## ABOUT PRIST DEEMED TO BE UNIVERSITY

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status. The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## SCHOOL OF ENGINEERING & TECHNOLOGY

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

STAAD's full form is Structural Analysis and Design. STAAD Pro is one of the popular software that is used for analyzing & designing structures like – buildings, towers, bridges, industrial, transportation, and utility structures. Designs may include any building structures like tunnels, culverts, bridges, piles, and petrochemical plants; and building materials like timber, concrete, steel, cold-formed steel, and aluminum.

STAAD or STAAD.Pro was developed by Research Engineers International at Yorba Linda, CA in 1997. To get rid of the boring & time-consuming manual procedures architectural Engineers started using automated software STAAD.Pro. STAAD.Pro permits structural engineers to design & analyze any type of structure virtually. Structural consultants, structural engineering firms, departments in construction companies, government agencies, owner/operators, offshore platform designers, and many more are extensively using this software.

STAAD.Pro V8i provides a flexible modeling environment, fluent data collaboration, and advanced features. It best structural analysis & design software that supports Indian as well as all international codes. STAAD.Pro® is one of the most widely-used software for developing and analyzing the designs of various structures, such as petrochemical plants, tunnels, bridges, etc. STAAD.Pro v8i, the latest version, allows civil engineering individuals to analyze structural designs in terms of factors like force, load, displacements, etc. Multisoft Virtual Academy STAAD.Pro v8i online training builds expertise in using the software at a professional level in domains, including construction companies, government agencies, architecture firms, etc.

## INTRODUCTION ABOUT THE COURSE

Primavera P6 Professional Project Management provides what modern project managers and schedulers value the most: control. Primavera P6 Professional Project Management, the industry-recognized benchmark for performant project management software, is designed to manage large-scale, highly complex, and diverse projects. It can organize projects with up to one hundred thousand activities and supports unlimited resources and target plans. Massive amounts of data necessitate using sophisticated yet highly adaptable organizational tools that allow users to organize, filter, and sort activities, projects, and resources.

A Windows client application for project scheduling, Primavera P6 Professional, is installed on a user's workstation. Like other Windows applications, it is executed from an executable file on the workstation. P6 Professional can be used independently with a locally installed database like Oracle XE or Microsoft SQL Server Express. It can also access a central database and function as a multi-user system when data must be shared.

P6 Professional is commonly used in the Engineering, Construction, Aerospace, Defense, Utilities, and Oil and Gas industries. In addition, P6 Professional is the tool of choice for power users, such as schedulers and project managers, in industries where detailed, fast, accurate scheduling and the critical path method are crucial to the planning, execution, and success of a project.

Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. ## INTRODUCTION ABOUT THE COURSE

Landscape architecture is a discipline that focuses on intervention through the activities of planning, design, and management. Also, it is concerned with the art and science that underpins all activities. All these activities are united in the concept of landscape, which is defined in various ways.

However, it is generally understood to mean the outdoor environments and relationships between people and places. Landscape architecture is concerned with landscapes of all types both urban and rural, and at all scales from the smallest open space to the whole region.

As a result, people enjoy attractively designed gardens, public parks, playgrounds, residential areas, college campuses, shopping centers, golf courses, and parkways. Landscape architects design these areas so that they are not only functional but also beautiful and harmonious with the natural environment. They plan the location of buildings, roads, and walkways, as well as the arrangement of flowers, shrubs, and trees.

## ABOUT PRIST DEEMED TO BE UNIVERSITY

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of SriRam Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## SCHOOL OF ENGINEERING & TECHNOLOGY

The Departments of Civil Engineering, Computer Science and Engineering, Electronics and Communication Engineering, Mechanical Engineering, and Electrical and Electronics Engineering were established in 2008 with an objective to impart quality education to meet today's competitive environment. All Departments has well experienced & dedicated faculty with strong commitment to provide vibrant learning environment to student in order to help them excel. To keep pace with the current technological trends, all departments have well designed, constantly reviewed syllabus to incorporate all advanced in existing & Emerging Technologies which gives the students a holistic and pragmatic view of the present scenario of Industry.

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

ETABS is an engineering software product that caters to multi-story building analysis and design. Modeling tools and templates, code-based load prescriptions, analysis methods and solution techniques, all coordinate with the grid-like geometry unique to this class of structure. Basic or advanced systems under static or dynamic conditions may be evaluated using ETABS.

For a sophisticated assessment of seismic performance, modal and direct-integration time-history analyses may couple with P-Delta and Large Displacement effects. Nonlinear links and concentrated PMM or fiber hinges may capture material nonlinearity under monotonic or hysteretic behavior. Intuitive and integrated features make applications of any complexity practical to implement.

## ABOUT PRIST DEEMED TO BE UNIVERSITY

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status. The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## SCHOOL OF ENGINEERING & TECHNOLOGY

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

Demolition is the process of destroying down or dismantling or collapsing down of large buildings after its useful life period. The process of demolition is carried out with the help of someequipment or other methods with legal procedure followed by the consent of the local authority.

We know that every structure is designed for a specific life period generally 100 years. The existence of the structure after the service life period is over is very dangerous to its occupants and surrounding buildings. The purpose of demolition is to prevent the accidental collapse of any part of the building and to ensure safety of workers, public and neighboring properties.

Prior to carrying out any building demolition, detailed building appraisal by means of surveys and appropriate assessments shall be required which shall include a building survey and a structure survey. Increased concern for environmental protection has led government's tointroduce legislationto encourage the use of construction demolished waste after recycling it.

Demolition sites are thesources of large amounts of solid waste, which today is being used as mere landfill. On the other hand, building practices are such that reusable materials also become mixed with rubble, stone and soil, reducing their value and making recycling difficult or uneconomical.

## ABOUT PRIST DEEMED TO BE UNIVERSITY

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

This course is a practical beginner's guide to Tekla Structures. Whether you are an engineer or a detailer, this course is for you. It consists of an introduction, 13 modules full of principles, tools and techniques for modeling with Tekla Structures, delivered through hands-on tasks and simulations that enhance your practical learning; at the end, we've added a summary and next steps to take you further on your journey with Tekla Structures.

Each module covers a section of the workflow and comes equipped with reference models for you to download and practice on. Enroll now and get started with Tekla is a software used in the construction industry to create and manage 3D models of concrete and steel structures.

**Learning outcomes:**

1. Tekla Structures is a software used in the construction industry to create and manage 3D models of concrete and steel structures. Users can learn to create models, analyze and design them.
2. The software enables users to create and manage 3D structural models in concrete or steel, and guides them through the process from concept to fabrication.
3. Tekla Structures empowers engineers to create highly detailed, accurate 3D models of structures, ensuring precision in design and construction. This precision minimizes errors and rework, ultimately saving time and resources.

## ABOUT PRIST DEEMED TO BE UNIVERSITY

Ponnaiyah Ramajayam Institute of Science & Technology (PRIST), made a for into the academic domain, with the establishment of Sri Ram Institute of Computer Science and Technology in 1985. Over time, various institutions of higher learning such as an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, Commerce & Business Management, Architecture, Agriculture, Law, Pharmacy & Polytechnic College, added feathers to the PRIST crown. PRIST University received university status under section 3 of UGC Act 1956 & also got NAAC Accredited status. Today, PRIST commands a massive student base, spread across a whole array of campuses such as Trichy, Kumbakonam, Puducherry, Chennai, Madurai etc.

Ponnaiyah Ramajayam College applied for NAAC assessment and accreditation Council and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status. The academic reach extends right from school education up to the level of the Ph.D Doctoral programmes in a rich array of disciplines such as Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Law, Agriculture & Architecture.

## SCHOOL OF ENGINEERING & TECHNOLOGY

The Departments of Civil Engineering, Computer Science and Engineering, Electronics and Communication Engineering, Mechanical Engineering, and Electrical and Electronics Engineering were established in 2008 with an objective to impart quality education to meet today's competitive environment. All Departments has well experienced & dedicated faculty with strong commitment to provide vibrant learning environment to student in order to help them excel. To keep pace with the current technological trends, all departments have well designed, constantly reviewed syllabus to incorporate all advanced in existing & Emerging Technologies which gives the students a holistic and pragmatic view of the present scenario of Industry.

