives – characteristics- stand off and contact operations- stress waves and their effects- process variables – properties of formed components- applications- Electro hydraulic forming – principles, requirements and characteristics – process variables- water hammer forming- principles and parameters- governing the process.

List of Electives - Elective I

22254E23AP - FINITE ELEMENT APPLICATIONS IN MANUFACTURING 3 10 4

AIM:

To impart knowledge in the area of finite element methods and its application in manufacturing.

OBJECTIVE:

To study the fundamentals of one dimensional and two dimensional problems using FEA in manufacturing.

UNIT I INTRODUCTION 6

Fundamentals – Initial, boundary and eigen value problems – weighted residual, Galerkin and Raleigh Ritz methods - Integration by parts – Basics of variational formulation – Polynomial and Nodal approximation.

UNIT II ONE DIMENSIONAL ANALYSIS 10

Steps in FEM – Discretization. Interpolation, derivation of elements characteristic matrix, shape function, assembly and imposition of boundary conditions-solution and post processing – One dimensional analysis in solid mechanics and heat transfer.

UNIT III SHAPE FUNCTIONS AND HIGHER ORDER FORMULATIONS 10

Shape functions for one and two dimensional elements- Three noded triangular and four nodded quadrilateral element Global and natural co-ordinates—Non linear analysis – Isoparametric elements – Jacobian matrices and transformations – Basics of two dimensional, plane stress, plane strain and axisymmetric analysis.

UNIT IV COMPUTER IMPLEMENTATION 9

Pre Processing, mesh generation, elements connecting, boundary conditions, input of material and processing characteristics – Solution and post processing – Overview of application packages – Development of code for one dimensional analysis and validation.

UNIT V ANALYSIS OF PRODUCTION PROCESSES 10

FE analysis of metal casting – special considerations, latent heat incorporation, gap element – Time stepping procedures – Crank – Nicholson algorithm – Prediction of grain structure – Basic concepts of plasticity and fracture – Solid and flow formulation – small incremental deformation formulation – Fracture criteria – FE analysis of metal cutting, chip separation criteria, incorporation of strain rate dependency – FE analysis of welding.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Reddy, J.N. An Introduction to the Finite Element Method, McGraw Hill,1985.
2. Rao, S.S., Finite Element method in engineering, Pergammon press, 1989.
3. Lewis R.W.Morgan, K, Thomas, H.R. and Seetharaman, K.N. The Finite Element Method in Heat Transfer Analysis, John Wiley, 1994.

22254E23BP LEAN MANUFACTURING 4 0 0 4

AIM:

To introduce the concepts of lean manufacturing system.

OBJECTIVES:

- To study the various tools for lean manufacturing (LM).
- To apply the above tools to implement LM system in an organization.

UNIT – I INTRODUCTION TO LEAN MANUFACTURING 7

Conventional Manufacturing versus Lean Manufacturing – Principles of Lean Manufacturing – Basic elements of lean manufacturing – Introduction to LM Tools.

UNIT – II CELLULAR MANUFACTURING, JIT, TPM 9

Cellular Manufacturing – Types of Layout, Principles of Cell layout, Implementation. JIT – Principles of JIT and Implementation of Kanban. TPM – Pillars of TPM, Principles and implementation of TPM.

UNIT – III SET UP TIME REDUCTION, TQM, 5S, VSM 10

Set up time reduction – Definition, philosophies and reduction approaches. TQM – Principles and implementation. 5S Principles and implementation - Value stream mapping - Procedure and principles.

UNIT – IV SIX SIGMA 9

Six Sigma – Definition, statistical considerations, variability reduction, design of experiments – Six Sigma implementation.

UNIT – V CASE STUDIES 10

Various case studies of implementation of lean manufacturing at industries.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Design and Analysis of Lean Production Systems, Ronald G. Askin & Jeffrey B. Goldberg, John Wiley & Sons, 2003
2. Rother M. and Shook J, 1999 ‘Learning to See: Value Stream Mapping to Add Value and Eliminate Muda’ , Lean Enterprise Institute, Brookline, MA.

22254E16A MATERIALS MANAGEMENT AND LOGISTICS 3 0 0 3

AIM:

To introduce to the students the various functions of materials management and logistics

OBJECTIVE:

To make the students familiar with the various concepts and functions of material management, so that the students will be in a position to manage the materials management department independently.

UNIT I INTRODUCTION 6

Introduction to materials management – Objectives – Functions – Operating Cycle – Value analysis – Make or buy decisions.

UNIT II MANAGEMENT OF PURCHASE 7

Purchasing policies and procedures – Selection of sources of supply – Vendor development – Vendor evaluation and rating – Methods of purchasing – Imports – Buyer – Seller relationship – Negotiations.

UNIT III MANAGEMENT OF STORES AND LOGISTICS 12

Stores function – Location – Layout – Stock taking – Materials handling – Transportation – Insurance – Codification – Inventory pricing – stores management – safety – warehousing – Distribution linear programming – Traveling Salesman problems – Network analysis – Logistics Management.

UNIT IV MATERIALS PLANNING 10

Forecasting – Materials requirements planning – Quantity – Periodic – Deterministic models – Finite production.

UNIT V INVENTORY MANAGEMENT 10

ABC analysis – Aggregate planning – Lot size under constraints – Just in Time (JIT) system.

TOTAL: 45 periods

List of Electives - Elective II

22254E33BP **QUALITY AND RELIABILITY ENGINEERING 3 0 0 3**

OBJECTIVES:

To make the students to understand the various quality control techniques and to construct the various quality control charts for variables and attributes and also the design concepts for reliable system and maintenance aspects in industries.

UNIT I QUALITY & STATISTICAL PROCESS CONTROL 8

Quality – Definition – Quality Assurance – Variation in process – Factors – process capability – control charts – variables X, R and X, - Attributes P, C and U-Chart tolerance design. Establishing and interpreting control charts – charts for variables – Quality rating – Short run SPC.

UNIT II ACCEPTANCE SAMPLING 8

Lot by lot sampling – types – probability of acceptance in single, double, multiple sampling plans – OC curves – Producer's risk and consumer's risk. AQL, LTPD, AOQL, Concepts – standard sampling plans for AQL and LTPD – use of standard sampling plans.

UNIT III EXPERIMENTAL DESIGN AND TAGUCHI METHOD 9

Fundamentals – factorial experiments – random design, Latin square design – Taguchi method – Loss function – experiments – S/N ratio and performance measure – Orthogonal array.

UNIT IV CONCEPT OF RELIABILITY 9

Definition – reliability vs quality, reliability function – MTBF, MTTR, availability, bathtub curve – time dependent failure models – distributions – normal, weibull, lognormal – Reliability of system and models – serial, parallel and combined configuration – Markove analysis, load sharing systems, standby systems, covarient models, static models, dynamic models.

UNIT V DESIGN FOR RELIABILITY AND MAINTAINABILITY 11

Reliability design process, system effectiveness, economic analysis and life cycle cost, reliability allocation, design methods, parts and material selection, derating, stress-strength and analysis, failure analysis, identification determination of causes, assessments of effects, computation of criticality index, corrective action, system safety – analysis of down-time – the repair time distribution, stochastic point processes system repair time, reliability under preventive maintenance state dependent system with repair. MTTR – mean system down time, repair vs replacement, replacement models, proactive, preventive, predictive maintenance maintainability and availability, optimization techniques for system reliability with redundancy heuristic methods applied to optimal system reliability.

TOTAL: 45 PERIODS

Text Books:

1. Statistical Process Control, by Eugene Grant, Richard Leavenworth, McGraw Hill.

2. Quality Engineering in Production Systems, by G Taguchi , McGraw Hill, 1989.

3. Optimization &Variation Reduction in Quality, byW.A. Taylor,Tata McGraw Hill, 1991.

Reference Books:

1. Jurans Quality Planning and Analysis, by Frank. M.Gryna Jr. McGrawHill

2. Taguchi Techniques for Quality Engineering, (2ndEdition) by Philipposs, McGraw Hill, 1996,.

4. Reliability Engineering, by E.Bala Guruswamy, Tata McGraw Hill, 1994

22254E32A ADVANCED METROLOGY AND COMPUTER AIDED INSPECTION 4 0 0 4

AIM:

To give a thorough knowledge of measurement and instrumentation of increasing importance in industry. The student will be knowledgeable in various standards and proliferation of computerized and automated inspecting techniques along with the classical metrology.

OBJECTIVES:

- To teach the students basic concepts in various methods of engineering measurement techniques and applications, understand the importance of measurement and inspection in manufacturing industries.
- Expose the students to various modern metrological instruments and the procedure used to operate these instruments.

UNIT I GENERAL CONCEPTS OF MEASUREMENT 8

Definition – Standards of measurement – Errors in measurement – Interchangeability and Selective assembly – Accuracy and Precision – Calibration of instruments.

UNITII MEASUREMENT OF SURFACE FINISH AND MEASURING MACHINES 9

Definitions – Types of Surface Texture: Surface Roughness Measurement Methods- Comparison, Profilometer, 3D Surface Roughness Measurement – Instruments.

UNIT III INTERFEROMETRY 8

Interferometry – Introduction, Principles of light interference – Interferometers – Measurement and Calibration – Laser Interferometry.

UNIT IV COMPUTER AIDED AND LASER METROLOGY 10

Tool Makers Microscope – Microhite – Co – Ordinate measuring machine – Applications – Laser Micrometer, Laser Scanning gauge, Non contact and in-process inspection, Vision system.

UNIT V IMAGE PROCESSING 10

Overview, Computer imaging systems, Image Analysis, Preprocessing, Human vision system, Image model, Image enhancement, gray scale models, histogram models, Image Transforms.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. GUPTA, I.C, “A Text Book of engineering metrology”, Dhanpat Rai and Sons, 1996.
2. G.N.GALYER F.W. and C.R.SHOTBOLT, “Metrology for engineers”, ELBS, 1990.
3. GRAHAM T.SMITH, “Industrial Metrology”, Springer, 2002
4. “ASTE Handbook of Industries Metrology”, Prentice Hall of India Ltd., 1992.

22254E33BP FINANCIAL MANAGEMENT 4 0 0 4

AIM:

To introduce the concepts of financial and various functions of financial management so that the students will be able to handle higher level financial decisions.

OBJECTIVES:

To train students in various functions of finance such as working capital management, current assets management so that students will be able to make high investment decisions when they take up senior managerial positions.

UNIT – I FINANCIAL ACCOUNTING 8

Accounting principles - Basic records - Preparation and interpretation of profit and loss statement - balance sheet - Fixed assets - Current assets.

UNIT – II COST ACCOUNTING 12

Elements of cost - cost classification - material cost - labour costs - overheads - cost of a product - costing systems - cost determination - process - costing - Allocation of overheads - Depreciation - methods.

UNIT – III MANAGEMENT OF WORKING CAPITAL 10

Current assets - Estimation of working capital requirements - Management of accounts receivable - Inventory - Cash - Inventory valuation methods.

UNIT – IV CAPITAL BUDGETING 8

Significance of capital budgeting - payback period - present value method – accounting rate of return method - Internal rate of return method.

UNIT – V PROFIT PLANNING AND ANALYSIS 7

Cost - Volume profit relationship relevant costs in decision making profit management analysis - Break even analysis.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Presanna Chandra, Financial Management, Tata McGraw Hill, 1998.
2. G.B.S. Narang, Production and Costing, Khanna Publishers, 1993.
3. R. Kesavan, C.Elanchezian, Sundar Selwyn, Engineering Economics and Financial Accounting, Laxmi Publications, New Delhi, 2005.
4. R Kesavan, C. Elanchezian, B.Vijaramnath, Engineering Economics and Cost Analysis Anuratha Publications, Chennai.

22254E33CP MANUFACTURING INFORMATION SYSTEMS 4 0 0 4

AIM:

To impart the knowledge in manufacturing information system.

OBJECTIVE:

On completion of this course, the students are expected to be conversant with order policies, data base terminologies, designing, manufacturing considerations and information system for manufacturing.

UNIT I INTRODUCTION 5

The Evolution of order policies, from MRP to MRP II, the role of Production organization, Operations control.

UNIT II DATABASE 7

Terminologies – Entities and attributes – Data models, schema and subschema - Data Independence – ER Diagram – Trends in database.

UNIT III DESIGNING DATABASE 13

Hierarchical model – Network approach- Relational Data model concepts, principles, keys, relational operations – functional dependence – Normalization types – Query.

UNIT IV MANUFACTURING CONSIDERATION 10

The product and its structure, inventory and process flow – Shop floor control Data structure and procedure – various model – the order scheduling module, Input/output analysis module the stock status database – the complete IOM database.

UNIT V INFORMATION SYSTEM FOR MANUFACTURING 10

Parts oriented production information system – concepts and structure – Computerized production scheduling, online production control systems; Computer based production management system, computerized manufacturing information system – case study.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Luca G.Sartori, "Manufacturing Information Systems", Addison-Wesley Publishing Company, 1988.
2. Date.C.J.,"An Introduction to Database Systems" Addison Wesley, 8th Edn,.2003

4. Kerr.R, "Knowledge based Manufacturing Management", Addison-Wesley,1991.
5. Manufacturing Information & Data Systems Analysis, Design & Practice,CECELJA FRANJO, 2002.

List of Electives - Elective III

22254E43AP Non-Destructive Testing And Evaluation

OBJECTIVES :

To stress the importance of NDT in engineering.

UNIT I

NON-DESTRUCTIVE TESTING: AN INTRODUCTION, VISUAL INSPECTION & LIQUID PENETRANT TESTING 6

Introduction to various non-destructive methods, Comparison of Destructive and Non destructive Tests, Visual Inspection, Optical aids used for visual inspection, Applications.

Physical principles, procedure for penetrant testing, Penetrant testing materials, Penetrant testing methods-water washable, Post – Emulsification methods, Applications

UNIT II EDDY CURRENT TESTING & ACOUSTIC EMISSION 10

Principles, Instrumentation for ECT, Absolute, differential probes, Techniques – High sensitivity techniques, Multi frequency, Phased array ECT, Applications.

Principle of AET, Instrumentation, Applications - testing of metal pressure vessels, Fatigue crack detection in aerospace structures.

UNIT III MAGNETIC PARTICLE TESTING & THERMOGRAPHY 10

Principle of MPT, procedure used for testing a component, Equipment used for MPT, Magnetizing techniques, Applications.

Principle of Thermography, Infrared Radiometry, Active thermography measurements, Applications – Imaging entrapped water under an epoxy coating, Detection of carbon fiber contaminants.

UNIT IV ULTRASONIC TESTING 10

Principle, Ultrasonic transducers, Ultrasonic Flaw detection Equipment, Modes of display A- scan, B-Scan, C- Scan, Applications, Inspection Methods - Normal Incident Pulse-Echo Inspection, Normal Incident Through-transmission Testing, Angle Beam Pulse-Echo testing, TOFD Technique, Applications of Normal Beam Inspection in detecting fatigue cracks, Inclusions, Slag, Porosity and Intergranular cracks - Codes, standards, specification and procedures and case studies in ultrasonics test.

UNIT V RADIOGRAPHY 9

Principle of Radiography, x-ray and gamma ray sources- safety procedures and standards, Effect of radiation on Film, Radiographic imaging, Inspection Techniques – Single wall single image, Double wall Penetration, Multiwall Penetration technique, Real Time Radiography - Codes, standards, specification and procedures and case studies in Radiography test.

Case studies on defects in cast, rolled, extruded, welded and heat treated components - Comparison and selection of various NDT techniques

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course the students are expected to have hands on experience on all types of NDT and their applications in Engineering.

22254E43BP MAINTENANCE MANAGEMENT 4 0 0 4

OBJECTIVE:

To understand the concepts of maintenance management and to have knowledge in developing a suitable maintenance system for any type of an organization.

UNIT I: Introduction to Maintenance Management: 7

Maintenance: Its role and scope in total Organizational contexts - role of Maintenance. Centralized and decentralized maintenance organization structures. Maintenance Economics – reliability and Availability – MTBF, MTTR.

UNIT II: Maintenance Categories: 10

Maintenance system– Categories - Design and its selection – Breakdown Maintenance –Routine Maintenance- Predictive Maintenance –Preventive Maintenance- Corrective Maintenance-Total Productive Maintenance –Maintenance Schedule – Repair Cycle.

UNIT III: Spare Parts Management: 8

Pareto's principles for repetitive breakdown analysis, spares management, planning considerations for each type of activities.

UNIT – IV: Condition Monitoring: 10

Condition Monitoring (CM) – Introduction- Economics of CM – On-load and off-load testing – Methods and instruments for CM – Temperature sensitive tapes – Pistol thermometers – wear-debris analysis.

UNIT V: Maintenance Manpower Cost, Performance Management: 10

Maintenance man power planning - Selection training - Scheduling maintenance costs - Budget preparation and budgetary control of maintenance expenditures Maintenance effectiveness various performance indices - evaluation, uses and limitations - Monitoring of Maintenance performance.

BOOKS FOR REFERENCE:

1. Gopalakrishnan P. and Sundarajan 1996. Maintenance Management. New Delhi, Prentice-Hall of India.
2. Srivastava S.K., "Industrial Maintenance Management", - S. Chand & Co.,1981.
3. Higgirs L.T and Morrow L.C., 1997, ``Maintenance Engineering Handbook``, McGraw Hill.
Armstrong, "Condition Monitoring", BSIRSA, 1988.

]

22254E43CP OPTIMIZATION TECHNIQUES 3 1 0 4

UNIT I - INTRODUCTION TO OPTIMIZATION 7

Formulation of an optimization problem- Classification of optimization problem – optimization techniques-Classical optimization technique – Single variable optimization – Multi variable optimization algorithms

UNIT II - MINIMIZATION METHODS 8

One dimensional minimization methods: unimodal function – elimination methods: unrestricted search, exhaustive search, Dichotomous search, Fibonacci methods, Golden section methods, Interpolation methods: Quadratic and cubic interpolation methods.

UNIT III - CONSTRAINED OPTIMIZATION TECHNIQUES 10

Optimization with equality and inequality constraints - Direct methods – Indirect methods using penalty functions, Lagrange multipliers - separable programming and Geometric programming.

UNIT IV - UNCONSTRAINED OPTIMIZATION TECHNIQUES 10

Multi variable unconstrained optimization techniques: Direct search methods: Random search method, unvaried method, pattern search method, steepest descent method and Conjugate gradient method.

UNIT V - APPLICATIONS OF HEURISTICS IN OPTIMIZATION 10

Heuristics-Introduction-Multi objective optimization: Genetic algorithms and Simulated Annealing techniques; neural network & Fuzzy logic principles in optimization.

BOOKS FOR REFERENCE:

1. Rao, Singaresu, S., "Engineering Optimization – Theory & Practice", New Age International (P) Limited, New Delhi, 2000.
2. Johnson Ray, C., "Optimum design of mechanical elements", Wiley, John & Sons, 1990.
3. Kalyanamoy Deb, "Optimization for Engineering design algorithms and Examples", Prentice Hall of India Pvt. 1995.
4. Goldberg, D.E., "Genetic algorithms in search, optimization and machine", Barnen, Addison-Wesley, New York, 1989.

List of Electives - Elective IV

22254E51AP PROCESS PLANNING AND COST ESTIMATION 3 0 0 3

OBJECTIVES: To introduce the process planning concepts to make cost estimation for various products after process planning

UNIT I INTRODUCTION TO PROCESS PLANNING 10

Introduction- methods of process planning-Drawing interpretation-Material evaluation – steps in process selection-.Production equipment and tooling selection

UNIT II PROCESS PLANNING ACTIVITIES 10

Process parameters calculation for various production processes-Selection jigs and fixtures election of quality assurance methods – Set of documents for process planning-Economics of process planning- case studies

UNIT III INTRODUCTION TO COST ESTIMATION 8

Importance of costing and estimation –methods of costing-elements of cost estimation –Types of estimates – Estimating procedure- Estimation labor cost, material cost- allocation of over head charges- Calculation of depreciation cost

UNIT IV PRODUCTION COST ESTIMATION 8

Estimation of Different Types of Jobs – Estimation of Forging Shop, Estimation of Welding Shop, Estimation of Foundry Shop

UNIT V MACHINING TIME CALCULATION 9

Estimation of Machining Time – Importance of Machine Time Calculation- Calculation of Machining Time for Different Lathe Operations ,Drilling and Boring – Machining Time Calculation for Milling, Shaping and Planning -Machining Time Calculation for Grinding

TOTAL: 45 PERIODS

OUTCOMES: At the end of this course the students are expected to use the concepts of process planning and cost estimation for various products.

22254E51BP INSTRUMENTATION AND CONTROL ENGINEERING 4 0 0 4

UNIT–I: Introduction to Instrumentation: 8
Mechanical Instrumentation- General concepts, General measurement system. Classification of Instruments - indicators, recorders and integrators- working principles, Precision and Accuracy: Measurement Error and calibration.

UNIT–II: Measuring Devices 10
Measurement of speed, frequency, acceleration - Vibrometer, Accelerometer etc. Pressure measurement: Gravitational, Bourdon, elastic transducers, strain gauge, pressure cells, and measurement of high and low pressure. Temperature measurement: Bi-Metallic, Resistance Thermometer, Thermocouples, Pyrometer, thermostats, Magnetic flow meter , Ultrasonic flow meter.

UNIT – III: Transducers: 8
Transducers – Introduction – Types -Variable resistance Transducers-Variable reactive transducers- Piezo Electric transducers- Fibre optic transducers- Laser instrumentation-analogue and digital type -incremental and absolute measurement.

UNIT – IV: Machine Diagnostic and Condition Monitoring: 10
Machine Diagnostics – Basic Concepts - Analysis of failure in machines-Distribution of fault occurrences-Objectives of monitoring-Monitoring techniques applied to Machineries.

UNIT – V: Computer Control System: 9
Data acquisition system-Introduction-Direct Digital control-Programmable Logic Controls (PLC) -Ladder diagrams-Communication used in PLC.

22254E51CP ARTIFICIAL INTELLIGENCE AND NEURAL NETWORKS 3 1 0 4

UNIT – I - Neural Networks 8

Introduction to soft Computing-Neural Networks-Supervised Learning Neural Networks – Perceptrons – Adaline – Back propagation Multilayer perceptrons – Radial Basic Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Habbian Learning.

UNIT – II - Fuzzy Logic: 10

Fuzzy Sets – Basic Definition and Terminology – Set –theoretic operations – Member Function Formulation and parameterization – Fuzzy Rules and Fuzzy Reasoning. Fuzzy Logic: Extension principle and Fuzzy Relations – Fuzzy If – Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT – III Genetic Algorithm: 9

Derivative – based Optimization – Descent Methods – The Method of steepest Descent – Classical Newton's Method – Step Size Determination – Derivative – free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT – IV Neuro Fuzzy Modeling: 10

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – learning Methods that Cross – Fertilize ANFIS and RBFN – Coactive Neuro – Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT – V Applications: 8

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency prediction – Soft Computing for Color Recipe Prediction – Single MLP approaches –CANFIS modeling for color recipe prediction

List of Electives - Elective V

22254E52AP INTERNET OF THINGS FOR MANUFACTURING 3 0 0 3

OBJECTIVES:

- To discover key IoT concepts including identification, sensors, localization, wireless protocols
- To explore IoT technologies, architectures, standards, and regulation
- To realize the value created by collecting, communicating, coordinating, and leveraging data
- To examine developments that will likely shape the industrial landscape in the future;

UNIT I INTRODUCTION 9

Technology of the IoT and applications,. IoT data management requirements, Architecture of IoT, Security issues Opportunities for IoT -Issues in implementing IoT. Technological challenges, RFID and the Electronic Product Code (EPC) network, the web of things.

UNIT II DESIGN OF IoT 9

Design challenges in IoT -Standardization, Security and privacy, Infrastructure, Analytics. Design steps for implementing IoT.

UNIT III PROTOTYPING OF IoT 9

Design principles for connected devices -Embedded devices, physical design, online components, embedded coding system. Informed Manufacturing plant – Elements, IoT implementation in Transportation and logistics, Energy and utilities, Automotive Connected supply chain, Plant floor control automation, remote monitoring, Management of critical assets, Energy management and resource optimization, proactive maintenance.

UNIT IV PREREQUISITES FOR IoT 9

IOT Technologies Wireless protocols low-power design (Bluetooth Low Energy), range extension techniques (data mining and mesh networking), and data-intensive IoT for continuous recognition applications Data storage and analysis Localization algorithms Localization for mobile systems

UNIT V APPLICATION IN MANUFACTURING 9

Applications HCI and IoT world -Multilingual interactions Robotics and Autonomous Vehicles Sensing and data processing-Simultaneous mapping and localization-Levels of autonomy, Smart factories, Future research challenges

TOTAL : 45 PERIODS

OUTCOMES:

- At the end of this course the students are expected to
- Utilizing sensors to gain greater visibility and real-time situational awareness
- Vertical applications that provide a clear business case and a pressing opportunity
- Emerging technologies to address IoT challenges

22254E52BP FLUID POWER AUTOMATION 4 0 0 4

AIM:

To impart knowledge in the area of hydraulics, pneumatic and fluid power components and its functions.

OBJECTIVE:

• To make the students to learn the basic concepts of hydraulics and pneumatics and their controlling elements in the area of manufacturing process.

• To train the students in designing the hydraulics and pneumatic circuits using ladder diagram.

UNIT I INTRODUCTION 5

Need for Automation, Hydraulic & Pneumatic Comparison – ISO symbols for fluid power elements, Hydraulic, pneumatics – Selection criteria.

UNIT II FLUID POWER GENERATING/UTILIZING ELEMENTS 8

Hydraulic pumps and motor gears, vane, piston pumps-motors-selection and specification-Drive characteristics – Linear actuator – Types, mounting details, cushioning – power packs – construction. Reservoir capacity, heat dissipation, accumulators – standard circuit symbols, circuit (flow) analysis.

UNIT III CONTROL AND REGULATION ELEMENTS 8

Direction flow and pressure control valves-Methods of actuation, types, sizing of ports pressure and temperature compensation, overlapped and under lapped spool valves operating characteristics-electro hydraulic servo valves-Different types-characteristics and performance.

UNIT IV CIRCUIT DESIGN 10

Typical industrial hydraulic circuits-Design methodology – Ladder diagram-cascade, method-truth table-Karnaugh map method-sequencing circuits-combinational and logic circuit.

UNIT V ELECTRO PNEUMATICS & ELECTRONIC CONTROL OF HYDRAULIC AND PNEUMATIC CIRCUITS 7

Electrical control of pneumatic and hydraulic circuits-use of relays, timers, counters, Ladder diagram. Programmable logic control of Hydraulics Pneumatics circuits, PLC ladder diagram for various circuits, motion controllers, use of field busses in circuits. Electronic drive circuits for various Motors.

TOTAL: 45 PERIODS

5. Peter Rohner, Fluid Power Logic Circuit Design, Mcmelan Prem, 1994.

List of Electives - Elective VI

22254E53AP ADVANCED MATERIAL TECHNOLOGY 4 0 0 4

AIM:

To impart knowledge on advance concepts of material technology

OBJECTIVE:

- To enlight the PG students on elastic, plastic and fractured behaviour of engineering Materials.
- To train the PG students in selection of metallic and non-metallic materials for the various engineering applications.

UNIT I ELASTIC AND PLASTIC BEHAVIOR 10

Elasticity in metals and polymers Anelastic and visco-elastic behaviour – Mechanism of plastic deformation and non metallic shear strength of perfect and real crystals – Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity – Deformation of non crystalline materials.

UNIT II FRACTURE BEHAVIOUR 10

Griffith's theory, stress intensity factor and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracture mechanism maps – Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law. Effect of surface and metallurgical parameters on fatigue – Fracture of non metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

UNIT III SELECTION OF MATERIALS 10

Motivation for selection, cost basis and service requirements – Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications – Computer aided materials selection.

UNIT IV MODERN METALLIC MATERIALS 8

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel – Intermetallics, Ni and Ti aluminides – smart materials, shape memory alloys – Metallic glass and nano crystalline materials.

UNIT V NON METALLIC MATERIALS 7

Polymeric materials – Formation of polymer structure – Production techniques of fibers, foams, adhesives and coating – structure, properties and applications of engineering polymers – Advanced structural ceramics, WC, TIC, TaC, Al2O3, SiC, Si3N4 CBN and diamond – properties, processing and applications.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. George E.Dieter, Mechanical Metallurgy, McGraw Hill, 1988.
2. Thomas H. Courtney, Mechanical Behaviour of Materials, (2nd edition), McGraw Hill, 2000.
3. Flinn, R.A., and Trojan, P.K., Engineering Materials and their Applications, (4^{th} Edition) Jaico, 1999.
4. ASM Hand book, Vol.11, Failure Analysis and Prevention, (10th Edition), ASM, 2002.
5. Ashby M.F., Material Selection in Mechanical Design, 3rd Edition, Butter Worth 2005.

22254E53BP INDUSTRIAL SAFETY 3 0 0 3

OBJECTIVE:
To develop and strengthen the safety ideas and motivate the students to impart basic safety skills and understandings to run an industry efficiently and effectively

UNIT I OPERATIONAL SAFETY 9

Hot metal operation, boiler, pressure vessels – heat treatment shop – gas furnace operation – electroplating – hot bending pipes – safety in welding and cutting, Cold – metal operation – safety in machine shop – cold bending and chamfering of pipesmetal cutting – shot blasting, grinding, painting – power press and other machines. Management of toxic gases and chemicals – industrial fires and prevention – road safety – highway and urban safety – safety of sewage disposal and cleaning – control of environmental pollution – managing emergencies in industries – planning security and risk assessments, on – site and off site. Control of major industrial hazards.

UNIT II SAFETY APPRAISA L AND ANALYSIS 9

Human side of safety – personal protective equipment – causes and cost of accidents. Accidents prevention program – specific hazard control strategies – HAZOP training and development of employees – first aid – fire fight devices – accident reporting, investigation. Measurement of safety performance, accident reporting and investigation – plant safety inspection, job safety analysis – safety permit procedures. Product safety – plant safety rules and procedures – safety sampling – safety inventory systems. Determining the cost effectiveness of safety measurement.

UNIT III OCCUPATIONAL HEALTH 9

Concept and spectrum of health functional units and activities of operational health service – occupational and related disease – levels of prevention of diseases – notifiable occupational diseases Toxicology Lead – Nickel, chromium and manganese toxicity – gas poisoning (such as CO, Ammonia Chlorise, So2, H2s.) their effects and prevention – effects of ultra violet radiation and infrared radiation on human system.

UNIT IV SAFETY AND HEALTH REGULATIONS 9

Safety and health standards – industrial hygiene – occupational diseases prevention welfare facilities. The object of factories act 1948 with special reference to safety provisions, model rules 123a, history of legislations related to safety – pressure vessel act – Indian boiler act – the environmental protection act – electricity act – explosive act.

UNIT V SAFETY MANAGEMENT 9

Evaluation of modern safety concepts – safety management functions – safety organization, safety department- safety committee, safety audit – performance measurements and motivation – employee participation in safety - safety and productivity.

TOTAL: 45 PERIODS

OUTCOME:
At the end of this course the students are expected to gain knowledge and skills needed to run an industry with utmost safety precautions.

22254E53CP ADDITIVE MANUFACTURING 3 0 0 3

OBJECTIVE:

 To educate students with fundamental and advanced knowledge in the field of Additive manufacturing technology and the associated Aerospace, Architecture, Art, Medical and industrial applications.

UNIT I INTRODUCTION: 8

Need - Development of AM systems – AM process chain - Impact of AM on Product Development - Virtual Prototyping- Rapid Tooling – RP to AM -Classification of AM processes-Benefits- Applications.

UNIT II REVERSE ENGINEERING AND CAD MODELING: 10

Basic concept- Digitization techniques – Model reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data requirements – Geometric modeling techniques: Wire frame, surface and solid modeling – data formats - Data interfacing, Part orientation and support generation, Support structure design, Model Slicing, Tool path generation-Software for AM- Case studies.

UNIT III LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS 10

Stereolithography Apparatus (SLA): Principle, pre-build process, part-building and post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications.

Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modeling (FDM): Principle, details of processes, process variables, types, products, materials and applications. Laminated Object Manufacturing (LOM): Working Principles, details of processes, products, materials, advantages, limitations and applications - Case studies.

UNIT IV POWDER BASED ADDITIVE MANUFACTURING SYSTEMS: 10

Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS- powder structures, materials, post processing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations and applications– Case Studies.

UNIT V OTHER ADDITIVE MANUFACTURING SYSTEMS: 7

Three dimensional Printing (3DP): Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Shape Deposition Manufacturing (SDM), Ballastic Particle Manufacturing (BPM), Selective Laser Melting, Electron Beam Melting.

TOTAL: 45 PERIODS

OUTCOMES:

On completion of this course the students are expected to learn about a variety of Additive Manufacturing (AM) technologies, their potential to support design and manufacturing, case studies relevant to mass customized manufacturing, and some of the important research challenges associated with AM and its data processing tools

22148S11P TRANSFORMS & PARTIAL DIFFERENTIAL EQUATIONS

UNIT I PARTIAL DIFFERENTIAL EQUATIONS 9 + 3

Charpits method- Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT II FOURIER SERIES 9 + 3

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identify – Harmonic Analysis.

UNIT III BOUNDARY VALUE PROBLEMS 9 + 3

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

UNIT IV FOURIER TRANSFORM 9 + 3

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT V Z -TRANSFORM AND DIFFERENCE EQUATIONS 9 + 3

Z-transform - Elementary properties – Inverse Z – transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22153C12P ELECTRICAL DRIVES AND CONTROLS

UNIT-I D.C. MACHINES (9)

Principle of operation, Construction, Method of Excitation, Characteristics of d.c shunt, series ,compound generator, emf equation, application. Characteristics of d.c shunt, series, compound motor, torque equation, application, Types of d.c motor starters.

UNIT-II A.C. MACHINES (9)

Principle of operation, Construction of Induction and Synchronous machines- Characteristics and its applications. Starters for induction machines.

UNIT-III (9)

Basic elements-types of drives-factors influencing the choice of electrical drives-heating and cooling curves-loading conditions and classes of duty-selection of power rating for drive motors with regard to thermal overloading and load variation factors.

UNIT-IV CONVENTIONAL AND SOLID STATE SPEED CONTROL OF D.C. DRIVES (9)

Speed control of DC series and shunt motors – Armature and field control, Ward-Leonard control system - Using controlled rectifiers and DC choppers –applications.

UNIT-V CONVENTIONAL AND SOLID STATE SPEED CONTROL OF A.C. DRIVES (9)

Speed control of three phase induction motor – Voltage control, voltage / frequency control, slip power recovery scheme – Using inverters and AC voltage regulators – applications.

Total Hours : 45

TEXT BOOKS

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C13P ENGINEERING THERMODYNAMICS

UNIT- I: BASIC CONCEPTS 9

Basic concepts - macroscopic approach, thermodynamic systems - closed, open and isolated. Property, state, path and process, quasi-static process, work, modes of work, Zeroth law of thermodynamics – concept of temperature and heat.. First law of thermodynamics – application to closed and open systems, internal energy, specific heat capacities, enthalpy, steady flow process with reference to various thermal equipments.

UNIT – II: SECOND LAW, ENTROPY AND AVAILABILITY 9

Second law of thermodynamics – Kelvin's and Clausius statements of second law. Reversibility and irreversibility. Carnot cycle, reversed carnot cycle, efficiency, COP. Clausius inequality, concept of entropy, entropy of ideal gas, principle of increase of entropy – Carnot theorem

UNIT – III: STEAM POWER CYCLE 9

Properties of pure substances – Thermodynamic properties of pure substances in solid, liquid and vapour phases, phase rule, P-V, P-T, T-V, T-S, H-S diagrams, PVT surfaces, thermodynamic properties of steam. Calculations of work done and heat transfer in non-flow and flow processes. Standard Rankine cycle, Reheat and regenerative cycle**.**

UNIT – IV : THERMODYNAMIC RELATIONS 9

Gas mixtures – Properties of ideal and real gases, equation of state, Vander Waal's equation of states, compressibility, compressibility chart. Exact differentials, Maxwell relations, Clausius Clapeyron equations, Joule Thomson Coefficient.

UNIT – V: PSYCHROMETRY 9

Psychrometry and psychrometric charts, property calculations of air vapour mixtures. Psychrometric process – Sensible heat exchange processes. Latent heat exchange processes. Adiabatic mixing, evaporative cooling, problems.

TUTORIALS 15

TOTAL HOURS: 60

(Use of standard thermodynamic tables, Mollier diagram, Psychometric chart and Refrigerant property tables are permitted)

TEXT BOOKS

1. Nag.P.K., "Engineering Thermodynamics", Tata McGraw-Hill, New Delhi, 1998.
2. Cengel, "Thermodynamics" An Engineering Approach, Third Edition – 2003, Tata Mc Graw Hill, New Delhi.

REFERENCES

1. Holman.J.P., "Thermodynamics", 3rd Ed. McGraw-Hill, 1995.
2. Arora C.P, " Thermodynamics", Tata McGraw-Hill, New Delhi, 2003.
3. Sri Vastava R.C, Saha S. K, Jan A. K, " Thermodynamics" Prentice Hall of India, New Delhi, 2004.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C14P FLUID MECHANICS AND MACHINERY

1. BASIC CONCEPTS AND PROPERTIES 6

Fluid – definition - Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures - pressure measurements by manometers and pressure gauges.

2. KINEMATICS OF FLUID AND FLUID DYNAMICS 12

Fluid Kinematics - Flow visualization - lines of flow - types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- stream line, streak line and path line (definitions only)-stream function and velocity potential function (definitions only)- Euler's equation along a streamline - Bernoulli's equation – applications - Venturi meter, Orifice meter, Pitot tube - dimensional analysis - Buckingham's π theorem- applications - similarity laws and models.

3. INCOMPRESSIBLE FLUID FLOW 12

Viscous flow - Navier-Stoke's equation (Statement only) - Shear stress, pressure gradient relationship - laminar flow between parallel plates - Laminar flow through circular tubes (Hagen poiseulle's) - Hydraulic and energy gradient (descriptive treatment only) - flow through pipes - Darcy -weisback's equation - pipe roughness -friction factor- Moody's diagram-minor losses - flow through pipes in series and in parallel - Boundary layer (definition only)

4. HYDRAULIC TURBINES 8

Fluid machines: definition and classification - exchange of energy - Euler's equation for turbo machines - Construction of velocity vector diagrams - head and specific work - components of energy transfer - degree of reaction.

Hydro turbines: definition and classifications - Pelton turbine - Francis turbine - propeller turbine - Kaplan turbine - working principles - velocity triangles - work done - specific speed - efficiencies -performance curve for turbines.

5. HYDRAULIC PUMPS 7

Pumps: definition and classifications - Centrifugal pump: classifications, working principle, velocity triangles, specific speed, efficiency and performance curves - Reciprocating pump: classification, working principle, indicator diagram, performance curves - cavitations in pumps - rotary pumps: working principles of gear and vane pumps

TUTORIALS 15 TOTAL : 60

22154C15P Manufacturing Technology - I

UNIT-I: INTRODUCTION **9**

Introduction to moulding and casting Processes – Steps involved – advantages, limitations and application of casting process. Patterns – Types _ their applications – Pattern allowances – Pattern materials – Colour coding as per BIS. Pattern making cores – Core prints –Core boxes – core making.

UNIT – II: MOULDING PROCESSES **9**

Manual moulding processes – equipments and tools – Moulding sand ingredients – Moulding sand properties, influence of ingredients on properties – sand preparation and control – sand testing – machine moulding – types of machines,

UNIT – III: CASTING PROCESSES **9**

Sand casting processes –permanent mould casting processes-pressure die casting, centrifugal casting – precision/investment casting-shell moulding,– continuous casting –– electro slag casting processes, Vacuum process, magnetic moulding process.

UNIT – IV: SPECIAL WELDING PROCESSES **9**

Gas tungsten arc (TIG) welding, Gas metal arc (MIG) welding, submerged arc welding, power sources and other characteristics for these individual processes, equipments and accessories, application and limitation of each process. Resistance welding processes-their principle-Types (spot, seam, projection).

UNIT – V: MODERN WELDING PROCESSES **9**

Electron beam welding, laser beam welding, Plasma arc welding, friction welding, explosive welding, ultrasonic welding, stud welding, diffusion bonding, welding of dissimilar metals.

TUTORIALS: 15 **TOTAL HOURS: 60**

TEXT BOOK

1. Lal,Mand Khanna O.P “A Text Book of Foundry Technology” Dhanpat Rai and Sons, New Delhi 1986.

22148C21P NUMERICAL METHODS

1. SOLUTION OF EQUATIONS AND EIGEN VALUE PROBLEMS 9

Linear interpolation methods (method of false position) - Newton's method - Statement of Fixed Point Theorem - Fixed pointer iteration x=g(x) method - Solution of linear system of Gaussian elimination and Gauss-Jordan methods - Iterative methods: Gauss Jacobi and Gauss – Seidel methods- Inverse of a matrix by Gauss-Jordan method. Eigen value of a matrix by power methods.

2. INTERPOLATION AND APPROXIMATION 9

Lagrangian Polynomials - Divided difference - Interpolation with a cubic spline - Newton forward and backward difference formulae.

3. NUMERICAL DIFFERENTIATION AND INTEGRATION 9

Derivatives from difference table - Divided difference and finite difference - Numerical integration by Trapezoidal and Simpson's 1/3 and 3/8 rules - Romberg's method - Two and three point Gaussian quadrature formulas - Double integrals using trapezoidal and Simpson's rules.

4. INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 9

Single step Methods : Taylor Series and methods - Euler and Modified Euler methods - Fourth order Runge-Kutta method for solving first and second order equations - Multistep methods – Milne's and Adam's predictor and corrector methods.

5. BOUNDARY VALUE PROBLEMS 9

Finite difference solution for the second order ordinary differential equations. Finite difference solution for one dimensional heat equation by implict and explict methods - one dimensional wave equation and two dimensional Laplace and Poisson equations.

22154C22P MANUFACTURING TECHNOLOGY – II

UNIT – I: METAL CUTTING THEORY 8

Introduction: material removal processes, types of machine tools – theory of metal cutting: chip formation, Types of metal cutting, cutting tool materials, Types of tool wear, Simple problems on Tool life.

UNIT –II: CENTRE LATHE AND SPECIAL PURPOSE LATHES 10

Centre lathe, constructional features, cutting tools, various operations, taper turning methods, thread cutting methods, special attachments, machining time and power estimation.

Capstan and turret lathes – automatic lathes : semi automatic, automats – single spindle : cutting off, multi spindle; cutting off machines.

UNIT – III: SHAPING, PLANING, SLOTTING & MILLING MACHINES 10

Reciprocating machine tools: shaper, planer, slotter ; milling : types, milling cutters, operations.

UNIT – IV: GRINDING, BROACHING AND GEAR CUTTING 10

Grinding: Introduction- Grinding wheel – specifications and selection, types of grinding process – cylindrical grinding, surface grinding, centreless grinding – honing, lapping, super finishing, polishing and buffing.

Broaching Machines: broach Specification – push, pull, surface and continuous broaching machines, Gear cutting: forming, generation, shaping, Hobbing.

UNIT – V: CNC MACHINES AND APT PROGRAMMING 7

Numerical Control (NC) machine tools – CNC – Introduction, Types, constructional details, special features, Advantages and applications.

Part programming fundamentals – manual programming – computer assisted part programming – APT language.

3. HMT – "Production Technology", Tata McGraw-Hill, 1998.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C23P THERMAL ENGINEERING

UNIT-I: GAS POWER CYCLES 9

Otto, Diesel, Dual, Brayton cycles, Calculation of mean effective pressure and air standard efficiency, Actual and theoretical PV diagram of Four stroke engines, Actual and theoretical PV diagram of two stroke engines.

UNIT – II: INTERNAL COMBUSTION ENGINES 9

Classification of IC engine, IC engine components and functions. Comparison of two stroke and four stroke engines. Fuel supply systems, Ignition Systems, Performance calculation. Comparison of petrol & diesel engine. Fuels, Knocking and Detonation. Lubrication system and cooling system. Exhaust gas analysis, pollution control nor

UNIT – III: STEAM NOZZLES AND TURBINES 9

Flow of steam through nozzles, shapes of nozzles, effect of friction, critical pressure ratio, supersaturated flow. Impulse and reaction principles, compounding, velocity diagrams for simple and multistage turbines,

UNIT – IV: AIR COMPRESSORS 9

Classification and working principle, work of compression with and without clearance. Volumetric efficiency, Isothermal efficiency and isentropic efficiency of reciprocating air compressors. Multistage air compressor and inter cooling – work of multistage air compressor, various types of compressors (Thoeretical treatment only).

UNIT – V: REFRIGERATION AND AIR-CONDITIONING 9

Vapour compression Refrigeration cycle – super heat, sub cooling, performance calculations. Working principle of vapour absorption system. Ammonia – water, Lithium bromide – water systems (Theory only), Comparison between vapour compression and absorption systems. Psychrometry, Psychometric chart, Cooling load calculations. Concept of RSHF, GSHF, ESHF, Air conditioning systems.

TUTORIALS : 15
TOTAL HOURS : 60

(Use of standard thermodynamic tables, Mollier diagram, Psychometric chart and Refrigerant property tables are permitted in the examination)

TEXT BOOKS

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C24P STRENGTH OF MATERIALS

1. STRESS AND STRAIN 9

Bodies - Rigid and Deformable bodies- Stresses; Tensile, Compressive and Shear – Deformation of simple and compound bars under axial load – Thermal stress – Elastic constants – Strain energy and unit strain energy

2. BEAMS - SFD & BMD 9

Beams -Types: Supports and Loads – Shear force and Bending Moment Diagrams in beams – Cantilever and Simply supported– Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section – Effect of shape of beam section on stress induced.

3. TORSION IN SHAFTS 9

Analysis of torsion in shafts – Shear stress distribution – Solid, Stepped and Hollow shafts – Twist and torsion stiffness – Replacement of Shafts - Compound shafts – Fixed and simply supported shafts.

4. DEFLECTION IN SPRINGS 9

Springs- Introduction, Types- Close coiled helical springs – Maximum shear stress in spring section– Deflection of helical coil springs under axial loads – Design of helical coil springs – stresses in helical coil springs under torsion loads

5. ANALYSIS OF STRESSES IN TWO DIMENSIONS 9

Thin cylindrical and spherical shells – Deformation in thin cylindrical and spherical shells – Biaxial stresses at a point –Principal planes and stresses – Analytical Method- Graphical Method: Mohr’s circle – Only for two stresses applied mutually perpendicular to each other on a body– Maximum shear stress.

TUTORIALS 15
TOTAL: 60

TEXT BOOKS

1. Popov E.P, “Engineering Mechanics of Solids”, Prentice-Hall of India, New Delhi, 1997.
2. Kazimi S.M.A, “Solid Mechanics”, Tata McGraw-Hill Publishing Co, New Delhi, 1981

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C25P ENGINEERING MATERIALS AND METALLURGY

1. CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS 10

Solid solutions, substitutional and interstitial – phase diagrams, invariant reactions, Iron – Iron carbide equilibrium diagram

2. HEAT TREATMENT 11

Definition – Full annealing, stress relief, recrystallisation and spheroidizing –normalising, hardening and Tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on I.T. diagram CCR - Hardenability, Jominy end quench test

3. FERROUS AND NON FERROUS METALS 9

Effect of alloying additions on steel (Mn, Si, Cr, Mo, V Ti & W) - stainless and tool steels – HSLA - maraging steels –types of CI

Copper and Copper alloys – Brass, Bronze and Cupronickel – Aluminum and Al-Cu – precipitation strengthening treatment.

4. NON-METALLIC MATERIALS 9

Polymers – types of polymer– Properties and applications of PE, PP, PS, PVC, PMMA, PET, PC, PA, ABS, PI, PAI, PPO, PPS, PEEK, PTFE Polymers — Engineering Ceramics – Properties and applications of Al_2O_3, SiC, SiC, Si_3, N_4, PSZ and Sialon – Fibre and particulate reinforced composites.

5. **MECHANICAL PROPERTIES AND TESTING 6**

Mechanism of plastic deformation, slip and twinning – Types of fracture – Testing of materials under tension, compression and shear loads – Hardness tests (Brinell, Vickers and Rockwell) Impact test Izod and charpy, fatigue and creep test.

Total Hours : 45

22148C31CP PROBABILITY AND STATISTICS

1. PROBABILITY AND RANDOM VARIABLE 9

Axioms of probability - Conditional probability - Total probability - Bayes theorem - Random variable - Probability mass function - Probability density functions - Properties- Moments - Moment generating functions and their properties.

2. TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

3. STANDARD DISTRIBUTIONS 9

Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties - Functions of a random variable.

4. TESTING OF HYPOTHESIS 9

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

5. DESIGN OF EXPERIMENTS 9

Analysis of variance – One way classification – CRD - Two – way classification – RBD - Latin square.

Note : Use of approved statistical table permitted in the examination.

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

22154C32P KINEMATICS OF MACHINERY

UNIT – I: BASICS OF MECHANISMS 7

Terminology and Definitions-Degree of Freedom Mobility-Kutzbach criterion-Grashoff's law-Kinematic Inversions of 4-bar chain and slider crank chains-Mechanical Advantage-Transmission angle-Description of reciprocating Mechanisms-Single slider crank, double slider crank mechanisms, Quick return mechanisms, Offset slider crank mechanism.

UNIT – II: KINEMATICS 12

Displacement, velocity and acceleration - analysis in simple mechanisms - Graphical Method velocity and acceleration polygons -Vector Approach, - Coriolis Acceleration.

UNIT – III: CAM PROFILE 8

Introduction-Classification cam and followers- cam nomenclature- Displacement diagrams-uniform velocity motion, uniform acceleration and retardation motion -Simple harmonic and Cycloidal motions – construction of displacement, velocity and acceleration diagrams-construction of cam profile with knife edge follower, roller follower, oscillating follower, flat faced mushroom follower

UNIT – IV: GEARS 10

Spur gear Terminology and definitions-Fundamental Law of toothed gearing-Inter changeable gears-gear tooth action – Terminology - Interference and undercutting-Non standard gear teeth-Helical, Bevel, Worm, Rack and Pinion gears (Basics only)-Gear trains-Parallel axis gear trains-Epicyclic gear trains

UNIT – V: FRICTION 8

Friction-Concepts, Types - Friction drives: Clutches - Introduction, Single & Multiplate Clutches – Friction in screw threads - Belt and rope drives.

Brakes: Types – Block Brake, Band: Simple Band & Differential, Band and Block Brakes.

TUTORIALS 15

TOTAL HOURS : 60

TEXT BOOKS

1. Rattan S.S, "Theory of Machines", Tata McGraw-Hill Publishing Company Ltd., New Delhi, 1998.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C33P COMPUTER AIDED DESIGN AND MANUFACTURING

OBJECTIVES:

• To provide an overview of how computers are being used in mechanical component design

UNIT I FUNDAMENTALS OF COMPUTER GRAPHICS 9

Product cycle- Design process- sequential and concurrent engineering- Computer aided design – CAD system architecture- Computer graphics – co-ordinate systems- 2D and 3D transformations homogeneous coordinates - Line drawing -Clipping- viewing transformation

UNIT II GEOMETRIC MODELING 9

Representation of curves- Hermite curve- Bezier curve- B-spline curves-rational curves-Techniques for surface modeling – surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid modeling techniques- CSG and B-rep

UNIT III VISUAL REALISM 9

Hidden – Line-Surface-Solid removal algorithms – shading – colouring – computer animation.

UNIT IV ASSEMBLY OF PARTS 9

Assembly modelling – interferences of positions and orientation – tolerance analysis-mass property calculations – mechanism simulation and interference checking.

UNIT V CAD STANDARDS 9

Standards for computer graphics- **Graphical Kernel System** (GKS) - standards for exchange images- **Open G**raphics Library **(OpenGL)** - Data exchange standards - IGES, STEP, CALSetc. - communication standards.

TOTAL : 45 PERIODS

OUTCOMES:

• Upon completion of this course, the students can able to use computer and CAD software's for modeling of mechanical components

TEXT BOOKS:

1. Ibrahim Zeid “Mastering CAD CAM” Tata McGraw-Hill Publishing Co.2007

22154C34P ENGINEERING METROLOGY AND MEASUREMENTS

UNIT – I: INTRODUCTION 9

Measurement -Introduction – Generalised measurement system-Units and standards-measuring instruments- range of accuracy, precision- repeatability-systematic and random errors-correction, calibration, interchangeability.

UNIT – II: LINEAR AND ANGULAR MEASURING DEVICES 9

Definition of Metrology-Linear measuring instruments: Vernier, micrometer, interval measurement, Slip gauges and classification, limit gauges- Comparators: Mechanical, pneumatic and electrical types, applications.

Angular measurements: -Sine bar, optical bevel protractor, angle Decker – Taper measurements.

UNIT – III: SCREW THREAD & GEAR FORM MEASUREMENT 9

Measurement of screw threads-Thread gauges, floating carriage micrometer-measurement of gears-tooth thickness-constant chord and base tangent method-.

UNIT – IV: LASER METROLOGY AND CMM 9

Precision instruments based on laser-Principles- laser interferometer-application in linear, angular measurements

Coordinate measuring machine (CMM)- Constructional features – types, applications –computer aided inspection.

UNIT – V: POWER, FLOW AND TEMPERATURE MEASUREMENT 9

Force, torque, power:-mechanical and pneumatic type-Flow measurement: Venturi, orifice, rotameter,–Temperature: bimetallic strip, pressure thermometers, thermocouples,

22154L35P COMPUTER AIDED SIMULATION AND ANALYSIS LABORATORY

LIST OF EXPERIMENTS

A. Simulation ***15***

1. Simulation of cam and follower mechanism using C / MAT Lab.
2. Analysis (Simple Treatment only) 30
3. Stress analysis of a plate with a circular hole.
4. Stress analysis of rectangular L bracket
5. Stress analysis of an axi-symmetric component
6. Stress analysis of beams (Cantilever, Simply supported, Fixed ends)
7. Mode frequency analysis of a 2 D component
8. Mode frequency analysis of beams (Cantilever, Simply supported, Fixed ends)
9. Harmonic analysis of a 2D component
10. Thermal stress analysis of a 2D component
11. Conductive heat transfer analysis of a 2D component
12. Convective heat transfer analysis of a 2D component

TOTAL : 45

22154C41P PROFESSIONAL ETHICS

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

OBJECTIVES:

□□To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNIT I HUMAN VALUES 10

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and imeditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION 9

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS 9

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination

UNIT V GLOBAL ISSUES 8

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility

TOTAL: 45 PERIODS

OUTCOMES :

□□Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society

TEXTBOOKS:

1. Mike W. Martin and Roland Schinzinger, "Ethics in Engineering", Tata McGraw Hill, New Delhi, 2003.

22154C42P DYNAMICS OF MACHINERY

UNIT – I: FORCE ANALYSIS IN MOVING PARTS 10

Rigid Body dynamics in general plane motion – Equations of motion - Dynamic force analysis - Inertia force and Inertia torque – D'Alemberts principle - - Dynamic Analysis in Reciprocating Engines – Gas Forces - Equivalent masses - Bearing loads - Crank shaft Torque - Turning moment diagrams - Fly wheels

UNIT – II: BALANCING OF MOVING PARTS 9

Static and dynamic balancing - Balancing of rotating masses – Balancing-single cylinder Multi-cylinder - Partial balancing in locomotive Engines - Balancing linkages - balancing machines

UNIT – III: FREE VIBRATIONS 10

Basic features of vibratory systems - idealized models - Basic elements and lumping of parameters - Degrees of freedom - Single degree of freedom - Free vibration - Equations of motion - natural frequency - Types of Damping - Damped vibration critical speeds of simple shaft - Torsional systems

UNIT – IV: FORCED VIBRATIONS 6

Response to periodic forcing - Harmonic Forcing - Forcing caused by unbalance - Support motion – Force transmissibility and amplitude transmissibility – Vibration

isolation.

UNIT – V: MECHANISMS FOR CONTROL 10

Governors - Types - Centrifugal governors - Gravity controlled and spring controlled centrifugal governors –Characteristics - Effect of friction - Controlling Force -
Gyroscopes - Gyroscopic forces and Torques - Gyroscopic stabilization - Gyroscopic effects in Automobiles, ships and airplanes

22154C43P DESIGN OF MACHINE ELEMENTS

UNIT – I : STRESSES IN MACHINE MEMBERS 9

Introduction to the design process - factor influencing machine design, selection of materials based on mechanical properties – Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, Factor of safety - theories of failure – stress concentration – design for variable loading – Soderberg, Goodman and Gerber relations

UNIT – II: DESIGN OF SHAFTS AND COUPLINGS 9

Design of solid and hollow shafts based on strength, rigidity and critical speed – Design of keys and key ways - Design of rigid and flexible couplings – Introduction to gear and shock absorbing couplings

UNIT – III: DESIGN OF FASTNERS AND WELDED JOINTS 9

Threaded fastners - Design of bolted joints including eccentric loading – Design of welded joints for pressure vessels and structures -.

UNIT – IV: DESIGN OF SPRINGS AND LEVERS 9

Design of helical, leaf, disc and torsional springs under constant loads and varying loads – Concentric torsion springs - Belleville springs

UNIT – V: DESIGN OF BEARINGS AND FLYWHEELS 9

Design of bearings – sliding contact and rolling contact types. – Cubic mean load – Design of journal bearings – Mckees equation – Lubrication in journal bearings – calculation of bearing dimensions

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

IS 10260 : Part 1 : 1982 Terms, definitions and classification of Plain bearings Part 2 : Friction and Wear.

IS 10260 : Part 1 : 1982 Terms, definitions and classification of Plain bearings Part 3 : Lubrication**.**

22154L45P DYNAMICS LABORATORY

LIST OF EXPERIMENTS

1. Governors - Determination of sensitivity, effort, etc. for Watt, Porter
2. Cam - Study of jump phenomenon and drawing profile of the cam.
3. Motorised Gyroscope-Verification of laws -Determination of gyroscopic couple.
4. Whirling of shaft-Determination of critical speed of shaft with concentrated loads.
5. Balancing of rotating masses.
6. Determination of moment of inertia by oscillation method for connecting rod and flywheel.
7. Vibrating system - Spring mass system-Determination of damping co-efficient of single degree of freedom system.
8. Determination of torsional frequencies for compound pendulum and flywheel system with lumped Moment of inertia.
9. Transverse vibration –free- Beam. Determination of natural frequency and deflection of beam.

Total Hours: 45

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C51P HEAT AND MASS TRANSFER

UNIT – I: CONDUCTION **11**

Basic Concepts – Mechanism of Heat Transfer – Conduction, Convection and Radiation – General Differential equation of Heat Conduction – Fourier Law of Conduction – Cartesian and Cylindrical Coordinates – One Dimensional Steady State Heat Conduction – Conduction through Plane Wall, Composite walls– Conduction with Internal Heat Generation –

UNIT – II: CONVECTION **10**

Basic Concepts – Convective Heat Transfer Coefficients – Boundary Layer Concept – Types of Convection – Forced Convection – Dimensional Analysis – External Flow – Flow over Plates,– Internal Flow – Laminar and Turbulent Flow – – Free Convection –Flow over Vertical Plate, Horizontal Plate, Inclined Plate

UNIT – III: HEAT EXCHANGERS **9**

Nusselts theory of condensation-pool boiling, flow boiling, correlations in boiling and condensation. Types of Heat Exchangers – LMTD Method of heat Exchanger Analysis – Effectiveness – NTU method of Heat Exchanger Analysis – Overall Heat Transfer Coefficient – Fouling Factors**.**

UNIT – IV: RADIATION **8**

Basic Concepts, Laws of Radiation – Stefan Boltzman Law, Kirchoff Law –Black Body Radiation –Grey body radiation Shape Factor Algebra – Radiation Shields .

UNIT – V: MASS TRANSFER **7**

Basic Concepts – Diffusion Mass Transfer – Fick's Law of Diffusion – Steady state Molecular Diffusion – Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy

TUTORIAL:15

TOTAL HOURS : 60

Note: (Use of standard heat and mass transfer data book is permitted in the University examination)

TEXT BOOKS:

1. Sachdeva R C, "Fundamentals of Engineering Heat and Mass Transfer" New Age International, 1995.
2. Kothandaraman C.P "Fundamentals of Heat and Mass Transfer" New Age International, New Delhi, 1998

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

5. Frank P. Incropera and David P. DeWitt, “Fundamentals of Heat and Mass Transfer”, John Wiley and Sons, 1998.

22154C52P DESIGN OF TRANSMISSION SYSTEMS

UNIT – I: DESIGN OF TRANSMISSION SYSTEMS 9

Selection of V belts and pulleys – selection of Flat belts and pulleys -– Selection of Transmission chains and Sprockets. Design of pulleys and sprockets.

UNIT – II: SPUR GEARS AND PARALLEL AXIS HELICAL GEARS 9

Gear Terminology-Speed ratios and number of teeth-Force analysis - Dynamic effects - Fatigue strength - Factor of safety - Gear materials – Module and Face width-power rating calculations based on strength and wear considerations -– Pressure angle in the normal and transverse plane-Equivalent number of teeth-forces and stresses.

UNIT – III: BEVEL AND CROSS HELICAL GEARS 9

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears.
Cross helical: Terminology-helix angles-Estimating the size of the pair of cross helical gears.

UNIT – IV: GEAR BOXES DESIGN 9

Geometric progression - Standard step ratio - Ray diagram, kinematics layout -Design of sliding mesh gear box -Constant mesh gear box. – Design of multi speed gear box.

UNIT – V: DESIGN OF CAM, CLUTCHES AND BRAKES 9

Cam Design: Types-pressure angle and under cutting base circle determination-forces and surface stresses.
Design of plate clutches –axial clutches-cone clutches-internal expanding rim clutches-

22154C53P SAFETY IN PROCESS INDUSTRIES

OBJECTIVES:

- ❖ To give the procedures in safe handling of chemicals.
- ❖ To give a knowledge about the safety equipment used in process industry.
- ❖ To give knowledge about fire safety and Emergency preparedness.

UNIT – I INTRODUCTION TO SAFETY 12

Accident – Causes and Cost – Prevention of accident – Laws and regulations – Indian Factories Act governing health and safety of workers.

UNIT – II SAFE HANDLING OF CHEMICALS 12

Organizational Control – Identifications, labeling, safe handling, storing and transfer of chemicals – medical examination of workers – Material safety data sheet

UNIT – III SAFETY EQUIPMENT 12

Personal protective equipment – Principle, role and types – Safe work permit system

UNIT – IV FIRE SAFETY 12

Fire – Causes of fire – Extinguishing and classification of fire – Type of extinguisher applications – Fire hydrants.

UNIT – V EMERGENCY PREPAREDNESS 12

Emergency – preparation of on site and off site emergency plan – data required Mock drill – Constitution and role of emergency organization.

TOTAL HOURS:60

REFERENCE:

1) Accident prevention manual, NSC, Chicago
2) Factories Act 1948
3) Safe handling of Chemicals in Industry by P.A Carson, C.J. Mamford (Vol.3)

22154L55P HEAT TRANSFER LABORATORY

LIST OF EXPERIMENTS

HEAT TRANSFER **30**

1. Thermal conductivity measurement by guarded plate method
2. Thermal conductivity of pipe insulation using lagged pipe apparatus
3. Natural convection heat transfer from a vertical cylinder
4. Forced convection Inside tube
5. Heat transfer from Pin-fin (natural & forced convection modes)
6. Determination of Stefan-Boltzmann constant
7. Determination of Emissivity of a grey surface
8. Effectiveness of Parallel/counter flow heat exchanger

REFRIGERATION AND AIR CONDITIONING **15**

1. Determination of COP of a refrigeration system
2. Experiments on air-conditioning system
3. Performance test on single/two stage reciprocating air compressor.

Total Hours : 45

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C61P FINITE ELEMENT ANALYSIS

UNIT – I: INTRODUCTION TO FEA: 9

Historical background – Matrix approach – Application to the continuum – Discretisation – Matrix algebra – Gaussian elimination – Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Ritz method

UNIT – II: ONE DIMENSIONAL PROBLEMS 9

Finite element modeling – Coordinates and shape functions- Potential energy approach – Galarkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses

UNIT – III: TWO DIMENSIONAL PROBLEMS 9

Introduction – Finite element modelling – Scalar valued problem – Poisson equation –Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galarkin approach - Stress calculation.

UNIT – IV: AXISYMMETRIC PROBLEMS 9

Axisymmetric formulation – Element stiffness matrix and force vector – Galarkin approach – Body forces– Stress calculations – Boundary conditions.

UNIT – V: ISOPARAMETRIC ELEMENTS 9

The four node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration - Stiffness integration – Stress calculations – Four node quadrilateral for axisymmetric problems.

22154C62P MECHATRONICS

UNIT – I: INTRODUCTION 9

Introduction to Mechatronics – Measurement Systems – Control Systems – Microprocessor based Controllers.

Sensors and Transducers – Performance Terminology – Sensors for Displacement, Position and Proximity; Velocity, Motion, Force, Fluid Pressure, Liquid Flow, Liquid Level, Temperature, Light Sensors – Selection of Sensors

UNIT – II: POWER DRIVE SYSTEM 9

Pneumatic and Hydraulic Systems – Directional Control Valves – Rotary Actuators.

Mechanical Actuation Systems – Cams – Gear Trains – Ratchet and pawl – Belt and Chain Drives – Bearings.

Electrical Actuation Systems – Mechanical Switches – Solid State Switches – Solenoids – D.C Motors – A.C Motors – Stepper Motors.

UNIT – III: SYSTEM MODELS AND CONTROLLERS 9

Building blocks of Mechanical, Electrical, Fluid and Thermal Systems, Rotational – Transnational Systems, Electromechanical Systems – Hydraulic – Mechanical Systems.

Continuous and discrete process Controllers – Control Mode – Two – Step mode – Proportional Mode – Derivative Mode – Integral Mode – PID Controllers.

UNIT – IV: PROGRAMMING LOGIC CONTROLLERS(PLC) 9

Programmable Logic Controllers – Basic Structure – Input / Output Processing – Programming – Mnemonics – Timers, Internal relays and counters – Shift Registers – Master and Jump Controls – Data Handling – Analogs Input / Output .

UNIT – V: DESIGN OF MECHATRONICS SYSTEM 9

Stages in designing Mechatronics Systems – Traditional and Mechatronic Design - Possible Design Solutions

Case Studies of Mechatronics Systems, Pick and place robot – Automatic Car Park Systems

Total Hours : 45

TEXT BOOKS:

1. W. Bolton, "Mechatronics", Pearson Education, Second Edition, 1999.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154C63P MAINTENANCE ENGINEERING

OBJECTIVES:

- To enable the student to understand the principles, functions and practices adapted in industry for the successful management of maintenance activities.
- To explain the different maintenance categories like Preventive maintenance, condition monitoring and repair of machine elements.
- To illustrate some of the simple instruments used for condition monitoring in industry.

UNIT I PRINCIPLES AND PRACTICES OF MAINTENANCE PLANNING 9

Basic Principles of maintenance planning – Objectives and principles of planned maintenance activity

– Importance and benefits of sound Maintenance systems – Reliability and machine availability – MTBF, MTTR and MWT – Factors of availability – Maintenance organization – Maintenance economics.

UNIT II MAINTENANCE POLICIES – PREVENTIVE MAINTENANCE 9

Maintenance categories – Comparative merits of each category – Preventive maintenance, maintenance schedules, repair cycle - Principles and methods of lubrication – TPM.

UNIT III CONDITION MONITORING 9

Condition Monitoring – Cost comparison with and without CM – On-load testing and offload testing – Methods and instruments for CM – Temperature sensitive tapes – Pistol thermometers – wear-debris analysis

UNIT IV REPAIR METHODS FOR BASIC MACHINE ELEMENTS 10

Repair methods for beds, slide ways, spindles, gears, lead screws and bearings – Failure analysis – Failures and their development – Logical fault location methods – Sequential fault location.

UNIT V REPAIR METHODS FOR MATERIAL HANDLING EQUIPMENT 8

Repair methods for Material handling equipment - Equipment records –Job order systems - Use of computers in maintenance.

TOTAL: 45 PERIODS

OUTCOMES:

- Upon completion of the programme, the students can able to implement the maintenance function and different practices in industries for the successful management of maintenance activities

- To identify the different maintenance categories like Preventive maintenance, condition monitoring and repair of machine elements.

22154L65P MECHATRONICS LABORATORY

<u>LIST OF EXPERIMENTS</u>

1. Fluid power circuits to control
   (i) single and double acting cylinder
2. Design of circuits with logic sequence using Electro pneumatic trainer kits.
3. Circuits with multiple cylinder sequences in Electro pneumatic using PLC.
4. Servo controller interfacing for open loop
5. Servo controller interfacing for closed loop
6. Stepper motor interfacing with 8051 Micro controller
   (i) full step resolution (ii) half step resolution
7. Computerized data logging system with control for process variables like pressure flow and temperature.

TOTAL : 45

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22160C71P TOTAL QUALITY MANAGEMENT

UNIT – I: BASICS OF TQM **9**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT – II: PRINCIPLES OF TQM **9**

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT – III: QUALITY CONCEPTS **9**

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Concept of six sigma,

UNIT – IV: TQM TOOLS **9**

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits,   FMEA – Stages of FMEA.

UNIT – V: ISO STANDARDS **9**

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, ISO 14000 – Concept, Requirements and Benefits.

TOTAL : 45

TEXT BOOKS:

22154C72P PROCESS PLANNING AND COST ESTIMATION

UNIT-I: WORK STUDY AND TIME STUDY 10

Method study – Definition – Objectives-Motion economy- Principles – Tools and Techniques- Applications – Work measurements- purpose – use – procedure – tools and techniques- Standard time –Time study– principles – applications.

UNIT-II: PROCESS PLANNING 10

Definition – Objective –approaches to process planning- Process planning activities – Finished part requirements- manufacturing sequences- machine selection – material selection parameters- Set of documents for process planning-process chart - production time calculation – selection of cost optimal processes.

UNIT-III: INTRODUCTION TO COST ESTIMATION 7

Objective of cost estimation- costing – cost accounting- classification of cost- Elements of cost.

UNIT-IV: COST ESTIMATION 8

Types of estimates – methods of estimates – data requirements and sources- collection of cost

UNIT-V: PRODUCTION COST ESTIMATION 10

Estimation of material cost, labour cost and over heads, allocation of overheads – Estimation for different types of jobs.

Total Hours : 45

22154C73P ADVANCED I.C. ENGINES

OBJECTIVES:

- To update the knowledge in engine exhaust emission control and alternate fuels
- To enable the students to understand the recent developments in IC Engines

UNIT I SPARK IGNITION ENGINES 9

Air-fuel ratio requirements, Design of carburetor –fuel jet size and venture size, Stages of combustion-normal and abnormal combustion, Factors affecting knock, Combustion chambers, Introduction to thermodynamic analysis of SI Engine combustion process.

UNIT II COMPRESSION IGNITION ENGINES 9

Stages of combustion-normal and abnormal combustion – Factors affecting knock, Direct and Indirect injection systems, Combustion chambers, Turbo charging, Introduction to Thermodynamic Analysis of CI Engine Combustion process.

UNIT III ENGINE EXHAUST EMISSION CONTROL 9

Formation of NO_X , HC/CO mechanism , Smoke and Particulate emissions, Green House Effect , Methods of controlling emissions , Three way catalytic converter and Particulate Trap, Emission (HC,CO, NO and NO_X ,) measuring equipments, Smoke and Particulate measurement, Indian Driving Cycles and emission norms

UNIT IV ALTERNATE FUELS 9

Alcohols , Vegetable oils and bio-diesel, Bio-gas, Natural Gas , Liquefied Petroleum Gas ,Hydrogen , Properties , Suitability, Engine Modifications, Performance , Combustion and Emission Characteristics of SI and CI Engines using these alternate fuels.

UNIT V RECENT TRENDS 9

Homogeneous Charge Compression Ignition Engine, Lean Burn Engine, Stratified Charge Engine, Surface Ignition Engine, Four Valve and Overhead cam Engines, Electronic Engine Management, Common Rail Direct Injection Diesel Engine, Gasoline Direct Injection Engine, Data Acquisition System –pressure pick up, charge amplifier PC for Combustion and Heat release analysis in Engines.

TOTAL: 45 PERIODS

LIST OF ELECTIVES

22154E44AP GAS DYNAMICS AND JET PROPULSION

UNIT – I: FUNDAMENTALS OF COMPRESSIBLE FLOW 8

Energy and momentum equations for compressible fluid flows, various regions of flows, reference velocities, stagnation state, velocity of sound, critical states, Mach number, critical Mach number, Mach cone, Mach angle, effect of Mach number on compressibility.

UNIT – II: FLOW THROUGH VARIABLE AREA DUCTS 9

Isentropic flow through variable area ducts, T-s and h-s diagrams for nozzle and diffuser flows, area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles.

UNIT – III : Flow through Constant Area Ducts 10

Flow in constant area ducts with friction (Fanno flow) – Fanno curves and Fanno flow equation, variation of flow propertiesFlow in constant area ducts with heat transfer (Rayleigh flow), Rayleigh line and Rayleigh flow equation, variation of flow properties,

UNIT – IV: NORMAL SHOCK 8

Governing equations, variation of flow parameters like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock, Prandtl - Meyer equation, flow in convergent and divergent nozzle with shock, normal shock in Fanno and Rayleigh flows,

UNIT – V: PROPULSION 10

Aircraft propulsion – types of jet engines – energy flow through jet engines, study of turbojet engine components – diffuser, compressor, combustion chamber, turbine and exhaust systems, performance of turbo jet engines – thrust, thrust power, propulsive and overall efficiencies, ram jet and pulse jet engines

TUTORIAL 15

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

22154E44BP WELDING TECHNOLOGY

OBJECTIVES

- To understand the basics of welding and to know about the various types of welding processes

UNIT I GAS AND ARC WELDING PROCESSES: 9

Fundamental principles – Air Acetylene welding, Oxyacetylene welding, Carbon arc welding, Shielded metal arc welding, Submerged arc welding, TIG & MIG welding, Plasma arc welding and Electroslag welding processes - advantages, limitations and applications.

UNIT II RESISTANCE WELDING PROCESSES: 9

Spot welding, Seam welding, Projection welding, Resistance Butt welding, Flash Butt welding, Percussion welding and High frequency resistance welding processes - advantages, limitations and applications.

UNIT III SOLID STATE WELDING PROCESSES: 9

Cold welding, Diffusion bonding, Explosive welding, Ultrasonic welding, Friction welding, Forge welding, Roll welding and Hot pressure welding processes - advantages, limitations and applications.

UNIT IV OTHER WELDING PROCESSES: 9

Thermit welding, Atomic hydrogen welding, Electron beam welding, Laser Beam welding, Friction stir welding, Under Water welding, Welding automation in aerospace, nuclear and surface transport vehicles.

UNIT V DESIGN OF WELD JOINTS, WELDABILITY AND TESTING OF WELDMENTS 9

Various weld joint designs – Weldability of Aluminium, Copper, and Stainless steels. Destructive and non destructive testing of weldments.

TOTAL : 45 HOURS

OUTCOMES:

- Upon completion of this course, the students can able to compare different types of Welding process for effective Welding of Structural components.

TEXT BOOKS:

22154E44CP FUNDAMENTALS OF NANOSCIENCE

OBJECTIVES

 To learn about basis of nanomaterial science, preparation method, types and application

UNIT I INTRODUCTION 8

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering-Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilmsmultilayered
materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

UNIT II GENERAL METHODS OF PREPARATION 9

Bottom-up Synthesis-Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

UNIT III NANOMATERIALS 12

Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications- Nanometal oxides-ZnO, TiO_2,MgO, ZrO_2, NiO, nanoalumina, CaO, $AgTiO_2$, Ferrites, Nanoclaysfunctionalization and applications-Quantum wires, Quantum dots-preparation, properties and
applications

UNIT IV CHARACTERIZATION TECHNIQUES 9

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation

UNIT V APPLICATIONS 7

NanoInfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nanobiotechlogy: nanoprobes in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery

TOTAL : 45 PERIODS

OUTCOMES

 Will familiarize about the science of nanomaterials
 Will demonstrate the preparation of nanomaterials
 Will develop knowledge in characteristic nanomaterial

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154E44DP RENEWABLE SOURCES OF ENERGY

UNIT– I: FACTORS AFFECTING ENERGY SOURCES: 9

Primary energy sources - world energy resources- energy cycle of the earth –environmental aspects of energy utilisation, CO_2 emissions and Global warming–renewable energy resources and their importance. Potential impacts of harnessing the different renewable energy resources.

UNIT – II: SOLAR ENERGY : 9

Principles of Solar energy collection -Solar radiation - measurements - instruments - data and estimation- types of collectors - characteristics and design principles of different type of collectors - performance of collectors - testing of collectors. Solar thermal applications - water heaters and air heaters - performance and applications - simple calculations - solar cooling - solar drying - solar ponds - solar tower concept - solar furnace.

UNIT – III: WIND, TIDAL AND GEO THERMAL ENERGY 9

Energy from the wind - general theory of windmills - types of windmills - design aspects of horizontal axis windmills - applications. Energy from tides and waves – working principles of tidal plants and ocean thermal energy conversion plants - power from geothermal energy - principle of working of geothermal power plants.

UNIT – IV: BIO ENERGY 9

Energy from bio mass & bio gas plants -various types - design principles of biogas plants - applications. Energy from wastes - waste burning power plants - utilization of industrial and municipal wastes - energy from the agricultural wastes.

UNIT – V: RECENT ADVANCEMENTS 9

Direct energy conversion (Description, principle of working and basic design aspects only) – Magneto hydrodynamic systems (MHD) - thermoelectric generators – thermionic generators - fuel cells - solar cells - types,

22158E54AP ENVIRONMENTAL SCIENCE AND ENGINEERING

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES 10

Definition, scope and importance – need for public awareness – forest resources: use and over-exploitation, deforestation,. Timber extraction, mining, dams-benefits and problems – mineral resources: use and effects on forests and tribal people – water resources: use and over-utilization of surface and exploitation, environmental effects of extracting and using mineral resources, case studies – food resources: world food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – energy resources: growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies – land resources: land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources.

UNIT II ECOSYSTEMS AND BIODIVERSITY 14

Concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem. Introduction to biodiversity – definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity –endangered and endemic species of India – conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT III ENVIRONMENTAL POLLUTION 8

Definition – causes, effects and control measures of: (a) air pollution (b) water pollution (c) soil pollution (d) marine pollution (e) noise pollution (f) thermal pollution (g) nuclear hazards — role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT 7

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management

environmental ethics: issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents. environment production act – air (prevention and control of pollution) act – water (prevention and control of pollution) act – wildlife protection act – forest conservation act – issues involved in enforcement of environmental legislation – public awareness

UNIT V HUMAN POPULATION AND THE ENVIRONMENT 6

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – hiv / aids – women and

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

child welfare – role of information technology in environment and human health – case studies.

22154E54BP HUMAN RIGHTS

OBJECTIVES :

 To sensitize the Engineering students to various aspects of Human Rights.

UNIT I 9

Human Rights – Meaning, origin and Development. Notion and classification of Rights – Natural, Moral and Legal Rights. Civil and Political Rights, Economic, Social and Cultural Rights; collective / Solidarity Rights.

UNIT II 9

Evolution of the concept of Human Rights Magana carta – Geneva convention of 1864. Universal Declaration of Human Rights, 1948. Theories of Human Rights.

UNIT III 9

Theories and perspectives of UN Laws – UN Agencies to monitor and compliance.

UNIT IV 9

Human Rights in India – Constitutional Provisions / Guarantees.

UNIT V 9

Human Rights of Disadvantaged People – Women, Children, Displaced persons and Disabled persons, including Aged and HIV Infected People. Implementation of Human Rights – National and State Human Rights Commission – Judiciary – Role of NGO's, Media, Educational Institutions, Social Movements.

TOTAL : 45 PERIODS

OUTCOME :

 Engineering students will acquire the basic knowledge of human rights.

REFERENCES:

1. Kapoor S.K., "Human Rights under International law and Indian Laws", Central Law Agency, Allahabad, 2014.
2. Chandra U., "Human Rights", Allahabad Law Agency, Allahabad, 2014.

22154E54CP ROBOTICS

UNIT-I: INTRODUCTION OF ROBOT BASICS 7

Robot – Definition – Robot Anatomy – Co-ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications

UNIT-II: ROBOT ACTUATORS AND END EFFECTORS 10

Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features, Applications and Comparison of all these Drives

End Effectors – Grippers – Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered Internal Grippers and External Grippers;

UNIT-III: SENSORS AND MACHINE VISION SYSTEM 10

Requirements of a sensor, Principles and Applications of the following types of sensors – Position of sensors - Piezo Electric Sensor, LVDT, Optical Encoders, Range Sensors, Proximity Sensors - nductive, Hall Effect, Capacitive, Ultrasonic Touch Sensors, Sensing and Digitizing Image Data – Signal Conversion, Image Storage, Lighting Techniques. Image Processing and Analysis – Data Reduction, Segmentation, Feature Extraction, Object Recognition.

UNIT-IV: ROBOT KINEMATICS AND ROBOT PROGRAMMING 10

Forward Kinematics, Inverse Kinematics and Differences; Forward Kinematics and Reverse Kinematics of Manipulators with Two, Three Degrees of Freedom (In 2 Dimensional),
Teach Pendant Programming, Lead through programming, Robot programming Languages – VAL Programming – Motion Commands, Sensor Commands, End effecter commands, and Simple programs

UNIT – V: IMPLEMENTATION AND ROBOT ECONOMICS 8

RGV, AGV; Implementation of Robots in Industries – Various Steps; Safety Considerations for Robot Operations; Economic Analysis of Robots – Pay back Method, Rate of Return Method.

Total Hours : 45

22154E54DP MARKETING MANAGEMENT

OBJECTIVES:

 To enable students to deal with newer concepts of marketing concepts like strategic marketing segmentation, pricing, advertisement and strategic formulation. The course will enable a student to take up marketing as a professional career.

UNIT I MARKETING PROCESS 9

Definition, Marketing process, dynamics, needs, wants and demands, marketing concepts, environment, mix, types. Philosophies, selling versus marketing, organizations, industrial versus consumer marketing, consumer goods, industrial goods, product hierarchy.

UNIT II BUYING BEHAVIOUR AND MARKET SEGMENTATION 9

Cultural, demographic factors, motives, types, buying decisions, segmentation factors - demographic -
Psycho graphic and geographic segmentation, process, patterns.

UNIT III PRODUCT PRICING AND MARKETING RESEARCH 9

Objectives, pricing, decisions and pricing methods, pricing management. Introduction, uses, process
of marketing research.

UNIT IV MARKETING PLANNING AND STRATEGY FORMULATION 9

Components of marketing plan-strategy formulations and the marketing process, implementations,
portfolio analysis, BCG, GEC grids.

UNIT V ADVERTISING, SALES PROMOTION AND DISTRIBUTION 9

Characteristics, impact, goals, types, and sales promotions - point of purchase - unique selling proposition. Characteristics, wholesaling, retailing, channel design, logistics, and modern trends in
retailing, Modern Trends, e-Marketing.

TOTAL: 45 PERIODS

OUTCOMES :

 The learning skills of Marketing will enhance the knowledge about Marketer's Practices and create insights on Advertising, Branding, Retailing and Marketing Research.

TEXT BOOKS:

1. Philip Kolter & Keller, "Marketing Management", Prentice Hall of India, 14th edition, 2012.
2. Chandrasekar. K.S., "Marketing Management Text and Cases", 1st Edition, Tata McGraw Hill –
Vijaynicole, 2010.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154E64AP PRINCIPLES OF MANAGEMENT

OBJECTIVES:

 To enable the students to study the evolution of Management, to study the functions and principles of management and to learn the application of the principles in an organization .

UNIT I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS 9

Definition of Management – Science or Art – Manager Vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations , system andcontingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.

UNIT II PLANNING 9

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques– Decision making steps and process.

UNIT III ORGANISING 9

Nature and purpose – Formal and informal organization – organization chart – organization structure– types – Line and staff authority – departmentalization – delegation of authority – centralization anddecentralization – Job Design - Human Resource Management – HR Planning, Recruitment,selection, Training and Development, Performance Management , Career planning and management.

UNIT IV DIRECTING 9

Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication –communication and IT.

UNIT V CONTROLLING 9

System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control andperformance – direct and preventive control – reporting.

TOTAL: 45 PERIODS

OUTCOMES:

 Upon completion of the course, students will be able to have clear understanding of managerial functions like planning, organizing, staffing, leading & controlling and have same basic knowledge on international aspect of management

TEXTBOOKS:

1. Stephen P. Robbins & Mary Coulter, “Management”, Prentice Hall (India)Pvt. Ltd., 10th Edition,
2009.

2. JAF Stoner, Freeman R.E and Daniel R Gilbert “Management”, 6th Edition, Pearson Education, 2004.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154E64BP ENERGY CONSERVATION AND MANAGEMENT

OBJECTIVES:

At the end of the course, the student is expected to

- understand and analyse the energy data of industries
- carryout energy accounting and balancing
- conduct energy audit and suggest methodologies for energy savings and
- utilise the available resources in optimal ways

UNIT I INTRODUCTION 8

Energy - Power – Past & Present scenario of World; National Energy consumption Data – Environmental aspects associated with energy utilization –Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Instruments for energy auditing.

UNIT II ELECTRICAL SYSTEMS 12

Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors,Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting andscope of Encon in Illumination.

UNIT III THERMAL SYSTEMS 12

Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and encon measures. Steam: Distribution &U sage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories

UNIT IV ENERGY CONSERVATION IN MAJOR UTILITIES 8

Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems – Cooling Towers – D.G. sets

UNIT V ECONOMICS 5

Energy Economics – Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing –ESCO concept

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of this course, the students can able to analyse the energy data of industries.

- Can carryout energy accounting and balancing
- Can suggest methodologies for energy savings

TEXT BOOKS:

1. Energy Manager Training Manual (4 Volumes) available at www.energymanager training.com,
a website administered by Bureau of Energy Efficiency (BEE), a statutory body under Ministry of Power, Government of India, 2004.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154E64CP ENGINEERING ECONOMICS

OBJECTIVES:

 To enable students to understand the fundamental economic concepts applicable to engineering and to learn the techniques of incorporating inflation factor in economic decision making.

UNIT I INTRODUCTION TO ECONOMICS 8

Introduction to Economics- Flow in an economy, Law of supply and demand, Concept of Engineering Economics – Engineering efficiency, Economic efficiency, Scope of engineering economics – Element of costs, Marginal cost, Marginal Revenue, Sunk cost, Opportunity cost, Break-even analysis - V ratio, Elementary economic Analysis – Material selection for product Design selection for a product, Process planning.

UNIT II VALUE ENGINEERING 10

Make or buy decision, Value engineering – Function, aims, Value engineering procedure. Interest formulae and their applications –Time value of money, Single payment compound amount factor, Single payment present worth factor, Equal payment series sinking fund factor, Equal payment series payment Present worth factor- equal payment series capital recovery factor - Uniform gradient series annual equivalent factor, Effective interest rate, Examples in all the methods.

UNIT III CASH FLOW 9

Methods of comparison of alternatives – present worth method (Revenue dominated cash flow diagram), Future worth method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), Annual equivalent method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), rate of return method, Examples in all the methods.

UNIT IV REPLACEMENT AND MAINTENANCE ANALYSIS 9

Replacement and Maintenance analysis – Types of maintenance, types of replacement problem, determination of economic life of an asset, Replacement of an asset with a new asset – capital recovery with return and concept of challenger and defender, Simple probabilistic model for items which fail completely.

UNIT V DEPRECIATION 9

Depreciation- Introduction, Straight line method of depreciation, declining balance method of depreciation-Sum of the years digits method of depreciation, sinking fund method of depreciation/ Annuity method of depreciation, service output method of depreciation-Evaluation of public alternatives- introduction, Examples, Inflation adjusted decisions – procedure to adjust inflation, Examples on comparison of alternatives and determination of economic life of asset.

TOTAL: 45 PERIODS

OUTCOMES :

 Upon successful completion of this course, students will acquire the skills to apply the basics of economics and cost analysis to engineering and take economically sound decisions.

.

22148E64DP MATHEMATICS FOR INDUSTRIAL OPERATIONS

Unit I Introduction to Linear Programming (LP)

Introduction to applications of operations research in functional areas of management. Linear Programming – formulation, solution by graphical and simplex methods (Primal – Penalty, Two Phase), Special cases, Sensitivity Analysis.

Unit II Transportation and Assignment models

Transportation Models (Minimizing and Maximizing Cases) – Balanced and unbalanced cases – Initial Basic feasible solution by N-W Corner Rule, Least cost and Vogal's approximation methods. Check for optimality. Solution by MODI / Stepping Stone method. Cases of degeneracy. Transportation Models. Assignment Models (Minimizing and Maximizing Cases) – Balanced and Unbalanced Cases. Solution by Hungarian and Branch and Bound Algorithms. Travelling Salesman problem. Crew Assignment Models.

Unit III Integer Linear Programming and Game Theory

Solution to pure and mixed integer programming problem by Branch and Bound and cutting plane algorithms. Game Theory – Two person zero sum games – Saddle point, Dominance Rule, Convex Linear Combination (Averages), methods of matrices, graphical and L.P. Solutions.

Unit IV Dynamic Programming, Simulation and Decision Theory

Dynamic Programming (DP) – Deterministic Cases – Maximizing and Minimizing problems. DP techniques for L.P. problems, decision making under risk – decision trees – decision making under uncertainty. Application of simulation techniques for decision making.

Unit V Queuing Theory and Replacement Models

Basic elements of the Queuing Model, of the Poisson and Exponential Distributions, Queuing with combined arrivals and departures, Queues with priorities for service, P.E.R.T. & C.P.M. and replacement model: drawing networks – identifying critical path – probability of completing the project within given time – project crashing – optimum cost and optimum duration.

Total no. of hrs: 60 hrs.

22154E74AP ADDITIVE MANUFACTURING

OBJECTIVES:

 To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturing technologies

 To be familiar with the characteristics of the different materials those are used in Additive Manufacturing.

UNIT I INTRODUCTION 10

Overview – History - Need-Classification -Additive Manufacturing Technology in product development-Materials for Additive Manufacturing Technology – Tooling - Applications.

UNIT II CAD & REVERSE ENGINEERING 10

Basic Concept – Digitization techniques – Model Reconstruction – Data Processing for Additive Manufacturing Technology: CAD model preparation – Part Orientation and support generation – Model Slicing –Tool path Generation – Softwares for Additive Manufacturing Technology: MIMICS, MAGICS.

UNIT III LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS 10

Classification – Liquid based system – Stereolithography Apparatus (SLA)- Principle, process, advantages and applications - Solid based system –Fused Deposition Modeling - Principle, process, advantages and applications, Laminated Object Manufacturing

UNIT IV POWDER BASED ADDITIVE MANUFACTURING SYSTEMS 10

Selective Laser Sintering – Principles of SLS process - Process, advantages and applications, Three Dimensional Printing - Principle, process, advantages and applications- Laser Engineered Net Shaping (LENS), Electron Beam Melting.

UNIT V MEDICAL AND BIO-ADDITIVE MANUFACTURING 5

Customized implants and prosthesis: Design and production. Bio-Additive Manufacturing-Computer Aided Tissue Engineering (CATE) – Case studies

TOTAL : 45 PERIODS

OUTCOMES:

 Upon completion of this course, the students can able to compare different method and discuss the effects of the Additive Manufacturing technologies and analyse the characteristics of the different materials in Additive Manufacturing.

TEXT BOOKS:

1. Chua C.K., Leong K.F., and Lim C.S., “Rapid prototyping: Principles and applications”, Third Edition, World Scientific Publishers, 2010.

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154E74BP COMPUTATIONAL FLUID DYNAMICS

OBJECTIVES:

 To introduce Governing Equations of viscous fluid flows
 To introduce numerical modeling and its role in the field of fluid flow and heat transfer
 To enable the students to understand the various discretization methods, solution procedures and turbulence modeling.
 To create confidence to solve complex problems in the field of fluid flow and heat transfer by using high speed computers.

UNIT I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS 8

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations – Chemical species transport – Physical boundary conditions – Time-averaged equations for Turbulent Flow – Turbulent–Kinetic Energy Equations – Mathematical
behaviour of PDEs on CFD - Elliptic, Parabolic and Hyperbolic equations.

UNIT II FINITE DIFFERENCE AND FINITE VOLUME METHODS FOR DIFFUSION 9

Derivation of finite difference equations – Simple Methods – General Methods for first and second
order accuracy – Finite volume formulation for steady state One, Two and Three -dimensional diffusion problems –Parabolic equations – Explicit and Implicit schemes – Example problems on elliptic and parabolic equations – Use of Finite Difference and Finite Volume methods.

UNIT III FINITE VOLUME METHOD FOR CONVECTION DIFFUSION 10

Steady one-dimensional convection and diffusion – Central, upwind differencing schemes properties
of discretization schemes – Conservativeness, Boundedness, Transportiveness, Hybrid, Power-law,
QUICK Schemes.

UNIT IV FLOW FIELD ANALYSIS 9

Finite volume methods -Representation of the pressure gradient term and continuity equation – Staggered grid – Momentum equations – Pressure and Velocity corrections – Pressure Correction equation, SIMPLE algorithm and its variants – PISO Algorithms.

UNIT V TURBULENCE MODELS AND MESH GENERATION 9

Turbulence models, mixing length model, Two equation (k-Є) models – High and low Reynolds number models – Structured Grid generation – Unstructured Grid generation – Mesh refinement –
Adaptive mesh – Software tools.

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of this course, the students can able
 To create numerical modeling and its role in the field of fluid flow and heat transfer
 To use the various discretization methods, solution procedures and turbulence modeling to solve flow and heat transfer problems.

TEXT BOOKS:

22154E74CP UNCONVENTIONAL MACHINING PROCESSES

UNIT – I: INTRODUCTION: 5

Non traditional machining Process – Introductions-Need–types- Brief overview of all techniques.

UNIT – II: AJM, WJM & USM 10

Abrasive Jet Machining – Water Jet Machining – Ultrasonic Machining. (AJM, WJM and USM). Working Principles – equipment used – Process parameters – MRR-Variation in techniques used – Applications.

UNIT – III: EDM 8

Electric Discharge Machining (EDM)- working Principles-equipments-Process Parameters-MRR- electrode / Tool – Power Circuits-Tool Wear – Dielectric – Flushing – Wire cut EDM – Applications.

UNIT – IV: ECM & ECG 12

Chemical Machining and Electro-Chemical machining (CHM and ECM)-Etchants-maskant-techniques of applying maskants-Process Parameters – MRR-Applications.

Principles of ECM-equipments-MRR-Electrical circuit-Process Parameters-ECG and ECH Applications.

UNIT – V: LBM, PAM & EBM 10

Laser Beam machining (LBM), plasma Arc machining (PAM) and Electron Beam Machining (EBM). Principles-Equipment-Types-Beam control techniques – Applications**.**

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

22154E74DP DISASTER MANAGEMENT

OBJECTIVES:

 To provide students an exposure to disasters, their significance and types.
 To ensure that students begin to understand the relationship between vulnerability, disasters, disaster prevention and risk reduction
 To gain a preliminary understanding of approaches of Disaster Risk Reduction (DRR)
 To enhance awareness of institutional processes in the country and
 To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity

UNIT I INTRODUCTION TO DISASTERS 9

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Disasters: Types of disasters – Earthquake, Landslide, Flood, Drought, Fire etc - Classification, Causes, Impacts including social, economic, political, environmental, health, psychosocial, etc.- Differential impacts- in terms of caste, class, gender, age, location, disability - Global trends in disasters: urban disasters, pandemics, complex emergencies, Climate change- Dos and Don'ts during various types of Disasters.

UNIT II APPROACHES TO DISASTER RISK REDUCTION (DRR) 9

Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stake-holders- Institutional Processess and Framework at State and Central Level- State Disaster Management Authority(SDMA) – Early Warning System – Advisories from Appropriate Agencies.

UNIT III INTER-RELATIONSHIP BETWEEN DISASTERS AND DEVELOPMENT 9

Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams, embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios in the context of India - Relevance of indigenous knowledge, appropriate technology and local resources.

UNIT IV DISASTER RISK MANAGEMENT IN INDIA 9

Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, Disaster Management Act and Policy - Other related policies, plans, programmes and legislation – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment.

UNIT V DISASTER MANAGEMENT: APPLICATIONS AND CASE STUDIES AND FIELD WORKS 9

Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.

TOTAL: 45 PERIODS

OUTCOMES:

SKILL DEVELOPMENT **EMPLOYABILITY** ENTREPRENUEURSHIP

The students will be able to

 Differentiate the types of disasters, causes and their impact on environment and society

 Assess vulnerability and various methods of risk reduction measures as well as mitigation.

 Draw the hazard and vulnerability profile of India, Scenarious in the Indian context, Disaster damage assessment and management.

21147S11 PROFESSIONAL ENGLISH – I L T P C 3 0 0 3

OBJECTIVES :

- To improve the communicative competence of learners
- To learn to use basic grammatic structures in suitable contexts
- To acquire lexical competence and use them appropriately in a sentence and understandtheir meaning in a text
- To help learners use language effectively in professional contexts
- To develop learners' ability to read and write complex texts, summaries, articles, blogs,definitions, essays and user manuals.

UNIT I INTRODUCTION TO EFFECTIVE COMMUNICATION 1

What is effective communication? (Explain using activities) Why is communication critical for excellence during study, research and work? What are the seven C's of effective communication? What are key language skills? What is effective listening? What does it involve? What is effective speaking? What does it mean to be an excellent reader? What should you be able to do? What is effective writing? How does one develop language and communication skills? What does the coursefocus on? How are communication and language skills going to be enhanced during this course? What do you as a learner need to do to enhance your English language and communication skillsto get the best out of this course?

INTRODUCTION TO FUNDAMENTALS OF COMMUNICATION 8

Reading - Reading brochures (technical context), telephone messages / social media messages relevant to technical contexts and emails. Writing - Writing emails / letters introducing oneself. Grammar - Present Tense (simple and progressive); Question types: Why/ Yes or No/ and Tags. Vocabulary - Synonyms; One word substitution; Abbreviations & Acronyms (as used in technical contexts).

UNIT II NARRATION AND SUMMATION 9

Reading - Reading biographies, travelogues, newspaper reports, Excerpts from literature, and travel& technical blogs. Writing - Guided writing-- Paragraph writing Short Report on an event (field trip etc.) Grammar –Past tense (simple); Subject-Verb Agreement; and Prepositions. Vocabulary - Wordforms (prefixes& suffixes); Synonyms and Antonyms. Phrasal verbs.

UNIT III DESCRIPTION OF A PROCESS / PRODUCT 9

Reading — Reading advertisements, gadget reviews; user manuals. Writing - Writing definitions; instructions; and Product /Process description. Grammar - Imperatives; Adjectives; Degrees of comparison; Present & Past Perfect Tenses. Vocabulary - Compound Nouns, Homonyms; and Homophones, discourse markers (connectives & sequence words).

UNIT IV CLASSIFICATION AND RECOMMENDATIONS 9

Reading – Newspaper articles; Journal reports –and Non Verbal Communication (tables, pie chartsetc,). Writing — Note-making / Note-taking (*Study skills to be taught, not tested); Writingrecommendations; Transferring information from non verbal (chart , graph etc, to verbal mode) Grammar – Articles; Pronouns - Possessive & Relative pronouns. Vocabulary - Collocations; Fixed / Semi fixed expressions.

UNIT V EXPRESSION 9

Reading – Reading editorials; and Opinion Blogs; Writing – Essay Writing (Descriptive or narrative). Grammar – Future Tenses, Punctuation; Negation (Statements & Questions); and Simple, Compound & Complex Sentences. Vocabulary - Cause & Effect Expressions – Content vs Functionwords.

TOTAL : 45 PERIODS

LEARNING OUTCOMES:

At the end of the course, learners will be able

- To use appropriate words in a professional context
- To gain understanding of basic grammatical structures and use them in right context.
- To read and infer the denotative and connotative meanings of technical texts
- To read and interpret information presented in tables, charts and other graphic forms
- To write definitions, descriptions, narrations and essays on various topics

TEXT BOOKS :

1. English for Engineers & Technologists Orient Blackswan Private Ltd. Department of English, Anna University, (2020 edition)
2. English for Science & Technology Cambridge University Press, 2021.
   Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. KN. Shoba, and Dr. Lourdes Joevani, Department of English, Anna University.

REFERENCE BOOKS:

1. Technical Communication – Principles And Practices By Meenakshi Raman & SangeetaSharma, Oxford Univ. Press, 2016, New Delhi.
2. A Course Book On Technical English By Lakshminarayanan, Scitech Publications (India) Pvt. Ltd.
3. English For Technical Communication (With CD) By Aysha Viswamohan, Mcgraw Hill Education, ISBN : 0070264244.
4. Effective Communication Skill, Kulbhusan Kumar, RS Salaria, Khanna Publishing House.
5. Learning to Communicate – Dr. V. Chellammal, Allied Publishing House, New Delhi,2003.

ASSESSMENT PATTERN

Two internal assessments and an end semester examination to test students' reading and writing skills along with their grammatical and lexical competence.

21147S15 PROBLEM SOLVING AND PYTHON PROGRAMMING L T P C
3 0 0 3

COURSE OBJECTIVES:

- To understand the basics of algorithmic problem solving.
- To learn to solve problems using Python conditionals and loops.
- To define Python functions and use function calls to solve problems.
- To use Python data structures - lists, tuples, dictionaries to represent complex data.
- To do input/output with files in Python.

UNIT I COMPUTATIONAL THINKING AND PROBLEM SOLVING 9

Fundamentals of Computing — Identification of Computational Problems -Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA TYPES, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode, debugging; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS, STRINGS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT IV LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: simple sorting, histogram, Students marks statement, Retail bill preparation.

UNIT V FILES, MODULES, PACKAGES 9

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file, Voter's age validation, Marks range validation (0-100).

TOTAL : 45 PERIODS

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1: Develop algorithmic solutions to simple computational problems.
CO2: Develop and execute simple Python programs.
CO3: Write simple Python programs using conditionals and looping for solving problems.
CO4: Decompose a Python program into functions.
CO5: Represent compound data using Python lists, tuples, dictionaries etc.
CO6: Read and write data from/to files in Python programs.

21150L16 PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY

L T P C
0 0 4 2

COURSE OBJECTIVES:

- To understand the problem solving approaches.
- To learn the basic programming constructs in Python.
- To practice various computing strategies for Python-based solutions to real world problems.
- To use Python data structures - lists, tuples, dictionaries.
- To do input/output with files in Python.

EXPERIMENTS:

Note: The examples suggested in each experiment are only indicative. The lab instructor is expected to design other problems on similar lines. The Examination shall not be restricted to the sample experiments listed here.

1. Identification and solving of simple real life or scientific or technical problems, and developing flow charts for the same. (Electricity Billing, Retail shop billing, Sin series, weight of a motorbike, Weight of a steel bar, compute Electrical Current in Three Phase AC Circuit, etc.)
2. Python programming using simple statements and expressions (exchange the values of two variables, circulate the values of n variables, distance between two points).
3. Scientific problems using Conditionals and Iterative loops. (Number series, Number Patterns, pyramid pattern)
4. Implementing real-time/technical applications using Lists, Tuples. (Items present in a library/Components of a car/ Materials required for construction of a building –operations of list &tuples)
5. Implementing real-time/technical applications using Sets, Dictionaries. (Language, components of an automobile, Elements of a civil structure, etc.- operations of Sets & Dictionaries)
6. Implementing programs using Functions. (Factorial, largest number in a list, area of shape)
7. Implementing programs using Strings. (reverse, palindrome, character count, replacing characters)
8. Implementing programs using written modules and Python Standard Libraries (pandas, numpy. Matplotlib, scipy)
9. Implementing real-time/technical applications using File handling. (copy from one file to another, word count, longest word)
10. Implementing real-time/technical applications using Exception handling. (divide by zero error, voter's age validity, student mark range validation)
11. Exploring Pygame tool.
12. Developing a game activity using Pygame like bouncing ball, car race etc.

TOTAL: 60 PERIODS

COURSE OUTCOMES:

On completion of the course, students will be able to:

CO1: Develop algorithmic solutions to simple computational problems

CO2: Develop and execute simple Python programs.

CO3: Implement programs in Python using conditionals and loops for solving problems.

CO4: Deploy functions to decompose a Python program.

CO5: Process compound data using Python data structures.

CO6: Utilize Python packages in developing software applications.

21147L18 COMMUNICATION LABORATORY I

L T P C
0 0 2 1

OBJECTIVES :

- To improve the communicative competence of learners
- To help learners use language effectively in academic /work contexts
- To develop various listening strategies to comprehend various types of audio materials like lectures, discussions, videos etc.
- To build on students' English language skills by engaging them in listening, speaking and grammar learning activities that are relevant to authentic contexts.
- To use language efficiently in expressing their opinions via various media.

UNIT I INTRODUCTION TO FUNDAMENTALS OF COMMUNICATION 6

Listening for general information-specific details- conversation: Introduction to classmates - Audio / video (formal & informal); Telephone conversation; Listening to voicemail & messages; Listening and filling a form. Speaking - making telephone calls-Self Introduction; Introducing a friend; - politeness strategies- making polite requests, making polite offers, replying to polite requests and offers- understanding basic instructions(filling out a bank application for example).

UNIT II NARRATION AND SUMMATION 6

Listening - Listening to podcasts, anecdotes / stories / event narration; documentaries and interviews with celebrities. Speaking - Narrating personal experiences / events-Talking about current and temporary situations & permanent and regular situations* - describing experiences and feelings- engaging in small talk- describing requirements and abilities.

UNIT III DESCRIPTION OF A PROCESS / PRODUCT 6

Listening - Listen to product and process descriptions; a classroom lecture; and advertisements about products. Speaking — Picture description- describing locations in workplaces- Giving instruction to use the product- explaining uses and purposes- Presenting a product- describing shapes and sizes and weights- talking about quantities(large & small)-talking about precautions.

UNIT IV CLASSIFICATION AND RECOMMENDATIONS 6

Listening – Listening to TED Talks; Listening to lectures - and educational videos. Speaking – Small Talk; discussing and making plans-talking about tasks-talking about progress- talking about positions and directions of movement-talking about travel preparations- talking about transportation-

UNIT V EXPRESSION 6

Listening – Listening to debates/ discussions; different viewpoints on an issue; and panel discussions. Speaking –making predictions- talking about a given topic-giving opinions- understanding a website-describing processes

TOTAL : 30 PERIODS

LEARNING OUTCOMES:

At the end of the course, learners will be able

- To listen to and comprehend general as well as complex academic information
- To listen to and understand different points of view in a discussion
- To speak fluently and accurately in formal and informal communicative contexts
- To describe products and processes and explain their uses and purposes clearly and accurately
- To express their opinions effectively in both formal and informal discussions

ASSESSMENT PATTERN

- One online / app based assessment to test listening /speaking
- End Semester **ONLY** listening and speaking will be conducted online.
- Proficiency certification is given on successful completion of listening and speaking internal test and end semester exam.

Note: The average value of this course to be used for program articulation matrix.

21147S21 PROFESSIONAL ENGLISH - II

L T P C
3 0 0 3

OBJECTIVES:

- To engage learners in meaningful language activities to improve their reading and writing skills
- To learn various reading strategies and apply in comprehending documents in professional context.
- To help learners understand the purpose, audience, contexts of different types of writing
- To develop analytical thinking skills for problem solving in communicative contexts
- To demonstrate an understanding of job applications and interviews for internship andplacements

UNIT I MAKING COMPARISONS 6

Reading - Reading advertisements, user manuals, brochures; Writing – Professional emails, Email etiquette - Compare and Contrast Essay; Grammar – Mixed Tenses, Prepositional phrases

UNIT II EXPRESSING CAUSAL RELATIONS IN SPEAKING AND WRITING 6

Reading - Reading longer technical texts– Cause and Effect Essays, and Letters / emails of complaint, Writing - Writing responses to complaints. Grammar - Active Passive Voice transformations, Infinitive and Gerunds

UNIT III PROBLEM SOLVING 6

Reading - Case Studies, excerpts from literary texts, news reports etc. Writing – Letter to the Editor, Checklists, Problem solution essay / Argumentative Essay. Grammar – Error correction; If conditional sentences

UNIT IV REPORTING OF EVENTS AND RESEARCH 6

Reading –Newspaper articles; Writing – Recommendations, Transcoding, Accident Report, Survey Report Grammar – Reported Speech, Modals Vocabulary – Conjunctions- use of prepositions

UNIT V THE ABILITY TO PUT IDEAS OR INFORMATION COGENTLY 6

Reading – Company profiles, Statement of Purpose, (SOP), an excerpt of interview with professionals; Writing – Job / Internship application – Cover letter & Resume; Grammar – Numerical adjectives, Relative Clauses.

TOTAL : 30 PERIODS

OUTCOMES:

At the end of the course, learners will be able

- To compare and contrast products and ideas in technical texts.
- To identify and report cause and effects in events, industrial processes through technical texts
- To analyse problems in order to arrive at feasible solutions and communicate them in the written format.
- To present their ideas and opinions in a planned and logical manner
- To draft effective resumes in the context of job search.

TEXT BOOKS :

1. English for Engineers & Technologists (2020 edition) Orient Blackswan Private Ltd. Department of English, Anna University.
2. English for Science & Technology Cambridge University Press 2021.
3. Authored by Dr. Veena Selvam, Dr. Sujatha Priyadarshini, Dr. Deepa Mary Francis, Dr. KN. Shoba, and Dr. Lourdes Joevani, Department of English, Anna University.

5. Developing Communication Skills by Krishna Mohan, Meera Bannerji- Macmillan India Ltd. 1990, Delhi.

ASSESSMENT PATTERN

Two internal assessments and an end semester examination to test students' reading and writing skills along with their grammatical and lexical competence.

21153S25A BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

L	T	P	C
3	**0**	**0**	**3**

COURSE OBJECTIVES:

- To introduce the basics of electric circuits and analysis
- To impart knowledge in the basics of working principles and application of electrical machines
- To introduce analog devices and their characteristics
- To educate on the fundamental concepts of digital electronics
- To introduce the functional elements and working of measuring instruments

UNIT I ELECTRICAL CIRCUITS 9

DC Circuits: Circuit Components: Conductor, Resistor, Inductor, Capacitor – Ohm's Law - Kirchhoff's Laws –Independent and Dependent Sources – Simple problems- Nodal Analysis, Mesh analysiswith Independent sources only (Steady state)

Introduction to AC Circuits and Parameters: Waveforms, Average value, RMS Value, Instantaneous power, real power, reactive power and apparent power, power factor – Steady state analysis of RLCcircuits (Simple problems only)

UNIT II ELECTRICAL MACHINES 9

Construction and Working principle- DC Separately and Self excited Generators, EMF equation, Types and Applications. Working Principle of DC motors, Torque Equation, Types and Applications. Construction, Working principle and Applications of Transformer, Three phase Alternator, Synchronous motor and Three Phase Induction Motor.

UNIT III ANALOG ELECTRONICS 9

Resistor, Inductor and Capacitor in Electronic Circuits- Semiconductor Materials: Silicon &Germanium – PN Junction Diodes, Zener Diode –Characteristics Applications – Bipolar Junction Transistor-Biasing, JFET, SCR, MOSFET, IGBT — Types, I-V Characteristics and Applications, Rectifier and Inverters

UNIT IV DIGITAL ELECTRONICS 9

Review of number systems, binary codes, error detection and correction codes, Combinational logic - representation of logic functions-SOP and POS forms, K-map representations - minimization using K maps (Simple Problems only)

UNIT V MEASUREMENTS AND INSTRUMENTATION 9

Functional elements of an instrument, Standards and calibration, Operating Principle, types -Moving Coil and Moving Iron meters, Measurement of three phase power, Energy Meter, Instrument Transformers-CT and PT, DSO- Block diagram- Data acquisition.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

After completing this course, the students will be able to

1. Compute the electric circuit parameters for simple problems
2. Explain the working principle and applications of electrical machines
3. Analyze the characteristics of analog electronic devices
4. Explain the basic concepts of digital electronics
5. Explain the operating principles of measuring instruments

TEXT BOOKS:

21154S24	ENGINEERING GRAPHICS	L T P C 2 0 4 4

COURSE OBJECTIVES:

The main learning objective of this course is to prepare the students for:

1. Drawing engineering curves.
2. Drawing freehand sketch of simple objects.
3. Drawing orthographic projection of solids and section of solids.
4. Drawing development of solids
5. Drawing isometric and perspective projections of simple solids.

CONCEPTS AND CONVENTIONS (Not for Examination)

Importance of graphics in engineering applications - Use of drafting instruments - BIS conventions and specifications — Size, layout and folding of drawing sheets — Lettering and dimensioning.

UNIT I PLANE CURVES 6+12

Basic Geometrical constructions, Curves used in engineering practices: Conics — Construction of ellipse, parabola and hyperbola by eccentricity method — Construction of cycloid — construction of involutes of square and circle — Drawing of tangents and normal to the above curves.

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACE 6+12

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces. Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS AND FREEHAND SKETCHING 6+12

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes and parallel to the other by rotating object method. Visualization concepts and Free Hand sketching: Visualization principles —Representation of Three Dimensional objects — Layout of views- Freehand sketching of multiple views from pictorial views of objects.

Practicing three dimensional modeling of simple objects by CAD Software (Not for examination)

UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF **SURFACES** **6 +12**

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other — obtaining true shape of section. Development oflateral surfaces of simple and sectioned solids — Prisms, pyramids cylinders and cones.

Practicing three dimensional modeling of simple objects by CAD Software (Not for examination)

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 6+12

Principles of isometric projection — isometric scale - Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method. Practicing three dimensional modeling of isometric projection of simple objects by CAD Software (Not for examination)

TOTAL: (L=30; P=60) 90 PERIODS

OUTCOMES:

On successful completion of this course, the student will be able to

- Use BIS conventions and specifications for engineering drawing.
- Construct the conic curves, involutes and cycloid.
- Solve practical problems involving projection of lines.
- Draw the orthographic, isometric and perspective projections of simple solids.
- Draw the development of simple solids.

5. IS 15021 (Parts 1 to 4) — 2001: Technical drawings — Projection Methods.

Special points applicable to University Examinations on Engineering Graphics:

1. There will be five questions, each of either or type covering all units of the syllabus.
2. All questions will carry equal marks of 20 each making a total of 100.
3. The answer paper shall consist of drawing sheets of A3 size only. The students will be permitted to use appropriate scale to fit solution within A3 size.
4. The examination will be conducted in appropriate sessions on the same day

21154L21 ENGINEERING PRACTICES LABORATORY

L	T	P	C
0	0	4	2

COURSE OBJECTIVES:

The main learning objective of this course is to provide hands on training to the students in:

1. Drawing pipe line plan; laying and connecting various pipe fittings used in common household plumbing work; Sawing; planing; making joints in wood materials used in commonhousehold wood work.
2. Wiring various electrical joints in common household electrical wire work.
3. Welding various joints in steel plates using arc welding work; Machining various simple processes like turning, drilling, tapping in parts; Assembling simple mechanical assembly of common household equipments; Making a tray out of metal sheet using sheet metal work.
4. Soldering and testing simple electronic circuits; Assembling and testing simple electronic components on PCB.

GROUP – A (CIVIL & ELECTRICAL)

PART I CIVIL ENGINEERING PRACTICES 15

PLUMBING WORK:

a) Connecting various basic pipe fittings like valves, taps, coupling, unions, reducers, elbows and other components which are commonly used in household.
b) Preparing plumbing line sketches.
c) Laying pipe connection to the suction side of a pump
d) Laying pipe connection to the delivery side of a pump.
e) Connecting pipes of different materials: Metal, plastic and flexible pipes used inhousehold appliances.

WOOD WORK:

a) Sawing,
b) Planing and
c) Making joints like T-Joint, Mortise joint and Tenon joint and Dovetail joint.

Wood Work Study:

a) Studying joints in door panels and wooden furniture
b) Studying common industrial trusses using models.

PART II ELECTRICAL ENGINEERING PRACTICES 15

a) Introduction to switches, fuses, indicators and lamps - Basic switch board wiring with lamp, fan and three pin socket
b) Staircase wiring
c) Fluorescent Lamp wiring with introduction to CFL and LED types.
d) Energy meter wiring and related calculations/ calibration
e) Study of Iron Box wiring and assembly
f) Study of Fan Regulator (Resistor type and Electronic type using Diac/Triac/quadrac)
g) Study of emergency lamp wiring/Water heater

GROUP – B (MECHANICAL AND ELECTRONICS)

PART III **MECHANICAL ENGINEERING PRACTICES** **15**

WELDING WORK:

a) Welding of Butt Joints, Lap Joints, and Tee Joints using arc welding.
b) Practicing gas welding.

BASIC MACHINING WORK:

a) (simple)Turning.
b) (simple)Drilling.
c) (simple)Tapping.

ASSEMBLY WORK:

a) Assembling a centrifugal pump.
b) Assembling a household mixer.
c) Assembling an airconditioner.

SHEET METAL WORK:

a) Making of a square tray

FOUNDRY WORK:

a) Demonstrating basic foundry operations.

PART IV ELECTRONIC ENGINEERING PRACTICES 15

SOLDERING WORK:

a) Soldering simple electronic circuits and checking continuity.

ELECTRONIC ASSEMBLY AND TESTING WORK:

a) Assembling and testing electronic components on a small PCB.

ELECTRONIC EQUIPMENT STUDY:

a) Study an elements of smart phone.
b) Assembly and dismantle of LED TV.
c) Assembly and dismantle of computer/ laptop

COURSE OUTCOMES: TOTAL = 60 PERIODS

Upon completion of this course, the students will be able to:

1. Draw pipe line plan; lay and connect various pipe fittings used in common household plumbing work; Saw; plan; make joints in wood materials used in common household wood work.
2. Wire various electrical joints in common household electrical wire work.
3. Weld various joints in steel plates using arc welding work; Machine various simple processeslike turning, drilling, tapping in parts; Assemble simple mechanical assembly of common household equipments; Make a tray out of metal sheet using sheet metal work.
4. Solder and test simple electronic circuits; Assemble and test simple electronic components on PCB.

21153L28C BASIC ELECTRICAL AND ELECTRONICS ENGINEERING LABORATORY

L T P C
0 0 4 2

COURSE OBJECTIVES:

- To train the students in conducting load tests on electrical machines
- To gain practical experience in characterizing electronic devices
- To train the students to use DSO for measurements.

LIST OF EXPERIMENTS

1. Verification of ohms and Kirchhoff's Laws.
2. Load test on DC Shunt Motor.
3. Load test on Self Excited DC Generator
4. Load test on Single phase Transformer
5. Load Test on Induction Motor
6. Characteristics of PN and Zener Diodes
7. Characteristics of BJT, SCR and MOSFET
8. Half wave and Full Wave rectifiers
9. Study of Logic Gates
10. Implementation of Binary Adder and Subtractor
11. Study of DSO

TOTAL: 60 PERIODS

COURSE OUTCOMES:

After completing this course, the students will be able to

1. Use experimental methods to verify the Ohm's and Kirchhoff's Laws.
2. Analyze experimentally the load characteristics of electrical machines
3. Analyze the characteristics of basic electronic devices
4. Use DSO to measure the various parameters

21147L23 COMMUNICATION LABORATORY II L T P C 0 0 4 2

OBJECTIVES

- To identify varied group discussion skills and apply them to take part in effective discussions in a professional context.
- To analyse concepts and problems and make effective presentations explaining them clearly and precisely.
- To be able to communicate effectively through formal and informal writing.
- To be able to use appropriate language structures to write emails, reports and essays
- To give instructions and recommendations that are clear and relevant to the context

UNIT I 12

Speaking-Role Play Exercises Based on Workplace Contexts, - talking about competition-discussing progress toward goals-talking about experiences- talking about events in life- discussing past events-Writing: writing emails (formal & semi-formal).

UNIT II 12

Speaking: discussing news stories-talking about frequency-talking about travel problems-discussing travel procedures- talking about travel problems- making arrangements-describing arrangements-discussing plans and decisions- discussing purposes and reasons- understanding common technology terms-Writing: - writing different types of emails.

UNIT III 12

Speaking: discussing predictions-describing the climate-discussing forecasts and scenarios- talking about purchasing-discussing advantages and disadvantages- making comparisons- discussing likes and dislikes- discussing feelings about experiences-discussing imaginary scenarios Writing: short essays and reports-formal/semi-formal letters.

UNIT IV 12

Speaking: discussing the natural environment-describing systems-describing position and movement- explaining rules-(example- discussing rental arrangements)- understanding technical instructions-Writing: writing instructions-writing a short article.

UNIT V 12

Speaking: describing things relatively-describing clothing-discussing safety issues (making recommendations) talking about electrical devices-describing controlling actions- Writing:
job application (Cover letter + Curriculum vitae)-writing recommendations.

TOTAL: 60 PERIODS

LEARNING OUTCOMES

At the end of the course, learners will be able

- Speak effectively in group discussions held in ~~a~~ formal/semi formal contexts.
- Discuss, analyse and present concepts and problems from various perspectives to arrive at suitable solutions
- Write emails, letters and effective job applications.
- Write critical reports to convey data and information with clarity and precision
- Give appropriate instructions and recommendations for safe execution of tasks

Assessment Pattern

- One online / app based assessment to test speaking and writing skills
- Proficiency certification is given on successful completion of speaking and writing.

21154C32 **ENGINEERING MECHANICS**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

1 To Learn the use scalar and vector analytical techniques for analysing forces in statically determinate structures
2 To introduce the equilibrium of rigid bodies, vector methods and free body diagram
3 To study and understand the distributed forces, surface, loading on beam and intensity.
4 To learn the principles of friction, forces and to determine the apply the concepts of frictional forces at the contact surfaces of various engineering systems.
5 To develop basic dynamics concepts – force, momentum, work and energy;

UNIT I STATICS OF PARTICLES 9

Fundamental Concepts and Principles, Systems of Units, Method of Problem Solutions, Statics of Particles -Forces in a Plane, Resultant of Forces, Resolution of a Force into Components, Rectangular Components of a Force, Unit Vectors. Equilibrium of a Particle- Newton's First Law of Motion, Space and Free-Body Diagrams, Forces in Space, Equilibrium of a Particle in Space.

UNIT II EQUILIBRIUM OF RIGID BODIES 9

Principle of Transmissibility, Equivalent Forces, Vector Product of Two Vectors, Moment of a Force about a Point, Varignon's Theorem, Rectangular Components of the Moment of a Force, Scalar Product of Two Vectors, Mixed Triple Product of Three Vectors, Moment of a Force about an Axis, Couple - Moment of a Couple, Equivalent Couples, Addition of Couples, Resolution of a Given Force into a Force -Couple system, Further Reduction of a System of Forces, Equilibrium in Two and Three Dimensions - Reactions at Supports and Connections.

UNIT III DISTRIBUTED FORCES 9

Centroids of lines and areas — symmetrical and unsymmetrical shapes, Determination of Centroids by Integration, Theorems of Pappus-Guldinus, Distributed Loads on Beams, Centre of Gravity of a Three- Dimensional Body, Centroid of a Volume, Composite Bodies, Determination of Centroids of Volumes by Integration. Moments of Inertia of Areas and Mass - Determination of the Moment of Inertia of an Area by Integration, Polar Moment of Inertia, Radius of Gyration of an Area, Parallel-Axis Theorem, Moments of Inertia of Composite Areas, Moments of Inertia of a Mass - Moments of Inertia of Thin Plates, Determination of the Moment of Inertia of a Three-Dimensional Body by Integration.

UNIT IV FRICTION 9

The Laws of Dry Friction, Coefficients of Friction, Angles of Friction, Wedge friction, Wheel Friction, Rolling Resistance, Ladder friction.

UNIT V DYNAMICS OF PARTICLES 9

Kinematics - Rectilinear Motion and Curvilinear Motion of Particles. Kinetics- Newton's Second Law of Motion -Equations of Motions, Dynamic Equilibrium, Energy and Momentum Methods - Work of a Force, Kinetic Energy of a Particle, Principle of Work and Energy, Principle of Impulse and Momentum, Impact of bodies.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course the students would be able to

- Illustrate the vector and scalar representation of forces and moments
- Analyse the rigid body in equilibrium
- Evaluate the properties of distributed forces
- Determine the friction and the effects by the laws of friction
- Calculate dynamic forces exerted in rigid body

21154C35 **ENGINEERING MATERIALS AND METALLURGY**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

1 To learn the constructing the phase diagram and using of iron-iron carbide phase diagram formicrostructure formation.
2 To learn selecting and applying various heat treatment processes and its microstructureformation.
3 To illustrate the different types of ferrous and non-ferrous alloys and their uses in engineeringfield.
4 To illustrate the different polymer, ceramics and composites and their uses in engineering field.
5 To learn the various testing procedures and failure mechanism in engineering field.

UNIT I CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS 9

Constitution of alloys — Solid solutions, substitutional and interstitial — phase diagrams, Isomorphous, eutectic, eutectoid, peritectic, and peritectoid reactions, Iron — Iron carbide equilibrium diagram. Classification of steel and cast-Iron microstructure, properties and application.

UNIT II HEAT TREATMENT 9

Definition – Full annealing, stress relief, recrystallisation and spheroidising –normalizing, hardening and tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on I.T. diagram – continuous cooling Transformation (CCT) diagram – Austempering, Martempering – Hardenability,Jominy end quench test -case hardening, carburizing, Nitriding, cyaniding, carbonitriding – Flame and Induction hardening – Vacuum and Plasma hardening – Thermo-mechanical treatments- elementaryideas on sintering.

UNIT III FERROUS AND NON-FERROUS METALS 9

Effect of alloying additions on steel (Mn, Si, Cr, Mo, Ni, V,Ti& W) – stainless and tool steels – HSLA - Maraging steels – Grey, white, malleable, spheroidal – alloy cast irons, Copper and its alloys – Brass, Bronze and Cupronickel – Aluminium and its alloys; Al-Cu – precipitation strengthening treatment – Titanium alloys, Mg-alloys, Ni-based super alloys – shape memory alloys- Properties and Applications- overview of materials standards

UNIT IV NON-METALLIC MATERIALS 9

Polymers – types of polymers, commodity and engineering polymers – Properties and applications of PE, PP, PS, PVC, PMMA, PET, PC, PA, ABS, PAI, PPO, PPS, PEEK, PTFE, Thermoset polymers –Urea and Phenol formaldehydes –Nylon, Engineering Ceramics – Properties and applications of Al2O3, SiC, Si3N4, PSZ and SIALON — intermetallics- Composites- Matrix and reinforcement Materials- applications of Composites - Nano composites.

UNIT V MECHANICAL PROPERTIES AND DEFORMATION MECHANISMS 9

Mechanisms of plastic deformation, slip and twinning – Types of fracture – fracture mechanics- Griffith's theory- Testing of materials under tension, compression and shear loads — Hardness tests (Brinell, Vickers and Rockwell), Micro and nano-hardness tests, Impact test Izod and charpy, fatigue and creep failure mechanisms.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course the students would be able to

1. Explain alloys and phase diagram, Iron-Iron carbon diagram and steel classification.
2. Explain isothermal transformation, continuous cooling diagrams and different heat treatment processes.
3. Clarify the effect of alloying elements on ferrous and non-ferrous metals.
4. Summarize the properties and applications of non-metallic materials.
5. Explain the testing of mechanical properties.

21154C36 **MANUFACTURING PROCESSES**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

1. To illustrate the working principles of various metal casting processes.
2. To learn and apply the working principles of various metal joining processes.
3. To analyse the working principles of bulk deformation of metals.
4. To learn the working principles of sheet metal forming process.
5. To study and practice the working principles of plastics molding.

UNIT – I METAL CASTING PROCESSES 9

Sand Casting – Sand Mould – Type of patterns - Pattern Materials – Pattern allowances – Molding sand Properties and testing – Cores –Types and applications – Molding machines – Types and applications– Melting furnaces – Principle of special casting processes- Shell, investment – Ceramic mould – Pressure die casting – low pressure, gravity- Tilt pouring, high pressure die casting- Centrifugal Casting – CO2 casting –- Defects in Sand casting process-remedies

UNIT II METAL JOINING PROCESSES 9

Fusion welding processes – Oxy fuel welding – Filler and Flux materials-–Arc welding, Electrodes, Coating and specifications – Gas Tungsten arc welding –Gas metal arc welding - Submerged arc welding – Electro slag welding– Plasma arc welding –– Resistance welding Processes -Electron beam welding – Laser beam Welding Friction welding – Friction stir welding – Diffusion welding – Thermit Welding, Weld defects – inspection &remedies – Brazing - soldering – Adhesive bonding.

UNIT III BULK DEFORMATION PROCESSES 9

Hot working and cold working of metals – Forging processes – Open, impression and closed die forging –cold forging- Characteristics of the processes – Typical forging operations – rolling of metals – Types of Rolling – Flat strip rolling – shape rolling operations – Defects in rolled parts – Principle of rod and wire drawing – Tube drawing – Principles of Extrusion – Types – Hot and Cold extrusion. Introduction to shapingoperations.

UNIT IV SHEET METAL PROCESSES 9

Sheet metal characteristics – Typical shearing, bending and drawing operations – Stretch forming operations – Formability of sheet metal – Test methods –special forming processes - Working principle and applications – Hydro forming – Rubber pad forming – Metal spinning – Introduction of Explosive forming, magnetic pulseforming, peen forming, Super plastic forming – Micro forming – Incremental forming.

UNIT V MANUFACTURE OF PLASTIC COMPONENTS 9

Types and characteristics of plastics – Molding of thermoplastics & Thermosetting polymers– working principles and typical applications – injection molding – Plunger and screw machines – Compression molding, Transfer Molding – Typical industrial applications – introduction to blow molding – Rotational molding – Film blowing – Extrusion – Thermoforming – Bonding of Thermoplastics- duff moulding.

TOTAL :45 PERIODS

OUTCOMES:

At the end of the course the students would be able to

1. Explain the principle of different metal casting processes.
2. Describe the various metal joining processes.
3. Illustrate the different bulk deformation processes.
4. Apply the various sheet metal forming process.
5. Apply suitable molding technique for manufacturing of plastics components.

21154L37 **COMPUTER AIDED MACHINE DRAWING**

L	T	P	C
0	0	4	2

COURSE OBJECTIVES:

1 To acquaint the skills and practical experience in handling 2D drafting and 3D modelling software systems, standard drawing practices using fits and tolerances.

2 To prepare assembly drawings both manually and using standard CAD packages.

3 To Preparing standard drawing layout for modeled parts, assemblies with BoM.

PART I DRAWING STANDARDS & FITS AND TOLERANCES 12

Code of practice for Engineering Drawing, BIS specifications — Welding symbols, riveted joints, keys, fasteners – Reference to hand book for the selection of standard components like bolts, nuts, screws, keys etc. - Limits, Fits — Tolerancing of individual dimensions IS919- Specification of Fits — Preparation of production drawings and reading of part and assembly drawings, basic principles of Geometric Dimensioning &Tolerancing.

PART II 2D DRAFTING 48

Drawing, Editing, Dimensioning, Layering, Hatching, Block, Array, Detailing, Detailed Drawing.

1. Bearings – Bush Bearing,
2. Valves – Safety and Non-return Valves.
3. Couplings – Flange, Oldham's, Muff, Gear couplings.
4. Joints – Universal, Knuckle, Gib& Cotter, Strap, Sleeve &Cotter joints.
5. Engine parts – Piston, Connecting Rod, Crosshead (vertical and horizontal), Stuffing box, multi-plate clutch.
6. Machine Components – Screw Jack, Machine Vice, LatheTail Stock, Lathe Chuck, Plummer Block, Vaneand Gear pumps.

Total: 20% of classes for theory classes and 80% of classes for practice

Note: 25% of assembly drawings must be done manually and remaining 75% of assembly drawings must be done by using any CAD software. The above tasks can be performed manually and using standard commercial 2D CAD software.

TOTAL:60 PERIODS

21154L38	**MANUFACTURING TECHNOLOGY LABORATORY**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

COURSE OBJECTIVES:

1 To Selecting appropriate tools, equipment's and machines to complete a given job.

2 To Performing various welding process using GMAW and fabricating gears using gear making machines.

3 To Performing various machining process such as rolling, drawing, turning, shaping, drilling, milling and analysing the defects in the cast and machined components.

LIST OF EXPERIMENTS

1. Fabricating simple structural shapes using Gas Metal Arc Welding machine.
2. Preparing green sand moulds with cast patterns.
3. Taper Turning and Eccentric Turning on circular parts using lathe machine.
4. Knurling, external and internal thread cutting on circular parts using lathe machine.
5. Shaping – Square and Hexagonal Heads on circular parts using shaper machine.
6. Drilling and Reaming using vertical drilling machine.
7. Milling contours on plates using vertical milling machine.
8. Cutting spur and helical gear using milling machine.
9. Generating gears using gear hobbing machine.
10. Generating gears using gear shaping machine.
11. Grinding components using cylindrical and centerless grinding machine.
12. Grinding components using surface grinding machine.
13. Cutting force calculation using dynamometer in milling machine
14. Cutting force calculation using dynamometer in lathe machine

TOTAL:60 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Demonstrate the safety precautions exercised in the mechanical workshop and join two metals using GMAW.
2. The students able to make the work piece as per given shape and size using machining processsuch as rolling, drawing, turning, shaping, drilling and milling.
3. The students become make the gears using gear making machines and analyze the defects in the cast and machined components

21154L39 PROFESSIONAL DEVELOPMENT

L T P C
0 0 2 1

OBJECTIVES:

To be proficient in important Microsoft Office tools: MS WORD, EXCEL, POWERPOINT.

- To be proficient in using MS WORD to create quality technical documents, by using standard templates, widely acceptable styles and formats, variety of features to enhance the presentability and overall utility value of content.
- To be proficient in using MS EXCEL for all data manipulation tasks including the common statistical, logical, mathematical etc., operations, conversion, analytics, search and explore, visualize, interlink, and utilizing many more critical features offered
- To be able to create and share quality presentations by using the features of MS PowerPoint, including: organization of content, presentability, aesthetics, using media elements and enhance the overall quality of presentations.

MS WORD: 10 Hours

Create and format a document
Working with tables
Working with Bullets and Lists
Working with styles, shapes, smart art, charts
Inserting objects, charts and importing objects from other office tools
Creating and Using document templates
Inserting equations, symbols and special characters
Working with Table of contents and References, citations
Insert and review comments
Create bookmarks, hyperlinks, endnotes footnote
Viewing document in different modes
Working with document protection and security
Inspect document for accessibility

MS EXCEL: 10 Hours

Create worksheets, insert and format data
Work with different types of data: text, currency, date, numeric etc.
Split, validate, consolidate, Convert data
Sort and filter data
Perform calculations and use functions: (Statistical, Logical, Mathematical, date, Time etc.,)
Work with Lookup and reference formulae
Create and Work with different types of charts
Use pivot tables to summarize and analyse data
Perform data analysis using own formulae and functions
Combine data from multiple worksheets using own formulae and built-in functions to generate results
Export data and sheets to other file formats
Working with macros
Protecting data and Securing the workbook

MS POWERPOINT: 10
Hours

Select slide templates, layout and themes
Formatting slide content and using bullets and numbering
Insert and format images, smart art, tables, charts
Using Slide master, notes and handout master
Working with animation and transitions
Organize and Group slides
Import or create and use media objects: audio, video, animation
Perform slideshow recording and Record narration and create presentable videos

TOTAL: 30 PERIODS

21154C43	HYDRAULICS AND PNEUMATICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To provide the knowledge on the working principles of fluid power systems.
2. To study the fluids and components used in modern industrial fluid power system.
3. To develop the design, construction and operation of fluid power circuits.
4. To learn the working principles of pneumatic power system and its components.
5. To provide the knowledge of trouble shooting methods in fluid power systems.

UNIT I FLUID POWER PRINICIPLES AND HYDRAULIC PUMPS 9

Introduction to Fluid power – Advantages and Applications – Fluid power systems – Types of fluids - Properties of fluids and selection – Basics of Hydraulics – Pascal's Law – Principles of flow - Friction loss – Work, Power and Torque- Problems, Sources of Hydraulic power: Pumping Theory–– Pump Classification – Construction, Working, Design, Advantages, Disadvantages, Performance, Selection criteria of pumps – Fixed and Variable displacement pumps – Problems

UNIT – II HYDRAULIC ACTUATORS AND CONTROL COMPONENTS 9

Hydraulic Actuators: Cylinders — Types and construction, Application, Hydraulic cushioning — RotaryActuators-Hydraulic motors - Control Components: Direction Control, Flow control and pressure control valves – Types, Construction and Operation – Accessories: Reservoirs, Pressure Switches – Filters – types andselection- Applications – Fluid Power ANSI Symbols – Problems

UNIT – III HYDRAULIC CIRCUITS AND SYSTEMS 9

Accumulators, Intensifiers, Industrial hydraulic circuits – Regenerative, Pump Unloading, Double-Pump, Pressure Intensifier, Air-over oil, Sequence, Reciprocation, Synchronization, Fail-Safe, Speed Control, Deceleration circuits, Sizing of hydraulic systems, Hydrostatic transmission, Electro hydraulic circuits, – Servoand Proportional valves – Applications- Mechanical, hydraulic servo systems.

UNIT – IV PNEUMATIC AND ELECTRO PNEUMATIC SYSTEMS 9

Properties of air –Air preparation and distribution – Filters, Regulator, Lubricator, Muffler, Air control Valves, Quick Exhaust Valves, Pneumatic actuators, Design of Pneumatic circuit –classification- single cylinder and multi cylinder circuits-Cascade method –Integration of fringe circuits, Electro Pneumatic System – Elements – Ladder diagram – timer circuits-Problems, Introduction to fluidics and pneumatic logic circuits

UNIT – V TROUBLE SHOOTING AND APPLICATIONS 9

Installation, Selection, Maintenance, Trouble Shooting and Remedies in Hydraulic and Pneumatic systems, Conditioning of hydraulic fluids Design of hydraulic circuits for Drilling, Planning, Shaping, Surface grinding, Press and Forklift applications- mobile hydraulics; Design of Pneumatic circuits for metal working, handling, clamping counter and timer circuits. – Low-cost Automation – Hydraulic and Pneumatic power packs, IOT in Hydraulics and pneumatics

Note: (Use of standard Design Data Book is permitted in the University examination)

TOTAL: 45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Apply the working principles of fluid power systems and hydraulic pumps.
2. Apply the working principles of hydraulic actuators and control components.
3. Design and develop hydraulic circuits and systems.
4. Apply the working principles of pneumatic circuits and power system and its components.
5. Identify various troubles shooting methods in fluid power systems.

21154C44 **MANUFACTURING TECHNOLOGY**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

1 To study the concepts and basic mechanics of metal cutting and the factors affecting machinability
2 To learn working of basic and advanced turning machines.
3 To teach the basics of machine tools with reciprocating and rotating motions and abrasive finishing processes.
4 To study the basic concepts of CNC of machine tools and constructional features of CNC.
5 To learn the basics of CNC programming concepts to develop the part programme for Machine centre and turning centre

UNIT – I MECHANICS OF METAL CUTTING 9

Mechanics of chip formation, forces in machining, Types of chip, cutting tools — single point cutting tool nomenclature, orthogonal and oblique metal cutting, thermal aspects, cutting tool materials, tool wear, tool life, surface finish, cutting fluids and Machinability.

UNIT – II TURNING MACHINES 9

Centre lathe, constructional features, specification, operations — taper turning methods, thread cutting methods, special attachments, surface roughness in turning, machining time and power estimation. Special lathes - Capstan and turret lathes- tool layout – automatic lathes: semi-automatic – single spindle: Swiss type, automatic screw type – multi spindle

UNIT – III RECIPROCATING MACHINE TOOLS 9

Reciprocating machine tools: shaper, planer, slotter: Types and operations- Hole making: Drilling, reaming, boring, tapping, type of milling operations-attachments- types of milling cutters– machining time calculation - Gear cutting, gear hobbing and gear shaping – gear finishing methods Abrasive processes: grinding wheel – specifications and selection, types of grinding process – cylindrical grinding, surface grinding, centreless grinding, internal grinding - micro finishing methods

UNIT – IV CNC MACHINES 9

Computer Numerical Control (CNC) machine tools, constructional details, special features — Drives, Recirculating ball screws, tool changers; CNC Control systems – Open/closed, point-to-point/continuous - Turning and machining centres – Work holding methods in Turning and machining centres, Coolant systems,Safety features.

UNIT – V PROGRAMMING OF CNC MACHINE TOOLS 9

Coordinates, axis and motion, Absolute vs Incremental, Interpolators, Polar coordinates, Program planning, G and M codes, Manual part programming for CNC machining centers and Turning centers — Fixed cycles, Loops and subroutines, Setting up a CNC machine for machining.

TOTAL 45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Apply the mechanism of metal removal process and to identify the factors involved in improving machinability.
2. Describe the constructional and operational features of centre lathe and other special purpose lathes.
3. Describe the constructional and operational features of reciprocating machine tools.
4. Apply the constructional features and working principles of CNC machine tools.
5. Demonstrate the Program CNC machine tools through planning, writing codes and setting up CNC machine tools to manufacture a given component.

21154C45 STRENGTH OF MATERIALS

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To understand the concepts of stress, strain, principal stresses and principal planes.
- To study the concept of shearing force and bending moment due to external loads in determinatebeams and their effect on stresses.
- To determine stresses and deformation in circular shafts and helical spring due to torsion.
- To compute slopes and deflections in determinate beams by various methods.
- To study the stresses and deformations induced in thin and thick shells.

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 9

Rigid bodies and deformable solids – Tension, Compression and Shear Stresses - Deformation of simpleand compound bars – Thermal stresses – Elastic constants - Volumertric strains – Stresses on inclined planes – Principal stresses and principal planes – Mohr's circle of stress.

UNIT II TRANSVERSE LOADING ON BEAMS AND STRESSES IN BEAM 9

Beams – Types - Transverse loading on beams – Shear force and Bending moment in beams – Cantilever, Simply supported and over hanging beams. Theory of simple bending – Bending stressdistribution – Load carrying capacity – Proportioning of sections – Flitched beams – Shear stress distribution.

UNIT III TORSION 9

Theory of Torsion – Stresses and Deformations in Solid and Hollow Circular Shafts – Combined bendingmoment and torsion of shafts - Power transmitted to shaft – Shaft in series and parallel – Closed andOpen Coiled helical springs – springs in series and parallel.

UNIT IV DEFLECTION OF BEAMS 9

Elastic curve – Governing differential equation - Double integration method - Macaulay's method - Area moment method - Conjugate beam method for computation of slope and deflection of determinant beams.

UNIT V THIN CYLINDERS, SPHERES AND THICK CYLINDERS 9

Stresses in thin cylindrical shell due to internal pressure - circumferential and longitudinal stresses - Deformation in thin cylinders – Spherical shells subjected to internal pressure – Deformation in sphericalshells — Thick cylinders - Lame's theory.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course the students would be able to

1. Understand the concepts of stress and strain in simple and compound bars, the importan of principal stresses and principal planes.
2. Understand the load transferring mechanism in beams and stress distribution due shearing force and bending moment.
3. Apply basic equation of torsion in designing of shafts and helical springs
4. Calculate slope and deflection in beams using different methods.
5. Analyze thin and thick shells for applied pressures.

21149S46 ENVIRONMENTAL SCIENCES AND SUSTAINABILITY L T P C

3 0 0 3

COURSE OBJECTIVES:

- To introduce the basic concepts of environment, ecosystems and biodiversity and emphasize on the biodiversity of India and its conservation.
- To impart knowledge on the causes, effects and control or prevention measures of environmental pollution and natural disasters.
- To facilitate the understanding of global and Indian scenario of renewable and nonrenewable resources, causes of their degradation and measures to preserve them.
- To familiarize the concept of sustainable development goals and appreciate the interdependence of economic and social aspects of sustainability, recognize and analyze climate changes, concept of carbon credit and the challenges of environmental management.
- To inculcate and embrace sustainability practices and develop a broader understanding on green materials, energy cycles and analyze the role of sustainable urbanization.

UNIT I ENVIRONMENT AND BIODIVERSITY 6

Definition, scope and importance of environment — need for public awareness. Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species and ecosystem diversity– values of biodiversity, India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ.

UNIT II ENVIRONMENTAL POLLUTION 6

Causes, Effects and Preventive measures of Water, Soil, Air and Noise Pollutions. Solid, Hazardous and E-Waste management. Case studies on Occupational Health and Safety Management system (OHASMS). Environmental protection, Environmental protection acts.

UNIT III RENEWABLE SOURCES OF ENERGY 6

Energy management and conservation, New Energy Sources: Need of new sources. Different types new energy sources. Applications of- Hydrogen energy, Ocean energy resources, Tidal energy conversion. Concept, origin and power plants of geothermal energy.

UNIT IV SUSTAINABILITY AND MANAGEMENT 6

Development, GDP, Sustainability- concept, needs and challenges-economic, social and aspects of sustainability-from unsustainability to sustainability-millennium development goals, and protocols-Sustainable Development Goals-targets, indicators and intervention areas Climate change- Global, Regional and local environmental issues and possible solutions-case studies. Concept of Carbon Credit, Carbon Footprint. Environmental management in industry-A case study.

UNIT V SUSTAINABILITY PRACTICES 6

Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycle assessment, Environmental Impact Assessment. Sustainable habitat: Green buildings, Green materials, Energy efficiency, Sustainable transports. Sustainable energy: Non-conventional Sources, Energy Cycles-carbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socio-economical and technological change.

TOTAL : 30 PERIODS

OUTCOMES:

- To recognize and understand the functions of environment, ecosystems and biodiversity and their conservation.
- To identify the causes, effects of environmental pollution and natural disasters and contribute to the preventive measures in the society.
- To identify and apply the understanding of renewable and non-renewable resources and contribute to the sustainable measures to preserve them for future generations.
- To recognize the different goals of sustainable development and apply them for suitable technological advancement and societal development.
- To demonstrate the knowledge of sustainability practices and identify green materials, energy cycles and the role of sustainable urbanization.

21154L47 STRENGTH OF MATERIALS AND FLUID MACHINERY LABORATORY

L T P C
0 0 4 2

COURSE OBJECTIVE:

1. To study the mechanical properties of metals, wood and spring by testing in laboratory.
2. To verify the principles studied in fluid mechanics and machinery theory by performing experiments in laboratory.

UNIT – I STRENGTH OF MATERIALS 30

LIST OF EXPERIMENTS

1. Tension test on mild steel rod
2. Torsion test on mild steel rod
3. Hardness test on metal (Rockwell and Brinell Hardness)
4. Compression test on helical spring
5. Deflection test on carriage spring

UNIT – II FLUID MECHANICS AND MACHINES LABORATORY 30

LIST OF EXPERIMENTS

1. (a) Determination of coefficient of discharge of a venturimeter
   (b) Determination of friction factor for flow through pipes
2. (a) Determination of metacentric height
   (b) Determination of forces due to impact of jet on a fixed plate
3. Characteristics of centrifugal pumps
4. Characteristics of reciprocating pump
5. Characteristics of Pelton wheel turbine

TOTAL: 60 PERIODS

OUTCOMES: On completion of the course, the student is expected to be able to

1. Determine the tensile, torsion and hardness properties of metals by testing
2. Determine the stiffness properties of helical and carriage spring
3. Apply the conservation laws to determine the coefficient of discharge of a venturimeter and finding the friction factor of given pipe
4. Apply the fluid static and momentum principles to determine the metacentric height and forces due to impact of jet
5. Determine the performance characteristics of turbine, rotodynamic pump and positive displacement pump.

21154C51	DESIGN OF MACHINE ELEMENTS	L	T	P	C
		3	1	0	4

COURSE OBJECTIVES

1. To learn the various steps involved in the Design Process.
2. To Learn designing shafts and couplings for various applications.
3. To Learn the design of temporary and permanent Joints.
4. To Learn designing helical, leaf springs, flywheels, connecting rods and crank shafts for variousapplications.
5. To Learn designing and select sliding and rolling contact bearings, seals and gaskets.

(Use of PSG Design Data book is permitted)

UNIT – I FUNDAMENTAL CONCEPTS IN DESIGN 12

Introduction to the design process - factors influencing machine design, selection of materials based on mechanical properties - Preferred numbers- Direct, Bending and torsional loading- Modes of failure - Factor of safety – Combined loads – Principal stresses – Eccentric loading – curved beams – crane hook and 'C' frame- theories of failure – Design based on strength and stiffness – stress concentration – Fluctuating stresses – Endurance limit –Design for finite and infinite life under variable loading - Exposure to standards.

UNIT – II DESIGN OF SHAFTS AND COUPLINGS 12

Shafts and Axles - Design of solid and hollow shafts based on strength, rigidity and critical speed – Keys andsplines — Rigid and flexible couplings.

UNIT – III DESIGN OF TEMPORARY AND PERMANENT JOINTS 12

Threaded fasteners - Bolted joints including eccentric loading, Knuckle joints, Cotter joints – Welded joints- Butt, Fillet and parallel transverse fillet welds – welded joints subjected to bending, torsional and eccentricloads, riveted joints for structures - theory of bonded joints.

UNIT – IV DESIGN OF ENERGY STORING ELEMENTS AND ENGINE COMPONENTS 12

Types of springs, design of helical and concentric springs–surge in springs, Design of laminated springs - rubber springs - Flywheels considering stresses in rims and arms for engines and punching machines-- Solid and Rimmed flywheels- connecting rods and crank shafts

UNIT – V DESIGN OF BEARINGS AND MISCELLANEOUS ELEMENTS 12

Sliding contact and rolling contact bearings - Hydrodynamic journal bearings, Sommerfeld Number, Raimondi & Boyd graphs, -- Selection of Rolling Contact bearings –Design of Seals and Gaskets.

TOTAL: 60 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Explain the design machine members subjected to static and variable loads.
2. Apply the concepts design to shafts, key and couplings.
3. Apply the concepts of design to bolted, Knuckle, Cotter, riveted and welded joints.
4. Apply the concept of design helical, leaf springs, flywheels, connecting rods and crank shafts.
5. Apply the concepts of design and select sliding and rolling contact bearings, seals and gaskets.

21154C52	METROLOGY AND MEASUREMENTS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

1 To learn basic concepts of the metrology and importance of measurements.
2 To teach measurement of linear and angular dimensions assembly and transmission elements.
3 To study the tolerance analysis in manufacturing.
4 To develop the fundamentals of GD & T and surface metrology.
5 To provide the knowledge of the advanced measurements for quality control in manufacturing industries.

UNIT – I BASICS OF METROLOGY 9

Measurement – Need, Process, Role in quality control; Factors affecting measurement - SWIPE; Errors in Measurements – Types – Control – Measurement uncertainty – Types, Estimation, Problems on Estimation of Uncertainty, Statistical analysis of measurement data, Measurement system analysis, Calibration of measuring instruments, Principle of air gauging- ISO standards.

UNIT – II MEASUREMENT OF LINEAR, ANGULAR DIMENSIONS, ASSEMBLY AND TRANSMISSION ELEMENTS 9

Linear Measuring Instruments – Vernier caliper, Micrometer, Vernier height gauge, Depth Micrometer, Bore gauge, Telescoping gauge; Gauge blocks – Use and precautions, Comparators – Working and advantages; Opto-mechanical measurements using measuring microscope and Profile projector - Angularmeasuring instruments – Bevel protractor, Clinometer, Angle gauges, Precision level, Sine bar, Autocollimator, Angle dekkor, Alignment telescope. Measurement of Screw threads - Single element measurements — Pitch Diameter, Lead, Pitch. Measurement of Gears — purpose — Analytical measurement – Runout, Pitch variation, Tooth profile, Tooth thickness, Lead – Functional checking – Rolling gear test.

UNIT – III TOLERANCE ANALYSIS 9

Tolerancing– Interchangeability, Selective assembly, Tolerance representation, Terminology, Limits and Fits, Problems (using tables IS919); Design of Limit gauges, Problems. Tolerance analysis in manufacturing, Process capability, tolerance stackup, tolerance charting.

UNIT – IV METROLOGY OF SURFACES 9

Fundamentals of GD & T- Conventional vs Geometric tolerance, Datums, Inspection of geometric deviations like straightness, flatness, roundness deviations; Simple problems – Measurement of Surface finish — Functionality of surfaces, Parameters, Comparative, Stylus based and Optical Measurement techniques, Filters, Introduction to 3D surface metrology- Parameters.

UNIT – V ADVANCES IN METROLOGY 9

Lasers in metrology - Advantages of lasers – Laser scan micrometers; Laser interferometers – Applications – Straightness, Alignment; Ball bar tests, Computer Aided Metrology - Basic concept of CMM – Types of CMM – Constructional features – Probes – Accessories – Software – Applications – Multi-sensor CMMs.
Machine Vision - Basic concepts of Machine Vision System – Elements – Applications - On-line and in-process monitoring in production - Computed tomography – White light Scanners.

TOTAL: 45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Discuss the concepts of measurements to apply in various metrological instruments.
2. Apply the principle and applications of linear and angular measuring instruments, assembly and transmission elements.
3. Apply the tolerance symbols and tolerance analysis for industrial applications.
4. Apply the principles and methods of form and surface metrology.
5. Apply the advances in measurements for quality control in manufacturing Industries.

21154L58 METROLOGY AND DYNAMICS LABORATORY

L	T	P	C
0	0	4	2

COURSE OBJECTIVES

1. To study the different measurement equipment and use of this industry for quality inspection.
2. To supplements the principles learnt in dynamics of machinery.
3. To understand how certain measuring devices are used for dynamic testing.

