## **ABOUT PRIST DEEMED TO BE UNIVERSITY**

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of SriRam Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

Navisworks allows users to open and combine 3D models, navigate around them in real-time and review the model using a set of tools including comments, redlining, viewpoint, and measurements. The functionality of these formats varies on various levels, allowing professionals to download Navisworks type that is the most suited option for their project requirements and workflow needs.

## **ABOUT PRIST DEEMED TO BE UNIVERSITY**

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status. The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## **SCHOOL OF ENGINEERING & TECHNOLOGY**

The Departments of Civil Engineering, Computer Science and Engineering, Electronics and Communication Engineering, Mechanical Engineering, and Electrical and Electronics Engineering were established in 2008 with an objective to impart quality education to meet today's competitive environment. All Departments has well experienced & dedicated faculty with strong commitment to provide vibrant learning environment to student in order to help them excel. To keep pace with the current technological trends, all departments have well designed, constantly reviewed syllabus to incorporate all advanced in existing & Emerging Technologies which gives the students a holistic and pragmatic view of the present scenario of Industry.

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

A total station is a surveying instrument that combines an electronic theodolite and an electronic distance meter (EDM) to provide accurate measurements of both horizontal and vertical angles as well as distances. It is commonly used in construction, engineering, and land surveying projects to collect data for creating detailed maps, plans, and 3D models. A Total Station consists of a telescope, a computer, and a reflector.

The telescope is used to aim at a target, and the EDM measures the distance to the target by sending out a laser beam and measuring the time it takes for the beam to be reflected back. This time is used to calculate the distance to the target.

The format of the course will be lectures, short in-class assignments for participation, final exam and lab sessions. Students will gain hands-on experience using ESRI Arc GIS Pro software, one of the most widely used commercial GIS packages. However, knowledge gained during the theoretical and practical sessions will easily be transferable to other platforms like QGIS or GRASS.

## **ABOUT PRIST DEEMED TO BE UNIVERSITY**

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status. The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## **SCHOOL OF ENGINEERING & TECHNOLOGY**

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

The Autodesk Revit software is a powerful Building Information Modeling (BIM) program that works the way architects think. The program streamlines the design process through the use of a central 3D model, where changes made in one view update across all views and on the printable sheets. This training guide is designed to teach you the Autodesk Revit functionality as you would work with it throughout the design process. You begin by learning about the user interface and basic drawing, editing, and viewing tools.

Then you learn design development tools including how to model walls, doors, windows, floors, ceilings, stairs and more. Finally, you learn the processes that take the model into the construction documentation phase. Since building projects themselves tend to be extremely complex, the Autodesk Revit software is also complex. The objective of the Autodesk Revit 2015 (R1): Architecture Fundamentals training guide is to enable students to create full 3D architectural project models and set them up in working drawings. This training guide focuses on basic tools that the majority of students need to work with the Autodesk Revit software. Topics Covered: Understand the purpose of Building Information Management (BIM) and how it is applied in the Autodesk Revit software. Navigating the Autodesk Revit workspace and interface. Working with the basic drawing and editing tools.

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status. The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## **SCHOOL OF ENGINEERING & TECHNOLOGY**

The Departments of Civil Engineering, Computer Science and Engineering, Electronics and Communication Engineering, Mechanical Engineering, and Electrical and Electronics Engineering were established in 2008 with an objective to impart quality education to meet today's competitive environment. All Departments has well experienced & dedicated faculty with strong commitment to provide vibrant learning environment to student in order to help them excel. To keep pace with the current technological trends, all departments have well designed, constantly reviewed syllabus to incorporate all advanced in existing & Emerging Technologies which gives the students a holistic and pragmatic view of the present scenario of Industry.

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

STAAD's full form is Structural Analysis and Design. STAAD Pro is one of the popular software that is used for analyzing & designing structures like – buildings, towers, bridges, industrial, transportation, and utility structures. Designs may include any building structures like tunnels, culverts, bridges, piles, and petrochemical plants; and building materials like timber, concrete, steel, cold-formed steel, and aluminum.

STAAD or STAAD.Pro was developed by Research Engineers International at Yorba Linda, CA in 1997. To get rid of the boring & time-consuming manual procedures architectural Engineers started using automated software STAAD.Pro. STAAD.Pro permits structural engineers to design & analyze any type of structure virtually. Structural consultants, structural engineering firms, departments in construction companies, government agencies, owner/operators, offshore platform designers, and many more are extensively using this software.

STAAD.Pro V8i provides a flexible modeling environment, fluent data collaboration, and advanced features. It best structural analysis & design software that supports Indian as well as all international codes. STAAD.Pro® is one of the most widely-used software for developing and analyzing the designs of various structures, such as petrochemical plants, tunnels, bridges, etc. STAAD.Pro v8i, the latest version, allows civil engineering individuals to analyze structural designs in terms of factors like force, load, displacements, etc. Multisoft Virtual Academy STAAD.Pro v8i online training builds expertise in using the software at a professional level in domains, including construction companies, government agencies, architecture firms, etc.

## INTRODUCTION ABOUT THE COURSE

Primavera P6 Professional Project Management provides what modern project managers and schedulers value the most: control. Primavera P6 Professional Project Management, the industry-recognized benchmark for performant project management software, is designed to manage large-scale, highly complex, and diverse projects. It can organize projects with up to one hundred thousand activities and supports unlimited resources and target plans. Massive amounts of data necessitate using sophisticated yet highly adaptable organizational tools that allow users to organize, filter, and sort activities, projects, and resources.