## INTRODUCTION ABOUT THE DEPARTMENT

In PRIST UNIVERSITY the Department of Civil Engineering was established in 2008. Since then its excellence in each and every aspects has played an important role in the Institute. Our Department is offering B.Tech – Civil Engineering M.Tech – Structural Engineering & Doctorate in Civil Engineering. Civil Engineering Department has been actively involved in research and consultancy in all the fields of Civil Engineering. The Department has well equipped laboratories and research facilities. It is constantly modernizing the laboratory facilities with latest technology and research know-how.

The Department offers PG/UG degree courses and a number of add on courses. Group electives or major electives are offered to enable students choose from wide choice of fourteen courses. Also, we offer skill based electives, from the point of view of employment opportunities and free elective courses of inter disciplinary nature. The Advanced Learners are offered Extra Credit courses for earning extra credits.

## INTRODUCTION ABOUT THE COURSE

Developed by Trimble, SketchUp is a software program that creates 3D models and visual designs, performs analyses, and effectively communicates engineering concepts. SketchUp components. For example, pretty much every building has at least one door and window. Instead of modeling these common objects, you can insert a component that someone else has already made. Like all geometry in SketchUp, a component is still made of edges and faces.

Architectural and interior design: SketchUp is widely used by architects and interior designers. Its intuitive interface and powerful visualization tools make it an ideal software for creating design concepts and presentations. you can create models of buildings, furniture, landscapes, and more, and add details such as textures, lighting, and shadows to create realistic visual representations. Create 2 Dimensional Geometry.

Create 3 Dimensional Geometry, Connect And Generate Forms, Effectively Present Mode, Use Group And Components To Isolate Geometry, Identify Modelling Techniques To Enhance Speed And Accuracy, Create Animation. SketchUp is a powerful 3D software application used for architecture, interior design, game design, and basic 3D modelling. In this hands-on workshop, students will learn to create 3D illustrations and models with SketchUp Pro. Topics include drawing tools, modify commands, component libraries, layering systems, modelling solids, surface treatments, and working with prefab objects.

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### Introduction and Overview

- Apiculture is the scientific method of beekeeping.
- It involves the management of honeybees to produce honey and other bee-related products.
- It is a process that requires complex knowledge and skill to manage the bees, their hives, and the environment in which they live.

#### What is Apiculture?

- The word 'apiculture' comes from the Latin word 'apis' meaning bee.
- So, apiculture or beekeeping is the care and management of honey bees for the production of honey and wax.
- In this method, bees are bred commercially in apiaries, an area where a lot of beehives can be placed.
- Usually, apiaries are set up in areas where there are sufficient bee pastures – such as areas that have flowering plants.

#### Benefits of Apiculture

1. Provides honey, which is the most valuable nutritional food.
2. Provides bee wax which is used in many industries, including cosmetics industries, polishing industries, pharmaceutical industries, etc.

3. Plays an excellent role in pollination. Honey bees are the best pollinating agents which help in increasing the yield of several crops.
4. According to the recent studies, the honey bee's venom contains a mixture of proteins which can potentially be used as a prophylactic to destroy HIV that causes AIDS in humans.
5. Apiculture can contribute to local employment opportunities. Beekeeping operations require skilled labour for hive management, honey extraction, product processing, packaging, marketing, and sales.
6. Bees play a crucial part in the ecosystem by performing pollination. This contributes to the overall ecology. They also help to maintain biodiversity by pollinating a wide range of plants, which helps to support other wildlife.

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

## About the Course

### Introduction and Overview

- The term mushroom means in general a fungus but commonly it is the fruiting body of some fungi which produce and disseminate spores. Like all other fungi, they lack Chlorophyll and thus cannot produce their own food. They grow saprophytically or sometimes symbiotically upon other dead and living plants respectively to obtain organic matter as food.
- Mushrooms are variable in size and shape. Many have cap and stalk but some varieties are devoid of stalk. Some varieties even produce fruit bodies below the ground. There are large number of species growing wild in nature, while many are edible, some are highly poisonous.
- The collection of colourful and variety of shapes of mushrooms is in practice since time immemorial. Auricularia, Lentinus edodus, Agaricus bisporus and volvariella volvacea were collected in China and France and elsewhere in the world

What is mushroom cultivation?

A mushroom farm is involved in the business of growing fungi. The word is also commonly used to refer to the practice of cultivation of fungi by animals such as leafcutter ants, termites, ambrosia beetles, and marsh periwinkles.

- Mushrooms are fungi and require different conditions than plants for optimal growth.

### Benefits of mushroom cultivation

- Mushrooms are popular for their delicacy and flavour.
- They are excellent sources of vitamins, proteins and minerals.
- They are good source of Vitamin 'B', folic acid, the blood building vitamin, useful in anaemic condition.
- They also contain pantothenic acid, vitamin B-12, ascorbic acid and the precursor of vitamin A and D.
- They are also good source of phosphorus, potassium, and iron, copper, contain all essential amino acids particularly L-lysine and L-tryptophan.
- Mushrooms contain least quantity of carbohydrates as well as fats, hence very valuable diet for those suffering from diabetes and heart problems.

### About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### Introduction and Overview

- Vegetable occupy an important place in our daily life particularly for vegetarians. Vegetables are the only source to increase not only the nutritive values of foods but also its palatability. For a balanced diet, an adult should have an intake of 85 g of fruits and 300 g of vegetables per day as per the dietary recommendation of nutrition specialists. But the present level of production of vegetables in our country can permit a per capita consumption of only 120 g of vegetables per day.
- However, people in India especially in the rural areas seldom eat vegetables due to the following reasons. Considering the above facts, we should plan to produce our own vegetable requirements in our backyards using the available fresh water as well as the kitchen and bathroom wastewater. This will not only facilitate prevention of stagnation unused water which will be hazardous to our health through environmental pollution, but can be useful for successful production of our own requirement of vegetables. Cultivation in a small area facilitates the methods of controlling pests and diseases through the removal of affected parts and non-use of chemicals. This is a safe practice, which does not cause toxic residues of pesticides in the vegetables produced

#### What Kitchen garden?

- Kitchen garden is the growing of fruits and vegetables at the backyard of house by using kitchen waste water.
- Otherwise called as Home garden or Nutrition garden or Kitchen gardening or Vegetable gardening

## Benefits of Kitchen-garden

- Supply fresh fruits and vegetables high in nutritive value.
- Supply fruits and vegetables free from toxic chemicals.
- Help to save expenditure on purchase of vegetables.
- Vegetables harvested from home garden taste better than those purchased from market.
- Effective utilization of kitchen waste water and kitchen waste materials. Exercise to the body and mind.

## Learning outcomes of the course unit

- Gardeners fed their families first and then sell, barter or give away surplus garden foods. In certain contexts, however, income generation may become the primary objective of the home garden. In any case, it is counterproductive to impose the nutrition objective to the exclusion of the income generation objective, since in most contexts they are linked and compatible.
- The potential economic benefits of home gardening include the following
- Gardening gives dual benefits of food and income generation
- Garden provide fodder for household animals and supplies for other household needs (hand-crafts, fuel wood, furniture, baskets, etc.)

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

- In addition, there is a growing public desire to engage in rural experiences and outdoor recreational activities.
- By combining agriculture and tourism, agritourism offers rural experiences to urban residents and economic diversification to farmers. Planning for agritourism requires a forward-thinking, locally-driven process.
- Planners must acknowledge agriculture as a land use and a business. The Indiana Land Resource Council (ILRC) designed this planning guide for agritourism providers, community leaders, extension agents, and rural economic development and tourism professionals.

#### What is agritourism?

- Agritourism, sometimes called rural tourism, is a subset of the leisure and hospitality industry that combines elements of tourism and agriculture. Although farm tourism is one of the most well-known types of agritourism, there is a wide array of businesses that fall under this category.
- In essence, any agricultural operation that provides tours or allows guests to visit or stay overnight on the property can be considered an agritourism business. Examples include:
  - Vineyards and wine tours
  - Family farms and hobby farms
  - Farm-to-table culinary experiences
  - Guest ranches or dude ranches
  - Barn weddings
  - Horseback rides and pony rides
  - Petting zoos
  - Corn mazes

#### **Benefits of starting an agritourism business**

- Many people who own an agricultural operation — such as a farm, ranch, or vineyard already have much of the necessary infrastructure, to start an agritourism business, including land, attractions, and amenities.
- Because this infrastructure often comes with a large overhead expense, the additional revenue generated by an agritourism venture can be a significant financial advantage when managed successfully.