UNIT – I METROLOGY **30**

LIST OF EXPERIMENTS

1. Calibration and use of linear measuring instruments — Vernier caliper, micrometer, Vernierheight gauge, depth micrometer, bore gauge, telescopic gauge, Comparators.
2. Measurement of angles using bevel protractor, sine bar, autocollimator, precision level.
3. Measurement of assembly and transmission elements - screw thread parameters — Screwthread Micrometers, Three wire method, Toolmaker's microscope.
4. Measurement of gear parameters – Micrometers, Vernier caliper, Gear tester.
5. Measurement of features in a prismatic component using Coordinate Measuring Machine (CMM), Programming of CNC Coordinate Measuring Machines for repeated measurements of identical components.
6. Non-contact (Optical) measurement using Measuring microscope / Profile projector and Video measurement system.
7. Surface metrology - Measurement of form parameters – Straightness, Flatness, Roundness, Cylindricity, Perpendicularity, Runout, Concentricity — in the given component using Roundness tester.
8. Measurement of Surface finish in components manufactured using various processes (turning, milling, grinding, etc.,) using stylus based instruments.

UNIT – II DYNAMICS LABORATORY 30

List of Experiments:

1. Study of gear parameters.
2. Epicycle gear Train.
3. Determination of moment of inertia of flywheel and axle system.
4. Determination of mass moment of inertia of a body about its axis of symmetry.
5. Undamped free vibrations of a single degree freedom spring-mass system.
6. Torsional Vibration (Undamped) of single rotor shaft system.
7. Dynamic analysis of cam mechanism.
8. Experiment on Watts Governor.
9. Experiment on Porter Governor.
10. Experiment on Proell Governor.
11. Experiment on motorized gyroscope.
12. Determination of critical speed of shafts.

TOTAL:60 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. The students able to measure the gear tooth dimensions, angle using sine bar, straightness.
2. Determine mass moment of inertia of mechanical element, governor effort and range of sensitivity.
3. Determine the natural frequency and damping coefficient, critical speeds of shafts,

21154L68	CAD/CAM LABORATORY	L	T	P	C
		3	1	0	4
		0	0	4	2

COURSE OBJECTIVES

1 To gain practical experience in handling 2D drafting and 3Dmodelling software systems
2 Designing 3 Dimensional geometric model of parts, sub-assemblies, assemblies and exporting it to drawing
3 Programming G & M Code programming and simulate the CNC program and Generating part programming data through CAM software

3D GEOMETRIC MODELLING 30

1. CAD Introduction
   Sketch:
   Solid modeling: Extrude, Revolve, Sweep, Variational sweep and Loft.
   Surface modeling: Extrude, Sweep, Trim, Mesh of curves and Free form.
   Feature manipulation: Copy, Edit, Pattern, Suppress, History operations.
   Assembly: Constraints, Exploded Views, Interference check
   Drafting: Layouts, Standard & Sectional Views, Detailing & Plotting
2. Creation of 3D assembly model of following machine elements using 3D Modelling software
   1. Flange Coupling
   2. Plummer Block
   3. Screw Jack
   4. Lathe Tailstock
   5. Universal Joint
   6. Machine Vice
   7. Stuffing box
   8. Crosshead
   9. Safety Valves
   10. Non-return valves
   11. Connecting rod
   12. Piston
   13. Crankshaft

* Students may also be trained in manual drawing of some of the above components (specify the number – progressive arrangement of 3D)

30

MANUAL PART PROGRAMMING

1. CNC Machining Centre
   i) Linear Cutting.
   ii) Circular cutting.
   iii) Cutter Radius Compensation.
   iv) Canned Cycle Operations.

2. CNC Turning Centre
   i) Straight, Taper and Radial Turning.
   ii) Thread Cutting.
   iii) Rough and Finish Turning Cycle.
   iv) Drilling and Tapping Cycle.

3. COMPUTER AIDED PART PROGRAMMING
   i) Generate CL Data and Post process data using CAM packages for Machining and Turning Centre.
   ii) Application of CAPP in Machining and Turning

TOTAL:60 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Design experience in handling 2D drafting and 3D modelling software systems
2. Design 3 Dimensional geometric model of parts, sub-assemblies, assemblies and export it to drawing
3. Demonstrate manual part programming and simulate the CNC program and Generate part programming using G and M code through CAM software.

21154C75	MECHATRONICS AND IoT	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

1 To make students get acquainted with the sensors and the actuators, which are commonly used in mechatronics systems.
2 To provide insight into the signal conditioning circuits, and also to develop competency in PLC programming and control
3 To make students familiarize with the fundamentals of IoT and Embedded systems.
4 To impart knowledge about the Arduino and the Raspberry Pi.
5 To inculcate skills in the design and development of mechatronics and IoT based systems.

UNIT – I SENSORS AND ACTUATORS 9

Introduction to Mechatronics - Modular Approach, Sensors and Transducers: Static and Dynamic Characteristics, Transducers - Resistive, Capacitive, Inductive and Resonant, Optical Sensors — Photodetectors - Vision Systems – Laser - Fibre optic - Non-fibre Optic, Solid State Sensors, Piezoelectric and Ultrasonic Sensors. Actuators – Brushless Permanent Magnet DC Motor – PM, VR and Hybrid Stepper motors — DC and AC Servo Motors

UNIT – II SIGNAL CONDITIONING CIRCUITS AND PLC 9

Operational Amplifiers — Inverting and Non-Inverting Amplifier — Wheatstone bridge Amplifier — Instrumentation Amplifier – PID Controller, Protection Circuits, Filtering Circuits, Multiplexer, Data Logger and Data Acquisition System –, Switching Loads by Power Semiconductor Devices Circuits – Thyristors – TRIAC – Darlington Pair –MOSFET and Relays.
PLC – Architecture – Input / Output Processing – Logic Ladder Programming – Functional Block Programming using Timers and Counters — Applications.

UNIT – III FUNDAMENTALS OF IoT AND EMBEDDED SYSTEMS 9

The Internet of Things (IoT) - Introduction to the IoT Framework — IoT Enabling Technologies- The Effective Implementation of IoT: The Detailed Procedure. Embedded Systems: An Introduction - Single-Chip Microcontroller Systems - Single-Board Microcontroller Systems - Single-Board Computer Systems - Embedded Systems: Peripherals - Software Considerations

UNIT – IV CONTROLLERS 9

Foundation topics: Programming Languages: C++ and Python - The Linux Operating System. Arduino: The Arduino Boards - Arduino Peripherals- Arduino IDE — ESP8266 Wi-Fi module. Raspberry Pi: The Raspberry Pi Boards - The Raspberry Pi Peripherals - The Raspberry Pi Operating System. (typical peripherals) Interfacing and Controlling I/O devices by Arduino and Raspberry Pi: LEDs - Push buttons - Light intensity sensor - Ultrasonic distance sensor — Temperature sensor- Humidity sensor - Sensor and Actuator interactions

UNIT – V MECHATRONICS AND IoT CASE STUDIES 9

Mechatronics systems: Drone actuation and Control -Autonomous Robot with Vision System, Automotive Mechatronics: Electronic Ignition System - ABS - EBD - Adaptive Cruise Control. IoT case studies: Remote Monitoring Systems- Remotely Operated Autonomous Systems - Centralized Water Management System - IoT Enabled Robotic Camera Dolly - Portable, Wireless, Interactive IoT Sensors for Agriculture - IoT Vehicle Management System with Network Selection.

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Explain Select suitable sensors and actuators to develop mechatronics systems.
2. Discuss Devise proper signal conditioning circuit for mechatronics systems, and also able to implement PLC as a controller for an automated system.
3. Elucidate the fundamentals ofIot and Embedded Systems
4. Discuss Control I/O devices through Arduino and Raspberry Pi.
5. Design and develop an apt mechatronics/IoT based system for the given real-time application.

21154C76	COMPUTER INTEGRATED MANUFACTURING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

1 To provide the overview of evolution of automation, CIM and its principles.
2 To learn the various Automation tools, include various material handling system.
3 To train students to apply group technology and FMS.
4 To familiarize the computer aided process planning in manufacturing.
5 To introduce to basics of data transaction, information integration and control of CIM.

UNIT – I INTRODUCTION 9

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts and mathematical models – Simple problems in production models – CIM hardware and software – Major elements of CIM system – Three step process for implementation of CIM – Computers in CIM – Computer networks for manufacturing – The future automated factory – Management of CIM – safety aspectsof CIM– advances in CIM

UNIT – II AUTOMATED MANUFACTURING SYSTEMS 9

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design– The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features.Automated Guided Vehicle system – Types &applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance – smart manufacturing – Industry 4.0 - Digital manufacturing – Virtual manufacturing

UNIT – III GROUP TECHNOLOGY AND FMS 9

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method — Benefits of GT — Case studies. FMS — Components — workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS — FMS applications, Benefits.

UNIT – IV PROCESS PLANNING 9

Process planning – Activities in process planning, Informations required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study. Typical process sheet – case studies in Manual process planning. Computer Aided Process Planning – Process planning module and data base – Variant process planning – Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning- Comparison of CAPP and Manual PP.

UNIT – V PROCESS CONTROL AND DATA ANALYSIS 9

Introduction to process model formulation – linear feedback control systems – Optimal control – Adaptivecontrol –Sequence control and PLC& SCADA. Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer controlOverview of Automatic identification methods — Bar code technology –Automatic data capture technologies.- Quality management (SPC) and automated inspection

TOTAL :45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Discuss the basics of computer aided engineering.
2. Choose appropriate automotive tools and material handling systems.
3. Discuss the overview of group technology, FMS and automation identification methods.
4. Design using computer aided process planning for manufacturing of various components

5. Acquire knowledge in computer process control techniques.

21147S71 **HUMAN VALUES ETHICS** **LT P C**
3 0 0 3

OBJECTIVES:

- To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNIT I HUMAN VALUES 10

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION 9

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV **SAFETY, RESPONSIBILITIES AND RIGHTS** 9

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT V GLOBAL ISSUES 8

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility.

TOTAL: 45 PERIODS

OUTCOMES:

- Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

TEXT BOOKS:

21154C77	INDUSTRIAL MANAGEMENT	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

1 To study the basic concepts of management; approaches to management; Contributors tomanagement studies; various forms of business organization and trade unions function in professional organizations.
2 To study the planning; organizing and staffing functions of management in professional organization.
3 To study the leading; controlling and decision making functions of management in professional organization.
4 To learn the organizational theory in professional organization.
5 To learn the principles of productivity and modern concepts in management in professional organization.

UNIT – I INTRODUCTION TO MANAGEMENT 9

Management: Introduction; Definition and Functions – Approaches to the study of Management – Mintzberg's Ten Managerial Roles – Principles of Taylor; Fayol; Weber; Parker – Forms of Organization: Sole Proprietorship; Partnership; Company (Private and Public); Cooperative – Public Sector Vs Private Sector Organization – Business Environment: Economic; Social; Political; Legal – Trade Union: Definition; Functions; Merits & Demerits.

UNIT – II FUNCTIONS OF MANAGEMENT - I 9

Planning: Characteristics; Nature; Importance; Steps; Limitation; Planning Premises; Strategic Planning; Vision & Mission statement in Planning– Organizing: Organizing Theory; Principles; Types; Departmentalization; Centralization and Decentralization; Authority & Responsibility — Staffing: Systems Approach; Recruiting and SelectionProcess; Human Resource Development (HRD) Concept and Design.

UNIT – III FUNCTIONS OF MANAGEMENT - II 9

Directing (Leading): Leadership Traits; Style; Morale; Managerial Grids (Blake-Mounton, Reddin) – Communication: Purpose; Model; Barriers — Controlling: Process; Types; Levels; Guidelines; Audit (External, Internal, Merits); Preventive Control – Decision Making: Elements; Characteristics; Nature; Process; Classifications.

UNIT – IV ORGANIZATION THEORY 9

Organizational Conflict: Positive Aspects; Individual; Role; Interpersonal; Intra Group; Inter Group; Conflict Management — Maslow's hierarchy of needs theory; Herzberg's motivation-hygiene theory; McClelland's three needs motivation theory; Vroom's valence-expectancy theory — Change Management: Concept of Change; Lewin's Process of Change Model; Sources of Resistance; Overcoming Resistance; Guidelines to managing Conflict.

UNIT – V PRODUCTIVITY AND MODERN TOPICS 9

Productivity: Concept; Measurements; Affecting Factors; Methods to Improve — Modern Topics (concept, feature/characteristics, procedure, merits and demerits): Business Process Reengineering (BPR); Benchmarking; SWOT/SWOC Analysis; Total Productive Maintenance; Enterprise Resource Planning (ERP); Management of Information Systems (MIS), Industry 4.0.

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Discuss basic concepts of management; approaches to management; contributors to management studies; various forms of business organization and trade unions function in professional organizations.
2. Discuss the planning; organizing and staffing functions of management in professional organization.
3. Apply the leading; controlling and decision making functions of management in professional organization.
4. Discuss the organizational theory in professional organization.
5. Apply principles of productivity and modern concepts in management in professional organization.

Low (1) ; Medium (2) ; High (3)															

21154L79	MECHATRONICS AND IoT LABORATORY	L	T	P	C
		0	0	4	2

Course Objectives

1. To study the concept of mechatronics to design, modelling and analysis of basic electrical hydraulic systems.
2. To provide the hands on-training in the control of linear and rotary actuators.
3. To study the concepts and fundamentals of IoT, sensors, actuators and IoT boards

MECHATRONICS

LIST OF EXPERIMENTS:

1. Measurement of Linear/Angular of Position, Direction and Speed using Transducers.
2. Measurement of Pressure, Temperature and Force using Transducers.
3. Speed and Direction control of DC Servomotor, AC Servomotor and Induction motors.
4. Addition, Subtraction and Multiplication Programming in 8051.
5. Programming and Interfacing of Stepper motor and DC motor using 8051/PLC.
6. Programming and Interfacing of Traffic Light Interface using 8051.
7. Sequencing of Hydraulic and Pneumatic circuits.
8. Sequencing of Hydraulic, Pneumatic and Electro-pneumatic circuits using Software.
9. Electro-pneumatic/hydraulic control using PLC.
10. Vision based image acquisition and processing technique for inspection and classification.

INTERNET OF THINGS

1. Familiarization with concept of IoT and its open source microcontroller/SBC.
2. Write a program to turn ON/OFF motor using microcontroller/SBC through internet.
3. Write a program to interface sensors to display the data on the screen through internet.
4. Interface the sensors with microcontroller/SBC and write a program to turn ON/OFF Solenoid valve through internet when sensor data is detected.
5. To interface sensor with microcontroller/SBC and write a program to turn ON/OFF Linear/Rotary Actuator through IoT when sensor data is detected.
6. To interface Bluetooth/Wifi with microcontroller/SBC and write a program to send sensor data to smart phone using Bluetooth/wifi.

TOTAL : 60 PERIODS

21154E53A	CAD/CAM	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

1 To Introduce and understand the Basic of Design.
2 To study the two dimensional drafting and bill of material creation.
3 To learn three dimensional modelling and its advantages.
4 To study the basic and purpose of assembling modeling.
5 To study the basics of computer aided machining and part programming.

UNIT – I BASICS OF DESIGNS **9**

Understanding of Projections, Scales, units, GD & T; its 14 symbols, Special characteristics & Title Block readings. Revision / ECN status of drawings – Customer Specific requirements – Drawing Gridreading

UNIT – II 2D DRAFTING **9**

Projection views – Orthographic view, Axillary view, Full & Half Section views, Broken Section view, Offset Section view – Title Block creation – BOM Creation – Notes creation – Ballooning of 2D drawing and its features for Inspection reporting

UNIT – III 3D MODELING **9**

Conversion of Views – 2D to 3D & 3D to 2D – Parametric and Non-Parametric Modeling – Tree features of 3D Modeling and its advantages – Surface Modeling – BIW (Body In White) – Solid Modeling, Boolean operations like Unites, Subtraction, Intersect, etc.

UNIT – IV ASSEMBLY MODELING **9**

Basics of Assembly modeling, Purpose of Assembly modeling & amp; its advantages – Top to Down & BottomUp modeling approaches – Analysis of Clearances – Undercuts – Interferences – Stack up analysis –Cumulative effect of Tolerances in after assembly conditions.- motion analysis

UNIT – V CAM 9

Basics of CNC Machining — 3, 4 & 5 Axis machines - CNC and Part Programing, CAM programing 2D & 3D. Elements of CAM Orientation, Boundary Creation, Cutter Path Selection, Cutter Compensation –Machining Stocks, Roughing, Re-roughing, Semi Finishing & Finishing - Tool Path Generation, Isl and Milling Programing. Machining program simulation, integration of program with machine; Estimation of CNC Cycle time. — Post Process NC Code conversion and Setup Sheet Preparation.

TOTAL : 45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Discuss the basics of the design and concepts.
2. Develop the two dimensional drafting and projection views.
3. Discuss the three dimensional modeling, parametric and Non-parametric modeling
4. Discuss the assembly modeling and top down, bottom up approaches.
5. Develop the computer aided machining and wirting part programming.

21154E53B VALUE EGNINEERING

L T P C
3 0 0 3

COURSE OBJECTIVES

1. To study the value engineering process and able to identify its functions within the process.
2. To determine the appropriate value engineering methodology for a given project and proposeappropriate training to centralized and decentralized modes.
3. To learn various decision-making processes and cost evaluation models and apply them inappropriately in the product development life-cycle.
4. To explore in-depth understanding of various value engineering applications in humanresources, manufacturing and marketing.
5. To demonstrate to implement value engineering solutions and propose to perfect them.

UNIT – I VALUE ENGINEERING BASICS 9

Origin of value engineering - Meaning of value engineering - Definition of value engineering and Value analysis- Value Management - Value Analysis Versus Value Engineering - Value Analysis versus Traditional cost reduction techniques - Types of Value function — Basic and Secondary functions - conceptof cost and worth - creativity In Value Engineering - uses, applications, advantages and limitations of Valueanalysis.

UNIT – II VALUE ENGINEERING JOB PLAN AND PROCESS 9

Seven phases of job plan - FAST Diagramming as Value Engineering Tool - Behavioral and organizational aspects of Value Engineering - Ten principles of Value analysis - Benefits of Value Engineering.

UNIT – III VALUE ENGINEERING TECHNIQUES 9

Creativity - Brain storming - Gordon technique - Morphological Analysis - ABC Analysis- Probabilistic approach - Make or Buy decisions — Function cost worth analysis (FCWA) - Function Analysis System technique (FAST) - Break Even Analysis - Life cycle cost(LCC)

UNIT – IV WORKSHEETS AND GUIDELINES 9

Preparation of worksheets - general and information phase - Function Classification, relationship and summary - Meaningful costs - Cost analysis - idea listing and comparison - Feasibility ranking - Investigator phase, study summary - guidelines for writing value engineering proposal - Financial aspects - List cycle cost analysis - Oral presentation - Audit - Case studies and Discussion.

UNIT – V VERSATILITY OF VALUE ENGINEERING 9

Value engineering operation in maintenance and repair activities - value engineering in non hardware projects - Initiating a value engineering programme Introduction - training plan - career development for value engineering specialties.

Total :45 Periods

OUTCOMES: At the end of the course the students would be able to

1. Estimate a product cost based on value engineering principles in terms of its values, functions and worthiness.
2. Discuss the product and articulate it in various phases of value engineering
3. Discuss and select appropriate methods, standards and apply them on value engineering project and propose appropriate training
4. Apply querying theory and FAST to prefect a value engineering project implementation.
5. Develop various case studies related to value engineering project implementation.

21154E53C **PRODUCT LIFE CYCLE MANAGEMENT**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1. To study about the history, concepts and terminology in PLM
2. To learn the functions and features of PLM/PDM
3. To develop different modules offered in commercial PLM/PDM tools
4. To demonstrate PLM/PDM approaches for industrial applications
5. To use PLM/PDM with legacy data bases, Coax& ERP systems

UNIT – I HISTORY, CONCEPTS AND TERMINOLOGY OF PLM 9

Introduction to PLM, Need for PLM, opportunities of PLM, Different views of PLM - Engineering Data Management (EDM), Product Data Management (PDM), Collaborative Product Definition Management (cPDm), Collaborative Product Commerce (CPC), Product Lifecycle Management (PLM). PLM/PDM Infrastructure — Network and Communications, Data Management, Heterogeneous data sources and applications

UNIT – II PLM/PDM FUNCTIONS AND FEATURES 9

User Functions – Data Vault and Document Management, Workflow and Process Management, Product Structure Management, Product Classification and Programme Management. Utility Functions —Communication and Notification, data transport, data translation, image services, system administration and application integration

UNIT – III DETAILS OF MODULES IN A PDM/PLM SOFTWARE 9

Case studies based on top few commercial PLM/PDM tools — Teamcenter, Windchill, ENOVIA, Aras PLM, SAP PLM, Arena, Oracle Agile PLM and Autodesk Vault.-Architecture of PLM software- selection criterion of software for particular application - Brand name to be removed

UNIT – IV ROLE OF PLM IN INDUSTRIES 9

Case studies on PLM selection and implementation (like auto, aero, electronic) - other possible sectors, PLM visioning, PLM strategy, PLM feasibility study, change management for PLM, financial justification of PLM, barriers to PLM implementation, ten step approach to PLM, benefits of PLM for–business, organisation, users, product or service, process performance- process compliance and process automation

UNIT – V BASICS ON CUSTOMISATION/INTEGRATION OF PDM/PLM SOFTWARE 9

PLM Customization, use of EAI technology (Middleware), Integration with legacy data base, CAD, SLM and ERP

TOTAL: 45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Summarize the history, concepts and terminology of PLM
2. Develop the functions and features of PLM/PDM
3. Discuss different modules offered in commercial PLM/PDM tools.
4. Interpret the implement PLM/PDM approaches for industrial applications.
5. Integrate PLM/PDM with legacy data bases, CAx& ERP systems

21154E54A	ROBOTICS	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To learn about basics of robots and their classifications
2. To understand the robot kinematics in various planar mechanisms
3. To learn about the concepts in robot dynamics
4. To understand the concepts in trajectory planning and programming
5. To know about the various applications of robots

UNIT – I BASICS OF ROBOTICS 8

Introduction- Basic components of robot-Laws of robotics- classification of robot- robot architecture, work space-accuracy-resolution –repeatability of robot.

UNIT – II ROBOT KINMEATICS 11

Robot kinematics: Introduction- Matrix representation- rigid motion & homogeneous transformation- D-H, forward & inverse kinematics of 2DOF and 3 DOF planar and spatial mechanisms

UNIT – III ROBOT DYNAMICS 9

Introduction - Manipulator dynamics – Lagrange - Euler formulation- Newton - Euler formulation

UNIT – IV TRAJECTORY, PATH PLANNING AND PROGRAMMING 8

Trajectory Planning- Joint space and Cartesian space technique, Introduction to robot control, Robot programming and Languages- Introduction to ROS

UNIT – V ROBOT AND ROBOT APPLICATIONS 9

Sensors and Actuators for Robots, Power transmission systems, Rotary to rotary motion, Rotary to linear motion, Harmonics drives — gear system - belt drives. Robot end effectors & Grippers: Introduction- types & classification- Mechanical gripper- gripper force analysis- other types & special purpose grippers. Robot Applications: pick and place, manufacturing, automotive, medical, space and underwater.

TOTAL: 45 PERIODS

COURSE OUTCOMES

Upon completion of this course, the students can able to
CO1: State the basic concepts and terminologies of robots
CO2:Know the Procedures for Forward and Inverse Kinematics, Dynamics for Various Robots
CO3: Derive the Forward and Inverse Kinematics, Dynamics for Various Robots
CO4:Apply the various programming techniques in industrial applications
CO5: Analyze the use of various types of robots in different applications

21154E54B	SMART MOBILITY AND INTELLIGENT VEHICLES	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

The objectives of the course are:

1. To introduce students to the various technologies and systems used to implement smart mobility and intelligent vehicles.
2. To learn Basics of Radar Technology and Systems, Ultrasonic Sonar Systems, LIDAR Sensor Technology and Systems and other sensors for automobile vision system.
3. To learn Basic Control System Theory applied to Autonomous Automobiles.
4. To produce overall impact of automating like various driving functions, connecting the automobile to sources of information that assist with a task
5. To allow the automobile to make autonomous intelligent decisions concerning future actions of the vehicle that potentially impact the safety of the occupants through connected car & autonomous vehicle technology.

UNIT – I INTRODUCTION TO AUTOMATED, CONNECTED, AND INTELLIGENTVEHICLES 9

Concept of Automotive Electronics, Electronics Overview, History & Evolution, Infotainment, Body, Chassis, and Powertrain Electronics, Introduction to Automated, Connected, and Intelligent Vehicles. Case studies: Automated, Connected, and Intelligent Vehicles

UNIT – II SENSOR TECHNOLOGY FOR SMART MOBILITY 9

Basics of Radar Technology and Systems, Ultrasonic Sonar Systems, Lidar Sensor Technology and Systems, Camera Technology, Night Vision Technology, Other Sensors, Use of Sensor Data Fusion, Integration of Sensor Data to On-Board Control Systems

UNIT – III CONNECTED AUTONOMOUS VEHICLE 9

Basic Control System Theory applied to Automobiles, Overview of the Operation of ECUs, Basic Cyber-Physical System Theory and Autonomous Vehicles, Role of Surroundings Sensing Systems and Autonomy, Role of Wireless Data Networks and Autonomy

UNIT – IV VEHICLE WIRELESS TECHNOLOGY & NETWORKING 9

Wireless System Block Diagram and Overview of Components, Transmission Systems — Modulation/Encoding, Receiver System Concepts– Demodulation/Decoding, Wireless Networking and Applications to Vehicle Autonomy, Basics of Computer Networking — the Internet of Things, Wireless Networking Fundamentals, Integration of Wireless Networking and On-Board Vehicle Networks

UNIT – V CONNECTED CAR & AUTONOMOUS VEHICLE TECHNOLOGY 9

Connectivity Fundamentals, Navigation and Other Applications, Vehicle-to-Vehicle Technology and Applications, Vehicle-to-Roadside and Vehicle-to-Infrastructure Applications, Autonomous Vehicles - Driverless Car Technology, Moral, Legal, Roadblock Issues, Technical Issues, Security Issues

TOTAL: 45 PERIODS

COURSE OUTCOMES

Upon successful completion of the course, students should be able to:

CO1: Recognize the concept of cyber-physical control systems and their application to collision avoidance and autonomous vehicles

CO2: Select the concept of remote sensing and the types of sensor technology needed to implement remote sensing

CO3: Familiar with the concept of fully autonomous vehicles

CO4: Apply the basic concepts of wireless communications and wireless data networks

CO 5: Analyze the concept of the connected vehicle and its role in automated vehicles

1. “Intelligent Transportation Systems and Connected and Automated Vehicles”, 2016, Transportation Research Board
2. Radovan Miucic, “Connected Vehicles: Intelligent Transportation Systems”, 2019, Springer

REFERENCE:

1. Tom Denton, “Automobile Electrical and Electronic systems, Roultedge”, Taylor & Francis Group,5th Edition,2018.

21154E54C **ELECTRICAL DRIVES AND ACTUATORS**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

1. To familiarize a relay and power semiconductor devices
2. To get a knowledge on drive characteristics
3. To obtain the knowledge on DC motors and drives.
4. To obtain the knowledge on AC motors and drives.
5. To obtain the knowledge on Stepper and Servo motor.

UNIT – I RELAY AND POWER SEMI-CONDUCTOR DEVICES 9

Study of Switching Devices – Relay and Types, Switching characteristics -BJT, SCR, TRIAC, GTO, MOSFET, IGBT and IGCT-: SCR, MOSFET and IGBT - Triggering and commutation circuit - Introduction to Driver and snubber circuits

UNIT – II DRIVE CHARACTERISTICS 9

Electric drive – Equations governing motor load dynamics – steady state stability – multi quadrant Dynamics: acceleration, deceleration, torque, and Direction starting & stopping – Selection ofmotor.

UNIT – III DC MOTORS AND DRIVES 9

DC Servomotor - Types of PMDC & BLDC motors - principle of operation- emf and torque equations - characteristics and control – Drives- H bridge - Single and Three Phases – 4 quadrantoperation — Applications

UNIT – IV AC MOTORS AND DRIVES 9

Introduction – Induction motor drives – Speed control of 3-phase induction motor – Stator voltage control – Stator frequency control – Stator voltage and frequency control – Stator current control– Static rotor resistance control – Slip power recovery control.

UNIT – V STEPPER AND SERVO MOTOR 9

Stepper Motor: Classifications- Construction and Principle of Operation – Modes of Excitation-Drive System-Logic Sequencer - Applications. Servo Mechanism – DC Servo motor-AC Servo motor — Applications.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of the course, the student able to:

CO 1: Recognize the principles and working of relays, drives and motors.
CO 2: Explain the working and characteristics of various drives and motors.
CO 3: Apply the solid state switching circuits to operate various types of Motors and Drivers
CO 4: Interpret the performance of Motors and Drives.
CO 5: Suggest the Motors and Drivers for given applications.

21154E55A **AUTOMOBILE ENGINEERING**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1 To study the construction and working principle of various parts of an automobile.
2 To study the practice for assembling and dismantling of engine parts and transmission system
3 To study various transmission systems of automobile.
4 To study about steering, brakes and suspension systems
5 To study alternative energy sources

UNIT – I VEHICLE STRUCTURE AND ENGINES 9

Types of automobiles vehicle construction and different layouts, chassis, frame and body, Vehicle aerodynamics (various resistances and moments involved), IC engines — components-functions and materials, variable valve timing (VVT).

UNIT – II ENGINE AUXILIARY SYSTEMS 9

Electronically controlled gasoline injection system for SI engines, Electronically controlled diesel injection system (Unit injector system, Rotary distributor type and common rail direct injection system), Electronic ignition system (Transistorized coil ignition system, capacitive discharge ignition system), Turbo chargers (WGT, VGT), Engine emission control by three way catalytic converter system, Emission norms (Euro and BS).

UNIT – III TRANSMISSION SYSTEMS 9

Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Overdrive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints, Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.

UNIT – IV STEERING, BRAKES AND SUSPENSION SYSTEMS 9

Steering geometry and types of steering gear box-Power Steering, Types of Front Axle, Types of Suspension Systems, Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS),electronicbrake force distribution (EBD) and Traction Control.

UNIT – V ALTERNATIVE ENERGY SOURCES 9

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Recognize the various parts of the automobile and their functions and materials.
2. Discuss the engine auxiliary systems and engine emission control.
3. Distinguish the working of different types of transmission systems.
4. Explain the Steering, Brakes and Suspension Systems.
5. Predict possible alternate sources of energy for IC Engines.

		3	0	0	3

COURSE OBJECTIVES

1	To study the various design requirements and get acquainted with the processes involvedin product development.
2	To study the design processes to develop a successful product.
3	To learn scientific approaches to provide design solutions.
4	Designing solution through relate the human needs and provide a solution.
5	To study the principles of material selection, costing and manufacturing in design.

UNIT – I DESIGN TERMINOLOGY 9

Definition-various methods and forms of design-importance of product design-static and dynamic products-various design projects-morphology of design-requirements of a good design-concurrent engineering-computer aided engineering-codes and standards-product and process cycles-bench marking.

UNIT – II INTRODUCTION TO DESIGN PROCESSES 9

Basic modules in design process-scientific method and design method-Need identification, importance of problem definition-structured problem, real life problem- information gathering -customer requirements-Quality Function Deployment (QFD)- product design specifications-generation of alternative solutions-Analysis and selection-Detail design and drawings-Prototype, modeling, simulation, testing and evaluation

UNIT – III CREATIVITY IN DESIGN 9

Creativity and problem solving-vertical and lateral thinking-invention-psychological view, mental blocks-Creativity methods-brainstorming, synectics, force fitting methods, mind map, concept map-Theory of innovative problem solving (TRIZ) - conceptual decomposition creating design concepts.

UNIT – IV HUMAN AND SOCIETAL ASPECTS IN PRODUCT DEVELOPMENT 9

Human factors in design, ergonomics, user friendly design-Aesthetics and visual aspects environmental aspects-marketing aspects-team aspects-legal aspects-presentation aspects

UNIT – V MATERIAL AND PROCESSES IN DESIGN 9

Material selection for performance characteristics of materials-selection for new design substitution for existing design-economics of materials-selection methods-recycling and material selection-types of manufacturing process, process systems- Design for Manufacturability (DFM) - Design for Assembly (DFA).

Total:45 periods

OUTCOMES: At the end of the course the students would be able to

1. Analyze the various design requirements and get acquainted with the processes involved in product development.
2. Apply the design processes to develop a successful product.
3. Apply scientific approaches to provide design solutions.
4. Design solution through relate the human needs and provide a solution.
5. Apply the principles of material selection, costing and manufacturing in design.

21154E63C **TURBO MACHINES**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1. To study the energy transfer in rotor and stator parts of the turbo machines.
2. To study the function of various elements of centrifugal fans and blowers.
3. To evaluating the working and performance of centrifugal compressor
4. To analyzing flow behavior and flow losses in axial flow compressor.
5. To study the types and working of axial and radial flow turbines.

UNIT – I WORKING PRINCIPLES 9

Classification of Turbomachines. Energy transfer between fluid and rotor - Euler equation and its interpretation. Velocity triangles. Efficiencies in Compressor and Turbine stages. Degree of reaction. Dimensionless parameters for Turbomachines.

UNIT – II CENTRIFUGAL FANS AND BLOWERS 9

Types – components – working. Flow analysis in impeller blades-volute and diffusers. Velocity triangles - h-s diagram. Stage parameters in fans and blowers. Performance characteristic curves – various losses. Fan – bearings, drives and noise.

UNIT – III CENTRIFUGAL COMPRESSOR 9

Components - blade types. Velocity triangles - h-s diagram, stage work. Slip factor and Degree of Reaction. Performance characteristics and various losses. Geometry and performance calculation.

UNIT – IV AXIAL FLOW COMPRESSOR 9

Construction details. Work done factor. Velocity triangles - h-s diagram, stage work. Work done factor. Performance characteristics, efficiency and stage losses – Stalling and Surging. Free and Forced vortexflow.

UNIT – V AXIAL AND RADIAL FLOW TURBINES 9

Axial flow turbines - Types – Elements - Stage velocity diagrams - h-s diagram, stage work - impulse and reaction stages. Compounding of turbines. Performance coefficients and losses. Radial flow turbines: Types -Elements - Stage velocity diagrams - h-s diagram, stage work Performance coefficients and losses.

TOTAL : 45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Explain the energy transfer in rotor and stator parts of the turbo machines.
2. Explain the function of various elements of centrifugal fans and blowers
3. Evaluate the working and performance of centrifugal compressor.
4. Analyze flow behavior and flow losses in axial flow compressor.
5. Explain the types and working of axial and radial flow turbines

21154E64A MATERIAL HANDLING AND SOLID PROCESSING **EQUIPMENT**

L	T	P	C
3	**0**	**0**	**3**

COURSE OBJECTIVES

1. To provide knowledge on materials handling equipment.
2. To provide knowledge on Industrial Vehicles
3. To provide knowledge on conveyor equipment.
4. To provide knowledge on Auxiliary Equipment and Hoisting Equipment.
5. To provide knowledge on Bulk Handling Equipment and Systems

UNIT – I INTRODUCTION TO MATERIALS HANDLING 9

Basic principles &objectives in material handling and its benefits - Classification of material handling equipment - selection of material handling equipments - guidelines for effective utilisation of material handling equipments -unit load concept

UNIT – II INDUSTRIAL VEHICLES 9

Introduction and types - Hand trucks - Two wheel Hand Trucks - Multiple wheel Hand Trucks - Hand Lift Trucks - Power Trucks - Fixed Platform Truck - Platform Lift Truck - Pallet Lift Truck - Walkie Truck - Straddle Carrier - Fork Lift Trucks - Specifications of FLT - FLT Attachments - Tractors - Industrial Tractor-Trailer-Self-propelled trucks and fork trucks - Automated guided vehicles Theory

UNIT – III CONVEYORS 9

Classification of conveyors- Definition - Description - General Characteristics - types and uses of belt Conveyors - Roller conveyors - Haulage Conveyors - Screw Conveyors - Bucket Conveyors - Chain Conveyors - Cable Conveyors - Pneumatic and Hydraulic conveyors - Computer controlled conveyor system.

UNIT – IV AUXILIARY EQUIPMENTAND HOISTING EQUIPMENT 9

Hoppers - Gates- Feeders- Chutes-positioners- Ball Table- Weighing and Control Equipment- Pallet loaders and unloaders -applications and advancements. - Hoisting Equipment - parts of hoisting equipment - Description and uses of hoists - Description and uses of ropes - description and purpose of crane hooks - Elevators - Cranes - Derricks - and its types

UNIT – V BULK HANDLING EQUIPMENT AND SYSTEMS 9

Storage of bulk solids - bulk handling equipment - Robotic handling - Materials handling at the workplace - Robots and their classification - Major components of a robot - classification of Robotic manipulators - Robotic handling applications

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Discuss the basic concepts of material handling equipment.
2. Explain the basic working principles of various industrial Vehicles.
3. Develop the basic working principles of various conveyors.
4. Elabrate the basic working principles of various Auxiliary Equipment and Hoisting Equipment.
5. Explain the basic working principles of various Bulk Handling Equipment and Systems.

21154E64B	THERMAL AND FIRED EQUIPMENT DESIGN	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

1. To introduce the concepts of thermal and fired equipment.
2. To study the basis, design and construction of boilers.
3. To study of typical fuel firing systems in the boiler.
4. To study of materials requirements for pressure parts.
5. To study of various boiler auxiliaries system.

UNIT – I INTRODUCTION 9

Principal equipment in Thermal Power Plant, Historical developments of Boiler, Utility, Industrial boilers, Morden trends in boiler design , Basic knowledge of different types of Thermal Fired Equipment ,sub critical and super critical boilers - Coal , Oil ,Gas , Pulverised fuel cyclone, FBC, CFBC , MSW , and Stoker firing, Boiler efficiency , auxiliary power consumption , Performance data , Performance Correction Curves

UNIT – II BASIS OF BOILERS AND DESIGN 9

Codes- Design and Construction, IBR, ISO, ASME, BS, Heat balance diagram, Boiler parameters, Fuel analysis and variations, Site conditions, Furnace heat loadings, FOT, Plan area loading, Volumetric loading Balanced Draft and Pressurised Furnace, Natural / Controlled Circulation, Constant and Sliding Pressure, Boiler heat transfer surfaces, Flue gas velocities, boiler auxiliaries, Boiler schemes, Boiler Layouts

UNIT – III FIRING SYSTEM- FUEL AND MILLING 9

Coal / Oil / Natural Gas in any combination, Lignite, Blast Furnace Gas / Coke Oven Gas / Corex Gas Carbon Monoxide / Tail gas, Asphalt, Black Liquor, Bagasse, Rice Husk, Washery Rejects, Wheat / Rice straw MSW, wind box, Burner, Type of Stokers, Pulverisers - Bowl mill, Tube mill, Direct firing, Indirect firing, Wall firing (Turbulent / Vortex Burners), Tangential firing (Jet Burners), Fire Ball.

UNIT – IV PRESSURE PARTS AND DESIGN AND MATERIALS 9

Economiser, Drums , Water Walls , Headers , Links , Super Hater , Super Heaters , Reheaters, Tubes , Spiral Tubes , Surface area , Free Gas Area , Metal temperature , LMTD , Acid Due Point Temperature , Carbon steel , Low alloy steel , Titanium alloy steel

UNIT – V BOILER AUXILIARIES 9

Air preheaters (APH) – bi sector APH , Tri sector APH, Cold PA System, Hot PA System, Tubular APH, Steam coil Air preheater , FANS – Axial, Radial, Performance curves, MILLS- Tube , Vertical mills , Air quality Control systems ,DustCollection System - Mechanical Precipitator, Electrostatic Precipitator, FGD , SCR , SNCR

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Explain the concepts of thermal and fired equipment.
2. Discuss the basis, design and construction of boilers.
3. Describe of typical fuel firing systems in the boiler.
4. Discuss the materials requirements for pressure parts.
5. Discuss of various boiler auxiliaries system.

21154E64C **DESIGN CODES AND STANDARDS**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1. To study the Codes and Standards and Need for them in the Industry
2. To know the different sources and the bodies that publish Codes and Standards
3. To familiarize the Government Regulations and its applicability
4. To familiarize with different codes used in Different Industry
5. To familiarize the Codes and Standards used in Process Industry

UNIT – I INTRODUCTION 9

Introduction to Codes and Standards. What is code? What is Standard?Need for codes and standards. Objective of Codes and Standards. Codes, Standards and Good Engineering Practices.

UNIT – II CODES 9

Codes and Standards used in Different Industry. Material, Design, Inspection and Construction Codes. Process Industry Codes. Machinery Design codes. Codes used in Oil and Gas Industry. Welding Codes. Machine Design. Automotive. HVAC. Performance Test Codes. Other Discipline codes

UNIT – III STANDARDS 9

Sources of Codes and Standards. Who publishes Codes and Standards? International Societies and Professional Bodies. Process of Standardisation and Code publishing in Professional Bodies and Companies. Interdisciplinary Codes.

UNIT – IV REGULATIONS 9

Government and Federal Regulations. Need for them. Indian and International Regulations. Standards organisations. Weather and Climatic codes. IS, ISO, IBR, OISD. Certification Bodies. Authorities and Engineers to certify. PE, Chartered Engineers

UNIT – V DESIGN CODES 9

Codes and Standards applicable in Process Industry Equipment Design. Pressure Vessel Design Codes. Heat Exchanger Design Codes. Wind and Seismic Codes. Machinery Codes. Package Equipment Design Codes. Performance Test Codes. ASTM, ASME, API, AWS, ANSI, ISO, ASHRAE.

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Explain the need for codes and Standards in Industry.
2. Discuss the different codes and standards used in different industry.
3. Discuss the sources of different codes and standards and the societies that publish them and how these are evolved
4. Explain need for Government regulations and Certification authorities and familiar with common regulations in India and International
5. Discuss knowledge of codes and standards used in Process equipment design for Oil and Gas Industry.

21154E65A **POWER PLANT ENGINEERING**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1 To study the coal based thermal power plants.
2 To study the diesel, gas turbine and combined cycle power plants.
3 To learn the basic of nuclear engineering and power plants.
4 To learn the power from renewable energy
5 To study energy, economic and environmental issues of power plants

UNIT – I COAL BASED THERMAL POWER PLANT 9

Rankine cycle - improvisations, Layout of modern coal power plant, Super Critical Boilers, FBC Boilers, Turbines, Condensers, Steam & Heat rate, Subsystems of thermal power plants — Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems.

UNIT – II DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS 9

Otto, Diesel, Dual & Brayton Cycle - Analysis & Optimisation. Components of Diesel and Gas Turbine power plants. Combined Cycle Power Plants. Integrated Gasifier based Combined Cycle systems.

UNIT – III NUCLEAR POWER PLANTS 9

Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors : Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANada Deuterium- Uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants.

UNIT – IV POWER FROM RENEWABLE ENERGY 9

Hydro Electric Power Plants — Classification, Typical Layout and associated components including Turbines.Principle, Construction and working of Wind, Tidal, Solar Photo Voltaic (SPV), Solar Thermal, Geo Thermal,Biogas and Fuel Cell power systems.

UNIT – V ENERGY, ECONOMIC AND ENVIRONMENTAL ISSUES OF POWER PLANTS 9

Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, relative merits & demerits, Capital & Operating Cost of different power plants. Pollution control technologies including Waste Disposal Options for Coal and Nuclear Power Plants.

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Explain the layout, construction and working of the components inside a thermal power plant.
2. Explain the layout, construction and working of the components inside a Diesel, Gas and Combined cycle power plants.
3. Explain the layout, construction and working of the components inside nuclear power plants.
4. Explain the layout, construction and working of the components inside Renewable energy power plants
5. Explain the applications of power plants while extend their knowledge to power plant economics and environmental hazards and estimate the costs of electrical energy production.

21154E65B **ENERGY CONSERVATION IN INDUSTRIES**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1. To learn Quantifying the energy demand and energy supply scenario of nation and explaining the need for energy auditing for becoming environmentally benign
2. To Analyzing factors behind energy billing and applying the concept of demand side management for lowering energy costs
3. To learn Computing the stoichiometric air requirement for any given fuel and quantifying the energy losses associated with thermal utilities of industries
4. To Diagnosing the causes for under performance of various electrical utilities and suggesting remedies for improving their efficiency
5. To Applying CUSUM and other financial evaluation techniques to estimating the accruable energy savings/monetary benefits for any energy efficiency project

UNIT – I INTRODUCTION 9

Energy scenario of World, India and TN - Environmental aspects of Energy Generation — Material and Energy balancing - Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Basic instruments for Energy Auditing.

UNIT – II ELECTRICAL SUPPLY SYSTEMS 9

Electricity Tariff structures – Typical Billing - Demand Side Management - HT and LT supply - Power Factor – Energy conservation in Transformers – Harmonics

UNIT – III ENERGY CONSERVATION IN MAJOR THERMAL UTILITIES 9

Stoichiometry - Combustion principles. Energy conservation in: Boilers - Steam Distribution Systems - Furnaces - Thermic Fluid Heaters — Cooling Towers — D.G. sets. Insulation and Refractories - Waste HeatRecovery Devices.

UNIT – IV ENERGY CONSERVATION IN MAJOR ELECTRICAL UTILITIES 9

Energy conservation in: Motors - Pumps – Fans – Blowers - Compressed Air Systems - Refrigeration and Air Conditioning Systems - Illumination systems

UNIT – V ENERGY MONITORING, TARGETING, LABELLING AND ECONOMICS 9

Elements of Monitoring & Targeting System – CUSUM - Energy / Cost index diagram – Energy Labelling -Energy Economics – Cost of production and Life Cycle Costing - Economic evaluation techniques – Discounting and Non-Discounting - ESCO concept – PAT scheme

TOTAL :45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Discuss Quantify the energy demand and energy supply scenario of nation and appreciate the need for energy auditing for becoming environmentally benign
2. Analyse factors behind energy billing and apply the concept of demand side management for lowering energy costs
3. Compute the stoichiometric air requirement for any given fuel and quantify the energy losses associated with thermal utilities of industries
4. Diagnose the causes for under performance of various electrical utilities and suggest remedies for improving their efficiency
5. Apply CUSUM and other financial evaluation techniques to estimate the accruable energy savings/monetary benefits for any energy efficiency project

TEXT BOOKS:

1. Guide book for National Certification Examination for “Energy Managers and Energy Auditors” (4 Volumes). Available at http://www.em-ea.org/gbook1.asp. This website is administered by Bureau of Energy Efficiency (BEE), a statutory body under Ministry of Power, Government of India.
2. K. Nagabhushan Raju, Industrial Energy Conservation Techniques: (concepts, Applications and Case Studies), Atlantic Publishers &Dist, 2007.

21154E65C **BIOENERGY CONVERSION TECHNOLOGIES**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1. To elucidate on biomass, types, availability, and characteristics
2. To study the bio-methanation process.
3. To impart knowledge on combustion of biofuels
4. To describe on the significance of equivalence ratio on thermochemical conversion ofbiomass
5. To provide insight to the possibilities of producing liquid fuels from biomass

UNIT – I **INTRODUCTION** **9**

Biomass: types – advantages and drawbacks – typical characteristics – proximate & ultimate analysis – comparison with coal - Indian scenario - carbon neutrality – biomass assessment studies – typical conversion mechanisms - densification technologies

UNIT – II **BIOMETHANATION** **9**

Biomethenation process – influencing parameters – typical feed stocks – Biogas plants: types and design, Biogas appliances – burner, luminaries and power generation systems – Industrial effluentbased biogas plants.

UNIT – III **COMBUSTION** **9**

Perfect, complete and incomplete combustion – stoichiometric air requirement for biofuels - equivalence ratio – fixed Bed and fluid Bed combustion

UNIT – IV **GASIFICATION, PYROLYSIS AND CARBONISATION** **9**

Chemistry of gasification - types – comparison – typical application – performance evaluation – economics. Pyrolysis - Classification - process governing parameters – Typical yield rates. Carbonization – merits of carbonized fuels – techniques adopted for carbonisation

UNIT – V **LIQUIFIED BIOFUELS** **9**

Straight Vegetable Oil (SVO) as fuel - Biodiesel production from oil seeds, waste oils and algae - Process and chemistry - Biodiesel Vs. Diesel – comparison on emission and performance fronts. Production of alcoholic fuels (methanol and ethanol) from biomass – engine modifications

TOTAL:45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Estimate the surplus biomass availability of any given area.
2. Design a biogas plant for a variety of biofuels.
3. Determine and compare the cost of steam generation from biofuels with that of coal and petroleum fuels.

21154E66B	OPERATIONAL RESEARCH	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

The main learning objective of this course is to prepare the students for:

1. To learn Selecting the constraints on the availability of resources and developing a model andrendering an optimal solution for the given circumstances.
2. To study Appraising the challenges in the transportation and production problems and furnishing a rational solution to maximize the benefits.
3. To learn Planning the purchase/ manufacturing policies, managing the spares/ stocks and meeting the customer demands.
4. To Analysing the queue discipline and exploring the avenues for better customer service.
5. To Investigating the nature of the project and offering methodical assistance towards decision making in maintenance.

UNIT – I INTRODUCTION TO OPERATIONS RESEARCH AND LINEAR PROGRAMMING 9

Operation Research: Definition – Models – Steps – Important topics – Scope - Tools. Linear Programing(LP): Introduction – Concept (Problem mix, Assumption, Properties) –Development (Problem formulation)
– Problems in: Graphical method, Simplex methods, Big M method.

UNIT – II TRANSPORTATION, ASSIGNMENT AND PRODUCTION SCHEDULING PROBLEMS 9

Transportation problems: Introduction, Model, Types — Problems in: Initial Basic (feasible) solution: Northwest Corner Cell method; Least Cost Cell method; Vogel's Approximation method and Optimal solution MODI (U-V) method. Assignment problems: Introduction,Types, Problems in Hungarian method. Production Scheduling problems: Introduction –Problems in Single Machine Scheduling: SPT; WSPT, EDDmethods – Problems inJohnson's Algorithm: n job 2 machines, n job 3 machines.

UNIT – III INVENTORY CONTROL MODELS & SYSTEMS 9

Inventory Control: Introduction, Models – Problems in Purchase and Production(Manufacturing) models with and without shortages – Theory on types of inventory control systems: P& Q, ABC, VED, FNS, XYZ, SDE and HML.

UNIT – IV QUEUING THEORY 9

Queuing Theory: Introduction; Applications; Terminology, Poisson process and exponential distribution – Problems in Single Server and Multi Server Queuing Models –Case study on simulation using Monte Carlotechnique.

UNIT – V PROJECT MANAGEMENT AND REPLACEMENT MODELS 9

Project Management: Introduction; Guidelines for Networking AOA Diagrams – Problems in Critical Path Method (CPM) & Program Evaluation Review Technique (PERT) – Differences of CPM & PERT. Replacement Problems: Types – Problems in: Determination of Economic Life of an Asset – Problems in:
Individual and Group Replacement Policies , Apply OR software

TOTAL :45 PERIODS

OUTCOMES: At the end of the course the students would be able to

1. Discuss the selection of the constraints on the availability of resources, develop a model and render an optimal solution for the given circumstances.
2. Explain the appraise the challenges in the transportation and production problems and furnish a rational solution to maximize the benefits.

3. Explain plan the purchase/ manufacturing policies, manage the spares/ stocks, and meet the customer demands.
4. Analyze the queue discipline and explore the avenues for better customer service.
5. Investigate the nature of the project and offer methodical assistance towards decision making in maintenance.

21154E66C PROCESS PLANNING AND COST ESTIMATION

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

1 To introduce the process planning concepts to make cost estimation for various products after process planning
2 To Learn the various Process Planning Activities
3 To provide the knowledge of importance of costing and estimation.
4 To provide the knowledge of estimation of production costing.
5 To learn the knowledge of various Machining time calculations

UNIT – I INTRODUCTION TO PROCESS PLANNING 9

Introduction- methods of process planning-Drawing Interpretation-Material evaluation – steps in process selection-. Production equipment and tooling selection

UNIT – II PROCESS PLANNING ACTIVITIES 9

Process parameters calculation for various production processes-Selection jigs and fixture selection of quality assurance methods - Set of documents for process planning-Economics of process planning- case studies

UNIT – III INTRODUCTION TO COST ESTIMATION 9

Importance of costing and estimation –methods of costing-elements of cost estimation –Types of estimates – Estimating procedure- Estimation labor cost, material cost- allocation of overhead charges- Calculation of depreciation cost

UNIT – IV PRODUCTION COST ESTIMATION 9

Estimation of Different Types of Jobs - Estimation of Forging Shop, Estimation of Welding Shop,Estimation of Foundry Shop

UNIT – V MACHINING TIME CALCULATION 9

Estimation of Machining Time - Importance of Machine Time Calculation- Calculation of Machining Time for Different Lathe Operations, Drilling and Boring - Machining Time Calculation for Milling,Shaping and Planning -Machining Time Calculation for Grinding.

Total:45 periods

OUTCOMES: At the end of the course the students would be able to

1. Discus select the process, equipment and tools for various industrial products.
2. Explain the prepare process planning activity chart.
3. Explain the concept of cost estimation.
4. Compute the job order cost for different type of shop floor.
5. Calculate the machining time for various machining operations.

21147MC51B DISASTER MANAGEMENT L T P C
3 0 0 0

COURSE OBJECTIVE

- To impart knowledge on concepts related to disaster, disaster risk reduction, disaster management
- To acquaint with the skills for planning and organizing disaster response

UNIT I HAZRADS, VULNERABILITY AND DISASTER RISKS 9

Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Types of Disasters: Natural, Human induced, Climate change induced –Earthquake, Landslide, Flood, Drought, Fire etc – Technological disasters- Structural collapse, Industrial accidents, oil spills -Causes, Impacts including social, Economic, political, environmental, health, psychosocial, etc.- Disaster vulnerability profile of India and Tamil Nadu - Global trends in disasters: urban disasters, pandemics, Complex emergencies,Inter relations between Disasters and Sustainable development Goals

UNIT II DISASTER RISK REDUCTION (DRR) 9

Sendai Framework for Disaster Risk Reduction**,** Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community Based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions / Urban Local Bodies (PRIs/ULBs), States, Centre, and other stakeholders- Early Warning System — Advisories from Appropriate Agencies.- Relevance of indigenous Knowledge, appropriate technology and Local resources.

UNIT III DISASTER MANAGEMENT 9

Components of Disaster Management – Preparedness of rescue and relief, mitigation, rehabilitation and reconstruction- Disaster Risk Management and post disaster management – Compensation and Insurance- Disaster Management Act (2005) and Policy - Other related policies, plans, programmers and legislation - Institutional Processes and Framework at State and Central Level- (NDMA –SDMA-DDMA-NRDF- Civic Volunteers)

UNIT IV TOOLS AND TECHNOLOGY FOR DISASTER MANAGEMENT 9

Early warning systems -Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster — Disaster Damage Assessment. - Elements of Climate Resilient Development –Standard operation Procedure for disaster response – Financial planning for disasterManagement

UNIT V DISASTER MANAGEMENT: CASE STUDIES 9

Discussion on selected case studies to analyse the potential impacts and actions in the contest of disasters-Landslide Hazard Zonation: Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.- Field work-Mock drill -

TOTAL : 45 PERIODS

TEXT BOOKS:

1 Taimpo (2016), Disaster Management and Preparedness, CRC Publications
2 Singh R (2017), Disaster Management Guidelines for earthquakes, Landslides, Avalanches and tsunami, Horizon Press Publications
3 Singhal J.P. "Disaster Management", Laxmi Publications, 2010. ISBN-10: 9380386427 ISBN-13: 978-9380386423
4 Tushar Bhattacharya, "Disaster Science and Management", McGraw Hill India Education Pvt. Ltd., 2012. **ISBN-10:** 1259007367, **ISBN-13:** 978-1259007361]

REFERENCES

2. Government of India, National Disaster Management Policy, 2009.

3. Shaw R (2016), Community based Disaster risk reduction, Oxford University Press

COURSE OUTCOME:

CO1: To impart knowledge on the concepts of Disaster, Vulnerability and Disaster Risk reduction (DRR)

CO2: To enhance understanding on Hazards, Vulnerability and Disaster Risk Assessment prevention and risk reduction

CO3: To develop disaster response skills by adopting relevant tools and technology

CO4: Enhance awareness of institutional processes for Disaster response in the country and

CO5: Develop rudimentary ability to respond to their surroundings with potential Disaster response in areas where they live, with due sensitivity

MANDATORY COURSES II

21147MC61B	SAFETYIN ENGINEERING INDUSTRY	L T P C 3 0 0 0

OBJECTIVES

- To Understand the Introduction and basic Terminologies safety.
- To enable the students to learn about the Important Statutory Regulations and standards.
- To enable students to Conduct and participate the various Safety activities in the Industry.
- To have knowledge about Workplace Exposures and Hazards.
- To assess the various Hazards and consequences through various Risk Assessment Techniques.

UNIT I SAFETY TERMINOLOGIES

Hazard-Types of Hazard- Risk-Hierarchy of Hazards Control Measures-Lead indicators- lag Indicators-Flammability- Toxicity Time-weighted Average (TWA) - Threshold LimitValue (TLV) - Short Term Exposure Limit (STEL)- Immediately dangerous to life or health (IDLH)- acute and chronic Effects- Routes of Chemical Entry-Personnel Protective Equipment- Health and Safety Policy-Material Safety Data Sheet MSDS

UNIT II STANDARDS AND REGULATIONS

Indian Factories Act-1948- Health- Safety- Hazardous materials and Welfare- ISO 45001:2018 occupational health and safety (OH&S) - Occupational Safety and Health Audit IS14489:1998- Hazard Identification and Risk Analysis- code of practice IS 15656:2006

UNIT III SAFETY ACTIVITIES

Toolbox Talk- Role of safety Committee- Responsibilities of Safety Officers and Safety Representatives- Safety Training and Safety Incentives- Mock Drills- On-site Emergency Action Plan- Off-site Emergency Action Plan- Safety poster and Display- Human Error Assessment

UNIT IV WORKPLACE HEALTH AND SAFETY

Noise hazard- Particulate matter- musculoskeletal disorder improper sitting poster and lifting Ergonomics RULE & REBA- Unsafe act & Unsafe Condition- Electrical Hazards- Crane Safety-Toxic gas Release

UNIT V HAZARD IDENTIFICATION TECHNIQUES

Job Safety Analysis-Preliminary Hazard Analysis-Failure mode and Effects Analysis- Hazard and Operability- Fault Tree Analysis- Event Tree Analysis Qualitative and Quantitative Risk Assessment-Checklist Analysis- Root cause analysis- What-If Analysis- and Hazard Identification and Risk Assessment

Course outcomes on completion of this course the student will be able:

- Understand the basic concept of safety.
- Obtain knowledge of Statutory Regulations and standards.
- Know about the safety Activities of the Working Place.
- Analyze on the impact of Occupational Exposures and their Remedies
- Obtain knowledge of Risk Assessment Techniques.

OPEN ELECTIVE I AND II

21150OE72A ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING FUNDAMENTALS L T P C
3 0 0 3

OBJECTIVES:
The main objectives of this course are to:
1. Understand the importance, principles, and search methods of AI
2. Provide knowledge on predicate logic and Prolog.
3. Introduce machine learning fundamentals
4. Study of supervised learning algorithms.
5. Study about unsupervised learning algorithms.

UNIT I INTELLIGENT AGENT AND UNINFORMED SEARCH 6
Introduction - Foundations of AI - History of AI - The state of the art - Risks and Benefits of AI - **Intelligent Agents** - Nature of Environment - Structure of Agent - Problem Solving Agents - Formulating Problems - **Uninformed Search** - Breadth First Search - Dijkstra's algorithm or uniform-cost search - Depth First Search - Depth Limited Search

UNIT II PROBLEM SOLVING WITH SEARCH TECHNIQUES 6
Informed Search - Greedy Best First - A* algorithm - Adversarial Game and Search - **Game theory** - Optimal decisions in game - Min Max Search algorithm - Alpha-beta pruning - **Constraint Satisfaction Problems (CSP)** - Examples - Map Coloring - Job Scheduling - Backtracking Search for CSP

UNIT III LEARNING 6
Machine Learning: Definitions — Classification - Regression - approaches of machine learning models - Types of learning - Probability - Basics - Linear Algebra – Hypothesis space and inductive bias, Evaluation. Training and test sets, cross validation, Concept of over fitting, under fitting, Bias and Variance - **Regression**: Linear Regression - Logistic Regression

UNIT IV SUPERVISED LEARNING 6
Neural Network: Introduction, Perceptron Networks — Adaline - Back propagation networks - **Decision Tree:** Entropy – Information gain - Gini Impurity - classification algorithm - Rule basedClassification - **Naïve Bayesian classification** - **Support Vector Machines** (SVM)

UNIT V UNSUPERVISED LEARNING 6
Unsupervised Learning – Principle Component Analysis - **Neural Network**: Fixed Weight Competitive Nets - Kohonen Self-Organizing Feature Maps – **Clustering**: Definition - Types of Clustering – Hierarchical clustering algorithms – k-means algorithm

TOTAL : 30 PERIODS

PRACTICAL EXERCISES: 30 PERIODS
Programs for Problem solving with Search
1. Implement breadth first search
2. Implement depth first search
3. Analysis of breadth first and depth first search in terms of time and space
4. Implement and compare Greedy and A* algorithms.

Supervised learning
5. Implement the non-parametric locally weighted regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs
6. Write a program to demonstrate the working of the decision tree based algorithm.
7. Build an artificial neural network by implementing the back propagation algorithm and test the same using appropriate data sets.
8. Write a program to implement the naïve Bayesian classifier.

Unsupervised learning
9. Implementing neural network using self-organizing maps
10. Implementing k-Means algorithm to cluster a set of data.
11. Implementing hierarchical clustering algorithm.

Note:

- Installation of gnu-prolog, Study of Prolog (gnu-prolog).
- The programs can be implemented in using C++/JAVA/ Python or appropriate tools can be used by designing good user interface
- Data sets can be taken from standard repositories (https://archive.ics.uci.edu/ml/datasets.html) or constructed by the students.

OUTCOMES:

CO1: Understand the foundations of AI and the structure of Intelligent Agents
CO2: Use appropriate search algorithms for any AI problem
CO3: Study of learning methods
CO4: Solving problem using Supervised learning
CO5: Solving problem using Unsupervised learning

TOTAL: 60 PERIODS

TEXT BOOKS:

1. S. Russell and P. Norvig, “Artificial Intelligence: A Modern Approach”, Prentice Hall, Fourth Edition, 2021
2. S.N.Sivanandam and S.N.Deepa, Principles of soft computing-Wiley India.3 rd ed,

21150OE61A IOT CONCEPTS AND APPLICATIONS L T P C
3 0 0 3

OBJECTIVES:

- To apprise students with basic knowledge of IoT that paves a platform to understand physical and logical design of IOT
- To teach a student how to analyse requirements of various communication models and protocols for cost-effective design of IoT applications on different IoT platforms.
- To introduce the technologies behind Internet of Things(IoT).
- To explain the students how to code for an IoT application using Arduino/Raspberry Pi open platform.
- To apply the concept of Internet of Things in real world scenario.

UNIT I INTRODUCTION TO INTERNET OF THINGS 5

Evolution of Internet of Things – Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) and Alternative IoT Models – Simplified IoT Architecture and Core IoT FunctionalStack — Fog, Edge and Cloud in IoT

UNIT II COMPONENTS IN INTERNET OF THINGS 5

Functional Blocks of an IoT Ecosystem – Sensors, Actuators, and Smart Objects – Control Units -Communication modules (Bluetooth, Zigbee,Wifi, GPS, GSM Modules)

UNIT III PROTOCOLS AND TECHNOLOGIES BEHIND IOT 6

IOT Protocols - IPv6, 6LoWPAN, MQTT, CoAP - RFID, Wireless Sensor Networks, BigData Analytics, Cloud Computing, Embedded Systems.

UNIT IV OPEN PLATFORMS AND PROGRAMMING 7

IOT deployment for Raspberry Pi /Arduino platform-Architecture –Programming – Interfacing – Accessing GPIO Pins – Sending and Receiving Signals Using GPIO Pins – Connecting to the Cloud.

UNIT V IOT APPLICATIONS 7

Business models for the internet of things, Smart city, Smart mobility and transport, Industrial IoT, Smart health, Environment monitoring and surveillance – Home Automation – Smart Agriculture

30 PERIODS

PRACTICAL EXERCISES: 30 PERIODS

1. Introduction to Arduino platform and programming
2. Interfacing Arduino to Zigbee module
3. Interfacing Arduino to GSM module
4. Interfacing Arduino to Bluetooth Module
5 Introduction to Raspberry PI platform and python programming
6. Interfacing sensors to Raspberry PI
7. Communicate between Arduino and Raspberry PI using any wireless medium
8. Setup a cloud platform to log the data
9. Log Data using Raspberry PI and upload to the cloud platform
10.Design an IOT based system

OUTCOMES:

CO 1: Explain the concept of IoT.
CO 2: Understand the communication models and various protocols for IoT.
CO 3: Design portable IoT using Arduino/Raspberry Pi /open platform
CO 4: Apply data analytics and use cloud offerings related to IoT.
CO 5: Analyze applications of IoT in real time scenario.

TOTAL:60 PERIODS

211500E72B DATA SCIENCE FUNDAMENTALS

	L T P C
	3 0 0 3

COURSE OBJECTIVES:

- Familiarize students with the data science process.
- Understand the data manipulation functions in Numpy and Pandas.
- Explore different types of machine learning approaches.
- Understand and practice visualization techniques using tools.
- Learn to handle large volumes of data with case studies.

UNIT I INTRODUCTION 6

Data Science: Benefits and uses – facets of data - Data Science Process: Overview – Defining research goals – Retrieving data – data preparation - Exploratory Data analysis – build the model – presenting findings and building applications - Data Mining - Data Warehousing – Basic statistical descriptions of Data

UNIT II DATA MANIPULATION 9

Python Shell - Jupyter Notebook - IPython Magic Commands - NumPy Arrays-Universal Functions – Aggregations – Computation on Arrays – Fancy Indexing – Sorting arrays – Structured data – Data manipulation with Pandas – Data Indexing and Selection – Handling missing data – Hierarchical indexing – Combining datasets – Aggregation and Grouping – String operations – Working with time series — High performance

UNIT III MACHINE LEARNING 5

The modeling process - Types of machine learning - Supervised learning - Unsupervised learning - Semi-supervised learning- Classification, regression - Clustering – Outliers and Outlier Analysis

UNIT IV DATA VISUALIZATION 5

Importing Matplotlib – Simple line plots – Simple scatter plots – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – three dimensional plotting - Geographic Data with Basemap - Visualization with Seaborn

UNIT V HANDLING LARGE DATA 5

Problems - techniques for handling large volumes of data - programming tips for dealing with large data sets- Case studies: Predicting malicious URLs, Building a recommender system - Tools and techniques needed - Research question - Data preparation - Model building — Presentation and automation.

30 PERIODS

PRACTICAL EXERCISES: **30 PERIODS**

LAB EXERCISES

1. Download, install and explore the features of Python for data analytics.
2. Working with Numpy arrays
3. Working with Pandas data frames
4. Basic plots using Matplotlib
5. Statistical and Probability measures
    a) Frequency distributions
    b) Mean, Mode, Standard Deviation
    c) Variability
    d) Normal curves
    e) Correlation and scatter plots
    f) Correlation coefficient
    g) Regression

6. Use the standard benchmark data set for performing the following:

a) Univariate Analysis: Frequency, Mean, Median, Mode, Variance, Standard Deviation, Skewness and Kurtosis.

b) Bivariate Analysis: Linear and logistic regression modelling.

7. Apply supervised learning algorithms and unsupervised learning algorithms on any data set.
8. Apply and explore various plotting functions on any data set.

Note: Example data sets like: UCI, Iris, Pima Indians Diabetes etc.

21150OE61B AUGMENTED REALITY /VIRTUAL REALITY **L T P C**

3 0 0 3

OBJECTIVES:

- To impart the fundamental aspects and principles of AR/VR technologies.
- To know the internals of the hardware and software components involved in the development of AR/VR enabled applications.
- To learn about the graphical processing units and their architectures.
- To gain knowledge about AR/VR application development.
- To know the technologies involved in the development of AR/VR based applications.

UNIT I INTRODUCTION 7

Introduction to Virtual Reality and Augmented Reality – Definition – Introduction to Trajectories and Hybrid Space-Three I's of Virtual Reality – Virtual Reality Vs 3D Computer Graphics – Benefits ofVirtual Reality – Components of VR System – Introduction to AR-AR Technologies-Input Devices – 3D Position Trackers – Types of Trackers – Navigation and Manipulation Interfaces – Gesture Interfaces – Types of Gesture Input Devices – Output Devices – Graphics Display – Human VisualSystem – Personal Graphics Displays – Large Volume Displays – Sound Displays – Human Auditory System**.**

UNIT II VR MODELING 6

Modeling – Geometric Modeling – Virtual Object Shape – Object Visual Appearance – KinematicsModeling – Transformation Matrices – Object Position – Transformation Invariants –ObjectHierarchies — Viewing the 3D World — Physical Modeling — Collision Detection — Surface Deformation – Force Computation – Force Smoothing and Mapping – Behavior Modeling – ModelManagement.

UNIT III VR PROGRAMMING 6

VR Programming – Toolkits and Scene Graphs – World ToolKit – Java 3D – Comparison of WorldToolKit and Java 3D

UNIT IV APPLICATIONS 6

Human Factors in VR – Methodology and Terminology – VR Health and Safety Issues – VR andSociety-Medical Applications of VR – Education, Arts and Entertainment – Military VR Applications
– Emerging Applications of VR – VR Applications in Manufacturing – Applications of VR in Robotics – Information Visualization – VR in Business – VR in Entertainment – VR in Education.

UNIT V AUGMENTED REALITY 5

Introduction to Augmented Reality-Computer vision for AR-Interaction-Modelling and Annotation-Navigation-Wearable devices

30 PERIODS

PRACTICAL EXERCISES: 30 PERIODS

1. Study of tools like Unity, Maya, 3DS MAX, AR toolkit, Vuforia and Blender.
2. Use the primitive objects and apply various projection types by handling camera.
3. Download objects from asset store and apply various lighting and shading effects.
4. Model three dimensional objects using various modelling techniques and apply textures over them.
5. Create three dimensional realistic scenes and develop simple virtual reality enabled mobile applications which have limited interactivity.
6. Add audio and text special effects to the developed application.
7. Develop VR enabled applications using motion trackers and sensors incorporating full haptic interactivity.
8. Develop AR enabled applications with interactivity like E learning environment, Virtual walkthroughs and visualization of historic places.
9. Develop AR enabled simple applications like human anatomy visualization, DNA/RNA structure visualization and surgery simulation.
10. Develop simple MR enabled gaming applications.

TOTAL:60 PERIODS

OUTCOMES:

On completion of the course, the students will be able to:

CO1: Understand the basic concepts of AR and VR

CO2: Understand the tools and technologies related to AR/VR

CO3: Know the working principle of AR/VR related Sensor devices

CO4: Design of various models using modeling techniques
CO5: Develop AR/VR applications in different domains

TEXTBOOKS:

OPEN ELCTIVE III

21150E73A ENGLISH FOR COMPETITIVE EXAMINATIONS L T P C

3 0 0 3

COURSE DESCRIPTION:

Students aspiring to take up competitive exams of which the English language is a vital component will find this course useful. Designed for students in the higher semesters, the course will help students to familiarise themselves with those aspects of English that are tested in these examinations.

Objectives:

- To train the students in the language components essential to face competitive examinations both at the national (UPSC, Banking, Railway, Defence) and the international level (GRE, TOEFL, IELTS).
- To enhance an awareness of the specific patterns in language testing and the respective skills to tackle verbal reasoning and verbal ability tests.
- To inculcate effective practices in language-learning in order to improve accuracy in usage of grammar and coherence in writing.
- To improve students' confidence to express their ideas and opinions in formal contexts
- To create awareness of accuracy and precision in communication

UNIT I 9

Orientation on different formats of competitive exams - Vocabulary – Verbal ability – Verbal reasoning - Exploring the world of words – Essential words – Meaning and their usage – Synonyms- antonyms – Word substitution – Word analogy – Idioms and phrases – Commonly confused words -Spellings – Word expansion – New words in use.

UNIT II 9

Grammar – Sentence improvement –Sentence completion – Rearranging phrases into sentences – Error identification –Tenses – Prepositions – Adjectives – Adverbs – Subject-verb agreement – Voice – Reported speech – Articles – Clauses – Speech patterns.

UNIT III 9

Reading - Specific information and detail – Identifying main and supporting ideas – Speed reading techniques – Improving global reading skills – Linking ideas – Summarising – Understanding argument – Identifying opinion/attitude and making inferences - Critical reading.

UNIT IV 9

Writing – Pre-writing techniques – Mindmap - Describing pictures and facts - Paragraph structure – organising points – Rhetoric writing – Improving an answer – Drafting, writing and developing an argument – Focus on cohesion – Using cohesive devices –Analytic writing – Structure and types ofessay — Mind maps — Structure of drafts, letters, memos, emails — Statements of Purpose — Structure, Content and Style.

UNIT V 9

Listening and Speaking – Contextual listening – Listening to instructions – Listening for specific information – Identifying detail, main ideas – Following signpost words – Stress, rhythm and intonation - Speaking to respond and elicit ideas – Guided speaking – Opening phrases – Interactive communication – Dysfluency -Sentence stress – Speaking on a topic – Giving opinions – Giving anoral presentation – Telling a story or a personal anecdote – Talking about oneself - Utterance – Speech acts- Brainstorming ideas – Group discussion.

TOTAL: 45 PERIODS

LEARNING OUTCOMES:

At the end of the course, learners will be able

- Expand their vocabulary and gain practical techniques to read and comprehend a wide range of texts with the emphasis required

- Identify errors with precision and write with clarity and coherence
- Understand the importance of task fulfilment and the usage of task-appropriate vocabulary
- Communicate effectively in group discussions, presentations and interviews
- Write topic based essays with precision and accuracy

1-low, 2-medium, 3-high, '-"- no correlation

Note: The average value of this course to be used for program articulation matrix.

Teaching Methods:

Instructional methods will involve discussions, taking mock tests on various question papers — Objective, multiple-choice and descriptive. Peer evaluation, self-check on improvement and peer feedback - Practice sessions on speaking assessments, interview and discussion — Using multimedia.

Evaluative Pattern:

Internal Tests – 50%
End Semester Exam - 50%

21152OE73A REMOTE SENSING CONCEPTS

L T P C
3 0 0 3

OBJECTIVES:

- To introduce the concepts of remote sensing processes and its components.
- To expose the various remote sensing platforms and sensors and to introduce the elements of data interpretation

UNIT I REMOTE SENSING AND ELECTROMAGNETIC RADIATION 9

Definition – components of RS – History of Remote Sensing – Merits and demerits of data collation between conventional and remote sensing methods - Electromagnetic Spectrum – Radiation principles - Wave theory, Planck's law, Wien's Displacement Law, Stefan's Boltzmann law, Kirchoff's law – Radiation sources: active & passive - Radiation Quantities

UNIT II EMR INTERACTION WITH ATMOSPHERE AND EARTH MATERIAL 9

Standard atmospheric profile – main atmospheric regions and its characteristics – interaction of radiation with atmosphere – Scattering, absorption and refraction – Atmospheric windows - Energy balance equation — Specular and diffuse reflectors — Spectral reflectance & emittance — Spectroradiometer – Spectral Signature concepts – Typical spectral reflectance curves for vegetation, soil and water – solid surface scattering in microwave region.

UNIT III ORBITS AND PLATFORMS 9

Motions of planets and satellites – Newton's law of gravitation - Gravitational field and potential - Escape velocity - Kepler's law of planetary motion - Orbit elements and types – Orbital perturbations and maneuvers – Types of remote sensing platforms - Ground based, Airborne platforms and Space borne platforms – Classification of satellites – Sun synchronous and Geosynchronous satellites –Lagrange Orbit.

UNIT IV SENSING TECHNIQUES 9

Classification of remote sensors – Resolution concept : spatial, spectral, radiometric and temporal resolutions - Scanners - Along and across track scanners – Optical-infrared sensors – Thermal sensors – microwave sensors – Calibration of sensors - High Resolution Sensors - LIDAR , UAV –Orbital and sensor characteristics of live Indian earth observation satellites

UNIT V DATA PRODUCTS AND INTERPRETATION 9

Photographic and digital products — Types, levels and open source satellite data products —- selection and procurement of data– Visual interpretation: basic elements and interpretation keys - Digital interpretation – Concepts of Image rectification, Image enhancement and Image classification

TOTAL:45 PERIODS

COURSE OUTCOMES:

On completion of the course, the student is expected to

CO 1 Understand the concepts and laws related to remote sensing
CO 2 Understand the interaction of electromagnetic radiation with atmosphere and earth material
CO 3 Acquire knowledge about satellite orbits and different types of satellites
CO 4 Understand the different types of remote sensors
CO 5 Gain knowledge about the concepts of interpretation of satellite imagery

21152OE73B DRINKING WATER SUPPLY AND TREATMENT L T P C

3 0 0 3

OBJECTIVE:

- To equip the students with the principles and design of water treatment units and distribution system.

UNIT I SOURCES OF WATER 9

Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater – Impounding Reservoir – Development and selection of source – Source Water quality – Characterization – Significance – Drinking Water quality standards.

UNIT II CONVEYANCE FROM THE SOURCE 9

Water supply – intake structures – Functions; Pipes and conduits for water – Pipe materials – Hydraulics of flow in pipes – Transmission main design – Laying, jointing and testing of pipes – appurtenances – Types and capacity of pumps – Selection of pumps and pipe materials.

UNIT III WATER TREATMENT 9

Objectives – Unit operations and processes – Principles, functions, and design of water treatment plant units, aerators of flash mixers, Coagulation and flocculation –- sand filters - Disinfection -–Construction, Operation and Maintenance aspects.

UNIT IV ADVANCED WATER TREATMENT 9

Water softening – Desalination- R.O. Plant – demineralization – Adsorption - Ion exchange– Membrane Systems - Iron and Manganese removal - Defluoridation - Construction and Operation and Maintenance aspects

UNIT V WATER DISTRIBUTION AND SUPPLY 9

Requirements of water distribution – Components – Selection of pipe material – Service reservoirs - Functions – Network design – Economics - Computer applications – Appurtenances – Leak detection - Principles of design of water supply in buildings – House service connection – Fixtures and fittings, systems of plumbing and types of plumbing.

TOTAL: 45 PERIODS

OUTCOMES

CO1: An understanding of water quality criteria and standards, and their relation to public health

CO2: The ability to design the water conveyance system

CO3: The knowledge in various unit operations and processes in water treatment

CO4: An ability to understand the various systems for advanced water treatment

CO5: An insight into the structure of drinking water distribution system

201VEA19 VALUE EDUCATION

	L	T	P	C
	0	**0**	**0**	**1**

UNIT – I
Concept of Human Values, Value Education Towards Personal Development
Aim of education and value education; Evolution of value oriented education; Concept of Human values; types of values; Components of value education.
Personal Development :
Self analysis and introspection; sensitization towards gender equality, physically challenged, intellectually challenged. Respect to - age, experience, maturity, family members, neighbours, co-workers.
Character Formation Towards Positive Personality:
Truthfulness, Constructivity, Sacrifice, Sincerity, Self Control, Altruism, Tolerance, Scientific Vision.

UNIT – II
Value Education Towards National and Global Development National and International Values:

Constitutional or national values - Democracy, socialism, secularism, equality, justice, liberty, freedom and fraternity.

Social Values - Pity and probity, self control, universal brotherhood.
Professional Values - Knowledge thirst, sincerity in profession, regularity, punctuality and faith.
Religious Values - Tolerance, wisdom, character.
Aesthetic values - Love and appreciation of literature and fine arts and respect for the same.
National Integration and international understanding.

UNIT – III Impact of Global Development on Ethics and Values
Conflict of cross-cultural influences, mass media, cross-border education, materialistic values, professional challenges and compromise.

Modern Challenges of Adolescent Emotions and behavior; Sex and spirituality: Comparision and competition; positive and negative thoughts.

Adolescent Emotions, arrogance, anger, sexual instability, selfishness, defiance.

UNIT - IV Theraupatic Measures

Control of the mind through
a. Simplified physical exercise
b. Meditation – Objectives, types, effect on body, mind and soul
c. Yoga – Objectives, Types, Asanas

d. Activities:

(i) Moralisation of Desires
(ii) Neutralisation of Anger
(iii)Eradication of Worries
(iv) Benefits of Blessings

UNIT; V Human Rights

1. Concept of Human Rights – Indian and International Perspectives
   a. Evolution of Human Rights
   b. Definitions under Indian and International documents

2. Broad classification of Human Rights and Relevant Constitutional Provisions.
   a. Right to Life, Liberty and Dignity
   b. Right to Equality
   c. Right against Exploitation
   d. Cultural and Educational Rights
   e. Economic Rights
   f. Political Rights
   g. Social Rights

3. Human Rights of Women and Children
   a. Social Practice and Constitutional Safeguards
      (i) Female Foeticide and Infanticide
      (ii) Physical assault and harassment
      (iii) Domestic violence
      (iv) Conditions of Working Women

4. Institutions for Implementation
   a. Human Rights Commission
   b. Judiciary

5. Violations and Redressel
   a. Violation by State
   b. Violation by Individuals
   c. Nuclear Weapons and terrorism
   d. Safeguards.

201ICA29 FUNDAMENTALS OF INDIAN CONSTITUTION AND ECONOMY L P T C
1 0 0 1

UNIT-I: THE MAKING OF INDIAN CONSTITUTION

The Constituent Assembly: Organization- Character- Work-Salient feature of the constitution- Writtern and detailed constitution- Socialism- Secularism- Democracy and Republic.

UNIT-II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS

Right of equality- Right of freedom-Right against exploitation-Right to freedom of religion- Cultural and Educational rights-Right to constitutional remedies- Fundamental duties.

UNIT-III: DIRECTIVE PRINCIPLES OF STATE POLICY

Socialistic principles- Gandhian principles- Liberal and general principles-Differences between Fundamental Rights and Directive principles

UNIT-IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT

Powers and Positions of the president- Qualification-Method of election of president and Vice President- Prime minister- Rajya sabha- Lok sabha- The Supreme Court- High Court- Functions and Positions of Supreme Court and High Court.

UNIT V: STATE COUNCIL- ELECTION SYSTEM AND PARLIMENTARY DEMOCRACY IN INDIA

State Council of Ministers- Chief Minister- Election Systems in India- Main Features-Election Commission – Features of Indian Democracy.

		L	T	P	C
20154L39	**INTERPERSONAL SKILLS/LISTENING & SPEAKING**	**0**	**0**	**2**	**1**

OBJECTIVES: The Course will enable learners to:

- Equip students with the English language skills required for the successful undertaking of academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage in specific academic speaking activities.
- improve general and academic listening skills
- Make effective presentations.

UNIT I

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation - pronunciation basics taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances.

UNIT II

Listen to a process information- give information, as part of a simple explanation - conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics.

UNIT III

Lexical chunking for accuracy and fluency- factors influence fluency, deliver a five-minute informal talk - greet - respond to greetings - describe health and symptoms - invite and offer - accept - decline - take leave - listen for and follow the gist- listen for detail

UNIT IV

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizing academic readings and lectures conversational speech listening to and participating in conversations - persuade.

UNIT V

Formal and informal talk - listen to follow and respond to explanations, directions and instructions in academic and business contexts - strategies for presentations and interactive communication - group/pair presentations - negotiate disagreement in group work.

TOTAL : 30 PERIODS

OUTCOMES: At the end of the course Learners will be able to:

- Listen and respond appropriately.
- Participate in group discussions
- Make effective presentations
- Participate confidently and appropriately in conversations both formal and informal

TEXT BOOKS:

20154L47 **PRODUCTION TECHNOLOGY LABORATORY – II**

L	T	P	C
0	0	3	2

OBJECTIVE:

- To Study and acquire knowledge on various basic machining operations in special purpose machines and its applications in real life manufacture of components in the industry

LIST OF EXPERIMENTS:

1. Contour milling using vertical milling machine
2. Spur gear cutting in milling machine
3.
4. Helical Gear Cutting in milling machine
5. Gear generation in hobbing machine
6. Gear generation in gear shaping machine
7. Plain Surface grinding
8. Cylindrical grinding
9. Tool angle grinding with tool and Cutter Grinder
10. Measurement of cutting forces in Milling / Turning Process
11. CNC Part Programming

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 use different machine tools to manufacturing gears
CO2 Ability to use different machine tools to manufacturing gears.
CO3 Ability to use different machine tools for finishing operations
CO4 Ability to manufacture tools using cutter grinder
CO5 Develop CNC part programming

TOTAL: 45

PERIODS LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	NAME OF THE EQUIPMENT	Qty.
1	Turret and Capstan Lathes	1 No each
2	Horizontal Milling Machine	2 No
3	Vertical Milling Machine	1 No
4	Surface Grinding Machine	1 No.
5	Cylinderical Grinding Machine	1 No.
6	Radial Drilling Machine	1 No.
7	lathe Tool Dynamometer	1 No
8	Milling Tool Dynamometer	1 No
9	Gear Hobbing Machine	1 No

20154L48	STRENGTH OF MATERIALS AND FLUID MECHANICS AND MACHINERY LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVES:

- To study the mechanical properties of materials when subjected to different types of loading.
- To verify the principles studied in Fluid Mechanics theory by performing experiments in lab.

STRENGTH OF MATERIALS **23**

LIST OF EXPERIMENTS

1. Tension test on a mild steel rod
2. Double shear test on Mild steel and Aluminium rods
3. Torsion test on mild steel rod
4. Impact test on metal specimen
5. Hardness test on metals - Brinnell and Rockwell Hardness Number
6. Deflection test on beams
7. Compression test on helical springs
8. Strain Measurement using Rosette strain gauge
9. Effect of hardening- Improvement in hardness and impact resistance of steels.
10. Tempering- Improvement Mechanical properties Comparison
    (i) Unhardened specimen
    (ii) Quenched Specimen and
    (iii) Quenched and tempered specimen.
11. Microscopic Examination of
    (i) Hardened samples and
    (ii) Hardened and tempered samples.

OUTCOME:

- Ability to perform Tension, Torsion, Hardness, Compression, and Deformation test on Solid materials.

LIST OF EQUIPMENT FOR BATCH OF 30 STUDENTS

S.No.	NAME OF THE EQUIPMENT	Qty.
1	Universal Tensile Testing machine with double 1 shear attachment – 40 Ton Capacity	1
2	Torsion Testing Machine (60 NM Capacity)	1
3	Impact Testing Machine (300 J Capacity)	1
4	Brinell Hardness Testing Machine	1
5	Rockwell Hardness Testing Machine	1
6	Spring Testing Machine for tensile and compressive loads (2500 N)	1
7	Metallurgical Microscopes	3
8	Muffle Furnace (800 C)	1

FLUID MECHANICS AND MACHINES LABORATORY **22**

LIST OF EXPERIMENTS

1. Determination of the Coefficient of discharge of given Orifice meter.
2. Determination of the Coefficient of discharge of given Venturi meter.
3. Calculation of the rate of flow using Rota meter.
4. Determination of friction factor for a given set of pipes.
5. Conducting experiments and drawing the characteristic curves of centrifugal pump/ submergible pump
6. Conducting experiments and drawing the characteristic curves of reciprocating pump.

7. Conducting experiments and drawing the characteristic curves of Gear pump.
8. Conducting experiments and drawing the characteristic curves of Pelton wheel.
9. Conducting experiments and drawing the characteristics curves of Francis turbine.
10. Conducting experiments and drawing the characteristic curves of Kaplan turbine.

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of this course, the students will be able to:

- Perform Tension, Torsion, Hardness, Compression, and Deformation test on Solid materials.
- Use the measurement equipments for flow measurement.
- Perform test on different fluid machinery.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S. NO.	NAME OF THE EQUIPMENT	Qty.
1	Orifice meter setup	1
2	Venturi meter setup	1
3	Rotameter setup	1
4	Pipe Flow analysis setup	1
5	Centrifugal pump/submergible pump setup	1
6	Reciprocating pump setup	1
7	Gear pump setup	1
8	Pelton wheel setup	1
9	Francis turbine setup	1
10	Kaplan turbine setup	1

20154L 49 **ADVANCED READING AND WRITING**

L	T	P	C
0	0	2	1

OBJECTIVES:

- Strengthen the reading skills of students of engineering.
- Enhance their writing skills with specific reference to technical writing.
- Develop students' critical thinking skills.
- Provide more opportunities to develop their project and proposal writing skills.

UNIT I

Reading - Strategies for effective reading-Use glosses and footnotes to aid reading comprehension-Read and recognize different text types-Predicting content using photos and title Writing-Plan before writing- Develop a paragraph: topic sentence, supporting sentences, concluding sentence –Write a descriptive paragraph

UNIT II

Reading-Read for details-Use of graphic organizers to review and aid comprehension Writing-State reasons and examples to support ideas in writing- Write a paragraph with reasons and examples- Write an opinion paragraph

UNIT III

Reading- Understanding pronoun reference and use of connectors in a passage- speed reading techniques-Writing- Elements of a good essay-Types of essays- descriptive-narrative- issue-based-argumentative-analytical.

UNIT IV

Reading- Genre and Organization of Ideas- Writing- Email writing- resumes – Job application- project writing-writing convincing proposals.

UNIT V

Reading- Critical reading and thinking- understanding how the text positions the reader- identify
Writing- Statement of Purpose- letter of recommendation- Vision statement

TOTAL: 30 PERIODS

OUTCOMES: At the end of the course Learners will be able to:

- Write different types of essays.
- Write winning job applications.
- Read and evaluate texts critically.
- Display critical thinking in various professional contexts.

TEXT BOOKS:

1. Debra Daise, CharlNorloff, and Paul Carne Reading and Writing (Level 4) Oxford University Press: Oxford, 2011
2. Gramer F. Margot and Colin S. Ward Reading and Writing (Level 3) Oxford University Press: Oxford, 2011

20154C52 **DESIGN OF MACHINE ELEMENTS**

L	T	P	C
3	2	0	4

OBJECTIVES

- To familiarize the various steps involved in the Design Process
- To understand the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.
- To learn to use standard practices and standard data
- To learn to use catalogues and standard machine components
- (Use of P S G Design Data Book is permitted)

UNIT I STEADY STRESSES AND VARIABLE STRESSES IN MACHINE MEMBERS 9+6

Introduction to the design process - factors influencing machine design, selection of materials based on mechanical properties - Preferred numbers, fits and tolerances – Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading – curved beams – crane hook and 'C' frame- Factor of safety - theories of failure – Design based on strength and stiffness – stress concentration – Design for variable loading.

UNIT II SHAFTS AND COUPLINGS 9+6

Design of solid and hollow shafts based on strength, rigidity and critical speed – Keys, keyways and splines - Rigid and flexible couplings.

UNIT III TEMPORARY AND PERMANENT JOINTS 9+6

Threaded fastners - Bolted joints including eccentric loading, Knuckle joints, Cotter joints – Welded joints, riveted joints for structures - theory of bonded joints.

UNIT IV ENERGY STORING ELEMENTS AND ENGINE COMPONENTS 9+6

Various types of springs, optimization of helical springs - rubber springs - Flywheels considering stresses in rims and arms for engines and punching machines- Connecting Rods and crank shafts.

UNIT V BEARINGS 9+6

Sliding contact and rolling contact bearings - Hydrodynamic journal bearings, Sommerfeld Number, Raimondi and Boyd graphs, -- Selection of Rolling Contact bearings.

TOTAL: 45+30= 75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the influence of steady and variable stresses in machine component design.
CO2 Apply the concepts of design to shafts, keys and couplings.
CO3 Apply the concepts of design to temporary and permanent joints.
CO4 Apply the concepts of design to energy absorbing members, connecting rod and crank shaft.
CO5 Apply the concepts of design to bearings.

TEXT BOOKS:

20154C53	METROLOGY AND MEASUREMENTS	L	T	P	C
		4	0	0	4

OBJECTIVES:

- To provide knowledge on various Metrological equipments available to measure the dimension of the components.
- To provide knowledge on the correct procedure to be adopted to measure the dimension of the components.

UNIT I BASICS OF METROLOGY 12

Introduction to Metrology – Need – Elements – Work piece, Instruments – Persons – Environment – their effect on Precision and Accuracy – Errors – Errors in Measurements – Types – Control – Types of standards.

UNIT II LINEAR AND ANGULAR MEASUREMENTS 12

Linear Measuring Instruments – Evolution – Types – Classification – Limit gauges – gauge design – terminology – procedure – concepts of interchange ability and selective assembly – Angular measuring instruments – Types – Bevel protractor clinometers angle gauges, spirit levels sine bar – Angle alignment telescope – Autocollimator – Applications.

UNIT III ADVANCES IN METROLOGY 12

Basic concept of lasers Advantages of lasers – laser Interferometers – types – DC and AC Lasers interferometer – Applications – Straightness – Alignment. Basic concept of CMM – Types of CMM
– Constructional features – Probes – Accessories – Software – Applications – Basic concepts of Machine Vision System – Element – Applications.

UNIT IV FORM MEASUREMENT 12

Principles and Methods of straightness – Flatness measurement – Thread measurement, gear measurement, surface finish measurement, Roundness measurement – Applications.

UNIT V MEASUREMENT OF POWER, FLOW AND TEMPERATURE 12

Force, torque, power - mechanical , Pneumatic, Hydraulic and Electrical type. Flow measurement: Venturimeter, Orifice meter, rotameter, pitot tube – Temperature: bimetallic strip, thermocouples, electrical resistance thermometer – Reliability and Calibration – Readability and Reliability.

TOTAL : 60 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Describe the concepts of measurements to apply in various metrological instruments
CO2 Outline the principles of linear and angular measurement tools used for industrial Applications
CO3 Explain the procedure for conducting computer aided inspection
CO4 Demonstrate the techniques of form measurement used for industrial components
CO5 Discuss various measuring techniques of mechanical properties in industrial applications

20154L57 **THERMAL ENGINEERING LABORATORY**

L	T	P	C
0	0	3	2

OBJECTIVES:

- To study the value timing-V diagram and performance of IC Engines
- To Study the characteristics of fuels/Lubricates used in IC Engines
- To study the Performance of steam generator/ turbine
- To study the heat transfer phenomena predict the relevant coefficient using implementation
- To study the performance of refrigeration cycle / components

LIST OF EXPERIMENTS

I.C. ENGINE LAB

1. Valve Timing and Port Timing diagrams.
2. Actual p-v diagrams of IC engines.
3. Performance Test on 4 – stroke Diesel Engine.
4. Heat Balance Test on 4 – stroke Diesel Engine.
5. Morse Test on Multi-cylinder Petrol Engine.
6. Retardation Test on a Diesel Engine.
7. Determination of Flash Point and Fire Point of various fuels / lubricants.

STEAM LAB

1. Study on Steam Generators and Turbines.
2. Performance and Energy Balance Test on a Steam Generator.
3. Performance and Energy Balance Test on Steam Turbine.

HEAT TRANSFER LAB:

1. Thermal conductivity measurement using guarded plate apparatus.
2. Thermal conductivity measurement of pipe insulation using lagged pipe apparatus.
3. Determination of heat transfer coefficient under natural convection from a vertical cylinder.
4. Determination of heat transfer coefficient under forced convection from a tube.
5. Determination of Thermal conductivity of composite wall.
6. Determination of Thermal conductivity of insulating powder.
7. Heat transfer from pin-fin apparatus (natural & forced convection modes)
8. Determination of Stefan – Boltzmann constant.
9. Determination of emissivity of a grey surface.
10. Effectiveness of Parallel / counter flow heat exchanger.

REFRIGERATION AND AIR CONDITIONING LAB

1. Determination of COP of a refrigeration system
2. Experiments on Psychrometric processes
3. Performance test on a reciprocating air compressor
4. Performance test in a HC Refrigeration System
5. Performance test in a fluidized Bed Cooling Tower

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 conduct tests on heat conduction apparatus and evaluate thermal conductivity of materials.

CO2 conduct tests on natural and forced convective heat transfer apparatus and evaluate heat transfer coefficient.

CO3 conduct tests on radiative heat transfer apparatus and evaluate Stefan Boltzmann constant and emissivity.

CO4 conduct tests to evaluate the performance of parallel/counter flow heat exchanger apparatus and reciprocating air compressor.

CO5 conduct tests to evaluate the performance of refrigeration and airconditioning test rigs.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

	NAME OF THE EQUIPMENT	Qty.
1	I.C Engine – 2 stroke and 4 stroke model	1 set
2	Apparatus for Flash and Fire Point	1 No.
3	4-stroke Diesel Engine with mechanical loading.	1 No
4	4-stroke Diesel Engine with hydraulic loading.	1 No.
5	4-stroke Diesel Engine with electrical loading.	1 No.
6	Multi-cylinder Petrol Engine	1 No.
7	Single cylinder Petrol Engine	1 No.
8	Data Acquisition system with any one of the above engines	1 No.
9	Steam Boiler with turbine setup	1 No.

S.No.	NAME OF THE EQUIPMENT	Qty.
1	Guarded plate apparatus	1 No.
2	Lagged pipe apparatus	1 No.
3	Natural convection-vertical cylinder apparatus	1 No.
4	Forced convection inside tube apparatus	1 No.
5	Composite wall apparatus	1 No.
6	Thermal conductivity of insulating powder apparatus	1 No.
7	Pin-fin apparatus	1 No.
8	Stefan-Boltzmann apparatus	1 No.
9	Emissivity measurement apparatus	1 No.
10	Parallel/counter flow heat exchanger apparatus	1 No.
11	Single/two stage reciprocating air compressor	1 No.
12	Refrigeration test rig	1 No.
13	Air-conditioning test rig	1 No.

20154L58	METROLOGY AND MEASUREMENTS LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVE:

- To familiar with different measurement equipments and use of this industry for quality inspection.

LIST OF EXPERIMENTS

1. Calibration and use of measuring instruments – Vernier caliper, micrometer, Vernier height gauge – using gauge blocks
2. Calibration and use of measuring instruments – depth micrometer, bore gauge, telescopic gauge
3. Measurement of linear dimensions using Comparators
4. Measurement of angles using bevel protractor and sine bar
5. Measurement of screw thread parameters – Screw thread Micrometers and Three wire method '(floating carriage micrometer)
6. Measurement of gear parameters – disc micrometers, gear tooth vernier caliper
7. Measurement of features in a prismatic component using Coordinate Measuring Machine (CMM)
8. Programming of CNC Coordinate Measuring Machines for repeated measurements of identical components
9. Non-contact (Optical) measurement using Toolmaker's microscope / Profile projector and Video measurement system
10. Measurement of Surface finish in components manufactured using various processes (turning, milling, grinding, etc.,) using stylus based instruments.
11. Machine tool metrology – Level tests using precision level; Testing of straightness of a machine tool guide way using Autocollimator, spindle tests.
12. Measurement of force, torque and temperature

TOTAL: 45 PERIODS

OUTCOMES

Upon the completion of this course the students will be able to

CO1 Measure the gear tooth dimensions, angle using sine bar, straightness and flatness, thread parameters, temperature using thermocouple, force, displacement, torque and vibration.

CO2 Calibrate the vernier, micrometer and slip gauges and setting up the comparator for the inspection.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	NAME OF THE EQUIPMENT	Qty.
1	Micrometer	5
2	Vernier Caliper	5
3	Vernier Height Gauge	2
4	Vernier depth Gauge	2
5	Slip Gauge Set	1
6	Gear Tooth Vernier	1
7	Sine Bar	1
8	Floating Carriage Micrometer	1
9	Profile Projector / Tool Makers Microscope	1
10	Parallel / counter flow heat exchanger apparatus	1
11	Mechanical / Electrical / Pneumatic Comparator	1
12	Autocollimator	1
13	Temperature Measuring Setup	1

14	Force Measuring Setup	1
15	Torque Measuring Setup	1
16	Coordinate measuring machine	1
17	Surface finish measuring equipment	1
18	Bore gauge	1
19	Telescope gauge	1

20154C61 **DESIGN OF TRANSMISSION SYSTEMS**

L	T	P	C
3	2	0	4

OBJECTIVES:

- To gain knowledge on the principles and procedure for the design of Mechanical power Transmission components.
- To understand the standard procedure available for Design of Transmission of Mechanical elements
- To learn to use standard data and catalogues (Use of P S G Design Data Book permitted)

UNIT I DESIGN OF FLEXIBLE ELEMENTS 9+6

Design of Flat belts and pulleys - Selection of V belts and pulleys – Selection of hoisting wire ropes and pulleys – Design of Transmission chains and Sprockets.

UNIT II SPUR GEARS AND PARALLEL AXIS HELICAL GEARS 9+6

Speed ratios and number of teeth-Force analysis -Tooth stresses - Dynamic effects – Fatigue strength - Factor of safety - Gear materials – Design of straight tooth spur & helical gears based on strength and wear considerations – Pressure angle in the normal and transverse plane- Equivalent number of teeth-forces for helical gears.

UNIT III BEVEL, WORM AND CROSS HELICAL GEARS 9+6

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits- terminology. Thermal capacity, materials-forces and stresses, efficiency, estimating the size of the worm gear pair. Cross helical: Terminology-helix angles-Estimating the size of the pair of cross helical gears.

UNIT IV GEAR BOXES 9+6

Geometric progression - Standard step ratio - Ray diagram, kinematics layout -Design of sliding mesh gear box - Design of multi speed gear box for machine tool applications - Constant mesh gear box - Speed reducer unit. – Variable speed gear box, Fluid Couplings, Torque Converters for automotive applications.

UNIT V CAMS, CLUTCHES AND BRAKES 9+6

Cam Design: Types-pressure angle and under cutting base circle determination-forces and surface stresses. Design of plate clutches –axial clutches-cone clutches-internal expanding rim clutches- Electromagnetic clutches. Band and Block brakes - external shoe brakes – Internal expanding shoe brake.

TOTAL : 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 apply the concepts of design to belts, chains and rope drives.
CO2 apply the concepts of design to spur, helical gears.
CO3 apply the concepts of design to worm and bevel gears.
CO4 apply the concepts of design to gear boxes .
CO5 apply the concepts of design to cams, brakes and clutches

20154C62 **COMPUTER AIDED DESIGN AND MANUFACTURING** **L T P C**

3 2 0 4

OBJECTIVES:

- To provide an overview of how computers are being used in mechanical component design
- To understand the application of computers in various aspects of Manufacturing viz., Design, Proper planning, Manufacturing cost, Layout & Material Handling system.

UNIT I INTRODUCTION 9+6

Product cycle- Design process- sequential and concurrent engineering- Computer aided design – CAD system architecture- Computer graphics – co-ordinate systems- 2D and 3D transformations- homogeneous coordinates - Line drawing -Clipping- viewing transformation-Brief introduction to CAD and CAM – Manufacturing Planning, Manufacturing control- Introduction to CAD/CAM – CAD/CAM concepts —Types of production - Manufacturing models and Metrics – Mathematical models of Production Performance

UNIT II GEOMETRIC MODELING 9+6

Representation of curves- Hermite curve- Bezier curve- B-spline curves-rational curves-Techniques for surface modeling – surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid modeling techniques- CSG andB-rep

UNIT III CAD STANDARDS 9+6

Standards for computer graphics- Graphical Kernel System (GKS) - standards for exchange images- Open Graphics Library (OpenGL) - Data exchange standards - IGES, STEP, CALS etc. - communication standards.

UNIT IV FUNDAMENTAL OF CNC AND PART PROGRAMING 9+6

Introduction to NC systems and CNC - Machine axis and Co-ordinate system- CNC machine tools- Principle of operation CNC- Construction features including structure- Drives and CNC controllers- 2D and 3D machining on CNC- Introduction of Part Programming, types - Detailed Manual part programming on Lathe & Milling machines using G codes and M codes- Cutting Cycles, Loops, Sub program and Macros- Introduction of CAM package.

UNIT V CELLULAR MANUFACTURING AND FLEXIBLE MANUFACTURING SYSTEM (FMS) 9+6

Group Technology(GT),Part Families–Parts Classification and coding–Simple Problems in Opitz Part Coding system–Production flow Analysis–Cellular Manufacturing–Composite part concept–Types of Flexibility - FMS – FMS Components – FMS Application & Benefits – FMS Planning and Control– Quantitative analysis in FMS

TOTAL : 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1	Explain the 2D and 3D transformations, clipping algorithm, Manufacturing models and Metrics
CO2	Explain the fundamentals of parametric curves, surfaces and Solids
CO3	Summarize the different types of Standard systems used in CAD
CO4	Apply NC & CNC programming concepts to develop part programme for Lathe & Milling Machines
CO5	Summarize the different types of techniques used in Cellular Manufacturing and FMS

20154C64 **FINITE ELEMENT ANALYSIS**

L	T	P	C
3	2	0	4

OBJECTIVES:

- To introduce the concepts of Mathematical Modeling of Engineering Problems.
- To appreciate the use of FEM to a range of Engineering Problems.

UNIT I INTRODUCTION 9+6

Historical Background – Mathematical Modeling of field problems in Engineering – Governing Equations – Discrete and continuous models – Boundary, Initial and Eigen Value problems– Weighted Residual Methods – Variational Formulation of Boundary Value Problems – Ritz Technique – Basic concepts of the Finite Element Method.

UNIT II ONE-DIMENSIONAL PROBLEMS 9+6

One Dimensional Second Order Equations – Discretization – Element types- Linear and Higher order Elements – Derivation of Shape functions and Stiffness matrices and force vectors- Assembly of Matrices - Solution of problems from solid mechanics and heat transfer. Longitudinal vibration frequencies and mode shapes. Fourth Order Beam Equation –Transverse deflections and Natural frequencies of beams.

UNIT III TWO DIMENSIONAL SCALAR VARIABLE PROBLEMS 9+6

Second Order 2D Equations involving Scalar Variable Functions – Variational formulation –Finite Element formulation – Triangular elements – Shape functions and element matrices and vectors. Application to Field Problems - Thermal problems – Torsion of Non circular shafts –Quadrilateral elements – Higher Order Elements.

UNIT IV TWO DIMENSIONAL VECTOR VARIABLE PROBLEMS 9+6

Equations of elasticity – Plane stress, plane strain and axisymmetric problems – Body forces and temperature effects – Stress calculations - Plate and shell elements.

UNIT V ISOPARAMETRIC FORMULATION 9+6

Natural co-ordinate systems – Isoparametric elements – Shape functions for iso parametric elements – One and two dimensions – Serendipity elements – Numerical integration and application to plane stress problems - Matrix solution techniques – Solutions Techniques to Dynamic problems – Introduction to Analysis Software.

TOTAL : 45+30=75 PERIODS

OUTCOMES

CO1 Summarize the basics of finite element formulation.
CO2 Apply finite element formulations to solve one dimensional Problems.
CO3 Apply finite element formulations to solve two dimensional scalar Problems.
CO4 Apply finite element method to solve two dimensional Vector problems.
CO5 Apply finite element method to solve problems on iso parametric element and dynamic Problems.

20154C65 **HYDRAULICS AND PNEUMATICS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide student with knowledge on the application of fluid power in process, construction and manufacturing Industries.
- To provide students with an understanding of the fluids and components utilized in modern industrial fluid power system.
- To develop a measurable degree of competence in the design, construction and operation of fluid power circuits.

UNIT I FLUID POWER PRINICIPLES AND HYDRAULIC PUMPS 9

Introduction to Fluid power – Advantages and Applications – Fluid power systems – Types offluids - Properties of fluids and selection – Basics of Hydraulics – Pascal's Law – Principles of flow - Friction loss – Work, Power and Torque Problems, Sources of Hydraulic power : Pumping Theory – Pump Classification – Construction, Working, Design, Advantages, Disadvantages, Performance, Selection criteria of Linear and Rotary – Fixed and Variable displacement pumps – Problems.

UNIT II HYDRAULIC ACTUATORS AND CONTROL COMPONENTS 9

Hydraulic Actuators: Cylinders – Types and construction, Application, Hydraulic cushioning – Hydraulic motors - Control Components : Direction Control, Flow control and pressure control valves – Types, Construction and Operation – Servo and Proportional valves – Applications – Accessories : Reservoirs, Pressure Switches – Applications – Fluid Power ANSI Symbols – Problems.

UNIT III HYDRAULIC CIRCUITS AND SYSTEMS 9

Accumulators, Intensifiers, Industrial hydraulic circuits – Regenerative, Pump Unloading, Double-Pump, Pressure Intensifier, Air-over oil, Sequence, Reciprocation, Synchronization, Fail-Safe, Speed Control, Hydrostatic transmission, Electro hydraulic circuits, Mechanical hydraulic servo systems.

UNIT IV PNEUMATIC AND ELECTRO PNEUMATIC SYSTEMS 9

Properties of air – Perfect Gas Laws – Compressor – Filters, Regulator, Lubricator, Muffler, Air control Valves, Quick Exhaust Valves, Pneumatic actuators, Design of Pneumatic circuit – Cascade method – Electro Pneumatic System – Elements – Ladder diagram – Problems, Introduction to fluidics and pneumatic logic circuits.

UNIT V TROUBLE SHOOTING AND APPLICATIONS 9

Installation, Selection, Maintenance, Trouble Shooting and Remedies in Hydraulic and Pneumatic systems, Design of hydraulic circuits for Drilling, Planning, Shaping, Surface grinding, Press and Forklift applications. Design of Pneumatic circuits for Pick and Place applications and tool handling in CNC Machine tools – Low cost Automation – Hydraulic and Pneumatic power packs.

TOTAL:45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the Fluid power and operation of different types of pumps.

CO2 Summarize the features and functions of Hydraulic motors, actuators and Flow control valves

CO3 Explain the different types of Hydraulic circuits and systems

CO4 Explain the working of different pneumatic circuits and systems

CO5 Summarize the various trouble shooting methods and applications of hydraulic and pneumatic systems.

TEXT BOOKS:

20154L67 **CAD / CAM LABORATORY**

L	T	P	C
0	0	3	2

OBJECTIVES:

- To gain practical experience in handling 2D drafting and 3D modelling software systems.
- To study the features of CNC Machine Tool.
- To expose students to modern control systems (Fanuc, Siemens etc.,)
- To know the application of various CNC machines like CNC lathe, CNC Vertical Machining centre, CNC EDM and CNC wire-cut and studying of Rapid prototyping.

LIST OF EXPERIMENTS

1. 3D GEOMETRIC MODELLING **23 PERIODS**

List of Experiments

1. Introduction of 3D Modelling software

Creation of 3D assembly model of following machine elements using 3D Modelling software

2. Flange Coupling
3. Plummer Block
4. Screw Jack
5. Lathe Tailstock
6. Universal Joint
7. Machine Vice
8. Stuffing box
9. Crosshead
10. Safety Valves
11. Non-return valves
12. Connecting rod
13. Piston
14. Crankshaft

* Students may also be trained in manual drawing of some of the above components

2. Manual Part Programming. **22 PERIODS**

(i) Part Programming - CNC
Machining Centre a) Linear Cutting.
b) Circular cutting.
c) Cutter Radius
Compensation. d) Canned
Cycle Operations.
(ii) Part Programming - CNC Turning
Centre a) Straight, Taper and Radius
Turning.
b) Thread Cutting.
c) Rough and Finish Turning
Cycle. d) Drilling and
Tapping Cycle.

3. Computer Aided Part Programming

e) CL Data and Post process generation using CAM packages.
f) Application of CAPP in Machining and Turning Centre.

TOTAL: 45 PERIODS

OUTCOMES

CO1 Draw 3D and Assembly drawing using CAD software
CO2 Demonstrate manual part programming with G and M codes using CAM

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Qty
HARDWARE		
1.	Computer Server	1
2.	Computer nodes or systems (High end CPU with atleast 1 GB main memory) networked to the server	30
3.	A3 size plotter	1
4.	Laser Printer	1
5.	CNC Lathe	1
6.	CNC milling machine	1
SOFTWARE		
7.	Any High end integrated modeling and manufacturing CAD / CAM software	15 licenses
8.	CAM Software for machining centre and turning centre (CNC Programming and tool path simulation for FANUC / Sinumeric and Heidenhain controller)	15 licenses
9.	Licensed operating system	Adequate
10.	Support for CAPP	Adequate

20154L68 DESIGN AND FABRICATION PROJECT

L	T	P	C
0	0	3	2

OBJECTIVE:

- The main objective is to give an opportunity to the student to get hands on training in the fabrication of one or more components of a complete working model, which is designed by them.

GUIDELINE FOR REVIEW AND EVALUATION

The students may be grouped into 2 to 4 and work under a project supervisor. The device/ system/component(s) to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

TOTAL : 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 design and Fabricate the machine element or the mechanical product.

CO2 demonstrate the working model of the machine element or the mechanical product.

20154L69 **PROFESSIONAL COMMUNICATION**

L	T	P	C
0	0	2	1

OBJECTIVES: The course aims to:

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

UNIT I

Introduction to Soft Skills-- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Time Management—General awareness of Current Affairs

UNIT II

Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice— presenting the visuals effectively – 5 minute presentations

UNIT III

Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstorming the topic -— questioning and clarifying –GD strategies- activities to improve GD skills

UNIT IV

Interview etiquette – dress code – body language – attending job interviews– telephone/skype interview -one to one interview &panel interview – FAQs related to job interviews

UNIT V

Recognizing differences between groups and teams- managing time-managing stress- networking professionally- respecting social protocols-understanding career management-developing a long- term career plan-making career changes

TOTAL : 30 PERIODS

OUTCOMES: At the end of the course Learners will be able to:

- Make effective presentations
- Participate confidently in Group Discussions.
- Attend job interviews and be successful in them.
- Develop adequate Soft Skills required for the workplace

Recommended Software

1. Globearena
2.Win English

20154C71 **POWER PLANT ENGINEERING**

L	T	P	C
4	0	0	4

OBJECTIVE:

- Providing an overview of Power Plants and detailing the role of Mechanical Engineers in their operation and maintenance.

UNIT I COAL BASED THERMAL POWER PLANTS 15

Rankine cycle - improvisations, Layout of modern coal power plant, Super Critical Boilers, FBC Boilers, Turbines, Condensers, Steam & Heat rate, Subsystems of thermal power plants – Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems.

UNIT II DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS 15

Otto, Diesel, Dual & Brayton Cycle - Analysis & Optimisation. Components of Diesel and Gas Turbine power plants. Combined Cycle Power Plants. Integrated Gasifier based Combined Cycle systems.

UNIT III NUCLEAR POWER PLANTS 15

Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors : Boil*ing Water Reactor* (BWR), P*ressurized Water Reactor* (PWR), CANada Deuterium- Uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants.

UNIT IV POWER FROM RENEWABLE ENERGY 15

Hydro Electric Power Plants – Classification, Typical Layout and associated components including Turbines. Principle, Construction and working of Wind, Tidal, *Solar* Photo Voltaic (SPV), Solar Thermal, Geo Thermal, Biogas and Fuel Cell power systems.

UNIT V ENERGY, ECONOMIC AND ENVIRONMENTAL ISSUES OF POWER PLANTS 15

Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, relative merits & demerits, Capital & Operating Cost of different power plants. Pollution control technologies including Waste Disposal Options for Coal and Nuclear Power Plants.

TOTAL : 60 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the layout, construction and working of the components inside a thermal power plant.

CO2 Explain the layout, construction and working of the components inside a Diesel, Gas and Combined cycle power plants.

CO3 Explain the layout, construction and working of the components inside nuclear power plants.

CO4 Explain the layout, construction and working of the components inside Renewable energy power plants.

CO5 Explain the applications of power plants while extend their knowledge to power plant economics and environmental hazards and estimate the costs of electrical energy production.

TEXT BOOK:

1. Nag. P.K., "Power Plant Engineering", Third Edition, Tata McGraw – Hill Publishing Company Ltd., 2008.

REFERENCES:

20154C72 **PROCESS PLANNING AND COST ESTIMATION**

L	T	P	C
3	2	0	4

OBJECTIVE:

- To introduce the process planning concepts to make cost estimation for various products after process planning

UNIT I INTRODUCTION TO PROCESS PLANNING 9+6

Introduction- methods of process planning-Drawing interpretation-Material evaluation – steps in process selection-.Production equipment and tooling selection

UNIT II PROCESS PLANNING ACTIVITIES 9+6

Process parameters calculation for various production processes-Selection jigs and fixtures election of quality assurance methods - Set of documents for process planning-Economics of process planning- case studies

UNIT III INTRODUCTION TO COST ESTIMATION 9+6

Importance of costing and estimation –methods of costing-elements of cost estimation –Types of estimates – Estimating procedure- Estimation labor cost, material cost- allocation of over head charges- Calculation of depreciation cost

UNIT IV PRODUCTION COST ESTIMATION 9+6

Estimation of Different Types of Jobs - Estimation of Forging Shop, Estimation of Welding Shop, Estimation of Foundry Shop

UNIT V MACHINING TIME CALCULATION 9+6

Estimation of Machining Time - Importance of Machine Time Calculation- Calculation of Machining Time for Different Lathe Operations ,Drilling and Boring - Machining Time Calculation for Milling, Shaping and Planning -Machining Time Calculation for Grinding.

TOTAL: 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 select the process, equipment and tools for various industrial products.
CO2 prepare process planning activity chart.
CO3 explain the concept of cost estimation.
CO4 compute the job order cost for different type of shop floor.
CO5 calculate the machining time for various machining operations.

20154C73 **MECHATRONICS**

L	T	P	C
4	0	0	4

OBJECTIVE:

- To impart knowledge about the elements and techniques involved in Mechatronics systems which are very much essential to understand the emerging field of automation.

UNIT I INTRODUCTION 12

Introduction to Mechatronics – Systems – Concepts of Mechatronics approach – Need for Mechatronics – Emerging areas of Mechatronics – Classification of Mechatronics. Sensors and Transducers**:** Static and dynamic Characteristics of Sensor, Potentiometers – LVDT – Capacitance sensors – Strain gauges – Eddy current sensor – Hall effect sensor – Temperature sensors – Light sensors

UNIT II MICROPROCESSOR AND MICROCONTROLLER 9+6

Introduction – Architecture of 8085 – Pin Configuration – Addressing Modes –Instruction set, Timing diagram of 8085 – Concepts of 8051 microcontroller – Block diagram,.

UNIT III PROGRAMMABLE PERIPHERAL INTERFACE 9+6

Introduction – Architecture of 8255, Keyboard interfacing, LED display –interfacing, ADC and DAC interface, Temperature Control – Stepper Motor Control – Traffic Control interface.

UNIT IV PROGRAMMABLE LOGIC CONTROLLER 9+6

Introduction – Basic structure – Input and output processing – Programming – Mnemonics – Timers, counters and internal relays – Data handling – Selection of PLC.

UNIT V ACTUATORS AND MECHATRONIC SYSTEM DESIGN 9+6

Types of Stepper and Servo motors – Construction – Working Principle – Advantages and Disadvantages. Design process-stages of design process – Traditional and Mechatronics design concepts – Case studies of Mechatronics systems – Pick and place Robot – Engine Management system – Automatic car park barrier.

TOTAL : 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Discuss the interdisciplinary applications of Electronics, Electrical, Mechanical and Computer Systems for the Control of Mechanical, Electronic Systems and sensor technology.

CO2 Discuss the architecture of Microprocessor and Microcontroller, Pin Diagram, Addressing Modes of Microprocessor and Microcontroller.

CO3 Discuss Programmable Peripheral Interface, Architecture of 8255 PPI, and various device Interfacing

CO4 Explain the architecture, programming and application of programmable logic controllers to problems and challenges in the areas of Mechatronic engineering.

CO5 Discuss various Actuators and Mechatronics system using the knowledge and skills acquired through the course and also from the given case studies

TEXT BOOKS:

20154L77	SIMULATION AND ANALYSIS LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVES:

- To give exposure to software tools needed to analyze engineering problems.
- To expose the students to different applications of simulation and analysis tools.

LIST OF EXPERIMENTS A. SIMULATION

1. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and two variables
2. Use of Matlab to solve simple problems in vibration
3. Mechanism Simulation using Multibody Dynamic software

B. ANALYSIS

1. Force and Stress analysis using link elements in Trusses, cables etc.
2. Stress and deflection analysis in beams with different support conditions.
3. Stress analysis of flat plates and simple shells.
4. Stress analysis of axi – symmetric components.
5. Thermal stress and heat transfer analysis of plates.
6. Thermal stress analysis of cylindrical shells.
7. Vibration analysis of spring-mass systems.
8. Model analysis of Beams.
9. Harmonic, transient and spectrum analysis of simple systems.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 simulate the working principle of air conditioning system, hydraulic and pneumatic cylinder and cam follower mechanisms using MATLAB.

CO2 analyze the stresses and strains induced in plates, brackets and beams and heat transfer problems.

CO3 calculate the natural frequency and mode shape analysis of 2D components and beams.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S. NO.	NAME OF THE EQUIPMENT	Qty.
1	Computer Work Station	15
2	Color Desk Jet Printer	01
3	Multibody Dynamic Software Suitable for Mechanism simulation and analysis	15 licenses
4	C / MATLAB	5 licenses

20154L78 **MECHATRONICS LABORATORY**

L	T	P	C
0	0	3	2

OBJECTIVE:

- To know the method of programming the microprocessor and also the design, modeling & analysis of basic electrical, hydraulic & pneumatic Systems which enable the students to understand the concept of mechatronics.

LIST OF EXPERIMENTS:

1. Assembly language programming of 8085 – Addition – Subtraction – Multiplication – Division – Sorting – Code Conversion.
2. Stepper motor interface.
3. Traffic light interface.
4. Speed control of DC motor.
5. Study of various types of transducers.
6. Study of hydraulic, pneumatic and electro-pneumatic circuits.
7. Modelling and analysis of basic hydraulic, pneumatic and electrical circuits using Software.
8. Study of PLC and its applications.
9. Study of image processing technique.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Demonstrate the functioning of mechatronics system with various pneumatic, hydraulic and electrical systems.

CO2 Demonstrate the functioning of control systems with the help of PLC and microcontrollers.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Sl. No.	NAME OF THE EQUIPMENT	Qty.
1	Basic Pneumatic Trainer Kit with manual and electrical controls/ PLC Control each	1 No.
2	Basic Hydraulic Trainer Kit	1 No
3	Hydraulics and Pneumatics Systems Simulation Software	10 No
4	8051 - Microcontroller kit with stepper motor and drive circuit sets	2 No
5	Image processing system with hardware & software	1 No.

20154L79 **TECHNICALSEMINAR** **L T P C**

0 0 2 1

To enrich the communication skills of the student and presentations of technical topics of interest, this course is introduced. In this course, a student has to present three Technical papers or recent advances in engineering/technology that will be evaluated by a Committee constituted by the Head of the Department.

TOTAL: 30 PERIODS

20154C81 **PRINCIPLES OF MANAGEMENT**

L	T	P	C
3	0	0	3

OBJECTIVE:

- To enable the students to study the evolution of Management, to study the functions and principles of management and to learn the application of the principles in an organization

UNIT I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS 9

Definition of Management – Science or Art – Manager Vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.

UNIT II PLANNING 9

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.

UNIT III ORGANISING 9

Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management.

UNIT IV DIRECTING 9

Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication – communication and IT.

UNIT V CONTROLLING 9

System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

TOTAL: 45 PERIODS

OUTCOME:

- Upon completion of the course, students will be able to have clear understanding of managerial functions like planning, organizing, staffing, leading & controlling and have same basic knowledge on international aspect of management

TEXT BOOKS:

1. JAF Stoner, Freeman R.E and Daniel R Gilbert "Management", 6th Edition, Pearson Education, 2004.
2. Stephen P. Robbins & Mary Coulter, "Management", Prentice Hall (India)Pvt. Ltd., Edition, 10^{th} 2009.

3. Stephen A. Robbins & David A. Decenzo & Mary Coulter, "Fundamentals of Management", 7th Edition, Pearson Education, 2011.
4. Tripathy PC & Reddy PN, "Principles of Management", Tata Mcgraw Hill, 1999
5.

ELECTIVE – I (VI SEMESTER)

20154E66A **AUTOMOBILE ENGINEERING**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

UNIT I VEHICLE STRUCTURE AND ENGINES 9

Types of automobiles vehicle construction and different layouts, chassis, frame and body, Vehicle aerodynamics (various resistances and moments involved), IC engines –components- functions and materials, variable valve timing (VVT).

UNIT II ENGINE AUXILIARY SYSTEMS 9

Electronically controlled gasoline injection system for SI engines, Electronically controlled diesel injection system (Unit injector system, Rotary distributor type and common rail direct injection system), Electronic ignition system (Transistorized coil ignition system, capacitive discharge ignition system), Turbo chargers (WGT, VGT), Engine emission control by three way catalytic converter system, Emission norms (Euro and BS).

UNIT III TRANSMISSION SYSTEMS 9

Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints, Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.

UNIT IV STEERING, BRAKES AND SUSPENSION SYSTEMS 9

Steering geometry and types of steering gear box- Power Steering, Types of Front Axle, Types of Suspension Systems, Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control.

UNIT V ALTERNATIVE ENERGY SOURCES 9

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

- CO1 recognize the various parts of the automobile and their functions and materials.
- CO2 discuss the engine auxiliary systems and engine emission control.
- CO3 distinguish the working of different types of transmission systems.
- CO4 explain the Steering, Brakes and Suspension Systems.
- CO5 predict possible alternate sources of energy for IC Engines.

20154E66B SAFETY IN ENGINEERING INDUSTIRES

L	T	P	C
3	0	0	3

OBJECTIVE

To promote safety in engineering industries for educating the employees and enforcing various labour legislation in order to eliminate the prevailing unsafe condition and correct the usage actions.

UNIT – I PRINCIPLES OF ACCIDENT PREVENTION **9**

Accident Prevention – Causes and Cost of Accident – Laws and regulations – Indian Factories Act governing health and safety of workers.

UNIT – II MACHINE GUARDING **9**

Machine guarding – need, basic requirements and benefits of machine guarding – types of guarding with applications.

UNIT – III

ELECTRICAL SAFETY

Electrical hazards – Shock protections methods – permit to work on electrical lines / installations – use of personal protective equipments.

UNIT – IV

SAFETY IN MATERIAL HANDLING

Material handling – manual and mechanical – material handling equipments – safe use and legal aspects.

UNIT – V

FIRE SAFETY

Fire – Extinguishing fire – Classification of fire – Types of fire extinguishers – Applications – Causes of fire.

REFERENCE:

1) National Safety council manual, Bombay
2) Factories Act 1948
3) Electrical Hazards – B. R. Kamath
4) Safety in the use of electricity, NSC, Bombay.

20154E66C **GAS DYNAMICS AND JET PROPULSION**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basic difference between incompressible and compressible flow.
- To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and Rocket Propulsion.

(Use of Standard Gas Tables permitted)

UNIT I BASIC CONCEPTS AND ISENTROPIC FLOWS 9

Energy and momentum equations of compressible fluid flows – Stagnation states, Mach waves and Mach cone – Effect of Mach number on compressibility – Isentropic flow through variable ducts – Nozzle and Diffusers

UNIT II FLOW THROUGH DUCTS 9

Flows through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) – variation of flow properties.

UNIT III NORMAL AND OBLIQUE SHOCKS 9

Governing equations – Variation of flow parameters across the normal and oblique shocks – Prandtl – Meyer relations – Applications.

UNIT IV JET PROPULSION 9

Theory of jet propulsion – Thrust equation – Thrust power and propulsive efficiency – Operating principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and turbo prop engines.

UNIT V SPACE PROPULSION 9

Types of rocket engines – Propellants-feeding systems – Ignition and combustion – Theory of rocket propulsion – Performance study – Staging – Terminal and characteristic velocity – Applications – space flights.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Apply the concept of compressible flows in variable area ducts.
CO2 Apply the concept of compressible flows in constant area ducts.
CO3 examine the effect of compression and expansion waves in compressible flow.
CO4 use the concept of gas dynamics in Jet Propulsion.
CO5 apply the concept of gas dynamics in Space Propulsion.

TEXT BOOKS:

1. Anderson, J.D., "Modern Compressible flow", 3rd Edition, McGraw Hill, 2012.

20154E66D **FUNDAMENTALS OF NANOSCIENCE** **L T P C**
3 0 0 3

OBJECTIVE:
To learn about basis of nanomaterial science, preparation method, types and application

UNIT I INTRODUCTION 8
Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering- Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilms- multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

UNIT II GENERAL METHODS OF PREPARATION 9
Bottom-up Synthesis-Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

UNIT III NANOMATERIALS 12
Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications- Nanometal oxides-ZnO, TiO2,MgO, ZrO2, NiO, nanoalumina, CaO, AgTiO2, Ferrites, Nanoclays-functionalization and applications-Quantum wires, Quantum dots-preparation, properties and applications.

UNIT IV CHARACTERIZATION TECHNIQUES 9
X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation.

UNIT V APPLICATIONS 7
NanoInfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nanobiotechlogy: nanoprobes in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery.

TOTAL : 45 PERIODS

OUTCOMES:
- Will familiarize about the science of nanomaterials
- Will demonstrate the preparation of nanomaterials
- Will develop knowledge in characteristic nanomaterial

TEXT BOOKS :

1. A.S. Edelstein and R.C. Cammearata, eds., “Nanomaterials: Synthesis, Properties and Applications”, Institute of Physics Publishing, Bristol and Philadelphia, 1996.
2. N John Dinardo, “Nanoscale Characterization of surfaces & Interfaces”, 2nd edition, Weinheim Cambridge, Wiley-VCH, 2000.

20154E74A **RENEWABLE SOURCES OF ENERGY**

L	T	P	C
3	0	0	3

OBJECTIVE:

- At the end of the course, the students are expected to identify the new methodologies / technologies for effective utilization of renewable energy sources.

UNIT I INTRODUCTION **9**

World Energy Use – Reserves of Energy Resources – Environmental Aspects of Energy Utilisation – Renewable Energy Scenario in Tamil nadu, India and around the World – Potentials - Achievements / Applications – Economics of renewable energy systems.

UNIT II SOLAR ENERGY **9**

Solar Radiation – Measurements of Solar Radiation - Flat Plate and Concentrating Collectors – Solar direct Thermal Applications – Solar thermal Power Generation - Fundamentals of Solar Photo Voltaic Conversion – Solar Cells – Solar PV Power Generation – Solar PV Applications.

UNIT III WIND ENERGY **9**

Wind Data and Energy Estimation – Types of Wind Energy Systems – Performance – Site Selection – Details of Wind Turbine Generator – Safety and Environmental Aspects

UNIT IV BIO - ENERGY **9**

Biomass direct combustion – Biomass gasifiers – Biogas plants – Digesters – Ethanol production – Bio diesel – Cogeneration - Biomass Applications

UNIT V OTHER RENEWABLE ENERGY SOURCES **9**

Tidal energy – Wave Energy – Open and Closed OTEC Cycles – Small Hydro-Geothermal Energy – Hydrogen and Storage - Fuel Cell Systems – Hybrid Systems.

TOTAL : 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Discuss the importance and Economics of renewable Energy
CO2 Discuss the method of power generation from Solar Energy
CO3 Discuss the method of power generation from Wind Energy
CO4 Explain the method of power generation from Bio Energy
CO5 Explain the Tidal energy, Wave Energy, OTEC, Hydro energy, Geothermal Energy, Fuel Cells and Hybrid Systems.

TEXT BOOKS:

1. Rai. G.D., "Non Conventional Energy Sources", Khanna Publishers, New Delhi, 2011.
2. Twidell, J.W. & Weir, A., "Renewable Energy Sources", EFN Spon Ltd., UK, 2006.

5. Johnson Gary, L. "Wind Energy Systems", Prentice Hall, New York, 1985

20154E74B **NON CONVENTIONAL MACHINING PROCESSES**

L	T	P	C
3	0	0	3

OBJECTIVE:

- To learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications

UNIT I INTRODUCTION AND MECHANICAL ENERGY BASED PROCESSES 9

Unconventional machining Process – Need – classification – merits, demerits and applications. Abrasive Jet Machining – Water Jet Machining – Abrasive Water Jet Machining - Ultrasonic Machining. (AJM, WJM, AWJM and USM). Working Principles – equipment used – Process parameters – MRR- Applications.

UNIT II THERMAL AND ELECTRICAL ENERGY BASED PROCESSES 9

Electric Discharge Machining (EDM) – Wire cut EDM – Working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool – Power and control Circuits-Tool Wear – Dielectric – Flushing –– Applications. Laser Beam machining and drilling, (LBM), plasma, Arc machining (PAM) and Electron Beam Machining (EBM). Principles – Equipment –Types - Beam control techniques – Applications.

UNIT III CHEMICAL AND ELECTRO-CHEMICAL ENERGY BASED PROCESSES 9

Chemical machining and Electro-Chemical machining (CHM and ECM)- Etchants – Maskant - techniques of applying maskants - Process Parameters – Surface finish and MRR-Applications. Principles of ECM- equipments-Surface Roughness and MRR Electrical circuit-Process Parameters- ECG and ECH - Applications.

UNIT IV ADVANCED NANO FINISHING PROCESSES 9

Abrasive flow machining, chemo-mechanical polishing, magnetic abrasive finishing, magneto rheological finishing, magneto rheological abrasive flow finishing their working principles, equipments, effect of process parameters, applications, advantages and limitations.

UNIT V RECENT TRENDS IN NON-TRADITIONAL MACHINING PROCESSES 9

Recent developments in non-traditional machining processes, their working principles, equipments, effect of process parameters, applications, advantages and limitations. Comparison of non-traditional machining processes.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the need for unconventional machining processes and its classification

CO2 Compare various thermal energy and electrical energy based unconventional machining processes.

CO3 Summarize various chemical and electro-chemical energy based unconventional machining processes.

CO4 Explain various nano abrasives based unconventional machining processes.

CO5 Distinguish various recent trends based unconventional machining processes.

TEXT BOOKS:

1. Vijay.K. Jain "Advanced Machining Processes" Allied Publishers Pvt. Ltd., New Delhi, 2007

20154E74C **OPERATIONS RESEARCH**

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide knowledge and training in using optimization techniques under limited resources for the engineering and business problems.

UNIT I LINEAR MODELS 15

The phase of an operation research study – Linear programming – Graphical method– Simplex algorithm – Duality formulation – Sensitivity analysis.

UNIT II TRANSPORTATION MODELS AND NETWORK MODELS 8

Transportation Assignment Models –Traveling Salesman problem-Networks models – Shortest route – Minimal spanning tree – Maximum flow models –Project network – CPM and PERT networks – Critical path scheduling – Sequencing models.

UNIT III INVENTORY MODELS 6

Inventory models – Economic order quantity models – Quantity discount models – Stochastic inventory models – Multi product models – Inventory control models in practice.

UNIT IV QUEUEING MODELS 6

Queueing models - Queueing systems and structures – Notation parameter – Single server and multi server models – Poisson input – Exponential service – Constant rate service – Infinite population – Simulation.

UNIT V DECISION MODELS 10

Decision models – Game theory – Two person zero sum games – Graphical solution- Algebraic solution– Linear Programming solution – Replacement models – Models based on service life – Economic life– Single / Multi variable search technique – Dynamic Programming – Simple Problem.

TOTAL: 45 PERIODS

OUTCOME:

- Upon completion of this course, the students can able to use the optimization techniques for use engineering and Business problems

TEXT BOOK:

1. Hillier and Libeberman, "Operations Research", Holden Day, 2005
2. Taha H.A., "Operations Research", Sixth Edition, Prentice Hall of India, 2003.

REFERENCES:

1. Bazara M.J., Jarvis and Sherali H., "Linear Programming and Network Flows", John Wiley, 2009.
2. Budnick F.S., "Principles of Operations Research for Management", Richard D Irwin, 1990.
3. Philip D.T. and Ravindran A., "Operations Research", John Wiley, 1992.

5. Tulsian and Pasdey V., "Quantitative Techniques", Pearson Asia, 2002.

20154E74D **TOTAL QUALITY MANAGEMENT** **L T P C**
3 0 0 3

OBJECTIVE:

- To facilitate the understanding of Quality Management principles and process.

UNIT I INTRODUCTION 9

Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention.

UNIT II TQM PRINCIPLES 9

Leadership - Quality Statements, Strategic quality planning, Quality Councils - Employee involvement - Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership - Partnering, Supplier selection, Supplier Rating.

UNIT III TQM TOOLS AND TECHNIQUES I 9

The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark, Bench marking process - FMEA - Stages, Types.

UNIT IV TQM TOOLS AND TECHNIQUES II 9

Quality Circles - Cost of Quality - Quality Function Deployment (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures.

UNIT V QUALITY MANAGEMENT SYSTEM 9

Introduction—Benefits of ISO Registration—ISO 9000 Series of Standards—Sector-Specific Standards—AS 9100, TS16949 and TL 9000-- ISO 9001 Requirements—Implementation—Documentation—Internal Audits—Registration--**ENVIRONMENTAL MANAGEMENT SYSTEM:**

Introduction—ISO 14000 Series Standards—Concepts of ISO 14001—Requirements of ISO 14001—Benefits of EMS.

TOTAL: 45 PERIODS

OUTCOME:

- The student would be able to apply the tools and techniques of quality management to manufacturing and services processes.

TEXT BOOK:

1. Dale H.Besterfiled, Carol B.Michna,Glen H. Besterfield,Mary B.Sacre,Hemant Urdhwareshe and Rashmi Urdhwareshe, "Total Quality Management", Pearson Education Asia, Revised Third Edition, Indian Reprint, Sixth Impression, 2013.

4. ISO 9001-2015 standards

20154E76A	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End of Effectors and Sensors
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics.

UNIT I FUNDAMENTALS OF ROBOT 9

Robot - Definition - Robot Anatomy - Co ordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS 9

Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION 9

Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data-Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications-Inspection, Identification, Visual Serving and Navigation.

UNIT IV ROBOT KINEMATICS AND ROBOT PROGRAMMING 9

Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS 9

RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

- CO1 Explain the concepts of industrial robots, classification, specifications and coordinate systems. Also summarize the need and application of robots in different sectors.
- CO2 Illustrate the different types of robot drive systems as well as robot end effectors.
- CO3 Apply the different sensors and image processing techniques in robotics to improve the ability of robots.
- CO4 Develop robotic programs for different tasks and familiarize with the kinematics motions of robot.
- CO5 Examine the implementation of robots in various industrial sectors and interpolate the economic analysis of robots.

TEXT BOOKS:

20154E76B	DESIGN OF JIGS, FIXTURES AND PRESS TOOLS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the functions and design principles of Jigs, fixtures and press tools
- To gain proficiency in the development of required views of the final design.

UNIT I LOCATING AND CLAMPING PRINCIPLES: 9

Objectives of tool design- Function and advantages of Jigs and fixtures – Basic elements – principles of location – Locating methods and devices – Redundant Location – Principles of clamping – Mechanical actuation – pneumatic and hydraulic actuation Standard parts – Drill bushes and Jig buttons – Tolerances and materials used.

UNIT II JIGS AND FIXTURES 9

Design and development of jigs and fixtures for given component- Types of Jigs – Post, Turnover, Channel, latch, box, pot, angular post jigs – Indexing jigs – General principles of milling, Lathe, boring, broaching and grinding fixtures – Assembly, Inspection and Welding fixtures – Modular fixturing systems- Quick change fixtures.

UNIT III PRESS WORKING TERMINOLOGIES AND ELEMENTS OF CUTTING DIES 9

Press Working Terminologies - operations – Types of presses – press accessories – Computation of press capacity – Strip layout – Material Utilization – Shearing action – Clearances – Press Work Materials – Center of pressure- Design of various elements of dies – Die Block – Punch holder, Die set, guide plates – Stops – Strippers – Pilots – Selection of Standard parts – Design and preparation of four standard views of simple blanking, piercing, compound and progressive dies.

UNIT IV BENDING AND DRAWING DIES 9

Difference between bending and drawing – Blank development for above operations – Types of Bending dies – Press capacity – Spring back – knockouts – direct and indirect – pressure pads – Ejectors – Variables affecting Metal flow in drawing operations – draw die inserts – draw beads- ironing – Design and development of bending, forming, drawing, reverse redrawing and combination dies – Blank development for axisymmetric, rectangular and elliptic parts – Single and double action dies.

UNIT V FORMING TECHNIQUES AND EVALUATION 9

Bulging, Swaging, Embossing, coining, curling, hole flanging, shaving and sizing, assembly, fine Blanking dies – recent trends in tool design- computer Aids for sheet metal forming Analysis – basic introduction - tooling for numerically controlled machines- setup reduction for work holding – Single minute exchange of dies – Poka Yoke.

TOTAL: 45 PERIODS

Note: (Use of P S G Design Data Book is permitted in the University examination)

OUTCOMES:

Upon the completion of this course the students will be able to

CO1	Summarize the different methods of Locating Jigs and Fixtures and Clamping principles
CO2	Design and develop jigs and fixtures for given component
CO3	Discuss the press working terminologies and elements of cutting dies
CO4	Distinguish between Bending and Drawing dies.
CO5	Discuss the different types of forming techniques

TEXT BOOKS:

20154E76C GENERAL ASPECTS OF ENERGY MANAGEMENT AND ENERGY AUDIT

L	T	P	C
3	0	0	3

UNIT 1: ENERGY SCENARIO

Introduction -Primary and Secondary Energy -Commercial Energy and Non commercial Energy-Renewable and Non Renewable Energy-Indian Energy Scenario-Energy Needs of Growing Economy-Long Term Energy Scenario for India-Energy Pricing in India-Energy Sector Reforms-Energy and Environment-Energy Security-Energy Conservation and its Importance-Energy Strategy for the Future.

UNIT II BASICS OF ENERGY AND ENERGY MANAGEMENT

Basics of energy: Definition-Various Forms of Energy-Electrical Energy Basics-Thermal Energy Basics-Units and Conversions.

Energy Management :Definition & Objectives of Energy Management -Energy Audit: Types and Methodology -Energy Audit Reporting Format -Understanding Energy Costs -Benchmarking and energy Performance -Matching Energy Usage to Requirement-Maximising System Efficiency -Fuel and Energy Substitution-Energy Audit Instruments.

UNIT III MATERIAL AND ENERGY BALANCE

Energy Balance: Basic Principles-The Sankey Diagram and its Use-Material Balances-Energy Balances-Method for Preparing Process Flow Chart-Facility as an Energy System How to Carryout Material and Energy (M & E) Balance. Case study.

UNIT IV PROJECT MANAGEMENT

Step in Project management-Project Definition and scope-Technical design-Financing-Contracting-Implementation-Project planning technique-Performance monitoring

UNIT V ENERGY MONITORING AND TARGETING

Energy monitoring: Definition-Elements of Monitoring & Targeting System-A Rationale for Monitoring, Targeting and Reporting -Data and Information Analysis –Relating-Energy Consumption and Production .

TEXT BOOK:

Guide book for National Certification Examination for Energy Management and Energy Auditors.

REFERENCES:

20154E76D **COMPOSITE MATERIALS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the fundamentals of composite material strength and its mechanical behavior
- Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of the fiber.
- Thermo-mechanical behavior and study of residual stresses in Laminates during processing.
- Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronic chips.

UNIT I INTRODUCTION, LAMINA CONSTITUTIVE EQUATIONS & MANUFACTURING 9

Definition –Need – General Characteristics, Applications. Fibers – Glass, Carbon, Ceramic and Aramid fibers. Matrices – Polymer, Graphite, Ceramic and Metal Matrices – Characteristics of fibers and matrices. Lamina Constitutive Equations: Lamina Assumptions – Macroscopic Viewpoint. Generalized Hooke's Law. Reduction to Homogeneous Orthotropic Lamina – Isotropic limit case, Orthotropic Stiffness matrix (Qij), Typical Commercial material properties, Rule of Mixtures. Generally Orthotropic Lamina –Transformation Matrix, Transformed Stiffness. Manufacturing: Bag Moulding Compression Moulding – Pultrusion – Filament Winding – Other Manufacturing Processes

UNIT II FLAT PLATE LAMINATE CONSTITUTE EQUATIONS 9

Definition of stress and Moment Resultants. Strain Displacement relations. Basic Assumptions of Laminated anisotropic plates. Laminate Constitutive Equations – Coupling Interactions, Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli. Evaluation of Lamina Properties from Laminate Tests. Quasi-Isotropic Laminates. Determination of Lamina stresses within Laminates.

UNIT III LAMINA STRENGTH ANALYSIS 9

Introduction - Maximum Stress and Strain Criteria. Von-Misses Yield criterion for Isotropic Materials. Generalized Hill's Criterion for Anisotropic materials. Tsai-Hill's Failure Criterion for Composites. Tensor Polynomial (Tsai-Wu) Failure criterion. Prediction of laminate Failure

UNIT IV THERMAL ANALYSIS 9

Assumption of Constant C.T.E's. Modification of Hooke's Law. Modification of Laminate Constitutive Equations. Orthotropic Lamina C.T.E's. C.T.E's for special Laminate Configurations – Unidirectional, Off-axis, Symmetric Balanced Laminates, Zero C.T.E laminates, Thermally Quasi-Isotropic Laminates

UNIT V ANALYSIS OF LAMINATED FLAT PLATES 9

Equilibrium Equations of Motion. Energy Formulations. Static Bending Analysis. Buckling Analysis. Free Vibrations – Natural Frequencies

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Summarize the various types of Fibers, Equations and manufacturing methods for Composite materials
CO2 Derive Flat plate Laminate equations
CO3 Analyze Lamina strength

CO4 Analyze the thermal behavior of Composite laminates
CO5 Analyze Laminate flat plates

TEXT BOOKS:

1. Gibson, R.F., "Principles of Composite Material Mechanics", Second Edition, McGraw-Hill, CRC press in progress, 1994, -.

20154E82A	PRODUCTION PLANNING AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the various components and functions of production planning and control such as work study, product planning, process planning, production scheduling, Inventory Control.
- To know the recent trends like manufacturing requirement Planning (MRP II) and Enterprise Resource Planning (ERP).

UNIT I INTRODUCTION 9

Objectives and benefits of planning and control-Functions of production control-Types of production- job- batch and continuous-Product development and design-Marketing aspect - Functional aspects- Operational aspect-Durability and dependability aspect aesthetic aspect. Profit consideration- Standardization, Simplification & specialization- Break even analysis-Economics of a new design.

UNIT II WORK STUDY 9

Method study, basic procedure-Selection-Recording of process - Critical analysis, Development - Implementation - Micro motion and memo motion study – work measurement - Techniques of work measurement - Time study - Production study - Work sampling - Synthesis from standard data - Predetermined motion time standards.

UNIT III PRODUCT PLANNING AND PROCESS PLANNING 9

Product planning-Extending the original product information-Value analysis-Problems in lack of product planning-Process planning and routing-Pre requisite information needed for process planning- Steps in process planning-Quantity determination in batch production-Machine capacity, balancing- Analysis of process capabilities in a multi product system.

UNIT IV PRODUCTION SCHEDULING 9

Production Control Systems-Loading and scheduling-Master Scheduling-Scheduling rules-Gantt charts-Perpetual loading-Basic scheduling problems - Line of balance – Flow production scheduling- Batch production scheduling-Product sequencing – Production Control systems- Periodic batch control-Material requirement planning kanban – Dispatching-Progress reporting and expediting- Manufacturing lead time-Techniques for aligning completion times and due dates.

UNIT V INVENTORY CONTROL AND RECENT TRENDS IN PPC 9

Inventory control-Purpose of holding stock-Effect of demand on inventories-Ordering procedures. Two bin system - Ordering cycle system-Determination of Economic order quantity and economic lot size- ABC analysis - Recorder procedure-Introduction to computer integrated production planning systems- elements of JUST IN TIME SYSTEMS-Fundamentals of MRP II and ERP.

TOTAL: 45 PERIODS

OUTCOMES:

- Upon completion of this course, the students can able to prepare production planning and control activities such as work study, product planning, production scheduling, Inventory Control.
- They can plan manufacturing requirements manufacturing requirement Planning (MRP II) and Enterprise Resource Planning (ERP).

TEXT BOOKS:

1. James. B. Dilworth, "Operations management – Design, Planning and Control for manufacturing and services" Mcgraw Hill International edition 1992.

8. Upendra Kachru, “ Production and Operations Management – Text and cases” 1st Edition, Excel books 2007

20154E82B	COMPUTER INTEGRATED MANUFACTURING SYSTEMS	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To understand the application of computers in various aspects of Manufacturing viz., Design, Proper planning, Manufacturing cost, Layout & Material Handling system.

UNIT I INTRODUCTION 9

Brief introduction to CAD and CAM – Manufacturing Planning, Manufacturing control- Introduction to CAD/CAM – Concurrent Engineering-CIM concepts – Computerised elements of CIM system – Types of production - Manufacturing models and Metrics – Mathematical models of Production Performance – Simple problems – Manufacturing Control – Simple Problems – Basic Elements of an Automated system – Levels of Automation – Lean Production and Just-In-Time Production.

UNIT II PRODUCTION PLANNING AND CONTROL AND COMPUTERISED PROCESS PLANNING 9

Process planning – Computer Aided Process Planning (CAPP) – Logical steps in Computer Aided Process Planning – Aggregate Production Planning and the Master Production Schedule – Material Requirement planning – Capacity Planning- Control Systems-Shop Floor Control-Inventory Control – Brief on Manufacturing Resource Planning-II (MRP-II) & Enterprise Resource Planning (ERP) - Simple Problems.

UNIT III CELLULAR MANUFACTURING 9

Group Technology(GT), Part Families – Parts Classification and coding – Simple Problems in Opitz Part Coding system – Production flow Analysis – Cellular Manufacturing – Composite part concept – Machine cell design and layout – Quantitative analysis in Cellular Manufacturing – Rank Order Clustering Method - Arranging Machines in a GT cell – Hollier Method – Simple Problems.

UNIT IV FLEXIBLE MANUFACTURING SYSTEM (FMS) AND AUTOMATED GUIDED VEHICLE SYSTEM (AGVS) 9

Types of Flexibility - FMS – FMS Components – FMS Application & Benefits – FMS Planning and Control – Quantitative analysis in FMS – Simple Problems. Automated Guided Vehicle System (AGVS) – AGVS Application – Vehicle Guidance technology – Vehicle Management & Safety.

UNIT V INDUSTRIAL ROBOTICS 9

Robot Anatomy and Related Attributes – Classification of Robots- Robot Control systems – End Effectors – Sensors in Robotics – Robot Accuracy and Repeatability - Industrial Robot Applications – Robot Part Programming – Robot Accuracy and Repeatability – Simple Problems.

TOTAL : 45 PERIODS

OUTCOMES:

CO1 Explain the basic concepts of CAD, CAM and computer integrated manufacturing systems
CO2 Summarize the production planning and control and computerized process planning
CO3 Differentiate the different coding systems used in group technology
CO4 Explain the concepts of flexible manufacturing system (FMS) and automated guided vehicle (AGV) system

CO5 Classification of robots used in industrial applications

TEXT BOOKS:

1. Mikell.P.Groover "Automation, Production Systems and Computer Integrated Manufacturing", Prentice Hall of India, 2008.
2. Radhakrishnan P, Subramanyan S.and Raju V., "CAD/CAM/CIM", 2nd Edition, New Age International (P) Ltd, New Delhi, 2000.

REFERENCES:

20154E82C	ENERGY EFFICIENCY IN THERMAL UTILITIES	L	T	P	C
		3	0	0	3

UNIT 1: FUELS AND COMBUSTION

9

Introduction to Fuels -Properties of Liquid Fuels -Properties of Coal -Properties of Gaseous Fuels -Properties of Agro Residues -Combustion -Combustion of Oil Combustion of Coal -Combustion of Gas -Draft System -Combustion Controls.

9

UNIT2: BOILERS

Introduction -Boiler Systems -Boiler Types and Classifications -Performance Evaluation of Boilers -Boiler Blowdown -Boiler Water Treatment -Energy Conservation Opportunities -Case Study.

9

UNIT3: STEAM SYSTEM

Introduction-Properties of Steam -Steam Distribution -Steam Pipe Sizing and Design-Proper Selection, Operation and Maintenance of Steam Traps -Performance Assessment Methods for Steam Traps-Energy Saving Opportunities.

9

UNIT4: FURNACES AND INSULATION

Types and Classification of Different Furnaces-Performance Evaluation of a Typical Furnace -General Fuel Economy Measures in Furnaces -Case Study -Purpose of Insulation -Types and Application -Calculation of Insulation Thickness Economic Thickness of Insulation(ETI) -Simplified Formula for Heat Loss Calculation.

9

UNIT 5: FBC BOILERS, COGENERATION AND WASTE HEAT RECOVERY

Introduction -Mechanism of Fluidised Bed Combustion -Types of Fluidised Bed Combustion Boilers -Retrofitting of FBC Systems to Conventional Boilers -Advantages of Fluidised Bed Combustion Boilers-Need for Cogeneration - Principle of Cogeneration -Technical Options for Cogeneration -Classification of Cogeneration Systems -Factors Influencing Cogeneration Choice -Case Study -Introduction -Classification and Application -Benefits of Waste Heat Recovery - Development of a Waste Heat Recovery System -Commercial Waste Heat Recovery Devices.