A Windows client application for project scheduling, Primavera P6 Professional, is installed on a user's workstation. Like other Windows applications, it is executed from an executable file on the workstation. P6 Professional can be used independently with a locally installed database like Oracle XE or Microsoft SQL Server Express. It can also access a central database and function as a multi-user system when data must be shared.

P6 Professional is commonly used in the Engineering, Construction, Aerospace, Defense, Utilities, and Oil and Gas industries. In addition, P6 Professional is the tool of choice for power users, such as schedulers and project managers, in industries where detailed, fast, accurate scheduling and the critical path method are crucial to the planning, execution, and success of a project.

## INTRODUCTION ABOUT THE COURSE

BIM stands for Building Information Modeling and is a workflow process. It's based around models used for the planning, design, construction, and management of building and infrastructure projects. BIM software is used to model and optimize projects by planning, designing, building, and operating BIM models BIM software is 3D design and modeling software that can help optimize the work of designing for architecture, construction, plant, civil, and MEP projects. "BIM improves project task quality, provides better quality product, creates possibility of sharing information, and improves work efficiency." BIM models can be used to analyze or explore design options, visualizations, and documentations.

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### What is agricultural technology?

Agricultural technology, also known as "agritech," encompasses a broad range of disciplines and devices that improve agricultural output. That includes vehicles, robotics, computers, satellites, drones, mobile devices, and software. The use of big data analytics and artificial intelligence (AI) technology in agriculture is also an example of how the farming sector is embracing technological advancement. Changes in farming and field management during the past few decades have been revolutionary. The employment of modern, state-of-the-art technology in agriculture can be credited with much of the recent success in crop management and increased harvests.

#### Benefits of starting an agricultural technology

The implementation of smart agricultural technology is advantageous for all players in the agri-food chain. With its use in optimizing and automating agricultural operations and field activities, growers and landowners can now save significant amounts of time and effort. agriculture technology: The implementation of smart agricultural technology is advantageous for all players in the agri-food chain. With its use in optimizing and automating agricultural operations and field activities, growers and landowners can now save significant amounts of time and effort. These are just a few examples of how farming has benefited from advances in agriculture technology:

- Using less water, fertilizer, pesticides, and other inputs allows agricultural producers to cut costs and keep more of their profits;
- By preventing or drastically reducing the amount of chemical runoff into waterways, businesses lessen agriculture's impact on the environment and take steps toward greater sustainability;
- Increasing crop yields while decreasing labor inputs;
- Making it easier for farmers, agronomists, or other agricultural workers to communicate and coordinate activities using mobile devices, apps, or web-based resources;
- Lowering barriers to accessing agricultural insurance and financial services as well as market and technological data;
- Mitigation of the damage that could be caused by pests, natural calamities, and bad weather in agriculture with the help of affordable, always-on agricultural monitoring systems
- Increase in farm income through improved product quality and increased quality controls;
- Timely recognizing nutrient deficiency in plants and notifying agricultural producers of the type and amount of fertilizer and other amendments needed;
- Ability to foresee potential problems on the farm through the visualization of production patterns and trends gleaned from an analysis of current and historical agricultural data. By estimating their overall crop yield, agricultural producers can precisely budget for the next growing season and better prepare for emergencies.

**Eligibility:** Any graduates / ongoing degree students shall be eligible for the admission to the course.

### About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

#### About the Course

##### Introduction and Overview

- Agritourism is a business model that is growing in popularity as Indiana farmers recognize a need to diversify their operations and supplement their farm incomes.
- In addition, there is a growing public desire to engage in rural experiences and outdoor recreational activities.
- By combining agriculture and tourism, agritourism offers rural experiences to urban residents and economic diversification to farmers. Planning for agritourism requires a forward-thinking, locally-driven process.
- Planners must acknowledge agriculture as a land use and a business. The Indiana Land Resource Council (ILRC) designed this planning guide for agritourism providers, community leaders, extension agents, and rural economic development and tourism professionals.

##### What is agritourism?

- Agritourism, sometimes called rural tourism, is a subset of the leisure and hospitality industry that combines elements of tourism and agriculture. Although farm tourism is one of the most well-known types of agritourism, there is a wide array of businesses that fall under this category.

- In essence, any agricultural operation that provides tours or allows guests to visit or stay overnight on the property can be considered an agritourism business. Examples include:

- Vineyards and wine tours
- Family farms and hobby farms
- Farm-to-table culinary experiences
- Guest ranches or dude ranches
- Barn weddings
- Horseback rides and pony rides
- Petting zoos
- Corn mazes
- Horse-drawn carriage and sleigh rides
- Guided hunting trips on private land

#### Benefits of starting an agritourism business

- Many people who own an agricultural operation — such as a farm, ranch, or vineyard already have much of the necessary infrastructure, to start an agritourism business, including land, attractions, and amenities.
- Because this infrastructure often comes with a large overhead expense, the additional revenue generated by an agritourism venture can be a significant financial advantage when managed successfully.

#### Learn what it takes to manage a successful venture

- Developed by experts with significant experience in the tourism industry, this program provides the in-depth knowledge you need to successfully plan and manage an agritourism operation. Learn to adapt or expand existing infrastructure to create enjoyable, memorable experiences for visitors.
- Also gain insights in building a comprehensive business plan that includes elements like launching a website, promoting the business, hooking guest reservations,

### About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### Introduction and Overview

- Vegetable occupy an important place in our daily life particularly for vegetarians. Vegetables are the only source to increase not only the nutritive values of foods but also its palatability. For a balanced diet, an adult should have an intake of 85 g of fruits and 300 g of vegetables per day as per the dietary recommendation of nutrition specialists. But the present level of production of vegetables in our country can permit a per capita consumption of only 120 g of vegetables per day.
- However, people in India especially in the rural areas seldom eat vegetables due to the following reasons. Considering the above facts, we should plan to produce our own vegetable requirements in our backyards using the available fresh water as well as the kitchen and bathroom wastewater. This will not only facilitate prevention of stagnation unused water which will be hazardous to our health through environmental pollution, but can be useful for successful production of our own requirement of vegetables. Cultivation in a small area facilitates the methods of controlling pests and diseases through the removal of affected parts and non-use of chemicals. This is a safe practice, which does not cause toxic residues of pesticides in the vegetables produced.