#### **Learn what it takes to manage a successful venture**

- Developed by experts with significant experience in the tourism industry, this program provides the in-depth knowledge you need to successfully plan and manage an agritourism operation. Learn to adapt or expand existing infrastructure to create enjoyable, memorable experiences for visitors.
- Also gain insights in building a comprehensive business plan that includes elements like launching a website, promoting the business, booking guest reservations, organizing activities, managing finances, and complying with local laws and regulations.
- Offered in an online format, the program allows you to complete coursework on a flexible schedule, from the comfort of your own home.

#### **Learning outcomes of the course unit**

- To obtain and diversify knowledge from tourism, rural tourism and their specific form agri-tourism.

### About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

### About the Course

#### Introduction and Overview

- Green revolution technologies such as greater use of synthetic agro chemicals like fertilizers and pesticides, adoption of nutrient responsive, high-yielding varieties of crops, greater exploitation of irrigation potentials etc., has boosted the production out put in most of cases.
- It concentrates on building up the biological fertility of the soil so that the crops take the nutrients they need from steady turnover within the soil nutrients produced in this way and are released in harmony with the need of the plants.
- Organic farmers recycle all wastes and manures within a farm, but the export of the products from the farm results in a steady drain of nutrients

#### What is organic farming?

- Organic farming, agricultural system that uses ecologically based pest controls and biological fertilizers derived largely from animal and plant wastes and nitrogen-fixing cover crops. Modern organic farming was developed as a response to the environmental harm caused by the use of chemical pesticides and synthetic fertilizers in conventional agriculture, and it has numerous ecological benefits. Benefits of Organic Farming Organic manures produce optimal conditions in the soil for high yields and good quality crops. They supply all the nutrients required by the plant (NPK, secondary and micronutrients). They improve plant growth and physiological activities of plants. They

improve the soil physical properties such as granulation and tilth, giving good aeration, easy root penetration and improved water holding capacity.

- Organic farming helps to avoid chain reaction in the environment from chemical sprays and dusts. Organic farming helps to prevent environmental degradation and can be used to regenerate degraded areas.

#### Learning outcomes of the course unit

- This course aims to update the knowledge of Organic Farming
- This process involves the use of biological materials, avoiding synthetic substances to maintain soil fertility and ecological balance thereby minimizing pollution and wastage.
- Ability to define and explain the concept, importance as well as scope of farming system.
- To study the important farming and cropping systems and their contribution in organic farming. Gaining knowledge about organic farming and precision farming with their issues and concerns for Indian agriculture

## About the University

The Institute was founded in 1985 by Prof. P. Murugesan. It was initially known as the Institute of Computer Science and Technology. Murugesan founded the Institute to introduce computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer Postgraduate Diploma Programmes in Computer Applications.

Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institution, and Polytechnic College.

In 2004, Ponnaiya Ramajayam College applied for NAAC assessment and accreditation and was awarded an "A" grade, thus making it the first "A" grade awarded college in the Bharathidasan University area. The college then submitted its proposal to the Ministry of Human Resource Development, Government of India for deemed university status.

On 4 January 2008, the Institute was conferred deemed university status based on the recommendations of the UGC Expert Committee, the Ministry of HRD, and the Government of India. The Institute also received approval from the Distance Education Council (DEC) and its B.Ed. course is approved by The National Council for Teacher Education (NCTE).

In 2015, the Institute once again applied for NAAC assessment and accreditation and was awarded a "B" grade. In a letter signed by an undersecretary in the Union Health Ministry, it was stated that the Institute, which was granted conditional approval to offer 150 MBBS seats last year, was debarred from admitting students for the academic years of 2017-18 and 2018-19.

Currently, the Institute offers degrees in: Medicine, Engineering, Arts & Science, Education, Pharmacy, Management, Agriculture and Technology, as well as Ph.D. programmes in some of these fields.

## About the Department

The department has spacious laboratories such as Plant Pathology, Microbiology, Agricultural Entomology, Agricultural Botany and Genetics, Agronomy, Horticulture, Economics lab and Audio – Visual lab. All the laboratories are fully equipped with latest, modern and sophisticated equipment.

The Department has young as well as experienced and dynamic personalities as faculty, is involved in providing quality education at Undergraduate (UG) levels. The staffs are from various disciplines in Doctorate like Plant Pathology, Microbiology, Soil science, Plant Genetics and Veterinary. The staffs are from various disciplines in masters like Agricultural Entomology, Agronomy, Agricultural Extension, Horticulture and Economics. Many of the staff members are encouraged to pursue their higher studies and research works.

### About the Course

#### Introduction and Overview

- Apiculture is the scientific method of beekeeping.
- It involves the management of honeybees to produce honey and other bee-related products.
- It is a process that requires complex knowledge and skill to manage the bees, their hives, and the environment in which they live.

#### What is roof gardening?

- A roof garden is essentially a garden on the rooftop of a building, man-made green spaces on the topmost level of residential and commercial structures.
- Consisting of different plants, these verdant areas help improve a building's aesthetics.
- Many gardeners in the city grow plants on top of apartment buildings to have fresh vegetables.
- However, anyone can garden on a roof in the right conditions.

## Benefits of Roof gardening

### 1. ROOF GARDENS SUBSTANTIALLY INCREASE PROPERTY VALUES

A roof garden substantially enhances re-sale or rental values. It raises property values. The most obvious advantage of a roof garden is as a valuable amenity that enhances the worth of the structure it occupies for a relatively modest expenditure. It is additional or reclaimed usable space. Independent researchers in London (Marsh and Parson's) have found that a roof garden or balcony typically adds 10-25% more value to the property in high-end neighborhoods.

### 2. A ROOF GARDEN CAN INCREASE THE LIFE EXPECTANCY OF YOUR ROOF

One of the great benefits of roof gardens, vertical gardens and green roofs is that by protecting the underlying roof covering, they extend the life of the existing roof fabric by up to 200%. A green roof protects the roof membrane from climatic extremes and physical abuse, thereby greatly increasing the life expectancy of the roof.

### 3. PROPERTY TAX CREDIT INCENTIVES FOR GREEN ROOFS

New York City recently passed a city bylaw that rewards building-owners who cover 50 per cent of available rooftop space with a green roof with a one-year property tax credit of up to \$100,000. The credit would be equal to \$4.50 per square-foot of roof area that is planted with vegetation, or approximately 25 per cent of the typical costs associated with the materials, labor, installation and design of the green roof. More and more municipalities and other government agencies are providing incentives that can help offset the cost of a green roof.

### 4. A ROOF GARDEN INSULATES AGAINST HEAT AND COLD

Buildings with roof gardens lose 30% less heat in the winter, are cooler in the summer, and offer year-round sound insulation. Green roofs can improve the thermal resistance of the roof assembly throughout the year, especially in summer months by helping to reduce cooling costs, saving fuel. Reduced noise levels from typical extensive green roofs (3" - 4" growing media) reduce reflective sound by up to 3 dB and improve sound insulation by up to 8 dB

### 5. GREEN ROOFS AND ROOF GARDENS RETAIN AND MANAGE STORMWATER

Stormwater retention: green roofs absorb up to 75% of rainfall, thus reducing the runoff dramatically, and lowering the risk of urban flooding. Depending on the roof garden design, a green roof can typically reduce storm water run-off by 50 to 90%. Additionally, the peak flow volume is greatly reduced and the peak flow period is delayed by as much as 4 hours, minimizing the impact on existing sewer systems.

## 6. PROVIDE SOCIAL BENEFITS

Green roofs expand the usefulness of buildings via patios, gardens and vistas. Planting gardens, both at ground level and in the sky, provide not only great spaces for relaxation and enjoyment, but also are great to look at!

## 7. IMPROVE AIR QUALITY

Plants produce oxygen and remove carbon dioxide from the air. They also trap up to 85% of airborne particulates on their leaf surfaces. Plants, soil, and air trapped in the soil are great acoustic insulators, too.

## 8. ELEVATED GARDENS MODIFY URBAN MICRO-CLIMATES

Cities, of concrete and tarmac, retain heat and create "urban heat islands", as much as 10F warmer than surrounding suburbs. Plants, through transpiration, directly cool the air, and can reduce surface roof temperatures by as much as 75F in summer.

