REPORT

**Venue: PRIST Block Seminar Hall**

**Date: 19.10.2018**

Department of Mathematics organized Technology Awareness programme on the "Sage Math" on 19.10.2018. The programme began with the invocation followed by the welcome address by Dr. S. SubramaniaN, Head of Department of Mathematics

Dr.N. Senthil Anand, School of Computer Science, SASTRA University Thanjavur was the resource person. He discussed with the students that Sage Math is a free open-source mathematics software system based on the Python programming language, Its features cover many aspects of mathematics, from basic arithmetic and calculus to advanced research mathematics in algebra, combinatorics, numerical mathematics, analysis, and number theory.

Every Student gave good response to this interactive session. The programme ended with the vote of thanks delivered by Dr. R. Abirami, Assistant Professor of Mathematics.

**SUB: Guest lecture on recent trends in Agriculture**

It is informed that conducting Guest lecture on recent trends in SRI. be arranged by the School Of Agriculture on 12.06.2018 for the academic year 2018 to 2019. Heads of the departments are requested to inform their students about the life skill and motivate them to attend the program. HODs are also requested to nominate one faculty member to coordinate the same.

## GUEST LECTURE ON RECENT TRENDS IN SRI

### About the course:

The System of Rice Intensification involves cultivating rice with as much organic manure as possible, starting with young seedlings planted singly at wider spacing in a square pattern; and with intermittent irrigation that keeps the soil moist but not inundated, and frequent inter cultivation with weeder that actively aerates the soil.

SRI is not a standardised, fixed technological method. It is rather a set of ideas, a methodology for comprehensively managing and conserving resources by changing the way that land, seeds, water, nutrients, and human labour are used to increase productivity from a small but well-tended number of seeds. As Father de Laulanié observed, SRI is an amalgamation of multiple beneficial practices.

### Debunking myths

Under SRI paddy fields are not flooded but kept moist during vegetative phase. Later only one inch water is maintained. SRI requires only about half as much water as normally applied in irrigated rice. Over 1,00,000 farmers are experimenting with this system worldwide at present.

SRI Paddy Cultivation requires less water, involves less expenditure and gives more yields. Thus it is beneficial for small and marginal farmers. SRI was first developed in Madagascar during 1980's. Its potential is under testing in China, Indonesia, Cambodia, Thailand, Bangladesh, Sri Lanka and India. In Andhra Pradesh. SRI was experimented in all the 22 districts during 2003 Kharif with encouraging results.

### SRI encourages rice plant to grow healthy with,

- Large root volume
- Profuse and strong tillers - Maximum tillering (30 tillers/plant can be easily achieved; 50 tillers per plant are quite attainable) occurs concurrently with panicle initiation. Under excellent management even 100 fertile tillers per plant or even more can be achieved due to early transplanting and absence of die back of roots.
- Non lodging
- Big panicles
- More and well filled grain panicles and higher grain weight

THANJAVUR - 613 403, TAMIL NADU

- Resists insects because it allows rice to absorb soil nutrients naturally

### Do-s and Don't-s in SRI

1. **Early Transplanting:** Transplant 8-12 day old seedlings, with only two small leaves, (More tillering potential and root growth potential)
2. **Careful Transplanting:** Minimise trauma in transplanting. Remove plant from nursery with the seed, soil and roots carefully and place it in the field without plunging too deep into soil (More tillering potential)
3. **Wide Spacing:** plant single seedlings, not in clumps, and in a square pattern 25cm x 25cm apart or wider. Do not plant in rows. (More root growth potential)
4. **Weeding and Aeration:** use simple mechanical "rotating hoe" that churns up soil; 2 weedings required, (More root growth, due to reduced weed competition, and aeration of soil, giving roots more Oxygen and Nitrogen due to increased microbial activity) Each additional weeding after two rounds results in increased productivity up to 2 t/ha / weeding.
5. **Water Management:** regular water application to keep soil moist but not saturated, with intermittent dryings, alternating aerobic and anaerobic soil conditions (More root growth because it avoids root degeneration, enables better absorption of nutrients from the soil).
6. **Compost / FYM applied instead**