#### What Kitchen garden?

- Kitchen garden is the growing of fruits and vegetables at the backyard of house by using kitchen waste water.
- Otherwise called as Home garden or Nutrition garden or Kitchen gardening or

### Benefits of Kitchen-garden

- Supply fresh fruits and vegetables high in nutritive value.
- Supply fruits and vegetables free from toxic chemicals.
- Help to save expenditure on purchase of vegetables.
- Vegetables harvested from home garden taste better than those purchased from market.
- Effective utilization of kitchen waste water and kitchen waste materials. Exercise to the body and mind.

### Learning outcomes of the course unit

- Gardeners fed their families first and then sell, barter or give away surplus garden foods. In certain contexts, however, income generation may become the primary objective of the home garden. In any case, it is counterproductive to impose the nutrition objective to the exclusion of the income generation objective, since in most contexts they are linked and compatible.
- The potential economic benefits of home gardening include the following
- Gardening gives dual benefits of food and income generation
- Garden provide fodder for household animals and supplies for other household needs (hand-crafts, fuel wood, furniture, baskets, etc.)

Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### Introduction and Overview

- Green revolution technologies such as greater use of synthetic agro chemicals like fertilizers and pesticides, adoption of nutrient responsive, high-yielding varieties of crops, greater exploitation of irrigation potentials etc., has boosted the production out put in most of cases.
- It concentrates on building up the biological fertility of the soil so that the crops take the nutrients they need from steady turnover within the soil nutrients produced in this way and are released in harmony with the need of the plants.
- Organic farmers recycle all wastes and manures within a farm, but the export of the products from the farm results in a steady drain of nutrients

#### What is landscaping?

The process of making a yard or other piece of land more attractive by altering the existing design, adding ornamental features, and planting trees and shrubs: "we will carry out minor repair works to the building's facade and supervise the landscaping of the extensive grounds"

People have practiced landscaping for centuries. As far back as the ancient Mayans, humans were manipulating the land for both aesthetic and practical reasons. The addition of plants, changes to the existing terrain and the construction of structures are all part of landscaping.

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### Introduction and Overview

- Green revolution technologies such as greater use of synthetic agro chemicals like fertilizers and pesticides, adoption of nutrient responsive, high-yielding varieties of crops, greater exploitation of irrigation potentials etc., has boosted the production out put in most of cases.
- It concentrates on building up the biological fertility of the soil so that the crops take the nutrients they need from steady turnover within the soil nutrients produced in this way and are released in harmony with the need of the plants.
- Organic farmers recycle all wastes and manures within a farm, but the export of the products from the farm results in a steady drain of nutrients

#### What is Non chemical farming?

- Organic farming, agricultural system that uses ecologically based pest controls and biological fertilizers derived largely from animal and plant wastes and nitrogen-fixing cover crops. Modern organic farming was developed as a response to the environmental harm caused by the use of chemical pesticides and synthetic fertilizers in conventional agriculture. and it has numerous ecological benefits. Benefits of Organic Farming Organic manures produce optimal conditions in the soil for high yields and good quality crops. They supply all the nutrients required by the plant (NPK, secondary and micronutrients). They improve plant growth and physiological activities of plants. They

improve the soil physical properties such as granulation and tilth, giving good aeration, easy root penetration and improved water holding capacity.

- Organic farming helps to avoid chain reaction in the environment from chemical sprays and dusts. Organic farming helps to prevent environmental degradation and can be used to regenerate degraded areas.

#### Learning outcomes of the course unit

- This course aims to update the knowledge of Organic Farming
- This process involves the use of biological materials, avoiding synthetic substances to maintain soil fertility and ecological balance thereby minimizing pollution and wastage.
- Ability to define and explain the concept, importance as well as scope of farming system.
- To study the important farming and cropping systems and their contribution in organic farming. Gaining knowledge about organic farming and precision farming with their issues and concerns for Indian agriculture

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### Introduction and Overview

Landscaping is the process of modifying the visible features of an area to enhance its aesthetic appeal, functionality, and overall value.

As you dive into the world of landscaping, there are a few key aspects to consider that will make your outdoor area truly shine. First of all, it's important to think about the design of your landscape.

#### What is post-harvest technology?

Post-harvest technology is the application of scientific and engineering principles to the handling, storage, packaging, distribution, and sale of agricultural produce after it has been harvested.

Post-harvest technology is used to improve the quality and extend the shelf life of food. It also helps to reduce wastage and improve food safety.

In agriculture, postharvest handling is the stage of crop production immediately following harvest, including cooling, cleaning, sorting and packing. The instant a crop is removed from the ground, or separated from its parent plant, it begins to deteriorate.

Postharvest treatment largely determines final quality, whether a crop is sold for fresh consumption, or used as an ingredient in a processed food product.