## 9. ROOF GARDENS PROVIDE DIVERSE HABITATS

Roof gardens, when planted with indigenous flora, can provide important habitats for native bird and insect populations. Green roofs create biodiversity.

## 10. LEED CERTIFICATION

Opportunity to assist in achieving LEED certification in several categories contributes to the attractiveness of building a roof garden. Within a dense urban environment one needs green space. Gardens are an ethereal world - they should be calming spaces and transport you to another state of mind.

### DEEMED TO BE UNIVERSITY SCHOOL OF ENGINEERING & TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

#### ABOUT THE INSTITUTION

Ponnaiyah Ramajayam Institute of Science and Technology (PRIST) Deemed to be University (U/s 3 of the UGC Act 1956), is one of the renowned units of Ponnaiyah Ramajayam Institutions, which are serving for more than 25 years in promoting quality education and research for our Indian community, since its Inception. The institution is now brimming with many social responsibilities, particularly in promoting quality education through research.

#### ABOUT THE DEPARTMENT

The department of Mechanical Engineering came into existence in 2000 with an objective to impart quality education to meet today's competitive environment.

Department has well experienced and dedicated faculty with strong commitment to provide a vibrant learning environment to the students in order to help them excel.

To keep pace with the current technological trends, the department has a well designed, constantly reviewed syllabus to incorporate all advancements in existing and emerging technologies which gives the students a holistic and pragmatic view of the present scenario of industry.

#### INFORMATION BROUCHER VALUE ADDED COURSE- METROLOGY AND QUALITY CONTROL

##### COURSE HIGHLIGHTS

Metrology is divided into three basic overlapping activities:

- ✓ The definition of units of measurement
- ✓ The realisation of these units of measurement in practice
- ✓ Traceability—linking measurements made in practice to the reference standards

These overlapping activities are used in varying degrees by the three basic sub-fields of metrology.

- ✓ Scientific or fundamental metrology, concerned with the establishment of units of measurement
- ✓ Applied, technical or industrial metrology—the application of measurement to manufacturing and other processes in society
- ✓ Legal metrology, covering the regulation and statutory requirements for measuring instruments and methods of measurement

## COURSE OBJECTIVES

'Metrology is the science of measurement, embracing both experimental and theoretical determinations at any level of uncertainty in any field of science and technology.' Metrology is surely at the core of all practical scientific endeavours.

- > Inspection of engineering parts with various precision instruments. Design of part, tolerances and fits.
- > Principles of measuring instruments and gauges and their uses.
- > Evaluation and inspection of surface roughness.
- > Inspection of spur gear and thread elements.
- > Machine tool testing to evaluate machine tool quality.

## Metrology and Quality Control Notes

## THE SCOPE OF METROLOGY

Metrology is used in many industries to enforce, validate and verify pre-defined standards. The study of metrology is divided into the following 3 subfields which are used to ensure accuracy, reliability and precision.

- ✓ 'Applied, Technical or Industrial Metrology' establishes the importance of measurement and the maintenance, quality control, and calibration of instruments.
- ✓ 'Legal Metrology' refers to the regulation requirements of measurement and measuring instruments so that consumers are protected and fair trade is observed.
- ✓ 'Scientific Metrology' establishes common understanding of measurements and units. It is therefore vital for being able to achieve high levels of accuracy and reliability, particularly for precision engineers.

## PIPING TECHNOLOGY

### OBJECTIVE:

This class covers the following topics: piping design, the effects on overall configuration on preliminary piping design, initial layout, the total system, introduction to pipe stress analysis, detailed piping design, and how all of this influences pipe support and pipe hanger design.

### Syllabus

#### Part 1: Introduction - Overview of Piping

1. This section serves as an introductory overview of piping system design.
  - a. Effects of operating conditions, including flow rate, design pressure and temperature on piping design
  - b. Impact of internal and external forces on the design.
  - c. Influences that the different modes of failure and the applicable codes have on the entire system.
  - d. Piping layout, an overview of the general support classifications.

#### Part 2: Preliminary Piping Design - Piping System Components

1. Concepts used in developing an initial piping layout.
2. Design principles including fluid properties, flow rate, and physical laws which influence the complete piping system layout.
3. Understand the effect of different piping system components, such as tanks, vessels, valves, and pumps, on the overall configuration.

#### Part 3: Preliminary Piping Design - The Total System

1. The total piping system.
2. The different types of equipment and components that define various types of piping systems.
3. Differences between series piping, parallel piping and branch piping as well as their specialized applications.
4. The piping system conditions such as static and dynamic head loss
5. Influences on the selection and distribution of piping components throughout the entire system.

#### Part 4: Basic Concepts of Stress Analysis - Flexibility Analysis

1. Historical perspective of how earlier analysis techniques were developed in the absence of today's computer technology.
2. Review how earlier techniques have evolved ultimately leading to today's finite element practices.
3. The basic concepts of stress analysis will be covered, including failure theories, stress intensification factors and the overall purpose of stress analysis.

#### Part 5: Basic Concepts of Stress Analysis - Design Bases

1. A review of the different phases of project evolution.
2. The design bases which form the foundation of all our analyses, including physical attributes.

**TOTAL : 45 PERIODS**

OUTCOMES:

1. A general overview of piping engineering
2. An awareness of the processes and issues involved with designing, procurement and construction
3. An awareness of the materials and equipment used

**ABOUT THE COURSE**

**Introduction to R Programming**

R is an integrated suite of software facilities for data manipulation, calculation and graphical display. Among other things it has

- an effective data handling and storage facility,
- a suite of operators for calculations on arrays, in particular matrices,
- a large, coherent, integrated collection of intermediate tools for data analysis,
- graphical facilities for data analysis and display either directly at the computer or on hardcopy,
- a well-developed, simple and effective programming language (called 'S') which includes conditionals, loops, user defined recursive functions and input and output facilities.

The term "environment" is intended to characterize it as a fully planned and coherent system, rather than an incremental accretion of very specific and inflexible tools, as is frequently the case with other data analysis software. R is very much a vehicle for newly developing methods of interactive data analysis. It has developed rapidly, and has been extended by a large collection of packages. However, most programs written in R are essentially ephemeral, written for a single piece of data analysis.

**COURSE OBJECTIVE**

- Understand the different data types in R
- Understand the different data structures in R
- Understand how to create and manipulate dates in R

**Introduction to LabView**

LabVIEW is a graphical programming environment software that is optimized for engineers and scientists. Developed by National Instruments, this software uses a visual approach to programming and is a great program for beginner programmers. You can create visual charts like data flow charts and connect hardware created by NI and other vendors. The programming environment software is available for Apple Mac, Linux, and Microsoft Windows PC 32-bit and 64-bit operating systems. MATLAB is another programming environment that is similar to LabVIEW. MATLAB is geared toward numbers whereas LabVIEW focuses on visualizations. While MATLAB computes and processes data, LabVIEW gathers and tests information. Simulink is another alternative app that is created by MathWorks, the same developers of MATLAB. The Simulink user experience is more comparable to LabVIEW since diagrams are used in both applications.

#### ABOUT THE COURSE

##### Introduction to Microcontroller

- A microcontroller is a compact integrated circuit designed to govern a specific operation in an embedded system. A typical microcontroller includes a processor, memory and input/output (I/O) peripherals on a single chip.
- Sometimes referred to as an embedded controller or microcontroller unit (MCU), microcontrollers are found in vehicles, robots, office machines, medical devices, mobile radio transceivers, vending machines and home appliances, among other devices. They are essentially simple miniature personal computers (PCs) designed to control small features of a larger component, without a complex front-end operating system (OS).
- A microcontroller is embedded inside of a system to control a singular function in a device. It does this by interpreting data it receives from its I/O peripherals using its central processor. The temporary information that the microcontroller receives is stored in its data memory, where the processor accesses it and uses instructions stored in its program memory to decipher and apply the incoming data. It then uses its I/O peripherals to communicate and enact the appropriate action.

**COURSE:** Certificate Course On Android App Development  
**Subject Code:** 22CC03

**AIM**

Creating robust mobile applications and learn how to integrate them with other services. Creating intuitive, reliable mobile apps using the android services and components. Create a seamless user interface that works with different mobile screens.