TOTAL: 45 PERIODS

TEXT BOOK:

Guide book for National Certification Examination for Energy Managers and Energy Auditors-Bureau of Energy Efficiency

REFERENCE BOOK :

1. Smith, CB Energy Management Principles, Pergamon Press, New York 1981
2. www.bee-india.com

20154E82D **PROFESSIONAL ETHICS IN ENGINEERING** **L T P C**
3 0 0 3

OBJECTIVE:

- To enable the students to create an awareness on Engineering Ethics and Human Values to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNIT I HUMAN VALUES 10

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION 9

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS 9

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT V GLOBAL ISSUES 8

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility.

TOTAL: 45 PERIODS

OUTCOME:

- Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

TEXT BOOKS:

1. Govindarajan M, Natarajan S, Senthil Kumar V. S, "Engineering Ethics", Prentice Hall of India, New Delhi, 2004.

OPEN ELECTIVE–I

20150FE54A **DATABASE MANAGEMENT SYSTEMS**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To learn the fundamentals of data models
- To learn conceptual modeling using ER diagrams.
- To study SQL queries and database programming
- To learn proper designing of relational database.
- To understand database security concepts
- To understand Information retrieval techniques

UNIT I DBMS AND CONCEPTUAL DATA MODELING 9

Purpose of Database System – Data independence - Data Models – Database System Architecture – Conceptual Data modeling: ER models - Enhanced-ER Model. Introduction to relational databases – Relational Model – Keys – ER-to-Relational Mapping. Modeling of a library management system.

UNIT II DATABASE QUERYING **11**

Relational Algebra – SQL: fundamentals – DDL – Specifying integrity constraints - DML – Basic retrieval queries in SQL - Complex SQL retrieval queries – nested queries – correlated queries – joins - aggregate functions. Creating a table, populating data, adding integrity constraints, querying tables with simple and complex queries.

UNIT III DATABASE PROGRAMMING **9**

Database programming with function calls, stored procedures - views – triggers. Embedded SQL. ODBC connectivity with front end tools. Implementation using ODBC/JDBC and SQL/PSM, implementing functions, views, and triggers in MySQL / Oracle.

UNIT IV SUSPENSION AND BRAKES SYSTEMS **9**

Functional Dependencies – Design guidelines – Normal Forms: first, second, third – Boyce/Codd Normal Form – Normalization algorithms. Design of a banking database system / university database system.

UNIT V ALTERNATIVE ENERGY SOURCES **9**

Database security issues – Discretionary access control – role based access – Encryption and public key infrastructures – challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- understand relational data model, evolve conceptual model of a given problem, its mapping to relational model and Normalization
- query the relational database and write programs with database connectivity
- understand the concepts of database security and information retrieval systems
-

TEXTBOOKS:

Ramez Elmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Sixth Edition , Pearson, 2011.

2. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Sixth Edition, Tata McGraw Hill, 2011

20150FE54B **CLOUD COMPUTING**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn about the concept of cloud and utility computing.
- To have knowledge on the various issues in cloud computing.
- To be familiar with the lead players in cloud.
- To appreciate the emergence of cloud as the next generation computing paradigm.

UNIT I INTRODUCTION TO CLOUD COMPUTING 9

Introduction to Cloud Computing – Roots of Cloud Computing – Desired Features of Cloud Computing – Challenges and Risks – Benefits and Disadvantages of Cloud Computing.

UNIT II VIRTUALIZATION **9**

Introduction to Virtualization Technology – Load Balancing and Virtualization – Understanding Hypervisor – Seven Layers of Virtualization – Types of Virtualization – Server, Desktop, Application Virtualization.

UNIT III CLOUD ARCHITECTURE, SERVICES AND STORAGE **9**

NIST Cloud Computing Reference Architecture – Public, Private and Hybrid Clouds - laaS – PaaS – SaaS – Architectural Design Challenges – Cloud Storage.

UNIT IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD **9**

Inter Cloud Resource Management – Resource Provisioning Methods – Security Overview – Cloud Security Challenges – Data Security –Application Security – Virtual Machine Security.

UNIT V CASE STUDIES **9**

Google App Engine(GAE) – GAE Architecture – Functional Modules of GAE – Amazon Web Services(AWS) – GAE Applications – Cloud Software Environments – Eucalyptus – Open Nebula – Open Stack.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
- Learn the key and enabling technologies that help in the development of cloud.
- Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.
- Explain the core issues of cloud computing such as resource management and security.
- Be able to install and use current cloud technologies.
- Choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.

TEXTBOOKS:

1. Buyya R., Broberg J., Goscinski A., “Cloud Computing: Principles and Paradigm”, First Edition, John Wiley & Sons, 2011.
2. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
3. Rittinghouse, John W., and James F. Ransome, “Cloud Computing: Implementation, Management, And Security”, CRC Press, 2017.

20152FE54A **BASICS OF BIOMEDICAL INSTRUMENTATION**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To study about the different bio potential and its propagation
- To understand the different types of electrodes and its placement for various recording
- To study the design of bio amplifier for various physiological recording
- To learn the different measurement techniques for non-physiological parameters.
- To familiarize the different biochemical measurements.
-

UNIT I BIO POTENTIAL GENERATION AND ELECTRODES TYPES 9

Origin of bio potential and its propagation. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits. Recording problems - measurement with two electrodes

UNIT II BIOSIGNAL CHARACTERISTICS AND ELECTRODECONFIGURATIONS **9**

Biosignals characteristics – frequency and amplitude ranges. ECG – Einthoven"s triangle, standard 12 lead system. EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG– unipolar and bipolar mode.

UNIT III SIGNAL CONDITIONING CIRCUITS **9**

Need for bio-amplifier - differential bio-amplifier, Impedance matching circuit, isolation amplifiers, Power line interference, Right leg driven ECG amplifier, Band pass filtering

UNIT IV MEASUREMENT OF NON-ELECTRICALPARAMETERS **10**

Temperature, respiration rate and pulse rate measurements. Blood Pressure: indirect methods - Auscultatory method, direct methods: electronic manometer, Systolic, diastolic pressure, Blood flow and cardiac output measurement: Indicator dilution, and dye dilution method, ultrasound blood flow measurement.

UNIT V BIO-CHEMICAL MEASUREMENT **8**

Blood gas analyzers and Non-Invasive monitoring, colorimeter, Sodium Potassium Analyser, spectrophotometer, blood cell counter, auto analyzer (simplified schematic description).

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- To Learn the different bio potential and its propagation.
- CO2: To get Familiarize the different electrode placement for various physiological recording
- CO3: Students will be able design bio amplifier for various physiological recording
- CO4: Students will understand various technique non electrical physiogical measurements

CO5: Understand the different biochemical measurements

TEXTBOOKS:

1. Leslie Cromwell, "Biomedical Instrumentation and measurement", Prentice hall of India, New Delhi, 2007.
2. John G. Webster, "Medical Instrumentation Application and Design", John Wiley and sons, New York, 2004. (Units I, II & V)

20153FE54A

INDUSTRIAL NANOTECHNOLOGY

L	T	P	C
3	0	0	3

OBJECTIVES:

- To elucidate on advantages of nanotechnology based applications in each industry
- To provide instances of contemporary industrial applications of nanotechnology
- To provide an overview of future technological advancements and increasing role of nanotechnology in each industry

UNIT I NANO ELECTRONICS 9

Advantages of nano electrical and electronic devices –Electronic circuit chips – Lasers - Micro and NanoElectromechanical systems – Sensors, Actuators, Optical switches,- Data memory – Lighting and Displays – Batteries - Fuel cells and Photo-voltaic cells – Electric double layer capacitors – Lead-free solder – Nanoparticle coatings for electrical products.

UNIT II BIONANOTECHNOLOGY **9**

Nanoparticles in bone substitutes and dentistry – Implants and Prosthesis – Nanorobotics in Surgery –Nanosensors in Diagnosis– Neuro-electronic Interfaces– Therapeutic applications.

UNIT III TRANSMISSION SYSTEMS **9**

Nanocatalyts – Smart materials – Heterogenous nanostructures and composites – Nanostructures for Molecular recognition (Quantum dots, Nanorods, Nanotubes) – Molecular Encapsulation and its applications – Nanoporous zeolites – Self-assembled Nanoreactors.

UNIT IV SUSPENSION AND BRAKES SYSTEMS **9**

Nanotechnology in Agriculture -Precision farming, Smart delivery system – Insecticides using nanotechnology – Potential of nano-fertilizers - Nanotechnology in Food industry

UNIT V ALTERNATIVE ENERGY SOURCES **9**

Nanofibre production - Electrospinning – Controlling morphologies of nanofibers – Tissue engineering application– Polymer nanofibers - Nylon-6 nanocomposites from polymerization - Nano-filled polypropylene fibers - Nano finishing in textiles (UV resistant, antibacterial, hydrophilic, self-cleaning, flame retardant finishes) – Modern textiles Cosmetics – Formulation of Gels, Shampoos, Hair-conditioners

TOTAL : 45 PERIODS

20153FE54B **ENERGY CONSERVATION AND MANAGEMENT**

L	T	P	C
3	0	0	3

OBJECTIVES:

Understand and analyse the energy data of industries
 Carryout energy accounting and balancing
 Conduct energy audit and suggest methodologies for energy savings and
 Utilise the available resources in optimal ways

•

UNIT I INTRODUCTION 9

Energy - Power – Past & Present scenario of World; National Energy consumption Data – Environmental aspects associated with energy utilization – Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Instruments for energy auditing.

UNIT II ELECTRICAL SYSTEMS **9**

Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors, Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope of Encon in Illumination.

UNIT III THERMAL SYSTEMS **9**

Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and encon measures. Steam: Distribution &U sage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories

UNIT IV ENERGY CONSERVATION IN MAJOR UTILITIES **9**

Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems – Cooling Towers – D.G. sets

UNIT V ECONOMICS **9**

Energy Economics – Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing –ESCO concept

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- **to analyse the energy data of industries.**
- Can carryout energy accounting and balancing
- Can suggest methodologies for energy savings
-

TEXTBOOKS:

Energy Manager Training Manual (4 Volumes) available at www.energymanager training.com,a website administered by Bureau of Energy Efficiency (BEE), a statutory body under Ministry of Power, Government of India, 2004.

20154FE54A

RENEWABLE ENERGY SOURCES

L	T	P	C
3	**0**	**0**	**3**

OBJECTIVES:

- To get exposure on solar radiation and its environmental impact to power.
- To know about the various collectors used for storing solar energy.
- To know about the various applications in solar energy.
- To learn about the wind energy and biomass and its economic aspects.
- To know about geothermal energy with other energy sources.

UNIT I PRINCIPLES OF SOLAR RADIATION 10

Role and potential of new and renewable source, the solar energy option, Environmental impact of solar power, physics of the sun, the solar constant, extraterrestrial and terrestrial solar radiation, solar radiation on titled surface, instruments for measuring solar radiation and sun shine, solar radiation data.

UNIT II SOLAR ENERGY COLLECTION 8

Flat plate and concentrating collectors, classification of concentrating collectors, orientation and thermal analysis, advanced collectors.

UNIT III SOLAR ENERGY STORAGE AND APPLICATIONS 7

Different methods, Sensible, latent heat and stratified storage, solar ponds. Solar Applications- solar heating/cooling technique, solar distillation and drying, photovoltaic energy conversion.

UNIT IV WIND ENERGY 10

Sources and potentials, horizontal and vertical axis windmills, performance characteristics, Betz criteria BIO-MASS: Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, I.C.Engine operation and economic aspects.

UNIT V GEOTHERMAL ENERGY 9

Resources, types of wells, methods of harnessing the energy, potential in India. OCEAN ENERGY: OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques, mini-hydel power plants, and their economics. DIRECT ENERGY CONVERSION: Need for DEC, Carnot cycle, limitations, principles of DEC.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Understanding the physics of solar radiation.
- Ability to classify the solar energy collectors and methodologies of storing solar energy.

- Knowledge in applying solar energy in a useful way.
- Knowledge in wind energy and biomass with its economic aspects.

  Knowledge in capturing and applying other forms of energy sources like wind, biogas and geothermal energies.

TEXTBOOKS:

1. Rai G.D. , “Non-Conventional Energy Sources”, Khanna Publishers, 2011
2. Twidell & Wier, “Renewable Energy Resources”, CRC Press (Taylor & Francis), 2011

20154FE54B **AUTOMOTIVE SYSTEMS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

UNIT I AUTOMOTIVE ENGINE AUXILIARY SYSTEMS 9

Automotive engines- External combustion engines –Internal combustion engines -classification of engines- SI Engines- CI Engines- two stroke engines -four stroke engines- construction and working principles - IC engine components- functions and materials -valve timing –port timing diagram- Injection system -Unit injector system- Rotary distributor type - Electronically controlled injection system for SI engines-CI engines-Ignition system - Electronic ignition system -Transistorized ignition system, capacitive discharge ignition system.

UNIT II VEHICLE FRAMES AND STEERING SYSTEM **9**

Vehicle construction and different Chassis layouts –classifications of chassis- types of frames-frameless chassis construction –articulated vehicles- vehicle body - Vehicle aerodynamics-various resistances and its effects - steering system –conventional –sophisticated vehicle- and types of steering gear box-Power Steering- Steering geometry-condition for true rolling motion-Ackermann's- Devi's steering system - types of stub axle – Types of rear axles.

UNIT III TRANSMISSION SYSTEMS **9**

Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints –-Hotchkiss Drive and Torque Tube Drive- rear axle- Differential-wheels and tyres.

UNIT IV SUSPENSION AND BRAKES SYSTEMS **9**

Suspension Systems- conventional Suspension Systems -independent Suspension Systems –leaf spring – coil spring –taper-lite - eligo,s spring Types of brakes -Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control. Derive the equation of Forces acting while applying a brakes on plain surface - inclined road-gradient .

UNIT V ALTERNATIVE ENERGY SOURCES **9**

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell. Turbo chargers -Engine emission control by three way catalytic converter system.
Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Upon completion of this course, the students will be able to identify the different components in automobile engineering.
- Have clear understanding on different auxiliary and transmission systems usual.

TEXTBOOKS:

Ganesan V. “Internal Combustion Engines”, Third Edition, Tata McGraw-Hill, 2007.

2. Jain K.K. and Asthana .R.B, “Automobile Engineering” Tata McGraw Hill Publishers, New Delhi, 2002.

20155FE54A **AIR POLLUTION AND CONTROL ENGINEERING**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To impart knowledge on the principle and design of control of Indoor/ particulate/ gaseous air pollutant and its emerging trends.
-

UNIT I NTRODUCTION 7

Structure and composition of Atmosphere – Definition, Scope and Scales of Air Pollution – Sources and classification of air pollutants and their effect on human health, vegetation, animals, property, aesthetic value and visibility- Ambient Air Quality and Emission standards.

UNIT II METEOROLOGY **6**

Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Atmospheric Diffusion Theories – Dispersion models, Plume rise.

UNIT III CONTROL OF PARTICULATE CONTAMINANTS 11

Factors affecting Selection of Control Equipment – Gas Particle Interaction – Working principle - Gravity Separators, Centrifugal separators Fabric filters, Particulate Scrubbers, Electrostatic Precipitators.

UNIT IV CONTROL OF GASEOUS CONTAMINANTS **11**

Factors affecting Selection of Control Equipment – Working principle - absorption, Adsorption, condensation, Incineration, Bio filters – Process control and Monitoring.

UNIT V INDOOR AIR QUALITY MANAGEMENT **10**

Sources, types and control of indoor air pollutants, sick building syndrome and Building related illness- Sources and Effects of Noise Pollution – Measurement – Standards –Control and Preventive measures.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- basic concepts of air quality management
- Ability to identify, formulate and solve air and noise pollution problems
- Ability to design stacks and particulate air pollution control devices to meet applicable standards.
- Ability to select control equipments.
- Ability to ensure quality, control and preventive measures.
-

20155FE54B **GEOGRAPHIC INFORMATION SYSTEM**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To introduce the fundamentals and components of Geographic Information System
- To provide details of spatial data structures and input, management and output
- processes.

UNIT I FUNDAMENTALS OF GIS 9

Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attribute data- types of attributes – scales/ levels of measurements.

UNIT II SPATIAL DATA MODELS **9**

Database Structures – Relational, Object Oriented – ER diagram - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector Models-TIN and GRID data models - OGC standards - Data Quality.

UNIT III DATA INPUT AND TOPOLOGY **9**

Scanner - Raster Data Input – Raster Data File Formats – Vector Data Input –Digitiser –Topology - Adjacency, connectivity and containment – Topological Consistency rules – Attribute Data linking – ODBC – GPS - Concept GPS based mapping.

UNIT IV DATA ANALYSIS **9**

Vector Data Analysis tools - Data Analysis tools - Network Analysis - Digital Education models - 3D data collection and utilisation.

UNIT V APPLICATIONS **9**

GIS Applicant - Natural Resource Management - Engineering - Navigation - Vehicle tracking and fleet management - Marketing and Business applications - Case studies.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- Have basic idea about the fundamentals of GIS.
- Understand the types of data models.
- Get knowledge about data input and topology.
- Gain knowledge on data quality and standards.
- Understand data management functions and data output
-

OPEN ELECTIVEII

20150FE74A INTRODUCTION TO C PROGRAMMING L T P C 3 0 0 3 OBJECTIVES

• To develop C Programs using basic programming constructs • To develop C programs using arrays and strings • To develop applications in C using functions and structures

UNIT I INTRODUCTION 9

Structure of C program – Basics: Data Types – Constants –Variables - Keywords – Operators: Precedence and Associativity - Expressions - Input/Output statements, Assignment statements – Decision-making statements - Switch statement - Looping statements – Pre-processor directives - Compilation process – Exercise Programs: Check whether the required amount can be withdrawn based on the available amount – Menu-driven program to find the area of different shapes – Find the sum of even numbers Text Book: ReemaThareja (Chapters 2,3)

UNIT II ARRAYS 9

Introduction to Arrays – One dimensional arrays: Declaration – Initialization - Accessing elements – Operations: Traversal, Insertion, Deletion, Searching - Two dimensional arrays: Declaration – Initialization - Accessing elements – Operations: Read – Print – Sum – Transpose – Exercise Programs: Print the number of positive and negative values present in the array – Sort the numbers using bubble sort - Find whether the given is matrix is diagonal or not. Text Book: ReemaThareja (Chapters 5)

UNIT III STRINGS 9

Introduction to Strings - Reading and writing a string - String operations (without using built-in string functions): Length – Compare – Concatenate – Copy – Reverse – Substring – Insertion – Indexing – Deletion – Replacement – Array of strings – Introduction to Pointers – Pointer operators – Pointer arithmetic - Exercise programs: To find the frequency of a character in a string - To find the number of vowels, consonants and white spaces in a given text - Sorting the names. Text Book: ReemaThareja (Chapters 6 & 7)

UNIT IV FUNCTIONS 9

Introduction to Functions – Types: User-defined and built-in functions - Function prototype - Function definition - Function call - Parameter passing: Pass by value - Pass by reference - Built-in functions (string functions) – Recursive functions – Exercise programs: Calculate the total amount of power consumed by ‘n’ devices (passing an array to a function) – Menu-driven program to count the numbers which are divisible by 3, 5 and by both (passing an array to a function) – Replace the punctuations from a given sentence by the space character (passing an array to a function) Text Book: ReemaThareja (Chapters 4)

UNIT V STRUCTURES 9

Introduction to structures – Declaration – Initialization – Accessing the members – Nested Structures – Array of Structures – Structures and functions – Passing an entire structure – Exercise programs: Compute the age of a person using structure and functions (passing a structure to a function) – Compute the number of days an employee came late to the office by considering his arrival time for 30 days (Use array of structures and functions) Text Book: ReemaThareja (Chapters 8)

TOTAL:45 PERIODS

OUTCOMES

Upon completion of this course, the students will be able to

• Develop simple applications using basic constructs

• Develop applications using arrays and strings
• Develop applications using functions and structures

TEXT BOOK

1. ReemaThareja, “Programming in C”, Oxford University Press, Second Edition, 2016

REFERENCES:

20150FE74B DATA STRUCTURES AND ALGORITHMS L T P C
3 0 0 3

OBJECTIVES:

- To understand the various algorithm design and analysis techniques
- To learn linear data structures – lists, stacks, and queues
- To learn different sorting and searching algorithms
- To understand Tree and Graph data structures

UNIT I ALGORITHM ANALYSIS, LIST ADT 11

Algorithms: Notation - analysis – running time calculations. Abstract Data Types (ADTs): List ADT – array-based implementation – linked list implementation – singly linked lists- applications of lists: Polynomial Manipulation. Implementation of List ADT using an array and using a linked list in C.

UNIT II STACKS AND QUEUES 7

Stack ADT - Applications - Evaluating arithmetic expressions- Conversion of Infix to Postfix- Recursion. Queue ADT – Priority Queue - applications of queues. Implementation of Stack ADT and palindrome checking using C. Implementation of Queue operations using arrays in C.

UNIT III SEARCHING AND SORTING ALGORITHMS 10

Divide and conquer methodology - Searching: Linear Search - Binary Search. Sorting: Insertion sort – Merge sort – Quick sort – Heap sort. Analysis of searching and sorting techniques. Implementation of linear search, binary search, insertion sort, merge sort and quick sort algorithms in C.

UNIT IV TREES 9

Tree ADT – tree traversals - Binary Tree ADT – expression trees – binary search tree ADT – applications of trees.Heap – applications of heap. Implementation of Binary search tree and its operations, tree traversal methods, finding height of the tree using C. Implementation of heap and heap sorting using arrays in C.

UNIT V GRAPHS 8

Definition – Representation of Graph – Breadth-first traversal - Depth-first traversal – Dynamic programming Technique – Warshall's and Floyd's algorithm – Greedy method - Dijkstra's algorithm – applications of graphs. Implementation of graph, graph traversal methods, finding shortest path using Dijkstra's algorithm in C

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students should be able to:

- Implement linear data structures and solve problems using them
- Implement and apply trees and graphs to solve problems.
- Implement the various searching and sorting algorithms.

TEXT BOOKS:

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", 2^{nd} Edition, Pearson Education,1997.
2. Brian W. Kernighan and Dennis M. Ritchie, "The C Programming Language", 2^{nd} Edition, Pearson Education, 1988.

4. YashvantKanetkar, “Data Structures Through C”, BPB publications, II edition, 2003

20152FE74A **ROBOTICS** **L T P C**
3 0 0 3

OBJECTIVES:
 To understand the functions of the basic components of a Robot. To study the use of various types of End of Effectors and Sensors To impart knowledge in Robot Kinematics and Programming To learn Robot safety issues and economics.

UNIT I FUNDAMENTALS OF ROBOT **6**
Robot - Definition - Robot Anatomy - Co ordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS **9**
Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION **12**
Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.

UNIT IV ROBOT KINEMATICS AND ROBOT PROGRAMMING **13**
Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS **5**
RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

TOTAL: 45 PERIODS OUTCOME:
 Upon completion of this course, the students can able to apply the basic engineering knowledge for the design of robotics

TEXT BOOKS: 1. Klafter R.D., ChmielewskiT.A and Negin M., “Robotic Engineering - An Integrated Approach”, Prentice Hall, 2003. 2. GrooverM.P., “Industrial Robotics -Technology Programming and Applications”, McGraw Hill, 2001.

20152FE74B ELECTRONIC DEVICES L T P C 3 0 0 3

OBJECTIVES:

The student should be made to:

- Introduce the concept of diodes, Bipolar Junction Transistors and FET
- Study the various model parameters of Transistors
- Learn the concept of special semiconductor devices, Power & Display devices
- Impart the knowledge of various configurations, characteristics and applications.

UNIT I SEMICONDUCTOR DIODE 9

PN junction diode, Current equations, Energy Band diagram, Diffusion and drift current densities, forward and reverse bias characteristics, Transition and Diffusion Capacitances, Switching Characteristics, Breakdown in PN Junction Diodes.

UNIT II BIPOLAR JUNCTION TRANSISTORS 9

NPN -PNP -Operations-Early effect-Current equations – Input and Output characteristics of CE, CB, CC - Hybrid -p model - h-parameter model, Ebers Moll Model- GummelPoonmodel, Multi Emitter Transistor.

UNIT III FIELD EFFECT TRANSISTORS 9

JFETs – Drain and Transfer characteristics,-Current equations-Pinch off voltage and its significance- MOSFET- Characteristics- Threshold voltage -Channel length modulation, DMOSFET, E-MOSFET- Characteristics – Comparison of MOSFET with JFET.

UNIT IV SPECIAL SEMICONDUCTOR DEVICES 9

Metal-Semiconductor Junction - MESFET, FINFET, PINFET, CNTFET, DUAL GATE MOSFET, Point Contact Diode, p-i-n Diode, Avalanche Photodiode, Schottky barrier diodeZener diode-Varactor diode – Tunnel diode- Gallium Arsenide device, LASER diode, LDR.

UNIT V POWER DEVICES AND DISPLAY DEVICES 9

UJT, Thyristor - SCR, Diac, Triac, Power BJT- Power MOSFET- DMOS-VMOS. LED, LCD, Opto Coupler, Solar cell, CCD.

TOTAL: 45 PERIODS

OUTCOMES:

After this course, the student should be able to:

- Analyze the characteristics of semiconductor diodes.
- Analyze and solve problems of Transistor circuits using model parameters.
- Identify and characterize diodes and various types of transistors.
- Analyze the characteristics of special semiconductor devices.
- Analyze the characteristics of Power and Display devices.

20153FE74B INTRODUCTION TO RENEWABLE ENERGY SYSTEMS L T P C

3 0 0 3

OBJECTIVES:

To Provide knowledge

- About the stand alone and grid connected renewable energy systems.
- Design of power converters for renewable energy applications.
- Wind electrical generators and solar energy systems.
- Power converters used for renewable energy systems.

UNIT I INTRODUCTION 9

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.

UNIT II ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION

Reference theory fundamentals-principle of operation and analysis: IG and PMSG 9

UNIT III POWER CONVERTERS 9

Solar: Block diagram of solar photo voltaic system -Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing Wind: Three phase AC voltage controllers

UNIT IV ANALYSIS OF WIND AND PV SYSTEMS 9

Stand alone operation of fixed and variability speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system

UNIT V HYBRID RENEWABLE ENERGY SYSTEMS 9

Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).

TOTAL : 45 PERIODS

OUTCOMES:

- Ability to understand and analyze power system operation, stability, control and protection.
- Ability to handle the engineering aspects of electrical energy generation and utilization.
- Ability to understand the stand alone and grid connected renewable energy systems.
- Ability to design of power converters for renewable energy applications.
- Ability to acquire knowledge on wind electrical generators and solar energy systems.
- Ability to design power converters used for hybrid renewable energy systems.

TEXT BOOK:

1. S. N. Bhadra, D.Kastha, S.Banerjee, “Wind Electrical Systems”, Oxford University Press, 2005.

20155FE74B **WASTE WATER TREATMENT** **L T P C**
3 0 0 3

OBJECTIVES

- To make the student conversant with the water treatment methods including adsorption and oxidation process.
- To provide basic under standings about the requirements of water, its preliminary treatment.

UNIT I WATER QUALITY AND PRELIMINARY TREATMENT 9

Water Quality-physical- chemical and biological parameters of water- water quality requirement - potable water standards -wastewater effluent standards -water quality indices. Water purification systems in natural systems- physical processes-chemical processes and biological processes- primary, secondary and tertiary treatment-Unit operations-unit processes. Mixing, clarification - sedimentation; Types; aeration and gas transfer – coagulation and flocculation, coagulation processes - stability of colloids - destabilization of colloids- transport of colloidal particles, clariflocculation.

UNIT II INDUSTRIAL WATER TREATMENT 9

Filtration – size and shape characteristics of filtering media – sand filters hydraulics of filtration – design considerations – radial, upflow, highrate and multimedia filters, pressure filter. Water softening – lime soda, zeolite and demineralization processes – industrial water treatment for boilers.

UNIT III CONVENTIONAL TREATMENT METHODS 9

Taste and odour control – adsorption – activated carbon treatment – removal of color – iron and manganese removal – aeration, oxidation, ion exchange and other methods – effects of fluorides – fluoridation and defluoridation –desalination - corrosion prevention and control – factors influencing corrosion – Langelier index – corrosion control measures.

UNIT IV WASTEWATER TREATMENT 9

Wastewater treatment – pre and primary treatment – equalization neutralization – screening and grid removal – sedimentation – oil separation gas stripping of volatile organics – biological oxidation – lagoons and stabilization basins – aerated lagoons – activated sludge process – trickling filtration – anaerobic decomposition.

UNIT V ADSORPTION AND OXIDATION PROCESSES 9

Chemical process – adsorption – theory of adsorption – ion exchange process – chemical oxidation – advanced oxidation process – sludge handling and disposal – miscellaneous treatment processes.

TOTAL: 45 PERIODS

OUTCOMES

- Will have knowledge about adsorption and oxidation process.
- Will gain idea about various methods available for water treatment.
- Will appreciate the necessity of water and acquire knowledge of preliminary treatment.

191VEA19 VALUE EDUCATION

	L	T	P	C
	0	**0**	**0**	**1**

UNIT – I

Concept of Human Values, Value Education Towards Personal Development

Aim of education and value education; Evolution of value oriented education; Concept of Human values; types of values; Components of value education.

Personal Development :

Self analysis and introspection; sensitization towards gender equality, physically challenged, intellectually challenged. Respect to - age, experience, maturity, family members, neighbours, co-workers.

Character Formation Towards Positive Personality:

Truthfulness, Constructivity, Sacrifice, Sincerity, Self Control, Altruism, Tolerance, Scientific Vision.

UNIT – II

Value Education Towards National and Global Development National and International Values:

Constitutional or national values - Democracy, socialism, secularism, equality, justice, liberty, freedom and fraternity.

Social Values - Pity and probity, self control, universal brotherhood.
Professional Values - Knowledge thirst, sincerity in profession, regularity, punctuality and faith.
Religious Values - Tolerance, wisdom, character.
Aesthetic values - Love and appreciation of literature and fine arts and respect for the same.
National Integration and international understanding.

UNIT – III Impact of Global Development on Ethics and Values

Conflict of cross-cultural influences, mass media, cross-border education, materialistic values, professional challenges and compromise.

Modern Challenges of Adolescent Emotions and behavior; Sex and spirituality: Comparision and competition; positive and negative thoughts.

Adolescent Emotions, arrogance, anger, sexual instability, selfishness, defiance.

UNIT - IV Theraupatic Measures

Control of the mind through
a. Simplified physical exercise
b. Meditation – Objectives, types, effect on body, mind and soul
c. Yoga – Objectives, Types, Asanas

d. Activities:
- (i) Moralisation of Desires
- (ii) Neutralisation of Anger
- (iii)Eradication of Worries
- (iv) Benefits of Blessings

UNIT; V Human Rights

1. Concept of Human Rights – Indian and International Perspectives
    a. Evolution of Human Rights
    b. Definitions under Indian and International documents

2. Broad classification of Human Rights and Relevant Constitutional Provisions.
    a. Right to Life, Liberty and Dignity
    b. Right to Equality
    c. Right against Exploitation
    d. Cultural and Educational Rights
    e. Economic Rights
    f. Political Rights
    g. Social Rights

3. Human Rights of Women and Children
    a. Social Practice and Constitutional Safeguards
        (i) Female Foeticide and Infanticide
        (ii) Physical assault and harassment
        (iii) Domestic violence
        (iv) Conditions of Working Women

4. Institutions for Implementation
    a. Human Rights Commission
    b. Judiciary

5. Violations and Redressel
    a. Violation by State
    b. Violation by Individuals
    c. Nuclear Weapons and terrorism
    d. Safeguards.

191ICA29 FUNDAMENTALS OF INDIAN CONSTITUTION AND ECONOMY L P T C

1 0 0 1

UNIT-I: THE MAKING OF INDIAN CONSTITUTION

The Constituent Assembly: Organization- Character- Work-Salient feature of the constitution- Writtern and detailed constitution- Socialism- Secularism- Democracy and Republic.

UNIT-II: FUNDAMENTAL RIGHTS AND FUNDAMENTAL DUTIES OF THE CITIZENS

Right of equality- Right of freedom-Right against exploitation-Right to freedom of religion- Cultural and Educational rights-Right to constitutional remedies- Fundamental duties.

UNIT-III: DIRECTIVE PRINCIPLES OF STATE POLICY

Socialistic principles- Gandhian principles- Liberal and general principles-Differences between Fundamental Rights and Directive principles

UNIT-IV: THE UNION EXECUTIVE, UNION PARLIAMENT AND SUPREME COURT

Powers and Positions of the president- Qualification-Method of election of president and Vice President- Prime minister- Rajya sabha- Lok sabha- The Supreme Court- High Court- Functions and Positions of Supreme Court and High Court.

UNIT V: STATE COUNCIL- ELECTION SYSTEM AND PARLIMENTARY DEMOCRACY IN INDIA

State Council of Ministers- Chief Minister- Election Systems in India- Main Features-Election Commission – Features of Indian Democracy.

		L	T	P	C
19154L39	INTERPERSONAL SKILLS/LISTENING & SPEAKING	0	0	2	1

OBJECTIVES: The Course will enable learners to:

- Equip students with the English language skills required for the successful undertaking of academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage in specific academic speaking activities.
- improve general and academic listening skills
- Make effective presentations.

UNIT I

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation - pronunciation basics taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances.

UNIT II

Listen to a process information- give information, as part of a simple explanation - conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics.

UNIT III

Lexical chunking for accuracy and fluency- factors influence fluency, deliver a five-minute informal talk - greet - respond to greetings - describe health and symptoms - invite and offer - accept - decline - take leave - listen for and follow the gist- listen for detail

UNIT IV

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizing academic readings and lectures conversational speech listening to and participating in conversations - persuade.

UNIT V

Formal and informal talk - listen to follow and respond to explanations, directions and instructions in academic and business contexts - strategies for presentations and interactive communication - group/pair presentations - negotiate disagreement in group work.

TOTAL : 30 PERIODS

OUTCOMES: At the end of the course Learners will be able to:

- Listen and respond appropriately.
- Participate in group discussions
- Make effective presentations
- Participate confidently and appropriately in conversations both formal and informal

19154L47 PRODUCTION TECHNOLOGY LABORATORY – II

L	T	P	C
0	0	3	2

OBJECTIVE:

- To Study and acquire knowledge on various basic machining operations in special purpose machines and its applications in real life manufacture of components in the industry

LIST OF EXPERIMENTS:

1. Contour milling using vertical milling machine
2. Spur gear cutting in milling machine
3.
4. Helical Gear Cutting in milling machine
5. Gear generation in hobbing machine
6. Gear generation in gear shaping machine
7. Plain Surface grinding
8. Cylindrical grinding
9. Tool angle grinding with tool and Cutter Grinder
10. Measurement of cutting forces in Milling / Turning Process
11. CNC Part Programming

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 use different machine tools to manufacturing gears
CO2 Ability to use different machine tools to manufacturing gears.
CO3 Ability to use different machine tools for finishing operations
CO4 Ability to manufacture tools using cutter grinder
CO5 Develop CNC part programming

TOTAL: 45

PERIODS LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	NAME OF THE EQUIPMENT	Qty.
1	Turret and Capstan Lathes	1 No each
2	Horizontal Milling Machine	2 No
3	Vertical Milling Machine	1 No
4	Surface Grinding Machine	1 No.
5	Cylinderical Grinding Machine	1 No.
6	Radial Drilling Machine	1 No.
7	lathe Tool Dynamometer	1 No
8	Milling Tool Dynamometer	1 No
9	Gear Hobbing Machine	1 No
10	Tool Makers Microscope	1 No

19154L48	STRENGTH OF MATERIALS AND FLUID MECHANICS AND MACHINERY LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVES:

- To study the mechanical properties of materials when subjected to different types of loading.
- To verify the principles studied in Fluid Mechanics theory by performing experiments in lab.

STRENGTH OF MATERIALS **23**

LIST OF EXPERIMENTS

1. Tension test on a mild steel rod
2. Double shear test on Mild steel and Aluminium rods
3. Torsion test on mild steel rod
4. Impact test on metal specimen
5. Hardness test on metals - Brinnell and Rockwell Hardness Number
6. Deflection test on beams
7. Compression test on helical springs
8. Strain Measurement using Rosette strain gauge
9. Effect of hardening- Improvement in hardness and impact resistance of steels.
10. Tempering- Improvement Mechanical properties Comparison
    (i) Unhardened specimen
    (ii) Quenched Specimen and
    (iii) Quenched and tempered specimen.
11. Microscopic Examination of
    (i) Hardened samples and
    (ii) Hardened and tempered samples.

OUTCOME:

- Ability to perform Tension, Torsion, Hardness, Compression, and Deformation test on Solid materials.

LIST OF EQUIPMENT FOR BATCH OF 30 STUDENTS

S.No.	NAME OF THE EQUIPMENT	Qty.
1	Universal Tensile Testing machine with double 1 shear attachment – 40 Ton Capacity	1
2	Torsion Testing Machine (60 NM Capacity)	1
3	Impact Testing Machine (300 J Capacity)	1
4	Brinell Hardness Testing Machine	1
5	Rockwell Hardness Testing Machine	1
6	Spring Testing Machine for tensile and compressive loads (2500 N)	1
7	Metallurgical Microscopes	3
8	Muffle Furnace (800 C)	1

FLUID MECHANICS AND MACHINES LABORATORY **22**

LIST OF EXPERIMENTS

1. Determination of the Coefficient of discharge of given Orifice meter.
2. Determination of the Coefficient of discharge of given Venturi meter.
3. Calculation of the rate of flow using Rota meter.
4. Determination of friction factor for a given set of pipes.
5. Conducting experiments and drawing the characteristic curves of centrifugal pump/ submergible pump
6. Conducting experiments and drawing the characteristic curves of reciprocating pump.

7. Conducting experiments and drawing the characteristic curves of Gear pump.
8. Conducting experiments and drawing the characteristic curves of Pelton wheel.
9. Conducting experiments and drawing the characteristics curves of Francis turbine.
10. Conducting experiments and drawing the characteristic curves of Kaplan turbine.

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of this course, the students will be able to:

- Perform Tension, Torsion, Hardness, Compression, and Deformation test on Solid materials.
- Use the measurement equipments for flow measurement.
- Perform test on different fluid machinery.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S. NO.	NAME OF THE EQUIPMENT	Qty.
1	Orifice meter setup	1
2	Venturi meter setup	1
3	Rotameter setup	1
4	Pipe Flow analysis setup	1
5	Centrifugal pump/submergible pump setup	1
6	Reciprocating pump setup	1
7	Gear pump setup	1
8	Pelton wheel setup	1
9	Francis turbine setup	1
10	Kaplan turbine setup	1

19154L 49	ADVANCED READING AND WRITING	L	T	P	C
		0	0	2	1

OBJECTIVES:
- Strengthen the reading skills of students of engineering.
- Enhance their writing skills with specific reference to technical writing.
- Develop students' critical thinking skills.
- Provide more opportunities to develop their project and proposal writing skills.

UNIT I

Reading - Strategies for effective reading-Use glosses and footnotes to aid reading comprehension-Read and recognize different text types-Predicting content using photos and title Writing-Plan before writing- Develop a paragraph: topic sentence, supporting sentences, concluding sentence –Write a descriptive paragraph

UNIT II

Reading-Read for details-Use of graphic organizers to review and aid comprehension Writing-State reasons and examples to support ideas in writing- Write a paragraph with reasons and examples- Write an opinion paragraph

UNIT III

Reading- Understanding pronoun reference and use of connectors in a passage- speed reading techniques-Writing- Elements of a good essay-Types of essays- descriptive-narrative- issue-based-argumentative-analytical.

UNIT IV

Reading- Genre and Organization of Ideas- Writing- Email writing- resumes – Job application- project writing-writing convincing proposals.

UNIT V

Reading- Critical reading and thinking- understanding how the text positions the reader- identify
Writing- Statement of Purpose- letter of recommendation- Vision statement

TOTAL: 30 PERIODS

OUTCOMES: At the end of the course Learners will be able to:
- Write different types of essays.
- Write winning job applications.
- Read and evaluate texts critically.
- Display critical thinking in various professional contexts.

TEXT BOOKS:

1. Debra Daise, CharlNorloff, and Paul Carne Reading and Writing (Level 4) Oxford University Press: Oxford, 2011
2. Gramer F. Margot and Colin S. Ward Reading and Writing (Level 3) Oxford University Press: Oxford, 2011

19154C52 **DESIGN OF MACHINE ELEMENTS**

L	T	P	C
3	2	0	4

OBJECTIVES

- To familiarize the various steps involved in the Design Process
- To understand the principles involved in evaluating the shape and dimensions of a component to satisfy functional and strength requirements.
- To learn to use standard practices and standard data
- To learn to use catalogues and standard machine components
- (Use of P S G Design Data Book is permitted)

UNIT I STEADY STRESSES AND VARIABLE STRESSES IN MACHINE MEMBERS 9+6

Introduction to the design process - factors influencing machine design, selection of materials based on mechanical properties - Preferred numbers, fits and tolerances – Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading – curved beams – crane hook and 'C' frame- Factor of safety - theories of failure – Design based on strength and stiffness – stress concentration – Design for variable loading.

UNIT II SHAFTS AND COUPLINGS 9+6

Design of solid and hollow shafts based on strength, rigidity and critical speed – Keys, keyways and splines - Rigid and flexible couplings.

UNIT III TEMPORARY AND PERMANENT JOINTS 9+6

Threaded fastners - Bolted joints including eccentric loading, Knuckle joints, Cotter joints – Welded joints, riveted joints for structures - theory of bonded joints.

UNIT IV ENERGY STORING ELEMENTS AND ENGINE COMPONENTS 9+6

Various types of springs, optimization of helical springs - rubber springs - Flywheels considering stresses in rims and arms for engines and punching machines- Connecting Rods and crank shafts.

UNIT V BEARINGS 9+6

Sliding contact and rolling contact bearings - Hydrodynamic journal bearings, Sommerfeld Number, Raimondi and Boyd graphs, -- Selection of Rolling Contact bearings.

TOTAL: 45+30= 75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the influence of steady and variable stresses in machine component design.
CO2 Apply the concepts of design to shafts, keys and couplings.
CO3 Apply the concepts of design to temporary and permanent joints.
CO4 Apply the concepts of design to energy absorbing members, connecting rod and crank shaft.
CO5 Apply the concepts of design to bearings.

TEXT BOOKS:

1. Bhandari V, "Design of Machine Elements", 4th Edition, Tata McGraw-Hill Book Co, 2016.

19154C53	METROLOGY AND MEASUREMENTS	L	T	P	C
		4	0	0	4

OBJECTIVES:

- To provide knowledge on various Metrological equipments available to measure the dimension of the components.
- To provide knowledge on the correct procedure to be adopted to measure the dimension of the components.

UNIT I BASICS OF METROLOGY 12

Introduction to Metrology – Need – Elements – Work piece, Instruments – Persons – Environment – their effect on Precision and Accuracy – Errors – Errors in Measurements – Types – Control – Types of standards.

UNIT II LINEAR AND ANGULAR MEASUREMENTS 12

Linear Measuring Instruments – Evolution – Types – Classification – Limit gauges – gauge design – terminology – procedure – concepts of interchange ability and selective assembly – Angular measuring instruments – Types – Bevel protractor clinometers angle gauges, spirit levels sine bar – Angle alignment telescope – Autocollimator – Applications.

UNIT III ADVANCES IN METROLOGY 12

Basic concept of lasers Advantages of lasers – laser Interferometers – types – DC and AC Lasers interferometer – Applications – Straightness – Alignment. Basic concept of CMM – Types of CMM

– Constructional features – Probes – Accessories – Software – Applications – Basic concepts of Machine Vision System – Element – Applications.

UNIT IV FORM MEASUREMENT 12

Principles and Methods of straightness – Flatness measurement – Thread measurement, gear measurement, surface finish measurement, Roundness measurement – Applications.

UNIT V MEASUREMENT OF POWER, FLOW AND TEMPERATURE 12

Force, torque, power - mechanical , Pneumatic, Hydraulic and Electrical type. Flow measurement: Venturimeter, Orifice meter, rotameter, pitot tube – Temperature: bimetallic strip, thermocouples, electrical resistance thermometer – Reliability and Calibration – Readability and Reliability.

TOTAL : 60 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Describe the concepts of measurements to apply in various metrological instruments

CO2 Outline the principles of linear and angular measurement tools used for industrial Applications

CO3 Explain the procedure for conducting computer aided inspection

CO4 Demonstrate the techniques of form measurement used for industrial components

CO5 Discuss various measuring techniques of mechanical properties in industrial applications

19154L57 **THERMAL ENGINEERING LABORATORY**

L	T	P	C
0	0	3	2

OBJECTIVES:

- To study the value timing-V diagram and performance of IC Engines
- To Study the characteristics of fuels/Lubricates used in IC Engines
- To study the Performance of steam generator/ turbine
- To study the heat transfer phenomena predict the relevant coefficient using implementation
- To study the performance of refrigeration cycle / components

LIST OF EXPERIMENTS

I.C. ENGINE LAB

1. Valve Timing and Port Timing diagrams.
2. Actual p-v diagrams of IC engines.
3. Performance Test on 4 – stroke Diesel Engine.
4. Heat Balance Test on 4 – stroke Diesel Engine.
5. Morse Test on Multi-cylinder Petrol Engine.
6. Retardation Test on a Diesel Engine.
7. Determination of Flash Point and Fire Point of various fuels / lubricants.

STEAM LAB

1. Study on Steam Generators and Turbines.
2. Performance and Energy Balance Test on a Steam Generator.
3. Performance and Energy Balance Test on Steam Turbine.

HEAT TRANSFER LAB:

1. Thermal conductivity measurement using guarded plate apparatus.
2. Thermal conductivity measurement of pipe insulation using lagged pipe apparatus.
3. Determination of heat transfer coefficient under natural convection from a vertical cylinder.
4. Determination of heat transfer coefficient under forced convection from a tube.
5. Determination of Thermal conductivity of composite wall.
6. Determination of Thermal conductivity of insulating powder.
7. Heat transfer from pin-fin apparatus (natural & forced convection modes)
8. Determination of Stefan – Boltzmann constant.
9. Determination of emissivity of a grey surface.
10. Effectiveness of Parallel / counter flow heat exchanger.

REFRIGERATION AND AIR CONDITIONING LAB

1. Determination of COP of a refrigeration system
2. Experiments on Psychrometric processes
3. Performance test on a reciprocating air compressor
4. Performance test in a HC Refrigeration System
5. Performance test in a fluidized Bed Cooling Tower

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 conduct tests on heat conduction apparatus and evaluate thermal conductivity of materials.

CO2 conduct tests on natural and forced convective heat transfer apparatus and evaluate heat transfer coefficient.

CO3 conduct tests on radiative heat transfer apparatus and evaluate Stefan Boltzmann constant and emissivity.
CO4 conduct tests to evaluate the performance of parallel/counter flow heat exchanger apparatus and reciprocating air compressor.
CO5 conduct tests to evaluate the performance of refrigeration and airconditioning test rigs.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

	NAME OF THE EQUIPMENT	**Qty.**
1	I.C Engine – 2 stroke and 4 stroke model	1 set
2	Apparatus for Flash and Fire Point	1 No.
3	4-stroke Diesel Engine with mechanical loading.	1 No
4	4-stroke Diesel Engine with hydraulic loading.	1 No.
5	4-stroke Diesel Engine with electrical loading.	1 No.
6	Multi-cylinder Petrol Engine	1 No.
7	Single cylinder Petrol Engine	1 No.
8	Data Acquisition system with any one of the above engines	1 No.
9	Steam Boiler with turbine setup	1 No.

S.No.	**NAME OF THE EQUIPMENT**	**Qty.**
1	Guarded plate apparatus	1 No.
2	Lagged pipe apparatus	1 No.
3	Natural convection-vertical cylinder apparatus	1 No.
4	Forced convection inside tube apparatus	1 No.
5	Composite wall apparatus	1 No.
6	Thermal conductivity of insulating powder apparatus	1 No.
7	Pin-fin apparatus	1 No.
8	Stefan-Boltzmann apparatus	1 No.
9	Emissivity measurement apparatus	1 No.
10	Parallel/counter flow heat exchanger apparatus	1 No.
11	Single/two stage reciprocating air compressor	1 No.
12	Refrigeration test rig	1 No.
13	Air-conditioning test rig	1 No.

19154L58	METROLOGY AND MEASUREMENTS LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVE:

- To familiar with different measurement equipments and use of this industry for quality inspection.

LIST OF EXPERIMENTS

1. Calibration and use of measuring instruments – Vernier caliper, micrometer, Vernier height gauge – using gauge blocks
2. Calibration and use of measuring instruments – depth micrometer, bore gauge, telescopic gauge
3. Measurement of linear dimensions using Comparators
4. Measurement of angles using bevel protractor and sine bar
5. Measurement of screw thread parameters – Screw thread Micrometers and Three wire method '(floating carriage micrometer)
6. Measurement of gear parameters – disc micrometers, gear tooth vernier caliper
7. Measurement of features in a prismatic component using Coordinate Measuring Machine (CMM)
8. Programming of CNC Coordinate Measuring Machines for repeated measurements of identical components
9. Non-contact (Optical) measurement using Toolmaker's microscope / Profile projector and Video measurement system
10. Measurement of Surface finish in components manufactured using various processes (turning, milling, grinding, etc.,) using stylus based instruments.
11. Machine tool metrology – Level tests using precision level; Testing of straightness of a machine tool guide way using Autocollimator, spindle tests.
12. Measurement of force, torque and temperature

TOTAL: 45 PERIODS

OUTCOMES

Upon the completion of this course the students will be able to

CO1 Measure the gear tooth dimensions, angle using sine bar, straightness and flatness, thread parameters, temperature using thermocouple, force, displacement, torque and vibration.

CO2 Calibrate the vernier, micrometer and slip gauges and setting up the comparator for the inspection.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	NAME OF THE EQUIPMENT	Qty.
1	Micrometer	5
2	Vernier Caliper	5
3	Vernier Height Gauge	2
4	Vernier depth Gauge	2
5	Slip Gauge Set	1
6	Gear Tooth Vernier	1
7	Sine Bar	1
8	Floating Carriage Micrometer	1
9	Profile Projector / Tool Makers Microscope	1
10	Parallel / counter flow heat exchanger apparatus	1
11	Mechanical / Electrical / Pneumatic Comparator	1
12	Autocollimator	1
13	Temperature Measuring Setup	1

14	Force Measuring Setup	1
15	Torque Measuring Setup	1
16	Coordinate measuring machine	1
17	Surface finish measuring equipment	1
18	Bore gauge	1
19	Telescope gauge	1

19154C61 **DESIGN OF TRANSMISSION SYSTEMS**

L	T	P	C
3	2	0	4

OBJECTIVES:

- To gain knowledge on the principles and procedure for the design of Mechanical power Transmission components.
- To understand the standard procedure available for Design of Transmission of Mechanical elements
- To learn to use standard data and catalogues (Use of P S G Design Data Book permitted)

UNIT I DESIGN OF FLEXIBLE ELEMENTS 9+6

Design of Flat belts and pulleys - Selection of V belts and pulleys – Selection of hoisting wire ropes and pulleys – Design of Transmission chains and Sprockets.

UNIT II SPUR GEARS AND PARALLEL AXIS HELICAL GEARS 9+6

Speed ratios and number of teeth-Force analysis -Tooth stresses - Dynamic effects – Fatigue strength - Factor of safety - Gear materials – Design of straight tooth spur & helical gears based on strength and wear considerations – Pressure angle in the normal and transverse plane-Equivalent number of teeth-forces for helical gears.

UNIT III BEVEL, WORM AND CROSS HELICAL GEARS 9+6

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits-terminology. Thermal capacity, materials-forces and stresses, efficiency, estimating the size of the worm gear pair. Cross helical: Terminology-helix angles-Estimating the size of the pair of cross helical gears.

UNIT IV GEAR BOXES 9+6

Geometric progression - Standard step ratio - Ray diagram, kinematics layout -Design of sliding mesh gear box - Design of multi speed gear box for machine tool applications - Constant mesh gear box - Speed reducer unit. – Variable speed gear box, Fluid Couplings, Torque Converters for automotive applications.

UNIT V CAMS, CLUTCHES AND BRAKES 9+6

Cam Design: Types-pressure angle and under cutting base circle determination-forces and surface stresses. Design of plate clutches –axial clutches-cone clutches-internal expanding rim clutches-Electromagnetic clutches. Band and Block brakes - external shoe brakes – Internal expanding shoe brake.

TOTAL : 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 apply the concepts of design to belts, chains and rope drives.
CO2 apply the concepts of design to spur, helical gears.
CO3 apply the concepts of design to worm and bevel gears.
CO4 apply the concepts of design to gear boxes .
CO5 apply the concepts of design to cams, brakes and clutches

TEXT BOOKS:

19154C62 **COMPUTER AIDED DESIGN AND MANUFACTURING** **L T P C**

3 2 0 4

OBJECTIVES:

- To provide an overview of how computers are being used in mechanical component design
- To understand the application of computers in various aspects of Manufacturing viz., Design, Proper planning, Manufacturing cost, Layout & Material Handling system.

UNIT I INTRODUCTION 9+6

Product cycle- Design process- sequential and concurrent engineering- Computer aided design – CAD system architecture- Computer graphics – co-ordinate systems- 2D and 3D transformations-homogeneous coordinates - Line drawing -Clipping- viewing transformation-Brief introduction to CAD and CAM – Manufacturing Planning, Manufacturing control- Introduction to CAD/CAM – CAD/CAM concepts —Types of production - Manufacturing models and Metrics – Mathematical models of Production Performance

UNIT II GEOMETRIC MODELING 9+6

Representation of curves- Hermite curve- Bezier curve- B-spline curves-rational curves-Techniques for surface modeling – surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid modeling techniques- CSG andB-rep

UNIT III CAD STANDARDS 9+6

Standards for computer graphics- Graphical Kernel System (GKS) - standards for exchange images- Open Graphics Library (OpenGL) - Data exchange standards - IGES, STEP, CALS etc. - communication standards.

UNIT IV FUNDAMENTAL OF CNC AND PART PROGRAMING 9+6

Introduction to NC systems and CNC - Machine axis and Co-ordinate system- CNC machine tools-Principle of operation CNC- Construction features including structure- Drives and CNC controllers- 2D and 3D machining on CNC- Introduction of Part Programming, types - Detailed Manual part programming on Lathe & Milling machines using G codes and M codes- Cutting Cycles, Loops, Sub program and Macros- Introduction of CAM package.

UNIT V CELLULAR MANUFACTURING AND FLEXIBLE MANUFACTURING SYSTEM (FMS) 9+6

Group Technology(GT),Part Families–Parts Classification and coding–Simple Problems in Opitz Part Coding system–Production flow Analysis–Cellular Manufacturing–Composite part concept–Types of Flexibility - FMS – FMS Components – FMS Application & Benefits – FMS Planning and Control– Quantitative analysis in FMS

TOTAL : 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1	Explain the 2D and 3D transformations, clipping algorithm, Manufacturing models and Metrics
CO2	Explain the fundamentals of parametric curves, surfaces and Solids
CO3	Summarize the different types of Standard systems used in CAD
CO4	Apply NC & CNC programming concepts to develop part programme for Lathe & Milling Machines
CO5	Summarize the different types of techniques used in Cellular Manufacturing and FMS

19154C64 **FINITE ELEMENT ANALYSIS**

L	T	P	C
3	2	0	4

OBJECTIVES:

- To introduce the concepts of Mathematical Modeling of Engineering Problems.
- To appreciate the use of FEM to a range of Engineering Problems.

UNIT I INTRODUCTION 9+6

Historical Background – Mathematical Modeling of field problems in Engineering – Governing Equations – Discrete and continuous models – Boundary, Initial and Eigen Value problems– Weighted Residual Methods – Variational Formulation of Boundary Value Problems – Ritz Technique – Basic concepts of the Finite Element Method.

UNIT II ONE-DIMENSIONAL PROBLEMS 9+6

One Dimensional Second Order Equations – Discretization – Element types- Linear and Higher order Elements – Derivation of Shape functions and Stiffness matrices and force vectors- Assembly of Matrices - Solution of problems from solid mechanics and heat transfer. Longitudinal vibration frequencies and mode shapes. Fourth Order Beam Equation –Transverse deflections and Natural frequencies of beams.

UNIT III TWO DIMENSIONAL SCALAR VARIABLE PROBLEMS 9+6

Second Order 2D Equations involving Scalar Variable Functions – Variational formulation –Finite Element formulation – Triangular elements – Shape functions and element matrices and vectors. Application to Field Problems - Thermal problems – Torsion of Non circular shafts –Quadrilateral elements – Higher Order Elements.

UNIT IV TWO DIMENSIONAL VECTOR VARIABLE PROBLEMS 9+6

Equations of elasticity – Plane stress, plane strain and axisymmetric problems – Body forces and temperature effects – Stress calculations - Plate and shell elements.

UNIT V ISOPARAMETRIC FORMULATION 9+6

Natural co-ordinate systems – Isoparametric elements – Shape functions for iso parametric elements – One and two dimensions – Serendipity elements – Numerical integration and application to plane stress problems - Matrix solution techniques – Solutions Techniques to Dynamic problems – Introduction to Analysis Software.

TOTAL : 45+30=75 PERIODS

OUTCOMES

CO1 Summarize the basics of finite element formulation.
CO2 Apply finite element formulations to solve one dimensional Problems.
CO3 Apply finite element formulations to solve two dimensional scalar Problems.
CO4 Apply finite element method to solve two dimensional Vector problems.
CO5 Apply finite element method to solve problems on iso parametric element and dynamic Problems.

19154C65 **HYDRAULICS AND PNEUMATICS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To provide student with knowledge on the application of fluid power in process, construction and manufacturing Industries.
- To provide students with an understanding of the fluids and components utilized in modern industrial fluid power system.
- To develop a measurable degree of competence in the design, construction and operation of fluid power circuits.

UNIT I FLUID POWER PRINICIPLES AND HYDRAULIC PUMPS 9

Introduction to Fluid power – Advantages and Applications – Fluid power systems – Types offluids - Properties of fluids and selection – Basics of Hydraulics – Pascal's Law – Principles of flow - Friction loss – Work, Power and Torque Problems, Sources of Hydraulic power : Pumping Theory – Pump Classification – Construction, Working, Design, Advantages, Disadvantages, Performance, Selection criteria of Linear and Rotary – Fixed and Variable displacement pumps – Problems.

UNIT II HYDRAULIC ACTUATORS AND CONTROL COMPONENTS 9

Hydraulic Actuators: Cylinders – Types and construction, Application, Hydraulic cushioning – Hydraulic motors - Control Components : Direction Control, Flow control and pressure control valves – Types, Construction and Operation – Servo and Proportional valves – Applications – Accessories : Reservoirs, Pressure Switches – Applications – Fluid Power ANSI Symbols – Problems.

UNIT III HYDRAULIC CIRCUITS AND SYSTEMS 9

Accumulators, Intensifiers, Industrial hydraulic circuits – Regenerative, Pump Unloading, Double-Pump, Pressure Intensifier, Air-over oil, Sequence, Reciprocation, Synchronization, Fail-Safe, Speed Control, Hydrostatic transmission, Electro hydraulic circuits, Mechanical hydraulic servo systems.

UNIT IV PNEUMATIC AND ELECTRO PNEUMATIC SYSTEMS 9

Properties of air – Perfect Gas Laws – Compressor – Filters, Regulator, Lubricator, Muffler, Air control Valves, Quick Exhaust Valves, Pneumatic actuators, Design of Pneumatic circuit – Cascade method – Electro Pneumatic System – Elements – Ladder diagram – Problems, Introduction to fluidics and pneumatic logic circuits.

UNIT V TROUBLE SHOOTING AND APPLICATIONS 9

Installation, Selection, Maintenance, Trouble Shooting and Remedies in Hydraulic and Pneumatic systems, Design of hydraulic circuits for Drilling, Planning, Shaping, Surface grinding, Press and Forklift applications. Design of Pneumatic circuits for Pick and Place applications and tool handling in CNC Machine tools – Low cost Automation – Hydraulic and Pneumatic power packs.

TOTAL:45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the Fluid power and operation of different types of pumps.

CO2 Summarize the features and functions of Hydraulic motors, actuators and Flow control valves

CO3 Explain the different types of Hydraulic circuits and systems

CO4 Explain the working of different pneumatic circuits and systems

CO5 Summarize the various trouble shooting methods and applications of hydraulic and pneumatic systems.

TEXT BOOKS:

1. Anthony Esposito, "Fluid Power with Applications", Pearson Education 2005.
2. Majumdar S.R., "Oil Hydraulics Systems- Principles and Maintenance", Tata McGraw-Hill, 2001.

19154L67	CAD / CAM LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVES:

- To gain practical experience in handling 2D drafting and 3D modelling software systems.
- To study the features of CNC Machine Tool.
- To expose students to modern control systems (Fanuc, Siemens etc.,)
- To know the application of various CNC machines like CNC lathe, CNC Vertical Machining centre, CNC EDM and CNC wire-cut and studying of Rapid prototyping.

LIST OF EXPERIMENTS

1. 3D GEOMETRIC MODELLING **23 PERIODS**

List of Experiments

1. Introduction of 3D Modelling software

Creation of 3D assembly model of following machine elements using 3D Modelling software

2. Flange Coupling
3. Plummer Block
4. Screw Jack
5. Lathe Tailstock
6. Universal Joint
7. Machine Vice
8. Stuffing box
9. Crosshead
10. Safety Valves
11. Non-return valves
12. Connecting rod
13. Piston
14. Crankshaft

* Students may also be trained in manual drawing of some of the above components

2. Manual Part Programming. **22 PERIODS**

(i) Part Programming - CNC Machining Centre a) Linear Cutting.
b) Circular cutting.
c) Cutter Radius Compensation. d) Canned Cycle Operations.
(ii) Part Programming - CNC Turning Centre a) Straight, Taper and Radius Turning.
b) Thread Cutting.
c) Rough and Finish Turning Cycle. d) Drilling and Tapping Cycle.

3. Computer Aided Part Programming

e) CL Data and Post process generation using CAM packages.
f) Application of CAPP in Machining and Turning Centre.

TOTAL: 45 PERIODS

OUTCOMES

CO1 Draw 3D and Assembly drawing using CAD software
CO2 Demonstrate manual part programming with G and M codes using CAM

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Qty
HARDWARE		
1.	Computer Server	1
2.	Computer nodes or systems (High end CPU with atleast 1 GB main memory) networked to the server	30
3.	A3 size plotter	1
4.	Laser Printer	1
5.	CNC Lathe	1
6.	CNC milling machine	1
SOFTWARE		
7.	Any High end integrated modeling and manufacturing CAD / CAM software	15 licenses
8.	CAM Software for machining centre and turning centre (CNC Programming and tool path simulation for FANUC / Sinumeric and Heidenhain controller)	15 licenses
9.	Licensed operating system	Adequate
10.	Support for CAPP	Adequate

19154L68 **DESIGN AND FABRICATION PROJECT**

L	T	P	C
0	0	3	2

OBJECTIVE:

- The main objective is to give an opportunity to the student to get hands on training in the fabrication of one or more components of a complete working model, which is designed by them.

GUIDELINE FOR REVIEW AND EVALUATION

The students may be grouped into 2 to 4 and work under a project supervisor. The device/ system/component(s) to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

TOTAL : 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 design and Fabricate the machine element or the mechanical product.

CO2 demonstrate the working model of the machine element or the mechanical product.

19154L69 **PROFESSIONAL COMMUNICATION**

L	T	P	C
0	0	2	1

OBJECTIVES: The course aims to:

- Enhance the Employability and Career Skills of students
- Orient the students towards grooming as a professional
- Make them Employable Graduates
- Develop their confidence and help them attend interviews successfully.

UNIT I

Introduction to Soft Skills-- Hard skills & soft skills - employability and career Skills—Grooming as a professional with values—Time Management—General awareness of Current Affairs

UNIT II

Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice–– presenting the visuals effectively – 5 minute presentations

UNIT III

Introduction to Group Discussion— Participating in group discussions – understanding group dynamics - brainstorming the topic -– questioning and clarifying –GD strategies- activities to improve GD skills

UNIT IV

Interview etiquette – dress code – body language – attending job interviews– telephone/skype interview -one to one interview &panel interview – FAQs related to job interviews

UNIT V

Recognizing differences between groups and teams- managing time-managing stress- networking professionally- respecting social protocols-understanding career management-developing a long- term career plan-making career changes

TOTAL : 30 PERIODS

OUTCOMES: At the end of the course Learners will be able to:

- Make effective presentations
- Participate confidently in Group Discussions.
- Attend job interviews and be successful in them.
- Develop adequate Soft Skills required for the workplace

Recommended Software

1. Globearena
2.Win English

19154C71 **POWER PLANT ENGINEERING**

L	T	P	C
4	0	0	4

OBJECTIVE:

- Providing an overview of Power Plants and detailing the role of Mechanical Engineers in their operation and maintenance.

UNIT I COAL BASED THERMAL POWER PLANTS 15

Rankine cycle - improvisations, Layout of modern coal power plant, Super Critical Boilers, FBC Boilers, Turbines, Condensers, Steam & Heat rate, Subsystems of thermal power plants – Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems.

UNIT II DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS 15

Otto, Diesel, Dual & Brayton Cycle - Analysis & Optimisation. Components of Diesel and Gas Turbine power plants. Combined Cycle Power Plants. Integrated Gasifier based Combined Cycle systems.

UNIT III NUCLEAR POWER PLANTS 15

Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors : Boili*ng Water Reactor* (BWR), P*ressurized Water Reactor* (PWR), CANada Deuterium- Uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants.

UNIT IV POWER FROM RENEWABLE ENERGY 15

Hydro Electric Power Plants – Classification, Typical Layout and associated components including Turbines. Principle, Construction and working of Wind, Tidal, *Solar* Photo Voltaic (SPV), Solar Thermal, Geo Thermal, Biogas and Fuel Cell power systems.

UNIT V ENERGY, ECONOMIC AND ENVIRONMENTAL ISSUES OF POWER PLANTS 15

Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, relative merits & demerits, Capital & Operating Cost of different power plants. Pollution control technologies including Waste Disposal Options for Coal and Nuclear Power Plants.

TOTAL : 60 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the layout, construction and working of the components inside a thermal power plant.

CO2 Explain the layout, construction and working of the components inside a Diesel, Gas and Combined cycle power plants.

CO3 Explain the layout, construction and working of the components inside nuclear power plants.

CO4 Explain the layout, construction and working of the components inside Renewable energy power plants.

CO5 Explain the applications of power plants while extend their knowledge to power plant economics and environmental hazards and estimate the costs of electrical energy production.

TEXT BOOK:

1. Nag. P.K., "Power Plant Engineering", Third Edition, Tata McGraw – Hill Publishing Company Ltd., 2008.

REFERENCES:

19154C72	PROCESS PLANNING AND COST ESTIMATION	L	T	P	C
		3	2	0	4

OBJECTIVE:

- To introduce the process planning concepts to make cost estimation for various products after process planning

UNIT I INTRODUCTION TO PROCESS PLANNING 9+6

Introduction- methods of process planning-Drawing interpretation-Material evaluation – steps in process selection-.Production equipment and tooling selection

UNIT II PROCESS PLANNING ACTIVITIES 9+6

Process parameters calculation for various production processes-Selection jigs and fixtures election of quality assurance methods - Set of documents for process planning-Economics of process planning- case studies

UNIT III INTRODUCTION TO COST ESTIMATION 9+6

Importance of costing and estimation –methods of costing-elements of cost estimation –Types of estimates – Estimating procedure- Estimation labor cost, material cost- allocation of over head charges- Calculation of depreciation cost

UNIT IV PRODUCTION COST ESTIMATION 9+6

Estimation of Different Types of Jobs - Estimation of Forging Shop, Estimation of Welding Shop, Estimation of Foundry Shop

UNIT V MACHINING TIME CALCULATION 9+6

Estimation of Machining Time - Importance of Machine Time Calculation- Calculation of Machining Time for Different Lathe Operations ,Drilling and Boring - Machining Time Calculation for Milling, Shaping and Planning -Machining Time Calculation for Grinding.

TOTAL: 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 select the process, equipment and tools for various industrial products.
CO2 prepare process planning activity chart.
CO3 explain the concept of cost estimation.
CO4 compute the job order cost for different type of shop floor.
CO5 calculate the machining time for various machining operations.

19154C73	MECHATRONICS	L	T	P	C
		4	0	0	4

OBJECTIVE:

- To impart knowledge about the elements and techniques involved in Mechatronics systems which are very much essential to understand the emerging field of automation.

UNIT I INTRODUCTION 12

Introduction to Mechatronics – Systems – Concepts of Mechatronics approach – Need for Mechatronics – Emerging areas of Mechatronics – Classification of Mechatronics. Sensors and Transducers**:** Static and dynamic Characteristics of Sensor, Potentiometers – LVDT – Capacitance sensors – Strain gauges – Eddy current sensor – Hall effect sensor – Temperature sensors – Light sensors

UNIT II MICROPROCESSOR AND MICROCONTROLLER 9+6

Introduction – Architecture of 8085 – Pin Configuration – Addressing Modes –Instruction set, Timing diagram of 8085 – Concepts of 8051 microcontroller – Block diagram,.

UNIT III PROGRAMMABLE PERIPHERAL INTERFACE 9+6

Introduction – Architecture of 8255, Keyboard interfacing, LED display –interfacing, ADC and DAC interface, Temperature Control – Stepper Motor Control – Traffic Control interface.

UNIT IV PROGRAMMABLE LOGIC CONTROLLER 9+6

Introduction – Basic structure – Input and output processing – Programming – Mnemonics – Timers, counters and internal relays – Data handling – Selection of PLC.

UNIT V ACTUATORS AND MECHATRONIC SYSTEM DESIGN 9+6

Types of Stepper and Servo motors – Construction – Working Principle – Advantages and Disadvantages. Design process-stages of design process – Traditional and Mechatronics design concepts – Case studies of Mechatronics systems – Pick and place Robot – Engine Management system – Automatic car park barrier.

TOTAL : 45+30=75 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Discuss the interdisciplinary applications of Electronics, Electrical, Mechanical and Computer Systems for the Control of Mechanical, Electronic Systems and sensor technology.

CO2 Discuss the architecture of Microprocessor and Microcontroller, Pin Diagram, Addressing Modes of Microprocessor and Microcontroller.

CO3 Discuss Programmable Peripheral Interface, Architecture of 8255 PPI, and various device Interfacing

CO4 Explain the architecture, programming and application of programmable logic controllers to problems and challenges in the areas of Mechatronic engineering.

CO5 Discuss various Actuators and Mechatronics system using the knowledge and skills acquired through the course and also from the given case studies

TEXT BOOKS:

19154L77	SIMULATION AND ANALYSIS LABORATORY	L	T	P	C
		0	0	3	2

OBJECTIVES:

- To give exposure to software tools needed to analyze engineering problems.
- To expose the students to different applications of simulation and analysis tools.

LIST OF EXPERIMENTS A. SIMULATION

1. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and two variables
2. Use of Matlab to solve simple problems in vibration
3. Mechanism Simulation using Multibody Dynamic software

B. ANALYSIS

1. Force and Stress analysis using link elements in Trusses, cables etc.
2. Stress and deflection analysis in beams with different support conditions.
3. Stress analysis of flat plates and simple shells.
4. Stress analysis of axi – symmetric components.
5. Thermal stress and heat transfer analysis of plates.
6. Thermal stress analysis of cylindrical shells.
7. Vibration analysis of spring-mass systems.
8. Model analysis of Beams.
9. Harmonic, transient and spectrum analysis of simple systems.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 simulate the working principle of air conditioning system, hydraulic and pneumatic cylinder and cam follower mechanisms using MATLAB.

CO2 analyze the stresses and strains induced in plates, brackets and beams and heat transfer problems.

CO3 calculate the natural frequency and mode shape analysis of 2D components and beams.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

S. NO.	NAME OF THE EQUIPMENT	Qty.
1	Computer Work Station	15
2	Color Desk Jet Printer	01
3	Multibody Dynamic Software Suitable for Mechanism simulation and analysis	15 licenses
4	C / MATLAB	5 licenses

19154L78 **MECHATRONICS LABORATORY**

L	T	P	C
0	0	3	2

OBJECTIVE:

- To know the method of programming the microprocessor and also the design, modeling & analysis of basic electrical, hydraulic & pneumatic Systems which enable the students to understand the concept of mechatronics.

LIST OF EXPERIMENTS:

1. Assembly language programming of 8085 – Addition – Subtraction – Multiplication – Division – Sorting – Code Conversion.
2. Stepper motor interface.
3. Traffic light interface.
4. Speed control of DC motor.
5. Study of various types of transducers.
6. Study of hydraulic, pneumatic and electro-pneumatic circuits.
7. Modelling and analysis of basic hydraulic, pneumatic and electrical circuits using Software.
8. Study of PLC and its applications.
9. Study of image processing technique.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Demonstrate the functioning of mechatronics system with various pneumatic, hydraulic and electrical systems.

CO2 Demonstrate the functioning of control systems with the help of PLC and microcontrollers.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS

Sl. No.	NAME OF THE EQUIPMENT	Qty.
1	Basic Pneumatic Trainer Kit with manual and electrical controls/ PLC Control each	1 No.
2	Basic Hydraulic Trainer Kit	1 No
3	Hydraulics and Pneumatics Systems Simulation Software	10 No
4	8051 - Microcontroller kit with stepper motor and drive circuit sets	2 No
5	Image processing system with hardware & software	1 No.

19154L79 **TECHNICALSEMINAR** **L T P C**

0 0 2 1

To enrich the communication skills of the student and presentations of technical topics of interest, this course is introduced. In this course, a student has to present three Technical papers or recent advances in engineering/technology that will be evaluated by a Committee constituted by the Head of the Department.

TOTAL: 30 PERIODS

19154C81 **PRINCIPLES OF MANAGEMENT**

L	T	P	C
3	0	0	3

OBJECTIVE:

- To enable the students to study the evolution of Management, to study the functions and principles of management and to learn the application of the principles in an organization

UNIT I INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS 9

Definition of Management – Science or Art – Manager Vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.

UNIT II PLANNING 9

Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.

UNIT III ORGANISING 9

Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management.

UNIT IV DIRECTING 9

Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication – communication and IT.

UNIT V CONTROLLING 9

System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.

TOTAL: 45 PERIODS

OUTCOME:

- Upon completion of the course, students will be able to have clear understanding of managerial functions like planning, organizing, staffing, leading & controlling and have same basic knowledge on international aspect of management

TEXT BOOKS:

1. JAF Stoner, Freeman R.E and Daniel R Gilbert “Management”, 6th Edition, Pearson Education, 2004.
2. Stephen P. Robbins & Mary Coulter, “Management”, Prentice Hall (India)Pvt. Ltd., Edition, 10th 2009.

3. Stephen A. Robbins & David A. Decenzo & Mary Coulter, "Fundamentals of Management", 7th Edition, Pearson Education, 2011.
4. Tripathy PC & Reddy PN, "Principles of Management", Tata Mcgraw Hill, 1999
5.

ELECTIVE – I (VI SEMESTER)

19154E66A **AUTOMOBILE ENGINEERING**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

UNIT I VEHICLE STRUCTURE AND ENGINES **9**

Types of automobiles vehicle construction and different layouts, chassis, frame and body, Vehicle aerodynamics (various resistances and moments involved), IC engines –components-functions and materials, variable valve timing (VVT).

UNIT II ENGINE AUXILIARY SYSTEMS **9**

Electronically controlled gasoline injection system for SI engines, Electronically controlled diesel injection system (Unit injector system, Rotary distributor type and common rail direct injection system), Electronic ignition system (Transistorized coil ignition system, capacitive discharge ignition system), Turbo chargers (WGT, VGT), Engine emission control by three way catalytic converter system, Emission norms (Euro and BS).

UNIT III TRANSMISSION SYSTEMS **9**

Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints, Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.

UNIT IV STEERING, BRAKES AND SUSPENSION SYSTEMS **9**

Steering geometry and types of steering gear box- Power Steering, Types of Front Axle, Types of Suspension Systems, Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control.

UNIT V ALTERNATIVE ENERGY SOURCES **9**

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 recognize the various parts of the automobile and their functions and materials.
CO2 discuss the engine auxiliary systems and engine emission control.
CO3 distinguish the working of different types of transmission systems.
CO4 explain the Steering, Brakes and Suspension Systems.
CO5 predict possible alternate sources of energy for IC Engines.

19154E66B SAFETY IN ENGINEERING INDUSTIRES

L	T	P	C
3	0	0	3

OBJECTIVE

To promote safety in engineering industries for educating the employees and enforcing various labour legislation in order to eliminate the prevailing unsafe condition and correct the usage actions.

UNIT – I PRINCIPLES OF ACCIDENT PREVENTION 9

Accident Prevention – Causes and Cost of Accident – Laws and regulations – Indian Factories Act governing health and safety of workers.

UNIT – II MACHINE GUARDING 9

Machine guarding – need, basic requirements and benefits of machine guarding – types of guarding with applications.

UNIT – III

ELECTRICAL SAFETY

Electrical hazards – Shock protections methods – permit to work on electrical lines / installations – use of personal protective equipments.

UNIT – IV

SAFETY IN MATERIAL HANDLING

Material handling – manual and mechanical – material handling equipments – safe use and legal aspects.

UNIT – V

FIRE SAFETY

Fire – Extinguishing fire – Classification of fire – Types of fire extinguishers – Applications – Causes of fire.

REFERENCE:

1) National Safety council manual, Bombay
2) Factories Act 1948
3) Electrical Hazards – B. R. Kamath
4) Safety in the use of electricity, NSC, Bombay.

19154E66C **GAS DYNAMICS AND JET PROPULSION**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the basic difference between incompressible and compressible flow.
- To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and Rocket Propulsion.

(Use of Standard Gas Tables permitted)

UNIT I BASIC CONCEPTS AND ISENTROPIC FLOWS **9**

Energy and momentum equations of compressible fluid flows – Stagnation states, Mach waves and Mach cone – Effect of Mach number on compressibility – Isentropic flow through variable ducts – Nozzle and Diffusers

UNIT II FLOW THROUGH DUCTS **9**

Flows through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) – variation of flow properties.

UNIT III NORMAL AND OBLIQUE SHOCKS **9**

Governing equations – Variation of flow parameters across the normal and oblique shocks – Prandtl – Meyer relations – Applications.

UNIT IV JET PROPULSION **9**

Theory of jet propulsion – Thrust equation – Thrust power and propulsive efficiency – Operating principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and turbo prop engines.

UNIT V SPACE PROPULSION **9**

Types of rocket engines – Propellants-feeding systems – Ignition and combustion – Theory of rocket propulsion – Performance study – Staging – Terminal and characteristic velocity – Applications – space flights.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Apply the concept of compressible flows in variable area ducts.
CO2 Apply the concept of compressible flows in constant area ducts.
CO3 examine the effect of compression and expansion waves in compressible flow.
CO4 use the concept of gas dynamics in Jet Propulsion.
CO5 apply the concept of gas dynamics in Space Propulsion.

TEXT BOOKS:

1. Anderson, J.D., "Modern Compressible flow", 3rd Edition, McGraw Hill, 2012.
2. Yahya, S.M. "Fundamentals of Compressible Flow", New Age International (P) Limited, New Delhi, 2002.

5. Zucrow. N.J., "Principles of Jet Propulsion and Gas Turbines", John Wiley, New York, 1970.

19154E66D **FUNDAMENTALS OF NANOSCIENCE** **L T P C**
3 0 0 3

OBJECTIVE:
To learn about basis of nanomaterial science, preparation method, types and application

UNIT I INTRODUCTION **8**
Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering- Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilms- multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

UNIT II GENERAL METHODS OF PREPARATION **9**
Bottom-up Synthesis-Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

UNIT III NANOMATERIALS **12**
Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications- Nanometal oxides-ZnO, TiO_2,MgO, ZrO_2, NiO, nanoalumina, CaO, $AgTiO_2$, Ferrites, Nanoclays-functionalization and applications-Quantum wires, Quantum dots-preparation, properties and applications.

UNIT IV CHARACTERIZATION TECHNIQUES **9**
X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation.

UNIT V APPLICATIONS **7**
NanoInfoTech: Information storage- nanocomputer, molecular switch, super chip, nanocrystal, Nanobiotechlogy: nanoprobes in medical diagnostics and biotechnology, Nano medicines, Targetted drug delivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems (NEMS)- Nanosensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sunbarrier products - In Photostat, printing, solar cell, battery.

TOTAL : 45 PERIODS

OUTCOMES:
- Will familiarize about the science of nanomaterials
- Will demonstrate the preparation of nanomaterials
- Will develop knowledge in characteristic nanomaterial

TEXT BOOKS :

1. A.S. Edelstein and R.C. Cammearata, eds., “Nanomaterials: Synthesis, Properties and Applications”, Institute of Physics Publishing, Bristol and Philadelphia, 1996.
2. N John Dinardo, “Nanoscale Characterization of surfaces & Interfaces”, 2nd edition, Weinheim Cambridge, Wiley-VCH, 2000.

19154E74A **RENEWABLE SOURCES OF ENERGY**

L	T	P	C
3	0	0	3

OBJECTIVE:

- At the end of the course, the students are expected to identify the new methodologies / technologies for effective utilization of renewable energy sources.

UNIT I INTRODUCTION **9**

World Energy Use – Reserves of Energy Resources – Environmental Aspects of Energy Utilisation – Renewable Energy Scenario in Tamil nadu, India and around the World – Potentials - Achievements / Applications – Economics of renewable energy systems.

UNIT II SOLAR ENERGY **9**

Solar Radiation – Measurements of Solar Radiation - Flat Plate and Concentrating Collectors – Solar direct Thermal Applications – Solar thermal Power Generation - Fundamentals of Solar Photo Voltaic Conversion – Solar Cells – Solar PV Power Generation – Solar PV Applications.

UNIT III WIND ENERGY **9**

Wind Data and Energy Estimation – Types of Wind Energy Systems – Performance – Site Selection – Details of Wind Turbine Generator – Safety and Environmental Aspects

UNIT IV BIO - ENERGY **9**

Biomass direct combustion – Biomass gasifiers – Biogas plants – Digesters – Ethanol production – Bio diesel – Cogeneration - Biomass Applications

UNIT V OTHER RENEWABLE ENERGY SOURCES **9**

Tidal energy – Wave Energy – Open and Closed OTEC Cycles – Small Hydro-Geothermal Energy – Hydrogen and Storage - Fuel Cell Systems – Hybrid Systems.

TOTAL : 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Discuss the importance and Economics of renewable Energy
CO2 Discuss the method of power generation from Solar Energy
CO3 Discuss the method of power generation from Wind Energy
CO4 Explain the method of power generation from Bio Energy
CO5 Explain the Tidal energy, Wave Energy, OTEC, Hydro energy, Geothermal Energy, Fuel Cells and Hybrid Systems.

TEXT BOOKS:

1. Rai. G.D., "Non Conventional Energy Sources", Khanna Publishers, New Delhi, 2011.
2. Twidell, J.W. & Weir, A., "Renewable Energy Sources", EFN Spon Ltd., UK, 2006.

5. Johnson Gary, L. "Wind Energy Systems", Prentice Hall, New York, 1985

19154E74B	NON CONVENTIONAL MACHINING PROCESSES	L	T	P	C
		3	0	0	3

OBJECTIVE:

- To learn about various unconventional machining processes, the various process parameters and their influence on performance and their applications

UNIT I INTRODUCTION AND MECHANICAL ENERGY BASED PROCESSES 9

Unconventional machining Process – Need – classification – merits, demerits and applications. Abrasive Jet Machining – Water Jet Machining – Abrasive Water Jet Machining - Ultrasonic Machining. (AJM, WJM, AWJM and USM). Working Principles – equipment used – Process parameters – MRR- Applications.

UNIT II THERMAL AND ELECTRICAL ENERGY BASED PROCESSES 9

Electric Discharge Machining (EDM) – Wire cut EDM – Working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool – Power and control Circuits-Tool Wear – Dielectric – Flushing –– Applications. Laser Beam machining and drilling, (LBM), plasma, Arc machining (PAM) and Electron Beam Machining (EBM). Principles – Equipment –Types - Beam control techniques – Applications.

UNIT III CHEMICAL AND ELECTRO-CHEMICAL ENERGY BASED PROCESSES 9

Chemical machining and Electro-Chemical machining (CHM and ECM)- Etchants – Maskant - techniques of applying maskants - Process Parameters – Surface finish and MRR-Applications. Principles of ECM- equipments-Surface Roughness and MRR Electrical circuit-Process Parameters- ECG and ECH - Applications.

UNIT IV ADVANCED NANO FINISHING PROCESSES 9

Abrasive flow machining, chemo-mechanical polishing, magnetic abrasive finishing, magneto rheological finishing, magneto rheological abrasive flow finishing their working principles, equipments, effect of process parameters, applications, advantages and limitations.

UNIT V RECENT TRENDS IN NON-TRADITIONAL MACHINING PROCESSES 9

Recent developments in non-traditional machining processes, their working principles, equipments, effect of process parameters, applications, advantages and limitations. Comparison of non-traditional machining processes.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the need for unconventional machining processes and its classification

CO2 Compare various thermal energy and electrical energy based unconventional machining processes.

CO3 Summarize various chemical and electro-chemical energy based unconventional machining processes.

CO4 Explain various nano abrasives based unconventional machining processes.

CO5 Distinguish various recent trends based unconventional machining processes.

TEXT BOOKS:

1. Vijay.K. Jain “Advanced Machining Processes” Allied Publishers Pvt. Ltd., New Delhi, 2007
2. Pandey P.C. and Shan H.S. “Modern Machining Processes” Tata McGraw-Hill, New Delhi, 2007.

19154E74C **OPERATIONS RESEARCH**

L	T	P	C
3	0	0	3

OBJECTIVE:

- To provide knowledge and training in using optimization techniques under limited resources for the engineering and business problems.

UNIT I LINEAR MODELS **15**

The phase of an operation research study – Linear programming – Graphical method– Simplex algorithm – Duality formulation – Sensitivity analysis.

UNIT II TRANSPORTATION MODELS AND NETWORK MODELS **8**

Transportation Assignment Models –Traveling Salesman problem-Networks models – Shortest route – Minimal spanning tree – Maximum flow models –Project network – CPM and PERT networks – Critical path scheduling – Sequencing models.

UNIT III INVENTORY MODELS **6**

Inventory models – Economic order quantity models – Quantity discount models – Stochastic inventory models – Multi product models – Inventory control models in practice.

UNIT IV QUEUEING MODELS **6**

Queueing models - Queueing systems and structures – Notation parameter – Single server and multi server models – Poisson input – Exponential service – Constant rate service – Infinite population – Simulation.

UNIT V DECISION MODELS **10**

Decision models – Game theory – Two person zero sum games – Graphical solution- Algebraic solution– Linear Programming solution – Replacement models – Models based on service life – Economic life– Single / Multi variable search technique – Dynamic Programming – Simple Problem.

TOTAL: 45 PERIODS

OUTCOME:

- Upon completion of this course, the students can able to use the optimization techniques for use engineering and Business problems

TEXT BOOK:

1. Hillier and Libeberman, “Operations Research”, Holden Day, 2005
2. Taha H.A., “Operations Research”, Sixth Edition, Prentice Hall of India, 2003.

REFERENCES:

1. Bazara M.J., Jarvis and Sherali H., “Linear Programming and Network Flows”, John Wiley, 2009.

5. Tulsian and Pasdey V., “Quantitative Techniques”, Pearson Asia, 2002.

19154E74D **TOTAL QUALITY MANAGEMENT** **L T P C 3 0 0 3**

OBJECTIVE:

- To facilitate the understanding of Quality Management principles and process.

UNIT I INTRODUCTION 9

Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, Customer retention.

UNIT II TQM PRINCIPLES 9

Leadership - Quality Statements, Strategic quality planning, Quality Councils - Employee involvement - Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership - Partnering, Supplier selection, Supplier Rating.

UNIT III TQM TOOLS AND TECHNIQUES I 9

The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark, Bench marking process - FMEA - Stages, Types.

UNIT IV TQM TOOLS AND TECHNIQUES II 9

Quality Circles - Cost of Quality - Quality Function Deployment (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures.

UNIT V QUALITY MANAGEMENT SYSTEM 9

Introduction—Benefits of ISO Registration—ISO 9000 Series of Standards—Sector-Specific Standards—AS 9100, TS16949 and TL 9000-- ISO 9001 Requirements—Implementation—Documentation—Internal Audits—Registration--**ENVIRONMENTAL MANAGEMENT SYSTEM:**

Introduction—ISO 14000 Series Standards—Concepts of ISO 14001—Requirements of ISO 14001—Benefits of EMS.

TOTAL: 45 PERIODS

OUTCOME:

- The student would be able to apply the tools and techniques of quality management to manufacturing and services processes.

TEXT BOOK:

1. Dale H.Besterfiled, Carol B.Michna,Glen H. Besterfield,Mary B.Sacre,Hemant Urdhwareshe and Rashmi Urdhwareshe, “Total Quality Management”, Pearson Education Asia, Revised Third Edition, Indian Reprint, Sixth Impression, 2013.

19154E76A	ROBOTICS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the functions of the basic components of a Robot.
- To study the use of various types of End of Effectors and Sensors
- To impart knowledge in Robot Kinematics and Programming
- To learn Robot safety issues and economics.

UNIT I FUNDAMENTALS OF ROBOT 9

Robot - Definition - Robot Anatomy - Co ordinate Systems, Work Envelope Types and Classification- Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS 9

Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION 9

Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.

UNIT IV ROBOT KINEMATICS AND ROBOT PROGRAMMING 9

Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS 9

RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Explain the concepts of industrial robots, classification, specifications and coordinate systems. Also summarize the need and application of robots in different sectors.

CO2 Illustrate the different types of robot drive systems as well as robot end effectors.

CO3 Apply the different sensors and image processing techniques in robotics to improve the ability of robots.

CO4 Develop robotic programs for different tasks and familiarize with the kinematics motions of robot.

CO5 Examine the implementation of robots in various industrial sectors and interpolate the economic analysis of robots.

TEXT BOOKS:

1. Groover M.P., “Industrial Robotics -Technology Programming and Applications”, McGraw Hill, 2012.
2. Klafter R.D., Chmielewski T.A and Negin M., “Robotic Engineering - An Integrated Approach”,Prentice Hall, 2003.

19154E76B	DESIGN OF JIGS, FIXTURES AND PRESS TOOLS	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the functions and design principles of Jigs, fixtures and press tools
- To gain proficiency in the development of required views of the final design.

UNIT I LOCATING AND CLAMPING PRINCIPLES: 9

Objectives of tool design- Function and advantages of Jigs and fixtures – Basic elements – principles of location – Locating methods and devices – Redundant Location – Principles of clamping – Mechanical actuation – pneumatic and hydraulic actuation Standard parts – Drill bushes and Jig buttons – Tolerances and materials used.

UNIT II JIGS AND FIXTURES 9

Design and development of jigs and fixtures for given component- Types of Jigs – Post, Turnover, Channel, latch, box, pot, angular post jigs – Indexing jigs – General principles of milling, Lathe, boring, broaching and grinding fixtures – Assembly, Inspection and Welding fixtures – Modular fixturing systems- Quick change fixtures.

UNIT III PRESS WORKING TERMINOLOGIES AND ELEMENTS OF CUTTING DIES 9

Press Working Terminologies - operations – Types of presses – press accessories – Computation of press capacity – Strip layout – Material Utilization – Shearing action – Clearances – Press Work Materials – Center of pressure- Design of various elements of dies – Die Block – Punch holder, Die set, guide plates – Stops – Strippers – Pilots – Selection of Standard parts – Design and preparation of four standard views of simple blanking, piercing, compound and progressive dies.

UNIT IV BENDING AND DRAWING DIES 9

Difference between bending and drawing – Blank development for above operations – Types of Bending dies – Press capacity – Spring back – knockouts – direct and indirect – pressure pads – Ejectors – Variables affecting Metal flow in drawing operations – draw die inserts – draw beads- ironing – Design and development of bending, forming, drawing, reverse redrawing and combination dies – Blank development for axisymmetric, rectangular and elliptic parts – Single and double action dies.

UNIT V FORMING TECHNIQUES AND EVALUATION 9

Bulging, Swaging, Embossing, coining, curling, hole flanging, shaving and sizing, assembly, fine Blanking dies – recent trends in tool design- computer Aids for sheet metal forming Analysis – basic introduction - tooling for numerically controlled machines- setup reduction for work holding – Single minute exchange of dies – Poka Yoke.

TOTAL: 45 PERIODS

Note: (Use of P S G Design Data Book is permitted in the University examination)

OUTCOMES:

Upon the completion of this course the students will be able to

CO1	Summarize the different methods of Locating Jigs and Fixtures and Clamping principles
CO2	Design and develop jigs and fixtures for given component
CO3	Discuss the press working terminologies and elements of cutting dies
CO4	Distinguish between Bending and Drawing dies.
CO5	Discuss the different types of forming techniques

TEXT BOOKS:

19154E76C GENERAL ASPECTS OF ENERGY MANAGEMENT AND ENERGY AUDIT

L	T	P	C
3	0	0	3

UNIT 1: ENERGY SCENARIO

Introduction -Primary and Secondary Energy -Commercial Energy and Non commercial Energy-Renewable and Non Renewable Energy-Indian Energy Scenario-Energy Needs of Growing Economy-Long Term Energy Scenario for India-Energy Pricing in India-Energy Sector Reforms-Energy and Environment-Energy Security-Energy Conservation and its Importance-Energy Strategy for the Future.

UNIT II BASICS OF ENERGY AND ENERGY MANAGEMENT

Basics of energy: Definition-Various Forms of Energy-Electrical Energy Basics-Thermal Energy Basics-Units and Conversions.

Energy Management :Definition & Objectives of Energy Management -Energy Audit: Types and Methodology -Energy Audit Reporting Format -Understanding Energy Costs -Benchmarking and energy Performance -Matching Energy Usage to Requirement-Maximising System Efficiency -Fuel and Energy Substitution-Energy Audit Instruments.

UNIT III MATERIAL AND ENERGY BALANCE

Energy Balance: Basic Principles-The Sankey Diagram and its Use-Material Balances-Energy Balances-Method for Preparing Process Flow Chart-Facility as an Energy System How to Carryout Material and Energy (M & E) Balance. Case study.

UNIT IV PROJECT MANAGEMENT

Step in Project management-Project Definition and scope-Technical design-Financing-Contracting-Implementation-Project planning technique-Performance monitoring

UNIT V ENERGY MONITORING AND TARGETING

Energy monitoring: Definition-Elements of Monitoring & Targeting System-A Rationale for Monitoring, Targeting and Reporting -Data and Information Analysis –Relating-Energy Consumption and Production .

TEXT BOOK:

Guide book for National Certification Examination for Energy Management and Energy Auditors.

REFERENCES:

19154E76D **COMPOSITE MATERIALS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the fundamentals of composite material strength and its mechanical behavior
- Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of the fiber.
- Thermo-mechanical behavior and study of residual stresses in Laminates during processing.
- Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronic chips.

UNIT I INTRODUCTION, LAMINA CONSTITUTIVE EQUATIONS & MANUFACTURING 9

Definition –Need – General Characteristics, Applications. Fibers – Glass, Carbon, Ceramic and Aramid fibers. Matrices – Polymer, Graphite, Ceramic and Metal Matrices – Characteristics of fibers and matrices. Lamina Constitutive Equations: Lamina Assumptions – Macroscopic Viewpoint. Generalized Hooke's Law. Reduction to Homogeneous Orthotropic Lamina – Isotropic limit case, Orthotropic Stiffness matrix (Qij), Typical Commercial material properties, Rule of Mixtures. Generally Orthotropic Lamina –Transformation Matrix, Transformed Stiffness. Manufacturing: Bag Moulding Compression Moulding – Pultrusion – Filament Winding – Other Manufacturing Processes

UNIT II FLAT PLATE LAMINATE CONSTITUTE EQUATIONS 9

Definition of stress and Moment Resultants. Strain Displacement relations. Basic Assumptions of Laminated anisotropic plates. Laminate Constitutive Equations – Coupling Interactions, Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli. Evaluation of Lamina Properties from Laminate Tests. Quasi-Isotropic Laminates. Determination of Lamina stresses within Laminates.

UNIT III LAMINA STRENGTH ANALYSIS 9

Introduction - Maximum Stress and Strain Criteria. Von-Misses Yield criterion for Isotropic Materials. Generalized Hill's Criterion for Anisotropic materials. Tsai-Hill's Failure Criterion for Composites. Tensor Polynomial (Tsai-Wu) Failure criterion. Prediction of laminate Failure

UNIT IV THERMAL ANALYSIS 9

Assumption of Constant C.T.E's. Modification of Hooke's Law. Modification of Laminate Constitutive Equations. Orthotropic Lamina C.T.E's. C.T.E's for special Laminate Configurations – Unidirectional, Off-axis, Symmetric Balanced Laminates, Zero C.T.E laminates, Thermally Quasi-Isotropic Laminates

UNIT V ANALYSIS OF LAMINATED FLAT PLATES 9

Equilibrium Equations of Motion. Energy Formulations. Static Bending Analysis. Buckling Analysis. Free Vibrations – Natural Frequencies

TOTAL: 45 PERIODS

OUTCOMES:

Upon the completion of this course the students will be able to

CO1 Summarize the various types of Fibers, Equations and manufacturing methods for Composite materials

CO2 Derive Flat plate Laminate equations

CO3 Analyze Lamina strength

CO4 Analyze the thermal behavior of Composite laminates
CO5 Analyze Laminate flat plates

TEXT BOOKS:

1. Gibson, R.F., "Principles of Composite Material Mechanics", Second Edition, McGraw-Hill, CRC press in progress, 1994, -.

19154E82A	PRODUCTION PLANNING AND CONTROL	L	T	P	C
		3	0	0	3

OBJECTIVES:

- To understand the various components and functions of production planning and control such as work study, product planning, process planning, production scheduling, Inventory Control.
- To know the recent trends like manufacturing requirement Planning (MRP II) and Enterprise Resource Planning (ERP).

UNIT I INTRODUCTION 9

Objectives and benefits of planning and control-Functions of production control-Types of production- job- batch and continuous-Product development and design-Marketing aspect - Functional aspects- Operational aspect-Durability and dependability aspect aesthetic aspect. Profit consideration- Standardization, Simplification & specialization- Break even analysis-Economics of a new design.

UNIT II WORK STUDY 9

Method study, basic procedure-Selection-Recording of process - Critical analysis, Development - Implementation - Micro motion and memo motion study – work measurement - Techniques of work measurement - Time study - Production study - Work sampling - Synthesis from standard data - Predetermined motion time standards.

UNIT III PRODUCT PLANNING AND PROCESS PLANNING 9

Product planning-Extending the original product information-Value analysis-Problems in lack of product planning-Process planning and routing-Pre requisite information needed for process planning- Steps in process planning-Quantity determination in batch production-Machine capacity, balancing- Analysis of process capabilities in a multi product system.

UNIT IV PRODUCTION SCHEDULING 9

Production Control Systems-Loading and scheduling-Master Scheduling-Scheduling rules-Gantt charts-Perpetual loading-Basic scheduling problems - Line of balance – Flow production scheduling- Batch production scheduling-Product sequencing – Production Control systems- Periodic batch control-Material requirement planning kanban – Dispatching-Progress reporting and expediting- Manufacturing lead time-Techniques for aligning completion times and due dates.

UNIT V INVENTORY CONTROL AND RECENT TRENDS IN PPC 9

Inventory control-Purpose of holding stock-Effect of demand on inventories-Ordering procedures. Two bin system - Ordering cycle system-Determination of Economic order quantity and economic lot size- ABC analysis - Recorder procedure-Introduction to computer integrated production planning systems- elements of JUST IN TIME SYSTEMS-Fundamentals of MRP II and ERP.

TOTAL: 45 PERIODS

OUTCOMES:

- Upon completion of this course, the students can able to prepare production planning and control activities such as work study, product planning, production scheduling, Inventory Control.
- They can plan manufacturing requirements manufacturing requirement Planning (MRP II) and Enterprise Resource Planning (ERP).

TEXT BOOKS:

1. James. B. Dilworth, "Operations management – Design, Planning and Control for manufacturing and services" Mcgraw Hill International edition 1992.

		L	T	P	C
19154E82B	**COMPUTER INTEGRATED MANUFACTURING SYSTEMS**				
		3	**0**	**0**	**3**

OBJECTIVE:

- To understand the application of computers in various aspects of Manufacturing viz., Design, Proper planning, Manufacturing cost, Layout & Material Handling system.

UNIT I INTRODUCTION 9

Brief introduction to CAD and CAM – Manufacturing Planning, Manufacturing control- Introduction to CAD/CAM – Concurrent Engineering-CIM concepts – Computerised elements of CIM system – Types of production - Manufacturing models and Metrics – Mathematical models of Production Performance – Simple problems – Manufacturing Control – Simple Problems – Basic Elements of an Automated system – Levels of Automation – Lean Production and Just-In-Time Production.

UNIT II PRODUCTION PLANNING AND CONTROL AND COMPUTERISED PROCESS PLANNING 9

Process planning – Computer Aided Process Planning (CAPP) – Logical steps in Computer Aided Process Planning – Aggregate Production Planning and the Master Production Schedule – Material Requirement planning – Capacity Planning- Control Systems-Shop Floor Control-Inventory Control – Brief on Manufacturing Resource Planning-II (MRP-II) & Enterprise Resource Planning (ERP) - Simple Problems.

UNIT III CELLULAR MANUFACTURING 9

Group Technology(GT), Part Families – Parts Classification and coding – Simple Problems in Opitz Part Coding system – Production flow Analysis – Cellular Manufacturing – Composite part concept – Machine cell design and layout – Quantitative analysis in Cellular Manufacturing – Rank Order Clustering Method - Arranging Machines in a GT cell – Hollier Method – Simple Problems.

UNIT IV FLEXIBLE MANUFACTURING SYSTEM (FMS) AND AUTOMATED GUIDED VEHICLE SYSTEM (AGVS) 9

Types of Flexibility - FMS – FMS Components – FMS Application & Benefits – FMS Planning and Control – Quantitative analysis in FMS – Simple Problems. Automated Guided Vehicle System (AGVS) – AGVS Application – Vehicle Guidance technology – Vehicle Management & Safety.

UNIT V INDUSTRIAL ROBOTICS 9

Robot Anatomy and Related Attributes – Classification of Robots- Robot Control systems – End Effectors – Sensors in Robotics – Robot Accuracy and Repeatability - Industrial Robot Applications – Robot Part Programming – Robot Accuracy and Repeatability – Simple Problems.

TOTAL : 45 PERIODS

OUTCOMES:

CO1 Explain the basic concepts of CAD, CAM and computer integrated manufacturing systems
CO2 Summarize the production planning and control and computerized process planning
CO3 Differentiate the different coding systems used in group technology
CO4 Explain the concepts of flexible manufacturing system (FMS) and automated guided vehicle (AGV) system
CO5 Classification of robots used in industrial applications

TEXT BOOKS:

1. Mikell.P.Groover "Automation, Production Systems and Computer Integrated Manufacturing", Prentice Hall of India, 2008.
2. Radhakrishnan P, Subramanyan S.and Raju V., "CAD/CAM/CIM", 2nd Edition, New Age International (P) Ltd, New Delhi, 2000.

19154E82C	ENERGY EFFICIENCY IN THERMAL UTILITIES	L	T	P	C
		3	0	0	3

UNIT 1: FUELS AND COMBUSTION

9

Introduction to Fuels -Properties of Liquid Fuels -Properties of Coal -Properties of Gaseous Fuels -Properties of Agro Residues -Combustion -Combustion of Oil Combustion of Coal -Combustion of Gas -Draft System -Combustion Controls.

9

UNIT2: BOILERS

Introduction -Boiler Systems -Boiler Types and Classifications -Performance Evaluation of Boilers -Boiler Blowdown -Boiler Water Treatment -Energy Conservation Opportunities -Case Study.

9

UNIT3: STEAM SYSTEM

Introduction-Properties of Steam -Steam Distribution -Steam Pipe Sizing and Design-Proper Selection, Operation and Maintenance of Steam Traps -Performance Assessment Methods for Steam Traps-Energy Saving Opportunities.

9

UNIT4: FURNACES AND INSULATION

Types and Classification of Different Furnaces-Performance Evaluation of a Typical Furnace -General Fuel Economy Measures in Furnaces -Case Study -Purpose of Insulation -Types and Application -Calculation of Insulation Thickness Economic Thickness of Insulation(ETI) -Simplified Formula for Heat Loss Calculation.

9

UNIT 5: FBC BOILERS, COGENERATION AND WASTE HEAT RECOVERY

Introduction -Mechanism of Fluidised Bed Combustion -Types of Fluidised Bed Combustion Boilers -Retrofitting of FBC Systems to Conventional Boilers -Advantages of Fluidised Bed Combustion Boilers-Need for Cogeneration - Principle of Cogeneration -Technical Options for Cogeneration -Classification of Cogeneration Systems -Factors Influencing Cogeneration Choice -Case Study -Introduction -Classification and Application -Benefits of Waste Heat Recovery - Development of a Waste Heat Recovery System -Commercial Waste Heat Recovery Devices.

TOTAL: 45 PERIODS

TEXT BOOK:

Guide book for National Certification Examination for Energy Managers and Energy Auditors-Bureau of Energy Efficiency

REFERENCE BOOK :

1. Smith, CB Energy Management Principles, Pergamon Press, New York 1981
2. www.bee-india.com

19154E82D **PROFESSIONAL ETHICS IN ENGINEERING** **L T P C**
3 0 0 3

OBJECTIVE:

- To enable the students to create an awareness on Engineering Ethics and Human Values to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNIT I HUMAN VALUES **10**

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT II ENGINEERING ETHICS **9**

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT III ENGINEERING AS SOCIAL EXPERIMENTATION **9**

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law.

UNIT IV SAFETY, RESPONSIBILITIES AND RIGHTS **9**

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT V GLOBAL ISSUES **8**

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility.

TOTAL: 45 PERIODS

OUTCOME:

- Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

TEXT BOOKS:

1. Govindarajan M, Natarajan S, Senthil Kumar V. S, "Engineering Ethics", Prentice Hall of India, New Delhi, 2004.

OPEN ELECTIVE–I

19150FE54A **DATABASE MANAGEMENT SYSTEMS**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To learn the fundamentals of data models
- To learn conceptual modeling using ER diagrams.
- To study SQL queries and database programming
- To learn proper designing of relational database.
- To understand database security concepts
- To understand Information retrieval techniques

UNIT I DBMS AND CONCEPTUAL DATA MODELING 9

Purpose of Database System – Data independence - Data Models – Database System Architecture – Conceptual Data modeling: ER models - Enhanced-ER Model. Introduction to relational databases – Relational Model – Keys – ER-to-Relational Mapping. Modeling of a library management system.

UNIT II DATABASE QUERYING **11**

Relational Algebra – SQL: fundamentals – DDL – Specifying integrity constraints - DML – Basic retrieval queries in SQL - Complex SQL retrieval queries – nested queries – correlated queries – joins - aggregate functions. Creating a table, populating data, adding integrity constraints, querying tables with simple and complex queries.

UNIT III DATABASE PROGRAMMING **9**

Database programming with function calls, stored procedures - views – triggers. Embedded SQL. ODBC connectivity with front end tools. Implementation using ODBC/JDBC and SQL/PSM, implementing functions, views, and triggers in MySQL / Oracle.

UNIT IV SUSPENSION AND BRAKES SYSTEMS **9**

Functional Dependencies – Design guidelines – Normal Forms: first, second, third – Boyce/Codd Normal Form – Normalization algorithms. Design of a banking database system / university database system.

UNIT V ALTERNATIVE ENERGY SOURCES **9**

Database security issues – Discretionary access control – role based access – Encryption and public key infrastructures – challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- understand relational data model, evolve conceptual model of a given problem, its mapping to relational model and Normalization
- query the relational database and write programs with database connectivity
- understand the concepts of database security and information retrieval systems
-

TEXTBOOKS:

19150FE54B **CLOUD COMPUTING**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To learn about the concept of cloud and utility computing.
- To have knowledge on the various issues in cloud computing.
- To be familiar with the lead players in cloud.
- To appreciate the emergence of cloud as the next generation computing paradigm.

UNIT I INTRODUCTION TO CLOUD COMPUTING 9

Introduction to Cloud Computing – Roots of Cloud Computing – Desired Features of Cloud Computing – Challenges and Risks – Benefits and Disadvantages of Cloud Computing.

UNIT II VIRTUALIZATION **9**

Introduction to Virtualization Technology – Load Balancing and Virtualization – Understanding Hypervisor – Seven Layers of Virtualization – Types of Virtualization – Server, Desktop, Application Virtualization.

UNIT III CLOUD ARCHITECTURE, SERVICES AND STORAGE **9**

NIST Cloud Computing Reference Architecture – Public, Private and Hybrid Clouds - laaS – PaaS – SaaS – Architectural Design Challenges – Cloud Storage.

UNIT IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD **9**

Inter Cloud Resource Management – Resource Provisioning Methods – Security Overview – Cloud Security Challenges – Data Security –Application Security – Virtual Machine Security.

UNIT V CASE STUDIES **9**

Google App Engine(GAE) – GAE Architecture – Functional Modules of GAE – Amazon Web Services(AWS) – GAE Applications – Cloud Software Environments – Eucalyptus – Open Nebula – Open Stack.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
- Learn the key and enabling technologies that help in the development of cloud.
- Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.
- Explain the core issues of cloud computing such as resource management and security.
- Be able to install and use current cloud technologies.
- Choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.

TEXTBOOKS:

1. Buyya R., Broberg J., Goscinski A., “Cloud Computing: Principles and Paradigm”, First Edition, John Wiley & Sons, 2011.
2. Kai Hwang, Geoffrey C. Fox, Jack G. Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.
3. Rittinghouse, John W., and James F. Ransome, “Cloud Computing: Implementation, Management, And Security”, CRC Press, 2017.

19152FE54A **BASICS OF BIOMEDICAL INSTRUMENTATION**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To study about the different bio potential and its propagation
- To understand the different types of electrodes and its placement for various recording
- To study the design of bio amplifier for various physiological recording
- To learn the different measurement techniques for non-physiological parameters.
- To familiarize the different biochemical measurements.
-

UNIT I BIO POTENTIAL GENERATION AND ELECTRODES TYPES 9

Origin of bio potential and its propagation. Types of electrodes - surface, needle and micro electrodes and their equivalent circuits. Recording problems - measurement with two electrodes

UNIT II BIOSIGNAL CHARACTERISTICS AND ELECTRODECONFIGURATIONS **9**

Biosignals characteristics – frequency and amplitude ranges. ECG – Einthoven‟s triangle, standard 12 lead system. EEG – 10-20 electrode system, unipolar, bipolar and average mode. EMG– unipolar and bipolar mode.

UNIT III SIGNAL CONDITIONING CIRCUITS **9**

Need for bio-amplifier - differential bio-amplifier, Impedance matching circuit, isolation amplifiers, Power line interference, Right leg driven ECG amplifier, Band pass filtering

UNIT IV MEASUREMENT OF NON-ELECTRICALPARAMETERS **10**

Temperature, respiration rate and pulse rate measurements. Blood Pressure: indirect methods - Auscultatory method, direct methods: electronic manometer, Systolic, diastolic pressure, Blood flow and cardiac output measurement: Indicator dilution, and dye dilution method, ultrasound blood flow measurement.

UNIT V BIO-CHEMICAL MEASUREMENT **8**

Blood gas analyzers and Non-Invasive monitoring, colorimeter, Sodium Potassium Analyser, spectrophotometer, blood cell counter, auto analyzer (simplified schematic description).

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- To Learn the different bio potential and its propagation.
- CO2: To get Familiarize the different electrode placement for various physiological recording
- CO3: Students will be able design bio amplifier for various physiological recording
- CO4: Students will understand various technique non electrical physiogical measurements

CO5: Understand the different biochemical measurements

TEXTBOOKS:

1. Leslie Cromwell, “Biomedical Instrumentation and measurement”, Prentice hall of India, New Delhi, 2007.
2. John G. Webster, “Medical Instrumentation Application and Design”, John Wiley and sons, New York, 2004. (Units I, II & V)

REFERENCES:

3. Joseph J. Carr and John M. Brown, “Introduction to Biomedical Equipment Technology”, Pearson Education, 2004.

19153FE54A **INDUSTRIAL NANOTECHNOLOGY**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To elucidate on advantages of nanotechnology based applications in each industry
- To provide instances of contemporary industrial applications of nanotechnology
- To provide an overview of future technological advancements and increasing role of nanotechnology in each industry

UNIT I NANO ELECTRONICS 9

Advantages of nano electrical and electronic devices –Electronic circuit chips – Lasers - Micro and NanoElectromechanical systems – Sensors, Actuators, Optical switches,- Data memory – Lighting and Displays – Batteries - Fuel cells and Photo-voltaic cells – Electric double layer capacitors – Lead-free solder – Nanoparticle coatings for electrical products.

UNIT II BIONANOTECHNOLOGY 9

Nanoparticles in bone substitutes and dentistry – Implants and Prosthesis – Nanorobotics in Surgery –Nanosensors in Diagnosis– Neuro-electronic Interfaces– Therapeutic applications.

UNIT III TRANSMISSION SYSTEMS 9

Nanocatalyts – Smart materials – Heterogenous nanostructures and composites – Nanostructures for Molecular recognition (Quantum dots, Nanorods, Nanotubes) – Molecular Encapsulation and its applications – Nanoporous zeolites – Self-assembled Nanoreactors.

UNIT IV SUSPENSION AND BRAKES SYSTEMS 9

Nanotechnology in Agriculture -Precision farming, Smart delivery system – Insecticides using nanotechnology – Potential of nano-fertilizers - Nanotechnology in Food industry

UNIT V ALTERNATIVE ENERGY SOURCES 9

Nanofibre production - Electrospinning – Controlling morphologies of nanofibers – Tissue engineering application– Polymer nanofibers - Nylon-6 nanocomposites from polymerization - Nano-filled polypropylene fibers - Nano finishing in textiles (UV resistant, antibacterial, hydrophilic, self-cleaning, flame retardant finishes) – Modern textiles Cosmetics – Formulation of Gels, Shampoos, Hair-conditioners

TOTAL : 45 PERIODS

19153FE54B **ENERGY CONSERVATION AND MANAGEMENT**

L	T	P	C
3	0	0	3

OBJECTIVES:

Understand and analyse the energy data of industries
 Carryout energy accounting and balancing
 Conduct energy audit and suggest methodologies for energy savings and
 Utilise the available resources in optimal ways

-

UNIT I INTRODUCTION 9

Energy - Power – Past & Present scenario of World; National Energy consumption Data – Environmental aspects associated with energy utilization – Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Instruments for energy auditing.

UNIT II ELECTRICAL SYSTEMS **9**

Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors, Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope of Encon in Illumination.

UNIT III THERMAL SYSTEMS **9**

Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and encon measures. Steam: Distribution &U sage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories

UNIT IV ENERGY CONSERVATION IN MAJOR UTILITIES **9**

Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems – Cooling Towers – D.G. sets

UNIT V ECONOMICS **9**

Energy Economics – Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing –ESCO concept

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- **to analyse the energy data of industries.**
- Can carryout energy accounting and balancing
- Can suggest methodologies for energy savings
-

TEXTBOOKS:

Energy Manager Training Manual (4 Volumes) available at www.energymanager training.com,a website administered by Bureau of Energy Efficiency (BEE), a statutory body under Ministry of Power, Government of India, 2004.

19154FE54A **RENEWABLE ENERGY SOURCES**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To get exposure on solar radiation and its environmental impact to power.
- To know about the various collectors used for storing solar energy.
- To know about the various applications in solar energy.
- To learn about the wind energy and biomass and its economic aspects.
- To know about geothermal energy with other energy sources.

UNIT I PRINCIPLES OF SOLAR RADIATION 10

Role and potential of new and renewable source, the solar energy option, Environmental impact of solar power, physics of the sun, the solar constant, extraterrestrial and terrestrial solar radiation, solar radiation on titled surface, instruments for measuring solar radiation and sun shine, solar radiation data.

UNIT II SOLAR ENERGY COLLECTION 8

Flat plate and concentrating collectors, classification of concentrating collectors, orientation and thermal analysis, advanced collectors.

UNIT III SOLAR ENERGY STORAGE AND APPLICATIONS 7

Different methods, Sensible, latent heat and stratified storage, solar ponds. Solar Applications- solar heating/cooling technique, solar distillation and drying, photovoltaic energy conversion.

UNIT IV WIND ENERGY 10

Sources and potentials, horizontal and vertical axis windmills, performance characteristics, Betz criteria BIO-MASS: Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, I.C.Engine operation and economic aspects.

UNIT V GEOTHERMAL ENERGY 9

Resources, types of wells, methods of harnessing the energy, potential in India. OCEAN ENERGY: OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques, mini-hydel power plants, and their economics. DIRECT ENERGY CONVERSION: Need for DEC, Carnot cycle, limitations, principles of DEC.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Understanding the physics of solar radiation.
- Ability to classify the solar energy collectors and methodologies of storing solar energy.

- Knowledge in applying solar energy in a useful way.
- Knowledge in wind energy and biomass with its economic aspects.

Knowledge in capturing and applying other forms of energy sources like wind, biogas and geothermal energies.

TEXTBOOKS:

1. Rai G.D. , “Non-Conventional Energy Sources”, Khanna Publishers, 2011
2. Twidell & Wier, “Renewable Energy Resources”, CRC Press (Taylor & Francis), 2011

4. Kothari D.P, Singhal ., K.C., “Renewable energy sources and emerging technologies”, P.H.I, New Delhi, 2010

19154FE54B **AUTOMOTIVE SYSTEMS**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

UNIT I AUTOMOTIVE ENGINE AUXILIARY SYSTEMS 9

Automotive engines- External combustion engines –Internal combustion engines -classification of engines- SI Engines- CI Engines- two stroke engines -four stroke engines- construction and working principles - IC engine components- functions and materials -valve timing –port timing diagram- Injection system -Unit injector system- Rotary distributor type - Electronically controlled injection system for SI engines-CI engines-Ignition system - Electronic ignition system -Transistorized ignition system, capacitive discharge ignition system.

UNIT II VEHICLE FRAMES AND STEERING SYSTEM **9**

Vehicle construction and different Chassis layouts –classifications of chassis- types of frames- frameless chassis construction –articulated vehicles- vehicle body - Vehicle aerodynamics-various resistances and its effects - steering system –conventional –sophisticated vehicle- and types of steering gear box-Power Steering- Steering geometry-condition for true rolling motion-Ackermann's- Devi's steering system - types of stub axle – Types of rear axles.

UNIT III TRANSMISSION SYSTEMS **9**

Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints –- Hotchkiss Drive and Torque Tube Drive- rear axle- Differential-wheels and tyres.

UNIT IV SUSPENSION AND BRAKES SYSTEMS **9**

Suspension Systems- conventional Suspension Systems -independent Suspension Systems –leaf spring – coil spring –taper-lite - eligo,s spring Types of brakes -Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control. Derive the equation of Forces acting while applying a brakes on plain surface - inclined road-gradient .

UNIT V ALTERNATIVE ENERGY SOURCES **9**

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell. Turbo chargers -Engine emission control by three way catalytic converter system.
Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

- Upon completion of this course, the students will be able to identify the different components in automobile engineering.
- Have clear understanding on different auxiliary and transmission systems usual.

TEXTBOOKS:

Ganesan V. “Internal Combustion Engines”, Third Edition, Tata McGraw-Hill, 2007.

2. Jain K.K. and Asthana .R.B, “Automobile Engineering” Tata McGraw Hill Publishers, New Delhi, 2002.

4. Newton ,Steeds and Garet, “Motor Vehicles”, Butterworth Publishers,1989.

19155FE54A **AIR POLLUTION AND CONTROL ENGINEERING**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To impart knowledge on the principle and design of control of Indoor/ particulate/ gaseous air pollutant and its emerging trends.
-

UNIT I NTRODUCTION 7

Structure and composition of Atmosphere – Definition, Scope and Scales of Air Pollution – Sources and classification of air pollutants and their effect on human health, vegetation, animals, property, aesthetic value and visibility- Ambient Air Quality and Emission standards.

UNIT II METEOROLOGY **6**

Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profiles and stack plume patterns- Atmospheric Diffusion Theories – Dispersion models, Plume rise.

UNIT III CONTROL OF PARTICULATE CONTAMINANTS 11

Factors affecting Selection of Control Equipment – Gas Particle Interaction – Working principle - Gravity Separators, Centrifugal separators Fabric filters, Particulate Scrubbers, Electrostatic Precipitators.

UNIT IV CONTROL OF GASEOUS CONTAMINANTS **11**

Factors affecting Selection of Control Equipment – Working principle - absorption, Adsorption, condensation, Incineration, Bio filters – Process control and Monitoring.

UNIT V INDOOR AIR QUALITY MANAGEMENT **10**

Sources, types and control of indoor air pollutants, sick building syndrome and Building related illness- Sources and Effects of Noise Pollution – Measurement – Standards –Control and Preventive measures.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- basic concepts of air quality management
- Ability to identify, formulate and solve air and noise pollution problems
- Ability to design stacks and particulate air pollution control devices to meet applicable standards.
- Ability to select control equipments.
- Ability to ensure quality, control and preventive measures.
-

19155FE54B **GEOGRAPHIC INFORMATION SYSTEM**

L	T	P	C
3	0	0	3

OBJECTIVES:

-
- To introduce the fundamentals and components of Geographic Information System
- To provide details of spatial data structures and input, management and output
- processes.

UNIT I FUNDAMENTALS OF GIS 9

Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attribute data- types of attributes – scales/ levels of measurements.

UNIT II SPATIAL DATA MODELS **9**

Database Structures – Relational, Object Oriented – ER diagram - spatial data models – Raster Data Structures – Raster Data Compression - Vector Data Structures - Raster vs Vector Models-TIN and GRID data models - OGC standards - Data Quality.

UNIT III DATA INPUT AND TOPOLOGY **9**

Scanner - Raster Data Input – Raster Data File Formats – Vector Data Input –Digitiser –Topology - Adjacency, connectivity and containment – Topological Consistency rules – Attribute Data linking – ODBC – GPS - Concept GPS based mapping.

UNIT IV DATA ANALYSIS **9**

Vector Data Analysis tools - Data Analysis tools - Network Analysis - Digital Education models - 3D data collection and utilisation.

UNIT V APPLICATIONS **9**

GIS Applicant - Natural Resource Management - Engineering - Navigation - Vehicle tracking and fleet management - Marketing and Business applications - Case studies.

TOTAL : 45 PERIODS

OUTCOMES:

At the end of the course, the student should be able to:

-
- Have basic idea about the fundamentals of GIS.
- Understand the types of data models.
- Get knowledge about data input and topology.
- Gain knowledge on data quality and standards.
- Understand data management functions and data output
-

TEXTBOOKS:

Kang - Tsung Chang, Introduction to Geographic Information Systems, McGraw Hill Publishing, 2nd Edition, 2011. 2. Ian Heywood, Sarah Cornelius, Steve Carver, Srinivasa Raju, “An Introduction Geographical Information Systems, Pearson Education, 2nd Edition,2007.

OPEN ELECTIVEII

19150FE74A INTRODUCTION TO C PROGRAMMING L T P C
3 0 0 3 OBJECTIVES

• To develop C Programs using basic programming constructs • To develop C programs using arrays and strings • To develop applications in C using functions and structures

UNIT I INTRODUCTION 9

Structure of C program – Basics: Data Types – Constants –Variables - Keywords – Operators: Precedence and Associativity - Expressions - Input/Output statements, Assignment statements – Decision-making statements - Switch statement - Looping statements – Pre-processor directives - Compilation process – Exercise Programs: Check whether the required amount can be withdrawn based on the available amount – Menu-driven program to find the area of different shapes – Find the sum of even numbers Text Book: ReemaThareja (Chapters 2,3)

UNIT II ARRAYS 9

Introduction to Arrays – One dimensional arrays: Declaration – Initialization - Accessing elements – Operations: Traversal, Insertion, Deletion, Searching - Two dimensional arrays: Declaration – Initialization - Accessing elements – Operations: Read – Print – Sum – Transpose – Exercise Programs: Print the number of positive and negative values present in the array – Sort the numbers using bubble sort - Find whether the given is matrix is diagonal or not. Text Book: ReemaThareja (Chapters 5)

UNIT III STRINGS 9

Introduction to Strings - Reading and writing a string - String operations (without using built-in string functions): Length – Compare – Concatenate – Copy – Reverse – Substring – Insertion – Indexing – Deletion – Replacement – Array of strings – Introduction to Pointers – Pointer operators – Pointer arithmetic - Exercise programs: To find the frequency of a character in a string - To find the number of vowels, consonants and white spaces in a given text - Sorting the names. Text Book: ReemaThareja (Chapters 6 & 7)

UNIT IV FUNCTIONS 9

Introduction to Functions – Types: User-defined and built-in functions - Function prototype - Function definition - Function call - Parameter passing: Pass by value - Pass by reference - Built-in functions (string functions) – Recursive functions – Exercise programs: Calculate the total amount of power consumed by 'n' devices (passing an array to a function) – Menu-driven program to count the numbers which are divisible by 3, 5 and by both (passing an array to a function) – Replace the punctuations from a given sentence by the space character (passing an array to a function) Text Book: ReemaThareja (Chapters 4)

UNIT V STRUCTURES 9

Introduction to structures – Declaration – Initialization – Accessing the members – Nested Structures – Array of Structures – Structures and functions – Passing an entire structure – Exercise programs: Compute the age of a person using structure and functions (passing a structure to a function) – Compute the number of days an employee came late to the office by considering his arrival time for 30 days (Use array of structures and functions) Text Book: ReemaThareja (Chapters 8)

TOTAL:45 PERIODS

OUTCOMES

Upon completion of this course, the students will be able to

• Develop simple applications using basic constructs

• Develop applications using arrays and strings
• Develop applications using functions and structures

TEXT BOOK

1. ReemaThareja, “Programming in C”, Oxford University Press, Second Edition, 2016

REFERENCES:

1. Kernighan, B.W and Ritchie,D.M, “The C Programming language”, Second Edition, Pearson Education, 2006
2. Paul Deitel and Harvey Deitel, “C How to Program”, Seventh edition, Pearson Publication
3. Juneja, B. L and Anita Seth, “Programming in C”, CENGAGE Learning India pvt. Ltd., 2011
4. PradipDey, Manas Ghosh, “Fundamentals of Computing and Programming in C”, First Edition, Oxford University Press, 2009

19150FE74B **DATA STRUCTURES AND ALGORITHMS** **L T P C**
3 0 0 3

OBJECTIVES:

- To understand the various algorithm design and analysis techniques
- To learn linear data structures – lists, stacks, and queues
- To learn different sorting and searching algorithms
- To understand Tree and Graph data structures

UNIT I ALGORITHM ANALYSIS, LIST ADT 11

Algorithms: Notation - analysis – running time calculations. Abstract Data Types (ADTs): List ADT – array-based implementation – linked list implementation – singly linked lists- applications of lists: Polynomial Manipulation. Implementation of List ADT using an array and using a linked list in C.

UNIT II STACKS AND QUEUES 7

Stack ADT - Applications - Evaluating arithmetic expressions- Conversion of Infix to Postfix- Recursion. Queue ADT – Priority Queue - applications of queues. Implementation of Stack ADT and palindrome checking using C. Implementation of Queue operations using arrays in C.

UNIT III SEARCHING AND SORTING ALGORITHMS 10

Divide and conquer methodology - Searching: Linear Search - Binary Search. Sorting: Insertion sort – Merge sort – Quick sort – Heap sort. Analysis of searching and sorting techniques. Implementation of linear search, binary search, insertion sort, merge sort and quick sort algorithms in C.

UNIT IV TREES 9

Tree ADT – tree traversals - Binary Tree ADT – expression trees – binary search tree ADT – applications of trees.Heap – applications of heap. Implementation of Binary search tree and its operations, tree traversal methods, finding height of the tree using C. Implementation of heap and heap sorting using arrays in C.

UNIT V GRAPHS 8

Definition – Representation of Graph – Breadth-first traversal - Depth-first traversal – Dynamic programming Technique – Warshall's and Floyd's algorithm – Greedy method - Dijkstra's algorithm – applications of graphs. Implementation of graph, graph traversal methods, finding shortest path using Dijkstra's algorithm in C

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students should be able to:

- Implement linear data structures and solve problems using them
- Implement and apply trees and graphs to solve problems.
- Implement the various searching and sorting algorithms.

TEXT BOOKS:

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", 2nd Edition, Pearson Education,1997.
2. Brian W. Kernighan and Dennis M. Ritchie, "The C Programming Language", 2nd Edition, Pearson Education, 1988.

REFERENCES:

4. YashvantKanetkar, "Data Structures Through C", BPB publications, II edition, 2003

19152FE74A **ROBOTICS** **L T P C**
3 0 0 3

OBJECTIVES:
 To understand the functions of the basic components of a Robot. To study the use of various types of End of Effectors and Sensors To impart knowledge in Robot Kinematics and Programming To learn Robot safety issues and economics.

UNIT I FUNDAMENTALS OF ROBOT **6**
Robot - Definition - Robot Anatomy - Co ordinate Systems, Work Envelope Types and Classification-Specifications-Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS **9**
Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors-Grippers-Mechanical Grippers, Pneumatic and Hydraulic- Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.

UNIT III SENSORS AND MACHINE VISION **12**
Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors - Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors ,binary Sensors., Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data- Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications- Inspection, Identification, Visual Serving and Navigation.

UNIT IV ROBOT KINEMATICS AND ROBOT PROGRAMMING **13**
Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 Dimension), Four Degrees of freedom (in 3 Dimension) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End Effector commands and simple Programs.

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS **5**
RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

TOTAL: 45 PERIODS OUTCOME:
 Upon completion of this course, the students can able to apply the basic engineering knowledge for the design of robotics

TEXT BOOKS: 1. Klafter R.D., ChmielewskiT.A and Negin M., “Robotic Engineering - An Integrated Approach”, Prentice Hall, 2003. 2. GrooverM.P., “Industrial Robotics -Technology Programming and Applications”, McGraw Hill, 2001.

19152FE74B ELECTRONIC DEVICES L T P C 3 0 0 3

OBJECTIVES:

The student should be made to:

- Introduce the concept of diodes, Bipolar Junction Transistors and FET
- Study the various model parameters of Transistors
- Learn the concept of special semiconductor devices, Power & Display devices
- Impart the knowledge of various configurations, characteristics and applications.

UNIT I SEMICONDUCTOR DIODE 9

PN junction diode, Current equations, Energy Band diagram, Diffusion and drift current densities, forward and reverse bias characteristics, Transition and Diffusion Capacitances, Switching Characteristics, Breakdown in PN Junction Diodes.

UNIT II BIPOLAR JUNCTION TRANSISTORS 9

NPN -PNP -Operations-Early effect-Current equations – Input and Output characteristics of CE, CB, CC - Hybrid -p model - h-parameter model, Ebers Moll Model- GummelPoonmodel, Multi Emitter Transistor.

UNIT III FIELD EFFECT TRANSISTORS 9

JFETs – Drain and Transfer characteristics,-Current equations-Pinch off voltage and its significance-MOSFET- Characteristics- Threshold voltage -Channel length modulation, DMOSFET, E-MOSFET-Characteristics – Comparison of MOSFET with JFET.

UNIT IV SPECIAL SEMICONDUCTOR DEVICES 9

Metal-Semiconductor Junction - MESFET, FINFET, PINFET, CNTFET, DUAL GATE MOSFET, Point Contact Diode, p-i-n Diode, Avalanche Photodiode, Schottky barrier diodeZener diode-Varactor diode – Tunnel diode- Gallium Arsenide device, LASER diode, LDR.

UNIT V POWER DEVICES AND DISPLAY DEVICES 9

UJT, Thyristor - SCR, Diac, Triac, Power BJT- Power MOSFET- DMOS-VMOS. LED, LCD, Opto Coupler, Solar cell, CCD.

TOTAL: 45 PERIODS

OUTCOMES:

After this course, the student should be able to:

- Analyze the characteristics of semiconductor diodes.
- Analyze and solve problems of Transistor circuits using model parameters.
- Identify and characterize diodes and various types of transistors.
- Analyze the characteristics of special semiconductor devices.
- Analyze the characteristics of Power and Display devices.

19153FE74B INTRODUCTION TO RENEWABLE ENERGY SYSTEMS L T P C

3 0 0 3

OBJECTIVES:

To Provide knowledge

- About the stand alone and grid connected renewable energy systems.
- Design of power converters for renewable energy applications.
- Wind electrical generators and solar energy systems.
- Power converters used for renewable energy systems.

UNIT I INTRODUCTION 9

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources: Solar, wind, ocean, Biomass, Fuel cell, Hydrogen energy systems and hybrid renewable energy systems.

UNIT II ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION

Reference theory fundamentals-principle of operation and analysis: IG and PMSG 9

UNIT III POWER CONVERTERS 9

Solar: Block diagram of solar photo voltaic system -Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing Wind: Three phase AC voltage controllers

UNIT IV ANALYSIS OF WIND AND PV SYSTEMS 9

Stand alone operation of fixed and variability speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system

UNIT V HYBRID RENEWABLE ENERGY SYSTEMS 9

Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).

TOTAL : 45 PERIODS

OUTCOMES:

- Ability to understand and analyze power system operation, stability, control and protection.
- Ability to handle the engineering aspects of electrical energy generation and utilization.
- Ability to understand the stand alone and grid connected renewable energy systems.
- Ability to design of power converters for renewable energy applications.
- Ability to acquire knowledge on wind electrical generators and solar energy systems.
- Ability to design power converters used for hybrid renewable energy systems.

19155FE74B **WASTE WATER TREATMENT** **L T P C**

3 0 0 3

OBJECTIVES

- To make the student conversant with the water treatment methods including adsorption and oxidation process.
- To provide basic under standings about the requirements of water, its preliminary treatment.

UNIT I WATER QUALITY AND PRELIMINARY TREATMENT 9

Water Quality-physical- chemical and biological parameters of water- water quality requirement - potable water standards -wastewater effluent standards -water quality indices. Water purification systems in natural systems- physical processes-chemical processes and biological processes- primary, secondary and tertiary treatment-Unit operations-unit processes. Mixing, clarification - sedimentation; Types; aeration and gas transfer – coagulation and flocculation, coagulation processes - stability of colloids - destabilization of colloids- transport of colloidal particles, clariflocculation.

UNIT II INDUSTRIAL WATER TREATMENT 9

Filtration – size and shape characteristics of filtering media – sand filters hydraulics of filtration – design considerations – radial, upflow, highrate and multimedia filters, pressure filter. Water softening – lime soda, zeolite and demineralization processes – industrial water treatment for boilers.

UNIT III CONVENTIONAL TREATMENT METHODS 9

Taste and odour control – adsorption – activated carbon treatment – removal of color – iron and manganese removal – aeration, oxidation, ion exchange and other methods – effects of fluorides – fluoridation and defluoridation –desalination - corrosion prevention and control – factors influencing corrosion – Langelier index – corrosion control measures.

UNIT IV WASTEWATER TREATMENT 9

Wastewater treatment – pre and primary treatment – equalization neutralization – screening and grid removal – sedimentation – oil separation gas stripping of volatile organics – biological oxidation – lagoons and stabilization basins – aerated lagoons – activated sludge process – trickling filtration – anaerobic decomposition.

UNIT V ADSORPTION AND OXIDATION PROCESSES 9

Chemical process – adsorption – theory of adsorption – ion exchange process – chemical oxidation – advanced oxidation process – sludge handling and disposal – miscellaneous treatment processes.

TOTAL: 45 PERIODS

OUTCOMES

- Will have knowledge about adsorption and oxidation process.
- Will gain idea about various methods available for water treatment.
- Will appreciate the necessity of water and acquire knowledge of preliminary treatment.

19154C15P FOUNDRY & WELDING TECHNOLOGY

UNIT-I: INTRODUCTION 9

Introduction to moulding and casting Processes – Steps involved – advantages, limitations and application of casting process. Patterns – Types _ their applications – Pattern allowances – Pattern materials – Colour coding as per BIS. Pattern making cores – Core prints –Core boxes – core making.

UNIT – II: MOULDING PROCESSES 9

Manual moulding processes – equipments and tools – Moulding sand ingredients – Moulding sand properties, influence of ingredients on properties – sand preparation and control – sand testing – machine moulding – types of machines,

UNIT – III: CASTING PROCESSES 9

Sand casting processes –permanent mould casting processes-pressure die casting, centrifugal casting – precision/investment casting-shell moulding,– continuous casting –– electro slag casting processes, Vacuum process, magnetic moulding process.

UNIT – IV: SPECIAL WELDING PROCESSES 9

Gas tungsten arc (TIG) welding, Gas metal arc (MIG) welding, submerged arc welding, power sources and other characteristics for these individual processes, equipments and accessories, application and limitation of each process. Resistance welding processes-their principle-Types (spot, seam, projection).

UNIT – V: MODERN WELDING PROCESSES 9

Electron beam welding, laser beam welding, Plasma arc welding, friction welding, explosive welding, ultrasonic welding, stud welding, diffusion bonding, welding of dissimilar metals.

TUTORIALS: 15

TOTAL HOURS: 60

TEXT BOOK

1. Lal,Mand Khanna O.P “A Text Book of Foundry Technology” Dhanpat Rai and Sons, New Delhi 1986.
2. Workshop Technology Volume I &II,Hajra Choudry & Bhattacharya.

REFERENCES

19154C22P MACHINE TOOL TECHNOLOGY

UNIT – I: METAL CUTTING THEORY 8

Introduction: material removal processes, types of machine tools – theory of metal cutting: chip formation, Types of metal cutting, cutting tool materials, Types of tool wear, Simple problems on Tool life.

UNIT –II: CENTRE LATHE AND SPECIAL PURPOSE LATHES 10

Centre lathe, constructional features, cutting tools, various operations, taper turning methods, thread cutting methods, special attachments, machining time and power estimation.
Capstan and turret lathes – automatic lathes : semi automatic, automats – single spindle : cutting off, multi spindle; cutting off machines.

UNIT – III: SHAPING, PLANING, SLOTTING & MILLING MACHINES 10

Reciprocating machine tools: shaper, planer, slotter ; milling : types, milling cutters, operations.

UNIT – IV: GRINDING, BROACHING AND GEAR CUTTING 10

Grinding: Introduction- Grinding wheel – specifications and selection, types of grinding process – cylindrical grinding, surface grinding, centreless grinding – honing, lapping, super finishing, polishing and buffing.
Broaching Machines: broach Specification – push, pull, surface and continuous broaching machines, Gear cutting: forming, generation, shaping, Hobbing.

UNIT – V: CNC MACHINES AND APT PROGRAMMING 7

Numerical Control (NC) machine tools – CNC – Introduction, Types, constructional details, special features, Advantages and applications.
Part programming fundamentals – manual programming – computer assisted part programming – APT language.

19154C34P ENGINEERING METROLOGY AND MEASUREMENTS

UNIT – I: INTRODUCTION 9

Measurement -Introduction – Generalised measurement system-Units and standards-measuring instruments- range of accuracy, precision- repeatability-systematic and random errors-correction, calibration, interchangeability.

UNIT – II: LINEAR AND ANGULAR MEASURING DEVICES 9

Definition of Metrology-Linear measuring instruments: Vernier, micrometer, interval measurement, Slip gauges and classification, limit gauges- Comparators: Mechanical, pneumatic and electrical types, applications.

Angular measurements: -Sine bar, optical bevel protractor, angle Decker – Taper measurements.

UNIT – III: SCREW THREAD & GEAR FORM MEASUREMENT 9

Measurement of screw threads-Thread gauges, floating carriage micrometer-measurement of gears-tooth thickness-constant chord and base tangent method-.

UNIT – IV: LASER METROLOGY AND CMM 9

Precision instruments based on laser-Principles- laser interferometer-application in linear, angular measurements

Coordinate measuring machine (CMM)- Constructional features – types, applications –computer aided inspection.

UNIT – V: POWER, FLOW AND TEMPERATURE MEASUREMENT 9

Force, torque, power:-mechanical and pneumatic type-Flow measurement: Venturi, orifice, rotameter,–Temperature: bimetallic strip, pressure thermometers, thermocouples,

19154L35P COMPUTER AIDED SIMULATION AND ANALYSIS LABORATORY

LIST OF EXPERIMENTS

A. Simulation ***15***

1. Simulation of cam and follower mechanism using C / MAT Lab.

2. Analysis (Simple Treatment only) 30
3. Stress analysis of a plate with a circular hole.
4. Stress analysis of rectangular L bracket
5. Stress analysis of an axi-symmetric component
6. Stress analysis of beams (Cantilever, Simply supported, Fixed ends)
7. Mode frequency analysis of a 2 D component
8. Mode frequency analysis of beams (Cantilever, Simply supported, Fixed ends)
9. Harmonic analysis of a 2D component
10. Thermal stress analysis of a 2D component
11. Conductive heat transfer analysis of a 2D component
12. Convective heat transfer analysis of a 2D component

TOTAL : 45

19154C41P POWER PLANT ENGINEERING

UNIT – I: INTRODUCTION : 9

Layout of Steam, Hydel, Diesel, MHD, Nuclear and Gas Turbine Power Plants - Steam Boilers and Cycles – High Pressure and Super Critical Boilers – Fluidised Bed Boilers

UNIT – II: STEAM POWER PLANT 9

Fuel Handling and Ash Handling, Combustion Equipment for burning coal, MechanicalStokers, Pulveriser, Electrostatic Precipitator, Draught, Cooling Towers

UNIT – III: NUCLEAR AND HYDEL POWER PLANTS 9

Nuclear Energy – Fission, Fusion Reaction, Types of Reactors, pressurized water reactor, Boiling Water Reactor,.

Hydel Power Plant – Essential Elements, Selection of Turbines, Governing of Turbines- Micro Hydel developments.

UNIT – IV: DIESEL AND GAS TURBINE POWER PLANT 9

Types of Diesel Plants, Components, Selection of Engine Type, Applications Gas Turbine Power Plant – Fuels – Open and Closed Cycles – Reheating – Regeneration and Intercooling

UNIT – V: POWER PLANTS ECONOMICS 9

Geo thermal –OTEC – Tidel - Pumped storage - Solar thermal central receiver system.

Cost of Electric Energy – Fixed and operating Costs – Energy Rates –Economics of load sharing, comparison of economics of various power plants**.**

Total Hours: 45

TEXT BOOKS:

1. G.D.Rai, “Introduction to Power Plant Technology”, Khanna Publishers, 1995.

2. Nag P.K, “Power plant Engineering”, Tata McGraw-Hill, 1998.

REFERENCES:

1. K.K.Ramalingam, “Power Plant Engineering”, Scitech Publications, 2002.

3. T.Morse Frederick, “Power Plant Engineering”, Prentice Hall of India, 1998

19154C43P DESIGN OF MACHINE ELEMENTS

UNIT – I : STRESSES IN MACHINE MEMBERS 9

Introduction to the design process - factor influencing machine design, selection of materials based on mechanical properties – Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, Factor of safety - theories of failure – stress concentration – design for variable loading – Soderberg, Goodman and Gerber relations

UNIT – II: DESIGN OF SHAFTS AND COUPLINGS 9

Design of solid and hollow shafts based on strength, rigidity and critical speed – Design of keys and key ways - Design of rigid and flexible couplings – Introduction to gear and shock absorbing couplings

UNIT – III: DESIGN OF FASTNERS AND WELDED JOINTS 9

Threaded fastners - Design of bolted joints including eccentric loading – Design of welded joints for pressure vessels and structures -.

UNIT – IV: DESIGN OF SPRINGS AND LEVERS 9

Design of helical, leaf, disc and torsional springs under constant loads and varying loads – Concentric torsion springs - Belleville springs

UNIT – V: DESIGN OF BEARINGS AND FLYWHEELS 9

Design of bearings – sliding contact and rolling contact types. – Cubic mean load – Design of journal bearings – Mckees equation – Lubrication in journal bearings – calculation of bearing dimensions

TUTORIAL 15
TOTAL HOURS : 60

Note: (Use of P S G Design Data Book is permitted in the University examination)

TEXT BOOKS:

1. Juvinall R.C, and Marshek K.M, “Fundamentals of Machine Component Design”, John Wiley & Sons, Third Edition, 2002.
2. Bhandari V.B, “Design of Machine Elements”, Tata McGraw-Hill Book Co, 2003.

3. Ugural A.C, "Mechanical Design – An Integral Approach, McGraw-Hill Book Co, 2004.
4. Spotts M.F., Shoup T.E "Design and Machine Elements" Pearson Education, 2004.

STANDARDS:

IS 10260 : Part 1 : 1982 Terms, definitions and classification of Plain bearings Part 1 : Construction.

IS 10260 : Part 1 : 1982 Terms, definitions and classification of Plain bearings Part 2 : Friction and Wear.

IS 10260 : Part 1 : 1982 Terms, definitions and classification of Plain bearings Part 3 : Lubrication.

19154L45P DYNAMICS LABORATORY

LIST OF EXPERIMENTS

1. Governors - Determination of sensitivity, effort, etc. for Watt, Porter
2. Cam - Study of jump phenomenon and drawing profile of the cam.
3. Motorised Gyroscope-Verification of laws -Determination of gyroscopic couple.
4. Whirling of shaft-Determination of critical speed of shaft with concentrated loads.
5. Balancing of rotating masses.
6. Determination of moment of inertia by oscillation method for connecting rod and flywheel.
7. Vibrating system - Spring mass system-Determination of damping co-efficient of single degree of freedom system.
8. Determination of torsional frequencies for compound pendulum and flywheel system with lumped Moment of inertia.
9. Transverse vibration –free- Beam. Determination of natural frequency and deflection of beam.

Total Hours: 45

19154C52P DESIGN OF TRANSMISSION SYSTEMS

UNIT – I: DESIGN OF TRANSMISSION SYSTEMS 9

Selection of V belts and pulleys – selection of Flat belts and pulleys -– Selection of Transmission chains and Sprockets. Design of pulleys and sprockets.

UNIT – II: SPUR GEARS AND PARALLEL AXIS HELICAL GEARS 9

Gear Terminology-Speed ratios and number of teeth-Force analysis - Dynamic effects - Fatigue strength - Factor of safety - Gear materials – Module and Face width-power rating calculations based on strength and wear considerations -– Pressure angle in the normal and transverse plane-Equivalent number of teeth-forces and stresses.

UNIT – III: BEVEL AND CROSS HELICAL GEARS 9

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears.
Cross helical: Terminology-helix angles-Estimating the size of the pair of cross helical gears.

UNIT – IV: GEAR BOXES DESIGN 9

Geometric progression - Standard step ratio - Ray diagram, kinematics layout -Design of sliding mesh gear box -Constant mesh gear box. – Design of multi speed gear box.

UNIT – V: DESIGN OF CAM, CLUTCHES AND BRAKES 9

Cam Design: Types-pressure angle and under cutting base circle determination-forces and surface stresses.
Design of plate clutches –axial clutches-cone clutches-internal expanding rim clutches-

TUTORIALS 30

TOTAL HOURS: 75

Note: (Usage of P.S.G Design Data Book is permitted in the University examination)

TEXT BOOKS

19154C53P AUTOMOBILE ENGINEERING

UNIT – I: STRUCTURE OF VEHICLESAND ENGINES 10

Types of Automobiles - Vehicle Construction – Chassis – Frame and Body –aerodynamics. Components of Engine – Their forms, Functions and Materials - Review of Cooling and Lubrication systems in Engine – Turbo Chargers –.

UNIT – II: ENGINE AUXILIARY SYSTEMS 10

Carburetor–working principle- Electronic fuel injection system – Mono-point and Multi - Point Injection Systems – Construction, Operation and Maintenance of Lead Acid Battery - Electrical systems – Battery generator – Starting Motor and Drives – Lighting and Ignition (Battery, Magneto Coil and Electronic Type)-Regulators-cut outs.

UNIT – III: TRANSMISSION SYSTEMS 10

Clutch – Types and Construction – Gear Boxes, Manual and Automatic – Simple Floor Mounted Shift Mechanism – Over Drives – Transfer Box Fluid flywheel-Torque convertors– Propeller shaft – Slip Joint – Universal Joints – Differential and Rear Axle.

UNIT – IV: STEERING, BRAKES AND SUSPENSION 10

Wheels and Tyres – Wheel Alignment Parameters - Steering Geometry and Types of steering gear box– Power Steering – Types of Front Axle – Suspension systems – Braking Systems – Types and Construction.

UNIT – V: ALTERNATIVE ENERGY SOURCES 5

Use of Natural Gas, LPG, Biodiesel, Gasohol and Hydrogen in Automobiles - Electric and Hybrid Vehicles, Fuel Cells.

Note: Practical training in dismantling and assembling of Engine parts Transmission System should be given to the students

Total Hours : 45

TEXT BOOKS:

1. Sethi H.M, "Automobile Technology", Tata McGraw-Hill-2003
2. Kirpal Singh "Automobile Engineering Vol. 1& 2", Standard Publishers, New Delhi.

19154L55P THERMAL ENGINEERING LABORATORY II

LIST OF EXPERIMENTS

HEAT TRANSFER **30**

1. Thermal conductivity measurement by guarded plate method
2. Thermal conductivity of pipe insulation using lagged pipe apparatus
3. Natural convection heat transfer from a vertical cylinder
4. Forced convection Inside tube
5. Heat transfer from Pin-fin (natural & forced convection modes)
6. Determination of Stefan-Boltzmann constant
7. Determination of Emissivity of a grey surface
8. Effectiveness of Parallel/counter flow heat exchanger

REFRIGERATION AND AIR CONDITIONING **15**

1. Determination of COP of a refrigeration system
2. Experiments on air-conditioning system
3. Performance test on single/two stage reciprocating air compressor.

Total Hours : 45

19154C62P MECHATRONICS

UNIT – I: INTRODUCTION 9

Introduction to Mechatronics – Measurement Systems – Control Systems – Microprocessor based Controllers.

Sensors and Transducers – Performance Terminology – Sensors for Displacement, Position and Proximity; Velocity, Motion, Force, Fluid Pressure, Liquid Flow, Liquid Level, Temperature, Light Sensors – Selection of Sensors

UNIT – II: POWER DRIVE SYSTEM 9

Pneumatic and Hydraulic Systems – Directional Control Valves – Rotary Actuators.

Mechanical Actuation Systems – Cams – Gear Trains – Ratchet and pawl – Belt and Chain Drives – Bearings.

Electrical Actuation Systems – Mechanical Switches – Solid State Switches – Solenoids – D.C Motors – A.C Motors – Stepper Motors.

UNIT – III: SYSTEM MODELS AND CONTROLLERS 9

Building blocks of Mechanical, Electrical, Fluid and Thermal Systems, Rotational – Transnational Systems, Electromechanical Systems – Hydraulic – Mechanical Systems.

Continuous and discrete process Controllers – Control Mode – Two – Step mode – Proportional Mode – Derivative Mode – Integral Mode – PID Controllers.

UNIT – IV: PROGRAMMING LOGIC CONTROLLERS(PLC) 9

Programmable Logic Controllers – Basic Structure – Input / Output Processing – Programming – Mnemonics – Timers, Internal relays and counters – Shift Registers – Master and Jump Controls – Data Handling – Analogs Input / Output .

UNIT – V: DESIGN OF MECHATRONICS SYSTEM 9

Stages in designing Mechatronics Systems – Traditional and Mechatronic Design - Possible Design Solutions

Case Studies of Mechatronics Systems, Pick and place robot – Automatic Car Park Systems

Total Hours : 45

19154C63P COMPUTER INTEGRATED MANUFACTURING

UNIT – I: INTRODUCTION 8

CIM-Introduction. - External communication - islands of automation and software-dedicated and open systems-manufacturing automation protocol - product related activities of a company- marketing engineering - production planning - plant operations - physical distribution.

UNIT – II: GROUP TECHNOLOGY AND CAPP 10

History of group technology- role of G.T. in CAD/CAM integration - part families - classification and coding - DCLASS and MICLASS and OPITZ coding systems-facility design using G.T. -benefits of G.T. - cellular manufacturing.

approaches to computer aided process planning -variant approach and generative approaches - CAPP and CMPP process planning systems.

UNIT – III: SHOP FLOOR CONTROL AND BASICS OF FMS 9

Shop floor control -factory data collection system -automatic identification methods- Bar code technology-automated data collection system.

FMS-components of FMS - types -FMS workstation -material handling and storage systems- FMS layout

UNIT – IV: CIM IMPLEMENTATION AND LAN 10

CIM and company strategy - system modeling tools -IDEF models - activity cycle diagram - CIM open system architecture (CIMOSA)- manufacturing enterprise wheel-CIM architecture.

Communication fundamentals- local area networks -topology - LAN implementations - network management and installations.

UNIT – V: OPEN SYSTEM AND DATABASE FOR CIM 8

Open systems-open system inter connection - manufacturing automations protocol and technical office protocol (MAP /TOP)

Development of databases -database terminology- architecture of database systems-data modeling and data associations -relational data bases - database operators - advantages of data base and relational database.

Total Hours : 45

TEXT BOOKS*:*

1. Mikell.P.Groover "Automation, Production Systems and computer integrated manufacturing", Pearson Education 2001.
2. Radhakrishnan P, Subramanyan S.and Raju V., "CAD/CAM/CIM", 2nd Edition New Age International (P) Ltd, New Delhi. 2000.