The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

The staffs are from various disciplines in Doctorate like Plant Pathology, Microbiology, Soil science, Plant Genetics and Veterinary. The staffs are from various disciplines in masters like Agricultural Entomology, Agronomy, Agricultural Extension, Horticulture and Economics. Many of the staff members are encouraged to pursue their higher studies and research works.

### About the Course

#### Introduction and Overview

The history of agricultural progress from the early days of man has been the history of seeds of new crops and crop varieties brought under cultivation. In the early days it was achieved through the cultivation of indigenous but useful plants and those taken through introductions.

Later through the well known techniques of selection, hybridization, mutation, polyploidization and plant biotechnology the scientists made available many new and better varieties. However, to the farmer all this scientific research would be of little value unless he gets seeds, which are genetically pure, high germination percentage and vigour, high purity, sound health etc.,

When the farmers do not get seeds possessing these qualities the yields they obtain may not be as expected. The pace of progress in production therefore, will largely depend upon the speed with which we are able to multiply and market good quality seeds of high yielding varieties

#### What is Seed technology?

The distinction between seed and grain is vital, being of seminal importance to agriculture. A seed, strictly speaking, is an "embryo" a living organism embedded in the supporting or the food storage tissue. The seed pertains to material (seed, fruit or vegetatively propagating material) meant for sowing for planting purposes, the essential function being the reproduction.

The seed when scientifically produced (such as under seed certification) is distinctly superior in terms of seed quality, namely, the improved variety, varietal purity, freedom from admixtures of weeds and other crop seeds, seed health, high germination and vigour, seed treatment and safe moisture content etc. A grain on the other hand, includes cereals and pulses meant for human consumption

#### Learning outcomes of the course unit

The major goal of seed technology is to increase agricultural production through the spread of good quality seeds of high yielding varieties.

It aims at the following: Rapid multiplication: Increase in agricultural production through quickest possible spread of new varieties developed by the plant breeders.

#### COURSE CONTENT

Unit I: Seed: importance and biology

Unit II: seed production

Unit III: Post harvest handling of seeds

#### ABOUT THE COURSE

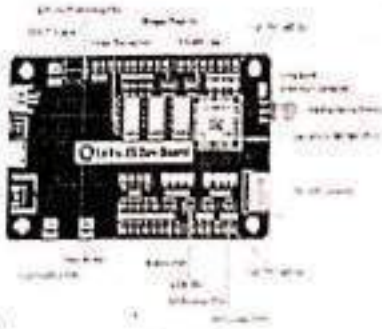

LoRa is an RF modulation technology for low-power, wide-area networks (LPWANs). The name, LoRa, is a reference to the extremely long-range data links that this technology enables. Created by Semtech to standardize LPWANs, LoRa provides for long-range communications: up to three miles (five kilometers) in urban areas and up to 10 miles (15 kilometers) or more in rural areas (line of sight). A key characteristic of the LoRa-based solutions is ultra-low power requirements, which allows for the creation of battery-operated devices that can last for up to 10 years. Deployed in a star topology, a network based on the open LoRaWAN protocol is perfect for applications that require long-range or deep in-building communication among a large number of devices that have low power requirements and that collect small amounts of data.

Consider the differences between LoRa and other network technologies that are typically used in IoT or traditional machine-to-machine (M2M) connectivity solutions

Signal processing involves converting or transforming data in a way that allows us to see things in it that are not possible via direct observation. Signal processing allows engineers and scientists to analyze, optimize, and correct signals, including scientific data, audio streams, images, and video. Further features:

- Data windowing.
- Power spectral density estimation.
- Digital FIR and IIR filter design.
- Analog filter design.
- Signal transforms including filter

#### Module-3-IMAGE PROCESSING USING SCHLAB

SIP is a toolbox for processing images in Scilab. SIP is meant to be a free, complete, and useful image toolbox for Scilab. Its goals include tasks such as filtering, blurring, edge detection, thresholding, histogram manipulation, segmentation, mathematical morphology, and color image processing.

An embedded system is a combination of computer hardware and software designed for a specific function. Embedded systems may also function within a larger system. The systems can be programmable or have a fixed functionality.

### Module 2 – EMBEDDED SYSTEM DESIGN USING ARDUINO

Embedded system basically is a computer system that is designed to pull off a few or one specific function, more often than not in real-time computing constraints. "ARDUNIO" most widely used technique of embedded systems. An Arduino is an assembled board of Atmel 8-bit AVR microcontroller with additional components to facilitate programming. An important aspect of the Arduino is the standardized way in which the connectors are exposed, providing a facility to the CPU board to get connected to a variety of interchangeable add-on modules known as shields. The hardware consists of an open-source hardware board designed around an 8-bit Atmel AVR microcontroller. The software consists of a standard programming language compiler and a boot loader that executes on the microcontroller

### Module 3 – EMBEDDED SYSTEM DESIGN USING RASPBERRY PI

The Raspberry Pi has received a lot of attention since its release in early 2012. It was designed to be a simple, low-cost device for use in schools to encourage interest in computers and computing. Whether the goal has been

## INTRODUCTION

Machine Learning in Statistical Learning, Applications of Machine Learning, Supervised and Unsupervised Learning, Reinforcement Learning, Classification, Unsupervised Learning, Classification, Applications suitable for Machine Learning

## LEARNING GOALS

Machine learning is performed with using the right features to build the right models that achieve the right tasks. The book starts with learning models has provided with some applications for a given problem, the collection of all possible solutions represents the complete space of solutions

## GOALS

The word machine learning was first coined by Arthur Samuel in 1959. In 1961, Frank Rosenblatt at the Cornell Aeronautical Laboratory introduced Donald Dreyfus's model of human cell behavior into Arthur Samuel's Machine Learning efforts and coined the term neural network. In 1957, the neural network algorithm was developed, which led to the beginning of back-propagation algorithm. This algorithm was used for mapping inputs and was one of the earliest algorithms used in building a neural network. In the 1980s, the problem of finding the best solution to the traveling salesman problem of finding the best solution to the problem.