**OBJECTIVE**

The objective of Data visualization tools provide data visualization designers with an easier way to create visual representations of large data sets. When dealing with data sets that include hundreds of thousands or millions of data points, automating the process of creating a visualization, at least in part, makes a designer's job significantly easier..

The best data visualization tools on the market have a few things in common. First is their ease of use. The best tools also can output an array of different chart, graph, and map types. Most of the tools below can output both images and interactive graphs. There are exceptions to the variety of output criteria, though. Some data visualization tools focus on a specific type of chart or map and do it very well. Those tools also have a place among the "best" tools out there.

### COURSE OBJECTIVE

Students will graduate with applied knowledge. This course will give you the core background, terminology and fundamental concepts that you need to understand in order to build modern full stack web applications. A full stack web developer is familiar with each layer of the software technologies involved in a web application including data modeling and database interaction, the web server environment and network protocols, the client side and basic visual design and user interface development.

### ELIGIBILITY CRITERIA

Any student shall be eligible for the admission to the course, limited capacity 15 Seats on the first come first serve (Admission to the course is subject to the approval of the school)

### COURSE CONTENT

The course will cover the following topics: Introduction to web applications, client side programming, server side programming, database interaction, network protocols, the client side and basic visual design and user interface development. The course will also cover the following topics: Introduction to web applications, client side programming, server side programming, database interaction, network protocols, the client side and basic visual design and user interface development.

Fundamental to modern web application design, is then presented. Will also discuss a few current topics related to web application development. Finally, we will show you how to set up the software development environment you will use throughout the remainder of the courses in this.

### Module 02 - Web Applications Frameworks

In this module you will learn about web application frameworks. We will start by talking about the evolution of software and programming languages, and then talk about software application frameworks. The fundamental trade-off we will consider is programmer productivity versus program efficiency. Next you will learn about web application frameworks, as well as the model-view-controller design pattern that is the backbone for many of these frameworks. We will also consider how these frameworks support the agile programming principles associated with modern software practice. This will include a discussion of distributed version control systems and you will learn how to use the popular Git system. We will also demonstrate how to use Git with a Rails or Django application. We will use Git to submit all of the programming applications in this specialization.

### Module 03 - Managing Data

A successful web application provides information to users that is (1) useful, and also (2) easy to access and understand. This information is often collected from users, as well as from other information sources, and must be stored in a manner that allows it to be manipulated by the web application. The typical approach is to store this data in a relational database. In this module you will

learn some basic concepts associated with modeling the data in a web application, including how to specify the relationships between various data entities. We will also investigate how to load a web application up to a back-end data store, along with good design techniques that will make it easier to use the data in your web application by maintaining consistency throughout the entire web stack.

### Module 04 - Middleware

Middleware is an abstract layer that hides details about hardware devices and other lower-level software services from an application. Middleware services implement common low-level functions, such as communication with the operating system, application servers, database servers, etc., so that application developers do not need to concern themselves with these details, and can instead focus on the application functionality they are trying to provide. In a web application, these services generally make use of the HTTP protocol, and the web application framework, the HTTP protocol can be abstracted as a layer of communication with the middleware.

### Module 05 - The User Interface

In our final module we will focus on the user interface. We will touch on CSS and JavaScript, and how these are used to add style to our pages of HTML documents. We will also learn about Ajax and how it improves user experience.

environment to modern web application design. In this presentation, we will discuss a few current topics related to web application development. Finally, we will show you how to set up the software development environment you will use throughout the remainder of the courses in this.

## Module 2 - Web Applications Frameworks

In this module you will learn about web application frameworks. We will start by talking about the evolution of software and programming languages, and then talk about software application frameworks. The fundamental trade-off we will consider is programmer productivity versus program efficiency. Next you will learn about web application frameworks, as well as the model-view-controller design pattern that is the backbone for many of these frameworks. We will also consider how these frameworks support the agile programming principles associated with modern software practice. This will include a discussion of distributed version control systems and you will learn how to use the popular Git system. We will also demonstrate how to use Git with a Ruby on Rails application. We will use Git to automate all of the development activities in this presentation.

## Module 3 - Storing Data

In this module, you will learn about data storage. We will discuss the different types of data storage, and also the different types of data storage. The different types of data storage are as follows: (1) structured data, (2) unstructured data, (3) semi-structured data, (4) time series data, (5) geospatial data, (6) multimedia data, and (7) metadata. We will also discuss how to manage data in a database. The typical approach is to store the data in a relational database. In this module you will

learn the basic concepts associated with storing data in a web application. We will discuss how to specify the relationships between various data entities. We will also discuss how to store data in an application up to a back-end data store, along with good design techniques that will make it easier to use the data in your web applications by maintaining consistency throughout the entire web stack.

## Module 4 - Middleware

Middleware is an abstraction layer that hides details about hardware devices and other lower-level software services from an application. Middleware services implement common low-level functions, such as communication with the operating system, application servers, database servers, etc., so that application developers do not need to concern themselves with these details, and can instead focus on the application functionality they are trying to provide. In a web application, these services generally make use of the HTTP protocol, and in a web application framework, the MVC design pattern can be thought of as being implemented over the middleware.

## Module 5 - The User Interface

In this module, you will learn about the user interface. We will discuss the different types of user interface, and how to design a user interface. We will also discuss how to design a user interface. We will also discuss how to design a user interface. We will also discuss how to design a user interface. We will also discuss how to design a user interface.

**COURSE OBJECTIVE**

The objective of Data visualization tools provide data visualization designers with an easier way to create visual representations of large data sets. When dealing with data sets that include hundreds of thousands or millions of data points, automating the process of creating a visualization, at least in part, makes a designer's job significantly easier.

The best data visualization tools on the market have a few things in common. First is their ease of use. The best tools also can output an array of different chart, graph, and map types. Most of the tools below can output both images and interactive graphs. There are exceptions to the variety of output criteria, though. Some data visualization tools focus on a specific type of chart or map and do it very well. These tools also have a place among the "best" tools out there.

### DIGITAL MARKETING

Nowadays, everyone is connected to the internet through their mobile phones and laptop devices. Understanding why **digital marketing** is essential for businesses aiming to succeed online through modern marketing and for individuals looking to make a career in **digital marketing**. **Digital marketing**, or **online marketing**, strategically promotes brands, products, or services using various digital channels and technologies. With the rise of the internet and mobile devices, businesses now have huge opportunities to reach a global audience.

Whether through innovative **search engine marketing (SEM)** strategies or advanced **digital marketing software**, companies can connect with potential customers like never before. Utilizing **search engine optimization (SEO)**, **content marketing**, **social media advertising**, and **email marketing** allows businesses to effectively reach and engage their target audience, driving growth and achieving marketing objectives.

## What is **DIGITAL MARKETING**

Digital marketing is the use of online platforms & digital technologies to promote brands, products, or services.

### Types of Digital Marketing

**Digital marketing** encompasses a wide range of strategies and techniques aimed at promoting products or services through digital channels. Here are the key types of digital marketing:

#### 1. Search Engine Optimization (SEO)

**SEO** involves optimizing a website to improve its visibility in **search engine results pages (SERPs)**. The goal is to attract organic traffic by using relevant **keywords**, improving site structure, and earning **backlinks**.

Effective **SEO** can enhance online visibility and drive long-term traffic.

#### 2. Content Marketing

**Content marketing** focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, articles, videos, infographics, and eBooks. The objective is to provide useful information that encourages customer loyalty and drives conversions.

#### 3. Social Media Marketing

**Social media marketing** involves using platforms like Facebook, Instagram, Twitter, LinkedIn, and TikTok to promote products and engage with customers.

This type of marketing can include organic content, **paid advertising**, and influencer partnerships to reach a broader audience and build brand awareness.

## Search Engine Optimization (SEO)

**SEO, or Search Engine Optimization**, is the process of optimizing your website and content to rank higher on search engine results pages (SERPs). It involves keyword research, on-page optimization, and building high-quality backlinks. For example, **Moz**, a leading SEO software company, uses **SEO services** to improve their visibility for high-volume keywords like "SEO tools" and "search engine optimization strategies."

## Content Marketing

**Content marketing** focuses on creating and distributing valuable, relevant content to attract and engage a target audience. This includes blog posts, videos, infographics, and ebooks. **HubSpot**, a prominent digital marketing agency, utilizes a robust **content marketing strategy** by offering free resources such as blogs, ebooks, and webinars to drive traffic and generate leads for their marketing automation software.