REFERENCES:

19154L65P MECHATRONICS LABORATORY

LIST OF EXPERIMENTS

1. Fluid power circuits to control
   (i) single and double acting cylinder
2. Design of circuits with logic sequence using Electro pneumatic trainer kits.
3. Circuits with multiple cylinder sequences in Electro pneumatic using PLC.
4. Servo controller interfacing for open loop
5. Servo controller interfacing for closed loop
6. Stepper motor interfacing with 8051 Micro controller
   (i) full step resolution (ii) half step resolution
7. Computerized data logging system with control for process variables like pressure flow and temperature.

TOTAL : 45

19160C71P TOTAL QUALITY MANAGEMENT

UNIT – I: BASICS OF TQM 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT – II: PRINCIPLES OF TQM 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT – III: QUALITY CONCEPTS 9

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Concept of six sigma,

UNIT – IV: TQM TOOLS 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, FMEA – Stages of FMEA.

UNIT – V: ISO STANDARDS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, ISO 14000 – Concept, Requirements and Benefits.

TOTAL : 45

TEXT BOOKS:

1. Dale H. Besterfiled, et al., "Total Quality Management", Pearson Education, Inc. 2003. (Indian reprint 2004). ISBN 81-297-0260-6.

19154C72P PROCESS PLANNING AND COST ESTIMATION

UNIT-I: WORK STUDY AND TIME STUDY 10

Method study – Definition – Objectives-Motion economy- Principles – Tools and Techniques-Applications – Work measurements- purpose – use – procedure – tools and techniques- Standard time –Time study– principles – applications.

UNIT-II: PROCESS PLANNING 10

Definition – Objective –approaches to process planning- Process planning activities – Finished part requirements- manufacturing sequences- machine selection – material selection parameters-Set of documents for process planning-process chart - production time calculation – selection of cost optimal processes.

UNIT-III: INTRODUCTION TO COST ESTIMATION 7

Objective of cost estimation- costing – cost accounting- classification of cost- Elements of cost.

UNIT-IV: COST ESTIMATION 8

Types of estimates – methods of estimates – data requirements and sources- collection of cost

UNIT-V: PRODUCTION COST ESTIMATION 10

Estimation of material cost, labour cost and over heads, allocation of overheads – Estimation for different types of jobs.

Total Hours : 45

TEXT BOOKS:

1 Sinha.B.P., "Mechanical Estimating and Costing", Tata McGraw-Hill, Publishing Co., 1995

19154C73P APPLIED HYDRAULICS AND PNEUMATICS

UNIT – I: FUNDAMENTALS OF FLUID POWER SYSTEM 9

Fluid power, Advantages Application .Types of fluid power systems, Properties of hydraulic fluids – General types of fluids – Fluid power symbols.

Basics of Hydraulics- Pascals Law- Laminar and Turbulent flow – Reynold's number

UNIT – II: HYDRAULIC SYSTEM & COMPONENTS 9

Sources of Hydraulic Power: Pump classification – Gear pump, Vane Pump, piston pump, construction and working of pumps – pump characteristics – Variable displacement pumps.

Actuators: Linear hydraulic actuators – Types of hydraulic cylinders – Single acting, Double acting special cylinders like tanden, Rodless, Telescopic, Cushioning mechanism, Construction of double acting cylinder, Rotary actuators – Fluid motors, Gear, Vane and Piston motors.

UNIT – III: DESIGN OF HYDRAULIC CIRCUITS 9

Construction of Control Components : Director control valve – 3/2 way valve – 4/2 way valve – Shuttle valve – check valve – pressure control valve –Flow control valve – Fixed and adjustable, electrical control solenoid valves, Relays, ladder diagram.

Accumulators and Intensifiers : Types of accumulators – Accumulators circuits, sizing of accumulators, intensifier – Applications of Intensifier – Intensifier circuit.

UNIT – IV: PNEUMATIC SYSTEMS AND COMPONENTS 9

Pneumatic Components: Properties of air – Compressors – Filter, Regulator, Lubricator Unit – Air control valves, Quick exhaust valves, pneumatic actuators.

Fluid Power Circuit Design, Speed control circuits, synchronizing circuit, , Sequential circuit design for simple applications using cascade method.

UNIT – V: DESIGN OF PNEUMATIC CIRCUITS 9

Servo systems – Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves.

Fluidics – Introduction to fluidic devices, simple circuits,. Fluid power circuits; failure and troubleshooting.

Total Hours : 45

TEXT BOOKS :

1. Anthony Esposito, “Fluid Power with Applications”, Pearson Education 2000.
2. Dudelyt, A. Pease and John T. Pippenger, “Basic Fluid Power”, Prentice Hall, 1987.

REFERENCES:

LIST OF ELECTIVES

19154E44AP GAS DYNAMICS AND JET PROPULSION

UNIT – I: FUNDAMENTALS OF COMPRESSIBLE FLOW 8

Energy and momentum equations for compressible fluid flows, various regions of flows, reference velocities, stagnation state, velocity of sound, critical states, Mach number, critical Mach number, Mach cone, Mach angle, effect of Mach number on compressibility.

UNIT – II: FLOW THROUGH VARIABLE AREA DUCTS 9

Isentropic flow through variable area ducts, T-s and h-s diagrams for nozzle and diffuser flows, area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles.

UNIT – III : Flow through Constant Area Ducts 10

Flow in constant area ducts with friction (Fanno flow) – Fanno curves and Fanno flow equation, variation of flow propertiesFlow in constant area ducts with heat transfer (Rayleigh flow), Rayleigh line and Rayleigh flow equation, variation of flow properties,

UNIT – IV: NORMAL SHOCK 8

Governing equations, variation of flow parameters like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock, Prandtl - Meyer equation, flow in convergent and divergent nozzle with shock, normal shock in Fanno and Rayleigh flows,

UNIT – V: PROPULSION 10

Aircraft propulsion – types of jet engines – energy flow through jet engines, study of turbojet engine components – diffuser, compressor, combustion chamber, turbine and exhaust systems, performance of turbo jet engines – thrust, thrust power, propulsive and overall efficiencies, ram jet and pulse jet engines

TUTORIAL 15
TOTAL HOURS : 60

Note: (Use of approved gas tables is permitted in the University examination)

TEXT BOOKS

1. Yahya. S.M., "Fundamental of compressible flow", New Age International (p) Ltd., New Delhi, 1996.
2. Patrich.H. Oosthvizen, William E.Carscallen, "Compressible fluid flow", McGraw-Hill, 1997

19154E44BP REFRIGERATION AND AIR CONDITIONING

UNIT – I: REFRIGERATION CYCLES 9

Review of thermodynamic principles of refrigeration. Vapour compression refrigeration cycle - use of P-H charts - multistage systems - cascade system - COP comparison. Vapor absorption refrigeration system. Ammonia water and Lithium Bromide water systems.

UNIT – II: REFRIGERANTS AND SYSTEM COMPONENTS 9

Compressors - reciprocating & rotary (Fundamentals only) - condensers - evaporators - cooling towers. Refrigerants - properties - selection of refrigerants, Alternate Refrigerants, Refrigeration plant controls - testing and charging of refrigeration units. Applications to refrigeration systems - ice plant - food storage plants.

UNIT – III: PSYCHROMETRY 9

Psychrometric processes- use of psychrometric charts - - Grand and Room Sensible Heat Factors - bypass factor - requirements of comfort air conditioning - comfort charts - factors governing optimum effective temperature,

UNIT – IV: COOLING LOAD CALCULATIONS 9

Types of load - design of space cooling load - heat transmission through building. Solar radiation - infiltration - internal heat sources (sensible and latent) - outside air and fresh air load - estimation of total load - Domestic, commercial and industrial systems - central air conditioning systems.

UNIT – V: AIRCONDITIONING SYSTEM 9

Air conditioning equipments – air cleaning and air filters - humidifiers - dehumidifiers - air washers - condenser – cooling tower and spray ponds - elementary treatment of duct design - air distribution system. Thermal insulation of air conditioning systems. - applications: car, industry, stores, and public buildings

Total Hours : 45

TEXT BOOKS:

1. Manohar Prasad, "Refrigeration and Air Conditioning", Wiley Eastern Ltd., 1983.
2. Arora. C.P., "Refrigeration and Air Conditioning", Tata McGraw-Hill New Delhi, 1988.

19154E44CP NON DESTRUCTIVE TESTING

UNIT I: OVERVIEW OF NDT 9

NDT Versus Mechanical testing, Overview of the Non Destructive Testing Methods for the detection of manufacturing defects as well as material characterisation. Relative merits and limitations, Various physical characteristics of materials and their applications in NDT., Visual inspection – Unaided and aided.

UNIT II: SURFACE NDE METHODS 9

Liquid Penetrant Testing - Principles, types and properties of liquid penetrants, developers, advantages and limitations of various methods, Testing Procedure, Interpretation of results. Magnetic Particle Testing- Theory of magnetism, inspection materials Magnetisation methods, Interpretation and evaluation of test indications, Principles and methods of demagnetization, Residual magnetism.

UNIT III:THERMOGRAPHY AND EDDY CURRENT TESTING (ET) 9

Thermography- Principles, Contact and non contact inspection methods, Techniques for applying liquid crystals, Advantages and limitation - infrared radiation and infrared detectors, Instrumentations and methods, applications. Eddy Current Testing-Generation of eddy currents, Properties of eddy currents, Eddy current sensing elements, Probes, Instrumentation, Types of arrangement, Applications, advantages, Limitations, Interpretation/Evaluation.

UNIT IV: ULTRASONIC TESTING (UT) AND ACOUSTIC EMISSION (AE) 9

Ultrasonic Testing-Principle, Transducers, transmission and pulse-echo method, straight beam and angle beam, instrumentation, data representation, A/Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight Diffraction. Acoustic Emission Technique – Principle, AE parameters, Applications.

UNIT V: RADIOGRAPHY (RT) 9

Principle, interaction of X-Ray with matter, imaging, film and film less techniques, types and use of filters and screens, geometric factors, Inverse square, law, characteristics of films - graininess, density, speed, contrast, characteristic curves, Penetrameters, Exposure charts, Radiographic equivalence. Fluoroscopy- Xero-Radiography, Computed Radiography, Computed Tomography

TOTAL : 45 PERIODS

TEXT BOOKS:

1. Baldev Raj, T.Jayakumar, M.Thavasimuthu “Practical Non-Destructive Testing”, Narosa Publishing House, 2014.

19154E44DP RENEWABLE SOURCES OF ENERGY

UNIT– I: FACTORS AFFECTING ENERGY SOURCES: 9

Primary energy sources - world energy resources- energy cycle of the earth –environmental aspects of energy utilisation, CO_2 emissions and Global warming–renewable energy resources and their importance. Potential impacts of harnessing the different renewable energy resources.

UNIT – II: SOLAR ENERGY : 9

Principles of Solar energy collection -Solar radiation - measurements - instruments - data and estimation- types of collectors - characteristics and design principles of different type of collectors - performance of collectors - testing of collectors. Solar thermal applications - water heaters and air heaters - performance and applications - simple calculations - solar cooling - solar drying - solar ponds - solar tower concept - solar furnace.

UNIT – III: WIND, TIDAL AND GEO THERMAL ENERGY 9

Energy from the wind - general theory of windmills - types of windmills - design aspects of horizontal axis windmills - applications. Energy from tides and waves – working principles of tidal plants and ocean thermal energy conversion plants - power from geothermal energy - principle of working of geothermal power plants.

UNIT – IV: BIO ENERGY 9

Energy from bio mass & bio gas plants -various types - design principles of biogas plants - applications. Energy from wastes - waste burning power plants - utilization of industrial and municipal wastes - energy from the agricultural wastes.

UNIT – V: RECENT ADVANCEMENTS 9

Direct energy conversion (Description, principle of working and basic design aspects only) – Magneto hydrodynamic systems (MHD) - thermoelectric generators – thermionic generators -

fuel cells - solar cells - types,

Total Hours : 45

TEXT BOOKS

19154E54BP COMPOSITE MATERIALS

1. INTRODUCTION TO COMPOSITES 8

Fundamentals of composites - need for composites – Enhancement of properties - classification of composites – Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Reinforcement – Particle reinforced composites, Fibre reinforced composites. Applications of various types of composites.

2. POLYMER MATRIX COMPOSITES 12

Polymer matrix resins – Thermosetting resins, thermoplastic resins – Reinforcement fibres – Rovings – Woven fabrics – Non woven random mats – various types of fibres. PMC processes - Hand lay up processes – Spray up processes – Compression moulding – Reinforced reaction injection moulding - Resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre reinforced plastics (FRP), Glass fibre reinforced plastics (GRP).

3. METAL MATRIX COMPOSITES 9

Characteristics of MMC, Various types of Metal matrix composites Alloy vs. MMC, Advantages of MMC, Limitations of MMC, Metal Matrix, Reinforcements – particles – fibres. Effect of reinforcement - Volume fraction – Rule of mixtures. Processing of MMC – Powder metallurgy process - diffusion bonding – stir casting – squeeze casting.

4. CERAMIC MATRIX COMPOSITES 9

Engineering ceramic materials – properties – advantages – limitations – Monolithic ceramics - Need for CMC – Ceramic matrix - Various types of Ceramic Matrix composites- oxide ceramics – non oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles- fibres- whiskers. Sintering - Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing (HIPing).

5. ADVANCES IN COMPOSITES 7

Carbon /carbon composites – Advantages of carbon matrix – limitations of carbon matrix Carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol gel technique. Composites for aerospace applications.

19154E54CP ROBOTICS

UNIT-I: INTRODUCTION OF ROBOT BASICS 7

Robot – Definition – Robot Anatomy – Co-ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications

UNIT-II: ROBOT ACTUATORS AND END EFFECTORS 10

Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features, Applications and Comparison of all these Drives

End Effectors – Grippers – Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered Internal Grippers and External Grippers;

UNIT-III: SENSORS AND MACHINE VISION SYSTEM 10

Requirements of a sensor, Principles and Applications of the following types of sensors – Position of sensors - Piezo Electric Sensor, LVDT, Optical Encoders, Range Sensors, Proximity Sensors - nductive, Hall Effect, Capacitive, Ultrasonic Touch Sensors, Sensing and Digitizing Image Data – Signal Conversion, Image Storage, Lighting Techniques. Image Processing and Analysis – Data Reduction, Segmentation, Feature Extraction, Object Recognition.

UNIT-IV: ROBOT KINEMATICS AND ROBOT PROGRAMMING 10

Forward Kinematics, Inverse Kinematics and Differences; Forward Kinematics and Reverse Kinematics of Manipulators with Two, Three Degrees of Freedom (In 2 Dimensional),
Teach Pendant Programming, Lead through programming, Robot programming Languages – VAL Programming – Motion Commands, Sensor Commands, End effecter commands, and Simple programs

UNIT – V: IMPLEMENTATION AND ROBOT ECONOMICS 8

RGV, AGV; Implementation of Robots in Industries – Various Steps; Safety Considerations for Robot Operations; Economic Analysis of Robots – Pay back Method, Rate of Return Method.

Total Hours : 45

TEXT BOOKS:

19154E54DP DESIGN OF JIGS, FIXTURES AND PRESS TOOLS

UNIT-I: TYPES AND FUNCTIONS OF JIGS AND FIXTURES 8

Tool design objectives - Production devices - Inspection devices - Materials used in Jigs and Fixtures – Types of Jigs - Types of Fixtures-Mechanical actuation-pneumatic and hydraulic actuation-Analysis of clamping force.

UNIT-II: JIGS 9

Drill bushes –different types of jigs-plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs-. Air operated Jigs components. Design and development of Jigs for given components.

UNIT-III: FIXTURES 9

General principles of boring, lathe, milling and broaching fixtures- Grinding, planning and shaping fixtures, assembly, Inspection and welding fixtures- Modular fixtures. Design and development of fixtures for given component.

UNIT-IV: PRESS WORKING 10

Press working terminology-Presses and press accessories-Computation of capacities and tonnage requirements. Elements of progressive combination and compound dies:. Bolster plate-punch plate-punch holder-guide pins and bushes.

UNIT-V: DESIGN AND DEVELOPMENT OF DIES 9

Design and development of progressive and compound dies for Blanking and piercing operations. Bending dies – development of bending dies-forming and drawing dies-Development of drawing dies.

Total Hours : 45

(Use of approved design data book is permitted)

TEXT BOOKS:

19154E64AP UNCONVENTIONAL MACHINING PROCESSES

UNIT – I: INTRODUCTION: 5

Non traditional machining Process – Introductions-Need–types- Brief overview of all techniques.

UNIT – II: AJM, WJM & USM 10

Abrasive Jet Machining – Water Jet Machining – Ultrasonic Machining. (AJM, WJM and USM). Working Principles – equipment used – Process parameters – MRR-Variation in techniques used – Applications.

UNIT – III: EDM 8

Electric Discharge Machining (EDM)- working Principles-equipments-Process Parameters-MRR- electrode / Tool – Power Circuits-Tool Wear – Dielectric – Flushing – Wire cut EDM – Applications.

UNIT – IV: ECM & ECG 12

Chemical Machining and Electro-Chemical machining (CHM and ECM)-Etchants-maskant-techniques of applying maskants-Process Parameters – MRR-Applications.

Principles of ECM-equipments-MRR-Electrical circuit-Process Parameters-ECG and ECH Applications.

UNIT – V: LBM, PAM & EBM 10

Laser Beam machining (LBM), plasma Arc machining (PAM) and Electron Beam Machining (EBM). Principles-Equipment-Types-Beam control techniques – Applications.

Total Hours : 45

TEXT BOOKS:

1. Vijay.K. Jain "Advanced Machining Processes" Allied Publishers Pvt. Ltd., New Delhi (2002) ISBN 81-7764-294-4.

19154E64BP NUCLEAR ENGINEERING

UNIT-I: **NUCLEAR PHYSICS** **9**

Nuclear model of an atom-Equivalence of mass and energy-binding- radio activity-half life-neutron interactions-cross sections.

UNIT-II: NUCLEAR REACTIONS AND REACTION MATERIALS 9

Mechanism of nuclear fission and fusion- radio activity- chain reactions-critical mass and composition-nuclear fuel cycles and its characteristics-uranium production and purification-Zirconium, thorium, beryllium.

UNIT-III: REPROCESSING 9

Reprocessing: nuclear fuel cycles-spent fuel characteristics-role of solvent extraction in reprocessing-solvent extraction equipment.

UNIT-IV: NUCLEAR REACTOR 9

Nuclear reactors: types of fast breeding reactors-design and construction of fast breeding reactors-heat transfer techniques in nuclear reactors- reactor shielding. Fusion reactors.

UNIT-V: SAFETY AND DISPOSAL 9

Safety and disposal: Nuclear plant safety-safety systems-changes and consequences of accident-criteria for safety-nuclear waste-types of waste and its disposal-radiation hazards and their prevention-weapons proliferation.

Total Hours : 45

TEXT BOOKS :

19154E64CP INTELLECTUAL PROPERTY RIGHTS

UNIT I: INTRODUCTION 9

Introduction to IPRs, Basic concepts and need for Intellectual Property - Patents, Copyrights, Geographical Indications, IPR in India and Abroad – Genesis and Development – the way from WTO to WIPO –TRIPS, Nature of Intellectual Property, Industrial Property, technological Research, Inventions and Innovations – Important examples of IPR.

UNIT II: REGISTRATION OF IPRs 10

Meaning and practical aspects of registration of Copy Rights, Trademarks, Patents, Geographical Indications, Trade Secrets and Industrial Design registration in India and Abroad

UNIT III: AGREEMENTS AND LEGISLATIONS 10

International Treaties and Conventions on IPRs, TRIPS Agreement, PCT Agreement, Patent Act of India, Patent Amendment Act, Design Act, Trademark Act, Geographical Indication Act.

UNIT IV: DIGITAL PRODUCTS AND LAW 9

Digital Innovations and Developments as Knowledge Assets – IP Laws, Cyber Law and Digital Content Protection – Unfair Competition – Meaning and Relationship between Unfair Competition and IP Laws – Case Studies.

UNIT V: ENFORCEMENT OF IPRs 7

Infringement of IPRs, Enforcement Measures, Emerging issues – Case Studies.

TOTAL :45 PERIODS

TEXT BOOKS:

1. 3. Edited by Derek Bosworth and Elizabeth Webster, The Management of Intellectual Property, Edward Elgar Publishing Ltd., 2013.

19148E64DP MATHEMATICS FOR INDUSTRIAL OPERATIONS

Unit I Introduction to Linear Programming (LP)

Introduction to applications of operations research in functional areas of management. Linear Programming – formulation, solution by graphical and simplex methods (Primal – Penalty, Two Phase), Special cases, Sensitivity Analysis.

Unit II Transportation and Assignment models

Transportation Models (Minimizing and Maximizing Cases) – Balanced and unbalanced cases – Initial Basic feasible solution by N-W Corner Rule, Least cost and Vogal's approximation methods. Check for optimality. Solution by MODI / Stepping Stone method. Cases of degeneracy. Transportation Models. Assignment Models (Minimizing and Maximizing Cases) – Balanced and Unbalanced Cases. Solution by Hungarian and Branch and Bound Algorithms. Travelling Salesman problem. Crew Assignment Models.

Unit III Integer Linear Programming and Game Theory

Solution to pure and mixed integer programming problem by Branch and Bound and cutting plane algorithms. Game Theory – Two person zero sum games – Saddle point, Dominance Rule, Convex Linear Combination (Averages), methods of matrices, graphical and L.P. Solutions.

Unit IV Dynamic Programming, Simulation and Decision Theory

Dynamic Programming (DP) – Deterministic Cases – Maximizing and Minimizing problems. DP techniques for L.P. problems, decision making under risk – decision trees – decision making under uncertainty. Application of simulation techniques for decision making.

Unit V Queuing Theory and Replacement Models

Basic elements of the Queuing Model, of the Poisson and Exponential Distributions, Queuing with combined arrivals and departures, Queues with priorities for service, P.E.R.T. & C.P.M. and replacement model: drawing networks – identifying critical path – probability of completing the project within given time – project crashing – optimum cost and optimum duration.

Total no. of hrs: 60 hrs.

19160E74AP QUALITY CONTROL AND RELIABILITY ENGINEERING

UNIT - I : INTRODUCTION 10

Introduction, definition of quality, basic concept of quality, definition of SQC, benefits and limitation of SQC, Quality assurance, Quality cost-Variation in process- factors – process capability – process capability studies and simple problems –

UNIT - II : CONTROL CHARTS FOR VARIABLES AND ATTRIBUTES 8 Theory of Control chart-variables-X- chart, R –chart, control chart for attributes –control chart for proportion or fraction defectives – p chart and np chart

UNIT-III : ACCEPTANCE SAMPLING 9

Lot by lot sampling – types – probability of acceptance in single, double, – O.C. curves – producer's Risk and consumer's Risk. AQL, LTPD, AOQL concepts- - uses of standard sampling plans.

UNIT –IV: LIFE TESTING - RELIABILITY 9

Life testing – Objective – failure data analysis, Mean failure rate, mean time to failure, mean time between failure, hazard rate, system reliability, series, parallel and mixed configuration – simple problems. Maintainability and availability – simple problems**.**

UNIT-V : QUALITY AND RELIABLITY 9

Reliability improvements – techniques- use of Pareto analysis – design for reliability – redundancy unit and standby redundancy – Optimization in reliability

Total Hours : 45

Note : Use of approved Statistical table permitted in the examination.

3. Sharma S.C., "Inspection Quality Control and Reliability", Khanna Publishers, 1998.

19154E74BP VIBRATION AND NOISE CONTROL

1. **BASICS OF VIBRATION** **9**

Introduction, classification of vibration: free and forced vibration, undamped and damped vibration, linear and non linear vibration, response of damped and undamped systems under harmonic force, analysis of single degree and two degree of freedom systems.

2. BASICS OF NOISE **9**

Introduction, amplitude, frequency, wavelength and sound pressure level, addition, subtraction and averaging decibel levels, noise dose level, legislation, measurement and analysis of noise, measurement environment, equipment, frequency analysis,

3. AUTOMOTIVE NOISE SOURCES **9**

Noise Characteristics of engines, engine overall noise levels, assessment of combustion noise, assessment of mechanical noise, engine radiated noise, intake and exhaust noise, engine accessory contributed noise, transmission noise, brake noise.

4. CONTROL TECHNIQUES **9**

Vibration isolation, tuned absorbers, un tuned viscous dampers, damping treatments, application dynamic forces generated by IC engines, engine isolation, crank shaft damping, modal analysis of the mass elastic model shock absorbers.

5. SOURCE OF NOISE AND CONTROL **9**

Methods for control of engine noise, combustion noise, mechanical noise, predictive analysis, palliative treatments and enclosures, automotive noise control principles, sound in enclosures, sound energy absorption.

TOTAL : 45

19160E74CP PRINCIPLES OF MANAGEMENT

(COMMON TO ALL BRANCHES)

UNIT I - Nature of Management 9

Definitions, meaning, scope, administration and management - Science and art Mgmt as a profession, University of management Hierarchy (Top, middle and supervisory, Levels), Principles of Management

UNIT II - Development of Management Thought 9

Taylor and Scientific Management, Principles of Scientific Management Contributions of fayol,Barnard and social system theory, Contributions of Herbert Simon, Contributions of Peter Drucker, Contributions of behavioral scientists ,Contribution of system scientists

UNIT III - Planning and organizing 9

Definition and features of planning, Nature of planning, Importance of planning
Types of planning, Steps in planning. Management by objectives, Strategies and policies, Definition of organization, Importance of organization, Principles of organization, Span of management

UNIT IV - Direction and Coordination 9

Meaning, definition, principles of direction, Techniques of direction - Meaning of supervision, Functions of supervisor, Meaning of coordination Element and features of coordination, Importance of coordination Cooperation and coordination systems approach Steps for effective coordination Meaning and causes of conflicts, Management of conflicts

UNIT V – Controlling 9

Definition, Meaning .elements, steps in establishing control procedure Control Techniques, Requirements of good control systems Budget –meaning, definitions, types Zero based budgeting, responsibility accounting, budgetary control, Report –meaning types PERT and CPM Management by Exception

Total Hours: 45

19154E74DP INDUSTRIAL ENGINEERING

Unit I Introduction to Industrial Engineering

Introduction to Industrial Engineering – Evolution of modern Concepts in Industrial Engineering – Functions of Industrial Engineering – Field of application of Industrial Engineering Product Development and research- Design function – Objectives of design- Manufacturing Vs purchase- Development of designs- Experimentation- prototype production and testing simplification and standardization – Selection of materials and processes- Human factors in design- value Engineering job plan.

Unit II Plant layout

Plant layout - Types of layouts- Product, process, fixed, Group technology, Flexible manufacturing system- elementary concepts and structure, flow charts, use of time study data, physical facilities- Constructional details- environmental control like lighting, temperature, humidity, Ventilation, noise and dust, Industrial waste disposal-

Unit III - Material handling

Principles of material handling- Types of material handling equipments- Selection and application maintenance and replacements- Preventive and brake- down maintenance and replacement- Preventive and brake- down maintenance- economic aspect, Replacement of equipment- Method of providing for depreciation- Determination of economic life, Criteria for selection of equipment- Simple problem.

Unit IV Organization,

Principles of organization, Development of Organizational charts like line, staff, line and staff & functional types. Resources, Human relationship. Factory acts, payment of wages, workmen compensation, E.S.I. Sales management & forecasting cost accounting, Budgetary control. , partnership, Joint stock & co-operative stores.

Unit V Labour welfare and Industrial Safety

Workers participation in management- Labour welfare and social security- Industrial safety- Important statutory provisions in labour legislation. Safety engineering, accident prevention program , safety design concepts, fire protection-industrial noise-Legislations on safety in industry . Recent Developments in maintenance methods-RCM- CBM –DMS – TPM etc.

DEPARTMENT OF MECHANICAL ENGINEERING

M.Tech., MANUFACTURING TECHNOLOGY – FULL TIME PROGRAMME SYLLABI-REGULATIONS- 2019

I - SEMESTER

19254H12 - THEORY OF METAL CUTTING **4 0 0 4**

OBJECTIVE:
To know about the mechanics of chip formation, to analyse the tool failure, and thermodynamics involved in metal cutting and evaluation of tool materials.

UNIT- I: Orthogonal Cutting: **12**
Orthogonal Cutting – Theories of merchant – Lee and Shaffer – Merchant's circle diagram – shear angle relationship – chip velocity – force – velocity relationships

UNIT-II: Chip Formation: **12**
Mechanism of chip formation – Types of Chips – discontinuous,continuous continuous with BUE – Chip Formation in drilling and Milling – effect of cutting variables of chip reduction coefficient.

UNIT-III : Tool Life and Machinability: **12**
Tool Failure:Mode of Plastic failure – Measurement of tool wear – tool life tests – tool life equation for variable theories – variables affecting tool life – machinability – machinability index – problems.

UNIT-IV: Thermal Analysis in Metal Cutting: **12**
Thermodynamics of orthogonal cutting – analysis of temperature at shear plane and tool face – experimental methods for temperature measurement.

UNIT-V: Chatter: **12**
Chatter - Importance of Chatter in machining – types of chatter – avoidance of chatter.Tools materials – requirements – alloy tools - HSS – carbides –PCD and CBN- properties and application.

TOTAL: 60 PERIODS

BOOKS FOR REFERENCES:

1. Juneja .B.L, "Fundamentals of Metal cutting and Machine tools", New Age International, 1995.

2. Bhattacharya.A, "Metal Cutting Theory and Practice", Central book publications.

3. Kuppusamy .G, "Principle of Metal Cutting", University Press,1996.
4. Shaw .M.C, "Metal Cutting Principles",I BH Publications,1992.
5. Armarego E.J.A and Brown R.H, "The Machining of Metals", Prentice Hall,1969

9254H13 ADVANCED MANUFACTURING PROCESSES 4 0 0 4

AIM:

To expose the students in the art of manufacturing new products due to the development of new materials and processes. The students will totally get a feel of the relevant suitable process while evaluating and deciding.

OBJECTIVE:

• To inform the students about the various alternative manufacturing processes available.
• To develop an altitude to look for the unconventional manufacturing process to machine
• To make them to understand and appreciate the latest manufacturing process for micro fabrication and devices.

UNIT I NEWER MACHINING PROCESSES - I 12

(Non thermal energy) – Abrasive machining – water jet machining - ultrasonic machining – chemical machining – electro chemical machining – construction working principle – steps - types – process parameters – derivations – problems, merits, demerits and applications .

UNIT II NEWER MACHINING PROCESS – II 12

Wire cut EDM - Electro chemical machining – ECG - Electric discharge machining – construction – principle – types – control - circuits – tool design – merits, demerits & applications.

UNIT III NEWER MACHINING PROCESS – III 12

Laser beam machining – Electron beam machining – Plasma arc machining – Ion beam machining – construction working principle types – process parameter – derivations – problems, merits, demerits and applications.

UNIT IV FABRICATION OF MICRO DEVICES 12

Semiconductors – films and film depurification – Oxidation - diffusion – ion implantation – etching – metallization – bonding – surface and bulk machining – LIGA Process – Solid free form fabrication.

UNIT V MICROFABRICATION TECHNOLOGY 12

Wafer preparation – monolithic processing – moulding – PCB board hybrid & mcm technology – programmable devices & ASIC – electronic material and processing.–
steriolithography SAW devices, Surface Mount Technology,

TOTAL: TOTAL: 60 PERIODS

BOOKS FOR REFERENCES:

7. More Madon, Fundamentals of Microfabrication, CRC Press, 1997.

19254H14 MECHANICAL METALLURGY 4 0 0 4

OBJECTIVE:

To study about the behaviour of Metals during the loading conditions related to distribution of Stress and Strain. To know about the fracture of metals and various test procedures.

UNIT-I: Tensile Study: 12

Study of Engineering stress-strain curve: Derivation of tensile strength , yield strength ductility, Young's modulus, resilience and toughness from stress strain curves, study of stress-strain curves for different materials-true stress-strain curve: true stress at ultimate load, true fracture strain, true uniform strain, true necking strain-necking factor-effect of strain rate, temperature- test of flow properties-Notch tensile test-tensile properties of steel-strengthening theory- strain hardening-strain aging-Yield point phenomena-Solid solution strengthening-Martensite strengthening-Grain refinement,

UNIT-II: Hardness and Toughness: 12

Hardness and Toughness: Hardness introduction, Hardness measurement methods-Brinell hardness, Meyer hardness, Vickers hardness, Rockwell hardness and Micro hardness- Relationship between hardness and the flow curve-Hardness at higher temperatures-Toughness –introduction, Toughness measurements: Charpy, Izod and instrumented Charpy-TTT curves: Significance, metallurgical factors affecting the curves, Drop weight test, explosion crack starter test.

UNIT-III: Fatigue: 12

Fatigue study: Introduction: Different stress cycles, S-N curves, Goodman diagram, Soderberg diagram, Gerbar diagram-Cyclic stress curve-Low cycle fatigue- Strain life equation-Fatique mechanism-High cycle fatigue-Effect of folloeing parameters on fatigue: Mean stress , stress concentration, specimen size, surface roughness, residual stress, micro structure and temperature. Fatique crack propagation.

UNIT-IV: Fracture Behaviour: 12

Fracture – Introduction –Types – Ductile and Brittle Cohesive Strength of Metals- Griffith Theory-Metallographic Examination of Fracture – Fractography – Notch Effect – Concept of Fracture curve – Fracture under combined stresses- Environment sensitive fracture: Hydrogen Embrittlement and Corrosion Cracking

UNIT-V: Creep: 12

Creep: Creep Curve – Stress rupture test- Structural changes during creep- Creep deformation-Deformation Mechanisms Maps – Activation Energy for Steady state creep – Fracture at higher temperatures.

TOTAL: 60 PERIODS

BOOKS FOR REFERENCES:

1. George E. Dieter, "Mechanical Metallurgy", Mc Graw Hill, NewYork, 1988.
2. M.A. Meyers and K.Chawla, "Mechanical Metallurgy", PHI.
3. Metals Hand Book, "Mechanical Testing", Vol. 8, 9th Ed., ASM.
4. Thomas Countney.H., "Mechanical Behaviour of Materials",McGraw Hill, 2nd Ed., 2000.
5. Hertzberg R.W., "Deformation and Fracture Mechanics of Engineering Materials", 2ne Ed., John Wiley & Sons. 1983.

19254H15 AUTOMATED COMPUTER INTEGRATED MANUFACTURING SYSTEMS 4 0 0 4

AIM:

To stress the role of computers in production.

OBJECTIVE:

To teach the role of computers in processing the information knowing across the various Stages and various departments in a manufacturing concern.

UNIT I INTRODUCTION 10

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts and mathematical models – Simple problems in production models – CIM hardware and software – Major elements of CIM system – Three step process for implementation of CIM – Computers in CIM – Computer networks for manufacturing – The future automated factory – Management of CIM – Impact of CIM on personnel – CIM status.

UNIT II AUTOMATED MANUFACTURING SYSTEMS 14

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design – The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features. Automated Guided Vehicle system – Types of vehicles and AGVs applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance.

UNIT III GROUP TECHNOLOGY AND FMS 14

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies. FMS – Components – workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS, FMS applications, Benefits.

UNIT IV PROCESS PLANNING 12

Process planning – Activities in process planning, Information’s required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – selecting among casting process, forming process and machining process. Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study. Typical process sheet – case studies in Manual process planning. Computer Aided Process Planning – Process planning module and data base – Variant process planning – Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning.

UNIT V TYPES OF PROCESS CONTROL AND AUTOMATIC DATA CAPTURE 10

Introduction to process model formulation – linear feedback control systems – Optimal control – Adaptive control –Sequence control and PLC. Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer control. Overviews of Automatic identification methods – Bar code technology – Other Automatic data capture technologies.

TOTAL: 60 PERIODS

BOOKS FOR REFERENCES:

1. Mikell P.Groover, “Automation, Production system and Computer integrated Manufacturing”, Prentice Hall of India Pvt. Ltd., 2008.
2. Radhakrishnan,P., Subramanian,S., and Raju,V., “CAD/CAM/CIM” New Age International Publishers, 2000.
3. James A.Retrg, Herry W.Kraebber, “Computer Integrated Manufacturing”, Pearson Education, Asia, 2001.
4. Viswanathan,N., and Narahari,Y., “Performance Modeling and Automated Manufacturing Systems”, Prentice Hall of India Pvt. Ltd., 2000.
5. Alavudeen and Venkateshwaran, “Computer Integrated Manufacturing”, PHI Learning Pvt. Ltd., New Delhi, 2008.

19254L19 CIM LAB 0 0 3 3

AIM:

To impart the knowledge on training the students in the area of CAD/CAM.

OBJECTIVES:

To teach the students about the drafting of 3D components and analyzing the same using various CAD/CAM software’s.

CAM LABORATORY

1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading, Grooving & canned cycle
2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle.
3. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Strain gauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.
4. Mini project on any one of the CIM elements is to be done. This can be either a software or hardware simulating a CIM element. At the end of the semester, the students has to submit a mini report and present his work before a Committee.

CAD LABORATORY

2D modeling and 3D modeling of components such as

1. Bearing
2. Couplings
3. Gears
4. Sheet metal components
5. Jigs, Fixtures and Die assemblies.

TOTAL: 30 PERIODS.

SEMESTER II

19254H21 PRODUCTION MANAGEMENT 4 0 0 4

OBJECTIVE:

To gain knowledge in operation management principles and the related quantitative approaches.

UNIT-I : Manufacturing System: 12

The concept of system - types of manufacturing system- the concept of a model - model classification - model building - decision making approaches. Forecasting: qualitative and quantitative methods - moving averages- single and multiple regression models.

UNIT-II : Aggregate Planning : 12

Methods of aggregate planning- graphical and charting methods, trial and error, transportation method- concepts of linear decision rule.

UNIT-III: Inventory Management Systems and Models 12

EOQ, model (without and with shortages)- inventory models allowing price breaks, EPQ model - single period inventory model - inventory control systems - P,Q and S-s system - selective inventory control techniques.

UNIT-IV: MRP & JIT: 12

Materials requirement planning (MRP) - master production schedule, bill of materials, MRP concepts, lot sizing - lot-for-lot technique, EOQ approach, silver-meal approach, period order quantity approach, least unit cost approach, least total cost approach. Principles of JIT production pull and push system, kanban, JIT purchasing, supply chain management.

UNIT-V: Scheduling: 12

Scheduling and assignment problems - notation and definitions - criteria, objective functions for scheduling - job shop scheduling: sequencing of n job s thorough 1 machine - priority rules, n jobs through 3, m machines - Johnsons rule, CDS algorithm, 2 jobs on m machine - graphical method- multi product assignment problem - index method, Hungarian method.

TOTAL: 60 PERIODS

TEXT BOOKS:

1. Production Operation Management:Theory And Problems, Chary:S.N, TMH, New delhi,1990.
2. Production Operation Management, Pannerselvam.R, PHI, 1999.

REFERENCE BOOKS:

1. Operation Management Theory And Problems, Monks.J,G., McGraw HILL,1987.
2. Production operation management, chase.R.B,. Aquiliano.N.J and Jacobs.R.R.,8th Edition, TMH, 1988.
3. Production Planning And Inventory Control, Narashimhan. S.L., Mcleavy.D.W.,and Billington.P.J., 2nd Edition., PHI,1997

19254H22 MEMS AND NANO TECHNOLOGY 4 0 0 4

AIM:

To inspire the students to expect to the trends in manufacturing micro components and measuring systems to nano scale.

OBJECTIVES:

• To expose the students to the evolution of micro electromechanical systems, to the various fabrication techniques and to make students to be award of micro actuators.

• Also to impart knowledge to the students about nano materials and various nano measurements techniques.

UNIT I OVER VIEW OF MEMS AND MICROSYSTEMS 10

Definition – historical development – fundamentals – properties, micro fluidics, design and fabrication micro-system, microelectronics, working principle and applications of micro system.

UNIT II MATERIALS, FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING 14

Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS, conductive polymers. Photolithography, photo resist applications, light sources, in implantation, diffusion process exudation – thermal oxidation, silicon diode, chemical vapour deposition, sputtering - deposition by epitoxy – etching – bulk and surface machining – LIGA process Micro system packaging – considerations packaging – levels of micro system packaging die level, device level and system level.

UNIT III MICRO DEVICES AND MATERIALS 12

Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands displacement sensors, pressure and flow sensors, micro actuators – smart materials – applications.

UNIT IV SCIENCE OF NANO MATERIALS 12

Classification of nano structures – effect of the nanometer length scale effects of nano scale dimensions on various properties – structural, thermal, chemical, mechanical, magnetic, optical and electronic properties – effect of nanoscale dimensions on biological systems. Fabrication methods – Top down processes – bottom up process.

UNIT V CHARACTERIZATION OF NANO MATERIALS 12

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, transmission electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

TOTAL: 60 PERIODS

BOOKS FOR REFERENCES:

1. Tai – Ran Hsu, MEMS and Microsystems Design and Manufacture, Tata-McGraw Hill, New Delhi, 2002.
2. Mark Madou Fundamentals of Microfabrication, CRC Press, New York, 1997.
3. Norio Taniguchi, Nano Technology, Oxford University Press, New York, 2003
4. The MEMS Hand book, Mohamed Gad-el-Hak, CRC Press, New York, London.
5. Charles P Poole, Frank J Owens, Introduction to Nano technology, John Wiley and Sons, 2003

6. Julian W. Hardner Micro Sensors, Principles and Applications, CRC Press 1993.

19254H23 MANUFACTURING METROLOGY AND QUALITY CONTROL 4 0 0 4

AIM:

To expose the students, the importance of measurement and the various latest measuring techniques using Laser, Coordinate measuring machines and Optoelectronics devices. Also to stress upon the Importance of quality in manufacturing.

OBJECTIVES:

To impart through knowledge in various latest measurement systems such as laser metrology, coordinate measuring machines and electro-optical devices. Also to make the students to understand quality

UNIT – I LASER METROLOGY 11

Introduction – types of lasers – laser in engineering metrology – metrological laser methods for applications in machine systems – Interferometry applications – speckle interferometry – laser interferometers in manufacturing and machine tool alignment testing – calibration systems for industrial robots laser Doppler technique – laser Doppler anemometry.

UNIT – II PRECISION INSTRUMENTS BASED ON LASER 11

Laser telemetric systems – detection of microscopic imperfections on high quality surface Pitter NPL gauge interferometer – classification of optical scanning systems – high inertia laser scan technique – rotating mirror technique – laser gauging – bar coding – laser dimensional measurement system.

UNIT – III CO-ORDINATE MEASURING MACHINE 14

Co-ordinate metrology – CMM configurations – hardware components – software – Probe sensors – displacement devices – Performance Evaluations – Software – Hardware – Dynamic errors – Thermal effects diagram – temperature variations environment control – applications.

UNIT – IV OPTO ELECTRONICS AND VISION SYSTEM 12

Opto electronic devices – CCD – On-line and in-process monitoring in production – applications image analysis and computer vision – Image analysis techniques – spatial feature – Image extraction – segmentation – digital image processing – Vision system for measurement – Comparison laser scanning with vision system.

UNIT – V QUALITY IN MANUFACTURING ENGINEERING 12

Importance of manufacturing planning for quality – concepts of controllability – need for quality management system and models – quality engineering tools and techniques – statistical process control – six sigma concepts – Poka Yoke – Computer controlled systems used in inspection.

TOTAL: 60 PERIODS

19254L26 AUTOMATION LAB 0 0 3 3

AIM:

To impart knowledge in the area of hydraulic and pneumatic components and its functions.

OBJECTIVE:

• To make the students to learn the basic concepts of hydraulics and pneumatics and its applications in the area of manufacturing process.
• To simulate the various hydraulics and pneumatics circuits.

EXPERIMENTS:

1. Simulation of single and double acting cylinder circuits
2. Simulation of Hydraulic circuits
3. Simulation of electro pneumatic circuits
4. Simulation of electro hydraulic circuits
5. Simulation of PLC circuits
6. Exercises on linear and angular measurements
7. Exercises on speed measurements
8. Exercises on Vibration measurements
9. Exercises on Motion controller using servo motors, encoders, etc.
10. Exercises on fiber optics transducers.
11. Exercises on stepper motor.
12. Exercises on microprocessor based data acquisition system.
13. Software simulation of fluid power circuits using Automation studio.

TOTAL : 30 PERIODS

192TECWR Technical Writing/Seminar 0 0 3 3

Seminar should be based on the literature survey on any topic relevant to CAD/CAM/CAE. It may be leading to selection of a suitable topic of dissertation. The report shall contain some contribution by the candidate in the form of experimental results, deductions, compilation and inferences etc.

• Each student has to prepare a write-up of about 25 pages. The report typed on A4 sized sheets and bound in the necessary format should be submitted after approved by the guide and endorsement of the Head of Department.

• The student has to deliver a seminar talk in front of the teachers of the department and his classmates. The Guide based on the quality of work and preparation and understanding of the candidate shall do an assessment of the seminar.

19219254CRM **Research Methodology**

AIM: **3 0 0 3**

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

OUTCOME:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

UNIT I **9**

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

UNIT II **9**

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

UNIT III **9**

Data Analysis using Excel- Tabulation of Data in excel (Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

UNIT IV **9**

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software

UNIT V **9**

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references

SEMESTER III

19254H31 **METAL FORMING PROCESS** **4 0 0 4**

OBJECTIVE:

To study about the response of materials under plastic deformation and the various techniques for finding the stress for various metal working processes, and the recent developments in high speed forming.

UNIT-I: Stress and Strain: 10

Stress-State of stress in two dimensions – three dimensions – stress tensor-Mohr's circles – 2D and 3D state of stress – Description of strain at a point – Mohr's circle of strain- Hydrostatic and stress deviator component of stress- Plasticity- flow curve- true and true strain yield criteria for ductile loads combined stress test-plastic stress and strain relations- Levy Mises equations-Prandyl_Resus equations.

UNIT-II: Analysis of Metal Forming: 14

Work Load analysis – work formula for homogeneous deformation- rolling, rod drawing and extrusion processes -Determination of load by stress evaluation method-Determination of drawing load – strip drawing with wedge shaped dies and cylindrical rod drawing with a conical die.

UNIT-III: Stress Evaluation: 12

Stress evaluation method-Determination of forging load-plane strain forging of a thin strip and a flat circular disc- Determination of extrusion load for round band flat strip- upper bound analysis – plane strain indentation with frictionless interface

UNIT-IV: High velocity Forming: 12

Study of effect of high speed on stress strain relationships- High velocity forming equipment- Description of high speed forming machine – hot forging, pneumatic-mechanical, high velocity forging – Fuel combustion process- Electro magnetic forming –Introduction- Procedure - process variables- Applications

UNIT-V: Advanced Forming process: 12

Explosive Forming – Explosives – characteristics- stand off and contact operations- stress waves and their effects- process variables – properties of formed components- applications- Electro hydraulic forming – principles, requirements and characteristics – process variables- water hammer forming- principles and parameters- governing the process.

List of Electives - Elective I

19254E16A MATERIALS MANAGEMENT AND LOGISTICS 3 0 0 3

AIM:

To introduce to the students the various functions of materials management and logistics

OBJECTIVE:

To make the students familiar with the various concepts and functions of material management, so that the students will be in a position to manage the materials management department independently.

UNIT I INTRODUCTION 6

Introduction to materials management – Objectives – Functions – Operating Cycle – Value analysis – Make or buy decisions.

UNIT II MANAGEMENT OF PURCHASE 7

Purchasing policies and procedures – Selection of sources of supply – Vendor development – Vendor evaluation and rating – Methods of purchasing – Imports – Buyer – Seller relationship – Negotiations.

UNIT III MANAGEMENT OF STORES AND LOGISTICS 12

Stores function – Location – Layout – Stock taking – Materials handling – Transportation – Insurance – Codification – Inventory pricing – stores management – safety – warehousing – Distribution linear programming – Traveling Salesman problems – Network analysis – Logistics Management.

UNIT IV MATERIALS PLANNING 10

Forecasting – Materials requirements planning – Quantity – Periodic – Deterministic models – Finite production.

UNIT V INVENTORY MANAGEMENT 10

ABC analysis – Aggregate planning – Lot size under constraints – Just in Time (JIT) system.

TOTAL: 45 periods

BOOKS FOR REFERENCES:

1. Lamer Lee and Donald W.Dobler, Purchasing and Material Management, Text and cases, Tata McGraw Hill, 1996.

5. G. Reghuram, N. Rangaraj, Logistics and supply chain management – cases and concepts, Macmillan India Ltd., 2006.

19254E16B FINANCIAL MANAGEMENT 3 0 0 3

AIM:

To introduce the concepts of financial and various functions of financial management so that the students will be able to handle higher level financial decisions.

OBJECTIVES:

To train students in various functions of finance such as working capital management, current assets management so that students will be able to make high investment decisions when they take up senior managerial positions.

UNIT – I FINANCIAL ACCOUNTING 8

Accounting principles - Basic records - Preparation and interpretation of profit and loss statement - balance sheet - Fixed assets - Current assets.

UNIT – II COST ACCOUNTING 12

Elements of cost - cost classification - material cost - labour costs - overheads - cost of a product - costing systems - cost determination - process - costing - Allocation of overheads - Depreciation - methods.

UNIT – III MANAGEMENT OF WORKING CAPITAL 10

Current assets - Estimation of working capital requirements - Management of accounts receivable - Inventory - Cash - Inventory valuation methods.

UNIT – IV CAPITAL BUDGETING 8

Significance of capital budgeting - payback period - present value method – accounting rate of return method - Internal rate of return method.

UNIT – V PROFIT PLANNING AND ANALYSIS 7

Cost - Volume profit relationship relevant costs in decision making profit management analysis - Break even analysis.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Presanna Chandra, Financial Management, Tata McGraw Hill, 1998.
2. G.B.S. Narang, Production and Costing, Khanna Publishers, 1993.
3. R. Kesavan, C.Elanchezian, Sundar Selwyn, Engineering Economics and Financial Accounting, Laxmi Publications, New Delhi, 2005.
4. R Kesavan, C. Elanchezian, B.Vijaramnath, Engineering Economics and Cost Analysis Anuratha Publications, Chennai.

19254E16C MANUFACTURING INFORMATION SYSTEMS 3 0 0 3

AIM:

To impart the knowledge in manufacturing information system.

OBJECTIVE:

On completion of this course, the students are expected to be conversant with order policies, data base terminologies, designing, manufacturing considerations and information system for manufacturing.

UNIT I INTRODUCTION 5

The Evolution of order policies, from MRP to MRP II, the role of Production organization, Operations control.

UNIT II DATABASE 7

Terminologies – Entities and attributes – Data models, schema and subschema - Data Independence – ER Diagram – Trends in database.

UNIT III DESIGNING DATABASE 13

Hierarchical model – Network approach- Relational Data model concepts, principles, keys, relational operations – functional dependence – Normalization types – Query.

UNIT IV MANUFACTURING CONSIDERATION 10

The product and its structure, inventory and process flow – Shop floor control Data structure and procedure – various model – the order scheduling module, Input/output analysis module the stock status database – the complete IOM database.

UNIT V INFORMATION SYSTEM FOR MANUFACTURING 10

Parts oriented production information system – concepts and structure – Computerized production scheduling, online production control systems; Computer based production management system, computerized manufacturing information system – case study.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Luca G.Sartori, "Manufacturing Information Systems", Addison-Wesley Publishing Company, 1988.
2. Date.C.J.,"An Introduction to Database Systems" Addison Wesley, 8th Edn,.2003

4. Kerr.R, "Knowledge based Manufacturing Management", Addison-Wesley,1991.
5. Manufacturing Information & Data Systems Analysis, Design & Practice,CECELJA FRANJO, 2002.

List of Electives - Elective II

19254E24A FINITE ELEMENT APPLICATIONS IN MANUFACTURING 3 0 0 3

AIM:

To impart knowledge in the area of finite element methods and its application in manufacturing.

OBJECTIVE:

To study the fundamentals of one dimensional and two dimensional problems using FEA in manufacturing.

UNIT I INTRODUCTION 6

Fundamentals – Initial, boundary and eigen value problems – weighted residual, Galerkin and Raleigh Ritz methods - Integration by parts – Basics of variational formulation – Polynomial and Nodal approximation.

UNIT II ONE DIMENSIONAL ANALYSIS 10

Steps in FEM – Discretization. Interpolation, derivation of elements characteristic matrix, shape function, assembly and imposition of boundary conditions-solution and post processing – One dimensional analysis in solid mechanics and heat transfer.

UNIT III SHAPE FUNCTIONS AND HIGHER ORDER FORMULATIONS 10

Shape functions for one and two dimensional elements- Three noded triangular and four nodded quadrilateral element Global and natural co-ordinates—Non linear analysis – Isoparametric elements – Jacobian matrices and transformations – Basics of two dimensional, plane stress, plane strain and axisymmetric analysis.

UNIT IV COMPUTER IMPLEMENTATION 9

Pre Processing, mesh generation, elements connecting, boundary conditions, input of material and processing characteristics – Solution and post processing – Overview of application packages – Development of code for one dimensional analysis and validation.

UNIT V ANALYSIS OF PRODUCTION PROCESSES 10

FE analysis of metal casting – special considerations, latent heat incorporation, gap element – Time stepping procedures – Crank – Nicholson algorithm – Prediction of grain structure – Basic concepts of plasticity and fracture – Solid and flow formulation – small incremental deformation formulation – Fracture criteria – FE analysis of metal cutting, chip separation criteria, incorporation of strain rate dependency – FE analysis of welding.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Reddy, J.N. An Introduction to the Finite Element Method, McGraw Hill,1985.
2. Rao, S.S., Finite Element method in engineering, Pergammon press, 1989.
3. Lewis R.W.Morgan, K, Thomas, H.R. and Seetharaman, K.N. The Finite Element Method in Heat Transfer Analysis, John Wiley, 1994.

19254E24B LEAN MANUFACTURING 3 0 0 3

AIM:

To introduce the concepts of lean manufacturing system.

OBJECTIVES:

- To study the various tools for lean manufacturing (LM).
- To apply the above tools to implement LM system in an organization.

UNIT – I INTRODUCTION TO LEAN MANUFACTURING 7

Conventional Manufacturing versus Lean Manufacturing – Principles of Lean Manufacturing – Basic elements of lean manufacturing – Introduction to LM Tools.

UNIT – II CELLULAR MANUFACTURING, JIT, TPM 9

Cellular Manufacturing – Types of Layout, Principles of Cell layout, Implementation. JIT – Principles of JIT and Implementation of Kanban. TPM – Pillars of TPM, Principles and implementation of TPM.

UNIT – III SET UP TIME REDUCTION, TQM, 5S, VSM 10

Set up time reduction – Definition, philosophies and reduction approaches. TQM – Principles and implementation. 5S Principles and implementation - Value stream mapping - Procedure and principles.

UNIT – IV SIX SIGMA 9

Six Sigma – Definition, statistical considerations, variability reduction, design of experiments – Six Sigma implementation.

UNIT – V CASE STUDIES 10

Various case studies of implementation of lean manufacturing at industries.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Design and Analysis of Lean Production Systems, Ronald G. Askin & Jeffrey B. Goldberg, John Wiley & Sons, 2003
2. Rother M. and Shook J, 1999 ‘Learning to See: Value Stream Mapping to Add Value and Eliminate Muda’ , Lean Enterprise Institute, Brookline, MA.
4. Mikell P. Groover (2002) ‘Automation, Production Systems and CIM.

19254E24C DESIGN AND ANALYSIS OF EXPERIMENTS 3 0 0 3

1. INTRODUCTION7

Defining Research, Scientific Enquiry, Hypothesis, Scientific Method, Types of Research, Research Process and steps in it. Research Proposals – Types, contents, sponsoring agent's requirements, Ethical, Training, Cooperation and Legal aspects.

2. RESEARCH DESIGN 10

Meaning, Need, Concepts related to it, categories; Literature Survey and Review, Dimensions and issues of Research Design, Research Design Process – Selection of type of research, Measurement and measurement techniques ,Selection of Sample, Selection of Data Collection Procedures, Selection of Methods of Analysis, Errors in Research. Research Problem Solving – Types, Process and Approaches – Logical, Soft System and Creative; Creative problem solving process, Development of Creativity, Group Problem Solving Techniques for Idea Generation – Brain storming and Delphi Method.

3. RESEARCH MODELING 10

Mathematical – Classification of Models, Development of Models, Stages in Model building, Principles of Modeling, Use of Analogy, Models as Approximations, Data consideration and Testing of Models (b) Heuristics and Simulation – Definition, Applications and reasons for using Heuristics, Heuristic Methods and approaches, Meta-Heuristics; Simulation – Meaning, Applications and Classification of Simulation Models, Process of Simulation, Steps and Features of Simulation Experiments and their Validation.

4. EXPERIMENTATION 8

Objective, Strategies, Factorial Experimental Design, Applications of Experimental Design, Basic Principles – Replication, Randomization and Blocking, Guidelines for designing experiments; Laboratory Experiments, Methods of manipulating Variables, Errors in Experiments, Steps in Design of Experiments.

5. PROCESS OPTIMIZATION AND ANALYSIS 10

Factorial Design principles, Two factor Factorial Design, General Factorial Design, Fitting response Curves and Surfaces, Blocking, Taguchi Approach to Parameter Design, Robust Design. Analysis of Variance and Co-variance, Hypothesis Testing – Parametric. Report Writing: Pre-writing Considerations, Principles of Thesis Writing, Format of Report Writing, Format of Publication in Research Journals

List of Electives - Elective III

19254E25A ADVANCED METROLOGY AND COMPUTER AIDED INSPECTION 3 0 0 3

AIM:

To give a thorough knowledge of measurement and instrumentation of increasing importance in industry. The student will be knowledgeable in various standards and proliferation of computerized and automated inspecting techniques along with the classical metrology.

OBJECTIVES:

- To teach the students basic concepts in various methods of engineering measurement techniques and applications, understand the importance of measurement and inspection in manufacturing industries.
- Expose the students to various modern metrological instruments and the procedure used to operate these instruments.

UNIT I GENERAL CONCEPTS OF MEASUREMENT 8

Definition – Standards of measurement – Errors in measurement – Interchangeability and Selective assembly – Accuracy and Precision – Calibration of instruments.

UNITII MEASUREMENT OF SURFACE FINISH AND MEASURING MACHINES 9

Definitions – Types of Surface Texture: Surface Roughness Measurement Methods- Comparison, Profilometer, 3D Surface Roughness Measurement – Instruments.

UNIT III INTERFEROMETRY 8

Interferometry – Introduction, Principles of light interference – Interferometers – Measurement and Calibration – Laser Interferometry.

UNIT IV COMPUTER AIDED AND LASER METROLOGY 10

Tool Makers Microscope – Microhite – Co – Ordinate measuring machine – Applications – Laser Micrometer, Laser Scanning gauge, Non contact and in-process inspection, Vision system.

UNIT V IMAGE PROCESSING 10

Overview, Computer imaging systems, Image Analysis, Preprocessing, Human vision system, Image model, Image enhancement, gray scale models, histogram models, Image Transforms.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. GUPTA, I.C, "A Text Book of engineering metrology", Dhanpat Rai and Sons, 1996.

19254E25B MAINTENANCE MANAGEMENT 3 0 0 3

OBJECTIVE:

To understand the concepts of maintenance management and to have knowledge in developing a suitable maintenance system for any type of an organization.

UNIT I: Introduction to Maintenance Management: 7

Maintenance: Its role and scope in total Organizational contexts - role of Maintenance. Centralized and decentralized maintenance organization structures. Maintenance Economics – reliability and Availability – MTBF, MTTR.

UNIT II: Maintenance Categories: 10

Maintenance system– Categories - Design and its selection – Breakdown Maintenance –Routine Maintenance- Predictive Maintenance –Preventive Maintenance- Corrective Maintenance-Total Productive Maintenance –Maintenance Schedule – Repair Cycle.

UNIT III: Spare Parts Management: 8

Pareto's principles for repetitive breakdown analysis, spares management, planning considerations for each type of activities.

UNIT – IV: Condition Monitoring: 10

Condition Monitoring (CM) – Introduction- Economics of CM – On-load and off-load testing – Methods and instruments for CM – Temperature sensitive tapes – Pistol thermometers – wear-debris analysis.

UNIT V: Maintenance Manpower Cost, Performance Management: 10

Maintenance man power planning - Selection training - Scheduling maintenance costs - Budget preparation and budgetary control of maintenance expenditures Maintenance effectiveness various performance indices - evaluation, uses and limitations - Monitoring of Maintenance performance.

TEXT BOOKS FOR REFERENCES:

1. Gopalakrishnan P. and Sundarajan 1996. Maintenance Management. New Delhi, Prentice-Hall of India.
2. Srivastava S.K., "Industrial Maintenance Management", - S. Chand & Co.,1981.

Armstrong, "Condition Monitoring", BSIRSA, 1988.

19254E25C OPTIMIZATION TECHNIQUES 3 0 0 3

UNIT I - INTRODUCTION TO OPTIMIZATION 7

Formulation of an optimization problem- Classification of optimization problem – optimization techniques- Classical optimization technique – Single variable optimization – Multi variable optimization algorithms

UNIT II - MINIMIZATION METHODS 8

One dimensional minimization methods: unimodal function – elimination methods: unrestricted search, exhaustive search, Dichotomous search, Fibonacci methods, Golden section methods, Interpolation methods: Quadratic and cubic interpolation methods.

UNIT III - CONSTRAINED OPTIMIZATION TECHNIQUES 10

Optimization with equality and inequality constraints - Direct methods – Indirect methods using penalty functions, Lagrange multipliers - separable programming and Geometric programming.

UNIT IV - UNCONSTRAINED OPTIMIZATION TECHNIQUES 10

Multi variable unconstrained optimization techniques: Direct search methods: Random search method, unvaried method, pattern search method, steepest descent method and Conjugate gradient method.

UNIT V - APPLICATIONS OF HEURISTICS IN OPTIMIZATION 10

Heuristics-Introduction-Multi objective optimization: Genetic algorithms and Simulated Annealing techniques; neural network & Fuzzy logic principles in optimization.

BOOKS FOR REFERENCES:

List of Electives - Elective IV

19254E32A MANUFACTURING SYSTEMS AND SIMULATION 3 0 0 3

AIM:

To introduce the various concepts of manufacturing system simulation.

OBJECTIVES:

- To model manufacturing systems of different kinds.
- To make use of simulation languages for manufacturing systems.

UNIT I INTRODUCTION 8

Basic concepts of system – elements of manufacturing system - concept of simulation – simulation as a decision making tool – types of simulation – Monte-Carlo simulation - system modeling – types of modeling – Limitations and Areas of application of simulation.

UNIT II RANDOM NUMBERS 10

Probability and statistical concepts of simulation – Pseudo random numbers – methods of generating random numbers – discrete and continuous distribution – testing of random numbers – kolmogorov-mirnov test, the Chi-Square test - sampling - simple, random and simulated.

UNIT III DESIGN OF SIMULATION EXPERIMENTS 10

Problem formulation – data collection and reduction – time flow mechanical – key variables - logic flow chart starting condition – run size – experimental design consideration – output analysis, interpretation and validation – application of simulation in engineering industry.

UNIT IV SIMULATION LANGUAGE 9

Comparison and selection of simulation languages - Study of GPSS (Basic blocks only) Generate, Queue, Depart, Size, Release, Advance, Terminate, Transfer, Enter and Leave.

UNIT V CASE STUDIES 10

Development of simulation models using GPSS for queuing, production, inventory, maintenance and replacement systems – case studies.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

19254E32B INSTRUMENTATION AND CONTROL ENGINEERING 3 0 0 3

UNIT–I: Introduction to Instrumentation: 8

Mechanical Instrumentation- General concepts, General measurement system. Classification of Instruments - indicators, recorders and integrators- working principles, Precision and Accuracy: Measurement Error and calibration.

UNIT–II: Measuring Devices 10

Measurement of speed, frequency, acceleration - Vibrometer, Accelerometer etc. Pressure measurement: Gravitational, Bourdon, elastic transducers, strain gauge, pressure cells, and measurement of high and low pressure. Temperature measurement: Bi-Metallic, Resistance Thermometer, Thermocouples, Pyrometer, thermostats, Magnetic flow meter , Ultrasonic flow meter.

UNIT – III: Transducers: 8

Transducers – Introduction – Types -Variable resistance Transducers-Variable reactive transducers- Piezo Electric transducers- Fibre optic transducers- Laser instrumentation-analogue and digital type -incremental and absolute measurement.

UNIT – IV: Machine Diagnostic and Condition Monitoring: 10

Machine Diagnostics – Basic Concepts - Analysis of failure in machines-Distribution of fault occurrences-Objectives of monitoring-Monitoring techniques applied to Machineries.

UNIT – V: Computer Control System: 9

Data acquisition system-Introduction-Direct Digital control-Programmable Logic Controls (PLC) -Ladder diagrams-Communication used in PLC.

BOOKS FOR REFERENCES:

1. Thomas Beckwith, Lewis Buck N.Ray, D. Maragoni, “Mechabical Measurements”, Narosia Publishing House, NewDelhi.

19254E32C ARTIFICIAL INTELLIGENCE AND NEURAL NETWORKS 3 0 0 3

UNIT – I - Neural Networks 8

Introduction to soft Computing-Neural Networks-Supervised Learning Neural Networks – Perceptrons – Adaline – Back propagation Multilayer perceptrons – Radial Basic Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Habbian Learning.

UNIT – II - Fuzzy Logic: 10

Fuzzy Sets – Basic Definition and Terminology – Set –theoretic operations – Member Function Formulation and parameterization – Fuzzy Rules and Fuzzy Reasoning. Fuzzy Logic: Extension principle and Fuzzy Relations – Fuzzy If – Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT – III Genetic Algorithm: 9

Derivative – based Optimization – Descent Methods – The Method of steepest Descent – Classical Newton's Method – Step Size Determination – Derivative – free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT – IV Neuro Fuzzy Modeling: 10

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – learning Methods that Cross – Fertilize ANFIS and RBFN – Coactive Neuro – Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT – V Applications: 8

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency prediction – Soft Computing for Color Recipe Prediction – Single MLP approaches –CANFIS modeling for color recipe prediction

List of Electives - Elective V

19254E33A PRODUCT DESIGN AND DEVELOPMENT 3 0 0 3

UNIT I - INTRODUCTION 7

Significance of product design, product design and development process, sequential engineering design method, the challenges of product development.

UNIT II - PRODUCT PLANNING AND PROJECT SELECTION 8

Identifying opportunities evaluate and prioritize projects, allocation of resources Identifying Customer Needs, Interpret raw data in terms of customers need, organize needs in hierarchy and establish the relative importance of needs.

UNIT III - PRODUCT SPECIFICATIONS 8

Establish target specifications, setting final specifications, Concept Generation: Activities of concept generation, clarifying problem, search both internally and externally.

UNIT IV - INDUSTRIAL DESIGN AND CONCEPT SELECTION 10

Assessing need for industrial design, industrial design process, management, assessing quality of industrial design, Overview, concept screening and concept scoring, methods of selection.

UNIT V - THEORY OF INVENTIVE PROBLEM SOLVING (TRIZ) AND CONCEPT TESTING 12

Fundamentals, methods and techniques, General Theory of Innovation and TRIZ, Value engineering Applications in Product development and design, Model-based technology for generating innovative ideas Elements of testing: qualitative and quantitative methods including survey, measurement of customers' response, Intellectual Property: Elements and outline, patenting procedures.

BOOKS FOR REFERENCES:

5. Systematic innovation: an introduction to TRIZ ; (theory of inventive Problem Solving), By John Terninko, Alla Zusman, CRC Press.

19254E33B FLUID POWER AUTOMATION 3 0 0 3

AIM:

To impart knowledge in the area of hydraulics, pneumatic and fluid power components and its functions.

OBJECTIVE:

- To make the students to learn the basic concepts of hydraulics and pneumatics and their controlling elements in the area of manufacturing process.
- To train the students in designing the hydraulics and pneumatic circuits using ladder diagram.

UNIT I INTRODUCTION 5

Need for Automation, Hydraulic & Pneumatic Comparison – ISO symbols for fluid power elements, Hydraulic, pneumatics – Selection criteria.

UNIT II FLUID POWER GENERATING/UTILIZING ELEMENTS 8

Hydraulic pumps and motor gears, vane, piston pumps-motors-selection and specification-Drive characteristics – Linear actuator – Types, mounting details, cushioning – power packs – construction. Reservoir capacity, heat dissipation, accumulators – standard circuit symbols, circuit (flow) analysis.

UNIT III CONTROL AND REGULATION ELEMENTS 8

Direction flow and pressure control valves-Methods of actuation, types, sizing of ports pressure and temperature compensation, overlapped and under lapped spool valves operating characteristics-electro hydraulic servo valves-Different types-characteristics and performance.

UNIT IV CIRCUIT DESIGN 10

Typical industrial hydraulic circuits-Design methodology – Ladder diagram-cascade, method-truth table-Karnaugh map method-sequencing circuits-combinational and logic circuit.

UNIT V ELECTRO PNEUMATICS & ELECTRONIC CONTROL OF HYDRAULIC AND PNEUMATIC CIRCUITS 7

Electrical control of pneumatic and hydraulic circuits-use of relays, timers, counters, Ladder diagram. Programmable logic control of Hydraulics Pneumatics circuits, PLC ladder diagram for various circuits, motion controllers, use of field busses in circuits. Electronic drive circuits for various Motors.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

List of Electives - Elective VI

19254E34A ADVANCED MATERIAL TECHNOLOGY 3 0 0 3

AIM:

To impart knowledge on advance concepts of material technology

OBJECTIVE:

- To enlight the PG students on elastic, plastic and fractured behaviour of engineering Materials.
- To train the PG students in selection of metallic and non-metallic materials for the various engineering applications.

UNIT I ELASTIC AND PLASTIC BEHAVIOR 10

Elasticity in metals and polymers Anelastic and visco-elastic behaviour – Mechanism of plastic deformation and non metallic shear strength of perfect and real crystals – Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity – Deformation of non crystalline materials.

UNIT II FRACTURE BEHAVIOUR 10

Griffith's theory, stress intensity factor and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracture mechanism maps – Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law. Effect of surface and metallurgical parameters on fatigue – Fracture of non metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

UNIT III SELECTION OF MATERIALS 10

Motivation for selection, cost basis and service requirements – Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications – Computer aided materials selection.

UNIT IV MODERN METALLIC MATERIALS 8

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel – Intermetallics, Ni and Ti aluminides – smart materials, shape memory alloys – Metallic glass and nano crystalline materials.

UNIT V NON METALLIC MATERIALS 7

Polymeric materials – Formation of polymer structure – Production techniques of fibers, foams, adhesives and coating – structure, properties and applications of engineering polymers – Advanced structural ceramics, WC, TIC, TaC, Al2O3, SiC, Si3N4 CBN and diamond – properties, processing and applications.

TOTAL: 45 PERIODS

DEPARTMENT OF MECHANICAL ENGINEERING

M.TECH., MANUFACTURING TECHNOLOGY - PART TIME PROGRAMME SYLLABUS-REGULATIONS- 2019

I - SEMESTER

19254H12P THEORY OF METAL CUTTING 3 1 0 4

OBJECTIVE:

To know about the mechanics of chip formation, to analyse the tool failure, and thermodynamics involved in metal cutting and evaluation of tool materials.

UNIT- I: Orthogonal Cutting:

Orthogonal Cutting – Theories of merchant – Lee and Shaffer – Merchant's circle diagram – shear angle relationship – chip velocity – force – velocity relationships

UNIT-II: Chip Formation:

Mechanism of chip formation – Types of Chips – discontinuous,continuous continuous with BUE – Chip Formation in drilling and Milling – effect of cutting variables of chip reduction coefficient.

UNIT-III : Tool Life and Machinability:

Tool Failure:Mode of Plastic failure – Measurement of tool wear – tool life tests – tool life equation for variable theories – variables affecting tool life – machinability – machinability index – problems.

UNIT-IV: Thermal Analysis in Metal Cutting:

Thermodynamics of orthogonal cutting – analysis of temperature at shear plane and tool face – experimental methods for temperature measurement.

UNIT-V: Chatter:

Chatter - Importance of Chatter in machining – types of chatter – avoidance of chatter.Tools materials – requirements – alloy tools - HSS – carbides –PCD and CBN-properties and application.

BOOKS FOR REFERENCE:

1. Juneja .B.L, "Fundamentals of Metal cutting and Machine tools", New Age International,1995.

2. Bhattacharya.A, "Metal Cutting Theory and Practice", Central book publications
3. Kuppusamy .G, "Principle of Metal Cutting", University Press,1996.
4. Shaw .M.C, "Metal Cutting Principles",I BH Publications,1992.

Armarego E.J.A and Brown R.H, "The Machining of Metals", Prentice Hall,1969

19254H13P ADVANCED MANUFACTURING PROCESSES 4 0 0 4

AIM:

To expose the students in the art of manufacturing new products due to the development of new materials and processes. The students will totally get a feel of the relevant suitable process while evaluating and deciding.

OBJECTIVE:

• To inform the students about the various alternative manufacturing processes available.
• To develop an altitude to look for the unconventional manufacturing process to machine
• To make them to understand and appreciate the latest manufacturing process for micro fabrication and devices.

UNIT I NEWER MACHINING PROCESSES - I 9

(Non thermal energy) – Abrasive machining – water jet machining - ultrasonic machining – chemical machining – electro chemical machining – construction working principle – steps - types – process parameters – derivations – problems, merits, demerits and applications .

UNIT II NEWER MACHINING PROCESS – II 9

Wire cut EDM - Electro chemical machining – ECG - Electric discharge machining – construction – principle – types – control - circuits – tool design – merits, demerits & applications.

UNIT III NEWER MACHINING PROCESS – III 9

Laser beam machining – Electron beam machining – Plasma arc machining – Ion beam machining – construction working principle types – process parameter – derivations – problems, merits, demerits and applications.

UNIT IV FABRICATION OF MICRO DEVICES 9

Semiconductors – films and film depurification – Oxidation - diffusion – ion implantation – etching – metallization – bonding – surface and bulk machining – LIGA Process – Solid free form fabrication.

UNIT V MICROFABRICATION TECHNOLOGY 9

Wafer preparation – monolithic processing – moulding – PCB board hybrid & mcm technology – programmable devices & ASIC – electronic material and processing.–
steriolithography SAW devices, Surface Mount Technology,

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Serope kelpekijian & stevan r. schmid- manufacturing process engg material – 2003
2. Micro senors Mems & smart devices- Julian W.Hardner – 2002
3. Brahem T. Smith, Advanced machining I.F.S. UK 1989.
4. Jaeger R.C., Introduction to microelectronic fabrication Addison Wesley, 1988.
5. Nario Taniguchi – Nano technology – Oxford University Press 1996.
6. Pandey P.C. & Shan HS Modern Machining Processes, Standard Publishing Co., 1980
7. More Madon, Fundamentals of Microfabrication, CRC Press, 1997.

19254L14P CIM LAB 0 0 3 3

AIM:

To impart the knowledge on training the students in the area of CAD/CAM.

OBJECTIVES:

To teach the students about the drafting of 3D components and analyzing the same using various CAD/CAM software's.

CAM LABORATORY

1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading, Grooving & canned cycle
2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle.
3. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Strain gauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.
4. Mini project on any one of the CIM elements is to be done. This can be either a software or hardware simulating a CIM element. At the end of the semester, the students has to submit a mini report and present his work before a Committee.

CAD LABORATORY

2D modeling and 3D modeling of components such as

1. Bearing
2. Couplings
3. Gears
4. Sheet metal components
5. Jigs, Fixtures and Die assemblies.

TOTAL: 30 PERIODS.

19254H21P PRODUCTION MANAGEMENT 3 1 0 4

OBJECTIVE:
To gain knowledge in operation management principles and the related quantitative approaches.

UNIT-I : Manufacturing System:
The concept of system - types of manufacturing system- the concept of a model - model classification - model building - decision making approaches. Forecasting: qualitative and quantitative methods - moving averages- single and multiple regression models.

UNIT-II : Aggregate Planning :
Methods of aggregate planning- graphical and charting methods, trial and error, transportation method- concepts of linear decision rule.

UNIT-III: Inventory Management Systems and Models
EOQ, model (without and with shortages)- inventory models allowing price breaks, EPQ model - single period inventory model - inventory control systems - P,Q and S-s system - selective inventory control techniques.

UNIT-IV: MRP & JIT:
Materials requirement planning (MRP) - master production schedule, bill of materials, MRP concepts, lot sizing - lot-for-lot technique, EOQ approach, silver-meal approach, period order quantity approach, least unit cost approach, least total cost approach.
Principles of JIT production pull and push system, kanban, JIT purchasing, supply chain management.

UNIT-V: Scheduling:
Scheduling and assignment problems - notation and definitions - criteria, objective functions for scheduling - job shop scheduling: sequencing of n job s thorough 1 machine - priority rules, n jobs through 3, m machines - Johnsons rule, CDS algorithm, 2 jobs on m machine - graphical method- multi product assignment problem - index method, Hungarian method.

BOOKS FOR REFERENCE:

1. Production Operation Management:Theory And Problems, Chary:S.N, TMH, New delhi,1990.
2. Production Operation Management, Pannerselvam.R, PHI, 1999.
3. Operation Management Theory And Problems, Monks.J,G., McGraw HILL,1987.
4. Production operation management, chase.R.B,. Aquiliano.N.J and Jacobs.R.R.,8th Edition, TMH, 1988.
5. Production Planning And Inventory Control, Narashimhan. S.L., Mcleavy.D.W.,and Billington.P.J., 2nd Edition., PHI,1997

SEMESTER II

19254H22P MEMS AND NANO TECHNOLOGY 4 0 0 4

AIM:

To inspire the students to expect to the trends in manufacturing micro components and measuring systems to nano scale.

OBJECTIVES:

• To expose the students to the evolution of micro electromechanical systems, to the various fabrication techniques and to make students to be award of micro actuators.

• Also to impart knowledge to the students about nano materials and various nano measurements techniques.

UNIT I OVER VIEW OF MEMS AND MICROSYSTEMS 6

Definition – historical development – fundamentals – properties, micro fluidics, design and fabrication micro-system, microelectronics, working principle and applications of micro system.

UNIT II MATERIALS, FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING 10

Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS, conductive polymers. Photolithography, photo resist applications, light sources, in implantation, diffusion process exudation – thermal oxidation, silicon diode, chemical vapour deposition, sputtering - deposition by epitoxy – etching – bulk and surface machining – LIGA process Micro system packaging – considerations packaging – levels of micro system packaging die level, device level and system level.

UNIT III MICRO DEVICES AND MATERIALS 8

Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands displacement sensors, pressure and flow sensors, micro actuators – smart materials – applications.

UNIT IV SCIENCE OF NANO MATERIALS 10

Classification of nano structures – effect of the nanometer length scale effects of nano scale dimensions on various properties – structural, thermal, chemical, mechanical, magnetic, optical and electronic properties – effect of nanoscale dimensions on biological systems. Fabrication methods – Top down processes – bottom up process.

UNIT V CHARACTERIZATION OF NANO MATERIALS 11

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, transmission electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Tai – Ran Hsu, MEMS and Microsystems Design and Manufacture, Tata-McGraw Hill, New Delhi, 2002.
2. Mark Madou Fundamentals of Microfabrication, CRC Press, New York, 1997.
3. Norio Taniguchi, Nano Technology, Oxford University Press, New York, 2003
4. The MEMS Hand book, Mohamed Gad-el-Hak, CRC Press, New York, London.
5. Charles P Poole, Frank J Owens, Introduction to Nano technology, John Wiley and Sons, 2003
6. Julian W. Hardner Micro Sensors, Principles and Applications, CRC Press 1993.

19254L24P AUTOMATION LAB 0 0 3 3

AIM:

To impart knowledge in the area of hydraulic and pneumatic components and its functions.

OBJECTIVE:

• To make the students to learn the basic concepts of hydraulics and pneumatics and its applications in the area of manufacturing process.
• To simulate the various hydraulics and pneumatics circuits.

EXPERIMENTS:

1. Simulation of single and double acting cylinder circuits
2. Simulation of Hydraulic circuits
3. Simulation of electro pneumatic circuits
4. Simulation of electro hydraulic circuits
5. Simulation of PLC circuits
6. Exercises on linear and angular measurements
7. Exercises on speed measurements
8. Exercises on Vibration measurements
9. Exercises on Motion controller using servo motors, encoders, etc.
10. Exercises on fiber optics transducers.
11. Exercises on stepper motor.
12. Exercises on microprocessor based data acquisition system.
13. Software simulation of fluid power circuits using Automation studio.

TOTAL : 30 PERIODS

SEMESTER II

192TECWRP Technical Writing/Seminar: 0 0 3 3

Seminar should be based on the literature survey on any topic relevant to CAD/CAM/CAE. It may be leading to selection of a suitable topic of dissertation. The report shall contain some contribution by the candidate in the form of experimental results, deductions, compilation and inferences etc.

• Each student has to prepare a write-up of about 25 pages. The report typed on A4 sized sheets and bound in the necessary format should be submitted after approved by the guide and endorsement of the Head of Department.

• The student has to deliver a seminar talk in front of the teachers of the department and his classmates. The Guide based on the quality of work and preparation and understanding of the candidate shall do an assessment of the seminar.

Research Methodology

AIM:

To give an exposure to development of research questions and the various statistical methods suitable to address them through available literature, with basic computational operators.

OBJECTIVES:

- To understand the approaches towards and constraints in good research.
- To identify various statistical tools used in research methodology
- To appreciate and compose the manuscript for publication
- To train in basic computational and excel- skills for research in engineering.

OUTCOME:

Ability to develop research questions and the various research strategies, and compile research results in terms of journal manuscripts.

PREREQUISITES:

Research Methodology course in UG level or equivalent knowledge.

UNIT I

Introduction to Research — Criteria of Good Research, Research Problem: Definition of research problem, selecting the problem - Necessity of defining the problem - Techniques involved in defining the problem-Basic principles of experimental designs-Descriptive and experimental design – different types of experimental design – Validity of findings – internal and external validity – Variables in Research – Measurement and Scaling – Different scales. Ethics & Misconduct in research, Plagiarism,

UNIT II

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods of data collection – Primary and secondary data – observation – Collection of literature, manual collection from library, usage of library, collection of literature from Scopus, Science Direct etc., compiling literature, software utilization in literature collection- Processing and analysis of data – editing – coding – transcription – tabulation –outline of statistical analysis.

UNIT III

Data Analysis using Excel- Tabulation of Data in excel (Creating Master Table and Sub Table), Formulas and Functions, Filters and Sort and Validation Lists, Data from External Sources. Data Analysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure of central tendency: mean, median, mode, Measure of dispersion: variance, standard deviation, Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one way classification, Chi square test, independence of attributes. Time series: forecasting Method of least squares, Moving average method, Introduction to presentation tool, features and functions, Creating Presentation, Customizing presentation.

UNIT IV

Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, Artificial Neural Networks, Fuzzy Logic, MATLAB - Graph Theory- Finite Element Methods, Computational Fluid Dynamics -R programming in Statistics- open source software

UNIT V

Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paper writing for Journals and formats of publications in Journals, Report Structure - writing research abstract - introduction, review of literature, result, conclusions, Concepts of Bibliography and references

SEMESTER III

19254H31P MECHANICAL METALLURGY 3 1 0 4

OBJECTIVE:

To study about the behaviour of Metals during the loading conditions related to distribution of Stress and Strain. To know about the fracture of metals and various test procedures.

UNIT-I: Tensile Study:

Study of Engineering stress-strain curve: Derivation of tensile strength , yield strength ductility, Young's modulus, resilience and toughness from stress strain curves, study of stress-strain curves for different materials-true stress-strain curve: true stress at ultimate load, true fracture strain, true uniform strain, true necking strain-necking factor-effect of strain rate, temperature- test of flow properties-Notch tensile test-tensile properties of steel-strengthening theory- strain hardening-strain aging-Yield point phenomena-Solid solution strengthening-Martensite strengthening-Grain refinement,

UNIT-II: Hardness and Toughness:

Hardness and Toughness: Hardness introduction, Hardness measurement methods-Brinell hardness, Meyer hardness, Vickers hardness, Rockwell hardness and Micro hardness- Relationship between hardness and the flow curve-Hardness at higher temperatures-Toughness –introduction, Toughness measurements: Charpy, Izod and instrumented Charpy-TTT curves: Significance, metallurgical factors affecting the curves, Drop weight test, explosion crack starter test.

UNIT-III: Fatigue:

Fatigue study: Introduction: Different stress cycles, S-N curves, Goodman diagram, Soderberg diagram, Gerbar diagram-Cyclic stress curve-Low cycle fatigue- Strain life equation-Fatique mechanism-High cycle fatigue-Effect of folloeing parameters on fatigue: Mean stress , stress concentration, specimen size, surface roughness, residual stress, micro structure and temperature. Fatique crack propagation.

UNIT-IV: Fracture Behaviour:

Fracture – Introduction –Types – Ductile and Brittle Cohesive Strength of Metals-Griffith Theory-Metallographic Examination of Fracture – Fractography – Notch Effect – Concept of Fracture curve – Fracture under combined stresses- Environment sensitive fracture: Hydrogen Embrittlement and Corrosion Cracking

UNIT-V: Creep:

Creep: Creep Curve – Stress rupture test- Structural changes during creep- Creep deformation- Deformation Mechanisms Maps – Activation Energy for Steady state creep – Fracture at higher temperatures.

TEXT BOOKS:

1. George E. Dieter, "Mechanical Metallurgy", Mc Graw Hill, NewYork, 1988.
2. M.A. Meyers and K.Chawla, "Mechanical Metallurgy", PHI.

BOOKS FOR REFERENCE:

1. Metals Hand Book, "Mechanical Testing", Vol. 8, 9th Ed., ASM.
2. Thomas Countney.H., "Mechanical Behaviour of Materials", Mc Graw hill, 2nd Ed., 2000.
3. Hertzberg R.W., "Deformation and Fracture Mechanics of Engineering Materials", 2ne Ed., John Wiley & Sons. 1983.

SEMESTER III

19254H32P AUTOMATED COMPUTER INTEGRATED MANUFACTURING SYSTEMS 4 0 0 4

AIM:

To stress the role of computers in production.

OBJECTIVE:

To teach the role of computers in processing the information knowing across the various Stages and various departments in a manufacturing concern.

UNIT I INTRODUCTION 6

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts and mathematical models – Simple problems in production models – CIM hardware and software – Major elements of CIM system – Three step process for implementation of CIM – Computers in CIM – Computer networks for manufacturing – The future automated factory – Management of CIM – Impact of CIM on personnel – CIM status.

UNIT II AUTOMATED MANUFACTURING SYSTEMS 10

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design – The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features. Automated Guided Vehicle system – Types of vehicles and AGVs applications – Vehicle guidance technology – Vehicle management and safety. Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance.

UNIT III GROUP TECHNOLOGY AND FMS 10

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies. FMS – Components – workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS, FMS applications, Benefits.

UNIT IV PROCESS PLANNING 10

Process planning – Activities in process planning, Information's required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – selecting among casting process, forming process and machining process. Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study. Typical process sheet – case studies in Manual process planning. Computer Aided Process Planning – Process planning module and data base – Variant process planning – Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning.

UNIT V TYPES OF PROCESS CONTROL AND AUTOMATIC DATA CAPTURE 9

Introduction to process model formulation – linear feedback control systems – Optimal control – Adaptive control –Sequence control and PLC. Computer process control – Computer process interface – Interface hardware – Computer process monitoring – Direct digital control and Supervisory computer control. Overviews of Automatic identification methods – Bar code technology – Other Automatic data capture technologies.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Mikell P.Groover, “Automation, Production system and Computer integrated Manufacturing”, Prentice Hall of India Pvt. Ltd., 2008.
2. Radhakrishnan,P., Subramanian,S., and Raju,V., “CAD/CAM/CIM” New Age International Publishers, 2000.
3. James A.Retrg, Herry W.Kraebber, “Computer Integrated Manufacturing”, Pearson Education, Asia, 2001.
4. Viswanathan,N., and Narahari,Y., “Performance Modeling and Automated Manufacturing Systems”, Prentice Hall of India Pvt. Ltd., 2000.
5. Alavudeen and Venkateshwaran, “Computer Integrated Manufacturing”, PHI Learning Pvt. Ltd., New Delhi, 2008.

SEMESTER IV

19254H41P MANUFACTURING METROLOGY AND QUALITY CONTROL 3 1 0 4

AIM:

To expose the students, the importance of measurement and the various latest measuring techniques using Laser, Coordinate measuring machines and Optoelectronics devices. Also to stress upon the Importance of quality in manufacturing.

OBJECTIVES:

To impart through knowledge in various latest measurement systems such as laser metrology, coordinate measuring machines and electro-optical devices. Also to make the students to understand quality

UNIT – I LASER METROLOGY 8

Introduction – types of lasers – laser in engineering metrology – metrological laser methods for applications in machine systems – Interferometry applications – speckle interferometry – laser interferometers in manufacturing and machine tool alignment testing – calibration systems for industrial robots laser Doppler technique – laser Doppler anemometry.

UNIT – II PRECISION INSTRUMENTS BASED ON LASER 9

Laser telemetric systems – detection of microscopic imperfections on high quality surface Pitter NPL gauge interferometer – classification of optical scanning systems – high inertia laser scan technique – rotating mirror technique – laser gauging – bar coding – laser dimensional measurement system.

UNIT – III CO-ORDINATE MEASURING MACHINE 10

Co-ordinate metrology – CMM configurations – hardware components – software – Probe sensors – displacement devices – Performance Evaluations – Software – Hardware – Dynamic errors – Thermal effects diagram – temperature variations environment control – applications.

UNIT – IV OPTO ELECTRONICS AND VISION SYSTEM 9

Opto electronic devices – CCD – On-line and in-process monitoring in production – applications image analysis and computer vision – Image analysis techniques – spatical feature – Image extraction – segmentation – digital image processing – Vision system for measurement – Comparison laser scanning with vision system.

UNIT – V QUALITY IN MANUFACTURING ENGINEERING 9

Importance of manufacturing planning for quality – concepts of controllability – need for quality management system and models – quality engineering tools and techniques – statistical process control – six sigma concepts – Poka Yoke – Computer controlled systems used in inspection.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. John A. Bosch, Giddings and Lewis Dayton, Co-ordinate Measuring Machines and Systems, Marcel Dekker, Inc, 1999.
2. Juran J.M. and Gyna F.M., Quality Planning and Analysis, Tata-McGraw Hill, New Delhi
3. Zuech, Nello Understanding and Applying Machine Vision, Marcel Dekker, Inc, 2000

4. Elanchezhian.C, Vijaya Ramnath.B and Sunder Selwyn, T., Engineering Metrology, Eswar Press, Chennai, 2004.

SEMESTER IV

19254H42P METAL FORMING PROCESS 4 0 0 4

OBJECTIVE: To study about the response of materials under plastic deformation and the various techniques for finding the stress for various metal working processes, and the recent developments in high speed forming.

UNIT-I: Stress and Strain:

Stress-State of stress in two dimensions – three dimensions – stress tensor-Mohr's circles – 2D and 3D state of stress – Description of strain at a point – Mohr's circle of strain- Hydrostatic and stress deviator component of stress- Plasticity- flow curve-true and true strain yield criteria for ductile loads combined stress test-plastic stress and strain relations- Levy Mises equations-Prandyl_Resus equations.

UNIT-II: Analysis of Metal Forming:

Work Load analysis – work formula for homogeneous deformation- rolling, rod drawing and extrusion processes -Determination of load by stress evaluation method-Determination of drawing load – strip drawing with wedge shaped dies and cylindrical rod drawing with a conical die.

UNIT-III: Stress Evaluation:

Stress evaluation method-Determination of forging load-plane strain forging of a thin strip and a flat circular disc- Determination of extrusion load for round band flat strip-upper bound analysis – plane strain indentation with frictionless interface

UNIT-IV: High velocity Forming:

Study of effect of high speed on stress strain relationships- High velocity forming equipment-Description of high speed forming machine – hot forging, pneumatic-mechanical, high velocity forging – Fuel combustion process- Electro magnetic forming –Introduction- Procedure - process variables- Applications

UNIT-V: Advanced Forming process:

Explosive Forming – Explosives – characteristics- stand off and contact operations-stress waves and their effects- process variables – properties of formed components-applications- Electro hydraulic forming – principles, requirements and characteristics – process variables- water hammer forming- principles and parameters- governing the process.

BOOKS FOR REFERENCE:

List of Electives - Elective I

19254E23AP - FINITE ELEMENT APPLICATIONS IN MANUFACTURING 3 10 4

AIM:

To impart knowledge in the area of finite element methods and its application in manufacturing.

OBJECTIVE:

To study the fundamentals of one dimensional and two dimensional problems using FEA in manufacturing.

UNIT I INTRODUCTION 6

Fundamentals – Initial, boundary and eigen value problems – weighted residual, Galerkin and Raleigh Ritz methods - Integration by parts – Basics of variational formulation – Polynomial and Nodal approximation.

UNIT II ONE DIMENSIONAL ANALYSIS 10

Steps in FEM – Discretization. Interpolation, derivation of elements characteristic matrix, shape function, assembly and imposition of boundary conditions-solution and post processing – One dimensional analysis in solid mechanics and heat transfer.

UNIT III SHAPE FUNCTIONS AND HIGHER ORDER FORMULATIONS 10

Shape functions for one and two dimensional elements- Three noded triangular and four nodded quadrilateral element Global and natural co-ordinates—Non linear analysis – Isoparametric elements – Jacobian matrices and transformations – Basics of two dimensional, plane stress, plane strain and axisymmetric analysis.

UNIT IV COMPUTER IMPLEMENTATION 9

Pre Processing, mesh generation, elements connecting, boundary conditions, input of material and processing characteristics – Solution and post processing – Overview of application packages – Development of code for one dimensional analysis and validation.

UNIT V ANALYSIS OF PRODUCTION PROCESSES 10

FE analysis of metal casting – special considerations, latent heat incorporation, gap element – Time stepping procedures – Crank – Nicholson algorithm – Prediction of grain structure – Basic concepts of plasticity and fracture – Solid and flow formulation – small incremental deformation formulation – Fracture criteria – FE analysis of metal cutting, chip separation criteria, incorporation of strain rate dependency – FE analysis of welding.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Reddy, J.N. An Introduction to the Finite Element Method, McGraw Hill,1985.
2. Rao, S.S., Finite Element method in engineering, Pergammon press, 1989.
3. Lewis R.W.Morgan, K, Thomas, H.R. and Seetharaman, K.N. The Finite Element Method in Heat Transfer Analysis, John Wiley, 1994.

19254E23BP LEAN MANUFACTURING 4 0 0 4

AIM:

To introduce the concepts of lean manufacturing system.

OBJECTIVES:

- To study the various tools for lean manufacturing (LM).
- To apply the above tools to implement LM system in an organization.

UNIT – I INTRODUCTION TO LEAN MANUFACTURING 7

Conventional Manufacturing versus Lean Manufacturing – Principles of Lean Manufacturing – Basic elements of lean manufacturing – Introduction to LM Tools.

UNIT – II CELLULAR MANUFACTURING, JIT, TPM 9

Cellular Manufacturing – Types of Layout, Principles of Cell layout, Implementation. JIT – Principles of JIT and Implementation of Kanban. TPM – Pillars of TPM, Principles and implementation of TPM.

UNIT – III SET UP TIME REDUCTION, TQM, 5S, VSM 10

Set up time reduction – Definition, philosophies and reduction approaches. TQM – Principles and implementation. 5S Principles and implementation - Value stream mapping - Procedure and principles.

UNIT – IV SIX SIGMA 9

Six Sigma – Definition, statistical considerations, variability reduction, design of experiments – Six Sigma implementation.

UNIT – V CASE STUDIES 10

Various case studies of implementation of lean manufacturing at industries.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCES:

1. Design and Analysis of Lean Production Systems, Ronald G. Askin & Jeffrey B. Goldberg, John Wiley & Sons, 2003

2. Rother M. and Shook J, 1999 ‘Learning to See: Value Stream Mapping to Add Value and Eliminate Muda’ , Lean Enterprise Institute, Brookline, MA.

1. Mikell P. Groover (2002) ‘Automation, Production Systems and CIM.

19254E23CP - DESIGN AND ANALYSIS OF EXPERIMENTS 3 1 0 4

1. INTRODUCTION7

Defining Research, Scientific Enquiry, Hypothesis, Scientific Method, Types of Research, Research Process and steps in it. Research Proposals – Types, contents, sponsoring agent's requirements, Ethical, Training, Cooperation and Legal aspects.

2. RESEARCH DESIGN 10

Meaning, Need, Concepts related to it, categories; Literature Survey and Review, Dimensions and issues of Research Design, Research Design Process – Selection of type of research, Measurement and measurement techniques ,Selection of Sample, Selection of Data Collection Procedures, Selection of Methods of Analysis, Errors in Research. Research Problem Solving – Types, Process and Approaches – Logical, Soft System and Creative; Creative problem solving process, Development of Creativity, Group Problem Solving Techniques for Idea Generation – Brain storming and Delphi Method.

3. RESEARCH MODELING 10

Mathematical – Classification of Models, Development of Models, Stages in Model building, Principles of Modeling, Use of Analogy, Models as Approximations, Data consideration and Testing of Models (b) Heuristics and Simulation – Definition, Applications and reasons for using Heuristics, Heuristic Methods and approaches, Meta-Heuristics; Simulation – Meaning, Applications and Classification of Simulation Models, Process of Simulation, Steps and Features of Simulation Experiments and their Validation.

4. EXPERIMENTATION 8

Objective, Strategies, Factorial Experimental Design, Applications of Experimental Design, Basic Principles – Replication, Randomization and Blocking, Guidelines for designing experiments; Laboratory Experiments, Methods of manipulating Variables, Errors in Experiments, Steps in Design of Experiments.

5. PROCESS OPTIMIZATION AND ANALYSIS 10

Factorial Design principles, Two factor Factorial Design, General Factorial Design, Fitting response Curves and Surfaces, Blocking, Taguchi Approach to Parameter Design, Robust Design. Analysis of Variance and Co-variance, Hypothesis Testing – Parametric. Report Writing: Pre-writing Considerations, Principles of Thesis Writing, Format of Report Writing, Format of Publication in Research Journals

List of Electives - Elective II

19254E33AP MATERIALS MANAGEMENT AND LOGISTICS 4 0 0 4

AIM:

To introduce to the students the various functions of materials management and logistics

OBJECTIVE:

To make the students familiar with the various concepts and functions of material management, so that the students will be in a position to manage the materials management department independently.

UNIT I INTRODUCTION 6

Introduction to materials management – Objectives – Functions – Operating Cycle – Value analysis – Make or buy decisions.

UNIT II MANAGEMENT OF PURCHASE 7

Purchasing policies and procedures – Selection of sources of supply – Vendor development – Vendor evaluation and rating – Methods of purchasing – Imports – Buyer – Seller relationship – Negotiations.

UNIT III MANAGEMENT OF STORES AND LOGISTICS 12

Stores function – Location – Layout – Stock taking – Materials handling – Transportation – Insurance – Codification – Inventory pricing – stores management – safety – warehousing – Distribution linear programming – Traveling Salesman problems – Network analysis – Logistics Management.

UNIT IV MATERIALS PLANNING 10

Forecasting – Materials requirements planning – Quantity – Periodic – Deterministic models – Finite production.

UNIT V INVENTORY MANAGEMENT 10

ABC analysis – Aggregate planning – Lot size under constraints – Just in Time (JIT) system.

TOTAL: 45

BOOKS FOR REFERENCE:

5. G. Reghuram, N. Rangaraj, Logistics and supply chain management – cases and concepts, Macmillan India Ltd., 2006.

19254E33BP FINANCIAL MANAGEMENT 4 0 0 4

AIM:

To introduce the concepts of financial and various functions of financial management so that the students will be able to handle higher level financial decisions.

OBJECTIVES:

To train students in various functions of finance such as working capital management, current assets management so that students will be able to make high investment decisions when they take up senior managerial positions.

UNIT – I FINANCIAL ACCOUNTING 8

Accounting principles - Basic records - Preparation and interpretation of profit and loss statement - balance sheet - Fixed assets - Current assets.

UNIT – II COST ACCOUNTING 12

Elements of cost - cost classification - material cost - labour costs - overheads - cost of a product - costing systems - cost determination - process - costing - Allocation of overheads - Depreciation - methods.

UNIT – III MANAGEMENT OF WORKING CAPITAL 10

Current assets - Estimation of working capital requirements - Management of accounts receivable - Inventory - Cash - Inventory valuation methods.

UNIT – IV CAPITAL BUDGETING 8

Significance of capital budgeting - payback period - present value method – accounting rate of return method - Internal rate of return method.

UNIT – V PROFIT PLANNING AND ANALYSIS 7

Cost - Volume profit relationship relevant costs in decision making profit management analysis - Break even analysis.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Presanna Chandra, Financial Management, Tata McGraw Hill, 1998.
2. G.B.S. Narang, Production and Costing, Khanna Publishers, 1993.
3. R. Kesavan, C.Elanchezian, Sundar Selwyn, Engineering Economics and Financial Accounting, Laxmi Publications, New Delhi, 2005.
4. R Kesavan, C. Elanchezian, B.Vijaramnath, Engineering Economics and Cost Analysis Anuratha Publications, Chennai.

19254E33CP MANUFACTURING INFORMATION SYSTEMS 4 0 0 4

AIM:

To impart the knowledge in manufacturing information system.

OBJECTIVE:

On completion of this course, the students are expected to be conversant with order policies, data base terminologies, designing, manufacturing considerations and information system for manufacturing.

UNIT I INTRODUCTION 5

The Evolution of order policies, from MRP to MRP II, the role of Production organization, Operations control.

UNIT II DATABASE 7

Terminologies – Entities and attributes – Data models, schema and subschema - Data Independence – ER Diagram – Trends in database.

UNIT III DESIGNING DATABASE 13

Hierarchical model – Network approach- Relational Data model concepts, principles, keys, relational operations – functional dependence – Normalization types – Query.

UNIT IV MANUFACTURING CONSIDERATION 10

The product and its structure, inventory and process flow – Shop floor control Data structure and procedure – various model – the order scheduling module, Input/output analysis module the stock status database – the complete IOM database.

UNIT V INFORMATION SYSTEM FOR MANUFACTURING 10

Parts oriented production information system – concepts and structure – Computerized production scheduling, online production control systems; Computer based production management system, computerized manufacturing information system – case study.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Luca G.Sartori, “Manufacturing Information Systems”, Addison-Wesley Publishing Company, 1988.
2. Date.C.J.,”An Introduction to Database Systems” Addison Wesley, 8th Edn,.2003

4. Kerr.R, “Knowledge based Manufacturing Management”, Addison-Wesley,1991.
5. Manufacturing Information & Data Systems Analysis, Design & Practice,CECELJA FRANJO, 2002.

List of Electives - Elective III

19254E43AP ADVANCED METROLOGY AND COMPUTER AIDED INSPECTION 4 0 0 4

AIM:

To give a thorough knowledge of measurement and instrumentation of increasing importance in industry. The student will be knowledgeable in various standards and proliferation of computerized and automated inspecting techniques along with the classical metrology.

OBJECTIVES:

- To teach the students basic concepts in various methods of engineering measurement techniques and applications, understand the importance of measurement and inspection in manufacturing industries.
- Expose the students to various modern metrological instruments and the procedure used to operate these instruments.

UNIT I GENERAL CONCEPTS OF MEASUREMENT 8

Definition – Standards of measurement – Errors in measurement – Interchangeability and Selective assembly – Accuracy and Precision – Calibration of instruments.

UNITII MEASUREMENT OF SURFACE FINISH AND MEASURING MACHINES 9

Definitions – Types of Surface Texture: Surface Roughness Measurement Methods- Comparison, Profilometer, 3D Surface Roughness Measurement – Instruments.

UNIT III INTERFEROMETRY 8

Interferometry – Introduction, Principles of light interference – Interferometers – Measurement and Calibration – Laser Interferometry.

UNIT IV COMPUTER AIDED AND LASER METROLOGY 10

Tool Makers Microscope – Microhite – Co – Ordinate measuring machine – Applications – Laser Micrometer, Laser Scanning gauge, Non contact and in-process inspection, Vision system.

UNIT V IMAGE PROCESSING 10

Overview, Computer imaging systems, Image Analysis, Preprocessing, Human vision system, Image model, Image enhancement, gray scale models, histogram models, Image Transforms.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. GUPTA, I.C, "A Text Book of engineering metrology", Dhanpat Rai and Sons, 1996.
2. G.N.GALYER F.W. and C.R.SHOTBOLT, "Metrology for engineers", ELBS, 1990.

19254E43BP MAINTENANCE MANAGEMENT 4 0 0 4

OBJECTIVE:

To understand the concepts of maintenance management and to have knowledge in developing a suitable maintenance system for any type of an organization.

UNIT I: Introduction to Maintenance Management: 7

Maintenance: Its role and scope in total Organizational contexts - role of Maintenance. Centralized and decentralized maintenance organization structures. Maintenance Economics – reliability and Availability – MTBF, MTTR.

UNIT II: Maintenance Categories: 10

Maintenance system– Categories - Design and its selection – Breakdown Maintenance –Routine Maintenance- Predictive Maintenance –Preventive Maintenance- Corrective Maintenance-Total Productive Maintenance –Maintenance Schedule – Repair Cycle.

UNIT III: Spare Parts Management: 8

Pareto's principles for repetitive breakdown analysis, spares management, planning considerations for each type of activities.

UNIT – IV: Condition Monitoring: 10

Condition Monitoring (CM) – Introduction- Economics of CM – On-load and off-load testing – Methods and instruments for CM – Temperature sensitive tapes – Pistol thermometers – wear-debris analysis.

UNIT V: Maintenance Manpower Cost, Performance Management: 10

Maintenance man power planning - Selection training - Scheduling maintenance costs - Budget preparation and budgetary control of maintenance expenditures Maintenance effectiveness various performance indices - evaluation, uses and limitations - Monitoring of Maintenance performance.

BOOKS FOR REFERENCE:

1. Gopalakrishnan P. and Sundarajan 1996. Maintenance Management. New Delhi, Prentice-Hall of India.
2. Srivastava S.K., "Industrial Maintenance Management", - S. Chand & Co.,1981.
3. Higgirs L.T and Morrow L.C., 1997, ``Maintenance Engineering Handbook``, McGraw Hill.
Armstrong, "Condition Monitoring", BSIRSA, 1988.

]

19254E43CP OPTIMIZATION TECHNIQUES 3 1 0 4

UNIT I - INTRODUCTION TO OPTIMIZATION 7

Formulation of an optimization problem- Classification of optimization problem – optimization techniques- Classical optimization technique – Single variable optimization – Multi variable optimization algorithms

UNIT II - MINIMIZATION METHODS 8

One dimensional minimization methods: unimodal function – elimination methods: unrestricted search, exhaustive search, Dichotomous search, Fibonacci methods, Golden section methods, Interpolation methods: Quadratic and cubic interpolation methods.

UNIT III - CONSTRAINED OPTIMIZATION TECHNIQUES 10

Optimization with equality and inequality constraints - Direct methods – Indirect methods using penalty functions, Lagrange multipliers - separable programming and Geometric programming.

UNIT IV - UNCONSTRAINED OPTIMIZATION TECHNIQUES 10

Multi variable unconstrained optimization techniques: Direct search methods: Random search method, unvaried method, pattern search method, steepest descent method and Conjugate gradient method.

UNIT V - APPLICATIONS OF HEURISTICS IN OPTIMIZATION 10

Heuristics-Introduction-Multi objective optimization: Genetic algorithms and Simulated Annealing techniques; neural network & Fuzzy logic principles in optimization.

BOOKS FOR REFERENCE:

1. Rao, Singaresu, S., "Engineering Optimization – Theory & Practice", New Age International (P) Limited, New Delhi, 2000.
2. Johnson Ray, C., "Optimum design of mechanical elements", Wiley, John & Sons, 1990.
3. Kalyanamoy Deb, "Optimization for Engineering design algorithms and Examples", Prentice Hall of India Pvt. 1995.
4. Goldberg, D.E., "Genetic algorithms in search, optimization and machine", Barnen, Addison-Wesley, New York, 1989.

List of Electives - Elective IV

19254E51AP MANUFACTURING SYSTEMS AND SIMULATION 4 0 0 4

AIM:
To introduce the various concepts of manufacturing system simulation.

OBJECTIVES:
- To model manufacturing systems of different kinds.
- To make use of simulation languages for manufacturing systems.

UNIT I INTRODUCTION 8
Basic concepts of system – elements of manufacturing system - concept of simulation – simulation as a decision making tool – types of simulation – Monte-Carlo simulation - system modeling – types of modeling – Limitations and Areas of application of simulation.

UNIT II RANDOM NUMBERS 10
Probability and statistical concepts of simulation – Pseudo random numbers – methods of generating random numbers – discrete and continuous distribution – testing of random numbers – kolmogorov-mirnov test, the Chi-Square test - sampling - simple, random and simulated.

UNIT III DESIGN OF SIMULATION EXPERIMENTS 10
Problem formulation – data collection and reduction – time flow mechanical – key variables - logic flow chart starting condition – run size – experimental design consideration – output analysis, interpretation and validation – application of simulation in engineering industry.

UNIT IV SIMULATION LANGUAGE 9
Comparison and selection of simulation languages - Study of GPSS (Basic blocks only) Generate, Queue, Depart, Size, Release, Advance, Terminate, Transfer, Enter and Leave.

UNIT V CASE STUDIES 10
Development of simulation models using GPSS for queuing, production, inventory, maintenance and replacement systems – case studies.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Jerry Banks and John S.Carson, “Discrete event system simulation”, Prentice Hall 1991
2. 1 .John H.Mize and J.Grady Cox, “Essentials of simulation” – Prentice hall 1989.

19254E51BP INSTRUMENTATION AND CONTROL ENGINEERING 4 0 0 4

UNIT–I: Introduction to Instrumentation: 8
Mechanical Instrumentation- General concepts, General measurement system. Classification of Instruments - indicators, recorders and integrators- working principles, Precision and Accuracy: Measurement Error and calibration.

UNIT–II: Measuring Devices 10
Measurement of speed, frequency, acceleration - Vibrometer, Accelerometer etc. Pressure measurement: Gravitational, Bourdon, elastic transducers, strain gauge, pressure cells, and measurement of high and low pressure. Temperature measurement: Bi-Metallic, Resistance Thermometer, Thermocouples, Pyrometer, thermostats, Magnetic flow meter , Ultrasonic flow meter.

UNIT – III: Transducers: 8
Transducers – Introduction – Types -Variable resistance Transducers-Variable reactive transducers- Piezo Electric transducers- Fibre optic transducers- Laser instrumentation-analogue and digital type -incremental and absolute measurement.

UNIT – IV: Machine Diagnostic and Condition Monitoring: 10

Machine Diagnostics – Basic Concepts - Analysis of failure in machines-Distribution of fault occurrences-Objectives of monitoring-Monitoring techniques applied to Machineries.

UNIT – V: Computer Control System: 9

Data acquisition system-Introduction-Direct Digital control-Programmable Logic Controls (PLC) -Ladder diagrams-Communication used in PLC.

BOOKS FOR REFERENCE:

1. Thomas Beckwith, Lewis Buck N.Ray, D. Maragoni, "Mechabical Measurements", Narosia Publishing House, NewDelhi.
2. M.P.Groover - " Automation, Production Systems and computer Intergrated Manufacturing ", Prentice Hall.
3. A.K. Sawhney, "Elecrical and Electronics Measurements & Instrumentation", Dhanpat Rai & Sons, 1993
4. C.S.Rangan,V.S.V.Mani and G.R.Sarma - " Instrumentation Devices and systems", Tata McGraw Hill,1983

19254E51CP ARTIFICIAL INTELLIGENCE AND NEURAL NETWORKS 3 1 0 4

UNIT – I - Neural Networks 8

Introduction to soft Computing-Neural Networks-Supervised Learning Neural Networks – Perceptrons – Adaline – Back propagation Multilayer perceptrons – Radial Basic Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Habbian Learning.

UNIT – II - Fuzzy Logic: 10

Fuzzy Sets – Basic Definition and Terminology – Set –theoretic operations – Member Function Formulation and parameterization – Fuzzy Rules and Fuzzy Reasoning. Fuzzy Logic: Extension principle and Fuzzy Relations – Fuzzy If – Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT – III Genetic Algorithm: 9

Derivative – based Optimization – Descent Methods – The Method of steepest Descent – Classical Newton's Method – Step Size Determination – Derivative – free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT – IV Neuro Fuzzy Modeling: 10

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – learning Methods that Cross – Fertilize ANFIS and RBFN – Coactive Neuro – Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT – V Applications: 8

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency prediction – Soft Computing for Color Recipe Prediction – Single MLP approaches –CANFIS modeling for color recipe prediction

BOOKS FOR REFERENCE:

List of Electives - Elective V

19254E52AP PRODUCT DESIGN AND DEVELOPMENT 4 0 0 4

UNIT I - INTRODUCTION 7

Significance of product design, product design and development process, sequential engineering design method, the challenges of product development.

UNIT II - PRODUCT PLANNING AND PROJECT SELECTION 8

Identifying opportunities evaluate and prioritize projects, allocation of resources Identifying Customer Needs, Interpret raw data in terms of customers need, organize needs in hierarchy and establish the relative importance of needs.

UNIT III - PRODUCT SPECIFICATIONS 8

Establish target specifications, setting final specifications, Concept Generation: Activities of concept generation, clarifying problem, search both internally and externally.

UNIT IV - INDUSTRIAL DESIGN AND CONCEPT SELECTION10

Assessing need for industrial design, industrial design process, management, assessing quality of industrial design, Overview, concept screening and concept scoring, methods of selection.

UNIT V - THEORY OF INVENTIVE PROBLEM SOLVING (TRIZ) AND CONCEPT TESTING 12

Fundamentals, methods and techniques, General Theory of Innovation and TRIZ, Value engineering Applications in Product development and design, Model-based technology for generating innovative ideas Elements of testing: qualitative and quantitative methods including survey, measurement of customers' response, Intellectual Property: Elements and outline, patenting procedures.

BOOKS FOR REFERENCE:

1. Ulrich K. T, and Eppinger S.D, Product Design and Development, Tata McGraw Hill
2. Otto K, and Wood K, Product Design, Pearson
3. Engineering of creativity: introduction to TRIZ methodology of inventive Problem Solving, By Semyon D. Savransky, CRC Press.
4. Inventive thinking through TRIZ: a practical guide, By Michael A. Orloff, Springer.
5. Systematic innovation: an introduction to TRIZ ; (theory of inventive Problem Solving), By John Terninko, Alla Zusman, CRC Press.

19254E52BP FLUID POWER AUTOMATION 4 0 0 4

AIM:

To impart knowledge in the area of hydraulics, pneumatic and fluid power components and its functions.

OBJECTIVE:

• To make the students to learn the basic concepts of hydraulics and pneumatics and their controlling elements in the area of manufacturing process.

• To train the students in designing the hydraulics and pneumatic circuits using ladder diagram.

UNIT I INTRODUCTION 5

Need for Automation, Hydraulic & Pneumatic Comparison – ISO symbols for fluid power elements, Hydraulic, pneumatics – Selection criteria.

UNIT II FLUID POWER GENERATING/UTILIZING ELEMENTS 8

Hydraulic pumps and motor gears, vane, piston pumps-motors-selection and specification-Drive characteristics – Linear actuator – Types, mounting details, cushioning – power packs – construction. Reservoir capacity, heat dissipation, accumulators – standard circuit symbols, circuit (flow) analysis.

UNIT III CONTROL AND REGULATION ELEMENTS 8

Direction flow and pressure control valves-Methods of actuation, types, sizing of ports pressure and temperature compensation, overlapped and under lapped spool valves operating characteristics-electro hydraulic servo valves-Different types-characteristics and performance.

UNIT IV CIRCUIT DESIGN 10

Typical industrial hydraulic circuits-Design methodology – Ladder diagram-cascade, method-truth table-Karnaugh map method-sequencing circuits-combinational and logic circuit.

UNIT V ELECTRO PNEUMATICS & ELECTRONIC CONTROL OF HYDRAULIC AND PNEUMATIC CIRCUITS 7

Electrical control of pneumatic and hydraulic circuits-use of relays, timers, counters, Ladder diagram. Programmable logic control of Hydraulics Pneumatics circuits, PLC ladder diagram for various circuits, motion controllers, use of field busses in circuits. Electronic drive circuits for various Motors.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

1. Antony Esposito, Fluid Power Systems and control Prentice-Hall, 1988.
2. Peter Rohner, Fluid Power logic circuit design. The Macmillan Press Ltd.,London, 1979
3. E.C.Fitch and J.B.Suryaatmadyn. Introduction to fluid logic, McGraw Hill, 1978.
4. W.Bolton, Mechatronics, Electronic control systems in Mechanical and Electrical Engineering Pearson Education, 2003.
5. Peter Rohner, Fluid Power Logic Circuit Design, Mcmelan Prem, 1994.

List of Electives - Elective VI

19254E53AP ADVANCED MATERIAL TECHNOLOGY 4 0 0 4

AIM:

To impart knowledge on advance concepts of material technology

OBJECTIVE:

- To enlight the PG students on elastic, plastic and fractured behaviour of engineering Materials.
- To train the PG students in selection of metallic and non-metallic materials for the various engineering applications.

UNIT I ELASTIC AND PLASTIC BEHAVIOR 10

Elasticity in metals and polymers Anelastic and visco-elastic behaviour – Mechanism of plastic deformation and non metallic shear strength of perfect and real crystals – Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, poly phase mixture, precipitation, particle, fibre and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity – Deformation of non crystalline materials.

UNIT II FRACTURE BEHAVIOUR 10

Griffith's theory, stress intensity factor and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracture mechanism maps – Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms and Paris law. Effect of surface and metallurgical parameters on fatigue – Fracture of non metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

UNIT III SELECTION OF MATERIALS 10

Motivation for selection, cost basis and service requirements – Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications – Computer aided materials selection.

UNIT IV MODERN METALLIC MATERIALS 8

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel – Intermetallics, Ni and Ti aluminides – smart materials, shape memory alloys – Metallic glass and nano crystalline materials.

UNIT V NON METALLIC MATERIALS 7

Polymeric materials – Formation of polymer structure – Production techniques of fibers, foams, adhesives and coating – structure, properties and applications of engineering polymers – Advanced structural ceramics, WC, TIC, TaC, Al2O3, SiC, Si3N4 CBN and diamond – properties, processing and applications.

TOTAL: 45 PERIODS

BOOKS FOR REFERENCE:

B.TECH-PARTTIME

[REGULATION2022]

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

PROGRAMMEEDUCATIONALOBJECTIVES:

PEO1:To enable graduates to pursue research, or have a successful career in academia or industries associated with Electronics and Communication Engineering, or as entrepreneurs.

PEO2: To provide students with strong foundational concepts and also advanced techniquesand tools in order to enable them to build solutions or systems of varying complexity.

PEO3: To prepare students to critically analyze existing literature in an area of specialization and ethically develop innovative and research oriented methodologies to solve the problems identified.

PROGRAMMEOUTCOMES:

EngineeringGraduateswillbeableto:

A. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

B. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

C. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

D. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data,and synthesis of the information to provide valid conclusions.

E. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

F. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legalandculturalissuesandtheconsequent responsibilities relevant to the professional engineering practice.

G. **Environment and sustainability**: Understandtheimpact of theprofessional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

H. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

I. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

J. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

K. **Project management and finance**: Demonstrate knowledge and understanding of the engineeringand management principles andapplytheseto one's ownwork, asa member and leader in a team, to manage projects and in multidisciplinary environments.

L. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES WITH PROGRAMME OUTCOMES

A broad relation between the programmeobjective and theoutcomesisgiven in the following table

PROGRAMME EDUCATIONAL OBJECTIVES	**PROGRAMMEOUTCOMES**

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

21148S11P **SEMESTERI**

TRANSFORMSANDPARTIALDIFFERENTIALEQUATIONS **3104**

(CommontoCSE,IT,ECE)

AIM

Thecourseaimstodeveloptheskillsofthestudentsintheareasofboundary value problems and transform techniques. This will be necessary for their effective studies in a large number of engineering subjects like heat conduction, communication systems, electro-optics and electromagnetic theory. The course will also serve as a prerequisite for post graduate and specialized studies and research.

OBJECTIVES

Attheendofthe coursethestudents would

- Be capable of mathematically formulating certain practical problems in terms of partial differential equations, solve them and physically interpret the results.
- Have gained a well founded knowledge of Fourier series, their different possible formsand the frequently needed practicalharmonic analysis that anengineer may have to make from discrete data.
- Haveobtainedcapacitytoformulateand identifycertainboundaryvalueproblems encountered in engineering practices, decide on applicabilityof the Fourier series method of solution, solve them and interpret the results.
- Have grasped the concept ofexpressionofa function, under certainconditions, as a double integral leading to identification of transform pair, and specialization on Fourier transformpair, their properties, thepossiblespecialcaseswithattentionto their applications.

UNITI FOURIERSERIES 9

Fourierseries–Oddandevenfunctions–Halfrangesineseries–Halfrangecosineseries – Complex form of Fourier Series – Parseval's identify – Harmonic Analysis.

UNITII FOURIERTRANSFORM 9

Fourierintegraltheorem(withoutproof)–SineandCosine transforms – Properties (without Proof) – Transforms of simple functions –Convolution theorem – Parseval's identity – Finite Fourier transform – Sine and Cosinetransform.

UNITIII Z-TRANSFORMANDDIFFERENCE EQUATIONS 9

Z-transform - Elementary properties (without proof) – Inverse Z – transform – Convolution theorem -Formation of difference equations – Solution of differenceequations using Z - transform.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV PARTIALDIFFERENTIALEQUATIONS 9

Solution of First order partial differential equation reducible to standard forms – Lagrange's linear equation – Linear partial differential equations of second order andhigher order with constant coefficients.

UNITV BOUNDARYVALUEPROBLEMS 9

Solutions of one dimensional wave equation – One dimensional heat equation– Steadystate solution of two-dimensional heat equation (Insulated edges excluded) – Fourierseries solutions in Cartesian coordinates.

ELECTROMAGNETICFIELDS 3104

AIM

To familiarize the student to the concepts, calculations and pertaining to electric, magnetic and electromagnetic fields so that an in depth understanding of antennas, electronic devices, waveguides is possible.

OBJECTIVES

- Toimpartknowledgeon thebasics of staticelectricandmagneticfieldandthe associated laws.
- TogiveinsightintothepropagationofEMwavesandalsotointroducethe methods in computational electromagnetics.
- Tomakestudentshavedepthunderstandingofantennas,electronicdevices,Waveguides is possible.

UNITI STATICELECTRICFIELD 9

Vector Algebra, Coordinate Systems, Vector differential operator, Gradient, Divergence,Curl, Divergence theorem, Stokestheorem, Coulombs law, Electric field intensity, Point,Line, Surface and Volume charge distributions, Electric flux density, Gauss law and itsapplications, Gaussdivergence theorem, Absolute Electric potential, Potentialdifference,Calculation of potential differences for different configurations. Electric dipole,Electrostatic Energy and Energy density.

UNITII CONDUCTORSANDDIELECTRICS 9

Conductors and dielectrics in Static Electric Field, Current and current density,Continuityequation, Polarization, Boundaryconditions, Methodofimages, Resistance ofa conductor, Capacitance, Parallel plate, Coaxial and Spherical capacitors, Boundaryconditions for perfect dielectric materials, Poisson‟s equation, Laplace's equation,Solution of Laplace equation, Application of Poisson‟s and Laplace‟s equations.

UNITIII STATICMAGNETICFIELDS 9

Biot -Savart Law, Magnetic field Intensity, Estimation of Magnetic field Intensity forstraight and circular conductors, Ampere‟s Circuital Law, Point form of Ampere‟sCircuital Law, Stokes theorem, Magnetic flux and magnetic flux density, The Scalar andVector Magnetic potentials, Derivation of Steady magnetic field Laws.

UNITIV MAGNETICFORCESAND MATERIALS 9

Forceona moving charge, Forceon a differentialcurrent element, Force betweencurrentelements,Forceandtorqueonaclosedcircuit,Thenatureofmagneticmaterials,

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Magnetization and permeability, Magnetic boundary conditions involving magneticfields, The magnetic circuit, Potential energy and forces on magnetic materials,Inductance, Basic expressions for self and mutual inductances, Inductance evaluation forsolenoid, toroid, coaxial cables and transmission lines, Energystored in Magnetic fields.

UNITV TIMEVARYINGFIELDSANDMAXWELL'SEQUATIONS 9

Fundamental relations for Electrostatic and Magnetostatic fields, Faraday‟s law forElectromagnetic induction, Transformers, Motional Electromotive forces, Differentialformof Maxwell‟s equations, Integral formof Maxwell‟s equations, Potential functions,Electromagnetic boundary conditions, Wave equations and their solutions, Poynting‟stheorem, Time harmonic fields, Electromagnetic Spectrum.

22152C13P **SEMESTERI**

DIGITALELECTRONICS **3104**

AIM

Tolearnthe fundamentalconceptsthoseareusefulfor designingdigitalsystems or circuits.

OBJECTIVES

- Tointroducenumbersystemsandcodes
- TointroducebasicpostulatesofBooleanalgebraandshowsthecorrelationbetween Boolean expressions
- TointroducethemethodsforsimplifyingBoolean expressions
- Tooutlinetheformalproceduresfortheanalysisanddesignofcombinational circuits and sequential circuits
- Tointroducetheconceptofmemoriesdevices.

UNITI: BOOLEANALGEBRAANDMINIMIZATION 9

Basic theorems – Boolean functions – Canonical and Standard forms – Minimizationtechniques – K-map up to five variables – NAND and NOR implementation – ExclusiveOR function - Hardware Description Language (HDL).

UNITII: DIGITALLOGIC FAMILIES 9

Switching operation of PN junction diode – bipolar and MOS devices – Bipolar logicfamilies – RTL – DTL – DCTL – HTL –TTL – ECL – MOS and CMOS – Tristate logic–Interfacing of CMOS and TTL families.

UNITIII: COMBINATIONALLOGICDESIGN 9

Design using gates – BCD arithmetic circuits – Binary adder – Subtractor – Multiplier – Divider–Designusing MSIdevices–MultiplexerandDemultiplexeraslogicelements – Encoder and decoder – Parity checker – Parity generator – Code converter – Magnitudecomparator.

UNITIV: SEQUENTIALLOGICDESIGN 9

Flip Flops and their conversions – Analysis and synthesis of synchronous sequentialcircuits – Excitation table – State table and state diagram – Design of synchronouscounters – Analysis of asynchronous sequential circuits – Reduction of state and flowtable – Race free state assignment – Designof Asynchronous counters – Timing diagram– Shift registers and their applications.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV: MEMORY DEVICES 9

Classification of memories – ROM organization – PROM – EPROM – EEPROM – EAPROM – RAM organization – Write operation – Read operation – Memory cycleTiming wave forms – Memory decoding – Memory expansion – Static RAM Cell-Bipolar RAM cell – MOSFET RAM cell – Dynamic RAM cell – Programmable LogicDevices – Programmable Logic Array(PLA) – Programmable ArrayLogic (PAL) – FieldProgrammable Gate Arrays (FPGA).

ELECTRONICCIRCUITS–I **3003**

AIM

The aim of this course is to familiarize the student with the analysis and design of basic transistor Amplifier circuits and power supplies.

OBJECTIVE

Oncompletionofthiscourse the studentwill understand

- Themethodsofbiasingtransistors
- Designofsimpleamplifier circuits
- Mid– bandanalysisofamplifiercircuitsusingsmall -signalequivalent circuitsto determine gain input impedance and output impedance
- Methodofcalculatingcutofffrequenciesandtodetermine bandwidth
- Designofpower amplifiersandheatsinks
- Analysisanddesignofpowersupplies

UNIT– I TRANSISTERBIASING&STABILIZATION 9

BiasingcircuitsforBJT-DCloadline-ACloadline–Stabilityfactor-MethodsofTransistor Biasing- Bias Compensation – Thermal runaway- heat sink- FET Biasing

UNIT-II LOWFREQUENCYAMPLIFIERANALYSIS&DESIGN 9

Transistor- FETamplifiers-LowfrequencySmallsignalhybridparametermodel:C_B,C_E,Cc Amplifier- Analysis of Transistor Amplifier Using h-parameter. JFETasanAmplifier-AnalysisoflowfrequencycommonSource&CommonDrainAmplifier Using h-parameter.

UNIT– III MULTISTAGEAMPLIFIERS 9

Cascading ofBJT Amplifiers- Analysis ofRC coupled Amplifiers Methods ofIncreasingInput impedance using Darlington and Boot strapping- Emitter coupled DifferentialAmplifier, Differential gain, CMRR, Transfer Characteristics – Cascode amplifier.

UNIT– IVHIGHFREQUENCYANALYSIS OFTHEAMPLIFIERS9

Frequencyresponse-Effect ofCoupling and Bypasscapacitor-Effect ofinternaltransistorcapacitance-Miller Effect – High Frequency πmodel for C_E Amplifier- C_E Short circuitCurrent gain- Cut off frequencies f_α, f_β,f_T - Gain Band Width product.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNIT– V POWERSUPPLIES 9

Half wave,Full Wave,Rectifiers- Capacitor Filter- Linear Regulator: ShuntRegulator,Series Regulator- Shunt Regulator using Zener Diode- Switch Mode Power Supply.

SIGNALSAND SYSTEMS **4004**

(Commonto ECE& IT)

AIM

Tostudyand analyzethecharacteristicsofcontinuous,discretesignalsand systems.

OBJECTIVES

- Tostudythepropertiesand representationofdiscreteand continuous signals.
- Tostudythesamplingprocessandanalysisofdiscretesystemsusingz- transforms.
- Tostudythe analysisandsynthesisofdiscretetime systems.

UNITI CLASSIFICATIONOFSIGNALSAND SYSTEMS 9

Continuous time signals (CT signals), discrete time signals (DT signals) - step, Ramp,Pulse, Impulse, Exponential, Classification of CT and DT signals - periodic andaperiodic, Random signals,Classification of systems (CT systems and DT systems)Linear time invariant systems.

UNITII ANALYSISOFCTSIGNALS 9

FourierTransformandLaplaceTransforminSignalAnalysis.Fourierseries,FourierTransform and Laplace Transform properties, Parseval's relation.

UNITIII LTI-CTSYSTEMS 9

Differentialequation,Blockdiagramrepresentation,Impulseresponse,ConvolutionIntegral, Frequency response, Fourier Methods and Laplace transforms in analysis.

UNITIVSAMPLINGTHEOREMAND ANALYSIS OFDT-SIGNALS9

Sampling theorem – Reconstruction ofa Signal from its samples, aliasing – discrete timeprocessing of continuous time signals, sampling of band pass signals

Z-transform definition – region of convergence – properties of ROC – Properties of ztransform– Polesand Zeros – inverse z-transform, Relationship betweenz-transformandFourier transform.

UNITV LTI-DTSYSTEMS 9

Differenceequations,Blockdiagramrepresentation,Impulseresponse,ConvolutionSUM, Frequency response, Z-transform analysis.

21148S21BP **SEMESTERII**

PROBABILITYANDRANDOMPROCESSES

3104

AIM

This course aims at providing the necessary basic concepts in random processes. A knowledge of fundamentals and applications of phenomena will greatly help in the understanding of topics such a estimation and detection, pattern recognition, voice and image processing networking and queuing.

OBJECTIVES

Atthe endofthe course,the students would

- Haveafundamentalknowledgeofthebasicprobabilityconcepts.
- Have a well – founded knowledge ofstandard distributions which can describe real life phenomena.
- Acquire skills in handling situations involving more than one random variable and functions of random variables.
- Understandandcharacterizephenomenawhichevolvewithrespecttotimeinprobabilistic manner.
- Beabletoanalyzetheresponseofrandominputstolinear timeinvariantsystems.

UNITI PROBABILITYANDRANDOMVARIABLE 9

Axioms of probability - Conditional probability - Baye's theorem- Random variable - Probabilitymassfunction-Probabilitydensityfunction-Properties-Moments-Momentgenerating functions and their properties.

UNITII STANDARDDISTRIBUTIONS 9

Binomial,Poisson,Geometric,Uniform,Exponential,Gamma,WeibullandNormaldistributions and their properties - Functions of a random variable (excluding theorm).

UNITIIITWODIMENSIONALRANDOMVARIABLES 9

Joint distributions - Marginal and conditional distributions – Covariance - Correlationand regression (for distributions only)- Transformation of random variables - Centrallimit theorem.

UNITIVCLASSIFICATION OFRANDOMPROCESSES 9

Definition and examples - first order, second order, strictly stationary, wide – sensestationary and Ergodic processes - Markov process - Binomial, Poisson and Normalprocesses - Sine wave process.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV CORRELATIONANDSPECTRALDENSITIES 9

Auto correlation - Cross correlation - Properties –Powerspectraldensity– Cross spectraldensity - Properties – Relationship between cross power spectrum and cross correlationfunction– Auto correlation and cross correlation functions of input and output.

TUTORIAL15 TOTAL:60

TEXTBOOKS

1. Ross, S., "AFirst CourseinProbability", Fifthedition, PearsonEducation, Delhi, 2002.
2. Peebles Jr. P.Z., "Probability Random Variables and Random Signal Principles", Tata McGraw-Hill Pubishers, Fourth Edition, New Delhi, 2002. (Chapters 6, 7and 8).

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

22152C22P **SEMESTERII**

COMMUNICATIONTHEORY **3104**

AIM

To study the various analog communication fundamentals viz., Amplitude modulation and demodulation, angle modulation and demodulation. Noise performance of various receivers and information theory with source coding theorem are also dealt.

OBJECTIVE

- ToprovidevariousAmplitude modulationanddemodulationsystems.
- ToprovidevariousAnglemodulationanddemodulationsystems.
- Toprovidesomedepthanalysis innoiseperformanceofvariousreceiver.
- Tostudysomebasicinformationtheorywithsomechannelcoding theorem.

UNIT1 AMPLITUDEMODULATIONSYSTEMS 10

Review of spectral characteristics of periodic and non-periodic signals – Generation anddemodulation of AM, DSBSC, SSB and VSB signals – Comparison of amplitudemodulation systems – Frequency translation – FDM – Non-linear distortion.

UNITII ANGLEMODULATION SYSTEMS 8

Phaseandfrequencymodulation–Singletone–NarrowbandandwidebandFM–Transmission bandwidth – Generation and demodulation of FM signal.

UNITIII NOISETHEORY 8

Review of probability – Random variables and random process – Gaussian process – Noise – Shot noise – Thermal noise and white noise – Narrow band noise – Noisetemperature – Noise figure.

UNITIVPERFORMANCEOFCWMODULATIONSYSTEMS 10

Superheterodyne radio receiver and its characteristic – SNR – Noise in DSBSC systemsusing coherent detection – Noise in AM system using envelope detection FM system –FM threshold effect – Pre-emphasis and de-emphasis in FM – Comparison ofperformances.

UNITV INFORMATIONTHEORY 9

Discrete messages and information content – Concept of amount of information – Average information – Entropy – Information rate – Source coding to increase averageinformation per bit – Shannon-fano coding – Huffman coding – Lempel-Ziv (LZ) coding– Shannon's theorem – Channel capacity – Bandwidth – S/N trade-off – Mutualinformation and channel capacity – Rate distortion theory – Lossy source coding.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

LINEARINTEGRATEDCIRCUITS **3104**

AIM

Toteachthebasicconceptsinthedesignofelectroniccircuitsusinglinearintegrated circuits and their applications in the processing of analog signals.

OBJECTIVES

- Tointroducethebasicbuildingblocksoflinearintegratedcircuits.
- Toteachthelinear andnon-linear applicationsofoperationalamplifiers.
- Tointroducethetheoryandapplicationsofanalogmultipliersand PLL.
- Toteachthetheoryof ADC andDAC
- Tointroduceafewspecialfunctionintegratedcircuits.

UNITI OPAMPCHARACTERISTICSANDAPPLICATIONS 9

Ideal op amp, IC op amp, DC characteristics: bias, offset and drift, AC characteristics:bandwidth, slew rate, noise and frequencycompensation, basic opamp application: scalechanger, inverter and non inverter, summer & subtractor, , differentiator & integrator,instrumentation amplifier, V to I and I to V converter, RC active filters: low pass andband pass filtersop amp circuits using diodes: precision rectifier, clipper and clamper,

UNITIICOMPARATORSAND SIGNALGENERATORS 9

Comparator and applications of comparator, regenerative comparator (Schmitt trigger),square wave generator (astable multivibrator), monostable multivibrator Triangular wavegenerator, saw tooth wave generator sine wave generators

UNIT III ANALOGMULTIPLIERANDPLL 9

Multiplier, Applications of multiplier: multiplying DC voltages, frequency doubling,phase angle detection, AM modulation/demodulation. PLL: Basic principles, analog anddigitalphase detector and comparator Voltage controlled Oscillator, Applications ofPLL

UNITIV ADCAND DAC 9

Analog switches, High speed sample and hold circuits, characteristics DAC, Types ofD/A converter, Current driven DAC, Switches for DAC, characteristics ofA/D converterTypes of A/D converter, - Single slope, Successive approximation.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV SPECIALFUNCTIONICS 9

555 timer functional diagram,Astable and Monostable Multivibrators using 555 Timer,Voltage regulators-linear and switched mode types, Switched capacitor filter, Frequencyto Voltage converters, and Isolation Amplifiers, Fiber optic ICs and Opto-couplers.

ELECTRONICCIRCUITS-II **3104**

AIM

The aim of this course is to familiarize the student with the analysis and design of feed back amplifiers, oscillators, tuned amplifiers, wave shaping circuits, multivibrators and blocking oscillators.

OBJECTIVES

Oncompletionofthiscoursethe studentwillunderstand

- Theadvantagesandmethodofanalysisoffeed backamplifiers
- AnalysisanddesignofRCandLCoscillators,tunedamplifiers,waveshaping circuits, multivibrators, blocking oscillators and time based generators.

UNITI:POWERAMPLIFIERS **9**

Classification, Efficiency of Class A , RC coupled, Transformer coupled, Class B push pull,Complementary symmetry power amplifier, Power Output, Efficiency and Power Dissipation,cross over distraction & Elimination, Heat sink.

UNITII:FEEDBACKAMPLIFIERS **9**

Feedback concept,Fourbasic typesoffeedback, Equivalent Circuitsofvoltage amplifier,Current Amplifier ,Trans conductance, Trans resistance amplifier, Transfer ratio fornegative feedback,Effect of feedback on noise, distortion gain input & output,impedance of the amplifier. Method of identifying feedback topology, Analysis of fourtypes of feedback amplifier.

UNITIII:OSCILLATORS **9**

Theory of Oscillator, Closed loop gain of the circuits, Barhausen Criterion. Analysis &DesignofRC Phase Shift Oscillators, WienBridge Oscillator, HartleyOscillatorColpittsOscillator, crystal Oscillator, frequency Stability.

UNITIV:TUNED AMPLIFERS **9**

Tuned Circuit, Resonance,Q factor, Classification oftuned amplifier, Analysis ofsingletuned amplifier, Capacitance coupling, Effect of cascading single tuned amplifier onBand width, Double tuned amplifier, instability of tuned amplifiers-stabilizationtechniques, Narrow band neutralization using coil, Class C tuned amplifiers and theirapplications. Efficiency of Class C tuned Amplifier.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV: WAVESHAPING,SWEEP&MULTIVIBRATOR CIRCUTS 9

RL & RC Integrator and Differentiator circuits. Voltage sweep circuit , Miller sweepgenerator, UJT saw tooth generator, current time base generator, Collector coupledAstable Multivibrator, Collector coupled Monosatble Multivibrator - BistableMultivibrator - Schmitt trigger circuits.

TRANSMISSIONLINESANDWAVEGUIDES 4004

AIM

Tolayastrongfoundationonthetheoryoftransmissionlinesandwaveguidesby highlighting their applications.

OBJECTIVES

- Tobecomefamiliarwithpropagationofsignalsthroughlines
- UnderstandsignalpropagationatRadiofrequencies
- Understandradiopropagationinguidedsystems
- Tobecomefamiliarwithresonators

UNITI TRANSMISSIONLINETHEORY 9

Different types of transmission lines – Definition of Characteristic impedance andPropagation Constant, General Solution of the transmission line –wavelength andvelocity of propagation. Waveform distortion – distortion less transmission line – Inputimpedance of lossless lines – reflection on a line not terminated by Z_o- reflection factorand reflection loss – Numerical problems.

UNITIITHELINEATRADIOFREQUENCIES 9

Standing waves and standing wave ratio on a line – One-eighth wave line – The quarterwave line and impedance matching – the halfwave line – The SmithChart – Applicationof the Smith Chart – Problems using smith chart (how to use smith chart and markimpedances, finding input impedance, SWR, reflection coefficient, finding loadimpedance) single stub matching - Numerical problems.

UNITIII GUIDEDWAVES 9

Waves betweenparallelplanes ofperfect conductors – Transverse electric and transversemagnetic waves – characteristics of TE and TM Waves – Transverse Electromagneticwaves – Velocities of propagation. – Wave impedances – Numerical problems.

UNITIV RECTANGULARWAVEGUIDES 9

Transverse Magnetic Waves in Rectangular Wave guides – Transverse Electric Waves inRectangular Waveguides – characteristic ofTE and TMWaves – cut-offwavelength andphase velocity - Dominant mode in rectangular waveguide –Wave impedance,Characteristic impedance - Numerical problems.

UNITV CIRCULARWAVEGUIDESANDRESONATORS 9

TM and TE waves in circular guides – wave impedances and characteristic impedance – Dominantmodeincircularwaveguide–excitationofmodes–Microwavecavities,

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Rectangular cavityresonators, circular cavityresonator – Q factor of cavityresonator forTE101 mode - Numerical problems.

NUMERICALMETHODS **3104**

AIM

With the present development of the computer technology, it is necessary to develop efficient algorithms for solving problems in science, engineering and technology. This course gives a complete procedure for solving different kinds of problems occur in engineering numerically.

OBJECTIVES

At the end of the course, the students would be acquainted with the basic concepts in numerical methods.

- The roots of nonlinear (algebraic or transcendental) equations, solutions of large system of linear equations and eigenvalue problem of a matrix can be obtained numerically where analytical methods fail to give solution.
- When huge amounts ofexperimentaldata are involved, the methods discussed on interpolation will be useful in constructing approximate polynomial to represent the data and to find the intermediate values.
- The numerical differentiation and integration find application when the functionin the analytical form is too complicated or the huge amounts of data are given such as series of measurements, observations or some other empiricalinformation.
- Since many physical laws are couched in terms of rate of change of one/two or more independent variables, most of the engineering problems are characterizedin the form of either nonlinear ordinary differential equations or partialdifferential equations. The methods introduced in the solution of ordinary differential equations and partial differential equations will be useful inattempting any engineering problem.

UNITISOLUTIONOFEQUATIONS AND EIGENVALUEPROBLEMS9

Newton Raphson's method – Iteration method – Solution of linear system by Gaussianelimination and Gauss-Jordon methods- Iterative methods: Gauss Jacobi and Gauss-Seidel methods- Inverse of a matrix byGauss Jordon method– Eigenvalue of a matrixby power method.

UNITII INTERPOLATION 9

Newton'sforwardandbackwarddifferenceformulas–Centraldifferenceformula:Bessels and Stirling's formula - Lagrangian Polynomials – Divided difference method .

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENEUERSHIP**

UNITIIINUMERICAL DIFFERENTIATION AND INTEGRATION9

Derivatives from difference tables – Divided differences and finite differences – Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg'smethod – Double integrals using trapezoidal and Simpson's rules.

UNITIV INITIALVALUEPROBLEMSFORORDINARY DIFFERENTIAL EQUATIONS 9

Single step methods: Taylor series method – Euler and modified Euler methods – Fourthorder Runge – Kutta method for solving first and second order equations – Multistepmethods: Milne's and Adam's predictor and corrector methods.

UNITV BOUNDARYVALUEPROBLEMSINORDINARYANDPARTIAL DIFFERENTIALEQUATIONS 9

Finite difference solution of second order ordinary differential equation – Finitedifference solution of one dimensional heat equation by explicit and implicit methods –One dimensional wave equation and two dimensional Laplace and Poisson equations.

MICROPROCESSORSAND MICROCONTROLLERS

3104

OBJECTIVES:

Thestudent shouldbemadeto:

- StudytheArchitectureof8086microprocessor.
- Learnthe designaspectsofI/Oand MemoryInterfacingcircuits.
- Studyaboutcommunicationandbus interfacing.
- StudytheArchitectureof8051microcontroller.

UNITI THE8086MICROPROCESSOR 9

Introduction to 8086 – Microprocessor architecture – Addressing modes - Instruction setand assembler directives – Assembly language programming – Modular Programming -Linking and Relocation - Stacks - Procedures – Macros – Interrupts and interrupt serviceroutines – Byte and String Manipulation.

UNITII 8086SYSTEM BUSSTRUCTURE 9

8086signals–Basicconfigurations–Systembustiming –Systemdesignusing8086 – IOprogramming – Introduction to Multiprogramming – System Bus Structure - Multiprocessor configurations – Coprocessor, Closely coupled and loosely Coupledconfigurations – Introduction to advanced processors.

UNITIII I/OINTERFACING 9

Memory Interfacing and I/O interfacing - Parallel communication interface – Serialcommunicationinterface –D/Aand A/DInterface - Timer – Keyboard/displaycontroller– Interrupt controller – DMA controller – Programming and applications Case studies:Traffic Light control, LED display, LCD display, Keyboard display interface and AlarmController.

UNITIV MICROCONTROLLER 9

Architecture of 8051 – Special Function Registers(SFRs) - I/O Pins Ports and Circuits - Instruction set - Addressing modes - Assembly language programming.

UNITVINTERFACINGMICROCONTROLLER 9

Programming 8051 Timers - Serial Port Programming - Interrupts Programming – LCD&Keyboard Interfacing -ADC, DAC &SensorInterfacing - ExternalMemoryInterface-Stepper Motor and Waveform generation.

TUTORIAL: 15 Hrs **TOTAL:45PERIODS**

OUTCOMES:

Attheendofthecourse, thestudent shouldbeableto:

- Designandimplementprogramson8086microprocessor.
- DesignI/Ocircuits.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- DesignMemoryInterfacing circuits.
- Designandimplement 8051microcontrollerbasedsystems.

DIGITALSIGNALPROCESSING **3104**

AIM

To studythesignalprocessingmethodsandprocessors.

OBJECTIVES

- TostudyDFTandits computation
- Tostudythedesigntechniquesfordigital filters
- Tostudythefiniteword lengtheffectsinsignalprocessing
- Tostudythenon-parametricmethodsofpowerspectrumestimations
- To studythefundamentalsofdigitalsignalprocessors.

UNITI FASTFOURIER TRANSFORM 9

Discrete Time Fourier Transform (DTFT), Introduction to DFT – Efficient computationof DFT Properties of DFT – FFT algorithms – Radix-2 and Radix-4 FFT algorithms – Decimation in Time – Decimation in Frequency algorithms

UNITII IIRFILTERDESIGN 9

StructureofIIR – SystemDesign ofDiscretetime IIR filter fromcontinuous time filter –IIR filter design by Impulse Invariance. Bilinear transformation – Approximationderivatives – Design of IIR filter in the Frequency domain.

UNITIII FIRFILTERDESIGN 9

Symmetric&AntisymtericFIRfilters–Linearphasefilter–Windowingtechnique–Rectangular, Hamming– Frequency sampling techniques

UNITIV FINITEWORDLENGTH EFFECTS 9

Quantization noise – derivation for quantization noise power – Fixed point and binaryfloating point number representation – comparison – over flow error – truncation error –co-efficient quantization error- limit cycle oscillation – signal scaling

UNITV POWERSPECTRUM ESTIMATION 9

Computation of Energy density spectrum – auto correlation and power spectrum ofrandom signals. Periodogram – use of DFT in power spectrum estimation – Nonparametric methods for power spectralestimation: Bartlett methods –Application ofDSP– Model of Speech Wave Form – Vocoder.

TUTORIAL15 **TOTAL:60**

DIGITALCOMMUNICATION **3104**

AIM

To introduce the basic concepts of Digital Communication modulation to baseband, passband modulation and to give an exposure to error control coding and finally to discuss about the spread spectrum modulation schemes.

OBJECTIVES

- Toknowtheprinciplesofsampling&quantization
- Tostudythevariouswaveformcodingschemes
- Tolearnthevariousbasebandtransmissionschemes
- TounderstandthevariousBandpass signalingschemes
- To knowthe fundamentalsofchannelcoding

UNITI SAMPLING&QUANTIZATION 9

Low pass sampling – Aliasing- Signal Reconstruction-Quantization - Uniform & non-uniform quantization - quantization noise - Logarithmic Companding of speech signal- PCM - TDM

UNITII WAVEFORMCODING 9

Prediction filtering and DPCM - Delta Modulation - ADPCM & ADM principles-LinearPredictive Coding

UNITIII BASEBANDTRANSMISSION 9

Properties of Line codes- Power Spectral Density of Unipolar / Polar RZ & NRZ – Bipolar NRZ- Manchester-ISI –Nyquist criterionfor distortionlesstransmission – Pulseshaping – Correlative coding - Mary schemes – Eye pattern - Equalization

UNITIV DIGITALMODULATIONSCHEME 9

Geometric Representation of signals - Generation, detection, PSD & BER of CoherentBPSK, BFSK & QPSK - QAM - Carrier Synchronization - structure of Non-coherentReceivers - Principle of DPSK.

UNITV ERRORCONTROL CODING 9

Channelcodingtheorem-LinearBlockcodes-Hammingcodes-Cycliccodes-Convolutional codes - Vitterbi Decoder

MEDICALELECTRONICS **3104**

AIM

Tomakestudentstounderstandtheapplicationsofelectronicsindiagnosticand therapeutic area.

OBJECTIVE

- To studythemethodsofrecordingvariousbiopotentials
- Tostudyhowtomeasurebiochemicalandvariousphysiologicalinformation
- Tounderstand theworking ofunitswhichwillhelptorestorenormalfunctioning
- Tounderstandtheuseofradiationfor diagnosticandtherapy
- Tounderstandtheneed andtechniqueofelectricalsafetyinHospitals

UNITIELECTRO– PHYSIOLOGYANDBIO– POTENTIALRECORDING 9

The origin of bio-potentials – Bio-potential electrodes – Biological amplifiers – ECG – EEG –EMG –PCG –EOG –Lead systems and recording methods – Typicalwaveformsand signal characteristics.

UNITII BIO–CHEMICALANDNONELECTRICALPARAMETER MEASUREMENT 9

PH – PO2 – PCO2 – PHCO3 – Electrophoresis – Colorimeter – Photometer – Autoanalyzer – Blood flow meter – Cardiac output – Respiratory measurement – Bloodpressure – Temperature – Pulse – Blood cell counters.

UNITIII ASSISTDEVICESANDBIO–TELEMETRY 9

Cardiac pacemakers–DC defibrillator– Telemetry principles–Frequency selection–Bio-telemetry – Radio – Pill and tele-stimulation.

UNITIV RADIOLOGICALEQUIPMENTS 9

Ionosing radiation – Diagnostic X-ray equipments – Use of radio isotope in diagnosis – Radiation therapy.

UNITV RECENTTRENDSINMEDICALINSTRUMENTATION 9

Thermograph–Endoscopyunit–Laserinmedicine–Diathermyunits–Electricalsafety in medical equipment.

ANTENNAANDWAVE PROPAGATION **3104**

AIM

Toenablethestudent tostudythevarioustypesofantennasand wave propagation.

OBJECTIVES

- To studyradiationfroma currentelement.
- To studyantenna arrays
- Tostudyapertureantennas
- Tolearnspecialantennassuchasfrequencyindependentandbroadbandantennas.
- Tostudyradiowavepropagation.

UNITI: RADIATION 9

Concept of Vector potentials- Modification for Time varying , retarded case- Fields andradiation resistance of an alternating current element--Radiation resistance – Effectivelength –Radiation intensity-Gain and Directivity-Field patterns- Beamwidth – Effectivearea-Relation between gain, effective length and radiation resistance.

UNITII: ANTENNAARRRAYS 9

Arrays of two point sources- Broadside array and End fire arrays – Binomial arrays - Pattern multiplication- Uniform linear array-

UNITIII: SPECIALPURPOSEANTENNAS 9

Radiationfromtravelingwaveonwire-Rhombicantenna–Loopantennas-Threeelement Yagi antenna- Log periodic antenna-Horn antenna -

UNITIV: PROPAGATION 9

Ground wave propagation: Attenuation characteristics – Calculation of field strength – Sky wave Propagation: Structure of Ionosphere – Effective dielectric constant of ionizedregion-Mechanism of Refraction and Refractive index- Critical Frequeny- Skip distance-Maximum usable frequency –Fading and Diversity Techniques.
SpaceWavePropagation:CalculationofFieldstrength–-Ductpropagation.

UNITV: MEASUREMENTS 9

Impedance – Field Pattern and Gain of Antennas- Radiation Pattern – Ionosphericmeasurements-Vertical incidence measurements of the ionosphere- Relation betweenoblique and vertical incidence transmission.

OBJECTIVES

- Tointroducethestudentsthefunctionsofdifferentlayers.
- TointroduceIEEEstandardemployedincomputer networking.
- Tomakestudentstogetfamiliarizedwithdifferentprotocolsandnetwork components.

UNITI DATA COMMUNICATIONS 8

Components – Direction of Data flow – networks – Components and Categories – typesof Connections – Topologies –Protocols and Standards – ISO / OSI model –Transmission Media – Coaxial Cable – Fiber Optics – Line Coding – Modems – RS232Interfacing sequences.