## INTRODUCTION

Innovation and entrepreneurship are two different concepts having entirely different meanings. However, there is a symbiotic relationship between innovation and entrepreneurship which sometimes causes confusion.

The main difference between innovation and entrepreneurship is that innovation involves introducing something new. This can be a new business model, product, idea, or service. On the other hand, entrepreneurship involves turning a great idea into a business opportunity.

## IMPORTANCE OF ENTREPRENEURSHIP AND INNOVATION

Developing a novel method of producing a good or a solution demonstrates the significance of innovation in entrepreneurship. To meet the constantly shifting needs of its customers, a service sector might grow by offering a different kind of service. The use of hybridized and raw materials allows producers to create new goods.

## COURSE OBJECTIVE

The objective of Data visualization tools provide data visualization designers with an easier way to create visual representations of large data sets. When dealing with data sets that include hundreds of thousands or millions of data points, automating the process of creating a visualization, at least in part, makes a designer's job significantly easier.

The best data visualization tools on the market have a few things in common. First is their ease of use. The best tools also can output an array of different chart, graph, and map types. Most of the tools below can output both images and interactive graphs. There are exceptions to the variety of output criteria, though. Some data visualization tools focus on a specific type of chart or map and do it very well. These tools also have a place among the "best" tools out there.

AI and Data Science are the key enablers for disruptive innovations of this century, these emerging technological revolutions have reshaped our work and life style. From the start of June 2021, CIT, Coimbatore establishes a new department "Artificial Intelligence and Data Science". The department will be driven by its commitment to excel in research, design and development of next generation cutting-edge technologies in the area of Artificial Intelligence and Data Analytics. Our mission is to cultivate Industry-Academia partnership, drive collaborative research with other domains and equip our talents to contribute on multi-disciplinary projects by translating the developed technology into real world impacts.

#### AI & DS Programme

The unique undergraduate program, B.Tech. Artificial Intelligence and Data Science (AI & DS), aims the students to acquire technical skills to perform data processing, analysis and visualization in multiple real-time applications. Program envisions to equip students with the ability to identify and assess societal, health, safety and cultural issues with an emphasize on identifying their consequent responsibilities as engineers of offering optimal and effective solutions for the same.

The designed curriculum is interdisciplinary at the core – straddling computer Science blended with Mathematical Foundations, Artificial Intelligence Techniques, Machine Learning Principles, Statistical Methods, Data Science Philosophies, and their applications across multiple domains. Curriculum also covers on sub-field such as Big Data Analytics, Deep Learning and Computer Vision and Pattern Recognition.

COURSE OUTCOMES:

- Explain intelligent agent frameworks
- Apply problem solving techniques
- Apply game playing and CSP techniques
- Perform logical reasoning

**3D animation** is a process of creating moving images in a three-dimensional digital environment. It involves designing, modeling, and animating objects or characters in a 3D space to create the illusion of movement and depth. This type of animation is widely used in various fields, including film, television, video games, virtual reality, and simulations.

## Key Components of 3D Animation:

1. **Modeling:** The creation of 3D objects or characters. This involves defining the shape, structure, and appearance of objects using vertices, edges, and polygons. Modeling can be done using software like Blender, Maya, or 3ds Max.
2. **Texturing:** Applying surface details to the 3D models. Textures are images or patterns that give the model its color, detail, and material properties, such as wood grain or fabric texture.
3. **Rigging:** Creating a skeleton or control system for a 3D model, which allows it to be animated. Rigging involves defining bones, joints, and control points that can be manipulated to move the model.
4. **Animation:** The process of creating movement for the 3D models. This involves setting key frames (specific points in time where changes occur) and creating smooth transitions between them to produce realistic motion. Animation can include character movements, object interactions, and environmental changes.
5. **Lighting:** Setting up light sources in the 3D environment to simulate how light interacts with objects. Proper lighting is crucial for creating mood, highlighting details, and ensuring the scene looks realistic.
6. **Rendering:** The process of generating the final images or video from the 3D scene. Rendering converts the 3D data into 2D images or video frames, taking into account textures, lighting, shadows, and other effects. This process can be time-consuming and resource-intensive.
7. **Compositing:** Combining rendered images or video with other elements, such as special effects, background layers, or additional visual enhancements. Compositing helps integrate the 3D animation seamlessly into the final project.

## Applications of 3D Animation:

1. **Film and Television:** Creating visual effects, animated characters, and entire virtual environments. Examples include animated movies like "Toy Story" or visual effects in movies like "The Avengers."

2. **Video Games:** Designing characters, environments, and animations for interactive gameplay. 3D animation is essential for creating lifelike characters and dynamic game worlds.
3. **Virtual Reality (VR) and Augmented Reality (AR):** Developing immersive experiences that blend virtual elements with the real world or create fully virtual environments for users to interact with.
4. **Simulations and Training:** Building realistic simulations for training purposes, such as flight simulators or medical training programs, to provide hands-on experience in a controlled virtual environment.
5. **Architecture and Product Design:** Visualizing architectural designs and product prototypes in 3D to better understand their appearance and functionality before physical production.
6. **Marketing and Advertising:** Creating compelling visual content for commercials, promotional videos, and advertisements to engage audiences and showcase products or services.