## Social Media Marketing

**Social media marketing** involves using platforms like Facebook, Instagram, Twitter, and LinkedIn to promote products, engage with customers, and build brand awareness. For example, **Nike** effectively uses **social media advertising** on Instagram and Twitter to showcase their products, engage with followers, and drive online sales, often targeting their audience with visually compelling ads.

#### DATA SCIENCE

In a world of data space where organizations deal with petabytes and exabytes of data, the era of Big Data emerged, and the essence of its storage also grew. It was a great challenge and concern for industries for the storage of data until 2010. Now when frameworks like Hadoop and others solved the problem of storage, the focus shifted to the processing of data. Data Science plays a big role here. All those fancy Sci-fi movies you love to watch around can be turned into reality by Data Science. Nowadays its growth has

been increased in multiple ways and thus one should be ready for our future by learning what it is and how can we add value to it.

Data science is not a one-step process such that you will get to learn it in a short time and call ourselves a Data Scientist. It's passes from many stages and every element is important. One should always follow the proper steps to reach the ladder. Every step has its value and it counts in your model. Buckle up in your seats and get ready to learn about those steps.

### 1. Problem Statement:

No work start without motivation, Data science is no exception though. It's really important to declare or formulate your problem statement very clearly and precisely. Your whole model and it's working depend on your statement. Many scientist considers this as the main and much important step of Date Science. So make sure what's your problem statement and how well can it add value to business or any other organization.

### 2. Data Collection:

After defining the problem statement, the next obvious step is to go in search of data that you might require for your model. You must do good research, find all that you need. Data can be in any form i.e unstructured or structured. It might be in various forms like videos, spreadsheets, coded forms, etc. You must collect all these kinds of sources.

### 3. Data Cleaning:

As you have formulated your motive and also you did collect your data, the next step to do is cleaning. Yes, it is! Data cleaning is the most favorite thing for data scientists to do. Data cleaning is all about the removal of missing, redundant, unnecessary and duplicate data from your collection. There are various tools to do so with the help of programming in either R or Python. It's totally on you to choose one of them. Various scientist have their opinion on which to choose. When it comes to the statistical part, R is preferred over Python, as it has the privilege of more than 12,000 packages. While

python is used as it is fast, easily accessible and we can perform the same things as we can in R with the help of various packages.

#### 4. Data Analysis and Exploration:

It's one of the prime things in data science to do and time to get inner Holmes out. It's about analyzing the structure of data, finding hidden patterns in them, studying behaviors, visualizing the effects of one variable over others and then concluding. We can explore the data with the help of various graphs formed with the help of libraries using any programming language. In R, GGplot is one of the most famous models while Matplotlib in Python.

#### 5. Data Modelling:

Once you are done with your study that you have formed from data visualization, you must start building a hypothesis model such that it may yield you a good prediction in future. Here, you must choose a good algorithm that best fit to your model. There are different kinds of algorithms from regression to classification, SVM( Support vector machines), Clustering, etc. Your model can be of a Machine Learning algorithm. You train your model with the train data and then test it with test data. There are various methods to do so.

#### 6. Optimization and Deployment:

You followed each and every step and hence build a model that you feel is the best fit. But how can you decide how well your model is performing? This where optimization comes. You test your data and find how well it is performing by checking its accuracy. In short, you check the efficiency of the data model and thus try to optimize it for better accurate prediction. Deployment deals with the launch of your model and let the people outside there to benefit from that. You can also obtain feedback from organizations and people to know their need and then to work more on your model.

## ETHICAL HACKING

### Who is a Certified Ethical Hacker?

A Certified Ethical Hacker is a specialist typically working in a red team environment, focused on attacking computer systems and gaining access to networks, applications, databases, and other critical data on secured systems. A CEH<sup>®</sup> understands attack strategies, the use of creative attack vectors, and mimics the skills and creativity of malicious hackers. Unlike malicious hackers and actors, Certified Ethical Hackers operate with permission from the system owners and take all precautions to ensure the outcomes remain confidential. Bug bounty researchers are expert ethical hackers who use their attack skills to uncover vulnerabilities in the systems.

## What is C|EH® v12?

The Certified Ethical Hacker has been battle-hardened over the last 20 years, creating hundreds of thousands of Certified Ethical Hackers employed by top companies, militaries, and governments worldwide. In its 12th version, the Certified Ethical Hacker provides comprehensive training, hands-on learning labs, practice cyber ranges for engagement, certification assessments, cyber competitions, and opportunities for continuous learning into one comprehensive program curated through our new learning framework: 1. Learn 2. Certify 3. Engage 4. Compete

The C|EH® v12 is a specialized and one-of-a-kind training program to teach you everything you need to know about ethical hacking with hands-on training, labs, assessment, a mock engagement (practice), and global hacking competition. Stay on top of the game with the most in-demand skills required to succeed in the field of cyber security.

## COURSE OUTCOMES:

At the end of this course, the students will be able:

1. To express knowledge on basics of computer based vulnerabilities.
2. To gain understanding on different foot printing, reconnaissance and scanning methods.
3. To demonstrate the enumeration and vulnerability analysis methods.
4. To gain knowledge on hacking options available in Web and wireless applications.
5. To acquire knowledge on the options for network protection.
- 6.

## VIRTUAL REALITY

Virtual Reality (VR) is a technology that creates a simulated environment, allowing users to feel like they are in a different place or world. VR puts you inside a computer-generated world that feels real. It does this by using special equipment that covers your eyes and sometimes your ears called **VR Headset**. Virtual Reality creates a believable, interactive 3D environment that you can explore and interact with, making you feel like you are really there.

This is made possible by putting on a head-mounted display that sends a form of input tracking. The display is split between the eyes and thus creates a stereoscopic 3D effect with stereo sound to give you a graphic experience.

The technology feeds in the images of the objects taken at slightly different angles which creates an impression of depth and solidity. The LCD or OLED panels inside are refracted by lenses completely fill the field of vision with what is to be displayed and experienced. Together with the technology

and the input tracking, it creates an immersive and exciting believable world that the computer generates. What we know today as VR, has been existing for decades now. Taking you back to when 360° paintings took the world by surprise, giving a virtual element.

VR merely is 'The Wise Guy' of the digital world. It creates a world that neither functions according to you, nor does it respond to your actions. It gives you a first-hand experience with even the after-effects of an event along with the ability to interact and interrelate with the world created. This technology holds vast potential insights into the workings of the Human Brain.

### Types of Virtual Reality (VR)

On the basis of the most important feature of VR i.e. immersion and the types of systems and interfaces used, The VR systems can be classified into 3 types :

1. **Immersive**
2. **Semi-immersive**
3. **Non – immersive**

#### 1. Immersive VR system

Immersive VR system is closest to the virtual environment. It makes us experience the highest level of immersion. This VR system is expensive than others. It provides the closest feeling of being in virtual world. Tools and gadgets used in this system are advanced and not so common to use.

#### 2. Semi – immersive VR system

Semi – immersive VR systems also make us to experience a high level of immersion but the tools and gadgets used are not so advanced and costly. Tools and gadgets used in this system are common to us and utilize physical models.

### 3. Non-immersive VR system

Non-immersive VR system is the least immersive and least immersive VR system. It is not expensive to use this system. It is also known as desktop VR system because the gadgets used are limited to glasses and display monitors and it uses the least expensive components.

The Software Testing Tutorial serves as a comprehensive guide for learning Software Testing. It covers all software testing basics to the most advanced concepts, making it beneficial for both beginners and experienced professionals.

Testing is basically a collection of methods to evaluate an application's suitability for use by a predetermined script. The basic goal of testing is to find application flaws so that they may be identified and fixed.

As the field evolves, gaining proficiency in automated testing tools and frameworks becomes increasingly important. This not only streamlines the testing process but also enhances accuracy and efficiency, making it a vital skill set for anyone looking to excel in the **software testing domain**.

For those who want a thorough, hands-on approach, kindly explore our **dedicated course Manual to Automation Testing** which covers both theoretical and practical aspects and can be invaluable in mastering these techniques.