UNITII DATALINKLAYER 12

Error – detection and correction – Parity– LRC – CRC – Hamming code – Flow Controland Error control: stop and wait – go back N ARQ – selective repeat ARQ-slidingwindow techniques– HDLC.

LAN:EthernetIEEE802.3,IEEE802.4,andIEEE802.5–IEEE802.11–FDDI,SONET – Bridges.

UNITIII NETWORKLAYER 10

Internetworks-PacketSwitchingandDatagramapproach–IPaddressingmethods–Subnetting – Routing – Distance Vector Routing – Link State Routing – Routers.

UNITIV TRANSPORTLAYER 8

Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User DatagramProtocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Qualityof services (QOS) – Integrated Services.

UNITV APPLICATIONLAYER 7

DomainNameSpace(DNS)–SMTP,FDP,HTTP,WWW– Security– Cryptography.

ELECTIVE -I

22152E44EP **SEMESTERIV**

ADVANCEDELECTRONICSYSTEMDESIGN **4004**

AIM

To get knowledge about usage of electronic devices in Communication Engineering and Power supplies.

OBJECTIVE

- TostudyRFcomponentsuchasresonator,filter,transmissionlines,etc…
- To learndesignofRFamplifiersusingtransistors.
- TostudymodernPower Suppliesusing SCRand SMPStechnology
- Tolearnaboutsignalshielding&groundingtechniquesandstudyofA/Dand D/A Converters.
- TolearnknowledgeaboutfabricationofPCBsusing CAD.

UNITI: INTRODUCTIONTORFDESIGN 9

RFbehaviourofpassivecomponents –Chipcomponentsandcircuit boardconsiderations–Reviewoftransmissionlines –Impedanceandadmittancetransformation–Parallelandseries connectionof networks – ABCD and scattering parameters – Analysis of amplifierusing scattering parameter – RF filter – Basic resonator and filter configurations –Butterworth and chebyshev filters – Implementation of microstrip filter design – Bandpass filter and cascading of band pass filter elements.

UNITII: RFTRANSISTORAMPLIFIERDESIGN 9

Impedance matching using discrete components – Microstrip line matching networks – Amplifier classes of operation and biasing networks – Amplifier power gain–Unilateraldesign(S_{12}=0) –Simple input andoutput matching networks–Bilateraldesign–Stabilitycircle and conditional stability – Simultaneous conjugate matching for unconditionallystable transistors – Broadband amplifiers – High power amplifiers and multistageamplifiers.

UNITIII: DESIGNOFPOWER SUPPLIES 9

DC power supplydesignusing transistors and SCR's – Designofcrowbar and foldbackprotectioncircuits–SwitchedModePowerSupplies(SMPS) –Forward–Flyback-buckand boost converters – Design of transformers and control circuits for SMPS.

UNITIV: DESIGNOFDATAACQUISITIONSYSTEMS 9

Amplification of lowlevel signals– Grounding– Shielding and guarding techniques–Dualslope–QuadslopeandhighspeedA/Dconverters–Microprocessorscompatible

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

A/D converters – Multiplying A/D converters and logarithmic A/D converters – Sampleand hold – Design of two and four wire transmitters.

UNITV: DESIGNOFPRINTEDCIRCUITBOARDS 9

Introduction to technology of Printed Circuit Boards (PCB) – General lay out and rulesand parameters – PCB design rules for digital – High frequency – Analog – Powerelectronics and microwave circuits – Computer Aided Design(CAD) of PCB's.

OPTICALCOMMUNICATIONAND NEWORKS **4004**

AIM

- To introduce the various optical fiber modes, configurations and various signal degradation factors associated with optical fiber.
- To study about various optical sources and optical detectors and their use in the optical communication system. Finally to discuss about digital transmission and its associated parameters on system performance.

OBJECTIVES

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures.
- To understandthe different kind oflosses, signaldistortion inopticalwave guides and other signaldegradation factors. DesignoptimizationofSM fibers, RI profile and cut-off wave length.
- Tolearnthevariousopticalsource materials, LEDstructures,quantumefficiency, Laser diodes and different fiber amplifiers.
- To learnthe fiberopticalreceivers suchasPIN APDdiodes, noiseperformance in photo detector, receiver operation and configuration.
- To learn fiber slicing and connectors, noise effects on system performance, operational principles WDM and solutions.

UNITI INTRODUCTIONTOOPTICALFIBERS 9

Evolution of fiber optic system- Element of an Optical Fiber Transmission link-RayOptics-Optical Fiber Modes and Configurations –fiber types Mode theory of CircularWave guides- Overview of Modes- Key model concepts- Linearly Polarized Modes –Single Mode Fibers-

UNITIISIGNALDEGRADATIONOPTICALFIBERS 9

Attenuation – Absorption losses, Scattering losses, Bending Losses, Core and Claddinglosses, Signal Distortion in Optical Wave guides-Information Capacity determination –GroupDelay-MaterialDispersion, Wave guide Dispersion, Signaldistortion inSM fibers
-ModeCoupling

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIII FIBEROPTICALSOURCESAND COUPLING 9

Direct and indirect Band gap materials-LED structures –Quantum efficiency Modulationofa LED, lasers Diodes-Modes and Threshold condition Fiber amplifiers-Power Fibre –to- Fibre joints, Fibre splicing.

UNITIV FIBEROPTICALRECEIVERS 9

PIN and APD diodes –Photo detector noise, SNR, Detector Response time, AvalancheMultiplication Noise –Comparison of Photo detectors –Fundamental Receiver Operation– preamplifiers, Error Sources –Receiver Configuration –Probability of Error

UNITV DIGITALTRANSMISSION SYSTEM 9

Point-to-Point links System considerations –Link Power budget –Rise - time budget –Noise Effects on System Performance-Operational Principles of WDM, Solitons-. Basicon concepts of SONET/SDH Network.

MICROWAVEENGINEERING **4004**

Aim

Toenablethestudenttobecomefamiliarwithactive&passivemicrowavedevices& components used in Microwave communication systems.

Objectives

- TostudypassivemicrowavecomponentsandtheirS-Parameters.
- TostudyMicrowavesemiconductor devices&applications.
- To studyMicrowave sourcesandamplifiers.

Unit–I:Introduction **9**

Radio Spectrum–MicrowaveFrequencyand itscharacteristics –Transmissionmedia formicrowave signals – Waveguides – Scattering Parameters for microwave network (twoports)

Unit –II:PassiveMicrowaveDevices **9**

Isolators, Attenuators, Directional Couplers – Waveguide Tees – E- plane, H-Plane andMagic Tee –- Matched Terminators – S – parameters for all the components

Unit –III: MicrowaveSources **9**

KlystronOscillator–MagnetronOscillator–TWTAAmplifier–Poweroutputandefficiency equations for all the devices

Unit–IV:SemiconductorMicrowave Devices **9**

PIN Diode – Varactor Diode (Manley – Rowe Power Relation) – Tunnel Diode – GunnDiode – Applications of all the diodes –

Unit–VMicrowaveMeasurements **9**

PowerMeasurements–FrequencyMeasurements–VSWRMeasurements(HighandLow VSWR) – Attenuation Measurements – Insertion Loss Measurements

OPTOELECTRONICDEVICES **4004**

AIM

Tolearn differenttypesof optical emission,detection,modulation andoptoelectronic integrated circuits and their applications.

OBJECTIVE

- Toknowthebasicsofsolidstatephysicsandunderstandthenatureand characteristics of light.
- Tounderstanddifferent methodsofluminescence, displaydevicesand laser typesand their applications.
- Tolearntheprincipleofopticaldetection mechanismindifferentdetectiondevices.
- Tounderstanddifferent light modulationtechniquesandtheconceptsandapplications of optical switching.
- To studythe integrationprocess and applicationofopto electronic integrated circuits in transmitters and receivers.

UNITI: ELEMENTSOFLIGHTANDSOLIDSTATEPHYSICS 9

Wave nature of light – Polarization – Interference – Diffraction – Light source – Reviewof quantum mechanical concept – Review of solid state physics – Review ofsemiconductor physics and semiconductor junction device.

UNITII: DISPLAYDEVICESANDLASERS 9

Introduction – Photo luminescence – Cathode luminescence – Electro luminescence – Injection luminescence – Injection luminescence – LED – Plasma display – LiquidCrystal Display (LCD) – Numeric displays – Laser emission – Absorption – Radiation –Population inversion – Optical feedback – Threshold condition – Laser modes – Classesof lasers – Mode locking – Laser applications.

UNITIII: OPTICALDETECTIONDEVICES 9

Photo detector – Thermal detector – Photo devices – Photo conductors – Photo diodes – Detector performance.

UNITIV: OPTOELECTRONICMODULATOR 9

Introduction– Analoganddigitalmodulation–Electro-optic modulators– Magnetoopticdevices – Acoustoptic devices – Optical – Switching and logic devices.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV: OPTOELECTRONICINTEGRATEDCIRCUITS 9

Introduction–Hybridandmonolithicintegration–Applicationofoptoelectronicintegrated circuits – Integrated transmitters and receivers – Guided wave devices.

RADARANDNAVIGATIONALAIDS **4004**

AIM

Tomakethestudentunderstandtheprinciplesof Radaranditsuseinmilitaryand civilian environment

Alsotomakethestudentfamiliarwithnavigationalaidsavailablefornavigationof aircrafts and ships.

OBJECTIVES

- Toderiveand discussthe Rangeequationand the natureofdetection.
- To apply doppler principle to radars and hence detect moving targets, cluster, alsoto understand tracking radars
- To refresh principles ofantennas and propagation as related to radars, also studyof transmitters and receivers.
- To understand principles of navigation, in addition to approach and landing aids as related to navigation
- To understandnavigationofshipsfromshoretoshore.

UNITI INTRODUCTIONTORADAR 9

Basic radar – The simple form of the radar equation – Radar block diagram – Radarfrequencies – Applications of radar – The origins of radar – The radar equation – Introduction – Detectionofsignals in noise – Receiver noise and the signal-to-noise ratio– Probability density functions – Probabilities of detection and false alarm – Integrationof radar pulses – Radar cross section of targets – Radar cross section fluctuations – Transmitter power – Pulse repetition frequency – Antenna parameters – System losses – Other radar equation considerations

UNITII: MTIAND PULSEDOPPLER RADAR 9

Introduction to Doppler and MTI radar – Delay-line cancellers – Staggered pulserepetition frequencies – Doppler filter banks – Digital MTI processing – Moving targetdetector – Limitations to MTI performance – MTI from a moving platform (AMIT) –Pulse Doppler radar – Other Doppler radar topics – Tracking with radar – Mono pulsetracking – Conicalscanand sequentiallobing – Limitations to tracking accuracy – Low –Angle tracking – Tracking in range – Other tracking radar topics – Comparison oftrackers – Automatic tracking with surveillance radars (ADT).

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIII **9**

Detection of signals in noise – Introduction – Matched – Filter receiver – Detection – Detectors – Automatic detector – Integrators – Constant – False – Alarmrate receivers – The radar operator – Signal management – Propagation radar waves – Atmospheric – Standard propagation – Nonstandard propagation – The radar antenna – Reflectorantennas – Electronically steered phased array antennas – Phase shifters – Frequency –Scan arrays – Radar transmitters – Introduction – Linear beam power tubes – Solid stateRF power sources – Magnetron – Crossed field amplifiers – Other RF power sources –Other aspectsofradar transmitter –Radar receivers–Theradar receiver –Receiver noisefigure – Super heterodyne receiver – Duplexers and receiver protectors – Radar displays.

UNITIV **9**

Introduction – Four methods of navigation – Radio direction finding – The loop antenna– Loop input circuits – An aural null direction finder – The goniometer – Errors indirection finding – Adcock direction finders – Direction finding at very high frequencies– Automatic direction finders – The commutated aerial direction finder – Range andaccuracy of direction finders – Radio ranges – The Lf/Mf four course radio range – Vhfomni directional range (Vor) – Vor receiving equipment – Range and accuracy of Vor –Recent developments – Hyperbolic systems of navigation (loran and decca) – Loran-Aequipment – Range and precision of standard loran – Loran-C – The decca navigationsystem – Decca receivers – Range and accuracy of decca – The omega system

UNITV **9**

DME and TACAN – Distance measuring equipment – Operation of DME – TACAN – TACAN equipment – Aids to approach and landing – Instrument landing system – Ground controlled approach system – Microwave Landing System (MLS) – Dopplernavigation – The Doppler effect – Beamconfigurations – Doppler frequency equations –Trackstabilization–Dopplerspectrum– ComponentsoftheDopplernavigationsystem – Dopplerrangeequation–Accuracyof Dopplernavigationsystems–Inertialnavigation – Principles of operation – Navigation over the earth – Components of an inertialnavigation system – Earth co-ordinate mechanization – Strapped – Down systems –Accuracyofinertialnavigationsystems –Satellite navigationsystem–Thetransit system – Navstar GlobalPositioning System(GPS)

DIGITALIMAGEPROCESSING 4004

AIM

Tointroducethestudenttovarious imageprocessing techniques.

OBJECTIVES

- To studythe image fundamentals and mathematicaltransforms necessaryfor image processing.
- Tostudytheimageenhancementtechniques
- Tostudyimagerestorationprocedures.
- Tostudytheimagecompressionprocedures.
- Tostudytheimagesegmentationandrepresentationtechniques.

UNIT-I: DIGITALIMAGE FUNDAMENTALS 9

Elementsofvisualperception–Imagesampling,Quantization–Basicrelationshipbetween pixels-monochrome vision model- color space model-convolution.

UNIT– IIIMAGETRANSFORM 9

Basic geometric transforms-Introduction to Fourier transform and DFT – properties of2D Fourier transform– FFT- Separable image transforms – Walsh – Hadamard-Discretecosine and Haar Transfroms

UNIT-III: IMAGEENHANCEMENTANDRESTORATIONTECHNIQUES9

Spatial domain methods- Basic gray level transformation-Histogram equalization-Spatialfiltering-Laplacian filtering- Frequency Domain filters- homomorphic filtering-Model ofimage degradation/Restoration process- Noise models.

UNITIV:IMAGECOMPRESSION 9

Losslesscompression-: Variable lengthcoding- LZWcoding- -Predictive coding-DPCM.Lossy compression- Transform coding-– Image compression standards-JPEG,MPEG.

UNIT–V:IMAGESEGMENTATION&REPRESENTATION 9

Edge detection – Thresholding- region based segmentation- Boundary representation – chair codes- Boundary segments – boundarydescriptors-: simple descriptors-Fourierdescriptors- Regional descriptors- Texture.

ENGINEERINGACOUSTICS **4004**

AIM

Thiscourseaimsatprovidinganoverviewofengineeringacoustics.

OBJECTIVE

- Toprovide mathematicalbasisforacousticswaves
- Tointroducetheconceptofradiationreceptionabsorptionandattenuationof acoustic waves.
- Topresentthecharacteristicbehaviourofsoundinpipes, resonatorsand filters.
- Tointroducethepropertiesofhearing and speech
- Todescribethearchitectureandenvironmentalinclusiveofreverberationand noise.
- Togiveadetailed studyonloud speakersandmicrophones.

UNITI:

Acoustics waves – Linear wave equation – Sound in fluids – Harmonic plane waves – Energy density – Acoustics intensity – Specific acoustic impedance – Spherical waves – Describer scales.

Reflection and Transmission: Transmission from one fluid to another normal andoblique incidence – Method of images.

UNITII: RADIATIONANDRECEPTION OFACOUSTICWAVES 9

Radiationfrompulsatingsphere–Acousticreciprocity–Continuouslinesource–Radiation impedance – Fundamental properties of transducers.

Absorptionandattenuationofsound: Absorptionfromviscosity–Complexsoundspeed and absorption – Classical absorption co-efficient

UNITIII: PIPERESONATORSANDFILTERS 9

Resonance in pipes – Standing wave pattern absorption of sound in pipes – Longwavelength limit – Helmoltz resonator – Acoustic impedance – Reflection andtransmission of waves in pipe – Acoustic filters – Low pass, high pass and band pass.

Noise, Signal detection, Hearing and speech: Noise, spectrum level and band level – Combing band levels and tones – Detecting signals in noise – Detection threshold – Theear – Fundamental properties of hearing – Loudness level and loudness – Pitch andfrequency – Voice.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV: ARCHITECTURALACOUSTICS 9

Sound in endosure – A simple model for the growth of sound in a room – Reverberationtime – Sabine, sound absorption materials – Measurement ofthe acoustic outputofsoundsources in live rooms – Acoustics factor in architectural design.

Environmental Acoustics: Weighted sound levels speech interference – Highway noiseNoise induced hearing loss – Noise and architectural design specification andmeasurement of some isolation design of portions.

UNITV: TRANSDUCTION 9

Transducer as an electives network – Canonical equation for the two simple transducerstransmitters – Moving coil loud speaker – Loudspeaker cabinets – Horn loud speaker,receivers – Condenser – Microphone – Moving coil electrodynamics microphonePiezoelectric microphone – Calibration of receivers.

WIRELESSCOMMUNICATION **4004**

Objectives

- Knowthecharacteristicofwirelesschannel
- Learnthevariouscellular architectures
- Understandtheconceptsbehindvariousdigitalsignalingschemesforfading channels
- Befamiliarthevariousmultipathmitigationtechniques
- Understandthevariousmultipleantennasystems

UNITIWIRELESSCHANNELS9

Large scale path loss – Path loss models: Free Space and Two-Ray models -Link Budgetdesign – Small scale fading- Parameters of mobile multipath channels – Time dispersionparameters-Coherence bandwidth – Doppler spread & Coherence time, Fading due toMultipath time delay spread – flat fading – frequency selective fading – Fading due toDoppler spread – fast fading – slow fading.

UNITIICELLULARARCHITECTURE9

Multiple Access techniques - FDMA, TDMA, CDMA – Capacity calculations–Cellularconcept- Frequency reuse - channel assignment- hand off- interference & systemcapacity- trunking & grade of service – Coverage and capacity improvement.

UNITIIIDIGITALSIGNALINGFORFADINGCHANNELS 9

Structure of a wireless communication link, Principles of Offset-QPSK, p/4-DQPSK,Minimum Shift Keying, Gaussian Minimum Shift Keying, Error performance in fadingchannels, OFDM principle – Cyclic prefix, Windowing, PAPR.

UNITIVMULTIPATHMITIGATIONTECHNIQUES9

Equalisation – Adaptive equalization, Linear and Non-Linear equalization, Zero forcingand LMS Algorithms. Diversity – Micro and Macrodiversity, Diversity combiningtechniques, Error probability in fading channels with diversity reception, Rake receiver.

UNITVMULTIPLEANTENNATECHNIQUES9

MIMO systems – spatial multiplexing -System model -Pre-coding - Beam forming - transmitter diversity, receiver diversity- Channelstateinformation-capacityin fading andnon-fading channels.

VLSIDESIGN **3104**

AIM

To introduce the technology, design concepts and testing of Very Large Scale Integrated Circuits.

OBJECTIVES

- In this course, the MOS circuit realization of the various building blocks that is common to any microprocessor or digital VLSI circuit is studied.
- Architectural choices and performance tradeoffs involved in designing and realizing the circuits in CMOS technology are discussed.
- The main focus in this course is on the transistor circuit level design and realization for digital operation and the issues involved as well as the topics covered are quite distinct fromthose encountered incoursesonCMOS Analog IC design.

UNITIMOS TRANSISTORPRINCIPLE9

NMOS and PMOS transistors, Process parameters for MOS and CMOS, Electricalproperties of CMOS circuits and device modeling, Scaling principles and fundamentallimits, CMOS inverter scaling, propagation delays, Stick diagram, Layout diagrams

UNITIICOMBINATIONALLOGICCIRCUITS9

Examples of Combinational Logic Design, Elmore‟s constant, Pass transistor Logic,Transmission gates, static and dynamic CMOS design, Power dissipation – Low powerdesign principles

UNITIIISEQUENTIALLOGICCIRCUITS9

Static and Dynamic Latches and Registers, Timing issues, pipelines, clock strategies,Memory architecture and memory control circuits, Low power memory circuits,Synchronous and Asynchronous design

UNITIVDESIGNINGARITHMETICBUILDINGBLOCKS 9

Data path circuits,Architectures for ripple carry adders,carry look ahead adders,Highspeed adders, accumulators, Multipliers, dividers, Barrelshifters, speed and area tradeoff

UNITVIMPLEMENTATIONSTRATEGIES9

FullcustomandSemicustomdesign,Standardcelldesignandcelllibraries,FPGAbuilding block architectures, FPGA interconnect routing procedures.

EMBEDDEDANDREALTIME SYSTEMS

OBJECTIVES:

Thestudent shouldbemadeto:

- Understandthe conceptsofembeddedsystemdesignandanalysis
- LearnthearchitectureandprogrammingofARMprocessor
- Beexposedtothebasicconceptsofembedded programming
- Learntherealtimeoperatingsystems

UNITI INTRODUCTIONTOEMBEDDEDSYSTEMDESIGN 9

Complex systems and micro processors– Embedded system design process – Designexample: Model train controller- Design methodologies- Design flows - RequirementAnalysis – Specifications-System analysis and architecture design – Quality Assurancetechniques - Designing with computing platforms – consumer electronics architecture –platform-level performance analysis.

UNITII ARM PROCESSORANDPERIPHERALS 9

ARM Architecture Versions – ARM Architecture – Instruction Set – Stacks andSubroutines – Features of the LPC 214X Family – Peripherals – The Timer Unit – PulseWidth Modulation Unit– UART – Block Diagram of ARM9 and ARM Cortex M3MCU.

UNITIIIEMBEDDED PROGRAMMING 9

Components for embedded programs- Models of programs- Assembly, linking and loading – compilation techniques- Program level performance analysis – Software performance optimization – Program level energy and power analysis and optimization – Analysis and optimization of program size- Program validation and testing.

UNITIV REALTIME SYSTEMS 9

Structure of a Real Time System — Estimating program run times – Task Assignmentand Scheduling – Fault Tolerance Techniques – Reliability, Evaluation – ClockSynchronisation.

UNITVPROCESSES AND OPERATINGSYSTEMS 9

Introduction– Multipletasksand multipleprocesses – Multiratesystems-Preemptiverealtime operating systems- Priority based scheduling- Interprocess communicationmechanisms – Evaluating operating system performance- power optimization strategiesfor processes – Example Realtime operating systems-POSIX-Windows CE. - Distributedembedded systems – MPSoCs and shared memory multiprocessors. – Design Example -Audio player, Engine control unit – Video accelerator.

Tutorial:15Hrs **TOTAL:45PERIODS**

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

OUTCOMES:

Attheendofthecourse,thestudent shouldbeableto:

- Describethearchitectureandprogrammingof ARMprocessor
- Outlinethe conceptsofembeddedsystems
- Explainthebasic conceptsofrealtime operating systemdesign
- Modelreal-time applicationsusingembedded-systemconcepts

PROFESSIONALETHICSINENGINEERING **4004**

OBJECTIVES:

- To enable the students to create an awareness on Engineering Ethics and Human Values, to instillMoraland SocialValuesand Loyaltyand to appreciatetherights of others.

UNITI HUMANVALUES 10

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage –Valuing time – Cooperation – Commitment – Empathy – Self confidence – Character –Spirituality – Introduction to Yoga and meditation for professional excellence and stressmanagement.

UNITII ENGINEERINGETHICS 9

Senses of „Engineering Ethics" – Variety of moral issues – Types of inquiry – Moraldilemmas – Moral Autonomy – Kohlberg"s theory – Gilligan"s theory – Consensus andControversy– Models ofprofessional roles - Theories about right action – Self-interest –Customs and Religion – Uses of Ethical Theories

UNITIII ENGINEERINGASSOCIALEXPERIMENTATION 9

EngineeringasExperimentation–EngineersasresponsibleExperimenters–Codes ofEthics – A Balanced Outlook on Law.

UNITIVSAFETY, RESPONSIBILITIES ANDRIGHTS 9

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and ReducingRisk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts ofInterest – Occupational Crime – Professional Rights – Employee Rights – IntellectualProperty Rights (IPR) – Discrimination.

UNITV GLOBALISSUES 8

Multinational Corporations – Environmental Ethics – Computer Ethics – WeaponsDevelopment – Engineers as Managers – Consulting Engineers – Engineers as ExpertWitnesses and Advisors – Moral Leadership –Code of Conduct – Corporate SocialResponsibility

TOTAL:45PERIODS

OUTCOMES:

- Upon completion of the course, the student should be able to apply ethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society

SATELLITECOMMUNICATION **4004**

AIM

Toenablethestudenttobecomefamiliarwithsatellitesandsatelliteservices.

OBJECTIVES

- Overviewofsatellitesystemsinrelationtootherterrestrialsystems.
- Studyofsatellite orbits andlaunching.
- Studyofearthsegmentand space segmentcomponents
- Studyofsatellite access byvarious users.
- StudyofDTHandcompressionstandards.

UNITI: ELEMENTSOFORBITAL MECHANICS **9**

Equationofmotion–Orbitalelements–Orbitalperturbation–Trackingandorbitdetermination – orbit control.

SatelliteLaunchsystems:FundamentalsofRocketpropulsion–Multistagerockets–Huffman transfer orbit circularization

UNITII:ELEMETSOFCOMMUNICATIONSATELLITEDESIGN **9**

Space environment – Spacecraft configuration – Spacecraft subsystems – Payload – Reliability consideration – Spacecraft integration – Testing facilities – Spacecraftoperations.

UNIT–III: SATELLITECOMMUNICATION SYSTEMS **9**

Typesofsystems–FSS,BSS-Noiseinterference,intermodulation–CDMA-Packetsatellite networks – The INSAT system -The INTELSAT/INMARSAT system.

UNIT–IV:EARTHSTATIONDESIGN **9**

Earthstationconfigurationoption – Site selection – Antenna systems – Tracking systems– Receiver subsystems – Low noise amplifiers – Down converters – Transmittersubsystems – Up converters- High power amplifiers- Terminal equipment .

UNIT-V: PERFORMANCE MEASUREMENTS **9**

Spacecraftcheckout–Groundstationmeasurements–Systemcoordinationandcontrol .Elements of Frequency coordination andmanagement: The ITU/IFRB requirements– Satellite system characterization – Ground system characteristics .

ROBOTICSAND AUTOMATION **4004**

AIM

Robots are slowly and steadily replacing human beings in many fields. The aim of this course is to introduce the students into this area so that they could use the same whenthey enter the industries.

OBJECTIVES

- Tostudythevarious partsofrobotsandfields ofrobotics.
- Tostudythevariouskinematicsandinversekinematicsofrobots.
- TostudytheEuler,LagrangianformulationofRobotdynamics.
- To studythe trajectoryplanningforrobot.
- Tostudythe controlofrobotsforsome specific applications.

UNITI BASICCONCEPTS 9

Definitionandoriginofrobotics–differenttypesofrobotics–variousgenerationsof robots–degreesoffreedom–Asimov‟slawsofrobotics–dynamicstabilizationofrobots.

UNITII POWERSOURCESANDSENSORS 9

Hydraulic, pneumatic and electric drives – determination of HP of motor and gearingratio – variable speed arrangements – path determination – micro machines in robotics – machine vision – ranging – laser – acoustic – magnetic, fiber optic and tactile sensors.

UNITIIIMANIPULATORS,ACTUATORS AND GRIPPERS 9

Construction of manipulators – manipulator dynamics and force control – electronic andpneumatic manipulator control circuits – end effectors – U various types of grippers – design considerations.

UNITIVKINEMATICS AND PATHPLANNING 9

Solution of inverse kinematics problem – multiple solution jacobian work envelop – hillClimbing Techniques – robot programming languages

UNITV CASESTUDIES 9

Mutiplerobots– machineinterface–robotsin manufacturingandnon-manufacturingapplications – robot cell design – selection of robot.

22152E64DP **SEMESTERVI**

REMOTE SENSING **4004**

AIM:

Tounderstandthebasicsforremotesensing.

OBJECTIVES:

- Introduce the principles of remote sensing and fundamental knowledge on the physics of remote sensing, aerial photographic techniques, photogrammetry, multispectral, hyperspectral and thermal imaging, and RADAR and LIDAR image analysis.
- Thenewesttechnologyinthefieldwillalsobe discussed.
- The course will be taught with an emphasis on the geographical applications of remotesensing;however, incertain instancesother disciplineswillbe introducedas well.

UNITI: REMOTESENSING 9

Definition – Components of Remote Sensing -Energy, Sensor, Interacting Body –Active and Passive Remote Sensing – Platforms – Aerial and Space Platforms –Balloons, Helicopters, Aircraft and Satellites – Synoptivity and Repetivity – ElectroMagnetic Radiation (EMR) – EMR spectrum – Visible, Infra Red (IR), Near IR, MiddleIR, Thermal IR and Microwave – Black Body Radiation – Planck's law – Stefan-Boltzman law.

UNITII: EMRINTERACTIONWITHATMOSPHEREAND EARTH MATERIALS 9

Atmospheric characteristics – Scattering of EMR – Raleigh, Mie, Non-selective andRaman Scattering – EMR Interaction with Water vapour and ozone – AtmosphericWindows – Significance ofAtmospheric windows – EMR interaction with Earth SurfaceMaterial– Radiance, Irradiance, Incident, Reflected, AbsorbedandTransmittedEnergy –Reflectance – Specular and Diffuse Reflection Surfaces – Spectral Signature – SpectralSignature curves – EMR interaction with water, soil and Earth Surface: Imagingspectrometry and spectral characteristics.

UNIT– III:OPTICALAND MICROWAVEREMOTESENSING 9

Satellites – Classification – Based onOrbits and purpose –Satellite Sensors – Resolution– Description of Multi Spectral Scanning – Along and Across Track Scanners – DescriptionofSensorsinLandsat,SPOT,IRSseries–CurrentSatellites–Radar

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Speckle – Back Scattering – Side Looking Airbome Radar – Synthetic Aperture Radar – Radiometer – Geometrical characteristics ; Sonar remote sensing systems.

UNIT– IV: GEOGRAPHICINFORMATIONSYSTEM 9

GIS – Components of GIS – Hardware, Software and Organisational Context – Data – Spatial and Non-Spatial – Maps – Types of Maps – Projection – Types of Projection – Data Input – Digitizer, Scanner – Editing – Raster and Vector data structures – Comparition of Raster and Vector data structure – Analysis using Raster and Vector data–Retrieval, Reclassification, Overlaying, Buffering – Data Output – Printers and Plotters.

UNIT-V: MISCELLANEOUSTOPICS 9

Visual Interpretation of Satellite Images – Elements of Interpretation – InterpretationKeys Characteristics of Digital Satellite Image –Image enhancement – Filtering –Classification– IntegrationofGIS and Remote Sensing – ApplicationofRemote Sensingand GIS – UrbanApplications – IntegrationofGIS and RemoteSensing – ApplicationofRemote Sensing and GIS – Water resources – Urban Analysis – Watershed Management– Resources Information Systems.Global positioning system – an introduction.

ELECTIVE-III

22150E64EP **SEMESTERVI**

NETWORKSECURITY **4004**

AIM

To understand the principles of encryption algorithms; conventional and public keycryptography. To have a detailed knowledge about authentication, hash functions and application level security mechanisms.

OBJECTIVES

- Toknowthe methodsofconventionalencryption.
- Tounderstandthe conceptsofpublic keyencryptionandnumbertheory
- Tounderstand authenticationandHashfunctions
- Toknowthenetwork securitytoolsand applications.
- Tounderstandthesystemlevelsecurityused.

UNITI: SYMMETRICCIPHERS 9

Overview–Classicalencryptiontechniques –Blockciphers anddataencryptionstandard–Finite fields – Advanced encryption standard – Contemporary symmetric ciphers – Confidentiality using symmetric encryption.

UNITII:PUBLIC-KEYENCRYPTION AND HASH FUNCTIONS9

Number theory – Public-key cryptography and RSA – Keym – Diffie-hellman keyexchange – Elliptic curve cryptography – Message authentication and hash functions –Hash algorithms – Digital signatures and authentication protocols.

UNITIII: NETWORKSECURITYPRACTICE 9

Authentication applications – Kerberos-X.509 authentication service – Electronic mailsecurity – Pretty good privacy – S/MIME – IP security – IP security architecture – Authentication header – Encapsulating security payload – Key management.

UNITIV: SYSTEMSECURITY 9

Intruders–Intrusiondetection–Passwordmanagement –Malicioussoftware–Firewalls–Firewall design principles – Trusted systems.

UNITV: WIRELESSSECURITY 9

WirelessLANsecuritystandards –WirelessLANsecurityfactorsandissues.

TOTALQUALITYMANAGEMENT **3003**

OBJECTIVE

- TounderstandtheTotalQualityManagementconceptandprinciplesandthevarious tools available to achieve Total Quality Management.
- Tounderstandthestatisticalapproachforqualitycontrol.
- To create an awareness about the ISO and QS certification process and its need for the industries.

1. INTRODUCTION 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - AnalysisTechniques for Quality Costs, Basic concepts of Total Quality Management, HistoricalReview, Principles of TQM, Leadership – Concepts, Role of Senior Management,Quality Council, QualityStatements, Strategic Planning, Deming Philosophy, Barriers toTQM Implementation.

2. TQMPRINCIPLES 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, ServiceQuality, Customer Retention, Employee Involvement – Motivation, Empowerment,Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous ProcessImprovement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership –Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development,Performance Measures – Basic Concepts, Strategy, Performance Measure.

3. STATISTICALPROCESSCONTROL(SPC) 9

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency andDispersion, Population and Sample, Normal Curve, Control Charts for variables andattributes, Process capability, Concept of six sigma, New seven Management tools.

4. TQMTOOLS 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality FunctionDeployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality LossFunction, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA– Stages of FMEA.

5. QUALITYSYSTEMS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS16949, ISO 14000 – Concept, Requirements and Benefits.

WIRELESSNETWORKS 3104

OBJECTIVES

- Tostudyabout Wirelessnetworks,protocolstackand standards.
- Tostudyaboutfundamentalsof3GServices,itsprotocolsand applications.
- Tostudyaboutevolutionof4GNetworks,itsarchitectureandapplications.

UNITI WIRELESSLAN 9

Introduction-WLAN technologies: Infrared, UHF narrowband, spread spectrum - IEEE802.11: System architecture, protocol architecture, physical layer, MAC layer,802.11b, 802.11a – Hiper LAN: WATM, BRAN, HiperLAN2 – Bluetooth: Architecture,Radio Layer, Baseband layer, Link manager Protocol, security - IEEE802.16-WIMAX:Physical layer, MAC, Spectrum allocation for WIMAX

UNITII MOBILENETWORKLAYER 9

Introduction - Mobile IP: IP packet delivery, Agent discovery, tunneling andencapsulation, IPV6-Network layer inthe internet-Mobile IP session initiationprotocol-mobile ad-hoc network: Routing, Destination Sequence distance vector, Dynamic sourcerouting

UNITIII MOBILETRANSPORTLAYER 9

TCP enhancements for wireless protocols - Traditional TCP: Congestion control, fastretransmit/fast recovery, Implicationsofmobility- ClassicalTCP improvements:IndirectTCP, Snooping TCP, Mobile TCP, Time out freezing, Selective retransmission,Transaction oriented TCP - TCP over 3G wireless networks.

UNITIV WIRELESSWIDEAREANETWORK 9

Overview ofUTMS TerrestrialRadio access network-UMTS Core network Architecture:3G-MSC,3G-SGSN,3G-GGSN,SMS-GMSC/SMS-IWMSC,Firewall,DNS/DHCP-HighspeedDownlinkpacketaccess (HSDPA)-LTE networkarchitectureandprotocol.

UNITV 4GNETWORKS 9

Introduction – 4G vision – 4G features and challenges - Applications of 4G – 4GTechnologies: Multicarrier Modulation, Smart antenna techniques, OFDM-MIMOsystems, Adaptive Modulation and coding with time slot scheduler, Cognitive Radio.

TELECOMMUNICATIONSWITCHINGAND NETWORKS

4004

AIM

- To introduce fundamentals functions of a telecom switching office, namely, digital multiplexing, digital switching and digital subscriber access.
- Tointroduceamathematicalmodelfortheanalysisoftelecommunicationtraffic.

OBJECTIVES

- Tointroducethe conceptsofFrequencyandTimedivisionmultiplexing.
- TointroducedigitalmultiplexinganddigitalhierarchynamelySONET/SDH
- Tointroducetheconceptsofspaceswitching,timeswitchingandcombination switching, example of a switch namely No.4 ESS Toll switch.
- Tointroducetheneedfornetworksynchronizationandstudysynchronizationissues. To outline network control and management issues.
- Tostudytheenhancedlocalloopsystemsindigitalenvironment.Tointroduce ISDN, DSL / ADSL, and fiber optic systems in subscriber loop.
- Tointroducestatisticalmodelingoftelephonetraffic.Tostudyblockingsystem characteristics and queuing system characteristics.
- Tocharacterize blockingprobabilityholdingservicetimedistributionsfor inspeech and data networks.

UNITI EVOLUTIONOFTELECOMMUNICATION SWITCHINGAND CIRCUITS 9

Evolution of Public Switched Telecommunication Networks Strowger exchange,Crossbar exchange,– Basic Tele communicationequipments – Telephone handset, , Echosuppressors and cancellors, PCM coders, Modems and Relays.

UNITII ELECTRONICSWITCHING 9

CircuitSwitching,Messageswitching,Centralizedstoredprogrammeswitching,Timeswitching, Space switching – Digital switching system hardware configuration,

UNITIIITELECOMMUNICATIONSIGNALLINGANDTRAFFIC9

Channel associated signaling, Common channel signaling, SS7 signaling protocol, SS7protocol architecture, Grade of service, Modeling switching systems, Blocking modelsand Delay systems.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV INTEGRATEDDIGITALNETWORKS 9

Subscriber loop characteristics, Local access wire line and wire less PCM / TDM carrierstandards transmission line codes, Synchronous, Asynchronous, SONET / SDH,Integrated DigitalNetwork(IDN)environment –PrinciplesofIntegrated ServicesDigitalNetwork (ISDN)

UNITV DATANET WORKS 9

DatatransmissioninPSTN – ConnectionorientedandConnectionlessprotocols – packetswitching – ISO-OSIarchitecture-Satellitebaseddatanetworks –LAN, WAN – standards– TCP / IP – Internet

22152E74AP **SEMESTERVII**

POWERELECTRONICS **3003**

AIM

ApplicationofElectronicknowledgeinindustryforrectificationofpolyphasesupply voltage and for control of motor speed and for thermal heating.

OBJECTIVES

- Tostudyaboutpowerelectroniccircuitsforvoltageandcurrentcontroland protection.
- To learn the switching characteristics of transistors and SCRs. Series and parallel functions of SCRs, Programmable triggering methods of SCR.
- TolearncontrolledrectificationACsupplies.
- Tostudyofconverters andinverters.
- Tolearnaboutmotorcontrol,charges,SMPSandUPS.

UNITI POWERSEMICONDUCTORDEVICES 9

Powertransistors,Thyristors,PowerTRIAC,MOSFET,IGBT,GTOcharacteristics,rating, Protection circuits.

UNITII POWERSUPPLIES 9

Single Phase and Three Phase Controlled rectifiers, DesignofTrigger circuits, Switchingmode regulators – Boost, Buck, Buck-Boost and Cuk regulators, AC voltage regulator.

UNITIII INVERTERS 9

Voltageandcurrentsourceinverters,Resonant,Series inverter,PWM inverter.

UNITIV CHOPPERS 9

TypeA, B,CandDchoppers,Pulsewidthmodulation-Gating requirements.

UNITV MOTORCONTROL&Applications 9

Single Phase DC series motor drives, Inductionand Synchronous motor drives, Switchedreluctance motor Drive, SMPS and UPS

ADVANCEDMICROPROCESSORSANDMICROCONTROLLERS

3003

OBJECTIVES

- Toexposethestudentstothe fundamentalsofmicroprocessor architecture.
- Tointroducetheadvancedfeaturesinmicroprocessorsandmicrocontrollers.
- Toenablethestudentstounderstandvariousmicrocontrollerarchitectures.

UNITI HIGHPERFORMANCECISCARCHITECTURE–PENTIUM9

CPUArchitecture-Bus Operations–Pipelining–Brachpredication–floatingpointunit-Operating Modes –Paging – Multitasking – Exception and Interrupts – Instruction set – addressing modes – Programming the Pentium processor.

UNITIIHIGH PERFORMANCERISC ARCHITECTURE–ARM9

Arcon RISC Machine – Architectural Inheritance – Core & Architectures - Registers – Pipeline - Interrupts – ARM organization - ARM processor family – Co-processors - ARM instruction set- Thumb Instruction set - Instruction cycle timings - The ARMProgrammer‟s model – ARM Development tools – ARM Assembly LanguageProgramming - C programming – Optimizing ARM Assembly Code – OptimizedPrimitives.

UNITIIIARMAPPLICATIONDEVELOPMENT 9

Introduction to DSP on ARM –FIR filter – IIR filter – Discrete fourier transform – Exception handling – Interrupts – Interrupt handling schemes- Firmware and bootloader–Embedded Operating systems – Integrated Development Environment- STDIOLibraries – Peripheral Interface – Application of ARM Processor - Caches – Memoryprotection Units – Memory Management units – Future ARM Technologies.

UNITIV MOTOROLA 68HC11MICROCONTROLLERS 9

Instructionsetaddressingmodes–operatingmodes-Interruptsystem-RTC-SerialCommunication Interface – A/D Converter PWM and UART.

UNITV PICMICROCONTROLLER 9

CPU Architecture – Instruction set– interrupts- Timers- I2C Interfacing–UART-A/DConverter –PWM and introduction to C-Compilers.

ELECTROMAGNETICINTERFERENCEANDCOMPATIBILITY

3003

AIM

To understand different electromagnetic Interference problems occurring in Intersystem and in inter system and their possible mitigation techniques in Electronic design

OBJECTIVES

- To understand EMI Sources,EMI problems andtheir solution methodsin PCB level / Subsystem and system level design.
- To measure the emission.immunity level from different systems to couple with the prescribed EMC standards

UNITI BASICCONCEPTS 9

Definition of EMI and EMC with examples – Classification of EMI/EMC – CE – RE – CS – RS – Unitsofparameters – SourcesofEMI –EMI coupling modes – CMand DM–ESD phenomena and effects – Transient phenomena and suppression.

UNITII EMIMEASUREMENTS 9

Basic principles of RE, CE, RS and CS measurements – EMI measuring instruments – Antennas – LISN – Feed through capacitor – Current probe – EMC analyzer anddetection technique open area site – Shielded anechoic chamber – TEM cell.

UNITIII EMCSTANDARDAND REGULATIONS 8

National and intentional standardizing organizations – FCC – CISPR – ANSI – DOD – IEC – CENEEC – FCC – CE and RE standards – CISPR – CE and RE standards – IEC/EN – CS standards – Frequency assignment – Spectrum conversion.

UNITIV EMICONTROLMETHODS ANDFIXES 10

Shielding–Grounding–Bonding–Filtering–EMIgasket–Isolationtransformer–Opto-isolator.

UNITV EMCDESIGNANDINTERCONNECTION TECHNIQUES 9

Cableroutingandconnection–Componentselectionandmounting–PCBdesign–Trace routing – Impedance control – Decoupling – Zoning and grounding

SOLIDSTATEELECTRONICDRIVES **3003**

AIM

To have fundamentalknowledge about structure of devices, VI characteristics of devices like PN Junction diode, Zener diode, MOSFET, BJT and Opto electronic.

OBJECTIVES:

- Tolearncrystalstructuresofelementsusedforfabricationofsemiconductordevices.
- Tostudyenergybandstructureofsemiconductordevices.
- To understand fermi levels, movement ofcharge carriers, Diffusion current and Drift current.
- To study behavior of semiconductor junction under different biasing conditions. Fabrication of different semiconductor devices, Varactor diode, Zener diode, Schottky diode, BJT, MOSFET, etc.
- To study the VI Characteristics of devices and their limitations in factors like current, power frequency.
- Tolearnphotoelectriceffectandfabricationofoptoelectronic devices.

UNITI:CRYYSTALPROPERTIES ANDGROWTH SEMICONDUCTORS9

Semiconductormaterials –periodicStructures –CrystalLattices–Cubic lattices–Planesand Directions – Diamond lattice – Bulk Crystal Growth – Starting Material – Growth ofSingle Crystal Ingots – Wafers – Doping – Epitaxial Growth – Lattice Matching inEpitaxial Growth – Vapor – Phase Epitaxy – Atoms and Electronics – Introduction toPhysical Models – Experimental Observations – Photoelectric Effect – Atomic spectra –Bhr model – Quantum Mechanics – Probability and Uncertainty Principle – SchrodingerWave Equation – Potential Well Equation – Potential well Problem – Tunneling.

UNITII: ENERGYBANDSANDCHARGECARRIERSINSEMICONDUCTORS AND JUNCTIONS 9

Energybands inSolids, EnergyBands inMetals, Semiconductors,andInsulators –Directand Indirect Semiconductors – Variation of Energy Bands with Alloy Composition -Charge Carriers in Semiconductors – Electrons and Holes – Electrons and holes inQuantum Wells – Carrier Concentrations –Femi Level – Electron and HoleConcentrations at Equilibrium – Temperature Dependence of Carrier Concentrations –Compensation and Space Charge Neutrality – Drift of Carrier in Electric and MagneticFields conductivity and Mobility – Drift and Resistance – Effects of Temperature andDoping on Mobility – High Field effects – Hall Effect – invariance of Fermi level atequilibrium – Fabrication of p-n junctions, Metal semiconductor junctions.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIII: METALOXIDESEMICONDUCTOR FET 9

GaAS MESFET – High Electron Mobility Transistor – Short channel Effects – MetalInsulator Semiconductor FET – Basic Operation and Fabrication – Effects of RealSurfaces – Threshold Voltage – MOS capacitance Measurements – Current – VoltageCharacteristics of MOS Gate Oxides – MOS Field Effect Transistor – OutputCharacteristics – Transfer characteristics - Short Channel MOSFET V-I characteristics –Control of Threshold Voltage – Substrate Bias Effects -Sub threshold characteristics –Equivalent Circuit for MOSFET –MOSFET Scaling and Hot Electron Effects – Drain –InducedBarrierLowering –short channelandNarrowwidthEffect – GateInducedDrainLeakage.

UNITIV: OPTOELECTRONDEVICES 9

Photodiodes – Current and Voltage in illuminated Junction – Solar Cells – Photodetectors – Noise and Bandwidth of Photo detectors – Light Emitting Diodes – LightEmitting Material – Fiber Optic Communication Multilayer Heterojunctions for LEDS –Lasers – Semiconductor lasers – Population Inversion at a Junction Emission Spectra forp-n junction – Basic Semiconductor laser – Materials for Semiconductor laser.

UNITV HIGHFREQUENCYANDHIGHPOWER DEVICES 9

Tunnel Diode, IMPATT Diode, operation of TRAPATT and BARITT Diodes, GunnDiode – transferred – electron mechanism, formation and drift of space charge domains,p-n-p-n diode, Semiconductor Controlled Rectifier, Insulated Gate Bipolar Transistor.

COMPUTERHARDWAREANDINTERFACING 3003

AIM

To enable the student to get a detailed knowledge of all the hardware components that make up a computer and to understand the different interfaces required for connecting these hardware devices.

OBJECTIVES

- TointroduceissuesrelatedtoCPUandmemory.
- To understand the componentsonthe motherboard
- Tounderstanddifferentstorage media
- TointroducethefeaturesofdifferentI/Operipheraldevicesandtheirinterfaces.

UNITI CPUANDMEMORY 9

CPU essentials – processor modes – modern CPU concepts – Architectural performancefeatures – the Intel's CPU – CPU over clocking – over clocking requirements – overclocking the system – over clocking the Intel processors – Essential memory concepts –memory organizations – memory packages – modules –memory.

UNITII MOTHERBOARDS 9

Pentium4 mother board -form factor – upgrading a mother board – chipsets – northbridge – south bridge –motherboard BIOS – POST – BIOS features – BIOS and Bootsequences – BIOS shortcomings and compatibility issues – power supplies and powermanagement – concepts of switching regulation – potential power problems – powermanagement.

UNITIII STORAGE DEVICES 9

The floppy drive – magnetic storage – magnetic recording principles – data and diskorganization – floppy drive – hard drive – data organization and hard drive – sectorlayout –CDROM electronics – DVD-ROM – DVD media – DVD drive and decoder.

UNITIV I/OPERIPHERALS 9

Parallel port – signals and timing diagram – IEEE1284 modes – asynchronouscommunication- serialport signals – video adapters – graphic accelerators – 3D graphicsaccelerator issues

UNITV BUSARCHITECTURE 9

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Buses – Industrystandard architecture (ISA), peripheral component Interconnect (PCI) – Accelerated Graphics port (AGP) – plug-and-play devices – SCSI concepts – USBarchitecture.

SEMESTERI

22248S11B APPLIEDMATHEMATICS FORELECTRONICSENGINEERING

LTPC 3 1 0 4

AIM:

Theprimaryaimofthiscourseistodemonstratevariousanalyticalskillsinapplied mathematics and extensive experience with the tactics of problem solving and logical thinkingapplicable in communication engineering.

OBJECTIVES:

The primary objective of this coursewill help the students to identify, formulate, abstract, and solve poblems using mathematical tools from a variety of mathematical areas, including fuzzy logic, matrix linear programming, probability, numerical solution of ordinary differential equations and queuing models.

UNITICALCULUS OFVARIATIONS 9

Functional – Euler's equation-Variational problems involving one unknown function-severalunknown functions-functional dependent on higher order derivatives-several independentvariables-isoperimetric problems.

UNITIIINTEGRALTRANSFORMSANDWAVE EQUATIONS 9

Fourier transformpairs, Properties – Fourier Sine and Cosine transforms, Convolution integrals,Evaluation of integrals using Fourier Transform.Discrete Fourier Transform - properties.Application of Fourier transform to wave equation.Z-transform-properties-inverse transform-solution to difference equation.

UNITIIILINEARPROGRAMMING 9

Simplexalgorithm-twophasemethod-duality-transportationandassignmentproblems-inventory-scheduling.

UNITIVRANDOMPROCESSANDQUEUINGTHEORY 9

Classification – auto correlation-cross correlation-ergodicity-power spectral density function-Poisson process.Single and multiple server Markovian queuing models- customer impatience-queuing applications.

UNITVTESTINGOF HYPOTHESIS 9

Sampling distributions-Testing of hypothesis of normal, t, chi square, F distributions for testingmean and variance- large sample test. Analysis of variance – one way classification.

Tutorial :15 **Total:60**

OUTCOMES:

Aftercompletingthiscourse,studentsshoulddemonstratecompetencyinthefollowing skills:

- Concepts on vector spaces, linear transformation, inner product spaces, eigenvalues and generalized eigenvectors.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Applyvarious methodsinlinearalgebratosolvesystemsoflinearequations.
- Could develop a fundamental understanding of linear programming models, able to develop a linear programming model from problem description, apply the simplex method for solving linear programming problems.
- Numericalsolutionofdifferentialequations bysingleandmultistepmethods.
- Computationofprobability,randomvariablesandtheirassociateddistributions, correlations and regression.
- Conceptualizetheprincipleofoptimalityandsub-optimization,formulationand computational procedure of dynamic programming.
- Exposingthebasiccharacteristicfeaturesof aqueuingsystemandacquiringskillsin analyzing queuing models.
- Usingdiscrete time Markovchainstomodelcomputer systems.

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

SEMESTERI

22271C12 STATISTICALSIGNALPROCESSING LT PC
31 04

AIM:

Thestudentcomprehendsmathematicaldescriptionandmodellingofdiscretetime random signals.

OBJECTIVES:

- Thestudentisconversantwithimportanttheoremsand algorithms.
- Thestudentlearnsrelevantfiguresofmeritsuchaspower,energy,biasand consistency.
- Thestudentisfamiliarwithestimation,predictionandfilteringconceptsandtechniques.

UNITI DISCRETERANDOMSIGNAL PROCESSING 9

Wide sense stationary process – Ergodic process – Mean – Variance - Auto-correlation and Auto-correlation matrix - Properties - Weiner Khitchine relation - Power spectral density – filtering random process, Spectral Factorization Theorem–Finite Data records,Simulation of uniformly distributed/Gaussian distributed white noise – Simulation of Sine wave mixed with Additive White GaussianNoise.

UNITII SPECTRUMESTIMATION 9

Bias and Consistency of estimators - Non-Parametric methods - Correlation method - Co-variance estimator - Performance analysis of estimators – Unbiased consistent estimators – Periodogramestimator - Barlett spectrum estimation - Welch estimation.

UNITIIILINEARESTIMATIONAND PREDICTION 9

Model based approach - AR, MA, ARMA Signal modeling - Parameter estimation using Yule-Walkermethod - Maximum likelihood criterion - Efficiency of estimator - Least mean squared error criterion –Wienerfilter-Discrete WienerHoffequations– Mean squareerror.

UNITIV ADAPTIVEFILTERS 9

Recursive estimators - Kalman filter - Linear prediction –Forward prediction andBackward prediction,Prediction error - Whitening filter, Inverse filter - Levinson recursion, Lattice realization, Levinsonrecursion algorithm for solving Toeplitz system of equations.

l equalization -
Adaptiveechocanceller-Adaptivenoisecancellation-RLSAdaptivefilters-Exponentially weighted RLS – Sliding window RLS - Simplified IIR LMS Adaptive filter.

Total:45Periods

OUTCOMES:

- Formulatetimedomainandfrequencydomaindescriptionof WideSenseStationaryprocessin

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

termsof matrixalgebra andrelatetolinearalgebra concepts.

- State Parseval's theorem, W-K theorem, principle of orthogonality, spectral factorization theorem, Widrow-HoffLMS algorithmandShannon'ssamplingtheorem, anddefinelinear prediction, linear estimation, sample auto-correlation, periodogram, bias and consistency.
- Explain various noise types, Yule-Walker algorithm, parametric and non-parametric methods, Wiener and Kalman filtering, LMS and RMS algorithms, Levinson Durbin algorithm, adaptive noise cancellation and adaptive echo cancellation, speed verses convergence issues, channel equalization, sampling rate change, subband coding and wavelet transform.
- Calculate mean, variance, auto-correlation and PSD for WSS stochastic processes, and derive prediction error criterion, Wiener-Hoff equations, Parseval'stheorem,W-K theorem and normal equations.
- Design AR, MA, ARMA models, Weiner filter, anti aliasing and anti imaging filters, and develop FIR adaptive filter and polyphase filter structures.
- Simulatespectralestimationalgorithmsandbasicmodelsoncomputingplatforms.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERI

22271C13 ADVANCEDDIGITALCOMMUNICATIONTECHNIQUES

LTPC
3104

AIM:

Tounderstandthebasicsofsignal-spaceanalysisanddigital transmission.

OBJECTIVES:

- Tounderstandthebasicsofsignal-spaceanalysisanddigitaltransmission.
- Tounderstandthecoherentandnoncoherentreceiversanditsimpactondifferentchannel characteristics.
- TounderstandthedifferentEqualizers
- Tounderstandthedifferentblockcodedandconvolutionalcodeddigitalcommunication
- TounderstandthebasicsofMulticarrierandMultiuser Communications.

UNITICOHERENTANDNON-COHERENTCOMMUNICATION 9

Coherent receivers – Optimum receivers in WGN – IQ modulation & demodulation – Noncoherent receivers in random phase channels; MFSK receivers – Rayleigh and Ricianchannels – Partially coherent receivers – DPSK; M-PSK; M-DPSK-BER Performance Analysis.Carrier SynchronizationBit synchronization.

–AdaptiveEqualizationalgorithms.

UNITIVCONVOLUTIONALCODEDDIGITALCOMMUNICATION 9

Representation of codes using Polynomial, State diagram, Tree diagram, and Trellis diagram – Decoding techniques using Maximum likelihood, Viterbi algorithm, Sequential and Thresholdmethods – Error probability performance for BPSK and Viterbi algorithm, Turbo Coding.

UNITVMULTICARRIERANDMULTIUSERCOMMUNICATIONS 9

M),

Total:45Periods

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto:

- Developthe ability to understand the conceptsofsignal space analysisforcoherent and non- coherent receivers.
- ConceptuallyappreciatedifferentEqualizationtechniques
- Possessknowledgeondifferentblockcodesandconvolutionalcodes.
- ComprehendthegenerationofOFDMsignalsandthetechniquesof multiuser detection.

SEMESTERI

22271C14 OPTICALNETWORKS L TPC
4004

AIM:

ToexposethestudentstotheOpticalsystemcomponentslikeopticalamplifiers,wavelength converters.

OBJECTIVES:

Thestudentsshouldbemadetounderstand:

- Up-to-datesurveyofdevelopmentinOpticalNetworkArchitectures.
- Packetswitching.
- Networkdesignperspectives.
- DifferentOpticalNetworkmanagementtechniquesand functions.

UNITIINTRODUCTIONTOOPTICALNETWORKS 9

Introduction to Optical Networks: Telecommunications Networks Architecture, Services, circuit switchingandpacketswitching,OpticalNetworks:MultiplexingTechniques,Second generation Optical Networks, Optical Packet Switching, Transmission Basics: Wavelength, frequencies, andchannel spacing, Wavelength standards, Optical power and loss, Network Evolution,Nonlinear Effects: Self-phase Modulation, Cross-phase Modulation, Four Wave mixing,Solitons.Components:Couplers,IsolatorsandCirculators,MultiplexersandFilters, Optical Amplifiers, Transmitters, Detectors, Switches, Wavelength Converters.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIITRANSMISSIONSYSTEMENGINEERING 9

SystemModel, Power Penalty, Transmitter, Receiver, OpticalAmplifiers, Crosstalk, Dispersion,Wavelength Stabilization, Overall Design Considerations. Optical Internets: Migration to IPoptical networking, IP and Optical backbone, IP Routing table, MPLS and optical cross connecttable, Protocolstack Alternatives, Internetworking SS7 and Legacy Transport, Internet transportnetwork protocol stack.

UNITIIIOPTICALTRANSPORTNETWORKS 9

SONET, SDH and Optical Transport Networks (OTNs): SONET and SDH: SONETmultiplexing hierarchy, Frame structure, Functional Component, problem detection,concatenation. Architecture of Optical Transport Networks (OTNs): Digital wrapper, in-bandand out-of band control signalling, Importance of Multiplexing and multiplexing hierarchies,SONET multiplexing hierarchies, SDH multiplexing hierarchies, New Optical Transport, OTNlayered Model, Generic Framing Procedure (GFP).

UNITIVNETWORKTOPOLOGIES 9

WDM, Network topologies, MPLS and Optical Networks: WDM: WDM operation, DenseWavelength Division Multiplexing (DWDM), Erbium-doped Fiber (EDF), WDM amplifiers,Add-Drop Multiplexers, Wavelength Continuity Property, Higher dispersion for DWDM,Tunable DWDM Lasers.

UNITVNETWORKTOPOLOGIESANDPROTECTIONSCHEMES 9

Robust networks, Line and path protection switching, Types of topology, Point to pointtopology, bi-directional line-switched ring (BLSR), meshed topology, Passive optical networks,Metro optical networks 28 MPLS and Optical Networks: IS label switching, Forwardingequivalence class (FEC), Types of MPLS nodes, Label distribution and binding, label swappingand traffic forwarding, MPLS support of Virtual Private Networks (VPN), MPLS trafficengineering, Multi protocol Lambda switching (MPIS).

Total:45Periods

OUTCOMES:

Attheendofthecourse,thestudentshouldbeableto:

- **DesignandAnalyzeNetworkComponents**
- **AssessandEvaluateopticalnetworks**

BOOKSFORREFERENCES:

1. RajivRamaswamiandKumarSivarajan,"OpticalNetworks–Practical Perspective", 3rd Edition,Morgan - Kaufmann Publishers.
2. OpticalNetworks,ThirdGenerationTransport Systems,UylessBlack,Pearson

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERI

22271C15 ADVANCEDRADIATIONSYSTEMS LT PC
4004

AIM:

Toenhancethestudent'sknowledgeintheareaofvariousantennadesign.

OBJECTIVES:

- Tounderstandantennaradiationanditsparameters.
- Toenhancethestudent'sknowledgeintheareaofvariousantennadesign.
- To design monopole, dipole and patch antenna and to impart the knowledge about modern antennas.

UNITIANTENNA FUNDAMENTALS 9

Antenna fundamental parameters, Radiation integrals ,Radiation from surface and line currentdistributions – dipole, monopole, loop antenna; Mobile phone antenna- base station, handsetantenna; Image; Induction ,reciprocity theorem, Broadband antennas and matching techniques,Balance to unbalance transformer, Introduction to numerical techniques.

UNITIIRADIATIONFROMAPERTURES 9

Field equivalence principle, Radiation from Rectangular and Circular apertures, Uniformaperture distribution on an infinite ground plane; Slot antenna; Horn antenna; Reflector antenna,aperture blockage, and design consideration.

UNITIIIANTENNASYNTHESIS 9

Synthesis problem-Line source based beam synthesis methods (Fourier transform andWoodward-Lawson sampling method – Linear array shaped beam synthesis method – Low sidelobe, narrow main beam synthesis methods - discretization of continuous sources. Schelkunoffpolynomial method

UNITIVAPERTUREANTENNAS 9

Radiation from apertures - Huygens Principle. Rectangular apertures- techniques for evaluatinggain, Circular apertures and their design considerations- Babinets principle Fraunhofer andFresnel diffraction.Complimentary screens and slot antennas. Slot and dipoles as dual antennas.Fourier transform of aperture antenna theory.

UNITVHORN,MICROSTRIP,REFLECTORANTENNAS. 9

E and H plane sectoral Horns. Pyramidal horns. Conical and corrugated Horns. Multimodehorns. Phasecenter.Microstripantennas –feedingmethods. Rectangular patch- Transmissionlinemodel – Circular patch Parabolic Reflector antennas – Prime focus and cassegrain reflectors.Equivalent focal length of Cassegrain antennas. Spillover and taper efficiencies. Optimumillumination.

Total:45Periods

OUTCOMES:

- Abilitytounderstandantennaconcepts
- Abilitytodesignantennaforvarious applications
- Knowledgeofmodernantennadesign

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERI

22271L17 COMMUNICATIONSYSTEMLAB-I

LTPC
0033

OBJECTIVES:

- ToacquireknowledgeonTransmissionlineandS-parameterestimationofmicrowave devices.
- TointroducethebasicsofMicrostripPatchAntennaandits analysis.
- Tostudy& measuretheperformanceofdigitalcommunicationsystems.
- ToprovideacomprehensiveknowledgeofWirelessCommunication.
- Tolearnaboutthedesignofdigitalfiltersanditsadaptivefiltering algorithms.

LISTOF EXPERIMENTS:

1. AntennaRadiationPatternmeasurement.
2. SimulationofModulationandCodinginaAWGNCommunicationChannelusingSimulation Packages.
3. Implementation of AdaptiveFilters,periodgram andmultistagemultiratesystem inDSPProcessor
4. PerformanceevaluationofDigitalData TransmissionthroughFiberOptic Link.
5. StudyofSpreadSpectrumTechniques.
6. SimulationofQMFusingSimulationPackages.
7. ImplementationofVideoLinkusingOpticalFiber.
8. ImplementationofLinearandCyclic Codes.

TOTAL:45PERIODS

OUTCOMES:

Upon thecompletion ofcourse,studentsareableto

- Measureandanalyzevarioustransmissionlineparameters.
- DesignMicrostrippatchantennas.
- Implementtheadaptivefilteringalgorithms
- Togenerateanddetect digitalcommunicationsignalsofvariousmodulation techniques using MATLAB.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

LISTOF ELECTIVES

ELECTIVE–I(SEMESTERI)

ELECTIVE-I
SEMESTERI

22271E16A INTERNETWORKINGAND MULTIMEDIA LT PC
3003

AIM:

Theaimofthismoduleistoaddressthetechnicalissuesandthesolutionsforthe implementationofmultimediaservicesontheInternet.

OBJECTIVES:

- Recent advances in multimedia and networking technologies have made possible the evolution of the Internet from a text-based environment to a multimedia global communication network.
- The objective of this module is to address the technical issues and the solutions for the implementation of multimedia services on the Internet.
- Afterstudyingthis module, studentsareexpectedto beabletoappreciatethestate-of-the- art in Internet technologies for multimedia services.

UNITIMULTIMEDIA NETWORKING 9

Digital sound, video and graphics, basic multimedia networking, multimedia characteristics,evolution of Internet services model, network requirements for audio/ video transform,multimedia coding and compression for text, image, audio and video.

UNITIIBROADBANDNETWORKTECHNOLOGY 9

Broadband services, ATM and IP, IPV6, High speed switching, resource reservation, Buffermanagement, traffic shaping, caching, scheduling, and policing, throughput, delay and jitterperformance. Storage and media services, voice and video over IP, MPEG-2 over ATM/IP,indexing synchronization of requests, recording and remote control.

UNITIIIRELIABLETRANSPORTPROTOCOLANDAPPLICATIONS9

Multicast over shared media network, multicast routing and addressing, scaling multicast andNBMA networks, Reliable transport protocols, TCP adaptation algorithm, RTP, RTCP. MIME,Peer- to-Peer computing, shared application, video conferencing, centralized and distributedconference control,distributed virtual reality, lightweight session philosophy.

UNITIVMULTIMEDIACOMMUNICATIONSTANDARDS 9

Objective ofMPEG- 7 standard, Functionalities and systems ofMPEG-7, MPEG-21 MultimediaFramework Architecture, - Content representation, Content Management and usage, Intellectualproperty management, Audio visual system- H322: Guaranteed QOS LAN systems; MPEG_4video Transport across internet.

UNITVMULTIMEDIACOMMUNICATIONACROSSNETWORKS 9

PacketAudio/videointhenetworkenvironment,videotransportacrossGenericnetworks- Layeredvideocoding,errorResilientvideocodingtechniques,ScalableRatecontrol,Streaming

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

videoacross Internet,Multimedia transportacross ATMnetworks and IP network,Multimediaacross wireless networks.

Total:45Periods

Outcomes

Uponcompletionofthesubject, studentswillbeableto:

- Understandthestate-of-artdevelopmentsinInternettechnologiesandapplications
- UnderstandthedevelopmentofnextgenerationInternet
- Appreciatetheprinciples usedindesigningInternet protocols for multimedia applications, andso understand why standard protocols are designed the way that they are
- Beabletosolveproblemsfor thedesignof multimediaapplicationsonInternet.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

ELECTIVE-I
SEMESTERI

22271E16B **DIGITALIMAGEPROCESSING** **L T PC**
3003

AIM:

Theaimofthiscourseistoexplainthefundamentalsofdigitalimageprocessing.

OBJECTIVES:

- Tounderstandtheimagefundamentals.
- Tounderstandthevariousimagesegmentationtechniques.
- Toextractfeaturesforimageanalysis.
- Tointroducetheconceptsofimageregistrationand imagefusion.

UNITIDIGITALIMAGEFUNDAMENTALS 9

Elements of digital image processing systems - Elements of visual perception - Psycho visualmodel- Brightness - Contrast - Hue - Saturation - Mach band effect- Color image fundamentals– RGBHSI models - Image sampling - Quantization - Dither - Two-dimensional mathematicalpreliminaries.

UNITIIIMAGE TRANSFORMS 9

1D DFT - 2Dtransforms - DFT - DCT - DiscreteSine - Walsh- Hadamard - Slant - Haar - KLTSVD - Wavelet Transform.

UNITIIIENHANCEMENTANDRESTORATION 9

Histogram modification and specification techniques - Noise distributions - Spatial averaging - DirectionalSmoothing – Median- Geometric mean- Harmonic mean– Contra harmonic and Ypmean filters - Homomorphic filtering - Color image enhancement - Image Restoration – Degradation model - Unconstrained and Constrained restoration - Inverse filtering - Removal ofblur caused by uniform linear motion - Wiener filtering - Geometric transformations - Spatialtransformations -Gray Level interpolation.

UNITIVIMAGESEGMENTATIONAND RECOGNITION 9

Edge detection - Image segmentation by region growing - Region splitting and merging – Edgelinking - Image Recognition - Patterns and pattern classes - Matching by minimum distanceclassifier - Matching by correlation - Back Propagation Neural Network - Neural Networkapplications in Image Processing.

UNITV IMAGECOMPRESSION 9

Need for datacompression- Huffman- RunLengthEncoding - Shift codes- Arithmeticcoding - VectorQuantization-BlockTruncationCoding-TransformCoding-DCTandWavelet-JPEG -MPEG–Standards-ConceptsofContextbased Compression.

Total:45Periods

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto

- Explainthefundamentalsofdigitalimageprocessing.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Describeimagevarioussegmentationandfeatureextractiontechniquesforimageanalysis.
- Discusstheconceptsofimageregistrationandfusion.

BOOKSFORREFERENCES:

ELECTIVE-I
SEMESTERI

22271E16C **LASERCOMMUNICATION** **LT PC**
3003

AIM:
Theaimofthiscourseistogainknowledgeabout lightandits propagation

OBJECTIVES:

- Tostudythenonlinearopticdevices.
- To learnaboutholography.
- Tostudythedifferenttypesoflaser andits effects.

UNITI LASERCOMMUNICATIONS 9
Atmospheric low loss windows, opticalsources and detectors forthese windows, Characteristicsof source and detectors. Optical transmitting and receiving antennas.

UNITII SYSTEMDESIGN 9
Link equation, Transmitter terminal, Antenna design, Antenna gain, Beam width, C/N, Opticaldetectors, Optical modulation formats, Deriving error statistics, Signal requirements foracquisition and tracking, Fundamentals of system design.

UNITIIISEMICONDUCTORANDMETALLASERSOURCESFORSATELLITE COMMUNICATIONS 9
PerformanceandGeometries,outputwavelengthcontrol,Semiconductorlaserlifetime,Directand indirect modulation techniques and radiation effects.

UNITIVOPTICALRECEIVERSANDSYSTEMDESIGN 9
Direct detection, coherent detection and demodulation. Gimbals in transceiver design, Receiveroptions and optics; Lasers; antennas / Telescope, Internal optical systems, Transmitter analysis.

UNITVLASERBEAMPOINTINGCONTROL 9
Acquisition andTrackingsystems,System description,Acquisitionmethodology,rackingandpointing control system, RF cross link system design, link equation.

Total:45Periods

Outcomes:
Studentsareableto

- RecognizeandclassifythestructuresofOpticalfiberandtypes.
- Discussthechannelimpairmentslikelossesanddispersion.
- Analyzevariouscouplinglosses.
- ClassifytheOpticalsourcesanddetectorsandtodiscusstheirprinciple.
- FamiliarwithDesignconsiderationsoffiberopticsystems.
- Toperformcharacteristicsofopticalfiber,sourcesanddetectors,designaswellasconduct experiments in software and hardware, analyze the results to provide valid conclusions.

SEMESTERII

22271C21 MOBILECOMMUNICATIONNETWORKS LT PC 4004

AIM:

Theaimofthiscourseistoprovidethebasiccellular systemconcepts.

OBJECTIVES:

- Tounderstandthebasiccellularsystemconcepts.
- Tohaveaninsightintothevariouspropagationmodelsandthespeechcodersusedin mobile communication.
- Tounderstandthemultipleaccesstechniquesandinterferenceeducation techniquesin mobile communication

UNITIWIRELESSCHANNELPROPAGATION ANDMODEL 9

PropagationofEM signals inwirelesschannel–Reflection, diffractionandScattering-Small scale fading-channel classification-channel models–COST-231 Hata model, Longley-Rice Model,NLOS Multipath Fading Models: Rayleigh, Rician, Nakagami, Composite Fading–shadowingDistributions, Link power budget Analysis

UNITIIOPERATIONANDPROPAGATIONMODELSANDAIRPROTOCOLS9

Operation of first, second, and third generation wireless networks: cellular systems, mediumaccess techniques, Mobile networks Elementary Principles of cellular Telephony ChannelDivision Techniques(TDMA, FDMA, CDMA) Cellular Coverage Methods Network Planningand Resource Allocation,Network Dimensioning ,Mobility Management Procedures

UNITIIIMOBILENETWORKARCHITECTURE 9

GeneralArchitecturedefinition,MobileTerminals(MT,SIM)
RadioSection(BTS, BSC)CoreNetwork(MSC,G-MSC, VLR,HLR,AuC)
User and ControlPlane ProtocolStack, MAP &SS#7, The KeyRole ofSignaling Interfaces andNetworkEntities Relation The Physical Channel, The Logical Channels Terminal, Call andNetwork ManagementProcedures, Network Planning.

UNITIVWIRELESSLOCALAREA NETWORKS 9

Wireless Local Area Networks , General Characteristics of the Hiperlan System, 802.11Standard, BasicDCF access schemeDCF Access Scheme with Handshaking, PCF AccessScheme, The 802.11a Standard, Mobile Ad HocNetworks, Wireless Sensor Networks, RoutingEnergy Efficiency, Localization, Clustering.

UNITVSECURITYISSUESINWIRELESSNETWORKS 9

Security in Wireless Networks, Secure routing, Key Pre-distribution and Management,Encryption andAuthentication, Security in Group Communication, Trust Establishment andManagement, Denial ofService Attacks, Energy-aware security mechanisms, Locationverification, Security on Data fusion.

Total:45Periods

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Outcomes:

- Discusscellularradio concepts.
- Identifyvariouspropagationeffects.
- Tohaveknowledgeofthemobilesystemspecifications.
- Classifymultipleaccesstechniquesinmobilecommunication.
- Outlinecellular mobilecommunicationstandards.
- Analyzevariousmethodologiesto improvethecellular capacity

SEMESTERII

22271C22 ADVANCEDMICROWAVE SYSTEMS LTPC
4004

AIM:

Theaimofthiscourseistoexplainfundamentalsofmicrowaveintegratedcircuits.

OBJECTIVES:

- Tounderstandthefundamentalsof Microwaveintegratedcircuits.
- Tounderstandthevariouscomponentsfor WirelessCommunications.
- Toknowthebasictechniques neededforanalysis ofMicrowave systems.

UNITIINTRODUCTIONTOMONOLITHICMICROWAVE INTEGRATED CIRCUITS 9

Introduction to Monolithic Microwave Integrated Circuits (MMICs), their advantages overdiscrete circuits, materials, MMIC fabrication techniques, MOSFET fabrication. Thin filmformation.

UNITIIMICROSTRIPANALYSIS 9

Planar transmission lines for MICs. Methodofconformaltransformation for microstrip analysis,concept of effective dielectric constant, Effective dielectric constant for microstrip, Losses inMicrostrip

UNITIIISLOTLINE ANALYSIS 9

SlotLineApproximateanalysisandfielddistribution,Transverseresonancemethodandevaluation of slot line impedance, comparison with micro strip line.

UNITIVLUMPEDELEMENTSFORMICS 9

Lumped Elements for MICs: Use of Lumped Elements, Capacitive elements, Inductive elementsand Resistive elements.

UNITVMICROWAVESEMICONDUCTORDEVICES& MICROWAVE PASSIVE COMPONENTS 9

Microwave semiconductor Devices & Microwave passive components Parametric amplifiers,tunnel diode, varactor diode, PIN diode, Gunn diode, their principle of operation, performancecharacteristics & applications, scattering parameter calculations of E plane-Tee, Magic Tee,Directional Coupler.

Total:45Periods

OUTCOMES:

- CapabilitytodesignMicrowavecircuits.
- Tobeabletoanalyzemicrowaveintegratedcircuits.

REFERENCES:

1. Gupta,K.C, and Amarjitsingh“Microwave IntegratedCircuits”John Wileyand sons – Wiley EasternReprint, 2278.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERII

22271C23ELECTROMAGNETICINTERFERENCEANDCOMPATIBILITY **LTPC 4004**

AIM:

Theaimofthecourseistofamiliarizethebasicsof EMIandEMIsources.

OBJECTIVES:

Thestudentsshouldbemadetobefamiliarwith:

- EMIproblems.
- SolutionmethodsinPCB.
- Measurementstechniquesforemission.
- Measurementtechniquesforimmunity.

UNITI BASICTHEORY 9

Introduction to EMI and EMC, Intra and inter system EMI, Elements of Interference, Sourcesand Victims of EMI, Conducted and Radiated EMI emission and susceptibility, Case Histories,Radiation hazards to humans, Various issues of EMC, EMC Testing categories EMCEngineering Application.

UNITII COUPLING MECHANISM 9

Electromagnetic field sources and Coupling paths, Coupling via the supply network, Commonmode coupling, Differential mode coupling, Impedance coupling, Inductive and Capacitivecoupling, Radioactive coupling, Ground loop coupling, Cable related emissions and coupling,Transient sources, Automotive transients.

UNITIII EMIMITIGATION TECHNIQUES 9

Working principle of Shielding and Murphy‟s Law, LF Magnetic shielding, Apertures andshielding effectiveness, Choice of Materials for H, E, and free space fields, Gasketting andsealing, PCBLevelshielding, PrincipleofGrounding, Isolatedgrounds, Groundingstrategies forLarge systems, Grounding for mixed signalsystems, Filter typesand operation, Surge protectiondevices, Transient Protection.

UNITIV STANDARDANDREGULATION 9

NeedforStandards,Generic/GeneralStandardsforResidentialandIndustrialenvironment, BasicStandards, Product Standards, NationalandInternationalEMIStandardizingOrganizations;IEC,ANSI, FCC, AS/NZS, CISPR, BSI, CENELEC, ACEC. Electro Magnetic Emission andsusceptibility standards and specifications, MIL461E Standards.

UNITV EMITESTMETHODSAND INSTRUMENTATION 9

Fundamental considerations, EMI Shielding effectiveness tests, Open field test, TEM cell forimmunity test, Shielded chamber , Shielded anechoic chamber, EMI test receivers, Spectrumanalyzer, EMI test wave simulators, EMI coupling networks, Line impedance stabilizationnetworks, Feed through capacitors, Antennas, Current probes, MIL -STD test methods, CivilianSTD test methods.

Total:45Periods

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

LISTOF ELECTIVES

ELECTIVE–II(SEMESTERII)

ELECTIVE-II
SEMESTERII

22271E24A HIGHSPEEDSWITCHINGARCHITECTURE LT PC 3003

AIM:

Toexposethestudentto theadvancesin packetswitchingarchitecturesand IP addressing andswitchingsolutionsandapproachestoexploitandintegratethebestfeaturesofdifferent architectures for high speed switching.

OBJECTIVES:

- Toenablethestudenttounderstandthebasicsofswitchingtechnologiesandtheir implementation LANs, ATM networks and IP networks.
- To enable the student to understand the different switching architectures and queuing strategies and their impact on the blocking performances.

UNITIHIGHSPEED NETWORK 9

LANandWANnetworkevolutionthroughISDNtoBISDN-TransfermodeandcontrolofBISDN -SDH multiplexing structure - ATM standard; ATM adaptation layers.

UNITIILANSWITCHINGTECHNOLOGY 9

Switchingconcepts;Switchforwardingtechniques;switchpathcontrol-LANswitching;cutthrough forwarding; store and forward - virtual LANs.

UNITIIIATMSWITCHINGARCHITECTURE 9

Switch models - Blocking networks – basic and enhanced banyan networks - sorting networks – merge sorting – rearrangeable networks - full and partial connection networks – non-blockingnetworks –recursive network – construction and comparison of non-blocking network - switcheswith deflection routing – shuffle switch - tandem banyan.

UNITIVMULTIMEDIACOMMUNICATIONSTANDARDS 9

Objective ofMPEG- 7 standard, Functionalities and systems ofMPEG-7, MPEG-21 MultimediaFramework Architecture, - Content representation, Content Management and usage, Intellectualproperty management, Audio visual system- H322: Guaranteed QOS LAN systems; MPEG_4video Transport across internet.

UNITVIPSWITCHING 9

Addressing mode -IPswitching types-flow driven andtopologydrivensolutions -IPOver ATMaddress and next hop resolution – multicasting - IPv6 over ATM.

Total:45Periods

OUTCOMES:

- Thestudentwouldbeabletoidentifysuitableswitcharchitecturesforaspecifiednetworking scenario and demonstrate its blocking performance.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENEUERSHIP**

- The student would be in a position to apply his knowledge of switching technologies,architectures and buffering strategies for designing high speed communication networks and analyse their performance

22271E24B DSPPROCESSORARCHITECTUREAND PROGRAMMING

L T PC
3003

AIM:

Theaimofthiscourseistoprovidein-depthknowledgeondigitalsignalprocessor basics.

OBJECTIVES:

Theobjectiveofthiscourseistoprovidein-depthknowledgeon

- DigitalSignalProcessorbasics
- ThirdgenerationDSPArchitectureandprogrammingskills
- AdvancedDSParchitecturesandsomeapplications.

UNITIFUNDAMENTALSOFPROGRAMMABLEDSPs 9

Multiplier and Multiplier accumulator (MAC) – Modified Bus Structures and Memoryaccess inProgrammable DSPs – Multiple access memory – Multi-port memory – VLIW architecture- Pipelining –Special Addressing modes in P-DSPs – On chip Peripherals.

UNITIIIADSPPROCESSORSI 9

Architecture of ADSP-21XXandADSP-210XXseriesof DSPprocessors-Addressingmodesand assembly language instructions – Application programs –Filter design, FFT calculation.

UNITIVADVANCEDPROCESSORS 9

Architectureof TMS320C54X:Pipelineoperation,Addressingmodesandassemblylanguageinstructions Introduction to Code Composer studio

UNITVADVANCEDPROCESSORSII 9

ArchitectureofTMS320C6X-ArchitectureofMotorolaDSP563XX–Comparisonofthefeatures of DSP family processors.

Total:45Periods

OUTCOMES:

Studentsshouldbeableto:

- BecomeDigitalSignalProcessorspecializedengineer
- DSPbasedSystemDeveloper

ELECTIVE-II
SEMESTERII

22271E24C DIGITALSPEECHPROCESSING LT PC
3003

AIM:

Toillustratethe conceptsofspeechsignalrepresentations andcoding.

OBJECTIVES:

- Tointroduce speechproductionandrelatedparametersofspeech.
- Tounderstanddifferentspeechmodelingproceduressuch asMarkov andtheir implementation issues.
- Togainknowledgeabouttext analysisand speechsynthesis.

UNITIMECHANICS OFSPEECH 9

Speech production mechanism – Nature of Speech signal – Discrete time modelling of Speechproduction – Representation of Speech signals – Classification of Speech sounds – Phones –Phonemes – Phonetic and Phonemic alphabets – Articulatory features.
Music production – Auditory perception – Anatomical pathways from the ear to the perceptionof sound – Peripheral auditory system – Psycho acoustics

UNITIVLINEARPREDICTIVEANALYSISOFSPEECH 9

Formulation of Linear Prediction problem in Time Domain – Basic Principle – Auto correlationmethod– Solution of LPC equations –– Durbin's Recursive algorithm – lattice formation andsolutions – Comparison of different methods –– Formant analysis – VELP – CELP.

UNITV APPLICATIONOFSPEECH&AUDIOSIGNALPROCESSING 9

Algorithms: SpectralEstimation, dynamic time warping, hiddenMarkovmodel – Music analysis– Pitch Detection – Feature analysis for recognition – Music synthesis – Automatic SpeechRecognition – Feature Extraction for ASR –– ASR systems– Voice response system – SpeechSynthesis: Text to speech, voice over IP.

Total:45Periods

OUTCOMES:

Studentswillbeableto:

- Modelspeechproductionsystemanddescribethefundamentalsof speech.
- Extractandcomparedifferentspeechparameters.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Chooseanappropriatestatisticalspeechmodelforagivenapplication.
- Designaspeechrecognitionsystem.
- Usedifferenttextanalysisandspeechsynthesistechniques.

AIM:

Theaimofthiscourseistounderstandthebasicprinciplesofdigitalcommunication techniques.

OBJECTIVES:

- Tounderstandthebasicprinciplesofdigitalcommunicationtechniques.
- Togainknowledgeaboutreceivers forAWGNchannelandFadingchannels.
- Tounderstandtheconceptsofsynchronizationandadaptiveequalizationtechniques.

UNITIREVIEWOFDIGITALCOMMUNICATION TECHNIQUES 9

Basebandandbandpasscommunication,signalspacerepresentation,linearandnon-linearmodulation techniques, and spectral characteristics of digital modulation.

UNITIIOPTIMUMRECEIVERSFORAWGN CHANNEL 9

Correlation demodulator, matched filter, maximum likelihood sequence detector, Optimumreceiver for CPM signals, M-aryorthogonalsignals, envelope detectors for M-aryand correlatedbinary signals.

UNITIIIRECEIVERSFORFADINGCHANNELS 9

Characterizationof fading multiple channels, statistical models, slow fading, frequencyselectivefading, diversity technique, RAKE demodulator, coded waveform for fading channel

UNITIVSYNCHRONIZATIONTECHNIQUES 9

Carrier and symbol synchronization, carrier phase estimation – PLL, Decision directed loops,symbol timing estimation, maximum likelihood and non-decision directed timing estimation,joint estimation.

UNITVADAPTIVEEQUALIZATION 9

Zero forcing algorithm, LMS algorithm, Adaptive decision – feedback equalizer, andequalizationofTrellis-codedsignals, Kalmanalgorithm, blindequalizers, andstochasticgradientalgorithm, Echo cancellation

Total:45Periods

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto

- Applybasicprinciplesofdigitalcommunicationtechniques.
- DiscussonreceiversforAWGN&Fadingchannel
- Describevarioussynchronizationtechniques.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENEUERSHIP**

- Designadaptiveequalizationalgorithmstosatisfytheevolvingdemandsindigitalcommunication.

ELECTIVE-III
SEMESTERII

22271E25C **COMMUNICATIONNETWORKSECURITY** **LTPC**
3003

AIM:

Theaimofthiscourseistounderstandtheneedand conceptofsecurity.

OBJECTIVES:
Thestudentsshouldbemadeto:

- Understandtheneedandconceptofsecurity
- Learn cryptosystems

UNITISYMMETRIC CIPHERS 9

Introduction – Services, Mechanisms and Attacks, OSI securityArchitecture, Modelfor networkSecurity; Classical Encryption Techniques- Symmetric Cipher Model, Substitution Techniques,Transposition Techniques, Product ciphers , DataEncryption Standard- Block Cipher Principles,Strength of DES,Differential and Linear CryptAnalysis, Block Cipher Design Principles, BlockCipher Modes of operation, Stegnography.

UNITIIADVANCEDENCRYPTIONSTANDARDANDSTREAMCIPHERS9

Evaluation Criteria for AES, AES Cipher; Contemporary Symmetric Ciphers- Triple DES,Blowfish, RC5-Characteristics of Advanced Symmetric Block Ciphers, Streamciphers based onLFSRs,RC4 Stream Cipher; Random Number Generation. Traffic Confidentiality, KeyDistribution.

UNITIIIPUBLIC-KEYENCRYPTION ANDHASH FUNCTIONS 9

Public Key Cryptography and Key Management- RSA Algorithm and other public keycryptosystems-,Diffie-Hellman Key Exchange, Elliptic Curve arithmetic, Elliptic CurveCryptography; Message Authentication and Hash Functions- Authentication Requirements, -MD5 Message Digest Algorithm; Secure Hash Algorithm, RIPEMD 160, HMAC; DigitalSignatures and Authentication Protocols- Digital Signature Standards.

UNITIVNETWORKSECURITYPRACTICE 9

Authentication Applications- Kerberos, X.509 Authentication Service; Electronic MailSecurity-Pretty Good Privacy, S/MIME; IP Security- overview and Architecture, Authentication Header,Encapsulating SecurityPayload, Combining Security Associations; Web Security- Web SecurityConsiderations, Secure Sockets Layer and Transport Layer Security, Secure ElectronicTransaction.

UNITVSYSTEMSECURITY 9

Intruders-IntruderDetection,PasswordManagement;MaliciousSoftware-VirusandRelatedThreats, Virus Countermeasures; Firewalls- Firewall Design Principles, Trusted Systems.

Total:45Periods

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

OUTCOMES:

Attheendofthiscourse, thestudentsshouldbeableto:

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

SEMESTERII

22271L26 COMMUNICATIONSYSTEMSLAB-II LT PC
0033

OBJECTIVES:

- To enable the students to verify the basic principles and design aspects involved in high frequency communication systems components
- To expose the student to different high frequency components and conduct the experiments to analyze and interpret data to produce meaningful conclusions and match with theoretical concepts.
- TodesignanddevelopRFcomponentsusingmicrostrip technology

LISTOF EXPERIMENTS:

1. SimulationofAudioandspeechcompressionalgorithms
2. SimulationofEZW/SPIHTImagecoding algorithm.
3. SimulationofMicrostripAntennas
4. S-parameterestimationofMicrowavedevices.
5. StudyofGlobalPositioningSystem.
6. PerformanceevaluationofsimulatedCDMASystem.
7. DesignandtestingofaMicrostripcoupler.
8. Characteristicsofλ/4andλ/2transmissionlines.

TOTAL:45PERIODS

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto:

- Applyknowledgetoidentifyasuitablearchitectureandsystematicallydesignan RFsystem.
- Comprehensivelyrecord and report the measured data, and would be capable ofanalyzing, interpreting the experimentally measured data and producing meaningful conclusions.
- Designanddevelopmicrostrip filters.

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

SEMESTERIII

22271C31 WIRELESSSENSOR NETWORKS LT PC
4004

AIM:

Theaimofthiscourseistostudyaboutwireless IParchitecture,PacketDataProtocol and LTEnetworkarchitecture.

OBJECTIVES:

- To study about advanced wireless networks, LTE, 4G and Evolutions from LTE to LTE.
- Tostudyaboutadaptivelinklayer, hybridARQandgraphrouting protocol.
- Tostudyaboutmobilitymanagement,cellularnetwork,andmicrocellularnetworks

UNITI OVERVIEWOFWIRELESSSENSOR NETWORKS 8

ChallengesforWirelessSensorNetworks,EnablingTechnologiesForWirelessSensorNetworks.

UNITII ARCHITECTURES 9

Single-Node Architecture - Hardware Components, Energy Consumption of SensorNodes ,Operating Systems and Execution Environments, Network Architecture -Sensor NetworkScenarios, Optimization Goals and Figures of Merit, GatewayConcepts.

UNITIII NETWORKINGSENSORS 10

Physical Layer and Transceiver Design Considerations, MAC Protocols for WirelessSensorNetworks, Low Duty Cycle Protocols and Wake Up Concepts - S-MAC , TheMediation DeviceProtocol, Wake Up Radio Concepts, Address and Name Management,Assignment of MACAddresses, Routing Protocols- Energy-Efficient Routing,Geographic Routing.

UNITIV INFRASTRUCTUREESTABLISHMENT 9

TopologyControl,Clustering,TimeSynchronization,LocalizationandPositioning,SensorTasking and Control.

UNITVSENSORNETWORKARCHITECTUREANDMACPROTOCOLS9

Single node architecture– Hardware components, energyconsumptionofsensornodes, Networkarchitecture – Sensor network scenarios, types ofsources and sinks, single hop versus multi-hopnetworks, multiple sinks and sources, design principles, Development of wireless sensornetworks. , physical layer and transceiver design consideration in wireless sensor networks,Energy usage profile, choice of modulation, Power Management - MAC protocols – fundamentals of wireless MAC protocols, low duty cycle protocols and wakeup concepts,contention-based protocols, Schedule-based protocols - SMAC, BMAC, Traffic-adaptivemediumaccessprotocol(TRAMA), Link Layer protocols – fundamentalstask and requirements,error control, framing, link management.

TOTAL- 45PERIODS

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

OUTCOMES:

- Familiarwiththelatest4GnetworksandLTE
- UnderstandaboutthewirelessIParchitectureandLTEnetworkarchitecture.
- Familiarwiththeadaptivelinklayerandnetworklayergraphsand protocol.
- Understandaboutthemobilitymanagementandcellular network.
- Understandaboutthewirelesssensornetworkarchitectureanditsconcept.

ELECTIVE–IV(SEMESTERIII)

ELECTIVE-IV
SEMESTERIII

22271E32A SOFTWAREDEFINEDRADIO LT PC
3003

AIM:

Theaimofthiscourseistounderstandthe conceptsofsoftwaredefinedradio.

OBJECTIVES:

Thestudentsshould bemadeto be

- Understandtheconceptsofsoftwaredefined radio
- Learnspectrumsensinganddynamic spectrumaccess

UNITI: IntroductiontoSDR 9

The Need for Software Radios-Characteristics and Benefits of a Software Radio. DesignPrinciples of a Software Radio.Radio frequency implementation issues-The Purpose of the RFFront-End. Dynamic Range: The Principal Challenge of Receiver Design. RF Receiver Front-End Topologies. Enhanced Flexibility of the RF Chain with Software Radios. Importance of theComponents -Transmitter Architectures and their Issues. Noise and Distortion in the RF Chain.ADC and DAC Distortion.

UNITII:DirectDigitalSynthesis 9

Introduction. Comparison ofDirect DigitalSynthesis with Analog SignalSynthesis. Approachesto Direct Digital Synthesis. Analysis of Spurious Signals. Spurious Components due to PeriodicJitter. Band pass Signal Generation. Performance of Direct Digital Synthesis Systems. HybridDDS-PLL Systems. Applications of direct Digital Synthesis. Generation of Random Sequences.ROM Compression Techniques.

UNITIIISignalProcessorandMultiRateProcessing Techniques 9

Introduction.SampleRateConversionPrinciples.
PolyphaseFilters.DigitalFilterBanks.TimingRecovery in Digital Receivers Using Multirate Digital Filters.
DSPProcessors;FieldProgrammableGateArrays;Trade-OffsinUsingDSPs,FPGAs,andASICs; Power Management Issues; Using a Combination of DSPs, FPGAs, and ASICs.

UNITIV:Smart Antennas 9

Vector channel modeling; Benefits of smart antennas; Structures for Beam forming Systems;Smart Antenna Algorithms.Diversity and Space-Time Adaptive Signal Processing; Algorithmsfor Transmit STAP; Hardware Implementation of Smart Antennas; Array Calibration.

UNITV: Applications–WirelessAspectsofTele-Health Care 9

The application of advanced telecommunication , the special requirements especially related toreliability, privacy and trust, Regulatory and safety aspects of tele-health care, Cognitive radioand flexible spectrum usage for tele-healthcare, Cooperative Communications for Tele-

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

health.Case studies: JTRS radio system ,Software defined base stations.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthiscourse,thestudentshouldbeableto

- CompareMACandnetworklayer designfor softwaredefinedradio
- DiscusscognitiveradioforInternetofThingsandM2Mtechnologies

ELECTIVE-IV
SEMESTERIII

22271E32B **SATELLITECOMMUNICATION** **LT PC**
3003

AIM:

Tounderstandthebasicsofsatelliteorbits.Tounderstandthesatellitesegmentandearth segment.

OBJECTIVES:

Thestudentsshould bemadeto be

- LearnM2Mdevelopmentsandsatellite applications
- UnderstandSatelliteCommunicationInIpv6Environment

UNITIORBITAL MECHANICS 9

Kepler's laws of motion, Orbits, Orbit Equations, Orbit Description, Locating the Satellite in theOrbit and with Respect to Earth, Orbital Elements-Look Angle Determination and Visibility - Orbital Perturbations,Orbit Determination, Launch Vehicles, Orbital Effects in CommunicationSystem - Performance Attitude control; Satellite launch vehicles. spectrum allocations forsatellite systems.

UNITIISPACECRAFTSUBSYSTEMSANDEARTH STATION 9

Spacecraft Subsystems, Altitude and Orbit Control, Telemetry and Tracking, PowerSystems,Communication Subsystems, Transponders, Antennas, Equipment Reliability, EarthStations, Example of payloads of operating and planned systems.

UNITIIISPACELINKS 9

The Space Link, Satellite Link Design - Satellite uplink -down link power Budget, BasicTransmission Theory, System Noise Temp, G/T Ratio, Noise Figure, Downlink Design, Designof Satellite Links for Specified C/N - Microwave Propagation on Satellite-Earth Paths.Interference between satellite circuits, EnergyDispersal, propagation characteristics of fixed andmobile satellite links.

UNITIVMULTIPLEACCESSTECHNIQUESANDNETWORKASPECTS 9

Single access vs. multiple access (MA). Classical MA techniques: FDMA, TDMA. Singlechannel per carrier (SCPC) access - Code division multiple access (CDMA). Demandassignment techniques. Examples of MA techniques for existing and planned systems (e.g. thesatellite component of UMTS).Mobile satellite network design, ATM via satellite. TCP/IP viasatellite - Call control, handover and call set up procedures.
Hybridsatellite-terrestrialnetworks

UNITVSERVICESAND APPLICATIONS 9

Fixed and mobile services - Multimedia satellite services - Advanced applications based onsatellite platforms - INTELSAT series - INSAT, VSAT, Remote Sensing - Mobile satelliteservice: GSM. GPS,INMARSAT, Navigation System, Direct to Home service (DTH), Specialservices, E-mail, Videoconferencing and Internet connectivity

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

ELECTIVE-IV
SEMESTERIII

22271E32C **CDMASYSTEMS** **LT PC**
3003

AIM:

Theaimofthiscourseistodefinethebasicsofcellularcommunicationsandexplainthe ArchitectureOFGSM&itsRadioChannels.

OBJECTIVES:

Thestudentsshould bemadeto be

- understand cellular concept, widelypopular 2G digital, TDMA based mobile systemGSM and modern mobile wireless system CDMA.

UNITIBASICCONCEPTS OFCDMA 9

Spread spectrum communication techniques (DS-CDMA, FH-CDMA),Synchronization inCDMA system, Detection and False alarm probabilities, Early-Late gate measurement statistics,Information capacity of Spread Spectrum Systems.

UNITIIIS-95 CDMA TECHNIQUES 9

SpreadingCodes,Powercontrol,Handovertechniques,Physicalandlogicalchannelsandprocessing (Forward and reverse links)

UNITIIIWCDMA /CDMA 2000 9

IntroductiontoIMT2000,CDMA2000-Physicallayercharacteristics,modulation&demodulationprocess , Handoff and power control in 3G systems.

UNITIVMULTICARRIERCDMA SYSTEMS 9

MulticarrierCDMA,Systemdesign,Performanceparameters–BERlowerbound,Multiuserdetection, UTRA, FDD and TDD systems.

UNITVOPTICALCDMA 9

Prime Codes and it’s properties, Generalized and Extended Prime Codes,Experimentaldemonstration of Optical CDMA, Synchronization of Optical CDMA networks, Multiwavelength Optical CDMA networks.

TOTAL:45PERIODS

OUTCOMES:

At theend ofthecourse,thestudent shouldbeableto:

- AnalyzeMIMOsystem.
- Discussmillimeterwavecommunication.
- Demonstratesoftwaredefined radio andcognitiveradio.

LISTOF ELECTIVES

ELECTIVE–V(SEMESTERIII)

ELECTIVE- V
SEMESTERIII

22271E33A WAVELETSANDMULTIRESOLUTIONPROCESSING

L T PC
3003

AIM:

Tointroducethefundamentalsconceptsofwavelet transforms.

OBJECTIVE:

- Tostudysystemdesignusing Wavelets
- Tolearnthedifferentwaveletfamilies&theirapplications.

UNITI INTRODUCTION 9

Vector Spaces - properties - dot product - basis - dimension, orthogonality and orthonormality - relationship between vectors and signals - Signal spaces - concept of Convergence – GeneralisedFourier Expansion.

UNITIIMULTIRESOLUTIONANALYSIS 9

Definition of Multi Resolution Analysis (MRA) – Haar basis - Construction of generalorthonormal MRA Wavelet basis– Continuous time MRA interpretation for the DTWT – Discrete time MRA- Basis functions for the DTWT – PR-QMF filter banks

UNITIVDISCRETEWAVELETTRANSFORM 9

Filter Bank and sub band coding principles - Wavelet Filters - Inverse DWT computation byFilterbanks -Basic Properties of Filter coefficients - Choice of wavelet function coefficients - Derivations of Daubechies Wavelets - Multi-band Wavelet transforms. Introduction to liftingScheme

UNITVAPPLICATIONS 9

Signal Compression – Image Compression techniques: EZW-SPHIT Coding - Imagedenoisingtechniques:Noise estimation - Shrinkage rules -. Shrinkage Functions - Edge detectionand object Isolation, Image Fusion, and Object Detection.

TOTAL:45PERIODS

OUTCOME:

- Thestudentswillbeabletoapprehendthedetailedknowledgeabout the Wavelettransform & its applications.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

22271E33B HIGHPERFORMANCECOMMUNICATION NETWORKS

L T PC
3003

AIM:

Tofamiliarizeconceptsandterminologyassociatedwith ATM,FrameRelay,MPLS, Bluetooth technology**.**

OBJECTIVES:

- Toappreciatetheneedforinteroperablenetworkmanagementasatypical distributed application
- To beaware ofcurrent trendsin networktechnologies

UNITIPACKETSWITCHED NETWORKS 9

OSIandIPmodels,Ethernet(IEEE802.3),Tokenring(IEEE802.5),WirelessLAN(IEEE802.11) FDDI,DQDB, SMDS: Internetworking with SMDS

UNITIIISDNANDBROADBAND ISDN 9

ISDN-overview,interfacesandfunctions,Layersandservices-SignalingSystem7(SS7)-Broadband ISDN architecture and Protocols.

UNITIIIATMANDFRAMERELAY 9

ATM: Main features-addressing, signaling and routing, ATM header structure-adaptation layer,management and control, ATM switching and transmission.

Frame Relay: Protocols and services,Congestion control,Internetworking with ATM,Internetand ATM, Frame relay via ATM.

UNITIVADVANCEDNETWORKARCHITECTURE 9

IP forwarding architectures overlay model, Multi Protocol Label Switching (MPLS), integratedservices in the Internet, Resource Reservation Protocol (RSVP), Differentiated services

UNITVBLUETOOTH TECHNOLOGY 9

The Bluetooth module-Protocol stack Part I: Antennas, Radio interface, Base band, The Linkcontroller, Audio, The Link Manager, The Host controller interface; The Bluetooth module-Protocolstack Part I:Logical link controland adaptation protocol, RFCOMM, Service discoveryprotocol, Wireless access protocol, Telephony control protocol.

TOTAL:45PERIODS

OUTCOMES:

Afterthecompletionofthiscourse,studentswillbeableto

- Diagnoseproblemsandmakeminorrepairstocomputernetworksusingappropriate diagnostics software
- DemonstratehowtocorrectlymaintainLANcomputersystems
- Maintainthenetworkbyperformingroutinemaintenancetasks
- Applynetworkmanagementtools

ELECTIVE- V
SEMESTERIII

22271E33C ADVANCEDMICROPROCESSORSAND MICROCONTROLLERS
L T PC
3003

AIM:

Tointroducetheadvancedfeaturesinmicroprocessorsandmicrocontrollers.

OBJECTIVES:

- Toenablethestudentstounderstandvariousmicrocontrollerarchitectures
- Toexposethe studentstothefundamentalsofmicroprocessor architecture.

UNITIMICROPROCESSORARCHITECTURE 9

Instruction set – Data formats – Instruction formats – Addressing modes – Memory hierarchy – register file – Cache–Virtualmemoryandpaging –Segmentation–Pipelining –The instructionpipeline –pipeline hazards – Instruction level parallelism – reduced instruction set – Computerprinciples – RISC versus CISC – RISC properties – RISC evaluation – On-chip register filesversus cache evaluation

UNITIIHIGHPERFORMANCECISCARCHITECTURE– PENTIUM 9

The software model – functional description – CPU pin descriptions – RISC concepts – busoperations – Super scalar architecture – pipelining – Branch prediction – The instruction andcaches –Floating point unit –protected mode operation – Segmentation – paging – Protection –multitasking –Exception and interrupts – Input /Output – Virtual 8086 model – Interruptprocessing -Instruction types –Addressing modes – Processor flags – Instruction set -programming the Pentium processor.

UNITIVMOTOROLA68HC11MICROCONTROLLERS 9

Instructions and addressing modes – operating modes – Hardware reset – Interrupt system – ParallelI/O ports – Flags – Real time clock – Programmable timer – pulse accumulator – serialcommunication interface – A/D converter – hardware expansion – Assembly languageProgramming

UNITVPICMICROCONTROLLER 9

CPUarchitecture–Instructionset-Interrupts–Timers–I/Oportexpansion–I2Cbusforperipheral chip access – A/D converter – UART

TOTAL:45PERIODS

OUTCOMES:

- The studentwill be able to workwith a suitable microprocessor/ microcontrollerfora specific real world application.

ELECTIVE- VI
SEMESTERIII

22271E34C MOBILEADHOC NETWORKS L T PC
3003

AIM:

Theaimofthiscourse istounderstandthe basicsofAd-hoc &SensorNetworks.

OBJECTIVES:

- Tolearnvariousfundamentalandemerging protocolsofalllayers.
- Tostudyabout theissuespertainingto major obstacles inestablishment andefficient management of Ad-hoc and sensor networks.
- TounderstandthenatureandapplicationsofAd-hocandsensor networks.
- TounderstandvarioussecuritypracticesandprotocolsofAd-hocandSensor Networks.

UNITI INTRODUCTION 9

Introduction to Ad Hoc networks – definition, characteristics features, applications.Characteristics of Wireless channel, Adhoc Mobility Models: - entity and group models.

UNITIIMEDIUMACCESSPROTOCOLS 9

MAC Protocols: design issues, goals and classification. Contention based protocols, reservationbased protocols, scheduling algorithms, protocols using directional antennas. IEEE standards:802.11a, 802.11b, 802.11g, 802.15. HIPERLAN.

UNITIIINETWORKPROTOCOLS 9

Addressing issues in ad hoc network, Routing Protocols: Design issues, goals and classification.Proactive Vs reactive routing, Unicast routing algorithms, Multicast routing algorithms, hybridrouting algorithm, Power/ Energy aware routing algorithm,Hierarchical Routing, QoS awarerouting.

UNITIVEND-TO-ENDDELIVERYANDSECURITY 9

Transport layer: Issues in designing- Transport layer classification, adhoc transport protocols.Security issues in adhoc networks: issues and challenges, network security attacks, securerouting protocols.

UNITVCROSS LAYER DESIGN ANDINTEGRATIONOFADHOC FOR 4G9

CrosslayerDesign:Need forcrosslayerdesign,crosslayeroptimization,parameteroptimizationtechniques, Cross layer cautionaryperspective, Co-operative networks:-Architecture, methodsofcooperation, co-operative antennas, Integrationofad hoc networkswithother wired and wirelessnetworks.

TOTAL:45PERIODS

OUTCOMES:

UponCompletionofthecourse, thestudentsshould beableto

- Identifydifferentissuesinwirelessadhocandsensornetworks.
- Toanalyzeprotocolsdevelopedforadhocandsensornetworks.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Toidentifyandaddressthesecuritythreatsinadhocandsensornetworks.
- EstablishaSensornetworkenvironmentfordifferenttypesofapplications.

PROGRAMHANDBOOK

B.TECH–FULLTIME

[REGULATION2021]

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

B.TECH(FULLTIME)–ECE–R-2021

PROGRAMEDUCATIONALOBJECTIVES (PEOs)

PEO1: To provide the students with a strong foundation in the required sciences in order to pursue studies in Electronics and Communication Engineering.

PEO2: To gain adequate knowledge to become good professional in electronic and communication engineering associated industries, higher education and research.

PEO3: To develop attitude in lifelong learning, applying and adapting new ideas and technologies as their field evolves.

PEO4: To prepare students to critically analyze existingliterature in an area of specialization and ethically develop innovative and research oriented methodologies to solve the problems identified.

PEO5: To inculcate in the students a professional and ethical attitude and an ability to visualize the engineering issues in a broader social context.

PROGRAMOUTCOMES(POs)

PO1:**Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2:**Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3:**Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4:**Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5:**Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6:**The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilitiesrelevant to the professional engineering practice.

PO7:**Environmentandsustainability**:Understandthe impact oftheprofessionalengineering solutions in societaland environmentalcontexts, and demonstrate the knowledge of, and need for sustainable development.

PO8:**Ethics**: Apply ethical principles and commit to professional ethics and responsibilitiesand norms of the engineering practice.

PO9:**Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: **Communication:** Communicate effectively on complex engineering activities with the engineering communityand withsocietyat large, suchas, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: **Project management and finance:** Demonstrate knowledge and understanding of the engineeringand management principles andapplythesetoone'sownwork, asamember and leader in a team, to manage projects and in multidisciplinary environments.

PO12: **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFICOUTCOMES (PSOs)

PSO1: Design, develop and analyze electronic systems through application of relevant electronics, mathematics and engineering principles

PSO2: Design, develop and analyze communication systems through application of fundamentals from communication principles, signal processing, and RF System Design & Electromagnetics.

PSO3: Adapt to emerging electronics and communication technologies and develop innovative solutions for existing and newer problems

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

21147IP INDUCTIONPROGRAMME

Thisisamandatory2weekprogrammetobeconductedassoonasthestudentsentertheinstitution. Normal classes start only after the induction program is over.

TheinductionprogrammehasbeenintroducedbyAICTEwiththefollowingobjective:

“Engineering colleges were established to train graduates well in the branch/department ofadmission, have a holistic outlook, and have a desire to workfor national needs and beyond.The graduating student must have knowledge and skills in the area of his/her study.However, he/she must also have a broad understanding of society and relationships.Character needs to be nurturedas an essential quality by which he/she would understand andfulfill his/her responsibility as an engineer, a citizen and a human being. Besides the above,several meta-skills and underlying values are needed.”

“One will have to work closely with the newly joined studentsin making them feelcomfortable, allow them to explore their academic interests and activities, reducecompetition and make them work for excellence, promote bonding within them, buildrelations between teachers and students, give a broader view of life, and build character.”

Hence, the purpose of this programme is to make the students feel comfortable in their newenvironment, open them up, set a healthy daily routine, createbonding in the batch as wellas between faculty and students, develop awareness, sensitivity and understanding of theself, peoplearound them, society at large, and nature.

The following are the activities under the induction program in which the student would befully engaged throughout the day for the entire duration of the program.

(i) PhysicalActivity

Thiswouldinvolveadailyroutineofphysicalactivitywithgamesandsports,yoga,gardening,etc.

(ii) Creative Arts

Every student would choose one skill related to the arts whether visual arts or performingarts. Examples are painting, sculpture, pottery, music, dance etc. The student would pursueit everyday for the duration of the program. These would allow for creative expression. Itwould develop a sense of aesthetics and alsoenhancecreativitywhichwould,hopefully,growintoengineeringdesignlater.

(iii) UniversalHumanValues

This is the anchoring activity of the Induction Programme. It gets the student to exploreoneself andallows one to experience the joy of learning, stand up to peer pressure, makedecisions with courage, be aware of relationships with colleagues and supporting stay in thehostel and department, be sensitive to others, etc. A module in Universal Human Valuesprovides the base. Methodology ofteaching this content is extremely important. It must notbe through do's and don'ts, but get students to explore and think by engaging them in adialogue. It is best taught through group discussions and real life activities rather thanlecturing.
Discussionswouldbeconductedinsmallgroupsof about20studentswithafaculty
mentor each. It would be effective that the faculty mentor assigned is also the facultyadvisor for the student for the full duration of the UG programme.

(iv) LiteraryActivity

Literaryactivitywouldencompassreading,writingandpossibly,debating,enactingaplayetc.

(v) ProficiencyModules

Thiswouldaddresssomelacunasthatstudentsmighthave,forexample,English,computerfamiliarity etc.

(vi) LecturesbyEminentPeople

Motivationallecturesbyeminentpeoplefrom all walksoflifeshould be arrangedtogivethe students exposure to people who are socially active or in public life.

(vii) VisitstoLocalArea

Acouple of visits to the landmarks of the city, or a hospital or orphanage could be organized.Thiswould familiarize them with the area as well as expose them to the underprivileged.

(viii) FamiliarizationtoDept./Branch&Innovations

They should be toldabout what gettinginto abranch or department means what role it playsinsociety, throughitstechnology. Theyshould alsobeshownthelaboratories,workshops &other facilities.

(ix) DepartmentSpecificActivities

About a week can be spent in introducing activities (games, quizzes, social interactions,small experiments, design thinking etc.) that are relevant to the particular branch ofEngineering/ Technology / Architecture that can serve as a motivation and kindle interest inbuilding things (become a maker) in that particular field. This can be conducted in the formofaworkshop. For example, CSEand ITstudentsmaybeintroducedtoactivitiesthat kindlecomputational thinking, and get them to build simple games. ECE students may beintroduced to building simple circuits asan extension of their knowledge in Science, and soon. Students may be asked to build stuff using their knowledge of science.

Induction Programme istotallyan activitybased programme and thereforethere shallbe notests / assessments during this programme.

21147S11 **PROFESSIONALENGLISH-I** LTPC 3104

COURSEOBJECTIVES:

- Toimprovethecommunicative competenceoflearners
- Tohelplearnersuselanguageeffectivelyinacademic/workcontexts
- To build on students' English language skills by engaging them in listening, speaking and grammar learning activities that are relevant to authentic contexts.
- Todeveloplearners'ability toreadandwritecomplextexts,summaries,articles,blogs, definitions, essays and user manuals.
- Touselanguageefficientlyinexpressingtheiropinions viavariousmedia.

INTRODUCTIONTOEFFECTIVECOMMUNICATION 1

- Whatiseffectivecommunication?(Therearemanyinterestingactivitiesforthis.)
- Whyiscommunicationcriticalforexcellenceduringstudy,researchand work?
- What arethesevenC'sofeffective communication?
- Whatarekeylanguageskills?
- Whatiseffective listening?What doesitinvolve?
- Whatiseffectivespeaking?
- Whatdoesitmeantobeanexcellentreader?Whatshouldyoubeabletodo?
- Whatiseffectivewriting?
- Howdoesonedeveloplanguageandcommunicationskills?
- What does the course focus on? How are communication and language skills going to be enhancedduring this course? What do you as a learner need to do to enhanceyourEnglish language and communication skills to get the best out of this course?

UNITI INTRODUCTIONTOFUNDAMENTALSOFCOMMUNICATION 11

Listening –for general information-specific details- conversation: Introduction to classmates -Audio / video (formal & informal); Telephone conversation; Listening to voicemail & messages;Listening and filling a form

Speaking - Self Introduction; Introducing a friend; Conversation - politeness strategies;Telephone conversation; Leave a voicemail; Leave a message with another person; askingfor information to fill details in a form.

Reading - Reading brochures (technical context), telephone messages / social mediamessages relevant to technical contexts and emails.

Writing-Writingemails/lettersintroducingoneself

Grammar-PresentTense(simpleandprogressive);Questiontypes:Wh/YesorNo/andTagsVocabulary -Synonyms; One word substitution; Abbreviations & Acronyms (as used intechnicalcontexts).

UNITII NARRATIONANDSUMMATION 12

Listening - Listening to podcasts, anecdotes / stories / event narration; documentaries and interviews with celebrities.

Speaking-Narratingpersonalexperiences/events;Interviewingacelebrity;Reporting/andsummarizing documentaries / podcasts/ interviews.

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Reading-Readingbiographies,travelogues,newspaperreports,Excerptsfromliterature,andtravel & technical blogs.
Writing-Guidedwriting--ParagraphwritingShortReportonanevent(fieldtrip etc.)Grammar –Past tense (simple); Subject-Verb Agreement; andPrepositions
Vocabulary-Wordforms(prefixes&suffixes);SynonymsandAntonyms.Phrasalverbs.

UNITIII DESCRIPTIONOFAPROCESS/PRODUCT 12

Listening - Listen to a product and process descriptions; a classroom lecture; andadvertisementsabout products.
Speaking–Picturedescription;givinginstructiontousetheproduct;Presentingaproduct;andSummarizing a lecture.
Reading–Readingadvertisements, gadget reviews;usermanuals.Writing - Writing definitions; instructions; and Product /Processdescription.
Grammar - Imperatives; Adjectives; Degrees of comparison; Present & Past Perfect Tenses.Vocabulary - Compound Nouns, Homonyms; and Homophones, discourse markers(connectives &sequence words)

UNITIV CLASSIFICATIONANDRECOMMENDATIONS 12

eports–andNonVerbalCommunication(tables,piechartsetc,)
Writing –Note-making /Note-taking (*Studyskillstobe taught,nottested;Writing recommendations;Transferringinformationfromnon verbal(chart,graphetc,toverbal mode)
Grammar – Articles; Pronouns - Possessive & Relative pronouns.
Vocabulary-Collocations;Fixed/Semifixedexpressions.

UNITV EXPRESSION 12

Listening – Listening to debates/ discussions; different viewpoints on an issue; and paneldiscussions.
Speaking–groupdiscussions,Debates, andExpressingopinionsthroughSimulations &Roleplay.Reading – Reading editorials; and Opinion Blogs;
Writing–EssayWriting(Descriptiveornarrative).
Grammar – Future Tenses, Punctuation; Negation (Statements & Questions); and Simple,Compound & Complex Sentences.
Vocabulary-Cause&EffectExpressions–ContentvsFunctionwords.

TOTAL:60PERIODS

COURSEOUTCOMES:

Attheendofthecourse,learnerswillbe able

- Tolistenandcomprehendcomplexacademictexts
- Toreadandinfer thedenotativeandconnotativemeaningsoftechnicaltexts
- Towritedefinitions,descriptions, narrationsandessaysonvarioustopics
- Tospeakfluentlyandaccuratelyinformalandinformalcommunicative contexts

L	T	P	C
3	**1**	**0**	**4**

COURSEOBJECTIVES:

- To develop the use of matrixalgebra techniques that areneeded byengineers for practical applications.
- Tofamiliarizethestudentswithdifferentialcalculus.
- Tofamiliarizethestudentwithfunctionsofseveralvariables. Thisisneededinmany branches of engineering.
- Tomakethe studentsunderstand varioustechniquesofintegration.
- Toacquaintthestudentwithmathematicaltools neededinevaluatingmultipleintegralsand

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

theirapplications.

UNITI MATRICES 9+3

EigenvaluesandEigenvectorsofarealmatrix–Characteristicequation–Propertiesof Eigenvalues and Eigenvectors – Cayley - Hamilton theorem – Diagonalization of matricesby orthogonal transformation – Reduction of a quadratic form to canonical form byorthogonal transformation – Nature of quadratic forms –Applications: Stretching of anelastic membrane.

UNITII DIFFERENTIALCALCULUS 9+3

Representationoffunctions-Limitofafunction-Continuity- Derivatives-Differentiation rules(sum,product,quotient,chainrules)-Implicitdifferentiation-Logarithmicdifferentiation - Applications: Maxima and Minima of functions of one variable.

UNITIII FUNCTIONSOFSEVERALVARIABLES 9+3

Partialdifferentiation–HomogeneousfunctionsandEuler'stheorem–Totalderivative– Change of variables –Jacobians – Partial differentiation of implicit functions – Taylor'sseries for functions of two variables – Applications: Maxima and minima of functions oftwo variables and Lagrange'smethod of undetermined multipliers.

UNITIV INTEGRALCALCULUS 9+3

DefiniteandIndefiniteintegrals-Substitutionrule-TechniquesofIntegration:Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rationalfunctions by partial fraction, Integration of irrational functions - Improper integrals - Applications:Hydrostaticforceand pressure, momentsandcentres ofmass.

UNITV MULTIPLEINTEGRALS 9+3

Doubleintegrals–Changeoforderofintegration–Doubleintegralsinpolarcoordinates– Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variablesin double andtriple integrals – Applications:Moments and centresof mass, momentofinertia.

21149S13 ENGINEERINGPHYSICS LTPC
3003

COURSEOBJECTIVES:

- Tomakethe studentseffectivelyachieveanunderstandingofmechanics.
- Toenablethestudentsto gainknowledgeofelectromagneticwavesandits applications.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEUERSHIP

- Tointroducethebasicsofoscillations,opticsandlasers.
- Equippingthestudentsto successfullyunderstand theimportanceofquantumphysics.
- Tomotivatethestudentstowardstheapplicationsofquantummechanics.

UNITI MECHANICS 9

Multi-particledynamics:Centerofmass(CM)–CMofcontinuousbodies–motionofthe CM–kineticenergyofthesystemofparticles.Rotationofrigidbodies:Rotational kinematics – rotationalkineticenergyandmomentofinertia-theoremsofM.I–momentof inertia of continuous bodies –

of a diatomic molecule - torque – rotational dynamics of rigid bodies – conservation of angularmomentum–rotational energystate ofarigid diatomicmolecule - gyroscope -torsional pendulum– double pendulum –Introduction to nonlinear oscillations.

UNITII ELECTROMAGNETICWAVES 9

TheMaxwell'sequations-waveequation;Planeelectromagneticwavesinvacuum, Conditionsonthewavefield-

propertiesofelectromagneticwaves:speed,amplitude,phase,orientation and waves in matter - polarization - Producing electromagnetic waves - Energyand momentum in EM waves: Intensity, waves from localized sources, momentum andradiation pressure - Cell-phone reception. Reflection and transmission of electromagneticwaves from a non-conducting medium- vacuum interface for normal incidence.

UNITIII OSCILLATIONS,OPTICSANDLASERS 9

Simpleharmonicmotion-resonance–analogybetweenelectricalandmechanicaloscillating systems - waves on a string - standingwaves - travelingwaves - Energy transfer of a wave - sound waves - Doppler effect. Reflection and refraction of light waves - total internalreflection-interference–Michelsoninterferometer–

Theoryofairwedgeandexperiment.Theoryoflaser-characteristics-

Spontaneousandstimulatedemission-

Einstein'scoefficients-populationinversion-Nd-YAGlaser,CO_2laser,semiconductor laser–Basicapplicationsoflasersinindustry.

UNITIV BASICQUANTUMMECHANICS 9

Photonsandlightwaves-Electronsandmatterwaves–Comptoneffect-TheSchrodinger equation (Time dependent and time independent forms) - meaning of wave function- Normalization –Free particle - particle in a infinite potential well: 1D,2D and 3D Boxes- Normalization, probabilities and the correspondence principle.

UNITV APPLIEDQUANTUMMECHANICS 9

The harmonic oscillator(qualitative)- Barrier penetration and quantum tunneling(qualitative)- Tunneling microscope - Resonant diode - Finite potential wells(qualitative)- Bloch's theoremfor particles in aperiodic potential –Basics of Kronig-Penneymodel and origin of energy bands.

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

21149S14 **ENGINEERINGCHEMISTRY** **LTPC**
3003

COURSEOBJECTIVES:

- To inculcate sound understanding of water quality parameters and water treatmenttechniques.
- Toimpartknowledge onthebasicprinciplesandpreparatorymethodsofnanomaterials.
- Tointroducethebasicconceptsandapplications ofphaseruleand composites.
- Tofacilitatetheunderstandingofdifferenttypesoffuels,theirpreparation,propertiesand

combustioncharacteristics.

- Tofamiliarizethestudentswiththeoperatingprinciples,workingprocessesand applications of energy conversion and storage devices.

UNITI WATERANDITS TREATMENT 9

Water:Sourcesandimpurities,Waterqualityparameters:Definitionandsignificanceof-color, odour, turbidity, pH, hardness, alkalinity, TDS, COD and BOD, fluoride and arsenic.Municipal water treatment: primary treatment and disinfection (UV, Ozonation, break-pointchlorination).Desalination of brackish water: Reverse Osmosis. Boiler troubles: Scale andsludge, Boiler corrosion, Caustic embrittlement, Priming & foaming. Treatment of boilerfeed water: Internal treatment (phosphate, colloidal, sodium aluminate and calgonconditioning) and External treatment –Ionexchangedemineralizationandzeoliteprocess.

UNITII NANOCHEMISTRY 9

Basics:Distinctionbetweenmolecules,nanomaterialsandbulkmaterials;Size-dependent properties (optical, electrical, mechanical and magnetic); Types of nanomaterials:Definition, properties and uses of – nanoparticle, nanocluster, nanorod, nanowire andnanotube. Preparation of nanomaterials: sol-gel, solvothermal, laser ablation, chemicalvapour deposition, electrochemical deposition and electro spinning. Applications ofnanomaterials in medicine, agriculture, energy, electronics and catalysis.

UNITIII PHASERULEANDCOMPOSITES 9

Phaserule:Introduction,definitionoftermswithexamples.Onecomponentsystem-water system;Reduced phase rule; Construction of a simple eutectic phase diagram - Thermalanalysis; Two component system: lead-silver system - Pattinson process.
Composites: Introduction: Definition & Need for composites; Constitution: Matrixmaterials (Polymer matrix, metal matrix and ceramic matrix) and Reinforcement (fiber,particulates, flakes and whiskers). Properties and applications of: Metal matrix composites(MMC), Ceramic matrix composites and Polymer matrix composites. Hybrid composites -definition and examples.

UNITIV FUELSANDCOMBUSTION 9

Fuels:Introduction:Classificationoffuels;Coalandcoke:Analysisofcoal(proximateand ultimate), Carbonization, Manufacture of metallurgical coke (Otto Hoffmann method).Petroleumand Diesel: Manufacture of synthetic petrol (Bergius process), Knocking -octanenumber, diesel oil -cetanenumber;Poweralcoholandbiodiesel.
Combustion of fuels: Introduction: Calorific value - higher and lower calorific values,Theoreticalcalculationofcalorificvalue;Ignitiontemperature:spontaneousignition temperature,Explosiverange;Fluegasanalysis-ORSATMethod.CO_2emissionand carbonfootprint.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

UNITV ENERGYSOURCESANDSTORAGEDEVICES 9

Stabilityofnucleus:massdefect(problems),bindingenergy;Nuclearenergy:lightwater nuclearpowerplant,breederreactor.Solarenergyconversion:Principle,workingand applicationsofsolarcells;Recentdevelopmentsinsolarcellmaterials.Windenergy; Geothermalenergy;Batteries:Typesofbatteries,Primarybattery-drycell,Secondary battery-leadacidbatteryandlithium-ion-battery;Electricvehicles-workingprinciples; Fuelcells:H_2-O_2fuelcell,microbialfuelcell;Supercapacitors:Storageprinciple,typesand examples.

TOTAL:45PERIODS

COURSEOUTCOMES:

Attheendofthecourse,thestudentswillbeable:

- To infer the quality of water from quality parameter data and propose suitable treatment methodologies to treat water.
- To identify and apply basic concepts of nanoscience and nanotechnology in designingthe synthesis of nanomaterials for engineering and technology applications.
- Toapplytheknowledgeofphaseruleandcompositesformaterialselection requirements.
- Torecommendsuitablefuelsforengineeringprocessesandapplications.
- Torecognizedifferentformsofenergyresourcesandapplythemforsuitable applications in energy sectors.

0S15	**PROBLEMSOLVINGANDPYTHONPROGRAMMING**	**L**		**C**
		3	**0**	

COURSEOBJECTIVES:

- Tounderstandthebasicsofalgorithmicproblemsolving.
- TolearntosolveproblemsusingPythonconditionalsandloops.
- TodefinePythonfunctionsand usefunctioncallstosolve problems.
- TousePythondatastructures-lists,tuples, dictionariestorepresentcomplexdata.
- Todoinput/output withfilesinPython.

UNITI COMPUTATIONALTHINKINGANDPROBLEMSOLVING 9

FundamentalsofComputing–IdentificationofComputationalProblems-Algorithms,building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code,flowchart,programminglanguage),algorithmicproblemsolving,simplestrategiesfor developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert acard in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNITII DATATYPES,EXPRESSIONS, STATEMENTS 9

Pythoninterpreterandinteractivemode,debugging;valuesandtypes:int,float,boolean,string , and list; variables, expressions, statements, tuple assignment, precedence of operators, comments;Illustrative programs: exchange the values of two variables, circulate the values of n variables,distance between two points.

UNITIII CONTROLFLOW,FUNCTIONS,STRINGS 9

Conditionals:Booleanvaluesandoperators,conditional(if),alternative(if-else),chainedconditional (if-elif-else);Iteration: state, while, for, break, continue, pass; Fruitful functions: returnvalues,parameters, local and global scope, function composition, recursion; Strings:stringslices,immutability, string functions and methods, string module; Lists as arrays. Illustrativeprograms: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNITIV LISTS,TUPLES, DICTIONARIES 9

Lists:listoperations,listslices,listmethods,listloop,mutability,aliasing,cloninglists,list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods;advanced list processing - list comprehension; Illustrative programs: simple sorting, histogram,Students marks statement, Retail bill preparation.

UNITV FILES,MODULES,PACKAGES 9

Filesandexceptions:textfiles,readingandwritingfiles,formatoperator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs:word count, copy file, Voter's age validation, Marks range validation (0-100).

TOTAL:45PERIODS

COURSEOUTCOMES:

Uponcompletionofthecourse,studentswillbeableto

CO1:Developalgorithmicsolutionstosimplecomputationalproblems.

CO2:DevelopandexecutesimplePythonprograms.

CO3:WritesimplePythonprogramsusingconditionalsandloopsforsolvingproblems. CO4: Decompose a Python program into functions.

CO5:RepresentcompounddatausingPythonlists,tuples,dictionariesetc. CO6: Read and write data from/to files in Python programs.

0042

COURSEOBJECTIVES:

- Tounderstandtheproblemsolvingapproaches.
- TolearnthebasicprogrammingconstructsinPython.
- Topractice variouscomputingstrategiesforPython-basedsolutionstorealworld problems.
- TousePythondatastructures-lists,tuples,dictionaries.

- Todoinput/output withfilesinPython.

EXPERIMENTS:

Note:Theexamplessuggestedineachexperimentareonlyindicative.Thelabinstructorisexpectedtodesignother problems on similar lines. The Examination shall not be restricted to the sample experiments listed here.

1. Identificationand solving of simple real life or scientific or technical problems, and developingflow charts for the same. (ElectricityBilling, Retailshop billing, Sinseries, weight ofa motorbike, Weight of a steel bar, compute Electrical Current in Three Phase AC Circuit, etc.)
2. Python programming using simple statements and expressions (exchange the values oftwo variables,circulate the values of n variables, distance between two points).
3. Scientific problemsusing Conditionalsand Iterative loops. (Number series, Number Patterns,pyramidpattern)
4. Implementing real-time/technical applications using Lists, Tuples. (Items present in alibrary/Components of a car/ Materials required for construction of a building –operations of list &tuples)
5. Implementing real-time/technical applications using Sets, Dictionaries. (Language, components of anautomobile, Elements of a civil structure, etc.- operations of Sets & Dictionaries)
6. ImplementingprogramsusingFunctions.(Factorial,largest numberinalist,areaofshape)
7. ImplementingprogramsusingStrings.(reverse,palindrome,charactercount,replacingcharacters)
8. Implementing programsusing writtenmodulesand PythonStandard Libraries(pandas,numpy.Matplotlib, scipy)
9. Implementingreal-time/technicalapplicationsusingFile handling. (copyfromone filetoanother,word count, longest word)
10. Implementingreal-time/technicalapplicationsusingExceptionhandling. (divide byzero error,voter'sage validity, student mark range validation)
11. ExploringPygametool.
12. DevelopingagameactivityusingPygamelikebouncingball,carraceetc.

TOTAL:60PERIODS

COURSEOUTCOMES:

Oncompletionofthecourse,studentswillbeable to:

CO1:Developalgorithmicsolutionstosimplecomputationalproblems

CO2: Develop and execute simple Python programs.

CO3:ImplementprogramsinPythonusingconditionalsandloopsforsolvingproblems. CO4: Deploy functions to decompose a Python program.

CO5:ProcesscompounddatausingPythondatastructures.

CO6:UtilizePythonpackagesindevelopingsoftwareapplications.

ASSESSMENTPATTERN

Two internal assessments and an end semester examination to test students' reading and writingskills along with their grammatical and lexical competence.

STATISTICSANDNUMERICALMETHODS **LTPC**

310

4

COURSEOBJECTIVES:

- This course aims at providing the necessary basic concepts of a few statistical and numerical methods and give procedures for solving numerically different kindsof problems occurring in engineering and technology.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- Tointroducethebasicconceptsofsolving algebraicand transcendentalequations.
- To introduce the numerical techniques of interpolation in various intervals and numerical techniques of differentiation and integration which plays an important role in engineering and technology disciplines.
- To acquaint the knowledge of various techniques and methods of solving ordinary differential equations.

UNITI TESTINGOFHYPOTHESIS 9+3

Sampling distributions - Tests for single mean, proportion and difference of means (Largeand small samples) – Tests for single variance and equality of variances – Chi square test forgoodness of fit –Independence of attributes.

UNITII DESIGNOFEXPERIMENTS 9+3

One way and two way classifications - Completely randomized design – Randomized blockdesign –Latin square design - 2^2 factorial design.

UNITIII SOLUTIONOFEQUATIONSANDEIGENVALUEPROBLEMS 9+3

Solutionofalgebraicandtranscendentalequations-Fixedpointiterationmethod–Newton Raphsonmethod-Solutionoflinearsystemofequations-Gausseliminationmethod–Pivoting-GaussJordanmethod–IterativemethodsofGaussJacobiandGaussSeidel-EigenvaluesofamatrixbyPowermethodandJacobi'smethodforsymmetricmatrices.

UNITIV INTERPOLATION,NUMERICALDIFFERENTIATIONANDNUMERICAL INTEGRATION 9 +3

Lagrange'sandNewton'sdivideddifferenceinterpolations–Newton'sforwardand backward difference interpolation – Approximation of derivates usinginterpolation polynomials–NumericalsingleanddoubleintegrationsusingTrapezoidalandSimpson's 1/3rules.

UNITV NUMERICALSOLUTIONOFORDINARYDIFFERENTIALEQUATIONS 9+3

Single step methods: Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order differential equations - Multi stepmethods: Milne's and Adams - Bash forth predictor corrector methods for solving first orderdifferential equations.

TOTAL:60 PERIODS

COURSEOUTCOMES:

Uponsuccessfulcompletionofthecourse,studentswillbeableto:

CO1:Apply the concept of testing of hypothesis for small and large samples in real life problems.CO2:Applythebasicconceptsofclassificationsofdesignofexperimentsinthe fieldofagriculture. CO3:Appreciate the numerical techniques of interpolation in various intervals and apply thenumerical techniques of differentiation andintegration for engineering problems.

CO4:Understand the knowledge ofvarious techniques and methods for solvingfirstandsecondorder ordinary differential equations.

CO5:Solve thepartial andordinarydifferential equations with initial and boundary conditions byusing certain techniques with engineering applications.

		3	**0**	**0**	**3**

COURSEOBJECTIVES:

- Tomakethestudentstounderstandthebasicsofcrystallographyanditsimportancein studying materials properties.
- Tounderstandtheelectricalpropertiesofmaterialsincludingfreeelectrontheory, applications of quantum mechanics and magnetic materials.
- Toinstilknowledgeonphysicsofsemiconductors,determinationofchargecarriersand device applications
- To establish a sound grasp of knowledge on different optical properties of materials, optical displays and applications
- To inculcate an idea of significance of nano structures, quantum confinement and ensuingnano device applications.

UNITI CRYSTALLOGRAPHY 9

Crystal structures: Crystal lattice– basis - unit cell and lattice parameters– crystal systemsandBravaislattices–StructureandpackingfractionsofSC,BCC,FCC,diamondcubic, NaCL,ZnSstructures–crystalplanes,directionsandMillerindices–distancebetween successiveplanes–linearandplanardensities–crystallineandnoncrystallinematerials– Example use of Miller indices: wafer surface orientation – wafer flats and notches – patternalignment - imperfections in crystals.

UNITII ELECTRICALANDMAGNETICPROPERTIESOFMATERIALS 9

Classicalfreeelectrontheory-Expressionfor electricalconductivity– Thermalconductivity,expression - Quantum free electron theory :Tunneling – degenerate states – Fermi- Diracstatistics – Density of energy states – Electron in periodic potential – Energy bands in solids – tightbinding approximation - Electron effective mass – concept of hole. Magnetic materials: Dia,para and ferromagnetic effects – paramagnetism in the conduction electrons in metals– exchange interaction and ferromagnetism – quantum interference devices – GMR devices.

UNITIII SEMICONDUCTORSANDTRANSPORTPHYSICS 9

Intrinsic Semiconductors – Energy band diagram– direct and indirect band gap semiconductors – Carrier concentration in intrinsic semiconductors – extrinsic semiconductors-CarrierconcentrationinN-type&P-typesemiconductors–Variationof carrier concentration with temperature – Carrier transport in Semiconductors: Drift, mobilityand diffusion – Hall effect and devices – Ohmiccontacts –Schottkydiode.

UNITIV OPTICALPROPERTIESOFMATERIALS 9

Classificationofopticalmaterials–Opticalprocessesinsemiconductors:opticalabsorption andemission,chargeinjectionandrecombination,opticalabsorption,lossandgain.Optical processesinquantumwells–Optoelectronicdevices:lightdetectorsandsolarcells–light emittingdiode–laserdiode-opticalprocessesinorganicsemiconductordevices–excitonic state–Electro-opticsandnonlinearoptics:Modulatorsandswitchingdevices–plasmonics.

UNITV NANODEVICES 9

Densityofstatesforsolids- SignificancebetweenFermienergyand volumeofthe material – Quantumconfinement– Quantumstructures– Density ofstatesforquantumwells,wires and dots–Bandgapofnanomaterials–Tunneling–Singleelectronphenomena–Singleelectron Transistor.Conductivityofmetallicnanowires–Ballistictransport–Quantumresistanceand conductance–Carbonnanotubes:Propertiesandapplications-Spintronicdevicesandapplications – Optics in quantum structures – quantum well laser.

TOTAL:45PERIODS

COURSEOUTCOMES:

Attheendofthecourse,thestudentsshouldbeable to

CO1:knowbasicsofcrystallographyanditsimportanceforvariedmaterialsproperties

CO2:gainknowledgeontheelectricalandmagneticpropertiesofmaterialsandtheir applications **CO3**:understand clearly of semiconductor physics and functioning of semiconductor devices **CO4**:understand the optical properties of materials and working principlesofvariousopticaldevices**CO5**:appreciatetheimportanceofnanotechnologyand nanodevices.

ELECTRICALANDINSTRUMENTATIONENGINEERING LTPC
3003

COURSEOBJECTIVES:

- Toimpartknowledgeintypes, constructionandworkingoftransformers
- Toimpartknowledgeintypes,constructionandworking ofDC machines
- Toimpartknowledgeintypes, constructionandworkingofACrotatingmachines
- Tointroducethefunctionalelementsandworkingofmeasuringinstruments.
- Tointroducethebasicsofpowersystemandprotectionschemes

UNITI TRANSFORMER 9

Introduction - Ideal and Practical Transformer – Phasor diagram-– Per Unit System – Equivalent circuit- Testing- Efficiency and Voltage Regulation– Three Phase Transformers – Applications- Auto Transformers, Advantages- Harmonics.

UNITII DCMACHINES 9

Introduction–ConstructionalFeatures–MotorandGeneratormode-EMFandTorque equation–CircuitModel–MethodsofExcitation-Characteristics–StartingandSpeedControl – Universal Motor- Stepper Motors – Brushless DC Motors- Applications

UNITIII ACROTATINGMACHINES 9

Principleofoperationofthree-phaseinductionmotors–Construction–Types–Equivalent circuit,SpeedControl-SinglephaseInductionmotors-Construction–Types–starting methods.Alternator:Workingprinciple–EquationofinducedEMF–Voltageregulation, Synchronousmotors-workingprinciple-startingmethods–Torqueequation.

UNITIV MEASUREMENTSANDINSTRUMENTATION 9

Functionalelementsofaninstrument,Standardsandcalibration,OperatingPrinciple,types - Moving Coil and Moving Iron meters, Measurement of three phase power, Energy Meter,InstrumentTransformers-CT andPT,DSO- Block diagram- Data acquisition.

UNITV BASICSOFPOWERSYSTEMS 9

Power system structure -Generation , Transmission and distribution , Various voltage levels,Earthing – methods of earthing, protective devices- switch fuse unit- Miniature circuitbreaker- moulded case circuit breaker- earth leakage circuit breaker, safety precautions andFirst Aid

TOTAL:45PERIODS

COURSEOUTCOMES :

Aftercompletingthiscourse,thestudentswillbeable to

CO1: Explaintheworkingprincipleofelectricalmachines

CO2: Analyzetheoutputcharacterizesofelectricalmachines

CO3: Choose the appropriate electrical machines for various applications **CO4:** Explain the types and operating principles of measuring instruments **CO5:** Explain the basic power systemstructure and protection schemes

COURSEOBJECTIVES:

Themainlearningobjectiveofthiscourseistopreparethestudentsfor:

- Drawingengineeringcurves.
- Drawingfreehandsketchofsimple objects.
- Drawingorthographic projectionofsolidsandsectionofsolids.
- Drawingdevelopmentofsolids
- Drawingisometricandperspectiveprojectionsofsimplesolids.

CONCEPTSANDCONVENTIONS(NotforExamination)

Importance of graphics in engineering applications — Use of drafting instruments — BIS conventions and specifications — Size, layout and folding of drawing sheets — Lettering and dimensioning.

UNITI PLANECURVES 6+12

Basic Geometrical constructions, Curves used in engineering practices: Conics — Construction of ellipse, parabola and hyperbola by eccentricity method — Construction ofcycloid — construction ofinvolutes of square and circle — Drawing of tangents and normalto the above curves.

UNITII PROJECTIONOFPOINTS,LINESANDPLANESURFACE 6+12

Orthographicprojection-principles-Principalplanes-Firstangleprojection-projectionof points.Projectionofstraightlines(onlyFirstangleprojections)inclinedtoboththeprincipal planes-Determinationoftruelengthsandtrueinclinationsbyrotatinglinemethodand traces. Projection of planes (polygonal and circular surfaces) inclined to both the principalplanes by rotating object method.

UNITIII PROJECTIONOFSOLIDSANDFREEHANDSKETCHING 6+12

Projectionofsimplesolidslikeprisms,pyramids,cylinder,coneandtruncatedsolidswhen theaxisisinclinedtooneoftheprincipalplanesandparalleltotheotherbyrotatingobject method.VisualizationconceptsandFreeHandsketching:Visualizationprinciples—RepresentationofThreeDimensionalobjects—Layoutofviews-Freehandsketchingofmultiple views from pictorial views of objects.

PracticingthreedimensionalmodelingofsimpleobjectsbyCADSoftware(Notforexamination)

UNITIV PROJECTIONOFSECTIONEDSOLIDSANDDEVELOPMENTOF SURFACES 6 +12

Sectioning of above solids in simple vertical position when the cutting plane is inclined tothe one ofthe principal planes and perpendicular to the other — obtaining true shape ofsection.Development oflateral surfaces of simple and sectioned solids — Prisms, pyramidscylinders and cones.

PracticingthreedimensionalmodelingofsimpleobjectsbyCADSoftware(Notforexamination)

UNITV ISOMETRICANDPERSPECTIVEPROJECTIONS 6+12

Principlesofisometric projection — isometric scale —Isometric projectionsofsimplesolidsand truncated solids - Prisms, pyramids, cylinders, cones-combination of two solid objectsin simple vertical positions - Perspective projection of simple solids-Prisms, pyramids andcylinders by visual ray method.

Practicing three dimensional modeling of isometric projection of simple objects by CADSoftware (Not for examination)

TOTAL:(L=30+P=60)90PERIODS

COURSEOUTCOMES:

On successful completion of this course, the student will be able to **CO1**:Use BISconventions and specifications for engineering drawing.**CO2**:Constructtheconiccurves,involutesandcycloid.

CO3:Solve practical problems involving projection of lines.

CO4:Drawtheorthographic,isometricandperspectiveprojectionsofsimplesolids.

CO5:Drawthedevelopmentofsimplesolids.

CIRCUIT ANALYSIS

LTPC
310
4

COURSEOBJECTIVES:

- TolearnthebasicconceptsandbehaviourofDCand AC circuits.
- Tounderstand variousmethodsofcircuit/networkanalysisusing networktheorems.
- Tounderstandthetransient andsteadystateresponseofthecircuitssubjectedtoDC excitations and AC with sinusoidal excitations.
- Tolearntheconcept ofcouplingincircuitsandtopologies.

UNITI DCCIRCUITANALYSIS 12

Basic Components of electric Circuits, Charge, current, Voltage and Power, Voltage andCurrent Sources, Ohms Law, Kirchoff's Current Law, Kirchoff's voltage law, The singleNode – Pair Circuit, series and Parallel Connected Independent Sources, Resistors in Seriesand Parallel, voltage and current division, Nodal analysis, Mesh analysis.

UNITII NETWORKTHEOREMANDDUALITY 12

Useful Circuit Analysis techniques - Linearity and superposition, Thevenin and NortonEquivalent Circuits, Maximum Power Transfer, Delta-Wye Conversion. Duals, Dual circuits.Analysis using dependent current sources and voltage sources

UNITIII SINUSOIDALSTEADYSTATEANALYSIS 12

SinusoidalSteady–Stateanalysis,CharacteristicsofSinusoids,TheComplexForcing Function,ThePhasor,PhasorrelationshipforR,L,andC,impedanceandAdmittance,Nodal andMeshAnalysis,PhasorDiagrams,ACCircuitPowerAnalysis,InstantaneousPower, AveragePower,apparentPowerandPowerFactor,ComplexPower.

UNITIV TRANSIENTSANDRESONANCEINRLCCIRCUITS 12

BasicRLandRCCircuits,TheSource-FreeRLCircuit,TheSource-FreeRCCircuit,The Unit-StepFunction,DrivenRLCircuits,DrivenRCCircuits,RLCCircuits,Frequency Response,ParallelResonance,SeriesResonance,QualityFactor.

UNITV COUPLEDCIRCUITSANDTOPOLOGY 12

Magnetically Coupled Circuits, mutual Inductance, the Linear Transformer, the IdealTransformer,Anintroduction to Network Topology, Trees and General Nodal analysis, Linksand Loop analysis.

SUGGESTEDACTIVITIES:

- Practicesolvingvarietyofproblems

COURSEOUTCOMES

Onsuccessfulcompletionofthiscourse,thestudentwillbeableto

CO1: Applythebasicconceptsofcircuitanalysissuchas Kirchoff'slaws,mesh currentandnode voltage method for analysis of DC and AC circuits.

CO2: ApplysuitablenetworktheoremsandanalyzeACandDCcircuits

CO3: AnalyzesteadystateresponseofanyR,LandCcircuits

CO4: Analyze the transient response for anyRC, RL and RLC circuits and frequency responseof parallel and series resonance circuits.

CO5: Analyzethecoupledcircuitsandnetworktopologies

ENGINEERINGPRACTICESLABORATORY LTPC

0042

COURSEOBJECTIVES:

Themainlearningobjectiveofthiscourseistoprovidehandsontrainingtothestudentsin:

- Drawingpipe lineplan; layingandconnecting variouspipe fittingsused incommon householdplumbingwork;Sawing;planing;makingjointsinwoodmaterials used in common household wood work.

- Wiring various electrical joints in common household electrical wire work.
- Welding various joints in steel plates using arc welding work; Machining various simple processes like turning, drilling, tapping in parts; Assembling simple mechanical assembly of common household equipments; Makinga tray out ofmetal sheet using sheet metal work.
- Soldering and testing simple electronic circuits; Assembling and testing simple electronic components on PCB.

GROUP–A(CIVIL&ELECTRICAL)

PARTI CIVILENGINEERINGPRACTICES 15

PLUMBING WORK:

a) Connecting various basic pipe fittings like valves, taps, coupling,unions,reducers,elbowsandothercomponentswhicharecommonlyused in household.
b) Preparingplumbinglinesketches.
c) Laying pipeconnectionto thesuctionsideofa pump
d) Layingpipe connectiontothedeliverysideofapump.
e) Connectingpipesofdifferentmaterials:Metal,plasticandflexible pipesusedinhousehold appliances.

WOODWORK:

a) Sawing,
b) Planing and
c) MakingjointslikeT-Joint,MortisejointandTenonjointandDovetailjoint.

WoodWorkStudy:

a) Studyingjointsindoorpanelsandwoodenfurniture
b) Studyingcommonindustrialtrussesusingmodels.

PARTII ELECTRICALENGINEERINGPRACTICES 15

a) Introductiontoswitches, fuses, indicatorsandlamps -Basicswitchboardwiringwith lamp, fan and three pin socket
b) Staircasewiring
c) Fluorescent LampwiringwithintroductiontoCFLandLED types.
d) Energymeterwiringandrelatedcalculations/calibration
e) StudyofIronBoxwiringandassembly
f) StudyofFanRegulator(ResistortypeandElectronictypeusingDiac/Triac/quadrac)
g) Studyofemergencylampwiring/Water heater

GROUP–B(MECHANICALANDELECTRONICS)

PARTIII MECHANICALENGINEERINGPRACTICES 15

WELDINGWORK:

a) WeldingofButtJoints, LapJoints,andTeeJointsusingarcwelding.

b) Practicinggaswelding.

BASIC MACHININGWORK:

a) (simple)Turning.
b) (simple)Drilling.
c) (simple)Tapping.

ASSEMBLYWORK:

a) Assemblingacentrifugalpump.
b) Assemblingahouseholdmixer.
c) Assemblinganairconditioner.

SHEETMETALWORK:

a)Makingofasquaretray

FOUNDRYWORK:

a)Demonstratingbasicfoundryoperations.

PARTIV ELECTRONICENGINEERINGPRACTICES 15

SOLDERINGWORK:

a)Solderingsimpleelectroniccircuitsandcheckingcontinuity.

ELECTRONICASSEMBLYANDTESTINGWORK:

a)AssemblingandtestingelectroniccomponentsonasmallPCB.

ELECTRONICEQUIPMENTSTUDY:

a) Studyanelements ofsmartphone..
b) Assemblyand dismantleofLED TV.
c) Assemblyand dismantleofcomputer/laptop

COURSEOUTCOMES:

Uponcompletionofthiscourse,thestudentswillbeableto:TOTAL:60PERIODS

CO1:Draw pipe line plan; lay and connect various pipe fittings used in common household plumbingwork; Saw; plan; make joints in wood materials used in common household wood work.

CO2:Wirevariouselectricaljointsincommonhouseholdelectricalwirework.

CO3:Weld various joints in steel plates using arc welding work; Machine various simple processes like turning, drilling, tapping in parts; Assemble simple mechanical assembly of common household equipments; Make a tray out of metal sheet using sheet metal work.

CO4:Solder and test simple electronic circuits; Assemble and test simple electronic components on PCB.

CIRCUIT ANALYSIS LABORATORY

LT PC
00 21

COURSEOBJECTIVES:

- Togainhands-onexperience inThevenin&Nortontheorem,KVL&KCL, andSuperposition Theorems.
- TounderstandtheworkingofRL,RCandRLCcircuits

ListofExperiments:

1. VerificationsofKVL& KCL.
2. Verifications ofThevenin&Nortontheorem.
3. VerificationofSuperpositionTheorem.
4. VerificationofmaximumpowertransferTheorem
5. DeterminationofResonanceFrequencyofSeries &ParallelRLCCircuits.
6. TransientanalysisofRLandRCcircuits.

TOTAL:30PERIODS

COURSEOUTCOMES:

Attheendofthecourse,thestudentwillbeableto

- DesignRLandRCcircuits.
- VerifyThevinin &NortontheoremKVL&KCL,and SuperPositionTheorems.

COMMUNICATION LABORATORY

LTPC
004
2

COURSEOBJECTIVES:

- Toidentifyvariedgroupdiscussionskillsandapplythemtotakepartineffectivediscussions in a professional context.
- Toanalyseconceptsandproblemsandmakeeffectivepresentationsexplainingthemclearly and precisely.
- Tobeabletocommunicateeffectivelythroughformalandinformalwriting.
- Tobeabletouseappropriatelanguagestructurestowriteemails,reportsandessays
- Togiveinstructionsandrecommendationsthatareclearandrelevant tothecontext

UNITI **12**

Speaking-Role Play Exercises Based on Workplace Contexts, - talking aboutcompetition-discussing progress toward goals-talking about experiences- talking about events in life-discussing past events-Writing: writing emails (formal & semi-formal).

UNITII **12**

Speaking: discussing news stories-talking about frequency-talking about travel problems-discussingtravel procedures- talking about travel problems- making arrangements-describingarrangements- discussing plans and decisions- discussing purposes and reasons-understanding common technology terms-Writing: - writing different types of emails.

UNITIII **12**

Speaking:discussingpredictions-describingtheclimate-discussingforecastsandscenarios-talkingaboutpurchasing-discussingadvantagesanddisadvantages-makingcomparisons-discussinglikesanddislikes-discussingfeelingsaboutexperiences-discussingimaginary scenariosWriting:shortessaysandreports-formal/semi-formalletters.

UNITIV **12**

Speaking:discussingthenaturalenvironment-describingsystems-describingpositionand movement-explainingrules-(example-discussingrentalarrangements)-understandingtechnical instructions-Writing: writing instructions-writing a short article.

UNITV **12**

Speaking:describingthingsrelatively-describingclothing-discussingsafetyissues(makingrecommendations) talking about electrical devices-describing controlling actions- Writing:job application(Cover letter + Curriculum vitae)-writing recommendations.

TOTAL:60PERIODS

LEARNINGOUTCOMES

CO1:Speak effectively in group discussions held informal/semi formal contexts.

CO2:Discuss,analyseandpresentconceptsandproblemsfromvariousperspectivestoarrive atsuitable solutions

CO3:Writeemails,lettersandeffectivejobapplications.

CO4:Writecriticalreportstoconveydataandinformationwithclarityandprecision

CO5:Giveappropriateinstructionsandrecommendationsforsafeexecutionoftasks

AssessmentPattern

- Oneonline/appbasedassessmenttotestspeakingandwriting skills
- Proficiencycertificationisgivenonsuccessfulcompletionofspeaking andwriting.

- **Note:**Theaveragevalueofthiscoursetobeusedforprogramarticulationmatrix.