### Benefits of SRI

- Higher yields - Both grain and straw
- Reduced duration (by 10 days)
- Lesser chemical inputs
- Less water requirement
- Less chaffy grain %
- Grain weight increased without change in grain size
- Higher head rice recovery
- Withstand cyclonic gales
- Cold tolerance
- Soil health improves through biological activity

### Disadvantages

*[Signature]*

Ponnaiyah Ramajayam Institute of  
Science & Technology (PRIST)  
Institution Deemed to be University  
Act 3 of the UGC Act 1956  
TIRANJAVUR - 613 403, TAMIL NADU.

- Higher labour costs in the initial years
- Difficulties in acquiring the necessary skills
- Not suitable when no irrigation source available

**SUB: Guest lecture on recent trends in Agriculture**

It is informed that conducting Guest lecture on recent trends in SSI be arranged by the School Of Agriculture on 20.12.2018 for the academic year 2018 to 2019. Heads of the departments are requested to inform their students about the life skill and motivate them to attend the program. HODs are also requested to nominate one faculty member to coordinate the same.

## GUEST LECTURE ON RECENT TRENDS IN SSI

### About the course:

The Sustainable Sugarcane Initiative (SSI) is an innovative set of agronomic practices that involves using less seeds, raising seeds in a nursery, and following new planting methods, with wider seed spacing, and better water and nutrient management to increase the cane yields significantly.

### Challenges to sugarcane millers.

Sugar mills face multiple problems. Sugarcane area is dwindling, leading to under-utilization of crushing machines, from inadequate supplies of canes. Competition from more profitable crops like rice and maize makes it difficult to convince farmers to accept the low price offered by mills. An increase in Jaggery prices is also threatening cane supplies to mills. Due to a high seed rate and insufficient availability of quality seed material, coverage of target areas is difficult. Low sugar recovery, inspite of various efforts has become one of the biggest problems the sugar industry is facing. Another problem is labour scarcity, especially at the time of harvest. And where labour is available, labourers demand high wages. Mechanization is not possible due to the close spacing of seeds in conventional planting.

### SUSTAINABLE SUGARCANE INITIATIVE:

SSI methods can increase sugarcane yields by at least 20% with 30% less water and a 25% reduction in chemical inputs.

The SSI method of sugarcane cultivation was evolved from the principles of 'More with Less' followed in SRI (System of Rice Intensification) and introduced in India by the WWF-ICRISAT collaborative project in 2009.

### Benefits of SSI to farmers

- Less seed: Saving in seed material
- Healthy seedling of 25-35 days old from nursery
- Wide spacing: Go for inter cropping
- Water saving: Easy for drip, low cost
- Less cost for transplantation
- Adapting to new varieties

## SCHOOL OF COMMERCE AND MANAGEMENT

### DEPARTMENT OF COMMERCE

#### AWARENESS PROGRAMME

The School of commerce and management is arranged Department of Commerce health development programmed for the under graduate students on 30.07.2018. The programmed was led by the *Dr.M.Vijay Asst.Professor, Department of management* Soft skill is a term often associated with commerce department. The PRIST deemed to be university –vallam student’s welfare in soft skill development aim and process of assigned Problem-solving skills are important in every career at every level. As a result, effective problem solving may also require industry or job-specific technical skills. For example, a registered nurse would need active listening and communication skills when interacting with patients but would also need effective technical knowledge related to diseases and medications. In many cases, a nurse would require to know when to consult a doctor regarding a patient’s medical needs as part of the solution

Many instructors design opportunities for students to solve “problems”. But are their students solving true problems or merely participating in practice exercises? The former stresses critical thinking and decision making skills whereas the latter requires only the application of previously learned procedures.