### **Automated Testing**

It is using special software for tasks that people usually do when checking and testing a software product. Nowadays, many software projects use

automation testing from start to end, especially in agile and DevOps methods. This means the engineering team runs tests automatically with the help of software tools. It will help to keep the testing team to make the process faster. Continuous delivery (CD) and quickly sends the new code to users. Automated testing is important for this because it converts the manual steps into automation. Continuous integration (CI) checks the new code changes to prevent issues. CD gets after CI done everything well. Automated testing, CI & CD will together prove that the new code is error-free and ready for deployment quickly for the project purpose.

some of the reasons for using automation testing:

- **Quality Assurance:** Manual testing is a tedious task that can be boring and at the same time error-prone. Thus, using automation testing improves the quality of the software under test as more test coverage can be achieved.
- **Error or Bug-free Software:** Automation testing is more efficient for detecting bugs in comparison to manual testing.
- **No Human Intervention:** Manual testing requires huge manpower in comparison to automation testing which requires no human intervention and the test cases can be executed unattended.
- **Increased test coverage:** Automation testing ensures more test coverage in comparison to manual testing where it is not possible to achieve 100% test coverage.

# **NEURAL NETWORKS**

Neural networks extract identifying features from data, lacking pre-programmed understanding. Network components include neurons, connections, weights, biases, propagation functions, and a learning rule. Neurons receive inputs, governed by thresholds and activation functions. Connections involve weights and biases regulating information transfer. Learning, adjusting weights and biases, occurs in three stages: input

computation, output generation, and iterative refinement enhancing the network's proficiency in diverse tasks.

These include:

1. The neural network is simulated by a new environment.
2. Then the free parameters of the neural network are changed as a result of this simulation.
3. The neural network then responds in a new way to the environment because of the changes in its free parameters.

## Importance of Neural Networks

The ability of neural networks to identify patterns, solve intricate puzzles, and adjust to changing surroundings is essential. Their capacity to learn from data has far-reaching effects, ranging from revolutionizing technology like natural language processing and self-driving automobiles to automating decision-making processes and increasing efficiency in numerous industries. The development of artificial intelligence is largely dependent on neural networks, which also drive innovation and influence the direction of technology.

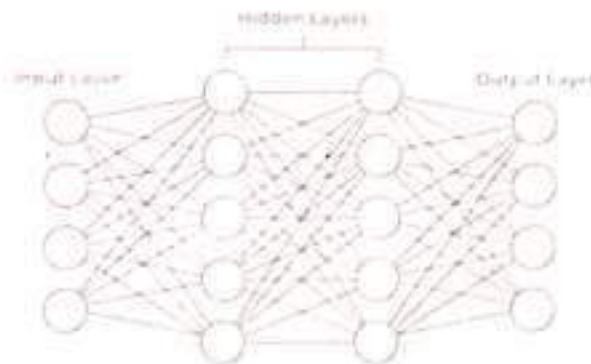

## Neural Networks work

Let's understand with an example of how a neural network works: Consider a neural network for email classification. The input layer takes features like email content, sender information, and subject. These inputs, multiplied by adjusted weights, pass through hidden layers. The network, through training, learns to recognize patterns indicating whether an email is spam or not. The output layer, with a binary activation function, predicts whether the email is spam (1) or not (0). As the network iteratively refines its weights through backpropagation, it becomes adept at distinguishing

between spam and legitimate emails, showcasing the practicality of neural networks in real-world applications like email filtering.

## Working of a Neural Network

Neural networks are complex systems that mimic some features of the functioning of the human brain. It is composed of an input layer, one or more hidden layers, and an output layer made up of layers of artificial neurons that are coupled. The two stages of the basic process are called backpropagation and forward propagation.

## Types of Neural Networks

There are seven types of neural networks that can be used

- **Feedforward Networks:** A feedforward neural network is a simple artificial neural network architecture in which data moves from input to output in a single direction.
- **Multilayer Perceptron (MLP):** MLP is a type of feedforward neural network with three or more layers, including an input layer, one or more hidden layers, and an output layer.
- **Convolutional Neural Network (CNN):** A Convolutional Neural Network (CNN) is a specialized artificial neural network designed for image processing.
- **Recurrent Neural Network (RNN):** An artificial neural network type intended for sequential data processing is called a Recurrent Neural Network (RNN).
- **Long Short-Term Memory (LSTM):** LSTM is a type of RNN that is designed to overcome the vanishing gradient problem in training RNNs.

## DEEP LEARNING

In the fast-evolving era of artificial intelligence, Deep Learning stands as a cornerstone technology, revolutionizing how machines understand, learn, and interact with complex data. At its essence, Deep Learning AI mimics the intricate neural networks of the human brain, enabling computers to autonomously discover patterns and make decisions from vast amounts of unstructured data. This transformative field has propelled breakthroughs across various domains, from computer vision and natural language processing to healthcare diagnostics and autonomous driving.

The definition of Deep learning is that it is the branch of machine learning that is based on artificial neural network architecture. An artificial neural network or ANN uses layers of interconnected nodes called neurons that work together to process and learn from the input data.

In a fully connected Deep neural network, there is an input layer and one or more hidden layers connected one after the other. Each neuron receives input from the previous layer neurons or the input layer. The output of one neuron becomes the input to other neurons in the next layer of the network, and this process continues until the final layer produces the output of the network. The layers of the neural network transform the input data through a series of nonlinear transformations, allowing the network to learn complex representations of the input data.

Deep learning AI can be used for supervised, unsupervised as well as reinforcement machine learning. it uses a variety of ways to process these.

- **Supervised Machine Learning:** Supervised machine learning is the machine learning technique in which the neural network learns to

make predictions or classify data based on the labeled datasets. Here we input both input features along with the target variables.

- **Unsupervised Machine Learning:** Unsupervised machine learning is the machine learning technique in which the neural network learns to discover the patterns or to cluster the dataset based on unlabeled datasets. Here there are no target variables.
- **Reinforcement Machine Learning:** Reinforcement Machine Learning is the machine learning technique in which an agent learns to make decisions in an environment to maximize a reward signal. The agent interacts with the environment by taking action and observing the resulting rewards.

#### COURSE OUTCOMES :

- Illustrate the categorization of machine learning algorithms.
- Compare and contrast the types of neural network architectures, activation functions.
- Acquaint with the pattern association using neural networks
- Elaborate various terminologies related with pattern recognition and architectures of convolutional neural networks
- Construct different feature selection and classification techniques and advanced neural network architectures such as RNN, Autoencoders, and GANs.

**INTRODUCTION**

Process intelligence uses advanced analytics to assess business processes and workflows to identify bottlenecks, inefficiencies and areas for improvement. It roadmaps how processes are executed by collecting, analyzing and interpreting data from multiple applications across various functions

**IMPORTANCE OF INTELLIGENCE FOR EXCELLENCE**

Excellence differentiates extraordinary people from ordinary people. Those who strive for excellence will have longevity in their endeavors. It is both the yardstick and the benchmark. When you benchmark against other achievers, you tend to improve and grow

**OBJECTIVES OF PROGRAM**

Process Excellence (PEX) Process Excellence is concerned with making processes more efficient and effective through design and testing. The main goal is to deliver consistent, positive outcomes with minimal variation (which Six Sigma tackles) and waste (which Lean deals with).

**DURATION OF PROGRAM**

45 Hours add on certificate course

**PROGRAM OUTCOME**

### INTRODUCTION

Goods and Services (GST) tax is a "value-added tax" that is exacted upon certain domestically sold goods and services and is typically set by the highest levels of government.

Customers paying a Goods and Services Tax will do so at the point of sale and will find it included within the total cost of the item itself. Sort of like an alternative form of a sales tax.

Java is a class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible. It is intended to let application developers write once, and run anywhere (WORA), meaning that compiled Java code can run on all platforms that support Java without the need for recompilation. Java was first released in 1995 and is widely used for developing applications for desktop, web, and mobile devices. Java is known for its simplicity, robustness, and security features, making it a popular choice for enterprise-level applications.

Java was developed by James Gosling at Sun Microsystems Inc in May 1995 and later acquired by Oracle Corporation. It is a simple programming language. Java makes writing, compiling, and debugging programming easy. It helps to create reusable code and modular programs. Java is a class-based, object-oriented programming language and is designed to have as few implementation dependencies as possible. A general-purpose programming language made for developers to write once run anywhere that is compiled Java code can run on all platforms that support Java

The Terminologies in Java

**JVM (Java Virtual Machine):** JVM is the specification that facilitates the runtime environment in which the execution of the Java bytecode takes place. Whenever one uses the command *java*, an instance of the JVM is created. JVM facilitates the definition of the memory area, register set, class file format, and fatal error reporting. Note that the JVM is platform dependent.