21148S31B **RANDOMPROCESSESANDLINEARALGEBRA** **LTPC**
3104

COURSEOBJECTIVES:

- Tointroducethebasicnotionsofvectorspaceswhichwillthenbeusedtosolve related problems.
- To understand the concepts of vector space, linear transformations ,inner product spaces and orthogonalization..
- To provide necessary basic concepts in probability and random processes for applicationssuch as random signals, linear systems in communication engineering.
- To provide necessary basics in probability that are relevant in applications such as random

signals, linear systems in communication engineering.

- Tounderstandthebasicconceptsofprobability, oneandtwodimensionalrandom
- variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.

UNIT-I PROBABILITYANDRANDOMVARIABLES 9+3

Axioms of probability – Conditional probability – Baye's theorem - Discrete and continuousrandom variables – Moments – Moment generating functions – Binomial, Poisson,Geometric, Uniform, Exponential and Normal distributions - Functions of arandom variable.

UNIT-II TWO-DIMENSIONALRANDOMVARIABLES 9+3

Joint distributions – Marginal and conditional distributions – Covariance – Correlation andlinear regression – Transformation of random variables – Central limit theorem (forindependent and identically distributed random variables).

UNIT–III RANDOMPROCESSES9+3

Classification–Stationaryprocess–Markovprocess-Poissonprocess-DiscreteparameterMarkov chain –ChapmanKolmogorovequations(Statement only) - Limitingdistributions .

UNIT-IV VECTORSPACES 9+3

Vector spaces – Subspaces – Linear combinations and linear system of equations – Linearindependence and linear dependence – Bases and dimensions.

UNIT-V LINEARTRANSFORMATIONANDINNERPRODUCTSPACES 9+3

Linear transformation - Null spaces and ranges - Dimension theorem - Matrix representationof a linear transformations - Inner product - Norms - Gram Schmidtorthogonalizationprocess - Adjoint of linear operations - Leastsquareapproximation.

TOTAL:60 PERIODS

COURSEOUTCOMES :

Uponsuccessfulcompletionofthecourse,studentswillbeableto:

CO1:Explain the fundamental concepts of advanced algebra and theirroleinmodern mathematics and applied contexts.

CO2:Demonstrateaccurateandefficientuseofadvancedalgebraictechniques.

CO3:Applytheconceptofrandomprocessesinengineeringdisciplines.

CO4:Understand the fundamental concepts of probability with a thorough knowledge of standarddistributions that can describe certain real-life phenomenon.

CO5:Understandthebasicconceptsofoneandtwodimensionalrandomvariablesand appl ythemtomodelengineeringproblems.

2S33 **CPROGRAMMINGANDDATASTRUCTURES** **LT 30**

COURSEOBJECTIVES:

- TointroducethebasicsofCprogramminglanguage.
- TolearntheconceptsofadvancedfeaturesofC.
- TounderstandtheconceptsofADTsandlineardata structures.
- Toknowthe conceptsofnon-lineardatastructureandhashing.
- Tofamiliarizetheconceptsofsorting andsearchingtechniques.

UNITI CPROGRAMMINGFUNDAMENTALS(8+1SKILL) 9

Data Types – Variables – Operations – Expressions and Statements – Conditional Statements – Functions – Recursive Functions – Arrays – Single and Multi-Dimensional Arrays.

UNITIICPROGRAMMING- ADVANCEDFEATURES(8+1SKILL) 9

Structures – Union – Enumerated Data Types – Pointers: Pointers to Variables, Arrays and Functions – FileHandling – Preprocessor Directives.

UNITIIILINEARDATASTRUCTURES(8+1SKILL) 9

Abstract Data Types (ADTs) – List ADT – Array-Based Implementation – Linked List – Doubly- LinkedLists – Circular Linked List – Stack ADT – Implementation of Stack – Applications – Queue ADT –PriorityQueues – Queue Implementation – Applications.

UNITIVNON-LINEARDATASTRUCTURES(8+1SKILL) 9

Trees – Binary Trees – Tree Traversals – Expression Trees – Binary Search Tree – Hashing - HashFunctions–SeparateChaining–OpenAddressing–LinearProbing–QuadraticProbing–DoubleHashing–Rehashing.

UNITV SORTINGANDSEARCHINGTECHNIQUES(8+1SKILL) 9

InsertionSort –QuickSort–HeapSort–MergeSort –LinearSearch–BinarySearch.

TOTAL:45PERIODS

SKILL DEVELOPMENT ACTIVITIES (Group Seminar/Mini Project/Assignment/ContentPreparation/Quiz/SurpriseTest/SolvingGATEquestions/etc) 5

COURSEOUTCOMES:

CO1:DevelopCprogramsforanyrealworld/technicalapplication.

CO2:ApplyadvancedfeaturesofCinsolvingproblems.

CO3:Writefunctionstoimplementlinearandnon–lineardatastructureoperations.

CO4: Suggestanduseappropriatelinear/non–lineardatastructureoperations forsolvinga givenproblem.

CO5:Appropriatelyusesortandsearchalgorithmsforagivenapplication.

CO6:Apply appropriate hash functions that result in a collision free scenario for datastorage andretrieval.

00 3 1.5

COURSEOBJECTIVES

- TolearnthecharacteristicsofPNJunctiondiodeandZenerdiode.
- Tounderstandtheoperationofrectifiersand filters.
- Tostudythecharacteristics ofamplifier.

LISTOFEXPERIMENTS

1. CharacteristicsofPNJunctionDiodeandZenerdiode.
2. FullWaveRectifierwithFilters.
3. DesignofZenerdiodeRegulator.
4. CommonEmitterinput-outputCharacteristics.
5. MOSFETDraincurrentandTransferCharacteristics.

6.FrequencyresponseofCEandCSamplifiers.
7.FrequencyresponseofCB andCC amplifiers.
8.FrequencyresponseofCascodeAmplifier
9.CMRRmeasurementofDifferentialAmplifier
10.ClassATransformer Coupled Power Amplifier.

COURSEOUTCOMES

Attheendofthelaboratorycourse,thestudentwillbeabletounderstand the

CO1: Characteristics of PN Junction Diode and Zener diode.

CO2: DesignandTestingofBJTandMOSFETamplifiers.

CO3: Operationofpoweramplifiers.

TOTAL:45PERIODS

REFERENCE:

XYZofOscilloscope–Applicationnote:TektronixUSA.

TOTAL:30PERIODS

COURSEOUTCOMES:

Onsuccessfulcompletionthestudentswillbeableto

CO1:Use MSWord to create quality documents, by structuring and organizing content for their dayto day technical and academic requirements

CO2:Use MSEXCEL to perform data operations and analytics, record, retrieve data as per requirements and visualize data for ease of understanding

CO3:UseMSPowerPointtocreatehighqualityacademicpresentationsbyincluding commontables, charts, graphs, interlinking other elements, and using media objects.

21152C41 ELECTROMAGNETICFIELDS L TPC
3003

COURSEOBJECTIVES:

- Toimpartknowledgeonthebasicsofstaticelectricfieldandtheassociated laws
- Toimpartknowledgeonthebasicsofstaticmagneticfieldand theassociatedlaws
- Togive insight into coupling betweenelectric and magnetic fieldsthroughFaraday's law, displacement current and Maxwell's equations
- TogainthebehaviourofthepropagationofEMwaves
- Tostudythesignificance ofTimevaryingfields.

UNITI INTRODUCTION 9

Electromagneticmodel,Unitsandconstants,Reviewofvectoralgebra,Rectangular, cylindricalandsphericalcoordinatesystems,Line,surfaceandvolumeintegrals, Gradientof ascalarfield,Divergenceofavectorfield,Divergencetheorem,Curlofavectorfield, Stoke'stheorem,Nullidentities,Helmholtz'stheorem,Verifytheoremsfordifferentpath, surfaceandvolume.

UNITII ELECTROSTATICS 9

Electricfield,Coulomb'slaw,Gauss'slawandapplications,Electricpotential,Conductors instaticelectricfield,Dielectricsinstaticelectricfield,Electricfluxdensityanddielectric constant,Boundaryconditions,Electrostaticsboundaryvalueproblems,Capacitance, Parallel,cylindricalandsphericalcapacitors,Electrostaticenergy,Poisson'sandLaplace's equations, Uniqueness of electrostatic solutions, Current density and Ohm's law, ElectromotiveforceandKirchhoff'svoltagelaw,EquationofcontinuityandKirchhoff's currentlaw

UNITIII MAGNETOSTATICS 9

Lorentzforceequation,Ampere'slaw,Vectormagneticpotential,Biot-Savartlawand applications, Magnetic field intensity and idea of relative permeability, Calculation ofmagnetic field intensity for various current distributions Magnetic circuits, Behaviour ofmagnetic materials, Boundary conditions, Inductance and inductors, Magnetic energy,Magnetic forces and torques

UNITIV TIME-VARYINGFIELDSANDMAXWELL'sEQUATIONS 9

Faraday'slaw,DisplacementcurrentandMaxwell-Amperelaw,Maxwell'sequations, Potentialfunctions,Electromagneticboundaryconditions,Waveequationsandsolutions, Time-harmonicfields,ObservingthePhenomenonofwavepropagationwiththeaidofMaxwell's equations

UNITV PLANEELECTROMAGNETICWAVES 9

Planewavesinlosslessmedia,Planewavesinlossymedia(low-lossdielectricsandgood conductors),Groupvelocity,ElectromagneticpowerflowandPoyntingvector,Normalincidence at a plane conducting boundary, Normal incidence at a plane dielectric boundary

COURSEOUTCOMES:

Attheendofthecoursethestudentswillbeableto

CO1:Relatethefundamentalsofvector,coordinatesystemtoelectromagneticconcepts
CO2:AnalyzethecharacteristicsofElectrostaticfield
CO3:InterprettheconceptsofElectricfieldinmaterialspaceandsolvetheboundary conditions**CO4**: Explain the concepts and characteristics of Magneto Static field in material space and solve boundary conditions.
CO5:Determinethesignificanceoftimevaryingfields

TOTAL:45PERIODS

21152C45 NETWORKS AND SECURITY LTP C30 24

COURSEOBJECTIVES:

- TolearntheNetworkModelsanddatalinklayerfunctions.
- TounderstandroutingintheNetworkLayer.
- Toexploremethodsofcommunicationand congestioncontrolbytheTransportLayer.
- TostudytheNetworkSecurityMechanisms.
- Tolearnvarioushardwaresecurityattacksandtheircountermeasures**.**

UNITI NETWORKMODELSANDDATALINKLAYER 9

Overview of Networks and its Attributes – Network Models – OSI, TCP/IP, Addressing – Introductionto Datalink Layer – Error Detection and Correction – Ethernet(802.3)-WirelessLAN – IEEE 802.11, Bluetooth– Flow and Error Control Protocols – HDLC – PPP.

UNITII NETWORKLAYERPROTOCOLS 9

Network Layer – IPv4 Addressing – Network Layer Protocols(IP,ICMP and Mobile IP)Unicast and Multicast Routing – Intradomain and Interdomain Routing Protocols – IPv6Addresses – IPv6 – Datagram Format - Transition from IPv4 to IPv6.

UNITIII TRANSPORTANDAPPLICATIONLAYERS 9

TransportLayerProtocols–UDPandTCPConnectionandStateTransitionDiagram-CongestionControlandAvoidance(DECbit,RED)-QoS-ApplicationLayerParadigms–Client–ServerProgramming–DomainName System–WorldWideWeb,HTTP,Electronic Mail.

UNITIV NETWORKSECURITY 9

OSISecurityArchitecture–Attacks–SecurityServicesandMechanisms–Encryption–AdvancedEncryptionStandard–PublicKeyCryptosystems–RSAAlgorithm–Hash Functions–SecureHashAlgorithm–DigitalSignatureAlgorithm.

UNIT V HARDWARESECURITY 9

Introduction to hardware security, Hardware Trojans, Side – Channel Attacks – PhysicalAttacksandCountermeasures–DesignforSecurity.IntroductiontoBlockchainTechnology.

45PERIODS

PRACTICALEXERCISES: 30PERIODS

ExperimentsusingC

1. ImplementtheDataLinkLayerframingmethods,
   i) Bitstuffing,(ii)Characterstuffing
2. ImplementationofErrorDetection/ CorrectionTechniques
   i) LRC,(ii)CRC,(iii)Hammingcode
3. ImplementationofStopandWait,andSliding WindowProtocols
4. ImplementationofGoback-NandSelectiveRepeatProtocols.
5. ImplementationofDistanceVectorRoutingalgorithm(RoutingInformation Protocol)(Bellman-Ford).
6. ImplementationofLink StateRoutingalgorithm(OpenShortestPathFirst)with5 nodes(Dijkstra's).
7. Dataencryptionanddecryptionusing DataEncryptionStandardalgorithm.
8. DataencryptionanddecryptionusingRSA(Rivest,ShamirandAdleman) algorithm.
9. ImplementClientServermodelusingFTPprotocol.

ExperimentsusingToolCommandLanguage

1. ImplementandrealizetheNetworkTopology- Star,BusandRingusing NS2.
2. ImplementandperformtheoperationofCSMA/CDandCSMA/CAusing NS2.

COURSEOUTCOMES:

Upon successful completionofthecoursethestudentwillbeableto **CO1**: Explain the Network Models, layers and functions.

CO2:Categorizeandclassifytheroutingprotocols.

CO3: List the functions of the transport and application layer.

CO4: Evaluate and choose the network security mechanisms.

CO5:Discussthehardwaresecurityattacksandcountermeasures.

21152C44 **DIGITALSIGNALPROCESSING** **L C**
3 4

COURSEOBJECTIVES:

- Tolearndiscretefouriertransform,propertiesofDFT anditsapplicationtolinear filtering
- To understand the characteristics of digital filters, designdigital IIR and FIR filters and applythese filters to filter undesirable signals in various frequency bands
- Tounderstandtheeffectsoffinite precisionrepresentationondigitalfilters
- Tounderstandthefundamentalconceptsofmultiratesignalprocessinganditsapplications
- Tointroducetheconceptsofadaptivefiltersanditsapplicationtocommunication engineering

UNITI DISCRETEFOURIERTRANSFORM 9

SamplingTheorem,conceptoffrequencyindiscrete-timesignals,summaryofanalysis& synthesisequationsforFT&DTFT,frequencydomainsampling,DiscreteFouriertransform (DFT)-derivingDFTfromDTFT,propertiesofDFT-periodicity,symmetry,circular convolution.LinearfilteringusingDFT.Filteringlongdatasequences-overlapsaveand overlapaddmethod.FastcomputationofDFT-Radix-2Decimation-in-time(DIT)Fast Fouriertransform(FFT),Decimation-in-frequency(DIF)FastFouriertransform(FFT). LinearfilteringusingFFT.

UNITII INFINITEIMPULSERESPONSEFILTERS 9

Characteristicsofpracticalfrequencyselectivefilters.characteristicsofcommonlyusedanalogfilters-Butterworth filters,Chebyshevfilters.Design ofIIR filters fromanalogfilters

(LPF, HPF, BPF,BRF) - Approximation of derivatives, Impulse invariance method, Bilineartransformation. Frequency transformationintheanalogdomain.StructureofIIRfilter-directformI,directformII,Cascade, parallel realizations.

UNITIII FINITEIMPULSERESPONSEFILTERS 9

Design ofFIRfilters-symmetricand Anti-symmetricFIRfilters-designoflinearphaseFIR filters usingFourier series method - FIR filter design usingwindows (Rectangular, Hammingand Hanning window), Frequency sampling method. FIR filter structures - linear phasestructure, direct form realizations

UNITIV FINITEWORDLENGTHEFFECTS 9

Fixed point and floatingpoint number representation-ADC - quantization-truncationandrounding - quantization noise - input / output quantization - coefficient quantization error-productquantization error - overflow error - limit cycle oscillations due to product quantizationandsummation - scaling to prevent overflow.

UNIT V DSPAPPLICATIONS 9

Multirate signal processing: Decimation, Interpolation, Sampling rate conversion by a rational factor–AdaptiveFilters: Introduction,Applicationsofadaptivefiltering toequalization-DSPArchitecture-Fixed and Floating point architecture principles

45PERIODS

PRACTICALEXERCISES: 30PERIODS

MATLAB/EQUIVALENTSOFTWAREPACKAGE/DSPPROCESSORBASED IMPLEMENTATION

1. GenerationofelementaryDiscrete-Timesequences
2. LinearandCircular convolutions
3. AutocorrelationandCrossCorrelation
4. FrequencyAnalysisusingDFT
5. DesignofFIRfilters(LPF/HPF/BPF/BSF)anddemonstratesthefiltering operation
6. DesignofButterworthandChebyshevIIRfilters(LPF/HPF/BPF/BSF)anddemonstratethe filtering operations
7. Studyofarchitecture ofDigitalSignalProcessor
8. PerformMACoperationusingvariousaddressingmodes
9. Generationofvarioussignalsandrandomnoise
10. DesignanddemonstrationofFIRFilter forLowpass, Highpass, BandpassandBand stop filtering
11. DesignanddemonstrationofButterworthandChebyshevIIRFiltersforLowpass, High pass, Band pass and Band stop filtering
12. ImplementanUp-samplingandDown-samplingoperationinDSPProcessor

COURSEOUTCOMES:

Attheendofthecoursestudentswillbeableto:

CO1: ApplyDFTfortheanalysisofdigitalsignalsandsystems
CO2: DesignIIRandFIRfilters

21149S46 ENVIRONMENTALSCIENCESANDSUSTAINABILITY LTPC
20 0 2

COURSEOBJECTIVES:

- To introduce the basic concepts of environment, ecosystems and biodiversityand emphasize on the biodiversity of India and its conservation.
- To impart knowledge on the causes, effects and control or prevention measures of environmental pollution and natural disasters.
- To facilitate the understanding of global and Indian scenario of renewable and nonrenewable resources, causes of their degradation and measures to preserve them.
- To familiarize the concept of sustainable development goals and appreciate the interdependence of economic and social aspects of sustainability, recognize and analyze climate changes, concept ofcarbon credit and the challenges ofenvironmental management.
- To inculcate and embrace sustainability practices and develop a broader understanding on green materials, energycycles and analyze the role of sustainable urbanization.

UNIT I ENVIRONMENTANDBIODIVERSITY 6

Definition,scopeandimportanceofenvironment–needforpublicawareness.Eco-system and Energy flow– ecological succession. Types of biodiversity: genetic, species andecosystem diversity– values of biodiversity, India as a mega-diversity nation – hot-spots ofbiodiversity – threatsto biodiversity: habitat loss, poachingof wildlife, man-wildlife conflicts–endangeredandendemicspeciesofIndia–conservationofbiodiversity:In-situandex-situ.

UNITII ENVIRONMENTALPOLLUTION 6

Causes,EffectsandPreventivemeasuresofWater,Soil,AirandNoisePollutions. Solid, Hazardous andE-Wastemanagement.CasestudiesonOccupationalHealthand Safety Management system (OHASMS). Environmental protection, Environmentalprotectionacts .

UNITIII RENEWABLESOURCESOFENERGY 6

Energy managementandconservation, New Energy Sources: Need ofnewsources. Differenttypesnew energy sources. Applications of- Hydrogen energy, Ocean energy resources, Tidalenergy conversion. Concept, origin and power plants of geothermal energy.

UNITIV SUSTAINABILITYANDMANAGEMENT 6

Development,GDP,Sustainability-concept,needsandchallenges-economic,socialandaspectsofsustainability-fromunsustainabilitytosustainability-millenniumdevelopment goals,andprotocols-SustainableDevelopmentGoals-targets,indicatorsandintervention areasClimatechange-Global,Regionalandlocalenvironmentalissuesandpossible solutions-case studies. Concept of Carbon Credit, CarbonFootprint. Environmentalmanagement in industry-A case study.

UNIT V SUSTAINABILITYPRACTICES 6

Zero waste and R concept, Circular economy, ISO 14000 Series, Material Life cycleassessment, Environmental Impact Assessment. Sustainable habitat: Green buildings, Greenmaterials, Energy efficiency, Sustainable transports. Sustainable energy: Non-conventionalSources, Energy Cycles- carbon cycle, emission and sequestration, Green Engineering:Sustainable urbanization- Socio- economical and technological change.

TOTAL:30PERIODS

COURSEOUTCOMES:

CO1:To recognize and understand the functions of environment, ecosystems and biodiversity andtheir conservation.

CO2:To identify the causes, effects of environmental pollution and natural disasters and contributeto the preventive measures in the society.

CO3:Toidentifyandapplytheunderstandingofrenewableandnon-renewableresourcesand contribute to the sustainable measures to preserve them for future generations.

CO4:Torecognizethedifferentgoalsofsustainabledevelopmentandapplythemfor suitabletechnological advancement and societal development.

CO5:To demonstrate the knowledge of sustainability practices and identify green materials, energycycles and the role of sustainable urbanization.

21152C51 **WIRELESSCOMMUNICATION** **LTPC**

302

4

COURSEOBJECTIVES:

- Tostudyandunderstandtheconceptsanddesignofa CellularSystem.
- ToStudyAndUnderstandMobileRadio PropagationAndVariousDigital ModulationTechniques.
- ToUnderstandTheConceptsOfMultipleAccessTechniques AndWirelessNetworks

UNIT-I THECELLULARCONCEPT-SYSTEMDESIGNFUNDAMENTALS 9

Introduction-FrequencyReuse-Channel Assignment Strategies-**Handoff Strategies:**Prioritizing Handoffs, PracticalHandoff Considerations. **Interference And System Capacity**: Co-Channel Interference And System Capacity-Channel Planning For Wireless Systems, Adjacent Channel Interference, Power Control For Reducing Interference,Trunking And Grade Of Service. **Improving Coverage And Capacity In Cellular Systems:** CellSplitting,Sectoring.

UNIT-II MOBILERADIOPROPAGATION 9

LargeScalePathLoss: IntroductionToRadioWavePropagation-FreeSpacePropagationModel – **Three Basic Propagation Mechanism:** Reflection – Brewster Angle-Diffraction- Scattering.**Small ScaleFading And Multipath:** Small Scale Multipath Propagation, Factors Influencing Small-Scale Fading, Doppler Shift,Coherence Bandwidth, Doppler Spread And Coherence Time. **TypesOf Small- Scale Fading:** Fading Effects Due ToMultipath Time Delay Spread, Fading Effects Due To Doppler Spread.

UNIT-III MODULATIONTECHNIQUESANDEQUALIZATIONANDDIVERSITY9

Digital Modulation – An Overview: Factors That Influence The Choice Of Digital Modulation, **Linear ModulationTechniques:** Minimum Shift Keying (MSK), Gaussian Minimum ShiftKeying(GMSK), **Spread Spectrum ModulationTechniques:** Pseudo- Noise (PN) Sequences,Direct Sequence Spread Spectrum (DS-SS)- Modulation Performance InFading And Multipath Channels- **Equalization, Diversity And Channel Coding:** Introduction-Fundamentals OfEqualization- **Diversity Techniques:** Practical Space Diversity Considerations, Polarization Diversity, FrequencyDiversity, Time Diversity.

UNIT-IV MULTIPLEACCESSTECHNIQUES 9

Introduction: Introduction To Multiple Access- Frequency Division MultipleAccess(FDMA)- Time Division Multiple Access(TDMA)- Spread Spectrum MultipleAccess-Code Division Multiple Access(CDMA)- Space Division Multiple Access(SDMA)-**Capacity Of Cellular Systems:** Capacity Of Cellular CDMA, Capacity Of CDMA WithMultiple Cells.

UNIT-V WIRELESSNETWORKING 9

Introduction: Difference Between Wireless And Fixed Telephone Networks, The Public Switched TelephoneNetwork(PSTN), **Development Of Wireless Networks:** First Generation Wireless Networks, Second GenerationWireless Networks, Third Generation Wireless Networks, Fixed Network Transmission Hierarchy,**TrafficRoutingInWireless Networks**: Circuit Switching, Packet Switching- **Personal Communication Services/Networks(PCS/PCNs):**Packet VsCircuit Switching For PCN, Cellular Packet- Switched Architecture-PacketReservation Multiple Access(PRMA)- **Network Databases:** DistributedDatabase For Mobility Management-UniversalMobile Telecommunication Systems(UMTS).

45PERIODS

PRACTICALEXERCISES: **30PERIODS**

1. Modelingofwirelesscommunicationsystemsusing Matlab(Two raychannel andOkumura –Hata model)
2. ModelingandsimulationofMultipathfadingchannel
3. Design, analyze and test Wireless standards and evaluate the performance measurements suchasBER,PER,BLER,throughput,capacity,ACLR, EVMfor4Gand5GusingMatlab
4. Modulation:SpreadSpectrum–DSSSModulation&Demodulation
5. Wireless Channel equalization: Zero-Forcing Equalizer (ZFE),MMSE Equalizer(MMSEE),AdaptiveEqualizer(ADE),DecisionFeedbackEqualizer (DFE)
6. ModelingandsimulationofTDMA,FDMAandCDMAfor wirelesscommunication

TOTAL:75PERIODS

COURSEOUTCOMES :

Uponsuccessfulcompletionofthecoursethestudentwillbeableto: CO1:Understand TheConcept And Design Of A Cellular System.

CO2:UnderstandMobileRadioPropagationAndVariousDigitalModulation

Techniques.**CO3**:Understand The Concepts Of Multiple Access Techniques And Wireless Networks **CO4**:Characterize a wireless channel and evolve the system designspecifications**CO5**:Designacellularsystembasedonresourceavailability and traffic demands.

21152C52 VLSIANDCHIPDESIGN L TPC

3003

COURSEOBJECTIVES:

- UnderstandthefundamentalsofICtechnologycomponentsandtheircharacteristics.
- Understandcombinationallogiccircuitsanddesignprinciples.
- Understandsequentiallogiccircuitsandclockingstrategies.
- UnderstandASICDesignfunctioninganddesign.
- UnderstandMemoryArchitectureandbuilding blocks

UNITI MOSTRANSISTORPRINCIPLES 9

MOS logic families (NMOS and CMOS), Ideal and Non Ideal IV Characteristics, CMOSdevices. MOS(FET) Transistor Characteristic under Static and Dynamic Conditions,Technology Scaling, power consumption

UNITII COMBINATIONALLOGICCIRCUITS 9

Propagation Delays, stick diagram, Layout diagrams, Examples of combinational logicdesign,Elmore's constant, Static Logic Gates,Dynamic Logic Gates, Pass Transistor Logic,Power Dissipation, Low Power Design principles.

UNITIII SEQUENTIALLOGICCIRCUITSANDCLOCKINGSTRATEGIES 9

Static Latches and Registers, Dynamic Latches and Registers, Pipelines, NonbistableSequential Circuits.Timing classification of Digital Systems, Synchronous Design, Self-Timed Circuit Design .

UNIT IV

INTERCONNECT,MEMORYARCHITECTUREANDARITHMETIC 9CIRCUITS

InterconnectParameters–Capacitance,Resistance,andInductance,ElectricalWireModels, Sequential digital circuits: adders, multipliers, comparators, shift registers. Logic ImplementationusingProgrammableDevices(ROM,PLA,FPGA),MemoryArchitecture andBuildingBlocks,MemoryCoreandMemoryPeripheralsCircuitry

UNITV ASICDESIGNANDTESTING 9

Introductiontowafertochipfabricationprocessflow.Microchipdesignprocess&issuesin testandverificationofcomplexchips,embeddedcoresandSOCs,Fault models,Testcoding.ASIC Design Flow, Introduction to ASICs, Introduction to test benches,Writingtest benchesin Verilog HDL, Automatic test pattern generation, Design for testability, Scan design: Testinterface and boundary scan.

TOTAL:45PERIODS

COURSEOUTCOMES:

Upon successful completionofthecoursethestudentwillbeabletoCO1:In depth knowledge of MOS technology

CO2: Understand Combinational Logic Circuits and Design Principles**CO3**: Understand Sequential Logic Circuits and ClockingStrategies**CO4**:UnderstandMemoryarchitectureand building blocks

CO5:UnderstandtheASICDesignProcessandTesting.

21152C53 TRANSMISSIONLINESANDRFSYSTEMS LTPC 3003

COURSEOBJECTIVES:

- Tointroducethevarioustypesoftransmissionlinesandits characteristics
- Tounderstandhighfrequencyline, power andimpedancemeasurements
- Toimparttechnicalknowledgeinimpedancematchingusing SmithChart.
- Tointroducepassivefiltersand basicknowledgeofactiveRFcomponents
- Tolearnthe conceptsofa RFsystemtransceiverdesign.

UNIT I TRANSMISSIONLINETHEORY 9

GeneraltheoryofTransmissionlines-thetransmissionline-generalsolution-Theinfinite line-Wavelength,velocityofpropagation-Waveformdistortion-thedistortionlessline-Loadinganddifferentmethodsofloading-LinenotterminatedinZ0-Reflection coefficient-calculationofcurrent,voltage,powerdeliveredandefficiencyoftransmission-Inputandtransferimpedance-Openandshortcircuitedlines-reflectionfactorandreflection loss.

UNITII HIGHFREQUENCYTRANSMISSIONLINES 9

Transmissionlineequationsatradiofrequencies-LineofZerodissipation-Voltageand current on thedissipationlessline,StandingWaves,Nodes,StandingWaveRatio-Inputimpedance of the dissipation less line - Open and short circuited lines - Power and impedance measurement onlines -Reflection losses - Measurement of VSWR and wavelength.

UNITIII IMPEDANCEMATCHINGINHIGHFREQUENCYLINE 9

Impedance matching: Quarter wave transformer ,One Eighth wave line, Half wave line- Impedance matching by stubs- Single stub and double stub matching - Smith chart – Application of Smith chart, Solutions of problems using Smithchart - Singleand double stubmatching using Smith chart.

UNITIV WAVEGUIDES 9

Waves between parallel planes of perfect conductors- Transverse Electric waves andTransverse Magnetic waves, Characteristics of TE and TM waves, TransverseElectromagnetic waves, TM and TE waves in Rectangular waveguides, TMand TEwaves inCircular waveguides.

UNIT V RFSYSTEMDESIGNCONCEPTS 9

ActiveRFcomponents:SemiconductorbasicsinRF,bipolarjunctiontransistors,RFfield effecttransistors,Highelectronmobilitytransistors,FundamentalsofMMIC,Basicconcepts ofRFdesign:Filters,couplers,powerdividers,Amplifierpowerrelations,Lownoise amplifiers,Poweramplifiers.

COURSEOUTCOMES:

CO1:Explainthecharacteristicsoftransmissionlinesanditslosses.
CO2:Calculatethestandingwaveratioandinputimpedanceinhighfrequency transmission lines.
CO3:AnalyzeimpedancematchingbystubsusingSmithCharts.
CO4:ComprehendthecharacteristicsofTEandTMwaves.
CO5:DesignaRFtransceiversystemforwirelesscommunication

21152S62 EMBEDDEDSYSTEMSANDIOTDESIGN LTP C3024

COURSEOBJECTIVES:

- Learnthe architectureandfeaturesof8051.
- Studythedesignprocess ofanembeddedsystem.
- Understandthereal–time processinginanembeddedsystem.
- Learnthearchitectureand designflowofIoT.
- BuildanIoTbased system.

UNIT I 8051MICROCONTROLLER 9

Microcontrollers for an Embedded System – 8051 – Architecture – Addressing Modes – Instruction Set– ProgramandDataMemory– Stacks– Interrupts–Timers/Counters – SerialPorts – Programming.

UNITII EMBEDDEDSYSTEMS 9

Embedded System Design Process – Model Train Controller – ARM Processor – InstructionSet Preliminaries – CPU – Programming Input and Output – Supervisor Mode – Exceptionsand Trap – Models for programs – Assembly, Linking and Loading – CompilationTechniques – Program Level Performance Analysis.

UNITIII PROCESSESANDOPERATINGSYSTEMS 9

Structure of a real – time system – Task Assignment and Scheduling – Multiple Tasks andMultiple Processes – Multirate Systems – Pre emptive real – time Operating systems – Priority based scheduling – Interprocess Communication Mechanisms – DistributedEmbedded Systems – MPSoCs and Shared Memory Multiprocessors – Design Example –Audio Player, Engine Control Unit and Video Accelerator.

UNITIV IOTARCHITECTUREANDPROTOCOLS 9

Internet – of – Things – Physical Design, Logical Design – IoT Enabling Technologies – Domain Specific IoTs – IoT and M2M– IoT SystemManagement with NETCONF – YANG– IoT Platform Design – Methodology – IoT Reference Model – Domain Model – CommunicationModel–IoTReferenceArchitecture–IoTProtocols-MQTT,XMPP, Modbus,CANBUSandBACNet.

UNITV IOTSYSTEMDESIGN 9

Basicbuildingblocksofan IoTdevice–RaspberryPi–Board–LinuxonRaspberryPi–Interfaces–Programming with Python – Case Studies: Home Automation, Smart Cities, Environment and Agriculture.

21152S63 ARTIFICIALINTELLIGENCEANDMACHINE LEARNING LTPC

30 24

COURSEOBJECTIVES:

Themainobjectivesofthiscourseareto:

- StudyaboutuninformedandHeuristicsearchtechniques.
- Learntechniquesforreasoningunderuncertainty
- IntroduceMachineLearningandsupervisedlearningalgorithms
- Studyabout ensemblingandunsupervisedlearning algorithms
- Learnthebasicsofdeeplearning usingneuralnetworks

UNITI PROBLEMSOLVING 9

Introduction to AI - AI Applications - Problem solving agents – search algorithms – uninformed search strategies – Heuristic search strategies – Local search and optimizationproblems – adversarial search – constraint satisfaction problems (CSP)

UNITII PROBABILISTICREASONING 9

Acting under uncertainty – Bayesian inference – naïve bayes models. Probabilistic reasoning–Bayesiannetworks–exactinferenceinBN–approximateinferenceinBN–causal networks.

UNITIII SUPERVISEDLEARNING 9

Introductiontomachinelearning–LinearRegressionModels:Leastsquares,single& multiplevariables,Bayesianlinearregression,gradientdescent,LinearClassification Models:Discriminantfunction–Probabilisticdiscriminativemodel-Logisticregression, Probabilisticgenerativemodel–NaiveBayes,Maximummarginclassifier–Supportvector machine,DecisionTree,Randomforests

UNITIV ENSEMBLETECHNIQUESANDUNSUPERVISEDLEARNING 9

Combiningmultiplelearners:Modelcombinationschemes,Voting,EnsembleLearning-bagging,boosting,stacking,Unsupervisedlearning:K-means,InstanceBasedLearning:KNN, Gaussian mixture models and Expectation maximization

UNITV NEURALNETWORKS 9

Perceptron - Multilayer perceptron, activation functions, network training – gradient descentoptimization – stochastic gradient descent, error backpropagation, from shallow networks todeep networks –Unit saturation (aka the vanishing gradient problem) – ReLU,hyperparameter tuning, batch normalization, regularization, dropout.

45PERIODS

PRACTICALEXERCISES: **30PERIODS**

1. ImplementationofUninformedsearchalgorithms(BFS,DFS)
2. ImplementationofInformed searchalgorithms(A*,memory-boundedA*)
3. ImplementnaïveBayes models
4. ImplementBayesianNetworks
5. BuildRegressionmodels
6. Build decisiontreesandrandomforests
7. BuildSVMmodels
8. Implementensemblingtechniques
1. Implementclusteringalgorithms
2. ImplementEMforBayesian networks
3. BuildsimpleNNmodels
4. BuilddeeplearningNNmodels

OUTCOMES:

Attheendofthiscourse,thestudentswillbeableto:

CO1:Useappropriatesearchalgorithmsforproblemsolving

CO2:Applyreasoningunderuncertainty

CO3:Buildsupervisedlearningmodels

CO4:Buildensemblingandunsupervisedmodels

CO5:Builddeeplearningneuralnetworkmodels

TOTAL:75PERIODS

21152INT76 SUMMER INTERNSHIP LTP C000 2

COURSEOBJECTIVES:

Toenablethestudentsto

- Getconnectedwithindustry/laboratory/researchinstitute
- Getpracticalknowledgeonproductionprocessintheindustryanddevelopskillstosolve related problems
- Developskillstocarryout researchintheresearch institutes/laboratories

The students individually undergo training in reputed firms/ research institutes / laboratories for the specified duration. After the completion of training, a detailed report should be submitted within ten days from the commencement of next semester. The students will be evaluated as per the Regulations.

No.ofWeeks:04 COURSE

OUTCOMES:

Oncompletionofthecourse,thestudentwillknowabout

CO1:System-leveldesignprocesses,verificationandvalidationtechniques, manufacturingandproductionprocessesinthefirmorresearchfacilitiesinthe laboratory/research institute

CO2:Analysisofindustrial/researchproblemsandtheirsolutions

CO3:Documentationofsystemspecifications,designmethodologies,process parameters,testing parameters and results

CO4:Preparingoftechnicalreportandpresentation

21152P81 PROJECTWORK/INTERNSHIP LTPC002010

COURSEOBJECTIVES:

Totrainthestudentsin

- Identifying problem and developing the structured methodologyto solve theidentifiedproblemintheindustryorresearchproblemat researchInstitutionor college.
- Conductingexperiments,analyzeanddiscussthetestresults,andmakeconclusions.
- Preparingprojectreportsand presentation

The students shall individually / or as group work on a specific topic approved by theDepartment. The student can select any topic which is relevant to his/her specialization ofthe programme. The student should continue the work on the selected topic as per theformulated methodology. At the end of the semester, after completing the work to thesatisfaction of the supervisor and review committee, a detailed report which contains cleardefinitionoftheidentifiedproblem, detailed literaturereviewrelatedtotheareaofworkandmethodology for carrying out the work, results and discussion, conclusion and referencesshould be prepared asperthe format prescribed by the University and submitted to the Headof the department. The students will be evaluated based on the report and viva-voceexamination by a panel of examiners as per the Regulations.

TOTAL:300PERIODS

COURSEOUTCOMES:

Attheendoftheproject,thestudentwillbeableto

CO1: Formulate and analyze problem / create a new product/ process.CO2:Designandconductexperimentstofindsolution

CO3: Analyze the results and provide solution for the identified problem, prepare project report andmake presentation.

21152E54A OPTICALCOMMUNICATION&NETWORKS LT P C300 3

COURSEOBJECTIVES:

- ToStudyAboutTheVariousOpticalFiberModes,ConfigurationOfOpticalFibers
- ToStudyTransmissionCharacteristicsOfOpticalFibers.
- ToLearnAboutTheVariousOpticalSources,DetectorsAndTransmissionTechniques.
- ToExploreVariousIdeaAboutOpticalFiberMeasurementsAndVariousCoupling
- Techniques.
- ToEnrichTheKnowledgeAboutOpticalCommunicationSystemsAnd Networks.

UNIT-IINTRODUCTIONTOOPTICALFIBERCOMMUNICATION9

Introduction - TheGeneral Systems - Advantages of OpticalFiber Communication- **RayTheoryTransmission** : TotalInternalReflection,AcceptanceAngle, Numerical Aperture,Skew Rays- **ElectromagneticModeTheoryforOpticalPropagation**: Modes ina PlanarGuide, Phaseand group velocity - **CylindricalFiber**: Stepindexfibers, Gradedindexfibers - **Single mode fibers**: Cutoff wavelength.

UNIT-II TRANSMISSIONCHARACTERISTICSOFOPTICALFIBERS9

Attenuation -**Material absorption losses in silica glass fibers:** Intrinsicabsorption, Extrinsicabsorption -**Linear scattering losses**: Rayleigh Scattering, Mie Scattering -**Nonlinear scattering losses**: Stimulated BrillouinScattering, Stimulated Raman Scattering – Fiber Bend Loss – Dispersion- **Chromatic dispersion**: Material dispersion,Waveguide dispersion- **Intermodal dispersion** : Multimodestep indexfiber,Multimode graded index fiber.

UNIT-III OPTICALSOURCESANDOPTICALDETECTORS9

Thelaser:Introduction-**Basicconcepts**:Absorptionandemissionofradiation, Populationinversion,Opticalfeedbackandlaseroscillation,Thresholdconditionforlaser oscillation-**Opticalemissionfromsemiconductors**:ThePNjunction,Spontaneous emission, Carrier recombination, Stimulated emission and lasing, Hetero junctions- **LED**:Introduction- Power and Efficiency - **LED structures**: Planar LED, Dome LED, SurfaceemitterLED,EdgeemitterLED-LEDCharacteristics.**OpticalDetectors:**Introduction ,Optical Detection Principles, Quantum Efficiency, Resposivity, P-N Photodiode ,P-I-NPhoto Diode and Avalanche Photodiode.

UNIT-IVOPTICALFIBERMEASUREMENTS 9

Introduction- Total Fiber Attenuation Measurement, Fiber Dispersion Measurements InTime Domain and Frequency Domain, Fiber Cut off Wavelength Measurements, NumericalAperture Measurements. Fiber Diameter Measurements,.Reflectance And Optical ReturnLoss, Field Measurements

UNIT-V OPTICALNETWORKS 9

Introduction- Optical NetworkConcepts: Optical NetworkingTerminology, Optical NetworkNodeAndSwitchingElements,WavelengthDivisionMultiplexedNetworks,Public TelecommunicationsNetworkOverview-OpticalNetworkTransmissionModes,Layers And Protocols: Synchronous Networks, Asynchronous Transfer Mode, Open System InterconnectionReferenceModel,OpticalTransportNetwork,InternetProtocol-Wavelength RoutingNetworks:RoutingAndWavelengthAssignment-OpticalSwitchingNetworks: OpticalCircuitSwitchedNetworks,OpticalPacketSwitchedNetworks,MultiprotocolLabel Switching,OpticalBurstSwitchingNetworks-OpticalNetworkDeployment:LongHaul Networks,Metropolitanareanetworks,Accessnetworks,LocalAreaNetworks-Optical Ethernet:Networkprotection,restorationandsurvivability.

TOTAL:45PERIODS

COURSEOUTCOMES

At the end of the course, the student will be able to understand the

CO1:RealizeBasicElementsInOpticalFibers,DifferentModesAnd Configurations.

CO2:AnalyzeTheTransmissionCharacteristicsAssociatedWithDispersionAnd Polarization Techniques.
CO3:DesignOpticalSourcesAndDetectorsWithTheirUseInOpticalCommunicationSystem.
CO4:ConstructFiberOpticReceiverSystems,MeasurementsAndTechniques. CO5:Design Optical Communication Systems And Its Networks.

21152E54C AVIONICSSYSTEMS L TPC
300
3

COURSEOBJECTIVES:

- Toimpartknowledgeontheneedsfor avionicsforbothCivilandmilitaryaircraft.
- Toimpartknowledgeonavionicsarchitectureand Avionicsdatabus.
- Toimpartknowledgeunderstandthevariouscockpitdisplays andhumaninterfaces.
- Toimpartknowledgeontheconceptsofflightcontrolsystems, FMSandtheirimportance
- Toimpartknowledgeondifferentnavigationaidsandneedfor certification

UNITI INTRODUCTIONTOAVIONICS 9

Basics of Avionics-Basics of Cockpits – Need for Avionics in civil and military aircraft andspacesystems–IntegratedAvionicsArchitecture–MilitaryandCivilsystem–Typical avionics SystemandSubsystems–Designand Technologies –Requirementsand Importanceof illities of Avionic Systems.

UNITII DIGITALAVIONICSBUSARCHITECTURE 9

Evolution ofAvionics architecture– Avionics Data buses MIL-STD-1553, MIL-STD-1773,ARINC- 429, ARINC-629, AFDX/ARINC-664, ARINC-818 – Aircraft system Interface

UNITIII COCKPITDISPLAYSANDMAN-MACHINEINTERACTION 9

Trendsindisplaytechnology-CRT,LED,LCD,ELandplasmapanel -Touchscreen-Directvoice input (DVI) –-Civil cockpit and military cockpit: MFD, MFK, HUD, HDD, HMD,HOTAS –Glass cockpit.

UNITIV FLIGHTCONTROLSYSTEMS 9

IntroductiontoFlightcontrolsystemsandFMS–Longitudinalcontrol–LateralControl–Autopilot–Flightplanning–RadarElectronicWarfare-Certification-Militaryandcivil aircrafts.

UNITV NAVIGATIONSYSTEMS 9

Overviewofnavigationsystems-CommunicationSystems–Radionavigation–Types&Principles –FundamentalsofInertialSensors–INS – GNSS --GPS –ApproachandLanding Aids– ILS & MLS – Hybrid Navigation

COURSEOUTCOMES: **TOTAL:45PERIODS**

Uponcompletionofthecourse,studentswillbeable to:

CO1:ExplainthedifferentofAvionicsSystemsanditsneedforcivilandmilitaryaircrafts consideringthe reliability and safety aspects

21152E54B **4G/5GCOMMUNICATIONNETWORKS** **LT P C20 23**

COURSEOBJECTIVES

- Tolearnthe evolutionofwirelessnetworks.
- Togetacquaintedwiththe fundamentalsof5Gnetworks.
- Tostudythe processesassociated with5G architecture.
- Tostudyspectrumsharingandspectrumtrading.
- Tolearnthesecurityfeaturesin5G networks.

UNITI EVOLUTIONOFWIRELESSNETWORKS 6

Networksevolution:2G,3G,4G,evolutionofradioaccessnetworks,needfor5G.4Gversus5G,Next Generation core(NG-core), visualized Evolved Packet core(vEPC).

UNITII 5GCONCEPTS ANDCHALLENGES 6

Fundamentals of 5G technologies, overview of 5G core network architecture,5G new radioand cloud technologies, Radio Access Technologies (RATs), EPC for 5G.

UNITIII NETWORKARCHITECTUREANDTHEPROCESSES 6

5G architecture and core, network slicing, multi access edge computing(MEC)visualizationof 5G components, end-to-end system architecture, service continuity, relation to EPC, andedge computing. 5G protocols: 5G NAS,NGAP, GTP-U, IPSec and GRE.

UNITIV DYNAMICSPECTRUMMANAGEMENTANDMM-WAVES 6

Mobilitymanagement,Commandandcontrol,spectrumsharingandspectrumtrading,cognitive radio based on 5G, millimeter waves.

UNITV SECURITYIN5GNETWORKS 6

Security features in 5G networks, networkdomain security, user domain security, flow basedQoS framework,mitigating the threats in 5G.

30PERIODS

PRACTICALEXERCISES: **30PERIODS**

SIMULATIONUSINGMATLAB

1. 5G-Compliantwaveformgenerationandtesting
2. Modelingof5GSynchronizationsignalblocksandbursts
3. Channelmodelingin5Gnetworks
4. MultibandOFDMdemodulation
5. PerfectChannelestimation
6. Developmentof5gNewRadioPolarCoding

COURSEOUTCOMES

CO1:Tounderstandtheevolutionofwirelessnetworks.

CO2:Tolearntheconceptsof5Gnetworks.

CO3:To comprehend the 5G architecture and protocols.

CO4:Tounderstandthedynamicspectrummanagement.

CO5:To learn the security aspects in 5G networks.

- Toknowthe applicationsofwearable devicesinthefield of medicine

UNITI INTRODUCTIONTOWEARABLESYSTEMSANDSENSORS 9

WearableSystems-Introduction,NeedforWearableSystems,DrawbacksofConventionalSystemsforWearableMonitoring,ApplicationsofWearableSystems,TypesofWearable Systems,ComponentsofwearableSystems.Sensorsforwearablesystems-Inertiamovement sensors, Respiration activity sensor, Inductive plethysmography, Impedance plethysmography,pneumography,Wearablegroundreactionforcesensor.

UNNITII SIGNAL PROCESSING ANDENERGY HARVESTING FOR WEARABLEDEVICES 9

Wearabilityissues-physicalshapeandplacementofsensor,Technicalchallenges-sensor design,signalacquisition,samplingfrequencyforreducedenergyconsumption,Rejection of irrelevantinformation.PowerRequirements-Solarcell,Vibrationbased,Thermalbased, Humanbodyasaheatsourceforpowergeneration,Hybridthermoelectricphotovoltaicenergy harvests, Thermopiles.

UNITIII WIRELESSHEALTHSYSTEMS 9

Need for wireless monitoring, Definition of Body area network, BAN and Healthcare,Technical Challenges- System security and reliability, BAN Architecture – Introduction,Wireless communication Techniques.

UNITIV SMARTTEXTILE 9

Introduction to smart textile- Passive smart textile, active smart textile. FabricationTechniques- Conductive Fibres, Treated Conductive Fibres, Conductive Fabrics, ConductiveInks.Case study- smart fabric for monitoring biological parameters - ECG, respiration.

UNITV APPLICATIONSOFWEARABLESYSTEMS 9

MedicalDiagnostics,MedicalMonitoring-Patientswithchronicdisease,Hospitalpatients,Elderly patients, neural recording, Gait analysis, Sports Medicine.

device.CO3: Usethe

OUTCOMES:

Onsuccessfulcompletionofthiscourse,thestudentwillbe able toCO1: Describe

the concepts of wearable system. CO2: Explain the energy harvestings in wearable	conceptsof BAN in healthcare.

CO4:Illustratetheconceptofsmarttextile
CO5:Comparethevariouswearabledevicesinhealthcare system

21152E56B **HUMANASSISTDEVICES** **LT PC**
30 03

COURSEOBJECTIVES:

- To study the roleandimportanceof machines that takes over the functionsof the heart and lungs,
- Tostudyvariousmechanicaltechniquesthathelpanon-functioning heart.
- Tolearnthe functioning oftheunitwhichdoestheclearanceofureafromtheblood
- To understandthetests to assessthe hearing loss and development ofelectronic devicesto compensate for the loss.
- Tostudyabout recenttechniquesusedinmodernclinicalapplications

UNITI HEARTLUNGMACHINEANDARTIFICIALHEART 9

Condition to be satisfied by the H/L System. Different types of Oxygenators, Pumps,Pulsatile and Continuous Types, Monitoring Process, Shunting, The Indication for CardiacTransplant,DrivingMechanism,BloodHandlingSystem,Functioninganddifferenttypes ofArtificial Heart, Schematic for temporary bypass of left ventricle.

UNITII CARDIACASSISTDEVICES 9

Assisted through Respiration, Right and left Ventricular Bypass Pump, Auxiliary ventricle,OpenChestandClosedChesttype,IntraAorticBalloonPumping,ProstheticCardiac valves,PrincipleofExternalCounterpulsationtechniques.

UNITIII ARTIFICIALKIDNEY 9

Indication and Principle of Haemodialysis, Membrane, Dialysate, types of filter andmembranes, Different types of hemodialyzers, Monitoring Systems, Wearable ArtificialKidney, Implanting Type.

UNITIV RESPIRATORYANDHEARINGAIDS 9

Ventilator and its types-Intermittent positive pressure, Breathing Apparatus OperatingSequence, Electronic IPPB unit with monitoring for all respiratory parameters. Types ofDeafness, Hearing Aids, SISI, maskingtechniques, wearable devices for hearingcorrection.

UNITV RECENTTRENDS 9

Transcutaneouselectricalnervestimulator,bio-feedback,Diagnosticandpoint-of-careplatforms.

COURSEOUTCOMES:

Attheendofthiscoursethestudentswillbeableto:

CO1:Explaintheprinciplesandconstructionofartificialheart

CO2:Understandvariousmechanicaltechniquesthatimprovetherapeutictechnology

CO3:Explain the functioning of the membrane or filter that cleanses the blood.

CO4:Describe the tests to assess the hearing loss and development of wearabledevices for thesame.

CO5:Analyze and research on electrical stimulation and biofeedback techniques in rehabilitationand physiotherapy.

30 0 3

COURSEOBJECTIVES:

Thestudentshouldbemadeto:

- Tounderstandthebasicconceptsofbraincomputerinterface
- Tostudythevarioussignalacquisitionmethods
- Tostudythe signalprocessingmethodsused inBCI

UNITI INTRODUCTIONTOBCI 9

Fundamentalsof BCI–StructureofBCIsystem–Classificationof BCI– Invasive, Non-invasive andPartially invasive BCI – EEG signal acquisition - Signal Preprocessing –Artifacts removal.

UNITII ELECTROPHYSIOLOGICALSOURCES 9

Sensorimotor activity – Mu rhythm, Movement Related Potentials – Slow CorticalPotentials-P300 -Visual Evoked Potential - Activity of Neural Cells - MultipleNeuromechanisms.

UNITIII FEATUREEXTRACTIONMETHODS 9

Time/Space Methods – Fourier Transform, PSD –Wavelets – Parametric Methods – AR,MA,ARMAmodels – PCA – Linear and Non-Linear Features.

UNITIV FEATURETRANSLATIONMETHODS 9

LinearDiscriminantAnalysis–SupportVectorMachines-Regression–VectorQuantization–GaussianMixtureModeling–HiddenMarkovModeling–NeuralNetworks.

UNITV APPLICATIONSOFBCI 9

Functionalrestorationusing Neuroprosthesis-FunctionalElectricalStimulation,VisualFeedbackandcontrol-Externaldevicecontrol,Casestudy:BrainactuatedcontrolofmobileRobot.

COURSEOUTCOMES:

Onsuccessfulcompletionofthiscourse,thestudentwillbeableto
CO1:DescribeBCIsystemanditspotentialapplications.
CO2:Analyzeeventrelatedpotentialsandsensorymotorrhythms.
CO3:ComputefeaturessuitableforBCI.**CO4**:DesignclassifierforaBCIsystem.
CO5:ImplementBCIforvariousapplications.

COURSEOBJECTIVES:

- Tounderstandthefundamentalsofwirelesssensornetwork
- TogainknowledgeontheMACand RoutingProtocols ofWSN
- Togetexposedto6LOWPANtechnology
- To acquire knowledge on the protocols required for developing real time applications using WSN and 6LOWPAN.
- TogainknowledgeaboutoperatingsystemrelatedtoWSN and6LOWPAN

UNITI INTRODUCTION 9

PrincipleofWirelessSensorNetwork-Introductiontowirelesssensornetworks-Challenges, Comparisonwithadhocnetwork,NodearchitectureandNetworkarchitecture,design principles,Serviceinterfaces,Gateway,Shortrangeradiocommunicationstandards-IEEE802.15.4, Zigbee andBluetooth. Physical layer and transceiver design considerations.

UNITII MACANDROUTING PROTOCOLS 9

MACprotocols–fundamentals,lowdutycycleprotocolsandwakeupconcepts,contention andSchedule-basedprotocols-SMAC,BMAC,TRAMA,Routingprotocols–Requirements, Classification
-SPIN,DirectedDiffusion,COUGAR,ACQUIRE,LEACH,PEGASIS.

UNITIII 6LOWPAN 9

6LoWPANArchitecture-protocolstack,AdaptationLayer,Linklayers–Addressing, Routing-Mesh-Under-Route-Over,HeaderCompression-Statelessheadercompression-Context-basedheadercompression,FragmentationandReassembly,Mobility–types, Mobile IPv6, Proxy Home Agent, Proxy MIPv6, NEMO –Routing – MANET, ROLL, Borderrouting.

Publish/subscribe, Web service paradigms, Common Protocols -Web serviceprotocols,MQtelemetry transport for sensor networks (MQTT-S), ZigBee compact application protocol(CAP),Service discovery, Simple network management protocol (SNMP), Real-time transportand sessions, Industry- Specific protocols.

UNITV TOOLS 9

TinyOS – Introduction, NesC, Interfaces, modules, configuration, Programming in TinyOSusing NesC, TOSSIM, Contiki – Structure, Communication Stack, Simulation environment –Cooja simulator, Programming

TOTAL:45PERIODS

COURSEOUTCOMES:

CO1: To be able to design solutions forWSNs applications

CO2: To be able to develop efficient MAC and Routing Protocols**CO3**: To be able to design solutions for 6LOWPAN applications

COURSEOBJECTIVES:

- Tounderstandthebasicelectricalandmechanicalconceptsof MEMSdesign
- Tounderstandthedesignaspectsofelectrostatic sensorsandactuators
- Tounderstandthe designaspectsofthermalsensorsand actuators
- Tounderstandthedesignaspectsofpiezoelectricsensors andactuators
- Tounderstandthe designaspectsofmagneticsensorsand actuators

UNITI ESSENTIALELECTRICANDMECHANICALCONCEPTS 6

Conductivity of semiconductors, Crystal planes and orientations, stress and strain, flexuralbeam bending analysis under simple loading conditions, Dynamic system, resonantfrequency and quality factor

UNITII ELECTROSTATICSESNING ANDACTUATION 6

Parallel plate capacitor, Applications of parallel plate capacitors- inertial sensor, pressuresensor, flow sensor, tactile sensor, parallel plate actuators, interdigitated finger capacitors,applications of comb drive devices.

UNITIII THERMALSENSINGANDACTUATION 6

Fundamentalsofthermaltransfer, Sensorsandactuators basedonthermalexpansion, Themalcouples, Thermal resistors, Applications- Infrared sensors, flow sensors, Inertial sensors,other sensors

UNITIV PIEZOELECTRICSENSINGANDACTUATION 6

Mathematical description of piezoelectric effects, Cantilever piezoelectric actuator model,properties of piezoelectric materials –Quartz, PZT,PVDF, ZnO , Applications – Acousticsensors, Tactilesensors

UNITV MAGNETICSENSINGANDACTUATION 6

Concepts and principles- magnetization and nomenclatures, principles of micromagneticactuators, fabrication of micro magnetic components- deposition, design and fabrication ofmagnetic coil, MEMS magnetic actuators

30PERIODS

PRACTICALEXERCISES: **30PERIODS**

1. Designandsimulationofpiezoelectriccantilever
2. Designandsimulationofthermocouples
3. Designandsimulationofcombdriveactuators

COURSEOUTCOMES:

Uponcompletionofthiscourse,thestudentswillbeable to

CO1:UnderstandthebasicsofMEMSdesignaspects.
CO2:Applytheknowledgeinthedevelopmentofelectrostaticsensorsandactuators.
CO3: Apply the knowledge in the development of thermal sensors and actuators.**CO4**:Applytheknowledgeinthedevelopmentofpiezoelectric sensors and actuators.**CO5**: Apply the knowledge in the development of magnetic sensors and actuators.

21152E65A **ADVANCEDWIRELESSCOMMUNICATION TECHNIQUES** **LTPC**

30 03

COURSEOBJECTIVES

- Tounderstandtheevolving paradigmofcooperativecommunication
- Tounderstand conceptsrelatedtogreenwireless communication
- Toenablethestudentto understandthedifferent powersavingstrategiesandenergy efficient signal, system and network design.
- Toexposethestudenttotheenergysavingtechniquesadoptedinexistingwireless components
- Toprovideunderstandingonprotocolsand networksrelatedtogreenfuturewireless communication technologies.

UNITI COOPERATIVECOMMUNICATIONSANDGREENCONCEPTS 9

Networkarchitecturesandresearchissuesincooperativecellularwirelessnetworks;CooperativecommunicationsinOFDMandMIMOcellularrelaynetworks:issuesand approaches;Fundamentaltrade-offsonthedesignof greenradionetworks, Greenmodulationand coding schemes.

UNITII COOPERATIVETECHNIQUES 9

Cooperativetechniquesforenergyefficiency,Cooperativebasestationtechniquesfor cellularwirelessnetworks;Turbobasestations;Antennaarchitecturesforcooperation; Cooperativecommunicationsin3GPPLTE-Advanced,Partialinformationrelayingand Coordinatedmulti-pointtransmissioninLTE-Advanced.

UNITIII RELAY-BASEDCOOPERATIVECELLULARNETWORKS 9

Distributed space-time block codes ; Collaborative relaying in downlink cellular systems ;Radio resource optimization; Adaptive resource allocation ; Cross-layer scheduling designfor cooperative wireless two-way relay networks ; Network coding in relay-based networks.

UNITIV GREENRADIONETWORKS 9

Base Station Power-Management Techniques- Opportunistic spectrum and loadmanagement, Energy-saving techniques in cellular wireless base stations , Power-management for base stationsin smart grid environment, Cooperative multi cell processingtechniques for energy-efficient cellular wireless communications.

UNITV ACCESSTECHNIQUESFORGREENRADIONETWORKS 9

Cross-layer design of adaptive packet scheduling for green radio networks; Energy-efficientrelayingfor cooperative cellular wireless networks ; Energy performance in TDD-CDMAmultihop cellular networks ; Resource allocation for green communication in relay-basedcellular networks ; Green Radio Test-Beds and Standardization Activities.

TOTAL:45PERIODS

COURSEOUTCOMES:

CO1:Thestudentwouldbeabletoappreciatethenecessityandthedesignaspectsof cooperativecommunication

CO2:Thestudentwouldbeabletoappreciatethenecessityandthedesignaspectsof greenwireless communication.

CO3:Thestudentwouldbeabletoevolvenewtechniquesinwirelesscommunication

CO4:Thestudentswouldbeabletodemonstratethefeasibilityofusingmathematical models usingsimulation tools.

CO5:Thestudentwouldbeabletodemonstratetheimpactofthegreenengineering solutions in aglobal, economic, environmental and societal context.

OBJECTIVE:

- To make the students aware about the finer sensibilities of human existence through an art form. The students will learn to appreciate different forms of literature as suitable modes of expressing human experience.

1. **COURSECONTENTS**

IntroductiontoElementsofLiterature

1. Relevanceofliterature

a) EnhancesReading,thinking,discussingandwritingskills.

b) Developsfinersensibilityforbetterhumanrelationship.

c) Increasesunderstandingoftheproblemofhumanitywithout bias.Providingspaceto reconcile and get a cathartic effect.

2. Elementsoffiction

a) Fiction,fact andliterarytruth.

b) Fictionalmodesand patterns.

c) Plotcharacterandperspective.

3. Elementsofpoetry

a) Emotionsandimaginations.

b) Figurativelanguage.

c) (Simile,metaphor,conceit,symbol,punandirony).

d) Personificationandanimation.

e) Rhetoricand trend.

4. Elementsofdrama

a) Dramaasrepresentationalart.

b) Contentmodeand elements.

c) Theatricalperformance.

d) Dramaasnarration,mediationandpersuasion.

e) Featuresoftragedy,comedyandsatire.

TOTAL:45PERIODS

21147MC61C POLITICALANDECONOMICTHOUGHTFORAHUMANESOCIETY LTPC

3000

Pre-Requisite**:**None.(Desirable:UniversalHumanValues1,UniversalHumanValues2)

COURSEOBJECTIVES:

- This course will begin with a short overview of human needs and desires and how different political-economic systems tryto fullfillthem. Inthe process, wewillend witha critique ofdifferent systems and their implementations in the past, with possible future directions.

COURSETOPICS:

Considerations for humane society, holistic thought, human being's desires, harmony in self, harmony in relationships, society, and nature, societal systems. **(9 lectures, 1 hour each)**

(Refs:ANagaraj, MKGandhi, JCKumarappa)

Capitalism–Freemarkets,demand-supply,perfectcompetition,laissez-faire, monopolies,imperialism. Liberal democracy. **(5 lectures)**

(Refs:Adamsmith, JSMill)

Fascismandtotalitarianism.WorldwarIandII.Coldwar.**(2lectures)**

Communism–Modeofproduction,theoryoflabour,surplusvalue,classstruggle,dialectical materialism, historical materialism, Russian and Chinese models.

(Refs:Marx,Lenin,Mao,MNRoy)**(5lectures)**

Welfarestate.Relationwithhumandesires.Empoweredhumanbeings,satisfaction.**(3lectures)**

Gandhian thought. Swaraj, Decentralized economy & polity, Community. Control over one'slives.Relationship with nature. **(6 lectures)**

(Refs:MKGandhi,Schumacher,Kumarappa) Essential

elements of Indian civilization. **(3**

lectures)(Refs:PtSundarlal,RCMazumdar,

Dharampal)

Technologyasdriverofsociety,Roleofeducationinshapingofsociety.Futuredirections.**(4lectures)**(Refs:NandkishoreAcharya,DavidDixon,LevisMumford)

Conclusion(2lectures)

Totallectures:39

PreferredTextbooks: SeeReferenceBooks

Reference Books: Authors mentioned along with topics above. Detailed reading list willbeprovided.

ADING:

dsems	30
dsem	20
meAssign	10
mpaper	40

TOTAL:45PERIODS

COURSEOUTCOME:

- The students will get an understanding of how societies are shaped by philosophy, political and economic system, how theyrelate to fulfilling human goals & desires with some case studies of how different attempts have been made in the past and how they have fared.

21147MC61D STATE,NATIONBUILDINGANDPOLITICSININDIA L TPC
3000

COURSEOBJECTIVE:

Theobjectiveofthecourseistoprovideanunderstandingofthestate, howitworksthrough its main organs, primacy of politics and political process, the concept of sovereignty and its changing contours in a globalized world. In the light of this, an attempt will be made to acquaint the students with the main development and legacies of national movement and constitutional development in India, reasons for adoptinga Parliamentary-federal system, the broad philosophy of the Constitutionof India and the changing nature of Indian Political System. Challenges/ problems and issues concerningnational integration and nation-building will also be discussed in the contemporary context with the aimof developing afuture vision for a better India.

TOPICS:

UnderstandingtheneedandroleofStateandpolitics.

DevelopmentofNation-State,sovereignty,sovereigntyinaglobalizedworld.

OrgansofState–Executive,Legislature,Judiciary.Separationofpowers,formsofgovernment-unitary-federal, Presidential-Parliamentary,
TheideaofIndia.

1857andthenationalawakening.

1885IndianNationalCongressanddevelopmentofnationalmovement–itslegacies. Constitution making and the Constitution of India.
Goals,objectiveand philosophy.Whyafederals
ystem?
Nationalintegrationandnation-building.

Challenges of nation-building – State against democracy(Kothari)New social movements.
The changing nature of Indian Political System, the futurescenario.What can we do?

OUTCOMEOFTHECOURSE:

It is expected that this course will make students aware of the theoretical aspect of the state, its organs, its operationalization aspect, the background and philosophy behind the founding of the present political system, broad streams and challenges of national integration and nation-buildingin India. It will equip the students with the real understandingof our political system/ process in correct perspective and make them sit up and think for devising ways for better participation in the system with a view to making the governance and delivery system better for the common man who is often left unheard and unattended in our democratic setup besides generating a lot of dissatisfaction and difficulties for the system.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

PROGRAMMEEDUCATIONALOBJECTIVES:

PEO1:Toenablegraduatestopursueresearch,orhaveasuccessfulcareerinacademiaorindustries associated with Electronics and Communication Engineering, or as entrepreneurs.

PEO2: To provide students with strong foundational concepts and also advanced techniques and tools in order to enable them to build solutions or systems of varying complexity.

PEO3:Topreparestudents tocriticallyanalyze existingliteratureinanarea of specializationand ethically develop innovative and research oriented methodologies to solve the problems identified.

PROGRAMMEOUTCOMES:

EngineeringGraduateswillbeableto:

A. **Engineering knowledge**: Applytheknowledgeof mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

B. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

C. **Design/development of solutions**: Design solutions for complex engineering problems and design systemcomponents or processes that meet thespecifiedneeds withappropriateconsiderationfor the public health and safety, and the cultural, societal, and environmental considerations.

D. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

E. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

F. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

G. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

H. **Ethics**:Applyethicalprinciples andcommit toprofessionalethics andresponsibilities and norms of the engineering practice.

I. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

J. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

K. **Project management and finance**: Demonstrate knowledge and understanding of the engineering andmanagement principlesandapplythesetoone‘sownwork, asamember andleader ina team, to manage projects and in multidisciplinary environments.

L. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

SEMESTERI

20147S11 **COMMUNICATIVEENGLISH**

L	T	P	C
4	0	0	4

OBJECTIVES:

- Todevelopthebasicreadingandwritingskillsoffirstyearengineeringandtechnologystudents.
- Tohelplearnersdeveloptheirlisteningskills,whichwill,enablethemlistentolecturesand comprehend them by asking questions; seeking clarifications.
- Tohelplearnersdeveloptheirspeakingskillsandspeakfluentlyinrealcontexts.
- Tohelplearnersdevelopvocabularyofa generalkindbydevelopingtheir readingskills

UNIT ISHARINGINFORMATIONRELATEDTOONESELF/FAMILY&FRIENDS12

Reading- short comprehension passages, practice in skimming-scanning and predicting- **Writing**- completing sentences- - developing hints. **Listening-** short texts- short formal and informalconversations. **Speaking-** introducing oneself - exchanging personal information- **Languagedevelopment**- Wh-Questions- asking and answering-yes or no questions- parts of speech. **Vocabularydevelopment**-- prefixes- suffixes- articles.- count/ uncount nouns.

UNIT V EXTENDEDWRITING 12

Reading- longer texts- close reading –**Writing-** brainstorming -writing short essays – developing anoutline- identifying main and subordinate ideas- dialogue writing-**Listening** – listening to talks- conversations- **Speaking** – participating in conversations- short group conversations- **Languagedevelopment**-modal verbs- present/ past perfect tense - **Vocabulary development**- collocations-fixedand semi-fixed expressions.

TOTAL:60PERIODS

OUTCOMES:

Attheendofthecourse, learnerswillbeableto:

- Readarticlesofa generalkindinmagazinesand newspapers.
- Participateeffectivelyininformalconversations;introducethemselvesandtheirfriendsandexpress opinions in English.

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENEURSHIP**

- ComprehendconversationsandshorttalksdeliveredinEnglish
- WriteshortessaysofageneralkindandpersonallettersandemailsinEnglish.

SEMESTERI

20148S12 ENGINEERINGMATHEMATICSI

	L	T	P	C
	4	0	0	4

OBJECTIVES:

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus. The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modelling the engineering problems mathematically and obtaining solutions. This is a foundation course which mainly deals with topics such as single variable and multivariablecalculus and plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I DIFFERENTIALCALCULUS 12

Representationoffunctions-Limitofafunction-Continuity-Derivatives-Differentiationrules-Maxima and Minima of functions of one variable.

UNIT II FUNCTIONSOFSEVERALVARIABLES 12

Partial differentiation – Homogeneous functions and Euler‗s theorem – Total derivative – Change ofvariables – Jacobians – Partial differentiation of implicit functions – Taylor‗s series for functions of twovariables – Maxima and minima of functions of two variables – Lagrange‗s method of undeterminedmultipliers.

UNIT III INTEGRALCALCULUS 12

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts,Trigonometric integrals, Trigonometric substitutions, Integration of rational functions bypartial fraction,Integration of irrational functions - Improper integrals.

UNIT IV MULTIPLEINTEGRALS 12

Double integrals – Change of order of integration – Double integrals in polar coordinates – Areaenclosedbyplanecurves – Tripleintegrals – Volume ofsolids – Changeof variables indoubleandtripleintegrals.

UNIT V DIFFERENTIALEQUATIONS 12

Higher order linear differential equations with constant coefficients- Method of variation of parameters– Homogenous equation of Euler‗s and Legendre‗s type – System of simultaneous linear differentialequations with constant coefficients - Method of undetermined coefficients.

TOTAL:60PERIODS

OUTCOMES:

Aftercompletingthiscourse, studentsshoulddemonstratecompetencyinthefollowingskills:

- Useboththelimitdefinitionandrulesofdifferentiationtodifferentiatefunctions.
- Applydifferentiationtosolvemaximaandminimaproblems.
- EvaluateintegralsbothbyusingRiemannsumsandbyusingtheFundamentalTheoremof Calculus.
- Apply integration to computemultipleintegrals,area,volume,integralsin polarcoordinates,in addition to change of order and change of variables.
- Evaluateintegralsusingtechniquesofintegration,suchassubstitution,partialfractionsandintegration by parts.
- Determineconvergence/divergenceofimproperintegralsandevaluateconvergent improper integrals.
- Applyvarioustechniquesinsolvingdifferentialequations.

SEMESTERI

20149S13	**ENGINEERINGPHYSICS**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- ToenhancethefundamentalknowledgeinPhysicsanditsapplicationsrelevanttovarious streams of Engineering and Technology.

UNIT I PROPERTIESOFMATTER 9

Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsionalstress anddeformations –twistingcouple-torsionpendulum:theoryandexperiment -bendingof beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending:theory and experiment - I-shaped girders - stress due to bending in beams.

UNIT II WAVESANDFIBEROPTICS 9

Oscillatorymotion–forcedanddampedoscillations:differentialequationanditssolution– plane progressive waves – wave equation. Lasers : population of energy levels, Einstein's A and Bcoefficients derivation – resonant cavity, optical amplification (qualitative) – Semiconductor lasers:homojunction and heterojunction – Fiber optics: principle, numerical aperture and acceptance angle -types of optical fibres (material, refractive index, mode) – losses associated with optical fibers - fibreoptic sensors: pressure and displacement.

UNIT III THERMALPHYSICS 9

Transfer of heat energy – thermalexpansionof solids andliquids – expansionjoints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity - Forbe's and Lee's disc method: theory and experiment - conduction through compound media (seriesand parallel) – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar waterheaters.

UNIT V CRYSTALPHYSICS 9

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems,Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances - coordinationnumber and packing factor for SC, BCC, FCC, HCP and diamond structures - crystal imperfections:point defects, line defects – Burger vectors, stacking faults – role of imperfections in plasticdeformation - growth of single crystals: solution and melt growth techniques.

TOTAL: 45 PERIODS

OUTCOMES:

Uponcompletionofthis course,

- Thestudentswillgainknowledgeonthebasicsofpropertiesof matter andits applications,
- Thestudentswillacquireknowledgeontheconceptsofwavesandopticaldevicesandtheir applications in fibre optics,
- The studentswillhave adequate knowledgeontheconceptsofthermalpropertiesofmaterials and their applications in expansion joints and heat exchangers,
- Thestudentswillgetknowledgeonadvancedphysicsconceptsofquantumtheoryandits applications in tunneling microscopes, and
- The students will understand the basics of crystals, their structures and different crystal growthtechniques.

SEMESTERI

20149S14	**ENGINEERINGCHEMISTRY**	**L**	**T**	**P**	**C**
		3	**0**	**0**	**3**

OBJECTIVES:

- To make the students conversant with boiler feed water requirements, related problems and water treatment techniques.
- To develop an understanding of the basic concepts of phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys.
- Preparation,propertiesandapplicationsofengineeringmaterials.
- Typesoffuels,calorificvaluecalculations,manufactureofsolid,liquidandgaseousfuels.
- Principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuelcells.

UNIT II SURFACECHEMISTRYANDCATALYSIS 9

Adsorption: Types of adsorption – adsorption of gases on solids – adsorption of solute from solutions – adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – contacttheory – kinetics of surface reactions, unimolecular reactions, Langmuir - applications of adsorption onpollution abatement. Catalysis: Catalyst – types of catalysis – criteria –autocatalysis – catalytic poisoningandcatalytic promoters -acidbasecatalysis – applications (catalyticconvertor) – enzyme catalysis– Michaelis – Menten equation.

UNIT IV FUELSANDCOMBUSTION 9

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufactureof metallurgical coke(OttoHoffmannmethod) - petroleum - manufactureofsynthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas -compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel.Combustion of fuels: Introduction - calorific value - higher and lower calorific values-theoreticalcalculation ofcalorificvalue-ignitiontemperature-spontaneous ignitiontemperature-explosiverange -flue gas analysis (ORSAT Method).

UNIT V ENERGYSOURCESANDSTORAGEDEVICES 9

Nuclear fission - controlled nuclear fission - nuclear fusion - differences between nuclear fission andfusion-nuclear chainreactions - nuclear energy-lightwater nuclear power plant -breeder reactor - solarenergyconversion- solar cells - wind energy. Batteries, fuelcells andsupercapacitors:Types of batteries– primary battery (dry cell) secondary battery (lead acid battery, lithium-ion-battery) fuel cells – H_2-O_2fuel cell.

TOTAL:45PERIODS

OUTCOMES:

- The knowledge gained on engineering materials, fuels, energy sources and water treatment techniques willfacilitatebetter understandingof engineeringprocesses andapplications for further learning.

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENEURSHIP**

TEXTBOOKS:

SEMESTERI

20154S15 **ENGINEERINGGRAPHICS**

L	T	P	C
2	0	4	4

OBJECTIVES:

- Todevelopinstudents,graphicskillsforcommunicationofconcepts,ideasanddesignof Engineering products.
- Toexposethemtoexistingnationalstandardsrelatedtotechnicaldrawings.

CONCEPTSANDCONVENTIONS(NotforExamination) **1**

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANECURVESANDFREEHANDSKETCHING 7+12

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse,parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes ofsquare and circle – Drawing of tangents and normal to the above curves.

Visualization concepts and Free Hand sketching: Visualization principles –Representation of ThreeDimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views ofobjects

UNIT II PROJECTIONOFPOINTS,LINESANDPLANESURFACE 6+12

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection ofplanes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT III PROJECTIONOFSOLIDS 5+12

Projectionofsimple solidslike prisms,pyramids,cylinder,cone and truncated solidswhen the axisisinclined to one of the principal planes by rotating object method.

UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OFSURFACES 5+12

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of theprincipal planes and perpendicular to the other – obtaining true shape of section. Development of lateralsurfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.

UNIT V ISOMETRICANDPERSPECTIVEPROJECTIONS 6+12

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids-Prisms,pyramids,cylinders,cones-combinationoftwosolidobjectsinsimple verticalpositions -Perspectiveprojectionofsimplesolids-Prisms,pyramidsandcylindersbyvisualraymethod.

TOTAL:90PERIODS OUTCOMES:

Onsuccessfulcompletionofthiscourse, thestudentwillbeableto:

- Familiarizewiththefundamentalsandstandardsof Engineeringgraphics
- Performfreehandsketchingofbasicgeometricalconstructionsandmultipleviewsof objects.
- Projectorthographicprojectionsoflinesandplanesurfaces.
- Drawprojectionsandsolidsanddevelopmentofsurfaces.
- Visualizeandtoproject isometricandperspectivesectionsofsimplesolids.

SEMESTERI

20150S16 PROBLEMSOLVINGANDBASICSOFPYTHONPROGRAMMING

L	T	P	C
3	0	0	3

OBJECTIVES:

- Toknowthebasics ofalgorithmicproblemsolving
- ToreadandwritesimplePythonprograms.
- TodevelopPythonprogramswithconditionalsandloops.
- TodefinePythonfunctionsandcall them.
- TousePythondata structures–-lists, tuples,dictionaries.
- Todoinput/outputwithfilesinPython.

UNIT I ALGORITHMICPROBLEMSOLVING 9

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudocode, flow chart, programming language), algorithmic problem solving, simple strategies for developingalgorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list ofsorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA,EXPRESSIONS,STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs:exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROLFLOW,FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if),alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root,gcd,exponentiation,sumanarrayofnumbers,linearsearch,binarysearch.

UNIT IV LISTS,TUPLES,DICTIONARIES 9

Lists:listoperations,listslices,listmethods,listloop,mutability,aliasing,cloninglists,list parameters;Tuples:tupleassignment,tupleasreturnvalue;Dictionaries:operationsandmethods; advancedlistprocessing-listcomprehension;Illustrativeprograms:selectionsort,insertionsort, mergesort,histogram.

UNIT V FILES,MODULES,PACKAGES 9

Filesandexception:textfiles, readingandwritingfiles, formatoperator;commandlinearguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse, studentswillbeableto

- Developalgorithmicsolutionstosimplecomputationalproblems
- Read,write, executebyhandsimplePythonprograms.
- StructuresimplePythonprogramsfor solvingproblems.
- DecomposeaPythonprogramintofunctions.
- RepresentcompounddatausingPythonlists,tuples,dictionaries.
- Readandwritedata from/tofilesinPythonPrograms.

SEMESTERI

20150L17 PROBLEMSOLVINGANDBASICSOFPYTHONPROGRAMMINGLAB

L	T	P	C
0	0	4	2

OBJECTIVES

- Towrite, test,anddebugsimplePythonprograms.
- ToimplementPythonprograms withconditionalsandloops.
- UsefunctionsforstructuringPythonprograms.
- RepresentcompounddatausingPythonlists,tuples,dictionaries.
- Readandwritedatafrom/tofilesinPython.

LISTOFPROGRAMS

1. ComputetheGCDoftwo numbers.
2. Findthesquarerootofa number(Newton‘smethod)
3. Exponentiation(power ofa number)
4. Findthemaximumofa listofnumbers
5. Linear searchandBinarysearch
6. Selectionsort,Insertionsort
7. Mergesort
8. Firstnprimenumbers
9. Multiplymatrices
10. Programsthattakecommandlinearguments(wordcount)
11. Findthemostfrequentwordsinatextreadfromafile
12. SimulateellipticalorbitsinPygame
13. SimulatebouncingballusingPygame

PLATFORMNEEDED

- Python3interpreterforWindows/Linux

OUTCOMES

Uponcompletionofthecourse, studentswillbeableto:

- Write,test, anddebugsimplePythonprograms.
- ImplementPythonprogramswithconditionalsandloops.
- DevelopPythonprogramsstep-wisebydefiningfunctionsandcallingthem.
- UsePythonlists,tuples,dictionariesforrepresentingcompounddata.
- Readandwritedatafrom/tofilesinPython.

TOTAL:60PERIODS

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

SEMESTERI

20149L18 PHYSICSANDCHEMISTRYLABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

To introduce different experiments to test basic understanding of physics concepts applied in optics, thermal physics, properties of matter and liquids.

LISTOFEXPERIMENTS: PHYSICSLABORATORY(Any5Experiments)

1. Determinationofrigiditymodulus–Torsionpendulum
2. DeterminationofYoung's modulusbynon-uniformbendingmethod
   a) Determinationofwavelength,andparticlesizeusingLaser
   b) Determinationofacceptanceangleinanopticalfiber.
3. Determinationofthermalconductivity ofabadconductor–Lee'sDisc method.
4. Determinationofvelocityofsoundandcompressibilityofliquid–Ultrasonicinterferometer
5. Determinationofwavelengthofmercuryspectrum–spectrometergrating
6. Determinationofbandgapofasemiconductor
7. Determinationofthicknessofathinwire–Air wedgemethod

TOTAL:30PERIODS

OUTCOMES:

Uponcompletionofthecourse, thestudentswillbeableto

applyprinciplesofelasticity,opticsandthermalpropertiesforengineeringapplications.

CHEMISTRYLABORATORY:(Anysevenexperimentstobeconducted) OBJECTIVES:

- To make the student to acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
- Toacquaintthestudentswiththedeterminationofmolecularweightofapolymerby viscometery.

1. EstimationofHClusingNa_2CO_3asprimarystandardandDeterminationofalkalinityinwater sample.
2. Determinationoftotal,temporary&permanenthardnessofwater byEDTAmethod.
3. DeterminationofDOcontentofwater samplebyWinkler'smethod.
4. Determinationofchloridecontentofwatersamplebyargentometric method.
5. EstimationofcoppercontentofthegivensolutionbyIodometry.
6. DeterminationofstrengthofgivenhydrochloricacidusingpHmeter.
7. Determinationofstrengthofacidsina mixtureofacidsusingconductivity meter.
8. Estimationofironcontent ofthegivensolutionusingpotentiometer.
9. Estimation of iron contentof the watersample usingspectrophotometer(1,10-Phenanthroline /thiocyanate method).
10. Estimationofsodiumandpotassiumpresent inwaterusingflamephotometer.
11. DeterminationofmolecularweightofpolyvinylalcoholusingOstwaldviscometer.
12. Pseudofirstorderkinetics-ester hydrolysis.
13. Corrosionexperiment-weightlossmethod.
14. DeterminationofCMC.
15. Phasechangeinasolid.
16. Conductometrictitrationofstrongacidvsstrongbase.

OUTCOMES:

Thestudentswillbeoutfittedwithhands-onknowledgeinthequantitativechemicalanalysisof water quality related parameters.

TOTAL:30PERIODS

1. Vogel'sTextbookofQuantitativeChemicalAnalysis(8^{TH}edition, 2014)

SEMESTERI

201AGIT	**INDUCTIONTRAININGPROGRAMME**	**L**	**T**	**P**	**C**
		0	**0**	**0**	**2**

The *InductionProgram*is designed to makethe newlyjoined studentsfeelcomfortable,sensitize them towards exploring theiracademic interests and activities, reducing competition and making them work for excellence, promote bonding within them, build relations between teachers and students, give a broaderview of life, and building of character.

uctionprogram	**3weeksduration**
uctionprogramforstudentstobeoffered right at the start of the first year.	• Physicalactivity • CreativeArts • UniversalHumanValues • Literary • ProficiencyModules • LecturesbyEminentPeople • VisitstolocalAreas • FamiliarizationtoDept./Branch&Innovations

TheactivitiesduringtheInductionProgramwould haveanInitialPhase, aRegularPhase and a Closing Phase. The Initial and Closing Phases would be two days each.

SEMESTERII

20147S21 **TECHNICALENGLISH**

L	T	P	C
4	0	0	4

OBJECTIVES:

TheCoursepreparessecondsemesterengineeringandTechnologystudentsto:

- Developstrategiesandskillstoenhancetheirabilitytoreadandcomprehendengineeringand technology texts.
- Fostertheirabilitytowriteconvincingjobapplications andeffectivereports.
- Developtheir speakingskillstomaketechnicalpresentations,participateingroupdiscussions.
- Strengthen their listening skill which will help themcomprehend lectures and talks in their areas of specialization.

UNIT I INTRODUCTIONTECHNICALENGLISH 12

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- **Speaking** –Asking for and giving directions- **Reading** – reading short technical texts from journals-newsapapers-**Writing-**purposestatements–extendeddefinitions–issue-writinginstructions – checklists-recommendations-**Vocabulary Development-** technical vocabulary **LanguageDevelopment** –subject verb agreement - compound words.

UNIT II READINGANDSTUDYSKILLS 12

Listening- Listening to longer technical talks and completing exercises based on them - **Speaking** – describing a process-**Reading** – reading longer technical texts- identifying the various transitions in atext- paragraphing- **Writing-** interpreting cgarts, graphs- **Vocabulary Development-**vocabulary used informal letters/emails and reports **Language Development-** impersonal passive voice, numericaladjectives.

UNIT III TECHNICALWRITINGANDGRAMMAR 12

Listening- Listeningtoclassroomlectures/ talkls onengineering/technology-**Speaking** – introductiontotechnical presentations- **Reading** – longer texts both general and technical, practice in speed reading;**Writing**-Describing a process, use of sequence words- **Vocabulary Development-** sequence words-Misspelled words. **Language Development-** embedded sentences

UNIT IV REPORTWRITING 12

Listening- Listening to documentaries and making notes. **Speaking** – mechanics of presentations- **Reading** –readingfor detailedcomprehension- **Writing-** email etiquette- job application– cover letter – Résumé preparation(via email and hard copy)- analytical essays and issue based essays-- **VocabularyDevelopment-** finding suitable synonyms-paraphrasing-. **Language Development-** clauses- ifconditionals.

UNIT V GROUPDISCUSSIONANDJOBAPPLICATIONS 12

Listening- TED/Ink talks; **Speaking** –participating in a group discussion **-Reading**– reading andunderstanding technical articles **Writing**– Writing reports- minutes of a meeting- accident and survey-**Vocabulary Development- verbal analogies Language Development-** reported speech

TOTAL PERIODS 60

OUTCOMES:

Attheendofthecourselearnerswillbeableto:

- Readtechnicaltexts andwritearea-specifictexts effortlessly.
- Listenandcomprehendlecturesandtalksintheir areaofspecialisationsuccessfully.
- Speakappropriatelyandeffectivelyinvariedformalandinformalcontexts.
- Writereportsandwinningjobapplications.

SEMESTER II

20148S22	**ENGINEERINGMATHEMATICSII**	**L**	**T**	**P**	**C**
		4	**0**	**0**	**4**

OBJECTIVES:

This course is designed to cover topics such as MatrixAlgebra, Vector Calculus, Complex Analysis and Laplace Transform. Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering. Vector calculus can be widely used for modelling the various laws of physics. The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines.

UNIT I MATRICES 12

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem– Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

UNIT II VECTORCALCULUS 12

Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational andSolenoidal vector fields – Lineintegral over a planecurve – Surfaceintegral - Area of a curved surface -Volume integral - Green‘s, Gauss divergence and Stoke‘s theorems – Verification and application inevaluatingline, surfaceand volume integrals.

UNIT III ANALYTICFUNCTIONS 12

Analyticfunctions–NecessaryandsufficientconditionsforanalyticityinCartesianandpolar coordinates-Properties–Harmonicconjugates–Constructionofanalyticfunction–Conformal mapping–Mappingbyfunctions$w = z + c, cz, z^{-1}, z^2$-Bilineartransformation.

UNIT IV COMPLEXINTEGRATION 12

Line integral - Cauchy‘s integral theorem – Cauchy‘s integral formula – Taylor‘s and Laurent‘s series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of realintegrals – Use of circular contour and semicircular contour.

UNIT V LAPLACETRANSFORMS 12

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulsefunction– Basic properties –Shiftingtheorems -Transforms of derivatives andintegrals – Initial and final value theorems – Inverse transforms – Convolution theorem – Transform of periodic functions–Applicationtosolutionoflinear secondorder ordinarydifferential equations with constant coefficients.

TOTAL:60PERIODS

OUTCOMES:

Aftersuccessfullycompletingthecourse,thestudentwillhaveagoodunderstandingofthefollowing topics and their applications:

- Eigenvalues and eigenvectors, diagonalizationofamatrix, Symmetricmatrices, Positivedefinite matrices and similar matrices.
- Gradient,divergenceandcurlofa vector pointfunctionandrelatedidentities.
- Evaluation of line, surface and volume integrals using Gauss, Stokes and Green‘s theorems and their verification.
- Analyticfunctions,conformalmappingandcomplexintegration.
- Laplacetransformandinversetransformofsimplefunctions,properties,variousrelated theorems and application to differential equations with constant coefficients.

SEMESTER II

20149S23B PHYSICSFORELECTRONICSENGINEERING

	L	T	P	C
	3	0	0	3

OBJECTIVES:

To understand the essential principles of Physics of semiconductor device and Electron transport properties. Become proficient in magnetic, dielectric and optical properties of materials and nano devices.

UNIT I ELECTRICALPROPERTIESOFMATERIALS 9

Classicalfree electrontheory-Expressionforelectricalconductivity–Thermalconductivity,expression - Wiedemann-Franz law–Success andfailures - electrons in metals –Particleina threedimensional box–degenerate states – Fermi- Dirac statistics – Density of energy states – Electron in periodic potential:Bloch thorem – metals and insulators - Energy bands in solids– tight binding approximation - Electroneffective mass – concept of hole.

UNIT III MAGNETICANDDIELECTRICPROPERTIESOFMATERIALS 9

Magnetism in materials – magnetic field and induction – magnetization - magnetic permeability andsusceptibility–types of magnetic materials – microscopic classification of magnetic materials - Ferromagnetism: origin and exchange interaction- saturation magnetization and Curie temperature – Domain Theory. Dielectric materials: Polarization processes – dielectric loss – internal field – Clausius-Mosotti relation- dielectric breakdown – high-k dielectrics.

UNIT IV OPTICALPROPERTIESOFMATERIALS 9

Classification of optical materials – carrier generation and recombination processes - Absorptionemission and scattering of light in metals, insulators and Semiconductors (concepts only) - photo current in a P- N diode –solarcell –photo detectors- LED – Organic LED– Laser diodes–excitons- quantum confinedStarkeffect–quantumdotlaser.

UNIT V NANOELECTRONICDEVICES 9

Introduction - electron density in bulk material – Size dependence of Fermi energy– quantumconfinement – quantum structures - Density of states in quantum well, quantum wire and quantum dot structures – Zener-Bloch oscillations – resonant tunneling – quantum interference effects – mesoscopic structures: conductance fluctuations and coherent transport –Coulomb blockade effects - Single electron phenomena and Single electron Transistor– magnetic semiconductors– spintronics - Carbon nanotubes: Propertiesandapplications.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse, thestudentswillableto

- Gainknowledgeonclassicalandquantumelectrontheories, andenergybandstructuues,
- Acquireknowledgeonbasicsofsemiconductorphysicsanditsapplicationsinvarious devices,
- Get knowledgeonmagneticanddielectricpropertiesofmaterials,
- Havethenecessaryunderstandingonthefunctioningofopticalmaterialsfor optoelectronics,

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

- Understandthebasicsofquantumstructuresandtheirapplicationsinspintronicsand carbon electronics.

TEXTBOOKS:

1. Kasap, S.O. ―Principlesof Electronic Materialsand Devices‖,McGraw-Hill Education, 2007.
2. UmeshKMishra&JaspritSingh,―SemiconductorDevicePhysicsandDesign‖,Springer, 2008.

SEMESTER II

20153S24B CIRCUITANALYSIS LT PC
4 004

OBJECTIVES:

- TointroducethebasicconceptsofDC andAC circuitsbehavior
- To study the transient and steady state response of the circuits subjected to step and sinusoidal excitations.
- TointroducedifferentmethodsofcircuitanalysisusingNetworktheorems,dualityand topology.

UNIT I BASICCIRCUITSANALYSISANDNETWORKTOPOLOGY 12

Ohm‘s Law – Kirchhoff‘s laws – Mesh current and node voltage method of analysis for D.C and A.C. circuits - Network terminology - Graph of a network - Incidence and reduced incidence matrices– Trees –Cutsets - Fundamental cutsets - Cutset matrix – Tie sets - Link currents and Tie set schedules - Twig voltages and Cutset schedules, Duality and dual networks.

- Network reduction: voltage and current division, source transformation – star delta conversion.

UNITIIIRESONANCEANDCOUPLEDCIRCUITS 12

Resonance- Series resonance- Parallelresonance- Variationof impedancewithfrequency - Variationin current through and voltage across L and C with frequency – Bandwidth - Q factor - Selectivity. Self inductance - Mutual inductance - Dot rule - Coefficient of coupling - Analysis of multiwinding coupled circuits - Series, Parallel connection of coupled inductors - Single tuned anddouble tuned coupled circuits.

UNITIVTRANSIENTANALYSIS 12

Natural response-Forced response - Transient response of RC, RL and RLC circuits to excitation by Step Signal, Impulse Signal and exponential sources - Complete response of RC, RLand RLC Circuits to sinusoidal excitation.

UNIT V TWOPORT NETWORKS 12

Twoportnetworks,Zparameters,Yparameters,Transmission(ABCD)parameters,Hybrid(H) Parameters, Interconnection of two port networks, Symmetrical properties of T and π networks.

TOTAL:60PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- Developthecapacitytoanalyzeelectricalcircuits,applythecircuittheoremsinrealtime
- DesignandunderstandandevaluatetheACandDCcircuits.

TEXTBOOKS:

SEMESTERII

20153S25B BASIC ELECTRICAL AND INSTRUMENTATION ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES:

Toimpartknowledgeon

- OperationofThreephaseelectricalcircuitsandpower measurement
- WorkingprinciplesofElectricalMachines
- WorkingprincipleofVariousmeasuringinstruments

UNIT I ACCIRCUITSANDPOWERSYSTEMS 9

Three phase power supply – Star connection – Delta connection – Balanced and Unbalanced Loads- Power equation – Star Delta Conversion – Three Phase Power Measurement - Transmission & Distribution of electrical energy – Over head Vs Underground system – Protection of power system – types of tariff – power factor improvement

UNIT II TRANSFORMER 9

Introduction - Ideal Transformer – Accounting For Finite Permeability And Core Loss– Circuit Model Of Transformer – Per Unit System – Determination Of Parameters Of Circuit Model Of Transformer – Voltage Regulation – Name Plate Rating – Efficiency – Three Phase Transformers - Auto Transformers

UNITIIIDC MACHINES 9

Introduction – Constructional Features– Motoringandgenerationprinciple - Emf AndTorque equation – Circuit Model – Methods of Excitation and magnetisation characteristics – Starting and Speed Control – Universal Motor

UNITIVACMACHINES 9

Principleof operationofthree-phaseinductionmotors –Construction–Types –Equivalent circuit, Single phase Induction motors -Construction– Types–starting and speed control methods. Alternator- working principle–Equation of induced EMF – Voltage regulation, Synchronous motors-working principle-starting methods -– Torque equation – Stepper Motors – Brushless DC Motors

UNIT V MEASUREMENTANDINSTRUMENTATION 9

Type of Electrical and electronic instruments – Classification- Types of indicating Instruments – Principles of Electrical Instruments –Multimeters, Oscilloscopes- Static and Dynamic Characteristics of Measurement – Errors in Measurement – Transducers - Classification of Transducers: Resistive, Inductive, Capacitive, Thermoelectric, piezoelectric, photoelectric, Hall effect and Mechanical

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecoursethestudentswillbeableto

- Understandtheconceptofthreephasepowercircuitsandmeasurement.
- Comprehendtheconceptsinelectricalgenerators,motorsandtransformers
- Chooseappropriatemeasuringinstrumentsforgivenapplication

SEMESTERII

20152S26B ELECTRONICDEVICES LTPC
3003

OBJECTIVES:

Toacquaint thestudents withthe construction, theoryandoperationofthebasic electronic devices suchasPNjunctiondiode, Bipolar andFieldeffectTransistors, Power controldevices, LED, LCDand other Opto-electronic devices

UNIT I SEMICONDUCTORDIODE 9

PN junction diode, Current equations, Energy Band diagram, Diffusion and drift current densities, forward and reverse bias characteristics, Transition and Diffusion Capacitances, Switching Characteristics, Breakdown in PN Junction Diodes.

UNIT II BIPOLARJUNCTIONTRANSISTORS 9

NPN -PNP -Operations-Early effect-Current equations – Input and Output characteristics of CE, CB, CC - Hybrid -π model - h-parameter model, Ebers Moll Model- Gummel Poon-model, Multi Emitter Transistor.

UNIT III FIELDEFFECTTRANSISTORS 9

JFETs – Drain and Transfer characteristics,-Current equations-Pinch off voltage and its significance-MOSFET-Characteristics- Threshold voltage -Channel length modulation, D-MOSFET, E-MOSFET-Characteristics – Comparison of MOSFET with JFET.

UNITIVSPECIALSEMICONDUCTOR DEVICES 9

Metal-Semiconductor Junction- MESFET, FINFET, PINFET, CNTFET, DUAL GATE MOSFET, Schottky barrier diode-Zener diode-Varactor diode –Tunnel diode- Gallium Arsenide device, LASER diode, LDR.

UNIT V POWERDEVICESANDDISPLAYDEVICES 9

UJT, SCR, Diac, Triac, Power BJT- Power MOSFET- DMOS-VMOS. LED, LCD, Photo transistor,Opto Coupler, Solar cell, CCD.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecoursethestudentswillbeableto:

- ExplaintheV-Icharacteristicofdiode,UJTandSCR
- Describetheequivalencecircuitsoftransistors
- Operate the basic electronic devices such as PN junction diode, Bipolar and Field effect Transistors, Power control devices, LED, LCD and other Opto-electronicdevices

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTERII

20154L27 ENGINEERINGPRACTICESLABORATORY LTPC
0042

OBJECTIVES:

Toprovideexposuretothestudentswithhandsonexperienceonvariousbasicengineering practices in Civil, Mechanical, Electrical and Electronics Engineering.

GROUPA (CIVIL &MECHANICAL)

I CIVILENGINEERINGPRACTICE 13

Buildings:

Studyofplumbingandcarpentrycomponentsofresidentialandindustrialbuildings.Safetyaspects.

PlumbingWorks:

1. Study of pipeline joints, its location and functions: valves, taps,couplings, unions, reducers,elbows in household fittings.
2. Studyofpipeconnectionsrequirementsfor pumpsandturbines.
3. Preparationofplumbinglinesketchesfor watersupplyandsewageworks.
4. Hands-on-exercise:
   Basicpipeconnections–Mixedpipematerialconnection–Pipeconnectionswith different joining components.
5. Demonstrationofplumbingrequirementsofhigh-risebuildings.

CarpentryusingPowerToolsonly:

1. Studyofthejointsinroofs,doors,windowsandfurniture.
2. Hands-on-exercise:
   Woodwork,jointsbysawing,planingandcutting.

II MECHANICALENGINEERINGPRACTICE 18

Welding:

(a) Preparationofbuttjoints,lapjointsandT-jointsbyShieldedmetalarcwelding.
(b) Gasweldingpractice

BasicMachining:

SimpleTurningandTaperturning
Drilling Practice

SheetMetalWork:

Forming&Bending:
Modelmaking–Traysandfunnels.
Different type of joints.

Machineassemblypractice:

Studyofcentrifugalpump
Study of air conditioner

Demonstrationon:

Smithyoperations,upsetting,swaging,settingdownandbending.Example– Exercise – Production of hexagonal headed bolt.
Foundryoperationslikemouldpreparationfor gear andstepconepulley.
Fitting–Exercises –PreparationofsquarefittingandV–fittingmodels.

GROUPB(ELECTRICAL&ELECTRONICS)

III ELECTRICALENGINEERINGPRACTICE 13

Residentialhousewiringusingswitches, fuse, indicator, lampandenergy meter.
Fluorescent lamp wiring.
Stair casewiring
Measurementofelectricalquantities–voltage,current,power&powerfactorinRLCcircuit.
Measurementofenergyusingsinglephaseenergy meter.
Measurementofresistanceto earthofanelectricalequipment.

IV ELECTRONICSENGINEERINGPRACTICE 16

StudyofElectroniccomponentsandequipments–Resistor,colourcodingmeasurementofAC signal parameter (peak-peak, rms period, frequency) using CR.
StudyoflogicgatesAND,OR,EX-ORandNOT.
GenerationofClockSignal.
Solderingpractice–ComponentsDevicesandCircuits–UsinggeneralpurposePCB.
MeasurementofripplefactorofHWRandFWR.

TOTAL:60 PERIODS

OUTCOMES:
Onsuccessfulcompletionofthiscourse, thestudentwillbeableto

- Fabricatecarpentrycomponentsandpipeconnectionsincludingplumbingworks.
- Useweldingequipmentstojointhestructures.
- Carryoutthebasicmachining operations
- Makethemodelsusingsheetmetalworks
- Illustrateoncentrifugalpump,Airconditioner,operationsofsmithy,foundaryand fittings
- Carryoutbasichome electricalworksandappliances
- Measuretheelectricalquantities
- Elaborateonthecomponents, gates,solderingpractices.

SEMESTER II

20152L28B CIRCUITSANDDEVICESLABORATORY LTPC
0042

OBJECTIVES:

- Tolearnthecharacteristicsofbasicelectronic devicessuchasDiode,BJT,FET, SCR
- TounderstandtheworkingofRL,RCandRLCcircuits
- To gain hand on experience in Thevinin & Norton theorem, KVL & KCL, and Super Position Theorems

1. CharacteristicsofPNJunctionDiode
2. ZenerdiodeCharacteristics&RegulatorusingZenerdiode
3. CommonEmitterinput-outputCharacteristics
4. CommonBaseinput-outputCharacteristics
5. FETCharacteristics
6. SCRCharacteristics
7. ClipperandClamper&FWR
8. VerificationsOfThevinin&Nortontheorem
9. VerificationsOfKVL&KCL
10. VerificationsOfSuperPositionTheorem
11. verificationsofmaximumpowertransfer&reciprocitytheorem
12. DeterminationOfResonanceFrequencyofSeries&ParallelRLC Circuits
13. TransientanalysisofRLandRCcircuits

TOTAL:60PERIODS

OUTCOMES:
Attheendofthecourse,thestudentshouldbeableto:

- Analyzethecharacteristicsofbasicelectronicdevices
- DesignRL andRCcircuits
- VerifyThevinin&NortontheoremKVL&KCL,andSuperPositionTheorems

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER II

201AGIC **INDIAN CONSTITUTION** **LTPC**
0002

Aim:

- Tounderstandthesalient featuresoftheIndianConstitution

Objectives:

- Tomakethestudentsunderstandabout theDemocraticRuleandParliamentarianAdministration.
- ToappreciatethesalientfeaturesoftheIndianConstitution.
- ToknowthefundamentalRightsandConstitutionalRemedies.
- To make familiar with powers and positions of the Union Executive, Union Parliament and the Supreme Court.
- ToexercisetheadultfranchiseofvotingandappreciatetheElectoralsystemofIndian Democracy.

Outcomes

- DemocraticvaluesandcitizenshipTrainingaregained.
- AwarenessonFundamentalRightsareestablished.
- ThefunctionsofunionGovernmentandStateGovernmentsarelearnt.
- ThepowerandfunctionsoftheJudiciarylearnt thoroughly.
- AppreciationofDemocraticParliamentaryRuleislearnt.

UNIT I:TheMakingOfIndianconstitution

TheConstituent AssemblyOrganizationCharacter –Work–Salientfeaturesoftheconstitution–Written and Detailed Constitution – Socialism – Secularism – Democracy and Republic.

UNITII:FundamentalRightsAndFundamentalDutiesOfTheCitizens

Right of Equality – Right of Freedom – Right against Exploitation – Right to Freedom ofReligion – Cultural and Educational Rights – Right to Constitutional Remedies – FundamentalDuties.

UNITIII:DirectivePrinciplesOfStatePolicy

Socialism Principles–GandhianPrinciples–LiberalandGeneralPrinciples–Differencesbetween Fundamental Rights and Directive principles.

UNITIV:TheUnionExecutive,UnionparliamentAndSupremeCourt

Powers and positions of the President – Qualification Method of Election of President and vicepresident – Prime Minister Rajya Sabha- Lok Sabha – The Supreme Court – High Court – Functions and position of Supreme court and High Court.

UNITV:StateCouncil–ElectionSystemAndPartliamentaryDemocracyInIndia

State council of Ministers – Chief Minister – Election system in India- Main features – ElectionCommission - Features of Indian Democracy.

References:

2. AiyerAlladi,Krishnaswami,Constitutionandfundamentalrights1955.
3. MarkandanK.C.DirectivePrinciplesintheIndianConstitution1966.
4. KashyapSubashCOurParliament,NationalBook,TrustNewDelhi 1989.

SEMESTER III

20148S31B LINEARALGEBRAANDPARTIALDIFFERENTIALEQUATIONS

L	T	P	C
4	0	0	4

OBJECTIVES:

- To introduce the basicnotionsofgroups,rings,fieldswhich will then be used to solve related problems.
- Tounderstandtheconceptsofvectorspace,lineartransformationsanddiagonalization.
- Toapplytheconceptofinnerproductspacesinorthogonalization.
- Tounderstandtheproceduretosolvepartialdifferentialequations.
- To give an integrated approach to number theory and abstract algebra, and provide a firm basis for further reading and study in the subject.

UNIT I VECTORSPACES 12

Vector spaces – Subspaces – Linear combinations and linear systemof equations – Linear independenceand linear dependence – Bases and dimensions.

UNIT II LINEARTRANSFORMATIONANDDIAGONALIZATION 12

Linear transformation - Null spaces and ranges - Dimension theorem - Matrix representation of a lineartransformations - Eigenvalues and eigenvectors - Diagonalizability.

UNIT III INNERPRODUCTSPACES 12

Innerproduct,norms- Gram Schmidtorthogonalization process-Adjointoflinearoperations- Leastsquare approximation.

UNIT IV PARTIALDIFFERENTIALEQUATIONS 12

Formation–Solutions of first order equations –Standardtypes and equations reducible tostandardtypes– Singular solutions – Lagrange‘s linear equation – Integral surface passing through a given curve – Classificationof partialdifferential equations - Solutionof linear equations of higher order withconstantcoefficients – Linear non-homogeneous partial differential equations.

UNIT V FOURIERSERIESSOLUTIONSOFPARTIALDIFFERENTIALEQUATIONS 12

Dirichlet‘s conditions – GeneralFourier series – Halfrangesineandcosineseries - Methodofseparationof variables – Solutions of one dimensional wave equation and one-dimensional heat equation – Steadystate solution of two-dimensional heat equation – Fourier series solutions in Cartesian coordinates.

TOTAL:60PERIODS

OUTCOMES:

Uponsuccessfulcompletionofthecourse,studentsshouldbe ableto:

- Explainthefundamentalconceptsofadvancedalgebraandtheirroleinmodern mathematics and applied contexts.
- Demonstrateaccurateandefficientuseofadvancedalgebraictechniques.
- Demonstratetheirmasterybysolvingnon-trivialproblemsrelatedtotheconceptsandby proving simple theorems about the statements proven by the text.
- Able to solve various types of partial differential equations.
  Able to solve engineering problems using Fourier series.

SEMESTER III

20152S32 CONTROLSYSTEMSENGINEERING LTPC 3003

OBJECTIVES:

- Tointroducethecomponentsandtheirrepresentationofcontrolsystems
- To learn various methods for analyzing the time response, frequency response and stability ofthe systems.
- Tolearnthevariousapproachforthestatevariableanalysis.

UNIT I SYSTEMSCOMPONENTSANDTHEIRREPRESENTATION 9

Control System: Terminology and Basic Structure-Feed forward and Feedback control theory-Electrical and Mechanical Transfer Function Models-Block diagram Models-Signal flow graphs models-DC and AC servo Systems-Synchronous -Multivariable control system

UNIT II TIMERESPONSEANALYSIS 9

Transient response-steady stateresponse-Measures of performance of the standard first order and second order system-effect on an additional zero and an additional pole-steady error constant and system- type number-PID control-Analytical design for PD, PI,PID control systems

UNIT III FREQUENCYRESPONSEANDSYSTEMANALYSIS 9

Closed loop frequency response-Performance specification in frequency domain-Frequency response of standard second order system- Bode Plot - Polar Plot- Nyquist plots-Design of compensators using Bode plots-Cascade lead compensation-Cascade lag compensation-Cascade lag-lead compensation

UNIT IV CONCEPTSOFSTABILITYANALYSIS 9

Conceptofstability-Bounded-InputBounded-Outputstability-Routhstabilitycriterion-Relativestability-Root locus concept-Guidelines for sketching root locus-Nyquist stability criterion.

UNIT V CONTROLSYSTEMANALYSISUSINGSTATEVARIABLEMETHODS 9

State variable representation-Conversion of state variable models to transfer functions-Conversion oftransfer functions to state variable models-Solution of state equations-Concepts of Controllability andObservability-Stability of linear systems-Equivalence between transfer function and state variablerepresentations-State variable analysis of digital control system-Digital control design using statefeedback.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse,thestudentshouldbeableto:

- Identifythevariouscontrolsystemcomponentsandtheirrepresentations.
- Analyzethevarioustimedomainparameters.
- Analysisthevariousfrequencyresponseplotsandits system.
- Applytheconceptsofvarioussystemstabilitycriterions.
- Designvarioustransfer functionsof digitalcontrolsystemusingstatevariablemodels.

SEMESTER III

20152S33 FUNDAMENTALSOFDATASTRUCTURESINC

LTPC 3 003

OBJECTIVES:

- TolearnthefeaturesofC
- Tolearnthelinearandnon-lineardatastructures
- Toexploretheapplicationsoflinearandnon-lineardatastructures
- Tolearntorepresent datausinggraphdatastructure
- Tolearnthebasicsortingandsearchingalgorithms

UNIT I CPROGRAMMINGBASICS 9

Structure of a C program – compilation and linking processes – Constants, Variables – Data Types – Expressions using operators in C – Managing Input and Output operations – Decision Making andBranching – Looping statements. Arrays – Initialization – Declaration – One dimensional and Two-dimensional arrays. Strings- String operations – String Arrays. Simple programs- sorting-searching – matrix operations.

UNIT II FUNCTIONS,POINTERS,STRUCTURESANDUNIONS 9

Functions – Pass by value – Pass by reference – Recursion – Pointers - Definition – Initialization – Pointers arithmetic. Structures and unions - definition – Structure within a structure - Union - Programsusing structures and Unions – Storage classes, Pre-processor directives.

UNIT III LINEARDATASTRUCTURES 9

Arrays and its representations – Stacks and Queues – Linked lists – Linked list-based implementation ofStacks and Queues – Evaluation of Expressions – Linked list based polynomial addition.

UNIT IV NON-LINEARDATASTRUCTURES 9

Trees – Binary Trees – Binary tree representation and traversals –Binary Search Trees – Applications of trees. Set representations - Union-Find operations. Graph and its representations – Graph Traversals.

UNIT V SEARCHINGANDSORTING ALGORITHMS 9

LinearSearch–BinarySearch.BubbleSort,Insertionsort–Mergesort–Quicksort-Hashtables–Overflow handling.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse, studentswillbeableto:

- Implementlinearandnon-lineardatastructureoperationsusingC
- Suggestappropriatelinear /non-linear datastructureforanygivendata set.
- Applyhashingconceptsfor a givenproblem
- Modifyorsuggestnewdatastructurefor anapplication
- Appropriatelychoosethesortingalgorithmforanapplication

SEMESTER III

20152C34 **DIGITALELECTRONICS** **L T P C**
3 00 3

OBJECTIVES:

- TopresenttheDigitalfundamentals, Booleanalgebraanditsapplicationsindigitalsystems
- Tofamiliarizewiththedesignofvariouscombinationaldigitalcircuitsusinglogicgates
- Tointroducetheanalysisanddesignproceduresforsynchronousandasynchronous sequential circuits
- Toexplainthevarioussemiconductor memoriesandrelatedtechnology
- Tointroducetheelectroniccircuitsinvolvedinthemakingoflogicgates

UNITI DIGITALFUNDAMENTALS 9
Number Systems – Decimal, Binary, Octal, Hexadecimal, 1_s and 2_s complements, Codes – Binary,BCD, Excess 3, Gray, Alphanumeric codes, Boolean theorems, Logic gates, Universal gates, Sum ofproducts and product of sums, Minterms and Maxterms, Karnaugh map Minimization and Quine-McCluskey method of minimization.

UNIT II COMBINATIONALCIRCUITDESIGN 9
Design of Half and Full Adders, Half and Full Subtractors, Binary Parallel Adder – Carry look aheadAdder, BCD Adder, Multiplexer, Demultiplexer, Magnitude Comparator, Decoder, Encoder, PriorityEncoder.

UNIT III SYNCHRONOUSSEQUENTIALCIRCUITS 9
Flip flops – SR, JK, T, D, Master/Slave FF – operation and excitation tables, Triggering of FF, Analysisand design of clocked sequential circuits – Design - Moore/Mealy models, state minimization, stateassignment, circuit implementation – Design of Counters- Ripple Counters, Ring Counters, Shiftregisters, Universal Shift Register.

UNIT IV ASYNCHRONOUSSEQUENTIALCIRCUITS 9
Stableand Unstablestates, output specifications, cycles andraces, statereduction, racefreeassignments,Hazards, Essential Hazards, Pulse mode sequential circuits, Design of Hazard free circuits.

UNITVMEMORY DEVICESANDDIGITALINTEGRATEDCIRCUITS 9
Basic memorystructure– ROM -PROM – EPROM–EEPROM –EAPROM, RAM – StaticanddynamicRAM - Programmable Logic Devices – Programmable Logic Array (PLA) - Programmable Array Logic(PAL) – Field Programmable Gate Arrays (FPGA) - Implementation of combinational logic circuitsusing PLA, PAL.

Digital integrated circuits: Logic levels, propagation delay, power dissipation, fan-out and fan-in, noisemargin, logic families and their characteristics-RTL, TTL, ECL, CMOS

TOTAL:45 PERIODS

OUTCOMES:
Attheendofthecourse:

- Usedigitalelectronicsinthepresentcontemporaryworld
- Designvariouscombinationaldigitalcircuitsusinglogicgates
- Dotheanalysisanddesignproceduresfor synchronousandasynchronoussequentialcircuits
- Usethesemiconductormemoriesandrelatedtechnology
- Useelectroniccircuitsinvolvedinthedesignoflogicgates

SEMESTERIII

20152C35 SIGNALSANDSYSTEMS **L T PC**
4 00 4

OBJECTIVES:

- Tounderstandthebasicpropertiesofsignal&systems
- ToknowthemethodsofcharacterizationofLTIsystemsintimedomain
- ToanalyzecontinuoustimesignalsandsystemintheFourierandLaplacedomain
- Toanalyzediscretetimesignals andsystemintheFourierandZtransformdomain

UNIT I CLASSIFICATIONOFSIGNALSANDSYSTEMS 12

Standard signals- Step, Ramp, Pulse, Impulse, Real and complex exponentials and Sinusoids_Classification of signals – Continuous time (CT) and Discrete Time (DT) signals, Periodic & Aperiodicsignals, Deterministic & Random signals, Energy & Power signals - Classification of systems-CTsystems and DT systems- – Linear & Nonlinear, Time-variant & Time-invariant, Causal & Non-causal,Stable & Unstable.

UNIT III LINEARTIMEINVARIANTCONTINUOUSTIMESYSTEMS 12

Impulseresponse-convolutionintegrals-DifferentialEquation-FourierandLaplacetransformsinAnalysis of CT systems - Systems connected in series / parallel.

UNIT IV ANALYSISOFDISCRETETIMESIGNALS 12

Baseband signal Sampling –FourierTransform of discrete time signals(DTFT)– Propertiesof DTFT-Z Transform & Properties

UNIT V LINEARTIMEINVARIANT-DISCRETETIMESYSTEMS 12

Impulseresponse– Difference equations-Convolution sum- DiscreteFourier TransformandZ TransformAnalysis of Recursive & Non-Recursive systems-DT systems connected in series and parallel.

TOTAL:60PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- Tobeableto determineifagivensystemislinear/causal/stable
- Capableofdeterminingthefrequencycomponentspresentina deterministicsignal
- CapableofcharacterizingLTIsystemsinthetime domainandfrequency domain
- TobeabletocomputetheoutputofanLTIsysteminthetimeandfrequencydomains

TEXTBOOK:

1. AllanV.Oppenheim,S.WilskyandS.H.Nawab,―SignalsandSystems‖,Pearson,2015. (Unit 1-V)

REFERENCES

3. JohnAlanStuller,―AnIntroductiontoSignalsandSystems‖,Thomson,2007.

SEMESTERIII

20152C36 **ELECTRONICCIRCUITS-I** **LTPC**
3003

OBJECTIVES:

- Tounderstandthemethodsofbiasingtransistors
- Todesignandanalyzesinglestageand multistageamplifiercircuits
- Toanalyzethefrequencyresponseofsmallsignalamplifiers
- TodesignandanalyzetheregulatedDC powersupplies.
- Totroubleshootandfaultanalysisofpower supplies.

UNIT IBIASINGOFDISCRETEBJT,JFETAND MOSFET 9

BJT– Need for biasing - DC Load Line and Bias Point – DC analysis of Transistor circuits - Various biasing methods of BJT – Bias Circuit Design - Thermal stability - Stability factors - Bias compensation techniquesusingDiode, thermistor andsensistor –BiasingBJT SwitchingCircuits-JFET -DCLoadLine and Bias Point - Various biasing methods of JFET - JFET Bias Circuit Design - MOSFET Biasing - Biasing FET Switching Circuits.

UNIT II BJTAMPLIFIERS 9

Small Signal Hybrid π equivalent circuit of BJT– Early effect - Analysis of CE, CC and CB amplifiers usingHybridπequivalentcircuits-ACLoadLineAnalysis-DarlingtonAmplifier-Bootstraptechnique -Cascade,Cascodeconfigurations-Differentialamplifier,BasicBJTdifferentialpair–Smallsignal analysis and CMRR.

UNIT III SINGLESTAGEFET,MOSFETAMPLIFIERS 9

Small Signal Hybrid π equivalent circuit of FET and MOSFET - Analysis of CS, CD and CG amplifiersusing Hybrid π equivalent circuits - Basic FET differential pair- BiCMOS circuits.

UNIT IV FREQUENCYRESPONSEOFAMPLIFIERS 9

Amplifier frequencyresponse– Frequencyresponseof transistor amplifiers withcircuit capacitors – BJTfrequency response – short circuit current gain - cut off frequency – fα, fβ and unity gain bandwidth –Miller effect - frequency response of FET - High frequency analysis of CE and MOSFET CSamplifier - Transistor Switching Times.

UNIT V POWERSUPPLIESANDELECTRONICDEVICETESTING 9

Linear mode power supply - Rectifiers - Filters - Half-Wave Rectifier Power Supply - Full-Wave Rectifier Power Supply - Voltage regulators: Voltage regulation - Linear series, shunt and switching Voltage Regulators - Over voltage protection - BJT and MOSFET – Switched mode power supply (SMPS)-PowerSupplyPerformanceandTesting-TroubleshootingandFaultAnalysis,Designof RegulatedDCPower Supply.

TOTAL: 45 PERIODS

OUTCOMES:

Afterstudyingthiscourse,thestudentshouldbeable to:

- Acquireknowledgeof
  - Workingprinciples,characteristicsandapplicationsofBJTandFET
  - FrequencyresponsecharacteristicsofBJTandFETamplifiers
- AnalyzetheperformanceofsmallsignalBJTandFETamplifiers-singlestageandmulti stage amplifiers
- ApplytheknowledgegainedinthedesignofElectroniccircuits

SEMESTERIII

20152L37 FUNDAMENTALSOFDATASTRUCTURESINCLABORATORY

LTPC
0042

OBJECTIVES:

- TounderstandandimplementbasicdatastructuresusingC
- Toapplylinear andnon-lineardatastructuresinproblemsolving.
- Tolearntoimplement functionsandrecursivefunctionsbymeansofdatastructures
- Toimplementsearchingandsortingalgorithms

LISTOFEXERCISES

1. BasicCPrograms–looping,datamanipulations, arrays
2. Programsusingstrings–stringfunction implementation
3. Programsusingstructuresandpointers
4. Programsinvolvingdynamicmemoryallocations
5. Arrayimplementationofstacksandqueues
6. Linkedlistimplementationofstacksandqueues
7. ApplicationofStacksandQueues
8. ImplementationofTrees,TreeTraversals
9. ImplementationofBinarySearchtrees
10. ImplementationofLinearsearchandbinarysearch
11. ImplementationInsertionsort,Bubblesort, QuicksortandMergeSort
12. ImplementationHashfunctions,collisionresolutiontechnique

TOTAL:60PERIODS

OUTCOMES:
Uponcompletionofthecourse,thestudentswillbeableto:

- WritebasicandadvancedprogramsinC
- ImplementfunctionsandrecursivefunctionsinC
- ImplementdatastructuresusingC
- Chooseappropriatesortingalgorithmfor anapplicationandimplementitinamodularizedway

SEMESTERIII

20152L38 ANALOGANDDIGITALCIRCUITSLABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

Thestudentshouldbe made to:

- StudytheFrequencyresponseof CE,CBandCCAmplifier
- LearnthefrequencyresponseofCSAmplifiers
- StudytheTransfercharacteristicsofdifferentialamplifier
- Performexperimenttoobtainthebandwidthofsinglestageandmultistageamplifiers
- PerformSPICEsimulationofElectronicCircuits
- DesignandimplementtheCombinationalandsequentiallogiccircuits

LISTOFANALOGEXPERIMENTS:

1. DesignofRegulatedPowersupplies
2. FrequencyResponseofCE,CB,CCandCSamplifiers
3. DarlingtonAmplifier
4. DifferentialAmplifiers-Transfercharacteristics,CMRRMeasurement
5. CascodeandCascadeamplifiers
6. Determinationofbandwidthofsinglestageandmultistageamplifiers
7. AnalysisofBJTwithFixedbiasandVoltagedivider biasusingSpice
8. AnalysisofFET,MOSFETwithfixedbias,self-biasandvoltagedividerbiasusingsimulation software like Spice
9. AnalysisofCascodeandCascadeamplifiersusing Spice
10. AnalysisofFrequencyResponseofBJTandFETusingSpice

LISTOFDIGITALEXPERIMENTS

1. Design and implementation of code converters using logic gates(i) BCD to excess-3 code and vice versa (ii) Binary to gray and vice-versa
2. Design and implementation of 4 bit binary Adder/ Subtractor and BCD adder usingIC 7483
3. DesignandimplementationofMultiplexerandDe-multiplexerusinglogicgates
4. Designandimplementationofencoderanddecoderusinglogicgates
5. Constructionandverificationof4bit ripple counter andMod-10/ Mod-12Ripple counters
6. Designandimplementationof3-bitsynchronousup/downcounter

TOTAL:60 PERIODS

OUTCOMES:

Oncompletionofthislaboratorycourse,thestudentshouldbeableto:

- DesignandTestrectifiers,filtersandregulatedpower supplies.
- DesignandTestBJT/JFETamplifiers.
- Differentiatecascodeandcascadeamplifiers.
- Analyzethelimitationinbandwidthofsinglestageand multistageamplifier
- MeasureCMRRindifferentialamplifier
- Simulateandanalyzeamplifier circuitsusingPSpice.
- DesignandTest thedigitallogiccircuits.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTERIII

20152L39 INTERPERSONALSKILLS/LISTENING&SPEAKING

L	T	P	C
0	0	2	1

OBJECTIVES:

TheCoursewillenablelearnersto:

- EquipstudentswiththeEnglishlanguageskillsrequiredforthesuccessfulundertakingof academic studies with primary emphasis on academic speaking and listening skills.
- Provide guidance and practice in basic general and classroom conversation and to engage inspecific academic speaking activities.
- improvegeneralandacademiclisteningskills
- Makeeffectivepresentations.

UNIT I

Listeningasakeyskill-itsimportance-speaking-givepersonalinformation-askforpersonalinformation - express ability - enquire about ability - ask for clarification Improving pronunciation pronunciationbasics taking lecturenotes -preparingtolistentoa lecture-articulatea completeideaas opposed to producing fragmented utterances.

UNIT II

Listen to a process information- give information, as part of a simple explanation - conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrastinformationandideasfrommultiplesources-conversewithreasonableaccuracyoverawide rangeofeverydaytopics.

UNIT III

Lexical chunking for accuracy and fluency- factors influence fluency, deliver a five-minute informal talk- greet- respondtogreetings-describe healthandsymptoms-inviteandoffer-accept-decline-takeleave-listenforandfollowthegist-listenfordetail

UNIT IV

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizingacademicreadingsandlecturesconversationalspeechlisteningtoandparticipatingin conversations-persuade.

UNIT V

Formalandinformaltalk-listentofollowandrespondtoexplanations,directionsandinstructionsin academicandbusinesscontexts-strategiesforpresentationsandinteractivecommunication -group/pair presentations-negotiatedisagreementingroupwork.

TOTAL :30PERIODS

OUTCOMES:

AttheendofthecourseLearnerswillbeableto:

- Listenandrespondappropriately.
- Participateingroupdiscussions
- Makeeffectivepresentations
- Participateconfidentlyandappropriatelyinconversationsbothformalandinformal

SEMESTER III

201AGGS INTRODUCTIONTOGENDERSTUDIES

L	T	P	C
0	0	0	2

UNIT I CONCEPTS

Sex vs. Gender, masculinity, femininity, socialization, patriarchy, public/ private, essentialism,binaryism, power, hegemony, hierarchy, stereotype, gender roles, gender relation, deconstruction,resistance, sexual division of labour.

UNIT II FEMINISTTHEORY

Liberal,Marxist,Socialist,Radical,Psychoanalytic,postmodernist,eco-feminist.

UNIT III WOMEN'SMOVEMENTS:GLOBAL,NATIONALANDLOCAL

RiseofFeminisminEuropeandAmerica.Women's

Movement in India.

UNIT IV GENDERANDLANGUAGE

LinguisticFormsandGender.

Gender andnarratives.

UNIT V GENDERANDREPRESENTATION

Advertisingandpopularvisualmedia.

GenderandRepresentationinAlternativeMedia.

Gender andsocialmedia.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER IV

20148S41B PROBABILITYANDRANDOMPROCESSES

L	T	P	C
4	0	0	4

OBJECTIVES:

- To provide necessary basic concepts in probability and random processes for applications suchas random signals, linear systems in communication engineering.
- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- Tounderstandthebasicconcepts ofrandomprocesseswhicharewidelyusedinITfields.
- Tounderstandtheconceptofcorrelationandspectraldensities.
- Tounderstandthesignificanceof linear systemswithrandominputs.

UNIT I PROBABILITYANDRANDOMVARIABLES 12

Probability – Axioms of probability – Conditional probability – Baye‘s theorem - Discrete andcontinuous random variables – Moments – Moment generating functions – Binomial, Poisson,Geometric, Uniform, Exponential and Normal distributions.

UNIT II TWO-DIMENSIONALRANDOMVARIABLES 12

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and linearregression–Transformationofrandomvariables–Centrallimittheorem(for independentandidenticallydistributed random variables).

UNIT III RANDOMPROCESSES 12

Classification–Stationaryprocess–Markovprocess-Markovchain-Poissonprocess–Randomtelegraph process.

UNITIV CORRELATIONANDSPECTRALDENSITIES 12

Auto correlation functions– Crosscorrelation functions– Properties– Powerspectral density –Crossspectral density – Properties.

UNIT V LINEARSYSTEMS WITHRANDOMINPUTS 12

Lineartimeinvariantsystem–Systemtransferfunction–Linearsystemswithrandominputs–Autocorrelation and cross correlation functions of input and output.

TOTAL : 60 PERIODS

OUTCOMES:

Uponsuccessfulcompletionofthecourse,studentsshouldbe ableto:

- Understandthefundamentalknowledgeoftheconceptsofprobabilityandhaveknowledgeof standard distributions which can describe real life phenomenon.
- Understandthebasicconceptsofoneandtwodimensionalrandomvariablesandapplyin engineering applications.
- Applytheconceptrandomprocessesinengineering disciplines.
- Understandandapplytheconceptofcorrelationandspectraldensities.
- The students will have an exposure of various distribution functions and help in acquiring skills in handling situations involving more than one variable. Able to analyze the response of random inputs to linear time invariant systems.

SEMESTER IV

20152C42 ELECTRONICCIRCUITSII

L	T	P	C
3	0	0	3

OBJECTIVES:

- To give a comprehensive exposure to all types of amplifiers and oscillators constructed with discrete components. This helps to develop a strong basis for building linear and digital integrated circuits
- Tostudyaboutfeedbackamplifiersandoscillators principles
- Todesignoscillators.
- Tostudyabout turnedamplifier.
- TounderstandtheanalysisanddesignofLCandRCoscillators,amplifiers,multivibrators, power amplifiers and DC convertors.

UNIT I FEEDBACKAMPLIFIERSANDSTABILITY 9

Feedback Concepts – gain with feedback – effect of feedback on gain stability, distortion,bandwidth, input and output impedances; topologies of feedback amplifiers – analysis of series -series, shunt-shunt and shunt-series feedback amplifiers-stability problem- Gain and Phase-margins-Frequency compensation.

UNIT II OSCILLATORS 9

Barkhausen criterion for oscillation – phase shift, Wien bridge - Hartley & Colpitt‘s oscillators – Clapposcillator-Ring oscillators and crystal oscillators – oscillator amplitude stabilization.

UNIT III TUNEDAMPLIFIERS 9

Coil losses, unloaded and loaded Q of tank circuits, small signal tuned amplifiers– Analysis ofcapacitor coupled singletuned amplifier —doubletuned amplifier - effect of cascading singletuned anddouble tuned amplifiers on bandwidth – Stagger tuned amplifiers - Stability of tuned amplifiers –Neutralization - Hazeltine neutralization method.

UNIT IV WAVESHAPINGANDMULTIVIBRATORCIRCUITS 9

Pulse circuits – attenuators – RC integrator and differentiator circuits– diode clampers and clippers – Multivibrators - Schmitt Trigger- UJT Oscillator.

UNIT V POWERAMPLIFIERSANDDCCONVERTERS 9

Power amplifiers- class A-Class B-Class AB-Class C-Power MOSFET-Temperature Effect- Class ABPower amplifier using MOSFET –DC/DC convertors – Buck, Boost, Buck-Boost analysis and design

TOTAL: 45 PERIODS

OUTCOMES:

Uponcompletionofthecourse, thestudentshouldbeableto:

- Analyzedifferenttypesofamplifier,oscillatorandmultivibratorcircuits
- DesignBJTamplifierandoscillator circuits
- Analyzetransistorizedamplifierandoscillator circuits
- Designandanalyzefeedbackamplifiers
- DesignLCandRCoscillators,tunedamplifiers,waveshapingcircuits,multivibrators,power amplifier and DC convertors.

SEMESTER IV

20152C43 COMMUNICATIONTHEORY LTPC
3003

OBJECTIVES:

- Tointroducetheconceptsof variousanalogmodulationsandtheirspectralcharacteristics
- Tounderstandthepropertiesofrandomprocess
- Toknowtheeffect ofnoiseoncommunicationsystems
- Tostudythelimitsset byInformationTheory

UNIT I AMPLITUDEMODULATION 9

Amplitude Modulation- DSBSC, DSBFC, SSB, VSB - Modulation index, Spectra, Power relations andBandwidth– AM Generation– SquarelawandSwitching modulator, DSBSC Generation – BalancedandRing Modulator, SSB Generation – Filter, Phase Shift and Third Methods, VSB Generation – FilterMethod, Hilbert Transform, Pre-envelope& complex envelope–comparison ofdifferent AM techniques,Superheterodyne Receiver

UNIT II ANGLEMODULATION 9

Phase and frequency modulation, Narrow Band and Wide band FM – Modulation index, Spectra, Powerrelations and Transmission Bandwidth - FM modulation –Direct and Indirect methods, FMDemodulation – FM to AM conversion, FM Discriminator - PLL as FM Demodulator.

UNIT III RANDOMPROCESS 9

Random variables, Random Process, Stationary Processes, Mean, Correlation & Covariance functions,Power Spectral Density, Ergodic Processes, Gaussian Process, Transmission of a Random ProcessThrough a LTI filter.

TOTAL: 45 PERIODS

OUTCOMES:

Attheendofthecourse,thestudentshouldbeableto:

- DesignAMcommunicationsystems
- DesignAnglemodulatedcommunicationsystems
- ApplytheconceptsofRandomProcesstothedesignofCommunicationsystems
- AnalyzethenoiseperformanceofAM andFM systems
- Gainknowledgeinsamplingandquantization

SEMESTER IV

20152C44 ELECTROMAGNETICFIELDS LTPC
4004

OBJECTIVES:

- To gain conceptual and basic mathematical understanding of electric and magnetic fields in free space and in materials
- Tounderstandthecouplingbetweenelectricandmagneticfieldsthroughfaraday'slaw, displacement current and Maxwell's equations
- Tounderstandwavepropagationinlossless andinlossy media
- Tobeabletosolveproblemsbasedontheaboveconcepts

UNIT I INTRODUCTION 12
Electromagnetic model, Units and constants, Review of vector algebra, Rectangular, cylindrical andspherical coordinate systems, Line, surface and volume integrals, Gradient of a scalar field, Divergenceofa vector field, Divergencetheorem,Curlofa vector field,Stoke'stheorem,Nullidentities, Helmholtz'stheorem

UNIT III MAGNETOSTATICS 12
Lorentz force equation, Law of no magnetic monopoles, Ampere's law, Vector magnetic potential, Biot-Savart lawand applications, Magnetic field intensity and idea of relativepermeability, Magnetic circuits,Behaviour of magnetic materials, Boundary conditions, Inductance and inductors, Magnetic energy,Magnetic forces and torques

UNIT IV TIME-VARYINGFIELDSANDMAXWELL'sEQUATIONS 12
Faraday'slaw,DisplacementcurrentandMaxwell-Amperelaw,Maxwell's equations,Potentialfunctions,Electromagnetic boundary conditions, Wave equations and solutions, Time-harmonic fields

UNIT V PLANEELECTROMAGNETICWAVES 12
Plane waves in lossless media, Plane waves in lossy media (low-loss dielectrics and good conductors),Group velocity, Electromagnetic power flow and Poynting vector, Normal incidence at a planeconducting boundary, Normal incidence at a plane dielectric boundary

TOTAL:60PERIODS

OUTCOMES:
Bytheendofthiscourse,thestudentshouldbe ableto:

- Displayanunderstandingoffundamentalelectromagneticlawsandconcepts
- WriteMaxwell'sequationsinintegral,differentialandphasorformsandexplaintheirphysical meaning
- Explainelectromagneticwavepropagationinlossyandinlosslessmedia
- Solve simple problems requiring estimation of electric and magnetic field quantities based on these concepts and laws

SEMESTER IV

20152C45 LINEARINTEGRATEDCIRCUITS **LT PC**
30 03

OBJECTIVES:

- Tointroducethebasicbuildingblocksof linear integratedcircuits
- Tolearnthelinear andnon-linearapplicationsofoperationalamplifiers
- Tointroducethetheoryandapplicationsofanalogmultipliersand PLL
- TolearnthetheoryofADC andDAC
- Tointroducetheconceptsofwaveformgenerationandintroducesomespecialfunction ICs

UNIT I BASICSOFOPERATIONAL AMPLIFIERS 9

Current mirror and current sources, Current sources as active loads, Voltage sources, VoltageReferences, BJT Differential amplifier with active loads, Basic information about op-amps – IdealOperational Amplifier - General operational amplifierstages -and internal circuit diagrams of IC 741,DC and AC performance characteristics, slew rate, Open and closed loop configurations – JFETOperational Amplifiers – LF155 and TL082.

UNIT II APPLICATIONSOFOPERATIONALAMPLIFIERS 9

Sign Changer, Scale Changer, Phase Shift Circuits, Voltage Follower, V-to-I and I-to-V converters,adder, subtractor, Instrumentation amplifier, Integrator, Differentiator, Logarithmic amplifier,Antilogarithmic amplifier, Comparators, Schmitt trigger, Precision rectifier, peak detector, clipper andclamper, Low-pass, high-pass and band-pass Butterworth filters.

UNIT III ANALOGMULTIPLIERAND PLL 9

Analog Multiplier using Emitter Coupled Transistor Pair - Gilbert Multiplier cell – Variabletransconductance technique, analog multiplier ICs and their applications, Operation of the basic PLL,Closed loop analysis, Voltage controlled oscillator, Monolithic PLL IC 565, application of PLL for AMdetection, FM detection, FSK modulation and demodulation and Frequency synthesizing and clocksynchronisation.

UNITIVANALOGTODIGITALANDDIGITALTOANALOGCONVERTERS9

Analog and Digital Data Conversions, D/A converter – specifications - weighted resistor type, R-2RLadder type, Voltage Mode and Current-Mode *R - 2R* Ladder types - switches for D/A converters, highspeed sample-and-hold circuits, A/D Converters – specifications - Flash type - SuccessiveApproximation type - Single Slope type – Dual Slope type - A/D Converter using Voltage-to-TimeConversion - Over-sampling A/D Converters, Sigma – Delta converters.

UNIT V WAVEFORMGENERATORSANDSPECIALFUNCTIONICS 9

Sine-wave generators, Multivibrators and Triangular wave generator, Saw-tooth wave generator,ICL8038 function generator, Timer IC 555, IC Voltage regulators – Three terminal fixed and adjustablevoltage regulators - IC 723 general purpose regulator - Monolithic switching regulator, Low Drop –Out(LDO) Regulators - Switched capacitor filter IC MF10, Frequency to Voltage and Voltage toFrequency converters, Audio Power amplifier, Video Amplifier, Isolation Amplifier, Opto-couplers andfibre optic IC.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse, thestudentshouldbeableto:

- Designlinearandnonlinear applicationsofOP–AMPS
- DesignapplicationsusinganalogmultiplierandPLL
- DesignADC andDAC usingOP–AMPS
- GeneratewaveformsusingOP–AMPCircuits
- AnalyzespecialfunctionICs

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER IV

20149S46 ENVIRONMENTALSCIENCEANDENGINEERING LTPC
3003

OBJECTIVES:

- Tostudythenatureandfactsaboutenvironment.
- Tofindingandimplementingscientific,technological,economicandpoliticalsolutionstoenvironmental problems.
- Tostudytheinterrelationshipbetweenlivingorganismand environment.
- To appreciatethe importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- Tostudythedynamicprocessesandunderstandthefeaturesoftheearth‟sinteriorandsurface.
- To study the integrated themes and biodiversity,natural resources,pollution control and wastemanagement.

UNIT I ENVIRONMENT,ECOSYSTEMSANDBIODIVERSITY 14

Definition, scope and importance of environment– need for public awareness - concept of an ecosystem– structure and function of an ecosystem – producers, consumers and decomposers – energy flow in theecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction,types,characteristicfeatures,structureandfunctionofthe(a)forestecosystem(b)grasslandecosystem

(c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographicalclassification of India – value of biodiversity: consumptive use, productive use, social, ethical, aestheticand option values – Biodiversity at global, national and local levels – India as a mega-diversity nation –hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlifeconflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situconservation of biodiversity. Field study of common plants, insects, birds; Field study of simpleecosystems – pond, river, hill slopes, etc.

UNIT II ENVIRONMENTALPOLLUTION 8

:) Soil

UNIT III NATURALRESOURCES 10

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, damsand their effects on forests and tribal people – Water resources: Use and over- utilization of surface andground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources:Use and exploitation, environmental effects of extracting and using mineral resources, case studies–Food resources: World food problems, changes caused by agricultureand overgrazing, effects of modernagriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources:Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources.casestudies – Landresources: Landasa resource, land degradation, man inducedlandslides, soil erosionand desertification – role of an individual in conservation of natural resources – Equitable use ofresources for sustainable lifestyles. Field study of local area to document environmental assets – river /forest / grassland / hill / mountain.

UNIT IV SOCIALISSUES ANDTHEENVIRONMENT 7

vation,

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidentsand holocaust, case studies. – wasteland reclamation – consumerism and waste products – environmentproduction act – Air (Prevention and Control of Pollution) act – Water (Prevention and control ofPollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved inenvironmental legislation- central and state pollution control boards- Public awareness.

TOTAL:45PERIODS

OUTCOMES:

- Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental Protection. One will obtain knowledge on the following after completing the course.
- Publicawarenessofenvironmentalisatinfantstage.
- Ignoranceandincompleteknowledgehasleadto misconceptions
- Developmentandimprovementinstd.oflivinghasleadtoseriousenvironmental disasters

TEXTBOOKS:

1. BennyJoseph,‗EnvironmentalScience andEngineering',TataMcGraw-Hill,NewDelhi, 2006.

SEMESTER IV

20152L47 CIRCUITSDESIGNANDSIMULATIONLABORATORY LT P C
00 4 2

OBJECTIVES:

- Togainhandsonexperienceindesigningelectroniccircuits
- Tolearnsimulationsoftwareusedincircuitdesign
- Tolearnthefundamentalprinciplesofamplifier circuits
- Todifferentiatefeedbackamplifiersandoscillators.
- Todifferentiatetheoperationof variousmultivibrators

DESIGNANDANALYSISOFTHEFOLLOWINGCIRCUITS

1. SeriesandShuntfeedbackamplifiers-Frequencyresponse,Inputandoutputimpedance
2. RCPhaseshiftoscillatorandWienBridgeOscillator
3. HartleyOscillatorandColpittsOscillator
4. SingleTunedAmplifier
5. RCIntegratorandDifferentiatorcircuits
6. AstableandMonostable multivibrators
7. ClippersandClampers

SIMULATIONUSINGSPICE(UsingTransistor):

1. TunedCollector Oscillator
2. Twin-TOscillator/WeinBridgeOscillator
3. DoubleandStaggertunedAmplifiers
4. BistableMultivibrator
5. SchmittTriggercircuitwithPredictablehysteresis
6. Analysisofpoweramplifier

TOTAL: 60 PERIODS

OUTCOMES:

Oncompletionofthislaboratorycourse,thestudentshouldbeableto:

- Analyzevarioustypes offeedbackamplifiers
- Designoscillators,tunedamplifiers,wave-shapingcircuitsandmultivibrators
- Designandsimulatefeedbackamplifiers, oscillators, tunedamplifiers, wave-shapingcircuits and multivibrators using SPICE Tool.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

SEMESTER IV

20152L48	**LINEARINTEGRATEDCIRCUITSLABORATORY**	**L**	**T**	**P**	**C**
		0	**0**	**4**	**2**

OBJECTIVES:

- Tounderstandthebasicsoflinear integratedcircuitsandavailableICs
- Tounderstandthecharacteristicsoftheoperationalamplifier.
- Toapplyoperationalamplifiersinlinearandnonlinearapplications.
- ToacquirethebasicknowledgeofspecialfunctionIC.
- TouseSPICEsoftwareforcircuitdesign

DESIGNANDTESTINGOFTHEFOLLOWINGCIRCUITS

1. Inverting,Noninvertinganddifferentialamplifiers.
2. IntegratorandDifferentiator.
3. Instrumentationamplifier
4. Activelow-pass,High-passandband-pass filters.
5. Astable&MonostablemultivibratorsusingOp-amp
6. SchmittTriggerusingop-amp.
7. PhaseshiftandWienbridgeoscillatorsusingOp-amp.
8. AstableandMonostablemultivibratorsusingNE555Timer.
9. PLLcharacteristicsanditsuseasFrequencyMultiplier,Clocksynchronization
10. R-2RLadderTypeD-AConverter usingOp-amp.
11. DCpowersupplyusingLM317andLM723.
12. Studyof SMPS

SIMULATIONUSINGSPICE:

1. Activelow-pass,High-passandband-passfiltersusingOp-amp
2. AstableandMonostablemultivibratorsusingNE555Timer.
3. A/Dconverter
4. Analogmultiplier

TOTAL: 60 PERIODS

OUTCOMES:

Oncompletionofthislaboratorycourse,thestudentshouldbeableto:

- Designamplifiers,oscillators,D-Aconvertersusingoperationalamplifiers.
- Designfiltersusingop-ampandperformsanexperimentonfrequencyresponse.
- AnalyzetheworkingofPLLanddescribeitsapplicationasafrequencymultiplier.
- DesignDCpower supplyusingICs.
- Analyzetheperformanceoffilters,multivibrators,A/DconverterandanalogmultiplierusingSPICE.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER IV

201AGCE **COMMUNITYENGAGEMENT**

L	T	P	C
0	0	0	2

OBJECTIVES:

- Todevelopanappreciationofruralculture,life-styleandwisdomamongst students
- Tolearnaboutthestatusofvariousagriculturalandruraldevelopmentprogrammes
- Tounderstandcausesforruraldistressandpovertyandexploresolutionsforthesame
- To applyclassroomknowledgeofcoursestofieldrealitiesandtherebyimprovequalityof learning

LEARNINGOUTCOMES:
Aftercompletingthiscourse,studentwillbeable to:

- Gainanunderstandingofrurallife,cultureandsocialrealities
- Developasenseofempathyandbondsofmutualitywithlocalcommunity
- AppreciatesignificantcontributionsoflocalcommunitiestoIndiansocietyand economy
- Learntovaluethelocalknowledgeandwisdomofthecommunity
- Identifyopportunities for contributing to community's socio-economic improvements

Credit

2 credit,30hours,atleast50%infield,compulsoryfor allstudents

Contents

DividedintoofourModules, fieldimmersionispartofeachUnit
CourseStructure:2CreditsCourse(1CreditforClassroomandTutorialsand1CreditforField Engagement)

S.No.	ModuleTitle	ModuleContent	Assignment	ching/Learning Methodology	No.of Classes
1	**Appreciationof Rural Society**	Rural lifestyle,rural society,casteandgender relations, rural values with respect tocommunity, nature and resources, elaboration of"soul of India lies in villages' (Gandhi), rural infrastructure	Prepare a map (physical, visual or digital) of the villageyouvisited andwriteanessay aboutinter-family relations in that village.	- Classroom discussions - Fieldvisit** - Assignment Map	2 4 2

2	***Understanding ruraleconomy&livelihood***	Agriculture, farming, landownership, water management, animal husbandry, non-farm livelihoods and artisans, ruralentrepreneurs,rural markets	Describe your analysisofruralhousehol d economy,its llengesandpossible pathwaysto address them	- Fieldvisit** -Group discussionsin class - Assignment	3 4 1
3	***RuralInstitutions***	Traditional rural organisations,Self-help Groups, Panchayatiraj institutions (Gram Sabha, Gram Panchayat,Standing Committees), localcivil society, local administration	Howeffectively are Panchayati raj institutions functioninginthe village?What wouldyousuggest toimprovetheiref fectiveness? Present a case study(writtenor audio-visual)	-Classroom -Fieldvisit** -Group presentationof assignment	2 4 2
4	***RuralDevelopment Programmes***	Hi story of rural development India,currentnational programmes:Sarva Shiksha Abhiyan, ti Bachao, Beti Padhao, ıshmanBharat, Swatchh Bharat, PM AwaasYojana,Skill India, Gram Panchayat DecentralisedPlanning, NRLM,MNREGA, etc.	scribethebenefits received and challenges ≥dinthedeliveryof one of these programmes inthe rural c o m m u n i t y ; give suggestions about improving implementationof the programmefor therural poor.	-Classroom - Eachstudent selects one program for field visit** - Written assignment	2 4 2

SEMESTERV

20152C51 DIGITALCOMMUNICATION LTPC
3003

OBJECTIVES:

- Toknowtheprinciples ofsampling&quantization
- Tostudythevarious waveformcodingschemes
- Tolearnthevariousbasebandtransmissionschemes
- Tounderstandthevarious bandpasssignalingschemes
- Toknowthefundamentalsofchannelcoding

UNIT I INFORMATIONTHEORY 9
Discrete Memoryless source, Information, Entropy, Mutual Information - Discrete Memoryless channels– Binary Symmetric Channel, Channel Capacity - Hartley - Shannon law - Source coding theorem -Shannon - Fano & Huffman codes.

UNIT II WAVEFORMCODING&REPRESENTATION 9
PredictionfilteringandDPCM-DeltaModulation-ADPCM&ADMprinciples-LinearPredictiveCoding-Propertiesof Linecodes- PowerSpectralDensityofUnipolar /Polar RZ&NRZ–BipolarNRZ -Manchester

UNIT III BASEBANDTRANSMISSION&RECEPTION 9
ISI – Nyquist criterionfor distortionless transmission – Pulseshaping – Correlative coding - Eyepattern–Receiving Filters- Matched Filter, Correlation receiver, Adaptive Equalization

UNIT V ERRORCONTROLCODING 9
Channel coding theorem - Linear Block codes - Hamming codes - Cyclic codes - Convolutional codes - Viterbi Decoder.

TOTAL:45PERIODS

OUTCOMES:
Uponcompletionofthecourse, thestudentshouldbeableto

- DesignPCMsystems
- Designandimplementbasebandtransmissionschemes
- Designandimplementbandpasssignalingschemes
- Analyzethespectralcharacteristicsofbandpasssignalingschemesandtheirnoiseperformance
- Designerrorcontrolcodingschemes

SEMESTERV

20152C52 DISCRETE-TIMESIGNALPROCESSING LTPC
4004

OBJECTIVES:

- Tolearndiscretefourier transform,propertiesofDFTanditsapplicationtolinearfiltering
- To understand the characteristics of digital filters, design digital IIR and FIR filters and applythese filters to filter undesirable signals in various frequency bands
- Tounderstandtheeffects offiniteprecisionrepresentationondigitalfilters
- Tounderstandthefundamentalconceptsofmultiratesignalprocessinganditsapplications
- Tointroducetheconceptsofadaptivefiltersanditsapplicationtocommunication engineering

UNIT I DISCRETEFOURIERTRANSFORM 12

Review of signals and systems, concept of frequency in discrete-time signals, summary of analysis & synthesis equations for FT & DTFT, frequency domain sampling, Discrete Fourier transform (DFT) - deriving DFT from DTFT, properties of DFT - periodicity, symmetry, circular convolution. Linear filtering using DFT. Filtering long data sequences - overlap save and overlap add method. Fast computationof DFT -Radix-2 Decimation-in-time(DIT)FastFourier transform(FFT), Decimation-in-frequency (DIF) Fast Fourier transform (FFT). Linear filtering using FFT.

UNIT II INFINITEIMPULSERESPONSEFILTERS 12

Characteristics of practical frequencyselective filters. characteristics of commonlyusedanalogfilters - Butterworthfilters, Chebyshevfilters. Designof IIR filters from analogfilters (LPF,HPF,BPF,BRF) - Approximation of derivatives, Impulse invariance method, Bilinear transformation. Frequencytransformation in the analog domain. Structure of IIR filter - direct form I, direct form II, Cascade,parallel realizations.

UNIT III FINITEIMPULSERESPONSEFILTERS 12

Design of FIR filters - symmetric and Anti-symmetric FIR filters - design of linear phase FIR filtersusing Fourier series method - FIR filter design using windows (Rectangular, Hamming and Hanningwindow), Frequency sampling method. FIR filter structures - linear phase structure, direct formrealizations

UNIT IV FINITEWORDLENGTHEFFECTS 12

Fixed point and floating point number representation - ADC - quantization - truncation and rounding - quantization noise - input / output quantization - coefficient quantization error - product quantizationerror - overflow error - limit cycle oscillations due to product quantization and summation - scaling toprevent overflow.

UNIT V INTRODUCTIONTODIGITALSIGNALPROCESSORS 12

DSP functionalities - circular buffering – DSP architecture – Fixed and Floating point architectureprinciples – Programming – Application examples.

TOTAL:60PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto

- ApplyDFTfortheanalysisofdigitalsignalsandsystems
- DesignIIR andFIR filters
- Characterizetheeffectsoffiniteprecisionrepresentationondigitalfilters
- Designmultiratefilters
- Applyadaptivefiltersappropriatelyincommunicationsystems

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

20152S53 COMPUTERARCHITECTUREANDORGANIZATION

LTPC
3003

OBJECTIVES:

- Tomakestudentsunderstandthebasicstructureandoperationofdigitalcomputer
- Tofamiliarizewithimplementationoffixedpointandfloating-pointarithmeticoperations
- Tostudythedesign ofdatapathunit andcontrolunit forprocessor
- Tounderstandtheconceptof variousmemoriesandinterfacing
- Tointroducetheparallelprocessingtechnique

UNIT I COMPUTERORGANIZATION&INSTRUCTIONS 9

Basics of a computer system: Evolution, Ideas, Technology, Performance, Power wall, Uniprocessors to Multiprocessors. Addressingandaddressingmodes. Instructions:OperationsandOperands, Representing instructions, Logical operations, control operations.