### 3D Animation using Matplot

Matplotlib, a popular plotting library in Python, does have some support for 3D plotting and animation, though it's not as feature-rich for 3D animation as some other libraries like Blender or Maya. You can create basic 3D animations using Matplotlib's `mpl_toolkits.mplot3d` module in combination with its animation capabilities.

#### Install Matplotlib

Make sure you have Matplotlib installed. You can install it using pip if you haven't already:

```
pip install matplotlib
```

### Explanation:

1. Initialize Plot: `plt.figure()` and `fig.add_subplot(111, projection='3d')` create a 3D plot.
2. Create Data: `np.linspace` and `np.meshgrid` generate a grid of x and y values. Z is initially set to a sine function of the distance from the origin.
3. Plot Initial Data: `ax.plot_surface` creates a surface plot with the initial data.
4. Update Function: This function updates the Z values for each frame of the animation. It clears the previous plot and redraws the surface with updated data.
5. Animation: `animation.FuncAnimation` is used to animate the plot. It calls the update function for each frame.

## ETHICAL HACKING

### Who is a Certified Ethical Hacker?

A Certified Ethical Hacker is a specialist typically working in a red team environment, focused on attacking computer systems and gaining access to networks, applications, databases, and other critical data on secured systems. A CEH<sup>®</sup> understands attack strategies, the use of creative attack vectors, and mimics the skills and creativity of malicious hackers. Unlike malicious hackers and actors, Certified Ethical Hackers operate with permission from the system owners and take all precautions to ensure the outcomes remain confidential. Bug bounty researchers are expert ethical hackers who use their attack skills to uncover vulnerabilities in the systems.

### What is CEH<sup>®</sup> v12?

The Certified Ethical Hacker has been battle-hardened over the last 20 years, creating hundreds of

thousands of Certified Ethical Hackers employed by top companies, militaries, and governments worldwide. In its 12th version, the Certified Ethical Hacker provides comprehensive training, hands-on learning labs, practice cyber ranges for engagement, certification assessments, cyber competitions, and opportunities for continuous learning into one comprehensive program curated through our new learning framework: 1. Learn 2. Certify 3. Engage 4. Compete

The C|EH® v12 is a specialized and one-of-a-kind training program to teach you everything you need to know about ethical hacking with hands-on training, labs, assessment, a mock engagement (practice), and global hacking competition. Stay on top of the game with the most in-demand skills required to succeed in the field of cyber security.

### COURSE OUTCOMES:

At the end of this course, the students will be able:

1. To express knowledge on basics of computer based vulnerabilities
2. To gain understanding on different foot printing, reconnaissance and scanning methods.
3. To demonstrate the enumeration and vulnerability analysis methods
4. To gain knowledge on hacking options available in Web and wireless applications.
5. To acquire knowledge on the options for network protection.

## BLOCKCHAIN TECHNOLOGY

A blockchain is essentially a distributed database of records or public ledger of all transactions or digital events that have been executed and shared among participating parties. Each transaction in the public ledger is verified by consensus of a majority of the participants in the system. And, once entered, information can never be erased. The blockchain contains a certain and verifiable record of every single transaction ever made. Bitcoin, the decentralized peer-to-peer digital currency, is the most popular example that uses blockchain technology. The digital currency bitcoin itself is highly controversial but the underlying blockchain technology has worked flawlessly and found wide range of applications in both financial and non-financial world.

The main hypothesis is that the blockchain establishes a system of creating a **distributed consensus** in the digital online world. This allows participating entities to know for certain that a digital event happened by creating an irrefutable record in a public ledger. It opens the door for developing a democratic open and scalable digital economy from a centralized one. There are tremendous opportunities in this disruptive technology and revolution in this space has just begun. Current digital economy is based on the reliance on a certain trusted authority. Our all online transactions rely on trusting. This white paper describes blockchain technology and some compelling specific applications in both financial and non-financial sector. We then look at the challenges ahead and business opportunities in this fundamental technology that is all set to revolutionize our digital world.

**Course outcomes**

1. Be able to state core blockchain concepts, the benefits, and the limitations of blockchain technologies.
2. Be able to state the key differentiators for blockchain from other technology systems.
3. Understand the technical underpinnings of blockchain technology at sufficient depth to perform analysis of the impacts of certain implementation decisions in proposals.

## ROBOTICS AND AUTOMATION

### What is ROBOTICS AND AUTOMATION

Robotics is a field of engineering that deal with design and application of robots and the use of computer for their manipulation and processing. Robots are used in industries for speeding up the manufacturing process. They are also used in the field of nuclear science, sea-exploration, servicing of transmission electric signals, designing of bio-medical equipments etc. Robotics requires the application of computer integrated manufacturing, mechanical engineering, electrical engineering, biological mechanics, software engineering.

Automation and Robotics Engineering is the use of control systems and information technologies to reduce the need for human work in the production of goods and services. In the scope of industrialization, automation is a step beyond mechanization.

Specialization in robotics engineering may lead to potential career opportunities in manufacturing, research and engineering, agriculture, mining, nuclear, power-plant maintenances and a variety of other areas. Besides, there is great scope for qualified experts and researchers to associate themselves with different segments of R & D in robotics. As the recent global career trend in robotics suggests, fields as diverse as surgery, modern warfare and nanotechnology have registered a remarkable increase recently in their demand for technical experts and researches in robotics.