## **DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**

### **Guest Lecture for Recent Trends in Technology for IoT**

#### **INTRODUCTION:-**

Edge connectivity and 5G are two of the most important trends to watch in the IoT space. Edge computing networks allow for the processing and storage of data closer to its source instead of relying on distant servers. And 5G networks offer higher speeds and lower latency than existing technologies.

Key Takeaway. Another name for IoT is the “Internet of Things.” It can also be referred to as Machine-to-Machine (M2M) communication, Cyber-Physical Systems (CPS), or the Web of Things (WoT). These terms highlight the core idea of IoT, which is connecting various devices and systems to communicate and share data.

#### **OBJECTIVES: -**

The main purpose of IoT is to connect any device and object to the internet, allowing them to collect and share information, and to be remotely monitored and controlled.

The main goal of IoT, or Internet of Things, is to connect devices to the internet, allowing them to collect, share, and analyze data. This enables remote monitoring and control, improving efficiency and reducing costs. IoT devices, such as smart thermostats and utility meters, communicate in real-time without human intervention.

This connectivity helps businesses streamline operations, enhance productivity, and reduce waste. For example, a logistics company can track their trucks and packages in real-time, optimizing delivery routes. In homes, IoT can enhance security by automating lights to deter intruders. Overall, IoT aims to make systems smarter and more efficient.

### Registration Details:

Registration will be done on first come first serve basis. Number of seats are 50. Registration will be closed once the target participants are reached. The enclosed registration form is to be filled and mailed/emailed (scan copy of registration form along with payment details) to the following communication address:

**Director, PRIST University, Vallam, Thanjavur-613 403, Tamil Nadu, India**

### **DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**

#### **Guest Lecture for Recent Trends in Technology for Neural Networks**

#### **INTRODUCTION:-**

A neural network is a method in artificial intelligence that teaches computers to process data in a way that is inspired by the human brain. It is a type of machine learning process, called deep learning, that uses interconnected nodes or neurons in a layered structure that resembles the human brain.

Every neural network consists of layers of nodes, or artificial neurons—an input layer, one or more hidden layers, and an output layer. Each node connects to others, and has its own associated weight and threshold.

#### **OBJECTIVES: -**

Neural networks are computing systems with interconnected nodes that work much like neurons in the human brain. Using algorithms, they can recognize hidden patterns and correlations in raw data, cluster and classify it, and – over time – continuously learn and improve.

The goal of the learning is to find such values of the neural network parameters that the actual network outputs would be as close as possible to the desired ones. This approach is usually applied to classification, regression, and system identification problems.

#### **8 types of neural networks**

- Convolutional neural networks. ...
- Recurrent neural networks. ...
- Radial basis functions networks. ...
- Long short-term memory networks. ...

- Multilayer perceptrons. ...
- Generative adversarial networks. ...
- Deep belief networks. ...
- Self-organising maps.

They receive input signals, process them using activation functions and produce output signals. These artificial neurons are interconnected in layers to form a network. The first layer, called the input layer, receives the initial data, while the last layer, known as the output layer, produces the end result.

### **Registration Details:**

Registration will be done on first come first serve basis. Number of seats are 50. Registration will be closed once the target participants are reached. Programme Report

The Biotechnology Department organized **Awareness of Trends in Technology Programme** for biotechnology students, there are totally 42 students, along with staff members from several departments. The greeting speech delivered by Dr. **Dr. G. Rajendran**, Assistant professor Department of Biotechnology, PRIST University. Dr. K. Saravanan, Dean, School of Arts and Science, PRIST Deemed to be University, Vallam, Thanjavur, delivered the presidential speech. Resource: **Dr. S. Manikandan, Assistant Professor, Department of Chemistry** of PRIST Deemed to be University's school of education at Vallam, Thanjavur. The event was beneficial to the students and given the in-depth discussions between the students and resource persons, it exposed the staff to skill development and capacity development for their future prospect. Dr. J. Illamaṭhi, Assistant Professor, Department of Biotechnology, PRIST Deemed to be University, Vallam, Thanjavur, finally offered a vote of gratitude.