UNIT II ARITHMETIC 9

FixedpointAddition,Subtraction,MultiplicationandDivision.FloatingPointarithmetic,Highperformance arithmetic, Subword parallelism

UNITIIITHEPROCESSOR 9

Introduction, Logic Design Conventions, Building a Datapath - A Simple Implementation scheme - An Overview of Pipelining - Pipelined Datapath and Control. Data Hazards: Forwarding versus Stalling, Control Hazards, Exceptions, Parallelism via Instructions.

UNIT IV MEMORYANDI/OORGANIZATION 9

Memory hierarchy, Memory Chip Organization, Cache memory, Virtual memory. Parallel BusArchitectures, InternalCommunicationMethodologies, SerialBusArchitectures, Massstorage,InputandOutput Devices.

UNIT V ADVANCEDCOMPUTERARCHITECTURE 9

Parallelprocessingarchitecturesandchallenges, Hardwaremultithreading, Multicoreandsharedmemorymultiprocessors, Introduction to Graphics Processing Units, Clusters and Warehouse scale computers -Introduction to Multiprocessor network topologies.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse,thestudentshouldbeableto

- Describedatarepresentation,instructionformatsandtheoperationofadigitalcomputer
- Illustratethefixedpointandfloating-pointarithmeticforALUoperation
- Discussaboutimplementationschemesofcontrolunitandpipelineperformance
- Explaintheconceptofvarious memories,interfacingandorganizationofmultipleprocessors
- Discussparallelprocessingtechniqueandunconventionalarchitectures

LISTOFOPENELECTIVES

OPENELECTIVE– I(SEMESTERV)

OPENELECTIVE–I
SEMESTERV

20150OE54A **DATABASEMANAGEMENTSYSTEMS** **LTPC**
3003

OBJECTIVES:

- Tolearnthefundamentalsofdatamodels
- Tolearnconceptual modelingusingER diagrams.
- TostudySQLqueriesanddatabaseprogramming
- Tolearnproperdesigningofrelationaldatabase.
- Tounderstanddatabasesecurityconcepts
- TounderstandInformationretrievaltechniques

UNIT I DBMSANDCONCEPTUALDATAMODELING 9
Purpose of Database System – Data independence - Data Models – Database System Architecture – Conceptual Data modeling: ER models - Enhanced-ER Model. Introduction to relational databases – Relational Model – Keys – ER-to-Relational Mapping. Modeling of a library management system.

UNIT II DATABASEQUERYING 11
Relational Algebra – SQL: fundamentals – DDL – Specifying integrity constraints - DML – Basicretrieval queries in SQL - Complex SQL retrieval queries – nested queries – correlated queries – joins -aggregate functions. Creating a table, populating data, adding integrity constraints, querying tables withsimple and complex queries.

UNIT III DATABASEPROGRAMMING 7
Databaseprogramming withfunctioncalls, storedprocedures - views – triggers. EmbeddedSQL. ODBCconnectivity with front end tools. Implementation using ODBC/JDBC and SQL/PSM, implementingfunctions, views, and triggers in MySQL / Oracle.

UNIT IV DATABASEDESIGN 9
FunctionalDependencies –Designguidelines –NormalForms:first, second, third–Boyce/CoddNormalForm – Normalization algorithms. Design of a banking database system / university database system.

UNIT V ADVANCEDTOPICS 9
Database security issues – Discretionary access control – role based access – Encryption and public keyinfrastructures – challenges. Information Retrieval: IR Concepts, Retrieval Models, Queries in IRsystems.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse, thestudentswillbeableto:

- Understand relational data model, evolve conceptual model of a given problem, its mapping torelational model and Normalization
- Querytherelationaldatabaseandwriteprogramswithdatabaseconnectivity
- Understandtheconceptsofdatabasesecurityandinformationretrievalsystems

3003

OBJECTIVES:

- Tolearnabout theconceptofcloudandutilitycomputing.
- Tohaveknowledgeonthevarious issues incloudcomputing.
- Tobefamiliarwiththeleadplayersincloud.
- Toappreciatetheemergenceofcloudasthenext generationcomputingparadigm.

UNIT I INTRODUCTIONTOCLOUDCOMPUTING 9
IntroductiontoCloudComputing – Roots ofCloudComputing– DesiredFeatures ofCloudComputing – Challenges and Risks – Benefits and Disadvantages of Cloud Computing.

UNIT II VIRTUALIZATION 9
Introduction to Virtualization Technology – Load Balancing and Virtualization – UnderstandingHypervisor – Seven Layers of Virtualization – Types of Virtualization – Server, Desktop, ApplicationVirtualization.

UNIT III CLOUDARCHITECTURE,SERVICESANDSTORAGE 9
NISTCloudComputingReferenceArchitecture–Public,PrivateandHybridClouds-laaS–PaaS–SaaS – Architectural Design Challenges – Cloud Storage.

UNIT IV RESOURCEMANAGEMENTANDSECURITYINCLOUD 9
InterCloudResourceManagement–ResourceProvisioningMethods–SecurityOverview–CloudSecurity Challenges – Data Security –Application Security – Virtual Machine Security.

UNIT V CASESTUDIES 9
Google App Engine(GAE) – GAE Architecture – Functional Modules of GAE – Amazon WebServices(AWS) – GAE Applications – Cloud Software Environments – Eucalyptus – Open Nebula – Open Stack.

TOTAL:45PERIODS

OUTCOMES:
OnCompletionofthecourse, thestudentsshouldbe ableto:

- Articulatethemainconcepts,keytechnologies, strengthsandlimitationsofcloudcomputing.
- Learnthekeyandenablingtechnologiesthathelpinthedevelopmentofcloud.
- Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.
- Explainthecoreissuesofcloudcomputingsuchasresourcemanagementandsecurity.
- Beabletoinstallandusecurrentcloudtechnologies.
- Choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.

20153OE54A INDUSTRIALNANOTECHNOLOGY LTPC
300 3

OBJECTIVES

- Toelucidateonadvantagesofnanotechnologybasedapplicationsineachindustry
- Toprovideinstancesofcontemporaryindustrialapplicationsofnanotechnology
- Toprovideanoverviewoffuturetechnologicaladvancementsandincreasingroleofnanotechnology in each industry

UNIT I NANOELECTRONICS 9

Advantages of nano electrical and electronic devices –Electronic circuit chips – Lasers - Micro andNanoElectromechanical systems – Sensors, Actuators, Optical switches,- Data memory –Lighting andDisplays – Batteries - Fuel cells and Photo-voltaic cells – Electric double layer capacitors – Lead-freesolder – Nanoparticle coatings for electrical products.

UNIT II BIONANOTECHNOLOGY 9

Nanoparticlesin bone substitutesanddentistry–Implantsand Prosthesis–Nanoroboticsin Surgery–Nanosensors in Diagnosis– Neuro-electronic Interfaces– Therapeutic applications.

UNITIIINANOTECHNOLOGYINCHEMICALINDUSTRY 9

Nanocatalyts – Smart materials – Heterogenous nanostructures and composites – Nanostructures forMolecular recognition (Quantum dots, Nanorods, Nanotubes) – Molecular Encapsulation and itsapplications – Nanoporous zeolites – Self-assembled Nanoreactors.

UNIT IV NANOTECHNOLOGYINAGRICULTUREANDFOODTECHNOLOGY9

NanotechnologyinAgriculture-Precisionfarming,Smartdeliverysystem–Insecticidesusingnanotechnology – Potential of nano-fertilizers - Nanotechnology in Food industry.

UNIT V NANOTECHNOLOGYINTEXTILESANDCOSMETICS 9

Nanofibre production - Electrospinning – Controlling morphologies of nanofibers – Tissue engineeringapplication– Polymer nanofibers - Nylon-6 nanocomposites from polymerization - Nano-filledpolypropylene fibers - Nano finishing in textiles (UV resistant, antibacterial, hydrophilic, self-cleaning,flame retardant finishes) – Modern textiles Cosmetics – Formulation of Gels, Shampoos, Hair-conditioners.

3003

OBJECTIVES:
Attheendofthecourse, thestudentisexpectedto

- Understandandanalysetheenergydataofindustries
- Carryoutenergyaccountingandbalancing
- Conductenergyauditandsuggestmethodologiesforenergysavingsand
- Utilisetheavailableresourcesinoptimal ways

UNIT I INTRODUCTION 9
Energy-Power – Past &Present scenarioofWorld; NationalEnergyconsumptionData – Environmentalaspects associated with energy utilization – Energy Auditing: Need, Types, Methodology and Barriers.Role of Energy Managers. Instruments for energy auditing.

UNIT II ELECTRICALSYSTEMS 9
Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors,Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, EnergyEfficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope ofEncon in Illumination.

UNIT III THERMALSYSTEMS 9
Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and enconmeasures. Steam: Distribution &U sage: Steam Traps, Condensate Recovery, Flash Steam Utilization,Insulators & Refractories

UNIT IV ENERGYCONSERVATIONINMAJORUTILITIES 9
Pumps, Fans, Blowers, Compressed Air Systems, Refrigerationand Air ConditioningSystems – CoolingTowers – D.G. sets

UNIT V ECONOMICS 9
Energy Economics–DiscountRate,Payback Period,Internal Rate of Return,NetPresentValue,LifeCycle Costing –ESCO concept

TOTAL:45PERIODS

OUTCOMES:
Uponcompletionofthiscourse,thestudentscanabletoanalysetheenergydataofindustries.

- Cancarryoutenergyaccountingandbalancing
- Cansuggest methodologiesforenergysavings

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

OPENELECTIVE–I
SEMESTERV

20154OE54A **RENEWABLEENERGYSOURCES** **LTPC 3003**

OBJECTIVES:

- Togetexposureonsolar radiationanditsenvironmentalimpacttopower.
- Toknowabout thevariouscollectorsusedforstoringsolarenergy.
- Toknowabout thevariousapplicationsinsolarenergy.
- Tolearnabout thewindenergyandbiomass anditseconomic aspects.
- Toknowaboutgeothermalenergywithotherenergysources.

UNIT II SOLARENERGY COLLECTION 8
Flat plate and concentrating collectors, classification of concentrating collectors, orientation and thermalanalysis, advanced collectors.

UNIT III SOLARENERGYSTORAGEAND APPLICATIONS 7
Differentmethods,Sensible,latentheatandstratifiedstorage,solarponds.SolarApplications-solarheating/cooling technique, solar distillation and drying, photovoltaic energy conversion.

UNIT IV WIND ENERGY 10
Sources and potentials, horizontal and vertical axis windmills, performance characteristics, Betz criteriaBIO-MASS: Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gasyield, combustion characteristics of bio-gas, utilization for cooking, I.C.Engine operation and economicaspects.

UNIT V GEOTHERMALENERGY: 9
Resources, types of wells, methods of harnessing the energy, potential in India. OCEAN ENERGY:OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy:Potential and conversion techniques, mini-hydel power plants, and their economics. DIRECT ENERGYCONVERSION: Need for DEC, Carnot cycle, limitations, principles of DEC.

TOTAL:45PERIODS

OUTCOMES:

- Understandingthephysicsofsolarradiation.
- Abilitytoclassifythesolar energycollectorsandmethodologiesofstoringsolarenergy.
- Knowledgeinapplyingsolarenergyinauseful way.
- Knowledgeinwindenergyandbiomasswithitseconomicaspects.
- Knowledgeincapturingandapplyingotherformsofenergysourceslikewind,biogasand geothermal energies.

20154OE54B AUTOMOTIVESYSTEMS

LTPC
3003

OBJECTIVES:

- Tounderstandtheconstructionandworkingprincipleofvarious partsofanautomobile.
- Tohavethepracticefor assemblinganddismantlingof enginepartsandtransmission system.

UNIT I AUTOMOTIVEENGINEAUXILIARYSYSTEMS 9

Automotiveengines-Externalcombustionengines–Internalcombustionengines-classificationof engines-SI Engines- CI Engines- two stroke engines -four stroke engines- construction andworking principles - IC engine components- functions and materials -valve timing –port timingdiagram- Injectionsystem-Unit injector system- Rotarydistributor type-Electronicallycontrolledinjection system for SI engines-CI engines-Ignition system - Electronic ignition system
-Transistorizedignitionsystem,capacitivedischargeignitionsystem.

UNIT II VEHICLEFRAMESANDSTEERINGSYSTEM 9

Vehicleconstructionanddifferent Chassislayouts –classifications ofchassis-typesofframes- frameless chassis construction –articulated vehicles- vehicle body -Vehicleaerodynamics-various resistances and its effects - steering system –conventional –sophisticated vehicle- and types of steering gear box-Power Steering-Steering
geometry-conditionfor truerollingmotion-Ackermann's-Devi'ssteeringsystem-types ofstubaxle –Types of rear axles.

UNIT III TRANSMISSIONSYSTEMS 9

Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms,Overdrive,transferbox,fluidflywheel,torqueconverter,propellershaft,slipjoints,universaljoints –- Hotchkiss Drive and Torque Tube Drive- rear axle- Differential-wheels and tyres.

UNIT IV SUSPENSIONANDBRAKESSYSTEMS 9

SuspensionSystems-conventionalSuspensionSystems -independentSuspensionSystems–leaf spring – coil spring –taper-lite - eligo,s spring Types of brakes -Pneumatic andHydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution(EBD)andTractionControl. DerivetheequationofForcesactingwhileapplyinga brakes on plain surface -inclined road-gradient.

UNIT V ALTERNATIVEENERGYSOURCES 9

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol andHydrogen in Automobiles- Engine modifications required –Performance, Combustion andEmissionCharacteristics of SI andCI engines withthesealternatefuels - Electric andHybridVehicles, FuelCell.Turbochargers -Engineemissioncontrolbythreewaycatalyticconvertersystem.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthiscourse, thestudentswillbe ableto:

- identifythedifferentcomponentsinautomobileengineering.
- haveclearunderstandingon differentauxiliaryandtransmissionsystemsusual.

20155OE54A	**AIRPOLLUTIONANDCONTROLENGINEERING**	**LTPC 3003**

OBJECTIVE:

- To impart knowledge on the principle and design of control of Indoor/particulate/gaseousairpollutant and its emerging trends.

UNIT I INTRODUCTION 7

Structure and composition of Atmosphere – Definition, Scope and Scales of Air Pollution – Sources andclassification of air pollutants and their effect on human health, vegetation, animals, property, aestheticvalue and visibility- Ambient Air Quality and Emission standards.

UNIT II METEOROLOGY 6

Effects of meteorology on Air Pollution - Fundamentals, Atmospheric stability, Inversion, Wind profilesand stack plume patterns- Atmospheric Diffusion Theories – Dispersion models, Plume rise.

UNIT IV CONTROLOFGASEOUSCONTAMINANTS 11

FactorsaffectingSelectionofControlEquipment–Workingprinciple-absorption,Adsorption,condensation, Incineration, Bio filters – Process control and Monitoring.

TOTAL:45PERIODS

OUTCOMES:

Thestudentscompletingthecoursewillhave

- Anunderstandingofthenatureandcharacteristicsofairpollutants,noisepollutionandbasic concepts of air quality management
- Abilitytoidentify, formulateandsolveairandnoisepollutionproblems
- Abilitytodesignstacksandparticulateair pollutioncontroldevicestomeetapplicablestandards.
- Abilitytoselectcontrol equipments.
- Abilitytoensurequality,controlandpreventivemeasures.

OBJECTIVES:
- TointroducethefundamentalsandcomponentsofGeographicInformationSystem
- Toprovidedetailsofspatialdatastructuresandinput,managementandoutputprocesses.

UNIT I FUNDAMENTALSOFGIS 9
Introduction to GIS - Basic spatial concepts - Coordinate Systems - GIS and Information Systems – Definitions – History of GIS - Components of a GIS – Hardware, Software, Data, People, Methods – Proprietary and open source Software - Types of data – Spatial, Attribute data- types of attributes –scales/ levels of measurements.

UNIT II SPATIALDATAMODELS 9
Database Structures – Relational, Object Oriented – ER diagram - spatial data models – Raster DataStructures – Raster Data Compression - Vector Data Structures - Raster vs Vector Models- TIN andGRID data models - OGC standards - Data Quality.

UNIT III DATAINPUTANDTOPOLOGY 9
Scanner - Raster Data Input – Raster Data File Formats – Vector Data Input –Digitiser –Topology - Adjacency, connectivity and containment – Topological Consistency rules – Attribute Data linking – ODBC – GPS - Concept GPS based mapping.

UNIT IV DATA ANALYSIS 9
VectorDataAnalysistools-DataAnalysistools-NetworkAnalysis-Digital Educationmodels-3Ddata collection and utilisation.

UNIT V APPLICATIONS 9
GIS Applicant - Natural Resource Management - Engineering - Navigation - Vehicle tracking and fleetmanagement - Marketing and Business applications - Case studies.

TOTAL:45PERIODS

OUTCOMES:
Thiscourseequipsthestudentto
- Havebasicidea aboutthefundamentalsof GIS.
- Understandthetypes ofdatamodels.
- Getknowledgeaboutdatainputandtopology.
- Gainknowledgeondataqualityandstandards.
- Understanddatamanagementfunctionsanddataoutput

LISTOF ELECTIVES

ELECTIVE–I(SEMESTERV)

ELECTIVE–I
SEMESTERV

20152E56A OBJECTORIENTEDPROGRAMMING LTPC
3003

OBJECTIVES:

- TounderstandObjectOrientedProgrammingconceptsandbasiccharacteristicsofJava
- Toknowtheprinciplesofpackages,inheritanceandinterfaces
- TodefineexceptionsanduseI/O streams
- Todevelopa javaapplicationwiththreadsandgenericsclasses
- TodesignandbuildsimpleGraphical UserInterfaces

UNIT I INTRODUCTIONTOOOPANDJAVA FUNDAMENTALS 10
ObjectOrientedProgramming-Abstraction–objectsandclasses-Encapsulation-Inheritance-Polymorphism-OOPinJava–CharacteristicsofJava–TheJavaEnvironment-JavaSourceFile-Structure–Compilation.FundamentalProgrammingStructuresinJava–DefiningclassesinJava –constructors,methods-accessspecifiers-staticmembers-Comments,DataTypes,Variables,Operators, Control Flow, Arrays , Packages - JavaDoc comments.

UNIT II INHERITANCEANDINTERFACES 9
Inheritance – Super classes- sub classes –Protected members – constructors in sub classes- the Objectclass – abstract classes and methods- final methods and classes – Interfaces – defining an interface,implementing interface, differences between classes and interfaces and extending interfaces - Objectcloning -inner classes, Array Lists - Strings

UNIT III EXCEPTIONHANDLINGAND I/O 9
Exceptions - exception hierarchy - throwing and catching exceptions - built in exceptions, creating ownexception, Stack Trace Elements.
Input / Output Basics –Streams – Byte streams and Character streams – Reading and Writing Console – Reading and Writing Files

UNIT IV MULTITHREADINGANDGENERICPROGRAMMING 8
Differences between multi-threading and multitasking, thread life cycle, creating threads, synchronizingthreads, Inter thread communication, daemon threads, thread groups.
GenericProgramming–Genericclasses–genericmethods–BoundedTypes–RestrictionsandLimitations.

UNIT V EVENTDRIVEN PROGRAMMING 9
Graphics programming - Frame – Components - working with 2D shapes - Using color, fonts, andimages - Basics of event handling - event handlers - adapter classes - actions - mouse events - AWTevent hierarchy - Introduction to Swing – layout management - Swing Components – Text Fields , TextAreas – Buttons-CheckBoxes –RadioButtons –Lists-choices-Scrollbars –Windows –Menus – DialogBoxes.

TOTAL:45PERIODS

OUTCOMES:
Uponcompletionofthecourse, studentswillbeableto:

- DevelopJavaprogramsusingOOP principles
- DevelopJava programswiththeconceptsinheritanceandinterfaces

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

20152E56C **OPERATINGSYSTEMS** **LTPC**
3003

OBJECTIVES:

- Tounderstandthebasicconceptsandfunctionsofoperatingsystems.
- TounderstandProcessesandThreads
- ToanalyzeSchedulingalgorithms.
- Tounderstandtheconcept ofDeadlocks.
- Toanalyzevariousmemorymanagementschemes.
- TounderstandI/OmanagementandFilesystems.
- TobefamiliarwiththebasicsofLinux systemandMobileOSlikeiOSand Android.

UNIT I OPERATINGSYSTEMOVERVIEW 7

Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy,Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating systemoverview-objectives and functions, Evolution of Operating System.- Computer System OrganizationOperating SystemStructureand Operations- SystemCalls, SystemPrograms, OS Generation and SystemBoot.

UNIT II PROCESSMANAGEMENT 11

Processes-ProcessConcept,ProcessScheduling,OperationsonProcesses, InterprocessCommunication;CPU Scheduling - Scheduling criteria, Scheduling algorithms, Multiple-processor scheduling, Real timescheduling;Threads-Overview, Multithreadingmodels,Threadingissues;ProcessSynchronization - Thecritical-section problem, Synchronization hardware, Mutex locks, Semaphores, Classic problems ofsynchronization, Critical regions, Monitors; Deadlock – System model, Deadlock characterization,Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection,Recovery from deadlock.

[illegible]

UNIT IV FILESYSTEMS ANDI/OSYSTEMS 9

Mass Storage system – Overview of Mass Storage Structure, Disk Structure, Disk Scheduling andManagement, swap space management; File-System Interface - File concept, Access methods, DirectoryStructure, Directory organization, File system mounting, File Sharing and Protection; File SystemImplementation- File System Structure, Directory implementation, Allocation Methods, Free SpaceManagement, Efficiency and Performance, Recovery; I/O Systems – I/O Hardware, Application I/Ointerface, Kernel I/O subsystem, Streams, Performance.

UNIT V CASESTUDY 9

Linux System - Design Principles, Kernel Modules, Process Management, Scheduling, MemoryManagement, Input-Output Management, File System, Interprocess Communication; Mobile OS - iOSand Android - Architecture and SDK Framework, Media Layer, Services Layer, Core OS Layer, FileSystem.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse,thestudentsshouldbeableto:

- Analyzevariousschedulingalgorithms.
- Understanddeadlock,preventionandavoidancealgorithms.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENEURSHIP**

- Compareandcontrastvarious memorymanagementschemes.
- Understandthefunctionalityoffilesystems.
- PerformadministrativetasksonLinuxServersandcompareiOSandAndroidOperating Systems.

SEMESTERV

20152E56D ROBOTICSANDAUTOMATION LTPC
3003

OBJECTIVES:
Thestudentshouldbemade:

- Tounderstandthe basic concepts associated withthe design, functioning, applications andsocial aspects of robots
- Tostudyabout theelectricaldrivesystemsandsensorsusedinrobotics forvarious applications
- To learn about analyzing robot kinematics, dynamics through different methodologies and study various design aspects of robot arm manipulator and end-effector
- Tolearnaboutvariousmotionplanningtechniquesandtheassociatedcontrolarchitecture
- TounderstandtheimplicationsofAIandothertrendingconceptsofrobotics

UNIT I FOUNDATIONFORBEGINNERS 9
Introduction -- brief history, definition, anatomy, types, classification, specification and need basedapplications; role and need of robots for the immediate problems of the society, future of mankind andautomation-ethical issues; industrial scenario local and global, case studies on mobile robot researchplatform and industrial serial arm manipulator

UNITII BUILDINGBLOCKSOFAROBOT 9
Types of electric motors - DC, Servo, Stepper; specification, drives for motors - speed & directioncontrolandcircuitry, Selectioncriterionfor actuators,direct drives, non-traditionalactuators;Sensors forlocalization, navigation, obstacle avoidance and path planning in known and unknown environments –optical, inertial, thermal, chemical, biosensor, other common sensors; Case study on choice of sensorsand actuators for maze solving robot and self driving cars

UNITIII KINEMATICS,DYNAMICSANDDESIGNOFROBOTS&END-EFFECTORS 9
Robot kinematics -Geometricapproachfor 2R,3R manipulators, homogenous transformationusingD-Hrepresentation, kinematics of WMR, Lagrangian formulation for 2R robot dynamics; Mechanical designaspects of a 2R manipulator, WMR; End-effector - common types and design case study.

UNITIVNAVIGATION,PATHPLANNINGANDCONTROL ARCHITECTURE 9
Mapping & Navigation – SLAM, Path planning for serial manipulators; types of control architectures - Cartesian control, Force control and hybrid position/force control, Behaviour based control, applicationof Neural network, fuzzy logic, optimization algorithms for navigation problems, programmingmethodologies of a robot

UNIT V AIANDOTHERRESEARCHTRENDSIN ROBOTICS 9
ApplicationofMachinelearning-AI,Expertsystems;Tele-roboticsandVirtualReality,Micro&Nanorobots, Unmanned vehicles, Cognitive robotics, Evolutionary robotics, Humanoids

TOTAL:45PERIODS

OUTCOMES:
Thestudentshouldbeableto:

- Explain the concepts of industrial robots in terms of classification, specifications and coordinate systems, along with the need and application of robots & automation
- Examinedifferentsensorsandactuatorsfor applicationslikemazesolvingandselfdrivingcars.
- Designa2Rrobot&anend-effectorandsolvethekinematicsanddynamicsofmotionfor robots.
- Explainnavigationandpathplanningtechniques along withthe control architectures adoptedfor robot motion planning.
- Describetheimpactandprogress inAIandotherresearchtrendsinthefieldof robotics.

ELECTIVE–I
SEMESTERV

20152E56G **TOTALQUALITYMANAGEMENT** **LTPC**
3003

OBJECTIVE:

- TofacilitatetheunderstandingofQualityManagementprinciplesandprocess.

UNIT I INTRODUCTION 9
Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of productand service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran andCrosby - Barriers to TQM - Customer focus - Customer orientation, Customer satisfaction, Customercomplaints, Customer retention.

UNIT II TQMPRINCIPLES 9
Leadership - Quality Statements, Strategic quality planning, Quality Councils - Employee involvement - Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement - PDCAcycle, 5S,Kaizen - Supplier partnership - Partnering, Supplierselection, Supplier Rating.

UNIT III TQMTOOLSANDTECHNIQUESI 9
The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology,applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark,Bench marking process - FMEA - Stages, Types.

UNIT IV TQMTOOLSANDTECHNIQUESII 9
Quality Circles - Cost of Quality - Quality Function Deployment (QFD) - Taguchi quality loss function - TPM - Concepts, improvement needs - Performance measures.

UNIT V QUALITYMANAGEMENTSYSTEM 9
Introduction—Benefits of ISO Registration—ISO 9000 Series of Standards—Sector-SpecificStandards—AS 9100, TS16949 and TL 9000-- ISO 9001 Requirements—Implementation—Documentation—Internal Audits—Registration-
ENVIRONMENTAL MANAGEMENT SYSTEM: Introduction—ISO 14000 Series Standards—Concepts of ISO 14001—Requirements of ISO 14001—Benefits of EMS.

TOTAL:45PERIODS

OUTCOME:

- The student would be able to apply the tools and techniques of quality management to manufacturing and services processes.

TEXTBOOK:

1. DaleH.Besterfiled, CarolB.Michna,GlenH.Besterfield,MaryB.Sacre,Hemant Urdhwaresheand Rashmi Urdhwareshe, ―Total Quality Management‖, Pearson Education Asia, Revised Third Edition, Indian Reprint, Sixth Impression, 2013.

SEMESTERV

20152L57 DIGITALSIGNALPROCESSINGLABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

Thestudentshouldbemade:

- ToperformbasicsignalprocessingoperationssuchasLinearConvolution,Circular Convolution, Auto Correlation, Cross Correlation and Frequency analysis in MATLAB
- ToimplementFIRandIIRfiltersinMATLABandDSPProcessor
- TostudythearchitectureofDSPprocessor
- TodesignaDSPsystemtodemonstratetheMulti-rateand Adaptivesignalprocessingconcepts.

LISTOFEXPERIMENTS:

MATLAB/EQUIVALENTSOFTWAREPACKAGE

1. GenerationofelementaryDiscrete-Timesequences
2. LinearandCircularconvolutions
3. AutocorrelationandCrossCorrelation
4. FrequencyAnalysisusingDFT
5. DesignofFIRfilters(LPF/HPF/BPF/BSF)anddemonstratesthefilteringoperation
6. DesignofButterworthandChebyshevIIRfilters(LPF/HPF/BPF/BSF)anddemonstrate the filtering operations

DSPPROCESSORBASED IMPLEMENTATION

1. StudyofarchitectureofDigitalSignalProcessor
2. PerformMACoperationusingvariousaddressingmodes
3. Generationof varioussignalsandrandomnoise
4. DesignanddemonstrationofFIRFilterforLowpass,Highpass,BandpassandBandstopfiltering
5. Design and demonstration of Butter worth and Chebyshev IIR Filters for Low pass, High pass,Band pass and Band stop filtering
6. ImplementanUp-samplingandDown-samplingoperationinDSPProcessor

TOTAL: 60 PERIODS

OUTCOMES:

Attheendofthe course, thestudentshouldbeableto:

- Carryoutbasicsignalprocessingoperations
- DemonstratetheirabilitiestowardsMATLABbasedimplementationofvariousDSPsystems
- AnalyzethearchitectureofaDSP Processor
- Design and Implement the FIR and IIR Filters in DSP Processor for performing filtering operation over real-time signals
- DesignaDSPsystemfor variousapplicationsof DSP

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTERV

20152L58 COMMUNICATIONSYSTEMSLABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

Thestudentshouldbemade:

- Tovisualizetheeffectsofsamplingand TDM
- ToImplementAM&FMmodulationanddemodulation
- Toimplement PCM& DM
- TosimulateDigitalModulationschemes
- TosimulateErrorcontrolcodingschemes

LISTOFEXPERIMENTS:

1. SignalSamplingandreconstruction
2. TimeDivisionMultiplexing
3. AMModulatorandDemodulator
4. FMModulatorandDemodulator
5. PulseCodeModulationandDemodulation
6. DeltaModulationandDemodulation
7. Linecodingschemes
8. SimulationofASK,FSK,andBPSKgenerationschemes
9. SimulationofDPSK,QPSKandQAMgenerationschemes
10. Simulationofsignalconstellations ofBPSK,QPSKandQAM
11. SimulationofASK,FSKandBPSKdetectionschemes
12. SimulationofLinearBlockandCyclicerrorcontrolcodingschemes
13. SimulationofConvolutionalcodingscheme
14. Communicationlinksimulation

TOTAL: 60 PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- Simulate&validatethevariousfunctionalmodulesofacommunicationsystem
- Demonstrate their knowledge in base band signaling schemes through implementation of digital modulation schemes
- Applyvariouschannelcodingschemes&demonstratetheircapabilitiestowardsthe improvement of the noise performance of communication system
- Simulateend-to-endcommunicationLink

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENEURSHIP**

SEMESTERV

20152L59 COMMUNICATIONNETWORKSLABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

Thestudentshouldbe made to:

- Learntocommunicatebetweentwodesktopcomputers
- Learntoimplementthedifferent protocols
- Befamiliar withIP Configuration
- Befamiliar withthevariousroutingalgorithms
- Befamiliarwithsimulationtools

LISTOFEXPERIMENTS:

1. ImplementationofErrorDetection/ErrorCorrectionTechniques
2. ImplementationofStopandWaitProtocolandslidingwindow
3. ImplementationandstudyofGoback-Nandselectiverepeatprotocols
4. ImplementationofHighLevelDataLinkControl
5. ImplementationofIPCommandssuchasping,Traceroute, nslookup.
6. ImplementationofIPaddressconfiguration.
7. Tocreate scenarioandstudythe performanceofnetworkwithCSMA/CAprotocolandcompare with CSMA/CD protocols.
8. NetworkTopology-Star, Bus,Ring
9. Implementationofdistancevectorroutingalgorithm
10. ImplementationofLinkstateroutingalgorithm
11. StudyofNetworksimulator(NS) andsimulationofCongestionControlAlgorithmsusing NS
12. ImplementationofEncryptionandDecryptionAlgorithmsusinganyprogramminglanguage

TOTAL: 60 PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- Communicatebetweentwodesktopcomputers
- Implementthedifferentprotocols
- Programusingsockets.
- Implementandcomparethevariousroutingalgorithms
- Usethesimulation tool.

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTERV

20152CRM **RESEARCHMETHODOLOGY** **LTPC**
3003

AIM:

Tocreateabasicappreciationtowardsresearchprocessandawarenessofvariousresearch publication.

OBJECTIVES:

- Tounderstandthesteps inresearchprocessandthesuitablemethods.
- Toidentifyvariousresearchcommunicationsandtheirsalient features
- Tocarryoutbasicliteraturesurveyusingthecommon data-bases
- Togiveexposuretostandardlaboratoryprecautionsandbestpracticesfor experimentalwork
- Toprovideorientationfor basicmathematicalcomputationusefulinbasicresearch

OUTCOME:

Ability to carry out independent literature survey corresponding to the specific publication type and assess basic experimental as well as conceptual set up.

PREREQUISITES:

Basicmathematicalandexperimentalskillsandexposuretowindow-basedcomputeroperation system.

UNIT I

Introductionto Research– Definition, Objectives, Motivationandpurpose – types of research – Pureandapplied, survey, case study experimental, exploratory – Research Design – Steps in selection andformulation of research problem - Steps in research – Criteria of Good Research,Problems Encounteredby Researchers in India.

UNIT II

Research Problem:Definition of research problem, selecting the problem - Necessity of defining theproblem - Techniques involved in defining the problem - Research design - Needs and features of gooddesign - Different research design - Basic principles of experimental designs. Development of a researchplan, Formulation of Hypothesis – Sampling techniques –Sampling error and sample size. Literaturetypes- compendia and tables of information, Reviews, General treatises, Monographs.

UNIT III

Methods of data collection – Primary and secondary data – observation – interview –Questionnaire – Tools for questionnaire;surveying & literature survey, spreadsheets, Technical writing, Construction oftools for data collection – testing validity – pilot study and pre-testing, Survey vs Experiment, PracticalExercises. Collectionofliterature, manualcollectionfromlibrary, usageoflibrary, collectionofliteraturefrom Scopus, Science Direct etc., compiling literature, software utilization in literature collection.

UNIT IV

Processing and analysis of data – editing – coding – transcription – tabulation –outline of statisticalanalysis- Uncertainty, accuracy and precision- Mean value; standard deviation; error on the mean-Usinga spreadsheet for data analysis- Graphs and graph plotting-Least squares methods – descriptive statistics– elements of processing through computer- packages for analysis (Excel).

UNIT V

Reviewof literature, Report writing – target audience– types of reports –contents of reports –styles andConventionsinreporting–stepsindraftingareport.Basicconceptofresearchpaperwritingfor Journals

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENEURSHIP**

andformatsofpublicationsinJournals, ReportStructure- writingresearchabstract -introduction, reviewof literature, result, conclusions, Concepts of Bibliography and references, Technical Presentation.

SEMESTERV

201AGIE **INNOVATIONANDENTREPRENEURSHIP** **LTPC**
0002

Module–I

IntroductiontoEntrepreneurship: Entrepreneurs;entrepreneurialpersonalityandintentions-characteristics, traits and behavioral; entrepreneurial challenges.

Module-II

Module Entrepreneurial Opportunities: Opportunities. discovery/ creation, Pattern identification andrecognition for venture creation: prototype and exemplar model, reverse engineering.

Module–III

Entrepreneurial Process and Decision Making: Entrepreneurial ecosystem, Ideation, developmentand exploitation of opportunities; Negotiation, decision making process and approaches**,** Effectuationand Causation.

Module-IV

Crafting business models and Lean Start-ups: Introduction to business models; Creating valuepropositions-conventional industrylogic, value innovationlogic; customer focused innovation; buildingandanalyzingbusiness models; Business modelcanvas, Introductiontoleanstartups,Business Pitching.

Module–V

Organizing Business and Entrepreneurial Finance: Forms of business organizations; organizationalstructures; Evolution of Organisation, sources and selection of venture finance options and itsmanagerial implications. PolicyInitiatives andfocus; roleof institutions inpromoting entrepreneurship.

COURSEOUTCOMES:

Afterthecompletionofthecourse, thestudentswillbeableto:

- Comprehendtheroleofboundedrationality,framing,causationandeffectuationinentrepreneurial decision making.
- Demonstrateanabilitytodesignabusiness modelcanvas.
- Evaluatethevarioussourcesofraisingfinancefor startupventures.
- Understandthefundamentalsofdevelopingandpresentingbusinesspitchingtopotential investors.

SEMESTER VI

20152C61 MICROPROCESSORSANDMICROCONTROLLERS

	L	TP	C
	3	00	3

OBJECTIVES:

- TounderstandtheArchitectureof8086 microprocessor.
- TolearnthedesignaspectsofI/OandMemoryInterfacingcircuits.
- Tointerfacemicroprocessorswithsupportingchips.
- TostudytheArchitectureof8051 microcontroller.
- Todesignamicrocontroller basedsystem

UNIT I THE8086 MICROPROCESSOR 9

Introduction to 8086 – Microprocessor architecture – Addressing modes - Instruction set and assembler directives – Assembly language programming – Modular Programming - Linking and Relocation -Stacks - Procedures – Macros – Interruptsand interrupt serviceroutines – Byteand String Manipulation.

UNIT II 8086SYSTEMBUSSTRUCTURE 9

8086 signals – Basic configurations – System bus timing –System design using 8086 – I/O programming – Introduction to Multiprogramming – System Bus Structure – Multiprocessor configurations – Coprocessor, Closelycoupledandlooselycoupled configurations – Introductiontoadvancedprocessors.

UNIT III I/OINTERFACING 9

Memory Interfacing and I/O interfacing - Parallel communication interface – Serial communication interface – D/A and A/D Interface - Timer – Keyboard /display controller – Interrupt controller – DMA controller–ProgrammingandapplicationsCasestudies:TrafficLightcontrol,LEDdisplay,LCD display,KeyboarddisplayinterfaceandAlarmController.

UNIT IV MICROCONTROLLER 9

Architectureof8051 –SpecialFunctionRegisters(SFRs) -I/OPins PortsandCircuits – Instructionset -Addressing modes - Assembly language programming.

UNIT V INTERFACINGMICROCONTROLLER 9

Programming8051Timers-SerialPortProgramming-InterruptsProgramming–LCD&Keyboard Interfacing-ADC,DAC&SensorInterfacing-ExternalMemoryInterface-StepperMotorand Waveformgeneration-ComparisonofMicroprocessor,Microcontroller,PICandARMprocessors

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse,thestudentsshouldbeableto:

- Understandandexecuteprograms basedon8086 microprocessor.
- DesignMemoryInterfacingcircuits.
- DesignandinterfaceI/O circuits.
- Designandimplement8051microcontrollerbasedsystems.

TEXTBOOKS:

SEMESTER VI

20152C62 VLSI DESIGN LTPC
3003

OBJECTIVES:

- StudythefundamentalsofCMOScircuitsandits characteristics.
- Learnthedesignandrealizationofcombinational&sequentialdigitalcircuits.
- Architecturalchoicesandperformancetradeoffsinvolvedindesigningandrealizingthe circuits in CMOS technology are discussed
- LearnthedifferentFPGAarchitecturesandtestabilityofVLSIcircuits.

UNIT I INTRODUCTIONTOMOSTRANSISTOR 9

MOS Transistor, CMOS logic, Inverter, Pass Transistor, Transmission gate, Layout Design Rules, GateLayouts, Stick Diagrams, Long-Channel I-V Charters tics, C-V Charters tics, Non ideal I-V Effects, DCTransfer characteristics, RC Delay Model, Elmore Delay, Linear Delay Model, Logical effort, ParasiticDelay, Delay in Logic Gate, Scaling.

UNIT II COMBINATIONALMOSLOGICCIRCUITS 9

Circuit Families: Static CMOS, Ratioed Circuits, Cascode Voltage Switch Logic, Dynamic Circuits,Pass Transistor Logic, Transmission Gates, Domino, Dual Rail Domino, CPL, DCVSPG, DPL, CircuitPitfalls.

Power: DynamicPower,StaticPower,LowPowerArchitecture.

UNIT III SEQUENTIALCIRCUITDESIGN 9

StaticlatchesandRegisters,DynamiclatchesandRegisters,PulseRegisters,SenseAmplifierBasedRegister, Pipelining, Schmitt Trigger, Monostable Sequential Circuits, Astable Sequential Circuits.

TimingIssues: TimingClassificationOfDigitalSystem,SynchronousDesign.

UNIT IV DESIGNOFARITHMETICBUILDINGBLOCKSANDSUBSYSTEM 9

ArithmeticBuildingBlocks:DataPaths,Adders,Multipliers,Shifters,ALUs,powerandspeedtradeoffs, Case Study: Design as a tradeoff.

Designing Memory and Array structures: Memory Architectures and Building Blocks, Memory Core,Memory Peripheral Circuitry.

UNIT V IMPLEMENTATIONSTRATEGIESANDTESTING 9

FPGA Building Block Architectures, FPGA Interconnect Routing Procedures. Design for Testability: *AdHoc* Testing, Scan Design, BIST, IDDQ Testing, Design for Manufacturability, Boundary Scan.

TOTAL:45PERIODS

OUTCOMES:

UPONCOMPLETIONOFTHECOURSE,STUDENTSSHOULDbeABLETO

- RealizetheconceptsofdigitalbuildingblocksusingMOStransistor.
- DesigncombinationalMOScircuitsandpowerstrategies.
- DesignandconstructSequentialCircuitsandTimingsystems.
- Designarithmeticbuildingblocksandmemorysubsystems.
- Applyandimplement FPGAdesignflowand testing.

SEMESTER VI

20152C63 WIRELESS COMMUNICATION

	L	T	P	C
	3	0	0	3

OBJECTIVES:

- Tostudythecharacteristicof wirelesschannel
- Tounderstandthedesignofacellularsystem
- Tostudythevariousdigitalsignalingtechniquesandmultipathmitigationtechniques
- Tounderstandtheconceptsof multipleantennatechniques

UNIT II CELLULARARCHITECTURE 9

Multiple Access techniques - FDMA, TDMA, CDMA – Capacity calculations–Cellular concept-Frequency reuse - channel assignment- hand off- interference & system capacity-trunking & grade ofservice – Coverage and capacity improvement.

UNITIIIDIGITALSIGNALING FORFADING CHANNELS 9

Structure of a wireless communication link, Principles of Offset-QPSK, p/4-DQPSK, Minimum ShiftKeying, Gaussian Minimum Shift Keying, Error performance in fading channels, OFDM principle – Cyclic prefix, Windowing, PAPR.

UNIT IV MULTIPATHMITIGATIONTECHNIQUES 9

Equalisation – Adaptive equalization, Linear and Non-Linear equalization, Zero forcing and LMSAlgorithms. Diversity – MicroandMacrodiversity, Diversitycombiningtechniques, Error probabilityinfading channels with diversity reception, Rake receiver.

UNIT V MULTIPLEANTENNATECHNIQUES 9

MIMOsystems – spatialmultiplexing-System model-Pre-coding-Beamforming-transmitter diversity,receiver diversity- Channel state information-capacity in fading and non-fading channels.

TOTAL: 45 PERIODS

OUTCOMES:

Thestudentshouldbeableto:

- Characterizeawireless channelandevolvethesystemdesignspecifications
- Designacellularsystembasedonresourceavailabilityandtrafficdemands
- Identifysuitablesignalingandmultipathmitigationtechniquesforthewirelesschanneland system under consideration.

TEXTBOOKS:

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER VI

20152S64 PRINCIPLESOFMANAGEMENT

L	T	P	C
3	0	0	3

OBJECTIVE:

- ToenablethestudentstostudytheevolutionofManagement,tostudythefunctionsandprinciples of management and to learn the application of the principles in an organization.

UNIT I INTRODUCTIONTOMANAGEMENTANDORGANIZATIONS 9

DefinitionofManagement –Scienceor Art –Manager VsEntrepreneur -typesof managers - managerialroles and skills – Evolution of Management – Scientific, human relations, system and contingencyapproaches – Types of Business organization - Sole proprietorship, partnership, company-public andprivate sector enterprises - Organization culture and Environment – Current trends and issues inManagement.

UNIT II PLANNING 9

Natureandpurposeofplanning – planningprocess – types ofplanning– objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decisionmaking steps and process.

ment, selection, Training and Development, Performance Management, Career planning and management

UNIT IV DIRECTING 9

Foundations of individual and group behaviour – motivation – motivation theories – motivationaltechniques – job satisfaction – job enrichment – leadership – types and theories of leadership –communication – process of communication – barrier in communication – effective communication – communication and IT.

UNIT V CONTROLLING 9

Systemand process of controlling – budgetary and non-budgetary control techniques – use of computersand IT in Management control – Productivity problems and management – control and performance –direct and preventive control – reporting.

TOTAL:45PERIODS

OUTCOME:

- Uponcompletionofthecourse,studentswillbeabletohaveclearunderstanding
- Managerial functionslike planning,organizing,staffing,leading &controlling and havesame basic knowledge on international aspect of management

TEXTBOOKS:

1. Stephen P. Robbins & Mary Coulter, ―Management‖, Prentice Hall (India) Pvt. Ltd., 10th Edition, 2009.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER VI

20152C65 TRANSMISSIONLINESANDRFSYSTEMS **L T PC 3 0 0 3**

OBJECTIVES:

- Tointroducethevarioustypesoftransmissionlinesandits characteristics
- Togivethoroughunderstandingabouthighfrequencyline, power andimpedancemeasurements
- Toimparttechnicalknowledgeinimpedancematchingusingsmithchart
- Tointroducepassivefiltersandbasicknowledgeofactive RFcomponents
- TogetacquaintancewithRFsystemtransceiver design

UNIT I TRANSMISSIONLINETHEORY 9

General theory of Transmission lines - the transmission line - general solution - The infinite line - Wavelength, velocity of propagation - Waveform distortion - the distortion-less line - Loading anddifferent methods of loading - Line not terminated in Z0 - Reflection coefficient - calculation of current,voltage, power delivered and efficiency of transmission - Input and transfer impedance - Open and shortcircuited lines - reflection factor and reflection loss.

UNIT II HIGHFREQUENCYTRANSMISSIONLINES 9

Transmission line equations at radio frequencies - Line of Zero dissipation - Voltage and current on thedissipation-less line, StandingWaves, Nodes, Standing WaveRatio - Input impedance of thedissipation-less line - Open and short circuited lines - Power and impedance measurement on lines - Reflectionlosses - Measurement of VSWR and wavelength.

UNIT III IMPEDANCEMATCHINGINHIGHFREQUENCYLINES 9

Impedance matching: Quarter wavetransformer - Impedance matching by stubs - Singlestub and doublestub matching - Smithchart -Solutions of problems usingSmithchart -Singleanddoublestub matchingusing Smith chart.

UNIT IV WAVEGUIDES 9

General Wave behavior along uniform guiding structures – Transverse Electromagnetic Waves,Transverse Magnetic Waves, Transverse Electric Waves – TM and TE Waves between parallel plates.Field Equations in rectangular waveguides, TM and TE waves in rectangular waveguides, BesselFunctions, TM and TE waves in Circular waveguides.

UNIT V RFSYSTEMDESIGN CONCEPTS 9

Active RF components: Semiconductor basics in RF, bipolar junction transistors, RF field effecttransistors, High electron mobility transistors Basic concepts of RF design, Mixers, Low noiseamplifiers, voltage control oscillators, Power amplifiers, transducer power gain and stabilityconsiderations.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse, thestudentshouldbeableto:

- Explainthecharacteristicsoftransmissionlinesandits losses
- Writeabout thestandingwaveratioandinput impedanceinhighfrequencytransmission lines
- Analyzeimpedancematchingbystubsusingsmithcharts
- Analyzethecharacteristics ofTEandTM waves
- DesignaRFtransceiversystemforwireless communication

LISTOF ELECTIVES

ELECTIVE–II(SEMESTERVI)

ELECTIVE–II
SEMESTER VI

20152E66A CRYPTOGRAPHYANDNETWORKSECURITY **LTPC**
3003

OBJECTIVES:

- TounderstandCryptographyTheories,AlgorithmsandSystems.
- TounderstandnecessaryApproachesandTechniquestobuildprotection mechanisms in order to secure computer networks.

UNIT I INTRODUCTION 9
Security trends - Legal, Ethical and Professional Aspects of Security, Need for Security at Multiplelevels, Security Policies - Model of network security – Security attacks, services and mechanisms – OSIsecurity architecture – Classical encryption techniques: substitution techniques, transposition techniques,steganography).- Foundations of modern cryptography: perfect security – information theory – productcryptosystem – cryptanalysis.

[illegible]

UNIT III PUBLICKEYCRYPTOGRAPHY 9
MATHEMATICS OF ASYMMETRIC KEY CRYPTOGRAPHY: Primes – Primality Testing – Factorization – Euler‘s totient function, Fermat‘s and Euler‘s Theorem - Chinese Remainder Theorem – Exponentiation and logarithm - ASYMMETRIC KEY CIPHERS: RSA cryptosystem – Key distribution– Key management – Diffie Hellman key exchange - ElGamal cryptosystem – Elliptic curve arithmetic-Elliptic curve cryptography.

[illegible]

UNIT V SECURITYPRACTICEANDSYSTEMSECURITY 9
ElectronicMailsecurity–PGP,S/MIME–IPsecurity–WebSecurity-SYSTEMSECURITY:Intruders – Malicious software – viruses – Firewalls.

TOTAL: 45 PERIODS

OUTCOMES:
Attheendofthecourse, thestudentshouldbeableto:

- Understandthefundamentalsofnetworkssecurity,securityarchitecture,threatsand vulnerabilities
- Applythedifferentcryptographicoperationsofsymmetriccryptographicalgorithms
- Applythedifferentcryptographicoperationsofpublic keycryptography
- ApplythevariousAuthenticationschemestosimulatedifferentapplications.
- UnderstandvariousSecuritypracticesandSystemsecuritystandards

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

ELECTIVE–II
SEMESTER VI

20152E66B ADVANCEDDIGITALSIGNALPROCESSING LTPC
3003

OBJECTIVES:

- Tolearnandunderstandtheconceptsofstationaryandnon-stationaryrandomsignalsand analysis & characterization of discrete-time random processes
- Toenunciatethesignificanceofestimationofpowerspectraldensityofrandomprocesses
- TointroducetheprinciplesofoptimumfilterssuchasWienerandKalmanfilters
- Tointroducetheprinciplesofadaptivefiltersandtheirapplicationstocommunication engineering
- Tointroducetheconceptsof multi-resolutionanalysis

UNIT I DISCRETE-TIMERANDOMPROCESSES 9
Random variables - ensemble averages a review, randomprocesses - ensemble averages, autocorrelationand autocovariance matrices, ergodic random process, white noise, filtering random processes, spectralfactorization, special types of random processes - AR, MA, ARMA

UNIT II SPECTRUMESTIMATION 10
Bias and consistency, Non-parametric methods - Periodogram, modified-Periodogram - performanceanalysis. Bartlett's method, Welch's method, Blackman-Tukey method. Performance comparison.Parametric methods -autoregressive(AR)spectrumestimation-autocorrelationmethod,Prony's method,solution using Levinson Durbin recursion.

Wiener filter - causalandnon-causalfilters. Recursiveestimators - discreteKalmanfilter.

UNIT IV ADAPTIVEFILTERS 9
Principles and properties of adaptive filters - FIR adaptive filters. Adaptive algorithms - steepest descentalgorithm, the LMS algorithm - convergence. Applications of adaptive filtering - noise cancellation,channel equalization.

UNIT V MULTIRESOLUTIONANALYSIS 8
Short-time Fourier transform - Heisenberg uncertainty principle. Principles of multi-resolution analysis - sub-band coding, the continuous and discrete wavelet transform - properties. Applications of wavelettransform - noise reduction, image compression.

TOTAL:45PERIODS

OUTCOMES:
Attheendofthecourse, thestudentshouldbeableto:

- Articulateandapplytheconceptsofspecialrandomprocessesinpracticalapplications
- Chooseappropriatespectrumestimationtechniquesfor a givenrandomprocess
- Applyoptimumfiltersappropriatelyfor a givencommunicationapplication
- Applyappropriateadaptivealgorithmfor processingnon-stationarysignals
- Applyandanalysewavelettransformsfor signalandimageprocessingbasedapplications

TEXTBOOKS

1. MonsonH. Hayes, "Statistical digitalsignalprocessingandmodeling", JohnWileyandSonsInc. New York, Indian reprint 2008. (UNIT I-IV)
2. P.P.Vaidyanathan,"Multiratesystemsandfilterbanks",PrenticeHallInc.1993(UNIT V)

SKILL DEVELOPMENT **EMPLOYABILITY** **ENTREPRENEURSHIP**

REFERENCES:

ELECTIVE–II
SEMESTER VI

20152E66C **MEMS ANDNEMS** **LT PC**
30 03

OBJECTIVES:

- Tointroducetheconceptsofmicroandnanoelectromechanicaldevices
- Toknowthefabricationprocess of Microsystems
- Toknowthedesignconceptsofmicrosensorsandmicroactuators
- Tointroducetheconceptsofquantummechanicsandnanosystems

UNIT I INTRODUCTIONTOMEMSAND NEMS 9
Introduction to Design of MEMS and NEMS, Overview of Nano and Microelectromechanical Systems,Applications of Micro and Nanoelectromechanical systems, Materials for MEMS and NEMS: Silicon,silicon compounds, polymers, metals.

UNIT II MEMSFABRICATIONTECHNOLOGIES 9
Photolithography,IonImplantation,Diffusion,Oxidation,CVD,SputteringEtchingtechniques,Micromachining: Bulk Micromachining, Surface Micromachining, LIGA.

UNIT III MICROSENSORS 9
MEMSSensors:DesignofAcousticwave sensors,Vibratorygyroscope,Capacitive Pressure sensors,Case study: Piezoelectric energy harvester

UNIT IV MICROACTUATORS 9
Design of Actuators: Actuation using thermal forces, Actuation using shape memory Alloys, Actuationusing piezoelectric crystals, Actuation using Electrostatic forces, Case Study:RF Switch.

UNIT V NANODEVICES 9
Atomic Structures and Quantum Mechanics, Shrodinger Equation, ZnO nanorods based NEMS device:Gas sensor.

TOTAL:45PERIODS

OUTCOMES:
Onsuccessfulcompletionofthiscourse, thestudentshouldbeableto:

- Interpretthebasicsofmicro/nanoelectromechanicalsystemsincludingtheirapplicationsand advantages
- Recognizetheuseofmaterialsinmicrofabricationanddescribethefabricationprocesses including surface micromachining, bulk micromachining and LIGA.
- Analyzethekeyperformanceaspectsofelectromechanicaltransducersincludingsensorsand actuators
- Comprehendthetheoreticalfoundationsof quantummechanicsandNanosystems

ELECTIVE–II
SEMESTER VI

20152E66D MULTIMEDIACOMPRESSIONANDCOMMUNICATION

LTPC
3003

OBJECTIVES:
Thestudentshouldbemade:

- Tounderstandthecompressionschemesfor text, voice,imageandvideo
- TounderstandtheQoSissuesinmultimedia network
- Toknowthecommunicationprotocolsformultimedianetworking

UNIT II IMAGEANDVIDEOCOMPRESSION 9
Graphics Interchange format- Tagged image file format-Digitized documents- Digitized pictures-JPEG-Video Encoding-Motion estimation –Overview of H.263 and MPEG-2

UNIT IV GUARANTEEDSERVICEMODEL 10
BestEffortservicemodel–SchedulingandDroppingpolicies–NetworkPerformanceParameters – QualityofServiceandmetrics–WFQanditsvariants–RandomEarlyDetection– QoSawareRouting – AdmissionControl–ResourceReservation–RSVP-TrafficShapingAlgorithms–Caching –Laissez FaireApproach-PossibleArchitectures–AnOverviewofQoS Architectures

UNIT V MULTIMEDIACOMMUNICATION 10
Stream characteristics for Continuous media – Temporal Relationship – Object Stream Interactions,Media Levity, Media Synchronization – Models for Temporal Specifications – Streaming of Audio andVideo – Jitter – Fixed playout and Adaptive playout – Recovering from packet loss – RTSP –– Multimedia Communication Standards – RTP/RTCP – SIP and H.263

TOTAL:45PERIODS

OUTCOMES:
Attheendofthecourse, thestudentshouldbeableto:

- Designaudiocompressiontechniques
- ConfigureText, imageandvideocompressiontechniques
- Selectsuitableservicemodelforspecificapplication
- Configuremultimediacommunicationnetwork

ELECTIVE–II
SEMESTER VI

20152E66E **CMOSANALOGICDESIGN** **LTPC**
3003

OBJECTIVES:

- TostudythefundamentalsofanalogcircuitsandMOSdevicemodels
- TogainknowledgeonvariousconfigurationsofMOStransistorsandfeedbackconcepts
- Tostudythecharacteristics ofnoiseandfrequencyresponseoftheamplifier
- TolearntheconceptsofOp-Ampfrequencycompensation,capacitorswitchesandPLLs

UNIT I INTRODUCTIONTOANALOGICDESIGNANDCURRENTMIRRORS 9
ConceptsofAnalogDesign-GeneralconsiderationofMOSdevices–MOSI/VCharacteristics–Second order effects – MOS device models. Basic current mirrors- Cascode current mirrors- Activecurrentmirrors-LargeandSmallsignalanalysis-Commonmodeproperties.

UNIT II AMPLIFIERSANDFEEDBACK 9
Basic Concepts – Common source stage- Source follower- Common gate stage- Cascode stage. Singleended and differential operation- Basic Differential pair- Common mode response-Differential pair withMOS loads- Gilbert Cell. Feedback- General Consideration of feedback circuits- Feedback topologies-Effect of loading- Effect of feedback on Noise.

UNITIIIFREQUENCYRESPONSEOFAMPLIFIERSAND NOISE 9
General considerations- Miller Effect and Association of Poles with Nodes, Common source stage- Sourcefollowers- Common gatestage- Cascodestage- Differential pair. Noise- Statistical characteristicsof noise- Types of noise- Representation of noise in circuits- Noise in single stage amplifiers- Noise indifferential pairs- Noise Bandwidth.

UNIT IV OPERATIONALAMPLIFIERSTABILITYANDFREQUENCY COMPENSATION 9
General Considerations- One and Two Stage Op Amps- Gain Boosting- Comparison- Common modefeedback- Input range limitations- Slew rate- Power Supply Rejection- Noise in Op Amps- Generalconsideration of stability and frequency compensation- Multipole system- Phase margin- Frequencycompensation- Compensation of two stage op Amps- Other compensation techniques.

UNIT V SWITCHEDCAPACITORCIRCUITSANDPLLS 9
General Considerations- Sampling switches- Switched Capacitor Amplifiers- Switched CapacitorIntegrator- Switched Capacitor Common mode feedback. Phase Locked Loops-Simple PLL- Chargepump PLLs - Non ideal Effects in PLLs- Delay locked loops- its Applications.

TOTAL:45PERIODS

OUTCOMES:
Uponcompletionofthecourse, studentshouldbeableto:

- RealizetheconceptsofAnalogMOSdevicesandcurrentmirrorcircuits.
- DesigndifferentconfigurationofAmplifiersandfeedbackcircuits.
- Analyzethecharacteristicsoffrequencyresponseoftheamplifierandits noise.
- Analyzetheperformanceofthestabilityandfrequencycompensationtechniques ofOp-Amp Circuits.
- ConstructswitchedcapacitorcircuitsandPLLs

ELECTIVE–II
SEMESTER VI

20152E66F **WIRELESS NETWORKS** **LTPC**
3003

OBJECTIVES:
Thestudentshouldbemade:

- TounderstandtheconceptaboutWirelessnetworks, protocolstackandstandards
- Tounderstandandanalysethenetworklayer solutionsforWirelessnetworks
- Tostudyaboutfundamentalsof3GServices,itsprotocolsandapplications
- TohaveindepthknowledgeoninternetworkingofWLANandWWAN
- Tolearnaboutevolutionof4GNetworks,itsarchitectureandapplications

UNITI WIRELESSLAN 9
Introduction-WLANtechnologies:-IEEE802.11:Systemarchitecture,protocolarchitecture,802.11b, 802.11a–HiperLAN:WATM,BRAN,HiperLAN2–Bluetooth:Architecture,WPAN–IEEE802.15.4, Wireless USB, Zigbee, 6LoWPAN, WirelessHART

UNIT II MOBILENETWORKLAYER 9
Introduction - Mobile IP: IP packet delivery, Agent discovery, tunneling and encapsulation, IPV6-Network layer in the internet- Mobile IP session initiation protocol - mobile ad-hoc network: Routing:Destination Sequence distance vector, IoT: CoAP

UNIT III 3GOVERVIEW 9
Overview of UTMSTerrestrial Radio access network-UMTS Core network Architecture: 3GPPArchitecture,Userequipment,CDMA2000overview-RadioandNetworkcomponents,Networkstructure, Radio Network, TD-CDMA, TD – SCDMA.

UNITIVINTERNETWORKINGBETWEENWLANSANDWWANS 9
Internetworking objectives and requirements, Schemes to connect WLANS and 3G Networks, SessionMobility, Internetworking Architecture for WLAN and GPRS, System Description, Local MultipointDistribution Service, Multichannel Multipoint Distribution System.

UNIT V 4G&Beyond 9
Introduction – 4G vision – 4G features and challenges - Applications of 4G – 4G Technologies:Multicarrier Modulation, Smart antenna techniques, IMS Architecture, LTE, Advanced BroadbandWireless Access and Services, MVNO.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse, thestudentwouldbeableto:

- Conversantwiththelatest3G/4Gnetworksandits architecture
- Design andimplementwirelessnetworkenvironmentforany application usinglatestwireless protocols and standards
- Abilitytoselectthesuitablenetworkdependingontheavailabilityandrequirement
- Implementdifferenttypeofapplicationsforsmartphonesandmobiledeviceswithlatestnetwork strategies

TEXTBOOKS:

ELECTIVE–II
SEMESTER VI

20152E66G INTELLECTUALPROPERTYRIGHTS LTPC
3003

OBJECTIVE:

- Togiveanideaabout IPR,registrationanditsenforcement.

UNIT I INTRODUCTION 9
Introduction to IPRs, Basic concepts and need for Intellectual Property - Patents, Copyrights,Geographical Indications, IPR in India and Abroad – Genesis and Development – the way fromWTO toWIPO –TRIPS, Nature of Intellectual Property, Industrial Property, technological Research, Inventionsand Innovations – Important examples of IPR.

UNIT II REGISTRATIONOFIPRs 10
Meaningandpracticalaspectsofregistrationof CopyRights,Trademarks,Patents,GeographicalIndications, Trade Secrets and Industrial Design registration in India and Abroad

UNIT III AGREEMENTSANDLEGISLATIONS 10
InternationalTreatiesandConventionsonIPRs,TRIPSAgreement, PCT Agreement, Patent Act ofIndia,Patent Amendment Act, Design Act, Trademark Act, Geographical Indication Act.

UNIT IV DIGITALPRODUCTSANDLAW 9
Digital Innovations and Developments as Knowledge Assets – IP Laws, Cyber Law and Digital ContentProtection– Unfair Competition–MeaningandRelationshipbetween Unfair CompetitionandIP Laws –Case Studies.

UNIT V ENFORCEMENTOFIPRs 7
InfringementofIPRs,EnforcementMeasures,Emergingissues–CaseStudies.

TOTAL:45PERIODS

OUTCOME:

- Abilityto manageIntellectualPropertyportfoliotoenhancethevalueofthefirm.

TEXTBOOKS:

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER VI

20152L61 MICROPROCESSORSANDMICROCONTROLLERSLABORATORY

L	T	P	C
0	0	4	2

OBJECTIVES:

- ToIntroduceALPconcepts, featuresandCoding methods
- WriteALPfor arithmeticandlogicaloperationsin8086and8051
- DifferentiateSerialandParallelInterface
- InterfacedifferentI/OswithMicroprocessors
- BefamiliarwithMASM

LISTOFEXPERIMENTS:

8086Programsusing kitsandMASM

1. BasicarithmeticandLogicaloperations
2. Moveadata blockwithoutoverlap
3. Codeconversion, decimalarithmeticandMatrix operations.
4. Floatingpointoperations,stringmanipulations,sortingandsearching
5. Passwordchecking, PrintRAMsizeandsystemdate
6. CountersandTimeDelay

PeripheralsandInterfacingExperiments

1. Trafficlightcontroller
2. Steppermotorcontrol
3. Digitalclock
4. KeyboardandDisplay
5. Printerstatus
6. SerialinterfaceandParallelinterface
7. A/DandD/AinterfaceandWaveformGeneration

8051ExperimentsusingkitsandMASM

1. BasicarithmeticandLogicaloperations
2. SquareandCubeprogram,Find2‘scomplementofanumber
3. UnpackedBCDtoASCII

TOTAL:60PERIODS

OUTCOMES:

Attheendofthecourse,thestudentshouldbeableto:

- WriteALPProgrammesfor fixedandFloatingPointandArithmeticoperations
- InterfacedifferentI/Oswithprocessor
- GeneratewaveformsusingMicroprocessors
- ExecuteProgramsin8051
- ExplainthedifferencebetweensimulatorandEmulator

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

20152L62 **VLSIDESIGNLABORATORY** **SEMESTER VI**

SEMESTER VI

20152L63 PROFESSIONALCOMMUNICATION

L	T	P	C
0	0	2	1

OBJECTIVES:

Thecourseaimsto:

- EnhancetheEmployabilityandCareerSkillsofstudents
- Orientthestudentstowardsgroomingasaprofessional
- MakethemEmployableGraduates
- Developtheir confidenceandhelpthemattendinterviewssuccessfully.

UNIT I

Introduction to Soft Skills-- Hard skills & soft skills -employability and career Skills—Grooming as aprofessional with values—Time Management—General awareness of Current Affairs

UNIT II

Self-Introduction-organizing the material - Introducing oneself to the audience – introducing the topic – answering questions – individual presentation practice— presenting the visuals effectively – 5 minutepresentations

UNIT III

IntroductiontoGroup Discussion— Participatingingroup discussions – understanding group dynamics - brainstorming the topic — questioning and clarifying –GD strategies- activities to improve GD skills

UNIT IV

Interview etiquette– dress code– bodylanguage– attendingjob interviews– telephone/skypeinterview -one to one interview &panel interview – FAQs related to job interviews

UNIT V

Recognizing differences between groups and teams- managing time-managing stress-networkingprofessionally- respecting social protocols-understanding career management-developing a long-termcareer plan-making career changes

TOTAL: 30 PERIODS

OUTCOMES:

AttheendofthecourseLearnerswillbeableto:

- Makeeffectivepresentations
- ParticipateconfidentlyinGroup Discussions.
- Attendjobinterviewsandbesuccessfulinthem.
- DevelopadequateSoftSkillsrequiredfor theworkplace

SEMESTER VII

20152C71 ANTENNASANDMICROWAVEENGINEERING

LTPC
3003

OBJECTIVES:

- Toenablethestudent tounderstandthebasicprinciplesinantennaandmicrowavesystemdesign
- Toenhancethestudentknowledgeintheareaofvariousantennadesigns.
- Toenhancethestudentknowledgeintheareaofmicrowavecomponentsandantennafor practical applications.

UNIT III ANTENNAARRAYSANDAPPLICATIONS 9

Two-element array, Array factor, Pattern multiplication, Uniformly spaced arrays with uniformand non-uniform excitation amplitudes, Smart antennas.

UNITIVPASSIVE ANDACTIVEMICROWAVEDEVICES 9

Microwave Passive components: Directional Coupler, Power Divider, Magic Tee, attenuator, resonator,Principles of Microwave Semiconductor Devices: Gunn Diodes, IMPATT diodes, Schottky Barrierdiodes, PIN diodes, Microwave tubes: Klystron, TWT, Magnetron.

UNIT V MICROWAVEDESIGNPRINCIPLES 9

Impedance transformation, Impedance Matching, Microwave Filter Design, RF and MicrowaveAmplifier Design, Microwave Power amplifier Design, Low Noise Amplifier Design, Microwave MixerDesign, Microwave Oscillator Design

TOTAL: 45 PERIODS

OUTCOMES:

Thestudentshouldbeableto:

- Applythebasicprinciplesandevaluateantenna parametersandlinkpowerbudgets
- Designandassesstheperformanceofvariousantennas
- Designamicrowavesystemgiventheapplicationspecifications

TEXTBOOKS:

1. JohnDKrauss,RonaldJMarhefkaandAhmadS.Khan,"AntennasandWavePropagation: Fourth Edition, Tata McGraw-Hill, 2006. (UNIT I, II, III)

SEMESTER VII

20152C72 **OPTICALCOMMUNICATION**

L	T	P	C
3	0	0	3

OBJECTIVES:

- To study about the various optical fiber modes, configuration and transmission characteristics of optical fibers
- Tolearnaboutthevariousopticalsources, detectorsandtransmissiontechniques
- Toexplorevariousideaaboutopticalfibermeasurementsandvariouscouplingtechniques
- Toenrichtheknowledgeaboutopticalcommunicationsystemsandnetworks

UNIT I INTRODUCTIONTOOPTICALFIBERS 9

Introduction-general optical fiber communication system- basic optical laws and definitions-opticalmodes and configurations -mode analysis for optical propagation through fibers-modes in planar waveguide-modes in cylindrical optical fiber-transverse electric and transverse magnetic modes-fibermaterials-fiber fabrication techniques-fiber optic cables-classification of optical fiber-single mode fiber-graded index fiber.

UNIT II TRANSMISSIONCHARACTERISTICOFOPTICALFIBER 9

Attenuation-absorption --scattering losses-bending losses-core and cladding losses-signal dispersion –inter symbol interference and bandwidth-intra model dispersion-material dispersion-waveguidedispersion-polarization mode dispersion-intermodal dispersion-dispersion optimization of single modefiber-characteristics of single mode fiber-R-I Profile-cutoff wave length-dispersion calculation-modefield diameter.

UNIT III OPTICALSOURCESANDDETECTORS 9

Sources: Intrinsic and extrinsic material-direct and indirect band gaps-LED-LED structures-surfaceemittingLED-EdgeemittingLED-quantumefficiency andLED power-light sourcematerials-modulationof LED-LASER diodes-modes and threshold conditions-Rate equations-external quantum efficiency-resonant frequencies-structures andradiationpatterns-single mode laser-external modulation-temperatureeffort.

Detectors:PIN photodetector-Avalanchephotodiodes-Photodetector noise-noisesources-SNR-detectorresponse time-Avalanche multiplication noise-temperature effects-comparisons of photo detectors.

UNIT IV OPTICALRECEIVER,MEASUREMENTSANDCOUPLING 9

Fundamental receiver operation-preamplifiers-digital signal transmission-error sources-Front endamplifiers-digital receiver performance-probability of error-receiver sensitivity-quantum limit. Opticalpower measurement-attenuation measurement-dispersion measurement- Fiber Numerical ApertureMeasurements- Fiber cut- off Wave lengthMeasurements- Fiber diameter measurements-SourcetoFiberPower Launching-Lensing Schemes for Coupling Management-Fiber to Fiber Joints-LED Coupling toSingle Mode Fibers-Fiber Splicing-Optical Fiber connectors.

UNIT V OPTICALCOMMUNICATIONSYSTEMSANDNETWORKS 9

System design consideration Point – to –Point link design –Link power budget –rise time budget, WDM–Passive DWDM Components-Elements of optical networks-SONET/SDH-Optical Interfaces-SONET/SDH Rings and Networks-High speed light wave Links-OADM configuration-OpticalETHERNET-Soliton.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- Realizebasicelementsinopticalfibers,differentmodesandconfigurations.
- Analyzethetransmissioncharacteristicsassociatedwithdispersionandpolarization techniques.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

- Designopticalsourcesanddetectorswiththeiruse inopticalcommunication system.
- Constructfiberopticreceiversystems,measurementsandcouplingtechniques.
- Designopticalcommunicationsystemsandits networks.

TEXTBOOKS:

1. P Chakrabarti, "Optical Fiber Communication‖, McGraw Hill Education (India) Private Limited**,** 2016 (UNIT I, II, III)

SEMESTER VII

20152C73 EMBEDDEDANDREALTIMESYSTEMS

L	T	P	C
3	0	0	3

OBJECTIVES:

Thestudentshouldbe made to:

- Understandtheconceptsofembeddedsystemdesignandanalysis
- LearnthearchitectureandprogrammingofARMprocessor
- Beexposedtothebasicconceptsofembeddedprogramming
- Learntherealtimeoperatingsystems

UNIT I INTRODUCTIONTOEMBEDDEDSYSTEMDESIGN 9

Complex systems and micro processors– Embedded system design process –Design example: Modeltrain controller- Design methodologies- Design flows - Requirement Analysis – Specifications-Systemanalysis andarchitecturedesign – Quality Assurancetechniques -Designing withcomputingplatforms –consumer electronics architecture – platform-level performance analysis.

UNIT II ARMPROCESSORANDPERIPHERALS 9

ARMArchitectureVersions–ARMArchitecture–InstructionSet–Stacksand Subroutines –Features of the LPC 214X Family – Peripherals – The Timer Unit – Pulse Width Modulation Unit –UART – Block Diagram of ARM9 and ARM Cortex M3 MCU.

UNIT III EMBEDDEDPROGRAMMING 9

Components for embeddedprograms- Models of programs- Assembly, linkingandloading – compilationtechniques- Program level performance analysis – Software performance optimization – Program levelenergy and power analysis and optimization – Analysis and optimization of program size-Programvalidation and testing.

UNIT IV REALTIMESYSTEMS 9

Structure of a Real Time System — Estimating program run times – Task Assignment and Scheduling – Fault Tolerance Techniques – Reliability, Evaluation – Clock Synchronisation.

UNIT V PROCESSESANDOPERATINGSYSTEMS 9

Introduction – Multiple tasks and multiple processes –Multirate systems- Preemptive real time operatingsystems- Priority based scheduling- Interprocess communication mechanisms – Evaluating operatingsystemperformance-power optimizationstrategiesfor processes –ExampleRealtime operatingsystems-POSIX-Windows CE. - Distributedembeddedsystems – MPSoCsandshared memory multiprocessors. –Design Example - Audio player, Engine control unit – Video accelerator.

TOTAL: 45 PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- DescribethearchitectureandprogrammingofARMprocessor
- Outlinetheconceptsof embeddedsystems
- Explainthebasicconceptsofrealtimeoperatingsystemdesign
- Modelreal-timeapplicationsusingembedded-systemconcepts

LISTOFOPENELECTIVES

OPENELECTIVE–II(SEMESTERVII)

OPENELECTIVE–II
SEMESTER VII

20150OE74A INTRODUCTIONTO CPROGRAMMING LTPC
3003

OBJECTIVES:

- TodevelopCProgramsusingbasicprogrammingconstructs
- TodevelopCprogramsusingarraysandstrings
- TodevelopapplicationsinCusingfunctionsandstructures

UNIT I INTRODUCTION 9
Structure of C program –Basics: Data Types –Constants –Variables -Keywords –Operators:Precedence and Associativity -Expressions -Input/Output statements, Assignment statements –Decision-making statements -Switch statement -Looping statements –Pre-processor directives -Compilationprocess –ExercisePrograms:Checkwhether therequiredamount canbewithdrawnbasedon the available amount –Menu-driven program to find the area of different shapes –Find the sum ofeven numbers

UNIT II ARRAYS 9
Introduction to Arrays –One dimensional arrays: Declaration –Initialization -Accessing elements –Operations: Traversal, Insertion, Deletion, Searching -Two dimensional arrays: Declaration –Initialization -Accessing elements –Operations: Read –Print –Sum –Transpose –Exercise Programs:Print the number of positive and negativevalues present in the array –Sort the numbers using bubblesort -Find whether the given is matrix is diagonal or not.

UNIT III STRINGS 9
Introduction to Strings -Reading and writing a string -String operations (without using built-in stringfunctions): Length –Compare –Concatenate –Copy –Reverse –Substring –Insertion –Indexing –Deletion –Replacement –Array of strings –Introduction to Pointers –Pointer operators –Pointerarithmetic -Exercise programs: To find the frequency of a character in a string -To find the number ofvowels, consonants and white spaces in a given text –Sorting the names.

UNIT IV FUNCTIONS 9
Introduction to Functions –Types: User-defined and built-in functions -Function prototype -Functiondefinition -Function call -Parameter passing: Pass by value -Pass by reference -Built-in functions(string functions) –Recursive functions –Exercise programs: Calculate the total amount of powerconsumed by „n" devices (passing an array toa function) –Menu-driven programto count thenumberswhicharedivisibleby3, 5 andbyboth(passinganarraytoa function)–Replacethepunctuations froma given sentence by the space character (passing an array to a function)

UNIT V STRUCTURES 9
Introduction to structures –Declaration –Initialization –Accessing the members –Nested Structures –Array of Structures –Structures and functions –Passing an entire structure –Exercise programs:Computetheageofa personusingstructureandfunctions (passinga structuretoa function) –Computethe number of days an employee came late to the office by considering his arrival time for 30 days(Use array of structures and functions)

TOTAL:45PERIODS

OUTCOMES:
Uponcompletionofthiscourse, thestudentswillbe ableto:

- Developsimpleapplicationsusingbasicconstructs
- Developapplicationsusingarraysandstrings
- Developapplicationsusingfunctionsandstructures

TEXTBOOK:

20150OE74B DATASTRUCTURESANDALGORITHMS LTPC
3003

OBJECTIVES:

- Tounderstandthevariousalgorithmdesignandanalysis techniques.
- Tolearnlineardatastructures–lists, stacks,andqueues.
- Tolearndifferentsortingandsearchingalgorithms.
- TounderstandTreeandGraphdatastructures.

UNITIIS TACKSAND QUEUES 7
StackADT -Applications -Evaluatingarithmeticexpressions-ConversionofInfix toPostfix-Recursion.Queue ADT –Priority Queue -applications of queues. Implementation of Stack ADT and palindromechecking using C. Implementation of Queue operations using arrays in C.

UNITIIISEARCHINGANDSORTINGALGORITHMS 10
Divide and conquer methodology -Searching: Linear Search -Binary Search. Sorting: Insertion sort –Merge sort –Quick sort –Heap sort. Analysis of searching and sorting techniques. Implementation oflinear search, binary search, insertion sort, merge sort and quick sort algorithms in C.

UNIT IV TREES 9
Tree ADT –treetraversals -BinaryTree ADT –expressiontrees –binarysearchtree ADT –applicationsof trees.Heap –applications of heap. Implementation of Binary search tree and its operations, treetraversal methods, finding height of the tree using C. Implementation of heap and heap sorting usingarrays in C.

UNIT V GRAPHS 8
Definition – Representation of Graph –Breadth-first traversal -Depth-first traversal –Dynamicprogramming Technique –Warshall‟s and Floyd‟s algorithm –Greedy method -Dijkstra‟s algorithm –applications of graphs. Implementation of graph, graph traversal methods, finding shortest path usingDijkstra‟s algorithm in C.

TOTAL:45PERIODS

OUTCOMES:
Attheendofthiscourse,thestudentsshouldbeableto:

- Implementlinear datastructuresandsolveproblemsusingthem.
- Implementandapplytreesandgraphstosolveproblems.
- Implementthevarioussearchingandsortingalgorithms.

TEXTBOOKS:

1. MarkAllenWeiss,“DataStructuresandAlgorithmAnalysisinC”,2nd Edition,Pearson Education,1997.

OPENELECTIVE–II
SEMESTER VII

20153OE74A **BASICCIRCUITTHEORY** **LTPC 3003**

OBJECTIVES:

- Tointroduceelectriccircuitsandits analysis.
- Toimpartknowledgeonsolvingcircuitequationsusingnetworktheorems.
- Tointroducethephenomenonofresonanceincoupledcircuits.
- TointroducePhasordiagramsandanalysisofthreephasecircuits.

UNIT I BASICCIRCUITSANALYSIS 9

Resistive elements -Ohm's LawResistors inseries and parallelcircuits –Kirchoffs laws –Meshcurrentand node voltage -methods of analysis.

UNIT II NETWORKREDUCTIONANDTHEOREMSFORDCCIRCUITS 9

Network reduction: voltage and current division, source transformation –star delta conversion.Thevenins and Norton Theorems –Superposition Theorem –Maximum power transfer theorem –Reciprocity Theorem –Millman's theorem.

UNIT III ACCIRCUITS 9

Introduction to AC circuits , inductance reactance, capacitive reactance, Phasor diagrams, real power,reactive power, apparent power, power factor, R-L R-C , RLC networks, Network reduction: voltageandcurrent division, sourcetransformation –meshand nodeanalysis, Thevenins andNortonTheorems–Superposition Theorem –Maximum power transfer theorem –Reciprocity Theorem –Millman'stheorem.

UNIT IV THREE PHASECIRCUITS 9

A.C. circuits –Average and RMS value -Phasor Diagram –Power, Power Factor and Energy.-Analysisofthreephase3-wireand4-wirecircuits withstaranddelta connected loads, balanced& unbalanced –phasor diagram of voltages and currents –power measurement in three phase circuits.

UNIT V RESONANCEANDCOUPLEDCIRCUITS 9

Seriesandparallelresonance–theirfrequencyresponse–QualityfactorandBandwidth-Selfandmutual inductance –Coefficient of coupling –Tuned circuits –Single tuned circuits.

TOTAL:45PERIODS

OUTCOMES:

- Abilitytointroduceelectriccircuitsandits analysis.
- Abilitytoimpartknowledgeonsolvingcircuitequationsusingnetworktheorems.
- Abilitytointroducethephenomenonofresonanceincoupledcircuits.
- AbilitytointroducePhasordiagramsandanalysisofthreephasecircuits.

OPENELECTIVE–II
SEMESTER VII

20153OE74A INTRODUCTIONTORENEWABLEENERGYSYSTEMS

LTPC
3003

OBJECTIVES:
ToProvide knowledge

- Aboutthestandaloneandgridconnectedrenewableenergysystems.
- Designofpowerconvertersforrenewableenergyapplications.
- Windelectricalgeneratorsandsolar energysystems.
- Powerconvertersusedforrenewableenergysystems.

UNIT II ELECTRICALMACHINESFORRENEWABLEENERGYCONVERSION 9
Referencetheoryfundamentals-principleof operationandanalysis:IGandPMSG.

UNIT III POWERCONVERTERS 9
Solar:Block diagramofsolar photo voltaicsystem-Principleof operation:line commutatedconverters(inversion-mode) -Boost and buck-boost converters-selection of inverter, battery sizing, array sizingWind: Three phase AC voltage controllers

UNIT IV ANALYSISOFWINDANDPV SYSTEMS 9
Standalone operationof fixedandvariabilityspeedwindenergyconversionsystems andsolar system-Grid connection Issues -Grid integrated PMSG, SCIG Based WECS, grid Integrated solar system.

UNIT V HYBRIDRENEWABLEENERGYSYSTEMS 9
NeedforHybridSystems-RangeandtypeofHybridsystems-CasestudiesofWind-PVMaximumPower Point Tracking (MPPT).

TOTAL:45PERIODS

OUTCOMES:

- Abilitytounderstandandanalyzepower systemoperation,stability,controlandprotection.
- Abilitytohandletheengineeringaspectsof electricalenergygenerationandutilization.
- Abilitytounderstandthestandaloneand gridconnectedrenewableenergysystems.
- Abilitytodesignofpower convertersforrenewableenergyapplications.
- Abilitytoacquireknowledgeonwindelectricalgeneratorsandsolar energysystems.
- Abilitytodesignpowerconvertersusedfor hybridrenewableenergysystems.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

OPENELECTIVE–II
SEMESTER VII

20154OE74A **INDUSTRIALSAFETY** **LTPC**
3003

OBJECTIVES:
Toimpartknowledgeonsafetyengineeringfundamentalsandsafetymanagementpractices.

UNIT I INTRODUCTION 9
Evolutionof modernsafetyconcepts –Fireprevention –Mechanicalhazards –Boilers, Pressurevessels,Electrical Exposure.

UNIT II CHEMICALHAZARDS 9
Chemical exposure –Toxic materials –Ionizing Radiation and Non-ionizing Radiation - IndustrialHygiene –Industrial Toxicology.

UNIT III ENVIRONMENTALCONTROL 9
IndustrialHealthHazards–EnvironmentalControl–IndustrialNoise-Noisemeasuringinstruments,Control of Noise, Vibration, -Personal Protection.

UNIT IV HAZARDANALYSIS 9
SystemSafetyAnalysis–Techniques–FaultTreeAnalysis(FTA),FailureModesandEffectsAnalysis(FMEA), HAZOP analysis and Risk Assessment.

UNIT V SAFETYREGULATIONS 9
Explosions –Disaster management –catastrophecontrol,hazardcontrol,Safetyeducationandtraining - Factories Act, Safety regulations Product safety –case studies.

TOTAL:45PERIODS

OUTCOMES:
- Students must be able to identify and prevent chemical, environmental mechanical, fire hazardthrough analysis and apply proper safety techniques on safety engineering and management.

TEXTBOOK:

1. JohnV.Grimaldi,"SafetyManagement",AITBSPublishers,2003.

REFERENCES:

OPENELECTIVE–II
SEMESTER VII

20154OE74B **TESTINGOFMATERIALS** **LTPC 3003**

OBJECTIVE:
Tounderstandthevariousdestructiveandnondestructivetestingmethodsofmaterialsandits industrial applications.

UNIT I INTRODUCTIONTOMATERIALSTESTING 9
Overview of materials, Classification of material testing, Purpose of testing, Selection of material,Development of testing, Testing organizations and its committee, Testing standards, Result Analysis,Advantages of testing.

UNIT II MECHANICALTESTING 9
Introductionto mechanicaltesting, Hardness test (Vickers, Brinell, Rockwell), Tensiletest, Impact test(Izod, Charpy) -Principles, Techniques, Methods, Advantages and Limitations, Applications. Bendtest, Shear test, Creep and Fatiguetest -Principles, Techniques, Methods, Advantages and Limitations,Applications.

UNIT III NONDESTRUCTIVETESTING 9
Visual inspection, Liquid penetrant test, Magnetic particle test, Thermography test – Principles,Techniques, Advantages and Limitations, Applications. Radiographic test, Eddy current test,Ultrasonic test, Acoustic emission-Principles, Techniques, Methods, Advantages and Limitations,Applications.

UNIT IV MATERIALCHARACTERIZATIONTESTING 9
Macroscopic and Microscopic observations, Optical and Electron microscopy (SEM and TEM) - Principles, Types, Advantages and Limitations,Applications. Diffraction techniques, SpectroscopicTechniques, Electrical and Magnetic Techniques-Principles, Types, Advantages and Limitations,Applications.

UNIT V OTHERTESTING 9
Thermal Testing: Differential scanning calorimetry, Differential thermal analysis. Thermo-mechanicaland Dynamic mechanical analysis: Principles, Advantages, Applications. Chemical Testing: X-RayFluorescence, Elemental Analysis by Inductively Coupled Plasma-Optical Emission Spectroscopy andPlasma-Mass Spectrometry.

TOTAL:45PERIODS

OUTCOMES:
- Identifysuitabletestingtechniquetoinspectindustrialcomponent.
- Abilitytousethedifferent techniqueandknowitsapplicationsandlimitations.

TEXTBOOKS:

1. BaldevRaj,T.Jayakumar,M.Thavasimuthu“PracticalNon-DestructiveTesting”,NarosaPublishing House, 2009.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

OPENELECTIVE–II
SEMESTER VII

20155OE74A **GREENBUILDINGDESIGN** **LTPC 3003**

UNIT I ENVIRONMENTALIMPLICATIONSOFBUILDINGS 9

Energy use, carbon emissions, water use, waste disposal; Building materials: sources, methods ofproduction and environmental Implications. Embodied Energy in Building Materials: TransportationEnergy for Building Materials; Maintenance Energy for Buildings.

UNIT II IMPLICATIONSOFBUILDINGTECHNOLOGIESEMBODIEDENERGY OFBUILDINGS 9

Framed Construction, Masonry Construction. Resources for Building Materials, Alternative concepts.Recycling of Industrial and Buildings Wastes. Biomass Resources for buildings.

UNIT III COMFORTSINBUILDING 9

ThermalComfort inBuildings-Issues; HeatTransfer Characteristic of BuildingMaterials and BuildingTechniques. Incidence of Solar Heat on Buildings-Implications of Geographical Locations.

UNIT IV UTILITYOFSOLARENERGYINBUILDINGS 9

Utility of Solar energy in buildings concepts of Solar Passive Cooling and Heating of Buildings. LowEnergy Cooling. Case studies of Solar Passive Cooled and Heated Buildings.

UNIT V GREENCOMPOSITESFORBUILDINGS 9

Concepts of Green Composites. Water Utilisation in Buildings, Low Energy Approaches to WaterManagement. Management of Solid Wastes. Management of Sullage Water and Sewage. UrbanEnvironment and Green Buildings. Green Cover and Built Environment.

TOTAL:45PERIODS

TEXTBOOKS:

1. K.S.Jagadish, B. U. VenkataramareddyandK. S. Nanjundarao. AlternativeBuildingMaterials and Technologies. New Age International, 2007.
2. LowEnergyCoolingFor SustainableBuildings. JohnWileyandSonsLtd, 2009.

OPENELECTIVE–II
SEMESTER VII

20155OE74B **WASTEWATERTREATMENT** **LTPC 3003**

OBJECTIVES:

- Tomakethestudentconversantwiththewatertreatmentmethodsincludingadsorptionand oxidation process.
- Toprovidebasicunder standingsabouttherequirementsofwater,itspreliminarytreatment.

UNIT I WATERQUALITYANDPRELIMINARYTREATMENT 9

Water Quality-physical-chemical and biological parameters of water-water quality requirement -potablewater standards -wastewater effluent standards -water quality indices. Water purification systems innatural systems-physical processes-chemical processes and biological processes-primary, secondary andtertiary treatment-Unit operations-unit processes. Mixing, clarification -sedimentation; Types; aerationand gas transfer –coagulation and flocculation, coagulation processes -stability of colloids -destabilization of colloids-transport of colloidal particles, clariflocculation.

UNIT II INDUSTRIALWATERTREATMENT 9

Filtration –size and shape characteristics of filtering media –sand filters hydraulics of filtration –designconsiderations –radial, upflow, highrate and multimedia filters, pressure filter. Water softening –limesoda, zeolite and demineralization processes –industrial water treatment for boilers.

UNITIIICONVENTIONALTREATMENTMETHODS 9

Tasteand odour control –adsorption –activatedcarbon treatment –removal of color –ironand manganeseremoval –aeration, oxidation, ion exchange and other methods –effects of fluorides –fluoridation anddefluoridation –desalination -corrosion prevention and control –factors influencing corrosion –Langelierindex –corrosion control measures.

UNIT IV WASTEWATERTREATMENT 9

Wastewater treatment –pre and primary treatment –equalization neutralization –screening and gridremoval –sedimentation –oil separation gas stripping of volatile organics –biological oxidation –lagoonsand stabilization basins –aerated lagoons –activated sludge process –trickling filtration –anaerobicdecomposition.

UNIT V ADSORPTIONANDOXIDATIONPROCESSES 9

Chemicalprocess–adsorption–theoryofadsorption–ionexchangeprocess–chemicaloxidation–advanced oxidation process –sludge handling and disposal –miscellaneous treatment processes.

TOTAL:45PERIODS

OUTCOMES:

- Willhaveknowledgeaboutadsorptionandoxidationprocess.
- Willgainideaaboutvariousmethodsavailableforwater treatment.
- Willappreciatethenecessityofwaterandacquireknowledgeofpreliminarytreatment.

TEXTBOOKS:

1. MetcalfandEddy,“WastewaterEngineering”,4thed.,McGrawHillHigherEdu., 2002.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER VII

19152C75 ADHOCANDWIRELESSSENSORNETWORKS

LTPC
3003

OBJECTIVES:

- LearnAdhocnetworkandSensor Networkfundamentals
- Understandthedifferentroutingprotocols
- Haveanin-depthknowledgeonsensornetworkarchitectureand designissues
- UnderstandthetransportlayerandsecurityissuespossibleinAdhocandSensornetworks
- Haveanexposuretomoteprogrammingplatformsand tools

UNITIADHOCNETWORKS–INTRODUCTIONANDROUTINGPROTOCOLS9

Elements of Ad hoc Wireless Networks, Issues in Ad hoc wireless networks, Example commercialapplications of Ad hoc networking, Ad hoc wireless Internet, Issues in Designing a Routing Protocol forAd Hoc Wireless Networks, Classifications of Routing Protocols, Table Driven Routing Protocols -Destination Sequenced Distance Vector (DSDV), On–Demand Routing protocols –Ad hoc On–DemandDistance Vector Routing (AODV).

UNITIISENSORNETWORKS –INTRODUCTION&ARCHITECTURES 9

Challenges for Wireless Sensor Networks, Enabling Technologies for Wireless Sensor Networks, WSNapplication examples, Single-Node Architecture - Hardware Components, Energy Consumption ofSensor Nodes, Network Architecture - Sensor Network Scenarios, Transceiver Design Considerations,Optimization Goals and Figures of Merit.

UNITIIIWSNNETWORKINGCONCEPTSANDPROTOCOLS 9

MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols And Wakeup Concepts - S-MAC, The Mediation Device Protocol, Contention based protocols - PAMAS, Schedule based protocols–LEACH, IEEE 802.15.4 MAC protocol, Routing Protocols-Energy Efficient Routing, Challenges andIssues in Transport layer protocol.

UNITIV SENSORNETWORKSECURITY 9

Network Security Requirements, Issues and Challenges in Security Provisioning, Network SecurityAttacks, Layer wise attacks in wireless sensor networks, possible solutions for jamming, tampering,black hole attack, flooding attack. Key Distribution and Management, Secure Routing – SPINS,reliability requirements in sensor networks.

UNIT V SENSORNETWORKPLATFORMSANDTOOLS 9

Sensor Node Hardware – Berkeley Motes, Programming Challenges, Node-level software platforms – TinyOS, nesC, CONTIKIOS, Node-level Simulators – NS2 and its extension to sensor networks,COOJA, TOSSIM, Programming beyond individual nodes – State centric programming.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse, thestudentwouldbeableto:

- KnowthebasicsofAdhocnetworksandWirelessSensorNetworks
- Apply this knowledge to identify the suitable routing algorithm based on the network and userrequirement
- ApplytheknowledgetoidentifyappropriatephysicalandMAC layerprotocols
- UnderstandthetransportlayerandsecurityissuespossibleinAdhocandsensornetworks.
- BefamiliarwiththeOS usedinWirelessSensorNetworksandbuildbasicmodules

LISTOF ELECTIVES

ELECTIVE–III(SEMESTERVII)

ELECTIVE–III
SEMESTER VII

20152E76A ADVANCEDWIRELESSCOMMUNICATION LTPC 3003

OBJECTIVES:

- Toexpose the studentstothe importanceofimprovingcapacityofwirelesschannelusing MIMO
- To enable understanding of channel impairmentmitigation using space-time block and Trelliscodes
- ToteachadvancedMIMOsystemlikelayeredspacetimecodes,MU-MIMOSystemand MIMO-OFDM systems

UNIT I CAPACITYOFWIRELESSCHANNELS 9

The crowded spectrum, need for high data rate, MIMO systems – Array Gain, Diversity Gain, DataPipes, Spatial MUX, MIMO System Model. MIMO System Capacity – channel known at the TX,Channel unknown to the TX – capacity of deterministic channels, Random channels and frequencyselective channels.

UNIT II RADIOWAVEPROPAGATION 9

Radio wave propagation – Macroscopic fading- free space and out door, small scale fading Fadingmeasurements – Direct pulsemeasurements, spreadspectrumcorrelation channelsounding frequencydomainchannel sounding,AntennaDiversity–Diversitycombining methods.

UNIT III SPACETIMEBLOCKCODES 9

Delay Diversity scheme, Alamoti space time code – Maximum likelihood decoding maximum ratiocombining. Transmit diversity space time block codes for real signal constellation and complex signalconstellation - decoding of STBC.

UNIT IV SPACETIMETRELLISCODES 9

Space time coded systems,space time code word design criteria,design of space time T C on slowfading channels, design of STTC on Fast Fading channels, performance analysis in slow and fast fadingchannels, effect of imperfect channel estimationand Antenna correlation onperformance, comparison ofSTBC & STTC.

UNITV LAYEREDSPACETIMECODES 9

LSTtransmitter–Horizontal andVerticalLSTreceiver– MLRx,ZeroforcingRx;MMSERx,SIC Rx, ZFV-blastRx-MMSEV-blastRx,IterativeRx -capacityofMIMO–OFDMsystems–capacity of MIMO multi user systems.

TOTAL:45PERIODS

OUTCOMES:

Thestudentshouldbeableto:

- Comprehend and appreciate the significance and role of this course in the present contemporary world
- Applytheknowledgeabout theimportanceofMIMOintoday'scommunication
- Appreciatethevariousmethodsforimprovingthedatarateofwirelesscommunicationsystem

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTER VII

20152E76B COGNITIVERADIO LTPC 3003

OBJECTIVES:

Thestudentshouldbemade:

- Tounderstandtheevolvingsoftwaredefinedradioandcognitiveradiotechniquesandtheir essential functionalities
- Tostudythebasicarchitectureandstandardforcognitiveradio
- Tounderstandthephysical, MACandNetworklayer designofcognitiveradio
- Toexposethestudent toevolvingapplicationsandadvancedfeaturesofcognitiveradio

[illegible]

UNIT II COGNITIVERADIOARCHITECTURE 9

Cognition cycle – orient, plan, decide and act phases, Organization, SDR as a platform for CognitiveRadio – Hardware and Software Architectures, Overview of IEEE 802.22 standard for broadbandwireless access in TV bands.

UNIT IIISPECTRUMSENSINGANDDYNAMICSPECTRUMACCESS 9

Introduction – Primary user detection techniques – energy detection, featuredetection, matched filtering,cooperative detection and other approaches, Fundamental Tradeoffs in spectrum sensing, SpectrumSharing Models of Dynamic Spectrum Access - Unlicensed and Licensed Spectrum Sharing,Fundamental Limits of Cognitive Radio.

UNIT IV MACANDNETWORKLAYERDESIGNFORCOGNITIVE RADIO 9

MACforcognitiveradios–Polling,ALOHA,slottedALOHA,CSMA,CSMA/CA,Networklayerdesign – routing in cognitive radios, flow control and error control techniques.

UNIT V ADVANCEDTOPICSINCOGNITIVERADIO 9

Overviewofsecurityissuesincognitiveradios,auctionbasedspectrummarketsincognitiveradionetworks, public safety and cognitive radio, cognitive radio for Internet of Things.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse,thestudentshouldbeableto:

- Gainknowledgeonthedesignprinciplesonsoftwaredefinedradioandcognitiveradio
- Develop theabilityto designand implement algorithms for cognitiveradiospectrumsensingand dynamic spectrum access
- Buildexperimentsandprojectswithrealtimewireless applications
- Applytheknowledgeofadvancedfeaturesofcognitiveradioforrealworldapplications

ELECTIVE–III
SEMESTER VII

20152E76C FOUNDATIONSKILLSININTEGRATEDPRODUCTDEVELOPMENT

LTPC
3003

OBJECTIVES:

- To understand the global trends and development methodologies of various types of productsand services
- To conceptualize, prototype and develop product management plan for a new product based on the type of the new product and development methodology integrating the hardware, software, controls, electronics and mechanical systems
- To understand requirement engineering and know how to collect, analyze and arrive at requirements for new product development and convert them in to design specification
- To understand system modeling for system, sub-system and their interfaces and arrive at the optimum system specification and characteristics
- To develop documentation, test specifications and coordinate with various teams to validate and sustain up to the EoL (End of Life) support activities for engineering customer

UNIT I FUNDAMENTALSOFPRODUCTDEVELOPMENT 9

Global TrendsAnalysisandProductdecision-SocialTrends- TechnicalTrends-EconomicalTrends - EnvironmentalTrends-Political/PolicyTrends-**IntroductiontoProductDevelopmentMethodologies andManagement -**OverviewofProductsandServices -Types ofProduct Development - OverviewofProductDevelopmentmethodologies-ProductLifeCycle–ProductDevelopmentPlanning and Management.

UNIT II REQUIREMENTSANDSYSTEMDESIGN 9

Requirement Engineering - Types of Requirements **-** Requirement Engineering – traceability Matrixand Analysis **-** Requirement Management **- System Design & Modeling -** Introduction to SystemModeling **-** System Optimization **-** System Specification **-** Sub-System Design **-** Interface Design.

UNIT III DESIGNANDTESTING 9

Conceptualization - Industrial Design and User Interface Design - Introduction to Concept generationTechniques – **Challenges in Integration of Engineering Disciplines -** Concept Screening & Evaluation

- **Detailed Design -** Component Design and Verification – **Mechanical, Electronics and SoftwareSubsystems -** High Level Design/Low Level Design of S/W Program **-** Types of Prototypes, S/WTesting- Hardware Schematic, Component design, Layout and Hardware Testing – **Prototyping -** Introduction to Rapid Prototyping and Rapid Manufacturing **- System Integration, Testing,Certification and Documentation**

UNIT IV SUSTENANCEENGINEERINGANDEND-OF-LIFE(EOL)SUPPORT9

Introduction to Product verification processes and stages - Introduction to Product Validation processesand stages - Product Testing Standards and Certification - Product Documentation - **Sustenance -**Maintenance and Repair – Enhancements **- Product EoL -** Obsolescence Management – ConfigurationManagement - EoL Disposal

UNIT V BUSINESSDYNAMICS–ENGINEERINGSERVICESINDUSTRY 9

The Industry - Engineering Services Industry - Product Development in Industry versus Academia – **The IPD Essentials -** Introduction to Vertical Specific Product Development processes - Manufacturing/Purchase and Assembly of Systems - Integration of Mechanical, Embedded andSoftware Systems – Product Development Trade-offs - Intellectual Property Rights and Confidentiality– Security and Configuration Management.

TOTAL:45PERIODS

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

OUTCOMES:

Uponcompletionofthecourse, thestudentswillbeableto:

- Define,formulateandanalyzeaproblem
- Solvespecificproblemsindependentlyor aspartofa team
- GainknowledgeoftheInnovation&ProductDevelopmentprocessintheBusiness Context
- Workindependentlyaswellasinteams
- Manageaprojectfromstarttofinish

ELECTIVE–III
SEMESTER VII

20152E76D MACHINELEARNINGTECHNIQUES LTPC
3003

OBJECTIVES:

- Tounderstandtheneedformachinelearningforvariousproblemsolving
- Tostudythevarioussupervised,semi-supervisedandunsupervisedlearningalgorithmsin machine learning
- Tolearnthenewapproachesinmachinelearning
- Todesignappropriatemachinelearningalgorithmsforproblemsolving

UNIT I INTRODUCTION 9
Learning Problems – Perspectives and Issues – Concept Learning – Version Spaces and CandidateEliminations – Inductivebias – Decision Treelearning – Representation – Algorithm – Heuristic SpaceSearch.

UNIT II NEURALNETWORKSANDGENETICALGORITHMS 9
NeuralNetworkRepresentation–Problems–Perceptrons–MultilayerNetworksandBack Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – GeneticProgramming – Models of Evaluation and Learning.

UNIT III BAYESIANANDCOMPUTATIONALLEARNING 9
BayesTheorem–ConceptLearning–MaximumLikelihood–Minimum DescriptionLength Principle–BayesOptimalClassifier–GibbsAlgorithm–NaïveBayesClassifier–BayesianBeliefNetwork–EMAlgorithm–ProbabilityLearning–SampleComplexity–FiniteandInfiniteHypothesis Spaces – Mistake Bound Model.

UNIT IV INSTANTBASEDLEARNING 9
K-NearestNeighbourLearning–LocallyweightedRegression – Radial BasesFunctions – Case Based Learning.

UNIT V ADVANCEDLEARNING 9
Learning Sets of Rules – Sequential Covering Algorithm – Learning Rule Set – First Order Rules – Setsof First Order Rules – Induction on Inverted Deduction – Inverting Resolution– Analytical Learning– PerfectDomainTheories–ExplanationBaseLearning – FOCLAlgorithm – Reinforcement Learning– Task – Q-Learning – Temporal Difference Learning

TOTAL:45PERIODS

OUTCOMES:
Attheendofthecourse, thestudentswillbeableto

- Differentiatebetweensupervised,unsupervised,semi-supervisedmachinelearningapproaches
- Applyspecificsupervisedor unsupervisedmachinelearningalgorithmfor aparticularproblem
- Analyseandsuggesttheappropriatemachinelearningapproachforthevarioustypesofproblem
- Designandmakemodificationstoexistingmachinelearningalgorithmstosuitanindividual application
- Provideusefulcasestudiesontheadvancedmachinelearningalgorithms

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

ELECTIVE–III
SEMESTER VII

20152E76E ELECTRONICSPACKAGINGANDTESTING LTPC
3003

OBJECTIVE:

- Tointroduceanddiscuss various issuesrelatedtothesystempackaging

UNIT I OVERVIEWOFELECTRONICSYSTEMSPACKAGING 9

Functions of an Electronic Package, Packaging Hierarchy, IC packaging: MEMS packaging, consumerelectronics packaging, medical electronics packaging, Trends, Challenges, Driving Forces on PackagingTechnology, Materials for Microelectronic packaging, Packaging Material Properties, Ceramics,Polymers, and Metals in Packaging, Material for high density interconnect substrates

UNIT II ELECTRICALISSUESINPACKAGING 9

Electrical Issues of Systems Packaging, Signal Distribution, Power Distribution, ElectromagneticInterference, Transmission Lines, Clock Distribution, Noise Sources, Digital and RF Issues.
DesignProcessElectricalDesign:InterconnectCapacitance,ResistanceandInductancefundamentals;Packagingroadmaps - Hybrid circuits - Resistive, Capacitive and Inductive parasitics

UNIT III CHIPPACKAGES 9

, Flip

UNIT IV PCB,SURFACEMOUNTTECHNOLOGYANDTHERMALCONSIDERATIONS 9

Printed Circuit Board: Anatomy, CAD tools for PCB design, Standard fabrication, Micro via Boards.Board Assembly: Surface Mount Technology, Through Hole Technology, Process Control and Designchallenges. Thermal Management, Heat transfer fundamentals, Thermal conductivity and resistance,Conduction, convection and radiation – Cooling requirements

UNIT V TESTING 9

Reliability, Basic concepts, Environmental interactions. Thermal mismatch and fatigue – failures –thermo mechanically induced –electrically induced – chemically induced. Electrical Testing: Systemlevel electrical testing, Interconnection tests, Active Circuit Testing, Design for Testability

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- Givea comprehensiveintroduction tothevarious packagingtypes usedalongwiththeassociated thermal, speed, signal and integrity power issues
- Enabledesignofpackages whichcanwithstandhighertemperature,vibrationsandshock
- DesignofPCBswhichminimizetheEMIandoperateathigherfrequency
- AnalyzetheconceptsofTestingandtesting methods

ELECTIVE–III
SEMESTER VII

20152E76F MIXEDSIGNALICDESIGN

LTPC
300 3

OBJECTIVES:

Thestudentshouldbe made to:

- Studythemixedsignal ofsubmicronCMOScircuits
- Understandthevariousintegratedbasedfiltersandtopologies
- Learnthedata convertersarchitecture,modelingandsignaltonoiseratio
- Studytheintegratedcircuitof oscillatorsandPLLs

UNIT I SUBMICRONCMOSCIRCUITDESIGN 9

SubmicronCMOS:OverviewandModels, CMOSprocessflow, CapacitorsandResistors. Digitalcircuitdesign:TheMOSFETSwitch,DelayElements,AnAdder.AnalogCircuit Design:Biasing,Op-AmpDesign,CircuitNoise.

UNIT II INTEGRATORBASEDCMOS FILTERS 9

Integrator Building Blocks- low pass filter, Active RC integrators, MOSFET-C Integrators, g_m-Cintegrators, Discrete time integrators. Filtering Topologies: The Bilinear transfer function, TheBiquadratic transfer function, Filters using Noise shaping.

UNITIIIDATACONVERTERARCHITECTURES 9

DAC Architectures- Resistor string, R-2R ladder Networks, Current Steering, Charge Scaling DACs,Cyclic DAC, and Pipeline DAC. ADC Architectures- Flash, Two-step flash ADC, Pipeline ADC,Integrating ADC‘s, Successive Approximation ADC.

UNITIVDATACONVERTERMODELING ANDSNR 9

Sampling and Aliasing: A modeling approach, Impulse sampling, The sample and Hold, Quantizationnoise. Data converter SNR: An overview, Clock Jitter, Improving SNR using Averaging, Decimatingfilter for ADCs, Interpolating filter for DACs, Band pass and High pass sinc filters - Using feedback toimprove SNR.

UNIT V OSCILLATORSANDPLL 9

LC oscillators,Voltage Controlled Oscillators. Simple PLL, Charge pumps PLLs, Non ideal effects inPLLs, Delay Locked Loops.

TOTAL:45PERIODS

OUTCOMES:

Uponcompletionofthecourse, studentshouldbeableto

- ApplytheconceptsformixedsignalMOS circuit.
- AnalyzethecharacteristicsofICbasedCMOS filters.
- Designofvariousdataconverterarchitecturecircuits.
- Analyzethesignaltonoiseratioand modelingofmixedsignals.
- Designof oscillatorsandphaselockloop circuit.

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

ELECTIVE–III
SEMESTER VII

20152E76G DISASTERMANAGEMENT LTPC
3003

OBJECTIVES:

- Toprovidestudentsanexposuretodisasters,theirsignificanceandtypes.
- Toensurethatstudentsbegintounderstandtherelationshipbetweenvulnerability,disasters, disaster prevention and risk reduction
- Togaina preliminaryunderstandingofapproachesofDisaster RiskReduction(DRR)
- Toenhanceawarenessofinstitutionalprocessesinthecountryand
- Todeveloprudimentaryabilitytorespondtotheirsurroundingswithpotential disaster response in areas where they live, with due sensitivity

UNIT II APPROACHESTODISASTERRISKREDUCTION(DRR) 9

Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community basedDRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati RajInstitutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stake-holders- InstitutionalProcesses and Framework at State and Central Level- State Disaster Management Authority(SDMA) –Early Warning System – Advisories from Appropriate Agencies.

UNIT III INTER-RELATIONSHIP BETWEEN DISASTERS AND DEVELOPMENT 9

Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams,embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios inthe context of India - Relevance of indigenous knowledge, appropriate technology and local resources.

UNIT IV DISASTERRISKMANAGEMENTININDIA 9

Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation,Shelter, Health, WasteManagement, Institutional arrangements (Mitigation, Responseand Preparedness,Disaster Management Act and Policy - Other related policies, plans, programmes and legislation – Roleof GIS and Information Technology Components in Preparedness, Risk Assessment, Response andRecovery Phases of Disaster – Disaster Damage Assessment.

UNIT V DISASTERMANAGEMENT:APPLICATIONSANDCASESTUDIES AND

Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings andInfrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm SurgeAssessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Madedisasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field worksrelated to disaster management.

TOTAL:45PERIODS

OUTCOMES:

Thestudentswillbeableto

- Differentiatethetypesofdisasters,causesandtheirimpactonenvironmentandsociety
- Assessvulnerabilityandvariousmethodsofriskreductionmeasuresaswellas mitigation.

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

- Drawthehazardandvulnerabilityprofileof India,ScenariosintheIndiancontext,Disaster damage assessment and management.

SEMESTER VII

20152L77 EMBEDDEDLABORATORY

	L	T	P	C
	0	0	4	2

OBJECTIVES:

Thestudentshouldbe madeto:

- Learntheworkingof ARM processor
- UnderstandtheBuildingBlocksofEmbeddedSystems
- Learntheconceptof memorymapandmemoryinterface
- Writeprogramstointerfacememory,I/Oswithprocessor
- Studytheinterruptperformance

LISTOFEXPERIMENTS:

1. StudyofARMevaluationsystem
2. InterfacingADCandDAC.
3. InterfacingLEDandPWM.
4. Interfacingrealtimeclockandserialport.
5. InterfacingkeyboardandLCD.
6. InterfacingEPROMandinterrupt.
7. Mailbox.
8. InterruptperformancecharacteristicsofARMandFPGA.
9. FlashingofLEDS.
10. Interfacingsteppermotorandtemperaturesensor.
11. ImplementingzigbeeprotocolwithARM.

TOTAL: 60 PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- WriteprogramsinARMfor aspecific Application
- Interfacememory,A/DandD/AconvertorswithARM system
- Analyzetheperformanceof interrupt
- Writeprogramforinterfacingkeyboard,display,motorandsensor.
- Formulateaminiprojectusingembeddedsystem

SEMESTER VII

20152L78 ADVANCEDCOMMUNICATIONLABORATORY LTPC
0042

OBJECTIVES:
Thestudentshouldbe made to:

- Understandtheworkingprincipleofopticalsources, detector,fibers
- Developunderstandingofsimpleopticalcommunicationlink
- UnderstandthemeasurementofBER,Pulsebroadening
- Understandandcaptureanexperimentalapproachtodigitalwireless communication
- Understandactualcommunicationwaveformsthatwillbesentandreceivedacrosswireless channel

LISTOFOPTICAL EXPERIMENTS

1. Measurementofconnector,bendingandfiberattenuationlosses.
2. NumericalApertureandModeCharacteristicsofFibers.
3. DCCharacteristicsofLEDandPINPhotodiode.
4. Fiber optic AnalogandDigitalLinkCharacterization - frequencyresponse(analog), eyediagramand BER (digital)

LISTOFWIRELESSCOMMUNICATIONEXPERIMENTS

1. WirelessChannelSimulationincludingfadingandDoppler effects
2. SimulationofChannelEstimation,Synchronization&Equalizationtechniques
3. AnalysingImpact ofPulseShapingandMatchedFilteringusingSoftwareDefinedRadios
4. OFDMSignalTransmissionandReceptionusingSoftwareDefinedRadios

LISTOFMICROWAVEEXPERIMENTS

1. VSWRandImpedanceMeasurementandImpedanceMatching
2. CharacterizationofDirectionalCouplers,Isolators,Circulators
3. GunnDiodeCharacteristics
4. MicrowaveIC –FilterCharacteristics

TOTAL:60 PERIODS

OUTCOMES:
Oncompletionofthislabcourse, thestudentwould beableto

- Analyzetheperformanceofsimpleopticallinkbymeasurementoflossesand Analyzingthe mode characteristics of fiber
- AnalyzetheEyePattern,Pulsebroadeningofopticalfiberandtheimpacton BER
- EstimatetheWirelessChannelCharacteristicsandAnalyzetheperformanceofWireless Communication System
- UnderstandtheintricaciesinMicrowaveSystemdesign

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

LISTOF ELECTIVES

ELECTIVE–IV(SEMESTER VIII)

ELECTIVE–IV
SEMESTERVIII

20152E81A ELECTROMAGNETICINTERFERENCEANDCOMPATIBILITY
LTPC
3003

OBJECTIVES:

- TointroducethebasicconceptsofElectromagneticInterference
- ToteachtheimportanceofElectromagneticCompatibledesigns
- ToexplaintheexistingstandardsforElectromagneticCompatibility

UNIT I EMI/EMC CONCEPTS 9
EMI-EMCdefinitions;SourcesandVictimsofEMI;ConductedandRadiatedEMIEmissionandSusceptibility; Case Histories; Radiation Hazards to humans.

UNIT II EMICOUPLINGPRINCIPLES 9
Conducted, radiated and transient coupling; Common ground impedance coupling; Common mode andground loop coupling; Differential mode coupling; Near field cable to cable coupling; Field to cablecoupling; Power mains and Power supply coupling; Transient EMI, ESD.

UNIT III EMICONTROL 9
Shielding;EMIFilters;Grounding;Bonding;Isolationtransformer;Transientsuppressors;EMISuppression Cables.

UNIT IV EMCDESIGNFORCIRCUITSANDPCBS 9
NoisefromRelays andSwitches; Nonlinearities in Circuits; Cross talkintransmissionlineandcross talkcontrol; Component selection and mounting; PCB trace impedance; Routing; Power distributiondecoupling; Zoning; Grounding; VIAs; Terminations.

UNIT V EMIMEASUREMENTSANDSTANDARDS 9
Open area test site; TEM cell; EMI test shielded chamber and shielded ferrite lined anechoic chamber;Line impedance stabilization networks; EMI Rx and spectrum analyzer; Civilian standards - CISPR,FCC, IEC, EN; Military standards-MIL461E/462.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse, thestudentshouldbeableto:

- IdentifythevarioustypesandmechanismsofElectromagneticInterference
- ProposeasuitableEMI mitigationtechnique
- DescribethevariousEMCStandardsandmethodstomeasurethem

SEMESTERVIII

20152E81B **LOWPOWERSoCDESIGN** **LTPC**
3003

OBJECTIVES:
Thestudentshouldbe made to:

- IdentifysourcesofpowerinanIC.
- UnderstandbasicprincipleofSystemonChip design
- LearnoptimizationofpowerincombinationalandsequentiallogicmachinesforSoC Design
- Identifysuitabletechniquestoreducethepowerdissipationanddesigncircuitswithlowpower dissipation.

UNIT I POWERCONSUMPTIONINCMOS 9
Physics of power dissipation in CMOS FET devices – Hierarchy of limits of power – Sources of powerconsumption – Static Power Dissipation, Active Power Dissipation - Designing for Low Power, CircuitTechniques for Leakage Power Reduction - Basic principle of low power design, Logic level poweroptimization – Circuit level low power design.

UNIT II SYSTEM-ON-CHIPDESIGN 9
System-on-Chip Concept, Design Principles in SoC Architecture, SoC Design Flow, Platform-based andIP based SoC Designs, Basic Concepts of Bus-Based Communication Architectures. High performancealgorithms for ASICs/ SoCs as case studies – Canonic Signed Digit Arithmetic, KCM, DistributedArithmetic, High performance digital filters for sigma-delta ADC

UNITIIIPOWEROPTIMIZATIONOFCOMBINATIONALANDSEQUENTIALLOGIC MACHINESFORSOC 9
Introduction to Standard Cell-Based Layout – Simulation - Combinational Network Delay - Logic andinterconnect Design - Power Optimization - Switch Logic Networks. Introduction - Latches and Flip-Flops - Sequential Systems andClockingDisciplines - Sequential SystemDesign - Power Optimization - Design Validation - Sequential Testing.

UNITIVDESIGNOFLOW POWERCIRCUITSFORSUBSYSTEMONA SOC 9
Subsystem Design Principles - Combinational Shifters – Adders – ALUs – Multipliers – High DensityMemory – Field Programmable Gate Arrays - Programmable Logic Arrays - Computer arithmetictechniques for low power system – low voltage low power static Random access and dynamic Randomaccess memories, low power clock, Inter connect and layout design

UNIT V FLOORPLANNING 9
Floor-planningMethods–BlockPlacement&Channel Definition-GlobalRouting-switchboxRouting -PowerDistribution-ClockDistributions-Floor-planningTips-DesignValidation-Off-ChipConnections – Packages, The I/O Architecture - PAD Design

TOTAL:45PERIODS

OUTCOME:

ELECTIVE–IV
SEMESTERVIII

20152E81C	**PHOTONICNETWORKS**	**LTPC** **3003**

OBJECTIVES:

- To enable the student to understand the importance of the backbone infrastructure for our present and future communication needs and familiarize them with the architectures and the protocol stack in use
- To enable the student to understand the differences in the design of data plane and the control plane and the routing, switching and the resource allocation methods and the network management and protection methods in vogue
- To expose the student to the advances in networking and switching domains and the future trends

UNIT I OPTICALSYSTEMCOMPONENTS 9

Light Propagation in optical fibers – Loss & bandwidth, System limitations, Nonlinear effects;Solitons; Optical Network Components – Couplers, Isolators & Circulators, Multiplexers & Filters,Optical Amplifiers, Switches, Wavelength Converters.

UNIT II OPTICALNETWORKARCHITECTURES 9

Introduction to Optical Networks; SONET / SDH, Metropolitan-Area Networks, LayeredArchitecture; Broadcast and Select Networks – Topologies for Broadcast Networks, Media-AccessControl Protocols, Wavelength Routing Architecture.

UNIT V NETWORKDESIGNANDMANAGEMENT 9

Transmission System Engineering – System model, Power penalty - transmitter, receiver, Opticalamplifiers, crosstalk, dispersion, Wavelength stabilization, Overall design considerations, Controland Management – Network management functions, Configuration management, Performancemanagement, Fault management, Optical safety, Service interface.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse, thestudentwouldbeableto:

- Usethebackboneinfrastructureforour presentandfuturecommunicationneeds
- Analyzethearchitecturesandtheprotocol stack
- Comparethe differences inthe design of data plane, controlplane, routing, switching, resource allocation methods, network management and protection methods in vogue

ELECTIVE–IV
SEMESTERVIII

20152E81D **COMPRESSIVESENSING** **LTPC**
3003

OBJECTIVES:
- To presentthe basic theory and ideasshowing whenitispossible to reconstructsparse ornearly sparse signals from undersampled data
- Toexposestudentstorecentideasinmodernconvexoptimizationallowingrapidsignalrecovery
- Togivestudentsasenseofrealtimeapplicationsthatmightbenefitfromcompressivesensing ideas

Conventional Data Acquisition System; Drawbacks of Transform coding; Compressed Sensing (CS).

UNIT II SPARSITYANDSIGNALRECOVERY 9
SignalRepresentation; Basis vectors; Sensing matrices; RestrictedIsometricProperty; Coherence; Stablerecovery; Number of measurements.

UNIT III RECOVERYALGORITHMS 9
Basis Pursuit algorithm: L1 minimization; Matching pursuit: Orthogonal Matching Pursuit(OMP),Stagewise OMP, Regularized OMP, Compressive Sampling Matching Pursuit (CoSaMP); IterativeThresholding algorithm: Hard thresholding, Soft thresholding; Model based : Model based CoSaMP,Model based HIT.

UNIT IV COMPRESSIVESENSINGFOR WSN 9
Basics of WSN; Wireless Sensor without Compressive Sensing; Wireless Sensor with CompressiveSensing; Compressive Wireless Sensing: Spatial compression in WSNs, Projections in WSNs,Compressed Sensing in WSNs.

UNIT V APPLICATIONSOFCOMPRESSIVESENSING 9
Compressed Sensing for Real-Time Energy-Efficient Compression on Wireless Body Sensor Nodes;Compressive sensing in video surveillance; An Application of Compressive Sensing for Image Fusion;Single-Pixel Imaging via Compressive Sampling.

TOTAL:45PERIODS

OUTCOMES:
Attheendofthecourse, thestudentshouldbeableto:
- Appreciatethemotivationandthe necessityforcompressedsensingtechnology.
- Design a new algorithm or modify an existing algorithm for different application areas in wireless sensor network.

SEMESTERVIII

20152E81E DIGITALIMAGE PROCESSING LTPC
3003

OBJECTIVES:

- Tobecomefamiliar withdigitalimagefundamentals
- TogetexposedtosimpleimageenhancementtechniquesinSpatialandFrequencydomain.
- Tolearnconceptsofdegradationfunctionandrestorationtechniques.
- Tostudytheimagesegmentationandrepresentationtechniques.
- Tobecomefamiliar withimagecompressionandrecognition methods

UNIT I DIGITALIMAGE FUNDAMENTALS 9
Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing andAcquisition – Image Sampling and Quantization – Relationships between pixels - Color imagefundamentals - RGB, HSI models, Two-dimensional mathematical preliminaries, 2D transforms - DFT,DCT.

UNIT II IMAGEENHANCEMENT 9
Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering – Smoothing and Sharpening Spatial Filtering, Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters,Homomorphic filtering, Color image enhancement.

UNIT III IMAGERESTORATION 9
Image Restoration - degradation model, Properties, Noise models – Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering

UNIT V IMAGECOMPRESSIONANDRECOGNITION 9
Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEGstandard, MPEG. Boundary representation, Boundary description, Fourier Descriptor, RegionalDescriptors – Topological feature, Texture - Patterns and Pattern classes - Recognition based onmatching.

TOTAL:45 PERIODS

OUTCOMES:
Attheendofthecourse,thestudentsshouldbeableto:

- Knowandunderstandthebasicsandfundamentalsofdigitalimageprocessing, suchasdigitization, sampling, quantization, and 2D-transforms.
- Operateonimagesusingthetechniquesofsmoothing, sharpeningandenhancement.
- Understandtherestorationconceptsandfilteringtechniques.
- Learnthebasicsofsegmentation,featuresextraction,compressionandrecognitionmethodsfor color models.

LTPC
3003

OBJECTIVES:
Theobjectiveofthiscourseistoprovide knowledge on:

- BasicsonDigitalSignalProcessors
- ProgrammableDSP‘sArchitecture,On-chipPeripheralsandInstructionset
- Programmingforsignalprocessingapplications
- AdvancedProgrammableDSPProcessors

UNIT I FUNDAMENTALSOFPROGRAMMABLEDSPs 9
Introduction to Programmable DSPs, Architectural Features of PDSPs - Multiplier and Multiplieraccumulator – Modified Bus Structures and Memory access – Multiple access memory – Multi-portmemory – VLIW architecture- Pipelining – Special Addressing modes in P-DSPs – On chipPeripherals, Applications of Programmable DSPs.

UNIT II TMS320C5X PROCESSOR 9
Architecture of C5X Processor – Addressing modes – Assembly language Instructions - Pipelinestructure, On-chipPeripherals –BlockDiagramofDSP starter kit (DSK) –SoftwareTools, DSKon-board peripherals, Application Programs for processing real time signals.

UNIT III TMS320C6X PROCESSOR 9
Architecture of the C6x Processor - Instruction Set – Addressing modes, Assembler directives, On-chipperipherals, DSP Development System: DSP Starter Kit - Code Composer Studio - Support Files – Introduction to AIC23 codec and other on-board peripherals, Real-Time Programming Examples forSignals and Noise generation, Frequency analysis, Filter design.

UNIT IV ADSPPROCESSORS 9
ArchitectureofADSP-21XXandADSP-210XXseriesofDSPprocessors-Addressingmodesandassembly language instructions – Application programs –Filter design, FFT calculation.

UNIT V ADVANCEDPROCESSORS 9
Study of TI‘s advanced processors - TMS320C674x and TMS320C55x DSPs, ADSP‘s Blackfin andSigmaDSP Processors, NXP‘s DSP56Fxx Family of DSP Processors, Comparison of the features of TI,ADSP and NXP DSP family processors.

TOTAL: 45 PERIODS

OUTCOMES:
Attheendofthecourse, thestudentshouldbeableto:

- AnalyzetheconceptsofDigitalSignalProcessors
- Demonstratetheir abilitytoprogramtheDSP processor for signalprocessingapplications
- Discuss, compare and select the suitable Advanced DSP Processors for real-time signal processing applications

ELECTIVE–V
SEMESTERVIII

20152E82C SATELLITECOMMUNICATION LTPC
3003

OBJECTIVES:
Thestudentshouldbe made to:

- Understandthebasicsofsatelliteorbits
- Understandthesatellitesegment andearthsegment
- Analyzethevariousmethodsofsatelliteaccess
- Understandtheapplicationsofsatellites
- UnderstandthebasicsofsatelliteNetworks

UNIT I SATELLITEORBITS 9
Kepler‟s Laws, Newton‟s law, orbital parameters, orbital perturbations, station keeping, geo stationary and non Geo-stationary orbits – Look Angle Determination- Limits of visibility – eclipse-Sub satellite point –Sun transit outage-Launching Procedures - launch vehicles and propulsion.

UNIT II SPACESEGMENT 9
Spacecraft Technology- Structure, Primary power, Attitude and Orbit control, Thermal control and Propulsion, communication Payload and supporting subsystems, Telemetry, Tracking and command-Transponders-The Antenna Subsystem.

UNIT III SATELLITELINK DESIGN 9
Basic link analysis, Interference analysis, Rain induced attenuation and interference, Ionospheric characteristics, Link Design with and without frequency reuse.

UNIT IV SATELLITEACCESSANDCODINGMETHODS 9
Modulation and Multiplexing: Voice, Data, Video, Analog – digital transmission system, Digital video Broadcast, multiple access: FDMA, TDMA, CDMA, DAMA Assignment Methods, compression – encryption, Coding Schemes.

UNIT V SATELLITEAPPLICATIONS 9
INTELSAT Series, INSAT, VSAT, Mobile satellite services: GSM, GPS, INMARSAT, LEO, MEO,Satellite Navigational System. GPS Position Location Principles, Differential GPS, Direct Broadcastsatellites (DBS/DTH).

TOTAL:45PERIODS

OUTCOMES:
Attheendofthecourse,thestudentwouldbeableto:

- Analyzethesatelliteorbits
- Analyzetheearthsegment andspacesegment
- AnalyzethesatelliteLinkdesign
- Designvarioussatelliteapplications

20152E82D **SOFT COMPUTING** **LTPC**
3003

OBJECTIVES:

- TolearnthebasicconceptsofSoftComputing
- To become familiar with various techniques like neural networks, genetic algorithmsand fuzzy systems.
- Toapplysoftcomputingtechniquestosolveproblems.

UNIT I INTRODUCTIONTOSOFT COMPUTING 9
Introduction-Artificial Intelligence-Artificial Neural Networks-Fuzzy Systems-Genetic Algorithm and Evolutionary Programming-Swarm Intelligent Systems-Classification of ANNs-McCulloch and Pitts Neuron Model-Learning Rules: Hebbian and Delta- Perceptron Network-Adaline Network-Madaline Network.

UNIT II ARTIFICIALNEURALNETWORKS 9
Back propagation Neural Networks - Kohonen Neural Network -Learning Vector Quantization - Hamming Neural Network - Hopfield Neural Network- Bi-directional Associative Memory -Adaptive Resonance Theory Neural Networks- Support Vector Machines - Spike Neuron Models.

UNIT III FUZZYSYSTEMS 9
Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets - Classical Relations and Fuzzy Relations - Membership Functions -Defuzzification - Fuzzy Arithmetic and Fuzzy Measures - Fuzzy Rule Base and Approximate Reasoning - Introduction to Fuzzy Decision Making.

UNIT IV GENETICALGORITHMS 9
BasicConcepts-WorkingPrinciples-Encoding-FitnessFunction -Reproduction - InheritanceOperators - Cross Over - Inversion and Deletion -Mutation Operator - Bit-wiseOperators -Convergence of GeneticAlgorithm.

UNITVHYBRID SYSTEMS 9
Hybrid Systems -Neural Networks, Fuzzy Logic and Genetic -GA Based Weight Determination - LR-Type Fuzzy Numbers - Fuzzy Neuron - Fuzzy BP Architecture - Learning in Fuzzy BP- Inference by FuzzyBP -FuzzyArtMap: ABrief Introduction- Soft ComputingTools - GAinFuzzyLogic Controller Design - Fuzzy Logic Controller

TOTAL: 45 PERIODS

OUTCOMES:
Uponcompletionofthiscourse,thestudentsshouldbeableto

- Applysuitablesoftcomputingtechniquesforvariousapplications.

20152E82E PRINCIPLESOFSPEECHPROCESSING LTPC
3003

OBJECTIVES:
Thestudentshouldbemade:

- To understand the speech production mechanism and the various speech analysis techniques andspeech models
- Tounderstandthespeechcompression techniques
- Tounderstandthespeechrecognitiontechniques
- Toknowthespeakerrecognitionandtext tospeechsynthesis techniques

UNIT I SPEECHSIGNALCHARACTERISTICS&ANALYSIS 11
Speech production process - speech sounds and features- - Phonetic Representation of Speech -- representing= speech in time and frequency domains - Short-Time Analysis of Speech - Short-Time Energy and Zero-Crossing Rate - Short-Time Autocorrelation Function - Short-Time Fourier Transform (STFT) - Speech Spectrum - Cepstrum - Mel-Frequency Cepstrum Coefficients - Hearing and Auditory Perception - Perception of Loudness - Critical Bands - Pitch Perception

UNIT II SPEECH COMPRESSION 12
Sampling and Quantization of Speech Vector Quantization- (PCM) - Adaptive differential PCM - Delta Modulation -Linear predictive coding (LPC)- Codeexcited LinearpredictiveCoding (CELP)

UNIT III SPEECH RECOGNITION 12
LPCfor speechrecognition- HiddenMarkovModel(HMM)- trainingprocedurefor HMM-subwordunit model based on HMM- language models for large vocabulary speech recognition - Overall recognition system based on subword units - Context dependent subword units- Semantic post processor for speech recognition

UNIT IV SPEAKERRECOGNITION 5
Acoustic parameters for speaker verification- Feature space for speaker recognition-similarity measures- Text dependent speaker verification-Text independent speaker verification techniques

UNIT V SPEAKERRECOGNITIONANDTEXTTOSPEECHSYNTHESIS 5
Text to speech synthesis(TTS)-Concatenative and waveformsynthesis methods, sub-word units for TTS,intelligibility and naturalness-role of prosody

TOTAL:45PERIODS

OUTCOMES:
Attheendofthecourse, thestudentshouldbeableto:

- Designspeechcompressiontechniques
- Configurespeechrecognitiontechniques
- Designspeakerrecognitionsystems

ELECTIVE–V
SEMESTERVIII

20152E82F FUNDAMENTALSOFNANOSCIENCE LTPC
3003

OBJECTIVE:

- Tolearnaboutbasisofnanomaterialscience,preparationmethod,typesandapplication

UNIT I INTRODUCTION 8

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering-Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thin films-multilayered materials. LengthScales involvedand effect onproperties:Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

UNIT II GENERALMETHODSOFPREPARATION 9

Bottom-up Synthesis-Top-down Approach: Co-Precipitation, Ultrasonication, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phasedeposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

UNIT III NANOMATERIALS 12

Nanoforms of Carbon - Buckminster fullerene- graphene and carbon nanotube, Single wall carbon Nanotubes (SWCNT) and Multi wall carbon nanotubes (MWCNT)- methods of synthesis(arc-growth, laser ablation, CVD routes, Plasma CVD), structure-property Relationships applications-Nanometal oxides-ZnO, TiO2,MgO, ZrO2, NiO, Nano alumina, CaO, AgTiO2, Ferrites, Nano clays-functionalization and applications-Quantum wires, Quantum dots-preparation, properties andapplications.

UNIT IV CHARACTERIZATIONTECHNIQUES 9

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques-AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation.

UNIT V APPLICATIONS 7

Nano InfoTech: Information storage- Nano computer, molecular switch, super chip, nanocrystal, Nanobiotechnology: nanoprobes in medical diagnostics and biotechnology, Nano medicines, Targeted drugdelivery, Bioimaging - Micro Electro Mechanical Systems (MEMS), Nano Electro Mechanical Systems(NEMS)- Nano sensors, nano crystalline silver for bacterial inhibition, Nanoparticles for sun barrierproducts - In Photostat, printing, solar cell, battery.

TOTAL:45PERIODS

OUTCOMES:

- Willfamiliarizeaboutthescienceofnanomaterials

SKILL DEVELOPMENT EMPLOYABILITY ENTREPRENEURSHIP

SEMESTERVIII

201AGPE PROFESSIONALETHICSANDHUMANVALUES LTPC
0002

OBJECTIVE:

- To enable the students to create an awareness on Engineering Ethics and Human Values, to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

UNITI HUMANVALUES

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation– Commitment – Empathy –Self confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNITII ENGINEERINGETHICS

Senses of ‗Engineering Ethics' – Varietyof moralissues – Types of inquiry– Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNITIII ENGINEERINGASSOCIALEXPERIMENTATION

Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A BalancedOutlook on Law.

UNITIV SAFETY,RESPONSIBILITIESANDRIGHTS

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect forAuthority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – ProfessionalRights – Employee Rights – Intellectual Property Rights (IPR)– Discrimination.

UNITV GLOBALISSUES

Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility.

OUTCOMES:

- Upon completion of the course, the student should be able to applyethics in society, discuss the ethical issues related to engineering and realize the responsibilities and rights in the society.

PROGRAMHANDBOOK

B.TECH–PARTTIME

[REGULATION2019]

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

PROGRAMMEEDUCATIONALOBJECTIVES:

PEO1:To enable graduates to pursue research, or have a successful career in academia or industries associated with Electronics and Communication Engineering, or as entrepreneurs.

PEO2: To provide students with strong foundational concepts and also advanced techniquesand tools in order to enable them to build solutions or systems of varying complexity.

PEO3: To prepare students to critically analyze existing literature in an area of specialization and ethically develop innovative and research oriented methodologies to solve the problems identified.

PROGRAMMEOUTCOMES:

EngineeringGraduateswillbeableto:

A. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

B. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

C. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

D. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data,and synthesis of the information to provide valid conclusions.

E. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

F. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legalandculturalissuesandtheconsequent responsibilities relevant to the professional engineering practice.

G. **Environment and sustainability**: Understandtheimpact of theprofessional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

H. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

I. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

J. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

K. **Project management and finance**: Demonstrate knowledge and understanding of the engineeringand management principles andapplytheseto one‘s ownwork, asa member and leader in a team, to manage projects and in multidisciplinary environments.

L. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

19148S11P **SEMESTERI**

TRANSFORMSANDPARTIALDIFFERENTIALEQUATIONS **3104**

(CommontoCSE,IT,ECE)

AIM

Thecourseaimstodeveloptheskillsofthestudentsintheareasofboundary value problems and transform techniques. This will be necessary for their effective studies in a large number of engineering subjects like heat conduction, communication systems, electro-optics and electromagnetic theory. The course will also serve as a prerequisite for post graduate and specialized studies and research.

OBJECTIVES

Atthe endofthe coursethe students would

- Be capable of mathematically formulating certain practical problems in terms of partial differential equations, solve them and physically interpret the results.
- Have gained a well founded knowledge of Fourier series, their different possible formsand the frequently needed practicalharmonic analysis that anengineer may have to make from discrete data.
- Haveobtainedcapacitytoformulateand identifycertainboundaryvalueproblems encountered in engineering practices, decide on applicabilityof the Fourier series method of solution, solve them and interpret the results.
- Have grasped the concept ofexpressionofa function, under certainconditions, as a double integral leading to identification of transform pair, and specialization on Fourier transformpair, their properties, thepossiblespecialcaseswithattentionto their applications.

UNITI FOURIERSERIES 9

Fourierseries–Oddandevenfunctions–Halfrangesineseries–Halfrangecosineseries – Complex form of Fourier Series – Parseval's identify – Harmonic Analysis.

UNITII FOURIERTRANSFORM 9

Fourierintegraltheorem(withoutproof)–SineandCosine transforms – Properties (without Proof) – Transforms of simple functions –Convolution theorem – Parseval's identity – Finite Fourier transform – Sine and Cosinetransform.

UNITIIIZ-TRANSFORMAND DIFFERENCEEQUATIONS 9

Z-transform - Elementary properties (without proof) – Inverse Z – transform – Convolution theorem -Formation of difference equations – Solution of differenceequations using Z - transform.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV PARTIALDIFFERENTIALEQUATIONS 9

Solution of First order partial differential equation reducible to standard forms – Lagrange's linear equation – Linear partial differential equations of second order andhigher order with constant coefficients.

UNITV BOUNDARYVALUEPROBLEMS 9

Solutions of one dimensional wave equation – One dimensional heat equation– Steadystate solution of two-dimensional heat equation (Insulated edges excluded) – Fourierseries solutions in Cartesian coordinates.

ELECTROMAGNETICTHEORY **3104**

AIM

To familiarize the student to the concepts, calculations and pertaining to electric, magnetic and electromagnetic fields so that an in depth understanding of antennas, electronic devices, waveguides is possible.

OBJECTIVES

- Toanalyzefieldsapotentialsduetostatic changes
- Toevaluatestaticmagnetic fields
- Tounderstandhowmaterialsaffectelectricand magnetic fields
- Tounderstandtherelationbetweenthefieldsundertimevaryingsituations
- Tounderstandprinciplesofpropagationofuniformplane waves.

UNITI STATICELECTRICFIELDS 9

Vector field. Introductionto Co-ordinate System–Rectangular – CylindricalandSphericalCo-ordinate System–calculationof lengtharea and volume. DefinitionofCurl,Divergence and Gradient – Meaning of Strokes theorem and Divergence theorem .

Coulomb's Law– Definition of Electric Field Intensity –Electric Field due todiscrete charges – charges distributed uniformly on an infinite line – Electric ScalarPotential – Relationship between potential and electric field - Potential due to infiniteuniformly charged line –Electric Flux Density – Gauss Law – Proof of Gauss Law.

UNITII STATICMAGNETICFIELD 9

The Biot-Savart Law in vector form –Magnetic field and Magnetic flux density-Magnetic Field intensity due to a infinite wire carrying a current I – Magnetic fieldintensityontheaxisofacircularandrectangular loopcarryingacurrent I – Calculationoffield using Ampere's circuital law for symmetrical distributions a) infinitely longsolenoid and b) coaxial cable. The Lorentz force equation for a moving charge andapplications –Scalar and Vector Magnetic Potential.

UNITIIIELECTRIC AND MAGNETICFIELDSIN MATERIALS9

Poisson's and Laplace's equation – Electric Polarization- Definition of Capacitance – Capacitance of various geometries using Laplace's equation – Electrostatic energy andenergy density – Boundary conditions for electric fields – Electric current – Currentdensity – point form of ohm's law –

Definition of Inductance - Inductance of loops– Definition of mutual inductance.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Energydensity in magnetic fields – Nature of magnetic materials – magnetization andpermeability - magnetic boundary conditions.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV TIMEVARYINGELECTRICANDMAGNETIC FIELDS 9

Faraday's law – Displacement current – Generalization of Ampere's circuital law.Maxwell's Equation in integral form from Faraday's Law – Maxwell's Equationexpressed in point form from Faraday's Law.

Poynting Vector Poynting Theorm and the flow of power – Power flow in a co-axialcable – Instantaneous Average and Complex Poynting Vector.

UNITV ELECTROMAGNETICWAVES 9

DerivationofWaveEquation –. PropertiesofUniformPlane Wave — Waveequation fora conducting medium– Plane waves Propagation in good dielectrics --- Plane wavesPropagation in good conductors – Skin effect.

Linear,Elliptical andcircularpolarization–normalincidenceandObliqueincidence–Reflection of Plane Waves by a perfect dielectric Brewster angle .Surface impedance**TUTORIAL15** **TOTAL : 60**

DIGITALELECTRONICS **3104**

AIM

Tolearnthe fundamentalconceptsthoseareusefulfor designingdigitalsystems or circuits.

OBJECTIVES

- Tointroducenumbersystemsandcodes
- TointroducebasicpostulatesofBooleanalgebraandshowsthecorrelationbetween Boolean expressions
- TointroducethemethodsforsimplifyingBoolean expressions
- Tooutlinetheformalproceduresfortheanalysisanddesignofcombinational circuits and sequential circuits
- Tointroducetheconceptofmemoriesdevices.

UNITI: BOOLEANALGEBRAANDMINIMIZATION 9

Basic theorems – Boolean functions – Canonical and Standard forms – Minimizationtechniques – K-map up to five variables – NAND and NOR implementation – ExclusiveOR function - Hardware Description Language (HDL).

UNITII: DIGITALLOGIC FAMILIES 9

Switching operation of PN junction diode – bipolar and MOS devices – Bipolar logicfamilies – RTL – DTL – DCTL – HTL –TTL – ECL – MOS and CMOS – Tristate logic–Interfacing of CMOS and TTL families.

UNITIII: COMBINATIONALLOGICDESIGN 9

Design using gates – BCD arithmetic circuits – Binary adder – Subtractor – Multiplier – Divider–Designusing MSIdevices–MultiplexerandDemultiplexeraslogicelements – Encoder and decoder – Parity checker – Parity generator – Code converter – Magnitudecomparator.

UNITIV: SEQUENTIALLOGICDESIGN 9

Flip Flops and their conversions – Analysis and synthesis of synchronous sequentialcircuits – Excitation table – State table and state diagram – Design of synchronouscounters – Analysis of asynchronous sequential circuits – Reduction of state and flowtable – Race free state assignment – Designof Asynchronous counters – Timing diagram– Shift registers and their applications.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV: MEMORY DEVICES 9

Classification of memories – ROM organization – PROM – EPROM – EEPROM – EAPROM – RAM organization – Write operation – Read operation – Memory cycleTiming wave forms – Memory decoding – Memory expansion – Static RAM Cell-Bipolar RAM cell – MOSFET RAM cell – Dynamic RAM cell – Programmable LogicDevices – Programmable Logic Array(PLA) – Programmable ArrayLogic (PAL) – FieldProgrammable Gate Arrays (FPGA).

ELECTRONICCIRCUITS–I **3003**

AIM

The aim of this course is to familiarize the student with the analysis and design of basic transistor Amplifier circuits and power supplies.

OBJECTIVE

Oncompletionofthiscoursethe studentwillunderstand

- Themethodsofbiasingtransistors
- Designofsimpleamplifier circuits
- Mid– bandanalysisofamplifiercircuitsusingsmall-signalequivalent circuitsto determine gain input impedance and output impedance
- Methodofcalculatingcutofffrequenciesandtodetermine bandwidth
- Designofpower amplifiersandheatsinks
- Analysis anddesignofpowersupplies

UNIT– I TRANSISTERBIASING&STABILIZATION 9

BiasingcircuitsforBJT-DCloadline-ACloadline–Stabilityfactor-MethodsofTransistor Biasing- Bias Compensation – Thermal runaway- heatsink- FET Biasing

UNIT-II LOWFREQUENCYAMPLIFIERANALYSIS&DESIGN 9

Transistor- FETamplifiers-LowfrequencySmallsignalhybridparametermodel:C_{B},C_{E},Cc Amplifier- Analysis of Transistor Amplifier Using h-parameter.
JFETasanAmplifier-AnalysisoflowfrequencycommonSource&CommonDrainAmplifier Using h-parameter.

UNIT– III MULTISTAGEAMPLIFIERS 9

Cascading ofBJT Amplifiers- Analysis ofRC coupled Amplifiers Methods ofIncreasingInput impedance using Darlington and Boot strapping- Emitter coupled DifferentialAmplifier, Differential gain, CMRR, Transfer Characteristics – Cascode amplifier.

UNIT– IVHIGHFREQUENCYANALYSIS OFTHEAMPLIFIERS9

Frequencyresponse-Effect ofCoupling and Bypasscapacitor-Effect ofinternaltransistorcapacitance-Miller Effect – High Frequency πmodel for C_E Amplifier- C_E Short circuitCurrent gain- Cut off frequencies f_α, f_β,f_T - Gain Band Width product.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNIT– V POWERSUPPLIES 9

Half wave,Full Wave,Rectifiers- Capacitor Filter- Linear Regulator: ShuntRegulator,Series Regulator- Shunt Regulator using Zener Diode- Switch Mode Power Supply.

SIGNALSAND SYSTEMS **4004**

(Commonto ECE& IT)

AIM

Tostudyandanalyzethecharacteristicsofcontinuous,discretesignalsandsystems.

OBJECTIVES

- Tostudythepropertiesand representationofdiscreteand continuous signals.
- Tostudythesamplingprocessandanalysisofdiscretesystemsusingz- transforms.
- Tostudythe analysisandsynthesisofdiscretetime systems.

UNITI CLASSIFICATIONOFSIGNALSAND SYSTEMS 9

Continuous time signals (CT signals), discrete time signals (DT signals) - step, Ramp,Pulse, Impulse, Exponential, Classification of CT and DT signals - periodic andaperiodic, Random signals,Classification of systems (CT systems and DT systems)Linear time invariant systems.

UNITII ANALYSISOFCTSIGNALS 9

FourierTransformandLaplaceTransforminSignalAnalysis.Fourierseries,FourierTransform and Laplace Transform properties, Parseval's relation.

UNITIII LTI-CTSYSTEMS 9

Differentialequation,Blockdiagramrepresentation,Impulseresponse,ConvolutionIntegral, Frequency response, Fourier Methods and Laplace transforms in analysis.

UNITIVSAMPLINGTHEOREMAND ANALYSIS OFDT-SIGNALS9

Sampling theorem – Reconstruction ofa Signal from its samples, aliasing – discrete timeprocessing of continuous time signals, sampling of band pass signals

Z-transform definition – region of convergence – properties of ROC – Properties of ztransform– Polesand Zeros – inverse z-transform, Relationship betweenz-transformandFourier transform.

UNITV LTI-DTSYSTEMS 9

Differenceequations,Blockdiagramrepresentation,Impulseresponse,ConvolutionSUM, Frequency response, Z-transform analysis.

NUMERICALMETHODS **3104**

(CommontoCSE,IT,ECE)

AIM

With the present development of the computer technology, it is necessary to develop efficient algorithms for solving problems in science, engineering and technology. This course gives a complete procedure for solving different kinds of problems occur in engineering numerically.

OBJECTIVES

At the end of the course, the students would be acquainted with the basic concepts in numerical methods.

- The roots of nonlinear (algebraic or transcendental) equations, solutions of large system of linear equations and eigenvalue problem of a matrix can be obtained numerically where analytical methods fail to give solution.
- When huge amounts ofexperimentaldata are involved, the methods discussed on interpolation will be useful in constructing approximate polynomial to represent the data and to find the intermediate values.
- The numerical differentiation and integration find application when the functionin the analytical form is too complicated or the huge amounts of data are given such as series of measurements, observations or some other empiricalinformation.
- Since many physical laws are couched in terms of rate of change of one/two or more independent variables, most of the engineering problems are characterizedin the form of either nonlinear ordinary differential equations or partialdifferential equations. The methods introduced in the solution of ordinary differential equations and partial differential equations will be useful inattempting any engineering problem.

UNITISOLUTIONOFEQUATIONS AND EIGENVALUEPROBLEMS9

Newton Raphson's method – Iteration method – Solution of linear system by Gaussianelimination and Gauss-Jordon methods- Iterative methods: Gauss Jacobi and Gauss-Seidel methods- Inverse of a matrix byGauss Jordon method– Eigenvalue of a matrixby power method.

UNITII INTERPOLATION 9

Newton'sforwardandbackwarddifferenceformulas–Centraldifferenceformula:Bessels and Stirling's formula - Lagrangian Polynomials – Divided difference method .

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIIINUMERICAL DIFFERENTIATION AND INTEGRATION9

Derivatives from difference tables – Divided differences and finite differences – Numerical integration by trapezoidal and Simpson's 1/3 and 3/8 rules – Romberg'smethod – Double integrals using trapezoidal and Simpson's rules.

UNITIV INITIALVALUEPROBLEMSFOR ORDINARYDIFFERENTIAL EQUATIONS 9

Single step methods: Taylor series method – Euler and modified Euler methods – Fourthorder Runge – Kutta method for solving first and second order equations – Multistepmethods: Milne's and Adam's predictor and corrector methods.

UNITV BOUNDARYVALUEPROBLEMSINORDINARYANDPARTIAL DIFFERENTIALEQUATIONS 9

Finite difference solution of second order ordinary differential equation – Finitedifference solution of one dimensional heat equation by explicit and implicit methods –One dimensional wave equation and two dimensional Laplace and Poisson equations.

ELECTRICALENGINEERINGANDCONTROL SYSTEMS

3003

AIM

Tofamiliarizethestudentswithconceptsrelatedtotheoperationanalysisandstabilization of control systems

OBJECTIVES

- TounderstandtheoperationofElectricalmachinesandtransformers
- Tounderstandtheopenloopandclosedloop(feedback) systems
- Tounderstandtimedomainandfrequencydomainanalysisofcontrolsystems required for stability analysis.
- Tounderstand thecompensation techniquethatcan beusedtostabilizecontrol systems

UNIT-I: D.CMACHINESANDTRANSFORMERS 12

Construction and operation of D.C. generators – emf equation – characteristics –principle of operation of D.C. motors. Principle of operation of transformers -parametersof transformers – regulation, losses and efficiency - introduction to three phasetransformers.

UNIT-IISPECIALMACHINES 9

Constructional details and principle of operation of single phase induction motorsandThree Phase Induction motors–servomotor, stepper motor, variable reluctance motors.-applications.

UNITIIIINTRODUCTIONTOCONTROLTHEORY 6

The control problem – differential equation of physical systems – control over systemdynamics by feedback – regenerative feedback – transfer function – block diagram -algebra – signal flow graphs.

UNITIVTIMERESPONSEANDFREQUENCYRESPONSEANALYSIS12

Time response of first and second order system – steady state errors – error constants – design specification of second order systems – state variable analysis – simple problems.Correlation between time and frequencyresponse – polar plots , Bode plots – stability infrequencydomainusingNyquiststabilitycriterion–simpleproblems.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITVSTABILITY 6

Conceptofstability–stabilityconditionsandcriteria–HurwitzandRouthcriterian–relative Stability analysis.

LINEARINTEGRATEDCIRCUITS 3104

AIM

Toteachthebasicconceptsinthedesignofelectroniccircuitsusinglinearintegrated circuits and their applications in the processing of analog signals.

OBJECTIVES

- Tointroducethebasicbuildingblocksoflinearintegratedcircuits.
- Toteachthelinearandnon-linearapplicationsofoperationalamplifiers.
- Tointroducethetheoryand applicationsofanalogmultipliersand PLL.
- Toteachthetheoryof ADC andDAC
- Tointroduceafewspecialfunctionintegratedcircuits.