### Course Outline

  - c. Measure Circuit Values in a DC Circuit
  - d. Interpret Simple Schematic Diagrams
  - e. Analyze Diode and Transistor Circuits
3. Hardware and Software (Line Following)
4. Sensors and Simple Machines (Robot Sumo)

### Benefits

A course in Robotics trains and educates an individual in the following fields,

- Artificial Intelligence
- Computer Aided Manufacturing
- Computer Integrated Manufacturing
- System
- Computational Geometry
- Robot Motion Planning

## Career Prospects

Robotics engineering is one of the recognized professional careers in India. There are ample opportunities in this field for robotics engineers both in India as well as in abroad countries. From manufacturing line robots to experimental robotics for the military, medical and automotive industries, the future of robotics engineering certainly offers a variety of opportunities for professionals entering the field. A candidate having an M.E. degree in robotics can find employment opportunities in space research organizations such as ISRO and also in industries which manufacture microchips. Most robotics engineers are employed in laboratories, space exploration, manufacturing plants, mining and organizations. Now-a-days gaming industries are possibly providing the most enjoyable variation of the kind of intelligence provided by robotics. Most robotics engineers are employed by private robot manufacturers or robot users. Robotics engineers who work for robot manufacturers are sometimes called robotics test engineers or automation system engineers. Professionals in this career can also opt for teaching jobs in universities and colleges.

## COURSE OUTCOMES

After successful completion of the course, the students are able to

1. Understand basic components of robotics, classification of robots.
2. Know on types of robot grippers, their usage and design considerations.
3. Understand about various types of sensory devices their working and applications.
4. Apply basic transformations related to the movement of manipulator.
5. Design a robot mechanism to meet kinematics requirements and to write simple programs.

#### **DIGITAL MARKETING**

Nowadays, everyone is connected to the internet through their mobile phones and laptop devices. Understanding why **digital marketing** is essential for businesses aiming to succeed online through modern marketing and for individuals looking to make a career in **digital marketing**. **Digital marketing**, or **online marketing**, strategically promotes brands, products, or services using various digital channels and technologies. With the rise of the internet and mobile devices, businesses now have huge opportunities to reach a global audience.

Whether through innovative **search engine marketing (SEM)** strategies or advanced **digital marketing software**, companies can connect with potential customers like never before. Utilizing **search engine optimization (SEO)**, **content marketing**, **social media advertising**, and **email**

**marketing** allows businesses to effectively reach and engage their target audience, driving growth and achieving marketing objectives.

## What is **DIGITAL MARKETING**

Digital marketing is the use of online platforms & digital technologies to promote brands, products, or services.

### Types of Digital Marketing

**Digital marketing** encompasses a wide range of strategies and techniques aimed at promoting products or services through digital channels. Here are the key types of digital marketing:

#### 1. Search Engine Optimization (SEO)

**SEO** involves optimizing a website to improve its visibility in **search engine results pages (SERPs)**. The goal is to attract organic traffic by using relevant **keywords**, improving site structure, and earning **backlinks**.

Effective **SEO** can enhance online visibility and drive long-term traffic.

#### 2. Content Marketing

**Content marketing** focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, articles, videos, infographics, and eBooks. The objective is to provide useful information that encourages customer loyalty and drives conversions.

#### 3. Social Media Marketing

**Social media marketing** involves using platforms like Facebook, Instagram, Twitter, LinkedIn, and TikTok to promote products and engage with customers. This type of marketing can include organic content, **paid advertising**, and influencer partnerships to reach a broader audience and build brand awareness.

### Search Engine Optimization (SEO)

**SEO**, or **Search Engine Optimization**, is the process of optimizing your website and content to rank higher on search engine results pages (SERPs). It involves keyword research, on-page optimization, and building high-quality backlinks. For example, **Moz**, a leading SEO software company, uses **SEO services** to improve their visibility for high-volume keywords like "SEO tools" and "search engine optimization strategies."

### Content Marketing

**Content marketing** focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, videos, infographics, and ebooks. **HubSpot**, a prominent **digital marketing agency**, utilizes a robust **content marketing strategy** by offering free resources such as blogs, ebooks, and webinars to drive traffic and generate leads for their **marketing automation software**.

### Social Media Marketing

**Social media marketing** involves using platforms like Facebook, Instagram, Twitter, and LinkedIn to promote products, engage with customers, and build brand awareness. For example, **Nike** effectively uses **social media**

advertising on Instagram and Twitter to showcase their products, engage with followers, and drive online sales, often targeting their audience with visually compelling ads.

## DATA SCIENCE

In a world of data space where organizations deal with petabytes and exabytes of data, the era of Big Data emerged, and the essence of its storage also grew. It was a great challenge and concern for industries for the storage of data until 2010. Now when frameworks like Hadoop and others solved the problem of storage, the focus shifted to the processing of data. Data Science plays a big role here. All those fancy Sci-fi movies you love to watch around can be turned into reality by Data Science. Nowadays its growth has been increased in multiple ways and thus one should be ready for our future by learning what it is and how can we add value to it.

Data science is not a one-step process such that you will get to learn it in a short time and call ourselves a Data Scientist. It's passes from many stages and every element is important. One should always follow the proper steps to reach the ladder. Every

step has its value and it counts in your model. Buckle up in your seats and get ready to learn about those steps.

### **1. Problem Statement:**

No work start without motivation, Data science is no exception though. It's really important to declare or formulate your problem statement very clearly and precisely. Your whole model and it's working depend on your statement. Many scientist considers this as the main and much important step of Date Science. So make sure what's your problem statement and how well can it add value to business or any other organization.

### **2. Data Collection:**

After defining the problem statement, the next obvious step is to go in search of data that you might require for your model. You must do good research, find all that you need. Data can be in any form i.e unstructured or structured. It might be in various forms like videos, spreadsheets, coded forms, etc. You must collect all these kinds of sources.