**Byte Code:** It has already been discussed in the introductory part that the Java compiler compiles the Java code to generate the *.class* file or the byte code. One has to use the *javac* command to invoke the Java compiler.

**Java Development Kit (JDK):** It is the complete Java Development Kit that encompasses everything, including JRE (Java Runtime Environment), compiler, *java* does, debuggers, etc. JDK must be installed on the computer for the creation, compilation, and execution of a Java program.

**Java Runtime Environment (JRE):** JRE is part of the JDK. If a system has only JRE installed, then the user can only run the program. In other words, only the *java* command works. The compilation of a Java program will not be possible (the *javac* command will not work).

**Garbage Collector:** Programmers are not able to delete objects in Java. In order to do so, JVM has a program known as Garbage Collector. Garbage Collectors recollect or delete unreferenced objects. Garbage Collector makes the life of a developer/ programmer easy as they do not have to worry about memory management.

**About PRIST**  
 The Institute was founded in 1984 by Prof. A. Manojan, a well known expert in the field of Computer Science and Information Management. He founded the institute to introduce computer education in the Thanjavur District. In 1986, the institute received affiliation from Tamil Nadu University to offer postgraduate diploma programmes in computer applications. Thereafter it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institute, and Polytechnic College.

**CRYSTAL GROWTH ANALYSIS**

A crystal is a solid material whose constituent atoms, molecules, or ions are arranged in an orderly repeating pattern extending in all three spatial dimensions. Crystal growth is a major stage of a crystallization process, and consists of the addition of new atoms, ions, or polymer chains into the characteristic arrangement of the crystalline lattice.

The growth typically follows an initial stage of either homogeneous or heterogeneous (surface catalyzed) nucleation, unless a "seed" crystal, purposely added to start the growth, was already present.

**OBJECTIVES**

- The programme is strongly connected to the latest innovations in the field and is embedded in ongoing research programmes at the participating research groups.
- The students are continuously updated following the progress of science and technology in this young and highly innovative field.
- There is ample opportunity to take elective courses, either to increase your level of proficiency, or to broaden your horizon, according to your own interest.

**Eligibility criteria**

Graduate level for B.Sc. (B.Tech) and M.Sc. students in the relevant fields of growth of seed or film from first hand. (Additional reference to the course co-ordinator of the subject).

**Course Structure and Duration**

Course is 12 month duration and will be of an integrated nature covering theoretical and practical aspects of temperature crystallization.

**Certification**

The candidates who fulfil qualifying the course for course shall be awarded a certificate to that effect in the appropriate form by School of Arts and Science, Department of Biotechnology, PRIST University, Thanjavur, Valluvar.

#### About PRIST

The Institute was founded in 1985 by Prof. K. Murugan. It was initially known as the Institute of Computer Science and Technology, Murugan. It started to provide an integrated computer education to the Thanjavur District. In 1988, the Institute received affiliation from Bharathidasan University to offer postgraduate diploma programmes in computer applications. Thereafter, it expanded to include an Arts and Science College, College of Engineering and Technology, College of Education, Research Institute, and Polytechnic College.

#### Semiconductor Physics

A semiconductor is a material which has an electrical conductivity value falling between that of a conductor, such as copper, and an insulator, such as glass. Its resistivity falls as its temperature rises; metals behave in the opposite way, its conducting properties may be altered in useful ways by introducing impurities ("doping") into the crystal structure.

When two differently doped regions exist in the same crystal, a semiconductor junction is created. The behavior of charge carriers, which include electrons, ions, and electron holes, at these junctions is the basis of diodes, transistors, and most modern electronics.

#### OBJECTIVES

- The programme is strongly connected to the latest innovations in the field and is embedded in ongoing research programmes at the participating research groups.
- The courses are continuously updated following the progress of science and technology in this young and highly innovative field.
- There is ample opportunity to take elective courses, either to increase your work of proficiency, or to broaden your horizon according to your own interest.

#### Eligibility criteria

All students shall be eligible for the admission to the course provided they have secured 15% marks in their class test based admission selection to the course is prerequisite of the school.

#### Course structure and Duration

Course is 12 taught modules, and will be of 48 hrs. integrated teaching programme covering theoretical and practical aspects of semiconductor technology.

#### Certification

The candidates successfully completing the course the course shall be awarded a certificate to bear effect in the appropriate form by School of Arts and Science, Department of Biotechnology, PRIST University, Thanjavur, Vallam.

## INTRODUCTION

The world is surrounded by several environmental challenges that are becoming worldwide by the day. Therefore, the certificate course in Food Processing, by PRIST aims to teach students about their pressing issues by developing in-depth knowledge about the field mainly deals with food science and technologies that are being used to transform raw ingredients into food. Food technology comes of necessity such as preservation, packaging and distribution of produce clean and nutritious food for the consumption of humans and animals.

### Importance of Food processing

The food processing offers important benefits to businesses and customers, including a more varied food supply and foods with a longer shelf life. Certain aspects of food processing, however, raise concerns over dietary health, weaker health, and food safety.

These programs can help individuals and companies develop a comprehensive understanding of food safety (including the requirements for a food management system, how to properly manage a food facility, and how to identify and mitigate potential safety risks).

## INTRODUCTION

Air pollution is a mixture of solid particles and gases in the air. Car emissions, chemicals from factories, dust, pollen and mold spores may be suspended as particles. Ozone, a gas, is a major part of air pollution in cities. When ozone forms air pollution, it's also called smog.

## Importance of Air Pollution

Air pollution is contamination of the indoor or outdoor environment by any chemical, physical or biological agent that modifies the natural characteristics of the atmosphere. Household combustion devices, motor vehicles, industrial facilities and forest fires are common sources of air pollution.

Breathing clean air can lessen the possibility of disease from stroke, heart disease, lung cancer as well as chronic and acute respiratory illnesses such as asthma. Lower levels of air pollution are better for heart and respiratory health both long and short-term. Both short and long term exposure to air pollutants have been associated with health impacts.

Department of Microbiology  
P. O. Box 1234, University, Thanjavur.

## Course Content

#### INTRODUCTION

Our world is surrounded by several environmental challenges that are becoming increasingly by the day. Therefore, the online course in Biodestructor Production Technology by PRIST aims to enhance soil productivity by using atmospheric nitrogen, stabilizing soil phosphorus, and stimulating plant growth. Biodestructor technology has integrated plant nutrient management for sustainable agriculture through BNF.

#### Importance of Biodestructor Production Technology

Application of biodestructor increases the plant growth, seedling rate (seedling number, seedling weight) and grain yield even in situations in different pulse crops without producing any adverse effect on the environment. And also improving the soil quality, protecting the plants from pathogens, avoiding environmental pollution, destruction of harmful substances present in the soil.

#### Course Content

- History and concepts of Bio-fertilizers
- Structure and characteristics features of bacterial Bio-fertilizers
- Production technology
- Application technology

#### Objective the Program

The main aim of the soil is to promote the use of Biodestructor technology, i.e., the addition of nutrients through the natural process of nitrogen fixation, stabilizing phosphorus, as well as the stimulation of plant growth by synthesizing growth-promoting substances.

#### Level of Knowledge Expected

Students studying Biodestructor technology course gain expertise in soil management as biodestructor play an important role by regenerating the soil microbial biodiversity and maintenance of soil health by stabilizing the plants.

#### Duration of the program

45 hrs and/or Certificate course

Reference book: Mindset (Carol S. Dweck, 2017): A liberating way to approach life, as per which everything great is work in progress. A must-read and the book I have gifted most often. Read here for more: Winning (Jack Welch, 2005): Probably the best book on leadership out there. Great advice which I keep on referring to regularly. Often while facing a difficult situation at work I am reminded of some of the learnings: "Don't run for office. You are already elected.", or how Candor is the biggest dirty little secret in education.

Good to Great (Jim Collins, 2001): One of the most popular business books. Concepts introduced in this book like Level 5 leadership, Stockdale's paradox, Flywheel & Hedgehog concept have become almost legendary.

Shoe Dog (Phil Knight, 2016): An adrenalin-pumping story of how Nike was built. If you are not into non-fiction and would like to start somewhere, this could be the perfect start!