UNITI OPAMPCHARACTERISTICSAND APPLICATIONS 9

Ideal op amp, IC op amp, DC characteristics: bias, offset and drift, AC characteristics:bandwidth, slew rate, noise and frequencycompensation, basic opamp application: scalechanger, inverter and non inverter, summer & subtractor, , differentiator & integrator,instrumentation amplifier, V to I and I to V converter, RC active filters: low pass andband pass filtersop amp circuits using diodes: precision rectifier, clipper and clamper,

UNITIICOMPARATORSAND SIGNALGENERATORS 9

Comparator and applications of comparator, regenerative comparator (Schmitt trigger),square wave generator (astable multivibrator), monostable multivibrator Triangular wavegenerator, saw tooth wave generator sine wave generators

UNITIII ANALOGMULTIPLIERANDPLL 9

Multiplier, Applications of multiplier: multiplying DC voltages, frequency doubling,phase angle detection, AM modulation/demodulation. PLL: Basic principles, analog anddigitalphase detector and comparator Voltage controlled Oscillator, Applications ofPLL

UNITIV ADCAND DAC 9

Analog switches, High speed sample and hold circuits, characteristics DAC, Types ofD/A converter, Current driven DAC, Switches for DAC, characteristics ofA/D converterTypes of A/D converter, - Single slope, Successive approximation.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV SPECIALFUNCTIONICS 9

555 timer functional diagram,Astable and Monostable Multivibrators using 555 Timer,Voltage regulators-linear and switched mode types, Switched capacitor filter, Frequencyto Voltage converters, and Isolation Amplifiers, Fiber optic ICs and Opto-couplers.

ELECTRONICCIRCUITS-II **3104**

AIM

The aim of this course is to familiarize the student with the analysis and design of feed back amplifiers, oscillators, tuned amplifiers, wave shaping circuits, multivibrators and blocking oscillators.

OBJECTIVES

Oncompletionofthiscoursethe studentwillunderstand

- Theadvantagesandmethodofanalysisoffeed backamplifiers
- AnalysisanddesignofRCandLCoscillators,tunedamplifiers,waveshaping circuits, multivibrators, blocking oscillators and time based generators.

UNITI:POWERAMPLIFIERS **9**

Classification, Efficiency of Class A , RC coupled, Transformer coupled, Class B push pull,Complementary symmetry power amplifier, Power Output, Efficiency and Power Dissipation,cross over distraction & Elimination, Heat sink.

UNITII:FEEDBACKAMPLIFIERS **9**

Feedback concept,Fourbasic typesoffeedback, Equivalent Circuitsofvoltage amplifier,Current Amplifier ,Trans conductance, Trans resistance amplifier, Transfer ratio fornegative feedback,Effect of feedback on noise, distortion gain input & output,impedance of the amplifier. Method of identifying feedback topology, Analysis of fourtypes of feedback amplifier.

UNITIII:OSCILLATORS **9**

Theory of Oscillator, Closed loop gain of the circuits, Barhausen Criterion. Analysis &DesignofRC Phase Shift Oscillators, WienBridge Oscillator, HartleyOscillatorColpittsOscillator, crystal Oscillator, frequency Stability.

UNITIV:TUNED AMPLIFERS **9**

Tuned Circuit, Resonance,Q factor, Classification oftuned amplifier, Analysis ofsingletuned amplifier, Capacitance coupling, Effect of cascading single tuned amplifier onBand width, Double tuned amplifier, instability of tuned amplifiers-stabilizationtechniques, Narrow band neutralization using coil, Class C tuned amplifiers and theirapplications. Efficiency of Class C tuned Amplifier.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV: WAVESHAPING,SWEEP&MULTIVIBRATORCIRCUTS 9

RL & RC Integrator and Differentiator circuits. Voltage sweep circuit , Miller sweepgenerator, UJT saw tooth generator, current time base generator, Collector coupledAstable Multivibrator, Collector coupled Monosatble Multivibrator - BistableMultivibrator - Schmitt trigger circuits.

TRANSMISSIONLINESANDWAVEGUIDES **4004**

AIM

Tolayastrongfoundationonthetheoryoftransmissionlinesandwaveguidesby highlighting their applications.

OBJECTIVES

- Tobecomefamiliarwithpropagationofsignalsthroughlines
- UnderstandsignalpropagationatRadiofrequencies
- Understandradiopropagationinguidedsystems
- Tobecomefamiliarwithresonators

UNITI TRANSMISSIONLINETHEORY 9

Different types of transmission lines – Definition of Characteristic impedance andPropagation Constant, General Solution of the transmission line –wavelength andvelocity of propagation. Waveform distortion – distortion less transmission line – Inputimpedance of lossless lines – reflection on a line not terminated by Z_o- reflection factorand reflection loss – Numerical problems.

UNITIITHELINEATRADIOFREQUENCIES 9

Standing waves and standing wave ratio on a line – One-eighth wave line – The quarterwave line and impedance matching – the halfwave line – The SmithChart – Applicationof the Smith Chart – Problems using smith chart (how to use smith chart and markimpedances, finding input impedance, SWR, reflection coefficient, finding loadimpedance) single stub matching - Numerical problems.

UNITIII GUIDEDWAVES 9

Waves betweenparallelplanes ofperfect conductors – Transverse electric and transversemagnetic waves – characteristics of TE and TM Waves – Transverse Electromagneticwaves – Velocities of propagation. – Wave impedances – Numerical problems.

UNITIV RECTANGULARWAVEGUIDES 9

Transverse Magnetic Waves in Rectangular Wave guides – Transverse Electric Waves inRectangular Waveguides – characteristic ofTE and TM Waves – cut-offwavelength andphase velocity - Dominant mode in rectangular waveguide –Wave impedance,Characteristic impedance - Numerical problems.

UNITV CIRCULARWAVEGUIDES ANDRESONATORS 9

TM and TE waves in circular guides – wave impedances and characteristic impedance –

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Dominantmodeincircularwaveguide–excitationofmodes–Microwavecavities,

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Rectangular cavityresonators, circular cavityresonator – Q factor of cavityresonator forTE101 mode - Numerical problems.

PROBABILITYANDRANDOMPROCESSES

(Commonto ECE& BM) **3104**

AIM

This course aims at providing the necessary basic concepts in random processes. A knowledge of fundamentals and applications of phenomena will greatly help in the understanding of topics such a estimation and detection, pattern recognition, voice and image processing networking and queuing.

OBJECTIVES

Atthe endofthe course,the students would

- Haveafundamentalknowledgeofthebasicprobabilityconcepts.
- Have a well – founded knowledge ofstandard distributions which can describe real life phenomena.
- Acquire skills in handling situations involving more than one random variable and functions of random variables.
- Understandandcharacterizephenomenawhichevolvewithrespecttotimeinprobabilistic manner.
- Beabletoanalyzetheresponseofrandominputstolinear timeinvariantsystems.

UNITI PROBABILITYANDRANDOMVARIABLE 9

Axioms of probability - Conditional probability - Baye's theorem- Random variable - Probabilitymassfunction-Probabilitydensityfunction-Properties-Moments-Momentgenerating functions and their properties.

UNITII STANDARDDISTRIBUTIONS 9

Binomial,Poisson,Geometric,Uniform,Exponential,Gamma,WeibullandNormaldistributions and their properties - Functions of a random variable (excluding theorm).

UNITIIITWODIMENSIONALRANDOMVARIABLES 9

Joint distributions - Marginal and conditional distributions – Covariance - Correlationand regression (for distributions only)- Transformation of random variables - Centrallimit theorem.

UNITIVCLASSIFICATION OFRANDOMPROCESSES 9

Definition and examples - first order, second order, strictly stationary, wide – sensestationary and Ergodic processes - Markov process - Binomial, Poisson and Normalprocesses - Sine wave process.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV CORRELATIONANDSPECTRALDENSITIES 9

Auto correlation - Cross correlation - Properties –Powerspectraldensity– Cross spectraldensity - Properties – Relationship between cross power spectrum and cross correlationfunction– Auto correlation and cross correlation functions of input and output.

AIM

To studythesignalprocessingmethodsandprocessors.

OBJECTIVES

- TostudyDFTandits computation
- Tostudythedesigntechniquesfordigital filters
- Tostudythefiniteword lengtheffectsinsignalprocessing
- Tostudythenon-parametricmethodsofpowerspectrumestimations
- To studythefundamentalsofdigitalsignalprocessors.

UNITI FASTFOURIER TRANSFORM 9

Discrete Time Fourier Transform (DTFT), Introduction to DFT – Efficient computationof DFT Properties of DFT – FFT algorithms – Radix-2 and Radix-4 FFT algorithms – Decimation in Time – Decimation in Frequency algorithms

UNITII IIRFILTERDESIGN 9

StructureofIIR – SystemDesign ofDiscretetime IIR filter fromcontinuous time filter –IIR filter design by Impulse Invariance. Bilinear transformation – Approximationderivatives – Design of IIR filter in the Frequency domain.

UNITIII FIRFILTERDESIGN 9

Symmetric&AntisymtericFIRfilters–Linearphasefilter–Windowingtechnique–Rectangular, Hamming– Frequency sampling techniques

UNITIV FINITEWORDLENGTH EFFECTS 9

Quantization noise – derivation for quantization noise power – Fixed point and binaryfloating point number representation – comparison – over flow error – truncation error –co-efficient quantization error- limit cycle oscillation – signal scaling

UNITV POWERSPECTRUM ESTIMATION 9

Computation of Energy density spectrum – auto correlation and power spectrum ofrandom signals. Periodogram – use of DFT in power spectrum estimation – Nonparametric methods for power spectralestimation: Bartlett methods –Application ofDSP– Model of Speech Wave Form – Vocoder.

COMMUNICATIONTHEORY **3104**

AIM

To study the various analog communication fundamentals viz., Amplitude modulation and demodulation, angle modulation and demodulation. Noise performance of various receivers and information theory with source coding theorem are also dealt.

OBJECTIVE

- ToprovidevariousAmplitudemodulationanddemodulationsystems.
- ToprovidevariousAnglemodulationanddemodulationsystems.
- Toprovidesomedepthanalysis innoiseperformanceofvariousreceiver.
- Tostudysomebasicinformationtheorywithsomechannelcoding theorem.

UNIT1 AMPLITUDEMODULATIONSYSTEMS 10

Review of spectral characteristics of periodic and non-periodic signals – Generation anddemodulation of AM, DSBSC, SSB and VSB signals – Comparison of amplitudemodulation systems – Frequency translation – FDM – Non-linear distortion.

UNITII ANGLEMODULATION SYSTEMS 8

Phaseandfrequencymodulation–Singletone–NarrowbandandwidebandFM–Transmission bandwidth – Generation and demodulation of FM signal.

UNITIII NOISETHEORY 8

Review of probability – Random variables and random process – Gaussian process – Noise – Shot noise – Thermal noise and white noise – Narrow band noise – Noisetemperature – Noise figure.

UNITIVPERFORMANCEOFCWMODULATIONSYSTEMS 10

Superheterodyne radio receiver and its characteristic – SNR – Noise in DSBSC systemsusing coherent detection – Noise in AM system using envelope detection FM system –FM threshold effect – Pre-emphasis and de-emphasis in FM – Comparison ofperformances.

UNITV INFORMATIONTHEORY 9

Discrete messages and information content – Concept of amount of information – Average information – Entropy – Information rate – Source coding to increase averageinformation per bit – Shannon-fano coding – Huffman coding – Lempel-Ziv (LZ) coding– Shannon's theorem – Channel capacity – Bandwidth – S/N trade-off – Mutualinformation and channel capacity – Rate distortion theory – Lossy source coding.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

DIGITALCOMMUNICATION **3104**

AIM

To introduce the basic concepts of Digital Communication modulation to baseband, passband modulation and to give an exposure to error control coding and finally to discuss about the spread spectrum modulation schemes.

OBJECTIVES

- To study pulse modulation and discuss the process of sampling, quantization and coding that are fundamental to the digital transmission of analog signals.
- To learnbaseband pulse transmission, whichdeals withthe transmissionofpulse-amplitude, modulated signals in their baseband form.
- To learnerror controlcoding whichencompasses techniques forthe encoding and decoding of digital data streams for their reliable transmission over noisy channels.

UNITI: DigitalcommunicationIntroductionandPulsemodulation 9

Block Diagramofdigitalcommunicationsystems Advantages, Disadvantages, Sampling,Aliasing, Pulse Amplitude Modulation, Pulse Duration and Pulse position Modulation,Pulse Coded Modulation, Delta Modulation, TDM

UNIT II: BasebandPulseTransmission 9

MatchedFilters,,IntersymbolInterference,NyquistPulseShaping,M-aryPAMTransmission Linear Equalizers , Adaptive Equalizers

UNITIII: DigitalBandpass Transmission 9

Representations of Bandpass Signals and Systems Correlation, Signal-spacerepresentations ,Detection of Known Signals in AWGN ,Generation ,detection, spectra,applications, signal space diagram of FSK, PSK, MSK

UNITIV: SpreadSpectrumCommunications 9

Advantages, characteristicofSpreadSpectrumCommunication. Direct Sequencespreqadspectrum systems, Frequency Hopping spread spectrum communication, Psedu Noisesequences: Types and Characteristics, code-division multiplexing (CDM). Application toCDMA wireless communication systems

UNITV: ErrorControlcoding 9

Linearblockcodes,convolutionalcodes,Hamming codes

ANTENNAANDWAVE PROPAGATION **3104**

AIM

Toenablethestudent tostudythevarioustypesofantennasand wave propagation.

OBJECTIVES

- To studyradiationfroma currentelement.
- To studyantenna arrays
- Tostudyapertureantennas
- Tolearnspecialantennassuchasfrequencyindependentandbroadbandantennas.
- Tostudyradiowavepropagation.

UNITI: RADIATION 9

Concept of Vector potentials- Modification for Time varying , retarded case- Fields andradiation resistance of an alternating current element--Radiation resistance – Effectivelength –Radiation intensity-Gain and Directivity-Field patterns- Beamwidth – Effectivearea-Relation between gain, effective length and radiation resistance.

UNITII: ANTENNAARRRAYS 9

Arrays of two point sources- Broadside array and End fire arrays – Binomial arrays - Pattern multiplication- Uniform linear array-

UNITIII: SPECIALPURPOSEANTENNAS 9

Radiationfromtravelingwaveonwire-Rhombicantenna–Loopantennas-Threeelement Yagi antenna- Log periodic antenna-Horn antenna -

UNITIV: PROPAGATION 9

Ground wave propagation: Attenuation characteristics – Calculation of field strength – Sky wave Propagation: Structure of Ionosphere – Effective dielectric constant of ionizedregion-Mechanism of Refraction and Refractive index- Critical Frequeny- Skip distance-Maximum usable frequency –Fading and Diversity Techniques.

SpaceWavePropagation:CalculationofFieldstrength–-Ductpropagation.

UNITV: MEASUREMENTS 9

Impedance – Field Pattern and Gain of Antennas- Radiation Pattern – Ionosphericmeasurements-Vertical incidence measurements of the ionosphere- Relation betweenoblique and vertical incidence transmission.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

COMPUTERNETWORKS **4004**

AIM

Tointroducetheconcept,terminologies,andtechnologiesusedinmoderndatacommunication and computer networking.

OBJECTIVES

- Tointroducethe studentsthe functionsofdifferentlayers.
- TointroduceIEEEstandardemployedincomputer networking.
- Tomakestudentstogetfamiliarizedwithdifferentprotocolsandnetwork components.

UNITI DATA COMMUNICATIONS 8

Components – Direction of Data flow – networks – Components and Categories – typesof Connections – Topologies –Protocols and Standards – ISO / OSI model –Transmission Media – Coaxial Cable – Fiber Optics – Line Coding – Modems – RS232Interfacing sequences.

UNITII DATLINKLAYER 12

Error – detection and correction – Parity– LRC – CRC – Hamming code – Flow Controland Error control: stop and wait – go back N ARQ – selective repeat ARQ- slidingwindow techniques– HDLC.
LAN:EthernetIEEE802.3,IEEE802.4,andIEEE802.5–IEEE802.11–FDDI,SONET – Bridges.

UNITIII NETWORKLAYER 10

Internetworks-PacketSwitchingandDatagramapproach–IPaddressingmethods–Subnetting – Routing – Distance Vector Routing – Link State Routing – Routers.

UNITIV TRANSPORTLAYER 8

Duties of transport layer – Multiplexing – Demultiplexing – Sockets – User DatagramProtocol (UDP) – Transmission Control Protocol (TCP) – Congestion Control – Qualityof services (QOS) – Integrated Services.

UNITV APPLICATIONLAYER 7

DomainNameSpace(DNS)–SMTP,FDP,HTTP,WWW– Security– Cryptography.

HIGHSPEEDNETWORKS 4004

AIM

To highlight the features of different technologiesinvolvedin High Speed Networking and their performance.

OBJECTIVES

- StudentswillgetanintroductionaboutATMandFrame relay.
- Studentswillbeprovidedwithanup-to-datesurveyofdevelopmentsinHigh Speed Networks.
- Enable the students to know techniques involved to support real-time traffic and congestion control.

Studentswillbeprovidedwithdifferentlevelsofqualityofservice(Q.S)todifferent applications.

UNITI HIGHSPEEDNETWORKS 9

FrameRelayNetworks–Asynchronoustransfermode–ATMProtocolArchitecture,ATM Cell – ATM Service Categories – AAL.

HighSpeedLANs:FastEthernet,GigabitEthernet,WirelessLANs:applications,requirements – Architecture of 802.11

UNITII LANSWITCHINGTECHNOLOGY 9

Switching concepts, switch forwarding techniques, switch path control, LAN switching,cut through forwarding, store and forward, Virtual LANs

UNITIII TCPANDATMCONGESTIONCONTROL 9

TCP Flow control – TCP Congestion Control – Retransmission – Timer Management – Exponential RTO backoff – KARN's Algorithm –– Performance of TCP over ATM.TrafficandCongestioncontrolinATM–Requirements–Attributes–TrafficManagementFramework,TrafficControl–ABRtrafficManagement–ABRratecontrol, RM cell formats,– GFR traffic management.

UNITIV INTEGRATEDANDDIFFERENTIATEDSERVICES 9

IntegratedServicesArchitecture–Approach,Components,Services-QueuingDiscipline,FQ, PS, BRFQ, GPS, WFQ – Random Early Detection, Differentiated Services

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

ADVANCEDELECTRONICSYSTEMDESIGN 4004

AIM

To get knowledge about usage of electronic devices in Communication Engineering and Power supplies.

OBJECTIVE

- TostudyRFcomponentsuchasresonator,filter,transmissionlines,etc…
- To learndesignofRFamplifiersusingtransistors.
- TostudymodernPowerSuppliesusing SCRand SMPStechnology
- Tolearnaboutsignalshielding&groundingtechniquesandstudyofA/Dand D/A Converters.
- TolearnknowledgeaboutfabricationofPCBsusing CAD.

UNITI: INTRODUCTIONTORFDESIGN 9

RFbehaviourofpassivecomponents –Chipcomponentsandcircuit boardconsiderations–Reviewoftransmissionlines –Impedanceandadmittancetransformation–Parallelandseries connectionof networks – ABCD and scattering parameters – Analysis of amplifierusing scattering parameter – RF filter – Basic resonator and filter configurations –Butterworth and chebyshev filters – Implementation of microstrip filter design – Bandpass filter and cascading of band pass filter elements.

UNITII: RFTRANSISTORAMPLIFIERDESIGN 9

Impedance matching using discrete components – Microstrip line matching networks – Amplifier classes of operation and biasing networks – Amplifier power gain–Unilateraldesign(S_{12}=0) –Simple input andoutputmatching networks–Bilateraldesign–Stabilitycircle and conditional stability – Simultaneous conjugate matching for unconditionallystable transistors – Broadband amplifiers – High power amplifiers and multistageamplifiers.

UNITIII: DESIGNOFPOWER SUPPLIES 9

DC power supplydesignusing transistors and SCR’s – Designofcrowbar and foldbackprotectioncircuits–SwitchedModePowerSupplies(SMPS) –Forward–Flyback-buckand boost converters – Design of transformers and control circuits for SMPS.

UNITIV: DESIGNOFDATAACQUISITIONSYSTEMS 9

Amplification of lowlevel signals– Grounding– Shielding and guarding techniques–Dualslope–QuadslopeandhighspeedA/Dconverters–Microprocessorscompatible

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

A/D converters – Multiplying A/D converters and logarithmic A/D converters – Sampleand hold – Design of two and four wire transmitters.

UNITV: DESIGNOFPRINTEDCIRCUITBOARDS 9

Introduction to technology of Printed Circuit Boards (PCB) – General lay out and rulesand parameters – PCB design rules for digital – High frequency – Analog – Powerelectronics and microwave circuits – Computer Aided Design(CAD) of PCB's.

OPTICALCOMMUNICATIONAND NEWORKS **4004**

AIM

- To introduce the various optical fiber modes, configurations and various signal degradation factors associated with optical fiber.
- To study about various optical sources and optical detectors and their use in the optical communication system. Finally to discuss about digital transmission and its associated parameters on system performance.

OBJECTIVES

- To learn the basic elements of optical fiber transmission link, fiber modes configurations and structures.
- To understandthe different kind oflosses, signaldistortion inopticalwave guides and other signaldegradation factors. DesignoptimizationofSM fibers, RI profile and cut-off wave length.
- Tolearnthevariousopticalsource materials, LEDstructures,quantumefficiency, Laser diodes and different fiber amplifiers.
- To learnthe fiberopticalreceivers suchasPIN APDdiodes, noiseperformance in photo detector, receiver operation and configuration.
- To learn fiber slicing and connectors, noise effects on system performance, operational principles WDM and solutions.

UNITI INTRODUCTIONTOOPTICALFIBERS 9

Evolution of fiber optic system- Element of an Optical Fiber Transmission link- RayOptics-Optical Fiber Modes and Configurations –fiber types Mode theory of CircularWave guides- Overview of Modes- Key model concepts- Linearly Polarized Modes –Single Mode Fibers-

UNITIISIGNALDEGRADATIONOPTICALFIBERS 9

Attenuation – Absorption losses, Scattering losses, Bending Losses, Core and Claddinglosses, Signal Distortion in Optical Wave guides-Information Capacity determination –GroupDelay-MaterialDispersion, Wave guide Dispersion, Signaldistortion inSM fibers

-ModeCoupling

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIII FIBEROPTICALSOURCESAND COUPLING 9

Direct and indirect Band gap materials-LED structures –Quantum efficiency Modulationofa LED, lasers Diodes-Modes and Threshold condition Fiber amplifiers-Power Fibre –to- Fibre joints, Fibre splicing.

UNITIV FIBEROPTICALRECEIVERS 9

PIN and APD diodes –Photo detector noise, SNR, Detector Response time, AvalancheMultiplication Noise –Comparison of Photo detectors –Fundamental Receiver Operation– preamplifiers, Error Sources –Receiver Configuration –Probability of Error

UNITV DIGITALTRANSMISSION SYSTEM 9

Point-to-Point links System considerations –Link Power budget –Rise - time budget –Noise Effects on System Performance-Operational Principles of WDM, Solitons-. Basicon concepts of SONET/SDH Network.

ENVIRONMENTALSCIENCEAND ENGINEERING 4004

UNIT:I INTRODUCTIONTOENVIRONMENTALSTUDIESAND NATURALRESOURCES 9

Definition,Scopeandimportance–Needforpublicawareness– Forestresources –Waterresources–Energyresources–Landresources–Roleofanindividualinconservation of natural resources –Equitable use of resource for sustainable life styles.

UNIT:II ECOSYSTEMAND BIODIVERSITY 9

Concept of an ecosystem – structure and Function of An ecosystem-Producers,consumers and decomposers – Energy flow in the ecosystem – Ecological succession –Food chainsFoodweband ecologicalpyramids.Introductionto Biodiversity–ValueofBiodiversity – Biodiversity at global, National and local levels – India as a mega –diversity nation Hot spots ofBiodiversity – Threats to Biodiversity Endangeredandendemic species ofIndia – Insitu and Excitu conservation of Biodiversity.

UNIT:III ENVIRONMENTALPOLLUTION 9

Definition – Causes, effects and control measure of **:** - Air pollution - Water Pollution-SoilPollution-MarinePollution-NoisePollution-ThermalPollution-Nuclearhazard – SolidWastemanagement– Role ofIndividual in prevention of pollution – Disastermanagement.

UNIT:IVSOCIAL ISSUESANDTHEENVIRONMENT 9

From Un sustainable to sustainable development – water conservation,Rain waterharvesting, water shed Management – Global warming – Ozone layer Depletion –Acidrain –Nuclear Accidents and holocaust –Environment Protection Act, Issues involvedin enforcement legislation.

UNIT:V HUMANPOPULATIONANDTHEENVIRONMENT 9

Populationgrowth– Populationexplosion– Familywelfare programme–Environmentand human health – Human rights –value education –HIV/AIDS–Role ofInformation Technology in Environment and human health.

OPTOELECTRONICDEVICES **4004**

AIM

Tolearn differenttypesof optical emission,detection,modulation andoptoelectronic integrated circuits and their applications.

OBJECTIVE

- Toknowthebasicsofsolidstatephysicsandunderstandthenatureand characteristics of light.
- Tounderstanddifferent methodsofluminescence, displaydevicesand laser typesand their applications.
- Tolearnthe principleofopticaldetectionmechanismindifferentdetectiondevices.
- Tounderstanddifferent light modulationtechniquesandtheconceptsandapplications of optical switching.
- To studythe integrationprocess and applicationofopto electronic integrated circuits in transmitters and receivers.

UNITI: ELEMENTSOFLIGHTANDSOLIDSTATEPHYSICS 9

Wave nature of light – Polarization – Interference – Diffraction – Light source – Reviewof quantum mechanical concept – Review of solid state physics – Review ofsemiconductor physics and semiconductor junction device.

UNITII: DISPLAYDEVICESANDLASERS 9

Introduction – Photo luminescence – Cathode luminescence – Electro luminescence – Injection luminescence – Injection luminescence – LED – Plasma display – LiquidCrystal Display (LCD) – Numeric displays – Laser emission – Absorption – Radiation –Population inversion – Optical feedback – Threshold condition – Laser modes – Classesof lasers – Mode locking – Laser applications.

UNITIII: OPTICALDETECTIONDEVICES 9

Photo detector – Thermal detector – Photo devices – Photo conductors – Photo diodes – Detector performance.

UNITIV: OPTOELECTRONICMODULATOR 9

Introduction– Analoganddigitalmodulation–Electro-optic modulators– Magnetoopticdevices – Acoustoptic devices – Optical – Switching and logic devices.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV: OPTOELECTRONICINTEGRATEDCIRCUITS 9

Introduction–Hybridandmonolithicintegration–Applicationofoptoelectronicintegrated circuits – Integrated transmitters and receivers – Guided wave devices.

RADARANDNAVIGATIONALAIDS **4004**

AIM

Tomakethestudentunderstandtheprinciplesof Radaranditsuseinmilitaryand civilian environment

Alsotomakethestudentfamiliarwithnavigationalaidsavailablefornavigationof aircrafts and ships.

OBJECTIVES

- Toderiveand discussthe Rangeequationand the natureofdetection.
- To apply doppler principle to radars and hence detect moving targets, cluster, alsoto understand tracking radars
- To refresh principles of antennas and propagation as related to radars, also studyof transmitters and receivers.
- To understand principles of navigation, in addition to approach and landing aids as related to navigation
- To understandnavigationofshipsfromshoretoshore.

UNITI **INTRODUCTIONTORADAR** **9**

Basic radar – The simple form of the radar equation – Radar block diagram – Radarfrequencies – Applications of radar – The origins of radar – The radar equation – Introduction – Detectionofsignals in noise – Receiver noise and the signal-to-noise ratio– Probability density functions – Probabilities of detection and false alarm – Integrationof radar pulses – Radar cross section of targets – Radar cross section fluctuations – Transmitter power – Pulse repetition frequency – Antenna parameters – System losses – Other radar equation considerations

UNITII: **MTIANDPULSEDOPPLER RADAR** **9**

Introduction to Doppler and MTI radar – Delay-line cancellers – Staggered pulserepetition frequencies – Doppler filter banks – Digital MTI processing – Moving targetdetector – Limitations to MTI performance – MTI from a moving platform (AMIT) –Pulse Doppler radar – Other Doppler radar topics – Tracking with radar – Mono pulsetracking – Conicalscanand sequentiallobing – Limitations to tracking accuracy – Low –Angle tracking – Tracking in range – Other tracking radar topics – Comparison oftrackers – Automatic tracking with surveillance radars (ADT).

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIII **9**

Detection of signals in noise – Introduction – Matched – Filter receiver – Detection – Detectors – Automatic detector – Integrators – Constant – False – Alarmrate receivers – The radar operator – Signal management – Propagation radar waves – Atmospheric – Standard propagation – Nonstandard propagation – The radar antenna – Reflectorantennas – Electronically steered phased array antennas – Phase shifters – Frequency –Scan arrays – Radar transmitters – Introduction – Linear beam power tubes – Solid stateRF power sources – Magnetron – Crossed field amplifiers – Other RF power sources –Other aspectsofradar transmitter –Radar receivers–Theradar receiver –Receiver noisefigure – Super heterodyne receiver – Duplexers and receiver protectors – Radar displays.

UNITIV **9**

Introduction – Four methods of navigation – Radio direction finding – The loop antenna– Loop input circuits – An aural null direction finder – The goniometer – Errors indirection finding – Adcock direction finders – Direction finding at very high frequencies– Automatic direction finders – The commutated aerial direction finder – Range andaccuracy of direction finders – Radio ranges – The Lf/Mf four course radio range – Vhfomni directional range (Vor) – Vor receiving equipment – Range and accuracy of Vor –Recent developments – Hyperbolic systems of navigation (loran and decca) – Loran-Aequipment – Range and precision of standard loran – Loran-C – The decca navigationsystem – Decca receivers – Range and accuracy of decca – The omega system

UNITV **9**

DME and TACAN – Distance measuring equipment – Operation of DME – TACAN – TACAN equipment – Aids to approach and landing – Instrument landing system – Ground controlled approach system – Microwave Landing System (MLS) – Dopplernavigation – The Doppler effect – Beamconfigurations – Doppler frequency equations –Trackstabilization–Dopplerspectrum–ComponentsoftheDopplernavigationsystem – Dopplerrangeequation–Accuracyof Dopplernavigationsystems–Inertialnavigation – Principles of operation – Navigation over the earth – Components of an inertialnavigation system – Earth co-ordinate mechanization – Strapped – Down systems –Accuracyofinertialnavigationsystems –Satellite navigationsystem–Thetransit system – NavstarGlobalPositioning System(GPS)

DIGITALIMAGEPROCESSING **4004**

AIM

Tointroducethestudenttovarious imageprocessing techniques.

OBJECTIVES

- To studythe image fundamentals and mathematicaltransforms necessaryfor image processing.
- Tostudytheimageenhancementtechniques
- Tostudyimagerestorationprocedures.
- Tostudytheimagecompressionprocedures.
- Tostudytheimagesegmentationand representationtechniques.

UNIT-I: DIGITALIMAGE FUNDAMENTALS **9**

Elementsofvisualperception–Imagesampling,Quantization–Basicrelationshipbetween pixels-monochrome vision model- color space model-convolution.

UNIT– IIIMAGETRANSFORM **9**

Basic geometric transforms-Introduction to Fourier transform and DFT – properties of2D Fourier transform– FFT- Separable image transforms – Walsh – Hadamard-Discretecosine and Haar Transfroms

UNIT-III: IMAGEENHANCEMENTANDRESTORATIONTECHNIQUES9

Spatial domain methods- Basic gray level transformation-Histogram equalization-Spatialfiltering-Laplacian filtering- Frequency Domain filters- homomorphic filtering-Model ofimage degradation/Restoration process- Noise models.

UNITIV:IMAGECOMPRESSION **9**

Losslesscompression-: Variable lengthcoding- LZWcoding- -Predictive coding-DPCM.Lossy compression- Transform coding-– Image compression standards-JPEG,MPEG.

UNIT–V:IMAGESEGMENTATION&REPRESENTATION **9**

Edge detection – Thresholding- region based segmentation- Boundary representation – chair codes- Boundary segments – boundarydescriptors-: simple descriptors-Fourierdescriptors- Regional descriptors- Texture.

ENGINEERINGACOUSTICS **4004**

AIM

Thiscourseaimsatprovidinganoverviewofengineeringacoustics.

OBJECTIVE

- Toprovide mathematicalbasisforacousticswaves
- Tointroducetheconceptofradiationreceptionabsorptionandattenuationof acoustic waves.
- Topresentthecharacteristicbehaviourofsoundinpipes, resonatorsand filters.
- Tointroducethepropertiesofhearing and speech
- Todescribethearchitectureandenvironmentalinclusiveofreverberationand noise.
- Togiveadetailed studyon loud speakersandmicrophones.

UNITI:

Acoustics waves – Linear wave equation – Sound in fluids – Harmonic plane waves – Energy density – Acoustics intensity – Specific acoustic impedance – Spherical waves – Describer scales.

Reflection and Transmission: Transmission from one fluid to another normal andoblique incidence – Method of images.

UNITII: RADIATIONANDRECEPTION OFACOUSTICWAVES 9

Radiationfrompulsatingsphere–Acousticreciprocity–Continuouslinesource–Radiation impedance – Fundamental properties of transducers.

Absorptionandattenuationofsound: Absorptionfromviscosity–Complexsoundspeed and absorption – Classical absorption co-efficient

UNITIII: PIPERESONATORSANDFILTERS 9

Resonance in pipes – Standing wave pattern absorption of sound in pipes – Longwavelength limit – Helmoltz resonator – Acoustic impedance – Reflection andtransmission of waves in pipe – Acoustic filters – Low pass, high pass and band pass.

Noise, Signal detection, Hearing and speech: Noise, spectrum level and band level – Combing band levels and tones – Detecting signals in noise – Detection threshold – Theear – Fundamental properties of hearing – Loudness level and loudness – Pitch andfrequency – Voice.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV: ARCHITECTURALACOUSTICS 9

Sound in endosure – A simple model for the growth of sound in a room – Reverberationtime – Sabine, sound absorption materials – Measurement ofthe acoustic outputofsoundsources in live rooms – Acoustics factor in architectural design.

Environmental Acoustics: Weighted sound levels speech interference – Highway noiseNoise induced hearing loss – Noise and architectural design specification andmeasurement of some isolation design of portions.

UNITV: TRANSDUCTION 9

Transducer as an electives network – Canonical equation for the two simple transducerstransmitters – Moving coil loud speaker – Loudspeaker cabinets – Horn loud speaker,receivers – Condenser – Microphone – Moving coil electrodynamics microphonePiezoelectric microphone – Calibration of receivers.

MOBILEANDWIRELESSCOMMUNICATION 4004

AIM

To introduce the concepts of wireless / mobile communication using cellular environment. To make the students to know about the various modulation techniques, propagation methods, coding and multi access techniques used in the mobile communication. Various wireless network systems and standards are to be introduced.

Objectives

- It deals with the fundamental cellular radio concepts such as frequency reuse and handoff. This also demonstrates the principle of trunking efficiency and how trunking and interference issues between mobile and base stations combine to affect the overall capacity of cellular systems.
- It presents different ways to radio propagation models and predict the large –scale effects of radio propagation in many operating environment. This alsocovers small propagation effects such as fading, time delay spread and Doppler spreadanddescribeshowtomeasuresand modelthe impactthat signalbandwidth and motion have on the instantaneous received signal through the multi-path channel.
- It provides idea about analog and digital modulation techniques used in wireless communication.It also deals with the different types of equalization techniques and diversity concepts.
- It provides an introduction to speech coding principles which have driven the development of adaptive pulse code modulation and linear predictive coding techniques are presented. This unit also describes the time, frequency code division multiple access techniques as well as more recent multiple access technique such as space division multiple access.
- It deals with second generation and third generation wireless networks and worldwide wireless standards.

UNITI: PRINCIPLESOFWIRELESSCOMMUNICATION 10

Digital modulation techniques – Linear modulation techniques – Spread spectrummodulation – Performance of modulation – Multiple access techniques – TDMA –FDMA– CDMA–SDMA– Overviewofcellular networks –Cellular concept – Handoffstrategies – Path loss – Fading and Doppler effect.

UNITII: WIRELESSPROTOCOLS 11

Issuesandchallengesofwirelessnetworks–Locationmanagement–Resourcemanagement–Routing–Powermanagement–Security–Wirelessmediaaccess

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

techniques – ALOHA– CSMA– WirelessLAN – MAN – IEEE 802.11(a–b–e–f–g–h–i)– Bluetooth. Wireless routing protocols – Mobile IP – IPv4 – IPv6 – Wireless TCP.Protocolsfor3G&4Gcellularnetworks–IMT–2000–UMTS–CDMA2000–Mobility management and handover technologies – All-IP based cellular network

UNITIII: TYPESOFWIRELESS NETWORKS 9

Mobile networks – Ad-hoc networks – Ad-hoc routing – Sensor networks – Peer-Peernetworks – Mobile routing protocols – DSR – AODV – Reactive routing – Locationaided routing – Mobility models – Entitybased – Group mobility – Randomway – Pointmobility model.

UNITIV: ISSUESAND CHALLENGES 9

Issues and challenges of mobile networks– Security issues – Authentication in mobileapplications – Privacy issues – Power management – Energy awareness computing.

MobileIP andAd-hocnetworks –VoIPapplications.

UNITV: SIMULATION 6

Study of various network simulators (GloMoSim – NS2 – Opnet) – Designing andevaluating the performance of various transport and routing protocols of mobile andwireless networks using network simulator (any one).

MEDICALELECTRONICS **3104**

AIM

Tomakestudentstounderstandtheapplicationsofelectronicsindiagnosticand therapeutic area.

OBJECTIVE

- To studythemethodsofrecordingvariousbiopotentials
- Tostudyhowtomeasurebiochemicalandvariousphysiologicalinformation
- Tounderstand theworking ofunitswhichwillhelptorestorenormalfunctioning
- Tounderstandtheuseofradiationfor diagnosticand therapy
- Tounderstandtheneed andtechniqueofelectricalsafetyinHospitals

UNITIELECTRO– PHYSIOLOGYANDBIO– POTENTIALRECORDING 9

The origin of bio-potentials – Bio-potential electrodes – Biological amplifiers – ECG – EEG –EMG –PCG –EOG –Lead systems and recording methods – Typicalwaveformsand signal characteristics.

UNITII BIO–CHEMICALANDNONELECTRICALPARAMETER MEASUREMENT 9

PH – PO2 – PCO2 – PHCO3 – Electrophoresis – Colorimeter – Photometer – Autoanalyzer – Blood flow meter – Cardiac output – Respiratory measurement – Bloodpressure – Temperature – Pulse – Blood cell counters.

UNITIII ASSISTDEVICESANDBIO– TELEMETRY 9

Cardiac pacemakers–DC defibrillator– Telemetry principles–Frequency selection–Bio-telemetry – Radio – Pill and tele-stimulation.

UNITIV RADIOLOGICALEQUIPMENTS 9

Ionosing radiation – Diagnostic X-ray equipments – Use of radio isotope in diagnosis – Radiation therapy.

UNITV RECENTTRENDSINMEDICALINSTRUMENTATION 9

Thermograph–Endoscopyunit–Laserinmedicine–Diathermyunits–Electricalsafety in medical equipment.

MICROCONTROLLERANDEMBEDDED SYSTEMS **3104**

Aim

To make students familiar about microcontroller, programming and its applications.

Objective

- Tostudy8051architecture
- Towriteassemblylanguageprogramming
- Tostudytheembeddedarchitecture and realtime applications.

UNITI 8051MICROCONTROLLER 9

8051Micro controller hardware-I/Opins,portsandcircuits-Externalmemory–Countersand Timers-Serial Data I/O- Interrupts-

UNITII8051PROGRAMMINGANDAPPLICATIONS 9

8051 instruction set – Addressing modes – Assembly language programming – I/O portprogramming -Timer and counter programming – Serial Communication – Interruptprogramming –8051 Interfacing:, Stepper Motors.

UNITIIIINTRODUCTION TOEMBEDDED SYSTEMS 9

Definition and Classification – Overview of Processors and hardware units in anembedded system–Softwareembedded intothesystem–ExemplaryEmbedded Systems–Embedded Systems on a Chip (SoC)

UNITIVDEVICES ANDBUSES FOR DEVICES NETWORK 9

I/O Devices - Device I/O Types– Synchronous - Iso-synchronous and AsynchronousCommunications from Serial Devices -Communication Devices - UART and HDLC -Parallel Port Devices - Timer and Counting Devices - ‘12C’, ‘CAN’ - I/O Serial highspeed buses- ISA.

UNITV EMBEDDEDARCHITECTURE 9

Embedded computers, characteristics of embedded, computing applications- challengesin embedded computing systems design, embedded design process, requirements andspecifications, architectural design

REMOTE SENSING **4004**

AIM:

Tounderstandthebasicsforremotesensing.

OBJECTIVES:

- Introduce the principles of remote sensing and fundamental knowledge on the physics of remote sensing, aerial photographic techniques, photogrammetry, multispectral, hyperspectral and thermal imaging, and RADAR and LIDAR image analysis.
- Thenewesttechnologyinthefieldwill alsobe discussed.
- The course will be taught with an emphasis on the geographical applications of remotesensing;however, incertain instancesother disciplineswillbe introducedas well.

UNITI: REMOTESENSING 9

Definition – Components of Remote Sensing -Energy, Sensor, Interacting Body –Active and Passive Remote Sensing – Platforms – Aerial and Space Platforms –Balloons, Helicopters, Aircraft and Satellites – Synoptivity and Repetivity – ElectroMagnetic Radiation (EMR) – EMR spectrum – Visible, Infra Red (IR), Near IR, MiddleIR, Thermal IR and Microwave – Black Body Radiation – Planck's law – Stefan-Boltzman law.

UNITII: EMRINTERACTIONWITHATMOSPHEREAND EARTH MATERIALS 9

Atmospheric characteristics – Scattering of EMR – Raleigh, Mie, Non-selective andRaman Scattering – EMR Interaction with Water vapour and ozone – AtmosphericWindows – Significance ofAtmospheric windows – EMR interaction with Earth SurfaceMaterial– Radiance, Irradiance, Incident, Reflected, AbsorbedandTransmittedEnergy –Reflectance – Specular and Diffuse Reflection Surfaces – Spectral Signature – SpectralSignature curves – EMR interaction with water, soil and Earth Surface: Imagingspectrometry and spectral characteristics.

UNIT– III:OPTICALAND MICROWAVEREMOTESENSING 9

Satellites – Classification – Based onOrbits and purpose –Satellite Sensors – Resolution– Description of Multi Spectral Scanning – Along and Across Track Scanners – DescriptionofSensorsinLandsat,SPOT,IRSseries–CurrentSatellites–Radar

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Speckle – Back Scattering – Side Looking Airbome Radar – Synthetic Aperture Radar – Radiometer – Geometrical characteristics ; Sonar remote sensing systems.

UNIT– IV: GEOGRAPHICINFORMATIONSYSTEM 9

GIS – Components of GIS – Hardware, Software and Organisational Context – Data – Spatial and Non-Spatial – Maps – Types of Maps – Projection – Types of Projection – Data Input – Digitizer, Scanner – Editing – Raster and Vector data structures – Comparition of Raster and Vector data structure – Analysis using Raster and Vector data–Retrieval, Reclassification, Overlaying, Buffering – Data Output – Printers and Plotters.

UNIT-V: MISCELLANEOUSTOPICS 9

Visual Interpretation of Satellite Images – Elements of Interpretation – InterpretationKeys Characteristics of Digital Satellite Image –Image enhancement – Filtering –Classification– IntegrationofGIS and Remote Sensing – ApplicationofRemote Sensingand GIS – UrbanApplications – IntegrationofGIS and RemoteSensing – ApplicationofRemote Sensing and GIS – Water resources – Urban Analysis – Watershed Management– Resources Information Systems.Global positioning system – an introduction.

NETWORKSECURITY 4004

AIM

To understand the principles of encryption algorithms; conventional and public keycryptography. To have a detailed knowledge about authentication, hash functions and application level security mechanisms.

OBJECTIVES

- Toknowthe methodsofconventionalencryption.
- Tounderstandthe conceptsofpublic keyencryptionandnumbertheory
- TounderstandauthenticationandHashfunctions
- Toknowthenetwork securitytoolsand applications.
- Tounderstandthesystemlevelsecurityused.

UNITI: SYMMETRICCIPHERS 9

Overview–Classicalencryptiontechniques –Blockciphers anddataencryptionstandard–Finite fields – Advanced encryption standard – Contemporary symmetric ciphers – Confidentiality using symmetric encryption.

UNITII:PUBLIC-KEYENCRYPTION AND HASH FUNCTIONS9

Number theory – Public-key cryptography and RSA – Keym – Diffie-hellman keyexchange – Elliptic curve cryptography – Message authentication and hash functions –Hash algorithms – Digital signatures and authentication protocols.

UNITIII: NETWORKSECURITYPRACTICE 9

Authentication applications – Kerberos-X.509 authentication service – Electronic mailsecurity – Pretty good privacy – S/MIME – IP security – IP security architecture – Authentication header – Encapsulating security payload – Key management.

UNITIV: SYSTEMSECURITY 9

Intruders–Intrusiondetection–Passwordmanagement –Malicioussoftware–Firewalls–Firewall design principles – Trusted systems.

UNITV: WIRELESSSECURITY 9

WirelessLANsecuritystandards –WirelessLANsecurityfactorsandissues.

TOTALQUALITYMANAGEMENT **3003**

OBJECTIVE

- TounderstandtheTotalQualityManagementconceptandprinciplesandthevarious tools available to achieve Total Quality Management.
- Tounderstandthestatisticalapproachforqualitycontrol.
- To create an awareness about the ISO and QS certification process and its need for the industries.

1. INTRODUCTION 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - AnalysisTechniques for Quality Costs, Basic concepts of Total Quality Management, HistoricalReview, Principles of TQM, Leadership – Concepts, Role of Senior Management,Quality Council, QualityStatements, Strategic Planning, Deming Philosophy, Barriers toTQM Implementation.

2. TQMPRINCIPLES 9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, ServiceQuality, Customer Retention, Employee Involvement – Motivation, Empowerment,Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous ProcessImprovement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership –Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development,Performance Measures – Basic Concepts, Strategy, Performance Measure.

3. STATISTICALPROCESSCONTROL(SPC) 9

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency andDispersion, Population and Sample, Normal Curve, Control Charts for variables andattributes, Process capability, Concept of six sigma, New seven Management tools.

4. TQMTOOLS 9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality FunctionDeployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality LossFunction, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA– Stages of FMEA.

5. QUALITYSYSTEMS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS16949, ISO 14000 – Concept, Requirements and Benefits.

WIRELESSNETWORKS **3104**

AIM

Tostudysomefundamentalconceptsinwirelessnetworks.

OBJECTIVES

- TounderstandphysicalaswirelessMAC layeralternativestechniques.
- Tolearnplanning and operationofwireless networks.
- TostudyvariouswirelessLANandWAN concepts.
- TounderstandWPANandgeo-locationsystems.

UNITI: PHYSICALANDWIRELESSMACLAYERALTERNATIVES9

Wired transmission techniques: Design of wireless modems – Power efficiency – Outof band radiation – Applied wireless transmission techniques – Short distance base bandtransmission – VWB pulse transmission – Broad modems for higher speeds – Diversityand smart receiving techniques – Randomaccess fordataoriented networks – Integrationof voice and data traffic.

UNITII:WIRELESSNETWORKPLANNING ANDOPERATION9

Wireless networks topologies – Cellular topology – Cell fundamentals signal tointerference ratio calculation – Capacity expansion techniques – Cell splitting – Use ofdirectional antennas for cell sectoring – Micro cell method – Overload cells – Channelsallocation techniques and capacity expansion FCA – Channel borrowing techniques –DCA – Mobility management – Radio resources and power management securities inwireless networks.

UNITIII: WIRELESSWAN 9

Mechanismto support a mobile environment – Communication inthe infrastructure –IS-95 CDMA forward channel – IS-95 CDMA reverse channel – Pallert and frame formatsin IS-95, IMT-2000 – Forward channel in W-CDMA and CDMA-2000 – Reversechannels in W-CDMA and CDMA-2000 – GPRS and higher data rates – ShortMessaging Service in GPRS mobile application protocols.

UNITIV: WIRELESSLAN 9

Historical overviews of the LAN industry – Evolution of the WLAN industry – WirelessHome Networking – IEEE 802.11 – The PHY layer – MAC layer – Wireless ATM –HYPER LAN – HYPER LAN – 2.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV: WPANANDGEOLOCATIONSYSTEMS 9

IEEE 802.15 WPAN – Home RF – Bluetooth – Interface between luetoothand802.11– Wireless geolocation technologies for wireless geolocation – Geolocation standards forE.911 service.

TELECOMMUNICATIONSWITCHINGAND NETWORKS

4004

AIM

- To introduce fundamentals functions of a telecom switching office, namely, digital multiplexing, digital switching and digital subscriber access.
- Tointroduceamathematicalmodelfortheanalysisoftelecommunicationtraffic.

OBJECTIVES

- Tointroducethe conceptsofFrequencyandTimedivisionmultiplexing.
- TointroducedigitalmultiplexinganddigitalhierarchynamelySONET/SDH
- Tointroducetheconceptsofspaceswitching,timeswitchingandcombination switching, example of a switch namely No.4 ESS Toll switch.
- Tointroducetheneedfornetworksynchronizationandstudysynchronizationissues. To outline network control and management issues.
- Tostudytheenhancedlocalloopsystemsindigitalenvironment.Tointroduce ISDN, DSL / ADSL, and fiber optic systems in subscriber loop.
- Tointroducestatisticalmodelingoftelephonetraffic.Tostudyblockingsystem characteristics and queuing system characteristics.
- Tocharacterize blockingprobabilityholdingservicetimedistributionsfor inspeech and data networks.

UNITI EVOLUTIONOFTELECOMMUNICATION SWITCHINGAND CIRCUITS 9

Evolution of Public Switched Telecommunication Networks Strowger exchange,Crossbar exchange,– Basic Tele communicationequipments – Telephone handset, , Echosuppressors and cancellors, PCM coders, Modems and Relays.

UNITII ELECTRONICSWITCHING 9

CircuitSwitching,Messageswitching,Centralizedstoredprogrammeswitching,Timeswitching, Space switching – Digital switching system hardware configuration,

UNITIIITELECOMMUNICATIONSIGNALLINGANDTRAFFIC9

Channel associated signaling, Common channel signaling, SS7 signaling protocol, SS7protocol architecture, Grade of service, Modeling switching systems, Blocking modelsand Delay systems.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV INTEGRATEDDIGITALNETWORKS 9

Subscriber loop characteristics, Local access wire line and wire less PCM / TDM carrierstandards transmission line codes, Synchronous, Asynchronous, SONET / SDH,Integrated DigitalNetwork(IDN)environment –PrinciplesofIntegrated ServicesDigitalNetwork (ISDN)

UNITV DATANET WORKS 9

DatatransmissioninPSTN – ConnectionorientedandConnectionlessprotocols – packetswitching – ISO-OSIarchitecture-Satellitebaseddatanetworks –LAN, WAN – standards– TCP / IP – Internet

ELECTIVE–IV

19152E74AP **SEMESTERVII**

POWERELECTRONICS **3003**

AIM

ApplicationofElectronicknowledgeinindustryforrectificationofpolyphasesupply voltage and for control of motor speed and for thermal heating.

OBJECTIVES

- Tostudyaboutpowerelectroniccircuitsforvoltageandcurrentcontroland protection.
- To learn the switching characteristics of transistors and SCRs. Series and parallel functions of SCRs, Programmable triggering methods of SCR.
- TolearncontrolledrectificationACsupplies.
- Tostudyofconverters andinverters.
- Tolearnaboutmotorcontrol,charges,SMPSandUPS.

UNITI POWERSEMICONDUCTOR DEVICES 9

Powertransistors,Thyristors,PowerTRIAC,MOSFET,IGBT,GTOcharacteristics,rating, Protection circuits.

UNITII POWERSUPPLIES 9

Single Phase and Three Phase Controlled rectifiers, DesignofTrigger circuits, Switchingmode regulators – Boost, Buck, Buck-Boost and Cuk regulators, AC voltage regulator.

UNITIII INVERTERS 9

Voltageandcurrentsourceinverters,Resonant,Series inverter,PWM inverter.

UNITIV CHOPPERS 9

TypeA, B,CandDchoppers,Pulsewidthmodulation-Gating requirements.

UNITV MOTORCONTROL&Applications 9

Single Phase DC series motor drives, Inductionand Synchronous motor drives, Switchedreluctance motor Drive, SMPS and UPS

ADVANCEDMICROPROCESSORS **3003**

AIM

To learnthe architecture and programming ofadvanced Intelfamily microprocessors and microcontrollers.

OBJECTIVES

- Tointroducetheconceptsininternalprogrammingmodelof Intelfamilyof microprocessors.
- To introduce the programming techniques using MASM, DOS and BIOS function calls.
- Tointroducethe basic architecture ofPentiumfamilyofprocessors.
- To introduce the architecture programming and interfacing of 16 bit microcontrollers.
- To introducetheconceptsand architectureofRISCprocessorandARM.

UNITI ADVANCEDMICROPROCESSORARCHITECTURE 9

Internal microprocessor architecture – Real mode memory addressing – Protected modememory addressing – Memory paging – Data addressing modes – Program memoryaddressing modes – Stack memory addressing modes – Data movement instructions –Program control instructions – Arithmetic and logic instructions.

UNITII MODULARPROGRAMMINGANDITS CONCEPTS 9

Modularprogramming– Using keyboard and video display – Data conversions – Diskfiles – Interrupt hooks – Using assembly languages with C/ C++

UNITIII PENTIUMPROCESSORS 9

Introduction to pentium microprocessor – Special pentium registers – Pentium memorymanagement – New pentium instructions – Pentium processor – Special pentium profeatures – Pentium IV processor

UNITIV 16–BITMICROCONTROLLER 9

8096/8097 architecture – CPU registers – RALU – Internal program and data memorytimers – High speed input and output – Serial interface – I/O ports – Interrupts – A/Dconverter – Watch dog timer – Power down feature – Instruction set – External memoryinterfacing – External I/O interfacing.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV RISCPROCESSORSANDARM 9

The RISC revolution – Characteristics of RISC architecture – The berkeley RISC – Register windows – Windows and parameter passing – Window overflow – RISCarchitecture and pipelining – Pipeline bubbles – Accessing external memory in RISCsystems – Reducing the branch penalties – Branch prediction – ARM processors – ARMregisters – ARM instructions – ARM built-in shift mechanism – ARM branchinstructions – Sequence control – Data movement and memory reference instructions.

ELECTROMAGNETICINTERFERENCEANDCOMPATIBILITY

3003

AIM

To understand different electromagnetic Interference problems occurring in Intersystem and in inter system and their possible mitigation techniques in Electronic design

OBJECTIVES

- To understand EMI Sources,EMI problems andtheir solution methodsin PCB level / Subsystem and system level design.
- To measure the emission.immunity level from different systems to couple with the prescribed EMC standards

UNITI BASICCONCEPTS 9

Definition of EMI and EMC with examples – Classification of EMI/EMC – CE – RE – CS – RS – Unitsofparameters – SourcesofEMI –EMI coupling modes – CMand DM–ESD phenomena and effects – Transient phenomena and suppression.

UNITII EMIMEASUREMENTS 9

Basic principles of RE, CE, RS and CS measurements – EMI measuring instruments – Antennas – LISN – Feed through capacitor – Current probe – EMC analyzer anddetection technique open area site – Shielded anechoic chamber – TEM cell.

UNITIII EMCSTANDARD AND REGULATIONS 8

National and intentional standardizing organizations – FCC – CISPR – ANSI – DOD – IEC – CENEEC – FCC – CE and RE standards – CISPR – CE and RE standards – IEC/EN – CS standards – Frequency assignment – Spectrum conversion.

UNITIV EMICONTROLMETHODS ANDFIXES 10

Shielding–Grounding–Bonding–Filtering–EMIgasket–Isolationtransformer–Opto-isolator.

UNITV EMCDESIGNANDINTERCONNECTION TECHNIQUES 9

Cableroutingandconnection–Componentselectionandmounting–PCBdesign–Trace routing – Impedance control – Decoupling – Zoning and grounding

SOLIDSTATEELECTRONICDRIVES **3003**

AIM

To have fundamentalknowledge about structure of devices, VI characteristics of devices like PN Junction diode, Zener diode, MOSFET, BJT and Opto electronic.

OBJECTIVES:

- To learn crystal structures of elements used for fabrication of semiconductor devices.
- Tostudyenergybandstructureofsemiconductordevices.
- To understand fermi levels, movement of charge carriers, Diffusion current and Drift current.
- To study behavior of semiconductor junction under different biasing conditions. Fabrication of different semiconductor devices, Varactor diode, Zener diode, Schottky diode, BJT, MOSFET, etc.
- To study the VI Characteristics of devices and their limitations in factors like current, power frequency.
- Tolearnphotoelectriceffectandfabricationofoptoelectronic devices.

UNITI:CRYYSTALPROPERTIES ANDGROWTH SEMICONDUCTORS9

Semiconductormaterials–periodicStructures –CrystalLattices–Cubic lattices–Planesand Directions – Diamond lattice – Bulk Crystal Growth – Starting Material – Growth ofSingle Crystal Ingots – Wafers – Doping – Epitaxial Growth – Lattice Matching inEpitaxial Growth – Vapor – Phase Epitaxy – Atoms and Electronics – Introduction toPhysical Models – Experimental Observations – Photoelectric Effect – Atomic spectra –Bhr model – Quantum Mechanics – Probability and Uncertainty Principle – SchrodingerWave Equation – Potential Well Equation – Potential well Problem – Tunneling.

UNITII: ENERGYBANDSANDCHARGECARRIERSINSEMICONDUCTORS AND JUNCTIONS 9

Energybands inSolids, EnergyBands inMetals, Semiconductors,andInsulators –Directand Indirect Semiconductors – Variation of Energy Bands with Alloy Composition -Charge Carriers in Semiconductors – Electrons and Holes – Electrons and holes inQuantum Wells – Carrier Concentrations –Femi Level – Electron and HoleConcentrations at Equilibrium – Temperature Dependence of Carrier Concentrations –Compensation and Space Charge Neutrality – Drift of Carrier in Electric and MagneticFieldsconductivityandMobility–DriftandResistance–EffectsofTemperatureand

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

DopingonMobility–HighFieldeffects–HallEffect–invarianceofFermilevelatequilibrium – Fabrication of p-n junctions, Metal semiconductor junctions.

UNITIII: METALOXIDESEMICONDUCTOR FET 9

GaAS MESFET – High Electron Mobility Transistor – Short channel Effects – MetalInsulator Semiconductor FET – Basic Operation and Fabrication – Effects of RealSurfaces – Threshold Voltage – MOS capacitance Measurements – Current – VoltageCharacteristics of MOS Gate Oxides – MOS Field Effect Transistor – OutputCharacteristics – Transfer characteristics - Short Channel MOSFET V-I characteristics –Control of Threshold Voltage – Substrate Bias Effects -Sub threshold characteristics –Equivalent Circuit for MOSFET –MOSFET Scaling and Hot Electron Effects – Drain –InducedBarrierLowering –short channelandNarrowwidthEffect – GateInducedDrainLeakage.

UNITIV: OPTOELECTRONDEVICES 9

Photodiodes – Current and Voltage in illuminated Junction – Solar Cells – Photodetectors – Noise and Bandwidth of Photo detectors – Light Emitting Diodes – LightEmitting Material – Fiber Optic Communication Multilayer Heterojunctions for LEDS –Lasers – Semiconductor lasers – Population Inversion at a Junction Emission Spectra forp-n junction – Basic Semiconductor laser – Materials for Semiconductor laser.

UNITV HIGH FREQUENCYANDHIGH POWERDEVICES9

Tunnel Diode, IMPATT Diode, operation of TRAPATT and BARITT Diodes, GunnDiode – transferred – electron mechanism, formation and drift of space charge domains,p-n-p-n diode, Semiconductor Controlled Rectifier, Insulated Gate Bipolar Transistor.

COMPUTERHARDWAREANDINTERFACING 3003

AIM

To enable the student to get a detailed knowledge of all the hardware components that make up a computer and to understand the different interfaces required for connecting these hardware devices.

OBJECTIVES

- TointroduceissuesrelatedtoCPUandmemory.
- To understandthecomponentsonthe motherboard
- Tounderstanddifferentstorage media
- TointroducethefeaturesofdifferentI/Operipheraldevicesandtheirinterfaces.

UNITI CPUANDMEMORY 9

CPU essentials – processor modes – modern CPU concepts – Architectural performancefeatures – the Intel’s CPU – CPU over clocking – over clocking requirements – overclocking the system – over clocking the Intel processors – Essential memory concepts –memory organizations – memory packages – modules –memory.

UNITII MOTHERBOARDS 9

Pentium4 mother board -form factor – upgrading a mother board – chipsets – northbridge – south bridge –motherboard BIOS – POST – BIOS features – BIOS and Bootsequences – BIOS shortcomings and compatibility issues – power supplies and powermanagement – concepts of switching regulation – potential power problems – powermanagement.

UNITIII STORAGE DEVICES 9

The floppy drive – magnetic storage – magnetic recording principles – data and diskorganization – floppy drive – hard drive – data organization and hard drive – sectorlayout –CDROM electronics – DVD-ROM – DVD media – DVD drive and decoder.

UNITIV I/OPERIPHERALS 9

Parallel port – signals and timing diagram – IEEE1284 modes – asynchronouscommunication- serialport signals – video adapters – graphic accelerators – 3D graphicsaccelerator issues

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV BUSARCHITECTURE 9

Buses – Industrystandard architecture (ISA), peripheral component Interconnect (PCI) – Accelerated Graphics port (AGP) – plug-and-play devices – SCSI concepts – USBarchitecture.

SEMESTERI

19248S11B APPLIEDMATHEMATICSFORELECTRONICSENGINEERING

L T PC
3104

AIM:

Theprimaryaimofthiscourseistodemonstratevariousanalyticalskillsinapplied mathematics and extensive experience with the tactics of problem solving and logical thinkingapplicable in communication engineering.

OBJECTIVES:

The primary objective of this coursewill help the students to identify, formulate, abstract, and solve poblems using mathematical tools from a variety of mathematical areas, including fuzzy logic, matrix linear programming, probability, numerical solution of ordinary differential equations and queuing models.

UNITICALCULUS OFVARIATIONS 9

Functional – Euler's equation-Variational problems involving one unknown function-severalunknown functions-functional dependent on higher order derivatives-several independentvariables-isoperimetric problems.

UNITIIINTEGRALTRANSFORMSANDWAVE EQUATIONS 9

Fourier transformpairs, Properties – Fourier Sine and Cosine transforms, Convolution integrals,Evaluation of integrals using Fourier Transform.Discrete Fourier Transform -properties.Application of Fourier transform to wave equation.Z-transform-properties-inverse transform-solution to difference equation.

UNITIIILINEARPROGRAMMING 9

Simplexalgorithm-twophasemethod-duality-transportationandassignment problems-inventory-scheduling.

UNITIVRANDOMPROCESSANDQUEUINGTHEORY 9

Classification – auto correlation-cross correlation-ergodicity-power spectral density function-Poisson process.Single and multiple server Markovian queuing models- customer impatience-queuing applications.

UNITVTESTINGOF HYPOTHESIS 9

Sampling distributions-Testing of hypothesis of normal, t, chi square, F distributions for testingmean and variance- large sample test. Analysis of variance – one way classification.

Tutorial :15 Total:60

OUTCOMES:

Aftercompletingthiscourse,studentsshoulddemonstratecompetencyinthefollowing skills:

- Concepts on vector spaces, linear transformation, inner product spaces, eigenvalues and generalized eigenvectors.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Applyvarious methodsinlinearalgebratosolvesystemsoflinearequations.
- Could develop a fundamental understanding of linear programming models, able to develop a linear programming model from problem description, apply the simplex method for solving linear programming problems.
- Numericalsolutionofdifferentialequations bysingleandmultistepmethods.
- Computationofprobability,randomvariablesandtheirassociateddistributions, correlations and regression.
- Conceptualizetheprincipleofoptimalityandsub-optimization,formulationand computational procedure of dynamic programming.
- Exposingthebasiccharacteristicfeaturesof aqueuingsystemandacquiringskillsin analyzing queuing models.
- Usingdiscrete time Markovchainstomodelcomputer systems.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERI

19271C12 STATISTICALSIGNALPROCESSING LT PC 3104

AIM:

Thestudentcomprehendsmathematicaldescriptionandmodellingofdiscretetime randomsignals.

OBJECTIVES:

- Thestudentisconversantwithimportanttheoremsand algorithms.
- Thestudentlearnsrelevantfiguresofmeritsuchaspower,energy,biasand consistency.
- Thestudentisfamiliarwithestimation,predictionandfilteringconceptsandtechniques.

UNITIDISCRETERANDOMSIGNAL PROCESSING 9

Discrete RandomProcesses-, Autocorrelationand Autocovariance matrices. Parseval's Theorem,Wiener - Khintchine Relation- Power Spectral Density-Periodogram -, Parameter estimation:Bias and consistency.

UNITII SPECTRUMESTIMATION 9

Non-Parametric Methods-Correlation Method, Periodogram Estimator, Performance Analysis ofEstimators –Unbiased Consistent Estimators-; Bartlett, Blackman –Tukey method. ParametricMethods- AR, MA, andARMAmodelbasedspectralestimation.

UNITIIISIGNALMODELINGANDOPTIMUMFILTERS 9

Introduction- Least square method – Pade approximation – Prony's method – LevinsonRecursion – Lattice filter - FIR Wiener filter – Filtering – Linear Prediction – Non Causal andCausal IIR Weiner Filter –- Mean square error – Discrete Kalman filter

UNITIV ADAPTIVEFILTERS 9

FIR adaptive filters -adaptive filter based on steepest descent method-Widrow-Hoff LMSadaptive algorithm Adaptive recursive filters (IIR). RLS adaptive filters-Exponentially weightedRLS-sliding window RLS.

UNITVMULTIRATEDIGITALSIGNAL PROCESSING 9

Mathematicaldescriptionofchange ofsampling rate -Interpolationand Decimation, Decimationby an integer factor - Interpolation by an integer factor, Filter implementation for sampling rateconversion- Application to sub band coding and Filter bank implementation of waveletexpansion of signals.

Total:45 Periods

OUTCOMES:

- Formulatetimedomainandfrequencydomaindescriptionof WideSenseStationaryprocessin terms of matrix algebra and relate to linear algebra concepts.
- State Parseval's theorem, W-K theorem, principle of orthogonality, spectral factorization theorem, Widrow-HoffLMS algorithmandShannon'ssamplingtheorem, anddefinelinear prediction, linear

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

estimation,sampleauto-correlation,periodogram,biasandconsistency.

- Explain various noise types, Yule-Walker algorithm, parametric and non-parametric methods, Wiener and Kalman filtering, LMS and RMS algorithms, Levinson Durbin algorithm, adaptive noise cancellation and adaptive echo cancellation, speed verses convergence issues, channel equalization, sampling rate change, subband coding and wavelet transform.
- Calculate mean, variance, auto-correlation and PSD for WSS stochastic processes, and derive prediction error criterion, Wiener-Hoff equations, Parseval'stheorem,W-K theorem and normal equations.
- Design AR, MA, ARMA models, Weiner filter, anti aliasing and anti imaging filters, and develop FIR adaptive filter and polyphase filter structures.
- Simulatespectralestimationalgorithmsandbasicmodelsoncomputingplatforms.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERI

19271C13 MODERNDIGITALCOMMUNICATIONSYSTEMS

LTPC
3104

AIM:

Tounderstandthebasicsofsignal-spaceanalysisanddigitaltransmission.

OBJECTIVES:

- Tounderstandthecoherentandnoncoherentreceiversanditsimpactondifferentchannel characteristics.
- TounderstandthedifferentEqualizers
- To understandthe different block codedand convolutionalcoded digitalcommunication systems.
- TounderstandthebasicsofMulticarrierandMultiuser Communications.

UNITICOHERENTANDNON-COHERENTCOMMUNICATION: 9

Coherent receivers – Optimum receivers in WGN – IQ modulation & demodulation – Non coherentreceivers in random phase channels; M-FSK receivers – Rayleigh and Rician channels– Partially coherent receives – DPSK; M-PSK; M-DPSK,-BER Performance Analysis.

UNITIIBANDLIMITEDCHANNELSANDDIGITALMODULATIONS: 9

Eye pattern; demodulation in the presence of ISI and AWGN; Equalization techniques – IQmodulations; QPSK; QAM; QBOM; -BER Performance Analysis. – Continuous phasemodulation;CPFM;CPFSK;MSK,OFDM. OFDM signalprocessing;Peak Power Problem: PAPreduction schemes-Clipping, Filtering, Coding and Scrambling.

UNITIIIBLOCKCODEDDIGITAL COMMUNICATION: 9

Architecture and performance – Binaryblock codes;Orthogonal;Biorthogonal;Transorthogonal– Shannon's channel coding theorem; Channel capacity; Matched filter; Concepts of Spreadspectrum communication – Coded BPSK and DPSK demodulators – Linear block codes;Hammning; Golay;Cyclic; BCH ; Reed – Solomon codes.

UNITIVCONVOLUTIONALCODEDDIGITAL COMMUNICATION: 9

Representation of codes using Polynomial, State diagram, Tree diagram, and Trellis diagram – Decoding techniques using Maximum likelihood, Viterbi algorithm, Sequential and Thresholdmethods – Errorprobabilityperformance for BPSKand Viterbialgorithm, Turbo Coding. Modelof spread Spectrum Digital Communication System-Direct Sequence Spread Spectrum Signals,Error rate performance of the coder, Generation of PN Sequences- Frequency-Hopped SpreadSpectrum Signals, Performance of FH Spread Spectrum Signals in an AWGN Channel-Synchronization of Spread Spectrum Systems.

UNITVMULTICARRIERANDMULTIUSERCOMMUNICATIONS 9

Single Vs multicarrier modulation, orthogonal frequency division multiplexing (OFDM), Modulation and demodulation in an OFDM system, An FFT algorithmic implementation of an OFDM system, Bit and power allocation in multicarrier modulation, Peak-to-average ratio in multicarrier modulation.Introduction to CDMA systems, multiuser detection in CDMA systems– optimum multiuser receiver, sub optimum detectors, successive interference cancellation.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Total:45Periods

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto:

- Developthe ability tounderstand the conceptsofsignal space analysisforcoherent and non- coherent receivers.
- ConceptuallyappreciatedifferentEqualizationtechniques
- Possessknowledgeondifferentblockcodesandconvolutionalcodes.
- ComprehendthegenerationofOFDMsignalsandthetechniquesofmultiuser detection.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERI

19271C14 COMMUNICATIONPROTOCOLENGINEERING L TPC 4 004

AIM:

Toexposethestudentstothelayeredarchitectureforcommunicationnetworksandthe specificfunctionalityofthe networklayer.

OBJECTIVES:

- To enable the student to understand the basic principles ofrouting and the manner this is implemented in conventional networks and the evolving routing algorithms based on Internetworking requirements, optical backbone and the wireless access part of the network.
- To enable the student to understand the different routing algorithms existing and their performance characteristics.

UNITINETWORKINTRODUCTION 9

Introduction: Communication model, Communication Software, Communication Subsystems,Communication Protocol Definition/Representation Formal and Informal Protocol DevelopmentMethods, Protocol Engineering Phases Error Control, Flow Control Type of TransmissionErrors, Linear Block Code, Cyclic Redundancy Checks, Introduction to Flow Control, WindowProtocols

UNITIINETWORKREFERENCEMODEL 9

Sequence Numbers, Negative Acknowledgments, Congestion Avoidance Network ReferenceModel: Layered Architecture, Network Services and Interfaces, Protocol FunctionsEncapsulation, Segmentation, Reassembly, Multiplexing, Addressing, OSI Model LayerFunctions, TCP/IP Protocol Suite, Application Protocols

UNITIIIPROTOCOL SPECIFICATIONS 9

Components of protocol, Specifications of Communication service, Protocol entity, Interface,Interactions,Multimedia protocol, Internet protocol, SDL, SDL based protocol- other protocolspecification languages

UNITIVPROTOCOLCONFORMANCE/PERFORMANCETESTING9

Conformance testing methodology and framework, Conformance test architectures, Testsequence generation methods, Distributed architecture by local methods, Conformance testingwith TTCN, systems with semi controllable interfaces - RIP,SDL based tools for conformancetesting, SDL based conformance testing of MPLS Performance testing, SDL based performancetesting of TCP and OSPF, Interoperability testing, SDL based interoperability testing ofCSMA/CD and CSMA/CA protocol using Bridge, Scalabilitytesting

UNITVPROTOCOLSYNTHESISANDIMPLEMENTATION 9

Protocol synthesis, Interactive synthesis algorithm, Automatic synthesis algorithm, Automaticsynthesis of SDL from MSC, Protocol Re-synthesis; Requirements of protocol implementation,Object based approach to protocol implementation, Protocol compilers, Tool for protocolengineering

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Total:45Periods

COURSEOUTCOMES:

- Given the network and user requirements and the type of channel over which the network has to operate, the student would be in a position to apply his knowledge for identifying a suitable routing algorithm, implementing it and analyzing its performance.
- The student would also be able to design a new algorithm or modify an existing algorithm to satisfy the evolving demands in the network and by the user applications.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERI

19271C15 ADVANCEDRADIATIONSYSTEMS LT PC
4004

AIM:

Toenhancethestudent'sknowledgeintheareaofvariousantennadesign.

OBJECTIVES:

- Tounderstandantennaradiationanditsparameters.
- Toenhancethestudent'sknowledgeintheareaofvariousantennadesign.
- To design monopole, dipole and patch antenna and to impart the knowledge about modern antennas.

UNITIANTENNA FUNDAMENTALS 9

Antenna fundamental parameters, Radiation integrals ,Radiation from surface and line currentdistributions – dipole, monopole, loop antenna; Mobile phone antenna- base station, handsetantenna; Image; Induction ,reciprocity theorem, Broadband antennas and matching techniques,Balance to unbalance transformer, Introduction to numerical techniques.

UNITIIRADIATIONFROMAPERTURES 9

Field equivalence principle, Radiation from Rectangular and Circular apertures, Uniformaperture distribution on an infinite ground plane; Slot antenna; Horn antenna; Reflector antenna,aperture blockage, and design consideration.

UNITIIIANTENNASYNTHESIS 9

Synthesis problem-Line source based beam synthesis methods (Fourier transform andWoodward-Lawson sampling method – Linear array shaped beam synthesis method – Low sidelobe, narrow main beam synthesis methods - discretization of continuous sources. Schelkunoffpolynomial method

UNITIVAPERTUREANTENNAS 9

Radiation from apertures - Huygens Principle. Rectangular apertures- techniques for evaluatinggain, Circular apertures and their design considerations- Babinets principle Fraunhofer andFresnel diffraction.Complimentary screens and slot antennas. Slot and dipoles as dual antennas.Fourier transform of aperture antenna theory.

UNITVHORN,MICROSTRIP,REFLECTORANTENNAS. 9

E and H plane sectoral Horns. Pyramidal horns. Conical and corrugated Horns. Multimodehorns. Phasecenter.Microstripantennas –feedingmethods. Rectangular patch- Transmissionlinemodel – Circular patch Parabolic Reflector antennas – Prime focus and cassegrain reflectors.Equivalent focal length of Cassegrain antennas. Spillover and taper efficiencies. Optimumillumination.

Total:45Periods

OUTCOMES:

- Abilitytounderstandantennaconcepts
- Abilitytodesignantennaforvarious applications

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Knowledgeofmodernantennadesign

BOOKSFORREFERENCES:

SEMESTERI

19271L17 COMMUNICATIONSYSTEMLAB-I

LTPC
0033

OBJECTIVES:

- ToacquireknowledgeonTransmissionlineandS-parameterestimationofmicrowave devices.
- TointroducethebasicsofMicrostripPatchAntennaandits analysis.
- Tostudy& measuretheperformanceofdigitalcommunicationsystems.
- ToprovideacomprehensiveknowledgeofWirelessCommunication.
- Tolearnaboutthedesignofdigitalfiltersanditsadaptivefiltering algorithms.

LISTOF EXPERIMENTS:

1. AntennaRadiationPatternmeasurement.
2. SimulationofModulationandCodinginaAWGNCommunicationChannelusingSimulation Packages.
3. Implementation ofAdaptiveFilters,periodgram andmultistagemultiratesystem inDSPProcessor
4. PerformanceevaluationofDigitalData TransmissionthroughFiberOptic Link.
5. StudyofSpreadSpectrumTechniques.
6. SimulationofQMFusing SimulationPackages.
7. ImplementationofVideoLink using OpticalFiber.
8. ImplementationofLinearandCyclic Codes.

TOTAL:45PERIODS

OUTCOMES:

Upon thecompletion ofcourse,studentsareableto

- Measureandanalyzevarioustransmissionlineparameters.
- DesignMicrostrippatchantennas.
- Implementtheadaptivefilteringalgorithms
- Togenerateanddetect digitalcommunicationsignalsofvariousmodulation techniques using MATLAB.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

LISTOF ELECTIVES

ELECTIVE–I(SEMESTERI)

ELECTIVE-I
SEMESTERI

19271E16A INTERNETWORKINGAND MULTIMEDIA LT PC
3003

AIM:

Theaimofthismoduleistoaddressthetechnicalissuesandthesolutionsforthe implementationofmultimediaservicesontheInternet.

OBJECTIVES:

- Recent advances in multimedia and networking technologies have made possible the evolution of the Internet from a text-based environment to a multimedia global communication network.
- The objective of this module is to address the technical issues and the solutions for the implementation of multimedia services on the Internet.
- Afterstudyingthis module, studentsareexpectedto beabletoappreciatethestate-of-the- art in Internet technologies for multimedia services.

UNITIMULTIMEDIA NETWORKING 9

Digital sound, video and graphics, basic multimedia networking, multimedia characteristics,evolution of Internet services model, network requirements for audio/ video transform,multimedia coding and compression for text, image, audio and video.

UNITIIBROADBANDNETWORKTECHNOLOGY 9

Broadband services, ATM and IP, IPV6, High speed switching, resource reservation, Buffermanagement, traffic shaping, caching, scheduling, and policing, throughput, delay and jitterperformance. Storage and media services, voice and video over IP, MPEG-2 over ATM/IP,indexing synchronization of requests, recording and remote control.

UNITIIIRELIABLETRANSPORTPROTOCOLANDAPPLICATIONS9

Multicast over shared media network, multicast routing and addressing, scaling multicast andNBMA networks, Reliable transport protocols, TCP adaptation algorithm, RTP, RTCP. MIME,Peer- to-Peer computing, shared application, video conferencing, centralized and distributedconference control,distributed virtual reality, lightweight session philosophy.

UNITIVMULTIMEDIACOMMUNICATIONSTANDARDS 9

Objective ofMPEG- 7 standard, Functionalities and systems ofMPEG-7, MPEG-21 MultimediaFramework Architecture, - Content representation, Content Management and usage, Intellectualproperty management, Audio visual system- H322: Guaranteed QOS LAN systems; MPEG_4video Transport across internet.

UNITVMULTIMEDIACOMMUNICATIONACROSSNETWORKS 9

PacketAudio/videointhenetworkenvironment,videotransportacrossGenericnetworks-Layeredvideocoding,errorResilientvideocodingtechniques,ScalableRatecontrol,Streaming

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

videoacross Internet,Multimedia transportacross ATMnetworks and IP network,Multimediaacross wireless networks.

Total:45Periods

Outcomes

Uponcompletionofthesubject, studentswillbeableto:

- Understandthestate-of-artdevelopmentsinInternettechnologiesandapplications
- UnderstandthedevelopmentofnextgenerationInternet
- Appreciatetheprinciples usedindesigningInternet protocols for multimedia applications, andso understand why standard protocols are designed the way that they are
- Beabletosolveproblemsfor thedesignof multimediaapplicationsonInternet.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

ELECTIVE-I
SEMESTERI

19271E16B **DIGITALIMAGEPROCESSING** **L T PC**
3003

AIM:

Theaimofthiscourseistoexplainthefundamentalsofdigitalimageprocessing.

OBJECTIVES:

- Tounderstandtheimagefundamentals.
- Tounderstandthevariousimagesegmentationtechniques.
- Toextractfeaturesforimageanalysis.
- Tointroducetheconceptsofimageregistrationand imagefusion.

UNITIDIGITALIMAGEFUNDAMENTALS **9**

Elements of digital image processing systems - Elements of visual perception - Psycho visualmodel- Brightness - Contrast - Hue - Saturation - Mach band effect- Color image fundamentals– RGBHSI models - Image sampling - Quantization - Dither - Two-dimensional mathematicalpreliminaries.

UNITIIIMAGE TRANSFORMS **9**

1D DFT - 2Dtransforms - DFT - DCT - DiscreteSine - Walsh- Hadamard - Slant - Haar - KLTSVD - Wavelet Transform.

UNITIIIENHANCEMENTANDRESTORATION **9**

Histogram modification and specification techniques - Noise distributions - Spatial averaging - DirectionalSmoothing – Median- Geometric mean- Harmonic mean– Contra harmonic and Ypmean filters - Homomorphic filtering - Color image enhancement - Image Restoration – Degradation model - Unconstrained and Constrained restoration - Inverse filtering - Removal ofblur caused by uniform linear motion - Wiener filtering - Geometric transformations - Spatialtransformations -Gray Level interpolation.

UNITIVIMAGESEGMENTATIONAND RECOGNITION **9**

Edge detection - Image segmentation by region growing - Region splitting and merging – Edgelinking - Image Recognition - Patterns and pattern classes - Matching by minimum distanceclassifier - Matching by correlation - Back Propagation Neural Network - Neural Networkapplications in Image Processing.

UNITVIMAGECOMPRESSION **9**

Need for datacompression- Huffman- RunLengthEncoding - Shift codes- Arithmeticcoding - VectorQuantization-BlockTruncationCoding-TransformCoding-DCTandWavelet-JPEG -MPEG–Standards-ConceptsofContextbasedCompression.

Total:45Periods

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto

- Explainthefundamentalsofdigitalimageprocessing.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Describeimagevarioussegmentationandfeatureextractiontechniquesforimageanalysis.
- Discusstheconceptsofimageregistrationandfusion.

ELECTIVE-I
SEMESTERI

19271E16C **LASERCOMMUNICATION** **LT PC**
3003

AIM:
Theaimofthiscourseistogainknowledgeabout lightandits propagation

OBJECTIVES:
- Tostudythenonlinearopticdevices.
- To learnabouthholography.
- Tostudythedifferenttypesoflaser andits effects.

UNITI LASERCOMMUNICATIONS 9
Atmospheric low loss windows, opticalsources and detectors forthese windows, Characteristicsof source and detectors. Optical transmitting and receiving antennas.

UNITII SYSTEMDESIGN 9
Link equation, Transmitter terminal, Antenna design, Antenna gain, Beam width, C/N, Opticaldetectors, Optical modulation formats, Deriving error statistics, Signal requirements foracquisition and tracking, Fundamentals of system design.

UNITIIISEMICONDUCTORANDMETALLASERSOURCESFORSATELLITE COMMUNICATIONS 9
PerformanceandGeometries,outputwavelengthcontrol,Semiconductorlaserlifetime,Directand indirect modulation techniques and radiation effects.

UNITIVOPTICALRECEIVERSANDSYSTEMDESIGN 9
Direct detection, coherent detection and demodulation. Gimbals in transceiver design, Receiveroptions and optics; Lasers; antennas / Telescope, Internal optical systems, Transmitter analysis.

UNITVLASERBEAMPOINTINGCONTROL 9
Acquisition andTrackingsystems,System description,Acquisitionmethodology,rackingandpointing control system, RF cross link system design, link equation.

Total:45Periods

Outcomes:
Studentsareableto
- RecognizeandclassifythestructuresofOpticalfiberandtypes.
- Discussthechannelimpairmentslikelossesanddispersion.
- Analyzevariouscouplinglosses.
- ClassifytheOpticalsourcesanddetectorsandtodiscusstheirprinciple.
- FamiliarwithDesignconsiderationsoffiberopticsystems.
- Toperformcharacteristicsofopticalfiber,sourcesanddetectors,designaswellasconduct experiments in software and hardware, analyze the results to provide valid conclusions.

19271C21 MOBILECOMMUNICATION NETWORKS LT PC 4004

AIM:

Theaimofthiscourseistoprovidethebasiccellular systemconcepts.

OBJECTIVES:

- Tounderstandthebasiccellularsystemconcepts.
- Tohaveaninsightintothevariouspropagationmodelsandthespeechcodersusedin mobile communication.
- Tounderstandthemultipleaccesstechniquesandinterferenceeducation techniquesin mobile communication

UNITIWIRELESSCHANNELPROPAGATION ANDMODEL 9

PropagationofEM signals inwirelesschannel–Reflection, diffractionandScattering-Small scale fading-channel classification-channel models–COST-231 Hata model, Longley-Rice Model,NLOSMultipathFadingModels:Rayleigh,Rician,Nakagami,CompositeFading–shadowingDistributions,Linkpowerbudget Analysis

UNITIIOPERATIONANDPROPAGATIONMODELSANDAIRPROTOCOLS9

Operation of first, second, and third generation wireless networks: cellular systems, mediumaccess techniques, Mobile networks Elementary Principles of cellular Telephony ChannelDivision Techniques(TDMA, FDMA, CDMA) Cellular Coverage Methods Network Planningand Resource Allocation,Network Dimensioning ,Mobility Management Procedures

UNITIIIMOBILENETWORKARCHITECTURE 9

GeneralArchitecturedefinition,MobileTerminals(MT,SIM)
RadioSection(BTS, BSC)CoreNetwork(MSC,G-MSC, VLR,HLR,AuC)
User and ControlPlane ProtocolStack, MAP &SS#7, The KeyRole ofSignaling Interfaces andNetworkEntities Relation The Physical Channel, The Logical Channels Terminal, Call andNetwork ManagementProcedures, Network Planning.

UNITIVWIRELESSLOCALAREA NETWORKS 9

Wireless Local Area Networks , General Characteristics of the Hiperlan System, 802.11Standard, BasicDCF access schemeDCF Access Scheme with Handshaking, PCF AccessScheme, The 802.11a Standard, Mobile Ad HocNetworks, Wireless Sensor Networks, RoutingEnergy Efficiency, Localization, Clustering.

UNITVSECURITYISSUESINWIRELESSNETWORKS 9

Security in Wireless Networks, Secure routing, Key Pre-distribution and Management,Encryption andAuthentication, Security in Group Communication, Trust Establishment andManagement, Denial ofService Attacks, Energy-aware security mechanisms, Locationverification, Security on Data fusion.

Total:45Periods

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

Outcomes:

- Discusscellularradio concepts.
- Identifyvariouspropagationeffects.
- Tohaveknowledgeofthemobilesystemspecifications.
- Classifymultipleaccesstechniquesinmobilecommunication.
- Outlinecellular mobilecommunicationstandards.
- Analyzevariousmethodologiesto improvethecellular capacity

SEMESTERII

19271C22 ADVANCEDMICROWAVE SYSTEMS LTPC 4004

AIM:

Theaimofthiscourseistoexplainfundamentalsofmicrowaveintegrated circuits.

OBJECTIVES:

- Tounderstandthefundamentalsof Microwaveintegrated circuits.
- Tounderstandthevariouscomponentsfor WirelessCommunications.
- Toknowthebasictechniques neededforanalysis ofMicrowave systems.

UNITIINTRODUCTIONTOMONOLITHICMICROWAVE INTEGRATED CIRCUITS 9

Introduction to Monolithic Microwave Integrated Circuits (MMICs), their advantages overdiscrete circuits, materials, MMIC fabrication techniques, MOSFET fabrication. Thin filmformation.

UNITIIMICROSTRIPANALYSIS 9

Planar transmission lines for MICs. Methodofconformaltransformation for microstrip analysis,concept of effective dielectric constant, Effective dielectric constant for microstrip, Losses inMicrostrip

UNITIIISLOTLINE ANALYSIS 9

SlotLineApproximateanalysisandfielddistribution,Transverseresonancemethodandevaluation of slot line impedance, comparison with micro strip line.

UNITIVLUMPEDELEMENTSFORMICS 9

Lumped Elements for MICs: Use ofLumped Elements, Capacitive elements, Inductive elementsand Resistive elements.

UNITVMICROWAVESEMICONDUCTORDEVICES& MICROWAVE PASSIVE COMPONENTS 9

Microwave semiconductor Devices & Microwave passive components Parametric amplifiers,tunnel diode, varactor diode, PIN diode, Gunn diode, their principle of operation, performancecharacteristics & applications, scattering parameter calculations of E plane-Tee, Magic Tee,Directional Coupler.

Total:45Periods

OUTCOMES:

- CapabilitytodesignMicrowavecircuits.
- Tobeabletoanalyzemicrowaveintegratedcircuits.

SEMESTERII

19271C23 FIBEROPTICNETWORKING LTPC 4004

AIM:

Theaimofthe course istodesignandanalyze networkcomponents.

OBJECTIVES:

Thestudentsshould bemadetounderstand:

- Opticalsystemcomponentslikeopticalamplifiers,wavelengthconverters.
- Up-to-datesurveyofdevelopmentinOpticalNetworkArchitectures.
- Packetswitching.
- Networkdesignperspectives.
- DifferentOpticalNetworkmanagementtechniquesandfunctions.

UNITI OPTICALFIBERCOMMUNICATIONANDTRANSMISSION CHARACTERISTICS 9

Introduction, Historical development, general system, advantages, disadvantages, andapplications of optical fiber communication, optical fiber waveguides, Ray theory, cylindricalfibersingle mode fiber, cutoff wavelength, mode field diameter. Optical Fibers: fiber materials,photonic crystal, fiber optic cables specialty fibers.

Attenuation, absorption, scattering losses, bending loss, dispersion, Intra modaldispersion, Intermodal dispersion.

UNITII OPTICALSOURCESANDDETECTORS,OPTICALAMPLIFIERSAND NETWORKS 9

Introduction, LED’s, LASER diodes, Photo detectors, Photo detector noise, Response time,double hetero junction structure, Photo diodes, comparison of photo detectors.

Optical amplifiers, basic applications and types, semiconductor optical amplifiers, EDFA.Optical Networks: Introduction, SONET / SDH, Optical Interfaces, SONET/SDH rings, High –speed light – waveguides.

UNITIII FIBERCOUPLERSANDCONNECTORSANDANALOGAND DIGITAL LINKS 9

Introduction, fiber alignment and joint loss, single mode fiber joints, fiber splices, fiberconnectors and fiber couplers.

Analog links – Introduction, overview of analog links, CNR, multichannel transmissiontechniques, RF over fiber, key link parameters, Radio over fiber links, microwave photonics.Digital links – Introduction, point–to–point links, System considerations, link power budget,resistive budget, short wavelength band, transmission distance for single mode fibers, Powerpenalties, nodal noise and chirping.

UNITIV OPTICALRECEIVER 9

Introduction,OpticalReceiverOperation,receiversensitivity,quantumlimit,eyediagrams,coherent detection, burst mode receiver operation, Analog receivers.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITV WDMCONCEPTSANDCOMPONENTS 9

WDM concepts, overview of WDM operation principles, WDM standards, Mach-Zehenderinterferometer, multiplexer, Isolators and circulators, direct thin film filters, active opticalcomponents, MEMS technology, variable optical attenuators, tunable optical fibers, dynamicgain equalizers, optical drop multiplexers, polarization controllers, chromatic dispersioncompensators, tunable light sources.

Total:45Periods

OUTCOMES:

Attheendofthecourse,thestudentshouldbeableto:

- DesignandAnalyzeNetworkComponents
- AssessandEvaluateoptical networks

LISTOF ELECTIVES

ELECTIVE–II(SEMESTERII)

ELECTIVE-II
SEMESTERII

19271E24A HIGHSPEEDSWITCHINGARCHITECTURE LT PC
3003

AIM:

Toexposethestudentto theadvancesin packetswitchingarchitecturesand IP addressing andswitchingsolutionsandapproachestoexploitandintegratethebestfeaturesofdifferent architectures for high speed switching.

OBJECTIVES:

- Toenablethestudenttounderstandthebasicsofswitchingtechnologiesandtheir implementation LANs, ATM networks and IP networks.
- To enable the student to understand the different switching architectures and queuing strategies and their impact on the blocking performances.

UNITIHIGHSPEED NETWORK 9

LANandWANnetworkevolutionthroughISDNtoBISDN-TransfermodeandcontrolofBISDN -SDH multiplexing structure - ATM standard; ATM adaptation layers.

UNITIILANSWITCHINGTECHNOLOGY 9

Switchingconcepts;Switchforwardingtechniques;switchpathcontrol-LANswitching;cutthrough forwarding; store and forward - virtual LANs.

UNITIIIATMSWITCHING ARCHITECTURE 9

Switch models - Blocking networks – basic and enhanced banyan networks - sorting networks – merge sorting – rearrangeable networks - full and partial connection networks – non-blockingnetworks –recursive network – construction and comparison of non-blocking network - switcheswith deflection routing – shuffle switch - tandem banyan.

UNITIVMULTIMEDIACOMMUNICATIONSTANDARDS 9

Objective ofMPEG- 7 standard, Functionalities and systems ofMPEG-7, MPEG-21 MultimediaFramework Architecture, - Content representation, Content Management and usage, Intellectualproperty management, Audio visual system- H322: Guaranteed QOS LAN systems; MPEG_4video Transport across internet.

UNITVIPSWITCHING 9

Addressing mode -IPswitching types-flow driven andtopologydrivensolutions -IPOver ATMaddress and next hop resolution – multicasting - IPv6 over ATM.

Total:45Periods

OUTCOMES:

- Thestudentwouldbeabletoidentifysuitableswitcharchitecturesforaspecifiednetworking scenario and demonstrate its blocking performance.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- The student would be in a position to apply his knowledge of switching technologies,architectures and buffering strategies for designing high speed communication networks and analyse their performance

SEMESTERII

19271E24B DSPPROCESSORARCHITECTUREAND PROGRAMMING

L T PC
3003

AIM:

Theaimofthiscourseistoprovidein-depthknowledgeondigitalsignalprocessor basics.

OBJECTIVES:

Theobjectiveofthiscourseistoprovidein-depthknowledgeon

- DigitalSignalProcessorbasics
- ThirdgenerationDSPArchitectureandprogrammingskills
- AdvancedDSParchitecturesandsomeapplications.

UNITIFUNDAMENTALSOFPROGRAMMABLEDSPs 9

Multiplier and Multiplier accumulator (MAC) – Modified Bus Structures and Memoryaccess inProgrammable DSPs – Multiple access memory – Multi-port memory – VLIW architecture-Pipelining –Special Addressing modes in P-DSPs – On chip Peripherals.

UNITIITMS320C3XPROCESSOR 9

Architecture–Dataformats-Addressingmodes–Groupsofaddressingmodes-Instructionsets -Operation – Block Diagram of DSP starter kit – Application Programs for processing real time signals –Generating and finding the sum of series, Convolution of two sequences, Filter design

UNITIIIADSPPROCESSORSI 9

Architecture of ADSP-21XXandADSP-210XXseriesof DSPprocessors-Addressingmodesand assembly language instructions – Application programs –Filter design, FFT calculation.

UNITIVADVANCEDPROCESSORS 9

Architectureof TMS320C54X:Pipelineoperation,Addressingmodesandassemblylanguageinstructions Introduction to Code Composer studio

UNITVADVANCEDPROCESSORSII 9

ArchitectureofTMS320C6X-ArchitectureofMotorolaDSP563XX–Comparisonofthefeatures of DSP family processors.

Total:45Periods

OUTCOMES:

Studentsshouldbeableto:

- BecomeDigitalSignalProcessorspecializedengineer
- DSPbasedSystemDeveloper

BOOKSFORREFERENCES:

ELECTIVE-II
SEMESTERII

19271E24C DIGITALSPEECHPROCESSING LT PC
3003

AIM:

Toillustratethe conceptsofspeechsignalrepresentations andcoding.

OBJECTIVES:

- Tointroduce speechproductionandrelatedparametersofspeech.
- Tounderstanddifferentspeechmodelingproceduressuch asMarkov andtheir implementation issues.
- Togainknowledgeabouttext analysisand speechsynthesis.

UNITIMECHANICS OFSPEECH 9

Speech production mechanism – Nature of Speech signal – Discrete time modelling of Speechproduction – Representation of Speech signals – Classification of Speech sounds – Phones –Phonemes – Phonetic and Phonemic alphabets – Articulatory features.
Music production – Auditory perception – Anatomical pathways from the ear to the perceptionof sound – Peripheral auditory system – Psycho acoustics

UNITIITIMEDOMAINMETHODSFORSPEECHPROCESSING 9

Time domain parameters of Speech signal – Methods for extracting the parameters Energy, Average Magnitude – Zero crossing Rate – Silence Discrimination using ZCR and energy – ShortTime AutoCorrelationFunction–PitchperiodestimationusingAuto CorrelationFunction

UNITIIIFREQUENCYDOMAINMETHODFORSPEECHPROCESSING 9

Short Time Fourier analysis – Filter bank analysis – Formant extraction – Pitch Extraction – Analysis by Synthesis- Analysis synthesis systems- Phase vocoder—Channel Vocoder. Homomorphic speech analysis: Cepstral analysis of Speech – Formant and Pitch Estimation –

UNITIVLINEARPREDICTIVEANALYSISOFSPEECH 9

Formulation of Linear Prediction problem in Time Domain – Basic Principle – Auto correlationmethod– Solution of LPC equations — Durbin's Recursive algorithm – lattice formation andsolutions – Comparison of different methods — Formant analysis – VELP – CELP.

UNITV APPLICATIONOFSPEECH&AUDIOSIGNALPROCESSING 9

Algorithms: SpectralEstimation, dynamic time warping, hiddenMarkovmodel – Music analysis– Pitch Detection – Feature analysis for recognition – Music synthesis – Automatic SpeechRecognition – Feature Extraction for ASR — ASR systems– Voice response system – SpeechSynthesis: Text to speech, voice over IP.

Total:45Periods

OUTCOMES:

Studentswillbeableto:

- Modelspeechproductionsystemanddescribethefundamentalsof speech.
- Extractandcomparedifferentspeechparameters.

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

- Chooseanappropriatestatisticalspeechmodelforagivenapplication.
- Designaspeechrecognitionsystem.
- Usedifferenttextanalysisandspeechsynthesistechniques.

ELECTIVE–III(SEMESTERII)

ELECTIVE-III
SEMESTERII

19271E25A	**DIGITALCOMMUNICATIONRECEIVERS**	**LT PC** **3003**

AIM:

Theaimofthiscourseistounderstandthebasicprinciplesofdigitalcommunication techniques.

OBJECTIVES:

- Tounderstandthebasicprinciplesofdigitalcommunicationtechniques.
- Togainknowledgeaboutreceivers forAWGNchannelandFadingchannels.
- Tounderstandtheconceptsofsynchronizationandadaptiveequalizationtechniques.

UNITIREVIEW OFDIGITALCOMMUNICATION TECHNIQUES 9

Basebandandbandpasscommunication,signalspacerepresentation,linearandnon-linearmodulation techniques, and spectral characteristics of digital modulation.

UNITIIOPTIMUMRECEIVERSFORAWGNCHANNEL 9

Correlation demodulator, matched filter, maximum likelihood sequence detector, Optimumreceiver for CPM signals, M-aryorthogonalsignals, envelope detectors for M-aryand correlatedbinary signals.

UNITIIIRECEIVERSFORFADINGCHANNELS 9

Characterizationof fading multiple channels, statisticalmodels, slow fading, frequencyselectivefading, diversity technique, RAKE demodulator, coded waveform for fading channel

UNITIVSYNCHRONIZATIONTECHNIQUES 9

Carrier and symbol synchronization, carrier phase estimation – PLL, Decision directed loops,symbol timing estimation, maximum likelihood and non-decision directed timing estimation,joint estimation.

UNITVADAPTIVEEQUALIZATION 9

Zero forcing algorithm, LMS algorithm, Adaptive decision – feedback equalizer, andequalizationofTrellis-codedsignals, Kalmanalgorithm, blindequalizers, andstochasticgradientalgorithm, Echo cancellation

Total:45Periods

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto

- Applybasicprinciples ofdigitalcommunicationtechniques.
- DiscussonreceiversforAWGN&Fadingchannel
- Describevarioussynchronizationtechniques.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Designadaptiveequalizationalgorithmstosatisfytheevolvingdemandsindigitalcommunication.

19271E25B **SOFTCOMPUTING** **LT PC**
3003

AIM:

Theaimofthiscourse istoknowthe basicsofartificialneuralnetworks.

OBJECTIVES:

- Toprovideadequateknowledgeaboutfeedforward/feedbackneural networks
- Toapplytheconceptoffuzzylogicinvarioussystems.
- Tohavetheideaaboutgeneticalgorithms.
- ToprovideadequateknowledgeabouttheapplicationsofSoftComputing.

UNITIARTIFICIALNEURAL NETWORKS 9

Basicconcepts-single layerperceptron-Multilayer perceptron-Adaline-Madaline-Learningrules-Supervised learning-Back propagation networks-Training algorithm, Practical difficulties, Advanced Algorithms-Adaptive network- Radial basis network-modular network-Applications

UNITIIUNSUPERVISED NETWORKS 9

Introduction- unsupervised learning -Competitive learning networks-Kohonen self organisingnetworks-Learning vector quantisation - Hebbian learning - Hopfield network-Contentaddressable nature, Binary Hopfield network, Continuous Hopfield network TravelingSalesperson problem - Adaptive resonance theory –Bidirectional Associative Memory-Principlecomponent Analysis

UNITIIIFUZZYSYSTEMS 9

Fuzzy sets-Fuzzy rules: Extension principle, Fuzzy relation- fuzzy reasoning – fuzzy inferencesystems:Mamdani model, Sugeno model. Tsukamoto model -Fuzzy decision making-Multiobjective Decision Making,-Fuzzy classification-Fuzzy control methods -Application

UNITIVNEURO-FUZZYMODELLING 9

Adaptive Neuro Fuzzy based inference systems – classification and regression trees: decisiontress, Cart algorithm – Data clustering algorithms: K means clustering, Fuzzy C meansclustering, Mountain clustering, Subtractive clustering – rule base structure identification – Neuro fuzzy control: Feedback Control Systems, Expert Control, Inverse Learning, SpecializedLearning, Back propagation through Real –Time Recurrent Learning.

UNITVGENETIC ALGORITHM 9

Fundamentals of genetic algorithm-Mathematical foundations-Genetic modeling-Survival of thefittest crossover-Inversion and Deletion-mutation-reproduction-Generational cycle-rank method-rank space method- Other derivative free optimization-simulated annealing, Random search,Downhill simplex search-Application

Total:45Periods

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

OUTCOMES:

- Knowledgeonconceptsofsoftcomputationaltechniques.
- Abletoapplysoftcomputationaltechniquestosolvevariousproblems.
- Motivatetosolveresearchoriented problems.

SEMESTERII

19271E25C COMMUNICATIONNETWORKSECURITY LTPC
3003

AIM:

Theaimofthiscourseistounderstandtheneedand conceptofsecurity.

OBJECTIVES:

Thestudentsshouldbemadeto:

- Understandtheneedandconceptofsecurity
- Learn cryptosystems

UNITISYMMETRIC CIPHERS 9

Introduction – Services, Mechanisms and Attacks, OSI securityArchitecture, Modelfor networkSecurity; Classical Encryption Techniques- Symmetric Cipher Model, Substitution Techniques,Transposition Techniques, Product ciphers , DataEncryption Standard- Block Cipher Principles,Strength of DES,Differential and Linear CryptAnalysis, Block Cipher Design Principles, BlockCipher Modes of operation, Stegnography.

UNITIIADVANCEDENCRYPTIONSTANDARDANDSTREAMCIPHERS9

Evaluation Criteria for AES, AES Cipher; Contemporary Symmetric Ciphers- Triple DES,Blowfish, RC5-Characteristics of Advanced Symmetric Block Ciphers, Streamciphers based onLFSRs,RC4 Stream Cipher; Random Number Generation. Traffic Confidentiality, KeyDistribution.

UNITIIIPUBLIC-KEYENCRYPTION ANDHASH FUNCTIONS 9

Public Key Cryptography and Key Management- RSA Algorithm and other public keycryptosystems-,Diffie-Hellman Key Exchange, Elliptic Curve arithmetic, Elliptic CurveCryptography; Message Authentication and Hash Functions- Authentication Requirements, -MD5 Message Digest Algorithm; Secure Hash Algorithm, RIPEMD 160, HMAC; DigitalSignatures and Authentication Protocols- Digital Signature Standards.

UNITIVNETWORKSECURITYPRACTICE 9

Authentication Applications- Kerberos, X.509 Authentication Service; Electronic MailSecurity- Pretty Good Privacy, S/MIME; IP Security- overview and Architecture, Authentication Header,Encapsulating SecurityPayload, Combining Security Associations; Web Security- Web SecurityConsiderations, Secure Sockets Layer and Transport Layer Security, Secure ElectronicTransaction.

UNITVSYSTEMSECURITY 9

Intruders-IntruderDetection,PasswordManagement;MaliciousSoftware-VirusandRelatedThreats, Virus Countermeasures; Firewalls- Firewall Design Principles, Trusted Systems.

Total:45Periods

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

OUTCOMES:

Attheendofthiscourse, thestudentsshouldbeableto:

- Explaindigitalsignaturestandards
- Discussauthentication
- Explainsecurityatdifferent layers

SEMESTERII

19271L26 COMMUNICATIONSYSTEMSLAB-II LT PC 0033

OBJECTIVES:

- To enable the students to verify the basic principles and design aspects involved in high frequency communication systems components
- To expose the student to different high frequency components and conduct the experiments to analyze and interpret data to produce meaningful conclusions and match with theoretical concepts.
- TodesignanddevelopRFcomponentsusingmicrostrip technology

LISTOF EXPERIMENTS:

1. SimulationofAudioandspeechcompressionalgorithms
2. SimulationofEZW/SPIHTImagecoding algorithm.
3. SimulationofMicrostripAntennas
4. S-parameterestimationofMicrowavedevices.
5. StudyofGlobalPositioningSystem.
6. PerformanceevaluationofsimulatedCDMASystem.
7. DesignandtestingofaMicrostripcoupler.
8. Characteristicsofλ/4andλ/2transmissionlines.

TOTAL:45PERIODS

OUTCOMES:

UponCompletionofthecourse, thestudentswillbeableto:

- Applyknowledgetoidentifyasuitablearchitectureandsystematicallydesignan RFsystem.
- Comprehensivelyrecord and report the measured data, and would be capable ofanalyzing, interpreting the experimentally measured data and producing meaningful conclusions.
- Designanddevelopmicrostrip filters.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERII

19271CRM **RESEARCHMETHODOLOGY** **LT PC**
3003

AIM:

Togiveanexposuretodevelopmentofresearchquestionsandthevariousstatistical methodssuitabletoaddressthemthroughavailableliterature,withbasiccomputational operators.

OBJECTIVES:

- Tounderstand theapproachestowardsandconstraintsingoodresearch.
- Toidentifyvariousstatisticaltoolsusedinresearch methodology
- Toappreciateandcomposethemanuscriptforpublication
- Totraininbasiccomputationalandexcel-skillsforresearchinengineering.

OUTCOME:

Ability todevelopresearchquestionsandthevariousresearchstrategies,andcompile research results in terms of journal manuscripts.

PREREQUISITES:

ResearchMethodologycourseinUGlevelorequivalentknowledge.

UNITI

Introduction to Research — Criteria of Good Research,Research Problem:Definition ofresearch problem, selecting the problem - Necessity of defining the problem - Techniquesinvolved in defining the problem-Basic principles of experimental designs-Descriptive andexperimentaldesign– different typesofexperimentaldesign – Validityoffindings – internalandexternal validity – Variables in Research – Measurement and Scaling – Different scales. Ethics& Misconduct in research, Plagiarism

UNITII

Formulation of Hypothesis – Sampling techniques –Sampling error and sample size-Methods ofdata collection – Primary and secondary data – observation – Collection of literature, manualcollection from library, usage of library, collection of literature fromScopus, ScienceDirect etc.,compiling literature, software utilization in literature collection- Processing and analysis of data– editing – coding – transcription – tabulation –outline of statistical analysis.

UNITIII

Data Analysis using Excel- Tabulation of Data in excel (Creating Master Table and Sub Table),Formulas and Functions, Filters and Sort and ValidationLists, Data fromExternalSources. DataAnalysis Using Charts and Graphs(Pivot Table & Charts), Time Value of Money, Measure ofcentral tendency: mean, median, mode, Measure of dispersion: variance, standard deviation,Coefficient of variation. Correlation, regression lines. Z-test, t- test F-test, ANOVA one wayclassification, Chi square test, independence of attributes. Time series: forecasting Method ofleast squares, Moving average method, Introduction to presentation tool, features and functions,Creating Presentation, Customizing presentation.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

UNITIV
Various research methods-Design of Experiments, Response Surface Methodology, Taguchi Methods- Modeling & Simulation of Engineering Systems, ArtificialNeuralNetworks,FuzzyLogic,MATLAB-GraphTheory-FiniteElementMethods, ComputationalFluidDynamics-RprogramminginStatistics-opensourcesoftware

UNITV
Review of literature, Report writing – target audience – types of reports – contents of reports – styles and Conventions in reporting – steps in drafting a report. Basic concept of research paperwriting for Journals and formats of publications in Journals, Report Structure - writing researchabstract - introduction, review of literature, result, conclusions, Concepts of Bibliography andreferences

OUTCOMES:
UponCompletionofthecourse, thestudentswillbeableto:

- Understandtheapproachestowardsandconstraintsin goodresearch.
- Identifyvariousstatisticaltoolsusedinresearch methodology
- Traininbasiccomputationalandexcel- skills forresearchinengineering.

SEMESTERIII

19271C31 WIRELESSSENSOR NETWORKS LT PC
4004

AIM:

Theaimofthiscourseistostudyaboutwireless IParchitecture,PacketDataProtocol and LTEnetworkarchitecture.

OBJECTIVES:

- To study about advanced wireless networks, LTE, 4G and Evolutions from LTE to LTE.
- Tostudyaboutadaptivelinklayer, hybridARQandgraphrouting protocol.
- Tostudyaboutmobilitymanagement,cellularnetwork,andmicrocellular networks

UNITI OVERVIEWOFWIRELESSSENSOR NETWORKS 8

ChallengesforWirelessSensorNetworks,EnablingTechnologiesForWirelessSensorNetworks.

UNITII ARCHITECTURES 9

Single-Node Architecture - Hardware Components, Energy Consumption of SensorNodes ,Operating Systems and Execution Environments, Network Architecture -Sensor NetworkScenarios, Optimization Goals and Figures of Merit, GatewayConcepts.

UNITIII NETWORKINGSENSORS 10

Physical Layer and Transceiver Design Considerations, MAC Protocols for WirelessSensorNetworks, Low Duty Cycle Protocols and Wake Up Concepts - S-MAC , TheMediation DeviceProtocol, Wake Up Radio Concepts, Address and Name Management,Assignment of MACAddresses, Routing Protocols- Energy-Efficient Routing,Geographic Routing.

UNITIV INFRASTRUCTUREESTABLISHMENT 9

TopologyControl,Clustering,TimeSynchronization,LocalizationandPositioning,SensorTasking and Control.

UNITVSENSORNETWORKARCHITECTUREANDMACPROTOCOLS9

Single node architecture – Hardware components, energyconsumptionofsensornodes, Networkarchitecture – Sensor network scenarios, types ofsources and sinks, single hop versus multi-hopnetworks, multiple sinks and sources, design principles, Development of wireless sensornetworks. , physical layer and transceiver design consideration in wireless sensor networks,Energy usage profile, choice of modulation, Power Management - MAC protocols – fundamentals of wireless MAC protocols, low duty cycle protocols and wakeup concepts,contention-based protocols, Schedule-based protocols - SMAC, BMAC, Traffic-adaptivemediumaccess protocol(TRAMA), Link Layer protocols – fundamentals task and requirements,error control, framing, link management.

TOTAL- 45PERIODS

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

OUTCOMES:

- Familiarwiththelatest4GnetworksandLTE
- UnderstandaboutthewirelessIParchitectureandLTEnetworkarchitecture.
- Familiarwiththeadaptivelinklayerandnetworklayergraphsand protocol.
- Understandaboutthemobilitymanagementandcellular network.
- Understandaboutthewirelesssensornetworkarchitectureanditsconcept.

LISTOF ELECTIVES

ELECTIVE–IV(SEMESTERIII)

ELECTIVE-IV
SEMESTERIII

19271E32A SOFTWAREDEFINEDRADIO LT PC
3003

AIM:

Theaimofthiscourseistounderstandthe conceptsofsoftwaredefinedradio.

OBJECTIVES:

Thestudentsshould bemadeto be

- Understandtheconceptsofsoftwaredefined radio
- Learnspectrumsensinganddynamic spectrumaccess

UNITI: IntroductiontoSDR 9

The Need for Software Radios-Characteristics and Benefits of a Software Radio. DesignPrinciples of a Software Radio.Radio frequency implementation issues-The Purpose of the RFFront-End. Dynamic Range: The Principal Challenge of Receiver Design. RF Receiver Front-End Topologies. Enhanced Flexibility of the RF Chain with Software Radios. Importance of theComponents -Transmitter Architectures and their Issues. Noise and Distortion in the RF Chain.ADC and DAC Distortion.

UNITII:DirectDigitalSynthesis 9

Introduction. Comparison ofDirect DigitalSynthesis with Analog SignalSynthesis. Approachesto Direct Digital Synthesis. Analysis of Spurious Signals. Spurious Components due to PeriodicJitter. Band pass Signal Generation. Performance of Direct Digital Synthesis Systems. HybridDDS-PLL Systems. Applications of direct Digital Synthesis. Generation of Random Sequences.ROM Compression Techniques.

UNITIIISignalProcessorandMultiRateProcessing Techniques 9

Introduction.SampleRateConversionPrinciples. PolyphaseFilters.DigitalFilterBanks.TimingRecovery in Digital Receivers Using Multirate Digital Filters.
DSPProcessors;FieldProgrammableGateArrays;Trade-OffsinUsingDSPs,FPGAs,andASICs; Power Management Issues; Using a Combination of DSPs, FPGAs, and ASICs.

UNITIV:Smart Antennas 9

Vector channel modeling; Benefits of smart antennas; Structures for Beam forming Systems;Smart Antenna Algorithms.Diversity and Space-Time Adaptive Signal Processing; Algorithmsfor Transmit STAP; Hardware Implementation of Smart Antennas; Array Calibration.

UNITV: Applications–WirelessAspectsofTele-Health Care 9

The application of advanced telecommunication , the special requirements especially related toreliability, privacy and trust, Regulatory and safety aspects of tele-health care, Cognitive radioand flexible spectrum usage for tele-healthcare, Cooperative Communications for Tele-health.Case studies: JTRS radio system ,Software defined base stations.

SKILLDEVELOPMENT EMPLOYABILITY ENTREPRENUEURSHIP

SEMESTERIII

19271E32B **SATELLITECOMMUNICATION** **LT PC**
3003

AIM:

Tounderstandthebasicsofsatelliteorbits.Tounderstandthesatellitesegmentandearth segment.

OBJECTIVES:

Thestudentsshould bemadeto be

- LearnM2Mdevelopmentsandsatellite applications
- UnderstandSatelliteCommunicationInIpv6Environment

UNITIORBITAL MECHANICS **9**

Kepler's laws of motion, Orbits, Orbit Equations, Orbit Description, Locating the Satellite in theOrbit and with Respect to Earth, Orbital Elements-Look Angle Determination and Visibility -Orbital Perturbations,Orbit Determination, Launch Vehicles, Orbital Effects in CommunicationSystem - Performance Attitude control; Satellite launch vehicles. spectrum allocations forsatellite systems.

UNITIISPACECRAFTSUBSYSTEMSANDEARTH STATION **9**

Spacecraft Subsystems, Altitude and Orbit Control, Telemetry and Tracking, PowerSystems,Communication Subsystems, Transponders, Antennas, Equipment Reliability, EarthStations, Example of payloads of operating and planned systems.

UNITIIISPACELINKS **9**

The Space Link, Satellite Link Design - Satellite uplink -down link power Budget, BasicTransmission Theory, System Noise Temp, G/T Ratio, Noise Figure, Downlink Design, Designof Satellite Links for Specified C/N - Microwave Propagation on Satellite-Earth Paths.Interference betweensatellite circuits, EnergyDispersal, propagationcharacteristics of fixed andmobile satellite links.

UNITIVMULTIPLEACCESSTECHNIQUESANDNETWORKASPECTS **9**

Single access vs. multiple access (MA). Classical MA techniques: FDMA, TDMA. Singlechannel per carrier (SCPC) access - Code division multiple access (CDMA). Demandassignment techniques. Examples of MA techniques for existing and planned systems (e.g. thesatellite component of UMTS).Mobile satellite network design, ATM via satellite. TCP/IP viasatellite - Call control, handover and call set up procedures.
Hybridsatellite-terrestrialnetworks

UNITVSERVICESAND APPLICATIONS **9**

Fixed and mobile services - Multimedia satellite services - Advanced applications based onsatellite platforms - INTELSAT series - INSAT, VSAT, Remote Sensing - Mobile satelliteservice: GSM. GPS,INMARSAT, Navigation System, Direct to Home service (DTH), Specialservices, E-mail, Videoconferencing and Internet connectivity

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERIII

19271E32C **CDMASYSTEMS** **LT PC**
3003

AIM:

Theaimofthiscourseistodefinethebasicsofcellularcommunicationsandexplainthe ArchitectureOFGSM&itsRadioChannels.

OBJECTIVES:

Thestudentsshould bemadeto be

- understand cellular concept, widelypopular 2G digital, TDMA based mobile systemGSM and modern mobile wireless system CDMA.

UNITIBASICCONCEPTS OFCDMA **9**

Spread spectrum communication techniques (DS-CDMA, FH-CDMA),Synchronization inCDMA system, Detection and False alarm probabilities, Early-Late gate measurement statistics,Information capacity of Spread Spectrum Systems.

UNITIIIS-95 CDMA TECHNIQUES **9**

SpreadingCodes,Powercontrol,Handovertechniques,Physicalandlogicalchannelsandprocessing (Forward and reverse links)

UNITIIIWCDMA /CDMA 2000 **9**

IntroductiontoIMT2000,CDMA2000-Physicallayercharacteristics,modulation&demodulationprocess , Handoff and power control in 3G systems.

UNITIVMULTICARRIERCDMA SYSTEMS **9**

MulticarrierCDMA,Systemdesign,Performanceparameters–BERlowerbound,Multiuserdetection, UTRA, FDD and TDD systems.

UNITVOPTICALCDMA **9**

Prime Codes and it's properties, Generalized and Extended Prime Codes,Experimentaldemonstration of Optical CDMA, Synchronization of Optical CDMA networks, Multiwavelength Optical CDMA networks.

TOTAL:45PERIODS

OUTCOMES:

Attheendofthecourse,thestudent shouldbeableto:

- AnalyzeMIMOsystem.
- Discussmillimeterwavecommunication.
- Demonstratesoftwaredefined radio andcognitiveradio.

BOOKSFORREFERENCES:

LISTOF ELECTIVES

ELECTIVE–V(SEMESTERIII)

ELECTIVE- V
SEMESTERIII

19271E33A WAVELETSANDMULTIRESOLUTIONPROCESSING

L T PC
3003

AIM:

Tointroducethefundamentalsconceptsofwavelet transforms.

OBJECTIVE:

- TostudysystemdesignusingWavelets
- Tolearnthedifferentwaveletfamilies&theirapplications.

UNITI INTRODUCTION 9

Vector Spaces - properties - dot product - basis - dimension, orthogonality and orthonormality - relationship between vectors and signals - Signal spaces - concept of Convergence – GeneralisedFourier Expansion.

UNITIIMULTIRESOLUTIONANALYSIS 9

Definition of Multi Resolution Analysis (MRA) – Haar basis - Construction of generalorthonormal MRA Wavelet basis– Continuous time MRA interpretation for the DTWT – Discrete time MRA- Basis functions for the DTWT – PR-QMF filter banks

UNITIIICONTINUOUSWAVELETTRANSFORM 9

Wavelet Transform- definitionand properties - concept ofscale and itsrelationwith frequency- Continuous Wavelet Transform (CWT) - Scaling function and wavelet functions (Daubechies, Coiflet,Mexican Hat, Sinc, Gaussian, Bi-Orthogonal) - Tiling of time -scale plane for CWT.

UNITIVDISCRETEWAVELETTRANSFORM 9

Filter Bank and sub band coding principles - Wavelet Filters - Inverse DWT computation byFilterbanks -Basic Properties of Filter coefficients - Choice of wavelet function coefficients - Derivations of Daubechies Wavelets - Multi-band Wavelet transforms. Introduction to liftingScheme

UNITVAPPLICATIONS 9

Signal Compression – Image Compression techniques: EZW-SPHIT Coding - Imagedenoisingtechniques:Noise estimation - Shrinkage rules -. Shrinkage Functions - Edge detectionand object Isolation, Image Fusion, and Object Detection.

TOTAL:45PERIODS

OUTCOME:

- ThestudentswillbeabletoapprehendthedetailedknowledgeabouttheWavelettransform & its applications.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

SEMESTERIII

19271E33B HIGHPERFORMANCECOMMUNICATION NETWORKS
L T PC
3003

AIM:
Tofamiliarizeconceptsandterminologyassociatedwith ATM,FrameRelay,MPLS, Bluetooth technology**.**

OBJECTIVES:

- Toappreciatetheneedforinteroperablenetworkmanagementasatypical distributed application
- To beaware ofcurrent trendsin networktechnologies

UNITIPACKETSWITCHED NETWORKS 9
OSIandIPmodels,Ethernet(IEEE802.3),Tokenring(IEEE802.5),WirelessLAN(IEEE802.11) FDDI,DQDB, SMDS: Internetworking with SMDS

UNITIIISDNANDBROADBAND ISDN 9
ISDN-overview,interfacesandfunctions,Layersandservices-SignalingSystem7(SS7)-Broadband ISDN architecture and Protocols.

UNITIIIATMANDFRAMERELAY 9
ATM: Main features-addressing, signaling and routing, ATM header structure-adaptation layer,management and control, ATM switching and transmission.
Frame Relay: Protocols and services,Congestion control,Internetworking with ATM,Internetand ATM, Frame relay via ATM.

UNITIVADVANCEDNETWORKARCHITECTURE 9
IP forwarding architectures overlay model, Multi Protocol Label Switching (MPLS), integratedservices in the Internet, Resource Reservation Protocol (RSVP), Differentiated services

UNITVBLUETOOTH TECHNOLOGY 9
The Bluetooth module-Protocol stack Part I: Antennas, Radio interface, Base band, The Linkcontroller, Audio, The Link Manager, The Host controller interface; The Bluetooth module-Protocolstack Part I:Logical link controland adaptation protocol, RFCOMM, Service discoveryprotocol, Wireless access protocol, Telephony control protocol.

TOTAL:45PERIODS

OUTCOMES:
Afterthecompletionofthiscourse,studentswillbeableto

- Diagnoseproblemsandmakeminorrepairstocomputernetworksusingappropriate diagnostics software
- DemonstratehowtocorrectlymaintainLANcomputersystems
- Maintainthenetworkbyperformingroutinemaintenancetasks
- Applynetworkmanagementtools

ELECTIVE- V
SEMESTERIII

19271E33C ADVANCEDMICROPROCESSORSAND MICROCONTROLLERS
L T PC
3003

AIM:

Tointroducetheadvancedfeaturesinmicroprocessorsandmicrocontrollers.

OBJECTIVES:

- Toenablethestudentstounderstandvariousmicrocontrollerarchitectures
- Toexposethe studentstothefundamentalsofmicroprocessor architecture.

UNITIMICROPROCESSORARCHITECTURE 9

Instruction set – Data formats – Instruction formats – Addressing modes – Memory hierarchy – register file – Cache–Virtualmemoryandpaging –Segmentation–Pipelining –The instructionpipeline –pipeline hazards – Instruction level parallelism – reduced instruction set – Computerprinciples – RISC versus CISC – RISC properties – RISC evaluation – On-chip register filesversus cache evaluation

UNITIIHIGHPERFORMANCECISCARCHITECTURE– PENTIUM 9

The software model – functional description – CPU pin descriptions – RISC concepts – busoperations – Super scalar architecture – pipelining – Branch prediction – The instruction andcaches –Floating point unit –protected mode operation – Segmentation – paging – Protection –multitasking –Exception and interrupts – Input /Output – Virtual 8086 model – Interruptprocessing -Instruction types –Addressing modes – Processor flags – Instruction set - programming the Pentium processor.

UNITIIIHIGHPERFORMANCERISCARCHITECTURE:ARM 9

TheARMarchitecture–ARMassemblylanguageprogram–ARMorganizationandimplementation – The ARM instruction set - The thumb instruction set – ARM CPU cores.

UNITIVMOTOROLA68HC11MICROCONTROLLERS 9

Instructions and addressing modes – operating modes – Hardware reset – Interrupt system – ParallelI/O ports – Flags – Real time clock – Programmable timer – pulse accumulator – serialcommunication interface – A/D converter – hardware expansion – Assembly languageProgramming

UNITVPICMICROCONTROLLER 9

CPUarchitecture–Instructionset-Interrupts–Timers–I/Oportexpansion–I2Cbusforperipheral chip access – A/D converter – UART

TOTAL:45PERIODS

OUTCOMES:

- The studentwill be able to workwith a suitablemicroprocessor/ microcontrollerfora specific real world application.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

19271E34A SIMULATIONOFCOMMUNICATION NETWORKS **L T PC**

3003

AIM:

Theaimofthiscourseistolearnmodelingand simulation.

OBJECTIVES:

Thestudentsshould bemadeto be

- Learnmodelingand simulation
- UnderstandMonteCarlosimulation
- Studychannelmodeling andmobility modeling

UNITIMODELLINGOFCOMMUNICATION SYSTEM 9

Model of speech and picture signals, Pseudo noise sequences, Non-linear sequences, Analogchannel model, Noise and fading, Digital channel model-Gilbert model of bursty channels, HF,Troposcatter and satellite channels, Switched telephone channels, Analog and Digitalcommunication system models, Light wave system models.

UNITIISIMULATIONOFRANDOMVARIABLESANDRANDOMPROCESS9

Univariate and multivariate models, Transformation of random variables, Bounds andapproximation,Random process models-Markov and ARMA Sequences, Sampling rate forsimulation, Computer generation and testing of random numbers

UNITIIIESTIMATIONOFPERFORMANCEMEASURES 9

Quality of an estimator, estimator for SNR, Probability density functions of analogcommunication system, BER of digital communication systems, Monte Carlo method andImportance of sampling method, estimation of power spectral density

UNITIVCOMMUNICATIONNETWORKS 9

Queuingmodels,M/M/IandM/M/I/Nqueues,Littleformula,Burke'stheorem ,M/G/Iqueue,Embedded Markov chain analysis of TDM systems, Polling, Random access systems

UNITVNETWORKOF QUEUES 9

Queues in tandem, store and forward communication networks, capacity allocation, Congestionand flowchart, Routing model, Network layout and Reliability

TOTAL:45PERIODS

OUTCOMES:

Attheendofthiscourse, thestudentshouldbeableto

ELECTIVE- VI
SEMESTERIII

19271E34C MOBILEADHOC NETWORKS L T PC
3003

AIM:

Theaimofthiscourse istounderstandthe basicsofAd-hoc &SensorNetworks.

OBJECTIVES:

- Tolearnvariousfundamentalandemerging protocolsofalllayers.
- Tostudyabout theissuespertainingto major obstacles inestablishment andefficient management of Ad-hoc and sensor networks.
- TounderstandthenatureandapplicationsofAd-hocandsensornetworks.
- TounderstandvarioussecuritypracticesandprotocolsofAd-hocandSensor Networks.

UNITI INTRODUCTION 9

Introduction to Ad Hoc networks – definition, characteristics features, applications.Characteristics of Wireless channel, Adhoc Mobility Models: - entity and group models.

UNITIIMEDIUMACCESSPROTOCOLS 9

MAC Protocols: design issues, goals and classification. Contention based protocols, reservationbased protocols, scheduling algorithms, protocols using directional antennas. IEEE standards:802.11a, 802.11b, 802.11g, 802.15. HIPERLAN.

UNITIIINETWORKPROTOCOLS 9

Addressing issues in ad hoc network, Routing Protocols: Design issues, goals and classification.Proactive Vs reactive routing, Unicast routing algorithms, Multicast routing algorithms, hybridrouting algorithm, Power/ Energy aware routing algorithm,Hierarchical Routing, QoS awarerouting.

UNITIVEND-TO-ENDDELIVERYANDSECURITY 9

Transport layer: Issues in designing- Transport layer classification, adhoc transport protocols.Security issues in adhoc networks: issues and challenges, network security attacks, securerouting protocols.

UNITVCROSS LAYERDESIGN AND INTEGRATIONOFADHOC FOR 4G9

CrosslayerDesign:Need forcrosslayerdesign,crosslayeroptimization,parameteroptimizationtechniques, Cross layer cautionaryperspective, Co-operative networks:-Architecture, methodsofcooperation, co-operative antennas, Integrationofad hoc networkswithother wired and wirelessnetworks.

TOTAL:45PERIODS

OUTCOMES:

UponCompletionofthecourse, thestudentsshould beableto

- Identifydifferentissuesinwirelessadhocandsensornetworks.
- Toanalyzeprotocolsdevelopedforadhocandsensornetworks.

SKILLDEVELOPMENT **EMPLOYABILITY** **ENTREPRENUEURSHIP**

- Toidentifyandaddressthesecuritythreatsinadhocandsensornetworks.
- EstablishaSensornetworkenvironmentfordifferenttypesofapplications.

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF ELECTRICAL & ELECTRONICS ENGINEERING

PROGRAM HANDBOOK

B.TECH FULL TIME

[REGULATION 2019]
[for candidates admitted to B.Tech EEE program from June 2019 onwards]

PROGRAMME EDUCATIONAL OBJECTIVES:

PEO1: To enable graduates to pursue research, or have a successful career in academia or industries associated with Electronics and Communication Engineering, or as entrepreneurs.

PEO2: To provide students with strong foundational concepts and also advanced techniques and tools in order to enable them to build solutions or systems of varying complexity.

PEO3: To prepare students to critically analyze existing literature in an area of specialization and ethically develop innovative and research oriented methodologies to solve the problems identified.

PROGRAMME OUTCOMES:

Engineering Graduates will be able to:

A. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

B. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

C. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

D. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

E. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

F. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

G. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

H. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

I. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

J. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

K. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

L. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

*RSD-Research Skill Development

SYLLABI

19147S11 **COMMUNICATIVE ENGLISH**

L	T	P	C
4	1	0	4

OBJECTIVES:

- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop their listening skills, which will, enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To help learners develop vocabulary of a general kind by developing their reading skills

UNIT I SHARING INFORMATION RELATED TO ONESELF/FAMILY& FRIENDS 12

Reading- short comprehension passages, practice in skimming-scanning and predicting- **Writing-** completing sentences-- developing hints. **Listening-** short texts- short formal and informal conversations. **Speaking-**introducing oneself - exchanging personal information- **Language development-** Wh- Questions- asking and answering-yes or no questions- parts of speech. **Vocabulary development--** prefixes- suffixes- articles.- count/ uncount nouns.

UNIT II GENERAL READING AND FREE WRITING 12

Reading - comprehension-pre-reading-post reading- comprehension questions (multiple choice questions and /or short questions/ open-ended questions)-inductive reading- short narratives and descriptions from newspapers including dialogues and conversations (also used as short Listening texts)- register- **Writing** – paragraph writing- topic sentence- main ideas- free writing, short narrative descriptions using some suggested vocabulary and structures –**Listening-** telephonic conversations. **Speaking –** sharing information of a personal kind—greeting – taking leave- **Language development**
– prepositions, conjunctions **Vocabulary development-** guessing meanings of words in context.

UNIT III GRAMMAR AND LANGUAGE DEVELOPMENT 12

Reading- short texts and longer passages (close reading) **Writing-** understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences **Listening** – listening to longer texts and filling up the table- product description- narratives from different sources. **Speaking-** asking about routine actions and expressing opinions. **Language development-** degrees of comparison- pronouns- direct vs indirect questions- **Vocabulary development –** single word substitutes- adverbs.

UNIT IV READING AND LANGUAGE DEVELOPMENT 12

Reading- comprehension-reading longer texts- reading different types of texts- magazines **Writing-** letter writing, informal or personal letters-e-mails-conventions of personal email- **Listening-** listening to dialogues or conversations and completing exercises based on them. **Speaking-** speaking about oneself- speaking about one's friend- **Language development-** Tenses- simple present-simple past- present continuous and past continuous- **Vocabulary development-** synonyms-antonyms- phrasal verbs

UNIT V EXTENDED WRITING 12

Reading- longer texts- close reading –**Writing-** brainstorming -writing short essays – developing an outline- identifying main and subordinate ideas- dialogue writing-**Listening** – listening to talks- conversations- **Speaking –** participating in conversations- short group conversations-**Language development**-modal verbs- present/ past perfect tense **- Vocabulary development**-collocations- fixed and semi-fixed expressions

19148S12	ENGINEERING MATHEMATICS - I	L	T	P	C
		4	1	0	4

OBJECTIVES :

- The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus. The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modelling the engineering problems mathematically and obtaining solutions. This is a foundation course which mainly deals with topics such as single variable and multivariable calculus and plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines.

UNIT I DIFFERENTIAL CALCULUS **12**

Representation of functions - Limit of a function - Continuity - Derivatives - Differentiation rules - Maxima and Minima of functions of one variable.

UNIT II FUNCTIONS OF SEVERAL VARIABLES **12**

Partial differentiation – Homogeneous functions and Euler's theorem – Total derivative – Change of variables – Jacobians – Partial differentiation of implicit functions – Taylor's series for functions of two variables – Maxima and minima of functions of two variables – Lagrange's method of undetermined multipliers.

UNIT III INTEGRAL CALCULUS **12**

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

UNIT IV MULTIPLE INTEGRALS **12**

Double integrals – Change of order of integration – Double integrals in polar coordinates – Area enclosed by plane curves – Triple integrals – Volume of solids – Change of variables in double and triple integrals.

UNIT V DIFFERENTIAL EQUATIONS **12**

Higher order linear differential equations with constant coefficients - Method of variation of parameters – Homogenous equation of Euler's and Legendre's type – System of simultaneous linear differential equations with constant coefficients - Method of undetermined coefficients.

TOTAL : 60 PERIODS

OUTCOMES :

After completing this course, students should demonstrate competency in the following skills:

- Use both the limit definition and rules of differentiation to differentiate functions.
- Apply differentiation to solve maxima and minima problems.
- Evaluate integrals both by using Riemann sums and by using the Fundamental Theorem of Calculus.
- Apply integration to compute multiple integrals, area, volume, integrals in polar coordinates, in addition to change of order and change of variables.
- Evaluate integrals using techniques of integration, such as substitution, partial fractions and integration by parts.
- Determine convergence/divergence of improper integrals and evaluate convergent improper integrals.
- Apply various techniques in solving differential equations.

19149S13	**ENGINEERING PHYSICS**	**L**	**T**	**P**	**C**
		4	**1**	**0**	4

OBJECTIVES
:

- To enhance the fundamental knowledge in Physics and its applications relevant to various streams of Engineering and Technology.

UNIT I PROPERTIES OF MATTER 9

Elasticity – Stress-strain diagram and its uses - factors affecting elastic modulus and tensile strength – torsional stress and deformations – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment - I-shaped girders - stress due to bending in beams.

UNIT II WAVES AND FIBER OPTICS 9

Oscillatory motion – forced and damped oscillations: differential equation and its solution – plane progressive waves – wave equation. Lasers : population of energy levels, Einstein's A and B coefficients derivation – resonant cavity, optical amplification (qualitative) – Semiconductor lasers: homojunction and heterojunction – Fiber optics: principle, numerical aperture and acceptance angle -types of optical fibres (material, refractive index, mode) – losses associated with optical fibers - fibre optic sensors: pressure and displacement.

UNIT III THERMAL PHYSICS 9

Transfer of heat energy – thermal expansion of solids and liquids – expansion joints - bimetallic strips - thermal conduction, convection and radiation – heat conductions in solids – thermal conductivity - Forbe's and Lee's disc method: theory and experiment - conduction through compound media (series and parallel) – thermal insulation – applications: heat exchangers, refrigerators, ovens and solar water heaters.

UNIT IV QUANTUM PHYSICS 9

Black body radiation – Planck's theory (derivation) – Compton effect: theory and experimental verification – wave particle duality – electron diffraction – concept of wave function and its physical significance – Schrödinger's wave equation – time independent and time dependent equations – particle in a one-dimensional rigid box – tunnelling (qualitative) - scanning tunnelling microscope.

UNIT V CRYSTAL PHYSICS 9

Single crystalline, polycrystalline and amorphous materials – single crystals: unit cell, crystal systems, Bravais lattices, directions and planes in a crystal, Miller indices – inter-planar distances - coordination number and packing factor for SC, BCC, FCC, HCP and diamond structures - crystal imperfections: point defects, line defects – Burger vectors, stacking faults – role of imperfections in plastic deformation - growth of single crystals: solution and melt growth techniques.

TOTAL : 45 PERIODS

OUTCOMES:

Upon completion of this course,

- the students will gain knowledge on the basics of properties of matter and its applications,
- the students will acquire knowledge on the concepts of waves and optical devices and their applications in fibre optics,
- the students will have adequate knowledge on the concepts of thermal properties of materials and their applications in expansion joints and heat exchangers,
- the students will get knowledge on advanced physics concepts of quantum theory and its applications in tunneling microscopes, and
- the students will understand the basics of crystals, their structures and different crystal growth techniques.

3. Tipler, P.A. & Mosca, G. “Physics for Scientists and Engineers with Modern Physics’. W.H.Freeman, 2007.

19149S14 **ENGINEERING CHEMISTRY** **L T P C**
4 1 0 4

OBJECTIVES:

- To make the students conversant with boiler feed water requirements, related problems and water treatment techniques.
- To develop an understanding of the basic concepts of phase rule and its applications to single and two component systems and appreciate the purpose and significance of alloys.
- Preparation, properties and applications of engineering materials.
- Types of fuels, calorific value calculations, manufacture of solid, liquid and gaseous fuels.
- Principles and generation of energy in batteries, nuclear reactors, solar cells, wind mills and fuel cells.

UNIT I WATER AND ITS TREATMENT **9**

Hardness of water – types – expression of hardness – units – estimation of hardness of water by EDTA – numerical problems – boiler troubles (scale and sludge) – treatment of boiler feed water – Internal treatment (phosphate, colloidal, sodium aluminate and calgon conditioning) external treatment
– Ion exchange process, zeolite process – desalination of brackish water - Reverse Osmosis.

UNIT II SURFACE CHEMISTRY AND CATALYSIS **9**

Adsorption: Types of adsorption – adsorption of gases on solids – adsorption of solute from solutions
– adsorption isotherms – Freundlich's adsorption isotherm – Langmuir's adsorption isotherm – contact theory – kinetics of surface reactions, unimolecular reactions, Langmuir - applications of adsorption on pollution abatement.

Catalysis: Catalyst – types of catalysis – criteria – autocatalysis – catalytic poisoning and catalytic promoters - acid base catalysis – applications (catalytic convertor) – enzyme catalysis– Michaelis –
Menten equation.

UNIT III ALLOYS AND PHASE RULE **9**

Alloys: Introduction- Definition- properties of alloys- significance of alloying, functions and effect of alloying elements- Nichrome and stainless steel (18/8) – heat treatment of steel. Phase rule: Introduction, definition of terms with examples, one component system -water system - reduced phase rule - thermal analysis and cooling curves - two component systems - lead-silver system - Pattinson process.

UNIT IV FUELS AND COMBUSTION **9**

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufacture of metallurgical coke (Otto Hoffmann method) - petroleum - manufacture of synthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas - compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel. Combustion of fuels: Introduction - calorific value - higher and lower calorific values- theoretical calculation of calorific value - ignition temperature - spontaneous ignition temperature - explosive range - flue gas analysis (ORSAT Method).

UNIT V ENERGY SOURCES AND STORAGE DEVICES **9**

Nuclear fission - controlled nuclear fission - nuclear fusion - differences between nuclear fission and fusion - nuclear chain reactions - nuclear energy - light water nuclear power plant - breeder reactor - solar energy conversion - solar cells - wind energy. Batteries, fuel cells and supercapacitors: Types of batteries – primary battery (dry cell) secondary battery (lead acid battery, lithium-ion-battery) fuel cells
– H_2-O_2 fuel cell.

TOTAL: 45 PERIODS

OUTCOMES:

- The knowledge gained on engineering materials, fuels, energy sources and water treatment techniques will facilitate better understanding of engineering processes and applications for further learning.

TEXT BOOKS:

1. S. S. Dara and S. S. Umare, "A Textbook of Engineering Chemistry", S. Chand & Company LTD, New Delhi, 2015
2. P. C. Jain and Monika Jain, "Engineering Chemistry" Dhanpat Rai Publishing Company (P) LTD, New Delhi, 2015
3. S. Vairam, P. Kalyani and Suba Ramesh, "Engineering Chemistry", Wiley India PVT, LTD, New Delhi, 2013.

19154S15	ENGINEERING GRAPHICS	L	T	P	C
		4	1	0	4

OBJECTIVES:

- To develop in students, graphic skills for communication of concepts, ideas and design of Engineering products.
- To expose them to existing national standards related to technical drawings.

CONCEPTS AND CONVENTIONS (Not for Examination) 1

Importance of graphics in engineering applications – Use of draftinginstruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREEHAND SKETCHING 7+12

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves.

Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three Dimensional objects – Layout of views- Freehand sketching of multiple views from pictorial views of objects

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACE 6+12

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS 5+12

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.

UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES 5+12

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 6+12

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions - Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method .

TOTAL: 90 PERIODS

OUTCOMES:

On successful completion of this course, the student will be able to

- familiarize with the fundamentals and standards of Engineering graphics
- perform freehand sketching of basic geometrical constructions and multiple views of objects.
- project orthographic projections of lines and plane surfaces.
- draw projections and solids and development of surfaces.
- visualize and to project isometric and perspective sections of simple solids.

Publication of Bureau of Indian Standards:

1. IS 10711 – 2001: Technical products Documentation – Size and lay out of drawing sheets.
2. IS 9609 (Parts 0 & 1) – 2001: Technical products Documentation – Lettering.
3. IS 10714 (Part 20) – 2001 & SP 46 – 2003: Lines for technical drawings.
4. IS 11669 – 1986 & SP 46 – 2003: Dimensioning of Technical Drawings.
5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods.

Special points applicable to University Examinations on Engineering Graphics:

1. There will be five questions, each of either or type covering all units of the syllabus.
2. All questions will carry equal marks of 20 each making a total of 100.
3. The answer paper shall consist of drawing sheets of A3 size only. The students will be permitted to use appropriate scale to fit solution within A3 size.
4. The examination will be conducted in appropriate sessions on the same day

19150S16 PROBLEM SOLVING AND PYTHON PROGRAMMING L T P C
4 1 0 4

COURSE OBJECTIVES:

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures –- lists, tuples, dictionaries.
- To do input/output with files in Python.

UNIT I ALGORITHMIC PROBLEM SOLVING 9

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT IV LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.

UNIT V FILES, MODULES, PACKAGES 9

Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

- Develop algorithmic solutions to simple computational problems
- Read, write, execute by hand simple Python programs.
- Structure simple Python programs for solving problems.
- Decompose a Python program into functions.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data from/to files in Python Programs.

TOTAL : 45 PERIODS

19150L17	**PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY**	**LT P C**
		0 0 3 2

COURSE OBJECTIVES:

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data from/to files in Python.

LIST OF PROGRAMS

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton's method)
3. Exponentiation (power of a number)
4. Find the maximum of a list of numbers
5. Linear search and Binary search
6. Selection sort, Insertion sort
7. Merge sort
8. First n prime numbers
9. Multiply matrices
10. Programs that take command line arguments (word count)
11. Find the most frequent words in a text read from a file
12. Simulate elliptical orbits in Pygame
13. Simulate bouncing ball using Pygame

PLATFORM NEEDED
Python 3 interpreter for Windows/Linux

COURSE OUTCOMES:
Upon completion of the course, students will be able to

- Write, test, and debug simple Python programs.
- Implement Python programs with conditionals and loops.
- Develop Python programs step-wise by defining functions and calling them.
- Use Python lists, tuples, dictionaries for representing compound data.
- Read and write data from/to files in Python.

TOTAL :60 PERIODS

19149L18	**PHYSICS AND CHEMISTRY LABORATORY** **(Common to all branches of B.E. / B.Tech Programmes)**	**L T P C** **0 0 3 2**

OBJECTIVES:

- To introduce different experiments to test basic understanding of physics concepts applied in optics, thermal physics, properties of matter and liquids.

LIST OF EXPERIMENTS: PHYSICS LABORATORY (Any 5 Experiments)

1. Determination of rigidity modulus – Torsion pendulum
2. Determination of Young's modulus by non-uniform bending method
3. (a) Determination of wavelength, and particle size using Laser
   (b) Determination of acceptance angle in an optical fiber.
4. Determination of thermal conductivity of a bad conductor – Lee's Disc method.
5. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer
6. Determination of wavelength of mercury spectrum – spectrometer grating
7. Determination of band gap of a semiconductor
8. Determination of thickness of a thin wire – Air wedge method

OUTCOMES:

Upon completion of the course, the students will be able to **TOTAL: 30 PERIODS**

- apply principles of elasticity, optics and thermal properties for engineering applications.

CHEMISTRY LABORATORY: (Any seven experiments to be conducted) OBJECTIVES:

- To make the student to acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
- To acquaint the students with the determination of molecular weight of a pol ymer by viscometery.

1. Estimation of HCl using Na_2CO_3 as primary standard and Determination of alkalinity in water sample.
2. Determination of total, temporary & permanent hardness of water by EDTA method.
3. Determination of DO content of water sample by Winkler's method.
4. Determination of chloride content of water sample by argentometric method.
5. Estimation of copper content of the given solution by Iodometry.
6. Determination of strength of given hydrochloric acid using pH meter.
7. Determination of strength of acids in a mixture of acids using conductivity meter.
8. Estimation of iron content of the given solution using potentiometer.
9. Estimation of iron content of the water sample using spectrophotometer (1, 10- Phenanthroline / thiocyanate method).
10. Estimation of sodium and potassium present in water using flame photometer.
11. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer.
12. Pseudo first order kinetics-ester hydrolysis.
13. Corrosion experiment-weight loss method.
14. Determination of CMC.
15. Phase change in a solid.
16. Conductometric titration of strong acid vs strong base.

OUTCOMES:

- The students will be outfitted with hands-on knowledge in the quantitative chemical analysis of water quality related parameters.

TOTAL: 30

PERIODS TEXTBOOKS:

1. Vogel's Textbook of Quantitative Chemical Analysis (8^{TH} edition, 2014)

19147S21 **TECHNICAL ENGLISH**

L	T	P	C
4	1	0	4

OBJECTIVES: The Course prepares second semester engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations , participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialisation.

UNIT I INTRODUCTION TECHNICAL ENGLISH 12

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises- **Speaking** –Asking for and giving directions- **Reading** – reading short technical texts from journals- newsapapers- **Writing-** purpose statements – extended definitions – issue- writing instructions – checklists-recommendations-**Vocabulary Development-** technical vocabulary **Language Development** –subject verb agreement **-** compound words.

UNIT II READING AND STUDY SKILLS 12

Listening- Listening to longer technical talks and completing exercises based on them-**Speaking** – describing a process-**Reading** – reading longer technical texts- identifying the various transitions in a text- paragraphing- **Writing-** interpreting cgarts, graphs- **Vocabulary Development-**vocabularyused in formal letters/emails and reports **Language Development-** impersonal passive voice, numerical adjectives.

UNIT III TECHNICAL WRITING AND GRAMMAR 12

Listening- Listening to classroom lectures/ talkls on engineering/technology **-Speaking** – introduction to technical presentations- **Reading** – longer texts both general and technical, practice in speed reading; **Writing**-Describing a process, use of sequence words- **Vocabulary Development-** sequence words- Misspelled words. **Language Development-** embedded sentences

UNIT IV REPORT WRITING 12

Listening- Listening to documentaries and making notes. **Speaking** – mechanics of presentations- **Reading** – reading for detailed comprehension- **Writing-** email etiquette- job application – cover letter – Résumé preparation(via email and hard copy)- analytical essays and issue based essays**-- Vocabulary Development-** finding suitable synonyms-paraphrasing-. **Language Development-** clauses- if conditionals.

UNIT V GROUP DISCUSSION AND JOB APPLICATIONS 12

Listening- TED/Ink talks; **Speaking** –participating in a group discussion **-Reading**– reading and understanding technical articles **Writing**– Writing reports- minutes of a meeting- accident and survey- **Vocabulary Development- verbal analogies Language Development-** reported speech

TOTAL : 60 PERIODS

OUTCOMES: At the end of the course learners will be able to:

- Read technical texts and write area- specific texts effortlessly.
- Listen and comprehend lectures and talks in their area of specialisation successfully.
- Speak appropriately and effectively in varied formal and informal contexts.
- Write reports and winning job applications.

TEXT BOOKS:

1. Board of editors. **Fluency in English A Course book for Engineering and Technology.** Orient Blackswan, Hyderabad: 2016
2. Sudharshana.N.P and Saveetha. C. **English for Technical Communication**. Cambridge University Press: New Delhi, 2016.

Students can be asked to read Tagore, Chetan Bhagat and for suplementary reading.

19148S22A	ENGINEERING MATHEMATICS – II	L	T	P	C
		4	1	0	4

OBJECTIVES :

- This course is designed to cover topics such as Matrix Algebra, Vector Calculus, Complex Analysis and Laplace Transform. Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering. Vector calculus can be widely used for modelling the various laws of physics. The various methods of complex analysis and Laplace transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines.

UNIT I MATRICES **12**

Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of Eigenvalues and Eigenvectors – Cayley-Hamilton theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.

UNIT II VECTOR CALCULUS **12**

Gradient and directional derivative – Divergence and curl - Vector identities – Irrotational and Solenoidal vector fields – Line integral over a plane curve – Surface integral - Area of a curved surface - Volume integral - Green’s, Gauss divergence and Stoke’s theorems – Verification and application in evaluating line, surface and volume integrals.

UNIT III ANALYTIC FUNCTIONS **12**

Analytic functions – Necessary and sufficient conditions for analyticity in Cartesian and polar coordinates - Properties – Harmonic conjugates – Construction of analytic function - Conformal mapping – Mapping by functions $w = z + c, cz, \frac{1}{z}, z^2$ - Bilinear transformation.

UNIT IV COMPLEX INTEGRATION **12**

Line integral - Cauchy’s integral theorem – Cauchy’s integral formula – Taylor’s and Laurent’s series – Singularities – Residues – Residue theorem – Application of residue theorem for evaluation of real integrals – Use of circular contour and semicircular contour.

UNIT V LAPLACE TRANSFORMS **12**

Existence conditions – Transforms of elementary functions – Transform of unit step function and unit impulse function – Basic properties – Shifting theorems -Transforms of derivatives and integrals – Initial and final value theorems – Inverse transforms – Convolution theorem – Transform of periodic functions – Application to solution of linear second order ordinary differential equations with constant coefficients.

OUTCOMES : **TOTAL: 60 PERIODS**

After successfully completing the course, the student will have a good understanding of the following topics and their applications:

- Eigenvalues and eigenvectors, diagonalization of a matrix, Symmetric matrices, Positive definite matrices and similar matrices.
- Gradient, divergence and curl of a vector point function and related identities.
- Evaluation of line, surface and volume integrals using Gauss, Stokes and Green’s theorems and their verification.
- Analytic functions, conformal mapping and complex integration.
- Laplace transform and inverse transform of simple functions, properties, various related theorems and application to differential equations with constant coefficients.

19149S23B	PHYSICS FOR ELECTRONICS ENGINEERING	L	T	P	C
		4	1	0	3

(Common to BME, ME, CC, ECE, EEE, E&I, ICE)

OBJECTIVES:

- To understand the essential principles of Physics of semiconductor device and Electron transport properties. Become proficient in magnetic, dielectric and optical properties of materials and nano devices.

UNIT I ELECTRICAL PROPERTIES OF MATERIALS 9

Classical free electron theory - Expression for electrical conductivity – Thermal conductivity, expression - Wiedemann-Franz law – Success and failures - electrons in metals – Particle in a three dimensional box – degenerate states – Fermi- Dirac statistics – Density of energy states – Electron in periodic potential: Bloch thorem – metals and insulators - Energy bands in solids– tight binding approximation - Electron effective mass – concept of hole.

UNIT II SEMICONDUCTOR PHYSICS 9

Intrinsic Semiconductors – Energy band diagram – direct and indirect semiconductors – Carrier concentration in intrinsic semiconductors – extrinsic semiconductors - Carrier concentration in N-type & P-type semiconductors – Carrier transport: Velocity-electric field relations – drift and diffusion transport - Einstein's relation – Hall effect and devices – Zener and avalanche breakdown in p-n junctions - Ohmic contacts – tunnel diode - Schottky diode – MOS capacitor - power transistor.

UNIT III MAGNETIC AND DIELECTRIC PROPERTIES OF MATERIALS 9

Magnetism in materials – magnetic field and induction – magnetization - magnetic permeability and susceptibility–types of magnetic materials – microscopic classification of magnetic materials - Ferromagnetism: origin and exchange interaction- saturation magnetization and Curie temperature – Domain Theory. Dielectric materials: Polarization processes – dielectric loss – internal field – Clausius-Mosotti relation- dielectric breakdown – high-k dielectrics.

UNIT IV OPTICAL PROPERTIES OF MATERIALS 9