### **3. Data Cleaning:**

As you have formulated your motive and also you did collect your data, the next step to do is cleaning. Yes, it is! Data cleaning is the most favorite thing for data scientists to do. Data cleaning is all about the removal of missing, redundant, unnecessary and duplicate data from your collection. There are various tools to do so with the help of programming in either R or Python. It's totally on you to choose one of them. Various scientist have their opinion on which to choose. When it comes to the statistical part, R is preferred over Python, as it has the privilege of more than 12,000 packages. While

python is used as it is fast, easily accessible and we can perform the same things as we can in R with the help of various packages.

#### **4. Data Analysis and Exploration:**

It's one of the prime things in data science to do and time to get inner Holmes out. It's about analyzing the structure of data, finding hidden patterns in them, studying behaviors, visualizing the effects of one variable over others and then concluding. We can explore the data with the help of various graphs formed with the help of libraries using any programming language. In R, GGplot is one of the most famous models while Matplotlib in Python.

#### **5. Data Modelling:**

Once you are done with your study that you have formed from data visualization, you must start building a hypothesis model such that it may yield you a good prediction in future. Here, you must choose a good algorithm that best fit to your model. There different kinds of algorithms from regression to classification, SVM( Support vector machines), Clustering, etc. Your model can be of a Machine Learning algorithm. You train your model with the train data and then test it with test data. There are various methods to do so. One of them is the K-fold method where you split your whole data into two parts, One is Train and the other is test data. On these bases, you train your model.

#### **6. Optimization and Deployment:**

You followed each and every step and hence build a model that you feel is the best fit. But how can you decide how well your model is performing? This where optimization comes. You test your data and find how well it is performing by checking its accuracy. In short, you

check the efficiency of the data model and thus try to optimize it for better accurate prediction. Deployment deals with the launch of your model and let the people outside there to benefit from that. You can also obtain feedback from organizations and people to know their need and then to work more on your model.

## ABOUT THE INSTITUTION:

P.R. ENGINEERING COLLEGE was established in the year 2000 under the benevolent Trust named "Sri Ponnaiyah Ramajayathammal Educational and Charitable Trust" (SPRECT). The Institution was founded by the philanthropic munificent founder Prof. P. Murugesan, who began his career as an academicians. The first seed to serve the society and higher education was sown by him in the year 1985, by starting Ram Institute of Computer Science and Technology. With the extra-ordinary support and cooperation from the parents, students and public, Within a short span of time, the college had earned good name, fame and reputation, which had encouraged starting P.R. Engineering College in the year 2000. Subsequently, his service to education and society has extended in every sphere and in all aspects till date.

## About the Department:

A Department of EEE was Started With Full Zeal in the Year 2005 Electrical and Electronics Engineering is a continuously evolving subject. As technology has advanced, so have the challenges facing the modern engineer. EEE is a subject that naturally partners with other disciplines to open whole new engineering avenues. The EEE Department at PREC prepares students in this field using new-age information and computer-intensive technologies. The EEE Department is dedicated to delivering competent electrical engineers to the arena of the real world. They are outfitted with core technical knowledge as well as professional skills necessary to face the challenges of the future. The committed faculty and staff are fully geared up towards this end.

## INTRODUCTION

Air pollution is a mixture of solid particles and gases in the air. Car emissions, chemicals from factories, dust, pollen and mold spores may be suspended as particles. Ozone, a gas, is a major part of air pollution in cities. When ozone forms air pollution, it's also called smog.

### Importance of Air Pollution

Air pollution is contamination of the indoor or outdoor environment by any chemical, physical or biological agent that modifies the natural characteristics of the atmosphere. Household combustion devices, motor vehicles, industrial facilities and forest fires are common sources of air pollution.

Breathing clean air can lessen the possibility of disease from stroke, heart disease, lung cancer as well as chronic and acute respiratory illnesses such as asthma. Lower levels of air pollution are better for heart and respiratory health both long- and short-term. Both short and long term exposure to air pollutants have been associated with health impacts.

### Course Content

- Air Pollution: Introductory and Impacts of air pollution on human health, vegetation, animals, building materials, structures and atmosphere, soil and water bodies.

## INTRODUCTION

The course will explain the fundamental concepts of research methodology in health. Course materials include video lectures reading/resource materials, example accompaniments, workbooks, lecture handouts and frequently asked questions (based on participant queries from previous cycle). Certification will be done based on lecture wise assignments and a final proctored exam.

### Importance of Biomedical Research

Biomedical research is important because it is the first step towards the creation of new medications and treatments that help to manage all different types of health conditions and diseases. Without this research, the prevention and cure of diseases would be practically impossible.

Clinical research is what allows doctors to decide how to best treat patients. It is what makes the development of new medicines, new procedures and new tools possible. Without clinical research, we would not be able to decide if new treatments are better than our current treatments.

#### INTRODUCTION

Our world is surrounded by several environmental challenges that are becoming increasingly evident by the day. Therefore, the solution course is Biofertilizer Production Technology by PRIST aim to enhance soil productivity by fixing atmospheric nitrogen, stabilizing soil phosphorus, and stimulating plant growth. Biofertilizer technology has integrated plant nutrition management to sustainable agriculture through RME.

#### Importance of Biofertilizer Production Technology

Application of Biofertilizers increases the plant growth, nodulate roots (nodule number, nodule weight) and grain yield area on inoculation in different pulse crops without producing any adverse effect on the environment. And also improving the soil quality, protecting the plants from pathogens, avoiding environmental pollution, destruction of harmful substances present in the soil.
